Third, lenders' ability to make long sequences of loans to borrowers will be greatly curtailed, whether lenders use the ATR or principal step-down approach. Currently, borrowers who have difficulty repaying a loan in full usually have the option of paying just the finance charge and rolling the loan over, or repaying the loan and then quickly re-borrowing. The option to re-borrow may make borrowers willing to make a finance charge payment on a loan they know they cannot afford while still meeting their other obligations or expenditure needs. The option for continued re-borrowing allows borrowers to put off defaulting in the hopes they may ultimately be able to successfully repay the loan. If continued re-borrowing does not allow them to ultimately repay the loan, the lender will still have received multiple finance charges before the borrower defaults. To this point, Bureau research shows that nearly half of the consumers who experienced a default or a 30-day delinquency had fees over $60 in the month before their first default or 30-day delinquency.[1197]

Borrowers who are more likely to default are also more likely to have late payments; thus, reducing the rate of defaults will likely reduce the rate of late payments and the harm associated with those late payments. Late payments on payday loans, defined as a payment that is sufficiently late that the lender deposits the borrower's check or attempts to collect using the ACH authorization, appear to range from seven [1198] to over 10 percent.[1199] At the borrower level, two different sources show that 39 to 50 percent of borrowers have a check deposited that bounces in their first year of payday borrowing.[1200] These late payments are costly for borrowers. If a lender deposits a check or submits a payment request and it is returned for insufficient funds, the borrower's bank or credit union will likely charge the borrower an NSF fee of approximately $35, and the lender may charge a returned-item fee. In addition, analysis the Bureau has conducted of payment requests from online lenders shows that a substantial number of payments that are made are overdrafts.[1201] Fees for overdrafts are generally equal to NSF fees at the same institution. Consumers will also benefit from mitigation of the harm from NSF and overdraft transactions by the limitations on payment practices and related notices described in the section-by-section analysis of §§ 1041.8 and 1041.9, and discussed later in this section.

Default rates on individual payday loans are fairly low, 2 percent in the data the Bureau has analyzed.[1202] But, as noted above, a substantial majority of borrowers takes out more than one loan in sequence before repaying the debt or defaulting. A more meaningful measure of default is therefore the share of loan sequences that end in default. The Bureau's data show that, using a 30-day sequence definition, 20 percent of loan sequences end in default. Other researchers have found similar high levels of default at the borrower level. A study of payday borrowers in Texas found that 4.7 percent of loans were charged off but 30 percent of borrowers had a loan charged off in their first year of borrowing.[1203]

Less information is available on the delinquency and default rates for online payday loans. The available information is discussed in part II above, where the Bureau notes that one lender reports online single-payment loans have a charge-off rate substantially higher than that for storefront payday loans. In a 2014 analysis of its consumer account data, a major depository institution found that small-dollar lenders, which include lenders making a range of products including payday loans, had an overall return rate of 25 percent for ACH payments. The Bureau's report on online payday loan payments practices presents rates of failed payments for online lenders exclusively.[1204] It shows a lower rate of payment failure; six

[1197] Calculations using the Bureau's payday loan dataset described above.

[1198] "For the years ended December 31, 2011 and 2010, we deposited customer checks or presented an Automated Clearing House ("ACH") authorization for approximately 6.7 percent and 6.5 percent, respectively, of all the customer checks and ACHs we received and we were unable to collect approximately 63 percent and 64 percent, respectively, of these deposited customer checks or presented ACHs. Total charge-offs, net of recoveries, for the years ended December 31, 2011 and 2010 were approximately $106.8 million and $108 million, respectively." Advance America, 2011 Annual Report (Form 10–K).

[1204] CFPB Online Payday Loan Payments.

percent of payment attempts that were not preceded by a failed payment attempt themselves failed.[1205] Default rates are more difficult to determine, but 42 percent of checking accounts with failed online loan payments are subsequently closed.[1206] This provides a rough measure of default on these loans.

Default rates on single-payment vehicle title loans are higher than those on payday loans. In the data analyzed by the Bureau, the default rate on all loans is nine percent, and the sequence-level default rate is 31 percent.[1207] In the data the Bureau has analyzed, five percent of all single-payment vehicle title loans lead to repossession, and 18 percent of sequences of loans end with repossession. So, at the loan level and at the sequence level, slightly more than half of all defaults lead to repossession of the borrower's vehicle.

The range of potential impacts on a borrower of losing a vehicle to repossession depends on the transportation needs of the borrower's household and the available transportation alternatives. According to two surveys of vehicle title loan borrowers, 15 percent of all borrowers report that they would have no way to get to work or school if they lost their vehicle to repossession.[1208] Fully 35 percent of borrowers pledge the title to the only working vehicle in the household.[1209] Even those with a second vehicle or the ability to get rides from friends or take public transportation would presumably experience significant inconvenience or even hardship from the loss of a vehicle.

iii. Avoiding Harms From Making Unaffordable Payments

Consumers will also benefit from a reduction in the other financial hardships that may arise because borrowers, having taken out a loan with unaffordable payments, feel compelled to take painful measures to avoid defaulting on the covered short-term and longer-term balloon-payment loans. If a lender has taken a security interest in the borrower's vehicle, the borrower may decide not to pay other bills or forgo crucial expenditures because of the leverage that the threat of repossession gives to the lender. The repayment mechanisms for some covered short-term loans and longer-term loans with balloon payments can also cause borrowers to lose control over their own finances. If a lender has the ability to withdraw payment directly from a borrower's checking account, especially when the lender is able to time the withdrawal to the borrower's payday, the borrower may lose control over the order in which payments are made and may be unable to choose to make essential expenditures before repaying the loan.

iv. Changes to Loan Structure

Consumers may benefit if lenders respond to the rule by modifying the terms of individual loans or if lenders adjust the range of products they offer. Borrowers offered smaller loans may benefit if this enables them to repay the loan, when they would otherwise be unable to repay. This will mitigate a borrower's exposure to the costs associated with re-borrowing, default, or the costs of being unable to pay for other financial obligations or living expenses. If lenders shift from payday loans or single-payment vehicle title loans to longer-term loans, consumers may benefit from lower payments that make it more feasible for the borrowers to repay. Given the high rate of unanticipated re-borrowing of short-term loans, the financing costs of longer-term loans, provided they disclose their terms clearly and do not utilize balloon or leveraged payments, may be easier for borrowers to predict, and therefore borrowers may be less likely to end up in a loan that is substantially more expensive than they anticipated.

b. Costs to Consumers and Access to Credit

The procedural requirements of the rule will make the process of obtaining a loan more time consuming and complex for some borrowers. The restrictions on lending included in the rule will reduce the availability of storefront payday loans, online payday loans, single-payment vehicle title loans, longer-term balloon-payment loans, and other loans covered by the rule. Borrowers may experience reduced access to new loans (*i.e.,* loans that are not part of an existing loan sequence). Some borrowers will also be prevented from rolling loans over or re-borrowing shortly after repaying a prior loan. And, some borrowers may still be able to borrow, but for smaller amounts or with different loan structures, and find this less preferable than the terms they would have received absent the rule.

The Bureau received many comments suggesting that the consideration of costs to consumers was incomplete. Notably, comments suggested that the speed of obtaining funds would be reduced, leading to consumer harm; that the welfare implications of reducing the access to covered loans needed to be more adequately considered; that the Bureau should more explicitly consider the costs of moving to ''inferior'' alternatives due to the reduction in covered loans; and that the Bureau declined to provide monetary estimates of harm. The Bureau attempts to address each of these (as well as additional comments) in the subsections below.

However, one general response is that the estimated restriction on consumer access to credit is not as severe as implied by these comments. The rule does not impose a ban on payday lending, and the Bureau expects the vast majority of consumers will experience minimal, if any, reduction in access to credit. The Bureau's simulations (discussed above) show that the restrictions on re-borrowing and underwriting imply that only 5.9 to 6.2 percent of borrowers will be prohibited from initiating a sequence of loans they would have initiated absent the rule.[1210] That is, since most consumers take out six or fewer loans each year, and are not engaged in long sequences of borrowing, most will not find their preferred borrowing patterns interrupted by the rule's requirements and prohibitions. As will be discussed below, if borrowers derive greater benefits from their initial loans compared to subsequent loans, the impacts of these restrictions will have

[1205] CFPB Online Payday Loan Payments, at 13 tbl. 1. This analysis includes both online and storefront lenders. Storefront lenders normally collect payment in cash and only deposit checks or submit ACH requests for payment when a borrower has failed to pay in person. These check presentments and ACH payment requests, where the borrower has already failed to make the agreed-upon payment, have a higher rate of insufficient funds.

[1206] CFPB Online Payday Loan Payments, at 24 tbl. 5.

[1207] There is also evidence that the default rates on longer-term balloon-payment title loans are high. The Bureau has data for a single lender that made longer-term vehicle title loans with both balloon and amortizing payment schedules. Those loans with balloon payments defaulted at a substantially higher rate. *See* CFPB Report on Supplemental Findings, at 30.

[1210] As previously mentioned, the Bureau does not attempt to predict the impact of any voluntary underwriting activities that would be undertaken by lenders providing loans under the principal step-down approach (*e.g.,* to screen out likely defaulters who would have been profitable under a regime with unlimited rollovers). Any reduction in lending that might result from such a strategic response to this rule would further reduce the provision of credit compared to the estimates provided here.

limited (and potentially positive) impacts on consumer welfare.

i. Impacts of Procedural Requirements

The procedural requirements for lenders will make the process of obtaining a loan more time consuming for some borrowers. This will depend on whether lenders use the ATR approach or the principal step-down approach, and the extent to which lenders automate their lending processes. In particular, borrowers taking out payday loans originated under the principal step-down approach from lenders that automate the process of checking their records and obtaining a report from a registered information system will see little, if any, increase in the time to obtain a loan. Notably, this should not substantially reduce the speed at which customers can take out a first loan (or a first loan after 30 or more days without a covered short-term loan or longer-term loan with a balloon payment). As such, those consumers who experience discrete, unanticipated, and infrequent shocks are unlikely to be negatively impacted by the rule's procedural requirements.[1211]

Borrowers taking out loans from lenders using the ATR approach are more likely to experience additional complexity. Online payday borrowers and vehicle title borrowers are required to provide documentation of the amount of their income, which currently is often not required. Both storefront and online borrowers will be asked to fill out a form listing the amount of their income and payments on major financial obligations. Even when additional documentation is not required and a customer statement of income or expenses is sufficient, the process by which a lender may obtain these values is likely to take additional time, and lead to additional scrutiny, than was the case prior to the rule. As such, customers seeking loans under the ATR approach will likely experience reductions in the speed they receive funds and/or access to credit.

While the Bureau expects many lenders to automate much of the ATR determination, there may still be lenders that rely, partially or completely, on manual underwriting processes.[1212] Estimates of the time required to manually process an application for a loan made via the ATR approach vary substantially. In the proposal, the Bureau assumed manual calculations of ATR would take less than 20 minutes. A large lender noted in its comment that manually processing applications in the U.K. takes one to four hours, and a trade group representing mostly large depository institutions suggested that three hours was a viable estimate. Comments received from a trade group representing covered title lenders and based on information provided by Small Entity Representatives shows that the increased time to process a manual ATR determination is 15–45 minutes. The last of these seems to be based on the most applicable information (*e.g.,* covered lenders in the U.S.), and thus informs the Bureau's estimates. Thus, if a lender orders consumer reports manually and performs the calculations by hand necessary to determine that the borrower has the ability to repay the loan, the Bureau estimates this could add 15–45 minutes to the borrowing process. And if a borrower is unaware that it is necessary to provide certain documentation required by the lender, this may require a second trip to the lender, increasing the costs borne by the borrower. Finally, borrowers taking out loans online may need to upload verification evidence, such as by taking a photograph of a pay stub, or facilitate lender access to other information sources.

ii. Reduced Access to Initial Loans

Initial covered short-term loans—*i.e.,* those taken out by borrowers who have not recently had a covered short-term loan—are presumably taken out because of a need for credit that is not the result of prior borrowing of covered short-term loans. Borrowers may be unable to take out new loans (those originated more than 30 days after their last loan) for at least two reasons: they may only have access to loans made under the ATR approach and be unable to demonstrate an ability to repay the loan under the rule, or they may be unable to satisfy any underwriting requirements adopted by lenders.

Payday borrowers are not likely to be required to satisfy the ATR requirement unless and until they have exhausted the limits on loans available to them under the principal step-down approach, or unless the borrower is seeking a loan in excess of $500. However, to obtain loans under the principal step-down approach, borrowers may be required to satisfy more exacting underwriting requirements than are applied today. Moreover, after exhausting the limits on principal step-down approach loans, borrowers are required to satisfy the ATR requirement in order to obtain a new loan.

The direct effects of the principal step-down approach on borrowers' ability to take out loans will be quite limited, provided the borrowers did not have an active loan within the past 30 days. The Bureau estimates that only about five percent of initial payday loans (those that are not part of an existing sequence) will be prevented by the annual limits, and roughly six percent of borrowers will be prohibited from initiating a new sequence of loans they would have started absent the rule. That is, only about five percent of the loans that are most likely to reflect a new need for credit will be affected by these annual limits on borrowing. These affected borrowers will then have to satisfy the ATR test in order to obtain a new loan.

Vehicle title borrowers are more likely to find that they are unable to obtain an initial loan because the principal step-down approach does not provide for vehicle title loans and thus these borrowers must satisfy the ATR requirement. Many of these consumers could choose to pursue a payday loan instead and seek to avail themselves of the principal step-down approach. However, there are two States that permit vehicle title loans but not payday loans, and 15 percent of vehicle title borrowers do not have a checking account, and thus may not be eligible for a payday loan under the lender's own rules (as borrowers without a checking account are allowed to obtain a loan under this rule).[1213] In addition, many States limit the size of payday loans but not the size of vehicle title loans, so some borrowers may prefer a vehicle title loan. For all of these borrowers, their ability to obtain an initial loan will depend upon their ability to demonstrate an ability to repay and satisfy any other underwriting requirements the lender may impose.

Consumers who are unable to obtain a new loan because they cannot satisfy

[1211] Some commenters suggested that the procedural requirements would reduce both speed and access to short-term credit, leading to consumer harm for those consumers who experience unanticipated shocks to their finances (*e.g.,* car repair or hospital bill). As the principal step-down approach is likely to be the primary means through which customers get infrequent loans to deal with shocks of this nature, the procedural requirements are unlikely to bind on customers dealing with these events.

[1212] It is likely that those stores able to determine ATR more rapidly and at a lower cost (*e.g.,* via an automated process) will have a competitive advantage. Given the reduction in stores anticipated in this section, in steady-state the Bureau has concluded that relatively few lenders will employ a manual process, and those that do will be the ones who are able to streamline their assessments.

[1213] The 2015 FDIC National Survey of Unbanked and Underbanked Households finds that 12.4 percent of consumers reporting having used an auto title loan in the prior 12 months are unbanked.

the ATR requirement and have exhausted or cannot qualify for a loan under the principal step-down approach will bear some costs from reduced access to credit. They may be forced to forgo certain purchases,[1214] incur high costs from delayed payment of existing obligations, incur high costs and other negative impacts by simply defaulting on bills, or they may choose to borrow from sources that are more expensive or otherwise less desirable. Some borrowers may overdraft their checking account; depending on the amount borrowed, an overdraft on a checking account may be more expensive than taking out a payday or single-payment vehicle title loan. Similarly, ''borrowing'' by paying a bill late may lead to late fees or other negative consequences like the loss of utility service. Other consumers may turn to friends or family when they would rather borrow from a lender. Still others may seek other types of credit, like longer-term loans not covered by the origination portions of this rule, credit cards, or other alternatives. And, some consumers may take out online loans from lenders that do not comply with this regulation.[1215]

Survey evidence provides some information about what borrowers are likely to do if they do not have access to these loans. Using the data from the CPS Unbanked/Underbanked supplement, researchers found that the share of households using pawn loans increased in States that banned payday loans, to a level that suggested a large share of households that would otherwise have taken out payday loans took out pawn loans, instead.[1216] A 2012 survey of payday loan borrowers found that a majority indicated that if payday loans were unavailable they would reduce expenses, delay bill payment, borrow from family or friends, and pawn personal items. Some did indicate, however, that they would get a bank or credit union loan or use a credit card to cover expenses.[1217] Finally, data collected by the Bureau from banks that ceased offering deposit advance products (''DAP loans''), showed that there was no evidence that reduced access to these products led to greater rates of overdraft or account closure.[1218]

In many comments received by the Bureau it was suggested that more consideration be given to the alternatives that displaced borrowers may turn to absent available payday or title loans. Overdraft fees, ''illegal loan sharks,'' and pawn loans were specifically mentioned as inferior forms of credit that borrowers denied a payday or title loan may utilize. The Bureau agrees that these are indeed valid potential costs, and considered them in the proposal. The Bureau notes that its summary and analysis of the related literature and empirical evidence suggests that intensive payday borrowers experienced increase welfare from reduced use of these loans. This outcome reflects the net effects of any substitution patterns or reductions in borrowing.

iii. Limits on Loan Size

Lenders making loans using the principal step-down approach could not make loans larger than $500. This will limit the availability of credit to borrowers who would otherwise seek a larger loan, and either do not have access to loans under the ATR approach or cannot demonstrate their ability to repay the larger loan. In the data analyzed by the Bureau, however, the median payday loan is only $350, and some States impose a $500 maximum loan size, so most existing payday loans would fall at or below the $500 maximum.[1219] Any borrowers that would have preferred a vehicle title loan but instead obtain a payday loan originated under the principal step-down approach because of the rule may be more affected by the loan size limit, as the median single-payment vehicle title loans is for nearly $700.[1220]

There are additional restrictions on loan sizes made via the principal step-down approach that apply to the second and third loans in a sequence. That is, each subsequent loan in a sequence made using the principal step-down approach must decrease by at least one-third the amount of the original loan. For example, a $450 initial loan would mean borrowers are restricted to no more than $300 for a second loan, and no more than $150 for a third loan.

In the Bureau's preferred simulation, described in part VII.F.1.c, around 40 percent of the reduction in loan revenues were the result of $500 cap on initial loans and the principal step-down, with the remaining reduction attributable to re-borrowing restrictions. Put another way, the reduction in revenues (which correspond to total amounts borrowed) predicted by the Bureau's simulations are partially, though not primarily, attributed to changes in maximum loans amounts.[1221]

iv. Limits on Re-Borrowing

For storefront payday borrowers, most of the reduction in the availability of credit will likely be due to borrowers who have recently taken out loans being unable to roll their loans over or borrow again within a short period of time. As discussed above, the Bureau believes that most storefront payday lenders will employ the principal step-down approach to making loans. If lenders only make loans under the principal step-down approach, each successive loan in a sequence will have to reduce the amount borrowed by one-third of the original principal amount, with a maximum of three loans per sequence, and borrowers will only be able to take out six covered short-term loans in a 12-month period or be in debt on such loans for at most 90 days over the course of any 12-month period.[1222] This restriction could limit borrowers paid monthly to as few as three loans per year, depending on when they take out their loans relative to when they are

[1214] Specifically, consumers may react to reduced access to short-term loans by decreasing their short-run consumption. However, to the extent they avoid long sequences of loans, and the fees associated with them, their longer-term consumption may increase. One study of consumption responses to payday loan access shows that overall consumption increases as payday loan use declines. *See* Brian Baugh, ''What Happens When Payday Borrowers Are Cut Off from Payday Lending? A Natural Experiment,'' Fisher College of Bus., Ohio State U. 2015).

[1215] It has been suggested that some borrowers might turn to in-person illegal lenders, or ''loan sharks.'' The Bureau is unaware of any data on the current prevalence of illegal lending in the United States by individuals. Nor is the Bureau aware of any data suggesting that such illegal lending is more prevalent in States in which payday lending is not permitted than in States which permit payday lending or of any evidence that the amount of such lending has increased in States which adopted a prohibition on payday lending.

[1218] CFPB Report on Supplemental Findings, at 35–39. The Bureau notes, however, that if demand for short-term liquidity is inelastic and outside options are limited, a decrease in access to one option will necessarily increase the demand for its substitutes.

[1219] CFPB Payday Loans and Deposit Advance Products White Paper, at 15.

[1220] CFPB Vehicle Title Report, at 7 tbl. 1.

[1221] Note that the Bureau's simulations do not consider the possible strategic responses to the amortization features of loans made via the principal step-down approach. For example, some lenders may encourage borrowers to take out larger initial loans to ensure increased access to credit on the second and third loans in a sequence. To the extent this increases initial loan sizes, the Bureau's estimates may overstate the expected decreases in lender revenues and borrowers' access to credit.

[1222] Prior loans made using the ATR approach would count towards the maximum number of loans and maximum time-in-debt limits of the principal step-down approach.

paid. If lenders make both ATR and principal step-down approach loans, borrowers who can demonstrate an ability to repay a loan will be able to take out ATR approach loans after they have reached the cap on loans issued via the principal step-down approach.

As described above, consumers will benefit from not having long sequences of loans and the associated higher than anticipated borrowing costs. Some borrowers, however, may experience costs from not being able to continue to re-borrow. For example, consider a borrower who has a loan due and is unable to repay one-third of the original principal amount (plus finance charges and fees), but who anticipates an upcoming influx of income. This borrower may experience additional costs if unable to re-borrow the full amount due because of the restrictions imposed by the rule. These costs could include the costs of being delinquent on the loan and having a check deposited or ACH payment request submitted, either of which may lead to an NSF fee. Borrowers in this situation may reasonably expect to eventually repay the loan, given the upcoming influx, but may simply default if they are not permitted to re-borrow.

The Bureau does not believe, however, that the restrictions on lending will necessarily lead to increases in borrowers defaulting on payday loans, in part because the step-down provisions of the principal step-down approach are designed to help consumers reduce their debt over subsequent loans. This step-down approach should reduce the risk of payment shock and lower the risk to lenders and borrowers of borrowers defaulting when a lender is unable to continue to lend to them (though some borrowers who would have re-borrowed the full amount of the initial loan may now default, if they are unable to successfully make the step-down payment). Additionally, the Bureau's simulations indicate that the majority of reduced access to credit will result from the re-borrowing restrictions, rather than initial loan size cap and forced step-down features of loans made via the principal step-down approach. It is also possible that some borrowers or lenders will strategically respond to the step-down provisions by taking out larger initial loans to ensure that subsequent loans in a sequence are sufficient to cover anticipated expenses. Finally, borrowers anticipating an influx of more than three pay periods in the future may find it more appropriate to pursue a longer-term loan (where permitted), meaning they should be less prevalent in the market for short-term loans.

Borrowers taking out single-payment vehicle title loans will also be much less likely to be able to roll their loans over or borrow again within a short period than they are today. They will potentially suffer the same costs as by payday borrowers taking out loans under the ATR approach who would prefer to roll over or re-borrow rather than repay their loan without re-borrowing.

v. Reduced Geographic Availability of Covered Short-Term Loans

Consumers will also have somewhat reduced physical access to payday storefront locations. Bureau research on States that have enacted laws or regulations that substantially impacted the revenue from storefront lending indicates that the number of stores has declined roughly in proportion to the decline in revenue.[1223] Because of the way payday stores locate, however, this has had much less impact on the geographic availability of payday loans. Nationwide, the median distance between a payday store and the next closest payday store is only 0.3 miles. When a payday store closes in response to laws that reduce revenue, there is usually a store nearby that remains open. For example, across several States with regulatory changes, between 93 and 95 percent of payday borrowers had to travel less than five additional miles to find a store that remained open. This is roughly equivalent to the median travel distance for payday borrowers nationwide. Using the loan volume impacts previously calculated above for storefront lenders exclusively using the principal step-down approach (which were about 71–76 percent without accounting for additional ATR lending or for changes in product terms or mixes[1224]) the Bureau forecasts that a large number of storefronts will close under the rule, but that consumers' geographic access to stores will not be substantially affected in most areas.

c. Evidence on the Benefits and Costs to Consumers of Access to Payday and Other Covered Loans

Most studies of the effects of payday loans on consumer welfare have relied on State-level variation in laws governing payday lending.[1225] Most of these studies rely on an ''intent to treat'' identification strategy, where access to payday loans is used as a proxy for actual use. While certainly instructive, the Bureau believes findings from such studies are generally less compelling than those based on individual-level data that are able to identify actual payday borrowers and use. A third class of studies addressing questions around payday focuses on experiments, either in the field or in laboratory settings. Within this literature, most studies have examined storefront payday loans; the literature studying online loans and vehicle title lending is much smaller; and there is even less direct evidence on longer-term balloon-payment loans.

The Bureau notes that all of the studies vary in their empirical rigor and the connection of their causal inference to their documented findings. As such, the Bureau, based on its experience and expertise, finds some studies to be more compelling than others. The Bureau discussed many of these studies in the proposal; additional studies are discussed here in light of comments received on the proposal.

As noted above, the rule does not ban payday or other covered short-term loans or longer-term balloon-payment loans. In fact, the Bureau believes that covered short-terms loans will still be

[1223] CFPB Report on Supplemental Findings, at Chapter 3. This is consistent with theoretical research showing that State price caps should lead to fewer stores and more borrowers per store. *See* Mark Flannery & Katherine Samolyk, ''Payday Lending: Do the Costs Justify the Price?,'' (FDIC Ctr. for Fin. Res., Working Paper No. 2005–09, 2005), *available at https://www.fdic.gov/bank/analytical/cfr/2005/wp2005/cfrwp_2005–09_flannery_samolyk.pdf*; Mark Flannery & Katherine Samolyk, ''Scale Economies at Payday Loan Stores,'' at 233–259 (Proceedings of the Federal Reserve Bank of Chicago's 43rd Annual Conference on Bank Structure and Competition 2007). It is also consistent with empirical analysis showing a correlation between State price caps and the number of stores per State resident. Pew Charitable Trusts, Fact Sheet, ''How State Rate Limits Affect Payday Loan Prices'' (Apr. 2014), *available at http://www.pewtrusts.org/~/media/legacy/uploadedfiles/pcs/content-level_pages/fact_sheets/stateratelimitsfactsheet.pdf*.

[1224] It is important to note that the estimates for the reduction in lending above may underestimate impacts in some ways and overestimate them in others. For example, store closures may cause total lending to fall further. A small share of potential borrowers will lose easy access to stores. In addition, the reduced physical presence and therefore visibility of stores, even in areas where as store is fairly close by, may lead to some consumers not taking out loans, or borrowing less, because they are not reminded as frequently of the availability of payday loans. Some lenders, however, may successfully adapt to the regulation by, for example, broadening the range of products they offer. The ability to do this will vary across States and across individual lenders.

[1225] This section focuses on the benefits and costs to consumers from payday lending. The literature on consumers' understanding and expectations regarding payday lending, notably Mann (2013), is discussed earlier in this section and above in Market Concerns—Underwriting. Other strands of the literature related to payday and small-dollar lending (*e.g.,* those addressing the populations of borrowers, endogenous market entry by lenders, changes in behavior or outcomes not related to regulatory changes, and academic studies of the business models or market structure) were also reviewed by the Bureau, but are not discussed here.

available to consumers facing a truly short-term need for credit in States that allow them. In contrast, most research has focused almost exclusively on the question of what happens when all access to a given form of credit is eliminated, as opposed to restricted. This is often referred to as the extensive margin (access), rather than the intensive margin (use, once accessed). As noted above, the available evidence from States that have imposed strong restrictions on lending, but not outright or de facto bans, suggests that, even after large contractions in this industry, loans remain widely available, and access to physical locations is not unduly limited.

To the extent that ability to repay and/or shorter loan sequences are associated with beneficial borrowing, this should not unduly restrict the positive welfare for consumers associated with borrowing to cover discrete needs. That said, if the benefits from borrowing are realized from later loans in a 12-month period, and are concentrated predominately in the segment of borrowers who would not pass an ATR assessment, the rule will more substantially reduce the benefits realized by borrowers. As noted at the end of this section however, the Bureau believes that the literature implies the greatest benefits consumers receive from access to credit are realized early in a borrowing sequence.

i. Intent-To-Treat Studies

As mentioned previously, intent-to-treat studies focus on the availability of credit to larger populations of individuals, rather than focusing on the actual usage of that credit. Many of these studies focus on the changes resulting after States institute bans on payday lending. For example, Morgan and Strain (2008) study a number of State law changes over a ten-year period, and find that payday bans were associated with higher rates of bounced checks.[1226] They also found that bans were associated with higher rates of complaints about debt collectors to the FTC, but lower rates of Chapter 13 bankruptcy filings. In an update to that paper, Morgan et al. (2012) expand the time frame, analyze more State-level payday bans, and consider the impacts of enabling payday lending as well.[1227] They again find evidence that bounced checks and complaints about debt collectors to the FTC increase, and Chapter 13 bankruptcy filings decrease in response to limits on payday lending. They also find that the service fees received on deposit accounts by banks operating in a single State tend to increase with limits on payday lending, and interpret this as an indication that payday loans help to avoid overdraft fees.

In contrast, Campbell, et al. (2008) found that Georgia's payday ban appeared to improve consumer's outcomes, as consumers living in counties further from bordering States that allowed payday lending had lower rates of involuntary checking account closures.[1228] Bhutta et al. (2016), using data from the Current Population Survey, show some evidence of increased use of alternative forms of high-interest credit (*e.g.,* pawn loans) when access to payday loans was restricted.[1229] Additionally, they present weak evidence of an increase in involuntary account closings after the imposition of State bans of payday loans, but this effect did not persist. In data collected by the Bureau from banks that ceased offering deposit advance products (''DAP loans''), there was no evidence that reduced access to these products led to greater rates of overdraft or account closure.[1230]

Melzer (2011) measured access to payday loans of people in States that do not allow payday lending using distance to the border of States that permit payday lending.[1231] He measured the effects of access on the payment of mortgages, rent and utilities, and found that greater access causes greater difficulty in paying these basic expenses, as well as delays in needed medical care. In a follow-up study, Melzer (2016), found higher Supplemental Nutritional Assistance Program (food stamp) usage and lower child-support payments with greater payday availability.[1232]

Two additional studies exploit State-level variation in access to estimate the impacts of payday loans by looking at similarly situated counties. Desai & Elliehausen (2017) compare counties in States that ban payday lending (Georgia, North Carolina, and Oregon) with adjacent States that allow such lending.[1233] While the authors cannot observe whether or to what extent payday borrowing is actually occurring in these counties, it appears that legislation in the States curbing payday lending had very small, mostly positive, effects on delinquencies. Edminson (2011) uses a similar identification approach (county-level analysis with varying payday restrictions), but does not limit the analysis to counties in adjacent States.[1234] This study concludes that restrictive payday regimes are associated with lower average credit scores, even when income is accounted for.

Zinman (2010) conducted a survey of payday loan users in Oregon and Washington both before and after a new law took effect in Oregon that limited the size of payday loans and reduced overall availability of these loans.[1235] He showed that the law appeared to increase consumer hardship, measured by unemployment and qualitative self-assessments of current and expected future financial conditions, over the subsequent five months.

An alternative to the State-level variation in extensive access to payday loans is to look at the intensive concentration of lenders in a geographical area as a proxy for payday loan availability. For example, Morse (2011) looked at zip code-level data to assess the impact of the availability of payday loans in particular circumstances, natural disasters.[1236] Using information about the concentration of payday lenders by zip code and linking it to data on natural disasters, she found that greater access to payday lending in times of disaster—which may generalize to unexpected personal emergencies—reduces home foreclosures and small property crime. Dobridge (2014) found that, in normal times, access to payday loans reduced consumer well-being, as measured by purchases of consumer durable

goods.[1237] But, similar to Morse (2011), Dobridge found that in times of severe weather, access to payday loans allowed consumers to smooth consumption and avoid declines in food spending or missed mortgage payments. Carrell and Zinman (2014) also developed a measure of payday loan access similar to that used by Morse (2011) and linked it to the job performance of Air Force personnel, showing that greater access to payday lending leads to worse job performance to such an extent that fewer are eligible for reenlistment.[1238]

Carter and Skimmyhorn (2016) used an alternative identification strategy, utilizing the differential access to payday loans associated with the implementation of the Military Lending Act (MLA). The MLA effectively banned payday loans to military personnel, allowing the authors to measure the impact of payday loans on financial well-being and labor market outcomes of soldiers in the Army.[1239] Unlike Carrell and Zinman who also focused on military personnel, Carter and Skimmyhorn found no effects. They speculated that some of the difference in the outcomes of the two preceding studies could reflect the fact that re-enlisting in the Army was easier than re-enlisting in the Air Force during the periods covered by the respective studies.

Another study also used the implementation of the MLA to measure the effects of payday loans on the ability of consumers to smooth their consumption between paydays, and found that access to payday loans did appear to make purchasing patterns less concentrated around paydays (Zaki, 2013).[1240] This study also found some evidence that access to payday loans increased what the author referred to as ''temptation purchases,'' specifically alcohol and consumer electronics.

Among these intent-to-treat studies, industry comments most often cited Morgan and Strain (2008), Zinman (2010), Morse (2011), and Morgan et al. (2012), along with a related study that is no longer available.[1241] Many of these commenters argued that these studies suggest strong, positive welfare impacts of access to payday lending. However, Morgan and Strain (2008) relies on a methodology that severely undermines their conclusions. Specifically, Morgan and Strain's (2008) assertion that checks are returned more frequently from the non-authorizing payday States of Georgia and North Carolina relies on data that intermingles those States' data with that of numerous authorizing States (*e.g.,* Louisiana, Alabama, and Tennessee).[1242] Additionally, the complaints data they cite are limited by the fact that the FTC is unlikely to receive complaints about payday lending (at the time, State regulators were more likely to receive such complaints). As such, the complaints measure the authors employ may not indicate the actual rate of credit-related complaints, let alone overall consumer satisfaction.

While Morgan et al. (2012) expands on the previous studies by including more States (contributing to the policy variation needed for identification), and additional outcome measures (*e.g.,* bank fee income), they fail to adequately address the shortcomings of their previous studies. For example, this study once again employs the measure of complaints received by the FTC. It also relies on data sources that comingle returned checks from States with payday bans with those from States that permit payday, which their difference-in-difference identification approach may not adequately address. For example, the Atlanta check processing center (CPC) is coded as ''banned'' even after States that allow payday (*e.g.,* Alabama and Louisiana) are absorbed; the Oregon payday ban is never coded into their data since the CPC for Oregon is in Seattle (and Washington allows payday); etc.[1243] The biggest addition to the paper relative to Morgan and Strain (2008) is that Morgan et al. (2012) analyze a new outcome to support the notion that payday limits are associated with an increase in overdrafts by looking at bank revenues realized through fees. However, their proxy for overdraft fees includes all service fees on deposit accounts at a time when the prevalence of overdraft was changing, and they limit their sample of banks to only those operating in a single State, limiting both the accuracy and generalizability of their finding.

Finally, most of the findings in Morgan et al. (2012) are not robust but rather highly sensitive to the choice of specification. For example, the point estimates and significance levels change a great deal in response to the inclusion or exclusion of State-specific time trends; the service fee findings are dependent on using a log fees per capita measure, rather than the more natural fees per capita or log fees; and their findings for the impacts of State-level bans on returned checks become insignificant when questionable demographic variables are excluded from the regressions.[1244]

Zinman (2010) was also frequently cited by industry comments. Those comments point to the qualitative findings that survey respondents indicate greater levels of ''financial hardships'' after a payday ban. However, the quantitative findings show indications that the welfare effects of the ban may have been positive (*e.g.,* lower rates of phone disconnections, greater rates of on time bill

Staff Report No. 309, 2008), *available at https://www.newyorkfed.org/research/staff_reports/sr309.html* (similarly mischaracterizes authorizing and non-authorizing States, *e.g.,* asserting North Carolina to be a non-authorizing State despite having 500+ payday lenders during the period analyzed.).

[1243] These findings were obtained from a brief analysis of the data used by Morgan et al. (2012), *see* Donald P. Morgan and Ihab Seblani, ''How Payday Credit Access Affects Overdrafts and Other Outcomes,'' 44 J. of Money, Credit, and Banking 519 (2012).

[1244] The authors note their coefficients of interest ''were insignificant in regressions using (unlogged) levels of fee income and income per capita.'' Donald P. Morgan and Ihab Seblani, ''How Payday Credit Access Affects Overdrafts and Other Outcomes,'' 44 J. of Money, Credit, and Banking 519, at n.16 (2012). The findings about the sensitivity of the returned checks estimates were achieved by analyzing the Morgan et al. (2012) data available at *id.* It should also be noted that the Bureau finds other weaknesses in the analytic approach employed in this study. Specifically, the difference-in-difference approach for returned checks relies on observations at the check processing center (CPC) level, yet a single CPC may process checks from many States, some of which ban payday, some of which allow it, and some of which have no explicit allowance or ban. The authors attempt to control for this using a very large number of dummy variables to capture CPC mergers, but this results in estimates that are highly sensitive to specification assumptions. Additionally, the study appears to code in ''sharp'' policies where the policy is actually ''fuzzy,'' which would cause identification problems (*e.g.,* they code a payday ban for P.A. in 2007, when the last payday lender exited the market, even though there had been a longer decline since 2006 when the legislation was passed). There are additional econometric issues with this study's approach, but the Bureau believes those cited here are sufficient to cast doubt on the strength of the reported findings.

payment).[1245] Additionally, the findings rely on a small survey conducted across only two States where idiosyncratic effects may drive many of the results. As such, the Bureau believes the actual welfare implications from this study are hard to generalize.

Priestly (2014), another paper frequently mentioned in industry comments, is more clear on the welfare implications of payday, and specifically re-borrowing. The author's results indicate, for example, that each rollover in 2008–2009 was associated with a .109-point increase in a customer's VantageScore (a credit score similar to FICO). The Bureau believes these benefits are quite small, as Priestly's findings suggest that the average consumer in her sample would need to roll a payday loan over more than nine times (at a cost of approximately $135 per $100 borrowed) in order to increase his or her VantageScore by one point. For the average customer in Priestly's sample, this would represent an increase from 587 to 588, deep enough into the subprime range that such a change would be unlikely to have any practical value.

The Morse (2011) study differs from the other intent-to-treat studies most cited by commenters, as it focuses on a source of variation more relevant to this rule (endogenous concentrations of lenders, rather than restrictions on locations), and its welfare implications are more nuanced. Specifically, Morse finds that borrowers appear ''better off'' in the face of unexpected shocks (*i.e.,* those that lead to discrete needs) with access to payday loans. While the outcome measures used in the study (*e.g.,* home foreclosures) limit the generalizability of the findings (as homeowners may not be representative of the typical payday borrower), the Bureau believes this study is methodologically sound and the findings are large and significant enough to warrant deep consideration. However, the Bureau has found little in this study to imply that a limit on continued use of payday loans (rather than a limit on the availability of short-term credit for discrete needs) would necessarily decrease borrowers' welfare.

ii. Individual-Level Studies

Other studies, rather than using differences across States in the availability of payday loans, have used data on the actual borrowers who apply for loans and are either offered loans or are rejected. These individual-level studies offer more direct insight into the effects of payday loans, rather than the effect of access measured by the intent-to-treat studies. Skiba and Tobacman (2009) used this approach to find that taking out a payday loan increases the likelihood that the borrower will file for Chapter 13 bankruptcy.[1246] They found that initial approval for a payday loan essentially doubled the bankruptcy rate of borrowers. Bhutta, et al., (2015) used a similar approach to measure the causal effects of storefront borrowing on borrowers' credit scores.[1247] They found that obtaining a loan had no impact on how the consumers' credit scores evolved over the following months. The authors noted, however, that applicants generally had very poor credit scores both prior to and after borrowing (or being rejected for) a payday loan. In each of these studies, the authors were unable to determine whether borrowers that were rejected by the lender from which they had data were able to take out a loan from another lender.

Two other studies have used data on payday borrowing and repayment behavior to compare changes over time in credit scores for different groups of borrowers. Priestley (2014), discussed above, measured changes over time in credit scores for borrowers who re-borrowed different numbers of times, and found that in some cases it appeared that borrowers who re-borrowed more times had slightly more positive changes in their credit scores.[1248] These differences were not economically meaningful, however, implying borrowers would need to rollover a loan more than nine times (at an average total cost of $135 per $100 borrowed) to see a one-point increase in their VantageScores.[1249] Mann (2014) compared the changes in credit scores of borrowers who defaulted on their loans with borrowers who did not, and also found no difference.[1250] Similar to the Bhutta, et al. (2015) study, neither the Priestly nor Mann studies found a meaningful effect of payday loan borrowing behavior on credit scores. Unlike Bhutta, et al. (2015), however, if either had measured an effect it would have simply been a finding of correlation, as neither had a way of identifying an effect as causal.

Gathergood, et al. (2016),[1251] used an approach similar to that used by Skiba and Tobacman (2014) and Bhutta, et al., (2015) to study the effects of taking out payday loans on United Kingdom borrowers' future overdrafting, rates of delinquency on other loan products, subjective well-being, and feelings of regret about borrowing. The products studied are similar to payday loans in the United States, primarily single-payment loans due in roughly 30 days. While the UK market includes storefront lenders, it is dominated by online lenders. The authors found that online payday loans led to higher rates of bank overdraft and delinquencies on other loans. While it had no effect on subjective measures of well-being, borrowers did report regretting the decision to take out the payday loan.

Baugh (2015) used the closure of dozens of online payday lenders, which cut off borrowers' access to such loans and other high-cost online credit, to measure the effects of these loans on consumers' consumption, measured via expenditures on debit and credit cards, and on overdrafts and insufficient funds transactions.[1252] He found that losing access to these loans, especially for consumers who had been heavy users of these loans, led to increased consumption and fewer overdrafts or NSF transactions.

iii. Experimental Studies

There have also been at least three studies of the impacts of payday loans that rely on experimental approaches. Bertrand and Morse (2011) run an experiment providing three types of information disclosures about the costs and re-borrowing rates of payday loans at the time borrowers receive their loans

[1245] Phone disconnections were explored in greater detail in the working paper version. *See* Jonathan Zinman, ''Restricting Consumer Credit Access: Household Survey Evidence on Effects Around the Oregon Rate Cap,'' (Dartmouth College, 2008), *available at http://www.dartmouth.edu/~jzinman/Papers/Zinman_RestrictingAccess_oct08.pdf*.

[1248] Jennifer Priestly, ''Payday Loan Rollovers and Consumer Welfare'' (Kennesaw State U., Dep't of Stats. and Analytical Sciences 2014).

[1249] The Priestley study also compared changes over time in credit scores of payday borrowers in different States, and attributed those differences to differences in the States' payday regulations. This ignores differences in who chooses to take out payday loans in different States, and ignores the different changes over time in the broader economic conditions in different States.

[1250] Ronald Mann, ''Do Defaults on Payday Loans Matter?,'' (Colum. L. and Econ., Working Paper No. 509, 2015), *available at https://papers.ssrn.com/sol3/Papers.cfm?abstract_id=2560005*.

[1251] John Gathergood et al., ''Comments on: How do Payday Loans Affect Consumers?'' (NBER Summer Institute–L. and Econ. 2015).

[1252] Brian Baugh, ''What Happens When Payday Borrowers Are Cut Off From Payday Lending? A Natural Experiment,) (Ph.D. dissertation, Ohio State Univ., 2015), *available at http://fisher.osu.edu/supplements/10/16174/Baugh.pdf*.

from a storefront payday lender.[1253] The disclosures are found to reduce the incidence of re-borrowing by 6–11 percent and the average amount borrowed by 12–23 percent relative to the control group, with stronger results for borrowers self-reporting higher degrees of self-control.

Fusaro and Cirillo (2011) conduct an experiment in which some borrowers are given no-fee loans and their re-borrowing rates are compared to borrowers who are given loans with normal fees.[1254] They find that re-borrowing rates are not different between the two groups. This could lead to at least two possible and compatible conclusions: That the cost does not drive a cycle of debt, and/or that the single-payment structure is a key factor that drives unaffordability, not merely the fee.

Commenters also referenced a third experimental study, Wilson et al. (2010).[1255] In this study the authors conducted a laboratory experiment designed to test whether access to payday loans improves or worsens the likelihood of ''financial survival'' or financial health in the face of expense shocks. The authors found that the students engaged in the game were more likely to successfully manage financial shocks if they had access to payday loans. However, when they explore the intensity of usage, they find that participants who utilize 10 or more loans over the 30 experimental months find themselves at greater risk than they would under a regime that bans payday loans.

iv. Discussion of Literature

The Bureau received numerous comments selectively citing the studies listed above, and making reference to particular results of interest to the commenters. Generally, industry and trade group commenters favored studies that imply access improves consumer outcomes (*e.g.,* Priestly (2014), Zinman (2010)); consumer groups favored studies that imply access harms consumers (*e.g.,* Skiba and Tobacman (2015), Baugh (2015)); and academic researchers referenced numerous studies highlighting the ambiguity or uncertainty illustrated by the literature. The Bureau has considered the comments carefully and gives weight to the studies in proportion to their applicability to the rule, generalizability, and methodological soundness.[1256] Additionally, and as much as possible, the Bureau has endeavored to rely on the descriptive (positive) findings of the studies, and not the authors' interpretations (often normative) of those findings.

In reviewing the existing literature, the Bureau notes that the evidence on the impacts of the availability of payday loans on consumer welfare indeed varies. In general, the evidence to date suggests that access to payday loans appears to benefit consumers in circumstances where they use these loans for short periods to address an unforeseen and discrete need, such as when they experience a transitory and unexpected shock to their incomes or expenses. However, in more general circumstances, access to and intensive use of these loans appears to make consumers worse off. A more succinct summary is: Access to payday loans may well be beneficial for those borrowers with discrete, short-term needs, but only if they can succeed in avoiding long sequences of loans.

There is also some limited evidence about the welfare effects of ''intensive'' users of payday. It should be noted, however, that there are no studies the Bureau is aware of that directly evaluate the welfare impacts of the seventh and later loans taken by a borrower in a 12-month span.[1257] There are also no studies on the welfare effects of payday loans made specifically to borrowers who would have failed an ATR assessment. Since the rule's restrictions should only bind for individuals who demand a seventh loan in a 12-month period and cannot demonstrate an ability to repay, there are no studies that speak directly to the likely impacts of the regulation.

As this rule will allow for continued access to the credit that appears to benefit consumers with discrete needs, the Bureau believes that the rule limits the potential harm other borrowers may experience while maintaining much of the welfare gains consumers realize from access to these loans.

G. Benefits and Costs of the Rule to Covered Persons and Consumers—Payments and Notices

The rule limits how lenders initiate payments on a covered loan from a borrower's account and imposes two notice requirements relating to such payments. Specifically, if two consecutive prior attempts to withdraw payment through any channel from a borrower's account have failed due to insufficient funds, lenders are prohibited from continuing to attempt to withdraw payment from a borrower's account, unless the lender obtains a new and specific authorization to make further withdrawals from the consumer's account. The rule also requires lenders of covered loans to provide a notice to a borrower before the initial withdrawal attempt and before initiating an unusual withdrawal attempt. A special notice is also required to be sent to the borrower if the lender can no longer continue to initiate payment directly from a borrower's account because two consecutive prior attempts had failed due to insufficient funds. The impacts of these proposals are discussed here for all covered loans.

Note that the Bureau expects that unsuccessful payment withdrawal attempts will be less frequent under the rule. This is because of the notice of irregular withdrawals; and it is also true because the ability-to-repay provisions or the requirements of the conditional exemption loans will reduce the frequency with which borrowers receive loans that they do not have the ability to repay. This should in turn lessen the impacts of the limitation on payment withdrawal attempts and the number of instances where a lender is required to notify consumers that the lender is no longer permitted to attempt to withdraw payments from a borrower's account.

Most if not all of the requirements in this portion of the rule are activities that lenders could have chosen to engage in absent the rule. As such, the Bureau

[1254] Marc A. Fusaro & Patricia J. Cirillo, ''Do Payday Loans Trap Consumers in a Cycle of Debt?,'' (2011), *available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=1960776.*

[1255] Bart J. Wilson et al., ''An Experimental Analysis of the Demand for Payday Loans,'' 10 B.E. J. of Econ. Analysis & Policy (2010).

[1256] The Bureau received numerous comments calling into question the objectivity of some studies funded by industry. These issues have also been noted in the press. *See, e.g.,* Ben Walsh and Ryan Grim, ''Emails Show Pro-Payday Loan Study Was Edited by the Payday Loan Industry,'' Huffington Post, Nov. 2, 2015, *available at http://www.huffingtonpost.com/entry/payday-loan-study_us_5633d933e4b00aa54a4e4273*; Christopher Werth, ''Tracking the Payday-Loan Industry's Ties to Academic Research,'' Freakonomics, Apr. 6, 2014, *available at http://freakonomics.com/podcast/industry_ties_to_academic_research/.* At least one of these studies appears to have given editorial and content control to an industry lobbyist. Others failed to reference the financial and other support received from the group in any of their acknowledgements, as is the best practice in such research. Still others mention the support received, but assert the group had no influence on the study or its findings (a similar assertion was made in the study where influence was documented). Such comments are to be expected in any contentious policy debate. Overall, the Bureau attempted to judge each study on its merits. As such, findings from these industry studies are generally weighted by their methodological soundness (in terms of data collection and analysis).

[1257] Bart J. Wilson et al., ''An experimental analysis of the demand for payday loans,'' 10 B.E. J. of Econ. Analysis & Policy (2010) (This analysis does show that once a participant takes 10 or more loans in a 30-month span, the loans appear to be more harmful than helpful to financial survival.)

believes that, while there are potential benefits to lenders, the restrictions are expected to impose some costs on these covered persons.[1258] That said, the Bureau is aware that many lenders have practices of not continuing to attempt to withdraw payments from a borrower's account after one or more failed attempts, and that some depository institutions do not assess additional fees to customers when continued attempts to withdraw from their accounts are made. In addition, some lenders provide upcoming-payment notices to borrowers in some form.

1. Limitation on Payment Withdrawal Attempts

The rule prevents lenders from attempting to withdraw payment from a consumer's account if two consecutive prior payment attempts made through any channel are returned for nonsufficient funds. The lender can resume initiating payment if the lender obtains from the consumer a new and specific authorization to collect payment from the consumer's account.

a. Benefits and Costs to Covered Persons

The rule will impose costs on lenders by limiting their use of payment methods that allow them to withdraw funds directly from borrowers' accounts, and by imposing the cost of obtaining a renewed authorization from the consumer or using some other method of collecting payment. There may be some benefits to lenders of reduced attempts to withdraw funds following repeated failures, as other methods of collecting may be more successful.

The impact of this restriction depends on how often a lender previously attempted to collect from a consumers' account after more than two consecutive failed transactions, and how often the lender was successful in doing so. Based on industry outreach, the Bureau understands that some lenders had already established a practice of not continuing to attempt to collect using these means after one or two failed attempts. These lenders would not incur costs from the restriction. Additionally, some depository institutions have disallowed repeated attempts to collect using these means; lenders attempting to collect from such depositories would also not incur costs from this restriction.

The Bureau has analyzed the ACH payment request behavior of lenders making payday or payday installment loans online. The Bureau found that about half the time that an ACH payment request fails, the lender makes at least two additional ACH payment requests.[1259] The likelihood of a successful payment request after a request that was returned for insufficient funds is quite low. Only 30 percent of requests that follow a failed request succeed, only 27 percent of third requests succeed, and after that the success rate is below 20 percent.[1260] The Bureau found that only 7 to 10 percent of the payments attempted through the ACH system came after two failed payments requests, equivalent to $55 to $219 per borrower from whom a payment was collected after the two failed attempts.[1261] These payments would have been prevented if the rule had been in place at the time. The Bureau notes that under the restriction, lenders can still seek payment from borrowers by engaging in other lawful collection practices. As such, the preceding are high-end estimates of the impact this restriction would have had on the collection efforts of these lenders. These other forms of lawful collection practices, however, may be more costly for lenders than attempting to collect directly from a borrower's account.

After the limitation is triggered by two consecutive failed attempts, lenders are required to send a notice to consumers. To seek a new and specific authorization to collect payment from a consumer's account, the lender can send a request with the notice and may need to initiate additional follow-up contact with the consumer. The Bureau believes that this will most often be done in conjunction with general collections efforts and will impose little additional cost on lenders, other than the costs associated with the disclosures, discussed below.

To the extent that lenders assess returned item fees when an attempt to collect a payment fails and are subsequently able to collect on those fees, this rule may reduce lenders' revenues.

Lenders will also need the capability of identifying when two consecutive payment requests have failed. The Bureau believes that the systems lenders use to identify when a payment is due, when a payment has succeeded or failed, and whether to request another payment will have the capacity to identify when two consecutive payments have failed, and therefore this requirement will not impose a significant new cost.

b. Benefits and Costs to Consumers

Consumers will benefit from the restriction because it will reduce the fees they are charged by the lender and the fees they are charged by their depository institution. Many lenders charge a returned item fee when a payment is returned for insufficient funds. Borrowers will benefit if the reduced number of failed ACH payment requests also results in reductions in the number of these fees, to the extent that they are eventually paid. Borrowers may also benefit from a reduction in the frequency of checking account closure, to be discussed below.

Each time an ACH transaction is returned for insufficient funds, the borrower is likely to be charged an NSF fee by her financial institution. In addition, each time a payment is paid by the borrower's financial institution when the borrower does not have sufficient funds in the account to cover the full amount of the payment, the borrower is likely to be charged an overdraft fee. Overdraft and NSF fees each average $34 per transaction.[1262] As noted above, most re-presentments[1263] of failed payment requests themselves fail, leading to additional NSF fees. In addition, about a third of all re-presentments that succeed only succeed because the borrower's financial institution paid it as an overdraft, likely leading to an overdraft fee. The Bureau's analysis of online lender payment practices shows that borrowers who have two payment withdrawal attempts fail are charged additional fees on subsequent payment attempts of $64 to

[1258] This is simply a revealed preference argument that to the extent that lenders did not voluntarily choose to engage in the activities, it is likely the case that the benefits to lenders do not outweigh the costs to lenders (at least in the lenders' views).

[1259] CFPB Online Payday Loan Payments, at 14 tbl. 2. Lenders make at least one additional request after a failed payment request 74 percent of the time. Two-thirds of these are followed by a third request, if the second also fails. These calculations exclude multiple requests made on the same day, as those requests are unlikely to be intentional re-presentments of failed attempts because the lender is unlikely to know that a payment failed on the same day it was submitted and be able to re-present the request on the same day. The data used in the Bureau's analysis were for 18 months in 2011 and 2012. Changes to the rules governing the ACH system in the fall of 2015 may have reduced the frequency with which lenders continue to make payment requests after one or more payment attempts have failed.

[1260] CFPB Online Payday Loan Payments, at 13 tbl. 1.

[1261] CFPB Report on Supplemental Findings, at 150. These impacts may be lower now than they were at the time covered by the data analyzed by the Bureau, due to changes in industry practices and to changes in the rules governing the ACH system referred to in note CFPB Online Payday Loan Payments, at 14 tbl. 2.

[1262] CFPB Online Payday Loan Payments, at 2.

[1263] For the purposes of its analysis, the Bureau referred to any payment request following a failed payment request as a ''re-presentment.'' The only exception was when multiple payment requests were submitted on the same day; if two or more failed, only the first failed payment request was considered a re-presentment.

$87. These costs would be prevented by the rule.[1264]

The restriction on repeated attempts to withdraw payments from a borrower's checking account may also reduce the rate of account closure, as account closures appear to be associated with failed withdrawal attempts. This benefits borrowers by allowing them to maintain their existing account so as to better manage their overall finances. It also allows them to avoid the possibility of a negative record in the specialty consumer reporting agencies that track involuntary account closures, which can make it difficult to open a new account and effectively cut the consumer off from access to the banking system and its associated benefits. In the data studied by the Bureau, account holders who took out online payday loans were more likely to have their accounts closed by their financial institution than were other account holders, and this difference was substantially higher for borrowers who had NSF online loan transactions.[1265] Borrowers with two consecutive failures by the same lender are significantly more likely to experience an involuntary account closure by the end of the sample period than accountholders generally (43 percent versus 3 percent, respectively).[1266] While there is the potential for a number of confounding factors, transactions that were NSFs could contribute to account closure in at least two ways. First, the fees from repeated payment attempts add to the negative balance on the deposit account, making it more difficult for a borrower to bring the account balance positive and maintain a positive balance. And, if a lender is repeatedly attempting to extract money from an account, the borrower may feel that the only way to regain control of her finances is to cease depositing money into the account and effectively abandon it.

The reduced ability to collect by repeatedly attempting to withdraw payments from a borrower's account may increase lenders' credit losses, which may, in turn reduce the availability or raise the cost of credit. As discussed in the consideration of the costs to lenders, this reduction in collections is likely to be quite small. And, as noted above in the discussion of the impacts of the ATR requirements, many lenders already charge the maximum price allowed by State law.

[1264] The Bureau notes that at least one depository institution limits the fees charged to consumers from multiple attempts to drawn on an account by payday lenders. To the extent that this type of policy is being voluntarily adopted, the net benefits of this limitation might decrease (due to an increase in the benefits present in the baseline).

[1266] CFPB Report on Supplemental Findings, at 151 n. 177.

2. Required Notice Prior To Attempt To Collect Directly From a Borrower's Account

The rule also requires lenders to provide consumers with a notice prior to the first lender-initiated attempt to withdraw payment from consumers' accounts, including ACH entries, post-dated signature checks, remotely created checks, remotely created payment orders, and payments run through the debit networks. The notice is required to include the date the lender will initiate the payment request; the payment channel; the amount of the payment; the breakdown of that amount to principal, interest, and fees; the loan balance remaining if the payment succeeds; the check number if the payment request is a signature check or RCC; and contact information for the consumer to reach the lender. There are also separate notices required prior to unusual payments.

a. Benefits and Costs to Covered Persons

These notices may reduce delinquencies and related collections activities if consumers take steps to ensure that they have funds available to cover loan payments, such as delaying or forgoing other expenditures, making deposits into their accounts, or contacting the lender to make alternative arrangements.

Costs to lenders of providing these notices will depend heavily on when the lender provides the notice and, should they provide a notice after origination, whether they are able to provide the notice via email, text messages, or on paper at origination or have to send notices through paper mail. In practice, the Bureau expects most lenders to provide the notice of initial payment withdrawal at origination, minimizing the transmission costs. This can either be done via a written disclosure (at a storefront), or as a PDF attachment, or Web page sent along with an electronic short notice sent via an email or text (for either storefront or online lenders). The variation in costs of notices provided after origination (either regular notices, or notices in advance of unusual payments) is due in part to differences in transmission costs between different channels. Most borrowers are likely to have Internet access and/or a mobile phone capable of receiving text messages, and during the SBREFA process multiple SERS reported that most borrowers, when given the opportunity, opt in to receiving notifications via text message. The Bureau has intentionally structured the rule to encourage transmission by email or text message because it believes those channels are the most effective for consumers, as well as less burdensome for lenders. However, should the lender choose to send paper notifications via regular mail, they would incur higher costs of transmission, as well as administrative costs associated with providing the notification early enough to ensure sufficient time for it to be received by the consumer.

The Bureau believes that all lenders affected by the new disclosure requirements have some system in place to comply with existing disclosure requirements, such as those imposed under Regulation Z, 12 CFR part 1026, and Regulation E, 12 CFR part 1005. Lenders enter data directly into the disclosure system, or the system automatically collects data from the lenders' loan origination system. For disclosures provided via mail, email, text message, or immediately at the time of origination, the disclosure system often forwards the information necessary to prepare the disclosures to a vendor in electronic form, and the vendor then prepares and delivers the disclosures. Lenders will incur a one-time burden to upgrade their disclosure systems to comply with new disclosure requirements.

Lenders will need to update their disclosure systems to compile the necessary loan information to send to the vendors that will produce and deliver the disclosures relating to payments. The Bureau believes that large lenders rely on proprietary disclosure systems, and estimates the one-time programming cost for large respondents to update these systems to be 1,000 labor hours per entity. The Bureau believes small lenders rely on licensed disclosure system software. Depending on the nature of the software license agreement, the Bureau estimates that the cost to upgrade this software will be $10,000 for lenders licensing the software at the entity-level and $100 per seat for lenders licensing the software using a seat-license contract. For lenders using seat license software, the Bureau estimates that each location for small lenders has on average three seats licensed. Given the price differential between the entity-level licenses and the seat-license contracts, the Bureau believes that only small lenders with a significant number of stores will rely on the entity-level licenses.

Lenders with disclosure systems that do not automatically pull information from the lenders' loan origination or servicing system will need to enter

payment information into the disclosure system manually, so that the disclosure system can generate payment disclosures. The Bureau estimates that this will require two minutes per loan in addition to the two minutes to provide the disclosures. Lenders would need to update this information if the scheduled payments were to change.

For disclosures delivered through the mail, the Bureau estimates that vendors will charge two different rates, one for high volume mailings and another for low volume mailings. For the high volume mailings, the Bureau estimates vendors will charge $0.53 per disclosure. However, the Bureau expects high volume mailings to be infrequent, as follow-up disclosures are only necessary for unusual payments and reauthorizations. For the low-volume mailings, the Bureau estimates vendors will charge $1.00 per disclosure. For disclosures delivered through email, the Bureau estimates vendors will charge $0.01 to create and deliver each email such that it complies with the requirements of the rule. For disclosures delivered through text message, the Bureau estimates vendors will charge $0.08 to create and deliver each text message such that it complies with the requirements of the rule. The vendor will also need to provide either a PDF attachment of the full disclosure or a Web page where the full disclosure linked to in the text message is provided. The cost of providing this PDF attachment or web disclosure is included in the cost estimate of providing the text message. Finally, for disclosures delivered on paper at origination, the Bureau estimates costs will be $0.10 per disclosures.

Again, the Bureau believes that virtually all notifications will be provided at the time of origination (for regular notices), or electronically via text or email (for notifications of unusual payments). As such, the mailing costs discussed here are expected to be almost completely avoided.

In addition to the costs associated with providing notices, this requirement may impact the frequency with which lenders initiate withdrawal attempts and lenders' revenue. On timing, lenders are likely to disclose all regular payment schedules at origination, and must provide notices on unusual payments in advance of their initiation. This lag time could affect lenders' decisions as to the timing and frequency of withdrawal attempts. With regard to revenue, the impacts are uncertain: Payment revenue will be reduced if the notices lead to consumers taking steps to avoid having payments debited from their accounts, including placing stop-payment orders or paying other expenses or obligations prior to the posting of the payment request. Alternatively, if the notices help borrowers to ensure that funds are available to cover the payment request, this will reduce lenders' losses from non-payment, although it will also lower lenders' returned-item fee revenue.

b. Benefits and Costs to Consumers

Receiving notices prior to an upcoming unusual payment will benefit consumers by allowing them to take those payments into account when managing the funds in their accounts. This will allow them to reduce the likelihood that they will run short of funds to cover either the upcoming payment or other obligations. The notice will also help borrowers who have written a post-dated check or authorized an ACH withdrawal, or remotely created check or remotely created payment order, to avoid incurring NSF fees. These fees can impose a significant cost on consumers. In data the Bureau has analyzed, for example, borrowers who took out loans from certain online lenders paid an average of $92 over an 18 month period in overdraft or NSF fees on the payments to, or payment requests from, those lenders.[1267]

The information in the notices may also benefit borrowers who need to address errors or unauthorized payments, by making it easier for the borrower to resolve errors with the lender or obtain assistance through their financial institution prior to the payment withdrawal being initiated.

Some consumers may incur costs for notices sent by text. Consumers can avoid these costs by choosing email;[1268] the Bureau requires that lenders must provide an email delivery option whenever they are providing a text or other electronic delivery option.

As some commenters noted, costs associated with the disclosures might be passed on the consumers. However, the Bureau believes the costs associated with the disclosures will be limited, as noted above. Specifically the costs will be much lower than under the proposed rule, which would have required a disclosure before each payment withdrawal attempt. Ultimately, the Bureau believes these costs to consumers will be small in relation to the overall cost of the loan.

[1267] CFPB Online Payday Payments, at 3.

[1268] It is possible that some consumers may only have access to email via data-limited plans (*e.g.,* smartphones), and thus receiving emails could impose costs as well. However, there are numerous ways to avoid the cost of accessing email (*e.g.,* public libraries or facilities that offer free WiFi). As such, the Bureau considers the cost of receiving an email to be negligible.

3. Required Notice When Lender Can No Longer Collect Directly From a Borrower's Account

The rule requires a lender to provide a borrower with a notice of consumer rights within three days of a second consecutive unsuccessful attempt to collect payment from a borrower's account. This notice will identify the loan, explain that the lender is no longer able to attempt to collect payment directly from the borrower's account, and provide the consumer a record of the two failed attempts to collect funds.

a. Benefits and Costs to Covered Persons

This provision may benefit lenders if it leads to consumers contacting the lender to provide a new authorization to withdraw payments from the borrower's account or make other payment arrangements. However, lenders would likely have attempted to make contact with borrowers to obtain payment even in the absence of this requirement.

The requirement will impose on lenders the cost of providing the notice. Lenders already need to track whether they can still attempt to collect payments directly from a borrower's account, so identifying which borrowers should receive the notice should not impose any additional cost on lenders. The Bureau also expects that lenders normally attempt to contact borrowers in these circumstances in an attempt to identify other means of obtaining payment. If they are contacting the consumer via mail, the lender will be able to include the required notice in that mailing.

The Bureau expects that lenders will incorporate the ability to provide this notice into their payment notification process. The Bureau estimates that vendors will charge $0.53 per notice sent via paper mail for lenders that send a large number of mailings and $1.00 per notice for lenders that send a small volume of mailing. For disclosures delivered through email, the Bureau estimates vendors will charge $0.01 to create and deliver each email such that it complies with the requirements of the rule. For disclosures delivered through text message, the Bureau estimates vendors will charge $0.08 to create and deliver each text message. The vendor will also need to provide either a PDF attachment of the full disclosure or a Web page where the full disclosure linked to in the text message would be provided. The cost of providing this PDF attachment or web disclosure is

included in the cost estimate of providing the text message.

b. Benefits and Costs to Consumers

Consumers will benefit from the notice because it will inform them that the lender cannot continue to collect payment directly from their account without their express permission. Absent this notice, borrowers may believe that they are obligated to re-authorize a lender to begin collecting directly from their account, when in many cases the borrower has the option to repay the loan through some other means that carries less risk of fees and provides the borrower with greater control over the timing and prioritization of their expenditures. Conversely, absent some communication from the lender, the borrower may not realize that payment can no longer be withdrawn and, as a result, fail to make payments on a loan.

Some consumers may incur costs for notices sent by text. Consumers can avoid these costs by choosing email or paper delivery of the notices. The Bureau does not believe the required disclosures will impose any other costs on consumers.

H. Benefits and Costs of the Rule to Covered Persons and Consumers—Recordkeeping

The rule requires lenders to maintain sufficient records to demonstrate compliance with the rule. This includes, among other records, loan records; materials collected during the process of originating loans, including the information used to determine whether a borrower had the ability to repay the loan, if applicable; records of reporting loan information to a registered information system, as required; and, records of attempts to withdraw payments from borrowers accounts, and the outcomes of those attempts.

1. Benefits and Costs to Covered Persons

The Bureau believes that some of the records that lenders are required to maintain would have already been maintained in the ordinary course of business. Given the very low cost of electronic storage, however, the Bureau did not believe that these new requirements would impose a meaningful new burden on lenders. However, a number of trade groups provided comments suggesting there are indeed costs associated with retaining these records. These comments note that lenders may incur some costs in developing a document retention policy, obtaining additional computer storage space to maintain the documents, programming the computer system to keep the documents for 36 months, training employees to comply with the recordkeeping requirements, and monitoring the implementation of these new procedures modify systems.

The Bureau acknowledges these costs but believes them to be small. The development of retention policy should be straightforward, as the requirements are not opaque. Computer storage is inexpensive and even the largest lenders should not require more than one terabyte of additional storage to manage the retention of their files enterprise-wide (and that assumes their computer systems are already storage-constrained). As such, the Bureau estimates this cost to be less than $50 per lender if they wish to purchase additional storage themselves (*e.g.,* a portable hard drive), or $10 per month if they wish to lease storage (*e.g.,* from one of the many online cloud storage vendors). There may be a need to develop procedures and train staff to retain materials that they would not normally retain in the ordinary course of business, as well as design systems to generate and retain required records; those costs are included in earlier estimates of the costs of developing procedures, upgrading systems, and training staff. The Bureau also finds that maintaining the records will facilitate lenders' ability to comply, and document their compliance, with other aspects of the rule.

2. Benefits and Costs to Consumers

Consumers will benefit from the requirement to maintain records sufficient to demonstrate compliance because this will make compliance by lenders more likely, and facilitates enforcement of the rule, ensuring that consumers receive the benefits of the rule.

I. Benefits and Costs of the Rule to Covered Persons and Consumers—Registered Information Systems

As discussed above, the rule will generally require lenders to report covered loans to registered information systems in close to real time. Entities wishing to become registered information systems must apply to the Bureau to become registered. The process for becoming a registered information system prior to August 19, 2019 requires an entity to submit an application for preliminary approval with information sufficient to determine that the entity would be reasonably likely to satisfy the conditions to become a registered information system. These conditions include, among other things, that the entity possesses the technical capabilities to carry out the functions of a registered information system; that the entity has developed, implemented, and maintains a program reasonably designed to ensure compliance with all applicable Federal consumer financial laws; and that the entity has developed, implemented, and maintains a comprehensive information security program. If an entity obtains preliminary approval to become a registered information system from the Bureau, it will need to submit an application to be a registered information system that includes certain written third-party assessments contemplated by the rule. The rule also permits the Bureau to require an entity to submit to the Bureau additional information and documentation to facilitate determination of whether the entity satisfies the eligibility criteria to become a registered information system, or otherwise to assess whether registration of the entity will pose an unreasonable risk to consumers.

On or after August 19, 2019, the rule contemplates a slightly different two-stage process. Specifically, an entity can become provisionally registered by submitting an application that contains information and documentation sufficient to determine that the entity satisfies the conditions to become a registered information system, including the written third-party assessments contemplated by the rule. Lenders will be required to furnish information to a provisionally registered system, but a consumer report from such a system will not satisfy the lenders' obligations under the rule to check borrowing history until a 240-day period from the date of provisional registration has expired, after which time the system will be deemed a fully registered information system.

Once an entity is a registered information system under either process, the rule requires the entity to submit biennial assessments of its information security program.

The Bureau expects that applicants to become registered information systems will be primarily, or exclusively, existing consumer reporting agencies. These entities have the technical capacity to receive data on consumer loans from a large number of entities and, in turn, deliver that data to a large number of entities. Depending on their current operations, some firms that wish to apply to become registered information systems may need to develop additional capabilities to satisfy the requirements of the rule. These requirements include that an entity possess the technical capability to receive specific information from lenders immediately upon furnishing,

using reasonable data standards that facilitate the timely and accurate transmission and processing of information in a manner that does not impose unreasonable costs or burdens on lenders, as well as the technical capability to generate a consumer report containing all required information substantially simultaneous to receiving the information from a lender. Because firms currently operating as consumer reporting agencies must comply with applicable existing laws and regulations, including Federal consumer financial laws and the Standards for Safeguarding Customer Information, the Bureau also expects that they should already have programs in place to ensure such compliance.

1. Benefits and Costs to Covered Persons

The rule will benefit firms that apply to become registered information systems by requiring lenders to furnish information regarding most covered loans to all registered information systems and to obtain a consumer report from a registered information system before originating most covered loans. The requirement to furnish information will provide registered information systems with data on borrowing of covered short-term and longer-term balloon payment loans. The requirement to obtain a consumer report before originating covered short-term and longer-term balloon-payment loans will ensure that there will be a market for these reports, which will provide a source of revenue for registered information systems. Registered systems will also be well-positioned to offer lenders supplemental services, for instance in providing assistance with determining consumers' ability to repay.

Any firm wishing to become a registered information system will need to incur the costs of applying to the Bureau. For some firms these costs may consist solely of compiling information about the firms' practices, capabilities, and policies and procedures, all of which should be readily available, and obtaining the required third-party written assessments. Some firms may choose to invest in additional technological or compliance capabilities so as to be able to satisfy the requirements for registered information systems. Firms currently operating as consumer reporting agencies must comply with applicable existing laws and regulations, including Federal consumer financial laws and the Standards for Safeguarding Customer Information. As such, it is the Bureau's expectation that these firms have programs in place to ensure such compliance. However, the independent assessments of these programs outlined in the rule may impose additional costs for some firms.

Once approved, a registered information system will be required to submit biennial assessments of its information security program. Firms that already obtain independent assessments of their information security programs at least biennially, similar to those contemplated in the rule, will incur very limited additional costs. Firms that do not obtain biennial independent assessments similar to those contemplated in the rule will need to incur the cost of doing so, which may be substantial.

2. Benefits and Costs to Consumers

The requirement that registered information systems have certain technical capabilities will ensure that the consumer reports that lenders obtain from these systems are sufficiently timely and accurate to achieve the consumer protections that are the goal of this part. This will benefit borrowers by facilitating compliance with the rule's ability to repay requirements and the conditional exemption in § 1041.6 to the ability to repay requirements.

J. Alternatives Considered

In preparing the rule, the Bureau has considered a number of alternatives to the provisions. The alternatives discussed here are:

- Limits on re-borrowing covered short-term loans without an ability-to-repay requirement;
- An ability-to-repay requirement for short-term loans with no principal step-down approach;
- Disclosures as an alternative to the ability-to-repay requirement; and
- Limitations on withdrawing payments from borrowers' accounts without such disclosures.

In this section, the major alternatives are briefly described and their potential impacts relative to each provision are discussed.

1. Limits on Re-Borrowing of Covered Short-Term Loans Without an Ability-To-Repay Requirement

The Bureau considered not imposing a requirement that lenders making covered short-term and longer-term balloon-payment loans determine the ability of borrowers to repay the loans, and instead proposing solely to limit the number of times that a lender could make a covered short-term loan to a borrower. Such a restriction could take the form of either a limit on the number of loans that could be made in sequence or a limit on the number of loans that could be made in a certain period of time.

The impacts of such an approach would depend on the specific limitation adopted. One approach the Bureau considered would have been to prevent a lender from making a covered short-term loan to a borrower if that loan would be the fourth covered short-term loan to the borrower in a sequence. A loan would be considered part of the same sequence as a prior loan if it were taken out within 30 days of when the prior loan were repaid or otherwise ceased to be outstanding.

A limit on repeated lending of this type would have procedural costs similar to the principal step-down approach, and therefore lower than the ATR approach to making short-term loans. The Bureau simulated the effects of a ''principal step-down approach only'' policy. More specifically, the simulation assumed one possible implementation of this type of policy: A three-loan sequence cap, a six-loan annual cap, and a principal step-down requirement within each sequence. In this simulation, loan volumes and revenues decreased by 71–76 percent.

Without an annual cap on loans, the impacts of this alternative on payday or vehicle title lender revenue would likely be less than the current rule. The ATR approach and the repeated lending limit both place a three-loan cap on loan sequences, but the ATR approach imposes the requirement that a lender not make a first loan without determining the borrower has the ability to repay the loan.

The repeated lending limit without an annual cap on loans would likely also have less impact on payday lender revenue than would the principal step-down approach. The principal step-down approach limits loan sequences to no more than three loans, but, in addition, imposes loan size limitations and limits borrowers to no more than six loans in a year and no more than 90 days in debt per year on a covered short-term loan. While payday lenders could make loans using the ATR approach to borrowers who had reached the annual limits for loans issued via the principal step-down approach, the ATR approach will likely limit the total loans available to many consumers.

The Bureau believes that limiting repeated lending should create stronger incentives to underwrite borrowers for ability to repay than exist in the current market. This is due to the reduction in expected revenue from loan sequences that would be cut off after the threshold is reached, rather than being able to continue for as long as the consumer is able to sustain rollover payments.

However, a rule that relied solely on limiting repeat lending would increase the risk that borrowers take out loans that they would not have the ability to repay relative to the rule. This alternative would also lack the protections of the principal step-down approach, which include mandatory reductions in loan size across a sequence of loans. The Bureau believes that this step-down system will make it more likely that borrowers will successfully repay a loan or short loan sequence than would a limit on repeated lending, which might produce more defaults at the point that further re-borrowing would be prohibited. And, without the principal step-down approach's limits on the number of loans per year and the limit on the time in debt, some borrowers might effectively continue their cycle of re-borrowing by returning as soon the 30-day period has ended.

2. An Ability-To-Repay Requirement for Short-Term Loans With No Principal Step-Down Approach

The Bureau also considered the ATR approach without the principal step-down approach for covered short-term loans. Many consumer groups suggested this alternative. Without the principal step-down approach, lenders would be required to incur the expenses of the ATR approach for all payday loans. This effect, together with the impact of the ATR requirements, would have a larger impact on the total volume of payday loans that could be originated than would the rule. The Bureau simulated the effects of an ''ATR approach only'' policy, applying the same assumption that 33 percent of borrowers would qualify for an initial ATR loan (*see* part VII.F.1.c for more details on the Bureau's simulations); and, as described in part VII.F.1.c, using various assumptions about how borrowers behave when the loan sequences are cut off. In this simulation, loan volumes and revenues decreased by 92 to 93 percent. Borrowers who could not demonstrate an ability to repay the loan would be unable to take out a payday loan.

3. Disclosures as an Alternative to the Ability-To-Repay Requirement

The Bureau considered whether to require disclosures to borrowers warning of the risk of re-borrowing or default, rather than the ATR approach and the principal step-down approach, and the Bureau received a number of comments asserting that this approach would be sufficient or more advantageous, as discussed in the section-by-section analysis above.

The Bureau believes that a disclosure-only approach would have lower procedural costs for lenders than would the ATR approach or the principal step-down approach. Requiring lenders to prepare disclosures that were customized to a particular loan would impose some additional cost over current practices. If lenders could simply provide standardized disclosures, that would impose almost no additional cost on lenders.

A disclosure-only approach would also have substantially less impact on the volume of covered short-term lending. Evidence from a field trial of several disclosures designed specifically to warn of the risks of re-borrowing and the costs of re-borrowing showed that these disclosures had a marginal effect on the total volume of payday borrowing.[1269] Analysis by the Bureau of similar disclosures implemented by the State of Texas showed a reduction in loan volume of 13 percent, consistent with the limited magnitude of the impacts from the field trial.[1270]

The Bureau believes that a disclosure-only approach would also have substantially less impact on the harms consumers experience from long sequences of payday and single-payment vehicle title loans. Given that loans in very long sequences make up well over half of all payday and single-payment vehicle title loans, a reduction of 13 percent in total lending has only a marginal impact on those harms. In addition, analysis by the Bureau of the impacts of the disclosures in Texas shows that the probability of re-borrowing on a payday loan declined by approximately 2 percent once the disclosure was put in place, indicating that high levels of re-borrowing and long sequences of payday loans remain a significant source of consumer harm. A disclosure-only approach would also not change the lender's incentives to encourage borrowers to take out long sequences of covered short-term loans.

Given the evidence of unanticipated re-borrowing discussed above in Market Concerns—Underwriting, borrowers are likely to dismiss warnings of possible negative outcomes as not applying to them, and to not focus on disclosures of the possible harms associated with a negative outcome that they do not anticipate experiencing. To the extent the borrowers have thought about the likelihood that they themselves will default on a loan, a general warning about how often people default is unlikely to cause them to revise their own expectations about the chances they themselves will default. Additionally, there is evidence that borrowers are generally aware of the average durations of sequences, but in spite of this are not good at predicting whether or not they themselves will experience a long duration.[1271] As such, warnings about the potential for long durations are also unlikely to elicit changes in these borrowers' behaviors.

The Bureau received comments suggesting that the potential for disclosures to impact behavior in this market was not fully considered. They pointed to the research of Bertrand and Morse (cited above), to the Texas disclosure law (described and analyzed above), and for the finding that disclosures alerting borrowers to the availability of payment plans in certain States increase participation in said payment plans. While the Bureau believes disclosures can be effective in certain applications—especially when there is a market failure resulting in a lack of information about a more immediate and certain outcome—the available evidence suggests that a disclosure-only intervention in this market would yield substantially lower benefits to consumers than the ATR with principal step-down approach in the rule. The Bureau discusses this topic in the section-by-section analysis in part V as well.

4. Limitations on Withdrawing Payments From Borrowers' Accounts Without Disclosures

The Bureau considered including the limitation on lenders continuing to attempt to withdraw payment from borrowers' accounts after two sequential failed attempts to do so, but not including the required initial disclosure of usual payments or the additional disclosure in the event of unusual payments, or the notice that would be sent when a lender could no longer continue to attempt to collect payments from a borrower account. The impacts of excluding the upcoming payment notices would simply be to not cause lenders and borrowers to experience the benefits and costs that are described in the discussion of the impacts of those provisions. With regard to the notice that a lender could no longer attempt to withdraw payment from a borrower's account, the primary effect would be analogous, and the benefits and costs are described in the discussion of the

[1270] *See* CFPB Supplemental Findings, section 3.

[1271] See the discussion in Market Concerns—Underwriting and above in this section of Ronald Mann, ''Assessing the Optimism of Payday Loan Borrowers,'' 21 Sup. Ct. Econ. Rev. 105 (2013).

impacts of the provision that would require that notice. However, there may also have been a particular interaction if lenders had been prevented from continuing to attempt to withdraw payment from a borrower's account, but the borrower did not receive a notice explaining that. Absent some communication from the lender, the borrower may not realize that payment would no longer be withdrawn and, as a result, fail to make payments on a loan. Lenders would presumably reach out to borrowers to avoid this eventuality. In addition, absent the notice, borrowers may have been more likely to believe that they are required to provide lenders with a new authorization to continue to withdraw payments directly from their accounts, when they may have been better off using some alternative method of payment.

K. Potential Impact on Depository Creditors With $10 Billion or Less in Total Assets

The Bureau believes that depository institutions and credit unions with less than 10 billion dollars in assets rarely originate loans that are covered by this rule. To the extent depository institutions do make loans in this market, many of those loans would be exempted under § 1041.3(e) or (f) as alternative or accommodation loans.

L. Impact on Consumers in Rural Areas

Consumers in rural areas will have a greater reduction in the availability of covered short-term and longer-term balloon-payment loans originated through storefronts relative to consumers living in non-rural areas. As described in part VII.F.1.c, the Bureau estimates that the restrictions on making these loans will likely lead to a substantial contraction in the markets for storefront payday loans and storefront single-payment vehicle title loans.[1272] The Bureau has analyzed how State laws in Colorado, Virginia, and Washington that led to significant contraction in the number of payday stores in those States affected the geographic availability of storefront payday loans in those States.[1273] In those States, nearly all borrowers living in non-rural areas (defined as Metropolitan Statistical Areas or ''MSA'') still had physical access to a payday store.[1274] A substantial minority of borrowers living outside of MSAs, however, no longer had a payday store readily available following the contraction in the industry. In Colorado, Virginia, and Washington, 37 percent, 13 percent, and 30 percent of borrowers, respectively, would need to travel at least five additional miles to reach a store that remained open.[1275] In Virginia, almost all borrowers had a store that remained open within 20 miles of their previous store.[1276] And, in Washington 9 percent of borrowers would have to travel at least 20 additional miles.[1277] While many borrowers who live outside of MSAs do travel that far to take out a payday loan, many do not,[1278] and the additional travel distance resulting from closures of rural storefronts will impose a cost on these borrowers and may make borrowing from storefront lenders impractical or otherwise cause them to choose not to borrow from such lenders. Rural borrowers for whom visiting a storefront payday lender becomes impracticable retain the option to seek covered loans from online lenders, subject to the restrictions of State and local law.

The Bureau has not been able to study a similar contraction in the single-payment vehicle title market, but expects that the relative impacts on rural and non-rural consumers will be similar to what has occurred in the payday market. That is, rural consumers are likely to experience a greater reduction in the physical availability of single-payment vehicle title loans made through storefronts than borrowers living in non-rural areas.

The Bureau received numerous comments suggesting that the proposal's consideration of rural borrowers was incomplete. However, the specific shortcoming cited was almost universally that rural borrowers displaced by the contraction in storefront lenders may not retain access via online lenders if they do not have access to the Internet. In assessing this, the Bureau notes that rural populations are less likely to have access to high-speed broadband compared to the overall population (39 percent vs 10 percent).[1279] However, the bandwidth and speed required to access an online payday lender is minimal; even if high-speed access is currently beneficial to seeking an online loan, lenders can scale down the bandwidth requirements if the latent demand for loans amongst rural borrowers is sufficient to justify doing so. Additionally, the Bureau believes most potential borrowers in rural communities will likely be able to access the Internet by some means (*e.g.,* dial up, or access at the public library or school). While the ease of access and quality of experience for bandwidth-limited rural customers may be lower than for non-rural customers, the Bureau believes that there will still be reasonable access for rural customers in need of loans. Additionally, mobile broadband access is growing rapidly in rural areas, with 67 percent of adults in these areas reporting they own a smartphone.[1280]

Additional commenters noted that some online payday lenders operate in rural areas, and that some comprise large shares of their local economies. If these lenders are amongst the number the Bureau expects to contract, this could impose a cost on these rural communities that would be avoided by more densely populated areas experiencing similar labor market shocks. However, if the cost advantages realized by lenders in rural areas (*e.g.,* lower overhead, lower wages afforded by lower costs of living) give them a competitive advantage over online lenders in more densely populated areas, they may be less likely to contract. However, the Bureau acknowledges that at least some rural lenders will be substantially impacted by the rule.

Given the available evidence, the Bureau believes that, other than the greater reduction in the physical availability of covered short-term loans made through storefronts, a potentially small relative reduction in access to any covered short-term loans, and the risk of negative labor market shocks to some rural areas in which online lenders comprise a significant share of employment, consumers living in rural areas will not experience substantially different effects of the regulation than other consumers. OMB designates this rule as major under 5 U.S.C. 804(2).

VIII. Regulatory Flexibility Analysis

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct an Initial Regulatory Flexibility Analysis (IRFA) and a Final Regulatory Flexibility Analysis (FRFA) of any rule subject to notice-and-comment

[1272] The Bureau reiterates that, given their limited prevalence, data on longer-term balloon-payment loans is scant. The effects on these types of loans are extrapolations from the empirical findings on short-term loans.

rulemaking requirements.[1281] These analyses must ''describe the impact of the proposed rule on small entities.'' [1282] An IRFA or FRFA is not required if the agency certifies that the proposal will not have a significant economic impact on a substantial number of small entities.[1283] The Bureau also is subject to certain additional procedures under the RFA involving the convening of a panel to consult with small entity representatives prior to proposing a rule for which the IRFA is required.[1284]

A. Overview of the Bureau's Approach

In the proposal the Bureau did not certify that the proposal would not have a significant impact on a substantial number of small entities within the meaning of the RFA. Accordingly, the Bureau convened and chaired a Small Business Review Panel under the Small Business Regulatory Enforcement Fairness Act (SBREFA) to consider the impact of the rule on small entities that would be subject to the rule and to obtain feedback from representatives of such small entities. The Small Business Review Panel for the proposal is discussed in the SBREFA Report. The proposal also contained an IRFA pursuant to section 603 of the RFA, which among other things estimated the number of small entities that would be subject to the proposal. In this IRFA, the Bureau described the impact of the proposal on those entities, drawing on the proposal's Section 1022(b)(2) Analysis. The Bureau also solicited comments on any costs, recordkeeping requirements, compliance requirements, or changes in operating procedures arising from the application of the proposal to small businesses; comments regarding any Federal rules that would duplicate, overlap, or conflict with the proposal; and comments on alternative means of compliance for small entities. Comments that addressed the impact on small entities are discussed below. Many of these comments implicated individual provisions of the final rule or the Bureau's Section 1022(b)(2) Analysis and are also addressed in those parts.

Similar to its approach in the proposal, the Bureau is not certifying that the final rule will not have a significant economic impact on a substantial number of small entities. Instead, the Bureau has completed a FRFA as detailed below.

Section 604(a) of the RFA sets forth the required elements of the FRFA. Section 604(a)(1) requires the FRFA to contain a statement of the need for, and objectives of, the rule.[1285] Section 604(a)(2) requires a statement of the significant issues raised by the public comments in response to the IRFA, a statement of the assessment of the Bureau of such issues, and a statement of any changes made in the proposed rules as a result of such comments.[1286] Section 604(a)(3) requires the response of the Bureau to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments.[1287] The FRFA further must contain a description of and, where feasible, provide an estimate of the number of small entities to which the final rule will apply.[1288]

Section 604(a)(5) requires a description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities that will be subject to the requirement and the types of professional skills necessary for the preparation of the report or record.[1289] Finally, section 604(a)(6) requires a description of the steps the Bureau has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected; and a description of the steps the agency has taken to minimize any additional cost of credit for small entities.[1290]

B. Rationale and Objectives of the Final Rule

As discussed in Market Concerns—Underwriting and Market Concerns—Payments above, the Bureau is concerned that practices in the market for payday, vehicle title, longer-term balloon-payment loans, and certain other longer-term loans utilizing leveraged payment mechanisms pose significant risk of harm to consumers. In particular, the Bureau is concerned about the harmful impacts on consumers of the practice of making these loans without making a reasonable determination that the consumer has the ability to repay the loan while paying for major financial obligations and basic living expenses. In addition, the Bureau is concerned that lenders in this market are using their ability to initiate payment withdrawals from consumers' accounts in ways that harm consumers.

To address these concerns, the Bureau is issuing the final rule pursuant to its authority under the Dodd-Frank Act in order to identify certain unfair and abusive acts or practices in connection with certain consumer credit transactions, to set forth requirements for preventing such acts or practices, to exempt loans meeting certain conditions from those requirements, to prescribe requirements to ensure that the features of those consumer credit transactions are fully, accurately, and effectively disclosed to consumers, and to prescribe processes and criteria for registration of information systems. The legal basis for the rule is discussed in detail in the legal authority analysis in part IV and in the section-by-section analysis in part V.

1. Public Comments on the IRFA and the Bureau's Views and Treatment of Those Comments

In accordance with section 603(a) of the RFA, the Bureau prepared an IRFA. In the IRFA, the Bureau estimated the possible costs for small entities with respect to the reporting, recordkeeping, and compliance requirements of the proposed rule against a pre-statute baseline. The Bureau requested comment on the IRFA.

A number of comments specifically addressed the IRFA or raised concerns regarding the burden of compliance with the rule for small entities. These comments are discussed first. Those comments that repeated the same issues raised by the Office of Advocacy of the U.S. Small Business Administration are addressed in the next section of the FRFA, below. While many additional comments referred to economic impacts affecting all entities, this FRFA discussion focuses on comments addressing impacts that are particular to or differential for small entities, supplementing the discussion in the section-by-section analysis in part V, and the consideration of the broader impacts in the Section 1022(b)(2) Analysis in part VII.

The significant comments addressing the IRFA or compliance burdens for small entities raised specific concerns falling into one of the following general categories: Anticipated direct costs to small entities unaccounted for or unquantified in the IRFA; direct costs to small entities accounted for but

[1290] 5 U.S.C. 604(a)(6).

underestimated; the lack of estimates for revenue losses specific to small entities; indirect effects on costs or prices faced by small entities not addressed; alternatives to the proposed rule which were not addressed or not appropriately considered; conflicts with existing laws and regulations not addressed; and categories of small entities not included in the analysis.

a. Comments Asserting Anticipated Direct Costs to Small Entities Not Accounted for in the IRFA

Commenters raised concerns about costs arising from several requirements of the rule which, they asserted, were unaccounted for or unquantified in the IRFA. First, commenters raised concerns that although the IRFA states that small entities may contract with attorneys, consultants, and vendors for assistance in complying with the ability-to-repay, disclosure, and reporting requirements of the rule, these costs were not made explicit. Related comments expressed concern that the need for small entities to contract with attorneys and vendors was in conflict with the Bureau's statement that professional skills beyond those of existing employees would be required in only rare circumstances.

The Bureau acknowledges that the need to contract with attorneys, consultants, and vendors may entail new costs for some small entities. For those small lenders which already maintain compliance processes for existing rules or regulations, the Bureau believes that the marginal added cost will be limited. In addition, some changes to the final rule which simplify the ability-to-repay verification and calculation requirements may lessen the need for these services. For those small entities that do not have relationships with these types of service providers under their current business process, the one-time costs may be larger.

Second, commenters expressed concern that the costs associated with the 36 month recordkeeping requirement of the rule would be more substantial than the discussion in the IRFA implied. In the case of recordkeeping, Regulation Z, implementing TILA, has a general record retention rule that lenders ''shall retain evidence of compliance'' for ''two years after the date disclosures are required to be made or action is required to be taken.'' [1291] In addition, as discussed in greater detail in the Background section, a number of States (including Colorado, Texas, Virginia, and Washington) have record retention requirements specific to payday loans, and numerous others have payday lending requirements which implicitly require some form of recordkeeping for compliance. Thus, the Bureau believes the 36 month recordkeeping requirement constitutes only an adjustment or extension of existing processes, with limited costs.

Still, commenters noted that lenders may incur some costs in developing a document retention policy, obtaining additional computer storage space to maintain the documents, programming the computer system to keep the documents for 36 months (and then delete them), training employees to comply with the recordkeeping requirements, and monitoring the implementation of these new procedures. The Bureau acknowledges these costs but believes them to be small. The development of retention policies should be straightforward, as the requirements are not opaque. Computer storage is inexpensive and even the largest lenders should not require more than one terabyte of additional storage to manage the retention of their files enterprise-wide (and that assumes their computer systems are already storage-constrained). As such, the Bureau estimates this cost to be less than $50 per lender if they wish to purchase additional storage themselves (*e.g.,* a portable hard drive) with any associated operations and maintenance costs, or $10 per month if they wish to lease storage (*e.g.,* from one of the many online cloud storage vendors).

There may be a need to develop procedures and train staff to retain materials that they would not normally retain in the ordinary course of business, as well as design systems to generate and retain the required records; those costs are included in earlier estimates of the costs of developing procedures, upgrading systems, and training staff. The Bureau also believes that maintaining the records will facilitate lenders' ability to comply with, and to document their compliance with, other aspects of the rule.

Third, commenters stated that tracking failed payment withdrawals would require new systems and procedures to be developed, at a cost not specified in the IRFA. While the Bureau acknowledges that some entities may face costs in modifying existing systems to comply with the recordkeeping and payment processing requirements of the rule, these requirements largely build on processes required by existing laws or necessitated by standard business practice.

b. Comments Asserting That Direct Costs to Small Entities Were Underestimated

Commenters raised concerns that, among the costs to small entities quantified in the IRFA, some of the Bureau's estimates of required time and financial costs were too low. Comments stated that compliance with the ability-to-repay requirements would be more costly and take employees longer than the Bureau had estimated. In particular, comments from industry trade associations and others asserted that the complexity of the proposed rule meant that verification and documentation of evidence for the ability-to-repay calculations would take longer than the Bureau's estimate of three to five minutes. Similarly, the commenters raised concerns that making the ability-to-repay determination would take longer than 15 to 20 minutes for manual decisions, and that the Bureau's statement that automated decisions would take essentially no time neglected to account for the time required for employees to monitor and maintain the automated decision-making system. Based on a survey of community banks, one industry trade association stated that respondents anticipate three hours of processing time on average to complete ability-to-repay verification and determination. As discussed in the section-by-section analysis for § 1041.5, part VII, and part VIII.C, in response to these concerns the Bureau has lessened the documentation requirements and simplified the calculations for the ability-to-repay determination in the following respects.

First, if verification evidence for income is not reasonably available, lenders may reasonably rely on stated amounts for income. Second, if the verification evidence for major financial obligations (*e.g.,* the borrower's credit report) does not include a particular obligation, lenders reasonably may rely on the stated amount of such obligation. Third, lenders will not be required to perform a credit check if they have already done so in the past 90 days and the consumer has not recently triggered a cooling-off period following a three-loan sequence. Fourth, lenders can use either a residual income or debt-to-income ratio when making the ability-to-repay determination, and the income and expenses can be based on a snapshot of the relevant calendar month rather than a time period which depends on the length of the loan. Fifth, lenders are not required to track the timing of income receipts or payments on major financial obligations. Finally, the Bureau has eliminated the

[1291] Regulation Z, 12 CFR 1026.25(a).

presumptions of unaffordability attached to the second and third loan in a sequence made under the ability-to-repay requirements, likely reducing the underwriting costs for these loans and increasing the number of consumers determined to have the ability to repay such a loan.

While these changes should reduce small entities' time costs for compliance with the ability-to-repay requirements, the Bureau has increased its estimate of the total time to conduct a manual ability-to-repay determination to 15–45 minutes. This estimate is consistent with comments received from a trade group representing covered lenders and information provided by Small Entity Representatives.

Commenters also raised concerns that the Bureau's time estimates for initial and periodic ongoing training estimates were too low. The Bureau has reviewed its assessment, and the broader set of comments, and has concluded that the training estimates laid out were reasonable. The Bureau has clarified that the training estimates are per employee engaged in the relevant business process.

Across a number of business processes, commenters raised concerns that the Bureau's estimates for the one-time costs to update policies, systems, and materials were underestimated. Regarding the disclosure requirements of the proposed rule, commenters stated that the time and costs to develop and ensure disclosures are accurate was underestimated. Similarly, commenters also stated that the estimated one-time costs to update credit reporting systems were too low. Finally, commenters stated that the Bureau's estimates of the costs to upgrade general computer systems—separate from licensed underwriting, credit reporting, and disclosure systems—were underestimated.

The Bureau appreciates these comments, but believes its estimates, and the cost framework used throughout the rule, are accurate. Throughout the rule, the Bureau has updated its estimates when appropriate, as in the case of possible setup costs for furnishing to multiple registered information systems, and believes these changes and the corresponding discussions in part VII where the Section 1022(b)(2) Analysis address these concerns.

c. Comments Asserting That the IRFA Did Not Estimate Lost Revenue for Smaller Entities

In the proposed rule, the Bureau estimated the loss of revenue from the proposal (see for example the section in the proposed Section 1022(b)(2) Analysis on ''Effect on Loan Volumes and Revenue From Underwriting Requirements and Restrictions on Certain Re-borrowing''). These costs, while not specifically estimated for small entities, were also referenced in the IRFA. Even assuming uniform compliance with the rule across large and small entities, the Bureau believes that the revenue impacts could differ between large and small entities. As noted below in more detail in the next section of this FRFA, the Bureau does not have data, and commenters provided only minimal evidence, that allow for the separate estimation of revenue impacts for small lenders. This issue is also discussed in part VII.F.1.c.

d. Comments Asserting Additional Indirect Effects on Costs and Prices

Commenters raised concerns regarding indirect costs and impacts on small entities resulting from the responses of lenders or other market participants to the rule. Several commenters stated that lenders themselves may face higher costs of obtaining credit due to the rule's impact on their profitability. Commenters also noted that lenders would face adjustment costs if they were to shift their portfolio of products away from covered loans. Related comments stated that if lenders were to forgo leveraged payment mechanisms on new originations in response to the rule, loan defaults were likely to increase. One commenter raised the concern that a reduction in the total size of the market could require vendors and consultants for small entities to raise prices charged for services provided. Commenters raised concern over possible increased litigation risk for lenders.

The Bureau appreciates these comments, and acknowledges that small lenders may face higher costs of credit, and that business practice adjustments would likely impact both the costs and revenues of these firms. Litigation risks and the pricing of vendor or consulting services could also change in response to the rule. While the exact form of these indirect costs is uncertain and the Bureau does not have the data available to estimate them, small lenders may face a relatively higher burden than larger lenders, given their smaller scale over which to spread fixed investments, and their potentially more limited access to financing options. These impacts are likely to be larger for small lenders that are highly specialized in short-term loans, or longer-term balloon-payment loans, or vehicle title loans not eligible for the exemption in § 1041.6, and smaller for those with more diversified product portfolios.

e. Comments Asserting That Certain Alternatives Were Not Addressed or Appropriately Considered

Regarding the IRFA, commenters expressed concern that the Bureau failed to provide a meaningful explanation for why it declined to pursue significant alternatives to the proposed rule. The IRFA included discussions of four significant alternatives to the proposed rule, which referred to more detailed analyses in the section-by-section discussions and the Section 1022(b)(2) Analysis. The Bureau believes its discussion of the alternatives provided in the IRFA, along with the alternatives considered in the proposal's Section 1022(b)(2) Analysis, provided sufficient explanation for the choice of regulatory approach. However, in order to provide improved detail and clarity, part VIII.D below includes additional discussion in response to comments.

The Bureau received a number of comments requesting exemptions for small entities. The Bureau is finalizing an exemption for accommodation loans, which are loans made by lenders that make fewer than 2,500 covered short-term loans and covered longer-term balloon-payment loans a year, and for which covered short-term loans and covered longer-term balloon-payment loans make up less than 10 percent of annual receipts. Additionally, the Bureau has adjusted its exemption for alternative loans to ensure that all PAL loans, and loans made by non-Federal credit unions which match the characteristic of a PAL loan, are exempt. This exemption should significantly reduce burden for smaller credit unions and other companies. Further, in response to comments the Bureau has substantially adjusted the rule in order to lessen the burdens of compliance, and also to reduce the degree to which the rule will impact total loan volumes, as noted above and in the section-by-section analysis for §§ 1041.5 and 1041.8. Even with these changes, there will still be a significant impact on small entities. The Bureau declines to completely exempt small entities because it believes many smaller entities, especially payday and vehicle title lenders, are engaging in the unfair and abusive practices identified in §§ 1041.4 and 1041.7. These practices cause substantial harm to consumers, and an exemption for small entities that would allow the practices to continue, albeit only at smaller companies, would substantially undermine the goals of

this rule and permit a significant amount of consumer harm to continue.

f. Comments Asserting That Conflicts With Existing Law Were Not Considered

The IRFA requires identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap, or conflict with the proposed rule. Several trade association commenters raised concerns that the Bureau had not identified E–SIGN and ECOA/Regulation B as duplicate or overlapping rules.

One comment stated that the proposed rule conflicts with E–SIGN and Regulation E because it adopts a different and new definition for consumer consent to receive electronic disclosures. The Bureau believes there is no conflict with E–SIGN because E–SIGN is not implicated by the consent process laid out in the rule. The Bureau decided not to use the E-Sign framework because of concerns raised in the SBREFA process about the burden of E–SIGN and the policy consideration of using an electronic disclosure consent process that is tailored to the small-dollar origination process and the situation the consumer is providing consent for. The Bureau also believes that the framework for obtaining consent for electronic notifications is more appropriate for the specific purposes of the notices in this rule. Another comment raised concerns about conflicts with EFTA, Regulation E, and Regulation CC. EFTA and Regulation E were discussed in the Market Concerns—Payments and section-by-section analysis for §§ 1041.7 and 1041.8. There are no provisions in EFTA, Regulation E, and Regulation CC that require or limit re-presentments of payments; those regulations do not conflict, duplicate or overlap with the limit on re-presentments. There are longstanding private network rules regarding repeat presentments that similarly do not raise conflicts.

One comment stated that the proposed rule conflicts with ECOA because it does not permit lenders to consider household income or expenses in making an ability-to-repay determination. Similarly, another comment expressed concern that considerations in ECOA and Regulation B for co-habitation arrangements, including ''spouses, cosigners, roommates, parents and adult children residing together, adult-children and elderly parents residing together,'' do not fit neatly into the proposal's documentation requirements for income, obligations, and living expenses. It also noted that ''the consumer reporting and registered information systems do not address how such information is reported under those varying arrangements.'' In the section-by-section analysis of § 1041.5, the Bureau discusses changes made to the ability-to-repay requirements of the final rule which now permits lenders to consider third party income to which a consumer has a reasonable expectation of access, to consider whether other persons are contributing towards the consumer's payment of major financial obligations, and to consider whether other persons are contributing towards the consumer's payment of basic living expenses when a lender chooses to itemize basic living expenses. As noted in the section-by-section analysis of § 1041.5 above, the Bureau believes that the requirements of the rule do not conflict with ECOA or Regulation B.[1292]

The Bureau also received comments suggesting that it had failed to consider the overlap between the proposal's provisions relating to registered information systems and to lenders' obligation to furnish to registered information systems, on the one hand, and the Fair Credit Reporting Act, Regulation V, the Gramm Leach Bliley Act, Regulation P or the Privacy Rule, and the Safeguards Rule, on the other hand. The commenter claimed that the Bureau had opened the door to numerous Regulation V issues relating to proper compliance with the duties of users and furnishers of information in registered information systems, and that the Bureau had not considered legal issues around the privacy and data security of said data. Yet these laws do not conflict with the rule in any way. To the contrary they would all have the same effect as they are applicable, and they would operate to address the issues raised by the commenter here in the same manner that they do in other areas of the economy.

g. Comments Asserting That Categories of Entities Were Not Included

A small number of commenters raised concerns regarding the impacts of the proposed rule on Indian tribes, which the IRFA did not separately address. The Bureau did not specifically analyze effects on Indian tribes, as it does not consider them to be small entities under the RFA, consistent with the interpretation provided by the Small Business Administration's comment. However, as many Tribal lenders may be small lenders, and many exist in rural areas, there is the potential for a more acute impact of the rule on Tribal lenders. This coincides with the impact on small and rural entities, and is therefore considered within the discussion of the impacts on those lenders.

2. Response to the Small Business Administration Chief Counsel for Advocacy

The SBA Office of Advocacy (Advocacy) provided a formal comment letter to the Bureau in response to the proposed rule. Among other things, this letter expressed concern about the following issues: The burden of complying with the ability-to-repay requirements; the lack of estimates for the impact of the ability-to-repay requirements on lender revenues; the length of the cooling-off period; the lack of an exception for loans to address an emergency; the interaction of the rule with State laws; the impact of the rule on credit unions, small communities, and Indian tribes; the lack of clarity of the business loan exemption; the effect of the rule on lender's own cost of credit; and the implementation date of the final rule.

Advocacy expressed concern that the ability-to-repay requirements in the proposed rule would be burdensome. The proposed rule would have required lenders to verify a consumer's net income, debt obligations, and housing expenses; project basic living expenses, net income, and obligations for a time period based on the term of the loan; and use this information to calculate the consumer's ability to repay the loan. Advocacy expressed concern that these requirements were complicated and extensive, turning an uncomplicated product into a complex product. Advocacy also expressed concern that many customers may not qualify for loans under the ability to repay requirements, particularly in small rural communities where lenders contend that lending is relationship based. Advocacy encouraged the Bureau to eliminate some of the ability-to-repay requirements, and suggested eliminating the credit check requirement as one possibility.

In response to comments from Advocacy and the public, the Bureau has made changes to the ability-to-repay requirements to reduce compliance costs for small entities of both obtaining evidence and making the ability-to-repay determination. For example, if verification evidence for income is not reasonably available, lenders may reasonably rely on stated amounts for

[1292] Under the RFA, rules are duplicative or overlapping if they are based on the same or similar reasons for the regulation, the same or similar regulatory goals, and if they regulate the same classes of industry. Rules are conflicting when they impose two conflicting regulatory requirements on the same classes of industry. The Bureau does not believe these standards are met in this case.

income. Additionally, verification evidence is no longer required for rental housing expenses. The Bureau estimates that these changes will reduce the time and expense of obtaining the information required to make an ability to repay determination, particularly for lenders serving customers with income or expenses that are difficult to document. And while the Bureau believes that the credit check requirement is necessary to properly project a consumer's debt obligations, lenders will not be required to perform a credit check if they have already done so in the past 90 days and the consumer has not recently triggered a cooling-off period following a three-loan sequence. This change maintains the integrity of the ability to repay requirements, while eliminating some marginal costs that both Advocacy and the Bureau suggest are higher for small lenders compared to larger lenders.

Additional changes were made to final rule to reduce the burden of making the ability-to-repay determination. Lenders can use either residual income or debt-to-income ratio when making the ability-to-repay determination, and the income and expenses can be based on a snapshot of the relevant calendar month rather than a time period which depends on the length of the loan. The Bureau expects these changes to ease implementation of the ability-to-repay requirement, particularly for smaller lenders who have less scale over which to recoup their fixed investment in compliance requirements. Finally, the Bureau has eliminated the presumptions of unaffordability attached to the second and third loan in a sequence made under the ability-to-repay requirements, likely reducing the underwriting costs for these loans and increasing the number of consumers determined to have the ability to repay such a loan.

In addition to compliance burdens, Advocacy expressed concern that the IRFA did not provide separate estimates of the impact of the ability-to-repay requirements, or the proposed rule as a whole, on revenue for small entities.

The Bureau does not have data that allow for the separate estimation of revenue impacts for small lenders. However, even assuming uniform compliance with the rule across large and small entities, the Bureau believes that the revenue impacts could differ between large and small entities. This possibility is discussed in part VII.F.1.c. However, that discussion is based on economic theory and reasoning, as the Bureau lacks the data required to differentiate the potential impacts on small and large lenders.

In contrast, two studies of loan-level data cited by commenters suggest the impacts on revenue may be similar for small and large entities.[1293] The studies separately simulated the effects of the proposed rule on a dataset of loans made by small lenders and on a dataset of loans made by large lenders, estimating total revenue reductions of 82% and 83% respectively. As described earlier, the Bureau's updated estimates in the Section 1022(b)(2) Analysis in part VII.F.1.c indicate smaller reductions in revenue from the final rule relative to the proposed rule; however, the Bureau is not able to differentiate the impacts for smaller entities. As a result, the Bureau has no evidence to suggest the revenue impacts on small entities will exceed those on larger entities, but remains sympathetic to that possibility. While not directly addressing revenue impacts, data on market concentration before and after payday lending laws were implemented in Colorado suggest that overall impacts were larger for small lenders. Colorado implemented its payday lending laws in 2010, and the share of storefront locations operated by the ten largest companies increased from 64% to 78% between 2009 and 2011.[1294] Note that the provisions and market context of the Colorado law differ from those in this rule.

Beyond the ability-to-repay requirements, Advocacy stated that the 30-day cooling-off period for re-borrowing will harm small businesses. As a result of the SBREFA panel, the Bureau reduced the cooling-off period from 60 to 30 days, for which Advocacy expressed appreciation. However, Advocacy asserted that the size of the revenue reductions estimated by the Bureau may be detrimental to small entities, and encouraged the Bureau to consider a shorter cooling-off period. Additionally, Advocacy noted that consumers may have bills due more frequently than monthly, in which case the 30-day cooling-off period may prevent the consumer from obtaining funds to meet these needs.

While the Bureau considered a range of cooling-off periods in the rulemaking process, the 30-day period was chosen, consistent with the re-borrowing period described in the section-by-section analysis above, so that borrowers must go a full billing cycle across all their liabilities before being permitted to take out another loan. This aligns the rule with the idea that short-term loans are intended to cover unexpected and temporary financial shocks, rather than persistent income deficits relative to expenses. See the section-by-section analysis for §§ 1041.4 and 1041.5 for more details.

Advocacy encouraged the Bureau to provide an exemption for consumers who have experienced and unexpected emergency, and to provide clear guidance on what qualifies as an emergency.

The Bureau has not created an exception for consumers who have experienced an emergency, as defining an emergency in such a way that does not allow broader evasion of the rule's requirements was not feasible. The Bureau believes that the alternatives to the ability-to-repay requirements present in the rule will make credit available to these consumers enduring unusual and nonrecurring expenses or drops in income. Specifically, the Bureau expects a consumer will be able to obtain no less than six loans in a 12-month period, without needing to satisfy any ability to repay requirements. The Bureau further expects this will be sufficient to address the vast majority of discrete events, such as emergencies and/or unexpected shocks to a consumer's income or expenses. This issue was discussed in greater depth above in Market Concerns—Underwriting.

Advocacy noted that many States have addressed the issue of payday loans through their own lawmaking. Small entities in States with existing payday lending laws have already made changes to their practices to comply with these laws. Advocacy encouraged the Bureau to recognize the States' ability to make the appropriate choices for their citizens and exempt from the rule small businesses that operate in States that currently have payday lending laws.

The Bureau has considered how this rule will interact with the existing State payday lending laws, which are

[1294] *See* Adm'r of the Colo. Consumer Credit Unit, ''Colorado Payday Lending—July Demographic and Statistical Information: July 2000 through December 2009,''; Adm'r of the Colo. Consumer Credit Unit, ''Colorado Payday Lending—July Demographic and Statistical Information: July 2000 through December 2011,''; Adm'r of the Colo. Consumer Credit Unit, ''Colorado Uniform Consumer Credit Code: Annual Report Composites,'' *available at https://coag.gov/uccc/info/ar.*

discussed in greater detail in part II and part VII.C. Given the varying stringency of State payday lending laws, the Bureau has found evidence of harm to consumers even in States with these laws, as discussed earlier. As such, the Bureau believes that State exemptions would be inconsistent with the objectives of the rule. As noted earlier, for those lenders in States with stricter limits on lending, lenders will experience relatively low compliance costs and smaller impacts from the rule, as the rule will be relatively less binding on them.

Advocacy raised concerns that the Bureau had underestimated the rule's impact on small credit unions. In particular, Advocacy expressed concerns over the minimum length required for loans made by credit unions, under the PAL program administered by the NCUA. The proposed rule required loans made under the alternative PAL approach to be at least 46 days in length, while NCUA requires a minimum length of only 30 days. Advocacy also raised concerns that the all-in APR calculation required by the proposal may require credit unions to perform additional calculations to populate new forms, disclosures, compliance training, and other resources. Advocacy encouraged the Bureau to recognize the NCUA's expertise in the area of credit unions and exempt small credit unions from the proposed rule.

While the Bureau believes that exempting small credit unions entirely would be inconsistent with the objectives of the rule, several changes have been made to the final rule to address the concerns and burden for small credit unions. First, the Bureau has lowered the minimum length of a loan made under the PAL Approach to 30 days, bringing the requirements into alignment with those of NCUA. In addition, the Bureau has added a safe harbor to any loans made by Federal credit unions in compliance with the PAL program as set forth by NCUA. Finally, the Bureau has added an exemption for entities offering loans on an accommodation basis that would otherwise be covered loans, as evidenced by the volume of such loans that an entity makes in absolute terms and relative to its overall business. The Bureau believes that most small credit unions will fall within this exemption. Thus the compliance costs of the rule will be significantly reduced for small credit unions, as well as other small entities, which make loans that follow the PAL Approach.

Advocacy expressed concern about the impact of the rule on small rural communities and Tribal businesses and communities. Consumers in rural communities may have fewer options for accessing credit than consumers in more populated areas. Advocacy also stated that consolidation of lenders will be more difficult in these areas, and the resulting long distances between lenders may further reduce credit access. Advocacy relayed the concerns of Tribal representatives regarding the impact of the rule on their communities, many of which are economically disadvantaged. Advocacy encouraged the Bureau to consider the detrimental effects that the proposed rule may have on small rural communities, and to work with federally recognized Indian tribes to resolve the issue of Tribal consultation and Tribal sovereignty.

The Bureau acknowledges that the effects of the rule may be felt differentially in communities depending on their population density, density of lenders, income, and wealth. Specifically, the Bureau considered the impact of consolidation by estimating the additional distance a rural customer may have to travel after this rule in part VII.F.2.b.v and part VII.L. Regarding the specific effects on small lenders, the Bureau believes that the changes made in the final rule described above will mitigate some of the burden associated with compliance in rural or Tribal areas.

Advocacy thanked the Bureau for clarifying that the proposed rule would not apply to business loans, and encouraged the Bureau to provide clear guidance on what qualifies as a small business loan. Advocacy stated that some small businesses do use payday loan products to finance their businesses, and this source of financing is important to their operations. Advocacy raised concerns that even with clear guidance, sources of credit for small businesses may be reduced if a large percentage of payday lenders cease operating due to the rule. In addition, Advocacy noted that if the rule affects the revenue stream of payday lenders, those lenders themselves may face higher costs of credit. Advocacy encouraged the Bureau to perform a full analysis of the impact that this rulemaking may have on the cost of credit for small entities as required by the RFA.

The Bureau's rule is not intended to effect business loans, and the definitions of covered loans reflect this fact. Only loans extended to a consumer primarily for personal, family, or household purposes are covered by the rule. The Bureau appreciates the concern for a possible reduction in business loan availability due to lender exit, and acknowledges that those business relying on products offered by payday lenders may have to travel further to obtain credit, or seek credit from alternative sources. (*e.g.,* online lenders). Regarding the potentially higher cost of credit to payday lenders themselves, Advocacy's point is well taken. The Bureau's analysis has focused on estimating the direct effects of the rule, as the indirect effects rely heavily on lender's responses to the rule, and the Bureau does not have data which could be used to quantify these effects.

Finally, Advocacy encouraged the Bureau to allow at least 24 months for small entities to comply with the rule, in part because small entities have undergone a number of other regulatory changes, including due to the implementation of State lending laws and the Military Lending Act.

The Bureau appreciates the concern regarding the required adjustments to small entities operations, and has increased the compliance date of §§ 1041.2 through 1041.10, 1041.12, and 1041.13 to 21 months after publication of the rule in the **Federal Register**. The Bureau believes this is a sufficient period for compliance with the final rule.

C. Effect of the Rule on Small Entities

1. Description and Estimate of the Number of Small Entities to Which the Final Rule Will Apply

As discussed in the Small Business Review Panel Report, for purposes of assessing the impacts of the rule on small entities, ''small entities'' is defined in the RFA to include small businesses, small nonprofit organizations, and small government jurisdictions.[1295] A ''small business'' is determined by application of SBA regulations and reference to the North American Industry Classification System (NAICS) classifications and size standards.[1296] Under such standards, banks and other depository institutions are considered ''small'' if they have $550 million or less in assets, and for most other financial businesses, the threshold is average annual receipts (*i.e.,* annual revenues) that do not exceed $38.5 million.[1297]

During the SBREFA process, the Bureau identified four categories of small entities that may be subject to the proposed rule for purposes of the RFA. The categories and the SBA small entity

[1295] 5 U.S.C. 601(6).

[1296] 5 U.S.C. 601(3). The current SBA size standards are found on SBA's Web site at *http://www.sba.gov/content/table-small-business-size-standards.*

[1297] 5 U.S.C. 601(3).

thresholds for those categories are: (1) Commercial banks, savings associations, and credit unions with up to $550 million in assets; (2) nondepository institutions engaged in consumer lending or credit intermediation activities with up to $38.5 million in annual revenue; (3) nondepository institutions engaged in other activities related to credit intermediation activities with up to $20.5 million in annual revenue; and (4) mortgage and non-mortgage loan brokers with up to $7.5 million in annual revenue.

The following Table 1 provides the Bureau's revised estimates of the number and types of entities that may be affected by the rule: [1298]

BILLING CODE 4810–AM–P

Table 1: Estimated Number and Types of Affected Entities and Small Entities by NAICS Code

NAICS Industry	NAICS Code	Small Entity Threshold	Estimated Number of Total Entities	Estimated Number of Small Entities
Commercial Banks, Savings Institutions, and Credit Unions[a]	522110; 522120; 522130	$550 million in assets	12,256	10,447
Nondepository Institutions Engaged in Consumer Lending or Credit Intermediation Activities[b]	522298	$38.5 million in annual revenues	5,523	5,403
Nondepository Institutions Engaged in Other Activities Related to Credit Intermediation Activities[b]	522390	$20.5 million in annual revenues	4,701	4,549
Mortgage and Non- Mortgage Loan Brokers[b]	522310	$7.5 million in annual revenues	7,007	6,817
Consumer Lending[b]	522291	$38.5 million in annual revenues	3,206	3,130

[a] Total number of entities and small entities was estimated based on the 2017 Call Report.

[b] Total number of entities and small entities was estimated based on the Census Bureau's Statistics of U.S. Businesses for 2012.

As discussed in the Small Business Review Panel Report, the NAICS categories are likely to include firms that do not extend credit that will be covered by the rule. In addition, some of these firms may qualify for exemptions under the rule. The following Table 2 provides the Bureau's estimates, not accounting for exemptions, of the numbers and types of small entities within particular segments of primary industries that may be affected by the rule:

[1298] In the Small Business Review Panel Report at Chapter 9.1, a preliminary estimate of affected entities and small entities was included in a similar format (a chart with clarifying notes). *See* Small Business Review Panel Report, at 26 tbl. 9.1.1, 27 tbl. 9.1.2.

Table 2: Estimated Number and Types of Affected Small Entities by Industry Category

NAICS Industry	NAICS Code	Small Entity Threshold	Estimated Number of Small Entities
Storefront Payday Lenders[a]	522390	$20.5 million in annual revenue	2,218
Storefront Payday Lenders Operating Primarily as Brokers[a]	522310	$7.5 million in annual revenue	229
Storefront Installment Lenders[b]	522291	$38.5 million in annual revenue	1,577
Storefront Vehicle Title Lenders[c]	522298	$38.5 million in annual revenue	812
Online Lenders[d]	522298; 522390	$20.5 million or 38.5 million in annual revenue	124
Credit Unions[e]	522130	$550 million in assets	5,603
Banks and Thrifts[e]	522110; 522120	$550 million in assets	4,844

[a] The number of small storefront payday lenders is estimated using licensee information from State financial regulators, firm revenue information from public filings and non-public sources, and, for a small number of States, industry market research relying on telephone directory listings. State reports supplemented by location information prepared by Steven Graves and Christopher Peterson, available at *http://www.csun.edu/~sg4002/research/data/US_pdl_addr.xls*. Based on these sources, there are approximately 2,256 storefront payday lenders in the United States. Based on the publicly-available revenue information, at least 38 of the firms have revenue above the small entity threshold. Most of the remaining firms operate a very small number of storefronts. Therefore, while some of the firms without publicly available information may have revenue above the small entity threshold, in the interest of being inclusive all are assumed to be small entities.

[b] The number of storefront installment lenders is estimated from industry estimates of the overall number of installment loan storefront locations and information on the locations of the largest storefront installment lenders. John Hecht, "Alternative Financial Services: Innovating to Meet Customer Needs in an Evolving Regulatory Framework," (2014) (Stephens, Inc., slide presentation) (on file). A recent industry report estimated 8,000 to 10,000 storefront installment lender locations. Based on publicly-available information, approximately 58 of the largest firms have revenue above the small entity threshold. They operate approximately 5,718 storefronts, leaving, on the high end, up to 4,300 storefronts operated by small entities. The number of small entities likely is on the high end of potential estimates of the number of entities that would be affected by the rule, as not all small storefront installment lenders originate covered loans.

[c] The number of small storefront vehicle title lenders is estimated using licensee information from State financial regulators and revenue information from public filings and from non-public sources. State reports supplemented with estimates from Susanna Montezemolo, "Payday Lending Abuses and Predatory Practices: The State of Lending in America & Its Impact on U.S. Households," (Ctr. for Responsible Lending, 2013), *available at http://www.responsiblelending.org/sites/default/files/uploads/10-payday-loans.pdf*. Based on these sources, there are approximately 842 storefront vehicle title lenders in the United States. Based on the revenue information, at least 30 of the firms have revenue above the small entity threshold. Most of the remaining firms operate a very small number of storefronts. Therefore, while some of the firms without publicly available information may have revenue above the small entity threshold, in the interest of being inclusive they are all assumed to be small entities.

d The number of small online lenders is estimated based on Bureau outreach and on estimates from nonPrime101, Report 1: Profiling Internet Small-Dollar Lending – Basic Demographics and Loan Characteristics, at 3 (2014), https://www.nonprime101.com/wp- content/uploads/2015/02/Profiling-Internet-Small-Dollar-Lending-Final.pdf.

[e] These numbers of small entities were estimated based on 2017 Call Report data. The estimates for banks and credit unions are on the high end of small entities subject to the rule, as some do not originate covered loans, though the Bureau's information on this point is incomplete.

BILLING CODE 4810–AM–C

2. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule

The rule imposes new reporting, recordkeeping, and compliance requirements on certain small entities. These requirements and the costs associated with them are discussed below.

a. Reporting Requirements and Their Costs for Small Entities

The rule imposes new reporting requirements to ensure that lenders making covered short-term and longer-term balloon-payment loans under the rule have access to timely and reasonably comprehensive information about a consumer's current and recent borrowing history with other lenders, as discussed in the section-by-section analysis for § 1041.10. This section discusses these reporting requirements and their associated costs on small entities.

Lenders making covered short-term or longer-term balloon-payment loans are required to furnish information about those loans to all information systems that have been registered with the Bureau for 180 days or more, have been provisionally registered with the Bureau for 180 days or more, or have subsequently become registered after being provisionally registered (generally referred to here as registered information systems). At loan consummation, the information furnished needs to include identifying information about the borrower, the type of loan, the loan consummation date, the principal amount borrowed or credit limit (for certain loans), and the payment due dates and amounts. While a loan is outstanding, lenders need to furnish any update to information previously furnished pursuant to the rule within a reasonable period of time following the event prompting the update. And when a loan ceases to be an outstanding loan, lenders must furnish the date as of which the loan ceased to be outstanding and whether all amounts owed in connection with the loan were paid in full, including the amount financed, charges included in the cost of credit, and charges excluded from the cost of credit.

Furnishing information to registered information systems will require small entities to incur one-time and ongoing costs. One-time costs include those associated with establishing a relationship with each registered information system and developing policies and procedures for furnishing the loan data.[1299] Lenders using automated loan origination systems will likely modify those systems, or purchase upgrades to those systems, to incorporate the ability to furnish the required information to registered information systems.[1300]

The ongoing costs will be those of accurately furnishing the data.[1301]

[1299] If multiple registered information systems exist, lenders may be able to contract with a third party to furnish to all registered information systems on their behalf. This third party may be one of the registered information systems, as they may provide this service to make them a more attractive option to lenders.

[1300] Some software vendors that serve lenders that make payday and other loans have developed enhancements to enable these lenders to report loan information automatically to existing State reporting systems.

[1301] The Bureau also received comments noting that lenders will have to incur additional costs associated with dispute resolution. One commenter specifically noted that consumers would dispute negative data contained on their reports which would require investigation along with company responses. The commenter cited a figure of $50,000 per year to handle these disputes and other costs of furnishing. The Bureau acknowledges there may be ancillary costs associated with such disputes, but believes that furnishing accurate data and compliance with the records management requirements should mitigate the costs associated with dispute resolutions (*e.g.* confirming the existence of the loan and any payments made). Additionally, many of the costs associated are expected to be borne by registered information systems, as the FCRA allows consumers to dispute

Lenders with automated loan origination and servicing systems with the capacity to furnish the required data will have very low ongoing costs. Lenders that furnish information manually will likely do so through a web-based form, which the Bureau estimates will take three minutes to fill out for each loan at the time of consummation, when information is updated (as applicable), and when the loan ceases to be an outstanding loan. If multiple registered information systems exist, it may be necessary to incur this cost multiple times, unless there are services that furnish to all registered information systems on behalf of a lender.[1302]

The Bureau notes that some lenders in States where a private third-party operates a database on behalf of State regulators are already required to provide information similar to that required under the rule, albeit to a single entity; such lenders thus have experience complying with this type of requirement. Where possible, the Bureau will also encourage the development of common data standards for registered information systems in order to reduce the costs of providing data to multiple information systems.

In addition to the costs of developing procedures for furnishing the specified information to registered information systems, lenders will also need to train their staff in those procedures. The Bureau estimates that lender personnel engaging in furnishing information will require approximately half an hour of initial training in carrying out the tasks described in this section and 15 minutes of periodic ongoing training per year.

b. Recordkeeping Requirements and Their Costs for Small Entities

The rule imposes new data retention requirements for the requirements to assess borrowers' ability to repay and alternatives to the requirement to assess borrowers' ability to repay for both short-term and longer-term balloon-payment loans by requiring lenders to maintain evidence of compliance in electronic tabular format for certain records. The retention period is 36 months, as discussed above in the section-by-section analysis for § 1041.12.

The data retention requirement in the rule may result in costs to small entities. The Bureau believes that not all small lenders currently maintain data in an electronic tabular format. To comply with the record retention provisions, therefore, lenders originating short-term or longer-term balloon-payment loans may be required to reconfigure existing document production and retention systems. For small entities that maintain their own compliance systems and software, the Bureau does not believe that adding the capacity to maintain data in an electronic tabular format will impose a substantial burden. The Bureau believes that the primary cost will be one-time systems changes that could be accomplished at the same time that systems changes are carried out to comply with the provisions of §§ 1041.5 and 1041.6 of the rule. Similarly, small entities that rely on vendors will likely rely on vendor software and systems to comply in part with the data retention requirements.

In addition to the costs described above, lenders will also need to train their staff in record retention procedures. The Bureau estimates that lender personnel engaging in recordkeeping will require approximately half an hour of initial training in carrying out the tasks described in this section and 15 minutes of periodic ongoing training per year.

c. Compliance Requirements and Their Costs for Small Entities

The analysis below discusses the costs of compliance for small entities of the following major provisions: (i) Ability-to-repay requirements for covered short-term and longer-term balloon-payment loans, including the requirement to obtain a consumer report from a registered information system; and a conditional exemption providing an alternative to those specific underwriting criteria for short-term loans, including notices to consumers taking out loans originated under this alternative; and (ii) provisions relating to payment practices that limit continuing attempts to withdraw money from borrowers' accounts after two consecutive failed attempts; and payment notice requirements.

The discussions of the impacts are organized into the two main categories of provisions listed above—those relating to underwriting and those related to payments. Within each category, the discussion is organized to facilitate a clear and complete consideration of the impacts of these major provisions of the rule on small entities.

In considering the potential impacts of the rule, the Bureau takes as the baseline for the analysis the regulatory regime that currently exists for the covered products and covered persons.[1303] These include State laws and regulations; Federal laws, such as the MLA, FCRA, FDCPA, TILA, EFTA, ECOA, E–SIGN, and the regulations promulgated under those laws; and, with regard to depository institutions that make covered loans, the guidance and policy statements of those institutions' prudential regulators.[1304]

The rule includes several exemptions, and in places it is useful to discuss their benefits, costs, and impacts relative to those of the core provisions of the proposed regulation. The baseline for evaluating the full potential benefits, costs, and impacts of the proposal, however, is the current regulatory regime as of the issuance of the proposal.

The discussion here is confined to the direct costs to small entities of complying with the requirements of the rule. Other impacts, such as the impacts of limitations on loans that could be made under the rule, are discussed at length above. The Bureau believes that, except where otherwise noted, the impacts discussed there would apply to small entities.

i. Underwriting for Covered Short-Term and Longer-Term Balloon-Payment Loans

(a). Requirement To Assess Borrowers' Ability To Repay

The rule will require that lenders determine that applicants for short-term and longer-term balloon-payment loans have the ability to repay the loan while still meeting their major financial obligations and paying basic living expenses. For purposes of this discussion, the practice of making loans after determining that the borrower has the ability to repay the loan will be referred to as the ''ATR approach.'' Lenders making loans using the ATR approach will need to comply with several procedural requirements when

information directly with the consumer reporting agency. As such, the $50,000 figure cited by the commenter seems inflated. Instead, the Bureau believes the costs associated with these activities are included in the ongoing costs associated with furnishing to registered information systems.

[1302] Should there be multiple registered information systems, the Bureau expects that one or more registered information systems or other third parties will offer to furnish information to all registered information systems on behalf of the lender.

[1303] The Bureau has discretion in each rulemaking to choose the relevant provisions to discuss and to choose the most appropriate baseline for that particular rulemaking.

[1304] *See, e.g.,* FDIC, Fin. Institution Letter FIL–14–2005, ''Payday Lending Programs: Revised Examination Guidance,'' (Revisd 2015), *available at https://www.fdic.gov/news/news/financial/2005/fil1405.pdf*; OCC, Guidance on Supervisory Concerns and Expectations Regarding Deposit Advance Product, 78 FR 70624 (Nov. 26, 2013); Guidance on Supervisory Concerns and Expectations Regarding Deposit Advance Products, 78 FR 70552 (Nov. 26, 2013).

originating loans. The Bureau's assessment of the benefits, costs, and other relevant impacts on small entities of these procedural requirements are discussed below.

The Bureau believes that many lenders use automated systems when underwriting loans and will modify those systems, or purchase upgrades to those systems, to incorporate many of the procedural requirements of the ATR approach. The costs of modifying such a system or purchasing an upgrade are discussed below, in the discussion of the costs of developing procedures, upgrading systems, and training staff.

(1). Consulting Lender's Own Records and Costs to Small Entities

Under the rule, lenders will need to consult their own records and the records of their affiliates to determine whether the borrower had taken out any prior short-term loans or longer-term balloon-payment loans that were still outstanding or were repaid within the prior 30 days. To do so, a lender will need a system for recording loans that can be identified as being made to a particular consumer and a method of reliably accessing those records. The Bureau has concluded that lenders will most likely comply with this requirement by using computerized recordkeeping. A lender operating a single storefront will need a system of recording the loans made from that storefront and accessing those loans by consumer. A lender operating multiple storefronts or multiple affiliates will need a centralized set of records or a way of accessing the records of all of the storefronts or affiliates. A lender operating solely online will presumably maintain a single set of records; if it maintained multiple sets of records, it will need a way to access each set of records.

The Bureau believes that most small entities already have the ability to comply with this provision, with the possible exception of those with affiliates that are run as separate operations. Lenders' own business needs likely lead them to have this capacity. Lenders need to be able to track loans in order to service the loans. In addition, lenders need to track the borrowing and repayment behavior of individual consumers to reduce their credit risk, such as by avoiding lending to a consumer who has defaulted on a prior loan. And most States that allow payday lending have requirements that implicitly require lenders to have the ability to check their records for prior loans to a loan applicant, including limitations on renewals or rollovers or cooling-off periods between loans. Despite these various considerations, however, there may be some lenders that currently do not have the capacity to comply with this requirement.

Small entities that do not already have a records system in place will need to incur a one-time cost of developing such a system, which may require investment in information technology hardware and/or software. Lenders may instead contract with a vendor to supply part or all of the systems and training needs.

As noted above, the Bureau believes that many lenders use automated loan origination systems and will modify those systems or purchase upgrades to those systems such that they would automatically access the lender's own records. For lenders that access their records manually, rather than through an automated origination system, the Bureau estimates that accessing and utilizing these records in the ATR determination will take an average of nine minutes of an employee's time.

The Bureau received no comments from industry or trade groups asserting that a substantial number of lenders currently lack the ability to check their record for prior loans, or that implementing such a system would constitute an undue cost or burden. The Bureau believes this supports the cost framework laid out here.

(2). Obtaining a Consumer Report From a Registered Information System; Costs to Small Entities

Under the rule, small entities will have to obtain a consumer report from a registered information system containing timely information about an applicant's borrowing history, if one or more such systems were available. The Bureau believes that many lenders likely already obtain from third parties some of the information that will be included in the registered information system data, such as in States where a private third-party operates a database containing loan information on behalf of the State regulator or for their own risk management purposes, such as fraud detection. However, the Bureau recognizes that there also is a sizable segment of lenders making short-term loans that operate only in States without a State-mandated loan database and that make lending decisions without obtaining any data from a specialty consumer reporting agency.

As noted above, the Bureau believes that many small entities use automated loan origination systems and will modify those systems or purchase upgrades to those systems such that they will automatically order a report from a registered information system during the lending process. For lenders that order reports manually, the Bureau estimates that it will take approximately nine minutes on average for a lender to request a report from a registered information system and utilize the report in the ATR determination. For all lenders, the Bureau expects that access to a registered information system will be priced on a ''per-hit'' basis, where a hit is a report successfully returned in response to a request for information about a particular consumer at a particular point in time. Based on industry outreach, the Bureau estimates that the cost to small entities would be $0.50 per hit, based on pricing in existing relevant consumer reporting markets.

The Bureau received comments from trade groups and lenders discussing the estimated ''per hit'' costs of the registered information system reports. The comments were approximately evenly split as to whether the estimated costs were substantially too low, slightly too low, or approximately accurate. A trade group representing mostly large depository institutions argued the cost is substantially too low, and cited its members' average costs of $10.97 to purchase a credit report. Given the drastic difference between this cost and those stated by other commenters, the Bureau believes the credit reports referred to (*e.g.,* tri-bureau credit reports) are not the type that would be purchased for this type of loan. This comparison did not seem relevant to the cost to obtain a report from a registered information system. A trade group representing small-dollar lenders also asserted the estimated cost was too low, citing its members' average cost of $1 to obtain a consumer report from a nationwide consumer reporting reporting agency. Finally, a large small-dollar lender asserted the $0.50 estimate ''appears to be right.'' Given that registered information systems are likely to collect much less data than are collected by consumer reporting agencies operating in the market today, it follows that the cost of a report from a registered information system should be lower. Given that the comments received directly from lenders regarding the expected costs of a registered information system report argued the estimate is generally accurate, the Bureau continues to believe the cost per hit estimate of $0.50 is reasonable.

(3). Assessing Ability To Repay Based on Information and Verification Evidence About Income and Major Financial Obligations; Costs to Small Entities

Lenders making loans under the ATR approach are required to collect information about the amount of income and major financial obligations, make reasonable efforts to verify that information, and use that information to make an ability-to-repay determination.

The Bureau believes that many small entities that make short-term loans, such as small storefront lenders making payday loans, already obtain some information on consumers' income. Many of these lenders, however, only obtain income verification evidence the first time they make a loan to a consumer or for the first loan following a substantial break in borrowing. Other lenders, such as some vehicle title lenders or some lenders operating online, may not currently obtain income information at all, let alone verification evidence for that information, before issuing loans. In addition, many consumers likely have multiple income sources that are not all currently documented in the ordinary course of short-term lending. Under the rule, consumers and lenders might have incentives to provide and gather more income information than they do currently in order to establish the borrower's ability to repay a given loan. The Bureau believes that most lenders that originate short-term loans and longer-term loans with balloon payments do not currently collect information on applicants' major financial obligations, let alone attempt to verify obligations, nor do they determine consumers' ability to repay a loan, as will be required under the rule.

There are two types of costs entailed in making an ATR determination: The cost of obtaining and verifying evidence where possible and the cost of making an ATR determination consistent with that evidence.

As noted above, many lenders already use automated systems when originating loans. These lenders will likely modify those systems or purchase upgrades to those systems to automate many of the tasks that would be required by the rule.

Under the rule, small lenders will be required to obtain a consumer report from a nationwide consumer reporting agency to verify the amount of payments for debt obligations, unless that lender has obtained a report in the preceding 90 days or the consumer has triggered a cooling-off period at the end of a three-loan sequence. As such, these consumer reports will typically only be necessary to obtain for the first loan in a new sequence of borrowing that begins more than 90 days since the last consumer reports was obtained. This will be in addition to the cost of obtaining a report from a registered information system, though the Bureau expects some registered information systems will provide consolidated reports. Based on industry outreach, the Bureau believes these reports will cost approximately $2.00 for small entities. As with the ordering of reports from registered information systems, the Bureau believes that many small entities will modify their loan origination system or purchase an upgrade to that system to allow the system to automatically order a consumer report from a nationwide consumer reporting agency during the lending process at a stage in the process where the information is relevant. For lenders that order reports manually, the Bureau estimates that it would take approximately nine minutes on average for a lender to request a report and utilize it in the ATR determination.

Small entities that do not currently collect income or verification evidence for income will need to do so. The Bureau estimates it will take roughly three to five minutes per application for lenders that use a manual process to gather and review information a for consumers who have straightforward documentation (*e.g.,* pay stubs), and incorporate the information into the ATR determination. Some industry commenters suggested this value was too low in the proposal, often citing cases where consumers may not have regular income from sources that provide documentation. The Bureau notes that many lenders already require such information prior to initiating loans. Additionally, the rule now allows stated income to be used in appropriate cases, mitigating the time costs associated with more rigorous verification efforts. As such, the Bureau believes the time estimates provided here to be reasonable.

Some consumers may visit a lender's storefront without the required documentation and may have income for which verification evidence cannot be obtained electronically.

Small entities making loans online may face particular challenges obtaining verification evidence, especially for income. It may be feasible for online lenders to obtain scanned or photographed documents as attachments to an electronic submission; the Bureau understands that some online lenders are doing this today with success. And services that use other sources of information, such as checking account or payroll records, may mitigate the need for lenders to obtain verification evidence directly from consumers. Additionally, for consumers with cash income that is not deposited into a depository account, lenders will be allowed to rely on stated information, minimizing the lenders' costs and the chance that a consumer is unable to complete an application.

Once information and verification evidence on income and major financial obligations has been obtained, the lender must use that information and evidence to make a reasonable determination that the consumer will have the ability to repay the contemplated loan. In the process of considering the information collected about income and major financial obligations, lenders will need to estimate an amount that the borrower needs for basic living expenses. They may do this in a number of ways, including, for example, collecting information directly from borrowers, using available estimates published by third parties, or basing it on their experience with similarly situated consumers.

In total, the Bureau estimates that obtaining a statement from the consumer and taking reasonable steps to verify income and required payments for major financial obligations, projecting the consumer's residual income, estimating the consumer's basic living expenses, and arriving at a reasonable ATR determination will take essentially no additional time for a fully automated electronic system and between 15 and 45 minutes for a fully manual system. Numerous industry commenters suggested the estimate provided by the Bureau in the proposal (15 to 2010 minutes) was too low. In response to these comments, the Bureau has increased its estimated time to manually underwrite these loans, but also notes that all major financial obligations should be obtainable either from a consumer report or consumer statement (in the example of rental expense).

Further total costs will depend on the existing utilization rates of and wages paid to staff that will spend time carrying out this work. To the extent that existing staff has excess capacity (that is, that a lender's employees have time that is not fully utilized), the extra time to process applications for loans made via the ATR approach should not result in higher wage bills for the lender. Further, as the Bureau expects the majority of loans to be made via the principal step-down approach, the expected increase in staff hours necessary to comply with the new

procedural requirements should be modest. Still, to the extent that lenders must increase staff and/or hours to comply with the procedural requirements, they may experience increased costs from hiring, training, wages, and benefits.

Dollar costs include a report from a registered information system costing $.50 and a consumer report from a nationwide consumer reporting agency containing housing costs estimates costing $2.00. Lenders relying on electronic services to gather verification information about income would face an additional small cost.

(4). Developing Procedures, Upgrading Systems, and Training Staff; Costs to Small Entities

Small entities will need to develop procedures to comply with the requirements of the ATR approach and train their staff in those procedures. Many of these requirements do not appear qualitatively different from many practices that most lenders already engage in, such as gathering information and documents from borrowers and ordering various types of consumer reports.

Developing procedures to make a reasonable determination that a borrower has an ability to repay a loan without re-borrowing and while paying for major financial obligations and living expenses is likely to be a challenge for many small entities. The Bureau expects that vendors, law firms, and trade associations are likely to offer both products and guidance to lenders, potentially lowering the cost of developing procedures as service providers can realize economies of scale. Lenders must also develop a process for estimating borrowers' basic living expenses if they choose not to make an individual determination for each customer. Some lenders may rely on vendors that provide services to determine ability to repay that include estimates of basic living expenses. Some methods of conducting an analysis to determine estimates of basic living expenses could be quite costly. There are a number of government data sources and online services, however, that lenders may be able to use to obtain living expense estimates. Additionally, lenders may rely on their experiences with similarly situated consumers in making this estimate, reducing the need to rely on individual measures or third parties.

As noted above, the Bureau believes that many lenders use automated systems when originating loans and would incorporate many of the procedural requirements of the ATR approach into those systems. This will likely include an automated system to make the ability-to-repay determination; subtracting the component expense elements from income itself is quite straightforward and should not require substantial development costs. The Bureau believes small lenders that use automated loan origination systems rely on licensed software. Depending on the nature of the software license agreement, the Bureau estimates that the one-time cost to upgrade this software will be $10,000 for lenders licensing the software at the entity-level and $100 per seat for lenders licensing the software using a seat-license contract. Given the price differential between the entity-level licenses and the seat-license contracts, the Bureau believes that only small entities with a significant number of stores will rely on the entity-level licenses. One trade group commented that they believe this to be too low an estimate of the associated costs, citing a survey of their members. However, the trade group's members are not predominately involved in making loans that will be covered under the rule, so it is unclear how their estimates relate to the systems contemplated here. Additionally, the vast majority of the comments from more directly-related trade groups, lenders, etc. remained silent on these estimates, despite the invitation to provide feedback. As such, the Bureau has not changed these values from those put forth in the proposal.

The Bureau estimates that lender personnel engaging in making loans would require approximately 4 hours per employee of initial training in carrying out the tasks described in this section and 2 hours per employee of periodic ongoing training per year.[1305]

(b). Principal Step-Down Approach as an Alternative to the Underwriting Criteria Used To Assess the Borrower's Ability To Repay; Costs to Small Entities

The rule includes an alternative approach, as opposed to using the underwriting criteria specified in § 1041.5, for originating certain short-term loans as in § 1041.6. In this section, the practice of making loans by complying with the alternative requirements under § 1041.6 will be referred to as the ''principal step-down approach.''

The procedural requirements of the principal step-down approach will generally have less impact on small lenders than the requirements of the ATR approach. Lenders that make short-term loans under the principal step-down approach will not have to obtain information or verification evidence about income or major financial obligations, estimate basic living expenses, or complete an ability-to-repay determination prior to making loans.

The rule will instead require only that lenders making loans under § 1041.6 consult their internal records and those of affiliates, access reports from a registered information system, furnish information to all registered information systems, and make an assessment as part of the origination process that certain loan requirements (such as principal limitations and restrictions on certain re-borrowing activity) are met. The requirement to consult the lender's own records is slightly different than under the ATR Approach, as the lender must check the records for the prior 12 months. This is unlikely to have different impacts on small lenders, however, as any system that allows the lender to comply with the requirement to check its own records under the ATR approach should be sufficient for the principal step-down approach and vice-versa. A lender will also have to develop procedures and train staff.

Small entities making short-term loans under the principal step-down approach will be required to provide borrowers with a disclosure, described in the section-by-section analysis of § 1041.6(e), with information about their loans and about the restrictions on future loans taken out using the principal step-down approach. One disclosure will be required at the time of origination of a first principal step-down approach loan, where a borrower had not had a principal step-down approach loan within the prior 30 days. The other disclosure will be required when originating a third principal step-down approach loan in a sequence because the borrower will therefore be unable to take out another principal step-down approach loan within 30 days of repaying the loan being originated. The disclosures will need to be customized to reflect the specifics of the individual loan.

The Bureau believes that all small entities have some disclosure system in place to comply with existing disclosure requirements. Lenders may enter data directly into the disclosure system, or the system may automatically collect data from the lenders' loan origination system. For disclosures provided via mail, email, or text message, some disclosure systems forward the information necessary to prepare the

[1305] Note that the Bureau expects that this training would be in addition to the training relating to furnishing loan information as discussed in part VIII.C.2.a and recordkeeping as discussed in part VIII.C.2b.

disclosures to a vendor in electronic form, and the vendor then prepares and delivers the disclosures. For disclosures provided in person, disclosure systems produce a disclosure that the lender then provides to the borrower.

Respondents will incur a one-time cost to upgrade their disclosure systems to comply with new disclosure requirements.

The Bureau believes that small lenders generally rely on licensed disclosure system software. Depending on the nature of the software license agreement, the Bureau estimates that the cost to upgrade this software will be $10,000 for lenders licensing the software at the entity-level and $100 per seat for lenders licensing the software using a seat- license contract. Given the price differential between the entity-level licenses and the seat- license contracts, the Bureau believes that only small lenders with a significant number of stores will rely on entity-level licenses.

In addition to the upgrades to the disclosure systems, the Bureau estimates that small storefront lenders will pay $200 to a vendor for a standard electronic origination disclosure form template.

The Bureau estimates that providing disclosures in stores will take a store employee two minutes and cost $0.10.

ii. Payment Practices and Related Notices for Certain Covered Loans; Costs to Small Entities

The rule limits how lenders initiate payments on a covered loan from a borrower's account and imposes two notice requirements relating to such payments. The impacts of these provisions are discussed here for all covered loans.

Note that the Bureau believes that the requirement to assess ATR before making a short-term or longer-term balloon-payment loan, or to comply with one of the conditional exemptions, will reduce the frequency with which borrowers receive loans that they do not have the ability to repay. This should make unsuccessful payment withdrawal attempts less frequent, and lessen the impacts of the limitation on payment withdrawal attempts and the requirement to notify consumers when a lender is no longer permitted to attempt to withdraw payments from a borrower's account.

(a). Limitation on Payment Withdrawal Attempts; Costs to Small Entities

The rule prevents lenders from attempting to withdraw payment from a consumer's account if two consecutive prior attempts to withdraw payment made through any channel are returned for nonsufficient funds. The lender can resume initiating payment if the lender obtains from the consumer a new and specific authorization to collect payment from the consumer's account.

The impact of this restriction depends on how often the lender attempts to collect from a consumers' account after more than two consecutive failed transactions and how often they succeed in doing so. Based on industry outreach, the Bureau understands that some small entities already have a practice of not continuing to attempt to collect using these means after one or two failed attempts. These lenders will not incur costs from the restriction. Additionally, some depository institutions disallowed repeated attempts to collect using these means; lenders attempting to collect from such depositories would also not incur costs from this restriction.

While not specific to small lenders, the Section 1022(b)(2) Analysis discusses the Bureau's analysis of ACH payment request behavior of online lenders making payday or payday installment loans. The Bureau found that only 7 to 10 percent of the payments attempted through the ACH system came after two failed payments requests.[1306] Under the restriction, lenders can still seek payment from their borrowers by engaging in other lawful collection practices. As such, the preceding are high-end estimates of the impact of this restriction on the collection efforts of these lenders. These other forms of lawful collection practices, however, may be more costly for lenders than attempting to collect directly from a borrower's account. After the limitation is triggered by two consecutive failed attempts, lenders are required to send a notice to consumers. To seek a new and specific authorization to collect payment from a consumer's account, the lender can send a request with the notice and may need to initiate additional follow-up contact with the consumer. The Bureau believes that this will most often be done in conjunction with general collections efforts and will impose little additional cost on lenders.

To the extent that lenders assess returned item fees when an attempt to collect a payment fails and lenders are subsequently able to collect on those fees, this rule may reduce lenders' revenues.

Small entities will also need the capability of identifying when two consecutive payment requests have failed. The Bureau believes that the systems small entities use to identify when a payment is due, when a payment has succeeded or failed, and whether to request another payment will have the capacity to identify when two consecutive payments have failed, and therefore this requirement will not impose a significant new cost.

The Bureau received comments stating that tracking failed payment withdrawals would require new systems and procedures to be developed, at a cost not specified in the IRFA. While the Bureau acknowledges that some small entities may face costs in modifying existing systems to comply with the recordkeeping and payment processing requirements of the rule, these requirements largely build on processes required by existing laws or necessitated by standard business practice.

(b). Required Notice To Collect Directly From a Borrower's Account; Costs to Small Entities

The rule will require lenders to provide consumers with a notice prior to the first lender-initiated attempt to withdraw payment from consumers' accounts, including ACH entries, post-dated signature checks, remotely created checks, remotely created payment orders, and payments run through the debit networks. The notice will be required to include the date the lender will initiate the payment request, the payment channel, the amount of the payment, the breakdown of that amount to principal, interest, and fees, the loan balance remaining if the payment succeeds, the check number if the payment request is a signature check or RCC, and contact information for the consumer to reach the lender. There are separate notices required prior to unusual payments.

This provision will not apply to small lenders making loans under the PAL approach or making accommodation loans.

The costs to small entities of providing these notices will depend heavily on whether they are able to provide the notice via email, text messages, or on paper at origination or will have to send notices through regular mail. In practice, the Bureau expects most small lenders to provide the notice of initial payment withdrawal at origination, minimizing the transmission costs. This can either be done via a written disclosure (at a storefront), or as a PDF attachment or Web page sent via an email or text (for either storefront or online lenders). The variation in costs of notices provided

[1306] CFPB Report on Supplemental Findings, at 150 tbl. 32. These impacts may be lower now than they were at the time covered by the data analyzed by the Bureau, due to changes in industry practices and to changes in the rules governing the ACH system.

after origination (either regular notices, or notices in advance of unusual payments) is due in part to differences in transmission costs between different channels. Most borrowers are likely to have Internet access or a mobile phone capable of receiving text messages, and during the SBREFA process multiple SERs reported that most borrowers, when given the opportunity, opt in to receiving notifications via text message. The Bureau has intentionally structured the rule to encourage transmission by email or text message because it believes those channels are the most effective for consumers, as well as less burdensome for lenders. However, should the lender choose to send paper notifications via regular mail, they would incur higher costs of transmission, as well as administrative costs associated with providing the notification early enough to ensure sufficient time for it to be received by the consumer.

The Bureau believes that small entities that will be affected by the new disclosure requirements have some disclosure system in place to comply with existing disclosure requirements, such as those imposed under Regulation Z, 12 CFR part 1026, and Regulation E, 12 CFR part 1005. Lenders enter data directly into the disclosure system or the system automatically collects data from the lenders' loan origination system. For disclosures provided via mail, email, text message, or immediately at the time of origination, the disclosure system often forwards to a vendor, in electronic form, the information necessary to prepare the disclosures, and the vendor then prepares and delivers the disclosures. Lenders will incur a one-time burden to upgrade their disclosure systems to comply with new disclosure requirements.

Small lenders will need to update their disclosure systems to compile necessary loan information to send to the vendors that would produce and deliver the disclosures relating to payments. The Bureau believes small lenders rely on licensed disclosure system software. Depending on the nature of the software license agreement, the Bureau estimates that the cost to upgrade this software would be $10,000 for lenders licensing the software at the entity-level and $100 per seat for lenders licensing the software using a seat-license contract. For lenders using seat license software, the Bureau estimates that each location for small lenders has on average three seats licensed. Given the price differential between the entity-level licenses and the seat-license contracts, the Bureau believes that only small entities with a significant number of stores will rely on the entity-level licenses.

Small entities with disclosure systems that do not automatically pull information from the lenders' loan origination or servicing system will need to enter payment information into the disclosure system manually so that the disclosure system can generate payment disclosures. The Bureau estimates that this will require two minutes per loan in addition to the two minutes to provide the disclosures. Lenders will need to update this information if the scheduled payments were to change.

For disclosures delivered through the mail, the Bureau estimates that vendors would charge two different rates, one for high volume mailings and another for low volume mailings. The Bureau understands that small entities will likely generate a low volume of mailings and estimates vendors will charge such lenders $1.00 per disclosure. For disclosures delivered through email, the Bureau estimates vendors will charge $0.01 to create and deliver each email such that it complies with the requirements of the rule. For disclosures delivered through text message, the Bureau estimates vendors will charge $0.08 to create and deliver each text message such that it complies with the requirements of the rule. The vendor would also need to provide either a PDF attachment of the full disclosure or a Web page where the full disclosure linked to in the text message is provided. The cost of providing this PDF attachment or web disclosure is included in the cost estimate of providing the text message. Finally, for disclosures delivered on paper at origination, the Bureau estimates costs will be $0.10 per disclosures.

Again, the Bureau believes that virtually all notifications will be provided at the time of origination (for regular notices), or electronically via text or email (for notifications of unusual payments). As such, the mailing costs discussed here are expected to be almost completely avoided.

(c). Required Notice When Lender Can No Longer Collect Directly From a Borrower's Account; Costs to Small Entities

The rule will require a lender that has made two consecutive unsuccessful attempts to collect payment through any channel from a borrower's account to provide a borrower, within three business days of learning of the second unsuccessful attempt, with a consumer rights notice explaining that the lender is no longer able to attempt to collect payment directly from the borrower's account, along with information identifying the loan and a record of the two failed attempts to collect funds.

The requirement will impose on small entities the cost of providing the notice. Lenders already need to track whether they can still attempt to collect payments directly from a borrower's account, so identifying which borrowers should receive the notice should not impose any additional cost on lenders. The Bureau also expects that lenders normally attempt to contact borrowers in these circumstances to identify other means of obtaining payment. If they are contacting the consumer via mail, the lender will be able to include the required notice in that mailing.

The Bureau expects that small entities will incorporate the ability to provide this notice into their payment notification process. The Bureau estimates that vendors will charge $1.00 per notice for small entities that send a small volume of mailing. For disclosures delivered through email, the Bureau estimates vendors will charge $0.01 to create and deliver each email such that it complies with the requirements of the proposed rule. For disclosures delivered through text message, the Bureau estimates vendors will charge $0.08 to create and deliver each text message. The vendor would also need to provide either a PDF attachment of the full disclosure or a Web page where the full disclosure linked to in the text message would be provided. The cost of providing this PDF attachment or web disclosure is included in the cost estimate of providing the text message.

(d). Estimate of Small Entities Subject to the Rule and Costs for Preparing Reports and Records

Section 604(a)(5) of the RFA also requires an estimate of the type of professional skills necessary for the preparation of the reports or records. The Bureau does not anticipate that, except in certain rare circumstances, any professional skills will be required for recordkeeping and other compliance requirements of this rule that are not otherwise required in the ordinary course of business of the small entities affected by the proposed rule. Parts VIII.C.2.b and VIII.C.2.c summarize the recordkeeping and compliance requirements of the rule that will affect small entities.

As discussed above, the Bureau believes that vendors will update their software and provide small creditors with the ability to retain the required data. The one situation in which a small entity would require professional skills

that are not otherwise required in the ordinary course of business will be if a small creditor does not use computerized systems to store information relating to originated loans and therefore will either need to hire staff with the ability to implement a machine-readable data retention system or contract with one of the vendors that provides this service. The Bureau believes that the small entities will otherwise have the professional skills necessary to comply with the proposed rule.

The Bureau believes efforts to train small entity staff on the updated software and compliance systems will be reinforcing existing professional skills sets above those needed in the ordinary course of business. In addition, although the Bureau acknowledges the possibility that certain small entities may have to hire additional staff as a result of certain aspects of the rule, the Bureau has no evidence that such additional staff will have to possess a qualitatively different set of professional skills than small entity staff employed currently. The Bureau presumes that additional staff that small entities may need to hire will generally be of the same professional skill set as current staff.

Several commenters raised concerns that the initial implementation of the rule's requirements may require legal or consulting skills beyond those of employees at typical small lenders. The Bureau acknowledges this concern, and believes these costs are accounted for in earlier estimates of the one-time costs of developing procedures, upgrading systems, and training staff.

D. The Bureau's Efforts To Minimize the Economic Impact on Small Entities

Section 604(a)(6) of the RFA requires the Bureau to describe in the FRFA the steps taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes. The Bureau has taken numerous steps to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statues. These include simplification of the ability-to-repay requirements, expanded exclusions from the rule, expanded exemptions for alternative loans and accommodation loans, increased flexibility and reduced number of required payment disclosures, and a later compliance date of §§ 1041.2 through 1041.10, 1041.12, and 1041.13, as described in the Bureau's responses to public comments and the SBA Office for Advocacy.

1. Consideration of Alternatives to the Final Rule and Their Impact on Small Entities

In the IRFA, four significant alternatives to the proposed rule were considered, but the Bureau decided that none of them would accomplish the stated objectives of Title X of the Dodd-Frank Act while minimizing the impact of the rule on small entities.[1307] In this section, the Bureau presents its considerations in that regard. Four significant alternatives are briefly described and their impacts on small entities relative to the adopted provisions are discussed below. The discussion of each alternative includes a statement of the factual, policy, and legal reasons for selecting the adopted provisions and rejecting the significant alternatives. The alternatives discussed here are:

- Limits on re-borrowing of short-term loans without an ability-to-repay requirement;
- An ATR requirement for short-term loans with no principal step-down approach;
- Disclosures as an alternative to the ability-to-repay requirement; and
- Limitations on withdrawing payments from borrowers' accounts without disclosures.

In addition to the significant alternatives outlined above, the Bureau has considered comments on alternatives to specific provisions of the rule, discussed in the section-by-section analysis of each corresponding section.

a. Limits on Re-Borrowing Short-Term Loans Without an Ability-To-Repay Requirement

As an alternative to the ability-to-repay requirements in § 1041.5 for short-term loans, the Bureau considered a limitation on the overall number of short-term loans that a consumer could take in a loan sequence or within a short period of time. This alternative would limit consumer injury from extended periods of re-borrowing on short-term loans. However, as discussed further in part VII.J.1, the Bureau has concluded that a limitation on re-borrowing without a requirement to determine the consumer's ability to repay the loan will not provide sufficient protection against consumer injury from making a short-term loan without reasonably determining that the consumer will have the ability to repay the loan. Accordingly, the Bureau finds that a limitation on repeat borrowing alone will not be consistent with the stated objectives of Title X to identify and prevent unfair, deceptive, or abusive acts or practices. However, the Bureau has made changes to the ability-to-pay requirements to reduce the burden of compliance for small entities, as described in the Bureau's responses to the SBA Office for Advocacy.

[1307] 5 U.S.C. 603(c).

b. An ATR Requirement for Short-Term Loans With No Principal Step-Down Approach

The Bureau considered adopting the ability-to-repay requirements in § 1041.5 for short-term loans without adopting the alternative approach for originating certain short-term loans as described in § 1041.6. In the absence of the principal step-down approach, lenders would be required to make a reasonable determination that a consumer has the ability to repay a loan and to therefore incur the costs associated with the ability-to-repay requirements for every short-term application that they process. However, the Bureau has determined that the principal step-down approach will provide sufficient structural consumer protections while reducing the compliance burdens associated with the ATR approach on lenders and permitting access to less risky credit for borrowers for whom it may be difficult for lenders to make a reasonable determination that the borrower has the ability to repay a loan, but who may nonetheless have sufficient income to repay the loan and also meet other financial obligations and basic living expenses. Comments from small entities expressed particular concern that the ability-to-repay requirements would be burdensome given their smaller scale over which to spread fixed cost investments.

In addition, comments suggested that because small lenders base some lending decisions on their personal relationship with customers, the full ability-to-repay assessment was not necessary for all loan originations. Accordingly, the Bureau has concluded that providing the principal step-down approach as described in § 1041.6 will help minimize the economic impact of the proposed rule on small entities without undermining consumer protections in accordance with the stated objectives of Title X to identify and prevent unfair, deceptive, or abusive acts or practices.

c. Disclosures as an Alternative To the Ability-To-Repay Requirement

As an alternative to substantive regulation of the consumer credit transactions that will be covered by the rule, the Bureau considered whether enhanced disclosure requirements would prevent the consumer injury that is the focus of the rule and minimize the impact of the proposal on small entities.

In particular, the Bureau considered whether the disclosures required by some States would accomplish the stated objectives of Title X of the Dodd-Frank Act. The Bureau is adopting, in §§ 1041.6 and 1041.9 requirements that lenders make specific disclosures in connection with certain aspects of a transaction.

Analysis by the Bureau indicates that a disclosure-only approach would have substantially less impact on the volume of short-term lending, but also would have substantially less impact on the harms consumers experience from long sequences of payday and single-payment vehicle title loans, as discussed further in part VII.J.3. Because the Bureau has concluded that disclosures alone would be ineffective in warning borrowers of those risks and preventing the harms that the Bureau seeks to address with the proposal, the Bureau is not adopting disclosure as an alternative to the ability-to-repay and other requirements of the rule.

d. Limitations on Withdrawing Payments From Borrowers' Accounts Without Disclosures

The Bureau considered including the prohibition on lenders attempting to collect payment from a consumer's accounts when two consecutive attempts have been returned due to a lack of sufficient funds in § 1041.8 unless the lender obtains a new and specific authorization, but not including the required disclosures of upcoming payment withdrawals (both the first and unusual payments) or the notice by lenders to consumers alerting them to the fact that two consecutive withdrawal attempts to their account have failed and the lender can therefore no longer continue to attempt to collect payments from a borrower account. This alternative would reduce lenders' one-time costs of upgrading their disclosure systems as well as the incremental burden of providing each disclosure. The Bureau finds, however, that in the absence of the disclosures, consumers face an increased risk of injury in situations in which lenders intend to initiate a withdrawal in a way that deviates from the loan agreement or prior course of conduct between the parties. In addition, consumers would face an increased risk of believing that they are required to provide lenders with a new authorization to continue to withdraw payments directly from their accounts when they may be better off using some alternative method of payment.

To reduce the burden for small entities and other lenders, after the first payment, any payment withdrawals for usual payments do not require a disclosure under the final rule. Relative to the proposed rule, this change will decrease compliance costs for small entities while still accomplishing the stated objectives of the rule.

Some commenters expressed concern that the Bureau's position on disclosures—that they are an insufficient alternative to the ability-to-repay requirements but beneficial for payment withdrawals, is inconsistent. Yet the mandated disclosures in these situations address different harms. The primary harm from re-borrowing is unlikely to be resolved by disclosures that long sequences may occur, as borrowers seem to understand the average duration of sequences,[1308] but cannot accurately predict their own durations.[1309] For re-borrowing, providing evidence about the average would therefore not address the market failure. However, disclosures about payments are different, as they are more immediate and inform the borrower of more certain events. Therefore, the Bureau has determined that they are an appropriate intervention here.

2. The Bureau's Efforts To Minimize Any Additional Cost of Credit for Small Entities

Section 603(d) of the RFA requires the Bureau to consult with small entities about the potential impact of the proposed rule on the cost of credit for small entities and related matters. In the FRFA, the Bureau is required to provide a description of the steps taken to minimize any additional cost of credit for small entities.[1310] To satisfy these statutory requirements, the Bureau provided notification to the Chief Counsel that the Bureau would collect the advice and recommendations of the same small entity representatives identified in consultation with the Chief Counsel through the SBREFA process concerning any projected impact of the proposed rule on the cost of credit for small entities.[1311] The Bureau sought to collect the advice and recommendations of the small entity representatives during the Small Business Review Panel Outreach Meeting regarding the potential impact on the cost of business credit because, as small financial service providers, the SERs could provide valuable input on any such impact related to the proposed rule.[1312]

At the Small Business Review Panel Outreach Meeting, the Bureau asked the SERs a series of questions regarding issues about the cost of business credit.[1313] The questions were focused on two areas. First, the SERs were asked whether, and how often, they extend to their customers covered loans to be used primarily for personal, family, or household purposes but that are used secondarily to finance a small business, and whether the proposals then under consideration would result in an increase in their customers' cost of credit. Second, the Bureau inquired as to whether the proposals under consideration would increase the SERs' cost of credit.

In general, some of the SERs expressed concern that the proposals under consideration would have a substantial impact on the cost of business credit, both by reducing access to credit for their customers that are using loans to fund small business operations and by making their businesses less creditworthy. As discussed in the Small Business Review Panel Report, the Panel recommended that the Bureau cover only loans extended primarily for personal, family, or household purposes.[1314] The Bureau agreed with that recommendation, and so in § 1041.3(b), the rule does in fact specify that it will apply only to loans that are extended to consumers primarily for personal, family, or household purposes. Loans that are made primarily for a business, commercial, or agricultural purpose will not be subject to this part. Nonetheless, the Bureau recognizes that some covered loans may nonetheless be used in part or in whole to finance small businesses, both with or without the knowledge of the lender.

The Bureau also recognizes that the rules will impact the ability of some small entities to access business credit themselves. As discussed more fully part VII.J and just above in this section, in developing the rule, the Bureau has considered a number of alternative approaches, yet for the reasons stated it has concluded that none of them would achieve the statutory objectives while minimizing the cost of credit for small entities.

IX. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA),[1315] Federal agencies are generally required to seek approval from the Office of Management and Budget (OMB) for information collection requirements prior to implementation. Under the PRA, the Bureau may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to an information collection unless the information collection displays a valid control number assigned by OMB. OMB has tentatively assigned control #3170–0064 to these collections of information, however this control number is not yet active.

This final rule contains information collection requirements that have not yet been approved by the OMB and, therefore, are not effective until OMB approval is obtained. The unapproved information collection requirements are listed below. A complete description of the information collection requirements, including the burden estimate methods, is provided in the information collection request (ICR) that the Bureau has submitted to OMB under the requirements of the PRA.

The Bureau believes the following aspects of the rule would be information collection requirements under the PRA: (1) Development, implementation, and continued use of notices for covered short-term loans made under § 1041.6, upcoming payment notices (including unusual payment notices), and consumer rights notices; (2) obtaining a consumer report from a registered information system; (3) furnishing information about consumers' borrowing behavior to each registered information system; (4) retrieval of borrowers' national consumer report information; (5) collection of consumers' income and major financial obligations during the underwriting process; (6) obtaining a new and specific authorization to withdraw payment from a borrower's deposit account after two consecutive failed payment transfer attempts; (7) application to be a registered information system; (8) biennial assessment of the information security programs for registered information systems; (9) retention of loan agreement and documentation obtained when making a covered loan, and electronic records of origination calculations and determination, records for a consumer who qualifies for an exception to or overcomes a presumption of unaffordability, loan type and term, and payment history and loan performance.

The Bureau received a fairly significant number of comments pertaining to the expected burden of the proposal, including burdens accounted for in the PRA. Some of those comments specifically noted the PRA, and argued that the proposed collections of information did not fill a legitimate regulatory purpose. Specifically, they claimed that the paperwork burden, in particular the collection and verification of income and debt information, did not serve a legitimate purpose and would not advance the goal of ensuring that loans would be made based on a reasonable assessment of the borrower's ability to repay.

As explained in detail in the section-by-section analysis, especially the section-by-section analysis for § 1041.5, as well as the Section 1022(b)(2) Analysis in part VII, the Bureau has significantly reduced the burden associated with the rule's requirements in response to comments it received which stated concerns that the proposed requirements would be too onerous. As finalized, and as described above, the Bureau is confident that each of the collections of information is worth the burden and serves an important purpose. Specific to the verification of income and debt requirements, the Bureau believes that these requirements are not overly burdensome. In many cases, covered lenders already verify income. Verification of debt will be achievable through obtaining consumer reports, an approach that would not burden consumers, and is consistent with industry practices in most other credit markets. These requirements advance the stated goal of assessing ability to repay because they ensure that lenders verify essential variables for a reasonable ability-to-repay determination, and they combat significant risks associated with lenders' potential evasion of the rule.

Pursuant to 44 U.S.C. 3507, the Bureau will publish a separate notice in the **Federal Register** announcing the submission of these information collection requirements to OMB as well as OMB's action on these submissions, including the OMB control number and expiration date.

The Bureau has a continuing interest in the public's opinion of its collections of information. At any time, comments regarding the burden estimate, or any other aspect of the information collection, including suggestions for reducing the burden, may be sent to the Consumer Financial Protection Bureau (Attention: PRA Office), 1700 G Street NW., Washington, DC 20552, or by email to *CFPB_Public_PRA@cfpb.gov.*

Title of Collection: Payday, Vehicle Title, and Certain High-Cost Installment Loans.

OMB Control Number: 3170–0064.

Type of Review: New collection (Request for a new OMB control number).

Affected Public: Private Sector.

Estimated Number of Respondents: 9,900.

Estimated Total Annual Burden Hours: 8,199,815.

List of Subjects in 12 CFR Part 1041

Banks, Banking, Consumer protection, Credit, Credit Unions, National banks, Registration, Reporting and recordkeeping requirements, Savings associations, Trade practices.

Authority and Issuance

■ For the reasons set forth above, the Bureau adds 12 CFR part 1041 to read as follows:

PART 1041—PAYDAY, VEHICLE TITLE, AND CERTAIN HIGH–COST INSTALLMENT LOANS

Subpart A—General

Sec.
1041.1 Authority and purpose.
1041.2 Definitions.
1041.3 Scope of coverage; exclusions; exemptions.

Subpart B—Underwriting

1041.4 Identification of unfair and abusive practice.
1041.5 Ability-to-repay determination required.
1041.6 Conditional exemption for certain covered short-term loans.

Subpart C—Payments

1041.7 Identification of unfair and abusive practice.
1041.8 Prohibited payment transfer attempts.
1041.9 Disclosure of payment transfer attempts.

Subpart D—Information Furnishing, Recordkeeping, Anti-Evasion, and Severability

1041.10 Information furnishing requirements.
1041.11 Registered information systems.
1041.12 Compliance program and record retention.
1041.13 Prohibition against evasion.
1041.14 Severability.
Appendix A to Part 1041—Model Forms
Supplement I to Part 1041—Official Interpretations

Authority: 12 U.S.C. 5511, 5512, 5514(b), 5531(b), (c), and (d), 5532.

[1315] 44 U.S.C. 3501 *et seq.*

Subpart A—General

§ 1041.1 Authority and purpose.

(a) *Authority.* The regulation in this part is issued by the Bureau of Consumer Financial Protection (Bureau) pursuant to Title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5481, *et seq.*).

(b) *Purpose.* The purpose of this part is to identify certain unfair and abusive acts or practices in connection with certain consumer credit transactions and to set forth requirements for preventing such acts or practices. This part also prescribes requirements to ensure that the features of those consumer credit transactions are fully, accurately, and effectively disclosed to consumers. This part also prescribes processes and criteria for registration of information systems.

§ 1041.2 Definitions.

(a) *Definitions.* For the purposes of this part, the following definitions apply:

(1) *Account* has the same meaning as in Regulation E, 12 CFR 1005.2(b).

(2) *Affiliate* has the same meaning as in 12 U.S.C. 5481(1).

(3) *Closed-end credit* means an extension of credit to a consumer that is not open-end credit under paragraph (a)(16) of this section.

(4) *Consumer* has the same meaning as in 12 U.S.C. 5481(4).

(5) *Consummation* means the time that a consumer becomes contractually obligated on a new loan or a modification that increases the amount of an existing loan.

(6) *Cost of credit* means the cost of consumer credit as expressed as a per annum rate and is determined as follows:

(i) *Charges included in the cost of credit.* The cost of credit includes all finance charges as set forth by Regulation Z, 12 CFR 1026.4, but without regard to whether the credit is consumer credit, as that term is defined in 12 CFR 1026.2(a)(12), or is extended to a consumer, as that term is defined in 12 CFR 1026.2(a)(11).

(ii) *Calculation of the cost of credit*—(A) *Closed-end credit.* For closed-end credit, the cost of credit must be calculated according to the requirements of Regulation Z, 12 CFR 1026.22.

(B) *Open-end credit.* For open-end credit, the cost of credit must be calculated according to the rules for calculating the effective annual percentage rate for a billing cycle as set forth in Regulation Z, 12 CFR 1026.14(c) and (d).

(7) *Covered longer-term balloon-payment loan* means a loan described in § 1041.3(b)(2).

(8) *Covered longer-term loan* means a loan described in § 1041.3(b)(3).

(9) *Covered person* has the same meaning as in the Dodd-Frank Wall Street Reform and Consumer Protection Act, 12 U.S.C. 5481(6).

(10) *Covered short-term loan* means a loan described in § 1041.3(b)(1).

(11) *Credit* has the same meaning as in Regulation Z, 12 CFR 1026.2(a)(14).

(12) *Electronic fund transfer* has the same meaning as in Regulation E, 12 CFR 1005.3(b).

(13) *Lender* means a person who regularly extends credit to a consumer primarily for personal, family, or household purposes.

(14) *Loan sequence* or *sequence* means a series of consecutive or concurrent covered short-term loans or covered longer-term balloon-payment loans, or a combination thereof, in which each of the loans (other than the first loan) is made during the period in which the consumer has a covered short-term loan or covered longer-term balloon-payment loan outstanding and for 30 days thereafter. For the purpose of determining where a loan is located within a loan sequence:

(i) A covered short-term loan or covered longer-term balloon-payment loan is the first loan in a sequence if the loan is extended to a consumer who had no covered short-term loan or covered longer-term balloon-payment loan outstanding within the immediately preceding 30 days;

(ii) A covered short-term or covered longer-term balloon-payment loan is the second loan in the sequence if the consumer has a currently outstanding covered short-term loan or covered longer-term balloon-payment loan that is the first loan in a sequence, or if the consummation date of the second loan is within 30 days following the last day on which the consumer's first loan in the sequence was outstanding;

(iii) A covered short-term or covered longer-term balloon-payment loan is the third loan in the sequence if the consumer has a currently outstanding covered short-term loan or covered longer-term balloon-payment loan that is the second loan in the sequence, or if the consummation date of the third loan is within 30 days following the last day on which the consumer's second loan in the sequence was outstanding; and

(iv) A covered short-term or covered longer-term balloon-payment loan would be the fourth loan in the sequence if the consumer has a currently outstanding covered short-term loan or covered longer-term balloon-payment loan that is the third loan in the sequence, or if the consummation date of the fourth loan would be within 30 days following the last day on which the consumer's third loan in the sequence was outstanding.

(15) *Motor vehicle* means any self-propelled vehicle primarily used for on-road transportation. The term does not include motor homes, recreational vehicles, golf carts, and motor scooters.

(16) *Open-end credit* means an extension of credit to a consumer that is an open-end credit plan as defined in Regulation Z, 12 CFR 1026.2(a)(20), but without regard to whether the credit is consumer credit, as defined in 12 CFR 1026.2(a)(12), is extended by a creditor, as defined in 12 CFR 1026.2(a)(17), is extended to a consumer, as defined in 12 CFR 1026.2(a)(11), or permits a finance charge to be imposed from time to time on an outstanding balance as defined in 12 CFR 1026.4.

(17) *Outstanding loan* means a loan that the consumer is legally obligated to repay, regardless of whether the loan is delinquent or is subject to a repayment plan or other workout arrangement, except that a loan ceases to be an outstanding loan if the consumer has not made at least one payment on the loan within the previous 180 days.

(18) *Service provider* has the same meaning as in the Dodd-Frank Wall Street Reform and Consumer Protection Act, 12 U.S.C. 5481(26).

(19) *Vehicle security* means an interest in a consumer's motor vehicle obtained by the lender or service provider as a condition of the credit, regardless of how the transaction is characterized by State law, including:

(i) Any security interest in the motor vehicle, motor vehicle title, or motor vehicle registration whether or not the security interest is perfected or recorded; or

(ii) A pawn transaction in which the consumer's motor vehicle is the pledged good and the consumer retains use of the motor vehicle during the period of the pawn agreement.

(b) *Rule of construction.* For purposes of this part, where definitions are incorporated from other statutes or regulations, the terms have the meaning and incorporate the embedded definitions, appendices, and commentary from those other laws except to the extent that this part provides a different definition for a parallel term.

§ 1041.3 Scope of coverage; exclusions; exemptions.

(a) *General.* This part applies to a lender that extends credit by making covered loans.

(b) *Covered loan.* Covered loan means closed-end or open-end credit that is extended to a consumer primarily for personal, family, or household purposes that is not excluded under paragraph (d) of this section or conditionally exempted under paragraph (e) or (f) of this section; and:

(1) For closed-end credit that does not provide for multiple advances to consumers, the consumer is required to repay substantially the entire amount of the loan within 45 days of consummation, or for all other loans, the consumer is required to repay substantially the entire amount of any advance within 45 days of the advance;

(2) For loans not otherwise covered by paragraph (b)(1) of this section:

(i) For closed-end credit that does not provide for multiple advances to consumers, the consumer is required to repay substantially the entire balance of the loan in a single payment more than 45 days after consummation or to repay such loan through at least one payment that is more than twice as large as any other payment(s).

(ii) For all other loans, either:

(A) The consumer is required to repay substantially the entire amount of an advance in a single payment more than 45 days after the advance is made or is required to make at least one payment on the advance that is more than twice as large as any other payment(s); or

(B) A loan with multiple advances is structured such that paying the required minimum payments may not fully amortize the outstanding balance by a specified date or time, and the amount of the final payment to repay the outstanding balance at such time could be more than twice the amount of other minimum payments under the plan; or

(3) For loans not otherwise covered by paragraph (b)(1) or (2) of this section, if both of the following conditions are satisfied:

(i) The cost of credit for the loan exceeds 36 percent per annum, as measured:

(A) At the time of consummation for closed-end credit; or

(B) At the time of consummation and, if the cost of credit at consummation is not more than 36 percent per annum, again at the end of each billing cycle for open-end credit, except that:

(*1*) Open-end credit meets the condition set forth in this paragraph (b)(3)(i)(B) in any billing cycle in which a lender imposes a finance charge, and the principal balance is $0; and

(*2*) Once open-end credit meets the condition set forth in this paragraph (b)(3)(i)(B), it meets the condition set forth in paragraph (b)(3)(i)(B) for the duration of the plan.

(ii) The lender or service provider obtains a leveraged payment mechanism as defined in paragraph (c) of this section.

(c) *Leveraged payment mechanism.* For purposes of paragraph (b) of this section, a lender or service provider obtains a leveraged payment mechanism if it has the right to initiate a transfer of money, through any means, from a consumer's account to satisfy an obligation on a loan, except that the lender or service provider does not obtain a leveraged payment mechanism by initiating a single immediate payment transfer at the consumer's request.

(d) *Exclusions for certain types of credit.* This part does not apply to the following:

(1) *Certain purchase money security interest loans.* Credit extended for the sole and express purpose of financing a consumer's initial purchase of a good when the credit is secured by the property being purchased, whether or not the security interest is perfected or recorded.

(2) *Real estate secured credit.* Credit that is secured by any real property, or by personal property used or expected to be used as a dwelling, and the lender records or otherwise perfects the security interest within the term of the loan.

(3) *Credit cards.* Any credit card account under an open-end (not home-secured) consumer credit plan as defined in Regulation Z, 12 CFR 1026.2(a)(15)(ii).

(4) *Student loans.* Credit made, insured, or guaranteed pursuant to a program authorized by subchapter IV of the Higher Education Act of 1965, 20 U.S.C. 1070 through 1099d, or a private education loan as defined in Regulation Z, 12 CFR 1026.46(b)(5).

(5) *Non-recourse pawn loans.* Credit in which the lender has sole physical possession and use of the property securing the credit for the entire term of the loan and for which the lender's sole recourse if the consumer does not elect to redeem the pawned item and repay the loan is the retention of the property securing the credit.

(6) *Overdraft services and lines of credit.* Overdraft services as defined in 12 CFR 1005.17(a), and overdraft lines of credit otherwise excluded from the definition of overdraft services under 12 CFR 1005.17(a)(1).

(7) *Wage advance programs.* Advances of wages that constitute credit if made by an employer, as defined in the Fair Labor Standards Act, 29 U.S.C. 203(d), or by the employer's business partner, to the employer's employees, provided that:

(i) The advance is made only against the accrued cash value of any wages the employee has earned up to the date of the advance; and

(ii) Before any amount is advanced, the entity advancing the funds warrants to the consumer as part of the contract between the parties on behalf of itself and any business partners, that it or they, as applicable:

(A) Will not require the consumer to pay any charges or fees in connection with the advance, other than a charge for participating in the wage advance program;

(B) Has no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay in the event the amount advanced is not repaid in full; and

(C) With respect to the amount advanced to the consumer, will not engage in any debt collection activities if the advance is not deducted directly from wages or otherwise repaid on the scheduled date, place the amount advanced as a debt with or sell it to a third party, or report to a consumer reporting agency concerning the amount advanced.

(8) *No-cost advances.* Advances of funds that constitute credit if the consumer is not required to pay any charge or fee to be eligible to receive or in return for receiving the advance, provided that before any amount is advanced, the entity advancing the funds warrants to the consumer as part of the contract between the parties:

(i) That it has no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay in the event the amount advanced is not repaid in full; and

(ii) That, with respect to the amount advanced to the consumer, such entity will not engage in any debt collection activities if the advance is not repaid on the scheduled date, place the amount advanced as a debt with or sell it to a third party, or report to a consumer reporting agency concerning the amount advanced.

(e) *Alternative loan.* Alternative loans are conditionally exempt from the requirements of this part. *Alternative loan* means a covered loan that satisfies the following conditions and requirements:

(1) *Loan term conditions.* An alternative loan must satisfy the following conditions:

(i) The loan is not structured as open-end credit, as defined in § 1041.2(a)(16);

(ii) The loan has a term of not less than one month and not more than six months;

(iii) The principal of the loan is not less than $200 and not more than $1,000;

(iv) The loan is repayable in two or more payments, all of which payments are substantially equal in amount and fall due in substantially equal intervals, and the loan amortizes completely during the term of the loan; and

(v) The lender does not impose any charges other than the rate and application fees permissible for Federal credit unions under regulations issued by the National Credit Union Administration at 12 CFR 701.21(c)(7)(iii).

(2) *Borrowing history condition.* Prior to making an alternative loan under this paragraph (e), the lender must determine from its records that the loan would not result in the consumer being indebted on more than three outstanding loans made under this section from the lender within a period of 180 days. The lender must also make no more than one alternative loan under this paragraph (e) at a time to a consumer.

(3) *Income documentation condition.* In making an alternative loan under this paragraph (e), the lender must maintain and comply with policies and procedures for documenting proof of recurring income.

(4) *Safe harbor.* Loans made by Federal credit unions in compliance with the conditions set forth by the National Credit Union Administration at 12 CFR 701.21(c)(7)(iii) for a Payday Alternative Loan are deemed to be in compliance with the requirements and conditions of paragraphs (e)(1), (2), and (3) of this section.

(f) *Accommodation loans.* Accommodation loans are conditionally exempt from the requirements of this part. *Accommodation loan* means a covered loan if at the time that the loan is consummated:

(1) The lender and its affiliates collectively have made 2,500 or fewer covered loans in the current calendar year, and made 2,500 or fewer such covered loans in the preceding calendar year; and

(2)(i) During the most recent completed tax year in which the lender was in operation, if applicable, the lender and any affiliates that were in operation and used the same tax year derived no more than 10 percent of their receipts from covered loans; or

(ii) If the lender was not in operation in a prior tax year, the lender reasonably anticipates that the lender and any of its affiliates that use the same tax year will derive no more than 10 percent of their receipts from covered loans during the current tax year.

(3) Provided, however, that covered longer-term loans for which all transfers meet the conditions in § 1041.8(a)(1)(ii), and receipts from such loans, are not included for the purpose of determining whether the conditions of paragraphs (f)(1) and (2) of this section have been satisfied.

(g) *Receipts.* For purposes of paragraph (f) of this section, receipts means ''total income'' (or in the case of a sole proprietorship ''gross income'') plus ''cost of goods sold'' as these terms are defined and reported on Internal Revenue Service (IRS) tax return forms (such as Form 1120 for corporations; Form 1120S and Schedule K for S corporations; Form 1120, Form 1065 or Form 1040 for LLCs; Form 1065 and Schedule K for partnerships; and Form 1040, Schedule C for sole proprietorships). Receipts do not include net capital gains or losses; taxes collected for and remitted to a taxing authority if included in gross or total income, such as sales or other taxes collected from customers but excluding taxes levied on the entity or its employees; or amounts collected for another (but fees earned in connection with such collections are receipts). Items such as subcontractor costs, reimbursements for purchases a contractor makes at a customer's request, and employee-based costs such as payroll taxes are included in receipts.

(h) *Tax year.* For purposes of paragraph (f) of this section, ''tax year'' has the meaning attributed to it by the IRS as set forth in IRS Publication 538, which provides that a ''tax year'' is an annual accounting period for keeping records and reporting income and expenses.

Subpart B—Underwriting

§ 1041.4 Identification of unfair and abusive practice.

It is an unfair and abusive practice for a lender to make covered short-term loans or covered longer-term balloon-payment loans without reasonably determining that the consumers will have the ability to repay the loans according to their terms.

§ 1041.5 Ability-to-repay determination required.

(a) *Definitions.* For purposes of this section:

(1) *Basic living expenses* means expenditures, other than payments for major financial obligations, that a consumer makes for goods and services that are necessary to maintain the consumer's health, welfare, and ability to produce income, and the health and welfare of the members of the consumer's household who are financially dependent on the consumer.

(2) *Debt-to-income ratio* means the ratio, expressed as a percentage, of the sum of the amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and the payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, to the net income that the lender projects the consumer will receive during the relevant monthly period, all of which projected amounts are determined in accordance with paragraph (c) of this section.

(3) *Major financial obligations* means a consumer's housing expense, required payments under debt obligations (including, without limitation, outstanding covered loans), child support obligations, and alimony obligations.

(4) *National consumer report* means a consumer report, as defined in section 603(d) of the Fair Credit Reporting Act, 15 U.S.C. 1681a(d), obtained from a consumer reporting agency that compiles and maintains files on consumers on a nationwide basis, as defined in section 603(p) of the Fair Credit Reporting Act, 15 U.S.C. 1681a(p).

(5) *Net income* means the total amount that a consumer receives after the payer deducts amounts for taxes, other obligations, and voluntary contributions (but before deductions of any amounts for payments under a prospective covered short-term loan or covered longer-term balloon-payment loan or for any major financial obligation); provided that, the lender may include in the consumer's net income the amount of any income of another person to which the consumer has a reasonable expectation of access.

(6) *Payment under the covered short-term loan or covered longer-term balloon-payment loan.* (i) Means the combined dollar amount payable by the consumer at a particular time following consummation in connection with the covered short-term loan or covered longer-term balloon-payment loan, assuming that the consumer has made preceding required payments and in the absence of any affirmative act by the consumer to extend or restructure the repayment schedule or to suspend, cancel, or delay payment for any product, service, or membership provided in connection with the loan;

(ii) Includes all principal, interest, charges, and fees; and

(iii) For a line of credit is calculated assuming that:

(A) The consumer will utilize the full amount of credit under the covered short-term loan or covered longer-term balloon-payment loan as soon as the credit is available to the consumer; and

(B) The consumer will make only minimum required payments under the covered short-term loan or covered longer-term balloon-payment loan for as long as permitted under the loan agreement.

(7) *Relevant monthly period* means the calendar month in which the highest sum of payments is due under the covered short-term or covered longer-term balloon-payment loan.

(8) *Residual income* means the sum of net income that the lender projects the consumer will receive during the relevant monthly period, minus the sum of the amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, all of which projected amounts are determined in accordance with paragraph (c) of this section.

(b) *Reasonable determination required.* (1)(i) Except as provided in § 1041.6, a lender must not make a covered short-term loan or covered longer-term balloon-payment loan or increase the credit available under a covered short-term loan or covered longer-term balloon-payment loan, unless the lender first makes a reasonable determination that the consumer will have the ability to repay the loan according to its terms.

(ii) For a covered short-term loan or covered longer-term balloon-payment loan that is a line of credit, a lender must not permit a consumer to obtain an advance under the line of credit more than 90 days after the date of a required determination under this paragraph (b), unless the lender first makes a new determination that the consumer will have the ability to repay the covered short-term loan or covered longer-term balloon-payment loan according to its terms.

(2) A lender's determination of a consumer's ability to repay a covered short-term loan or covered longer-term balloon-payment loan is reasonable only if either:

(i) Based on the calculation of the consumer's debt-to-income ratio for the relevant monthly period and the estimates of the consumer's basic living expenses for the relevant monthly period, the lender reasonably concludes that:

(A) For a covered short-term loan, the consumer can make payments for major financial obligations, make all payments under the loan, and meet basic living expenses during the shorter of the term of the loan or the period ending 45 days after consummation of the loan, and for 30 days after having made the highest payment under the loan; and

(B) For a covered longer-term balloon-payment loan, the consumer can make payments for major financial obligations, make all payments under the loan, and meet basic living expenses during the relevant monthly period, and for 30 days after having made the highest payment under the loan; or

(ii) Based on the calculation of the consumer's residual income for the relevant monthly period and the estimates of the consumer's basic living expenses for the relevant monthly period, the lender reasonably concludes that:

(A) For a covered short-term loan, the consumer can make payments for major financial obligations, make all payments under the loan, and meet basic living expenses during the shorter of the term of the loan or the period ending 45 days after consummation of the loan, and for 30 days after having made the highest payment under the loan; and

(B) For a covered longer-term balloon-payment loan, the consumer can make payments for major financial obligations, make all payments under the loan, and meet basic living expenses during the relevant monthly period, and for 30 days after having made the highest payment under the loan.

(c) *Projecting consumer net income and payments for major financial obligations*—(1) *General.* To make a reasonable determination required under paragraph (b) of this section, a lender must obtain the consumer's written statement in accordance with paragraph (c)(2)(i) of this section, obtain verification evidence to the extent required by paragraph (c)(2)(ii) of this section, assess information about rental housing expense as required by paragraph (c)(2)(iii) of this section, and use those sources of information to make a reasonable projection of the amount of a consumer's net income and payments for major financial obligations during the relevant monthly period. The lender must consider major financial obligations that are listed in a consumer's written statement described in paragraph (c)(2)(i)(B) of this section even if they cannot be verified by the sources listed in paragraph (c)(2)(ii)(B) of this section. To be reasonable, a projection of the amount of net income or payments for major financial obligations may be based on a consumer's written statement of amounts under paragraph (c)(2)(i) of this section only as specifically permitted by paragraph (c)(2)(ii) or (iii) or to the extent the stated amounts are consistent with the verification evidence that is obtained in accordance with paragraph (c)(2)(ii) of this section. In determining whether the stated amounts are consistent with the verification evidence, the lender may reasonably consider other reliable evidence the lender obtains from or about the consumer, including any explanations the lender obtains from the consumer.

(2) *Evidence of net income and payments for major financial obligations*—(i) *Consumer statements.* A lender must obtain a consumer's written statement of:

(A) The amount of the consumer's net income, which may include the amount of any income of another person to which the consumer has a reasonable expectation of access; and

(B) The amount of payments required for the consumer's major financial obligations.

(ii) *Verification evidence.* A lender must obtain verification evidence for the amounts of the consumer's net income and payments for major financial obligations other than rental housing expense, as follows:

(A) For the consumer's net income:

(*1*) The lender must obtain a reliable record (or records) of an income payment (or payments) directly to the consumer covering sufficient history to support the lender's projection under paragraph (c)(1) of this section if a reliable record (or records) is reasonably available. If a lender determines that a reliable record (or records) of some or all of the consumer's net income is not reasonably available, then, the lender may reasonably rely on the consumer's written statement described in paragraph (c)(2)(i)(A) of this section for that portion of the consumer's net income.

(*2*) If the lender elects to include in the consumer's net income for the relevant monthly period any income of another person to which the consumer has a reasonable expectation of access, the lender must obtain verification evidence to support the lender's projection under paragraph (c)(1) of this section.

(B) For the consumer's required payments under debt obligations, the lender must obtain a national consumer report, the records of the lender and its affiliates, and a consumer report obtained from an information system that has been registered for 180 days or

more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2), if available. If the reports and records do not include a debt obligation listed in the consumer's written statement described in paragraph (c)(2)(i)(B) of this section, the lender may reasonably rely on the written statement in determining the amount of the required payment.

(C) For a consumer's required payments under child support obligations or alimony obligations, the lender must obtain a national consumer report. If the report does not include a child support or alimony obligation listed in the consumer's written statement described in paragraph (c)(2)(i)(B) of this section, the lender may reasonably rely on the written statement in determining the amount of the required payment.

(D) Notwithstanding paragraphs (c)(2)(ii)(B) and (C) of this section, the lender is not required to obtain a national consumer report as verification evidence for the consumer's debt obligations, alimony obligations, and child support obligations if during the preceding 90 days:

(*1*) The lender or an affiliate obtained a national consumer report for the consumer, retained the report under § 1041.12(b)(1)(ii), and checked it again in connection with the new loan; and

(*2*) The consumer did not complete a loan sequence of three loans made under this section and trigger the prohibition under paragraph (d)(2) of this section since the previous report was obtained.

(iii) *Rental housing expense.* For a consumer's housing expense other than a payment for a debt obligation that appears on a national consumer report obtained pursuant to paragraph (c)(2)(ii)(B) of this section, the lender may reasonably rely on the consumer's written statement described in paragraph (c)(2)(i)(B) of this section.

(d) *Additional limitations on lending—covered short-term loans and covered longer-term balloon-payment loans*—(1) *Borrowing history review.* Prior to making a covered short-term loan or covered longer-term balloon-payment loan under this section, in order to determine whether any of the prohibitions in this paragraph (d) are applicable, a lender must obtain and review information about the consumer's borrowing history from the records of the lender and its affiliates, and from a consumer report obtained from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered with the Bureau pursuant to § 1041.11(d)(2), if available.

(2) *Prohibition on loan sequences of more than three covered short-term loans or covered longer-term balloon-payment loans made under this section.* A lender must not make a covered short-term loan or covered longer-term balloon-payment loan under this section during the period in which the consumer has a covered short-term loan or covered longer-term balloon-payment loan made under this section outstanding and for 30 days thereafter if the new covered short-term loan or covered longer-term balloon-payment loan would be the fourth loan in a sequence of covered short-term loans, covered longer-term balloon-payment loans, or a combination of covered short-term loans and covered longer-term balloon-payment loans made under this section.

(3) *Prohibition on making a covered short-term loan or covered longer-term balloon-payment loan under this section following a covered short-term loan made under § 1041.6.* A lender must not make a covered short-term loan or covered longer-term balloon-payment loan under this section during the period in which the consumer has a covered short-term loan made under § 1041.6 outstanding and for 30 days thereafter.

(e) *Prohibition against evasion.* A lender must not take any action with the intent of evading the requirements of this section.

§ 1041.6 Conditional exemption for certain covered short-term loans.

(a) *Conditional exemption for certain covered short-term loans.* Sections 1041.4 and 1041.5 do not apply to a covered short-term loan that satisfies the requirements set forth in paragraphs (b) through (e) of this section. Prior to making a covered short-term loan under this section, a lender must review the consumer's borrowing history in its own records, the records of the lender's affiliates, and a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered with the Bureau pursuant to § 1041.11(d)(2). The lender must use this borrowing history information to determine a potential loan's compliance with the requirements in paragraphs (b) and (c) of this section.

(b) *Loan term requirements.* A covered short-term loan that is made under this section must satisfy the following requirements:

(1) The loan satisfies the following principal amount limitations, as applicable:

(i) For the first loan in a loan sequence of covered short-term loans made under this section, the principal amount is no greater than $500.

(ii) For the second loan in a loan sequence of covered short-term loans made under this section, the principal amount is no greater than two-thirds of the principal amount of the first loan in the loan sequence.

(iii) For the third loan in a loan sequence of covered short-term loans made under this section, the principal amount is no greater than one-third of the principal amount of the first loan in the loan sequence.

(2) The loan amortizes completely during the term of the loan and the payment schedule provides for the lender allocating a consumer's payments to the outstanding principal and interest and fees as they accrue only by applying a fixed periodic rate of interest to the outstanding balance of the unpaid loan principal during every scheduled repayment period for the term of the loan.

(3) The lender and any service provider do not take vehicle security as a condition of the loan, as defined in § 1041.2(a)(19).

(4) The loan is not structured as open-end credit, as defined in § 1041.2(a)(16).

(c) *Borrowing history requirements.* Prior to making a covered short-term loan under this section, the lender must determine that the following requirements are satisfied:

(1) The consumer has not had in the past 30 days an outstanding covered short-term loan under § 1041.5 or covered longer-term balloon-payment loan under § 1041.5;

(2) The loan would not result in the consumer having a loan sequence of more than three covered short-term loans under this section; and

(3) The loan would not result in the consumer having during any consecutive 12-month period:

(i) More than six covered short-term loans outstanding; or

(ii) Covered short-term loans outstanding for an aggregate period of more than 90 days.

(d) *Restrictions on making certain covered loans and non-covered loans following a covered short-term loan made under the conditional exemption.* If a lender makes a covered short-term loan under this section to a consumer, the lender or its affiliate must not subsequently make a covered loan, except a covered short-term loan made in accordance with the requirements in this section, or a non-covered loan to the consumer while the covered short-term loan made under this section is outstanding and for 30 days thereafter.

(e) *Disclosures*—(1) *General form of disclosures*—(i) *Clear and conspicuous.*

Disclosures required by this paragraph (e) must be clear and conspicuous. Disclosures required by this section may contain commonly accepted or readily understandable abbreviations.

(ii) *In writing or electronic delivery.* Disclosures required by this paragraph (e) must be provided in writing or through electronic delivery. The disclosures must be provided in a form that can be viewed on paper or a screen, as applicable. This paragraph (e)(1)(ii) is not satisfied by a disclosure provided orally or through a recorded message.

(iii) *Retainable.* Disclosures required by this paragraph (e) must be provided in a retainable form.

(iv) *Segregation requirements for notices.* Notices required by this paragraph (e) must be segregated from all other written or provided materials and contain only the information required by this section, other than information necessary for product identification, branding, and navigation. Segregated additional content that is not required by this paragraph (e) must not be displayed above, below, or around the required content.

(v) *Machine readable text in notices provided through electronic delivery.* If provided through electronic delivery, the notices required by paragraphs (e)(2)(i) and (ii) of this section must use machine readable text that is accessible via both web browsers and screen readers.

(vi) *Model forms*—(A) *First loan notice.* The content, order, and format of the notice required by paragraph (e)(2)(i) of this section must be substantially similar to Model Form A–1 in appendix A to this part.

(B) *Third loan notice.* The content, order, and format of the notice required by paragraph (e)(2)(ii) of this section must be substantially similar to Model Form A–2 in appendix A to this part.

(vii) *Foreign language disclosures.* Disclosures required under this paragraph (e) may be made in a language other than English, provided that the disclosures are made available in English upon the consumer's request.

(2) *Notice requirements*—(i) *First loan notice.* A lender that makes a first loan in a sequence of loans made under this section must provide to a consumer a notice that includes, as applicable, the following information and statements, using language substantially similar to the language set forth in Model Form A–1 in appendix A to this part:

(A) *Identifying statement.* The statement ''Notice of restrictions on future loans,'' using that phrase.

(B) *Warning for loan made under this section*—(*1*) *Possible inability to repay.* A statement that warns the consumer not to take out the loan if the consumer is unsure of being able to repay the total amount of principal and finance charges on the loan by the contractual due date.

(*2*) *Contractual due date.* Contractual due date of the loan made under this section.

(*3*) *Total amount due.* Total amount due on the contractual due date.

(C) *Restriction on a subsequent loan required by Federal law.* A statement that informs a consumer that Federal law requires a similar loan taken out within the next 30 days to be smaller.

(D) *Borrowing limits.* In a tabular form:

(*1*) Maximum principal amount on loan 1 in a sequence of loans made under this section.

(*2*) Maximum principal amount on loan 2 in a sequence of loans made under this section.

(*3*) Maximum principal amount on loan 3 in a sequence of loans made under this section.

(*4*) Loan 4 in a sequence of loans made under this section is not allowed.

(E) *Lender name and contact information.* Name of the lender and a telephone number for the lender and, if applicable, a URL of the Web site for the lender.

(ii) *Third loan notice.* A lender that makes a third loan in a sequence of loans made under this section must provide to a consumer a notice that includes the following information and statements, using language substantially similar to the language set forth in Model Form A–2 in appendix A to this part:

(A) *Identifying statement.* The statement ''Notice of borrowing limits on this loan and future loans,'' using that phrase.

(B) *Two similar loans without 30-day break.* A statement that informs a consumer that the lender's records show that the consumer has had two similar loans without taking at least a 30-day break between them.

(C) *Restriction on loan amount required by Federal law.* A statement that informs a consumer that Federal law requires the third loan to be smaller than previous loans in the loan sequence.

(D) *Prohibition on subsequent loan.* A statement that informs a consumer that the consumer cannot take out a similar loan for at least 30 days after repaying the loan.

(E) *Lender name and contact information.* Name of the lender and a telephone number for the lender and, if applicable, a URL of the Web site for the lender.

(3) *Timing.* A lender must provide the notices required in paragraphs (e)(2)(i) and (ii) of this section to the consumer before the applicable loan under this section is consummated.

Subpart C—Payments

§ 1041.7 Identification of unfair and abusive practice.

It is an unfair and abusive practice for a lender to make attempts to withdraw payment from consumers' accounts in connection with a covered loan after the lender's second consecutive attempts to withdraw payments from the accounts from which the prior attempts were made have failed due to a lack of sufficient funds, unless the lender obtains the consumers' new and specific authorization to make further withdrawals from the accounts.

§ 1041.8 Prohibited payment transfer attempts.

(a) *Definitions.* For purposes of this section and § 1041.9:

(1) *Payment transfer* means any lender-initiated debit or withdrawal of funds from a consumer's account for the purpose of collecting any amount due or purported to be due in connection with a covered loan.

(i) *Means of transfer.* A debit or withdrawal meeting the description in paragraph (a)(1) of this section is a payment transfer regardless of the means through which the lender initiates it, including but not limited to a debit or withdrawal initiated through any of the following means:

(A) Electronic fund transfer, including a preauthorized electronic fund transfer as defined in Regulation E, 12 CFR 1005.2(k).

(B) Signature check, regardless of whether the transaction is processed through the check network or another network, such as the automated clearing house (ACH) network.

(C) Remotely created check as defined in Regulation CC, 12 CFR 229.2(fff).

(D) Remotely created payment order as defined in 16 CFR 310.2(cc).

(E) When the lender is also the account-holder, an account-holding institution's transfer of funds from a consumer's account held at the same institution, other than such a transfer meeting the description in paragraph (a)(1)(ii) of this section.

(ii) *Conditional exclusion for certain transfers by account-holding institutions.* When the lender is also the account-holder, an account-holding institution's transfer of funds from a consumer's account held at the same institution is not a payment transfer if all of the conditions in this paragraph (a)(1)(ii) are met, notwithstanding that the transfer otherwise meets the

description in paragraph (a)(1) of this section.

(A) The lender, pursuant to the terms of the loan agreement or account agreement, does not charge the consumer any fee, other than a late fee under the loan agreement, in the event that the lender initiates a transfer of funds from the consumer's account in connection with the covered loan for an amount that the account lacks sufficient funds to cover.

(B) The lender, pursuant to the terms of the loan agreement or account agreement, does not close the consumer's account in response to a negative balance that results from a transfer of funds initiated in connection with the covered loan.

(2) *Single immediate payment transfer at the consumer's request* means:

(i) A payment transfer initiated by a one-time electronic fund transfer within one business day after the lender obtains the consumer's authorization for the one-time electronic fund transfer.

(ii) A payment transfer initiated by means of processing the consumer's signature check through the check system or through the ACH system within one business day after the consumer provides the check to the lender.

(b) *Prohibition on initiating payment transfers from a consumer's account after two consecutive failed payment transfers*—(1) *General.* A lender must not initiate a payment transfer from a consumer's account in connection with any covered loan that the consumer has with the lender after the lender has attempted to initiate two consecutive failed payment transfers from that account in connection with any covered loan that the consumer has with the lender. For purposes of this paragraph (b), a payment transfer is deemed to have failed when it results in a return indicating that the consumer's account lacks sufficient funds or, if the lender is the consumer's account-holding institution, it is for an amount that the account lacks sufficient funds to cover.

(2) *Consecutive failed payment transfers.* For purposes of the prohibition in this paragraph (b):

(i) *First failed payment transfer.* A failed payment transfer is the first failed payment transfer from the consumer's account if it meets any of the following conditions:

(A) The lender has initiated no other payment transfer from the account in connection with the covered loan or any other covered loan that the consumer has with the lender.

(B) The immediately preceding payment transfer was successful, regardless of whether the lender has previously initiated a first failed payment transfer.

(C) The payment transfer is the first payment transfer to fail after the lender obtains the consumer's authorization for additional payment transfers pursuant to paragraph (c) of this section.

(ii) *Second consecutive failed payment transfer.* A failed payment transfer is the second consecutive failed payment transfer from the consumer's account if the immediately preceding payment transfer was a first failed payment transfer. For purposes of this paragraph (b)(2)(ii), a previous payment transfer includes a payment transfer initiated at the same time or on the same day as the failed payment transfer.

(iii) *Different payment channel.* A failed payment transfer meeting the conditions in paragraph (b)(2)(ii) of this section is the second consecutive failed payment transfer regardless of whether the first failed payment transfer was initiated through a different payment channel.

(c) *Exception for additional payment transfers authorized by the consumer*—(1) *General.* Notwithstanding the prohibition in paragraph (b) of this section, a lender may initiate additional payment transfers from a consumer's account after two consecutive failed payment transfers if the additional payment transfers are authorized by the consumer in accordance with the requirements and conditions in this paragraph (c) or if the lender executes a single immediate payment transfer at the consumer's request in accordance with paragraph (d) of this section.

(2) *General authorization requirements and conditions*—(i) *Required payment transfer terms.* For purposes of this paragraph (c), the specific date, amount, and payment channel of each additional payment transfer must be authorized by the consumer, except as provided in paragraph (c)(2)(ii) or (iii) of this section.

(ii) *Application of specific date requirement to re-initiating a returned payment transfer.* If a payment transfer authorized by the consumer pursuant to this paragraph (c) is returned for nonsufficient funds, the lender may re-initiate the payment transfer, such as by re-presenting it once through the ACH system, on or after the date authorized by the consumer, provided that the returned payment transfer has not triggered the prohibition in paragraph (b) of this section.

(iii) *Special authorization requirements and conditions for payment transfers to collect a late fee or returned item fee.* A lender may initiate a payment transfer pursuant to this paragraph (c) solely to collect a late fee or returned item fee without obtaining the consumer's authorization for the specific date and amount of the payment transfer only if the consumer has authorized the lender to initiate such payment transfers in advance of the withdrawal attempt. For purposes of this paragraph (c)(2)(iii), the consumer authorizes such payment transfers only if the consumer's authorization obtained under paragraph (c)(3)(iii) of this section includes a statement, in terms that are clear and readily understandable to the consumer, that payment transfers may be initiated solely to collect a late fee or returned item fee and that specifies the highest amount for such fees that may be charged and the payment channel to be used.

(3) *Requirements and conditions for obtaining the consumer's authorization*—(i) *General.* For purposes of this paragraph (c), the lender must request and obtain the consumer's authorization for additional payment transfers in accordance with the requirements and conditions in this paragraph (c)(3).

(ii) *Provision of payment transfer terms to the consumer.* The lender may request the consumer's authorization for additional payment transfers no earlier than the date on which the lender provides to the consumer the consumer rights notice required by § 1041.9(c). The request must include the payment transfer terms required under paragraph (c)(2)(i) of this section and, if applicable, the statement required by paragraph (c)(2)(iii) of this section. The lender may provide the terms and statement to the consumer by any one of the following means:

(A) In writing, by mail or in person, or in a retainable form by email if the consumer has consented to receive electronic disclosures in this manner under § 1041.9(a)(4) or agrees to receive the terms and statement by email in the course of a communication initiated by the consumer in response to the consumer rights notice required by § 1041.9(c).

(B) By oral telephone communication, if the consumer affirmatively contacts the lender in that manner in response to the consumer rights notice required by § 1041.9(c) and agrees to receive the terms and statement in that manner in the course of, and as part of, the same communication.

(iii) *Signed authorization required*—(A) *General.* For an authorization to be valid under this paragraph (c), it must be signed or otherwise agreed to by the consumer in writing or electronically and in a retainable format that memorializes the payment transfer

terms required under paragraph (c)(2)(i) of this section and, if applicable, the statement required by paragraph (c)(2)(iii) of this section. The signed authorization must be obtained from the consumer no earlier than when the consumer receives the consumer rights notice required by § 1041.9(c) in person or electronically, or the date on which the consumer receives the notice by mail. For purposes of this paragraph (c)(3)(iii)(A), the consumer is considered to have received the notice at the time it is provided to the consumer in person or electronically, or, if the notice is provided by mail, the earlier of the third business day after mailing or the date on which the consumer affirmatively responds to the mailed notice.

(B) *Special requirements for authorization obtained by oral telephone communication.* If the authorization is granted in the course of an oral telephone communication, the lender must record the call and retain the recording.

(C) *Memorialization required.* If the authorization is granted in the course of a recorded telephonic conversation or is otherwise not immediately retainable by the consumer at the time of signature, the lender must provide a memorialization in a retainable form to the consumer by no later than the date on which the first payment transfer authorized by the consumer is initiated. A memorialization may be provided to the consumer by email in accordance with the requirements and conditions in paragraph (c)(3)(ii)(A) of this section.

(4) *Expiration of authorization.* An authorization obtained from a consumer pursuant to this paragraph (c) becomes null and void for purposes of the exception in this paragraph (c) if:

(i) The lender subsequently obtains a new authorization from the consumer pursuant to this paragraph (c); or

(ii) Two consecutive payment transfers initiated pursuant to the consumer's authorization fail, as specified in paragraph (b) of this section.

(d) *Exception for initiating a single immediate payment transfer at the consumer's request.* After a lender's second consecutive payment transfer has failed as specified in paragraph (b) of this section, the lender may initiate a payment transfer from the consumer's account without obtaining the consumer's authorization for additional payment transfers pursuant to paragraph (c) of this section if:

(1) The payment transfer is a single immediate payment transfer at the consumer's request as defined in paragraph (a)(2) of this section; and

(2) The consumer authorizes the underlying one-time electronic fund transfer or provides the underlying signature check to the lender, as applicable, no earlier than the date on which the lender provides to the consumer the consumer rights notice required by § 1041.9(c) or on the date that the consumer affirmatively contacts the lender to discuss repayment options, whichever date is earlier.

(e) *Prohibition against evasion.* A lender must not take any action with the intent of evading the requirements of this section.

§ 1041.9 Disclosure of payment transfer attempts.

(a) *General form of disclosures*—(1) *Clear and conspicuous.* Disclosures required by this section must be clear and conspicuous. Disclosures required by this section may contain commonly accepted or readily understandable abbreviations.

(2) *In writing or electronic delivery.* Disclosures required by this section must be provided in writing or, so long as the requirements of paragraph (a)(4) of this section are satisfied, through electronic delivery. The disclosures must be provided in a form that can be viewed on paper or a screen, as applicable. This paragraph (a)(2) is not satisfied by a disclosure provided orally or through a recorded message.

(3) *Retainable.* Disclosures required by this section must be provided in a retainable form, except for electronic short notices delivered by mobile application or text message under paragraph (b) or (c) of this section.

(4) *Electronic delivery.* Disclosures required by this section may be provided through electronic delivery if the following consent requirements are satisfied:

(i) *Consumer consent*—(A) *General.* Disclosures required by this section may be provided through electronic delivery if the consumer affirmatively consents in writing or electronically to the particular electronic delivery method.

(B) *Email option required.* To obtain valid consumer consent to electronic delivery under this paragraph, a lender must provide the consumer with the option to select email as the method of electronic delivery, separate and apart from any other electronic delivery methods such as mobile application or text message.

(ii) *Subsequent loss of consent.* Notwithstanding paragraph (a)(4)(i) of this section, a lender must not provide disclosures required by this section through a method of electronic delivery if:

(A) The consumer revokes consent to receive disclosures through that delivery method; or

(B) The lender receives notification that the consumer is unable to receive disclosures through that delivery method at the address or number used.

(5) *Segregation requirements for notices.* All notices required by this section must be segregated from all other written or provided materials and contain only the information required by this section, other than information necessary for product identification, branding, and navigation. Segregated additional content that is not required by this section must not be displayed above, below, or around the required content.

(6) *Machine readable text in notices provided through electronic delivery.* If provided through electronic delivery, the payment notice required by paragraph (b) of this section and the consumer rights notice required by paragraph (c) of this section must use machine readable text that is accessible via both web browsers and screen readers.

(7) *Model forms*—(i) *Payment notice.* The content, order, and format of the payment notice required by paragraph (b) of this section must be substantially similar to Model Forms A–3 through A–4 in appendix A to this part.

(ii) *Consumer rights notice.* The content, order, and format of the consumer rights notice required by paragraph (c) of this section must be substantially similar to Model Form A–5 in appendix A to this part.

(iii) *Electronic short notice.* The content, order, and format of the electronic short notice required by paragraph (b) of this section must be substantially similar to Model Clauses A–6 and A–7 in appendix A to this part. The content, order, and format of the electronic short notice required by paragraph (c) of this section must be substantially similar to Model Clause A–8 in appendix A to this part.

(8) *Foreign language disclosures.* Disclosures required under this section may be made in a language other than English, provided that the disclosures are made available in English upon the consumer's request.

(b) *Payment notice*—(1) *General.* Prior to initiating the first payment withdrawal or an unusual withdrawal from a consumer's account, a lender must provide to the consumer a payment notice in accordance with the requirements in this paragraph (b) as applicable.

(i) *First payment withdrawal* means the first payment transfer scheduled to be initiated by a lender for a particular

covered loan, not including a single immediate payment transfer initiated at the consumer's request as defined in § 1041.8(a)(2).

(ii) *Unusual withdrawal* means a payment transfer that meets one or more of the conditions described in paragraph (b)(3)(ii)(C) of this section.

(iii) *Exceptions.* The payment notice need not be provided when the lender initiates:

(A) The initial payment transfer from a consumer's account after obtaining consumer authorization pursuant to § 1041.8(c), regardless of whether any of the conditions in paragraph (b)(3)(ii)(C) of this section apply; or

(B) A single immediate payment transfer initiated at the consumer's request in accordance with § 1041.8(a)(2).

(2) *First payment withdrawal notice*—(i) *Timing*—(A) *Mail.* If the lender provides the first payment withdrawal notice by mail, the lender must mail the notice no earlier than when the lender obtains payment authorization and no later than six business days prior to initiating the transfer.

(B) *Electronic delivery.* (*1*) If the lender provides the first payment withdrawal notice through electronic delivery, the lender must send the notice no earlier than when the lender obtains payment authorization and no later than three business days prior to initiating the transfer.

(*2*) If, after providing the first payment withdrawal notice through electronic delivery pursuant to the timing requirements in paragraph (b)(2)(i) of this section, the lender loses the consumer's consent to receive the notice through a particular electronic delivery method according to paragraph (a)(4)(ii) of this section, the lender must provide notice of any future unusual withdrawal, if applicable, through alternate means.

(C) *In person.* If the lender provides the first payment withdrawal notice in person, the lender must provide the notice no earlier than when the lender obtains payment authorization and no later than three business days prior to initiating the transfer.

(ii) *Content requirements.* The notice must contain the following information and statements, as applicable, using language substantially similar to the language set forth in Model Form A–3 in appendix A to this part:

(A) *Identifying statement.* The statement, ''Upcoming Withdrawal Notice,'' using that phrase, and, in the same statement, the name of the lender providing the notice.

(B) *Transfer terms*—(*1*) *Date.* Date that the lender will initiate the transfer.

(*2*) *Amount.* Dollar amount of the transfer.

(*3*) *Consumer account.* Sufficient information to permit the consumer to identify the account from which the funds will be transferred. The lender must not provide the complete account number of the consumer, but may use a truncated version similar to Model Form A–3 in appendix A to this part.

(*4*) *Loan identification information.* Sufficient information to permit the consumer to identify the covered loan associated with the transfer.

(*5*) *Payment channel.* Payment channel of the transfer.

(*6*) *Check number.* If the transfer will be initiated by a signature or paper check, remotely created check (as defined in Regulation CC, 12 CFR 229.2(fff)), or remotely created payment order (as defined in 16 CFR 310.2(cc)), the check number associated with the transfer.

(C) *Payment breakdown.* In a tabular form:

(*1*) *Payment breakdown heading.* A heading with the statement ''Payment Breakdown,'' using that phrase.

(*2*) *Principal.* The amount of the payment that will be applied to principal.

(*3*) *Interest.* The amount of the payment that will be applied to accrued interest on the loan.

(*4*) *Fees.* If applicable, the amount of the payment that will be applied to fees.

(*5*) *Other charges.* If applicable, the amount of the payment that will be applied to other charges.

(*6*) *Amount.* The statement ''Total Payment Amount,'' using that phrase, and the total dollar amount of the payment as provided in paragraph (b)(2)(ii)(B)(*2*) of this section.

(*7*) *Explanation of interest-only or negatively amortizing payment.* If applicable, a statement explaining that the payment will not reduce principal, using the applicable phrase ''When you make this payment, your principal balance will stay the same and you will not be closer to paying off your loan'' or ''When you make this payment, your principal balance will increase and you will not be closer to paying off your loan.''

(D) *Lender name and contact information.* Name of the lender, the name under which the transfer will be initiated (if different from the consumer-facing name of the lender), and two different forms of lender contact information that may be used by the consumer to obtain information about the consumer's loan.

(3) *Unusual withdrawal notice*—(i) *Timing*—(A) *Mail.* If the lender provides the unusual withdrawal notice by mail, the lender must mail the notice no earlier than 10 business days and no later than six business days prior to initiating the transfer.

(B) *Electronic delivery.* (*1*) If the lender provides the unusual withdrawal notice through electronic delivery, the lender must send the notice no earlier than seven business days and no later than three business days prior to initiating the transfer.

(*2*) If, after providing the unusual withdrawal notice through electronic delivery pursuant to the timing requirements in paragraph (b)(3)(i)(B) of this section, the lender loses the consumer's consent to receive the notice through a particular electronic delivery method according to paragraph (a)(4)(ii) of this section, the lender must provide notice of any future unusual withdrawal attempt, if applicable, through alternate means.

(C) *In person.* If the lender provides the unusual withdrawal notice in person, the lender must provide the notice no earlier than seven business days and no later than three business days prior to initiating the transfer.

(D) *Exception for open-end credit.* If the unusual withdrawal notice is for open-end credit as defined in § 1041.2(a)(16), the lender may provide the unusual withdrawal notice in conjunction with the periodic statement required under Regulation Z, 12 CFR 1026.7(b), in accordance with the timing requirements of that section.

(ii) *Content requirements.* The unusual withdrawal notice must contain the following information and statements, as applicable, using language substantially similar to the language set forth in Model Form A–4 in appendix A to this part:

(A) *Identifying statement.* The statement, ''Alert: Unusual Withdrawal,'' using that phrase, and, in the same statement, the name of the lender that is providing the notice.

(B) *Basic payment information.* The content required for the first withdrawal notice under paragraphs (b)(2)(ii)(B) through (D) of this section.

(C) *Description of unusual withdrawal.* The following content, as applicable, in a form substantially similar to the form in Model Form A–4 in appendix A to this part:

(*1*) *Varying amount*—(*i*) *General.* If the amount of a transfer will vary in amount from the regularly scheduled payment amount, a statement that the transfer will be for a larger or smaller amount than the regularly scheduled payment amount, as applicable.

(*ii*) *Open-end credit.* If the payment transfer is for open-end credit as defined in § 1041.2(a)(16), the varying amount

content is required only if the amount deviates from the scheduled minimum payment due as disclosed in the periodic statement required under Regulation Z, 12 CFR 1026.7(b).

(*2*) *Date other than date of regularly scheduled payment.* If the payment transfer date is not a date on which a regularly scheduled payment is due under the terms of the loan agreement, a statement that the transfer will be initiated on a date other than the date of a regularly scheduled payment.

(*3*) *Different payment channel.* If the payment channel will differ from the payment channel of the transfer directly preceding it, a statement that the transfer will be initiated through a different payment channel and a statement of the payment channel used for the prior transfer.

(*4*) *For purpose of re-initiating returned transfer.* If the transfer is for the purpose of re-initiating a returned transfer, a statement that the lender is re-initiating a returned transfer, a statement of the date and amount of the previous unsuccessful attempt, and a statement of the reason for the return.

(4) *Electronic delivery*—(i) *General.* When the consumer has consented to receive disclosures through electronic delivery, the lender may provide the applicable payment notice required by paragraph (b)(1) of this section through electronic delivery only if it also provides an electronic short notice, except for email delivery as provided in paragraph (b)(4)(iii) of this section.

(ii) *Electronic short notice*—(A) *General content.* The electronic short notice required by this paragraph (b) must contain the following information and statements, as applicable, in a form substantially similar to Model Clause A–6 in appendix A to this part:

(*1*) *Identifying statement,* as required under paragraphs (b)(2)(ii)(A) and (b)(3)(ii)(A) of this section;

(*2*) *Transfer terms*—(*i*) *Date,* as required under paragraphs (b)(2)(ii)(B)(*1*) and (b)(3)(ii)(B) of this section;

(*ii*) *Amount,* as required under paragraphs (b)(2)(ii)(B)(*2*) and (b)(3)(ii)(B) of this section;

(*iii*) *Consumer account,* as required and limited under paragraphs (b)(2)(ii)(B)(*3*) and (b)(3)(ii)(B) of this section; and

(*3*) *Web site URL.* When the full notice is being provided through a linked URL rather than as a PDF attachment, the unique URL of a Web site that the consumer may use to access the full payment notice required by paragraph (b) of this section.

(B) *Additional content requirements.* If the transfer meets any of the conditions for unusual attempts described in paragraph (b)(3)(ii)(C) of this section, the electronic short notice must also contain the following information and statements, as applicable, using language substantially similar to the language in Model Clause A–7 in appendix A to this part:

(*1*) *Varying amount,* as defined under paragraph (b)(3)(ii)(C)(*1*) of this section;

(*2*) *Date other than due date of regularly scheduled payment,* as defined under paragraph (b)(3)(ii)(C)(*2*) of this section; and

(*3*) *Different payment channel,* as defined under paragraph (b)(3)(ii)(C)(*3*) of this section.

(iii) *Email delivery.* When the consumer has consented to receive disclosures through electronic delivery, and the method of electronic delivery is email, the lender may either deliver the full notice required by paragraph (b)(1) of this section in the body of the email or deliver the full notice as a linked URL Web page or PDF attachment along with the electronic short notice as provided in paragraph (b)(4)(ii) of this section.

(c) *Consumer rights notice*—(1) *General.* After a lender initiates two consecutive failed payment transfers from a consumer's account as described in § 1041.8(b), the lender must provide to the consumer a consumer rights notice in accordance with the requirements of paragraphs (c)(2) through (4) of this section.

(2) *Timing.* The lender must send the notice no later than three business days after it receives information that the second consecutive attempt has failed.

(3) *Content requirements.* The notice must contain the following information and statements, using language substantially similar to the language set forth in Model Form A–5 in appendix A to this part:

(i) *Identifying statement.* A statement that the lender, identified by name, is no longer permitted to withdraw loan payments from the consumer's account.

(ii) *Last two attempts were returned.* A statement that the lender's last two attempts to withdraw payment from the consumer's account were returned due to non-sufficient funds, or, if applicable to payments initiated by the consumer's account-holding institution, caused the account to go into overdraft status.

(iii) *Consumer account.* Sufficient information to permit the consumer to identify the account from which the unsuccessful payment attempts were made. The lender must not provide the complete account number of the consumer, but may use a truncated version similar to Model Form A–5 in appendix A to this part.

(iv) *Loan identification information.* Sufficient information to permit the consumer to identify any covered loans associated with the unsuccessful payment attempts.

(v) *Statement of Federal law prohibition.* A statement, using that phrase, that in order to protect the consumer's account, Federal law prohibits the lender from initiating further payment transfers without the consumer's permission.

(vi) *Contact about choices.* A statement that the lender may be in contact with the consumer about payment choices going forward.

(vii) *Previous unsuccessful payment attempts.* In a tabular form:

(A) *Previous payment attempts heading.* A heading with the statement ''previous payment attempts.''

(B) *Payment due date.* The scheduled due date of each previous unsuccessful payment transfer attempted by the lender.

(C) *Date of attempt.* The date of each previous unsuccessful payment transfer initiated by the lender.

(D) *Amount.* The amount of each previous unsuccessful payment transfer initiated by the lender.

(E) *Fees.* The fees charged by the lender for each unsuccessful payment attempt, if applicable, with an indication that these fees were charged by the lender.

(viii) *CFPB information.* A statement, using that phrase, that the Consumer Financial Protection Bureau created this notice, a statement that the CFPB is a Federal government agency, and the URL to *www.consumerfinance.gov/payday-rule.* This statement must be the last piece of information provided in the notice.

(4) *Electronic delivery*—(i) *General.* When the consumer has consented to receive disclosures through electronic delivery, the lender may provide the consumer rights notice required by paragraph (c) of this section through electronic delivery only if it also provides an electronic short notice, except for email delivery as provided in paragraph (c)(4)(iii) of this section.

(ii) *Electronic short notice*—(A) *Content.* The notice must contain the following information and statements, as applicable, using language substantially similar to the language set forth in Model Clause A–8 in appendix A to this part:

(*1*) *Identifying statement.* As required under paragraph (c)(3)(i) of this section;

(*2*) *Last two attempts were returned.* As required under paragraph (c)(3)(ii) of this section;

(*3*) *Consumer account.* As required and limited under paragraph (c)(3)(iii) of this section;

(*4*) *Statement of Federal law prohibition.* As required under paragraph (c)(3)(v) of this section; and

(*5*) *Web site URL.* When the full notice is being provided through a linked URL rather than as a PDF attachment, the unique URL of a Web site that the consumer may use to access the full consumer rights notice required by paragraph (c) of this section.

(B) [Reserved]

(iii) *Email delivery.* When the consumer has consented to receive disclosures through electronic delivery, and the method of electronic delivery is email, the lender may either deliver the full notice required by paragraph (c)(1) of this section in the body of the email or deliver the full notice as a linked URL Web page or PDF attachment along with the electronic short notice as provided in paragraph (c)(4)(ii) of this section.

Subpart D—Information Furnishing, Recordkeeping, Anti-Evasion, and Severability

§ 1041.10 Information furnishing requirements.

(a) *Loans subject to furnishing requirement.* For each covered short-term loan and covered longer-term balloon-payment loan a lender makes, the lender must furnish the loan information described in paragraph (c) of this section to each information system described in paragraph (b)(1) of this section.

(b) *Information systems to which information must be furnished.* (1) A lender must furnish information as required in paragraphs (a) and (c) of this section to each information system that, as of the date the loan is consummated:

(i) Has been registered with the Bureau pursuant to § 1041.11(c)(2) for 180 days or more; or

(ii) Has been provisionally registered with the Bureau pursuant to § 1041.11(d)(1) for 180 days or more or subsequently has become registered with the Bureau pursuant to § 1041.11(d)(2).

(2) The Bureau will publish on its Web site and in the **Federal Register** notice of the provisional registration of an information system pursuant to § 1041.11(d)(1), registration of an information system pursuant to § 1041.11(c)(2) or (d)(2), and suspension or revocation of the provisional registration or registration of an information system pursuant to § 1041.11(h). For purposes of paragraph (b)(1) of this section, an information system is provisionally registered or registered, and its provisional registration or registration is suspended or revoked, on the date that the Bureau publishes notice of such provisional registration, registration, suspension, or revocation on its Web site. The Bureau will maintain on the Bureau's Web site a current list of information systems provisionally registered pursuant to § 1041.11(d)(1) and registered pursuant to § 1041.11(c)(2) and (d)(2). In the event that a provisional registration or registration of an information system is suspended, the Bureau will provide instructions on its Web site concerning the scope and terms of the suspension.

(c) *Information to be furnished.* A lender must furnish the information described in this paragraph (c), at the times described in this paragraph (c), concerning each covered loan as required in paragraphs (a) and (b) of this section. A lender must furnish the information in a format acceptable to each information system to which it must furnish information.

(1) *Information to be furnished at loan consummation.* A lender must furnish the following information no later than the date on which the loan is consummated or as close in time as feasible to the date the loan is consummated:

(i) Information necessary to uniquely identify the loan;

(ii) Information necessary to allow the information system to identify the specific consumer(s) responsible for the loan;

(iii) Whether the loan is a covered short-term loan or a covered longer-term balloon-payment loan;

(iv) Whether the loan is made under § 1041.5 or § 1041.6, as applicable;

(v) The loan consummation date;

(vi) For a loan made under § 1041.6, the principal amount borrowed;

(vii) For a loan that is closed-end credit:

(A) The fact that the loan is closed-end credit;

(B) The date that each payment on the loan is due; and

(C) The amount due on each payment date; and

(viii) For a loan that is open-end credit:

(A) The fact that the loan is open-end credit;

(B) The credit limit on the loan;

(C) The date that each payment on the loan is due; and

(D) The minimum amount due on each payment date.

(2) *Information to be furnished while loan is an outstanding loan.* During the period that the loan is an outstanding loan, a lender must furnish any update to information previously furnished pursuant to this section within a reasonable period of the event that causes the information previously furnished to be out of date.

(3) *Information to be furnished when loan ceases to be an outstanding loan.* A lender must furnish the following information no later than the date the loan ceases to be an outstanding loan or as close in time as feasible to the date the loan ceases to be an outstanding loan:

(i) The date as of which the loan ceased to be an outstanding loan; and

(ii) Whether all amounts owed in connection with the loan were paid in full, including the amount financed, charges included in the cost of credit, and charges excluded from the cost of credit.

§ 1041.11 Registered information systems.

(a) *Definitions.* (1) *Consumer report* has the same meaning as in section 603(d) of the Fair Credit Reporting Act, 15 U.S.C. 1681a(d).

(2) *Federal consumer financial law* has the same meaning as in section 1002(14) of the Dodd-Frank Wall Street Reform and Consumer Protection Act, 12 U.S.C. 5481(14).

(b) *Eligibility criteria for information systems.* An entity is eligible to be a provisionally registered information system pursuant to paragraph (d)(1) of this section or a registered information system pursuant to paragraph (c)(2) or (d)(2) of this section only if the Bureau determines that the following conditions are satisfied:

(1) *Receiving capability.* The entity possesses the technical capability to receive information lenders must furnish pursuant to § 1041.10 immediately upon the furnishing of such information and uses reasonable data standards that facilitate the timely and accurate transmission and processing of information in a manner that does not impose unreasonable costs or burdens on lenders.

(2) *Reporting capability.* The entity possesses the technical capability to generate a consumer report containing, as applicable for each unique consumer, all information described in § 1041.10 substantially simultaneous to receiving the information from a lender.

(3) *Performance.* The entity will perform or performs in a manner that facilitates compliance with and furthers the purposes of this part.

(4) *Federal consumer financial law compliance program.* The entity has developed, implemented, and maintains a program reasonably designed to ensure compliance with all applicable Federal consumer financial laws, which

includes written policies and procedures, comprehensive training, and monitoring to detect and to promptly correct compliance weaknesses.

(5) *Independent assessment of Federal consumer financial law compliance program.* The entity provides to the Bureau in its application for provisional registration or registration a written assessment of the Federal consumer financial law compliance program described in paragraph (b)(4) of this section and such assessment:

(i) Sets forth a detailed summary of the Federal consumer financial law compliance program that the entity has implemented and maintains;

(ii) Explains how the Federal consumer financial law compliance program is appropriate for the entity's size and complexity, the nature and scope of its activities, and risks to consumers presented by such activities;

(iii) Certifies that, in the opinion of the assessor, the Federal consumer financial law compliance program is operating with sufficient effectiveness to provide reasonable assurance that the entity is fulfilling its obligations under all Federal consumer financial laws; and

(iv) Certifies that the assessment has been conducted by a qualified, objective, independent third-party individual or entity that uses procedures and standards generally accepted in the profession, adheres to professional and business ethics, performs all duties objectively, and is free from any conflicts of interest that might compromise the assessor's independent judgment in performing assessments.

(6) *Information security program.* The entity has developed, implemented, and maintains a comprehensive information security program that complies with the Standards for Safeguarding Customer Information, 16 CFR part 314.

(7) *Independent assessment of information security program.* (i) The entity provides to the Bureau in its application for provisional registration or registration and on at least a biennial basis thereafter, a written assessment of the information security program described in paragraph (b)(6) of this section and such assessment:

(A) Sets forth the administrative, technical, and physical safeguards that the entity has implemented and maintains;

(B) Explains how such safeguards are appropriate to the entity's size and complexity, the nature and scope of its activities, and the sensitivity of the customer information at issue;

(C) Explains how the safeguards that have been implemented meet or exceed the protections required by the Standards for Safeguarding Customer Information, 16 CFR part 314;

(D) Certifies that, in the opinion of the assessor, the information security program is operating with sufficient effectiveness to provide reasonable assurance that the entity is fulfilling its obligations under the Standards for Safeguarding Customer Information, 16 CFR part 314; and

(E) Certifies that the assessment has been conducted by a qualified, objective, independent third-party individual or entity that uses procedures and standards generally accepted in the profession, adheres to professional and business ethics, performs all duties objectively, and is free from any conflicts of interest that might compromise the assessor's independent judgment in performing assessments.

(ii) Each written assessment obtained and provided to the Bureau on at least a biennial basis pursuant to paragraph (b)(7)(i) of this section must be completed and provided to the Bureau within 60 days after the end of the period to which the assessment applies.

(8) *Bureau supervisory authority.* The entity acknowledges it is, or consents to being, subject to the Bureau's supervisory authority.

(c) *Registration of information systems prior to August 19, 2019*—(1) *Preliminary approval.* Prior to August 19, 2019, the Bureau may preliminarily approve an entity for registration only if the entity submits an application for preliminary approval to the Bureau by the deadline set forth in paragraph (c)(3)(i) of this section containing information sufficient for the Bureau to determine that the entity is reasonably likely to satisfy the conditions set forth in paragraph (b) of this section by the deadline set forth in paragraph (c)(3)(ii) of this section. The assessments described in paragraphs (b)(5) and (7) of this section need not be included with an application for preliminary approval for registration or completed prior to the submission of the application. The Bureau may require additional information and documentation to facilitate this determination.

(2) *Registration.* Prior to August 19, 2019, the Bureau may approve the application of an entity to be a registered information system only if:

(i) The entity received preliminary approval pursuant to paragraph (c)(1) of this section; and

(ii) The entity submits an application to the Bureau by the deadline set forth in paragraph (c)(3)(ii) of this section that contains information and documentation sufficient for the Bureau to determine that the entity satisfies the conditions set forth in paragraph (b) of this section. The Bureau may require additional information and documentation to facilitate this determination or otherwise to assess whether registration of the entity would pose an unreasonable risk to consumers.

(3) *Deadlines.* (i) The deadline to submit an application for preliminary approval for registration pursuant to paragraph (c)(1) of this section is April 16, 2018.

(ii) The deadline to submit an application to be a registered information system pursuant to paragraph (c)(2) of this section is 120 days from the date preliminary approval for registration is granted.

(iii) The Bureau may waive the deadlines set forth in this paragraph (c).

(d) *Registration of information systems on or after August 19, 2019*—(1) *Provisional registration.* On or after August 19, 2019, the Bureau may approve an entity to be a provisionally registered information system only if the entity submits an application to the Bureau that contains information and documentation sufficient for the Bureau to determine that the entity satisfies the conditions set forth in paragraph (b) of this section. The Bureau may require additional information and documentation to facilitate this determination or otherwise to assess whether provisional registration of the entity would pose an unreasonable risk to consumers.

(2) *Registration.* An information system that is provisionally registered pursuant to paragraph (d)(1) of this section shall automatically become a registered information system pursuant to this paragraph (d)(2) upon the expiration of the 240-day period commencing on the date the information system is provisionally registered. For purposes of this paragraph (d)(2), an information system is provisionally registered on the date that the Bureau publishes notice of the provisional registration on the Bureau's Web site.

(e) *Applications.* Applications for preliminary approval, registration, and provisional registration shall be submitted in the form required by the Bureau and shall include, in addition to the information described in paragraph (c) or (d) of this section, as applicable, the following information:

(1) The name under which the applicant conducts business, including any ''doing business as'' or other trade name;

(2) The applicant's main business address, mailing address if it is different from the main business address,

telephone number, electronic mail address, and Internet Web site; and

(3) The name and contact information (including telephone number and electronic mail address) of the person authorized to communicate with the Bureau on the applicant's behalf concerning the application.

(f) *Denial of application.* The Bureau will deny the application of an entity seeking preliminary approval for registration under paragraph (c)(1) of this section, registration under paragraph (c)(2) of this section, or provisional registration under paragraph (d)(1) of this section, if the Bureau determines, as applicable, that:

(1) The entity does not satisfy the conditions set forth in paragraph (b) of this section, or, in the case of an entity seeking preliminary approval for registration, is not reasonably likely to satisfy the conditions as of the deadline set forth in paragraph (c)(3)(ii) of this section;

(2) The entity's application is untimely or materially inaccurate or incomplete; or

(3) Preliminary approval, provisional registration, or registration of the entity would pose an unreasonable risk to consumers.

(g) *Notice of material change.* An entity that is a provisionally registered or registered information system must provide to the Bureau in writing a description of any material change to information contained in its application for registration submitted pursuant to paragraph (c)(2) of this section or provisional registration submitted pursuant to paragraph (d)(1) of this section, or to information previously provided to the Bureau pursuant to this paragraph (g), within 14 days of such change.

(h) *Suspension and revocation.* (1) The Bureau will suspend or revoke an entity's preliminary approval for registration pursuant to paragraph (c)(1) of this section, provisional registration pursuant to paragraph (d)(1) of this section, or registration pursuant to paragraph (c)(2) or (d)(2) of this section if the Bureau determines:

(i) That the entity has not satisfied or no longer satisfies the conditions described in paragraph (b) of this section or has not complied with the requirement described in paragraph (g) of this section; or

(ii) That preliminary approval, provisional registration, or registration of the entity poses an unreasonable risk to consumers.

(2) The Bureau may require additional information and documentation from an entity if it has reason to believe suspension or revocation under paragraph (h)(1) of this section may be warranted.

(3) Except in cases of willfulness or those in which the public interest requires otherwise, prior to suspension or revocation under paragraph (h)(1) of this section, the Bureau will provide written notice of the facts or conduct that may warrant the suspension or revocation and an opportunity for the entity or information system to demonstrate or achieve compliance with this section or otherwise address the Bureau's concerns.

(4) The Bureau will revoke an entity's preliminary approval for registration, provisional registration, or registration if the entity submits a written request to the Bureau that its preliminary approval, provisional registration, or registration be revoked.

(5) For purposes of §§ 1041.5 and 1041.6, suspension or revocation of an information system's registration is effective five days after the date that the Bureau publishes notice of the suspension or revocation on the Bureau's Web site. For purposes of § 1041.10(b)(1), suspension or revocation of an information system's provisional registration or registration is effective on the date that the Bureau publishes notice of the suspension or revocation on the Bureau's Web site. The Bureau will also publish notice of a suspension or revocation in the **Federal Register**.

(6) In the event that a provisional registration or registration of an information system is suspended, the Bureau will provide instructions concerning the scope and terms of the suspension on its Web site and in the notice of suspension published in the **Federal Register**.

(i) *Administrative appeals*—(1) *Grounds for administrative appeals.* An entity may appeal a determination of the Bureau that:

(i) Denies the application of an entity seeking preliminary approval for registration under paragraph (c)(1) of this section, registration under paragraph (c)(2) of this section, or provisional registration under paragraph (d)(1) of this section; or

(ii) Suspends or revokes the entity's preliminary approval for registration pursuant to paragraph (c)(1) of this section, provisional registration pursuant to paragraph (d)(1) of this section, or registration pursuant to paragraph (c)(2) or (d)(2) of this section.

(2) *Time limits for filing administrative appeals.* An appeal must be submitted on a date that is within 30 business days of the date of the determination. The Bureau may extend this time for good cause.

(3) *Form and content of administrative appeals.* An appeal shall be made by electronic means as follows:

(i) The appeal shall be submitted as set forth on the Bureau's Web site. The appeal shall be labeled ''Information System Registration Appeal;''

(ii) The appeal shall set forth contact information for the appellant including, to the extent available, a mailing address, telephone number, or email address at which the Bureau may contact the appellant regarding the appeal;

(iii) The appeal shall specify the date of the letter of determination, and enclose a copy of the determination being appealed; and

(iv) The appeal shall include a description of the issues in dispute, specify the legal and factual basis for appealing the determination, and include appropriate supporting information.

(4) *Appeals process.* The filing and pendency of an appeal does not by itself suspend the determination that is the subject of the appeal during the appeals process. Notwithstanding the foregoing, the Bureau may, in its discretion, suspend the determination that is the subject of the appeal during the appeals process.

(5) *Decisions to grant or deny administrative appeals.* The Bureau shall decide whether to affirm the determination (in whole or in part) or to reverse the determination (in whole or in part) and shall notify the appellant of this decision in writing.

§ 1041.12 Compliance program and record retention.

(a) *Compliance program.* A lender making a covered loan must develop and follow written policies and procedures that are reasonably designed to ensure compliance with the requirements in this part. These written policies and procedures must be appropriate to the size and complexity of the lender and its affiliates, and the nature and scope of the covered loan lending activities of the lender and its affiliates.

(b) *Record retention.* A lender must retain evidence of compliance with this part for 36 months after the date on which a covered loan ceases to be an outstanding loan.

(1) *Retention of loan agreement and documentation obtained in connection with originating a covered short-term or covered longer-term balloon-payment loan.* To comply with the requirements in this paragraph (b), a lender must retain or be able to reproduce an image of the loan agreement and documentation obtained in connection

with a covered short-term or covered longer-term balloon-payment loan, including the following documentation, as applicable:

(i) Consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered with the Bureau pursuant to § 1041.11(d)(2);

(ii) Verification evidence, as described in § 1041.5(c)(2)(ii); and

(iii) Written statement obtained from the consumer, as described in § 1041.5(c)(2)(i).

(2) *Electronic records in tabular format regarding origination calculations and determinations for a covered short-term or covered longer-term balloon-payment loan under § 1041.5.* To comply with the requirements in this paragraph (b), a lender must retain electronic records in tabular format that include the following information for a covered loan made under § 1041.5:

(i) The projection made by the lender of the amount of a consumer's net income during the relevant monthly period;

(ii) The projections made by the lender of the amounts of a consumer's major financial obligations during the relevant monthly period;

(iii) Calculated residual income or debt-to-income ratio during the relevant monthly period;

(iv) Estimated basic living expenses for the consumer during the relevant monthly period; and

(v) Other consumer-specific information considered in making the ability-to-repay determination.

(3) *Electronic records in tabular format regarding type, terms, and performance of covered short-term or covered longer-term balloon-payment loan.* To comply with the requirements in this paragraph (b), a lender must retain electronic records in tabular format that include the following information for a covered short-term or covered longer-term balloon-payment loan:

(i) As applicable, the information listed in § 1041.10(c)(1)(i) through (viii) and (c)(2);

(ii) Whether the lender obtained vehicle security from the consumer;

(iii) The loan number in a loan sequence of covered short-term loans, covered longer-term balloon-payment loans, or a combination thereof;

(iv) For any full payment on the loan that was not received or transferred by the contractual due date, the number of days such payment was past due, up to a maximum of 180 days;

(v) For a loan with vehicle security: Whether repossession of the vehicle was initiated;

(vi) Date of last or final payment received; and

(vii) The information listed in § 1041.10(c)(3).

(4) *Retention of records relating to payment practices for covered loans.* To comply with the requirements in this paragraph (b), a lender must retain or be able to reproduce an image of the following documentation, as applicable, in connection with a covered loan:

(i) Leveraged payment mechanism(s) obtained by the lender from the consumer;

(ii) Authorization of additional payment transfer, as described in § 1041.8(c)(3)(iii); and

(iii) Underlying one-time electronic transfer authorization or underlying signature check, as described in § 1041.8(d)(2).

(5) *Electronic records in tabular format regarding payment practices for covered loans.* To comply with the requirements in this paragraph (b), a lender must retain electronic records in tabular format that include the following information for covered loans:

(i) History of payments received and attempted payment transfers, as defined in § 1041.8(a)(1), including:

(A) Date of receipt of payment or attempted payment transfer;

(B) Amount of payment due;

(C) Amount of attempted payment transfer;

(D) Amount of payment received or transferred; and

(E) Payment channel used for attempted payment transfer.

(ii) If an attempt to transfer funds from a consumer's account is subject to the prohibition in § 1041.8(b)(1), whether the lender or service provider obtained authorization to initiate a payment transfer from the consumer in accordance with the requirements in § 1041.8(c) or (d).

§ 1041.13 Prohibition against evasion.

A lender must not take any action with the intent of evading the requirements of this part.

§ 1041.14 Severability.

The provisions of this part are separate and severable from one another. If any provision is stayed or determined to be invalid, the remaining provisions shall continue in effect.

Appendix A to Part 1041—Model Forms

BILLING CODE 4810–AM–P

A-1 Model Form for First § 1041.6 Loan

WILLOW LENDING
800-555-5555
willowlending.com

Notice of restrictions on future loans

If you are unsure whether you will be able to pay $360.00 by November 12th, 2016, you should not take out this loan.

After you repay this loan, any similar loan you take out within the next 30 days will have to be smaller. This restriction is required by federal law.

Borrowing limits:

Loan order	Maximum amount that you will be able to borrow
Loan #1 (*this loan*)	$300.00
Loan #2	$200.00
Loan #3	$100.00
Loan #4	Not allowed

A-2 Model Form for Third § 1041.6 Loan

WILLOW LENDING
800-555-5555
willowlending.com

Notice of borrowing limits on this loan and future loans

Our records show that you have had two similar loans without taking a 30-day break. Under federal law, this loan must be smaller than your prior loans. And after you repay this loan, **you will not be able to take out another similar loan for at least 30 days**.

A-3 Model Form for First Payment Withdrawal Notice under § 1041.9(b)(2)

WILLOW LENDING
800-555-5555
willowlending.com

Upcoming Withdrawal Notice from Willow Lending

On November 12, 2016, Willow Lending will attempt to withdraw a payment of $80 from your account ending in 0022. The payment will be withdrawn by check, using check #999.

If this payment is not successful, we will add a $10 returned payment fee to your balance on loan #5432.

Contact Willow Lending at 1-800-555-5555 if you have questions or need to stop this withdrawal. The institution where you have your account also may be able to assist you.

Payment breakdown

Principal now	$0
Interest	$80
Total payment amount	$80

When you make this payment, your principal balance will stay the same and you will not be closer to paying off your loan.

A-4 Model Form for Unusual Withdrawal Notice under § 1041.9(b)(3)

WILLOW LENDING
800-555-5555
willowlending.com

Alert: Unusual Withdrawal from Willow Lending

On November 12, 2016, Willow Lending will attempt to withdraw a payment of $80 from your account ending in 0022. This electronic withdrawal will be made by ACH transfer.

This payment is unusual because it is larger than your originally scheduled payment. The previous withdrawal was initiated on November 2, 2016, for $60.

If this payment is not successful, we will add a $10 returned payment fee to your balance on loan #5432.

Contact Willow Lending at 1-800-555-5555 if you have questions or need to stop this withdrawal. The institution where you have your account also may be able to assist you.

Payment breakdown

Principal	$50
Interest	$20
Fees	$10
Total payment amount	$80

A-5 Model Form for Consumer Rights Notice under § 1041.9(c)

WILLOW LENDING
800-555-5555
willowlending.com

Notice: Willow Lending is no longer permitted to withdraw loan payments from your account

Our last two attempts to withdraw payment on your loan #5432 from your account ending in 0022 were returned because your account did not contain enough funds to cover the payment. To protect your account, federal law prohibits us from trying to withdraw payment again without your permission.

We may contact you to talk about your payment choices going forward.

Previous payment attempts

Payment due date	Date of attempt	Amount	Fees charged by Willow Lending
November 7, 2016	November 7, 2016	$80	$10 returned payment fee
November 7, 2016	November 10, 2016	$80	$10 returned payment fee

The Consumer Financial Protection Bureau (CFPB) created this notice to inform you of your rights under federal law. The CFPB is a federal government agency built to protect consumers. To learn more about your rights as a borrower, visit www.cfpb.gov/payday.

BILLING CODE 4810–AM–C

Supplement I to Part 1041—Official Interpretations

Section 1041.2—Definitions

2(a)(3) Closed-End Credit

1. *In general.* Institutions may rely on 12 CFR 1026.2(a)(10) and its related commentary in determining the meaning of closed-end credit, but without regard to whether the credit is consumer credit, as that term is defined in 12 CFR 1026.2(a)(12), or is extended to a consumer, as that term is defined in 12 CFR 1026.2(a)(11).

2(a)(5) Consummation

1. *New loan.* When a contractual obligation on the consumer's part is created is a matter to be determined under applicable law. A contractual commitment agreement, for example, that under applicable law binds the consumer to the loan terms would be consummation. Consummation, however, does not occur merely because the consumer has made some financial investment in the transaction (for example, by paying a non-refundable fee) unless applicable law holds otherwise.

2. *Modification of existing loan that triggers underwriting requirements.* A modification of an existing loan that increases the amount of an existing loan triggers underwriting requirements under § 1041.5 in certain circumstances. If the outstanding amount of an existing loan is increased, or if the total amount available under an open-end credit plan is increased, the modification is consummated as of the time that the consumer becomes contractually obligated on such a modification or increase. In those cases, the modification must comply with the requirements of § 1041.5(b). A loan modification does not trigger underwriting requirements under § 1041.5 if the modification reduces the outstanding amount or the total amount available under an open-end credit plan, or if the modification results only in the consumer receiving additional time in which to repay the loan. For example, providing a cost-free ''off-ramp'' or repayment plan to a consumer who cannot repay a loan during the allotted term of the loan is a modification of an existing loan—not a new loan—that results only in the consumer receiving additional time in which to repay the loan. Thus, providing a no-cost repayment plan does not constitute a modification that increases the amount of an existing loan.

2(a)(11) Credit

1. *In general.* Institutions may rely on 12 CFR 1026.2(a)(14) and its related commentary in determining the meaning of credit.

2(a)(12) Electronic Fund Transfer

1. *In general.* Institutions may rely on 12 CFR 1005.3(b) and its related commentary in determining the meaning of electronic fund transfer.

2(a)(13) Lender

1. *Regularly extends credit.* The test for determining whether a person regularly extends credit for personal, family, or household purposes is explained in Regulation Z, 12 CFR 1026.2(a)(17)(v). Any loan to a consumer primarily for personal, family, or household purposes, whether or not the loan is a covered loan under this part, counts toward the numeric threshold for determining whether a person regularly extends credit.

2(a)(16) Open-End Credit

1. *In general.* Institutions may rely on 12 CFR 1026.2(a)(20) and its related commentary in determining the meaning of open-end credit, but without regard to whether the credit permits a finance charge to be imposed from time to time on an outstanding balance as defined in 12 CFR 1026.4. Also, for the purposes of defining open-end credit under this part, the term credit, as defined in § 1041.2(a)(11), is substituted for the term consumer credit, as defined in 12 CFR 1026.2(a)(12); the term lender, as defined in § 1041.2(a)(13), is substituted for the term creditor, as defined in 12 CFR 1026.2(a)(17); and the term consumer, as defined in § 1041.2(a)(4), is substituted for the term consumer, as defined in 12 CFR 1026.2(a)(11). See generally § 1041.2(b).

2(a)(17) Outstanding Loan

1. *Payments owed to third parties.* A loan is an outstanding loan if it meets all the criteria set forth in § 1041.2(a)(17), regardless of whether the consumer is required to pay the lender, an affiliate of the lender, or a service provider. A lender selling the loan or the loan servicing rights to a third party does not affect whether a loan is an outstanding loan under § 1041.2(a)(17).

2. *Stale loans.* A loan is generally an outstanding loan if the consumer has a legal obligation to repay the loan, even if the consumer is delinquent or if the consumer is in a repayment plan or workout arrangement. However, a loan that the consumer otherwise has a legal obligation to repay is not an outstanding loan for purposes of this part if the consumer has not made any payment on the loan within the previous 180-day period. A loan ceases to be an outstanding loan as of: The earliest of the date the consumer repays the loan in full, the date the consumer is released from the legal obligation to repay, the date the loan is otherwise legally discharged, or the date that is 180 days following the last payment that the consumer has made on the loan, even if the payment is not a regularly scheduled payment in a scheduled amount. If the consumer does not make any payments on a loan and none of these other events occur, the loan ceases to be outstanding 180 days after consummation. A loan cannot become an outstanding loan due to any events that occur after the consumer repays the loan in full, the consumer is released from the legal obligation to repay, the loan is otherwise legally discharged, 180 days following the last payment that the consumer has made on the loan, or 180 days after consummation of a loan on which the consumer makes no payments.

2(a)(18) Service Provider

1. *Credit access businesses and credit services organizations.* Persons who provide a material service to lenders in connection with the lenders' offering or provision of covered loans are service providers, subject to the specific limitations in section 1002(26) of the Dodd-Frank Act. Accordingly, credit access businesses and credit service organizations that provide a material service to lenders during the course of obtaining for consumers, or assisting consumers in obtaining, loans from lenders, are service providers, subject to the specific limitations in section 1002(26) of the Dodd-Frank Act.

2(a)(19) Vehicle Security

1. *An interest in a consumer's motor vehicle as a condition of credit.* Subject to the exclusion described in § 1041.3(d)(1), a lender's or service provider's interest in a consumer's motor vehicle constitutes vehicle security only to the extent that the security interest is obtained in connection with the credit. If a party obtains such a security interest in a consumer's motor vehicle for a reason that is unrelated to an extension of credit, the security interest does not constitute vehicle security. For example, if a mechanic performs work on a consumer's motor vehicle and a mechanic's lien attaches to the consumer's motor vehicle by operation of law because the consumer did not timely pay the mechanic's bill, the mechanic does not obtain vehicle security for the purposes of § 1041.2(a)(19).

2(b) Rule of Construction

1. *Incorporation of terms from underlying statutes and regulations.* For purposes of this part, where definitions are incorporated from other statutes or regulations, users may as applicable rely on embedded definitions, appendices, and commentary for those other laws. For example, 12 CFR 1005.2(b) and its related commentary determine the meaning of account under § 1041.2(a)(1). However, where this part defines the same term or a parallel term in a way that creates a substantive distinction, the definition in this part shall control. See, for example, the definition of open-end credit in § 1041.2(a)(16), which is generally determined according to 12 CFR 1026.2(a)(20) and its related commentary but without regard to whether the credit is consumer credit, as that term is defined in 12 CFR 1026.2(a)(12), or is extended to a consumer, as that term is defined in 12 CFR 1026.2(a)(11), because this part provides a different and arguably broader definition of consumer in § 1041.2(a)(4).

Section 1041.3—Scope of Coverage; Exclusions; Exemptions

3(b) Covered Loans

1. *Credit structure.* The term covered loan includes open-end credit and closed-end credit, regardless of the form or structure of the credit.

2. *Primary purpose.* Under § 1041.3(b), a loan is not a covered loan unless it is extended primarily for personal, family, or household purposes. Institutions may rely on 12 CFR 1026.3(a) and its related commentary in determining the primary purpose of a loan.

Paragraph 3(b)(1)

1. *Closed-end credit that does not provide for multiple advances to consumers.* A loan does not provide for multiple advances to a consumer if the loan provides for full disbursement of the loan proceeds only through disbursement on a single specific date.

2. *Loans that provide for multiple advances to consumers.* Both open-end credit and closed-end credit may provide for multiple advances to consumers. Open-end credit can have a fixed expiration date, as long as during the plan's existence the consumer may use credit, repay, and reuse the credit. Likewise, closed-end credit may consist of a series of advances. For example:

i. Under a closed-end commitment, the lender might agree to lend a total of $1,000 in a series of advances as needed by the consumer. When a consumer has borrowed the full $1,000, no more is advanced under that particular agreement, even if there has been repayment of a portion of the debt.

3. *Facts and circumstances test for determining whether loan is substantially repayable within 45 days.* Substantially repayable means that the

substantial majority of the loan or advance is required to be repaid within 45 days of consummation or advance, as the case may be. Application of the standard depends on the specific facts and circumstances of each loan, including the timing and size of the scheduled payments. A loan or advance is not substantially repayable within 45 days of consummation or advance merely because a consumer chooses to repay within 45 days when the loan terms do not require the consumer to do so.

4. *Deposit advance products.* A loan or advance is substantially repayable within 45 days of consummation or advance if the lender has the right to be repaid through a sweep or withdrawal of any qualifying electronic deposit made into the consumer's account within 45 days of consummation or advance. A loan or advance described in this paragraph is substantially repayable within 45 days of consummation or advance even if no qualifying electronic deposit is actually made into or withdrawn by the lender from the consumer's account.

5. *Loans with alternative, ambiguous, or unusual payment schedules.* If a consumer, under any applicable law, would breach the terms of the agreement between the consumer and the lender or service provider by not substantially repaying the entire amount of the loan or advance within 45 days of consummation or advance, as the case may be, the loan is a covered short-term loan under § 1041.3(b)(1). For loans or advances that are not required to be repaid within 45 days of consummation or advance, if the consumer, under applicable law, would not breach the terms of the agreement between the consumer and the lender by not substantially repaying the loan or advance in full within 45 days, the loan is a covered longer-term balloon-payment loan under § 1041.3(b)(2) or a covered longer-term loan under § 1041.3(b)(3) if the loan otherwise satisfies the criteria specified in § 1041.3(b)(2) or (3), respectively.

Paragraph 3(b)(2)

1. *Closed-end credit that does not provide for multiple advances to consumers. See* comments 3(b)(1)–1 and 3(b)(1)–2.

2. *Payments more than twice as large as other payments.* For purposes of § 1041.3(b)(2)(i) and (ii), all required payments of principal and any charges (or charges only, depending on the loan features) due under the loan are used to determine whether a particular payment is more than twice as large as another payment, regardless of whether the payments have changed during the loan term due to rate adjustments or other payment changes permitted or required under the loan.

3. *Charges excluded.* Charges for actual unanticipated late payments, for exceeding a credit limit, or for delinquency, default, or a similar occurrence that may be added to a payment are excluded from the determination of whether the loan is repayable in a single payment or a particular payment is more than twice as large as another payment. Likewise, sums that are accelerated and due upon default are excluded from the determination of whether the loan is repayable in a single payment or a particular payment is more than twice as large as another payment.

4. *Multiple-advance structures.* Loans that provide for more than one advance are considered to be a covered longer-term balloon-payment loan under § 1041.3(b)(2)(ii) if either:

i. The consumer is required to repay substantially the entire amount of an advance more than 45 days after the advance is made or is required to make at least one payment on the advance that is more than twice as large as any other payment; or

ii. A loan with multiple advances is structured such that paying the required minimum payment may not fully amortize the outstanding balance by a specified date or time, and the amount of the final payment to repay the outstanding balance at such time could be more than twice the amount of other minimum payments under the plan. For example, the lender extends an open-end credit plan with a $500 credit limit, monthly billing cycles, and a minimum payment due each billing cycle that is equal to 10% of the outstanding principal. Fees or interest on the plan are equal to 10% of the outstanding principal per month, so that if a consumer pays nothing other than the minimum payment amount, the outstanding principal remains the same. All outstanding amounts must be repaid within six months of the advance. The credit plan is a covered loan under § 1041.3(b)(2)(ii) because if the consumer drew the entire amount at one time and then made only minimum payments, the sixth payment would be more than twice the amount of the minimum payment required ($50).

Paragraph 3(b)(3)

1. *Conditions for coverage of a longer-term loan.* A loan that is not a covered short-term loan or a covered longer-term balloon-payment loan is a covered longer-term loan only if it satisfies both the cost of credit requirement of § 1041.3(b)(3)(i) and leveraged payment mechanism requirement of § 1041.3(b)(3)(ii). If the requirements of § 1041.3(b)(3) are met, and the loan is not otherwise excluded or conditionally exempted from coverage by § 1041.3(d), (e), or (f), the loan is a covered longer-term loan. For example, a 60-day loan that is not a covered longer-term balloon-payment loan is not a covered longer-term loan if the cost of credit as measured pursuant to § 1041.2(a)(6) is less than or equal to a rate of 36 percent per annum even if the lender or service provider obtains a leveraged payment mechanism.

2. *No balance during a billing cycle.* Under § 1041.2(a)(6)(ii)(B), the cost of credit for open-end credit must be calculated according to the rules for calculating the effective annual percentage rate for a billing cycle as set forth in Regulation Z, 12 CFR 1026.14(c) and (d), which provide that the annual percentage rate cannot be calculated for billing cycles in which there is a finance charge but no other balance. Accordingly, pursuant to § 1041.2(a)(6)(ii)(B), the cost of credit could not be calculated for such billing cycles. Section 1041.3(b)(3)(i)(B)(*1*) provides that, for such billing cycles, an open-end credit plan is determined to have exceeded the threshold set forth in that paragraph if there is no balance other than a finance charge imposed by the lender.

3. *Timing for coverage determination.* A loan may become a covered longer-term loan at any such time as both of the requirements of § 1041.3(b)(3)(i) and (ii) are met. For example:

i. A lender originates a closed-end loan that is not a longer-term balloon-payment loan to be repaid within six months of consummation with a cost of credit equal to 60 percent. At the time of consummation, the loan is not a covered longer-term loan because it does not have a leveraged payment mechanism. After two weeks, the lender obtains a leveraged payment mechanism. The loan is now a covered longer-term loan because it meets both of the requirements of § 1041.3(b)(3)(i) and (ii).

ii. A lender extends an open-end credit plan with monthly billing cycles and a leveraged payment mechanism. At consummation and again at the end of the first billing cycle, the plan is not a covered longer-term loan because its cost of credit is below 36 percent. In the second billing cycle, the plan's cost of credit is 45 percent because several fees are triggered in addition to interest on the principal balance. The plan is now a covered longer-term loan because it meets both of the requirements of

§ 1041.3(b)(3)(i) and (ii). Beginning on the first day of the third billing cycle, and thereafter for the duration of the plan, the lender must therefore comply with the requirements of this part including by, for example, providing a first withdrawal notice before initiating the first payment transfer on or after the first day of the third billing cycle. The requirements to provide certain payment withdrawal notices under § 1041.9 have been structured so that the notices can be provided in the same mailing as the periodic statements that are required by Regulation Z, 12 CFR 1026.7(b). *See, e.g.,* § 1041.9(b)(3)(i)(D).

Paragraph 3(b)(3)(ii)

1. *Timing.* The condition in § 1041.3(b)(3)(ii) is satisfied if a lender or service provider obtains a leveraged payment mechanism before, at the same time as, or after the consumer receives the entire amount of funds that the consumer is entitled to receive under the loan, regardless of the means by which the lender or service provider obtains a leveraged payment mechanism.

2. *Leveraged payment mechanism in contract.* The condition in § 1041.3(b)(3)(ii) is satisfied if a loan agreement authorizes the lender to elect to obtain a leveraged payment mechanism, regardless of the time at which the lender actually obtains a leveraged payment mechanism. The following are examples of situations in which a lender obtains a leveraged payment mechanism under § 1041.3(b)(3)(ii):

i. *Future authorization.* A loan agreement provides that the consumer, at some future date, must authorize the lender or service provider to debit the consumer's account on a recurring basis.

ii. *Delinquency or default provisions.* A loan agreement provides that the consumer must authorize the lender or service provider to debit the consumer's account on a one-time or a recurring basis if the consumer becomes delinquent or defaults on the loan.

Paragraph 3(c)

1. *Initiating a transfer of money from a consumer's account.* A lender or service provider obtains the ability to initiate a transfer of money when that person can collect payment, or otherwise withdraw funds, from a consumer's account, either on a single occasion or on a recurring basis, without the consumer taking further action. Generally, when a lender or service provider has the ability to ''pull'' funds or initiate a transfer from the consumer's account, that person has a leveraged payment mechanism. However, a ''push'' transaction from the consumer to the lender or service provider does not in itself give the lender or service provider a leveraged payment mechanism.

2. *Lender-initiated transfers.* The following are examples of situations in which a lender or service provider has the ability to initiate a transfer of money from a consumer's account:

i. *Check.* A lender or service provider obtains a check, draft, or similar paper instrument written by the consumer, other than a single immediate payment transfer at the consumer's request as described in § 1041.3(c) and comment 3(c)–3.

ii. *Electronic fund transfer authorization.* The consumer authorizes a lender or service provider to initiate an electronic fund transfer from the consumer's account in advance of the transfer, other than a single immediate payment transfer at the consumer's request as described in § 1041.3(c) and comment 3(c)–3.

iii. *Remotely created checks and remotely created payment orders.* A lender or service provider has authorization to create or present a remotely created check (as defined by Regulation CC, 12 CFR 229.2(fff)), remotely created payment order (as defined in 16 CFR 310.2(cc)), or similar instrument drafted on the consumer's account.

iv. *Transfer by account-holding institution.* A lender or service provider that is an account-holding institution has a right to initiate a transfer of funds between the consumer's account and an account of the lender or affiliate, including, but not limited to, an account-holding institution's right of set-off.

3. *Single immediate payment transfer at the consumer's request excluded.* A single immediate payment transfer at the consumer's request, as defined in § 1041.8(a)(2), is excluded from the definition of leveraged payment mechanism. Accordingly, if the loan or other agreement between the consumer and the lender or service provider does not otherwise provide for the lender or service provider to initiate a transfer without further consumer action, the lender or service provider can initiate a single immediate payment transfer at the consumer's request without causing the loan to become a covered loan under § 1041.3(b)(3). See § 1041.8(a)(2) and related commentary for guidance on what constitutes a single immediate payment transfer at the consumer's request.

4. *Transfers not initiated by the lender.* A lender or service provider does not initiate a transfer of money from a consumer's account if the consumer authorizes a third party, such as a bank's automatic bill pay service, to initiate a transfer of money from the consumer's account to a lender or service provider.

3(d) Exclusions

3(d)(1) Certain Purchase Money Security Interest Loans

1. ''*Sole purpose*'' *test.* The requirements of this part do not apply to loans made solely and expressly to finance the consumer's initial purchase of a good in which the lender takes a security interest as a condition of the credit. For example, the requirements of this part would not apply to a transaction in which a lender makes a loan to a consumer for the express purpose of initially purchasing a motor vehicle, television, household appliance, or furniture in which the lender takes a security interest and the amount financed is approximately equal to, or less than, the cost of acquiring the good, even if the cost of credit exceeds 36 percent per annum and the lender also obtains a leveraged payment mechanism. A loan is made solely and expressly to finance the consumer's initial purchase of a good even if the amount financed under the loan includes Federal, State, or local taxes or amounts required to be paid under applicable State and Federal licensing and registration requirements. This exclusion does not apply to refinances of credit extended for the purchase of a good.

3(d)(2) Real Estate Secured Credit

1. *Real estate and dwellings.* The requirements of this part do not apply to credit secured by any real property, or by any personal property, such as a mobile home, used or expected to be used as a dwelling if the lender records or otherwise perfects the security interest within the term of the loan, even if the cost of credit exceeds 36 percent per annum and the lender or servicer provider also obtains a leveraged payment mechanism. If the lender does not record or perfect the security interest during the term of the loan, however, the credit is not excluded from the requirements of this part under § 1041.3(d)(2).

3(d)(5) Non-Recourse Pawn Loans

1. *Lender possession required and no recourse permitted.* A pawn loan must satisfy two conditions to be excluded from the requirements of this part under § 1041.3(d)(5). First, the lender must have sole physical possession and use of the property securing the pawned property at all times during the entire

term of the loan. If the consumer retains either possession or use of the property, however limited the consumer's possession or use of the property might be, the loan is not excluded from the requirements of this part under § 1041.3(d)(5). Second, the lender must have no recourse if the consumer does not elect to redeem the pawned item and repay the loan other than retaining the pawned property to dispose of according to State or local law. If any consumer, or if any co-signor, guarantor, or similar person, is personally liable for the difference between the outstanding balance on the loan and the value of the pawned property, the loan is not excluded from the requirements of this part under § 1041.3(d)(5).

3(d)(6) Overdraft Services

1. *Definitions.* Institutions may rely on 12 CFR 1005.17(a) and its related commentary in determining whether credit is an overdraft service or an overdraft line of credit that is excluded from the requirements of this part under § 1041.3(d)(6).

3(d)(7) Wage Advance Programs

1. Advances of wages under § 1041.3(d)(7) must be offered by an employer, as defined in the Fair Labor Standards Act, 29 U.S.C. 203(d), or by the employer's business partner to the employer's employees pursuant to a wage advance program. For example, an advance program might be offered by a company that provides payroll card services or accounting services to the employer, or by the employer with the assistance of such a company. Similarly, an advance program might be offered by a company that provides consumer financial products and services as part of the employer's benefits program, such that the company would have information regarding the wages accrued by the employee.

Paragraph 3(d)(7)(i)

1. Under the exclusion in § 1041.3(d)(7)(i), the advance must be made only against accrued wages. To qualify for that exclusion, the amount advanced must not exceed the amount of the employee's accrued wages. Accrued wages are wages that the employee is entitled to receive under State law in the event of separation from the employer for work performed for the employer, but for which the employee has yet to be paid.

Paragraph 3(d)(7)(ii)(B)

1. Under § 1041.3(d)(7)(ii)(B), the entity advancing the funds is required to warrant that it has no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay in the event the amount advanced is not repaid in full. This provision does not prevent the entity from obtaining a one-time authorization to seek repayment from the consumer's transaction account.

3(d)(8) No-Cost Advances

1. Under § 1041.3(d)(8)(i), the entity advancing the funds is required to warrant that it has no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay in the event the amount advanced is not repaid in full. This provision does not prevent the entity from obtaining a one-time authorization to seek repayment from the consumer's transaction account.

3(e) Alternative Loans

1. *General.* Section 1041.3(e) conditionally exempts from this part alternative covered loans that satisfy the conditions and requirements set forth in § 1041.3(e). Nothing in § 1041.3(e) provides lenders with an exemption from the requirements of other applicable laws, including State laws. The conditions for an alternative loan made under § 1041.3(e) largely track the conditions set forth by the National Credit Union Administration at 12 CFR 701.21(c)(7)(iii) for a Payday Alternative Loan made by a Federal credit union. All lenders, including Federal credit unions and persons that are not Federal credit unions, are permitted to make loans under § 1041.3(e), provided that such loans are permissible under other applicable laws, including State laws.

3(e)(1) Loan Term Conditions

Paragraph 3(e)(1)(iv)

1. *Substantially equal payments.* Under § 1041.3(e)(1)(iv), payments are substantially equal in amount if the amount of each scheduled payment on the loan is equal to or within a small variation of the others. For example, if a loan is repayable in six biweekly payments and the amount of each scheduled payment is within 1 percent of the amount of the other payments, the loan is repayable in substantially equal payments. In determining whether a loan is repayable in substantially equal payments, a lender may disregard the effects of collecting the payments in whole cents.

2. *Substantially equal intervals.* The intervals for scheduled payments are substantially equal if the payment schedule requires repayment on the same date each month or in the same number of days of the prior scheduled payment. For example, a loan for which payment is due every 15 days has payments due in substantially equal intervals. A loan for which payment is due on the 15th day of each month also has payments due in substantially equal intervals. In determining whether payments fall due in substantially equal intervals, a lender may disregard that dates of scheduled payments may be slightly changed because the scheduled date is not a business day, that months have different numbers of days, and the occurrence of leap years. Section 1041.3(e)(1)(iv) does not prevent a lender from accepting prepayment on a loan made under § 1041.3(e).

3. *Amortization.* Section 1041.3(e)(1)(iv) requires that the scheduled payments fully amortize the loan over the contractual period and prohibits lenders from making loans under § 1041.3(e) with interest-only payments or with a payment schedule that front-loads payments of interest and fees. While under § 1041.3(e)(1)(iv) the payment amount must be substantially equal for each scheduled payment, the amount of the payment that goes to principal and to interest will vary. The amount of payment applied to interest will be greater for earlier payments when there is a larger principal outstanding.

Paragraph 3(e)(1)(v)

1. *Cost of credit.* Under § 1041.3(e)(1)(v), the lender must not impose any charges other than the rate and application fees permissible for Federal credit unions to charge under 12 CFR 701.21(c)(7)(iii). Under 12 CFR 701.21(c)(7)(iii), application fees must reflect the actual costs associated with processing the application and must not exceed $20.

3(e)(2) Borrowing History Condition

1. *Relevant records.* A lender may make an alternative covered loan under § 1041.3(e) only if the lender determines from its records that the consumer's borrowing history on alternative covered loans made under § 1041.3(e) meets the criteria set forth in § 1041.3(e)(2). The lender is not required to obtain information about a consumer's borrowing history from other persons, such as by obtaining a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered with the Bureau pursuant to § 1041.11(d)(2).

2. *Determining 180-day period.* For purposes of counting the number of loans made under § 1041.3(e)(2), the 180-day period begins on the date that is 180 days prior to the consummation date of the loan to be made under

§ 1041.3(e) and ends on the consummation date of such loan.

3. *Total number of loans made under § 1041.3(e)(2).* Section 1041.3(e)(2) excludes loans from the conditional exemption in § 1041.3(e) if the loan would result in the consumer being indebted on more than three outstanding loans made under § 1041.3(e) from the lender in any consecutive 180-day period. See § 1041.2(a)(17) for the definition of outstanding loan. Under § 1041.3(e)(2), the lender is required to determine from its records the consumer's borrowing history on alternative covered loans made under § 1041.3(e) by the lender. The lender must use this information about borrowing history to determine whether the loan would result in the consumer being indebted on more than three outstanding loans made under § 1041.3(e) from the lender in a consecutive 180-day period, determined in the manner described in comment 3(e)(2)–2. Section 1041.3(e) does not prevent lenders from making a covered loan subject to the requirements of this part.

4. *Example.* For example, assume that a lender seeks to make an alternative loan under § 1041.3(e) to a consumer and the loan does not qualify for the safe harbor under § 1041.3(e)(4). The lender checks its own records and determines that during the 180 days preceding the consummation date of the prospective loan, the consumer was indebted on two outstanding loans made under § 1041.3(e) from the lender. The loan, if made, would be the third loan made under § 1041.3(e) on which the consumer would be indebted during the 180-day period and, therefore, would be exempt from this part under § 1041.3(e). If, however, the lender determined that the consumer was indebted on three outstanding loans under § 1041.3(e) from the lender during the 180 days preceding the consummation date of the prospective loan, the condition in § 1041.3(e)(2) would not be satisfied and the loan would not be an alternative loan subject to the exemption under § 1041.3(e) but would instead be a covered loan subject to the requirements of this part.

3(e)(3) Income Documentation Condition

1. *General.* Section 1041.3(e)(3) requires lenders to maintain policies and procedures for documenting proof of recurring income and to comply with those policies and procedures when making alternative loans under § 1041.3(e). Section 1041.3(e)(3) does not require lenders to undertake the same income documentation procedures required by § 1041.5(c)(2). For the purposes of § 1041.3(e)(3), lenders may establish any procedure for documenting recurring income that satisfies the lender's own underwriting obligations. For example, lenders may choose to use the procedure contained in the National Credit Union Administration's guidance at 12 CFR 701.21(c)(7)(iii) on Payday Alternative Loan programs recommending that Federal credit unions document consumer income by obtaining two recent paycheck stubs.

3(f) Accommodation Lending

1. *General.* Section 1041.3(f) provides a conditional exemption for covered loans if, at the time of origination: (1) The lender and its affiliates collectively have made 2,500 or fewer covered loans in the current calendar year and made 2,500 or fewer covered loans in the preceding calendar year; and (2) during the most recent completed tax year in which the lender was in operation, if applicable, the lender and any affiliates that were in operation and used the same tax year derived no more than 10 percent of their receipts from covered loans, or if the lender was not in operation in a prior tax year, the lender reasonably anticipates that the lender and any of its affiliates that use the same tax year will, during the current tax year, derive no more than 10 percent of their combined receipts from covered loans. For example, assume a lender begins operation in January 2019, uses the calendar year as its tax year, and has no affiliates. In 2019, the lender could originate up to 2,500 covered loans that are not subject to the requirements of this part if at the time of each origination it reasonably anticipates that no more than 10 percent of its receipts during the current tax year will derive from covered loans. In 2020, the lender could originate up to 2,500 covered loans that are not subject to the requirements of this part if the lender made 2,500 or fewer covered loans in 2019 and the lender derived no more than 10 percent of its receipts in the 2019 tax year from covered loans. Section 1041.3(f) provides that covered longer-term loans for which all transfers meet the conditions in § 1041.8(a)(1)(ii), and receipts from such loans, are not included for the purpose of determining whether the conditions of § 1041.3(f)(1) and (2) have been satisfied. For example, a bank that makes a covered longer-term loan using a loan agreement that includes the conditions in § 1041.8(a)(1)(ii) does not need to include that loan, or the receipts from that loan, in determining whether it is below the 2,500 loan threshold or the 10 percent of receipts threshold in § 1041.3(f)(1) and (2).

2. *Reasonable anticipation of receipts for current tax year.* A lender and its affiliates can look to receipts to date in forecasting their total receipts for the current tax year, but are expected to make reasonable adjustments to account for an upcoming substantial change in business plans or other relevant and known factors.

Section 1041.4— Identification of Unfair and Abusive Practice

1. *General.* A lender who complies with § 1041.5 in making a covered short-term loan or a covered longer-term balloon-payment loan has not engaged in the unfair and abusive practice under § 1041.4. A lender who complies with § 1041.6 in making a covered short-term loan has not committed the unfair and abusive practice under § 1041.4 and is not subject to § 1041.5.

Section 1041.5—Ability-to-Repay Determination Required

5(a) Definitions

5(a)(1) Basic Living Expenses

1. *General.* Under § 1041.5(b), a lender must make a reasonable determination that the consumer has the ability to repay a covered short-term loan or covered longer-term balloon-payment loan according to its terms. The consumer's ability to meet basic living expenses is part of the broader ability-to-repay determination under § 1041.5(b). *See* comment 5(b)–1 for additional clarification. The lender's estimate of basic living expenses must be reasonable. The lender may make a reasonable estimate of basic living expenses without making an individualized determination. *See* comment 5(b)–2.i.C for additional clarification.

2. *Expenditures included in basic living expenses.* Section 1041.5(a)(1) defines basic living expenses as expenditures, other than payments for major financial obligations, that the consumer makes for goods and services necessary to maintain the consumer's health, welfare, and ability to produce income, and the health and welfare of the members of the consumer's household who are financially dependent on the consumer. Examples of basic living expenses include food, utilities not paid as part of rental housing expenses, transportation, out-of-pocket medical expenses, phone and Internet services, and childcare. Basic living expenses do not include expenditures for discretionary personal and household goods or services, such as newspaper subscriptions, or vacation

activities. If the consumer is responsible for payment of household goods and services on behalf of the consumer's dependents, those expenditures are included in basic living expenses. As part of its reasonable ability-to-repay determination, the lender may reasonably consider whether another person (*e.g.,* a spouse or adult family member living with the consumer) is regularly contributing toward the consumer's payment of basic living expenses (*see* comment 5(b)–2.i.C.*2*).

5(a)(2) Debt-to-Income Ratio

1. *General.* Section 1041.5(a)(2) defines debt-to-income ratio as the ratio, expressed as a percentage, of the sum of the amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and the payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, to the monthly net income that the lender projects the consumer will receive during the relevant monthly period, all of which projected amounts are determined in accordance with § 1041.5(c). *See* § 1041.5(b)(2)(i) and associated commentary for further clarification on the use of debt-to-income methodology to determine ability to repay. For covered longer-term balloon-payment loans, where the relevant monthly period may fall well into the future relative to the consummation of the loan, the lender must calculate the debt-to-income ratio using the projections made under § 1041.5(c) and in so doing must make reasonable assumptions about the consumer's net income and major financial obligations during the relevant monthly period compared to the period covered by the verification evidence. For example, the lender cannot assume, absent a reasonable basis, that there will be a substantial increase in net income or decrease in major financial obligations between consummation and the relevant monthly period. For further clarification, see comment 5(c)(1)–1 regarding the consistency between the consumer's written statement and verification evidence and comment 5(c)(2)(ii)(A)–2 regarding what constitutes sufficient history of net income for purposes of verification evidence.

5(a)(3) Major Financial Obligations

1. *General.* Section 1041.5(a)(3) defines major financial obligations as a consumer's housing expense, required payments due under debt obligations (including, without limitation, outstanding covered loans), child support obligations, and alimony obligations. Housing expense includes the total periodic amount that the consumer pays for housing during the relevant monthly period, such as the amount the consumer pays to a landlord for rent or to a creditor for a mortgage (including principal, interest, and any escrowed amounts if required). Debt obligations for purposes of § 1041.5(a)(3) do not include amounts due or past due for medical bills, utilities, and other items that are generally defined as basic living expenses under § 1041.5(a)(1). The amount of a payment required under a debt obligation includes the amount the consumer must pay when due to avoid delinquency under the debt obligation in the absence of any affirmative act by the consumer to extend, delay, or restructure the repayment schedule. Thus, this would include periodic or lump-sum payments for automobile loans, student loans, and other covered and non-covered loans, and minimum monthly credit card payments due during the relevant monthly period. It also includes any delinquent amounts on such obligations that are due as of the relevant monthly period, except where an obligation on a covered short-term loan or a covered longer-term balloon-payment loan is no longer outstanding or where the obligation is listed as charged off on a national consumer report. For example, if the consumer has a periodic automobile loan payment from a prior period that is past due and the automobile finance company adds the past due payment to the next regularly scheduled periodic payment which falls during the relevant monthly period, then the past due periodic payment is a major financial obligation.

2. *Motor vehicle leases.* For purposes of this rule, motor vehicle leases shall be treated as a debt obligation.

5(a)(5) Net Income

1. *General.* Section 1041.5(a)(5) defines a consumer's net income to mean the total amount that a consumer receives after the payer has deducted amounts for taxes withheld by the consumer, other obligations, and voluntary contributions (but before deductions of any amounts for payments under a prospective covered short-term loan or covered longer-term balloon-payment loan or for any major financial obligation); provided that, a lender may elect to include in the consumer's net income the amount of any income of another person to which a consumer has a reasonable expectation of access (*see* comment 5(a)(5)–3). Net income includes income that is regularly received by the consumer as take-home pay, whether the consumer is treated as an employee or independent contractor. Net income also includes income regularly received by the consumer from other sources, such as child support or alimony received by the consumer and any payments received by the consumer from retirement, social security, disability, or other government benefits, or annuity plans. Lenders may include in net income irregular or seasonal income, such as tips, bonuses, and overtime pay. Net income does not include one-time payments anticipated to be received in the future from non-standard sources, such as legal settlements, tax refunds, jury prizes, or remittances, unless there is verification evidence of the amount and expected timing of such income. If the consumer receives a traditional pay check but the verification evidence obtained under § 1041.5(c)(2) shows payment of gross income or otherwise is unclear about whether deductions for the consumer's taxes, other obligations, or voluntary contributions have been made, or if the consumer is not paid via a traditional pay check, then the lender may draw reasonable conclusions from the information provided and is not required to inquire further about deductions for the consumer's taxes, other obligations, or voluntary contributions.

2. *Other obligations and voluntary contributions.* An example of other obligations is a consumer's portion of payments for premiums for employer-sponsored health insurance plans. An example of a voluntary contribution is a consumer's contribution to a defined contribution plan meeting the requirements of Internal Revenue Code section 401(a), 26 U.S.C. 401(a). The lender may inquire about and reasonably consider whether voluntary contributions will be discontinued prior to the relevant monthly period, in which case they would not be deducted from the amount of net income that is projected.

3. *Reasonable expectation of access to another person's income.* Under § 1041.5(a)(5), a lender may elect to include in the consumer's net income the amount of any income of another person to which the consumer has a reasonable expectation of access. The income of any other person is considered net income to which the consumer has a reasonable expectation of access if the consumer has direct access to those funds on a regular basis through a transaction account in which the consumer is an accountholder or cardholder. If the lender elects to include any income of another person to which the consumer has a reasonable

expectation of access, then as part of the lender's obligation to make a reasonable projection of the consumer's net income during the applicable period, the lender must obtain verification evidence demonstrating that the consumer has a reasonable expectation of access to the portion of the other person's income that the lender includes within its net income projection. *See* § 1041.5(c)(2)(ii)(A) and associated commentary. The following examples illustrate when a consumer has reasonable expectation of access to the income of another person for purposes of § 1041.5(a)(5):

i. The consumer's spouse has a salary or income that is deposited regularly into a joint account the spouse shares with the consumer. The consumer has a reasonable expectation of access to the spouse's income.

ii. The consumer shares a household with a sibling. The sibling's salary or other income is deposited into an account in which the consumer does not have access. However, the sibling regularly transfers a portion of that income from the sibling's deposit account into the consumer's deposit account. The consumer has a reasonable expectation of access to that portion of the sibling's income.

iii. The consumer's spouse has a salary or other income that is deposited into an account to which the consumer does not have access, and the spouse does not regularly transfer a portion of that income into the consumer's account. The consumer does not have a reasonable expectation of access to the spouse's income.

iv. The consumer does not have a joint bank account with his spouse, nor does the spouse make regular deposits into the consumer's individual deposit account. However, the spouse regularly pays for a portion of the consumer's basic living expenses. The consumer does not have a reasonable expectation of access to the spouse's income. However, regular contributions toward payment of the consumer's basic living expenses may be considered by the lender as a consumer-specific factor that is relevant if the lender makes an individualized estimate of basic living expenses (*see* comment 5(b)–2.i.C.*2* for further clarification).

5(a)(6) Payment Under the Covered Short-Term Loan or Covered Longer-Term Balloon-Payment Loan

Paragraphs 5(a)(6)(i) and (ii)

1. *General.* Section 1041.5(a)(6)(i) defines payment under a covered short-term loan or covered longer-term balloon-payment loan as the combined dollar amount payable by the consumer at a particular time following consummation in connection with the loan, assuming that the consumer has made preceding required payments and in the absence of any affirmative act by the consumer to extend or restructure the repayment schedule or to suspend, cancel, or delay payment for any product, service, or membership provided in connection with the covered short-term loan or covered longer-term balloon-payment loan. Section 1041.5(a)(6)(ii) clarifies that it includes all principal, interest, charges, and fees. A lender may not exclude a portion of the payment simply because a consumer could avoid or delay paying a portion of the payment, such as by requesting forbearance for that portion or by cancelling a service provided in exchange for that portion. For example:

i. Assume that in connection with a covered longer-term balloon-payment loan, a consumer would owe a periodic payment on a particular date of $100 to the lender, which consists of $15 in finance charges, $80 in principal, and a $5 service fee, and the consumer also owes $10 as a credit insurance premium to a separate insurance company. Assume further that under the terms of the loan or other agreements entered into in connection with the loan, the consumer has the right to cancel the credit insurance at any time and avoid paying the $10 credit insurance premium. The payment under the loan is $110.

ii. Assume that in connection with a covered short-term loan, a consumer would owe on a particular date $25 in finance charges to the lender. Under the terms of the loan, the consumer has the option of paying $50 in principal on that date, in which case the lender would charge $20 in finance charges instead. The payment under the loan is $25.

iii. Assume that in connection with a covered short-term loan, a consumer would owe on a particular date $25 in finance charges to the lender and $70 in principal. Under the terms of the loan, the consumer has the option of logging into her account on the lender's Web site and selecting an option to defer the due date of the $70 payment toward principal. The payment under the covered loan is $95.

Paragraph 5(a)(6)(iii)

1. *General.* Section 1041.5(a)(6)(iii) provides assumptions that a lender must make in calculating the payment under § 1041.5(a)(6) for a covered short-term loan or covered longer-term balloon-payment loan that is a line of credit (regardless of the extent to which available credit will be replenished as the consumer repays earlier advances). For a line of credit, the amount and timing of the consumer's actual payments after consummation may depend on the consumer's utilization of the credit or on amounts that the consumer has repaid prior to the payments in question. Section 1041.5(a)(6)(iii) requires the lender to calculate the total loan payment assuming that the consumer will utilize the full amount of credit under the loan as soon as the credit is available and that the consumer will make only minimum required payments for as long as permitted under the loan agreement. Lenders should use the same test with the same assumptions when they make a new ability-to-repay determination under § 1041.5(b)(1)(ii) prior to an advance under the line of credit that is more than 90 days after the date of a prior ability-to-repay determination for the line of credit, in order to determine whether the consumer still has the ability to repay the current credit line.

5(a)(8) Residual Income

1. *General.* Under § 1041.5(a)(8), residual income is defined as the sum of net income that the lender projects the consumer will receive during the relevant monthly period, minus the sum of amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, all of which projected amounts are determined in accordance with § 1041.5(c). *See* § 1041.5(b)(2)(ii) and associated commentary for further clarification on the use of residual income methodology to determine ability to repay. For covered longer-term balloon-payment loans, where the relevant monthly period may fall well into the future relative to the consummation of the loan, the lender must calculate the residual income using the projections made under § 1041.5(c) and in so doing must make reasonable assumptions about the consumer's net income and major financial obligations during the relevant monthly period compared to the period covered by the verification evidence. For example, the lender cannot assume, absent a reasonable basis, that there will be a substantial increase in net income or decrease in major financial obligations between consummation and the relevant monthly period. For further clarification, see comment 5(c)(1)–1 regarding the consistency between the consumer's written statement and

verification evidence and comment 5(c)(2)(ii)(A)–2 regarding what constitutes sufficient history of net income for purposes of verification evidence.

5(b) Reasonable Determination Required

1. *Overview.* Section 1041.5(b) prohibits a lender from making a covered short-term loan (other than a covered short-term loan described in § 1041.6) or a covered longer-term balloon-payment loan or increasing the amount of credit available on such loan unless it first makes a reasonable determination that the consumer will have the ability to repay the loan according to its terms. For discussion of loan modifications, see comment 2(a)(5)–2. Section 1041.5(b) provides minimum standards that the lender's determination must meet to constitute a reasonable determination. Section 1041.5(b)(2) provides that a lender's ability-to-repay determination for a covered short-term loan or covered longer-term balloon-payment loan is reasonable only if the lender reasonably concludes that, based on the estimates of the consumer's basic living expenses for the relevant monthly period and the calculation of the consumer's residual income or the debt-to-income ratio for the relevant monthly period, as applicable, the consumer can pay for major financial obligations, make any payments under the loan, and meet basic living expenses during the periods specified in § 1041.5(b)(2). For covered short-term loans, the periods are the shorter of the term of the loan or the period ending 45 days after consummation of the loan, and 30 days after having made the highest payment on the loan. For covered longer-term balloon-payment loans, the periods are the relevant monthly period, and 30 days after having made the highest payment on the loan. Thus, the rule requires lenders to make a debt-to-income ratio or residual income calculation and an estimate of basic living expenses for the relevant monthly period—the calendar month in which the highest payments are due on the covered short-term loan or covered longer-term balloon payment loan—and to use the results of the calculation and estimate to make reasonable inferences and draw a reasonable conclusion about whether the consumer can make loan payments, pay for major financial obligations, and meet basic living expenses during the periods specified in § 1041.5(b)(2). This analysis is designed to determine whether the consumer has the ability to repay the loan according to its terms. *See* § 1041.5(b)(2)(i) and (ii) and corresponding commentary.

2. *Reasonable determination.* To comply with the requirements of § 1041.5(b), a lender's determination that a consumer will have the ability to repay a covered short-term loan or covered longer-term balloon-payment loan must be reasonable in all respects.

i. To be reasonable, a lender's determination of a consumer's ability to repay a covered short-term loan or covered longer-term balloon-payment loan must:

A. Include the reasonable conclusions required in § 1041.5(b)(2), using either the debt-to-income ratio methodology under § 1041.5(b)(2)(i) or the residual income methodology under § 1041.5(b)(2)(ii) as applied to the relevant monthly period;

B. Be based on reasonable projections of a consumer's net income and major financial obligations during the relevant monthly period in accordance with § 1041.5(c);

C. Be based on reasonable estimates of basic living expenses during the relevant monthly period. The following provides additional clarification on what constitutes reasonable estimates of basic living expenses:

1. Section 1041.5(a)(1) and (b) do not specify a particular method that a lender must use to determine a consumer's basic living expenses. A lender is not required to itemize the basic living expenses of each consumer, but may instead arrive at estimates for the amount needed to cover the costs of food, utilities not paid as part of rental housing expenses, transportation, out-of-pocket medical expenses, phone and Internet services, and childcare. A lender may reasonably estimate the dollar amount or percentage of net income the consumer will need to meet these basic living expenses based upon such sources as the lender's own experience in making covered short-term or longer-term balloon-payment loans to similarly-situated consumers, reasonably reliable information available from government surveys or other publications about the basic living expenses of similarly-situated consumers, or some combination thereof. For example, it would be reasonable for the lender to use data about relevant categories of expenses from the Consumer Expenditure Survey of the Bureau of Labor Statistics or the Internal Revenue Code's Collection Financial Standards, or a combination of the two data sources, to develop non-individualized estimates of food, utilities not paid as part of rental housing expenses, transportation, out-of-pocket medical expenses, phone and internet services, and childcare for consumers seeking covered short-term or longer-term balloon-payment loans. In using the data from those sources to estimate the amount spent on a particular category, the lender may make reasonable adjustments to arrive at an estimate of basic living expenses, for instance where a data source's information on a particular type of basic living expenses overlaps with a type of major financial obligation as defined in § 1041.5(a)(3) or where a data source groups expenses into different categories than comment 5(a)(1)–2.

2. If the lender is conducting an individualized estimate by itemizing the consumer's costs of food, utilities not paid as part of rental housing expenses, transportation, out-of-pocket medical expenses, phone and Internet services, and childcare, the lender may reasonably consider other factors specific to the consumer that are not required to be projected under § 1041.5(c). Such consumer-specific factors could include whether other persons are regularly contributing toward the consumer's payment of basic living expenses. The lender may consider such consumer-specific factors only when it is reasonable to do so. It is not reasonable for the lender to consider whether other persons are regularly contributing toward the consumer's payment of basic living expenses if the lender is separately including in its projection of net income any income of another person to which the consumer has a reasonable expectation of access; and

D. Be consistent with a lender's written policies and procedures required under § 1041.12 and grounded in reasonable inferences and conclusions as to a consumer's ability to repay a covered short-term loan or covered longer-term balloon-payment loan according to its terms in light of information the lender is required to obtain or consider as part of its determination under § 1041.5(b).

ii. A determination of ability to repay is not reasonable if it:

A. Relies on an implicit or explicit assumption that the consumer will obtain additional consumer credit to be able to make payments under the covered short-term loan or covered longer-term balloon-payment loan, to make payments under major financial obligations, or to meet basic living expenses;

B. Assumes that a consumer needs implausibly low amounts of funds to meet basic living expenses under the residual income methodology or an implausibly low percentage of net income to meet basic living expenses if a lender uses the debt-to-income methodology. For example, assume a

consumer seeks a covered short-term loan. The lender uses a debt-to-income methodology to make an ability-to-repay determination. Based on the lender's projections of the consumer's net income and major financial obligations under § 1041.5(c), the lender calculates that the consumer's debt-to-income ratio would be 90 percent, which means that only 10 percent of the consumer's net income will be remaining to pay for basic living expenses. It is not reasonable for the lender to conclude under § 1041.5(b)(2) that a consumer with a 90 percent debt-to-income ratio would have the ability to repay the loan. *See* comment 5(b)(2)(i)–3 for additional examples of ability-to-repay determinations using the debt-to-income methodology; or

C. For covered longer-term balloon-payment loans, if the lender relies on an assumption that a consumer will accumulate savings while making one or more payments under a covered longer-term balloon-payment loan and that, because of such assumed savings, the consumer will be able to make a subsequent loan payment under the loan.

iii. Evidence that a lender's determinations of ability to repay are not reasonable may include, without limitation, the factors described under paragraphs (A) through (E) of comment 5(b)–2.iii. These factors may be evaluated across a lender's entire portfolio of covered short-term loans or covered longer-term balloon-payment loans or with respect to particular products, geographic regions, particular periods during which the loans were made, or other relevant categorizations. Other relevant categorizations would include, without limitation, loans made in reliance on consumer statements of income in the absence of verification evidence (*see* comment 5(c)(2)(ii)(A)–4). The factors described under paragraphs (A) through (E) of comment 5(b)–2.iii may be considered either individually or in combination with one another. These factors also are not absolute in their application; instead, they exist on a continuum and may apply to varying degrees. Each of these factors is viewed in the context of the facts and circumstances relevant to whether the lender's ability-to-repay determinations are reasonable. Relevant evidence may also include a comparison of the following factors on the part of the lender to that of other lenders making covered short-term loans or covered longer-term balloon-payment loans to similarly situated consumers; however, such evidence about comparative performance is not dispositive as to the evaluation of a lender's ability-to-repay determinations.

A. *Default rates.* This evidence includes defaults during and at the expiration of covered loan sequences as calculated on a per sequence or per consumer basis;

B. *Re-borrowing rates.* This evidence includes the frequency with which the lender makes consumers multiple covered short-term loans or covered longer-term balloon-payment loans within a loan sequence as defined in § 1041.2(a)(14) (*i.e.,* consecutive or concurrent loans taken out within 30 days of a prior loan being outstanding);

C. *Patterns of lending across loan sequences.* This evidence includes the frequency with which the lender makes multiple sequences of covered short-term loans or covered longer-term balloon-payment loans to consumers. This evidence also includes the frequency with which the lender makes consumers new covered short-term loans or covered longer-term balloon-payment loans immediately or soon after the expiration of a cooling-off period under § 1041.5(d)(2) or the 30-day period that separates one loan sequence from another (*see* § 1041.2(a)(14));

D. *Evidence of delinquencies and collateral impacts.* This evidence includes the proportion of consumers who incur late fees, failed presentments, delinquencies, and repossessions of motor vehicles for loans involving vehicle security; and

E. *Patterns of non-covered lending.* This evidence includes the frequency with which the lender makes non-covered loans shortly before or shortly after consumers repay a covered short-term loan or covered longer-term balloon-payment loan, and the non-covered loan bridges all or a substantial part of either the period between two loans that otherwise would be part of a loan sequence or of a cooling-off period. An example would be where the lender, its affiliate, or a service provider frequently makes 30-day non-recourse pawn loans to consumers shortly before or soon after repayment of covered short-term loans made by the lender, and where the lender then makes additional covered short-term loans to the same consumers soon after repayment of the pawn loans.

iv. *Examples of evidence of the reasonableness of ability-to-repay determinations.* The following examples illustrate how the factors described in comment 5(b)–2.iii may constitute evidence about whether lenders' determinations of ability to repay are reasonable under § 1041.5(b):

A. A significant percentage of consumers who obtain covered short-term loans from a lender under § 1041.5 re-borrow within 30 days of repaying their initial loan, re-borrow within 30 days of repaying their second loan, and re-borrow shortly after the end of the cooling-off period that follows the initial loan sequence of three loans. Based on the combination of these factors, this evidence suggests that the lender's ability-to-repay determinations are not reasonable.

B. A lender frequently makes at or near the maximum number of loans permitted under § 1041.6 to consumers early within a 12-month period (*i.e.,* the loans do not require ability-to-repay determinations) and then makes a large number of additional covered short-term loans to those same consumers under § 1041.5 (*i.e.,* the loans require ability-to-repay determinations) later within the 12-month period. Assume that the loans made under § 1041.5 are part of multiple loan sequences of two or three loans each and the sequences begin soon after the expiration of applicable cooling-off periods or 30-day periods that separate one loan sequence from another. This evidence suggests that the lender's ability-to-repay determinations for the covered short-term loans made under § 1041.5 are not reasonable. The fact that some of the loans in the observed pattern were made under § 1041.6 and thus are conditionally exempted from the ability-to-repay requirements does not mitigate the potential unreasonableness of the ability-to-repay determinations for the covered short-term loans that were made under § 1041.5.

C. A lender frequently makes at or near the maximum number of loans permitted under § 1041.6 to consumers early within a 12-month period (*i.e.,* the loans do not require ability-to-repay determinations) and then only occasionally makes additional covered short-term loans to those same consumers under § 1041.5 (*i.e.,* the loans require ability-to-repay determinations) later within the 12-month period. Very few of those additional loans are part of loans sequences longer than one loan. Absent other evidence that the ability-to-repay determination is unreasonable (*see* comment 5(b)–2.iii.A through E), this evidence suggests that the lender's ability-to-repay determinations for the loans made under § 1041.5 are reasonable.

D. Within a lender's portfolio of covered short-term loans, a small percentage of loans result in default, consumers generally have short loan sequences (fewer than three loans), and

the consumers who take out multiple loan sequences typically do not begin a new loan sequence until several months after the end of a prior loan sequence. There is no evidence of the lender or an affiliate making non-covered loans to consumers to bridge cooling-off periods or the periods between loan sequences. This evidence suggests that the lender's ability-to-repay determinations are reasonable.

3. *Payments under the covered short-term loan or longer-term balloon-payment loan.* Under the ability-to-repay requirements in § 1041.5(b)(2)(i) and (ii), a lender must determine the amount of the payments due in connection with the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period. See § 1041.5(a)(6) for the definition of payment under a covered short-term loan or covered longer-term balloon-payment loan, including assumptions that the lender must make in calculating the amount of payments under a loan that is a line of credit.

Paragraph 5(b)(2)

1. *General.* For a covered short-term loan, § 1041.5(b)(2) requires the lender to reasonably conclude that, based on the estimates of the consumer's basic living expenses for the relevant monthly period and the lender's calculation of the consumer's debt-to-income ratio or residual income for the relevant monthly period, as applicable, the consumer can pay major financial obligations, make any payments on the loan, and meet basic living expenses during the shorter of the term of the loan or the period ending 45 days after consummation of the loan, and for 30 days after having made the highest payment on the loan. *See* § 1041.5(b)(2)(i)(A) (the debt-to-income methodology) and § 1041.5(b)(2)(ii)(A) (the residual income methodology) and corresponding commentary. For a covered longer-term balloon-payment loan, § 1041.5(b)(2) requires the lender to reasonably conclude that, based on the estimates of the consumer's basic living expenses for the relevant monthly period and the lender's calculation of the consumer's debt-to-income ratio or residual income, as applicable, the consumer can pay major financial obligations, make any payments on the loan, and meet basic living expenses during the relevant monthly period, and for 30 days after having made the highest payment on the loan. *See* § 1041.5(b)(2)(i)(B) (the debt-to-income methodology) and § 1041.5(b)(2)(ii)(B) (the residual income methodology) and corresponding commentary. If the loan has two or more payments that are equal to each other in amount and higher than all other payments, the date of the highest payment under the loan is considered the later in time of the two or more highest payments. Under § 1041.5(b)(2), lenders must comply with either § 1041.5(b)(2)(i) or (ii) depending on whether they utilize the residual income or debt-to-income ratio methodology.

Paragraph 5(b)(2)(i)

1. *Relation of periods under § 1041.5(b)(2)(i) to relevant monthly period.* Section 1041.5(a)(2) defines debt-to-income ratio as the ratio, expressed as a percentage, of the sum of the amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and the payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, to the net income that the lender projects the consumer will receive during the relevant monthly period, all of which projected amounts are determined in accordance with § 1041.5(c). Comment 5(a)(2)–1 clarifies that the relevant monthly period is the calendar month during which the highest sum of payments on the loan is due. The relevant monthly period is not the same period as the periods set forth in § 1041.5(b)(2)(i), which for covered short-term loans are the shorter of the loan term or 45 days following consummation, and 30 days following the date of the highest payment under the loan, and for covered longer-term balloon-payment loans are the relevant monthly period, and 30 days following the date of the highest payment under the loan. There may be overlap between the relevant monthly period and the periods set forth in § 1041.5(b)(2)(i), but the degree of overlap will depend on the contractual duration of the loan and the consummation and contractual due dates. For example, assume a consumer takes a covered short-term loan of 30 days in duration that is consummated on June 15 and with a single payment due on July 14. The relevant monthly period is the calendar month in which the sum of the highest payments on the loan is due, which is the calendar month of July. This means that a portion of both the loan term (*i.e.,* June 15 to June 30) and the 30-day period following the date of the highest payment on the loan (*i.e.,* August 1 to August 13) are outside of the relevant monthly period.

2. *Use of projections for relevant monthly period to comply with § 1041.5(b)(2)(i).* The lender is not required under § 1041.5(b)(2)(i) to estimate the consumer's basic living expenses, make a projection under § 1041.5(c) of the consumer's net income and major financial obligations, or calculate the consumer's debt-to-income ratio for any period other than the relevant monthly period. The lender may use the estimates of the consumer's basic living expenses for the relevant monthly period, the projections about the consumer's net income and major financial obligations during the relevant monthly period, and the calculation of the consumer's debt-to-income ratio as a baseline of information from which to make reasonable inferences and draw a reasonable conclusion about whether the consumer will pay major financial obligations, make the payments on the loan, and meet basic living expenses during the periods specified in § 1041.5(b)(2)(i). To make reasonable inferences and draw a reasonable conclusion, the lender cannot, for example, assume that the consumer will defer payment of major financial obligations and basic living expenses until after the 30-day period that follows the date of the highest payment on the loan, or assume that obligations and expenses (other than payments on the covered loan itself) during the 30-day period will be less than during the relevant monthly period. Nor can the lender assume the consumer will be able to obtain additional credit during the loan term or during the 30-day period that follows the highest payment on the loan.

3. *Examples.* The following examples illustrate § 1041.5(b)(2)(i):

i. Assume a lender considers making a covered short-term loan to a consumer on March 1. The prospective loan would be repayable in a single payment of $385 on March 17. The lender calculates that, based on its projections of the consumer's net income and major financial obligations during March (*i.e.,* the relevant monthly period), the consumer will have a debt-to-income ratio of 55 percent. The lender complies with the requirement in § 1041.5(b)(2) if, using that debt-to-income ratio, the lender reasonably concludes that the consumer can pay for major financial obligations, make the loan payment, and meet basic living expenses during the loan term and to pay for major financial obligations and meet basic living expenses for 30 days following the contractual due date (*i.e.,* from March 18 to April 16). The lender would not make a reasonable conclusion if the lender were to assume, for example, that the consumer would defer payment of major financial obligations until after April 16 or that the consumer would obtain an

additional extension of credit on April 1.

ii. Assume a lender considers making a covered longer-term balloon-payment loan to a consumer on March 1. The prospective loan would be repayable in six biweekly payments. The first five of which would be for $100, and the last of which would be for $275, due on May 20. The highest sum of these payments that would be due within a monthly period would be $375, during the month of May. The lender further calculates that, based on its projections of net income and major financial obligations during the relevant monthly period, the consumer will have a debt-to-income ratio of 50 percent. The lender complies with the requirement in § 1041.5(b)(2)(i) if, applying that debt-to-income ratio, the lender reasonably concludes that the consumer can pay for major financial obligations, make the payments under the loan, and meet basic living expenses during the month in which the highest sum of payments on the loan are due (*i.e.,* during the month of May) and for 30 days following the highest payment on the loan (*i.e.,* from May 21 to June 19). The lender would not make a reasonable conclusion if the lender were to assume, for example, that the consumer would defer payment of major financial obligations until after June 19 or that the consumer would obtain an additional extension of credit on June 1.

Paragraph 5(b)(2)(ii)

1. *Relation of periods under § 1041.5(b)(2)(ii) to relevant monthly period.* Section 1041.5(a)(8) defines residual income as the sum of net income that the lender projects the consumer will receive during the relevant monthly period, minus the sum of the amounts that the lender projects will be payable by the consumer for major financial obligations during the relevant monthly period and payments under the covered short-term loan or covered longer-term balloon-payment loan during the relevant monthly period, all of which projected amounts are determined in accordance with paragraph (c). The relevant monthly period is the calendar month in which the highest sum of payments on the loan is due. The relevant monthly period is not the same period as the periods set forth in § 1041.5(b)(2)(ii), although there may be some overlap. *See* comment 5(b)(2)(i)–1 for further clarification and an analogous example.

2. *Use of projections for relevant monthly period to comply with § 1041.5(b)(2)(ii).* The lender is not required under § 1041.5(b)(2)(ii) to estimate the consumer's basic living expenses, make a projection under § 1041.5(c) of the consumer's net income and major financial obligations, or calculate the consumer's residual income for any period other than the relevant monthly period. The lender may use the estimates of the consumer's basic living expenses for the relevant monthly period, projections about the consumer's net income and major financial obligations during the relevant monthly period and the calculation of the consumer's residual income as a baseline of information on which to make reasonable inferences and draw a reasonable conclusion about whether the consumer will pay major financial obligations, make the payments on the loan, and meet basic living expenses during the periods specified in § 1041.5(b)(2)(ii). *See* comment 5(b)(2)(i)–2 for further clarification.

3. *Examples.* The following examples illustrate § 1041.5(b)(2)(ii):

i. Assume a lender considers making a covered short-term loan to a consumer on March 1. The prospective loan would be repayable in a single payment of $385 on March 17. The lender calculates that, based on its projections of the consumer's net income and major financial obligations during March (*i.e.,* the relevant monthly period), the consumer will have $1,000 in residual income for the month. The lender complies with the requirement in § 1041.5(b)(2)(ii) if, based on the calculation of residual income, it reasonably concludes that the consumer will be able to pay major financial obligations, make the loan payment, and meet basic living expenses during the loan term and for 30 days following the contractual due date (*i.e.,* from March 18 to April 16). The lender would not make a reasonable conclusion if the lender were to assume, for example, that the consumer would defer payment of major financial obligations until after April 16, that the consumer would obtain an additional extension of credit on April 1, or that the consumer's net income will increase in April relative to the relevant monthly period (*i.e.,* March).

ii. Assume a lender considers making a covered longer-term balloon-payment loan to a consumer on March 1. The prospective loan would be repayable in six biweekly payments. The first five payments would be for $100, and the last payment would be for $275, on May 20. The highest sum of these payments that would be due within a monthly period would be $375, during the month of May. The lender further calculates that, based on its projections of net income and major financial obligations during the relevant monthly period (*i.e.,* May), and accounting for the $375 amount, which is the highest sum of loan payments due within a monthly period, the consumer will have $1,200 in residual income. The lender complies with the requirement in § 1041.5(b)(2)(ii) if, based on the calculation of residual income, it reasonably concludes that the consumer will be able to pay major financial obligations, make the loan payments, and meet basic living expenses during the relevant monthly period (*i.e.,* May) and to pay for basic living expenses and major financial obligations for 30 days following the highest payment on the loan (*i.e.,* from May 21 to June 19). The lender would not make a reasonable conclusion if the lender were to assume, for example, that the consumer would be able to defer payment of major financial obligations until after June 19 or that the consumer would obtain an additional extension of credit on June 1, or that the consumer's net income will increase in June relative to the relevant monthly period (*i.e.,* May).

5(c) Projecting Consumer Net Income and Payments for Major Financial Obligations

Paragraph 5(c)(1)

1. *General.* Section 1041.5(c)(1) requires lenders to consider major financial obligations that are listed in a consumer's written statement described in § 1041.5(c)(2)(i)(B) even if the obligations do not appear in the national credit report or other verification documentation that lenders are required to compile under § 1041.5(c)(2)(ii)(B). To be reasonable, § 1041.5(c)(1) provides that a projection of the amount of net income or payments for major financial obligations may be based on a consumer's written statement of amounts under § 1041.5(c)(2)(i) only as specifically permitted by § 1041.5(c)(2)(ii) or (iii) or to the extent the stated amounts are consistent with the verification evidence that is obtained in accordance with § 1041.5(c)(2)(ii). Section 1041.5(c)(1) further provides that, in determining whether the stated amounts are consistent with the verification evidence, the lender may reasonably consider other reliable evidence the lender obtains from or about the consumer, including any explanations the lender obtains from the consumer. For example:

i. Assume that a consumer states that her net income is $900 every two weeks, pursuant to § 1041.5(c)(2)(i)(A). The consumer pay stub the lender obtains as reasonably available verification evidence pursuant to § 1041.5(c)(2)(ii)(A) shows that the consumer received $900 during the

preceding pay period. The lender complies with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a projection of $1,800 in net income for the relevant monthly period because the reasonably available verification evidence supports a projection of $900 in net income every two weeks.

ii. Assume that a consumer states that net income is $1,000 every two weeks, pursuant to § 1041.5(c)(2)(i)(A). The lender obtains a copy of the consumer's recent deposit account transaction records as verification evidence pursuant to § 1041.5(c)(2)(ii)(A). The account transaction records show biweekly take-home pay of $800 during the preceding two-week period. The lender does not comply with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a net income projection of a $2,000 for the relevant monthly period because this projection is not consistent with the reasonably available verification evidence (which, rather, is consistent with a total of $1,600 net income for the relevant monthly period). The lender may request additional deposit account transaction records for prior recent pay cycles and may reasonably project $2,000 in net income for the relevant monthly period if such additional evidence is consistent with the consumer's statement.

iii. Assume that a consumer states that net income is $1,000 every two weeks, pursuant to § 1041.5(c)(2)(i)(A). The lender obtains a copy of the consumer's recent deposit account transaction records as verification evidence pursuant to § 1041.5(c)(2)(ii)(A). The account transaction records show biweekly take-home pay of $800 during the preceding two-week period. Assume also, however, that the consumer states that the consumer supplements his regular payroll income with cash income from a second job, for which verification evidence is not reasonably available because the consumer is paid in cash and does not deposit the cash into the consumer's bank account, and that the consumer earns between $100 and $300 every two weeks from this job. In this instance, the lender complies with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a net income projection of $2,000 for the relevant monthly period. The lender's projection includes both the payroll income from the first job for which verification evidence is reasonably available and the cash income from the second job for which verification evidence is not reasonably available (*see* comment 5(c)(2)(ii)(A)–3). In such circumstances, the lender may reasonably consider the additional income reflected in the consumer's written statement pursuant to § 1041.5(c)(2)(ii)(A)(*1*).

iv. Assume that a consumer states that her net income is $1,000 every two weeks, pursuant to § 1041.5(c)(2)(i)(A). The lender obtains electronic records of the consumer's deposit account transactions as verification evidence pursuant to § 1041.5(c)(2)(ii)(A) showing a biweekly direct deposit $800 during the preceding two-week period and a biweekly direct deposit of $1,000 during the prior two-week period. The consumer explains that the most recent income was lower than her usual income of $1,000 because she missed two days of work due to illness. The lender complies with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a projection of $2,000 for the relevant monthly period because it reasonably considers the consumer's explanation in determining whether the stated amount is consistent with the verification evidence.

v. Assume that a consumer states that her net income is $2,000 every two weeks, pursuant to § 1041.5(c)(2)(i)(A). The lender obtains electronic records of the consumer's deposit account transactions as verification evidence pursuant to § 1041.5(c)(2)(ii)(A) showing no income transactions in the preceding month but showing consistent biweekly direct deposits of $2,000 from ABC Manufacturing prior to that month. The consumer explains that she was temporarily laid off for one month while ABC Manufacturing retooled the plant where she works but that she recently resumed work there. The lender complies with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a projection of $4,000 for the relevant monthly period because it reasonably considers the consumer's explanation in determining whether the stated amount is consistent with the verification evidence.

vi. Assume that a consumer states that she owes a child support payment of $200 each month, pursuant to § 1041.5(c)(2)(i)(B). The national consumer report that the lender obtains as verification evidence pursuant to § 1041.5(c)(2)(ii)(C) does not include any child support payment. The lender must consider the child support obligation listed in the written statement. The lender complies with § 1041.5(c)(1) if it reasonably relies on the amount in the consumer's written statement pursuant to § 1041.5(c)(2)(ii)(C) to make the determination required under § 1041.5(b) based on a projection of a $200 child support payment each month.

vii. Assume that a consumer does not list a student loan in her written statement pursuant to § 1041.5(c)(2)(i)(B), but the national consumer report that the lender obtains as verification evidence pursuant to § 1041.5(c)(2)(ii)(B) lists such a loan with a payment due during the relevant monthly period. The lender does not comply with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) without including the student loan payment based on the consumer's failure to list the loan in the written statement or on the consumer's explanation that the loan has recently been paid off. The lender may obtain and reasonably consider other reliable evidence, such as records from the consumer or an updated national consumer report, and may exclude the student loan payment if such additional evidence is consistent with the consumer's statement or explanation.

viii. Assume that a consumer states that he owes a child support payment of $200 each month, pursuant to § 1041.5(c)(2)(i)(B). The national consumer report that the lender obtains as verification evidence pursuant to § 1041.5(c)(2)(ii)(C) includes the child support payment. The consumer states, further, that his child support payment is deducted out of his paycheck prior to his receipt of take-home pay. The lender obtains a recent pay stub of the consumer as verification evidence which shows a $200 deduction but does not identify the payee or include any other information regarding the nature of the deduction. The lender complies with § 1041.5(c)(1) if it makes the determination required under § 1041.5(b) based on a projection of major financial obligations that does not include the $200 child support payment each month, because it relies on the consumer's statement that the child support payment is deducted from his paycheck prior to receipt of take-home pay and nothing in the verification evidence is inconsistent with the statement.

2. *Consumer-specific factors regarding payment of major financial obligations.* Under § 1041.5(c)(1), in projecting major financial obligations the lender may consider consumer-specific factors, such as whether other persons are regularly contributing toward the consumer's payment of major financial obligations. The lender may consider such consumer-specific factors only when it is reasonable to do so. It is not reasonable for the lender to consider whether other persons are regularly

contributing toward the consumer's payment of major financial obligations if the lender is separately including in its projection of net income any income of another person to which the consumer has a reasonable expectation of access (see comment 5(a)(5)–3).

5(c)(2) Evidence of Net Income and Payments for Major Financial Obligations

Paragraph 5(c)(2)(i)

1. *Statements from the consumer.* Section 1041.5(c)(2)(i) requires a lender to obtain a consumer's written statement of the amounts of the consumer's net income and payments for the consumer's major financial obligations currently and for the relevant monthly period. Section 1041.5(c)(2)(i) also provides that the written statement from the consumer may include a statement from the consumer about the amount of any income of another person to which the consumer has a reasonable expectation of access. A consumer's written statement includes a statement the consumer writes on a paper application or enters into an electronic record, or an oral consumer statement that the lender records and retains or memorializes in writing or electronically and retains.

Paragraph 5(c)(2)(ii)

1. *Verification requirement.* Section 1041.5(c)(2)(ii) establishes requirements for a lender to obtain verification evidence for the amounts of a consumer's net income and required payments for major financial obligations other than rental housing expense.

Paragraph 5(c)(2)(ii)(A)

1. *Income.* Section 1041.5(c)(2)(ii)(A) requires a lender to obtain a reliable record (or records) of an income payment (or payments) directly to the consumer covering sufficient history to support the lender's projection under § 1041.5(c)(1) if a reliable record (or records) of income payment (or payments) is reasonably available. Section 1041.5(c)(2)(ii)(A) also provides that if the lender elects to include as the consumer's net income for the relevant monthly period the income of another person to which the consumer has a reasonable expectation of access, the lender must obtain verification evidence of that income in the form of a reliable record (or records) demonstrating that the consumer has regular access to that income. Such verification evidence could consist of bank account statements indicating that the consumer has access to a joint bank account in which the other person's income is deposited, or that the other person regularly deposits income into the consumer's bank account (*see* comment 5(a)(5)–3 for further clarification). For purposes of verifying net income, a reliable transaction record includes a facially genuine original, photocopy, or image of a document produced by or on behalf of the payer of income, or an electronic or paper compilation of data included in such a document, stating the amount and date of the income paid to the consumer. A reliable transaction record also includes a facially genuine original, photocopy, or image of an electronic or paper record of depository account transactions, prepaid account transactions (including transactions on a general purpose reloadable prepaid card account, a payroll card account, or a government benefits card account) or money services business check-cashing transactions showing the amount and date of a consumer's receipt of income.

2. *Sufficient history.* Under § 1041.5(c)(2)(ii)(A), the lender must obtain a reliable record or records of the consumer's net income covering sufficient history to support the lender's projection under § 1041.5(c). For a covered short-term loan, sufficient history typically would consist of one biweekly pay cycle or one monthly pay cycle, depending on how frequently the consumer is paid. However, if there is inconsistency between the consumer's written statement regarding net income and the verification evidence which must be reconciled by the lender (*see* comment 5(c)(1)–1), then depending on the circumstances more than one pay cycle may be needed to constitute sufficient history. For a covered longer-term balloon-payment loan, sufficient history would generally consist of two biweekly pay cycles or two monthly pay cycles, depending on how frequently the consumer is paid. However, depending on the length of the loan, and the need to resolve inconsistency between the consumer's written statement regarding net income and the verification evidence, more than two pay cycles may be needed to constitute sufficient history.

3. *Reasonably available.* The lender's obligation to obtain a reliable record (or records) of income payment (or payments) covering sufficient history to support the lender's projection under § 1041.5(c)(1) applies if and to the extent a reliable record (or records) is reasonably available. A reliable record of the consumer's net income is reasonably available if, for example, the consumer's source of income is from her employment and she possesses or can access a copy of the consumer's recent pay stub. The consumer's recent transaction account deposit history is a reliable record (or records) that is reasonably available if the consumer has such an account. With regard to such bank account deposit history, the lender could obtain it directly from the consumer or, at its discretion, with the consumer's permission via an account aggregator service that obtains and categorizes consumer deposit account and other account transaction data. In situations in which income is neither documented through pay stubs nor transaction account records, the reasonably available standard requires the lender to act in good faith and exercise due diligence as appropriate for the circumstances to determine whether another reliable record (or records) is reasonably available.

4. *Reasonable reliance on consumer's statement if reliable record not reasonably available.* Under § 1041.5(c)(2)(ii)(A), if a lender determines that a reliable record (or records) of some or all of the consumer's net income is not reasonably available, the lender may reasonably rely on the consumer's written statement described in § 1041.5(c)(2)(i)(A) for that portion of the consumer's net income. Section 1041.5(c)(2)(ii)(A) does not permit a lender to rely on a consumer's written statement that the consumer has a reasonable expectation of access to the income of another person (*see* comment 5(c)(2)(ii)(A)–1). A lender reasonably relies on the consumer's written statement if such action is consistent with a lender's written policies and procedures required under § 1041.12 and there is no indication that the consumer's stated amount of net income on a particular loan is implausibly high or that the lender is engaged in a pattern of systematically overestimating consumers' income. Evidence of the lender's systematic overestimation of consumers' income could include evidence that the subset of the lender's portfolio consisting of the loans where the lender relies on the consumers' statements to project income in the absence of verification evidence perform worse, on a non-trivial level, than other covered loans made by the lender with respect to the factors noted in comment 5(b)–2.iii indicating poor loan performance (*e.g.,* high rates of default, frequent re-borrowings). If the lender periodically reviews the performance of covered short-term loans or covered longer-term balloon-payment loans where the lender has relied on consumers' written statements of income and uses the results of those reviews to make necessary adjustments to its policies and procedures and future lending decisions, such actions indicate

that the lender is reasonably relying on consumers' statements. Such necessary adjustments could include, for example, the lender changing its underwriting criteria for covered short-term loans to provide that the lender may not rely on the consumer's statement of net income in absence of reasonably available verification evidence unless the consumer's debt-to-income ratio is lower, on a non-trivial level, than that of similarly situated applicants who provide verification evidence of net income. A lender is not required to consider income that cannot be verified other than through the consumer's written statement. For an illustration of a lender's reliance on a consumer's written statement as to a portion of her income for which verification evidence is not reasonably available, see comment 5(c)(1)–1.iii.

Paragraph 5(c)(2)(ii)(B)

1. *Payments under debt obligations.* To verify a consumer's required payments under debt obligations, § 1041.5(c)(2)(ii)(B) requires a lender to obtain a national consumer report, the records of the lender and its affiliates, and a consumer report obtained from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2), if available. A lender satisfies its obligation under § 1041.5(d)(1) to obtain a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2), if available, when it complies with the requirement in § 1041.5(c)(2)(ii)(B) to obtain this same consumer report. *See* comment 5(a)(3)–1 regarding the definition of required payments.

2. *Deduction of debt obligations prior to consumer's receipt of take-home pay.* If verification evidence shows that a debt obligation is deducted prior to the consumer's receipt of take-home pay, the lender does not include the debt obligation in the projection of major financial obligations under § 1041.5(c).

3. *Inconsistent information.* If the consumer reports and lender and affiliate records do not include a debt obligation listed in the consumer's written statement described in § 1041.5(c)(2)(ii)(B), the lender must consider the debt obligation listed in the consumer's written statement to make a reasonable projection of the amount of payments for debt obligations. The lender may reasonably rely on the written statement in determining the amount of the required payment for the debt obligation. If the reports and records include a debt obligation that is not listed in the consumer's written statement, the lender must consider the debt obligation listed in the report or record unless it obtains additional verification evidence confirming that the obligation has been paid off or otherwise released. A lender is not responsible for information about a major financial obligation that is not owed to the lender, its affiliates, or its service providers if such obligation is not listed in a consumer's written statement, a national consumer report, or a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2).

Paragraph 5(c)(2)(ii)(C)

1. *Payments under child support or alimony obligations.* Section 1041.5(c)(2)(ii)(B) requires a lender to obtain a national consumer report to verify a consumer's required payments under child support obligations or alimony obligations under § 1041.5(c)(2)(ii)(C). A lender may use the same national consumer report to satisfy the verification requirements under both § 1041.5(c)(2)(ii)(B) and (C). *See* comment 5(c)(2)(ii)(B)–1 for clarification on the interplay between this obligation and § 1041.5(d)(1). If the report does not include a child support or alimony obligation listed in the consumer's written statement described in § 1041.5(c)(2)(i)(B), the lender must consider the obligation listed in the consumer's written statement to make a reasonable projection of the amount of payments for the child support or alimony obligation. The lender may reasonably rely on the written statement in determining the amount of the required payment for the obligation.

2. *Deduction of child support or alimony obligations prior to consumer's receipt of take-home pay.* If verification evidence shows that a child support or alimony obligation is deducted prior to the consumer's receipt of take-home pay, the lender does not include the child support or alimony obligation in the projection of major financial obligations under § 1041.5(c). For an illustration, see comment 5(c)(1)–1.viii.

Paragraph 5(c)(2)(ii)(D)

1. *Exception to obligation to obtain consumer report.* Section 1041.5(c)(2)(ii)(D) provides that notwithstanding § 1041.5(c)(2)(ii)(B) and (C), a lender is not required to obtain a national consumer report to verify debt obligations and child support and alimony obligations if during the preceding 90 days: The lender or its affiliate has obtained a national consumer report for the consumer, retained the report under § 1041.12(b)(1)(ii) and checked it again in connection with the new loan; and the consumer did not complete a loan sequence of three loans under § 1041.5 and trigger the 30-day cooling-off period under § 1041.5(d)(2) since the previous report was obtained. To illustrate how the two conditions relate to each other, assume a consumer obtains a sequence of three covered short-term loans under § 1041.5, with each loan being 15 days in duration, the first loan consummating on June 1, and the final loan no longer being outstanding as of July 15. The lender obtained a consumer report on May 30 as part of its ability-to-repay determination for the first loan in the sequence. Under § 1041.5(c)(2)(ii)(D), the lender is not required to obtain a consumer report for the second and third loan in the sequence. Because the consumer took a three-loan sequence, the consumer is subject to a 30-day cooling-off period which expires on August 15 pursuant to § 1041.5(d)(2). If the consumer returns to the lender for another covered short-term loan under § 1041.5 on August 15, the lender must obtain a consumer report under § 1041.5(c)(2)(ii)(B) and (C) to verify debt obligations and child support and alimony obligations even though fewer than 90 days has elapsed since the lender previously obtained a consumer report for the consumer because the consumer completed a three-loan sequence and triggered the 30-day cooling-off period since the previous report was obtained.

2. *Conflicts between consumer's written statement and national consumer report.* A lender is not required to obtain a new national consumer report if the conditions under § 1041.5(c)(2)(ii)(D) are met; however, there may be circumstances in which a lender would voluntarily obtain a new national consumer report to resolve potential conflicts between a consumer's written statement and a national consumer report obtained in the previous 90 days. See comments 5(c)(1)–1.vii and 5(c)(2)(ii)(B)–3.

Paragraph 5(c)(2)(iii)

1. *Rental housing expense.* Section 1041.5(c)(2)(iii) provides that for the consumer's housing expense other than a payment for a debt obligation that appears on a national consumer report obtained pursuant to § 1041.5(c)(2)(ii)(B) (*i.e.,* with respect to lease or other rental housing payments), the lender may reasonably rely on the consumer's statement described in § 1041.5(c)(2)(i)(B). A lender reasonably relies on the consumer's written

statement if such actions are consistent with a lender's written policies and procedures required under § 1041.12, and there is no evidence that the stated amount for rental housing expense on a particular loan is implausibly low or that there is a pattern of the lender underestimating consumers' rental housing expense.

2. *Mortgage obligations.* For a housing expense under a debt obligation (*i.e.,* a mortgage), a lender generally must verify the obligation by obtaining a national consumer report that includes the housing expense under a debt obligation pursuant to § 1041.5(c)(2)(ii)(B). Under § 1041.5(c)(2)(ii)(D), however, a lender is not required to obtain a national consumer report if, during the preceding 90 days: the lender or its affiliate has obtained a national consumer report for the consumer and retained the report under § 1041.12(b)(1)(ii) and checked it again in connection with the new loan; and the consumer did not complete a loan sequence of three loans under § 1041.5 and trigger the 30-day cooling-off period under § 1041.5(d)(2) since the previous report was obtained (*see* comment 5(c)(2)(ii)(D)–1).

5(d) Additional Limitations on Lending—Covered Short-Term Loans and Covered Longer-Term Balloon-Payment Loans

Paragraph 5(d)

1. *General.* Section 1041.5(d) specifies certain circumstances in which making a new covered short-term loan or a covered longer-term balloon-payment loan under § 1041.5 during or after a sequence of covered short-term loans, covered longer-term balloon-payment loans, or a combination of covered short-term loans and covered longer-term balloon-payment loans is prohibited during a mandatory cooling-off period. The prohibitions apply to making a covered short-term loan or covered longer-term balloon-payment loan under § 1041.5.

2. *Application to rollovers.* The prohibitions in § 1041.5(d) apply to new covered short-term loans or covered longer-term balloon-payment loans under § 1041.5, as well as to loans that are a rollover of a prior loan (or what is termed a ''renewal'' in some States). Rollovers are defined as a matter of State law but typically involve deferral of repayment of the principal amount of a short-term loan for a period of time in exchange for a fee. In the event that a lender is permitted under State law to roll over a loan, the rollover would be treated as applicable as a new covered short-term loan or covered longer-term balloon-payment loan that, depending on when it occurs in the sequence, would be subject to the prohibitions in § 1041.5(d). For example, assume that a lender is permitted under applicable State law to roll over a covered short-term loan and the lender makes a covered short-term loan with $500 in principal and a 14-day contractual duration. Assume that the consumer returns to the lender on day 14 (the repayment date of the first loan), the lender reasonably determines that the consumer has the ability to repay a new loan, and the consumer is offered the opportunity to roll over the first loan for an additional 14 days for a $75 fee. The rollover would be the second loan in a loan sequence, as defined under § 1041.2(a)(14), because fewer than 30 days would have elapsed between consummation of the new covered short-term loan (the rollover) and the consumer having had a covered short-term loan made under § 1041.5 outstanding. Assume that the consumer returns on day 28 (the repayment date of the first rollover, *i.e.,* the second loan in the sequence) and the lender again reasonably determines that the consumer has the ability to repay a new loan and offers to roll over the loan again for an additional 14 days for a $75 fee. The second rollover would be the third loan in a loan sequence. If the consumer were to return on day 42 (the repayment date of the second rollover, which is the third loan in the sequence) and attempt to roll over the loan again, that rollover would be considered the fourth loan in the loan sequence. Therefore, that rollover would be prohibited and the consumer could not obtain another covered short-term loan or covered longer-term balloon-payment loan until the expiration of the 30-day cooling-off period, which begins after the consumer repays the second rollover (*i.e.,* the third loan in the sequence).

5(d)(1) Borrowing History Review

1. *Relationship to § 1041.5(c)(2)(ii)(B) and (C).* A lender satisfies its obligation under § 1041.5(d)(1) to obtain a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2), if available, when it complies with the requirement in § 1041.5(c)(2)(ii)(B) and (C) to obtain this same consumer report.

2. *Availability of information systems that have been registered for 180 days or more pursuant to § 1041.11(c)(2) or are registered pursuant to § 1041.11(d)(2).* If no information systems that have been registered for 180 days or more pursuant to § 1041.11(c)(2) or are registered pursuant to § 1041.11(d)(2) are available at the time that the lender is required to obtain the information about the consumer's borrowing history, the lender is nonetheless required to obtain information about the consumer's borrowing history from the records of the lender and its affiliates and to obtain the consumer's statement about the amount and timing of payments of major financial obligations as required under § 1041.5(c)(2)(i)(B) (which would include information on current debt obligations including any outstanding covered loans). A lender may be unable to obtain a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or that is registered pursuant to § 1041.11(d)(2) if, for example, all registered information systems are temporarily unavailable.

5(d)(2) Prohibition on Loan Sequences of More Than Three Covered Short-Term Loans or Covered Longer-Term Balloon-Payment Loans Made Under § 1041.5.

1. *Prohibition.* Section 1041.5(d)(2) prohibits a lender from making a fourth covered short-term loan or covered longer-term balloon-payment loan under § 1041.5 in a loan sequence of covered short-term loans, covered longer-term balloon-payment loans, or a combination of covered short-term loans and covered longer-term balloon-payment loans made under § 1041.5. *See* § 1041.2(a)(14) for the definition of a loan sequence.

2. *Examples.* The following examples illustrate application of the prohibition under § 1041.5(d)(2):

i. Assume that a lender makes a covered short-term loan to a consumer under the requirements of § 1041.5 on February 1 with a contractual due date of February 15, the consumer repays the loan on February 15, and the consumer returns to the lender on March 1 for another loan. Assume that the second loan is a covered short-term loan with a contractual due date of March 15. The second loan would be part of the same loan sequence as the first loan because 30 or fewer days have elapsed since repayment of the first loan. Assume that the lender makes the second loan, the consumer repays the loan on March 15, and the consumer returns to the lender on April 1 for another loan. Assume that the third loan is a covered short-term loan with a contractual due date of April 15. The third loan would be part of the same loan sequence as the first and second loans because 30 or fewer days have elapsed since repayment of the second loan. Assume that the lender

makes the third loan and the consumer repays the loan on April 15. Assume that all loans are reported to a registered information system. The consumer would not be eligible for another covered short-term loan or covered longer-term balloon-payment loan under § 1041.5(d) from any lender until a 30-day cooling-off period following April 15 has elapsed, that is, starting on May 16. The consumer also would not be eligible for another covered short-term loan under § 1041.6 during the same 30-day cooling-off period. *See* § 1041.6(c)(1) and accompanying commentary.

ii. Assume that a lender makes a covered short-term loan to a consumer under the requirements of § 1041.5 on February 1 with a contractual due date of February 15, the consumer repays the loan on February 15, and the consumer returns to the lender on March 1 for another loan. Assume that the second loan is a covered longer-term balloon-payment loan that has biweekly installment payments followed by a final balloon payment on the contractual due date of May 1. The second loan would be part of the same loan sequence as the first loan because 30 or fewer days have elapsed since repayment of the first loan. Assume that the lender makes the second loan, the consumer repays the loan in full as of May 1, and the consumer returns to the lender on May 15 for another loan. Assume that the third loan is a covered short-term loan with a contractual due date of May 30. The third loan would be part of the same loan sequence as the first and second loans because 30 or fewer days have elapsed since repayment of the second loan. Assume that the lender makes the third loan and the consumer repays the loan on May 30. Assume that all loans are reported to a registered information system. The consumer would not be eligible to receive another covered short-term loan or covered longer-term balloon-payment loan under § 1041.5(d) from any lender until a 30-day cooling-off period following May 30 has elapsed, that is until after June 29. The consumer also would not be eligible for another covered short-term loan under § 1041.6 during the same 30-day cooling-off period. *See* § 1041.6(c)(1) and accompanying commentary.

5(e) Prohibition Against Evasion

1. *General.* Section 1041.5(e) provides that a lender must not take any action with the intent of evading the requirements of § 1041.5. In determining whether a lender has taken action with the intent of evading the requirements of § 1041.5, the form, characterization, label, structure, or written documentation of the lender's action shall not be dispositive. Rather, the actual substance of the lender's action as well as other relevant facts and circumstances will determine whether the lender's action was taken with the intent of evading the requirements of § 1041.5. If the lender's action is taken solely for legitimate business purposes, it is not taken with the intent of evading the requirements of § 1041.5. By contrast, if a consideration of all relevant facts and circumstances reveals a purpose that is not a legitimate business purpose, the lender's action may have been taken with the intent of evading the requirements of § 1041.5. A lender action that is taken with the intent of evading the requirements of this part may be knowing or reckless. Fraud, deceit, or other unlawful or illegitimate activity may be one fact or circumstance that is relevant to the determination of whether a lender's action was taken with the intent of evading the requirements of § 1041.5, but fraud, deceit, or other unlawful or illegitimate activity is not a prerequisite to such a finding.

2. *Illustrative example—lender action that may have been taken with the intent of evading the requirements of the rule.* The following example illustrates a lender action that, depending on the relevant facts and circumstances, may have been taken with the intent of evading the requirements of § 1041.5 and thus may have violated § 1041.5(e):

i. A storefront payday lender makes covered short-term loans to consumers with a contractual duration of 14 days and a lump-sum repayment structure. The lender's policies and procedures provide for a standard loan contract including a ''recurring late fee'' as a lender remedy that is automatically triggered in the event of the consumer's delinquency (*i.e.,* if the consumer does not pay the entire lump-sum amount on the contractual due date, with no grace period), and in the loan contract the consumer grants the lender authorization to initiate a recurring ACH in the event such remedy is triggered. Assume that the recurring late fee is to be paid biweekly while the loan remains outstanding and is substantially equal to or greater than the fee that the lender charges on transactions that are considered rollovers under applicable State law. The practice of imposing a recurring late fee by contract differs from the lender's prior practice of contacting the consumer on or about the contractual due date requesting that the consumer visit the store to discuss payment options including rollovers. Assume that as a matter of practice, if a consumer does not repay the first loan in a sequence when it is due, the lender charges recurring late fees for 60 days unless the consumer repays the outstanding balance. Such a period is roughly equivalent to two 14-day loan cycles or two rollovers following the initial loan in the sequence, plus a 30-day cooling-off period. *See* § 1041.5(d)(2) and related commentary. Depending on the relevant facts and circumstances, this action may have been taken with the intent of evading the requirements of § 1041.5. By charging the recurring late fee for 60 days after the initial loan was due, the lender avoided its obligation under § 1041.5(b) to make an ability-to-repay determination for the second and third loans in the sequence and to comply with the mandatory cooling-off period in § 1041.5(d)(2) after the third loan was no longer outstanding.

Section 1041.6—Conditional Exemption for Certain Covered Short-Term Loans

6(a) Conditional Exemption for Certain Covered Short-Term Loans

1. *General.* Under § 1041.6(a), a lender that complies with § 1041.6(b) through (e) can make a covered short-term loan without complying with the otherwise applicable requirements under § 1041.5. A lender who complies with § 1041.6 in making a covered short-term loan has not committed the unfair and abusive practice under § 1041.4 and is not subject to § 1041.5. However, nothing in § 1041.6 provides lenders with an exemption to the requirements of other applicable laws, including subpart C of this part and State laws.

2. *Obtaining consumer borrowing history information.* Under § 1041.6(a), the lender must determine prior to making a covered short-term loan under § 1041.6 that requirements under § 1041.6(b) and (c) are satisfied. In particular, § 1041.6(a) requires the lender to obtain information about the consumer's borrowing history from the records of the lender and the records of the lender's affiliates. (This information about borrowing history with the lender and its affiliates is also important to help a lender avoid violations of § 1041.6(d)). Furthermore, § 1041.6(a) requires the lender to obtain a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2). If no information systems have been registered for 180 days or more pursuant to § 1041.11(c)(2) or are registered pursuant to § 1041.11(d)(2) and available as of the time the lender is required to obtain the report, the lender

cannot comply with the requirements in § 1041.6(b) and (c). A lender may be unable to obtain such a consumer report if, for example:

i. No information systems have been registered for 180 days or more pursuant to § 1041.11(c)(2) or are registered pursuant to § 1041.11(d)(2); or

ii. If information systems have been registered for 180 days or more pursuant to § 1041.11(c)(2) or are registered pursuant to § 1041.11(d)(2) but all such registered information systems are temporarily unavailable. Under these circumstances, a lender cannot make a covered short-term loan under § 1041.6.

3. *Consumer reports.* A lender is not responsible for inaccurate or incomplete information contained in a consumer report from an information system that has been registered for 180 days or more pursuant to § 1041.11(c)(2) or is registered pursuant to § 1041.11(d)(2).

6(b) Loan Term Requirements

Paragraph 6(b)(1)

1. *Loan sequence.* Section 1041.2(a)(14) defines a loan sequence. For further clarification and examples regarding the definition of loan sequence, see § 1041.2(a)(14).

2. *Principal amount limitations—general.* For a covered short-term loan made under § 1041.6, different principal amount limitations apply under § 1041.6(b)(1) depending on whether the loan is the first, second, or third loan in a loan sequence. The principal amount limitations apply regardless of whether any or all of the loans are made by the same lender, an affiliate, or unaffiliated lenders. Under § 1041.6(b)(1)(i), for the first loan in a loan sequence, the principal amount must be no greater than $500. Under § 1041.6(b)(1)(ii), for the second loan in a loan sequence, the principal amount must be no greater than two-thirds of the principal amount of the first loan in the loan sequence. Under § 1041.6(b)(1)(iii), for the third loan in a loan sequence, the principal amount must be no greater than one-third of the principal amount of the first loan in the loan sequence.

3. *Application to rollovers.* The principal amount limitations under § 1041.6 apply to rollovers of the first or second loan in a loan sequence as well as new loans that are counted as part of the same loan sequence. Rollovers are defined as a matter of State law but typically involve deferral of repayment of the principal amount of a short-term loan for a period of time in exchange for a fee. In the event the lender is permitted under State law to make rollovers, the lender may, in a manner otherwise consistent with applicable State law and § 1041.6, roll over a covered short-term loan made under § 1041.6, but the rollover would be treated as the next loan in the loan sequence, as applicable, and would therefore be subject to the principal amount limitations set forth in § 1041.6(b)(1) as well as other limitations in § 1041.6. For example, assume that a lender is permitted under applicable State law to make a rollover. If the consumer obtains a first loan in a loan sequence under § 1041.6 with a principal amount of $300, under § 1041.6(b)(1)(ii), the lender may allow the consumer to roll over that loan so long as the consumer repays at least $100, so that the principal of the loan that is rolled over would be no greater than $200. Similarly, under § 1041.6(b)(1)(iii), the lender may allow the consumer to roll over the second loan in the loan sequence as permitted by State law, so long as the consumer repays at least an additional $100, so that the principal of the loan that is rolled over would be no greater than $100.

4. *Example.* Assume that a consumer who otherwise satisfies the requirements of § 1041.6 seeks a covered short-term loan and that the lender chooses to make the loan without meeting all the specified underwriting criteria required in § 1041.5. Under § 1041.6(b)(1)(i), the principal amount of the loan must not exceed $500. Assume that the consumer obtains a covered short-term loan under § 1041.6 with a principal amount of $450, the loan is contractually due in 14 days, and the consumer repays the loan on the contractual due date. Assume that the consumer returns to the lender 10 days after the repayment of the first loan to take out a second covered short-term loan under § 1041.6. Under § 1041.6(b)(1)(ii), the principal amount of the second loan may not exceed $300. Assume, further, that the consumer is then made a covered short-term loan under § 1041.6 with a principal amount of $300, the loan is contractually due in 14 days, and the consumer repays the loan on the contractual due date. If the consumer returns to the lender 25 days after the repayment of the second loan to take out a third covered short-term loan under § 1041.6, under § 1041.6(b)(1)(iii), the principal amount of the third loan may not exceed $150. These same limitations would apply if the consumer went to a different, unaffiliated lender for the second or third loan. If, however, the consumer does not return to the lender seeking a new loan under § 1041.6 until 32 days after the date on which the second loan in the loan sequence was repaid, the subsequent loan would not be part of the prior loan sequence and instead would be the first loan in a new loan sequence. Therefore, if otherwise permissible under § 1041.6, that loan would be subject to the $500 principal amount limitation under § 1041.6(b)(1)(i).

Paragraph 6(b)(2)

1. *Equal payments and amortization for loans with multiple payments.* Section 1041.6(b)(2) provides that for a loan with multiple payments, the loan must amortize completely during the term of the loan and the payment schedule must allocate a consumer's payments to the outstanding principal and interest and fees as they accrue only by applying a fixed periodic rate of interest to the outstanding balance of the unpaid loan principal during every repayment period for the term of the loan. For example, if the loan has a contractual duration of 30 days with two scheduled biweekly payments, under § 1041.6(b)(2) the lender cannot require the consumer to pay interest only for the first scheduled biweekly payment and the full principal balance at the second scheduled biweekly payment. Rather, the two scheduled payments must be equal in amount and amortize over the course of the loan term in the manner required under § 1041.6(b)(2).

Paragraph 6(b)(3)

1. *Inapplicability of conditional exemption to a loan with vehicle security.* Section 1041.6(b)(3) prohibits a lender from making a covered-short-term loan under § 1041.6 with vehicle security. If the lender or its service provider take vehicle security in connection with a covered short-term loan, the loan must be originated in compliance with all of the requirements under § 1041.5, including the ability-to-repay determination.

Paragraph 6(b)(4)

1. *Inapplicability of conditional exemption to an open-end loan.* Section 1041.6(b)(4) prohibits a lender from making a covered short-term loan under § 1041.6 structured as an open-end loan under § 1041.2(a)(16). If a covered short-term loan is structured as an open-end loan, the loan must be originated in compliance with all of the requirements under § 1041.5.

6(c) Borrowing History Requirements

Paragraph 6(c)(1)

1. *Preceding loans.* Section 1041.6(c)(1) provides that prior to making a covered short-term loan under

§ 1041.6, the lender must determine that more than 30 days has elapsed since the consumer had an outstanding loan that was either a covered short-term loan (as defined in § 1041.2(a)(10)) made under § 1041.5 or a covered longer-term balloon-payment loan (as defined in § 1041.2(a)(7)) made under § 1041.5. This requirement applies regardless of whether this prior loan was made by the same lender, an affiliate, or an unaffiliated lender. For example, assume that a lender makes a covered short-term loan to a consumer under § 1041.5, that the loan has a contractual duration of 14 days, and that the consumer repays the loan on the contractual due date. If the consumer returns for a second loan 20 days after repaying the loan, the lender cannot make a covered short-term loan under § 1041.6.

Paragraph 6(c)(2)

1. *Loan sequence limitation.* Section 1041.6(c)(2) provides that a lender cannot make a covered short-term loan under § 1041.6 if the loan would result in the consumer having a loan sequence of more than three covered short-term loans under § 1041.6 made by any lender. This requirement applies regardless of whether any or all of the loans in the loan sequence are made by the same lender, an affiliate, or unaffiliated lenders. See comments 6(b)(1)–1 and –2 for further clarification on the definition of loan sequence, as well as § 1041.2(a)(14) and accompanying commentary. For example, assume that a consumer obtains a covered short-term loan under the requirements of § 1041.6 on February 1 that has a contractual due date of February 15, that the consumer repays the loan on February 15, and that the consumer returns to the lender on March 1 for another loan under § 1041.6. The second loan under § 1041.6 would be part of the same loan sequence because 30 or fewer days have elapsed since repayment of the first loan. Assume that the lender makes the second loan with a contractual due date of March 15, that the consumer repays the loan on March 15, and that the consumer returns to the lender on April 1 for another loan under § 1041.6. The third loan under § 1041.6 would be part of the same loan sequence as the first and second loans because fewer than 30 days have elapsed since repayment of the second loan. Assume that the lender makes the third loan, which has a contractual due date of April 15 and that the consumer repays the loan on April 15. The consumer would not be permitted to receive another covered short-term loan under § 1041.6 until the 30-day period following April 15 has elapsed, that is until after May 15, assuming the other requirements under § 1041.6 are satisfied. The consumer would also be prohibited from obtaining other forms of credit from the same lender or its affiliate for 30 days under § 1041.6(d); see comment 6(d)–1. Loans that are rollovers count toward the sequence limitation under § 1041.6(c)(2). For further clarification on how the requirements of § 1041.6 apply to rollovers, see comment 6(b)(1)–3.

Paragraph 6(c)(3)

1. *Consecutive 12-month period.* Section 1041.6(c)(3) requires that a covered short-term loan made under § 1041.6 not result in the consumer having more than six covered short-term loans outstanding during a consecutive 12-month period or having covered short-term loans outstanding for an aggregate period of more than 90 days during a consecutive 12-month period. The consecutive 12-month period begins on the date that is 12 months prior to the proposed contractual due date of the new covered short-term loan to be made under § 1041.6 and ends on the proposed contractual due date. The lender must review the consumer's borrowing history on covered short-term loans for the 12 months preceding the consummation date of the new covered short-term loan less the period of proposed contractual indebtedness on that loan. For example, for a new covered short-term loan to be made under § 1041.6 with a proposed contractual term of 14 days, the lender must review the consumer's borrowing history during the 351 days preceding the consummation date of the new loan. The lender also must consider the making of the new loan and the days of proposed contractual indebtedness on that loan to determine whether the requirement under § 1041.6(c)(3) regarding the total number of covered short-term loans and total time of indebtedness on covered short-term loans during a consecutive 12-month period is satisfied.

Paragraph 6(c)(3)(i)

1. *Total number of covered short-term loans.* Section 1041.6(c)(3)(i) provides that a lender cannot make a covered-short term loan under § 1041.6 if the loan would result in the consumer having more than six covered short-term loans outstanding in any consecutive 12-month period. The requirement counts covered short-term loans made under either § 1041.5 or § 1041.6 toward the limit. This requirement applies regardless of whether any or all of the loans subject to the limitations are made by the same lender, an affiliate, or an unaffiliated lender. Under § 1041.6(c)(3)(i), the lender must use the consumer's borrowing history to determine whether the loan would result in the consumer having more than six covered short-term loans outstanding during a consecutive 12-month period. A lender may make a loan that would comply with the requirement under § 1041.6(c)(3)(i) even if the six-loan limit would prohibit the consumer from taking out one or two subsequent loans in the sequence.

2. *Example.* Assume that a lender seeks to make a covered short-term loan to a consumer under § 1041.6 with a contractual duration of 14 days. Assume, further, that the lender determines that during the past 30 days the consumer has not had an outstanding covered short-term loan and that during the 351 days preceding the consummation date of the new loan the consumer had outstanding a total of five covered short-term loans. The new loan would be the sixth covered short-term loan that was outstanding during a consecutive 12-month period. Therefore, the loan would comply with the requirement regarding the aggregate number of covered short-term loans under § 1041.6. Because the consumer has not had an outstanding covered short-term loan in the preceding 30 days, this loan would be the first loan in a new loan sequence. Assume that a week after repaying this first loan the consumer seeks another covered short-term loan under § 1041.6, also with a contractual duration of 14 days. Under § 1041.6(c)(3)(i), this second loan in the loan sequence cannot be made if it would result in the consumer taking out more than six covered short-term loans in the 351 days preceding the proposed consummation date of this loan.

Paragraph 6(c)(3)(ii)

1. *Aggregate period of indebtedness.* Section 1041.6(c)(3)(ii) provides that a lender cannot make a covered short-term loan under § 1041.6 if the loan would result in the consumer having covered short-term loans outstanding for an aggregate period of more than 90 days in any consecutive 12-month period. In addition to the proposed contractual duration of the new loan, the aggregate period in which all covered short-term loans made to the consumer during the consecutive 12-month period under either § 1041.5 or § 1041.6 were outstanding is counted toward the limit. This requirement applies regardless of whether any or all of the covered short-term loans are made by the same lender, an affiliate, or

an unaffiliated lender. Under § 1041.6(c)(3)(ii), the lender must use the information it has obtained about the consumer's borrowing history to determine whether the loan would result in the consumer having covered short-term loans outstanding for an aggregate period of more than 90 days during a consecutive 12-month period. A lender may make a loan that would comply with the requirement under § 1041.6(c)(3)(ii) even if the 90-day limit would prohibit the consumer from taking out one or two subsequent loans in the sequence.

2. *Example.* Assume that Lender A seeks to make a covered short-term loan under § 1041.6 with a contractual duration of 14 days. Assume, further, that Lender A determines that during the past 30 days the consumer did not have an outstanding covered short-term loan and that during the 351 days preceding the consummation date of the new loan the consumer had outstanding three covered short-term loans made by Lender A and a fourth covered short-term loan made by Lender B. Assume that each of the three loans made by Lender A had a contractual duration of 14 days and that the loan made by Lender B had a contractual duration of 30 days, for an aggregate total of 72 days of contractual indebtedness. Assume, further, that the consumer repaid each loan on its contractual due date. The new loan, if made, would result in the consumer having covered short-term loans outstanding for an aggregate period of 86 days during the consecutive 12-month period. Therefore, the loan would comply with the requirement regarding aggregate time of indebtedness. Because the consumer has not had an outstanding covered short-term loan in the preceding 30 days, this loan would be the first loan in a new loan sequence. Assume that a week after repaying this first loan the consumer seeks another covered short-term loan under § 1041.6, also with a contractual duration of 14 days. Under § 1041.6(c)(3)(ii), this second loan in the loan sequence cannot be made if it would result in the consumer being in debt on covered short-term loans for more than 90 days in the 351 days preceding the proposed consummation date of this loan.

6(d) Restrictions on Making Certain Covered Loans and Non-Covered Loans Following a Covered Short-Term Loan Made Under the Conditional Exemption

1. *General.* If a lender makes a covered short-term loan under § 1041.6 to a consumer, § 1041.6(d) prohibits the lender or its affiliate from making a covered short-term loan under § 1041.5, a covered longer-term balloon payment loan under § 1041.5, a covered longer-term loan, or a non-covered loan to the consumer while the covered short-term loan made under § 1041.6 is outstanding and for 30 days thereafter. During this period, a lender or its affiliate could make a subsequent covered short-term loan in accordance with the requirements in § 1041.6.

2. *Example.* Assume that a lender makes both covered short-term loans under § 1041.6 and non-covered installment loans. Assume, further, that the lender makes on April 1 a covered short-term loan under § 1041.6 to a consumer who has not obtained a covered short-term loan under § 1041.6 in the previous 30 days. Assume that the consumer repays this loan on April 15 and that the consumer returns to the lender on April 30 to seek a non-covered installment loan. Because 30 days have not elapsed since the consumer repaid the loan made under § 1041.6, neither the lender nor its affiliate can make a non-covered installment loan to the consumer on April 30. May 16 is the earliest the lender or its affiliate could make a non-covered installment loan to the consumer. The prohibition in § 1041.6(d) applies to covered short-term loans and covered longer-term balloon payment loans made under § 1041.5 and covered longer-term loans but not to covered short-term loans made under § 1041.6. Section 1041.6(d) would, therefore, not prohibit the consumer from obtaining an additional covered short-term loan under § 1041.6 from the same lender or its affiliate on April 30, provided that such loan complies with the principal amount reduction and other requirements of § 1041.6. The prohibition in § 1041.6(d) on making subsequent non-covered loans applies only to a lender and its affiliates. Section 1041.6(d) would, therefore, not prohibit the consumer from obtaining on April 30 a non-covered installment loan from a lender not affiliated with the lender that made the covered short-term loan on April 1.

6(e) Disclosures

1. *General.* Section 1041.6(e) sets forth two main disclosure requirements related to a loan made under the requirements in § 1041.6. The first, set forth in § 1041.6(e)(2)(i), is a notice of the restriction on the principal amount on the loan and restrictions on the number of future loans and the principal amounts of such loans, which is required to be provided to a consumer when the consumer seeks the first loan in a sequence of covered short-term loans made under § 1041.6. The second, set forth in § 1041.6(e)(2)(ii), is a notice of the restriction on the principal amount on the loan and the prohibition on another similar loan for at least 30 days after the loan is repaid, which is required to be provided to a consumer when the consumer seeks the third loan in a sequence of covered short-term loans made under § 1041.6.

6(e)(1) General Form of Disclosures

6(e)(1)(i) Clear and Conspicuous

1. *Clear and conspicuous standard.* Disclosures are clear and conspicuous for purposes of § 1041.6(e) if they are readily understandable by the consumer and their location and type size are readily noticeable to the consumer.

6(e)(1)(ii) In Writing or Electronic Delivery

1. *General.* Section 1041.6(e)(1)(ii) requires that disclosures required by § 1041.6 be provided to the consumer in writing or through electronic delivery.

2. *E-Sign Act requirements.* The notices required by § 1041.6(e)(2)(i) and (ii) may be provided to the consumer in electronic form without regard to the Electronic Signatures in Global and National Commerce Act (E-Sign Act) (15 U.S.C. 7001 *et seq.*).

6(e)(1)(iii) Retainable

1. *General.* Electronic disclosures are retainable for purposes of § 1041.6(e) if they are in a format that is capable of being printed, saved, or emailed by the consumer.

6(e)(1)(iv) Segregation Requirements for Notices

1. *Segregated additional content.* Although segregated additional content that is not required by this section may not appear above, below, or around the required content, this additional content may be delivered through a separate form, such as a separate piece of paper or Web page.

6(e)(1)(vi) Model Forms

1. *Safe harbor provided by use of model forms.* Although the use of the model forms and clauses is not required, lenders using them will be deemed to be in compliance with the disclosure requirement with respect to such model forms consistent with section 1032(d) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5481, *et seq.*)

6(e)(2) Notice Requirements

6(e)(2)(i) First Loan Notice

1. *As applicable standard.* Due to the requirements in § 1041.6(c)(3), a consumer may not be eligible to

complete a three-loan sequence of covered short-term loans under § 1041.6 because additional loans within 30 days of the expected pay-off date for the first loan would violate one or more provisions of § 1041.6(c)(3). Such a consumer may be permitted to obtain only one or two loans in a sequence of covered short-term loans under § 1041.6, as applicable. Under these circumstances, § 1041.6(e)(2)(i) would require the lender to modify the notice in § 1041.6(e)(2)(i) to reflect these limitations on subsequent loans. For example, if a consumer can receive only a sequence of two covered short-term loans under § 1041.6 because of the requirements in § 1041.6(c)(3), the lender would have to modify the notice to list the maximum principal amount on loans 1 and 2 and to indicate that loan 3 would not be permitted.

6(e)(3) Timing

1. *General.* Section 1041.6(e)(3) requires a lender to provide the notices required in § 1041.6(e)(2)(i) and (ii) to the consumer before the applicable covered short-term loan under § 1041.6 is consummated. For example, a lender can provide the notice after a consumer has completed a loan application but before the consumer has signed the loan agreement. A lender would not have to provide the notices to a consumer who inquires about a covered short-term loan under § 1041.6 but does not fill out an application to obtain this type of loan.

2. *Electronic notices.* If a lender delivers a notice required by this section electronically in accordance with § 1041.6(e)(1)(ii), § 1041.6(e)(3) requires a lender to provide the electronic notice to the consumer before a covered short-term loan under § 1041.6 is consummated. Specifically, § 1041.6(e)(3) requires a lender to present the retainable notice to the consumer before the consumer is contractually obligated on the loan. To comply with § 1041.6(e)(3), a lender could, for example, display a screen on a web browser with the notices required in § 1041.6(e)(2)(i) and (ii), provided the screen can be emailed, printed, or saved, before the covered short-term loan under § 1041.6 has been consummated.

Section 1041.7—Identification of Unfair and Abusive Practice

1. *General.* A lender who complies with § 1041.8 with regard to a covered loan has not committed the unfair and abusive practice under § 1041.7.

Section 1041.8—Prohibited Payment Transfer Attempts

8(a) Definitions

8(a)(1) Payment Transfer

1. *Lender-initiated.* A lender-initiated debit or withdrawal includes a debit or withdrawal initiated by the lender's agent, such as a payment processor.

2. *Any amount due.* The following are examples of funds transfers that are for the purpose of collecting any amount due in connection with a covered loan:

i. A transfer for the amount of a scheduled payment due under a loan agreement for a covered loan.

ii. A transfer for an amount smaller than the amount of a scheduled payment due under a loan agreement for a covered loan.

iii. A transfer for the amount of the entire unpaid loan balance collected pursuant to an acceleration clause in a loan agreement for a covered loan.

iv. A transfer for the amount of a late fee or other penalty assessed pursuant to a loan agreement for a covered loan.

3. *Amount purported to be due.* A transfer for an amount that the consumer disputes or does not legally owe is a payment transfer if it otherwise meets the definition set forth in § 1041.8(a)(1).

4. *Transfers of funds not initiated by the lender.* A lender does not initiate a payment transfer when:

i. A consumer, on her own initiative or in response to a request or demand from the lender, makes a payment to the lender in cash withdrawn by the consumer from the consumer's account.

ii. A consumer makes a payment via an online or mobile bill payment service offered by the consumer's account-holding institution.

iii. The lender seeks repayment of a covered loan pursuant to a valid court order authorizing the lender to garnish a consumer's account.

Paragraph 8(a)(1)(i)(A)

1. *Electronic fund transfer.* Any electronic fund transfer meeting the general definition in § 1041.8(a)(1) is a payment transfer, including but not limited to an electronic fund transfer initiated by a debit card or a prepaid card.

Paragraph 8(a)(1)(i)(B)

1. *Signature check.* A transfer of funds by signature check meeting the general definition in § 1041.8(a)(1) is a payment transfer regardless of whether the transaction is processed through the check network or through another network, such as the ACH network. The following example illustrates this concept: A lender processes a consumer's signature check through the check system to collect a scheduled payment due under a loan agreement for a covered loan. The check is returned for nonsufficient funds. The lender then converts and processes the check through the ACH system, resulting in a successful payment. Both transfers are payment transfers, because both were initiated by the lender for purposes of collecting an amount due in connection with a covered loan.

Paragraph 8(a)(1)(i)(E)

1. *Transfer by account-holding institution.* Under § 1041.8(a)(1)(i)(E), when the lender is the account holder, a transfer of funds by the account-holding institution from a consumer's account held at the same institution is a payment transfer if it meets the general definition in § 1041.8(a)(1)(i), unless the transfer of funds meets the conditions in § 1041.8(a)(1)(ii) and is therefore excluded from the definition. See § 1041.8(a)(1)(ii) and related commentary.

2. *Examples.* Payment transfers initiated by an account-holding institution from a consumer's account include, but are not limited to, the following:

i. Initiating an internal transfer from a consumer's account to collect a scheduled payment on a covered loan.

ii. Sweeping the consumer's account in response to a delinquency on a covered loan.

iii. Exercising a right of offset to collect against an outstanding balance on a covered loan.

Paragraph 8(a)(1)(ii) Conditional Exclusion for Certain Transfers by Account-Holding Institutions

1. *General.* The exclusion in § 1041.8(a)(1)(ii) applies only to a lender that is also the consumer's account-holding institution. The exclusion applies only if the conditions in both § 1041.8(a)(1)(ii)(A) and (B) are met with respect to a particular transfer of funds. A lender whose transfer meets the exclusion has not committed the unfair and abusive practice under § 1041.7 and is not subject to § 1041.8 or § 1041.9 in connection with that transaction, but is subject to subpart C for any transfers that do not meet the exclusion in § 1041.8(a)(1)(ii) and are therefore payment transfers under § 1041.8(a)(1).

Paragraph 8(a)(1)(ii)(A)

1. *Terms of loan agreement or account agreement.* The condition in § 1041.8(a)(1)(ii)(A) is met only if the terms of the loan agreement or account agreement setting forth the restrictions on charging fees are in effect at the time

the covered loan is made and remain in effect for the duration of the loan.

2. *Fees prohibited.* Examples of the types of fees restricted under § 1041.8(a)(1)(ii)(A) include, but are not limited to, nonsufficient fund fees, overdraft fees, and returned-item fees. A lender seeking to initiate transfers of funds pursuant to the exclusion in § 1041.8(a)(1)(ii) may still charge the consumer a late fee for failure to make a timely payment, as permitted under the terms of the loan agreement and other applicable law, notwithstanding that the lender has initiated a transfer of funds meeting the description in § 1041.8(a)(1)(ii)(A) in an attempt to collect the payment.

Paragraph 8(a)(1)(ii)(B)

1. *General.* Under § 1041.8(a)(1)(ii)(B), to be eligible for the exclusion in § 1041.8(a)(1)(ii), a lender may not close the consumer's account in response to a negative balance that results from a lender-initiated transfer of funds in connection with the covered loan. A lender is not restricted from closing the consumer's account in response to another event, even if the event occurs after a lender-initiated transfer of funds has brought the account to a negative balance. For example, a lender may close the account at the consumer's request, for purposes of complying with other regulatory requirements, or to protect the account from suspected fraudulent use or unauthorized access, and still meet the condition in § 1041.8(a)(1)(ii)(B).

2. *Terms of loan agreement or account agreement.* The condition in § 1041.8(a)(1)(ii)(B) is met only if the terms of the loan agreement or account agreement providing that the lender will not close the account in the specified circumstances are in effect at the time the covered loan is made and remain in effect for the duration of the loan.

8(a)(2) Single Immediate Payment Transfer at the Consumer's Request

Paragraph 8(a)(2)(i)

1. *Time of initiation.* A one-time electronic fund transfer is initiated at the time that the transfer is sent out of the lender's control. Thus, the electronic fund transfer is initiated at the time that the lender or its agent sends the transfer to be processed by a third party, such as the lender's bank. The following example illustrates this concept: A lender obtains a consumer's authorization for a one-time electronic fund transfer at 2 p.m. and sends the payment entry to its agent, a payment processor, at 5 p.m. on the same day. The agent then sends the payment entry to the lender's bank for further processing the next business day at 8 a.m. The timing condition in § 1041.8(a)(2)(ii) is satisfied, because the lender's agent sent the transfer out of its control within one business day after the lender obtained the consumer's authorization.

Paragraph 8(a)(2)(ii)

1. *Time of processing.* A signature check is processed at the time that the check is sent out of the lender's control. Thus, the check is processed at the time that the lender or its agent sends the check to be processed by a third party, such as the lender's bank. For an example illustrating this concept within the context of initiating a one-time electronic fund transfer, see comment 8(a)(2)(i)–1.

2. *Check provided by mail.* For purposes of § 1041.8(a)(2)(ii), if the consumer provides the check by mail, the check is deemed to be provided on the date that the lender receives it.

8(b) Prohibition on Initiating Payment Transfers From a Consumer's Account After Two Consecutive Failed Payment Transfers

1. *General.* When the prohibition in § 1041.8(b) applies, a lender is generally restricted from initiating any further payment transfers from the consumer's account in connection with any covered loan that the consumer has with the lender at the time the prohibition is triggered, unless the requirements and conditions in either § 1041.8(c) or (d) are satisfied for each such covered loan for which the lender seeks to initiate further payment transfers. The prohibition applies, for example, to payment transfers that might otherwise be initiated to collect payments that later fall due under a loan agreement for a covered loan and to transfers to collect late fees or returned item fees as permitted under the terms of such a loan agreement. In addition, the prohibition applies regardless of whether the lender holds an otherwise valid authorization or instrument from the consumer, including but not limited to an authorization to collect payments by preauthorized electronic fund transfers or a post-dated check. See § 1041.8(c) and (d) and accompanying commentary for guidance on the requirements and conditions that a lender must satisfy to initiate a payment transfer from a consumer's account after the prohibition applies.

2. *Account.* The prohibition in § 1041.8(b) applies only to the account from which the lender attempted to initiate the two consecutive failed payment transfers.

3. *More than one covered loan.* The prohibition in § 1041.8(b) is triggered after the lender has attempted to initiate two consecutive failed payment transfers in connection with any covered loan or covered loans that the consumer has with the lender. Thus, when a consumer has more than one covered loan with the lender, the two consecutive failed payment transfers need not be initiated in connection with the same loan in order for the prohibition to be triggered, but rather can be initiated in connection with two different loans. For example, the prohibition is triggered if the lender initiates the first failed payment transfer to collect payment on one covered loan and the second consecutive failed payment transfer to collect payment on a different covered loan, assuming that the conditions for a first failed payment transfer, in § 1041.8(b)(2)(i), and second consecutive failed transfer, in § 1041.8(b)(2)(ii), are met.

4. *Application to bona fide subsequent loan.* If a lender triggers the prohibition in § 1041.8(b), the lender is not prohibited under § 1041.8(b) from initiating a payment transfer in connection with a bona fide subsequent covered loan that was originated after the prohibition was triggered, provided that the lender has not attempted to initiate two consecutive failed payment transfers from the consumer's account in connection with the bona fide subsequent covered loan. For purposes of § 1041.8(b) only, a bona fide subsequent covered loan does not include a covered loan that refinances or rolls over any covered loan that the consumer has with the lender at the time the prohibition is triggered.

8(b)(1) General

1. *Failed payment transfer.* A payment transfer results in a return indicating that the consumer's account lacks sufficient funds when it is returned unpaid, or is declined, due to nonsufficient funds in the consumer's account.

2. *Date received.* The prohibition in § 1041.8(b) applies as of the date on which the lender or its agent, such as a payment processor, receives the return of the second consecutive failed transfer or, if the lender is the consumer's account-holding institution, the date on which the second consecutive failed payment transfer is initiated.

3. *Return for other reason.* A transfer that results in a return for a reason other than a lack of sufficient funds, such as a return made due to an incorrectly entered account number, is not a failed transfer for purposes of § 1041.8(b).

4. Failed payment transfer initiated by a lender that is the consumer's account-holding institution. When a lender that is the consumer's account-holding institution initiates a payment transfer for an amount that the account lacks sufficient funds to cover, the payment transfer is a failed payment transfer for purposes of the prohibition in § 1041.8(b), regardless of whether the result is classified or coded in the lender's internal procedures, processes, or systems as a return for nonsufficient funds or, if applicable, regardless of whether the full amount of the payment transfer is paid out of overdraft. Such a lender does not initiate a failed payment transfer for purposes of the prohibition if the lender merely defers or foregoes debiting or withdrawing payment from an account based on the lender's observation that the account lacks sufficient funds.

8(b)(2) Consecutive Failed Payment Transfers

8(b)(2)(i) First Failed Payment Transfer

1. *Examples.* The following examples illustrate concepts of first failed payment transfers under § 1041.8(b)(2)(i). All of the examples assume that the consumer has only one covered loan with the lender:

i. A lender, having made no other attempts, initiates an electronic fund transfer to collect the first scheduled payment due under a loan agreement for a covered loan, which results in a return for nonsufficient funds. The failed transfer is the first failed payment transfer. The lender, having made no attempts in the interim, re-presents the electronic fund transfer and the re-presentment results in the collection of the full payment. Because the subsequent attempt did not result in a return for nonsufficient funds, the number of consecutive failed payment transfers resets to zero. The following month, the lender initiates an electronic fund transfer to collect the second scheduled payment due under the covered loan agreement, which results in a return for nonsufficient funds. That failed transfer is a first failed payment transfer.

ii. A storefront lender, having made no prior attempts, processes a consumer's signature check through the check system to collect the first scheduled payment due under a loan agreement for a covered loan. The check is returned for nonsufficient funds. This constitutes the first failed payment transfer. The lender does not thereafter convert and process the check through the ACH system, or initiate any other type of payment transfer, but instead contacts the consumer. At the lender's request, the consumer comes into the store and makes the full payment in cash withdrawn from the consumer's account. The number of consecutive failed payment transfers remains at one, because the consumer's cash payment was not a payment transfer as defined in § 1041.8(a)(2).

8(b)(2)(ii) Second Consecutive Failed Payment Transfer

1. *General.* Under § 1041.8(b)(2)(ii), a failed payment transfer is the second consecutive failed transfer if the previous payment transfer was a first failed payment transfer. The following examples illustrate this concept:

i. Assume that a consumer has only one covered loan with a lender. The lender, having initiated no other payment transfer in connection with the covered loan, initiates an electronic fund transfer to collect the first scheduled payment due under the loan agreement. The transfer is returned for nonsufficient funds. The returned transfer is the first failed payment transfer. The lender next initiates an electronic fund transfer for the following scheduled payment due under the loan agreement for the covered loan, which is also returned for nonsufficient funds. The second returned transfer is the second consecutive failed payment transfer.

ii. Assume that a consumer has two covered loans, Loan A and Loan B, with a lender. Further assume that the lender has initiated no failed payment transfers in connection with either covered loan. On the first of the month, the lender initiates an electronic fund transfer to collect a regularly scheduled payment on Loan A, resulting in a return for nonsufficient funds. The returned transfer is the first failed payment transfer. Two weeks later, the lender, having initiated no further payment transfers in connection with either covered loan, initiates an electronic fund transfer to collect a regularly scheduled payment on Loan B, also resulting in a return for nonsufficient funds. The second returned transfer is the second consecutive failed payment transfer, and the lender is thus prohibited under § 1041.8(b) from initiating further payment transfers in connection with either covered loan.

2. *Previous payment transfer.* Section 1041.8(b)(2)(ii) provides that a previous payment transfer includes a payment transfer initiated at the same time or on the same day as the first failed payment transfer. The following example illustrates how this concept applies in determining whether the prohibition in § 1041.8(b) is triggered: Assume that a consumer has only one covered loan with a lender. The lender has made no other payment transfers in connection with the covered loan. On Monday at 9 a.m., the lender initiates two electronic fund transfers to collect the first scheduled payment under the loan agreement, each for half of the total amount due. Both transfers are returned for nonsufficient funds. Because each transfer is one of two failed transfers initiated at the same time, the lender has initiated a second consecutive failed payment transfer under § 1041.8(b)(2)(ii), and the prohibition in § 1041.8(b) is therefore triggered.

3. *Application to exception in § 1041.8(d).* When, after a second consecutive failed payment transfer, a lender initiates a single immediate payment transfer at the consumer's request pursuant to the exception in § 1041.8(d), the failed transfer count remains at two, regardless of whether the transfer succeeds or fails. Further, the exception is limited to a single payment transfer. Accordingly, if a payment transfer initiated pursuant to the exception fails, the lender is not permitted to re-initiate the transfer, such as by re-presenting it through the ACH system, unless the lender obtains a new authorization under § 1041.8(c) or (d).

8(b)(2)(iii) Different Payment Channel

1. *General.* Section 8(b)(2)(iii) provides that if a failed payment transfer meets the descriptions set forth in § 1041.8(b)(2)(ii), it is the second consecutive failed transfer regardless of whether the first failed transfer was made through a different payment channel. The following example illustrates this concept: A lender initiates an electronic funds transfer through the ACH system for the purpose of collecting the first payment due under a loan agreement for a covered loan. The transfer results in a return for nonsufficient funds. This constitutes the first failed payment transfer. The lender next processes a remotely created check through the check system for the purpose of collecting the same first payment due. The remotely created check is returned for nonsufficient funds. The second failed attempt is the second consecutive failed attempt because it meets the description set forth in § 1041.8(b)(2)(ii).

8(c) Exception for Additional Payment Transfers Authorized by the Consumer

1. *General.* Section 1041.8(c) sets forth one of two exceptions to the prohibition in § 1041.8(b). Under the exception in § 1041.8(c), a lender is permitted to initiate additional payment transfers from a consumer's account

after the lender's second consecutive transfer has failed if the additional transfers are authorized by the consumer in accordance with certain requirements and conditions as specified in the rule. In addition to the exception under § 1041.8(c), a lender is permitted to execute a single immediate payment transfers at the consumer's request under § 1041.8(d), if certain requirements and conditions are satisfied.

8(c)(1) General

1. *Consumer's underlying payment authorization or instrument still required.* The consumer's authorization required by § 1041.8(c) is in addition to, and not in lieu of, any separate payment authorization or instrument required to be obtained from the consumer under applicable laws.

8(c)(2) General Authorization Requirements and Conditions

8(c)(2)(i) Required Payment Transfer Terms

1. *General.* Section 1041.8(c)(2)(i) sets forth the general requirement that, for purposes of the exception in § 1041.8(c), the specific date, amount, and payment channel of each additional payment transfer must be authorized by the consumer, subject to a limited exception in § 1041.8(c)(2)(iii) for payment transfers solely to collect a late fee or returned item fee. Accordingly, for the exception to apply to an additional payment transfer, the transfer's specific date, amount, and payment channel must be included in the signed authorization obtained from the consumer under § 1041.8(c)(3)(iii). For guidance on the requirements and conditions that apply when obtaining the consumer's signed authorization, see § 1041.8(c)(3)(iii) and accompanying commentary.

2. *Specific date.* The requirement that the specific date of each additional payment transfer be authorized by the consumer is satisfied if the consumer authorizes the month, day, and year of each transfer.

3. *Amount larger than specific amoun*t. The exception in § 1041.8(c)(2) does not apply if the lender initiates a payment transfer for an amount larger than the specific amount authorized by the consumer. Accordingly, such a transfer would violate the prohibition on additional payment transfers under § 1041.8(b).

4. *Smaller amount.* A payment transfer initiated pursuant to § 1041.8(c) is initiated for the specific amount authorized by the consumer if its amount is equal to or smaller than the authorized amount.

8(c)(2)(iii) Special Authorization Requirements and Conditions for Payment Transfers To Collect a Late Fee or Returned Item Fee

1. *General.* If a lender obtains the consumer's authorization to initiate a payment transfer solely to collect a late fee or returned item fee in accordance with the requirements and conditions under § 1041.8(c)(2)(iii), the general requirement in § 1041.8(c)(2) that the consumer authorize the specific date and amount of each additional payment transfer need not be satisfied.

2. *Highest amount.* The requirement that the consumer's signed authorization include a statement that specifies the highest amount that may be charged for a late fee or returned item fee is satisfied, for example, if the statement specifies the maximum amount permitted under the loan agreement for a covered loan.

3. *Varying fee amounts.* If a fee amount may vary due to the remaining loan balance or other factors, the rule requires the lender to assume the factors that result in the highest amount possible in calculating the specified amount.

8(c)(3) Requirements and Conditions for Obtaining the Consumer's Authorization

8(c)(3)(ii) Provision of Payment Transfer Terms to the Consumer

1. *General.* A lender is permitted under § 1041.8(c)(3)(ii) to request a consumer's authorization on or after the day that the lender provides the consumer rights notice required by § 1041.9(c). For the exception in § 1041.8(c) to apply, however, the consumer's signed authorization must be obtained no earlier than the date on which the consumer is considered to have received the consumer rights notice, as specified in § 1041.8(c)(3)(iii).

2. *Different options.* Nothing in § 1041.8(c)(3)(ii) prohibits a lender from providing different options for the consumer to consider with respect to the date, amount, or payment channel of each additional payment transfer for which the lender is requesting authorization. In addition, if a consumer declines a request, nothing in § 1041.8(c)(3)(ii) prohibits a lender from making a follow-up request by providing a different set of terms for the consumer to consider. For example, if the consumer declines an initial request to authorize two recurring payment transfers for a particular amount, the lender may make a follow-up request for the consumer to authorize three recurring payment transfers for a smaller amount.

Paragraph 8(c)(3)(ii)(A)

1. *Request by email.* Under § 1041.8(c)(3)(ii)(A), a lender is permitted to provide the required terms and statement to the consumer in writing or in a retainable form by email if the consumer has consented to receive electronic disclosures in that manner under § 1041.9(a)(4) or agrees to receive the terms and statement by email in the course of a communication initiated by the consumer in response to the consumer rights notice required by § 1041.9(c). The following example illustrates a situation in which the consumer agrees to receive the required terms and statement by email after affirmatively responding to the notice:

i. After a lender provides the consumer rights notice in § 1041.9(c) by mail to a consumer who has not consented to receive electronic disclosures under § 1041.9(a)(4), the consumer calls the lender to discuss her options for repaying the loan, including the option of authorizing additional payment transfers pursuant to § 1041.8(c). In the course of the call, the consumer asks the lender to provide the request for the consumer's authorization via email. Because the consumer has agreed to receive the request via email in the course of a communication initiated by the consumer in response to the consumer rights notice, the lender is permitted under § 1041.8(c)(3)(ii)(A) to provide the request to the consumer by that method.

2. *E-Sign Act does not apply to provision of terms and statement.* The required terms and statement may be provided to the consumer electronically in accordance with the requirements for requesting the consumer's authorization in § 1041.8(c)(3) without regard to the E-Sign Act. However, under § 1041.8(c)(3)(iii)(A), an authorization obtained electronically is valid only if it is signed or otherwise agreed to by the consumer in accordance with the signature requirements in the E-Sign Act. *See* § 1041.8(c)(3)(iii)(A) and comment 8(c)(3)(iii)(A)–1.

3. *Same communication.* Nothing in § 1041.8(c)(3)(ii) prohibits a lender from requesting the consumer's authorization for additional payment transfers and providing the consumer rights notice in the same communication, such as a single written mailing or a single email to the consumer. Nonetheless, the consumer rights notice may be provided to the consumer only in accordance with the requirements and conditions in § 1041.9, including but not limited to the segregation requirements that apply to the notice. Thus, for example, if a lender mails the request for

authorization and the notice to the consumer in the same envelope, the lender must provide the notice on a separate piece of paper, as required under § 1041.9. Similarly, a lender could provide the notice to a consumer in the body of an email and attach a document containing the request for authorization. In such cases, it would be permissible for the lender to add language after the text of the notice explaining that the other document is a request for a new authorization.

Paragraph 8(c)(3)(ii)(B)

1. *Request by oral telephone communication.* Nothing in § 1041.8(c)(3)(ii) prohibits a lender from contacting the consumer by telephone to discuss repayment options, including the option of authorizing additional payment transfers. However, under § 1041.8(c)(3)(ii)(B), a lender is permitted to provide the required terms and statement to the consumer by oral telephone communication for purposes of requesting authorization only if the consumer affirmatively contacts the lender in that manner in response to the consumer rights notice required by § 1041.9(c) and agrees to receive the terms and statement by that method of delivery in the course of, and as part of, the same communication.

8(c)(3)(iii) Signed Authorization Required

8(c)(3)(iii)(A) General

1. *E-Sign Act signature requirements.* For authorizations obtained electronically, the requirement that the authorization be signed or otherwise agreed to by the consumer is satisfied if the E-Sign Act requirements for electronic records and signatures are met. Thus, for example, the requirement is satisfied by an email from the consumer or by a code entered by the consumer into the consumer's telephone keypad, assuming that in each case the signature requirements in the E-Sign Act are complied with.

2. *Consumer's affirmative response to the notice.* A consumer affirmatively responds to the consumer rights notice that was provided by mail when, for example, the consumer calls the lender on the telephone to discuss repayment options after receiving the notice.

8(c)(3)(iii)(C) Memorialization Required

1. *Timing.* The memorialization is deemed to be provided to the consumer on the date it is mailed or transmitted.

2. *Form of memorialization.* The requirement that the memorialization be provided in a retainable form is not satisfied by a copy of a recorded telephone call, notwithstanding that the authorization was obtained in that manner.

3. *Electronic delivery.* A lender is permitted under § 1041.8(c)(3)(iii)(C) to provide the memorialization to the consumer by email in accordance with the requirements and conditions for requesting authorization in § 1041.8(c)(3)(ii)(A), regardless of whether the lender requested the consumer's authorization in that manner. For example, if the lender requested the consumer's authorization by telephone but also has obtained the consumer's consent to receive electronic disclosures by email under § 1041.9(a)(4), the lender may provide the memorialization to the consumer by email, as specified in § 1041.8(c)(3)(ii)(A).

8(d) Exception for Initiating a Single Immediate Payment Transfer at the Consumer's Request

1. *General.* For guidance on the requirements and conditions that must be satisfied for a payment transfer to meet the definition of a single immediate payment transfer at the consumer's request, see § 1041.8(a)(2) and accompanying commentary.

2. *Application of prohibition.* A lender is permitted under the exception in § 1041.8(d) to initiate a single payment transfer requested by the consumer only once and thus is prohibited under § 1041.8(b) from re-initiating the payment transfer if it fails, unless the lender subsequently obtains the consumer's authorization to re-initiate the payment transfer under § 1041.8(c) or (d). However, a lender is permitted to initiate any number of payment transfers from a consumer's account pursuant to the exception in § 1041.8(d), provided that the requirements and conditions are satisfied for each such transfer. See comment 8(b)(2)(ii)–3 for further guidance on how the prohibition in § 1041.8(b) applies to the exception in § 1041.8(d).

3. *Timing.* A consumer affirmatively contacts the lender when, for example, the consumer calls the lender after noticing on her bank statement that the lender's last two payment withdrawal attempts have been returned for nonsufficient funds.

8(e) Prohibition Against Evasion

1. *General.* Section 1041.8(e) provides that a lender must not take any action with the intent of evading the requirements of § 1041.8. In determining whether a lender has taken action with the intent of evading the requirements of § 1041.8, the form, characterization, label, structure, or written documentation of the lender's action shall not be dispositive. Rather, the actual substance of the lender's action as well as other relevant facts and circumstances will determine whether the lender's action was taken with the intent of evading the requirements of § 1041.8. If the lender's action is taken solely for legitimate business purposes, it is not taken with the intent of evading the requirements of § 1041.8. By contrast, if a consideration of all relevant facts and circumstances reveals a purpose that is not a legitimate business purpose, the lender's action may have been taken with the intent of evading the requirements of § 1041.8. A lender action that is taken with the intent of evading the requirements of this part may be knowing or reckless. Fraud, deceit, or other unlawful or illegitimate activity may be one fact or circumstance that is relevant to the determination of whether a lender's action was taken with the intent of evading the requirements of § 1041.8, but fraud, deceit, or other unlawful or illegitimate activity is not a prerequisite to such a finding.

2. *Illustrative example.* A lender collects payment on its covered loans primarily through recurring electronic fund transfers authorized by consumers at consummation. As a matter of lender policy and practice, after a first attempt to initiate an ACH payment transfer from a consumer's account for the full payment amount is returned for nonsufficient funds, the lender initiates a second payment transfer from the account on the following day for $1.00. If the second payment transfer succeeds, the lender immediately splits the amount of the full payment into two separate payment transfers and initiates both payment transfers from the account at the same time, resulting in two returns for nonsufficient funds in the vast majority of cases. The lender developed the policy and began the practice shortly prior to August 19, 2019. The lender's prior policy and practice when re-presenting the first failed payment transfer was to re-present for the payment's full amount. Depending on the relevant facts and circumstances, the lender's actions may have been taken with the intent of evading the requirements of § 1041.8. Specifically, by initiating a second payment transfer for $1.00 from the consumer's account the day after a first transfer for the full payment amount fails and, if that payment transfer succeeds, initiating two simultaneous payment transfers from the account for the split amount of the full payment, resulting in two returns for

nonsufficient funds in the vast majority of cases, the lender avoided the prohibition in § 1041.8(b) on initiating payment transfers from a consumer's account after two consecutive payment transfers have failed.

Section 1041.9—Disclosure of Payment Transfer Attempts

1. *General.* Section 1041.9 sets forth two main disclosure requirements related to collecting payments from a consumer's account in connection with a covered loan. The first, set forth in § 1041.9(b), is a payment notice required to be provided to a consumer in advance of a initiating the first payment withdrawal or an unusual withdrawal from the consumer's account, subject to certain exceptions. The second, set forth in § 1041.9(c), is a consumer rights notice required to be provided to a consumer after a lender receives notice of a second consecutive failed payment transfer from the consumer's account, as described in § 1041.8(b). In addition, § 1041.9 requires lenders to provide an electronic short notice in two situations when they are providing the disclosures required by this section through certain forms of electronic delivery. The first, set forth in § 1041.9(b)(4), is an electronic short notice that must be provided along with the payment notice. This provision allows an exception for when the method of electronic delivery is email; for that method, the lender may use the electronic short notice under § 1041.9(b)(4)(ii) or may provide the full notice within the body of the email. The second, set forth in § 1041.9(c)(4), is an electronic short notice that must be provided along with the consumer rights notice. As with the payment notices, this consumer rights notice provision also allows an exception for when the method of electronic delivery is email; for that method, the lender may use the electronic short notice under § 1041.9(c)(4)(ii) or may provide the full notice within the body of the email.

9(a) General Form of Disclosures

9(a)(1) Clear and Conspicuous

1. *Clear and conspicuous standard.* Disclosures are clear and conspicuous for purposes of § 1041.9 if they are readily understandable and their location and type size are readily noticeable to consumers.

9(a)(2) In Writing or Electronic Delivery

1. *Electronic delivery.* Section 1041.9(a)(2) allows the disclosures required by § 1041.9 to be provided through electronic delivery as long as the requirements of § 1041.9(a)(4) are satisfied, without regard to the Electronic Signatures in Global and National Commerce Act (E-Sign Act) (15 U.S.C. 7001 *et seq.*).

9(a)(3) Retainable

1. *General.* Electronic disclosures, to the extent permitted by § 1041.9(a)(4), are retainable for purposes of § 1041.9 if they are in a format that is capable of being printed, saved, or emailed by the consumer. The general requirement to provide disclosures in a retainable form does not apply when the electronic short notices are provided in via mobile application or text message. For example, the requirement does not apply to an electronic short notice that is provided to the consumer's mobile telephone as a text message. In contrast, if the access is provided to the consumer via email, the notice must be in a retainable form, regardless of whether the consumer uses a mobile telephone to access the notice.

9(a)(4) Electronic Delivery

1. *General.* Section 1041.9(a)(4) permits disclosures required by § 1041.9 to be provided through electronic delivery if the consumer consent requirements under § 1041.9(a)(4) are satisfied.

9(a)(4)(i) Consumer Consent

9(a)(4)(i)(A) General

1. *General.* Section 1041.9(a)(4)(i) permits disclosures required by § 1041.9 to be provided through electronic delivery if the lender obtains the consumer's affirmative consent to receive the disclosures through a particular electronic delivery method. This affirmative consent requires lenders to provide consumers with an option to select a particular electronic delivery method. The consent must clearly show the method of electronic delivery that will be used, such as email, text message, or mobile application. Consent provided by checking a box during the origination process may qualify as being in writing. Consent can be obtained for multiple methods of electronic delivery, but the consumer must have affirmatively selected and provided consent for each method.

9(a)(4)(i)(B) Email Option Required

1. *General.* Section § 1041.9(a)(4)(i)(B) provides that when obtaining consumer consent to electronic delivery under § 1041.9(a)(4), a lender must provide the consumer with an option to receive the disclosures through email. The lender may choose to offer email as the only method of electronic delivery under § 1041.9(a)(4).

9(a)(4)(ii) Subsequent Loss of Consent

1. *General.* The prohibition on electronic delivery of disclosures in § 1041.9(a)(4)(ii) applies to the particular electronic method for which consent is lost. When a lender loses a consumer's consent to receive disclosures via text message, for example, but has not lost the consumer's consent to receive disclosures via email, the lender may continue to provide disclosures via email, assuming that all of the requirements in § 1041.9(a)(4) are satisfied.

2. *Loss of consent applies to all notices.* The loss of consent applies to all notices required by § 1041.9. For example, if a consumer revokes consent in response to the electronic short notice text message delivered along with the payment notice under § 1041.9(b)(4)(ii), that revocation also applies to text delivery of the electronic short notice that would be delivered with the consumer rights notice under § 1041.9(c)(4)(ii).

Paragraph 9(a)(4)(ii)(A)

1. *Revocation.* For purposes of § 1041.9(a)(4)(ii)(A), a consumer may revoke consent for any reason and by any reasonable means of communication. Reasonable means of communication may include calling the lender and revoking consent orally, mailing a revocation to an address provided by the lender on its consumer correspondence, sending an email response or clicking on a revocation link provided in an email from the lender, and responding by text message to a text message sent by the lender.

Paragraph 9(a)(4)(ii)(B)

1. *Notice.* A lender receives notification for purposes of § 1041.9(a)(4)(ii)(B) when the lender receives any information indicating that the consumer did not receive or is unable to receive disclosures in a particular electronic manner. Examples of notice include but are not limited to the following:

i. An email returned with a notification that the consumer's account is no longer active or does not exist.

ii. A text message returned with a notification that the consumer's mobile telephone number is no longer in service.

iii. A statement from the consumer that the consumer is unable to access or review disclosures through a particular electronic delivery method.

9(a)(5) Segregation Requirements for Notices

1. *Segregated additional content.* Although segregated additional content that is not required by § 1041.9 may not appear above, below, or around the required content, additional content may be delivered through a separate form, such as a separate piece of paper or Web page.

9(a)(7) Model Forms

1. *Safe harbor provided by use of model forms.* Although the use of the model forms and clauses is not required, lenders using them will be deemed to be in compliance with the disclosure requirement with respect to such model forms.

9(b) Payment Notice

9(b)(1)(i) First Payment Withdrawal

1. *First payment withdrawal.* Depending on when the payment authorization granted by the consumer is obtained on a covered loan and whether the exception for a single immediate payment transfer made at the consumer's request applies, the first payment withdrawal may or may not be the first payment made on a covered loan. When a lender obtains payment authorization during the origination process, the lender may provide the first payment withdrawal notice at that time. A lender that obtains payment authorization after a payment has been made by the consumer in cash, or after initiating a single immediate payment transfer at the consumer's request, would deliver the notice later in the loan term. If a consumer provides one payment authorization that the lender uses to initiate a first payment withdrawal after a notice as required by § 1041.9(b)(1)(i), but the consumer later changes the authorization or provides an additional authorization, the lender's exercise of that new authorization would not be the first payment withdrawal; however, it may be an unusual withdrawal under § 1041.9(b)(1)(ii).

2. *First payment withdrawal is determined when the loan is in covered status.* As discussed in comment 3(b)(3)–3, there may be situations where a longer-term loan is not covered at the time of origination but becomes covered at a later date. The lender's first attempt to execute a payment transfer after a loan becomes a covered loan under this part is the first payment withdrawal. For example, consider a loan that is not considered covered at the time of origination. If the lender initiates a payment withdrawal during the first and second billing cycles and the loan becomes covered at the end of the second cycle, any lender initiated payment during the third billing cycle is considered a first payment withdrawal under this section.

3. *Intervening payments.* Unscheduled intervening payments do not change the determination of first payment withdrawal for purposes of the notice requirement. For example, a lender originates a loan on April 1, with a payment scheduled to be withdrawn on May 1. At origination, the lender provides the consumer with a first payment withdrawal notice for May 1. On April 28, the consumer makes the payment due on May 1 in cash. The lender does not initiate a withdrawal on May 1. The lender initiates a withdrawal for the next scheduled payment June 1. The lender satisfied its notice obligation with the notice provided at origination, so it is not required to send a first payment notice in connection with the June 1 payment although it may have to send an unusual payment notice if the transfer meets one of the conditions in § 1041.9(b)(3)(ii)(C).

9(b)(1)(iii) Exceptions

1. *Exception for initial payment transfer applies even if the transfer is unusual.* The exception in § 1041.9(b)(1)(iii)(A) applies even if the situation would otherwise trigger the additional disclosure requirements for unusual attempts under § 1041.9(b)(3). For example, if the payment channel of the initial payment transfer after obtaining the consumer's consent is different than the payment channel used before the prohibition under § 1041.8 was triggered, the exception in § 1041.9(b)(1)(iii)(A) applies.

2. *Multiple transfers in advance.* If a consumer has affirmatively consented to multiple transfers in advance, the exception in § 1041.9(b)(1)(iii)(A) applies only to the first initial payment transfer of that series.

9(b)(2) First Payment Withdrawal Notice

9(b)(2)(i) Timing

1. *When the lender obtains payment authorization.* For all methods of delivery, the earliest point that the lender may provide the first payment withdrawal notice is when the lender obtains the payment authorization. For example, the notice can be provided simultaneously when the lender provides a consumer with a copy of a completed payment authorization, or after providing the authorization copy. The provision allows the lender to provide consumers with the notice at a convenient time because the lender and consumer are already communicating about the loan, but also allows flexibility for lenders that prefer to provide the notice closer to the payment transfer date. For example, the lender could obtain consumer consent to electronic delivery and deliver the notice through email 4 days before initiating the transfer, or the lender could hand deliver it to the consumer at the end of the loan origination process.

9(b)(2)(i)(A) Mail

1. *General.* The six business-day period begins when the lender places the notice in the mail, not when the consumer receives the notice. For example, if a lender places the notice in the mail on Monday, June 1, the lender may initiate the transfer of funds on Tuesday, June 9, if it is the 6th business day following mailing of the notice.

9(b)(2)(i)(B) Electronic Delivery

Paragraph 9(b)(2)(i)(B)(1)

1. *General.* The three-business-day period begins when the lender sends the notice, not when the consumer receives or is deemed to have received the notice. For example, if a lender sends the notice by email on Monday, June 1, the lender may initiate the transfer of funds on Thursday, June 4, the third business day following transmitting the notice.

Paragraph 9(b)(2)(i)(B)(2)

1. *General.* In some circumstances, a lender may lose a consumer's consent to receive disclosures through a particular electronic delivery method after the lender has provided the notice. In such circumstances, the lender may initiate the transfer for the payment currently due as scheduled. If the lender is scheduled to make a future unusual withdrawal attempt following the one that was disclosed in the previously provided first withdrawal notice, the lender must provide notice for that unusual withdrawal through alternate means, in accordance with the applicable timing requirements in § 1041.9(b)(3)(i).

2. Alternate Means. The alternate means may include a different electronic delivery method that the consumer has consented to, in person, or by mail, in accordance with the applicable timing requirements in § 1041.9(b)(3)(i).

9(b)(2)(ii) Content Requirements

9(b)(2)(ii)(B) Transfer Terms

Paragraph 9(b)(2)(ii)(B)(1) Date

1. *Date.* The initiation date is the date that the payment transfer is sent outside of the lender's control. Accordingly, the initiation date of the transfer is the date

that the lender or its agent sends the payment to be processed by a third party. For example, if a lender sends its ACH payments to a payment processor working on the lender's behalf on Monday, June 1, but the processor does not submit them to its bank and the ACH network until Tuesday, June 2, the date of the payment transfer is Tuesday the 2nd.

Paragraph 9(b)(2)(ii)(B)(2) Amount

1. *Amount.* The amount of the transfer is the total amount of money that will be transferred from the consumer's account, regardless of whether the total corresponds to the amount of a regularly scheduled payment. For example, if a single transfer will be initiated for the purpose of collecting a regularly scheduled payment of $50.00 and a late fee of $30.00, the amount that must be disclosed under § 1041.9(b)(2)(ii)(B)(*2*) is $80.00.

Paragraph 9(b)(2)(ii)(B)(5) Payment Channel

1. *General.* Payment channel refers to the specific payment method, including the network that the transfer will travel through and the form of the transfer. For example, a lender that uses the consumer's paper check information to initiate a payment transfer through the ACH network would use the ACH payment channel under § 1041.9(b)(2)(ii)(B)(*5*). A lender that uses consumer account and routing information to initiate a remotely created check over the check network would use the remotely created check payment channel. A lender that uses a post-dated signature check to initiate a transfer over the check network would use the signature check payment channel. A lender that initiates a payment from a consumer's prepaid card would specify whether that payment is processed as an ACH transfer, a PIN debit card network payment, or a signature debit card network payment.

2. *Illustrative examples.* In describing the payment channel in the disclosure, the most common payment channel descriptions include, but are not limited to, ACH transfers, checks, remotely created checks, remotely created payment orders, internal transfers, PIN debit card payments, and signature debit card network payments.

9(b)(2)(ii)(C) Payment Breakdown

9(b)(2)(ii)(C)(2) Principal

1. *General.* The amount of the payment that is applied to principal must always be included in the payment breakdown table, even if the amount applied is $0.

9(b)(2)(ii)(C)(4) Fees

1. *General.* This field must only be provided if some of the payment amount will be applied to fees. In situations where more than one fee applies, fees may be disclosed separately or aggregated. A lender may use its own term to describe the fee, such as ''late payment fee.''

9(b)(2)(ii)(C)(5) Other Charges

1. *General.* This field must only be provided if some of the payment amount will be applied to other charges. In situations when more than one other charge applies, other charges may be disclosed separately or aggregated. A lender may use its own term to describe the charge, such as ''insurance charge.''

9(b)(3) Unusual Withdrawal Notice

9(b)(3)(i) Timing

1. *General.* See comments on 9(b)(2) regarding the first payment withdrawal notice.

9(b)(3)(ii) Content Requirements

1. *General.* If the payment transfer is unusual according to the circumstances described in § 1041.9(b)(3)(ii)(C), the payment notice must contain both the basic payment information required by § 1041.9(b)(2)(ii)(B) through (D) and the description of unusual withdrawal required by § 1041.9(b)(3)(ii)(C).

9(b)(3)(ii)(C) Description of Unusual Withdrawal

1. *General.* An unusual withdrawal notice is required under § 1041.9(b)(3) if one or more conditions are present. The description of an unusual withdrawal informs the consumer of the condition that makes the pending payment transfer unusual.

2. *Illustrative example.* The lender provides a first payment withdrawal notice at origination. The first payment withdrawal initiated by the lender occurs on March 1, for $75, as a paper check. The second payment is scheduled for April 1, for $75, as an ACH transfer. Before the second payment, the lender provides an unusual withdrawal notice. The notice contains the basic payment information along with an explanation that the withdrawal is unusual because the payment channel has changed from paper check to ACH. Because the amount did not vary, the payment is taking place on the regularly scheduled date, and this is not a re-initiated payment, the only applicable content under § 1041.9(b)(3)(ii)(C) is the different payment channel information.

3. *Varying amount.* The information about varying amount for closed-end loans in § 1041.9(b)(3)(ii)(C)(*1*)(*i*) applies in two circumstances. First, the requirement applies when a transfer is for the purpose of collecting a payment that is not specified by amount on the payment schedule, including, for example, a one-time electronic payment transfer to collect a late fee. Second, the requirement applies when the transfer is for the purpose of collecting a regularly scheduled payment for an amount different from the regularly scheduled payment amount according to the payment schedule. Given existing requirements for open-end credit, circumstances that trigger an unusual withdrawal for open-end credit are more limited according to § 1041.9(b)(3)(ii)(C)(*1*)(*ii*). Because the outstanding balance on open-end credit may change over time, the minimum payment due on the scheduled payment date may also fluctuate. However, the minimum payment amount due for open-end credit would be disclosed to the consumer according to the periodic statement requirement in Regulation Z. The payment transfer amount would not be considered unusual with regards to open-end credit unless the amount deviates from the minimum payment due as disclosed in the periodic statement. The requirement for a first payment withdrawal notice under § 1041.9(b)(2) and the other circumstances that could trigger an unusual withdrawal notice under § 1041.9(b)(3)(ii)(C)(*2*) through (*4*), continue to apply.

4. *Date other than due date of regularly scheduled payment.* The changed date information in § 1041.9(b)(3)(ii)(C)(*2*) applies in two circumstances. First, the requirement applies when a transfer is for the purpose of collecting a payment that is not specified by date on the payment schedule, including, for example, a one-time electronic payment transfer to collect a late fee. Second, the requirement applies when the transfer is for the purpose of collecting a regularly scheduled payment on a date that differs from the regularly scheduled payment date according to the payment schedule.

9(b)(4) Electronic Delivery

1. *General.* If the lender is using a method of electronic delivery other than email, such as text or mobile application, the lender must provide the notice with the electronic short notice as provided in § 1041.9(b)(4)(ii). If the lender is using email as the method of electronic delivery, § 1041.9(b)(4)(iii) allows the lender to determine whether to use the electronic short notice

approach or to include the full text of the notice in the body of the email.

9(b)(4)(ii) Electronic Short Notice

9(b)(4)(ii)(A) General Content

1. *Identifying statement.* If the lender is using email as the method of electronic delivery, the identifying statement required in § 1041.9(b)(2)(ii)(A) and (b)(3)(ii)(A) must be provided in both the email subject line and the body of the email.

9(c) Consumer Rights Notice

9(c)(2) Timing

1. *General.* Any information provided to the lender or its agent that the payment transfer has failed would trigger the timing requirement provided in § 1041.9(c)(2). For example, if the lender's agent, a payment processor, learns on Monday, June 1 that an ACH payment transfer initiated by the processor on the lender's behalf has been returned for non-sufficient funds, the lender would be required to send the consumer rights notice by Thursday, June 4.

9(c)(3) Content Requirements

1. *Identifying statement.* If the lender is using email as the method of electronic delivery, the identifying statement required in § 1041.9(c)(3)(i) must be provided in both the email subject line and the body of the email.

2. *Fees.* If the lender is also the consumer's account-holding institution, this includes all fees charged in relation to the transfer, including any returned payment fees charged to outstanding loan balance and any fees, such as overdraft or insufficient fund fees, charged to the consumer's account.

9(c)(4) Electronic Delivery

1. *General.* See comments 9(b)(4)–1 and 9(b)(4)(ii)(A)–1.

Section 1041.10—Furnishing Information to Registered Information Systems

10(a) Loans Subject to Furnishing Requirement

1. *Application to rollovers.* The furnishing requirements in § 1041.10(a) apply to each covered short-term loan or covered longer-term balloon-payment loan a lender makes, as well as to loans that are a rollover of a prior covered short-term loan or covered longer-term balloon-payment loan (or what is termed a ''renewal'' in some States). Rollovers are defined as a matter of State law but typically involve deferral of repayment of the principal amount of a short-term loan for a period of time in exchange for a fee. In the event that a lender is permitted under State law to roll over a covered short-term loan or covered longer-term balloon-payment loan and does so in accordance with the requirements of § 1041.5 or § 1041.6, the rollover would be treated, as applicable, as a new covered short-term loan or as a new covered longer-term balloon-payment loan for purposes of § 1041.10. For example, assume that a lender is permitted under applicable State law to roll over a covered short-term loan; the lender makes a covered short-term loan with a 14-day contractual duration; and on day 14 the lender reasonably determines that the consumer has the ability to repay a new loan under § 1041.5 and offers the consumer the opportunity to roll over the first loan for an additional 14 days. If the consumer accepts the rollover, the lender would report the original loan as no longer outstanding and would report the rollover as a new covered short-term loan.

2. *Furnishing through third parties.* Section 1041.10(a) requires that, for each covered short-term loan and covered longer-term balloon loan a lender makes, the lender must furnish the information concerning the loan described in § 1041.10(c) to each information system described in § 1041.10(b). A lender may furnish information to such information system directly, or may furnish through a third party acting on its behalf, including a provisionally registered or registered information system.

10(b) Information Systems to Which Information Must Be Furnished

1. *Provisional registration and registration of information system while loan is outstanding.* Pursuant to § 1041.10(b)(1), a lender is only required to furnish information about a covered loan to an information system that, at the time the loan is consummated, has been registered pursuant to § 1041.11(c)(2) for 180 days or more or has been provisionally registered pursuant to § 1041.11(d)(1) for 180 days or more or subsequently has become registered pursuant to § 1041.11(d)(2). For example, if an information system is provisionally registered on March 1, 2020, the obligation to furnish information to that system begins on August 28, 2020, 180 days from the date of provisional registration. A lender is not required to furnish information about a loan consummated on August 27, 2020 to an information system that became provisionally registered on March 1, 2020.

2. *Preliminary approval.* Section 1041.10(b) requires that lenders furnish information to information systems that are provisionally registered pursuant to § 1041.11(d)(1) and information systems that are registered pursuant to § 1041.11(c)(2) or (d)(2). Lenders are not required to furnish information to entities that have received preliminary approval for registration pursuant to § 1041.11(c)(1) but are not registered pursuant to § 1041.11(c)(2).

10(c) Information To Be Furnished

1. *Deadline for furnishing under § 1041.10(c)(1) and (3).* Section 1041.10(c)(1) requires that a lender furnish specified information no later than the date on which the loan is consummated or as close in time as feasible to the date the loan is consummated. Section 1041.10(c)(3) requires that a lender furnish specified information no later than the date the loan ceases to be an outstanding loan or as close in time as feasible to the date the loan ceases to be an outstanding loan. Under each of § 1041.10(c)(1) and (3), if it is feasible to report on the specified date (such as the consummation date), the specified date is the date by which the information must be furnished.

10(c)(1) Information To Be Furnished at Loan Consummation

1. *Type of loan.* Section 1041.10(c)(1)(iii) requires that a lender furnish information that identifies a covered loan as either a covered short-term loan or a covered longer-term balloon-payment loan. For example, a lender must identify a covered short-term loan as a covered short-term loan.

2. *Whether a loan is made under § 1041.5 or § 1041.6.* Section 1041.10(c)(1)(iv) requires that a lender furnish information that identifies a covered loan as made under § 1041.5 or made under § 1041.6. For example, a lender must identify a loan made under § 1041.5 as a loan made under § 1041.5.

10(c)(2) Information To Be Furnished While Loan Is an Outstanding Loan

1. *Examples.* Section 1041.10(c)(2) requires that, during the period that the loan is an outstanding loan, a lender must furnish any update to information previously furnished pursuant to § 1041.10 within a reasonable period of the event that causes the information previously furnished to be out of date. Information previously furnished can become out of date due to changes in the loan terms or due to actions by the consumer. For example, if a lender extends the term of a closed-end loan, § 1041.10(c)(2) would require the lender to furnish an update to the date that each payment on the loan is due, previously furnished pursuant to

§ 1041.10(c)(1)(vii)(B), and to the amount due on each payment date, previously furnished pursuant to § 1041.10(c)(1)(vii)(C), to reflect the updated payment dates and amounts. If the amount or minimum amount due on future payment dates changes because the consumer fails to pay the amount due on a scheduled payment date, § 1041.10(c)(2) would require the lender to furnish an update to the amount or minimum amount due on each payment date, previously furnished pursuant to § 1041.10(c)(1)(vii)(C) or (c)(1)(viii)(D), as applicable, to reflect the updated amount or minimum amount due on each payment date. However, if a consumer makes payment on a closed-end loan as agreed and the loan is not modified to change the dates or amounts of future payments on the loan, § 1041.10(c)(2) would not require the lender to furnish an update to information concerning the date that each payment on the loan is due, previously furnished pursuant to § 1041.10(c)(1)(vii)(B), or the amount due on each payment date, previously furnished pursuant to § 1041.10(c)(1)(vii)(C). Section 1041.10(c)(2) does not require a lender to furnish an update to reflect that a payment was made.

2. *Changes to information previously furnished pursuant to § 1041.10(c)(2).* Section 1041.10(c)(2) requires that, during the period that the loan is an outstanding loan, a lender must furnish any update to information previously furnished pursuant to § 1041.10 within a reasonable period of the event that causes the information previously furnished to be out of date. This requirement extends to information previously furnished pursuant to § 1041.10(c)(2). For example, if a lender furnishes an update to the amount or minimum amount due on each payment date, previously furnished pursuant to § 1041.10(c)(1)(vii)(C) or (c)(1)(viii)(D), as applicable, and the amount or minimum amount due on each payment date changes again after the update, § 1041.10(c)(2) requires that the lender must furnish an update to the information previously furnished pursuant to § 1041.10(c)(2).

Section 1041.11—Registered Information Systems

11(b) Eligibility Criteria for Registered Information Systems

11(b)(2) Reporting Capability

1. *Timing.* To be eligible for provisional registration or registration, an entity must possess the technical capability to generate a consumer report containing, as applicable for each unique consumer, all information described in § 1041.10 substantially simultaneous to receiving the information from a lender. Technological limitations may cause some slight delay in the appearance on a consumer report of the information furnished pursuant to § 1041.10, but any delay must reasonable.

11(b)(3) Performance

1. *Relationship with other law.* To be eligible for provisional registration or registration, an entity must perform in a manner that facilitates compliance with and furthers the purposes of this part. However, this requirement does not supersede consumer protection obligations imposed upon a provisionally registered or registered information system by other Federal law or regulation. For example, the Fair Credit Reporting Act requires that, whenever a consumer reporting agency prepares a consumer report it, shall follow reasonable procedures to assure maximum possible accuracy of the information concerning the individual about whom the report relates. See 15 U.S.C. 1681e(b). If including information furnished pursuant to § 1041.10 in a consumer report would cause a provisionally registered or registered information system to violate this requirement, § 1041.11(b)(3) would not require that the information be included in a consumer report.

2. *Evidence of ability to perform in a manner that facilitates compliance with and furthers the purposes of this part.* Section 1041.11(c)(1) requires that an entity seeking preliminary approval to be a registered information system must submit an application to the Bureau containing information sufficient for the Bureau to determine that the entity is reasonably likely to satisfy the conditions set forth in § 1041.11(b). Section 1041.11(c)(2) and (d)(1) requires that an entity seeking to be a registered information system or a provisionally registered information system must submit an application that contains information and documentation sufficient for the Bureau to determine that the entity satisfies the conditions set forth in § 1041.11(b). In evaluating whether an applicant is reasonably likely to satisfy or satisfies the requirement set forth in § 1041.11(b)(3), the Bureau will consider the extent to which an applicant has experience functioning as a consumer reporting agency.

11(b)(4) Federal Consumer Financial Law Compliance Program

1. *Policies and procedures.* To be eligible for provisional registration or registration, an entity must have policies and procedures that are documented in sufficient detail to implement effectively and maintain its Federal consumer financial law compliance program. The policies and procedures must address compliance with applicable Federal consumer financial laws in a manner reasonably designed to prevent violations and to detect and prevent associated risks of harm to consumers. The entity must also maintain and modify, as needed, the policies and procedures so that all relevant personnel can reference them in their day-to-day activities.

2. *Training.* To be eligible for provisional registration or registration, an entity must provide specific, comprehensive training to all relevant personnel that reinforces and helps implement written policies and procedures. Requirements for compliance with Federal consumer financial laws must be incorporated into training for all relevant officers and employees. Compliance training must be current, complete, directed to appropriate individuals based on their roles, effective, and commensurate with the size of the entity and nature and risks to consumers presented by its activity. Compliance training also must be consistent with written policies and procedures and designed to enforce those policies and procedures.

3. *Monitoring.* To be eligible for provisional registration or registration, an entity must implement an organized and risk-focused monitoring program to promptly identify and correct procedural or training weaknesses so as to provide for a high level of compliance with Federal consumer financial laws. Monitoring must be scheduled and completed so that timely corrective actions are taken where appropriate.

11(b)(5) Independent Assessment of Federal Consumer Financial Law Compliance Program

1. *Assessor qualifications.* An objective and independent third-party individual or entity is qualified to perform the assessment required by § 1041.11(b)(5) if the individual or entity has substantial experience in performing assessments of a similar size, scope, or subject matter; has substantial expertise in both the applicable Federal consumer financial laws and in the entity's or information system's business; and has the appropriate professional qualifications necessary to perform the required assessment adequately.

2. *Written assessment.* A written assessment described in § 1041.11(b)(5) need not conform to any particular

format or style as long as it succinctly and accurately conveys the required information.

11(b)(7) Independent Assessment of Information Security Program

1. *Periodic assessments.* Section 1041.11(b)(7) requires that, to maintain its registration, an information system must obtain and provide to the Bureau, on at least a biennial basis, a written assessment of the information security program described in § 1041.11(b)(6). The period covered by each assessment obtained and provided to the Bureau to satisfy this requirement must commence on the day after the last day of the period covered by the previous assessment obtained and provided to the Bureau.

2. *Assessor qualifications.* Professionals qualified to conduct assessments required under § 1041.11(b)(7) include: A person qualified as a Certified Information System Security Professional (CISSP) or as a Certified Information Systems Auditor (CISA); a person holding Global Information Assurance Certification (GIAC) from the SysAdmin, Audit, Network, Security (SANS) Institute; and an individual or entity with a similar qualification or certification.

3. *Written assessment.* A written assessment described in § 1041.11(b)(7) need not conform to any particular format or style as long as it succinctly and accurately conveys the required information.

11(c) Registration of Information Systems Prior to August 19, 2019

11(c)(1) Preliminary Approval

1. *In general.* An entity seeking to become preliminarily approved for registration pursuant to § 1041.11(c)(1) must submit an application to the Bureau containing information sufficient for the Bureau to determine that the entity is reasonably likely to satisfy the conditions set forth in § 1041.11(b) as of the deadline set forth in § 1041.11(c)(3)(ii). The application must describe the steps the entity plans to take to satisfy the conditions set forth in § 1041.11(b) by the deadline and the entity's anticipated timeline for such steps. The entity's plan must be reasonable and achievable.

11(c)(2) Registration

1. *In general.* An entity seeking to become a registered information system pursuant to § 1041.11(c)(2) must submit an application to the Bureau by the deadline set forth in § 1041.11(c)(3)(ii) containing information and documentation adequate for the Bureau to determine that the conditions described in § 1041.11(b) are satisfied. The application must succinctly and accurately convey the required information, and must include the written assessments described in § 1041.11(b)(5) and (7).

11(d) Registration of Information Systems on or After August 19, 2019

11(d)(1) Provisional Registration

1. *In general.* An entity seeking to become a provisionally registered information system pursuant to § 1041.11(d)(1) must submit an application to the Bureau containing information and documentation adequate for the Bureau to determine that the conditions described in § 1041.11(b) are satisfied. The application must succinctly and accurately convey the required information, and must include the written assessments described in § 1041.11(b)(5) and (7).

Section 1041.12—Compliance Program and Record Retention

12(a) Compliance Program

1. *General.* Section 1041.12(a) requires a lender making a covered loan to develop and follow written policies and procedures that are reasonably designed to ensure compliance with the applicable requirements in this part. These written policies and procedures must provide guidance to a lender's employees on how to comply with the requirements in this part. In particular, under § 1041.12(a), a lender must develop and follow detailed written policies and procedures reasonably designed to achieve compliance, as applicable, with the ability-to-repay requirements in § 1041.5, alternative requirements in § 1041.6, payments requirements in §§ 1041.8 and 1041.9, and requirements on furnishing loan information to registered and provisionally registered information systems in § 1041.10. The provisions and commentary in each section listed above provide guidance on what specific directions and other information a lender must include in its written policies and procedures.

2. *Examples.* The written policies and procedures a lender must develop and follow under § 1041.12(a) depend on the types of loans that the lender makes. A lender that makes a covered loan under § 1041.5 must develop and follow written policies and procedures to ensure compliance with the ability-to-repay requirements, including on projecting a consumer's net income and payments on major financial obligations, and estimating a consumer's basic living expenses. Among other written policies and procedures, a lender that makes a covered loan under § 1041.5 or § 1041.6 must develop and follow written policies and procedures to furnish loan information to registered and provisionally registered information systems in accordance with § 1041.10. A lender that makes a covered loan subject to the requirements in § 1041.6 or § 1041.9 must develop and follow written policies and procedures to provide the required disclosures to consumers.

12(b) Record Retention

1. *General.* Section 1041.12(b) requires a lender to retain various categories of documentation and information in connection with the underwriting and performance of covered short-term loans and covered longer-term balloon payment loans, as well as payment practices in connection with covered loans generally. The items listed are non-exhaustive as to the records that may need to be retained as evidence of compliance with this part concerning loan origination and underwriting, terms and performance, and payment practices.

12(b)(1) Retention of Loan Agreement and Documentation Obtained in Connection With Originating a Covered Short-Term or Covered Longer-Term Balloon-Payment Loan

1. *Methods of retaining loan agreement and documentation obtained for a covered short-term or covered longer-term balloon-payment loan.* Section 1041.12(b)(1) requires a lender either to retain the loan agreement and documentation obtained in connection with a covered short-term or covered longer-term balloon-payment loan in original form or to be able to reproduce an image of the loan agreement and documentation accurately. For example, if the lender uses a consumer's pay stub to verify the consumer's net income, § 1041.12(b)(1) requires the lender to either retain a paper copy of the pay stub itself or be able to reproduce an image of the pay stub, and not merely the net income information that was contained in the pay stub. For documentation that the lender receives electronically, such as a consumer report from a registered information system, the lender may retain either the electronic version or a printout of the report.

12(b)(2) Electronic Records in Tabular Format Regarding Origination Calculations and Determinations for a Covered Short-Term or Longer-Term Balloon-Payment Loan Under § 1041.5

1. *Electronic records in tabular format.* Section 1041.12(b)(2) requires a lender to retain records regarding origination calculations and determinations for a covered loan in electronic, tabular format. Tabular format means a format in which the individual data elements comprising the record can be transmitted, analyzed, and processed by a computer program, such as a widely used spreadsheet or database program. Data formats for image reproductions, such as PDF, and document formats used by word processing programs are not tabular formats. A lender does not have to retain the records required in § 1041.12(b)(2) in a single, combined spreadsheet or database with the records required in § 1041.12(b)(3) and (5). Section 1041.12(b)(2), however, requires a lender to be able to associate the records for a particular covered short-term or covered longer-term balloon payment loan in § 1041.12(b)(2) with unique loan and consumer identifiers in § 1041.12(b)(3).

12(b)(3) Electronic Records in Tabular Format Regarding Type, Terms, and Performance of Covered Short-Term or Covered Longer-Term Balloon-Payment Loans

1. *Electronic records in tabular format.* Section 1041.12(b)(3) requires a lender to retain records regarding loan type, terms, and performance of covered short-term or covered longer-term balloon-payment loans for a covered loan in electronic, tabular format. *See* comment 12(b)(2)–1 for a description of how to retain electronic records in tabular format. A lender does not have to retain the records required in § 1041.12(b)(3) in a single, combined spreadsheet or database with the records required in § 1041.12(b)(2). Section 1041.12(b)(3), however, requires a lender to be able to associate the records for a particular covered short-term or covered longer-term balloon payment loan in § 1041.12(b)(2) and (5) with unique loan and consumer identifiers in § 1041.12(b)(3).

Paragraph 12(b)(3)(iv)

1. *Maximum number of days, up to 180 days, any full payment was past due.* Section 1041.12(b)(3)(iv) requires a lender that makes a covered loan to retain information regarding the number of days any full payment is past due beyond the payment schedule established in the loan agreement, up to 180 days. For this purpose, a full payment is defined as principal, interest, and any charges. If a consumer makes a partial payment on the contractual due date and the remainder of the payment 10 days later, the lender must record the full payment as being 10 days past due. If a consumer fails to make a full payment on a covered loan more than 180 days after the contractual due date, the lender must only record the full payment as being 180 days past due.

12(b)(4) Retention of Records Relating to Payment Practices for Covered Loans

1. *Methods of retaining documentation.* Section 1041.12(b)(4) requires a lender either to retain certain payment-related information in connection with covered loans in original form or to be able to reproduce an image of such documents accurately. For example, § 1041.12(b)(4) requires the lender to either retain a paper copy of the leveraged payment mechanism obtained in connection with a covered longer-term loan or to be able to reproduce an image of the mechanism. For documentation that the lender receives electronically, the lender may retain either the electronic version or a printout.

12(b)(5) Electronic Records in Tabular Format Regarding Payment Practices for Covered Loans

1. *Electronic records in tabular format.* Section 1041.12(b)(5) requires a lender to retain records regarding payment practices in electronic, tabular format. *See* comment 12(b)(2)–1 for a description of how to retain electronic records in tabular format. A lender does not have to retain the records required in § 1041.12(b)(5) in a single, combined spreadsheet or database with the records required in § 1041.12(b)(2) and (3). Section 1041.12(b)(5), however, requires a lender to be able to associate the records for a particular covered short-term or covered longer-term balloon payment loan in § 1041.12(b)(5) with unique loan and consumer identifiers in § 1041.12(b)(3).

Section 1041.13—Prohibition Against Evasion

1. *Lender action taken with the intent of evading the requirements of the rule.* Section 1041.13 provides that a lender must not take any action with the intent of evading the requirements of this part. In determining whether a lender has taken action with the intent of evading the requirements of this part, the form, characterization, label, structure, or written documentation of the lender's action shall not be dispositive. Rather, the actual substance of the lender's action as well as other relevant facts and circumstances will determine whether the lender's action was taken with the intent of evading the requirements of this part. If the lender's action is taken solely for legitimate business purposes, it is not taken with the intent of evading the requirements of this part. By contrast, if a consideration of all relevant facts and circumstances reveals the presence of a purpose that is not a legitimate business purpose, the lender's action may have been taken with the intent of evading the requirements of this part. A lender action that is taken with the intent of evading the requirements of this part may be knowing or reckless. Fraud, deceit, or other unlawful or illegitimate activity may be one fact or circumstance that is relevant to the determination of whether a lender's action was taken with the intent of evading the requirements of this part, but fraud, deceit, or other unlawful or illegitimate activity is not a prerequisite to such a finding.

Dated: October 4, 2017.

Richard Cordray,

Director, Bureau of Consumer Financial Protection.

Department of the Interior

Office of Surface Mining Reclamation and Enforcement

30 CFR Parts 700, 701, 773, et al.

Congressional Nullification of the Stream Protection Rule Under the Congressional Review Act; Final Rule

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Parts 700, 701, 773, 774, 777, 779, 780, 783, 784, 785, 800, 816, 817, 824, and 827

[Docket ID: OSM–2010–0018; S1D1S SS08011000 SX064A000 178S180110; S2D2S SS08011000 SX064A000 17X501520]

RIN 1029–AC63

Congressional Nullification of the Stream Protection Rule Under the Congressional Review Act

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Final rule; CRA Revocation.

SUMMARY: By operation of the Congressional Review Act, the Stream Protection Rule shall be treated as if it had never taken effect. The Office of Surface Mining Reclamation and Enforcement issues this document to effect the removal of any amendments, deletions or other modifications made by the nullified rule, and the reversion to the text of the regulations in effect immediately prior to the effective date of the Stream Protection Rule.

DATES: This rule is effective on November 17, 2017. The incorporation by reference of material listed in the rule was previously approved by the Director of the Federal Register.

ADDRESSES: Previous documents related to the Stream Protection Rule, published at 81 FR 93066 (Dec. 20, 2016), are available at *www.regulations.gov* in Docket No. OSM–2010–0018.

FOR FURTHER INFORMATION CONTACT: Kathleen Vello, Office of Surface Mining Reclamation and Enforcement, U.S. Department of the Interior, 1849 C Street NW., Mail Stop 4550, MIB, Washington, DC 20240 Telephone: 202–208–1908.

SUPPLEMENTARY INFORMATION: The Office of Surface Mining Reclamation and Enforcement published the Stream Protection Rule on December 20, 2016 (81 FR 93066). The rule became effective on January 19, 2017. On February 1, 2017, the United States House of Representatives passed a joint resolution of disapproval (H.J. Res. 38) of the Stream Protection Rule in accordance with the Congressional Review Act, 5 U.S.C. 801 *et seq.* The Senate passed the joint resolution of disapproval on February 2, 2017 (Cong. Rec. p. S611). President Trump then signed the resolution into law as Public Law 115–5 on February 16, 2017. Under the terms of the Congressional Review Act, the Office of Surface Mining Reclamation and Enforcement's Stream Protection Rule must be ''treated as though such rule had never taken effect.'' 5 U.S.C. 801(f).

However, because the Congressional Review Act does not include direction regarding the removal, by the Office of the Federal Register or otherwise, of the voided language from the Code of Federal Regulations, the Office of Surface Mining Reclamation and Enforcement must publish this document to effect the removal of the voided text. This document will enable the Office of the Federal Register to effectuate congressional intent to remove the voided text of the Stream Protection Rule which is to be treated as if it had never taken effect and to restore the previous language and prior state of the Code of Federal Regulations.

This action is not an exercise of the Department's rulemaking authority under the Administrative Procedure Act because the Department is not ''formulating, amending, or repealing a rule'' under 5 U.S.C. 551(5). Rather, the Department is effectuating changes to the Code of Federal Regulations to reflect what congressional action has already accomplished—namely, the nullification of any changes purported to have been made to the Code of Federal Regulations by the Stream Protection Rule and the reversion to the regulatory text in effect immediately prior to January 19, 2017, the effective date of the Stream Protection Rule. Accordingly, the Department is not soliciting comments on this action. Moreover, this action is not a final agency action subject to judicial review.

List of Subjects

30 CFR Part 700

Administrative practice and procedure, Reporting and recordkeeping requirements, Surface mining, Underground mining.

30 CFR Part 701

Law enforcement, Surface mining, Underground mining.

30 CFR Part 773

Administrative practice and procedure, Reporting and recordkeeping requirements, Surface mining, Underground mining.

30 CFR Part 774

Reporting and recordkeeping requirements, Surface mining, Underground mining.

30 CFR Part 777

Reporting and recordkeeping requirements, Surface mining, Underground mining.

30 CFR Part 779

Environmental protection, Reporting and recordkeeping requirements, Surface mining.

30 CFR Part 780

Incorporation by reference, Reporting and recordkeeping requirements, Surface mining.

30 CFR Part 783

Environmental protection, Reporting and recordkeeping requirements, Underground mining.

30 CFR Part 784

Reporting and recordkeeping requirements, Underground mining.

30 CFR Part 785

Reporting and recordkeeping requirements, Surface mining, Underground mining.

30 CFR Part 800

Insurance, Reporting and recordkeeping requirements, Surety bonds, Surface mining, Underground mining.

30 CFR Part 816

Environmental protection, Incorporation by reference, Reporting and recordkeeping requirements, Surface mining.

30 CFR Part 817

Environmental protection, Incorporation by reference, Reporting and recordkeeping requirements, Underground mining.

30 CFR Part 824

Environmental protection, Surface mining.

30 CFR Part 827

Environmental protection, Surface mining, Underground mining.

■ For the reasons given in the preamble, and under the authority of the Congressional Review Act (5 U.S.C. 801 *et seq.*) and Public Law 115–5 (February 16, 2017), the Department of the Interior, Office of Surface Mining Reclamation and Enforcement amends parts 700, 701, 773, 774, 777, 779, 780, 783, 784, 785, 800, 816, 817, 824, and 827 of chapter VII of title 30 of the Code of Federal Regulations as follows:

■ 1. Revise part 700 to read as follows:

PART 700—GENERAL

Sec.
700.1 Scope.
700.2 Objective.
700.3 Authority.
700.4 Responsibility.
700.5 Definitions.

700.10 Information collection.
700.11 Applicability.
700.12 Petitions to initiate rulemaking.
700.13 Notice of citizen suits.
700.14 Availability of records.
700.15 Computation of time.

Authority: 30 U.S.C. 1201 *et seq.*

§ 700.1 Scope.

The regulations in chapter VII of 30 CFR, consisting of parts 700 through 899, establish the procedures through which the Secretary of the Interior will implement the Surface Mining Control and Reclamation Act of 1977 (Pub. L. 95–87, 91 Stat. 445 (30 U.S.C. 1201 *et. seq.*)). Chapter VII is divided into 13 subchapters.

(a) Subchapter A contains introductory information intended to serve as a guide to the rest of the chapter and to the regulatory requirements and definitions generally applicable to the programs and persons covered by the Act.

(b) Subchapter B contains regulations covering the initial regulatory program which apply before the applicability of permanent program regulations to persons conducting surface coal mining and reclamation operations and other persons covered by the Act.

(c) Subchapter C sets forth regulations covering applications for and decisions on permanent State programs; the process to be followed for substituting a Federal program for an approved State program, if necessary; the process for assuming temporary Federal enforcement of an approved State program; and the process for implementing a Federal program in a State when required by the Act.

(d) Subchapter D of this chapter identifies the procedures that apply to surface coal mining and reclamation operations conducted on Federal lands rather than State or private lands and incorporates by reference the requirements of the applicable regulatory program and the inspection and enforcement requirements of subchapter L of this chapter.

(e) Subchapter E of this chapter contains regulations that apply to surface coal mining and reclamation operations conducted on Indian lands.

(f)(1) Subchapter F implements the requirements of the Act for—

(i) Designating lands which are unsuitable for all or certain types of surface coal mining operations;

(ii) Terminating designations no longer found to be appropriate; and

(iii) Prohibiting surface coal mining and reclamation operations on those lands or areas where the Act states that surface coal mining operations should not be permitted or should be permitted only after specified determinations are made.

(2) Subchapter F does not include regulations governing designation of areas unsuitable for noncoal mining under the terms of section 601 of the Act or the designation of Federal lands under the Federal lands review provisions of section 522(b) of the Act. The Bureau of Land Management of the Department of the Interior is responsible for these provisions which will be implemented when promulgated by regulations in title 43 of the Code of Federal Regulations.

(g) Subchapter G governs applications for and decisions on permits for surface coal mining and reclamation operations on non-Indian and non-Federal lands under a State or Federal program. It also governs coal exploration and permit application and decisions on permits for special categories of coal mining on non-Indian and non-Federal lands under a State or Federal program. Regulations implementing the experimental practices provision of the Act are also included in subchapter G.

(h) Subchapter J sets forth requirements for performance bonds and public liability insurance for both surface mining and underground mining activities.

(i) Subchapter K sets forth the environmental and other performance standards which apply to coal exploration and to surface coal mining and reclamation operations during the permanent regulatory program. The regulations establish the minimum requirements for operations under State and Federal programs. Performance standards applicable to special mining situations such as anthracite mines, steep slope mining, alluvial valley floors, and prime farmlands are included.

(j) Subchapter L sets forth the inspection, enforcement, and civil penalty provisions that apply to a State, Federal, or Federal lands program.

(k) Subchapter M sets forth the requirements for the training, examination, and certification of blasters.

(l) Subchapter P sets forth the provisions for protection of employees who initiate proceedings under the Act or testify in any proceedings resulting from the administration or enforcement of the Act.

(m) Subchapter R sets forth the regulations for the abandoned mine land reclamation program. These regulations include the fee collection requirements and the mechanisms for implementing the State and Federal portions of the abandoned mine land reclamation program.

(n) Subchapter S sets forth the regulations that apply to grants for mining and mineral research institutes and grants for mineral research projects.

§ 700.2 Objective.

The objective of chapter VII is to fulfill the purposes of the Act found in section 102 in a manner which is consistent with the language of the Act, its legislative history, other applicable laws, and judicial interpretations.

§ 700.3 Authority.

The Secretary is authorized to administer the requirements of the Act, except the following:

(a) Provisions of the Act that authorize the Secretary of Agriculture to establish programs for the reclamation of rural lands, identification of prime agricultural lands, and other responsibilities described in the Act. Regulations promulgated by the Secretary of Agriculture are in 7 CFR;

(b) Provisions of the Act for which responsibility is specifically assigned to other Federal agencies, including the Department of Labor, the Environmental Protection Agency, the Corps of Engineers, the Council on Environmental Quality, and the Department of Energy; and

(c) Authority retained by the States to enforce State laws or regulations which are not inconsistent with the Act and this chapter, including the authority to enforce more stringent land use and environmental controls and regulations.

§ 700.4 Responsibility.

(a) The Director of the Office of Surface Mining Reclamation and Enforcement, under the general direction of the Assistant Secretary, Energy and Minerals, is responsible for exercising the authority of the Secretary, except for the following:

(1) Approval, disapproval or withdrawal of approval of a State program and implementation of a Federal program. The Director is responsible for exercising the authority of the Secretary to substitute Federal enforcement of a State program under section 521(b) of the Act.

(2) Designation of non-Federal lands or Federal lands without the concurrence of the Federal surface managing agency as unsuitable for all or certain types of surface coal mining operations under section 522 of the Act and as unsuitable for non-coal mining under section 601 of the Act; and

(3) Authority to approve or disapprove mining plans to conduct surface coal mining and reclamation operations on Federal lands.

(b) The Director is responsible for consulting with Federal land-managing

agencies and Federal agencies with responsibility for natural and historic resources on Federal lands on actions which may have an effect on their responsibilities.

(c) The States are responsible for the regulation of surface coal mining and reclamation operations under the initial regulatory program and surface coal mining and reclamation operations and coal exploration under an approved State program and the reclamation of abandoned mine lands under an approved State Reclamation Plan on non-Federal and non-Indian lands in accordance with procedures in this chapter.

(d) The Secretary may delegate to a State through a cooperative agreement certain authority relating to the regulation of surface coal mining and reclamation operations on Federal lands in accordance with 30 CFR part 745.

(e) The Director, Office of Hearings and Appeals, U.S. Department of the Interior, is responsible for the administration of administrative hearings and appeals required or authorized by the Act pursuant to the regulations in 43 CFR part 4.

§ 700.5 Definitions.

As used throughout this chapter, the following terms have the specified meaning except where otherwise indicated—

Act means the Surface Mining Control and Reclamation Act of 1977 (Pub. L. 95–87).

AML means abandoned mine land(s).

AML inventory means OSM's listing of abandoned mine land problems eligible to be reclaimed using moneys from the Abandoned Mine Reclamation Fund or the Treasury as appropriate.

Anthracite means coal classified as anthracite in ASTM Standard D 388–77. Coal classifications are published by the American Society of Testing and Materials under the title, *Standard Specification for Classification of Coals by Rank,* ASTM D 388–77, on pages 220 through 224. Table 1 which classifies the coals by rank is presented on page 223. This publication is hereby incorporated by reference as it exists on the date of adoption of these regulations. Notices of changes made to this publication will be periodically published by the Office of Surface Mining in the **Federal Register**. This ASTM Standard is on file and available for inspection at the OSM Office, U.S. Department of the Interior, South Interior Building, Washington, DC 20240, at each OSM Regional Office, District Office and Field Office, and at the central office of the applicable State Regulatory Authority, if any. Copies of this publication may also be obtained by writing to the above locations. A copy of this publication will also be on file for public inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* Incorporation by reference provisions approved by the Director of the Federal Register February 7, 1979. The Director's approval of this incorporation by reference expires on July 1, 1981.

Coal means combustible carbonaceous rock, classified as anthracite, bituminous, subbituminous, or lignite by ASTM Standard D 388–77, referred to and incorporated by reference in the definition of *Anthracite* immediately above.

Department means the Department of the Interior.

Director means the Director, Office of Surface Mining Reclamation and Enforcement, or the Director's representative.

Eligible lands and water means lands and water eligible for expenditures under title IV of SMCRA and this chapter. Eligible lands and water for reclamation or drainage abatement expenditures under the Abandoned Mine Land program contained in this chapter are those which were mined for coal or which were affected by such mining, wastebanks, coal processing, or other coal mining processes and left or abandoned in either an unreclaimed or inadequately reclaimed condition prior to August 3, 1977, and for which there is no continuing reclamation responsibility. However, lands and water damaged by coal mining operations after that date and on or before November 5, 1990, may also be eligible for reclamation if they meet the requirements specified in § 874.12(d) and (e) of this chapter. Following certification of the completion of all known coal problems, eligible lands and water for noncoal reclamation purposes are those sites that meet the eligibility requirements specified in § 875.14 of this chapter. For additional eligibility requirements for water projects, see § 874.14 of this chapter, and for lands affected by remining operations, see section 404 of SMCRA.

Emergency means a sudden danger or impairment that presents a high probability of substantial physical harm to the health, safety, or general welfare of people before the danger can be abated under normal program operation procedures.

Expended means that moneys have been obligated, encumbered, or committed by contract by the State, Tribe, or us for work to be accomplished or services to be rendered.

Extreme danger means a condition that could reasonably be expected to cause substantial physical harm to persons, property, or the environment and to which persons or improvements on real property are currently exposed.

Federal lands means any land, including mineral interests, owned by the United States, without regard to how the United States acquired ownership of the lands or which agency manages the lands. It does not include Indian lands. However, lands or mineral interests east of the 100th meridian west longitude owned by the United States and entrusted to or managed by the Tennessee Valley Authority are not subject to sections 714 (surface owner protection) and 715 (Federal lessee protection) of the Act.

Federal lands program means a program established by the Secretary pursuant to section 523 of the Act to regulate surface coal mining and reclamation operations on Federal lands.

Fund means the Abandoned Mine Reclamation Fund established on the books of the U.S. Treasury for the purpose of accumulating revenues designated for reclamation of abandoned mine lands and other activities authorized by section 401 of SMCRA.

Indian lands means all lands, including mineral interests, within the exterior boundaries of any Federal Indian reservation, notwithstanding the issuance of any patent, and including rights-of-way, and all lands including mineral interests held in trust for or supervised by an Indian tribe.

Indian tribe means any Indian tribe, band, group, or community having a governing body recognized by the Secretary.

Office means the Office of Surface Mining Reclamation and Enforcement established under title II of the Act.

Left or abandoned in either an unreclaimed or inadequately reclaimed condition means, for Abandoned Mine Land programs, lands and water:

(1) Which were mined or which were affected by such mining, wastebanks, processing or other mining processes prior to August 3, 1977, or between August 3, 1977, and November 5, 1990, as authorized pursuant to section 402(g)(4) of SMCRA, and on which all mining has ceased;

(2) Which continue, in their present condition, to degrade substantially the quality of the environment, prevent or

damage the beneficial use of land or water resources, or endanger the health and safety of the public; and

(3) For which there is no continuing reclamation responsibility under State or Federal laws, except as provided in sections 402(g)(4) and 403(b)(2) of SMCRA.

OSM and *OSMRE* mean the Office of Surface Mining Reclamation and Enforcement established under title II of the Act.

Person means an individual, Indian tribe when conducting surface coal mining and reclamation operations on non-Indian lands, partnership, association, society, joint venture, joint stock company, firm, company, corporation, cooperative or other business organization and any agency, unit, or instrumentality of Federal, State or local government including any publicly owned utility or publicly owned corporation of Federal State or local government.

Person having an interest which is or may be adversely affected or *person with a valid legal interest* shall include any person—

(a) Who uses any resource of economic, recreational, esthetic, or environmental value that may be adversely affected by coal exploration or surface coal mining and reclamation operations or any related action of the Secretary or the State regulatory authority; or

(b) Whose property is or may be adversely affected by coal exploration or surface coal mining and reclamation operations or any related action of the Secretary or the State regulatory authority.

Project means a delineated area containing one or more abandoned mine land problems. A project may be a group of related reclamation activities with a common objective within a political subdivision of a State or within a logical, geographically defined area, such as a watershed, conservation district, or county planning area.

Public office means a facility under the direction and control of a governmental entity which is open to public access on a regular basis during reasonable business hours.

Reclamation activity means the reclamation, abatement, control, or prevention of adverse effects of past mining by an Abandoned Mine Land program.

Reclamation program means a program established by a State or an Indian tribe in accordance with Title IV of SMCRA for reclamation of lands and water adversely affected by past mining, including the reclamation plan and annual applications for grants under the plan.

Regional Director means a Regional Director of the Office or a Regional Director's representative.

Regulatory authority means the department or agency in each State which has primary responsibility at the State level for administering the Act in the initial program, or the State regulatory authority where the State is administering the Act under a State regulatory program, or the Secretary in the initial or permanent program where the Secretary is administering the Act, or the Secretary when administering a Federal program or Federal lands program or when enforcing a State program pursuant to section 521(b) of the Act.

Regulatory program means any approved State or Federal program or, in a State with no approved State or Federal program and coal exploration and surface coal mining and reclamation operations are on Federal lands, the requirements of subchapters A, F, G, J, K, L, M, and P of this chapter.

Secretary means the Secretary of the Interior or the Secretary's representative.

SMCRA means the Surface Mining Control and Reclamation Act of 1977, 30 U.S.C. 1201 *et seq.,* as amended.

State regulatory authority means the department or agency in each State which has primary responsibility at the State level for administering the initial or permanent State regulatory program.

Surface coal mining operations mean—

(a) Activities conducted on the surface of lands in connection with a surface coal mine or, subject to the requirements of section 516 of the Act, surface operations and surface impacts incident to an underground coal mine, the products of which enter commerce or the operations of which directly or indirectly affect interstate commerce. Such activities include excavation for the purpose of obtaining coal, including such common methods as contour, strip, auger, mountain top removal, box cut, open pit, and area mining; the use of explosives and blasting; in situ distillation or retorting; leaching or other chemical or physical processing; and the cleaning, concentrating, or other processing or preparation of coal. Such activities also include the loading of coal for interstate commerce at or near the mine site. *Provided,* these activities do not include the extraction of coal incidental to the extraction of other minerals, where coal does not exceed 16⅔ percent of the tonnage of minerals removed for purposes of commercial use or sale, or coal exploration subject to section 512 of the Act; and, *Provided further,* that excavation for the purpose of obtaining coal includes extraction of coal from coal refuse piles; and

(b) The areas upon which the activities described in paragraph (a) of this definition occur or where such activities disturb the natural land surface. These areas shall also include any adjacent land the use of which is incidental to any such activities, all lands affected by the construction of new roads or the improvement or use of existing roads to gain access to the site of those activities and for haulage and excavation, workings, impoundments, dams, ventilation shafts, entryways, refuse banks, dumps, stockpiles, overburden piles, spoil banks, culm banks, tailings, holes or depressions, repair areas, storage areas, processing areas, shipping areas, and other areas upon which are sited structures, facilities, or other property or material on the surface, resulting from or incident to those activities.

Surface coal mining and reclamation operations means surface coal mining operations and all activities necessary or incidental to the reclamation of such operations. This term includes the term surface coal mining operations.

Ton means 2000 pounds avoirdupois (.90718 metric ton).

§ 700.10 Information collection.

The collection of information, and recordkeeping requirements, contained in 30 CFR 700.11(d), 700.12(b) and 700.13 has approved by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0094. The information collected in § 700.11(d) is used by OSMRE and States to establish standards for determining when a mine site is no longer a surface coal mining and reclamation operation and thereby when regulatory jurisdiction may end. The information collection under § 700.12(b) is used by OSMRE to consider need, costs, and benefits of a proposed regulatory change in order to grant or deny a petition that has been submitted. Information collected in § 700.13 identifies the person and nature of a citizen's suit, so that OSMRE or a state can respond appropriately.

§ 700.11 Applicability.

(a) Except as provided in paragraph (b) of this section, this chapter applies to all coal exploration and surface coal mining and reclamation operations, except:

(1) The extraction of coal by a landowner for his or her own noncommercial use from land owned or leased by him or her. Noncommercial

use does not include the extraction of coal by one unit of an integrated company or other business or nonprofit entity which uses the coal in its own manufacturing or power plants;

(2) The extraction of 250 tons of coal or less by a person conducting a surface coal mining and reclamation operation. A person who intends to remove more than 250 tons is not exempted;

(3) The extraction of coal as an incidental part of Federal, State or local government-financed highway or other construction in accordance with part 707 of this chapter;

(4) The extraction of coal incidental to the extraction of other minerals where coal does not exceed 16⅔ percent of the total tonnage of coal and other minerals removed for purposes of commercial use or sale in accordance with part 702 of this chapter.

(5) Coal exploration on lands subject to the requirement of 43 CFR parts 3480–3487.

(b) This chapter does not apply to the extraction of coal for commercial purposes where the surface coal mining and reclamation operation, together with any related operations, has or will have an affected area of two acres or less. For purposes of this paragraph:

(1) Where a segment of a road is used for access or coal haulage by more than one surface coal mining operation, the entire segment shall be included in the affected area of each of those operations; provided, that two or more operations which are deemed related pursuant to paragraph (b)(2) of this section shall be considered as one operation for purposes of this paragraph.

(2) Except as provided in paragraph (b)(3) of this section, surface coal mining operations shall be deemed related if they occur within twelve months of each other, are physically related, and are under common ownership or control.

(i) Operations shall be deemed physically related if drainage from both operations flows into the same watershed at or before a point within five aerial miles of either operation.

(ii) Operations shall be deemed under common ownership or control if they are owned or controlled, directly or indirectly, by or on behalf of:

(A) The same person;

(B) Two or more persons, one of whom controls, is under common control with, or is controlled by the other; or

(C) Members of the same family and their relatives, unless it is established that there is no direct or indirect business relationship between or among them;

(iii) For purposes of this paragraph, *control* means: Ownership of 50 percent or more of the voting shares of, or general partnership in, an entity; any relationship which gives one person the ability in fact or law to direct what the other does; or any relationship which gives one person express or implied authority to determine the manner in which coal at different sites will be mined, handled, sold or disposed of.

(3) Notwithstanding the provisions of paragraph (b)(2) of this section, the regulatory authority may determine, in accordance with the procedures applicable to requests for determination of exemption pursuant to paragraph (c) of this section, that two or more surface coal mining operations shall not be deemed related if, considering the history and circumstances relating to the coal, its location, the operations at the sites in question, all related operations and all persons mentioned in paragraph (b)(2)(ii) of this section, the regulatory authority concludes in writing that the operations are not of the type which the Act was intended to regulate and that there is no intention on the part of such operations or persons to evade the requirements of the Act or the applicable regulatory program.

(4) The exemption provided by paragraph (b) of this section applies only to operations with an affected area of less than two acres where coal is being extracted for commercial purposes and to surface coal mining operations within that affected area incidental to such operations.

(c) The regulatory authority may on its own initiative and shall, within a reasonable time of a request from any person who intends to conduct surface coal mining operations, make a written determination whether the operation is exempt under this section. The regulatory authority shall give reasonable notice of the request to interested persons. Prior to the time a determination is made, any person may submit, and the regulatory authority shall consider, any written information relevant to the determination. A person requesting that an operation be declared exempt shall have the burden of establishing the exemption. If a written determination of exemption is reversed through subsequent administrative or judicial action, any person who, in good faith, has made a complete and accurate request for an exemption and relied upon the determination, shall not be cited for violations which occurred prior to the date of the reversal.

(d)(1) A regulatory authority may terminate its jurisdiction under the regulatory program over the reclaimed site of a completed surface coal mining and reclamation operation, or increment thereof, when:

(i) The regulatory authority determines in writing that under the initial program, all requirements imposed under subchapter B of this chapter have been successfully completed; or

(ii) The regulatory authority determines in writing that under the permanent program, all requirements imposed under the applicable regulatory program have been successfully completed or, where a performance bond was required, the regulatory authority has made a final decision in accordance with the State or Federal program counterpart to part 800 of this chapter to release the performance bond fully.

(2) Following a termination under paragraph (d)(1) of this section, the regulatory authority shall reassert jurisdiction under the regulatory program over a site if it is demonstrated that the bond release or written determination referred to in paragraph (d)(1) of this section was based upon fraud, collusion, or misrepresentation of a material fact.

§ 700.12 Petitions to initiate rulemaking.

(a) Any person may petition the Director to initiate a proceeding for the issuance, amendment, or repeal of any regulation under the Act. The petition shall be submitted to the Office of the Director, Office of Surface Mining Reclamation and Enforcement, Department of the Interior, Washington, DC 20240.

(b) The petition shall be a concise statement of the facts, technical justification, and law which require issuance, amendment, or repeal of a regulation under the Act and shall indicate whether the petitioner desires a public hearing.

(c) Upon receipt of the petition, the Director shall determine if the petition sets forth facts, technical justification and law which may provide a reasonable basis for issuance, amendment or repeal of a regulation. Facts, technical justification or law previously considered in a petition or rulemaking on the same issue shall not provide a reasonable basis. If the Director determines that the petition has a reasonable basis, a notice shall be published in the **Federal Register** seeking comments from the public on the proposed change. The Director may hold a public hearing, may conduct an investigation or take other action to determine whether the petition should be granted.

(d) Within 90 days from receipt of the petition, the Director shall issue a written decision either granting or denying the petition. The Director's decision shall constitute the final decision for the Department.

(1) If the petition is granted, the Director shall initiate a rulemaking proceeding.

(2) If the petition is denied, the Director shall notify the petitioner in writing, setting forth the reasons for denial.

§ 700.13 Notice of citizen suits.

(a) A person who intends to initiate a civil action on his or her own behalf under section 520 of the Act shall give notice of intent to do so, in accordance with this section.

(b) Notice shall be given by certified mail to the Secretary and the Director in all cases and to the head of the State regulatory authority, if a complaint involves or relates to a specific State. A copy of the notice shall be sent by first class mail to the Regional Director, if the complaint involves or relates to surface coal mining and reclamation operations in a specific region of the Office.

(c) Notice shall be given by certified mail to the alleged violator, if the complaint alleges a violation of the Act or any regulation, order, or permit issued under the Act.

(d) Service of notice under this section is complete upon mailing to the last known address of the person being notified.

(e) A person giving notice regarding an alleged violation shall state, to the extent known—

(1) Sufficient information to identify the provision of the Act, regulation, order, or permit allegedly violated;

(2) The act or omission alleged to constitute a violation;

(3) The name, address, and telephone numbers of the person or persons responsible for the alleged violation;

(4) The date, time, and location of the alleged violation;

(5) The name, address, and telephone number of the person giving notice; and

(6) The name, address, and telephone number of legal counsel, if any, of the person giving notice.

(f) A person giving notice of an alleged failure by the Secretary or a State regulatory authority to perform a mandatory act or duty under the Act shall state, to the extent known:

(1) The provision of the Act containing the mandatory act or duty allegedly not performed;

(2) Sufficient information to identify the omission alleged to constitute the failure to perform a mandatory act or duty under the Act;

(3) The name, address, and telephone number of the person giving notice; and

(4) The name, address, and telephone number of legal counsel, if any, of the person giving notice.

§ 700.14 Availability of records.

(a) Records required by the Act to be made available locally to the public shall be retained at the geographically closest office of the State or Federal regulatory authority having jurisdiction over the area involved.

(b) Other records or documents in the possession of the Office may be requested under 43 CFR part 2, which implements the Freedom of Information Act and the Privacy Act.

§ 700.15 Computation of time.

(a) Except as otherwise provided, computation of time under this chapter is based on calendar days.

(b) In computing any period of prescribed time, the day on which the designated period of time begins is not included. The last day of the period is included unless it is a Saturday, Sunday, or legal holiday on which the regulatory authority is not open for business, in which event the period runs until the end of the next day which is not a Saturday, Sunday, or legal holiday.

(c) Intermediate Saturdays, Sundays, and legal holidays are excluded from the computation when the period of prescribed time is 7 days or less.

■ 2. Revise part 701 to read as follows:

PART 701—PERMANENT REGULATORY PROGRAM

Sec.

701.1 Scope.
701.2 Objective.
701.3 Authority.
701.4 Responsibility.
701.5 Definitions.
701.11 Applicability.

Authority: 30 U.S.C. 1201 *et seq.*

§ 701.1 Scope.

(a) This part provides general introductory material for the permanent regulatory program required by the Act.

(b) The following regulations apply to the permanent regulatory program:

(1) Subchapter C on State program application, approval, withdrawal, and grants, and Federal program implementation;

(2) Subchapter D on surface coal mining and reclamation operations on Federal lands;

(3) Subchapter E on surface coal mining and reclamation operations on Indian lands.

(4) Subchapter F on criteria for designating lands unsuitable for surface coal mining operations and the process for designating these lands or withdrawing the designation by the regulatory authority; *Provided,* That, part 761 is applicable during the initial regulatory program under subchapter B of this chapter and 30 CFR part 211[1] and that part 769 and other parts incorporated therein are applicable to the initial Federal lands program under 30 CFR part 211;

(5) Subchapter G on the process for application, approval, denial, revision, and renewal of permits for surface coal mining and reclamation operations, including the small operator assistance program, requirements for special categories of these operations, and requirements for coal exploration;

(6) Subchapter J on public liability insurance and performance bonds or other assurances of performance for surface coal mining and reclamation operations;

(7) Subchapter K on performance standards which apply to coal exploration, surface coal mining and reclamation operations, and special categories of these operations;

(8) Subchapter L on inspection and enforcement responsibilities and civil penalties; and

(9) Subchapter M on the training, examination, and certification of blasters.

§ 701.2 Objective.

The regulations in this part give—

(a) A general overview of the regulatory program to be implemented by the State or Federal regulatory authority;

(b) The applicability of that program to coal exploration and surface coal mining and reclamation operations; and

(c) The definitions that apply to the regulation of coal exploration and surface coal mining and reclamation operations.

§ 701.3 Authority.

The Secretary is required by section 501(b) of the Act to promulgate regulations which establish the permanent regulatory program; by section 523 of the Act to promulgate regulations which establish the Federal lands programs; and is authorized by section 710 of the Act to promulgate regulations which establish a Federal program for Indian lands.

§ 701.4 Responsibility.

(a) A State regulatory authority shall assume primary responsibility for regulation of coal exploration and surface coal mining and reclamation operations during the permanent regulatory program upon submission to

and approval by the Secretary of a State program meeting all applicable requirements of the Act and this chapter. After approval of the State program, the State regulatory authority has responsibility for review of and decisions on permits and bonding for surface coal mining and reclamation operations, approval of coal exploration which substantially disturbs the natural land surface and removes more than 250 tons of coal from the earth in any one location, inspection of coal exploration and surface coal mining and reclamation operations for compliance with the Act, this chapter, the State program, permits and exploration approvals, and for enforcement of the State program.

(b) While a State regulatory program is in effect, the Office's responsibility includes, but is not limited to—

(1) Evaluating the administration of the State program through such means as periodic inspections of coal exploration and surface coal mining and reclamation operations in the State and review of exploration approvals, permits, inspection reports, and other documents required to be made available to the Office;

(2) Referring to the State regulatory authority information which creates reasonable belief that a person is in violation of the Act, this chapter, the State regulatory program, a permit condition, or coal exploration approval condition, and initiating an inspection when authorized by the Act or this chapter;

(3) Issuing notices of violation when a State regulatory authority fails to take appropriate action to cause a violation to be corrected; and

(4) Issuing cessation orders, including imposing affirmative obligations, when a condition, practice, or violation exists which creates an imminent danger to the health or safety of the public, or is causing or could reasonably be expected to cause significant, imminent environmental harm to land, air, or water resources.

(c) The Office shall implement a Federal program in a State, if that State does not have an approved State program by June 3, 1980. The Office shall not implement a Federal program in a State for a period of up to 1 year following that date if the State's failure to have an approved program by that date is due to an injunction imposed by a court of competent jurisdiction.

(d) Under a Federal program, the Office shall be the regulatory authority for all coal exploration and surface coal mining and reclamation operations in that State and shall perform the functions that a State regulatory authority would perform under an approved State program.

(e) During the period in which a State program is in effect, the Office shall assume responsibility for enforcing permit conditions, issuing new or revised permits, and issuing necessary notices and orders, when required by 30 CFR part 733.

(f) The Secretary shall substitute a Federal program under 30 CFR part 736 for an approved State program, when required by 30 CFR part 733.

(g) The Secretary shall have the responsibility for administration of the Federal lands program. The Director and other Federal authorities shall have the responsibilities under a Federal lands program as are provided for under subchapter D of this chapter. In addition, State regulatory authorities shall have responsibilities to administer the Federal lands program as provided for under cooperative agreements approved by the Secretary in accordance with 30 CFR part 745.

(h) The Secretary shall have the responsibility for the administration of the Federal program for Indian lands, as provided for under subchapter E of this chapter. The Director and other Federal authorities have the responsibilities under the Indian lands program as are provided for under subchapter E of this chapter.

§ 701.5 Definitions.

As used in this chapter, the following terms have the specified meanings, except where otherwise indicated:

Acid drainage means water with a pH of less than 6.0 and in which total acidity exceeds total alkalinity, discharged from an active, inactive or abandoned surface coal mine and reclamation operation or from an area affected by surface coal mining and reclamation operations.

Acid-forming materials means earth materials that contain sulfide minerals or other materials which, if exposed to air, water, or weathering processes, form acids that may create acid drainage.

Adjacent area means the area outside the permit area where a resource or resources, determined according to the context in which *adjacent area* is used, are or reasonably could be expected to be adversely impacted by proposed mining operations, including probable impacts from underground workings.

Administratively complete application means an application for permit approval or approval for coal exploration where required, which the regulatory authority determines to contain information addressing each application requirement of the regulatory program and to contain all information necessary to initiate processing and public review.

Affected area means any land or water surface area which is used to facilitate, or is physically altered by, surface coal mining and reclamation operations. The affected area includes the disturbed area; any area upon which surface coal mining and reclamation operations are conducted; any adjacent lands the use of which is incidental to surface coal mining and reclamation operations; all areas covered by new or existing roads used to gain access to, or for hauling coal to or from, surface coal mining and reclamation operations, except as provided in this definition; any area covered by surface excavations, workings, impoundments, dams, ventilation shafts, entryways, refuse banks, dumps, stockpiles, overburden piles, spoil banks, culm banks, tailings, holes or depressions, repair areas, storage areas, shipping areas; any areas upon which are sited structures, facilities, or other property material on the surface resulting from, or incident to, surface coal mining and reclamation operations; and the area located above underground workings. The affected area shall include every road used for purposes of access to, or for hauling coal to or from, surface coal mining and reclamation operations, unless the road (a) was designated as a public road pursuant to the laws of the jurisdiction in which it is located; (b) is maintained with public funds, and constructed, in a manner similar to other public roads of the same classification within the jurisdiction; and (c) there is substantial (more than incidental) public use.

Agricultural activities means, with respect to alluvial valley floors, the use of any tract of land for the production of animal or vegetable life, based on regional agricultural practices, where the use is enhanced or facilitated by subirrigation or flood irrigation. These uses include, but are not limited to, farming and the pasturing or grazing of livestock. These uses do not include agricultural activities which have no relationship to the availability of water from subirrigation or flood irrigation practices.

Agricultural use means the use of any tract of land for the production of animal or vegetable life. The uses include, but are not limited to, the pasturing, grazing, and watering of livestock, and the cropping, cultivation, and harvesting of plants.

Alluvial valley floors means the unconsolidated stream-laid deposits holding streams with water availability sufficient for subirrigation or flood irrigation agricultural activities but does not include upland areas which are

generally overlain by a thin veneer of colluvial deposits composed chiefly of debris from sheet erosion, deposits formed by unconcentrated runoff or slope wash, together with talus, or other mass-movement accumulations, and windblown deposits.

Applicant means any person seeking a permit, permit revision, renewal, and transfer, assignment, or sale of permit rights from a regulatory authority to conduct surface coal mining and reclamation operations or, where required, seeking approval for coal exploration.

Applicant/Violator System or *AVS* means an automated information system of applicant, permittee, operator, violation and related data OSM maintains to assist in implementing the Act.

Application means the documents and other information filed with the regulatory authority under this chapter for the issuance of permits; revisions; renewals; and transfer, assignment, or sale of permit rights for surface coal mining and reclamation operations or, where required, for coal exploration.

Approximate original contour means that surface configuration achieved by backfilling and grading of the mined areas so that the reclaimed area, including any terracing or access roads, closely resembles the general surface configuration of the land prior to mining and blends into and complements the drainage pattern of the surrounding terrain, with all highwalls, spoil piles and coal refuse piles eliminated. Permanent water impoundments may be permitted where the regulatory authority has determined that they comply with 30 CFR 816.49 and 816.56, 816.133 or 817.49, 817.56, and 817.133.

Aquifer means a zone, stratum, or group of strata that can store and transmit water in sufficient quantities for a specific use.

Arid and semiarid area means, in the context of alluvial valley floors, an area of the interior western United States, west of the 100th meridian west longitude, experiencing water deficits, where water use by native vegetation equals or exceeds that supplied by precipitation. All coalfields located in North Dakota west of the 100th meridian west longitude, all coalfields in Montana, Wyoming, Utah, Colorado, New Mexico, Idaho, Nevada, and Arizona, the Eagle Pass field in Texas, and the Stone Canyon and the Ione fields in California are in arid and semiarid areas.

Auger mining means a method of mining coal at a cliff or highwall by drilling holes into an exposed coal seam from the highwall and transporting the coal along an auger bit to the surface.

Best technology currently available means equipment, devices, systems, methods, or techniques which will (a) prevent, to the extent possible, additional contributions of suspended solids to stream flow or runoff outside the permit area, but in no event result in contributions of suspended solids in excess of requirements set by applicable State or Federal laws; and (b) minimize, to the extent possible, disturbances and adverse impacts on fish, wildlife and related environmental values, and achieve enhancement of those resources where practicable. The term includes equipment, devices, systems, methods, or techniques which are currently available anywhere as determined by the Director, even if they are not in routine use. The term includes, but is not limited to, construction practices, siting requirements, vegetative selection and planting requirements, animal stocking requirements, scheduling of activities and design of sedimentation ponds in accordance with 30 CFR parts 816 and 817. Within the constraints of the permanent program, the regulatory authority shall have the discretion to determine the best technology currently available on a case-by-case basis, as authorized by the Act and this chapter.

Coal exploration means the field gathering of:

(a) surface or subsurface geologic, physical, or chemical data by mapping, trenching, drilling, geophysical, or other techniques necessary to determine the quality and quantity of overburden and coal of an area; or

(b) the gathering of environmental data to establish the conditions of an area before beginning surface coal mining and reclamation operations under the requirements of this chapter.

Coal mine waste means coal processing waste and underground development waste.

Coal preparation means chemical or physical processing and the cleaning, concentrating, or other processing or preparation of coal.

Coal preparation plant means a facility where coal is subjected to chemical or physical processing or cleaning, concentrating, or other processing or preparation. It includes facilities associated with coal preparation activities, including, but not limited to the following: loading facilities; storage and stockpile facilities; sheds; shops, and other buildings; water-treatment and water-storage facilities; settling basins and impoundments; and coal processing and other waste disposal areas.

Coal processing waste means earth materials which are separated and wasted from the product coal during cleaning, concentrating, or other processing or preparation of coal.

Combustible material means organic material that is capable of burning, either by fire or through oxidation, accompanied by the evolution of heat and a significant temperature rise.

Compaction means increasing the density of a material by reducing the voids between the particles and is generally accomplished by controlled placement and mechanical effort such as from repeated application of wheel, track, or roller loads from heavy equipment.

Complete and accurate application means an application for permit approval or approval for coal exploration where required, which the regulatory authority determines to contain all information required under the Act, this subchapter, and the regulatory program that is necessary to make a decision on permit issuance.

Control or *controller,* when used in parts 773, 774, and 778 of this chapter, refers to or means—

(a) A permittee of a surface coal mining operation;

(b) An operator of a surface coal mining operation; or

(c) Any person who has the ability to determine the manner in which a surface coal mining operation is conducted.

Cropland means land used for the production of adapted crops for harvest, alone or in a rotation with grasses and legumes, and includes row crops, small grain crops, hay crops, nursery crops, orchard crops, and other similar specialty crops.

Cumulative impact area means the area, including the permit area, within which impacts resulting from the proposed operation may interact with the impacts of all anticipated mining on surface- and ground-water systems. Anticipated mining shall include, at a minimum, the entire projected lives through bond releases of:

(a) The proposed operation,

(b) all existing operations,

(c) any operation for which a permit application has been submitted to the regulatory authority, and

(d) all operations required to meet diligent development requirements for leased Federal coal for which there is actual mine development information available.

Disturbed area means an area where vegetation, topsoil, or overburden is removed or upon which topsoil, spoil, coal processing waste, underground development waste, or noncoal waste is

placed by surface coal mining operations. Those areas are classified as *disturbed* until reclamation is complete and the performance bond or other assurance of performance required by subchapter J of this chapter is released.

Diversion means a channel, embankment, or other manmade structure constructed to divert water from one area to another.

Downslope means the land surface between the projected outcrop of the lowest coalbed being mined along each highwall and a valley floor.

Drinking, domestic or residential water supply means water received from a well or spring and any appurtenant delivery system that provides water for direct human consumption or household use. Wells and springs that serve only agricultural, commercial or industrial enterprises are not included except to the extent the water supply is for direct human consumption or human sanitation, or domestic use.

Embankment means an artificial deposit of material that is raised above the natural surface of the land and used to contain, divert, or store water, support roads or railways, or for other similar purposes.

Ephemeral stream means a stream which flows only in direct response to precipitation in the immediate watershed or in response to the melting of a cover of snow and ice, and which has a channel bottom that is always above the local water table.

Essential hydrologic functions means the role of an alluvial valley floor in collecting, storing, regulating, and making the natural flow of surface or ground water, or both, usefully available for agricultural activities by reason of the valley floor's topographic position, the landscape, and the physical properties of its underlying materials. A combination of these functions provides a water supply during extended periods of low precipitation.

Excess spoil means spoil material disposed of in a location other than the mined-out area; provided that spoil material used to achieve the approximate original contour or to blend the mined-out area with the surrounding terrain in accordance with §§ 816.102(d) and 817.102(d) of this chapter in non-steep slope areas shall not be considered excess spoil.

Existing structure means a structure or facility used in connection with or to facilitate surface coal mining and reclamation operations for which construction begins prior to the approval of a State program or implementation of a Federal program or Federal lands program, whichever occurs first.

Farming means, with respect to alluvial valley floors, the primary use of those areas for the cultivation, cropping or harvesting of plants which benefit from irrigation, or natural subirrigation, that results from the increased moisture content in the alluvium of the valley floors. For purposes of this definition, harvesting does not include the grazing of livestock.

Federal program means a program established by the Secretary pursuant to section 504 of the Act to regulate coal exploration and surface coal mining and reclamation operations on non-Federal and non-Indian lands within a State in accordance with the Act and this chapter.

(a) *Complete Federal program* means a program established by the Secretary pursuant to section 504 of the Act before June 3, 1980, or upon the complete withdrawal of a State program after June 3, 1980, by which the Director regulates all coal exploration and surface coal mining and reclamation operations.

(b) *Partial Federal program* means a program established by the Secretary pursuant to sections 102, 201 and 504 of the Act upon the partial withdrawal of a State program, by which the Director may regulate appropriate portions of coal exploration and surface coal mining and reclamation operations.

Flood irrigation means, with respect to alluvial valley floors, supplying water to plants by natural overflow or the diversion of flows, so that the irrigated surface is largely covered by a sheet of water.

Fugitive dust means that particulate matter not emitted from a duct or stack which becomes airborne due to the forces of wind or surface coal mining and reclamation operations or both. During surface coal mining and reclamation operations it may include emissions from haul roads; wind erosion of exposed surfaces, storage piles, and spoil piles; reclamation operations; and other activities in which material is either removed, stored, transported, or redistributed.

Gravity discharge means, with respect to underground mining activities, mine drainage that flows freely in an open channel downgradient. Mine drainage that occurs as a result of flooding a mine to the level of the discharge is not gravity discharge.

Ground cover means the area of ground covered by the combined aerial parts of vegetation and the litter that is produced naturally onsite, expressed as a percentage of the total area of measurement.

Ground water means subsurface water that fills available openings in rock or soil materials to the extent that they are considered water saturated.

Half-shrub means a perennial plant with a woody base whose annually produced stems die back each year.

Head-of-hollow fill means a fill structure consisting of any material, other than organic material, placed in the uppermost reaches of a hollow where side slopes of the existing hollow, measured at the steepest point, are greater than 20 degrees or the average slope of the profile of the hollow from the toe of the fill to the top of the fill is greater than 10 degrees. In head-of-hollow fills the top surface of the fill, when completed, is at approximately the same elevation as the adjacent ridge line, and no significant area of natural drainage occurs above the fill draining into the fill area.

Higher or better uses means postmining land uses that have a higher economic value or nonmonetary benefit to the landowner or the community than the premining land uses.

Highwall means the face of exposed overburden and coal in an open cut of a surface coal mining activity or for entry to underground mining activities.

Highwall remnant means that portion of highwall that remains after backfilling and grading of a remining permit area.

Historically used for cropland means

(a) lands that have been used for cropland for any 5 years or more out of the 10 years immediately preceding the acquisition, including purchase, lease, or option, of the land for the purpose of conducting or allowing through resale, lease or option the conduct of surface coal mining and reclamation operations;

(b) lands that the regulatory authority determines, on the basis of additional cropland history of the surrounding lands and the lands under consideration, that the permit area is clearly cropland but falls outside the specific 5-years-in-10 criterion, in which case the regulations for prime farmland may be applied to include more years of cropland history only to increase the prime farmland acreage to be preserved; or

(c) lands that would likely have been used as cropland for any 5 out of the last 10 years, immediately preceding such acquisition but for the same fact of ownership or control of the land unrelated to the productivity of the land.

Hydrologic balance means the relationship between the quality and quantity of water inflow to, water outflow from, and water storage in a hydrologic unit such as a drainage basin, aquifer, soil zone, lake, or reservoir. It encompasses the dynamic

relationships among precipitation, runoff, evaporation, and changes in ground and surface water storage.

Hydrologic regime means the entire state of water movement in a given area. It is a function of the climate and includes the phenomena by which water first occurs as atmospheric water vapor, passes into a liquid or solid form, falls as precipitation, moves along or into the ground surface, and returns to the atmosphere as vapor by means of evaporation and transpiration.

Imminent danger to the health and safety of the public means the existence of any condition or practice, or any violation of a permit or other requirements of the Act in a surface coal mining and reclamation operation, which could reasonably be expected to cause substantial physical harm to persons outside the permit area before the condition, practice, or violation can be abated. A reasonable expectation of death or serious injury before abatement exists if a rational person, subjected to the same condition or practice giving rise to the peril, would avoid exposure to the danger during the time necessary for abatement.

Impounding structure means a dam, embankment or other structure used to impound water, slurry, or other liquid or semi-liquid material.

Impoundments means all water, sediment, slurry or other liquid or semi-liquid holding structures and depressions, either naturally formed or artificially built.

In situ processes means activities conducted on the surface or underground in connection with in-place distillation, retorting, leaching, or other chemical or physical processing of coal. The term includes, but is not limited to, in situ gasification, in situ leaching, slurry mining, solution mining, borehole mining, and fluid recovery mining.

Intermittent stream means—

(a) A stream or reach of a stream that drains a watershed of at least one square mile, or

(b) A stream or reach of a stream that is below the local water table for at least some part of the year, and obtains its flow from both surface runoff and ground water discharge.

Irreparable damage to the environment means any damage to the environment, in violation of the Act, the regulatory program, or this chapter, that cannot be corrected by actions of the applicant.

Knowing or *knowingly* means that a person who authorized, ordered, or carried out an act or omission knew or had reason to know that the act or omission would result in either a violation or a failure to abate or correct a violation.

Land use means specific uses or management-related activities, rather than the vegetation or cover of the land. Land uses may be identified in combination when joint or seasonal uses occur and may include land used for support facilities that are an integral part of the use. Changes of land use from one of the following categories to another shall be considered as a change to an alternative land use which is subject to approval by the regulatory authority.

(a) *Cropland.* Land used for the production of adapted crops for harvest, alone or in rotation with grasses and legumes, that include row crops, small grain crops, hay crops, nursery crops, orchard crops, and other similar crops.

(b) *Pastureland or land occasionally cut for hay.* Land used primarily for the long-term production of adapted, domesticated forage plants to be grazed by livestock or occasionally cut and cured for livestock feed.

(c) *Grazingland.* Land used for grasslands and forest lands where the indigenous vegetation is actively managed for grazing, browsing, or occasional hay production.

(d) *Forestry.* Land used or managed for the long-term production of wood, wood fiber, or wood-derived products.

(e) *Residential.* Land used for single- and multiple-family housing, mobile home parks, or other residential lodgings.

(f) *Industrial/Commercial.* Land used for—

(1) Extraction or transformation of materials for fabrication of products, wholesaling of products, or long-term storage of products. This includes all heavy and light manufacturing facilities.

(2) Retail or trade of goods or services, including hotels, motels, stores, restaurants, and other commercial establishments.

(g) *Recreation.* Land used for public or private leisure-time activities, including developed recreation facilities such as parks, camps, and amusement areas, as well as areas for less intensive uses such as hiking, canoeing, and other undeveloped recreational uses.

(h) *Fish and wildlife habitat.* Land dedicated wholly or partially to the production, protection, or management of species of fish or wildlife.

(i) *Developed water resources.* Land used for storing water for beneficial uses, such as stockponds, irrigation, fire protection, flood control, and water supply.

(j) *Undeveloped land or no current use or land management.* Land that is undeveloped or, if previously developed, land that has been allowed to return naturally to an undeveloped state or has been allowed to return to forest through natural succession.

Lands eligible for remining means those lands that would otherwise be eligible for expenditures under section 404 or under section 402(g)(4) of the Act.

Material damage, in the context of §§ 784.20 and 817.121 of this chapter, means:

(a) Any functional impairment of surface lands, features, structures or facilities;

(b) Any physical change that has a significant adverse impact on the affected land's capability to support any current or reasonably foreseeable uses or causes significant loss in production or income; or

(c) Any significant change in the condition, appearance or utility of any structure or facility from its pre-subsidence condition.

Materially damage the quantity or quality of water means, with respect to alluvial valley floors, to degrade or reduce by surface coal mining and reclamation operations the water quantity or quality supplied to the alluvial valley floor to the extent that resulting changes would signficantly decrease the capability of the alluvial valley floor to support farming.

MSHA means the Mine Safety and Health Administration.

Moist bulk density means the weight of soil (oven dry) per unit volume. Volume is measured when the soil is at field moisture capacity (1⁄3 bar moisture tension). Weight is determined after drying the soil at 105 °C.

Mulch means vegetation residues or other suitable materials that aid in soil stabilization and soil moisture conservation, thus providing micro-climatic conditions suitable for germination and growth.

Non-commercial building means any building, other than an occupied residential dwelling, that, at the time the subsidence occurs, is used on a regular or temporary basis as a public building or community or institutional building as those terms are defined in § 761.5 of this chapter. Any building used only for commercial agricultural, industrial, retail or other commercial enterprises is excluded.

Noxious plants means species that have been included on official State lists of noxious plants for the State in which the surface coal mining and reclamation operation occurs.

Occupied residential dwelling and structures related thereto means, for purposes of §§ 784.20 and 817.121, any building or other structure that, at the

time the subsidence occurs, is used either temporarily, occasionally, seasonally, or permanently for human habitation. This term also includes any building, structure or facility installed on, above or below, or a combination thereof, the land surface if that building, structure or facility is adjunct to or used in connection with an occupied residential dwelling. Examples of such structures include, but are not limited to, garages; storage sheds and barns; greenhouses and related buildings; utilities and cables; fences and other enclosures; retaining walls; paved or improved patios, walks and driveways; septic sewage treatment facilities; and lot drainage and lawn and garden irrigation systems. Any structure used only for commercial agricultural, industrial, retail or other commercial purposes is excluded.

Operator means any person engaged in coal mining who removes or intends to remove more than 250 tons of coal from the earth or from coal refuse piles by mining within 12 consecutive calendar months in any one location.

Other treatment facilities mean any chemical treatments, such as flocculation or neutralization, or mechanical structures, such as clarifiers or precipitators, that have a point source discharge and are utilized:

(a) To prevent additional contributions of dissolved or suspended solids to streamflow or runoff outside the permit area, or

(b) To comply with all applicable State and Federal water-quality laws and regulations.

Outslope means the face of the spoil or embankment sloping downward from the highest elevation to the toe.

Overburden means material of any nature, consolidated or unconsolidated, that overlies a coal deposit, excluding topsoil.

Own, owner, or *ownership,* as used in parts 773, 774, and 778 of this chapter (except when used in the context of ownership of real property), means being a sole proprietor or owning of record in excess of 50 percent of the voting securities or other instruments of ownership of an entity.

Perennial stream means a stream or part of a stream that flows continuously during all of the calendar year as a result of ground-water discharge or surface runoff. The term does not include *intermittent stream* or *ephemeral stream.*

Performance bond means a surety bond, collateral bond or self-bond or a combination thereof, by which a permittee assures faithful performance of all the requirements of the Act, this chapter, a State, Federal or Federal lands program, and the requirements of the permit and reclamation plan.

Permanent diversion means a diversion remaining after surface coal mining and reclamation operations are completed which has been approved for retention by the regulatory authority and other appropriate State and Federal agencies.

Permanent impoundment means an impoundment which is approved by the regulatory authority and, if required, by other State and Federal agencies for retention as part of the postmining land use.

Permit means a permit to conduct surface coal mining and reclamation operations issued by the State regulatory authority pursuant to a State program or by the Secretary pursuant to a Federal program. For purposes of the Federal lands program, permit means a permit issued by the State regulatory authority under a cooperative agreement or by OSM where there is no cooperative agreement.

Permit area means the area of land, indicated on the approved map submitted by the operator with his or her application, required to be covered by the operator's performance bond under subchapter J of this chapter and which shall include the area of land upon which the operator proposes to conduct surface coal mining and reclamation operations under the permit, including all disturbed areas; provided that areas adequately bonded under another valid permit may be excluded from the permit area.

Permittee means a person holding or required by the Act or this chapter to hold a permit to conduct surface coal mining and reclamation operations issued by a State regulatory authority pursuant to a State program, by the Director pursuant to a Federal program, by the Director pursuant to a Federal lands program, or, where a cooperative agreement pursuant to section 523 of the Act has been executed, by the Director and the State regulatory authority.

Precipitation event means a quantity of water resulting from drizzle, rain, snow, sleet, or hail in a limited period of time. It may be expressed in terms of recurrence interval. As used in these regulations, *precipitation event* also includes that quantity of water emanating from snow cover as snowmelt in a limited period of time.

Previously mined area means land affected by surface coal mining operations prior to August 3, 1977, that has not been reclaimed to the standards of 30 CFR chapter VII.

Prime farmland means those lands which are defined by the Secretary of Agriculture in 7 CFR part 657 (**Federal Register** Vol. 4 No. 21) and which have historically been used for cropland as that phrase is defined above.

Principal shareholder means any person who is the record or beneficial owner of 10 percent or more of any class of voting stock.

Property to be mined means both the surface estates and mineral estates within the permit area and the area covered by underground workings.

Rangeland means land on which the natural potential (climax) plant cover is principally native grasses, forbs, and shrubs valuable for forage. This land includes natural grasslands and savannahs, such as prairies, and juniper savannahs, such as brushlands. Except for brush control, management is primarily achieved by regulating the intensity of grazing and season of use.

Reasonably available spoil means spoil and suitable coal mine waste material generated by the remining operation or other spoil or suitable coal mine waste material located in the permit area that is accessible and available for use and that when rehandled will not cause a hazard to public safety or significant damage to the environment.

Recharge capacity means the ability of the soils and underlying materials to allow precipitation and runoff to infiltrate and reach the zone of saturation.

Reclamation means those actions taken to restore mined land as required by this chapter to a postmining land use approved by the regulatory authority.

Recurrence interval means the interval of time in which a precipitation event is expected to occur once, on the average. For example, the 10-year 24-hour precipitation event would be that 24-hour precipitation event expected to occur on the average once in 10 years.

Reference area means a land unit maintained under appropriate management for the purpose of measuring vegetation ground cover, productivity and plant species diversity that are produced naturally or by crop production methods approved by the regulatory authority. Reference areas must be representative of geology, soil, slope, and vegetation in the permit area.

Refuse pile means a surface deposit of coal mine waste that does not impound water, slurry, or other liquid or semi-liquid material.

Remining means conducting surface coal mining and reclamation operations which affect previously mined areas.

Renewable resource lands means aquifers and areas for the recharge of aquifers and other underground waters, areas for agricultural or silvicultural

production of food and fiber, and grazinglands.

Replacement of water supply means, with respect to protected water supplies contaminated, diminished, or interrupted by coal mining operations, provision of water supply on both a temporary and permanent basis equivalent to premining quantity and quality. Replacement includes provision of an equivalent water delivery system and payment of operation and maintenance costs in excess of customary and reasonable delivery costs for premining water supplies.

(a) Upon agreement by the permittee and the water supply owner, the obligation to pay such operation and maintenance costs may be satisfied by a one-time payment in an amount which covers the present worth of the increased annual operation and maintenance costs for a period agreed to by the permittee and the water supply owner.

(b) If the affected water supply was not needed for the land use in existence at the time of loss, contamination, or diminution, and if the supply is not needed to achieve the postmining land use, replacement requirements may be satisfied by demonstrating that a suitable alternative water source is available and could feasibly be developed. If the latter approach is selected, written concurrence must be obtained from the water supply owner.

Road means a surface right-of-way for purposes of travel by land vehicles used in surface coal mining and reclamation operations or coal exploration. A road consists of the entire area within the right-of-way, including the roadbed, shoulders, parking and side areas, approaches, structures, ditches, and surface. The term includes access and haulroads constructed, used, reconstructed, improved, or maintained for use in surface coal mining and reclamation operations or coal exploration, including use by coal hauling vehicles to and from transfer, processing, or storage areas. The term does not include ramps and routes of travel within the immediate mining area or within spoil or coal mine waste disposal areas.

Safety factor means the ratio of the available shear strength to the developed shear stress, or the ratio of the sum of the resisting forces to the sum of the loading or driving forces, as determined by accepted engineering practices.

Sedimentation pond means an impoundment used to remove solids from water in order to meet water quality standards or effluent limitations before the water leaves the permit area.

Significant, imminent environmental harm to land, air or water resources means—

(a) An environmental harm is an adverse impact on land, air, or water resources which resources include, but are not limited to, plant and animal life.

(b) An environmental harm is imminent, if a condition, practice, or violation exists which—

(1) Is causing such harm; or,

(2) May reasonably be expected to cause such harm at any time before the end of the reasonable abatement time that would be set under section 521(a)(3) of the Act.

(c) An environmental harm is significant if that harm is appreciable and not immediately reparable.

Siltation structure means a sedimentation pond, a series of sedimentation ponds, or other treatment facility.

Slope means average inclination of a surface, measured from the horizontal, generally expressed as the ratio of a unit of vertical distance to a given number of units of horizontal distance (*e.g.,* 1v: 5h). It may also be expressed as a percent or in degrees.

Soil horizons means contrasting layers of soil parallel or nearly parallel to the land surface. Soil horizons are differentiated on the basis of field characteristics and laboratory data. The four master soil horizons are—

(a) *A horizon.* The uppermost mineral layer, often called the surface soil. It is the part of the soil in which organic matter is most abundant, and leaching of soluble or suspended particles is typically the greatest;

(b) *E horizon.* The layer commonly near the surface below an A horizon and above a B horizon. An E horizon is most commonly differentiated from an overlying A horizon by lighter color and generally has measurably less organic matter than the A horizon. An E horizon is most commonly differentiated from an underlying B horizon in the same sequum by color of higher value or lower chroma, by coarser texture, or by a combination of theses properties;

(c) *B horizon.* The layer that typically is immediately beneath the E horizon and often called the subsoil. This middle layer commonly contains more clay, iron, or aluminum than the A, E, or C horizons; and

(d) *C horizon.* The deepest layer of soil profile. It consists of loose material or weathered rock that is relatively unaffected by biologic activity.

Soil survey means a field and other investigation, resulting in a map showing the geographic distribution of different kinds of soils and an accompanying report that describes, classifies, and interprets such soils for use. Soil surveys must meet the standards of the National Cooperative Soil Survey as incorporated by reference in 30 CFR 785.17(c)(1).

Special bituminous coal mines means those mines in existence on January 1, 1972, or mines adjoining or having a common boundary with those mines for which development began after August 3, 1977, that are located in the State of Wyoming and that are being mined or will be mined according to the following criteria:

(a) Surface mining takes place on a relatively limited site for an extended period of time. The surface opening of the excavation is at least the full size of the excavation and has a continuous border.

(b) Excavation of the mine pit follows a coal seam that inclines 15° or more from the horizontal, and as the excavation proceeds downward it expands laterally to maintain stability of the pitwall or as necessary to accommodate the orderly expansion of the total mining operation.

(c) The amount of material removed from the pit is large in comparison to the surface area disturbed.

(d) There is no practicable alternative to the deep open-pit method of mining the coal.

(e) There is no practicable way to reclaim the land as required in subchapter K.

Spoil means overburden that has been removed during surface coal mining operations.

Stabilize means to control movement of soil, spoil piles, or areas of disturbed earth by modifying the geometry of the mass, or by otherwise modifying physical or chemical properties, such as by providing a protective surface coating.

State program means a program established by a State and approved by the Secretary pursuant to section 503 of the Act to regulate surface coal mining and reclamation operations on non-Indian and non-Federal lands within that State, according to the requirements of the Act and this chapter. If a cooperative agreement under part 745 has been entered into, a State program may apply to Federal lands, in accordance with the terms of the cooperative agreement.

Steep slope means any slope of more than 20° or such lesser slope as may be designated by the regulatory authority after consideration of soil, climate, and other characteristics of a region or State.

Subirrigation means, with respect to alluvial valley floors, the supplying of water to plants from underneath or from a semisaturated or saturated subsurface

zone where water is available for use by vegetation.

Substantially disturb means, for purposes of coal exploration, to significantly impact land or water resources by blasting; by removal of vegetation, topsoil, or overburden; by construction of roads or other access routes; by placement of excavated earth or waste material on the natural land surface or by other such activities; or to remove more than 250 tons of coal.

Successor in interest means any person who succeeds to rights granted under a permit, by transfer, assignment, or sale of those rights.

Surface mining activities means those surface coal mining and reclamation operations incident to the extraction of coal from the earth by removing the materials over a coal seam, before recovering the coal, by auger coal mining, or by recovery of coal from a deposit that is not in its original geologic location.

Suspended solids or nonfilterable residue, expressed as milligrams per liter, means organic or inorganic materials carried or held in suspension in water which are retained by a standard glass fiber filter in the procedure outlined by the Environmental Protection Agency's regulations for waste water and analyses (40 CFR part 136).

Temporary diversion means a diversion of a stream or overland flow which is used during coal exploration or surface coal mining and reclamation operations and not approved by the regulatory authority to remain after reclamation as part of the approved postmining land use.

Temporary impoundment means an impoundment used during surface coal mining and reclamation operations, but not approved by the regulatory authority to remain as part of the approved postmining land use.

Topsoil means the A and E soil horizon layers of the four master soil horizons.

Toxic-forming materials means earth materials or wastes which, if acted upon by air, water, weathering, or microbiological processes, are likely to produce chemical or physical conditions in soils or water that are detrimental to biota or uses of water.

Toxic mine drainage means water that is discharged from active or abandoned mines or other areas affected by coal exploration or surface coal mining and reclamation operations, which contains a substance that through chemical action or physical effects is likely to kill, injure, or impair biota commonly present in the area that might be exposed to it.

Transfer, assignment, or sale of permit rights means a change of a permittee.

Unanticipated event or condition, as used in § 773.13 of this chapter, means an event or condition related to prior mining activity which arises from a surface coal mining and reclamation operation on lands eligible for remining and was not contemplated by the applicable permit.

Underground development waste means waste-rock mixtures of coal, shale, claystone, siltstone, sandstone, limestone, or related materials that are excavated, moved, and disposed of from underground workings in connection with underground mining activities.

Underground mining activities means a combination of—

(a) Surface operations incident to underground extraction of coal or in situ processing, such as construction, use, maintenance, and reclamation of roads, above-ground repair areas, storage areas, processing areas, shipping areas, areas upon which are sited support facilities including hoist and ventilating ducts, areas utilized for the disposal and storage of waste, and areas on which materials incident to underground mining operations are placed; and

(b) Underground operations such as underground construction, operation, and reclamation of shafts, adits, underground support facilities, in situ processing, and underground mining, hauling, storage, and blasting.

Undeveloped rangeland means, for purposes of alluvial valley floors, lands where the use is not specifically controlled and managed.

Upland areas means, with respect to alluvial valley floors, those geomorphic features located outside the floodplain and terrace complex, such as isolated higher terraces, alluvial fans, pediment surfaces, landslide deposits, and surfaces covered with residuum, mud flows or debris flows, as well as highland areas underlain by bedrock and covered by residual weathered material or debris deposited by sheetwash, rillwash, or windblown material.

Valley fill means a fill structure consisting of any material, other than organic material, that is placed in a valley where side slopes of the existing valley, measured at the steepest point, are greater than 20 degrees, or where the average slope of the profile of the valley from the toe of the fill to the top of the fill is greater than 10 degrees.

Violation, when used in the context of the permit application information or permit eligibility requirements of sections 507 and 510(c) of the Act and related regulations, means—

(1) A failure to comply with an applicable provision of a Federal or State law or regulation pertaining to air or water environmental protection, as evidenced by a written notification from a governmental entity to the responsible person; or

(2) A noncompliance for which OSM has provided one or more of the following types of notice or a State regulatory authority has provided equivalent notice under corresponding provisions of a State regulatory program—

(i) A notice of violation under § 843.12 of this chapter.

(ii) A cessation order under § 843.11 of this chapter.

(iii) A final order, bill, or demand letter pertaining to a delinquent civil penalty assessed under part 845 or 846 of this chapter.

(iv) A bill or demand letter pertaining to delinquent reclamation fees owed under part 870 of this chapter.

(v) A notice of bond forfeiture under § 800.50 of this chapter when—

(A) One or more violations upon which the forfeiture was based have not been abated or corrected;

(B) The amount forfeited and collected is insufficient for full reclamation under § 800.50(d)(1) of this chapter, the regulatory authority orders reimbursement for additional reclamation costs, and the person has not complied with the reimbursement order; or

(C) The site is covered by an alternative bonding system approved under § 800.11(e) of this chapter, that system requires reimbursement of any reclamation costs incurred by the system above those covered by any site-specific bond, and the person has not complied with the reimbursement requirement and paid any associated penalties.

Violation, failure or refusal, for purposes of parts 724 and 846 of this chapter, means—

(1) A failure to comply with a condition of a Federally-issued permit or of any other permit that OSM is directly enforcing under section 502 or 521 of the Act or the regulations implementing those sections; or

(2) A failure or refusal to comply with any order issued under section 521 of the Act, or any order incorporated in a final decision issued by the Secretary under the Act, except an order incorporated in a decision issued under section 518(b) or section 703 of the Act.

Violation notice means any written notification from a regulatory authority or other governmental entity, as specified in the definition of *violation* in this section.

Water table means the upper surface of a zone of saturation, where the body of ground water is not confined by an overlying impermeable zone.

Willful or *willfully* means that a person who authorized, ordered or carried out an act or omission that resulted in either a violation or the failure to abate or correct a violation acted—

(1) Intentionally, voluntarily, or consciously; and

(2) With intentional disregard or plain indifference to legal requirements.

§ 701.11 Applicability.

(a) Any person who conducts surface coal mining operations on non-Indian or non-Federal lands on or after 8 months from the date of approval of a State program or implementation of a Federal program shall have a permit issued pursuant to the applicable State or Federal program. However, under conditions specified in 30 CFR 773.4(b) of this chapter, a person may continue operations under a previously issued permit after 8 months from the date of approval of a State program or implementation of a Federal program.

(b) Any person who conducts surface coal mining operations on Federal lands on or after 8 months from the date of approval of a State program or implementation of a Federal program for the State in which the Federal lands are located shall have a permit issued pursuant to part 740 of this chapter. However, under conditions specified in § 740.13(a)(3) of this chapter, a person may continue such operations under a mining plan previously approved pursuant to 43 CFR part 3480 or a permit issued by the State under the interim State program after 8 months after the date of approval of a State program or implementation of a Federal program.

(c) Any person who conducts surface coal mining operations on Indian lands on or after eight months from the effective date of the Federal program for Indian lands shall have a permit issued pursuant to part 750 of this chapter. However, a person who is authorized to conduct surface coal mining operations may continue to conduct those operations beyond eight months from the effective date of the Federal program for Indian lands if the following conditions are met:

(1) An application for a permit to conduct those operations has been made to the Director within two months after the effective date of the Federal program for Indian lands and the initial administrative decision on that application has not been issued; and

(2) Those operations are conducted in compliance with all terms and conditions of the existing authorization to mine, the requirements of the Act, 25 CFR part 216, and the requirements of all applicable mineral agreements, leases or licenses.

(d) The requirements of subchapter K of this chapter shall be effective and shall apply to each surface coal mining and reclamation operation for which the surface coal mining operation is required to obtain a permit under the Act, on the earliest date upon which the Act and this chapter require a permit to be obtained, except as provided in paragraph (e) of this section.

(e)(1) Each structure used in connection with or to facilitate a coal exploration or surface coal mining and reclamation operation shall comply with the performance standards and the design requirements of subchapter K of this chapter, except that—

(i) An existing structure which meets the performance standards of subchapter K of this chapter but does not meet the design requirements of subchapter K of this chapter may be exempted from meeting those design requirements by the regulatory authority. The regulatory authority may grant this exemption only as part of the permit application process after obtaining the information required by 30 CFR 780.12 or 784.12 and after making the findings required in 30 CFR 773.15;

(ii) If the performance standard of subchapter B of this chapter is at least as stringent as the comparable performance standard of subchapter K of this chapter, an existing structure which meets the performance standards of subchapter B of this chapter may be exempted by the regulatory authority from meeting the design requirements of subchapter K of this chapter. The regulatory authority may grant this exemption only as part of the permit application process after obtaining the information required by 30 CFR 780.12 or 784.12 and after making the findings required in 30 CFR 773.15;

(iii) An existing structure which meets a performance standard of subchapter B of this chapter which is less stringent than the comparable performance standards of subchapter K of this chapter or which does not meet a performance standard of subchapter K of this chapter, for which there was no equivalent performance standards in subchapter B of this chapter, shall be modified or reconstructed to meet the performance and design standard of subchapter K of this chapter pursuant to a compliance plan approved by the regulatory authority only as part of the permit application as required in 30 CFR 780.12 or 784.12 and according to the findings required by 30 CFR 773.15;

(iv) An existing structure which does not meet the performance standards of subchapter B of this chapter and which the applicant proposes to use in connection with or to facilitate the coal exploration or surface coal mining and reclamation operation shall be modified or reconstructed to meet the performance and design standards of subchapter K prior to issuance of the permit.

(2) The exemptions provided in paragraphs (e)(1)(i) and (e)(1)(ii) of this section shall not apply to—

(i) The requirements for existing and new coal mine waste disposal facilities; and

(ii) The requirements to restore the approximate original contour of the land.

(f)(1) Any person conducting coal exploration on non-Federal and non-Indian lands on or after the date on which a State program is approved or a Federal program implemented, shall either file a notice of intention to explore or obtain approval of the regulatory authority, as required by 30 CFR part 772.

(2) Coal exploration performance standards in 30 CFR part 815 shall apply to coal exploration on non-Federal and non-Indian lands which substantially disturbs the natural land surface 2 months after approval of a State program or implementation of a Federal program.

■ 3. Revise part 773 to read as follows:

PART 773—REQUIREMENTS FOR PERMITS AND PERMIT PROCESSING

Sec.

773.1 Scope and purpose.
773.3 Information collection.
773.4 Requirements to obtain permits.
773.5 Regulatory coordination with requirements under other laws.
773.6 Public participation in permit processing.
773.7 Review of permit applications.
773.8 General provisions for review of permit application information and entry of information into AVS.
773.9 Review of applicant and operator information.
773.10 Review of permit history.
773.11 Review of compliance history.
773.12 Permit eligibility determination.
773.13 Unanticipated events or conditions at remaining sites.
773.14 Eligibility for provisionally issued permits.
773.15 Written findings for permit application approval.
773.16 Performance bond submittal.
773.17 Permit conditions.
773.19 Permit issuance and right of renewal.

773.21 Initial review and finding requirements for improvidently issued permits.
773.22 Notice requirements for improvidently issued permits.
773.23 Suspension or rescission requirements for improvidently issued permits.
773.25 Who may challenge ownership or control listings and findings.
773.26 How to challenge an ownership or control listing or finding.
773.27 Burden of proof for ownership or control challenges.
773.28 Written agency decision on challenges to ownership or control listings or findings.

Authority: 30 U.S.C. 1201 *et seq.,* 16 U.S.C. 470 *et seq.,* 16 U.S.C. 661 *et seq.,* 16 U.S.C. 703 *et seq.,* 16 U.S.C. 668a *et seq.,* 16 U.S.C. 469 *et seq.,* and 16 U.S.C. 1531 *et seq.*

§ 773.1 Scope and purpose.

This part provides minimum requirements for permits and permit processing and covers obtaining and reviewing permits; coordinating with other laws; public participation; permit decision and notification; permit conditions; and permit term and right of renewal.

§ 773.3 Information collection.

The collections of information contained in part 773 have been approved by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0115. The information collected will be used by the regulatory authority in processing surface coal mining permit applications. Persons intending to conduct surface coal mining operations must respond to obtain a benefit. A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Response is required to obtain a benefit in accordance with SMCRA. Send comments regarding burden estimates or any other aspect of this collection of information, including suggestions for reducing the burden, to the Office of Surface Mining Reclamation and Enforcement, Information Collection Clearance Officer, Room 202—SIB, 1951 Constitution Avenue NW., Washington, DC 20240.

§ 773.4 Requirements to obtain permits.

(a) *All operations.* On and after 8 months from the effective date of a permanent regulatory program within a State, no person shall engage in or carry out any surface coal mining operations, unless such person has first obtained a permit issued by the regulatory authority except as provided for in paragraph (b) of this section. A permittee need not renew the permit if no surface coal mining operations will be conducted under the permit and solely reclamation activities remain to be done. Obligations established under a permit continue until completion of surface coal mining and reclamation operations, regardless of whether the authorization to conduct surface coal mining operations has expired or has been terminated, revoked, or suspended.

(b) *Continuation of initial program operations.* (1) If a State program receives final disapproval under part 732 of this chapter, including judicial review of the disapproval, existing surface coal mining and reclamation operations may continue pursuant to the provisions of subchapter B of this chapter and section 502 of the Act until promulgation of a complete Federal program for the State. During this period, no new permits for surface coal mining and reclamation operations shall be issued by the State. Permits that lapse during this period may continue in full force and effect within the specified permit area until promulgation of a Federal program for the State.

(2) Except for coal preparation plants separately authorized to operate under 30 CFR 785.21(e), a person conducting surface coal mining operations, under a permit issued or amended by the regulatory authority in accordance with the requirements of section 502 of the Act, may conduct such operations beyond the period prescribed in paragraph (a) of this section if—

(i) Not later than 2 months following the effective date of a permanent regulatory program, regardless of litigation contesting that program, an application for a permanent regulatory program permit is filed for any operation to be conducted after the expiration of 8 months from such effective date in accordance with the provisions of the regulatory program;

(ii) The regulatory authority has not yet rendered an initial administrative decision approving or disapproving the permit; and

(iii) The surface coal mining and reclamation operation is conducted in compliance with the requirements of the Act, subchapter B of this chapter, applicable State statutes and regulations, and all terms and conditions of the initial program authorization or permit.

(3) No new initial program permits may be issued after the effective date of a State program unless the application was received prior to such date.

(c) *Continued operations under Federal program permits.* (1) A permit issued by the Director pursuant to a Federal program for a State shall be valid under any superseding State program approved by the Secretary.

(2) The Federal permittee shall have the right to apply to the State regulatory authority for a State permit to supersede the Federal permit.

(3) The State regulatory authority may review a permit issued pursuant to the superseded Federal program to determine that the requirements of the Act and the approved State program are not violated by the Federal permit, and to the extent that the approved State program contains additional requirements not contained in the Federal program for the State, the State regulatory authority shall—

(i) Inform the permittee in writing;

(ii) Provide the permittee an opportunity for a hearing;

(iii) Provide the permittee a reasonable opportunity to resubmit the permit application in whole or in part, as appropriate; and

(iv) Provide the permittee a reasonable time to conform ongoing surface coal mining and reclamation operations to the requirements of the State program.

(d) *Continued operations under State program permits.* (1) A permit issued pursuant to a previously approved or conditionally approved State program shall be valid under a superseding Federal program.

(2) Immediately following promulgation of a Federal program, the Director shall review the permits issued under the previously approved State program to determine that the requirements of the Act, this chapter, and the Federal program are not violated. If the Director determines that a permit was granted contrary to the requirments of this Act, the Director shall—

(i) Inform the permittee in writing;

(ii) Provide the permittee an opportunity for a hearing;

(iii) Provide the permittee a reasonable opportunity to resubmit the permit application in whole or in part, as appropriate; and

(iv) Provide the permittee a reasonable time to conform ongoing surface coal mining and reclamation operations to the requirements of the Federal program, as prescribed in the Federal program for the State.

§ 773.5 Regulatory coordination with requirements under other laws.

Each regulatory program shall, to avoid duplication, provide for the coordination of review and issuance of permits for surface coal mining and reclamation operations with applicable requirements of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531

et seq.); the Fish and Wildlife Coordination Act, as amended (16 U.S.C. 661 *et seq.*); the Migratory Bird Treaty Act of 1918, as amended (16 U.S.C. 703 *et seq.*); The National Historic Preservation Act of 1966, as amended (16 U.S.C. 470 *et seq.*); the Bald Eagle Protection Act, as amended (16 U.S.C. 668a); for Federal programs only, the Archeological and Historic Preservation Act of 1974 (16 U.S.C. 469 *et seq.*); and the Archaeological Resources Protection Act of 1979 (16 U.S.C. 470aa *et seq.*) where Federal and Indian lands covered by that Act are involved.

§ 773.6 Public participation in permit processing.

(a) *Filing and public notice.* (1) Upon submission of an administratively complete application, an applicant for a permit, significant revision of a permit under § 774.13, or renewal of a permit under § 774.15, shall place an advertisement in a local newspaper of general circulation in the locality of the proposed surface coal mining and reclamation operation at least once a week for four consecutive weeks. A copy of the advertisement as it will appear in the newspaper shall be submitted to the regulatory authority. The advertisement shall contain, at a minimum, the following:

(i) The name and business address of the applicant.

(ii) A map or description which clearly shows or describes the precise location and boundaries of the proposed permit area and is sufficient to enable local residents to readily identify the proposed permit area. It may include towns, bodies of water, local landmarks, and any other information which would identify the location. If a map is used, it shall indicate the north direction.

(iii) The location where a copy of the application is available for public inspection.

(iv) The name and address of the regulatory authority where written comments, objections, or requests for informal conferences on the application may be submitted under paragraphs (b) and (c) of this section.

(v) If an applicant seeks a permit to mine within 100 feet of the outside right-of-way of a public road or to relocate or close a public road, except where public notice and hearing have previously been provided for this particular part of the road in accordance with § 761.14 of this chapter; a concise statement describing the public road, the particular part to be relocated or closed, and the approximate timing and duration of the relocation or closing.

(vi) If the application includes a request for an experimental practice under § 785.13, a statement indicating that an experimental practice is requested and identifying the regulatory provisions for which a variance is requested.

(2) The applicant shall make an application for a permit, significant revision under § 774.13, or renewal of a permit under § 774.15 available for the public to inspect and copy by filing a full copy of the application with the recorder at the courthouse of the county where the mining is proposed to occur, or an accessible public office approved by the regulatory authority. This copy of the application need not include confidential information exempt from disclosure under paragraph (d) of this section. The application required by this paragraph shall be filed by the first date of newspaper advertisement of the application. The applicant shall file any changes to the application with the public office at the same time the change is submitted to the regulatory authority.

(3) Upon receipt of an administratively complete application for a permit, a significant revision to a permit under § 774.13, or a renewal of a permit under § 774.15, the regulatory authority shall issue written notification indicating the applicant's intention to mine the described tract of land, the application number or other identifier, the location where the copy of the application may be inspected, and the location where comments on the application may be submitted. The notification shall be sent to—

(i) Local governmental agencies with jurisdiction over or an interest in the area of the proposed surface coal mining and reclamation operation, including but not limited to planning agencies, sewage and water treatment authorities, water companies; and

(ii) All Federal or State governmental agencies with authority to issue permits and licenses applicable to the proposed surface coal mining and reclamation operation and which are part of the permit coordinating process developed in accordance with section 503(a)(6) or section 504(h) of the Act, or § 773.5; or those agencies with an interest in the proposed operation, including the U.S. Department of Agriculture Soil Conservation Service district office, the local U.S. Army Corps of Engineers district engineer, the National Park Service, State and Federal fish and wildlife agencies, and the historic preservation officer.

(b) *Comments and objections on permit applications.* (1) Within a reasonable time established by the regulatory authority, written comments or objections on an application for a permit, significant revision to a permit under § 774.13, or renewal of a permit under § 774.15 may be submitted to the regulatory authority by public entities notified under paragraph (a)(3) of this section with respect to the effects of the proposed mining operations on the environment within their areas of responsibility.

(2) Written objections to an application for a permit, significant revision to a permit under § 774.13, or renewal of a permit under § 774.15 may be submitted to the regulatory authority by any person having an interest which is or may be adversely affected by the decision on the application, or by an officer or head of any Federal, State, or local government agency or authority, within 30 days after the last publication of the newspaper notice required by paragraph (a) of this section.

(3) The regulatory authority shall upon receipt of such written comments or objections—

(i) Transmit a copy of the comments or objections to the applicants; and

(ii) File a copy for public inspection at the same public office where the application is filed.

(c) *Informal conferences.* (1) Any person having an interest which is or may be adversely affected by the decision on the application, or an officer or a head of a Federal, State, or local government agency, may request in writing that the regulatory authority hold an informal conference on the application for a permit, significant revision to a permit under § 774.13, or renewal of a permit under § 774.15. The request shall—

(i) Briefly summarize the issues to be raised by the requestor at the conference;

(ii) State whether the requestor desires to have the conference conducted in the locality of the proposed operation; and

(iii) Be filed with the regulatory authority no later than 30 days after the last publication of the newspaper advertisement required under paragraph (a) of this section.

(2) Except as provided in paragraph (c)(3) of this section, if an informal conference is requested in accordance with paragraph (c)(1) of this section, the regulatory authority shall hold an informal conference within a reasonable time following the receipt of the request. The informal conference shall be conducted as follows:

(i) If requested under paragraph (c)(1)(ii) of this section, it shall be held in the locality of the proposed surface coal mining and reclamation operation.

(ii) The date, time, and location of the informal conference shall be sent to the applicant and other parties to the conference and advertised by the regulatory authority in a newspaper of general circulation in the locality of the proposed surface coal mining and reclamation operation at least 2 weeks before the scheduled conference.

(iii) If requested in writing by a conference requestor at a reasonable time before the conference, the regulatory authority may arrange with the applicant to grant parties to the conference access to the proposed permit area and, to the extent that the applicant has the right to grant access to it, to the adjacent area prior to the established date of the conference for the purpose of gathering information relevant to the conference.

(iv) The requirements of section 5 of the Administrative Procedure Act, as amended (5 U.S.C. 554), shall not apply to the conduct of the informal conference. The conference shall be conducted by a representative of the regulatory authority, who may accept oral or written statements and any other relevant information from any party to the conference. An electronic or stenographic record shall be made of the conference, unless waived by all the parties. The record shall be maintained and shall be accessible to the parties of the conference until final release of the applicant's performance bond or other equivalent guarantee pursuant to subchapter J of this chapter.

(3) If all parties requesting the informal conference withdraw their request before the conference is held, the informal conference may be canceled.

(4) Informal conferences held in accordance with this section may be used by the regulatory authority as the public hearing required under § 761.14(c) of this chapter on proposed relocation or closing of public roads.

(d) *Public availability of permit applications*—(1) *General availability.* Except as provided in paragraph (d)(2) or (d)(3) of this section, all applications for permits; revisions; renewals; and transfers, assignments or sales of permit rights on file with the regulatory authority shall be available, at reasonable times, for public inspection and copying.

(2) *Limited availability.* Except as provided in paragraph (d)(3)(i) of this section, information pertaining to coal seams, test borings, core samplings, or soil samples in an application shall be made available to any person with an interest which is or may be adversely affected. Information subject to this paragraph shall be made available to the public when such information is required to be on public file pursuant to State law.

(3) *Confidentiality.* The regulatory authority shall provide procedures, including notice and opportunity to be heard for persons both seeking and opposing disclosure, to ensure confidentiality of qualified confidential information, which shall be clearly identified by the applicant and submitted separately from the remainder of the application. Confidential information is limited to—

(i) Information that pertains only to the analysis of the chemical and physical properties of the coal to be mined, except information on components of such coal which are potentially toxic in the environment;

(ii) Information required under section 508 of the Act that is not on public file pursuant to State law and that the applicant has requested in writing to be held confidential;

(iii) Information on the nature and location of archeological resources on public land and Indian land as required under the Archeological Resources Protection Act of 1979 (Pub. L. 96–95, 93 Stat. 721, 16 U.S.C. 470).

§ 773.7 Review of permit applications.

(a) The regulatory authority will review an application for a permit, revision, or renewal; written comments and objections submitted; and records of any informal conference or hearing held on the application and issue a written decision, within a reasonable time set by the regulatory authority, either granting, requiring modification of, or denying the application. If an informal conference is held under § 773.6(c) of this part, the decision will be made within 60 days of the close of the conference.

(b) The applicant for a permit or revision of a permit shall have the burden of establishing that his application is in compliance with all the requirements of the regulatory program.

§ 773.8 General provisions for review of permit application information and entry of information into AVS.

(a) Based on an administratively complete application, we, the regulatory authority, must undertake the reviews required under §§ 773.9 through 773.11 of this part.

(b) We will enter into AVS—

(1) The information you are required to submit under §§ 778.11 and 778.12(c) of this subchapter.

(2) The information you submit under § 778.14 of this subchapter pertaining to violations which are unabated or uncorrected after the abatement or correction period has expired.

(c) We must update the information referred to in paragraph (b) of this section in AVS upon our verification of any additional information submitted or discovered during our permit application review.

§ 773.9 Review of applicant and operator information.

(a) We, the regulatory authority, will rely upon the information that you, the applicant, are required to submit under § 778.11 of this subchapter, information from AVS, and any other available information, to review your and your operator's organizational structure and ownership or control relationships.

(b) We must conduct the review required under paragraph (a) of this section before making a permit eligibility determination under § 773.12 of this part.

§ 773.10 Review of permit history.

(a) We, the regulatory authority, will rely upon the permit history information you, the applicant, submit under § 778.12 of this subchapter, information from AVS, and any other available information to review your and your operator's permit histories. We must conduct this review before making a permit eligibility determination under § 773.12 of this part.

(b) We will also determine if you or your operator have previous mining experience.

(c) If you or your operator do not have any previous mining experience, we may conduct an additional review under § 774.11(f) of this subchapter. The purpose of this review will be to determine if someone else with mining experience controls the mining operation.

§ 773.11 Review of compliance history.

(a) We, the regulatory authority, will rely upon the violation information supplied by you, the applicant, under § 778.14 of this subchapter, a report from AVS, and any other available information to review histories of compliance with the Act or the applicable State regulatory program, and any other applicable air or water quality laws, for—

(1) You;

(2) Your operator;

(3) Operations you own or control; and

(4) Operations your operator owns or controls.

(b) We must conduct the review required under paragraph (a) of this section before making a permit eligibility determination under § 773.12 of this part.

§ 773.12 Permit eligibility determination.

Based on the reviews required under §§ 773.9 through 773.11 of this part, we, the regulatory authority, will determine whether you, the applicant, are eligible for a permit under section 510(c) of the Act.

(a) Except as provided in §§ 773.13 and 773.14 of this part, you are not eligible for a permit if we find that any surface coal mining operation that—

(1) You directly own or control has an unabated or uncorrected violation; or

(2) You or your operator indirectly control has an unabated or uncorrected violation and your control was established or the violation was cited after November 2, 1988.

(b) We will not issue you a permit if you or your operator are permanently ineligible to receive a permit under § 774.11(c) of this subchapter.

(c) After we approve your permit under § 773.15 of this part, we will not issue the permit until you comply with the information update and certification requirement of § 778.9(d) of this subchapter. After you complete that requirement, we will again request a compliance history report from AVS to determine if there are any unabated or uncorrected violations which affect your permit eligibility under paragraphs (a) and (b) of this section. We will request this report no more than five business days before permit issuance under § 773.19 of this part.

(d) If you are ineligible for a permit under this section, we will send you written notification of our decision. The notice will tell you why you are ineligible and include notice of your appeal rights under part 775 of this subchapter and 43 CFR 4.1360 through 4.1369.

§ 773.13 Unanticipated events or conditions at remining sites.

(a) You, the applicant, are eligible for a permit under § 773.12 if an unabated violation—

(1) Occurred after October 24, 1992; and

(2) Resulted from an unanticipated event or condition at a surface coal mining and reclamation operation on lands that are eligible for remining under a permit that was held by the person applying for the new permit.

(b) For permits issued under § 785.25 of this subchapter, an event or condition is presumed to be unanticipated for the purpose of this section if it—

(1) Arose after permit issuance;

(2) Was related to prior mining; and

(3) Was not identified in the permit application.

§ 773.14 Eligibility for provisionally issued permits.

(a) This section applies to you if you are an applicant who owns or controls a surface coal mining and reclamation operation with—

(1) A notice of violation issued under § 843.12 of this chapter or the State regulatory program equivalent for which the abatement period has not yet expired; or

(2) A violation that is unabated or uncorrected beyond the abatement or correction period.

(b) We, the regulatory authority, will find you eligible for a provisionally issued permit under this section if you demonstrate that one or more of the following circumstances exists with respect to all violations listed in paragraph (a) of this section—

(1) For violations meeting the criteria of paragraph (a)(1) of this section, you certify that the violation is being abated to the satisfaction of the regulatory authority with jurisdiction over the violation, and we have no evidence to the contrary.

(2) As applicable, you, your operator, and operations that you or your operator own or control are in compliance with the terms of any abatement plan (or, for delinquent fees or penalties, a payment schedule) approved by the agency with jurisdiction over the violation.

(3) You are pursuing a good faith—

(i) Challenge to all pertinent ownership or control listings or findings under §§ 773.25 through 773.27 of this part; or

(ii) Administrative or judicial appeal of all pertinent ownership or control listings or findings, unless there is an initial judicial decision affirming the listing or finding and that decision remains in force.

(4) The violation is the subject of a good faith administrative or judicial appeal contesting the validity of the violation, unless there is an initial judicial decision affirming the violation and that decision remains in force.

(c) We will consider a provisionally issued permit to be improvidently issued, and we must immediately initiate procedures under §§ 773.22 and 773.23 of this part to suspend or rescind that permit, if—

(1) Violations included in paragraph (b)(1) of this section are not abated within the specified abatement period;

(2) You, your operator, or operations that you or your operator own or control do not comply with the terms of an abatement plan or payment schedule mentioned in paragraph (b)(2) of this section;

(3) In the absence of a request for judicial review, the disposition of a challenge and any subsequent administrative review referenced in paragraph (b)(3) or (4) of this section affirms the validity of the violation or the ownership or control listing or finding; or

(4) The initial judicial review decision referenced in paragraph (b)(3)(ii) or (4) of this section affirms the validity of the violation or the ownership or control listing or finding.

§ 773.15 Written findings for permit application approval.

No permit application or application for a significant revision of a permit shall be approved unless the application affirmatively demonstrates and the regulatory authority finds, in writing, on the basis of information set forth in the application or from information otherwise available that is documented in the approval, the following:

(a) The application is accurate and complete and the applicant has complied with all requirements of the Act and the regulatory program.

(b) The applicant has demonstrated that reclamation as required by the Act and the regulatory program can be accomplished under the reclamation plan contained in the permit application.

(c) The proposed permit area is—

(1) Not within an area under study or administrative proceedings under a petition, filed pursuant to parts 764 and 769 of this chapter, to have an area designated as unsuitable for surface coal mining operations, unless the applicant demonstrates that before January 4, 1977, he has made substantial legal and financial commitments in relation to the operation covered by the permit application; or

(2) Not within an area designated as unsuitable for surface coal mining operations under parts 762 and 764 or 769 of this chapter or within an area subject to the prohibitions of § 761.11 of this chapter.

(d) For mining operations where the private mineral estate to be mined has been severed from the private surface estate, the applicant has submitted to the regulatory authority the documentation required under § 778.15(b) of this chapter.

(e) The regulatory authority has made an assessment of the probable cumulative impacts of all anticipated coal mining on the hydrologic balance in the cumulative impact area and has determined that the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area.

(f) The applicant has demonstrated that any existing structure will comply

with § 701.11(d), and the applicable performance standards of subchapter B or K of this chapter.

(g) The applicant has paid all reclamation fees from previous and existing operations as required by subchapter R of this chapter.

(h) The applicant has satisfied the applicable requirements of part 785 of this chapter.

(i) The applicant has, if applicable, satisfied the requirements for approval of a long-term, intensive agricultural postmining land use, in accordance with the requirements of § 816.111(d) or § 817.111(d).

(j) The operation would not affect the continued existence of endangered or threatened species or result in destruction or adverse modification of their critical habitats, as determined under the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*).

(k) The regulatory authority has taken into account the effect of the proposed permitting action on properties listed on and eligible for listing on the National Register of Historic Places. This finding may be supported in part by inclusion of appropriate permit conditions or changes in the operation plan protecting historic resources, or a documented decision that the regulatory authority has determined that no additional protection measures are necessary.

(l) For a proposed remining operation where the applicant intends to reclaim in accordance with the requirements of § 816.106 or § 817.106 of this chapter, the site of the operation is a *previously mined area* as defined in § 701.5 of this chapter.

(m) For permits to be issued under § 785.25 of this chapter, the permit application must contain:

(i) Lands eligible for remining;

(ii) An identification of the potential environmental and safety problems related to prior mining activity which could reasonably be anticipated to occur at the site; and

(iii) Mitigation plans to sufficiently address these potential environmental and safety problems so that reclamation as required by the applicable requirements of the regulatory program can be accomplished.

(n) The applicant is eligible to receive a permit, based on the reviews under §§ 773.7 through 773.14 of this part.

§ 773.16 Performance bond submittal.

If the regulatory authority decides to approve the application, it shall require that the applicant file the performance bond or provide other equivalent guarantee before the permit is issued, in accordance with the provisions of subchapter J of this chapter.

§ 773.17 Permit conditions.

Each permit issued by the regulatory authority shall be subject to the following conditions:

(a) The permittee shall conduct surface coal mining and reclamation operations only on those lands that are specifically designated as the permit area on the maps submitted with the application and authorized for the term of the permit and that are subject to the performance bond or other equivalent guarantee in effect pursuant to subchapter J of this chapter.

(b) The permittee shall conduct all surface coal mining and reclamation operations only as described in the approved application, except to the extent that the regulatory authority otherwise directs in the permit.

(c) The permittee shall comply with the terms and conditions of the permit, all applicable performance standards of the Act, and the requirements of the regulatory program.

(d) Without advance notice, delay, or a search warrant, upon presentation of appropriate credentials, the permittee shall allow the authorized representatives of the Secretary and the State regulatory authority to—

(1) Have the right of entry provided for in §§ 842.13 and 840.12 of this chapter; and

(2) Be accompanied by private persons for the purpose of conducting an inspection in accordance with parts 840 and 842, when the inspection is in response to an alleged violation reported to the regulatory authority by the private person.

(e) The permittee shall take all possible steps to minimize any adverse impact to the environment or public health and safety resulting from noncompliance with any term or condition or the permit, including, but not limited to—

(1) Any accelerated or additional monitoring necessary to determine the nature and extent of noncompliance and the results of the noncompliance;

(2) Immediate implementation of measures necessary to comply; and

(3) Warning, as soon as possible after learning of such noncompliance, any person whose health and safety is in imminent danger due to the noncompliance.

(f) As applicable, the permittee shall comply with § 701.11(d) and subchapter B or K of this chapter for compliance, modification, or abandonment of existing structures.

(g) The operator shall pay all reclamation fees required by subchapter R of this chapter for coal produced under the permit for sale, transfer or use, in the manner required by that subchapter.

§ 773.19 Permit issuance and right of renewal.

(a) *Decision.* If the application is approved, the permit shall be issued upon submittal of a performance bond in accordance with subchapter J. If the application is disapproved, specific reasons therefore shall be set forth in the notification required by paragraph (b) of this section.

(b) *Notification.* The regulatory authority shall issue written notification of the decision to the following persons and entities:

(1) The applicant, each person who files comments or objections to the permit application, and each party to an informal conference.

(2) The local governmental officials in the local political subdivision in which the land to be affected is located within 10 days after the issuance of a permit, including a description of the location of the land.

(3) If the regulatory authority is a State agency, the local OSM office.

(c) *Permit term.* Each permit shall be issued for a fixed term of 5 years or less, unless the requirements of § 778.17 of this chapter are met.

(d) *Right of renewal.* Permit application approval shall apply to those lands that are specifically designated as the permit area on the maps submitted with the application and for which the application is complete and accurate. Any valid permit issued in accordance with paragraph (a) of this section shall carry with it the right of successive renewal, within the approved boundaries of the existing permit, upon expiration of the term of the permit, in accordance with § 774.15.

(e) *Initiation of operations.* (1) A permit shall terminate if the permittee has not begun the surface coal mining and reclamation operation covered by the permit within 3 years of the issuance of the permit.

(2) The regulatory authority may grant a reasonable extension of time for commencement of these operations, upon receipt of a written statement showing that such an extension of time is necessary, if—

(i) Litigation precludes the commencement or threatens substantial economic loss to the permittee; or

(ii) There are conditions beyond the control and without the fault or negligence of the permittee.

(3) With respect to coal to be mined for use in a synthetic fuel facility or specified major electric generating facility, the permittee shall be deemed

to have commenced surface mining operations at the time that the construction of the synthetic fuel or generating facility is initiated.

(4) Extensions of time granted by the regulatory authority under this paragraph shall be specifically set forth in the permit, and notice of the extension shall be made public by the regulatory authority.

§ 773.21 Initial review and finding requirements for improvidently issued permits.

(a) If we, the regulatory authority, have reason to believe that we improvidently issued a permit to you, the permittee, we must review the circumstances under which the permit was issued. We will make a preliminary finding that your permit was improvidently issued if, under the permit eligibility criteria of the applicable regulations implementing section 510(c) of the Act in effect at the time of permit issuance, your permit should not have been issued because you or your operator owned or controlled a surface coal mining and reclamation operation with an unabated or uncorrected violation.

(b) We will make a finding under paragraph (a) of this section only if you or your operator—

(1) Continue to own or control the operation with the unabated or uncorrected violation;

(2) The violation remains unabated or uncorrected; and

(3) The violation would cause you to be ineligible under the permit eligibility criteria in our current regulations.

(c) When we make a preliminary finding under paragraph (a) of this section, we must serve you with a written notice of the preliminary finding, which must be based on evidence sufficient to establish a *prima facie* case that your permit was improvidently issued.

(d) Within 30 days of receiving a notice under paragraph (c) of this section, you may challenge the preliminary finding by providing us with evidence as to why the permit was not improvidently issued under the criteria in paragraphs (a) and (b) of this section.

(e) The provisions of §§ 773.25 through 773.27 of this part apply when a challenge under paragraph (d) of this section concerns a preliminary finding under paragraphs (a) and (b)(1) of this section that you or your operator currently own or control, or owned or controlled, a surface coal mining operation.

§ 773.22 Notice requirements for improvidently issued permits.

(a) We, the regulatory authority, must serve you, the permittee, with a written notice of proposed suspension or rescission, together with a statement of the reasons for the proposed suspension or rescission, if—

(1) After considering any evidence submitted under § 773.21(d) of this part, we find that a permit was improvidently issued under the criteria in § 773.21 paragraphs (a) and (b) of § 773.21 of this part; or

(2) Your permit was provisionally issued under § 773.14(b) of this part and one or more of the conditions in §§ 773.14(c)(1) through (4) exists.

(b) If we propose to suspend your permit, we will provide 60 days notice.

(c) If we propose to rescind your permit, we will provide 120 days notice.

(d) If you wish to appeal the notice, you must exhaust administrative remedies under the procedures at 43 CFR 4.1370 through 4.1377 (when OSM is the regulatory authority) or under the State regulatory program equivalent (when a State is the regulatory authority).

(e) After we serve you with a notice of proposed suspension or rescission under this section, we will take action under § 773.23 of this part.

(f) The regulations for service at § 843.14 of this chapter, or the State regulatory program equivalent, will govern service under this section.

(g) The times specified in paragraphs (b) and (c) of this section will apply unless you obtain temporary relief under the procedures at 43 CFR 4.1376 or the State regulatory program equivalent.

§ 773.23 Suspension or rescission requirements for improvidently issued permits.

(a) Except as provided in paragraph (b) of this section, we, the regulatory authority, must suspend or rescind your permit upon expiration of the time specified in § 773.22(b) or (c) of this part unless you submit evidence and we find that—

(1) The violation has been abated or corrected to the satisfaction of the agency with jurisdiction over the violation;

(2) You or your operator no longer own or control the relevant operation;

(3) Our finding for suspension or rescission was in error;

(4) The violation is the subject of a good faith administrative or judicial appeal (unless there is an initial judicial decision affirming the violation, and that decision remains in force);

(5) The violation is the subject of an abatement plan or payment schedule that is being met to the satisfaction of the agency with jurisdiction over the violation; or

(6) You are pursuing a good faith challenge or administrative or judicial appeal of the relevant ownership or control listing or finding (unless there is an initial judicial decision affirming the listing or finding, and that decision remains in force).

(b) If you have requested administrative review of a notice of proposed suspension or rescission under § 773.22(e) of this part, we will not suspend or rescind your permit unless and until the Office of Hearings and Appeals or its State counterpart affirms our finding that your permit was improvidently issued.

(c) When we suspend or rescind your permit under this section, we must—

(1) Issue you a written notice requiring you to cease all surface coal mining operations under the permit; and

(2) Post the notice at our office closest to the permit area.

(d) If we suspend or rescind your permit under this section, you may request administrative review of the notice under the procedures at 43 CFR 4.1370 through 4.1377 (when OSM is the regulatory authority) or under the State regulatory program equivalent (when a State is the regulatory authority). Alternatively, you may seek judicial review of the notice.

§ 773.25 Who may challenge ownership or control listings and findings.

You may challenge a listing or finding of ownership or control using the provisions under §§ 773.26 and 773.27 of this part if you are—

(a) Listed in a permit application or AVS as an owner or controller of an entire surface coal mining operation, or any portion or aspect thereof:

(b) Found to be an owner or controller of an entire surface coal mining operation, or any portion or aspect thereof, under §§ 773.21 or 774.11(g) of this subchapter; or

(c) An applicant or permittee affected by an ownership or control listing or finding.

§ 773.26 How to challenge an ownership or control listing or finding.

This section applies to you if you challenge an ownership or control listing or finding.

(a) To challenge an ownership or control listing or finding, you must submit a written explanation of the basis for the challenge, along with any evidence or explanatory materials you wish to provide under § 773.27(b) of this part, to the regulatory authority, as identified in the following table.

If the challenge concerns . . .	Then you must submit a written explanation to . . .
(1) a pending State or Federal permit application	the regulatory authority with jurisdiction over the application.
(2) your ownership or control of a surface coal mining operation, and you are not currently seeking a permit.	the regulatory authority with jurisdiction over the surface coal mining operation.

(b) The provisions of this section and of §§ 773.27 and 773.28 of this part apply only to challenges to ownership or control listings or findings. You may not use these provisions to challenge your liability or responsibility under any other provision of the Act or its implementing regulations.

(c) When the challenge concerns a violation under the jurisdiction of a different regulatory authority, the regulatory authority with jurisdiction over the permit application or permit must consult the regulatory authority with jurisdiction over the violation and the AVS Office to obtain additional information.

(d) A regulatory authority responsible for deciding a challenge under paragraph (a) of this section may request an investigation by the AVS Office.

(e) At any time, you, a person listed in AVS as an owner or controller of a surface coal mining operation, may request an informal explanation from the AVS Office as to the reason you are shown in AVS in an ownership or control capacity. Within 14 days of your request, the AVS Office will provide a response describing why you are listed in AVS.

§ 773.27 Burden of proof for ownership or control challenges.

This section applies to you if you challenge an ownership or control listing or finding.

(a) When you challenge a listing of ownership or control, or a finding of ownership or control made under § 774.11(g) of this subchapter, you must prove by a preponderance of the evidence that you either—

(1) Do not own or control the entire surface coal mining operation or relevant portion or aspect thereof; or

(2) Did not own or control the entire surface coal mining operation or relevant portion or aspect thereof during the relevant time period.

(b) In meeting your burden of proof, you must present reliable, credible, and substantial evidence and any explanatory materials to the regulatory authority. The materials presented in connection with your challenge will become part of the permit file, an investigation file, or another public file. If you request, we will hold as confidential any information you submit under this paragraph which is not required to be made available to the public under § 842.16 of this chapter (when OSM is the regulatory authority) or under § 840.14 of this chapter (when a State is the regulatory authority).

(c) Materials you may submit in response to the requirements of paragraph (b) of this section include, but are not limited to—

(1) Notarized affidavits containing specific facts concerning the duties that you performed for the relevant operation, the beginning and ending dates of your ownership or control of the operation, and the nature and details of any transaction creating or severing your ownership or control of the operation.

(2) Certified copies of corporate minutes, stock ledgers, contracts, purchase and sale agreements, leases, correspondence, or other relevant company records.

(3) Certified copies of documents filed with or issued by any State, municipal, or Federal governmental agency.

(4) An opinion of counsel, when supported by—

(i) Evidentiary materials;

(ii) A statement by counsel that he or she is qualified to render the opinion; and

(iii) A statement that counsel has personally and diligently investigated the facts of the matter.

§ 773.28 Written agency decision on challenges to ownership or control listings or findings.

(a) Within 60 days of receipt of your challenge under § 773.26(a) of this part, we, the regulatory authority identified under § 773.26(a) of this part, will review and investigate the evidence and explanatory materials you submit and any other reasonably available information bearing on your challenge and issue a written decision. Our decision must state whether you own or control the relevant surface coal mining operation, or owned or controlled the operation, during the relevant time period.

(b) We will promptly provide you with a copy of our decision by either—

(1) Certified mail, return receipt requested; or

(2) Any means consistent with the rules governing service of a summons and complaint under Rule 4 of the Federal Rules of Civil Procedure, or its State regulatory program counterparts.

(c) Service of the decision on you is complete upon delivery and is not incomplete if you refuse to accept delivery.

(d) We will post all decisions made under this section on AVS.

(e) Any person who receives a written decision under this section, and who wishes to appeal that decision, must exhaust administrative remedies under the procedures at 43 CFR 4.1380 through 4.1387 or, when a State is the regulatory authority, the State regulatory program counterparts, before seeking judicial review.

(f) Following our written decision or any decision by a reviewing administrative or judicial tribunal, we must review the information in AVS to determine if it is consistent with the decision. If it is not, we must promptly revise the information in AVS to reflect the decision.

■ 4. Revise part 774 to read as follows:

PART 774—REVISION; RENEWAL; TRANSFER, ASSIGNMENT, OR SALE OF PERMIT RIGHTS; POST-PERMIT ISSUANCE REQUIREMENTS; AND OTHER ACTIONS BASED ON OWNERSHIP, CONTROL, AND VIOLATION INFORMATION

Sec.

774.1 Scope and purpose.
774.9 Information collection.
774.10 Regulatory authority review of permits.
774.11 Post-permit issuance requirements for regulatory authorities and other actions based on ownership, control, and violation information.
774.12 Post-permit issuance information requirements for permittees.
774.13 Permit revisions.
774.15 Permit renewals.
774.17 Transfer, assignment, or sale of permit rights.

Authority: 30 U.S.C. 1201 *et seq.*

§ 774.1 Scope and purpose.

This part provides requirements for revision; renewal; transfer, assignment, or sale of permit rights; entering and updating information in AVS following the issuance of a permit; post-permit issuance requirements for regulatory authorities and permittees; and other actions based on ownership, control, and violation information.

§ 774.9 Information collection.

(a) The collections of information contained in part 774 have been approved by the Office of Management

and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0116. Regulatory authorities will use this information to:

(1) Determine if the applicant meets the requirements for revision; renewal; transfer, assignment, or sale of permit rights;

(2) Enter and update information in AVS following the issuance of a permit; and

(3) Fulfill post-permit issuance requirements and other obligations based on ownership, control, and violation information.

(b) A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Response is required to obtain a benefit in accordance with SMCRA. Send comments regarding burden estimates or any other aspect of this collection of information, including suggestions for reducing the burden, to the Office of Surface Mining Reclamation and Enforcement, Information Collection Clearance Officer, Room 202–SIB, 1951 Constitution Avenue NW., Washington, DC 20240.

§ 774.10 Regulatory authority review of permits.

(a) The regulatory authority shall review each permit issued and outstanding under an approved regulatory program during the term of the permit. This review shall occur not later than the middle of each permit term and as follows:

(1) Permits with a term longer than 5 years shall be reviewed no less frequently than the permit midterm or every 5 years, whichever is more frequent.

(2) Permits with variances granted in accordance with § 785.14 of this chapter (mountaintop removal) and § 785.18 of this chapter (variance for delay in contemporaneous reclamation requirement in combined surface and underground mining operations) of this chapter shall be reviewed no later than 3 years from the date of issuance of the permit unless, for variances issued in accordance with § 785.14 of this chapter, the permittee affirmatively demonstrates that the proposed development is proceeding in accordance with the terms of the permit.

(3) Permits containing experimental practices issued in accordance with § 785.13 of this chapter and permits with a variance from approximate original contour requirements in accordance with § 785.16 shall be reviewed as set forth in the permit or at least every 2½ years from the date of issuance as required by the regulatory authority, in accordance with §§ 785.13(g) and 785.16(c) of this chapter, respectively.

(b) After the review required by paragraph (a) of this section, or at any time, the regulatory authority may, by order, require reasonable revision of a permit in accordance with § 774.13 to ensure compliance with the Act and the regulatory program.

(c) Any order of the regulatory authority requiring revision of a permit shall be based upon written findings and shall be subject to the provisions for administrative and judicial review in part 775 of this chapter. Copies of the order shall be sent to the permittee.

(d) Permits may be suspended or revoked in accordance with subchapter L of this chapter.

§ 774.11 Post-permit issuance requirements for regulatory authorities and other actions based on ownership, control, and violation information.

(a) For the purposes of future permit eligibility determinations and enforcement actions, we, the regulatory authority, must enter into AVS the data shown in the following table—

We must enter into AVS all . . .	Within 30 days after . . .
(1) permit records	the permit is issued or subsequent changes made.
(2) unabated or uncorrected violations	the abatement or correction period for a violation expires.
(3) changes to information initially required to be provided by an applicant under 30 CFR 778.11.	receiving notice of a change.
(4) changes in violation status	abatement, correction, or termination of a violation, or a decision from an administrative or judicial tribunal.

(b) If, at any time, we discover that any person owns or controls an operation with an unabated or uncorrected violation, we will determine whether enforcement action is appropriate under part 843, 846 or 847 of this chapter. We must enter the results of each enforcement action, including administrative and judicial decisions, into AVS.

(c) We must serve a preliminary finding of permanent permit ineligibility under section 510(c) of the Act on you, an applicant or operator, if the criteria in paragraphs (c)(1) and (c)(2) are met. In making a finding under this paragraph, we will only consider control relationships and violations which would make, or would have made, you ineligible for a permit under §§ 773.12(a) and (b) of this subchapter. We must make a preliminary finding of permanent permit ineligibility if we find that—

(1) You control or have controlled surface coal mining and reclamation operations with a demonstrated pattern of willful violations under section 510(c) of the Act; and

(2) The violations are of such nature and duration with such resulting irreparable damage to the environment as to indicate your intent not to comply with the Act, its implementing regulations, the regulatory program, or your permit.

(d) You may request a hearing on a preliminary finding of permanent permit ineligibility under 43 CFR 4.1350 through 4.1356.

(e) Entry into AVS.

(1) If you do not request a hearing, and the time for seeking a hearing has expired, we will enter our finding into AVS.

(2) If you request a hearing, we will enter our finding into AVS only if that finding is upheld on administrative appeal.

(f) At any time, we may identify any person who owns or controls an entire surface coal mining operation or any relevant portion or aspect thereof. If we identify such a person, we must issue a written preliminary finding to the person and the applicant or permittee describing the nature and extent of ownership or control. Our written preliminary finding must be based on evidence sufficient to establish a prima facie case of ownership or control.

(g) After we issue a written preliminary finding under paragraph (f) of this section, we will allow you, the person subject to the preliminary finding, 30 days in which to submit any information tending to demonstrate your lack of ownership or control. If, after reviewing any information you submit, we are persuaded that you are not an owner or controller, we will

serve you a written notice to that effect. If, after reviewing any information you submit, we still find that you are an owner or controller, or if you do not submit any information within the 30-day period, we will issue a written finding and enter our finding into AVS.

(h) If we identify you as an owner or controller under paragraph (g) of this section, you may challenge the finding using the provisions of §§ 773.25, 773.26, and 773.27 of this subchapter.

§ 774.12 Post-permit issuance information requirements for permittees.

(a) Within 30 days after the issuance of a cessation order under § 843.11 of this chapter, or its State regulatory program equivalent, you, the permittee, must provide or update all the information required under § 778.11 of this subchapter.

(b) You do not have to submit information under paragraph (a) of this section if a court of competent jurisdiction grants a stay of the cessation order and the stay remains in effect.

(c) Within 60 days of any addition, departure, or change in position of any person identified in § 778.11(c) of this subchapter, you must provide—

(1) The information required under § 778.11(d) of this subchapter; and

(2) The date of any departure.

§ 774.13 Permit revisions.

(a) *General.* During the term of a permit, the permittee may submit an application to the regulatory authority for a revision of the permit.

(b) *Application requirements and procedures.* the regulatory authority shall establish—

(1) A time period within which the regulatory authority will approve or disapprove an application for a permit revision; and

(2) Guidelines establishing the scale or extent of revisions for which all the permit application information requirements and procedures of this subchapter, including notice, public participation, and notice of decision requirements of §§ 773.6, 773.19(b) (1) and (3), and 778.21, shall apply. Such requirements and procedures shall apply at a minimum to all significant permit revisions.

(c) *Criteria for approval.* No application for a permit revision shall be approved unless the application demonstrates and the regulatory authority finds that reclamation as required by the Act and the regulatory program can be accomplished, applicable requirements under § 773.15 which are pertinent to the revision are met, and the application for a revision complies with all requirements of the Act and the regulatory program.

(d) *Request to change permit boundary.* Any extensions to the area covered by the permit, except incidental boundary revisions, shall be made by application for a new permit.

§ 774.15 Permit renewals.

(a) *General.* A valid permit, issued pursuant to an approved regulatory program, shall carry with it the right of successive renewal, within the approved boundaries of the existing permit, upon expiration of the term of the permit.

(b) *Application requirements and procedures.* (1) An application for renewal of a permit shall be filed with the regulatory authority at least 120 days before expiration of the existing permit term.

(2) An application for renewal of a permit shall be in the form required by the regulatory authority and shall include at a minimum—

(i) The name and address of the permittee, the term of the renewal requested, and the permit number or other identifier;

(ii) Evidence that a liability insurance policy or adequate self-insurance under § 800.60 of this chapter will be provided by the applicant for the proposed period of renewal;

(iii) Evidence that the performance bond in effect for the operation will continue in full force and effect for any renewal requested, as well as any additional bond required by the regulatory authorities pursuant to subchapter J of this chapter;

(iv) A copy of the proposed newspaper notice and proof of publication of same, as required by § 778.21 of this chapter; and

(v) Additional revised or updated information required by the regulatory authority.

(3) Applications for renewal shall be subject to the requirements of public notification and public participation contained in §§ 773.6 and 773.19(b) of this chapter.

(4) If an application for renewal includes any proposed revisions to the permit, such revisions shall be identified and subject to the requirements of § 774.13.

(c) *Approval process*—(1) *Criteria for approval.* The regulatory authority shall approve a complete and accurate application for permit renewal, unless it finds, in writing that—

(i) The terms and conditions of the existing permit are not being satisfactorily met;

(ii) The present surface coal mining and reclamation operations are not in compliance with the environmental protection standards of the Act and the regulatory program;

(iii) The requested renewal substantially jeopardizes the operator's continuing ability to comply with the Act and the regulatory program on existing permit areas;

(iv) The operator has not provided evidence of having liability insurance or self-insurance as required in § 800.60 of this chapter;

(v) The operator has not provided evidence that any performance bond required to be in effect for the operation will continue in full force and effect for the proposed period of renewal, as well as any additional bond the regulatory authority might require pursuant to subchapter J of this chapter; or

(vi) Additional revised or updated information required by the regulatory authority has not been provided by the applicant.

(2) *Burden of proof.* In the determination of whether to approve or deny a renewal of a permit, the burden of proof shall be on the opponents of renewal.

(3) *Alluvial valley floor variance.* If the surface coal mining and reclamation operation authorized by the original permit was not subject to the standards contained in sections 510(b)(5) (A) and (B) of the Act and § 785.19 of this chapter, because the permittee complied with the exceptions in the proviso to section 510(b)(5) of the Act, the portion of the application for renewal of the permit that addresses new land areas previously identified in the reclamation plan for the original permit shall not be subject to the standards contained in sections 510(b)(5) (A) and (B) of the Act and § 785.19 of this chapter.

(d) *Renewal term.* Any permit renewal shall be for a term not to exceed the period of the original permit established under § 773.19.

(e) *Notice of decision.* The regulatory authority shall send copies of its decision to the applicant, to each person who filed comments or objections on the renewal, to each party to any informal conference held on the permit renewal, and to OSM if OSM is not the regulatory authority.

(f) *Administrative and judicial review.* Any person having an interest which is or may be adversely affected by the decision of the regulatory authority shall have the right to administrative and judicial review set forth in part 775 of this chapter.

§ 774.17 Transfer, assignment, or sale of permit rights.

(a) *General.* No transfer, assignment, or sale of rights granted by a permit shall be made without the prior written approval of the regulatory authority. At its discretion, the regulatory authority

may allow a prospective successor in interest to engage in surface coal mining and reclamation operations under the permit during the pendency of an application for approval of a transfer, assignment, or sale of permit rights submitted under paragraph (b) of this section, provided that the prospective successor in interest can demonstrate to the satisfaction of the regulatory authority that sufficient bond coverage will remain in place.

(b) *Application requirements.* An applicant for approval of the transfer, assignment, or sale of permit rights shall—

(1) Provide the regulatory authority with an application for approval of the proposed transfer, assignment, or sale including—

(i) The name and address of the existing permittee and permit number or other identifier;

(ii) A brief description of the proposed action requiring approval; and

(iii) The legal, financial, compliance, and related information required by part 778 of this chapter for the applicant for approval of the transfer, assignment, or sale of permit rights.

(2) Advertise the filing of the application in a newspaper of general circulation in the locality of the operations involved, indicating the name and address of the applicant, the permittee, the permit number or other identifier, the geographic location of the permit, and the address to which written comments may be sent;

(3) Obtain appropriate performance bond coverage in an amount sufficient to cover the proposed operations, as required under subchapter J of this chapter.

(c) *Public participation.* Any person having an interest which is or may be adversely affected by a decision on the transfer, assignment, or sale of permit rights, including an official of any Federal, State, or local government agency, may submit written comments on the application to the regulatory authority within a time specified by the regulatory authority.

(d) *Criteria for approval.* The regulatory authority may allow a permittee to transfer, assign, or sell permit rights to a successor, if it finds in writing that the successor—

(1) Is eligible to receive a permit in accordance with §§ 773.12 and 773.14 of this chapter;

(2) Has submitted a performance bond or other guarantee, or obtained the bond coverage of the original permittee, as required by subchapter J of this chapter; and

(3) Meets any other requirements specified by the regulatory authority.

(e) *Notification.* (1) The regulatory authority shall notify the permittee, the successor, commenters, and OSM, if OSM is not the regulatory authority, of its findings.

(2) The successor shall immediately provide notice to the regulatory authority of the consummation of the transfer, assignment, or sale of permit rights.

(f) *Continued operation under existing permit.* The successor in interest shall assume the liability and reclamation responsibilities of the existing permit and shall conduct the surface coal mining and reclamation operations in full compliance with the Act, the regulatory program, and the terms and conditions of the existing permit, unless the applicant has obtained a new or revised permit as provided in this subchapter.

■ 5. Revise part 777 to read as follows:

PART 777—GENERAL CONTENT REQUIREMENTS FOR PERMIT APPLICATIONS

Sec.

777.1 Scope.
777.10 Information collection.
777.11 Format and contents.
777.13 Reporting of technical data.
777.14 Maps and plans: General requirements.
777.15 Completeness.
777.17 Permit fees.

Authority: Pub. L. 95–87, 30 U.S.C. 1201 *et seq.*

§ 777.1 Scope.

This part provides minimum requirements concerning the general content for permit applications under a State or Federal program.

§ 777.10 Information collection.

The information collection requirements contained in part 777 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1029–0032. The information is being collected to meet the requirements of sections 507, 508, and 510(b) of the Act. It provides general requirements for permit application format and contents. The obligation to respond is mandatory.

§ 777.11 Format and contents.

(a) An application shall—

(1) Contain current information, as required by this subchapter;

(2) Be clear and concise; and

(3) Be filed in the format required by the regulatory authority.

(b) If used in the application, referenced materials shall either be provided to the regulatory authority by the applicant or be readily available to the regulatory authority. If provided, relevant portions of referenced published materials shall be presented briefly and concisely in the application by photocopying or abstracting and with explicit citations.

(c) Applications for permits; revisions; renewals; or transfers, sales or assignments of permit rights shall be verified under oath, by a responsible official of the applicant, that the information contained in the application is true and correct to the best of the official's information and belief.

§ 777.13 Reporting of technical data.

(a) All technical data submitted in the application shall be accompanied by the names of persons or organizations that collected and analyzed the data, dates of the collection and analysis of the data, and descriptions of the methodology used to collect and analyze the data.

(b) Technical analyses shall be planned by or under the direction of a professional qualified in the subject to be analyzed.

§ 777.14 Maps and plans: General requirements.

(a) Maps submitted with applications shall be presented in a consolidated format, to the extent possible, and shall include all the types of information that are set forth on topographic maps of the U.S. Geological Survey of the 1:24,000 scale series. Maps of the permit area shall be at a scale of 1:6,000 or larger. Maps of the adjacent area shall clearly show the lands and waters within those areas and be in a scale determined by the regulatory authority, but in no event smaller than 1:24,000.

(b) All maps and plans submitted with the application shall distinguish among each of the phases during which surface coal mining operations were or will be conducted at any place within the life of operations. At a minimum, distinctions shall be clearly shown among those portions of the life of operations in which surface coal mining operations occurred—

(1) Prior to August 3, 1977;

(2) After August 3, 1977, and prior to either—

(i) May 3, 1978; or

(ii) In the case of an applicant or operator which obtained a small operator's exemption in accordance with § 710.12 of this chapter, January 1, 1979;

(3) After May 3, 1978 (or January 1, 1979, for persons who received a small operator's exemption) and prior to the approval of the applicable regulatory program;

(4) After the estimated date of issuance of a permit by the regulatory

authority under the approved regulatory program.

§ 777.15 Completeness.

An application for a permit to conduct surface coal mining and reclamation operations shall be complete and shall include at a minimum—

(a) For surface mining activities, the information required under parts 778, 779, and 780 of this chapter, and, as applicable to the operation, part 785 of this chapter; and

(b) For underground mining activities, the information required under parts 778, 783, and 784 of this chapter, and, as applicable to the operation, part 785 of this chapter.

§ 777.17 Permit fees.

An application for a surface coal mining and reclamation permit shall be accompanied by a fee determined by the regulatory authority. The fee may be less than, but shall not exceed, the actual or anticipated cost of reviewing, administering, and enforcing the permit. The regulatory authority may develop procedures to allow the fee to be paid over the term of the permit.

■ 6. Revise part 779 to read as follows:

PART 779—SURFACE MINING PERMIT APPLICATIONS—MINIMUM REQUIREMENTS FOR INFORMATION ON ENVIRONMENTAL RESOURCES

Sec.

779.1 Scope.
779.2 Objectives.
779.4 Responsibilities.
779.10 Information collection.
779.11 General requirements.
779.12 General environmental resources information.
779.18 Climatological information.
779.19 Vegetation information.
779.20 [Reserved]
779.21 Soil resources information.
779.24 Maps: General requirements.
779.25 Cross sections, maps, and plans.

Authority: 30 U.S.C. 1201 *et seq.;* sec. 115 of Pub. L. 98–146, (30 U.S.C. 1257), and 16 U.S.C. 470 *et seq.*

§ 779.1 Scope.

This part establishes the minimum requirements for the Secretary's approval of regulatory program provisions for the environmental resources contents of applications for surface mining activities.

§ 779.2 Objectives.

The objectives of this part are to ensure that each application provides to the regulatory authority a complete and accurate description of the environmental resources that may be impacted or affected by proposed surface mining activities.

§ 779.4 Responsibilities.

(a) It is the responsibility of the applicant to provide, except where specifically exempted in this part, all information required by this part in the application.

(b) It is the responsibility of State and Federal government agencies to provide information for applications as specifically required by this part.

§ 779.10 Information collection.

The information collection requirements contained in 30 CFR 779.11, 779.12, 779.13, 779.14, 779.15, 779.16, 779.17, 779.18, 779.19, 779.21, 779.22, 779.24, 779.25 and 779.27 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1029–0035. The information is being collected to meet the requirements of sections 507 and 508 of Pub. L. 95–87, which require the applicant to present an adequate description of the existing pre-mining environmental resources within and around the proposed mine plan area. This information will be used by the regulatory authority to determine whether the applicant can comply with the performance standards of the regulations for surface coal mining and whether reclamation of these areas is feasible. The obligation to respond is mandatory.

§ 779.11 General requirements.

Each permit application shall include a description of the existing, premining environmental resources within the proposed permit area and adjacent areas that may be affected or impacted by the proposed surface mining activities.

§ 779.12 General environmental resources information.

Each application shall describe and identify—

(a) The lands subject to surface coal mining operations over the estimated life of those operations and the size, sequence, and timing of the subareas for which it is anticipated that individual permits for mining will be sought; and

(b)(1) The nature of cultural, historic and archeological resources listed or eligible for listing on the National Register of Historic Places and known archeological sites within the proposed permit and adjacent areas. The description shall be based on all available information, including, but not limited to, information from the State Historic Preservation Officer and from local archeological, historical, and cultural preservation agencies.

(2) The regulatory authority may require the applicant to identify and evaluate important historic and archeological resources that may be eligible for listing on the National Register of Historic Places, through

(i) Collection of additional information,

(ii) Conduct of field investigations, or

(iii) Other appropriate analyses.

§ 779.18 Climatological information.

(a) When requested by the regulatory authority, the application shall contain a statement of the climatological factors that are representative of the proposed permit area, including:

(1) The average seasonal precipitation;

(2) The average direction and velocity of prevailing winds; and

(3) Seasonal temperature ranges.

(b) The regulatory authority may request such additional data as deemed necessary to ensure compliance with the requirements of this subchapter.

§ 779.19 Vegetation information.

(a) The permit application shall, if required by the regulatory authority, contain a map that delineates existing vegetative types and a description of the plant communities within the proposed permit area and within any proposed reference area. This description shall include information adequate to predict the potential for reestablishing vegetation.

(b) When a map or aerial photograph is required, sufficient adjacent areas shall be included to allow evaluation of vegetation as important habitat for fish and wildlife for those species of fish and wildlife identified under 30 CFR 780.16.

§ 779.20 [Reserved]

§ 779.21 Soil resources information.

(a) The applicant shall provide adequate soil survey information of the permit area consisting of the following:

(1) A map delineating different soils;

(2) Soil identification;

(3) Soil description; and

(4) Present and potential productivity of existing soils.

(b) Where the applicant proposes to use selected overburden materials as a supplement or substitute for topsoil, the application shall provide results of the analyses, trials, and tests required under 30 CFR 816.22.

§ 779.24 Maps: General requirements.

The permit application shall include maps showing—

(a) All boundaries of lands and names of present owners of record of those lands, both surface and subsurface, included in or contiguous to the permit area;

(b) The boundaries of land within the proposed permit area upon which the applicant has the legal right to enter and begin surface mining activities;

(c) The boundaries of all areas proposed to be affected over the estimated total life of the proposed surface mining activities, with a description of size, sequence, and timing of the mining of sub-areas for which it is anticipated that additional permits will be sought;

(d) The location of all buildings on and within 1,000 feet of the proposed permit area, with identification of the current use of the buildings;

(e) The location of surface and sub-surface man-made features within, passing through, or passing over the proposed permit area, including, but not limited to major electric transmission lines, pipelines, and agricultural drainage tile fields;

(f) The location and boundaries of any proposed reference areas for determining the success of revegetation;

(g) The locations of water supply intakes for current users of surface water flowing into, out of, and within a hydrologic area defined by the regulatory authority, and those surface waters which will receive discharges from affected areas in the proposed permit area;

(h) Each public road located in or within 100 feet of the proposed permit area;

(i) The boundaries of any public park and locations of any cultural or historical resources listed or eligible for listing in the National Register of Historic Places and known archeological sites within the permit and adjacent areas.

(j) Each cemetery that is located in or within 100 feet of the proposed permit area.

(k) Any land within the proposed permit area which is within the boundaries of any units of the National System of Trails or the Wild and Scenic Rivers System, including study rivers designated under section 5(a) of the Wild and Scenic Rivers Act; and

(l) Other relevant information required by the regulatory authority.

§ 779.25 Cross sections, maps, and plans.

(a) The application shall include cross sections, maps, and plans showing—

(1) Elevations and locations of test borings and core samplings;

(2) Elevations and locations of monitoring stations used to gather data for water quality and quantity, fish and wildlife, and air quality, if required, in preparation of the application;

(3) Nature, depth, and thickness of the coal seams to be mined, any coal or rider seams above the seam to be mined, each stratum of the overburden, and the stratum immediately below the lowest coal seam to be mined;

(4) All coal crop lines and the strike and dip of the coal to be mined within the proposed permit area;

(5) Location and extent of known workings of active, inactive, or abandoned underground mines, including mine openings to the surface within the proposed permit and adjacent areas;

(6) Location and extent of sub-surface water, if encountered, within the proposed permit or adjacent areas;

(7) Location of surface water bodies such as streams, lakes, ponds, springs, constructed or natural drains, and irrigation ditches within the proposed permit and adjacent areas;

(8) Location and extent of existing or previously surface-mined areas within the proposed permit area;

(9) Location and dimensions of existing areas of spoil, waste, and non-coal waste disposal, dams, embankments, other impoundments, and water treatment and air pollution control facilities within the proposed permit area;

(10) Location, and depth if available, of gas and oil wells within the proposed permit area and water wells in the permit area and adjacent area;

(b) Cross sections, maps and plans included in a permit application as required by this section shall be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such cross sections, maps and plans, a qualified, registered, professional, land surveyor, with assistance from experts in related fields such as landscape architecture, and shall be updated as required by the regulatory authority.

■ 7. Revise part 780 to read as follows:

PART 780—SURFACE MINING PERMIT APPLICATIONS—MINIMUM REQUIREMENT FOR RECLAMATION AND OPERATION PLAN

Sec.

780.1 Scope.
780.2 Objectives.
780.4 Responsibilities.
780.10 Information collection.
780.11 Operation plan: General requirements.
780.12 Operation plan: Existing structures.
780.13 Operation plan: Blasting.
780.14 Operation plan: Maps and plans.
780.15 Air pollution control plan.
780.16 Fish and wildlife information.
780.18 Reclamation plan: General requirements.
780.21 Hydrologic information.
780.22 Geologic information.
780.23 Reclamation plan: Land use information.
780.25 Reclamation plan: Siltation structures, impoundments, banks, dams, and embankments.
780.27 Reclamation plan: Surface mining near underground mining.
780.28 [Reserved]
780.29 Diversions.
780.31 Protection of publicly owned parks and historic places.
780.33 Relocation or use of public roads.
780.35 Disposal of excess spoil.
780.37 Road systems.
780.38 Support facilities.

Authority: 30 U.S.C. 1201 *et seq.* and 16 U.S.C. 470 *et seq.*

§ 780.1 Scope.

This part provides the minimum requirements for the Secretary's approval of regulatory program provisions for the mining operations and reclamation plan portions of applications for permits for surface mining activities, except to the extent that different requirements for those plans are established under 30 CFR part 785.

§ 780.2 Objectives.

The objectives of this part are to insure that the regulatory authority is provided with comprehensive and reliable information on proposed surface mining activities, and to ensure that those activities are allowed to be conducted only in compliance with the Act, this chapter, and the regulatory program.

§ 780.4 Responsibilities.

(a) It is the responsibility of the applicant to provide to the regulatory authority all of the information required by this part, except where specifically exempted in this part.

(b) It is the responsibility of State and Federal governmental agencies to provide information to the regulatory authority where specifically required in this part.

§ 780.10 Information collection.

(a) The collections of information contained in part 780 have been approved by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0036. The information will be used by the regulatory authority to determine whether the applicant can comply with the applicable performance and environmental standards in Public Law 95–87. Response is required to obtain a benefit.

(b) Public Reporting burden for this information is estimated to average 28 hours per response, including the time

for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to the Information Collection Clearance Officer, Office of Surface Mining Reclamation and Enforcement, 1951 Constitution Ave. NW., Room 203, Washington, DC 20240; and the Office of Management and Budget, Paperwork Reduction Project 1029–0036, Washington, DC 20503.

§ 780.11 Operation plan: General requirements.

Each application shall contain a description of the mining operations proposed to be conducted during the life of the mine within the proposed permit area, including, at a minimum, the following:

(a) A narrative description of the type and method of coal mining procedures and proposed engineering techniques, anticipated annual and total production of coal, by tonnage, and the major equipment to be used for all aspects of those operations; and

(b) A narrative explaining the construction, modification, use, maintenance, and removal of the following facilities (unless retention of such facilities is necessary for postmining land use as specified in § 816.133):

(1) Dams, embankments, and other impoundments;

(2) Overburden and topsoil handling and storage areas and structures;

(3) Coal removal, handling, storage, cleaning, and transportation areas and structures;

(4) Spoil, coal processing waste, and non-coal waste removal, handling, storage, transportation, and disposal areas and structures;

(5) Mine facilities; and

(6) Water and air pollution control facilities.

§ 780.12 Operation plan: Existing structures.

(a) Each application shall contain a description of each existing structure proposed to be used in connection with or to facilitate the surface coal mining and reclamation operation. The description shall include—

(1) Location;

(2) Plans of the structure which describe its current condition;

(3) Approximate dates on which construction of the existing structure was begun and completed; and

(4) A showing, including relevant monitoring data or other evidence, whether the structure meets the performance standards of subchapter K (Permanent Program Standards) of this chapter or, if the structure does not meet the performance standards of subchapter K of this chapter, a showing whether the structure meets the performance standards of subchapter B (Interim Program Standards) of this chapter.

(b) Each application shall contain a compliance plan for each existing structure proposed to be modified or reconstructed for use in connection with or to facilitate the surface coal mining and reclamation operation. The compliance plan shall include—

(1) Design specifications for the modification or reconstruction of the structure to meet the design and performance standards of subchapter K of this chapter;

(2) A construction schedule which shows dates for beginning and completing interim steps and final reconstruction;

(3) Provisions for monitoring the structure during and after modification or reconstruction to ensure that the performance standards of subchapter K of this chapter are met; and

(4) A showing that the risk of harm to the environment or to public health or safety is not significant during the period of modification or reconstruction.

§ 780.13 Operation plan: Blasting.

(a) *Blasting plan.* Each application shall contain a blasting plan for the proposed permit area, explaining how the applicant will comply with the requirements of §§ 816.61 through 816.68 of this chapter. This plan shall include, at a minimum, information setting forth the limitations the operator will meet with regard to ground vibration and airblast, the bases for those limitations, and the methods to be applied in controlling the adverse effects of blasting operations.

(b) *Monitoring system.* Each application shall contain a description of any system to be used to monitor compliance with the standards of § 816.67 including the type, capability, and sensitivity of any blast-monitoring equipment and proposed procedures and locations of monitoring.

(c) *Blasting near underground mines.* Blasting operations within 500 feet of active underground mines require approval of the State and Federal regulatory authorities concerned with the health and safety of underground miners.

§ 780.14 Operation plan: Maps and plans.

Each application shall contain maps and plans as follows:

(a) The maps and plans shall show the lands proposed to be affected throughout the operation and any change in a facility or feature to be caused by the proposed operations, if the facility or feature was shown under 30 CFR 779.24 through 779.25.

(b) The following shall be shown for the proposed permit area:

(1) Buildings, utility corridors and facilities to be used;

(2) The area of land to be affected within the proposed permit area, according to the sequence of mining and reclamation;

(3) Each area of land for which a performance bond or other equivalent guarantee will be posted under subchapter J of this chapter;

(4) Each coal storage, cleaning and loading area;

(5) Each topsoil, spoil, coal waste, and non-coal waste storage area;

(6) Each water diversion, collection, conveyance, treatment, storage, and discharge facility to be used;

(7) Each air pollution collection and control facility;

(8) Each source of waste and each waste disposal facility relating to coal processing or pollution control;

(9) Each facility to be used to protect and enhance fish and wildlife and related environmental values;

(10) Each explosive storage and handling facility; and

(11) Location of each sedimentation pond, permanent water impoundment, coal processing waste bank, and coal processing waste dam and embankment, in accordance with 30 CFR 780.25, and fill area for the disposal of excess spoil in accordance 30 CFR 780.35.

(c) Except as provided in §§ 780.25(a)(2), 780.25(a)(3), 780.35(a), 816.71(b), 816.73(c), 816.74(c) and 816.81(c) of this chapter, cross sections, maps and plans required under paragraphs (b)(4), (5), (6), (10) and (11) of this section shall be prepared by, or under the direction of, and certified by a qualified registered professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such cross sections, maps and plans, a qualified, registered, professional, land surveyor, with assistance from experts in related fields such as landscape architecture.

§ 780.15 Air pollution control plan.

(a) For all surface mining activities with projected production rates exceeding 1,000,000 tons of coal per year and located west of the 100th

meridian west longitude, the application shall contain an air pollution control plan which includes the following:

(1) An air quality monitoring program to provide sufficient data to evaluate the effectiveness of the fugitive dust control practices proposed under paragraph (a)(2) of this section to comply with Federal and State air quality standards; and

(2) A plan for fugitive dust control practices as required under 30 CFR 816.95.

(b) For all other surface mining activities the application shall contain an air pollution control plan which includes the following:

(1) An air quality monitoring program, if required by the regulatory authority, to provide sufficient data to evaluate the effectiveness of the fugitive dust control practices under paragraph (b)(2) of this section to comply with applicable Federal and State air quality standards; and

(2) A plan for fugitive dust control practices, as required under 30 CFR 816.95.

§ 780.16 Fish and wildlife information.

(a) *Resource information.* Each application shall include fish and wildlife resource information for the permit area and adjacent area.

(1) The scope and level of detail for such information shall be determined by the regulatory authority in consultation with State and Federal agencies with responsibilities for fish and wildlife and shall be sufficient to design the protection and enhancement plan required under paragraph (b) of this section.

(2) Site-specific resource information necessary to address the respective species or habitats shall be required when the permit area or adjacent area is likely to include:

(i) Listed or proposed endangered or threatened species of plants or animals or their critical habitats listed by the Secretary under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), or those species or habitats protected by similar State statutes;

(ii) Habitats of unusually high value for fish and wildlife such as important streams, wetlands, riparian areas, cliffs supporting raptors, areas offering special shelter or protection, migration routes, or reproduction and wintering areas; or

(iii) Other species or habitats identified through agency consultation as requiring special protection under State or Federal law.

(b) *Protection and enhancement plan.* Each application shall include a description of how, to the extent possible using the best technology currently available, the operator will minimize disturbances and adverse impacts on fish and wildlife and related environmental values, including compliance with the Endangered Species Act, during the surface coal mining and reclamation operations and how enhancement of these resources will be achieved where practicable. This description shall—

(1) Be consistent with the requirements of § 816.97 of this chapter;

(2) Apply, at a minimum, to species and habitats identified under paragraph (a) of this section; and

(3) Include—

(i) Protective measures that will be used during the active mining phase of operation. Such measures may include the establishment of buffer zones, the selective location and special design of haul roads and powerlines, and the monitoring of surface water quality and quantity; and

(ii) Enhancement measures that will be used during the reclamation and postmining phase of operation to develop aquatic and terrestrial habitat. Such measures may include restoration of streams and other wetlands, retention of ponds and impoundments, establishment of vegetation for wildlife food and cover, and the replacement of perches and nest boxes. Where the plan does not include enhancement measures, a statement shall be given explaining why enhancement is not practicable.

(c) *Fish and Wildlife Service review.* Upon request, the regulatory authority shall provide the resource information required under paragraph (a) of this section and the protection and enhancement plan required under paragraph (b) of this section to the U.S. Department of the Interior, Fish and Wildlife Service Regional or Field Office for their review. This information shall be provided within 10 days of receipt of the request from the Service.

§ 780.18 Reclamation plan: General requirements.

(a) Each application shall contain a plan for reclamation of the lands within the proposed permit area, showing how the applicant will comply with section 515 of the Act, subchapter K of this chapter, and the environmental protection performance standards of the regulatory program. The plan shall include, at a minimum, all information required under 30 CFR 780.18 through 780.37.

(b) Each plan shall contain the following information for the proposed permit area—

(1) A detailed timetable for the completion of each major step in the reclamation plan;

(2) A detailed estimate of the cost of reclamation of the proposed operations required to be covered by a performance bond under subchapter J of this chapter, with supporting calculations for the estimates;

(3) A plan for backfilling, soil stabilization, compacting, and grading, with contour maps or cross sections that show the anticipated final surface configuration of the proposed permit area, in accordance with 30 CFR 816.102 through 816.107;

(4) A plan for removal, storage, and redistribution of topsoil, subsoil, and other material to meet the requirements of § 816.22 of this chapter. A demonstration of the suitability of topsoil substitutes or supplements under § 816.22(b) of this chapter shall be based upon analysis of the thickness of soil horizons, total depth, texture, percent coarse fragments, pH, and areal extent of the different kinds of soils. The regulatory authority may require other chemical and physical analyses, field-site trials, or greenhouse tests if determined to be necessary or desirable to demonstrate the suitability of the topsoil substitutes or supplements.

(5) A plan for revegetation as required in 30 CFR 816.111 through 816.116, including, but not limited to, descriptions of the—

(i) Schedule of revegetation;

(ii) Species and amounts per acre of seeds and seedlings to be used;

(iii) Methods to be used in planting and seeding;

(iv) Mulching techniques;

(v) Irrigation, if appropriate, and pest and disease control measures, if any; and

(vi) Measures proposed to be used to determine the success of revegetation as required in 30 CFR 816.116.

(vii) A soil testing plan for evaluation of the results of topsoil handling and reclamation procedures related to revegetation.

(6) A description of the measures to be used to maximize the use and conservation of the coal resource as required in 30 CFR 816.59;

(7) A description of measures to be employed to ensure that all debris, acid-forming and toxic-forming materials, and materials constituting a fire hazard are disposed of in accordance with 30 CFR 816.89 and 816.102 and a description of the contingency plans which have been developed to preclude sustained combustion of such materials;

(8) A description, including appropriate cross sections and maps, of the measures to be used to seal or

manage mine openings, and to plug, case, or manage exploration holes, other bore holes, wells, and other openings within the proposed permit area, in accordance with 30 CFR 816.13 through 816.15; and

(9) A description of steps to be taken to comply with the requirements of the Clean Air Act (42 U.S.C. 7401 *et seq.*), the Clean Water Act (33 U.S.C. 1251 *et seq.*), and other applicable air and water quality laws and regulations and health and safety standards.

§ 780.21 Hydrologic information.

(a) *Sampling and analysis methodology.* All water-quality analyses performed to meet the requirements of this section shall be conducted according to the methodology in the 15th edition of ''Standard Methods for the Examination of Water and Wastewater,'' which is incorporated by reference, or the methodology in 40 CFR parts 136 and 434. Water quality sampling performed to meet the requirements of this section shall be conducted according to either methodology listed above when feasible. ''Standard Methods for the Examination of Water and Wastewater,'' is a joint publication of the American Public Health Association, the American Water Works Association, and the Water Pollution Control Federation and is available from the American Public Health Association, 1015 15th Street NW., Washington, DC 20036. This document is also available for inspection at the Office of the OSM Administrative Record, U.S. Department of the Interior, Room 5315, 1100 L Street NW., Washington, DC; at the OSM Eastern Technical Service Center, U.S. Department of the Interior, Building 10, Parkway Center, Pittsburgh, Pa.; at the OSM Western Technical Service Center, U.S. Department of the Interior, Brooks Tower, 1020 15th Street, Denver, Colo or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* This incorporation by reference was approved by the Director of the Federal Register on October 26, 1983. This document is incorporated as it exists on the date of the approval, and a notice of any change in it will be published in the **Federal Register**.

(b) *Baseline information.* The application shall include the following baseline hydrologic information, and any additional information required by the regulatory authority.

(1) *Ground-water information.* The location and ownership for the permit and adjacent areas of existing wells, springs, and other ground-water resources, seasonal quality and quantity of ground water, and usage. Water quality descriptions shall include, at a minimum, total dissolved solids or specific conductance corrected to 25°C, pH, total iron, and total manganese. Ground-water quantity descriptions shall include, at a minimum, approximate rates of discharge or usage and depth to the water in the coal seam, and each water-bearing stratum above and potentially impacted stratum below the coal seam.

(2) *Surface-water information.* The name, location, ownership, and description of all surface-water bodies such as streams, lakes, and impoundments, the location of any discharge into any surface-water body in the proposed permit and adjacent areas, and information on surface-water quality and quantity sufficient to demonstrate seasonal variation and water usage. Water quality descriptions shall include, at a minimum, baseline information on total suspended solids, total dissolved solids or specific conductance corrected to 25°C, pH, total iron, and total manganese. Baseline acidity and alkalinity information shall be provided if there is a potential for acid drainage from the proposed mining operation. Water quantity descriptions shall include, at a minimum, baseline information on seasonal flow rates.

(3) *Supplemental information.* If the determination of the probable hydrologic consequences (PHC) required by paragraph (f) of this section indicates that adverse impacts on or off the proposed permit area may occur to the hydrologic balance, or that acid-forming or toxic-forming material is present that may result in the contamination of ground-water or surface-water supplies, then information supplemental to that required under paragraphs (b) (1) and (2) of this section shall be provided to evaluate such probable hydrologic consequences and to plan remedial and reclamation activities. Such supplemental information may be based upon drilling, aquifer tests, hydrogeologic analysis of the water-bearing strata, flood flows, or analysis of other water quality or quantity characteristics.

(c) *Baseline cumulative impact area information.* (1) Hydrologic and geologic information for the cumulative impact area necessary to assess the probable cumulative hydrologic impacts of the proposed operation and all anticipated mining on surface- and ground-water systems as required by paragraph (g) of this section shall be provided to the regulatory authority if available from appropriate Federal or State agencies.

(2) If the information is not available from such agencies, then the applicant may gather and submit this information to the regulatory authority as part of the permit application.

(3) The permit shall not be approved until the necessary hydrologic and geologic information is available to the regulatory authority.

(d) *Modeling.* The use of modeling techniques, interpolation or statistical techniques may be included as part of the permit application, but actual surface- and ground-water information may be required by the regulatory authority for each site even when such techniques are used.

(e) *Alternative water source information.* If the PHC determination required by paragraph (f) of this section indicates that the proposed mining operation may proximately result in contamination, diminution, or interruption of an underground or surface source of water within the proposed permit or adjacent areas which is used for domestic, agricultural, industrial or other legitimate purpose, then the application shall contain information on water availability and alternative water sources, including the suitability of alternative water sources for existing premining uses and approved postmining land uses.

(f) *Probable hydrologic consequences determination.* (1) The application shall contain a determination of the probable hydrologic consequences (PHC) of the proposed operation upon the quality and quantity of surface and ground water under seasonal flow conditions for the proposed permit and adjacent areas.

(2) The PHC determination shall be based on baseline hydrologic, geologic and other information collected for the permit application and may include data statistically representative of the site.

(3) The PHC determination shall include findings on:

(i) Whether adverse impacts may occur to the hydrologic balance;

(ii) Whether acid-forming or toxic-forming materials are present that could result in the contamination of surface or ground water supplies;

(iii) Whether the proposed operation may proximately result in contamination, diminution or interruption of an underground or surface source of water within the proposed permit or adjacent areas which is used for domestic, agricultural, industrial or other legitimate purpose; and

(iv) What impact the proposed operation will have on:

(A) Sediment yields from the disturbed area; (B) acidity, total suspended and dissolved solids, and other important water quality parameters of local impact; (C) flooding or streamflow alteration; (D) ground water and surface water availability; and (E) other characteristics as required by the regulatory authority.

(4) An application for a permit revision shall be reviewed by the regulatory authority to determine whether a new or updated PHC determination shall be required.

(g) *Cumulative hydrologic impact assessment.* (1) The regulatory authority shall provide an assessment of the probable cumulative hydrologic impacts (CHIA) of the proposed operation and all anticipated mining upon surface- and ground-water systems in the cumulative impact area. The CHIA shall be sufficient to determine, for purposes of permit approval, whether the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area. The regulatory authority may allow the applicant to submit data and analyses relevant to the CHIA with the permit application.

(2) An application for a permit revision shall be reviewed by the regulatory authority to determine whether a new or updated CHIA shall be required.

(h) *Hydrologic reclamation plan.* The application shall include a plan, with maps and descriptions, indicating how the relevant requirements of part 816, including §§ 816.41 to 816.43, will be met. The plan shall be specific to the local hydrologic conditions. It shall contain the steps to be taken during mining and reclamation through bond release to minimize disturbances to the hydrologic balance within the permit and adjacent areas; to prevent material damage outside the permit area; to meet applicable Federal and State water quality laws and regulations; and to protect the rights of present water users. The plan shall include the measures to be taken to: Avoid acid or toxic drainage; prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow; provide water-treatment facilities when needed; control drainage; restore approximate premining recharge capacity and protect or replace rights of present water users. The plan shall specifically address and potential adverse hydrologic consequences identified in the PHC determination prepared under paragraph (f) of this section and shall include preventive and remedial measures.

(i) *Ground-water monitoring plan.* (1) The application shall include a ground-water monitoring plan based upon the PHC determination required under paragraph (f) of this section and the analysis of all baseline hydrologic, geologic and other information in the permit application. The plan shall provide for the monitoring of parameters that relate to the suitability of the ground water for current and approved postmining land uses and to the objectives for protection of the hydrologic balance set forth in paragraph (h) of this section. It shall identify the quantity and quality parameters to be monitored, sampling frequency, and site locations. It shall describe how the data may be used to determine the impacts of the operation upon the hydrologic balance. At a minimum, total dissolved solids or specific conductance corrected to 25 °C, pH, total iron, total manganese, and water levels shall be monitored and data submitted to the regulatory authority at least every 3 months for each monitoring location. The regulatory authority may require additional monitoring.

(2) If an applicant can demonstrate by the use of the PHC determination and other available information that a particular water-bearing stratum in the proposed permit and adjacent areas is not one which serves as an aquifer which significantly ensures the hydrologic balance within the cumulative impact area, then monitoring of that stratum may be waived by the regulatory authority.

(j) *Surface-water monitoring plan.* (1) The application shall include a surface-water monitoring plan based upon the PHC determination required under paragraph (f) of this section and the analysis of all baseline hydrologic, geologic, and other information in the permit application. The plan shall provide for the monitoring of parameters that relate to the suitability of the surface water for current and approved postmined land uses and to the objectives for protection of the hydrologic balance as set forth in paragraph (h) of this section as well as the effluent limitations found at 40 CFR part 434.

(2) The plan shall identify the surface-water quantity and quality parameters to be monitored, sampling frequency and site locations. It shall describe how the data may be used to determine the impacts of the operation upon the hydrologic balance.

(i) At all monitoring locations in the surface-water bodies such as streams, lakes, and impoundments, that are potentially impacted or into which water will be discharged and at upstream monitoring locations the total dissolved solids or specific conductance corrected to 25 °C, total suspended solids, pH, total iron, total manganese, and flow shall be monitored.

(ii) For point-source discharges, monitoring shall be conducted in accordance with 40 CFR parts 122, 123 and 434 and as required by the National Pollutant Discharge Elimination System permitting authority.

(3) The monitoring reports shall be submitted to the regulatory authority every 3 months. The regulatory authority may require additional monitoring.

§ 780.22 Geologic information.

(a) *General.* Each application shall include geologic information in sufficient detail to assist in determining—

(1) The probable hydrologic consequences of the operation upon the quality and quantity of surface and ground water in the permit and adjacent areas, including the extent to which surface- and ground-water monitoring is necessary;

(2) All potentially acid- or toxic-forming strata down to and including the stratum immediately below the lowest coal seam to be mined; and

(3) Whether reclamation as required by this chapter can be accomplished and whether the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area.

(b) Geologic information shall include, at a minimum the following:

(1) A description of the geology of the proposed permit and adjacent areas down to and including the deeper of either the stratum immediately below the lowest coal seam to be mined or any aquifer below the lowest coal seam to be mined which may be adversely impacted by mining. The description shall include the areal and structural geology of the permit and adjacent areas, and other parameters which influence the required reclamation and the occurrence, availability, movement, quantity, and quality of potentially impacted surface and ground waters. It shall be based on—

(i) The cross sections, maps and plans required by § 779.25 of this chapter;

(ii) The information obtained under paragraphs (b)(2) and (c) of this section; and

(iii) Geologic literature and practices.

(2) Analyses of samples collected from test borings; drill cores; or fresh, unweathered, uncontaminated samples

from rock outcrops from the permit area, down to and including the deeper of either the stratum immediately below the lowest coal seam to be mined or any aquifer below the lowest seam to be mined which may be adversely impacted by mining. The analyses shall result in the following:

(i) Logs showing the lithologic characteristics including physical properties and thickness of each stratum and location of ground water where occurring;

(ii) Chemical analyses identifying those strata that may contain acid- or toxic-forming or alkalinity-producing materials and to determine their content except that the regulatory authority may find that the analysis for alkalinity-producing materials is unnecessary; and

(iii) Chemical analyses of the coal seam for acid- or toxic-forming materials, including the total sulfur and pyritic sulfur, except that the regulatory authority may find that the analysis of pyritic sulfur content is unnecessary.

(c) If determined to be necessary to protect the hydrologic balance or to meet the performance standards of this chapter, the regulatory authority may require the collection, analysis, and description of geologic information in addition to that required by paragraph (b) of this section.

(d) An applicant may request the regulatory authority to waive in whole or in part the requirements of paragraph (b)(2) of this section. The waiver may be granted only if the regulatory authority finds in writing that the collection and analysis of such data is unnecessary because other equivalent information is available to the regulatory authority in a satisfactory form.

§ 780.23 Reclamation plan: Land use information.

(a) The plan shall contain a statement of the condition, capability, and productivity of the land within the proposed permit area, including:

(1) A map and supporting narrative of the uses of the land existing at the time of the filing of the application. If the premining use of the land was changed within 5 years before the anticipated date of beginning the proposed operations, the historic use of the land shall also be described. In the case of previously mined land, the use of the land prior to any mining shall also be described to the extent such information is available.

(2) A narrative of land capability and productivity, which analyzes the land-use description under paragraph (a) of this section in conjunction with other environmental resources information. The narrative shall provide analyses of:

(i) The capability of the land before any mining to support a variety of uses, giving consideration to soil and foundation characteristics, topography, vegetative cover, and the hydrology of the proposed permit area; and

(ii) The productivity of the proposed permit area before mining, expressed as average yield of food, fiber, forage, or wood products from such lands obtained under high levels of management. The productivity shall be determined by yield data or estimates for similar sites based on current data from the U.S. Department of Agriculture, State agricultural universities, or appropriate State natural resource or agricultural agencies.

(b) Each plan shall contain a detailed description of the proposed use, following reclamation, of the land within the proposed permit area, including a discussion of the utility and capacity of the reclaimed land to support a variety of alternative uses, and the relationship of the proposed use of existing land use policies and plans. This description shall explain:

(1) How the proposed post mining land use is to be achieved and the necessary support activities which may be needed to achieve the proposed land use; and

(2) Where a land use different from the premining land use is proposed, all materials needed for approval of the alternative use under 30 CFR 816.133.

(3) The consideration which has been given to making all of the proposed surface mining activities consistent with surface owner plans and applicable State and local land use plans and programs.

(c) The description shall be accompanied by a copy of the comments concerning the proposed use by the legal or equitable owner of record of the surface of the proposed permit area and the State and local government agencies which would have to initiate, implement, approve, or authorize the proposed use of the land following reclamation.

§ 780.25 Reclamation plan: Siltation structures, impoundments, banks, dams, and embankments.

(a) *General.* Each application shall include a general plan and a detailed design plan for each proposed siltation structure, water impoundment, and coal processing waste bank, dam, or embankment within the proposed permit area.

(1) Each general plan shall—(i) Be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such plans, a qualified, registered, professional, land surveyor, with assistance from experts in related fields such as landscape architecture;

(ii) Contain a description, map, and cross section of the structure and its location;

(iii) Contain preliminary hydrologic and geologic information required to assess the hydrologic impact of the structure;

(iv) Contain a survey describing the potential effect on the structure from subsidence of the subsurface strata resulting from past underground mining operations if underground mining has occurred; and

(v) Contain a certification statement which includes a schedule setting forth the dates that any detailed design plans for structures that are not submitted with the general plan will be submitted to the regulatory authority. The regulatory authority shall have approved, in writing, the detailed design plan for a structure before construction of the structure begins.

(2) Impoundments meeting the Class B or C criteria for dams in the U.S. Department of Agriculture, Soil Conservation Service Technical Release No. 60 (210–VI–TR60, Oct. 1985), ''Earth Dams and Reservoirs,'' Technical Release No. 60 (TR–60) shall comply with the requirements of this section for structures that meet or exceed the size of other criteria of the Mine Safety and Health Administration (MSHA). The technical release is hereby incorporated by reference. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. TR–60 may be viewed and downloaded from OSM's Web site at *http://www.osmre.gov/programs/TDT/damsafety.shtm.* It also is available for inspection at the OSM Headquarters Office, Office of Surface Mining Reclamation and Enforcement, Administrative Record, Room 252, 1951 Constitution Ave. NW., Washington, DC or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* Each detailed design plan for a structure that meets or exceeds the size or other criteria of MSHA, § 77.216(a) of this chapter shall:

(i) Be prepared by, or under the direction of, and certified by a qualified registered professional engineer with assistance from experts in related fields

such as geology, land surveying, and landscape architecture;

(ii) Include any geotechnical investigation, design, and construction requirements for the structure;

(iii) Describe the operation and maintenance requirements for each structure; and

(iv) Describe the timetable and plans to remove each structure, if appropriate.

(3) Each detailed design plan for structures not included in paragraph (a)(2) of this section shall:

(i) Be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, or in any State which authorizes land surveyors to prepare and certify such plans, a qualified, registered, professional land surveyor, except that all coal processing waste dams and embankments covered by §§ 816.81–816.84 of this chapter shall be certified by a qualified, registered, professional engineer;

(ii) Include any design and construction requirements for the structure, including any required geotechnical information;

(iii) Describe the operation and maintenance requirements for each structure; and

(iv) Describe the timetable and plans to remove each structure, if appropriate.

(b) *Siltation structures.* Siltation structures shall be designed in compliance with the requirements of § 816.46 of this chapter.

(c) *Permanent and temporary impoundments.* (1) Permanent and temporary impoundments shall be designed to comply with the requirements of § 816.49 of this chapter.

(2) Each plan for an impoundment meeting the size or other criteria of the Mine Safety and Health Administration shall comply with the requirements of §§ 77.216–1 and 77.216–2 of this title. The plan required to be submitted to the District Manager of MSHA under § 77.216 of this title shall be submitted to the regulatory authority as part of the permit application in accordance with paragraph (a) of this section.

(3) For impoundments not included in paragraph (a)(2) of this section, the regulatory authority may establish through the State program approval process, engineering design standards that ensure stability comparable to a 1.3 minimum static safety factor in lieu of engineering tests to establish compliance with the minimum static safety factor of 1.3 specified in § 816.49(a)(4)(ii) of this chapter.

(d) *Coal processing waste banks.* Coal processing waste banks shall be designed to comply with the requirements of 30 CFR 816.81–816.84.

(e) *Coal processing waste dams and embankments.* Coal processing waste dams and embankments shall be designed to comply with the requirements of 30 CFR 816.81–816.84. Each plan shall comply with the requirements of the Mine Safety and Health Administration, 30 CFR 77.216–1 and 77.216–2, and shall contain the results of a geotechnical investigation of the proposed dam or embankment foundation area, to determine the structural competence of the foundation which will support the proposed dam or embankment structure and the impounded material. The geotechnical investigation shall be planned and supervised by an engineer or engineering geologist, according to the following:

(1) The number, location, and depth of borings and test pits shall be determined using current prudent engineering practice for the size of the dam or embankment, quantity of material to be impounded, and subsurface conditions.

(2) The character of the overburden and bedrock, the proposed abutment sites, and any adverse geotechnical conditions which may affect the particular dam, embankment, or reservoir site shall be considered.

(3) All springs, seepage, and ground water flow observed or anticipated during wet periods in the area of the proposed dam or embankment shall be identified on each plan.

(4) Consideration shall be given to the possibility of mudflows, rock-debris falls, or other landslides into the dam, embankment, or impounded material.

(f) If the structure meets the Class B or C criteria for dams in TR–60 or meets the size or other criteria of § 77.216(a) of this chapter, each plan under paragraphs (b), (c), and (e) of this section shall include a stability analysis of the structure. The stability analysis shall include, but not be limited to, strength parameters, pore pressures, and long-term seepage conditions. The plan shall also contain a description of each engineering design assumption and calculation with a discussion of each alternative considered in selecting the specific design parameters and construction methods.

§ 780.27 Reclamation plan: Surface mining near underground mining.

For surface mining activities within the proposed permit area to be conducted within 500 feet of an underground mine, the application shall describe the measures to be used to comply with 30 CFR 816.79.

§ 780.28 [Reserved]

§ 780.29 Diversions.

Each application shall contain descriptions, including maps and cross sections, of stream channel diversions and other diversions to be constructed within the proposed permit area to achieve compliance with 30 CFR 816.43 of this chapter.

§ 780.31 Protection of publicly owned parks and historic places.

(a) For any publicly owned parks or any places listed on the National Register of Historic Places that may be adversely affected by the proposed operation, each plan shall describe the measures to be used—

(1) To prevent adverse impacts, or

(2) If a person has valid existing rights, as determined under § 761.16 of this chapter, or if joint agency approval is to be obtained under § 761.17(d) of this chapter, to minimize adverse impacts.

(b) The regulatory authority may require the applicant to protect historic or archeological properties listed on or eligible for listing on the National Register of Historic Places through appropriate mitigation and treatment measures. Appropriate mitigation and treatment measures may be required to be taken after permit issuance provided that the required measures are completed before the properties are affected by any mining operation.

§ 780.33 Relocation or use of public roads.

Each application shall describe, with appropriate maps and cross-sections, the measures to be used to ensure that the interests of the public and landowners affected are protected if, under § 761.14 of this chapter, the applicant seeks to have the regulatory authority approve—

(a) Conducting the proposed surface mining activities within 100 feet of the right-of-way line of any public road, except where mine access or haul roads join that right-of-way; or

(b) Relocating a public road.

§ 780.35 Disposal of excess spoil.

(a) Each application shall contain descriptions, including appropriate maps and cross section drawings, of the proposed disposal site and design of the spoil disposal structures according to 30 CFR 816.71–816.74. These plans shall describe the geotechnical investigation, design, construction, operation, maintenance, and removal, if appropriate, of the site and structures.

(b) Except for the disposal of excess spoil on pre existing benches, each application shall contain the results of a geotechnical investigation of the

proposed disposal site, including the following:

(1) The character of bedrock and any adverse geologic conditions in the disposal area,

(2) A survey identifying all springs, seepage, and ground water flow observed or anticipated during wet periods in the area of the disposal site;

(3) A survey of the potential effects of subsidence of the subsurface strata due to past and future mining operations;

(4) A technical description of the rock materials to be utilized in the construction of those disposal structures containing rock chimney cores or underlain by a rock drainage blanket; and

(5) A stability analysis including, but not limited to, strength parameters, pore pressures and long-term seepage conditions. These data shall be accompanied by a description of all engineering design assumptions and calculations and the alternatives considered in selecting the specific design specifications and methods.

(c) If, under 30 CFR 816.71(d), rock-toe buttresses or key-way cuts are required, the application shall include the following:

(1) The number, location, and depth of borings or test pits which shall be determined with respect to the size of the spoil disposal structure and subsurface conditions; and

(2) Engineering specifications utilized to design the rock-toe buttress or key-way cuts which shall be determined in accordance with paragraph (b)(5) of this section.

§ 780.37 Road systems.

(a) *Plans and drawings.* Each applicant for a surface coal mining and reclamation permit shall submit plans and drawings for each road, as defined in § 701.5 of this chapter, to be constructed, used, or maintained within the proposed permit area. The plans and drawings shall—

(1) Include a map, appropriate cross sections, design drawings and specifications for road widths, gradients, surfacing materials, cuts, fill embankments, culverts, bridges, drainage ditches, low-water crossings, and drainage structures;

(2) Contain the drawings and specifications of each proposed road that is located in the channel of an intermittent or perennial stream, as necessary for approval of the road by the regulatory authority in accordance with § 816.150(d)(1) of this chapter;

(3) Contain the drawings and specifications for each proposed ford of perennial or intermittent streams that is used as a temporary route, as necessary for approval of the ford by the regulatory authority in accordance with § 816.151(c)(2) of this chapter;

(4) Contain a description of measures to be taken to obtain approval of the regulatory authority for alteration or relocation of a natural stream channel under § 816.151(d)(5) of this chapter;

(5) Contain the drawings and specifications for each low-water crossing of perennial or intermittent stream channels so that the regulatory authority can maximize the protection of the stream in accordance with § 816.151(d)(6) of this chapter; and

(6) Describe the plans to remove and reclaim each road that would not be retained under an approved postmining land use, and the schedule for this removal and reclamation.

(b) *Primary road certification.* The plans and drawings for each primary road shall be prepared by, or under the direction of, and certified by a qualified registered professional engineer, or in any State which authorizes land surveyors to certify the design of primary roads a qualified registered professional land surveyor, with experience in the design and construction of roads, as meeting the requirements of this chapter; current, prudent engineering practices; and any design criteria established by the regulatory authority.

(c) *Standard design plans.* The regulatory authority may establish engineering design standards for primary roads through the State program approval process, in lieu of engineering tests, to establish compliance with the minimum static safety factor of 1.3 for all embankments specified in § 816.151(b) of this chapter.

§ 780.38 Support facilities.

Each applicant for a surface coal mining and reclamation permit shall submit a description, plans, and drawings for each support facility to be constructed, used, or maintained within the proposed permit area. The plans and drawings shall include a map, appropriate cross sections, design drawings, and specifications sufficient to demonstrate compliance with § 816.181 of this chapter for each facility.

■ 8. Revise part 783 to read as follows:

PART 783—UNDERGROUND MINING PERMIT APPLICATIONS—MINIMUM REQUIREMENTS FOR INFORMATION ON ENVIRONMENTAL RESOURCES

Sec.

783.1 Scope.
783.2 Objectives.
783.4 Responsibilities.
783.10 Information collection.
783.11 General requirements.
783.12 General environmental resources information.
783.18 Climatological information.
783.19 Vegetation information.
783.20 [Reserved]
783.21 Soil resources information.
783.24 Maps: General requirements.
783.25 Cross sections, maps, and plans.

Authority: 30 U.S.C. 1201 *et seq.;* sec. 115 of Pub. L. 98–146, (30 U.S.C. 1257), and 16 U.S.C. 470 *et seq.*

§ 783.1 Scope.

This part establishes the minimum requirements for the Secretary's approval of regulatory program provisions for the environmental resources contents of applications for permits for underground mining activities.

§ 783.2 Objectives.

The objectives of this part are to ensure that each application provides to the regulatory authority a complete and accurate description of the environmental resources that may be impacted or affected by proposed underground mining activities.

§ 783.4 Responsibilities.

(a) It is the responsibility of the applicant to provide, except where specifically exempted in this part, all information required by this part in the application.

(b) It is the responsibility of State and Federal Government agencies to provide information for applications as specifically required by this part.

§ 783.10 Information collection.

The information collection requirements contained in 30 CFR 783.11, 783.12, 783.13, 783.14, 783.15, 783.16, 783.17, 783.18, 783.19, 783.21, 783.22, 783.23, 783.24 and 783.25 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1029–0038. The information is being collected to meet the requirements of sections 507 and 508 of Pub. L. 95–87, which require the permit applicant to present an adequate description of the existing pre-mining environmental resources within and around the proposed mine plan area. This information will be used by the regulatory authority to determine whether the applicant can comply with the performance standards for underground mining. The obligation to respond is mandatory.

§ 783.11 General requirements.

Each permit application shall include a description of the existing, premining environmental resources within the

proposed permit area and adjacent areas that may be affected or impacted by the proposed underground mining activities.

§ 783.12 General environmental resources information.

Each application shall describe and identify—

(a) The lands subject to surface coal mining operations over the estimated life of those operations and the size, sequence, and timing of the subareas for which it is anticipated that individual permits for mining will be sought; and

(b) The nature of cultural historic and archeological resources listed or eligible for listing on the National Register of Historic Places and known archeological sites within the proposed permit and adjacent areas.

(1) The description shall be based on all available information, including, but not limited to, information from the State Historic Preservation Officer and local archeological, historical, and cultural preservation groups.

(2) The regulatory authority may require the applicant to identify and evaluate important historic and archeological resources that may be eligible for listing on the National Register of Historic Places, through the—

(i) Collection of additional information,

(ii) Conduct of field investigations, or

(iii) Other appropriate analyses.

§ 783.18 Climatological information.

(a) When requested by the regulatory authority, the application shall contain a statement of the climatological factors that are representative of the proposed permit area, including—

(1) The average seasonal precipitation;

(2) The average direction and velocity of prevailing winds; and

(3) Seasonal temperature ranges.

(b) The regulatory authority may request such additional data as deemed necessary to ensure compliance with the requirements of this subchapter.

§ 783.19 Vegetation information.

(a) The permit application shall, if required by the regulatory authority, contain a map that delineates existing vegetative types and a description of the plant communities within the area affected by surface operations and facilities and within any proposed reference area. This description shall include information adequate to predict the potential for reestablishing vegetation.

(b) When a map or aerial photograph is required, sufficient adjacent areas shall be included to allow evaluation of vegetation as important habitat for fish and wildlife for those species of fish and wildlife identified under 30 CFR 784.21.

§ 783.20 [Reserved]

§ 783.21 Soil resources information.

(a) The applicant shall provide adequate soil survey information on those portions of the permit area to be affected by surface operations or facilities consisting of the following:

(1) A map delineating different soils;

(2) Soil identification;

(3) Soil description; and

(4) Present and potential productivity of existing soils.

(b) Where the applicant proposes to use selected overburden materials as a supplement or substitute for topsoil, the application shall provide results of the analyses, trials and tests required under 30 CFR 817.22.

§ 783.24 Maps: General requirements.

The permit application shall include maps showing:

(a) All boundaries of lands and names of present owners of record of those lands, both surface and sub-surface, included in or contiguous to the permit area;

(b) The boundaries of land within the proposed permit area upon which the applicant has the legal right to enter and begin underground mining activities;

(c) The boundaries of all areas proposed to be affected over the estimated total life of the underground mining activities, with a description of size, sequence and timing of the mining of sub-areas for which it is anticipated that additional permits will be sought;

(d) The location of all buildings in and within 1000 feet of the proposed permit area, with identification of the current use of the buildings;

(e) The location of surface and sub-surface man-made features within, passing through, or passing over the proposed permit area, including, but not limited to, major electric transmission lines, pipelines, and agricultural drainage tile fields;

(f) The location and boundaries of any proposed reference areas for determining the success of revegetation;

(g) The locations of water supply intakes for current users of surface waters flowing into, out of, and within a hydrologic area defined by the regulatory authority, and those surface waters which will receive discharges from affected areas in the proposed permit area;

(h) Each public road located in or within 100 feet of the proposed permit area;

(i) The boundaries of any public park and locations of any cultural or historical resources listed or eligible for listing in the National Register of Historic Places and known archeological sites within the permit and adjacent areas.

(j) Each cemetery that is located in or within 100 feet of the proposed permit area.

(k) Any land within the proposed permit area which is within the boundaries of any units of the National System of Trails or the Wild and Scenic Rivers System, including study rivers designated under section 5(a) of the Wild and Scenic Rivers Act; and

(l) Other relevant information required by the regulatory authority.

§ 783.25 Cross sections, maps, and plans.

(a) The application shall include cross sections, maps, and plans showing—

(1) Elevations and locations of test borings and core samplings;

(2) Elevations and locations of monitoring stations used to gather data on water quality and quantity, fish and wildlife, and air quality, if required, in preparation of the application.

(3) Nature, depth, and thickness of the coal seams to be mined, any coal or rider seams above the seam to be mined, each stratum of the overburden, and the stratum immediately below the lowest coal seam to be mined;

(4) All coal crop lines and the strike and dip of the coal to be mined within the proposed permit area;

(5) Location and extent of known workings of active, inactive, or abandoned underground mines, including mine openings to the surface within the proposed permit and adjacent areas;

(6) Location and extent of sub-surface water, if encountered, within the proposed permit or adjacent areas, including, but not limited to areal and vertical distribution of aquifers, and portrayal of seasonal differences of head in different aquifers on cross-sections and contour maps;

(7) Location of surface water bodies such as streams, lakes, ponds, springs, constructed or natural drains, and irrigation ditches within the proposed permit and adjacent areas;

(8) Location and extent of existing or previously surface-mined areas within the proposed permit area;

(9) Location and dimensions of existing areas of spoil, waste, coal development waste, and non-coal waste disposal, dams, embankments, other impoundments, and water treatment and air pollution control facilities within the proposed permit area;

(10) Location, and depth if available, of gas and oil wells within the proposed permit area and water wells in the permit area and adjacent areas;

(b) Cross-sections, maps and plans included in a permit application as required by this section shall be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such cross sections, maps and plans, a qualified, registered, professional, land surveyor, with assistance from experts in related fields such as landscape architecture, and shall be updated as required by the regulatory authority.

■ 9. Revise part 784 to read as follows:

PART 784—UNDERGROUND MINING PERMIT APPLICATIONS—MINIMUM REQUIREMENTS FOR RECLAMATION AND OPERATION PLAN

Sec.

784.1 Scope.
784.2 Objectives.
784.4 Responsibilities.
784.10 Information collection.
784.11 Operation plan: General requirements.
784.12 Operation plan: Existing structures.
784.13 Reclamation plan: General requirements.
784.14 Hydrologic information.
784.15 Reclamation plan: Land use information.
784.16 Reclamation plan: Siltation structures, impoundments, banks, dams, and embankments.
784.17 Protection of publicly owned parks and historic places.
784.18 Relocation or use of public roads.
784.19 Underground development waste.
784.20 Subsidence control plan.
784.21 Fish and wildlife information.
784.22 Geologic information.
784.23 Operation plan: Maps and plans.
784.24 Road systems.
784.25 Return of coal processing waste to abandoned underground workings.
784.26 Air pollution control plan.
784.29 Diversions.
784.30 Support facilities.
784.200 Interpretive rules related to General Performance Standards.

Authority: 30 U.S.C. 1201 *et seq.* and 16 U.S.C. 470 *et seq.*

§ 784.1 Scope.

This part provides the minimum requirements for the Secretary's approval of regulatory program provisions for the mining operations and reclamation plans portions of applications for permits for underground mining activities, except to the extent that different requirements for those plans are established under 30 CFR part 785.

§ 784.2 Objectives.

The objectives of this part are to ensure that the regulatory authority is provided with comprehensive and reliable information on proposed underground mining activities, and to ensure that those activities are allowed to be conducted only in compliance with the Act, this chapter, and the regulatory program.

§ 784.4 Responsibilities.

(a) It is the responsibility of the applicant to provide to the regulatory authority all of the information required by this part, except where specifically exempted in this part.

(b) It is the responsibility of State and Federal governmental agencies to provide information to the regulatory authority where specifically required in this part.

§ 784.10 Information collection.

(a) The collections of information contained in part 784 have been approved by Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0039. The information will be used to meet the requirements of 30 U.S.C. 1211(b), 1251, 1257, 1258, 1266, and 1309a. The obligation to respond is required to obtain a benefit.

(b) Public reporting burden for this information is estimated to average 513 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

§ 784.11 Operation plan: General requirements.

Each application shall contain a description of the mining operations proposed to be conducted during the life of the mine within the proposed permit area, including, at a minimum, the following:

(a) A narrative description of the type and method of coal mining procedures and proposed engineering techniques, anticipated annual and total production of coal, by tonnage, and the major equipment to be used for all aspects of those operations; and

(b) A narrative explaining the construction, modification, use, maintenance, and removal of the following facilities (unless retention of such facility is necessary for postmining land use as specified in § 817.133):

(1) Dams, embankments, and other impoundments;

(2) Overburden and topsoil handling and storage areas and structures;

(3) Coal removal, handling, storage, cleaning, and transportation areas and structures;

(4) Spoil, coal processing waste, mine development waste, and non-coal waste removal, handling, storage, transportation, and disposal areas and structures;

(5) Mine facilities; and

(6) Water pollution control facilities.

§ 784.12 Operation plan: Existing structures.

(a) Each application shall contain a description of each existing structure proposed to be used in connection with or to facilitate the surface coal mining and reclamation operation. The description shall include:

(1) Location;

(2) Plans of the structure which describe its current condition;

(3) Approximate dates on which construction of the existing structure was begun and completed; and

(4) A showing, including relevant monitoring data or other evidence, whether the structure meets the performance standards of subchapter K (Permanent Program Standards) of this chapter or, if the structure does not meet the performance standards of subchapter K of this chapter, a showing whether the structure meets the performance standards of subchapter B (Interim Program Standards) of this chapter.

(b) Each application shall contain a compliance plan for each existing structure proposed to be modified or reconstructed for use in connection with or to facilitate the surface coal mining and reclamation operation. The compliance plan shall include—

(1) Design specifications for the modification or reconstruction of the structure to meet the design and performance standards of subchapter K of this chapter;

(2) A construction schedule which shows dates for beginning and completing interim steps and final reconstruction;

(3) Provisions for monitoring the structure during and after modification or reconstruction to ensure that the performance standards of subchapter K of this chapter are met; and

(4) A showing that the risk of harm to the environment or to public health or safety is not significant during the period of modification or reconstruction.

§ 784.13 Reclamation plan: General requirements.

(a) Each application shall contain a plan for the reclamation of the lands within the proposed permit area, showing how the applicant will comply with sections 515 and 516 of the Act, subchapter K of this chapter, and the environmental protection performance standards of the regulatory program.

The plan shall include, at a minimum, all information required under 30 CFR 784.13 through 784.26.

(b) Each plan shall contain the following information for the proposed permit area;

(1) A detailed timetable for the completion of each major step in the reclamation plan;

(2) A detailed estimate of the cost of the reclamation of the proposed operations required to be covered by a performance bond under subchapter J of this chapter, with supporting calculations for the estimates;

(3) A plan for backfilling, soil stabilization, compacting and grading, with contour maps or cross sections that show the anticipated final surface configuration of the proposed permit area, in accordance with 30 CFR 817.102 through 817.107;

(4) A plan for removal, storage, and redistribution of topsoil, subsoil, and other material to meet the requirements of § 817.22 of this chapter. A demonstration of the suitability of topsoil substitutes or supplements under § 817.22(b) of this chapter shall be based upon analysis of the thickness of soil horizons, total depth, texture, percent coarse fragments, pH, and areal extent of the different kinds of soils. The regulatory authority may require other chemical and physical analyses, field-site trials, or greenhouse tests if determined to be necessary or desirable to demonstrate the suitability of the topsoil substitutes or supplements.

(5) A plan for revegetation as required in 30 CFR 817.111 through 817.116, including, but not limited to, descriptions of the—

(i) Schedule of revegetation;

(ii) Species and amounts per acre of seeds and seedlings to be used;

(iii) Methods to be used in planting and seeding;

(iv) Mulching techniques;

(v) Irrigation, if appropriate, and pest and disease control measures, if any;

(vi) Measures proposed to be used to determine the success of revegetation as required in 30 CFR 817.116; and,

(vii) A soil testing plan for evaluation of the results of topsoil handling and reclamation procedures related to revegetation.

(6) A description of the measures to be used to maximize the use and conservation of the coal resource as required in 30 CFR 817.59;

(7) A description of measures to be employed to ensure that all debris, acid-forming and toxic-forming materials, and materials constituting a fire hazard are disposed of in accordance with 30 CFR 817.89 and 817.102 and a description of the contingency plans which have been developed to preclude sustained combustion of such materials;

(8) A description, including appropriate cross sections and maps, of the measures to be used to seal or manage mine openings, and to plug, case or manage exploration holes, other bore holes, wells and other openings within the proposed permit area, in accordance with 30 CFR 817.13–817.15; and

(9) A description of steps to be taken to comply with the requirements of the Clean Air Act (42 U.S.C. 7401 *et seq.*), the Clean Water Act (33 U.S.C. 1251 *et seq.*), and other applicable air and water quality laws and regulations and health and safety standards.

§ 784.14 Hydrologic information.

(a) *Sampling and analysis.* All water quality analyses performed to meet the requirements of this section shall be conducted according to the methodology in the 15th edition of ''Standard Methods for the Examination of Water and Wastewater,'' which is incorporated by reference, or the methodology in 40 CFR parts 136 and 434. Water quality sampling performed to meet the requirements of this section shall be conducted according to either methodology listed above when feasible. ''Standard Methods for the Examination of Water and Wastewater,'' is a joint publication of the American Public Health Association, the American Water Works Association, and the Water Pollution Control Federation and is available from the American Public Health Association, 1015 Fifteenth Street NW., Washington, DC 20036. This document is also available for inspection at the Office of the OSM Administrative Record, U.S. Department of the Interior, Room 5315, 1100 L Street NW., Washington, DC; at the OSM Eastern Technical Service Center, U.S. Department of the Interior, Building 10, Parkway Center, Pittsburgh, Pa.; at the OSM Western Technical Service Center, U.S. Department of the Interior, Brooks Tower, 1020 15th Street, Denver, Colo or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* This incorporation by reference was approved by the Director of the Federal Register on October 26, 1983. This document is incorporated as it exists on the date of the approval, and a notice of any change in it will be published in the **Federal Register.**

(b) *Baseline information.* The application shall include the following baseline hydrologic information, and any additional information required by the regulatory authority.

(1) *Ground-water information.* The location and ownership for the permit and adjacent areas of existing wells, springs, and other ground-water resources, seasonal quality and quantity of ground water, and usage. Water quality descriptions shall include, at a minimum, total dissolved solids or specific conductance corrected to 25°C, pH, total iron, and total manganese. Ground-water quantity descriptions shall include, at a minimum, approximate rates of discharge or usage and depth to the water in the coal seam, and each water-bearing stratum above and potentially impacted stratum below the coal seam.

(2) *Surface-water information.* The name, location, ownership and description of all surface-water bodies such as streams, lakes, and impoundments, the location of any discharge into any surface-water body in the proposed permit and adjacent areas, and information on surface-water quality and quantity sufficient to demonstrate seasonal variation and water usage. Water quality descriptions shall include, at a minimum, baseline information on total suspended solids, total dissolved solids or specific conductance corrected to 25°C, pH, total iron, and total manganese. Baseline acidity and alkalinity information shall be provided if there is a potential for acid drainage from the proposed mining operation. Water quantity descriptions shall include, at a minimum, baseline information on seasonal flow rates.

(3) *Supplemental information.* If the determination of the probable hydrologic consequences (PHC) required by paragraph (e) of this section indicates that adverse impacts on or off the proposed permit area may occur to the hydrologic balance, or that acid-forming or toxic-forming material is present that may result in the contamination of ground-water or surface-water supplies, then information supplemental to that required under paragraphs (b) (1) and (2) of this section shall be provided to evaluate such probable hydrologic consequences and to plan remedial and reclamation activities. Such supplemental information may be based upon drilling, aquifer tests, hydrogeologic analysis of the water-bearing strata, flood flows, or analysis of other water quality or quantity characteristics.

(c) *Baseline cumulative impact area information.* (1) Hydrologic and geologic information for the cumulative impact area necessary to assess the probable cumulative hydrologic impacts of the

proposed operation and all anticipated mining on surface- and ground-water systems as required by paragraph (f) of this section shall be provided to the regulatory authority if available from appropriate Federal or State agencies.

(2) If this information is not available from such agencies, then the applicant may gather and submit this information to the regulatory authority as part of the permit application.

(3) The permit shall not be approved until the necessary hydrologic and geologic information is available to the regulatory authority.

(d) *Modeling.* The use of modeling techniques, interpolation or statistical techniques may be included as part of the permit application, but actual surface- and ground-water information may be required by the regulatory authority for each site even when such techniques are used.

(e) *Probable hydrologic consequences determination.* (1) The application shall contain a determination of the probable hydrologic consequences (PHC) of the proposed operation upon the quality and quantity of surface and ground water under seasonal flow conditions for the proposed permit and adjacent areas.

(2) The PHC determination shall be based on baseline hydrologic, geologic, and other information collected for the permit application and may include data statistically representative of the site.

(3) The PHC determination shall include findings on:

(i) Whether adverse impacts may occur to the hydrologic balance;

(ii) Whether acid-forming or toxic-forming materials are present that could result in the contamination of surface or ground water supplies;

(iii) What impact the proposed operation will have on:

(A) Sediment yield from the disturbed area; (B) acidity, total suspended and dissolved solids, and other important water quality parameters of local impact; (C) flooding or streamflow alteration; (D) ground water and surface water availability; and (E) other characteristics as required by the regulatory authority;

(iv) Whether the underground mining activities conducted after October 24, 1992 may result in contamination, diminution or interruption of a well or spring in existence at the time the permit application is submitted and used for domestic, drinking, or residential purposes within the permit or adjacent areas.

(4) An application for a permit revision shall be reviewed by the regulatory authority to determine whether a new or updated PHC shall be required.

(f) *Cumulative hydrologic impact assessment.* (1) The regulatory authority shall provide an assessment of the probable cumulative hydrologic impacts (CHIA) of the proposed operation and all anticipated mining upon surface- and ground-water systems in the cumulative impact area. The CHIA shall be sufficient to determine, for purposes of permit approval, whether the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area. The regulatory authority may allow the applicant to submit data and analyses relevant to the CHIA with the permit application.

(2) An application for a permit revision shall be reviewed by the regulatory authority to determine whether a new or updated CHIA shall be required.

(g) *Hydrologic reclamation plan.* The application shall include a plan, with maps and descriptions, indicating how the relevant requirements of part 817 of this chapter, including §§ 817.41 to 817.43, will be met. The plan shall be specific to the local hydrologic conditions. It shall contain the steps to be taken during mining and reclamation through bond release to minimize disturbance to the hydrologic balance within the permit and adjacent areas; to prevent material damage outside the permit area; and to meet applicable Federal and State water quality laws and regulations. The plan shall include the measures to be taken to: avoid acid or toxic drainage; prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow; provide water treatment facilities when needed; and control drainage. The plan shall specifically address any potential adverse hydrologic consequences identified in the PHC determination prepared under paragraph (e) of this section and shall include preventive and remedial measures.

(h) *Ground-water monitoring plan.* (1) The application shall include a ground-water monitoring plan based upon the PHC determination required under paragraph (e) of this section and the analysis of all baseline hydrologic, geologic and other information in the permit application. The plan shall provide for the monitoring of parameters that relate to the suitability of the ground water for current and approved postmining land uses and to the objectives for protection of the hydrologic balance set forth in paragraph (g) of this section. It shall identify the quantity and quality parameters to be monitored, sampling frequency and site locations. It shall describe how the data may be used to determine the impacts of the operation upon the hydrologic balance. At a minimum, total dissolved solids or specific conductance corrected to 25°C, pH, total iron, total manganese, and water levels shall be monitored and data submitted to the regulatory authority at least every 3 months for each monitoring location. The regulatory authority may require additional monitoring.

(2) If an applicant can demonstrate by the use of the PHC determination and other available information that a particular water-bearing stratum in the proposed permit and adjacent areas is not one which serves as an aquifer which significantly ensures the hydrologic balance within the cumulative impact area, then monitoring of that stratum may be waived by the regulatory authority.

(i) *Surface-water monitoring plan.* (1) The application shall include a surface-water monitoring plan based upon the PHC determination required under paragraph (e) of this section and the analysis of all baseline hydrologic, geologic and other information in the permit application. The plan shall provide for the monitoring of parameters that relate to the suitability of the surface water for current and approved postmining land uses and to the objectives for protection of the hydrologic balance as set forth in paragraph (g) of this section as well as the effluent limitations found at 40 CFR part 434.

(2) The plan shall identify the surface-water quantity and quality parameters to be monitored, sampling frequency and site locations. It shall describe how the data may be used to determine the impacts of the operation upon the hydrologic balance.

(i) At all monitoring locations in streams, lakes, and impoundments, that are potentially impacted or into which water will be discharged and at upstream monitoring locations, the total dissolved solids or specific conductance corrected at 25°C, total suspended solids, pH, total iron, total manganese, and flow shall be monitored.

(ii) For point-source discharges, monitoring shall be conducted in accordance with 40 CFR parts 122, 123 and 434 and as required by the National Pollutant Discharge Elimination System permitting authority.

(3) The monitoring reports shall be submitted to the regulatory authority every 3 months. The regulatory

authority may require additional monitoring.

§ 784.15 Reclamation plan: Land use information.

(a) The plan shall contain a statement of the condition, capability, and productivity of the land within the proposed permit area, including:

(1) A map and supporting narrative of the uses of the land existing at the time of the filing of the application. If the premining use of the land was changed within 5 years before the anticipated date of beginning the proposed operations, the historic use of the land shall also be described. In the case of previously mined land, the use of the land prior to any mining shall also be described to the extent such information is available.

(2) A narrative of land capability and productivity, which analyzes the land-use description under paragraph (a) of this section in conjunction with other environmental resources information. The narrative shall provide analyses of:

(i) The capability of the land before any mining to support a variety of uses, giving consideration to soil and foundation characteristics, topography, vegetative cover, and the hydrology of the proposed permit area; and

(ii) The productivity of the proposed permit area before mining, expressed as average yield of food, fiber, forage, or wood products from such lands obtained under high levels of management. The productivity shall be determined by yield data or estimates for similar sites based on current data from the U.S. Department of Agriculture, State agricultural universities, or appropriate State natural resource or agricultural agencies.

(b) Each plan shall contain a detailed description of the proposed use, following reclamation, of the land within the proposed permit area including a discussion of the utility and capacity of the reclaimed land to support a variety of alternative uses, and the relationship of the proposed use to existing land use policies and plans. This description shall explain:

(1) How the proposed postmining land use is to be achieved and the necessary support activities which may be needed to achieve the proposed land use; and

(2) Where a land use different from the premining land use is proposed, all materials needed for approval of the alternative use under 30 CFR 817.133.

(3) The consideration which has been given to making all of the proposed surface mining activities consistent with surface owner plans and applicable State and local land use plans and programs.

(c) The description shall be accompanied by a copy of the comments concerning the proposed use by the legal or equitable owner of record of the surface of the proposed permit area and the State and local government agencies which would have to initiate, implement, approve, or authorize the proposed use of the land following reclamation.

§ 784.16 Reclamation plan: Siltation structures, impoundments, banks, dams, and embankments.

(a) *General.* Each application shall include a general plan and a detailed design plan for each proposed siltation structure, water impoundment, and coal processing waste bank, dam, or embankment within the proposed permit area.

(1) Each general plan shall—

(i) Be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such plans, a qualified, registered, professional, land surveyor with assistance from experts in related fields such as landscape architecture;

(ii) Contain a description, map, and cross section of the structure and its location;

(iii) Contain preliminary hydrologic and geologic information required to assess the hydrologic impact of the structure;

(iv) Contain a survey describing the potential effect on the structure from subsidence of the subsurface strata resulting from past underground mining operations if underground mining has occurred; and

(v) Contain a certification statement which includes a schedule setting forth the dates when any detailed design plans for structures that are not submitted with the general plan will be submitted to the regulatory authority. The regulatory authority shall have approved, in writing, the detailed design plan for a structure before construction of the structure begins.

(2) Impoundments meeting the Class B or C criteria for dams in the U.S. Department of Agriculture, Soil Conservation Service Technical Release No. 60 (210–VI–TR60, Oct. 1985), "Earth Dams and Reservoirs," Technical Release No. 60 (TR–60) shall comply with the requirements of this section for structures that meet or exceed the size or other criteria of the Mine Safety and Health Administration (MSHA). The technical release is hereby incorporated by reference. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. TR–60 may be viewed or downloaded from OSM's Web site at *http://www.osmre.gov/programs/TDT/damsafety.shtm.* It also is available for inspection at the OSM Headquarters Office, Office of Surface Mining Reclamation and Enforcement, Administrative Record, Room 252, 1951 Constitution Ave. NW., Washington, DC or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* Each detailed design plan for a structure that meets or exceeds the size or other criteria of MSHA, § 77.216(a) of this chapter shall:

(i) Be prepared by, or under the direction of, and certified by a qualified registered professional engineer with assistance from experts in related fields such as geology, land surveying, and landscape architecture;

(ii) Include any geotechnical investigation, design, and construction requirements for the structure;

(iii) Describe the operation and maintenance requirements for each structure; and

(iv) Describe the timetable and plans to remove each structure, if appropriate.

(3) Each detailed design plan for structures not included in paragraph (a)(2) of this section shall:

(i) Be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, or in any State which authorizes land surveyors to prepare and certify such plans, a qualified, registered, professional, land surveyor, except that all coal processing waste dams and embankments covered by §§ 817.81 through 817.84 of this chapter shall be certified by a qualified, registered, professional engineer;

(ii) Include any design and construction requirements for the structure, including any required geotechnical information;

(iii) Describe the operation and maintenance requirements for each structure; and

(iv) Describe the timetable and plans to remove each structure, if appropriate.

(b) *Siltation structures.* Siltation structures shall be designed in compliance with the requirements of § 817.46 of this chapter.

(c) *Permanent and temporary impoundments.* (1) Permanent and temporary impoundments shall be

designed to comply with the requirements of § 817.49 of this chapter.

(2) Each plan for an impoundment meeting the size of other criteria of the Mine Safety and Health Administration shall comply with the requirements of §§ 77.216–1 and 77.216–2 of this title. The plan required to be submitted to the District Manager of MSHA under § 77.216 of this title shall be submitted to the regulatory authority as part of the permit application in accordance with paragraph (a) of this section.

(3) For impoundments not included in paragraph (a)(2) of this section the regulatory authority may establish through the State program approval process engineering design standards that ensure stability comparable to a 1.3 minimum static safety factor in lieu of engineering tests to establish compliance with the minimum static safety factor of 1.3 specified in § 817.49(a)(4)(ii) of this chapter.

(d) *Coal processing waste banks.* Coal processing waste banks shall be designed to comply with the requirements of 30 CFR 817.81 through 817.84.

(e) *Coal processing waste dams and embankments.* Coal processing waste dams and embankments shall be designed to comply with the requirements of 30 CFR 817.81 through 817.84. Each plan shall comply with the requirements of the Mine Safety and Health Administration, 30 CFR 77.216–1 and 77.216–2, and shall contain the results of a geotechnical investigation of the proposed dam or embankment foundation area, to determine the structural competence of the foundation which will support the proposed dam or embankment structure and the impounded material. The geotechnical investigation shall be planned and supervised by an engineer or engineering geologist, according to the following:

(1) The number, location, and depth of borings and test pits shall be determined using current prudent engineering practice for the size of the dam or embankment, quantity of material to be impounded, and subsurface conditions.

(2) The character of the overburden and bedrock, the proposed abutment sites, and any adverse geotechnical conditions which may affect the particular dam, embankment, or reservoir site shall be considered.

(3) All springs, seepage, and ground water flow observed or anticipated during wet periods in the area of the proposed dam or embankment shall be identified on each plan.

(4) Consideration shall be given to the possibility of mudflows, rock-debris falls, or other landslides into the dam, embankment, or impounded material.

(f) If the structure meets the Class B or C criteria for dams in TR–60 or meets the size or other criteria of § 77.216(a) of this chapter, each plan under paragraphs (b), (c), and (e) of this section shall include a stability analysis of the structure. The stability analysis shall include, but not be limited to, strength parameters, pore pressures, and long-term seepage conditions. The plan shall also contain a description of each engineering design assumption and calculation with a discussion of each alternative considered in selecting the specific design parameters and construction methods.

§ 784.17 Protection of publicly owned parks and historic places.

(a) For any publicly owned parks or any places listed on the National Register of Historic Places that may be adversely affected by the proposed operation, each plan shall describe the measures to be used.

(1) To prevent adverse impacts, or

(2) If a person has valid existing rights, as determined under § 761.16 of this chapter, or if joint agency approval is to be obtained under § 761.17(d) of this chapter, to minimize adverse impacts.

(b) The regulatory authority may require the applicant to protect historic and archeological properties listed on or eligible for listing on the National Register of Historic Places through appropriate mitigation and treatment measures. Appropriate mitigation and treatment measures may be required to be taken after permit issuance provided that the required measures are completed before the properties are affected by any mining operation.

§ 784.18 Relocation or use of public roads.

Each application shall describe, with appropriate maps and cross sections, the measures to be used to ensure that the interests of the public and landowners affected are protected if, under § 761.14 of this chapter, the applicant seeks to have the regulatory authority approve—

(a) Conducting the proposed surface coal mining operations within 100 feet of the right-of-way line of any public road, except where mine access or haul roads join that right-of-way; or

(b) Relocating a public road.

§ 784.19 Underground development waste.

Each plan shall contain descriptions, including appropriate maps and cross section drawings of the proposed disposal methods and sites for placing underground development waste and excess spoil generated at surface areas affected by surface operations and facilities, according to 30 CFR 817.71 through 817.74. Each plan shall describe the geotechnical investigation, design, construction, operation, maintenance and removal, if appropriate, of the structures and be prepared according to 30 CFR 780.35.

§ 784.20 Subsidence control plan.

(a) *Pre-subsidence survey.* Each application must include:

(1) A map of the permit and adjacent areas at a scale of 1:12,000, or larger if determined necessary by the regulatory authority, showing the location and type of structures and renewable resource lands that subsidence may materially damage or for which the value or reasonably foreseeable use may be diminished by subsidence, and showing the location and type of drinking, domestic, and residential water supplies that could be contaminated, diminished, or interrupted by subsidence.

(2) A narrative indicating whether subsidence, if it occurred, could cause material damage to or diminish the value or reasonably foreseeable use of such structures or renewable resource lands or could contaminate, diminish, or interrupt drinking, domestic, or residential water supplies.

(3) A survey of the condition of all non-commercial buildings or occupied residential dwellings and structures related thereto, that may be materially damaged or for which the reasonably foreseeable use may be diminished by subsidence, within the area encompassed by the applicable angle of draw; as well as a survey of the quantity and quality of all drinking, domestic, and residential water supplies within the permit area and adjacent area that could be contaminated, diminished, or interrupted by subsidence. If the applicant cannot make this survey because the owner will not allow access to the site, the applicant will notify the owner, in writing, of the effect that denial of access will have as described in § 817.121(c)(4) of this chapter. The applicant must pay for any technical assessment or engineering evaluation used to determine the pre-mining condition or value of such non-commercial buildings or occupied residential dwellings and structures related thereto and the quantity and quality of drinking, domestic, or residential water supplies. The applicant must provide copies of the survey and any technical assessment or engineering evaluation to the property owner and regulatory authority. However, the requirements to perform a survey of the condition of all noncommercial buildings or occupied

residential dwellings and structures related thereto, that may be materially damaged or for which the reasonably foreseeable use may be diminished by subsidence, within the areas encompassed by the applicable angle of draw is suspended per court order.

(b) *Subsidence control plan.* If the survey conducted under paragraph (a) of this section shows that no structures, or drinking, domestic, or residential water supplies, or renewable resource lands exist, or that no material damage or diminution in value or reasonably foreseeable use of such structures or lands, and no contamination, diminution, or interruption of such water supplies would occur as a result of mine subsidence, and if the regulatory authority agrees with this conclusion, no further information need be provided under this section. If the survey shows that structures, renewable resource lands, or water supplies exist and that subsidence could cause material damage or diminution in value or reasonably foreseeable use, or contamination, diminution, or interruption of protected water supplies, or if the regulatory authority determines that damage, diminution in value or foreseeable use, or contamination, diminution, or interruption could occur, the application must include a subsidence control plan that contains the following information:

(1) A description of the method of coal removal, such as longwall mining, room-and-pillar removal or hydraulic mining, including the size, sequence and timing of the development of underground workings;

(2) A map of the underground workings that describes the location and extent of the areas in which planned-subsidence mining methods will be used and that identifies all areas where the measures described in paragraphs (b)(4), (b)(5), and (b)(7) of this section will be taken to prevent or minimize subsidence and subsidence-related damage; and, when applicable, to correct subsidence-related material damage;

(3) A description of the physical conditions, such as depth of cover, seam thickness and lithology of overlaying strata, that affect the likelihood or extent of subsidence and subsidence-related damage;

(4) A description of the monitoring, if any, needed to determine the commencement and degree of subsidence so that, when appropriate, other measures can be taken to prevent, reduce or correct material damage in accordance with § 817.121(c) of this chapter;

(5) Except for those areas where planned subsidence is projected to be used, a detailed description of the subsidence control measures that will be taken to prevent or minimize subsidence and subsidence-related damage, such as, but not limited to:

(i) Backstowing or backfilling of voids;

(ii) Leaving support pillars of coal;

(iii) Leaving areas in which no coal is removed, including a description of the overlying area to be protected by leaving coal in place; and

(iv) Taking measures on the surface to prevent or minimize material damage or diminution in value of the surface;

(6) A description of the anticipated effects of planned subsidence, if any;

(7) For those areas where planned subsidence is projected to be used, a description of methods to be employed to minimize damage from planned subsidence to non-commercial buildings and occupied residential dwellings and structures related thereto; or the written consent of the owner of the structure or facility that minimization measures not be taken; or, unless the anticipated damage would constitute a threat to health or safety, a demonstration that the costs of minimizing damage exceed the anticipated costs of repair;

(8) A description of the measures to be taken in accordance with §§ 817.41(j) and 817.121(c) of this chapter to replace adversely affected protected water supplies or to mitigate or remedy any subsidence-related material damage to the land and protected structures; and

(9) Other information specified by the regulatory authority as necessary to demonstrate that the operation will be conducted in accordance with § 817.121 of this chapter.

§ 784.21 Fish and wildlife information.

(a) *Resource information.* Each application shall include fish and wildlife resource information for the permit area and adjacent area.

(1) The scope and level of detail for such information shall be determined by the regulatory authority in consultation with State and Federal agencies with responsibilities for fish and wildlife and shall be sufficient to design the protection and enhancement plan required under paragraph (b) of this section.

(2) Site-specific resource information necessary to address the respective species or habitats shall be required when the permit area or adjacent area is likely to include:

(i) Listed or proposed endangered or threatened species of plants or animals or their critical habitats listed by the Secretary under the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), or those species or habitats protected by similar State statutes;

(ii) Habitats of unusually high value for fish and wildlife such as important streams, wetlands, riparian areas, cliffs supporting raptors, areas offering special shelter or protection, migration routes, or reproduction and wintering areas; or

(iii) Other species or habitats identified through agency consultation as requiring special protection under State or Federal law.

(b) *Protection and enhancement plan.* Each application shall include a description of how, to the extent possible using the best technology currently available, the operator will minimize disturbances and adverse impacts on fish and wildlife and related environmental values, including compliance with the Endangered Species Act, during the surface coal mining and reclamation operations and how enhancement of these resources will be achieved where practicable. This description shall—

(1) Be consistent with the requirements of § 817.97 of this chapter;

(2) Apply, at a minimum, to species and habitats identified under paragraph (a) of this section; and

(3) Include—

(i) Protective measures that will be used during the active mining phase of operation. Such measures may include the establishment of buffer zones, the selective location and special design of haul roads and powerlines, and the monitoring of surface water quality and quantity; and

(ii) Enchancement measures that will be used during the reclamation and postmining phase of operation to develop aquatic and terrestrial habitat. Such measures may include restoration of streams and other wetlands, retention of ponds and impoundments, establishment of vegetation for wildlife food and cover, and the placement of perches and nest boxes. Where the plan does not include enhancement measures, a statement shall be given explaining why enhancement is not practicable.

(c) *Fish and Wildlife Service review.* Upon request, the regulatory authority shall provide the resource information required under paragraph (a) of this section and the protection and enhancement plan required under paragraph (b) of this section to the U.S. Department of the Interior, Fish and Wildlife Service Regional or Field Office for their review. This information shall be provided within 10 days of receipt of the request from the Service.

§ 784.22 Geologic information.

(a) *General.* Each application shall include geologic information in sufficient detail to assist in—

(1) Determining the probable hydrologic consequences of the operation upon the quality and quantity of surface and ground water in the permit and adjacent areas, including the extent to which surface- and ground-water monitoring is necessary;

(2) Determining all potentially acid- or toxic-forming strata down to and including the stratum immediately below the coal seam to be mined;

(3) Determining whether reclamation as required by this chapter can be accomplished and whether the proposed operation has been designed to prevent material damage to the hydrologic balance outside the permit area; and

(4) Preparing the subsidence control plan under § 784.20.

(b) Geologic information shall include, at a minimum, the following:

(1) A description of the geology of the proposed permit and adjacent areas down to and including the deeper of either the stratum immediately below the lowest coal seam to be mined or any aquifer below the lowest coal seam to be mined which may be adversely impacted by mining. This description shall include the areal and structural geology of the permit and adjacent areas, and other parameters which influence the required reclamation and it shall also show how the areal and structural geology may affect the occurrence, availability, movement, quantity and quality of potentially impacted surface and ground water. It shall be based on—

(i) The cross sections, maps, and plans required by § 783.25 of this chapter;

(ii) The information obtained under paragraphs (b)(2), (b)(3), and (c) of this section; and

(iii) Geologic literature and practices.

(2) For any portion of a permit area in which the strata down to the coal seam to be mined will be removed or are already exposed, samples shall be collected and analyzed from test borings; drill cores; or fresh, unweathered, uncontaminated samples from rock outcrops down to and including the deeper of either the stratum immediately below the lowest coal seam to be mined or any aquifer below the lowest coal seam to be mined which may be adversely impacted by mining. The analyses shall result in the following:

(i) Logs showing the lithologic characteristics including physical properties and thickness of each stratum and location of ground water where occurring;

(ii) Chemical analyses identifying those strata that may contain acid- or toxic-forming, or alkalinity-producing materials and to determine their content except that the regulatory authority may find that the analysis for alkalinity-producing material is unnecessary; and

(iii) Chemical analysis of the coal seam for acid- or toxic-forming materials, including the total sulfur and pyritic sulfur, except that the regulatory authority may find that the analysis of pyritic sulfur content is unnecessary.

(3) For lands within the permit and adjacent areas where the strata above the coal seam to be mined will not be removed, samples shall be collected and analyzed from test borings or drill cores to provide the following data:

(i) Logs of drill holes showing the lithologic characteristics, including physical properties and thickness of each stratum that may be impacted, and location of ground water where occurring;

(ii) Chemical analyses for acid- or toxic-forming or alkalinity-producing materials and their content in the strata immediately above and below the coal seam to be mined;

(iii) Chemical analyses of the coal seam for acid- or toxic-forming materials, including the total sulfur and pyritic sulfur, except that the regulatory authority may find that the analysis of pyrite sulfur content is unnecessary; and

(iv) For standard room and pillar mining operations, the thickness and engineering properties of clays or soft rock such as clay shale, if any, in the stratum immediately above and below each coal seam to be mined.

(c) If determined to be necessary to protect the hydrologic balance, to minimize or prevent subsidence, or to meet the performance standards of this chapter, the regulatory authority may require the collection, analysis and description of geologic information in addition to that required by paragraph (b) of this section.

(d) An applicant may request the regulatory authority to waive in whole or in part the requirements of paragraphs (b) (2) and (3) of this section. The waiver may be granted only if the regulatory authority finds in writing that the collection and analysis of such data is unnecessary because other information having equal value or effect is available to the regulatory authority in a satisfactory form.

§ 784.23 Operation plan: Maps and plans.

Each application shall contain maps and plans as follows:

(a) The maps, plans and cross-sections shall show the underground mining activities to be conducted, the lands to be affected throughout the operation, and any change in a facility or feature to be caused by the proposed operations, if the facility or feature was shown under 30 CFR 783.24 and 783.25.

(b) The following shall be shown for the proposed permit area:

(1) Buildings, utility corridors, and facilities to be used;

(2) The area of land to be affected within the proposed permit area, according to the sequence of mining and reclamation;

(3) Each area of land for which a performance bond or other equivalent guarantee will be posted under subchapter J of this chapter;

(4) Each coal storage, cleaning and loading area;

(5) Each topsoil, spoil, coal preparation waste, underground development waste, and non-coal waste storage area;

(6) Each water diversion, collection, conveyance, treatment, storage and discharge facility to be used;

(7) Each source of waste and each waste disposal facility relating to coal processing or pollution control;

(8) Each facility to be used to protect and enhance fish and wildlife related environmental values;

(9) Each explosive storage and handling facility;

(10) Location of each sedimentation pond, permanent water impoundment, coal processing waste bank, and coal processing waste dam and embankment, in accordance with 30 CFR 784.16 and disposal areas for underground development waste and excess spoil, in accordance with 30 CFR 784.19;

(11) Each profile, at cross-sections specified by the regulatory authority, of the anticipated final surface configuration to be achieved for the affected areas;

(12) Location of each water and subsidence monitoring point;

(13) Location of each facility that will remain on the proposed permit area as a permanent feature, after the completion of underground mining activities.

(c) Except as provided in §§ 784.16(a)(2), 784.16(a)(3), 784.19, 817.71(b), 817.73(c), 817.74(c) and 817.81(c) of this chapter, cross sections, maps and plans required under paragraphs (b)(4), (5), (6), (10) and (11) of this section shall be prepared by, or under the direction of, and certified by a qualified, registered, professional engineer, a professional geologist, or in any State which authorizes land surveyors to prepare and certify such

cross sections, maps and plans, a qualified, registered, professional, land surveyor, with assistance from experts in related fields such as landscape architecture.

§ 784.24 Road systems.

(a) *Plans and drawings.* Each applicant for an underground coal mining and reclamation permit shall submit plans and drawings for each road, as defined in § 701.5 of this chapter, to be constructed, used, or maintained within the proposed permit area. The plans and drawings shall—

(1) Include a map, appropriate cross sections, design drawings, and specifications for road widths, gradients, surfacing materials, cuts, fill embankments, culverts, bridges, drainage ditches, low-water crossings, and drainage structures;

(2) Contain the drawings and specifications of each proposed road that is located in the channel of an intermittent or perennial stream, as necessary for approval of the road by the regulatory authority in accordance with § 817.150(d)(1) of this chapter;

(3) Contain the drawings and specifications for each proposed ford of perennial or intermittent streams that is used as a temporary route, as necessary for approval of the ford by the regulatory authority in accordance with § 817.151(c)(2) of this chapter;

(4) Contain a description of measures to be taken to obtain approval of the regulatory authority for alteration or relocation of a natural stream channel under § 817.151(d)(5) of this chapter;

(5) Contain the drawings and specifications for each low-water crossing of perennial or intermittent stream channels so that the regualtory authority can maximize the protection of the stream in accordance with § 817.151(d)(6) of this chapter; and

(6) Describe the plans to remove and reclaim each road that would not be retained under an approved postmining land use, and the schedule for this removal and reclamation.

(b) *Primary road certification.* The plans and drawings for each primary road shall be prepared by, or under the direction of, and certified by a qualified registered professional engineer, or in any State which authorizes land surveyors to certify the design of primary roads a qualified registered professional land surveyor, experienced in the design and construction of roads, as meeting the requirements of this chapter; current, prudent engineering practices; and any design criteria established by the regulatory authority.

(c) *Standard design plans.* The regulatory authority may establish engineering design standards for primary roads through the State program approval process, in lieu of engineering tests, to establish compliance with the minimum static safety factor of 1.3 for all embankments specified in § 817.151(b) of this chapter.

§ 784.25 Return of coal processing waste to abandoned underground workings.

(a) Each plan shall describe the design, operation and maintenance of any proposed coal processing waste disposal facility, including flow diagrams and any other necessary drawings and maps, for the approval of the regulatory authority and the Mine Safety and Health Administration under 30 CFR 817.81(f).

(b) Each plan shall describe the source and quality of waste to be stowed, area to be backfilled, percent of the mine void to be filled, method of constructing underground retaining walls, influence of the backfilling operation on active underground mine operations, surface area to be supported by the backfill, and the anticipated occurrence of surface effects following backfilling.

(c) The applicant shall describe the source of the hydraulic transport mediums, method of dewatering the placed backfill, retainment of water underground, treatment of water if released to surface streams, and the effect on the hydrologic regime.

(d) The plan shall describe each permanent monitoring well to be located in the backfilled area, the stratum underlying the mined coal, and gradient from the backfilled area.

(e) The requirements of paragraphs (a), (b), (c), and (d) of this section shall also apply to pneumatic backfilling operations, except where the operations are exempted by the regulatory authority from requirements specifying hydrologic monitoring.

§ 784.26 Air pollution control plan.

For all surface operations associated with underground mining activities, the application shall contain an air pollution control plan which includes the following:

(a) An air quality monitoring program, if required by the regulatory authority, to provide sufficient data to evaluate the effectiveness of the fugitive dust control practices, under paragraph (b) of this section to comply with applicable Federal and State air quality standards; and

(b) A plan for fugitive dust control practices, as required under 30 CFR 817.95.

§ 784.29 Diversions.

Each application shall contain descriptions, including maps and cross sections, of stream channel diversions and other diversions to be constructed within the proposed permit area to achieve compliance with § 817.43 of this chapter.

§ 784.30 Support facilities.

Each applicant for an underground coal mining and reclamation permit shall submit a description, plans, and drawings for each support facility to be constructed, used, or maintained within the proposed permit area. The plans and drawings shall include a map, appropriate cross sections, design drawings, and specifications sufficient to demonstrate compliance with § 817.181 of this chapter for each facility.

§ 784.200 Interpretive rules related to General Performance Standards.

The following interpretation of rules promulgated in part 784 of this chapter have been adopted by the Office of Surface Mining Reclamation and Enforcement.

(a) *Interpretation of § 784.15: Reclamation plan: Postmining land uses.* (1) The requirements of § 784.15(a)(2), for approval of an alternative postmining land use, may be met by requesting approval through the permit revision procedures of § 774.13 rather than requesting such approval in the original permit application. The original permit application, however, must demonstrate that the land will be returned to its premining land use capability as required by § 817.133(a). An application for a permit revision of this type, (i) must be submitted in accordance with the filing deadlines of § 774.13, (ii) shall constitute a significant alteration from the mining operations contemplated by the original permit, and (iii) shall be subject to the requirements of 30 CFR parts 773 and 775.

(b) [Reserved]

■ 10. Revise part 785 to read as follows:

PART 785—REQUIREMENTS FOR PERMITS FOR SPECIAL CATEGORIES OF MINING

Sec.

785.1 Scope.
785.2 Objective.
785.10 Information collection.
785.11 Anthracite surface coal mining and reclamation operations.
785.12 Special bituminous surface coal mining and reclamation operations.
785.13 Experimental practices mining.
785.14 Mountaintop removal mining.
785.15 Steep slope mining.
785.16 Permits incorporating variances from approximate original contour restoration requirements for steep slope mining.

785.17 Prime farmlands.
785.18 Variances for delay in contemporaneous reclamation requirement in combined surface and underground mining activities.
785.19 Surface coal mining and reclamation operations on areas or adjacent to areas including alluvial valley floors in the arid and semi-arid areas west of the 100th meridian.
785.20 Augering.
785.21 Coal preparation plants not located within the permit area of a mine.
785.22 In situ processing activities.
785.25 Lands eligible for remining.

Authority: 30 U.S.C. 1201 *et seq.* as

§ 785.1 Scope.

This part establishes the minimum requirements for regulatory program provisions for permits for certain categories of surface coal mining and reclamation operations. These requirements are in addition to the general permit requirements contained in this subchapter G. All of the provisions of subchapter G apply to these operations, unless otherwise specifically provided in this part.

§ 785.2 Objective.

The objective of this part is to ensure that permits are issued for certain categories of surface coal mining and reclamation operations only after the regulatory authority receives information that shows that these operations will be conducted according to the applicable requirements of the Act, subchapter K, and applicable regulatory programs.

§ 785.10 Information collection.

In accordance with 44 U.S.C. 3501 *et seq.,* the Office of Management and Budget (OMB) has approved the information collection requirements of part 785 and assigned it control number 1029–0040. The information is being collected to meet the requirements of sections 507, 508, 510, 515, 701 and 711 of Public Law 95–87, which requires applicants for special types of mining activities to provide descriptions, maps, plans and data of the proposed activity. This information will be used by the regulatory authority in determining if the applicant can meet the applicable performance standards for the special type of mining activity. Persons must respond to obtain a benefit. A Federal agency may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number.

§ 785.11 Anthracite surface coal mining and reclamation operations.

(a) This section applies to any person who conducts or intends to conduct anthracite surface coal mining and reclamation operations in Pennsylvania.

(b) Each person who intends to conduct anthracite surface coal mining and reclamation operations in Pennsylvania shall apply for and obtain a permit in accordance with the requirements of this subchapter. The following standards apply to applications for and issuance of permits:

(1) In lieu of the requirements of 30 CFR parts 816–817, the requirements of 30 CFR part 820 shall apply.

(2) All other requirements of this chapter including the bonding and insurance requirements of 30 CFR 800.70, except the bond limits and the period of revegetation responsibility, to the extent they are required under sections 509 or 510 of the Act, shall apply.

(c) If the Pennsylvania anthracite permanent regulatory program in effect on August 3, 1977, is amended with respect to environmental protection performance standards, the Secretary shall issue additional regulations necessary to meet the purposes of the Act.

§ 785.12 Special bituminous surface coal mining and reclamation operations.

(a) This section applies to any person who conducts or intends to conduct certain special bituminous coal surface mine operations in Wyoming.

(b) Each application for a permit for a special bituminous coal mine operation shall include, as part of the mining operations and reclamation plan, the detailed descriptions, maps and plans needed to demonstrate that the operations will comply with the requirements of the Act and 30 CFR part 825.

(c) The regulatory authority may issue a permit for a special bituminous coal mine operation for which a complete application has been filed in accordance with this section, if it finds, in writing, that the operation will be conducted in compliance with the Act and 30 CFR part 825.

(d) Upon amendment or revision to the Wyoming regulatory program, regulations, or decisions made thereunder, governing special bituminous coal mines, the Secretary shall issue additional regulations necessary to meet the purposes of the Act.

§ 785.13 Experimental practices mining.

(a) Experimental practices provide a variance from environmental protection performance standards of the Act, of subchapter K of this chapter, and the regulatory program for experimental or research purposes, or to allow an alternative postmining land use, and may be undertaken if they are approved by the regulatory authority and the Director and if they are incorporated in a permit or permit revision issued in accordance with the requirements of subchapter G of this chapter.

(b) An application for an experimental practice shall contain descriptions, maps, plans, and data which show—

(1) The nature of the experimental practice, including a description of the performance standards for which variances are requested, the duration of the experimental practice, and any special monitoring which will be conducted;

(2) How use of the experimental practice encourages advances in mining and reclamation technology or allows a postmining land use for industrial, commercial, residential, or public use (including recreation facilities) on an experimental basis;

(3) That the experimental practice—

(i) Is potentially more, or at least as, environmentally protective, during and after mining operations, as would otherwise be required by standards promulgated under subchapter K of this chapter; and

(ii) Will not reduce the protection afforded public health and safety below that provided by the requirements of subchapter K of this chapter; and

(4) That the applicant will conduct monitoring of the effects of the experimental practice. The monitoring program shall ensure the collection, analysis, and reporting of reliable data that are sufficient to enable the regulatory authority and the Director to—

(i) Evaluate the effectiveness of the experimental practice; and

(ii) Identify, at the earliest possible time, potential risk to the environment and public health and safety which may be caused by the experimental practice during and after mining.

(c) Applications for experimental practices shall comply with the public notice requirements of § 773.6 of this chapter.

(d) No application for an experimental practice under this section shall be approved until the regulatory authority first finds in writing and the Director then concurs that—

(1) The experimental practice encourages advances in mining and reclamation technology or allows a postmining land use for industrial, commercial, residential, or public use (including recreational facilities) on an experimental basis;

(2) The experimental practice is potentially more, or at least as, environmentally protective, during and

after mining operations, as would otherwise be required by standards promulgated under subchapter K of this chapter;

(3) The mining operations approved for a particular land-use or other purpose are not larger or more numerous than necessary to determine the effectiveness and economic feasibility of the experimental practice; and

(4) The experimental practice does not reduce the protection afforded public health and safety below that provided by standards promulgated under subchapter K of this chapter.

(e) Experimental practices granting variances from the special environmental protection performance standards of sections 515 and 516 of the Act applicable to prime farmlands shall be approved only after consultation with the U.S. Department of Agriculture, Soil Conservation Service.

(f) Each person undertaking an experimental practice shall conduct the periodic monitoring, recording and reporting program set forth in the application, and shall satisfy such additional requirements as the regulatory authority or the Director may impose to ensure protection of the public health and safety and the environment.

(g) Each experimental practice shall be reviewed by the regulatory authority at a frequeny set forth in the approved permit, but no less frequently than every 2½ years. After review, the regulatory authority may require such reasonable modifications of the experimental practice as are necessary to ensure that the activities fully protect the environment and the public health and safety. Copies of the decision of the regulatory authority shall be sent to the permittee and shall be subject to the provisions for administrative and judicial review of part 775 of this chapter.

(h) Revisions or modifications to an experimental practice shall be processed in accordance with the requirements of § 774.13 of this chapter and approved by the regulatory authority. Any revisions which propose significant alterations in the experimental practice shall, at a minimum, be subject to notice, hearing, and public participation requirements of § 773.6 of this chapter and concurrence by the Director. Revisions that do not propose significant alterations in the experimental practice shall not require concurrence by the Director.

§ 785.14 Mountaintop removal mining.

(a) This section applies to any person who conducts or intends to conduct surface mining activities by mountaintop removal mining.

(b) Mountaintop removal mining means surface mining activities, where the mining operation removes an entire coal seam or seams running through the upper fraction of a mountain, ridge, or hill, except as provided for in 30 CFR 824.11(a)(6), by removing substantially all of the overburden off the bench and creating a level plateau or a gently rolling contour, with no highwalls remaining, and capable of supporting postmining land uses in accordance with the requirements of this section.

(c) The regulatory authority may issue a permit for mountaintop removal mining, without regard to the requirements of §§ 816.102, 816.104, 816.105, and 816.107 of this chapter to restore the lands disturbed by such mining to their approximate original contour, if it first finds, in writing, on the basis of a complete application, that the following requirements are met:

(1) The proposed postmining land use of the lands to be affected will be an industrial, commercial, agricultural, residential, or public facility (including recreational facilities) use and, if—

(i) After consultation with the appropriate land-use planning agencies, if any, the proposed land use is deemed by the regulatory authority to constitute an equal or better economic or public use of the affected land compared with the pre-mining use;

(ii) The applicant demonstrates compliance with the requirements for acceptable alternative postmining land uses of paragraphs (a) through (c) of § 816.133 of this chapter;

(iii) The applicant has presented specific plans for the proposed postmining land use and appropriate assurances that such use will be—

(A) Compatible with adjacent land uses;

(B) Obtainable according to data regarding expected need and market;

(C) Assured of investment in necessary public facilities;

(D) Supported by commitments from public agencies where appropriate;

(E) Practicable with respect to private financial capability for completion of the proposed use;

(F) Planned pursuant to a schedule attached to the reclamation plan so as to integrate the mining operation and reclamation with the postmining land use; and

(G) Designed by a registered engineer in conformance with professional standards established to assure the stability, drainage, and configuation necessary for the intended use of the site.

(iv) The proposed use would be consistent with adjacent land use and existing State and local land use plans and programs; and

(v) The regulatory authority has provided, in writing, an opportunity of not more than 60 days to review and comment on such proposed use to the governing body of general purpose government in whose jurisdiction the land is located and any State or Federal agency which the regulatory authority, in its discretion, determines to have an interest in the proposed use.

(2) The applicant demonstrates that in place of restoration of the land to be affected to the approximate original contour under §§ 816.102, 816.104, 816.105, and 816.107 of this chapter, the operation will be conducted in compliance with the requirements of part 824 of this chapter.

(3) The requirements of 30 CFR 824 are made a specific condition of the permit.

(4) All other requirements of the Act, this chapter, and the regulatory program are met by the proposed operations.

(5) The permit is clearly identified as being for mountaintop removal mining.

(d)(1) Any permits incorporating a variance issued under this section shall be reviewed by the regulatory authority to evaluate the progress and development of mining activities to establish that the operator is proceeding in accordance with the terms of the variance—

(i) Within the sixth month preceding the third year from the date of its issuance;

(ii) Before each permit renewal; and

(iii) Not later than the middle of each permit term.

(2) Any review required under paragraph (d)(1) of this section need not be held if the permittee has demonstrated and the regulatory authority finds, in writing, within three months before the scheduled review, that all operations under the permit are proceeding and will continue to be conducted in accordance with the terms of the permit and requirements of the Act, this chapter, and the regulatory program.

(3) The terms and conditions of a permit for mountaintop removal mining may be modified at any time by the regulatory authority, if it determines that more stringent measures are necessary to insure that the operation involved is conducted in compliance with the requirements of the Act, this chapter, and the regulatory program.

§ 785.15 Steep slope mining.

(a) This section applies to any persons who conducts or intends to conduct

steep slope surface coal mining and reclamation operations, except—

(1) Where an operator proposes to conduct surface coal mining and reclamation operations on flat or gently rolling terrain, leaving a plain or predominantly flat area, but on which an occasional steep slope is encountered as the mining operation proceeds;

(2) Where a person obtains a permit under the provisions of § 785.14; or

(3) To the extent that a person obtains a permit incorporating a variance under § 785.16.

(b) Any application for a permit for surface coal mining and reclamation operations covered by this section shall contain sufficient information to establish that the operations will be conducted in accordance with the requirements of § 816.107 or § 817.107 of this chapter.

(c) No permit shall be issued for any operations covered by this section, unless the regulatory authority finds, in writing, that in addition to meeting all other requirements of this subchapter, the operation will be conducted in accordance with the requirements of § 816.107 or § 817.107 of this chapter.

§ 785.16 Permits incorporating variances from approximate original contour restoration requirements for steep slope mining.

(a) The regulatory authority may issue a permit for non-mountaintop removal, steep slope, surface coal mining and reclamation operations which includes a variance from the requirements to restore the disturbed areas to their approximate original contour that are contained in §§ 816.102, 816.104, 816.105, and 816.107, or §§ 817.102 and 817.107 of this chapter. The permit may contain such a variance only if the regulatory authority finds, in writing, that the applicant has demonstrated, on the basis of a complete application, that the following requirments are met:

(1) After reclamation, the lands to be affected by the variance within the permit area will be suitable for an industrial, commercial, residential, or public postmining land use (including recreational facilities).

(2) The requirements of § 816.133 or § 817.133 of this chapter will be met.

(3) The watershed of lands within the proposed permit and adjacent areas will be improved by the operations when compared with the condition of the watershed before mining or with its condition if the approximate original contour were to be restored. The watershed will be deemed improved only if—

(i) The amount of total suspended solids or other pollutants discharged to ground or surface water from the permit area will be reduced, so as to improve the public or private uses or the ecology of such water, or flood hazards within the watershed containing the permit area will be reduced by reduction of the peak flow discharge from precipitation events or thaws;

(ii) The total volume of flow from the proposed permit area, during every season of the year, will not vary in a way that adversely affects the ecology of any surface water or any existing or planned use of surface or ground water; and

(iii) The appropriate State environmental agency approves the plan.

(4) The owner of the surface of the lands within the permit area has knowingly requested, in writing, as part of the application, that a variance be granted. The request shall be made separately from any surface owner consent given for the operations under § 778.15 of this chapter and shall show an understanding that the variance could not be granted without the surface owner's request.

(b) If a variance is granted under this section—

(1) The requirements of § 816.133(d) or § 817.133(d) of this chapter shall be included as a specific condition of the permit; and

(2) The permit shall be specifically marked as containing a variance from approximate original contour.

(c) A permit incorporating a variance under this section shall be reviewed by the regulatory authority at least every 30 months following the issuance of the permit to evaluate the progress and development of the surface coal mining and reclamation operations to establish that the operator is proceeding in accordance with the terms of the variance.

(d) If the permittee demonstrates to the regulatory authority that the operations have been, and continue to be, conducted in compliance with the terms and conditions of the permit, the requirements of the Act, this chapter, and the regulatory program, the review specified in paragraph (c) of this section need not be held.

(e) The terms and conditions of a permit incorporating a variance under this section may be modified at any time by the regulatory authority, if it determines that more stringent measures are necessary to ensure that the operations involved are conducted in compliance with the requirements of the Act, this chapter, and the regulatory program.

(f) The regulatory authority may grant variances in accordance with this section only if it has promulgated specific rules to govern the granting of variances in accordance with the provisions of this section and any necessary, more stringent requirements.

§ 785.17 Prime farmland.

(a) This section applies to any person who conducts or intends to conduct surface coal mining and reclamation operations on prime farmlands historically used for cropland. This section does not apply to:

(1) Lands on which surface coal mining and reclamation operations are conducted pursuant to any permit issued prior to August 3, 1977; or

(2) Lands on which surface coal mining and reclamation operations are conducted pursuant to any renewal or revision of a permit issued prior to August 3, 1977; or

(3) Lands included in any existing surface coal mining operations for which a permit was issued for all or any part thereof prior to August 3, 1977, provided that:

(i) Such lands are part of a single continuous surface coal mining operation begun under a permit issued before August 3, 1977; and

(ii) The permittee had a legal right to mine the lands prior to August 3, 1977, through ownership, contract, or lease but not including an option to buy, lease, or contract; and

(iii) The lands contain part of a continuous recoverable coal seam that was being mined in a single continuous mining pit (or multiple pits if the lands are proven to be part of a single continuous surface coal mining operation) begun under a permit issued prior to August 3, 1977.

(4) For purposes of this section:

(i) ''Renewal'' of a permit shall mean a decision by the regulatory authority to extend the time by which the permittee may complete mining within the boundaries of the original permit, and ''revision'' of the permit shall mean a decision by the regulatory authority to allow changes in the method of mining operations within the original permit area, or the decision of the regulatory authority to allow incidental boundary changes to the original permit;

(ii) A pit shall be deemed to be a single continuous mining pit even if portions of the pit are crossed by a road, pipeline, railroad, or powerline or similar crossing;

(iii) A single continuous surface coal mining operation is presumed to consist only of a single continuous mining pit under a permit issued prior to August 3, 1977, but may include non-contiguous parcels if the operator can prove by clear and convincing evidence that,

prior to August 3, 1977, the non-contiguous parcels were part of a single permitted operation. For the purposes of this paragraph, clear and convincing evidence includes, but is not limited to, contracts, leases, deeds or other properly executed legal documents (not including options) that specifically treat physically separate parcels as one surface coal mining operation.

(b) *Application contents—Reconnaissance inspection.* (1) All permit applications, whether or not prime farmland is present, shall include the results of a reconnaissance inspection of the proposed permit area to indicate whether prime farmland exists. The regulatory authority in consultation with the U.S. Soil Conservation Service shall determine the nature and extent of the required reconnaissance inspection.

(2) If the reconnaissance inspection establishes that no land within the proposed permit area is prime farmland historically used for cropland, the applicant shall submit a statement that no prime farmland is present. The statement shall identify the basis upon which such a conclusion was reached.

(3) If the reconnaissance inspection indicates that land within the proposed permit area may be prime farmland historically used for cropland, the applicant shall determine if a soil survey exists for those lands and whether soil mapping units in the permit area have been designated as prime farmland. If no soil survey exists, the applicant shall have a soil survey made of the lands within the permit area which the reconnaissance inspection indicates could be prime farmland. Soil surveys of the detail used by the U.S. Soil Conservation Service for operational conservation planning shall be used to identify and locate prime farmland soils.

(i) If the soil survey indicates that no prime farmland soils are present within the proposed permit area, paragraph (b)(2) of this section shall apply.

(ii) If the soil survey indicates that prime farmland soils are present within the proposed permit area, paragraph (c) of this section shall apply.

(c) *Application contents—Prime farmland.* All permit applications for areas in which prime farmland has been identified within the proposed permit area shall include the following:

(1) A soil survey of the permit area according to the standards of the National Cooperative Soil Survey and in accordance with the procedures set forth in U.S. Department of Agriculture Handbooks 436 ''Soil Taxonomy'' (U.S. Soil Conservation Service, 1975) as amended on March 22, 1982 and October 5, 1982, and 18, ''Soil Survey Manual'' (U.S. Soil Conservation Service, 1951), as amended on December 18, 1979, May 7, 1980, May 9, 1980, September 11, 1980, June 9, 1981, June 29, 1981, November 16, 1982. The U.S. Soil Conservation Service establishes the standards of the National Cooperative Soil Survey and maintains a National Soils Handbook which gives current acceptable procedures for conducting soil surveys. This National Soils Handbook is available for review at area and State SCS offices.

(i) U.S. Department of Agriculture Handbooks 436 and 18 are incorporated by reference as they exist on the date of adoption of this section. Notices of changes made to these publications will be periodically published by OSM in the **Federal Register**. The handbooks are on file and available for inspection at the OSM Central Office, U.S. Department of the Interior, 1951 Constitution Avenue NW., Washington, DC, at each OSM Technical Center and Field Office, and at the central office of the applicable State regulatory authority, if any. Copies of these documents are also available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, Stock Nos. 001–000–02597–0 and 001–000–00688–6, respectively. In addition, these documents are available for inspection at the national, State, and area offices of the Soil Conservation Service, U.S. Department of Agriculture, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.* Incorporation by reference provisions were approved by the Director of the Federal Register on June 29, 1981.

(ii) The soil survey shall include a description of soil mapping units and a representative soil profile as determined by the U.S. Soil Conservation Service, including, but not limited to, soil-horizon depths, pH, and the range of soil densities for each prime farmland soil unit within the permit area. Other representative soil-profile descriptions from the locality, prepared according to the standards of the National Cooperative Soil Survey, may be used if their use is approved by the State Conservationist, U.S. Soil Conservation Service. The regulatory authority may request the operator to provide information on other physical and chemical soil properties as needed to make a determination that the operator has the technological capability to restore the prime farmland within the permit area to the soil-reconstruction standards of part 823 of this chapter.

(2) A plan for soil reconstruction, replacement, and stabilization for the purpose of establishing the technological capability of the mine operator to comply with the requirements of part 823 of this chapter.

(3) Scientific data, such as agricultural-school studies, for areas with comparable soils, climate, and management that demonstrate that the proposed method of reclamation, including the use of soil mixtures or substitutes, if any, will achieve, within a reasonable time, levels of yield equivalent to, or higher than, those of nonmined prime farmland in the surrounding area.

(4) The productivity prior to mining, including the average yield of food, fiber, forage, or wood products obtained under a high level of management.

(d) *Consultation with Secretary of Agriculture.* (1) The Secretary of Agriculture has responsibilities with respect to prime farmland soils and has assigned the prime farmland responsibilities arising under the Act to the Chief of the U.S. Soil Conservation Service. The U.S. Soil Conservation Service shall carry out consultation and review through the State Conservationist located in each State.

(2) The State Conservationist shall provide to the regulatory authority a list of prime farmland soils, their location, physical and chemical characteristics, crop yields, and associated data necessary to support adequate prime farmland soil descriptions.

(3) The State Conservationist shall assist the regulatory authority in describing the nature and extent of the reconnaissance inspection required in paragraph (b)(1) of this section.

(4) Before any permit is issued for areas that include prime farmland, the regulatory authority shall consult with the State Conservationist. The State Conservationist shall provide for the review of, and comment on, the proposed method of soil reconstruction in the plan submitted under paragraph (c) of this section. If the State Conservationist considers those methods to be inadequate, he or she shall suggest revisions to the regulatory authority which result in more complete and adequate reconstruction.

(e) *Issuance of permit.* A permit for the mining and reclamation of prime farmland may be granted by the regulatory authority, if it first finds, in writing, upon the basis of a complete application, that—

(1) The approved proposed postmining land use of these prime farmlands will be cropland;

(2) The permit incorporates as specific conditions the contents of the plan submitted under paragraph (c) of this section, after consideration of any revisions to that plan suggested by the State Conservationist under paragraph (d)(4) of this section;

(3) The applicant has the technological capability to restore the prime farmland, within a reasonable time, to equivalent or higher levels of yield as non-mined prime farmland in the surrounding area under equivalent levels of management; and

(4) The proposed operations will be conducted in compliance with the requirements of 30 CFR part 823 and other environmental protection performance and reclamation standards for mining and reclamation of prime farmland of the regulatory program.

(5) The aggregate total prime farmland acreage shall not be decreased from that which existed prior to mining. Water bodies, if any, to be constructed during mining and reclamation operations must be located within the post-reclamation non-prime farmland portions of the permit area. The creation of any such water bodies must be approved by the regulatory authority and the consent of all affected property owners within the permit area must be obtained.

§ 785.18 Variances for delay in contemporaneous reclamation requirement in combined surface and underground mining activities.

(a) *Scope.* This section shall apply to any person or persons conducting or intending to conduct combined surface and underground mining activities where a variance is requested from the contemporaneous reclamation requirements of § 816.100 of this chapter.

(b) *Application contents for variances.* Any person desiring a variance under this section shall file with the regulatory authority complete applications for both the surface mining activities and underground mining activities which are to be combined. The reclamation and operation plans for these permits shall contain appropriate narratives, maps, and plans, which—

(1) Show why the proposed underground mining activities are necessary or desirable to assure maximum practical recovery of the coal;

(2) Show how multiple future disturbances of surface lands or waters will be avoided;

(3) Identify the specific surface areas for which a variance is sought and the sections of the Act, this chapter, and the regulatory program from which a variance is being sought;

(4) Show how the activities will comply with § 816.79 of this chapter and other applicable requirements of the regulatory program;

(5) Show why the variance sought is necessary for the implementation of the proposed underground mining activities;

(6) Provide an assessment of the adverse environmental consequences and damages, if any, that will result if the reclamation of surface mining activities is delayed; and

(7) Show how offsite storage of spoil will be conducted to comply with the requirements of the Act, §§ 816.71 through 816.74 of this chapter, and the regulatory program.

(c) *Issuance of permit.* A permit incorporating a variance under this section may be issued by the regulatory authority if it first finds, in writing, upon the basis of a complete application filed in accordance with this section, that—

(1) The applicant has presented, as part of the permit application, specific, feasible plans for the proposed underground mining activities;

(2) The proposed underground mining activities are necessary or desirable to assure maximum practical recovery of the mineral resource and will avoid multiple future disturbances of surface land or waters;

(3) The applicant has satisfactorily demonstrated that the applications for the surface mining activities and underground mining activities conform to the requirements of the regulatory program and that all other permits necessary for the underground mining activities have been issued by the appropriate authority;

(4) The surface area of surface mining activities proposed for the variance has been shown by the applicant to be necessary for implementing the proposed underground mining activities;

(5) No substantial adverse environmental damage, either onsite or offsite, will result from the delay in completion of reclamation otherwise required by section 515(b)(16) of the Act, part 816 of this chapter, and the regulatory program;

(6) The operations will, insofar as a variance is authorized, be conducted in compliance with the requirements of § 816.79 of this chapter and the regulatory program;

(7) Provisions for offsite storage of spoil will comply with the requirements of section 515(b)(22) of the Act, §§ 816.71 through 816.74 of this chapter, and the regulatory program;

(8) Liability under the performance bond required to be filed by the applicant with the regulatory authority pursuant to subchapter J of this chapter and the regulatory program will be for the duration of the underground mining activities and until all requirements of subchapter J and the regulatory program have been complied with; and

(9) The permit for the surface mining activities contains specific conditions—

(i) Delineating the particular surface areas for which a variance is authorized;

(ii) Identifying the applicable provisions of section 515(b) of the Act, part 816 of this chapter, and the regulatory program; and

(iii) Providing a detailed schedule for compliance with the provisions of this section.

(d) *Review of permits containing variances.* Variances granted by permits issued under this section shall be reviewed by the regulatory authority no later than 3 years from the dates of issuance of the permit and any permit renewals.

§ 785.19 Surface coal mining and reclamation operations on areas or adjacent to areas including alluvial valley floors in the arid and semiarid areas west of the 100th meridian.

(a) *Alluvial valley floor determination.* (1) Permit applicants who propose to conduct surface coal mining and reclamation operations within a valley holding a stream or in a location where the permit area or adjacent area includes any stream, in the arid and semiarid regions of the United States, as an initial step in the permit process, may request the regulatory authority to make an alluvial valley floor determination with respect to that valley floor. The applicant shall demonstrate and the regulatory authority shall determine, based on either available data or field studies submitted by the applicant, or a combination of available data and field studies, the presence or absence of an alluvial valley floor. Studies shall include sufficiently detailed geologic, hydrologic, land use, soils, and vegetation data and analysis to demonstrate the probable existence of an alluvial valley floor in the area. The regulatory authority may require additional data collection and analysis or other supporting documents, maps, and illustrations in order to make the determination.

(2) The regulatory authority shall make a written determination as to the extent of any alluvial valley floors within the area. The regulatory authority shall determine that an alluvial valley floor exists if it finds that—

(i) Unconsolidated streamlaid deposits holding streams are present; and

(ii) There is sufficient water available to support agricultural activities as evidenced by—

(A) The existence of current flood irrigation in the area in question;

(B) The capability of an area to be flood irrigated, based on evaluations of typical regional agricultural practices, historical flood irrigation, streamflow, water quality, soils, and topography; or

(C) Subirrigation of the lands in question derived from the ground-water system of the valley floor.

(3) If the regulatory authority determines in writing that an alluvial valley does not exist pursuant to paragraph (a)(2) of this section, no further consideration of this section is required.

(b) *Applicability of statutory exclusions.* (1) If an alluvial valley floor is identified pursuant to paragraph (a)(2) of this section and the proposed surface coal mining operation may affect this alluvial valley floor or waters that supply the alluvial valley floor, the applicant may request the regulatory authority, as a preliminary step in the permit application process, to separately determine the applicability of the statutory exclusions set forth in paragraph (b)(2) of this section. The regulatory authority may make such a determination based on the available data, may require additional data collection and analysis in order to make the determination, or may require the applicant to submit a complete permit application and not make the determination until after the complete application is evaluated.

(2) An applicant need not submit the information required in paragraphs (d)(2) (ii) and (iii) of this section and a regulatory authority is not required to make the findings of paragraphs (e)(2) (i) and (ii) of this section when the regulatory authority determines that one of the following circumstances, heretofore called statutory exclusions, exist:

(i) The premining land use is undeveloped rangeland which is not significant to farming;

(ii) Any farming on the alluvial valley floor that would be affected by the surface coal mining operation is of such small acreage as to be of negligible impact on the farm's agricultural production. Negligible impact of the proposed operation on farming will be based on the relative importance of the affected farmland areas of the alluvial valley floor area to the farm's total agricultural production over the life of the mine; or

(iii) The circumstances set forth in § 822.12(b) (3) or (4) of this chapter exist.

(3) For the purpose of this section, a farm is one or more land units on which farming is conducted. A farm is generally considered to be the combination of land units with acreage and boundaries in existence prior to August 3, 1977, or if established after August 3, 1977, with those boundaries based on enhancement of the farm's agricultural productivity and not related to surface coal operations.

(c) *Summary denial.* If the regulatory authority determines that the statutory exclusions are not applicable and that any of the required findings of paragraph (e)(2) of this section cannot be made, the regulatory authority may, at the request of the applicant:

(1) Determine that mining is precluded on the proposed permit area and deny the permit without the applicant filing any additional information required by this section; or

(2) Prohibit surface coal mining and reclamation operations in all or parts of the area to be affected by mining.

(d) *Application contents for operations affecting designated alluvial valley floors.* (1) If land within the permit area or adjacent area is identified as an alluvial valley floor and the proposed surface coal mining operation may affect an alluvial valley floor or waters supplied to an alluvial valley floor, the applicant shall submit a complete application for the proposed surface coal mining and reclamation operations to be used by the regulatory authority together with other relevant information as a basis for approval or denial of the permit. If an exclusion of paragraph (b)(2) of this section applies, then the applicant need not submit the information required in paragraphs (d)(2) (ii) and (iii) of this section.

(2) The complete application shall include detailed surveys and baseline data required by the regulatory authority for a determination of—

(i) The essential hydrologic functions of the alluvial valley floor which might be affected by the mining and reclamation process. The information required by this subparagraph shall evaluate those factors which contribute to the collecting, storing, regulating and making the natural flow of water available for agricultural activities on the alluvial valley floor and shall include, but are not limited to:

(A) Factors contributing to the function of collecting water, such as amount, rate and frequency of rainfall and runoff, surface roughness, slope and vegetative cover, infiltration, and evapotranspiration, relief, slope and density of drainage channels;

(B) Factors contributing to the function of storing water, such as permeability, infiltration, porosity, depth and direction of ground water flow, and water holding capacity;

(C) Factors contributing to the function of regulating the flow of surface and ground water, such as the longitudinal profile and slope of the valley and channels, the sinuosity and cross-sections of the channels, interchange of water between streams and associated alluvial and bedrock aquifers, and rates and amount of water supplied by these aquifers; and

(D) Factors contributing to water availability, such as the presence of flood plains and terraces suitable for agricultural activities.

(ii) Whether the operation will avoid during mining and reclamation the interruption, discontinuance, or preclusion of farming on the alluvial valley floor;

(iii) Whether the operation will cause material damage to the quantity or quality of surface or ground waters supplied to the alluvial valley floor;

(iv) Whether the reclamation plan is in compliance with requirements of the Act, this chapter, and regulatory program; and

(v) Whether the proposed monitoring system will provide sufficient information to measure compliance with part 822 of this chapter during and after mining and reclamation operations.

(e) *Findings.* (1) The findings of paragraphs (e)(2) (i) and (ii) of this section are not required with regard to alluvial valley floors to which are applicable any of the exclusions of paragraph (b)(2) of this section.

(2) No permit or permit revision application for surface coal mining and reclamation operations on lands located west of the 100th meridian west longitude shall be approved by the regulatory authority unless the application demonstrates and the regulatory authority finds in writing, on the basis of information set forth in the application, that—

(i) The proposed operations will not interrupt, discontinue, or preclude farming on an alluvial valley floor;

(ii) The proposed operations will not materially damage the quantity or quality of water in surface and underground water systems that supply alluvial valley floors; and

(iii) The proposed operations will comply with part 822 of this chapter and the other applicable requirements of the Act and the regulatory program.

§ 785.20 Augering.

(a) This section applies to any person who conducts or intends to conduct surface coal mining and reclamation operations utilizing augering operations.

(b) Any application for a permit for operations covered by this section shall contain, in the mining and reclamation plan, a description of the augering methods to be used and the measures to be used to comply with 30 CFR part 819.

(c) No permit shall be issued for any operations covered by this section unless the regulatory authority finds, in writing, that in addition to meeting all other applicable requirements of this subchapter, the operation will be conducted in compliance with 30 CFR part 819.

§ 785.21 Coal preparation plants not located within the permit area of a mine.

(a) This section applies to any person who operates or intends to operate a coal preparation plant in connection with a coal mine but outside the permit area for a specific mine. Any person who operates such a preparation plant shall obtain a permit from the regulatory authority in accordance with the requirements of this section

(b) Any application for a permit for operations covered by this section shall contain an operation and reclamation plan which specifies plans, including descriptions, maps, and cross sections, of the construction, operation, maintenance, and removal of the preparation plant and support facilities operated incident thereto or resulting therefrom. The plan shall demonstrate that those operations will be conducted in compliance with part 827 of this chapter.

(c) No permit shall be issued for any operation covered by this section, unless the regulatory authority finds in writing that, in addition to meeting all other applicable requirements of this subchapter, the operations will be conducted in compliance with the requirements of part 827 of this chapter.

(d)(1) Except as provided in paragraph (d)(2) of this section, any person who operates a coal preparation plant beyond May 10, 1986, that was not subject to this chapter before July 6, 1984, shall have applied for a permit no later than November 11, 1985.

(2)(i) State programs that have a statutory or regulatory bar precluding issuance of permits to facilities covered by paragraph (d)(1) of this section shall notify OSMRE not later than November 7, 1985, and shall establish a schedule for actions necessary to allow the permitting of such facilities as soon as practicable. Not later than December 9, 1985, this schedule shall be submitted to OSMRE for approval.

(ii) Any person who operates a coal preparation plant that was not subject to this chapter before July 6, 1984, in a state which submits a schedule in accordance with paragraph (d)(2)(i) of this section shall apply for a permit in accordance with the schedule approved by OSMRE.

(e) Notwithstanding § 773.4 of this chapter and except as prohibited by § 761.11 of this chapter, any person operating a coal preparation plant that was not subject to this chapter before July 6, 1984, may continue to operate without a permit until May 10, 1986, and may continue to operate beyond that date if:

(1) A permit application has been timely filed under paragraph (d)(1) of this section or under a State imposed schedule specified in paragraph (d)(2) of this section,

(2) The regulatory authority has yet to either issue or deny the permit, and

(3) The person complies with the applicable performance standards of § 827.13 of this chapter.

§ 785.22 In situ processing activities.

(a) This section applies to any person who conducts or intends to conduct surface coal mining and reclamation operations utilizing in situ processing activities.

(b) Any application for a permit for operations covered by this section shall be made according to all requirements of this subchapter applicable to underground mining activities. In addition, the mining and reclamation operations plan for operations involving in situ processing activities shall contain information establishing how those operations will be conducted in compliance with the requirements of 30 CFR part 828, including—

(1) Delineation of proposed holes and wells and production zone for approval of the regulatory authority;

(2) Specifications of drill holes and casings proposed to be used;

(3) A plan for treatment, confinement or disposal of all acid-forming, toxic-forming or radioactive gases, solids, or liquids constituting a fire, health, safety or environmental hazard caused by the mining and recovery process; and

(4) Plans for monitoring surface and ground water and air quality, as required by the regulatory authority.

(c) No permit shall be issued for operations covered by this section, unless the regulatory authority first finds, in writing, upon the basis of a complete application made in accordance with paragraph (b) of this section, that the operation will be conducted in compliance with all requirements of this subchapter relating to underground mining activities, and 30 CFR parts 817 and 828.

§ 785.25 Lands eligible for remining.

(a) This section contains permitting requirements to implement § 773.13. Any person who submits a permit application to conduct a surface coal mining operation on lands eligible for remining must comply with this section.

(b) Any application for a permit under this section shall be made according to all requirements of this subchapter applicable to surface coal mining and reclamation operations. In addition, the application shall—

(1) To the extent not otherwise addressed in the permit application, identify potential environmental and safety problems related to prior mining activity at the site and that could be reasonably anticipated to occur. This identification shall be based on a due diligence investigation which shall include visual observations at the site, a record review of past mining at the site, and environmental sampling tailored to current site conditions.

(2) With regard to potential environmental and safety problems referred to in paragraph (b)(1) of this section, describe the mitigative measures that will be taken to ensure that the applicable reclamation requirements of the regulatory program can be met.

■ 11. Revise part 800 to read as follows:

PART 800—BOND AND INSURANCE REQUIREMENTS FOR SURFACE COAL MINING AND RECLAMATION OPERATIONS UNDER REGULATORY PROGRAMS

Sec.

800.1 Scope and purpose.
800.4 Regulatory authority responsibilities.
800.5 Definitions.
800.10 Information collection.
800.11 Requirement to file a bond.
800.12 Form of the performance bond.
800.13 Period of liability.
800.14 Determination of bond amount.
800.15 Adjustment of amount.
800.16 General terms and conditions of bond.
800.17 Bonding requirements for underground coal mines and long-term coal-related surface facilities and structures.
800.20 Surety bonds.
800.21 Collateral bonds.
800.23 Self-bonding.
800.30 Replacement of bonds.
800.40 Requirement to release performance bonds.
800.50 Forfeiture of bonds.
800.60 Terms and conditions for liability insurance.

800.70 Bonding for anthracite operations in Pennsylvania.

Authority: 30 U.S.C. 1201 *et seq.,* as amended; and Pub. L. 100–34.

§ 800.1 Scope and purpose.

This part sets forth the minimum requirements for filing and maintaining bonds and insurance for surface coal mining and reclamation operations under regulatory programs in accordance with the Act.

§ 800.4 Regulatory authority responsibilities.

(a) The regulatory authority shall prescribe and furnish forms for filing performance bonds.

(b) The regulatory authority shall prescribe by regulation terms and conditions for performance bonds and insurance.

(c) The regulatory authority shall determine the amount of the bond for each area to be bonded, in accordance with § 800.14. The regulatory authority shall also adjust the amount as acreage in the permit area is revised, or when other relevant conditions change according to the requirements of § 800.15.

(d) The regulatory authority may accept a self-bond if the permittee meets the requirements of § 800.23 and any additional requirements in the State or Federal program.

(e) The regulatory authority shall release liability under a bond or bonds in accordance with § 800.40.

(f) If the conditions specified in § 800.50 occur, the regulatory authority shall take appropriate action to cause all or part of a bond to be forfeited in accordance with procedures of that section.

(g) The regulatory authority shall require in the permit that adequate bond coverage be in effect at all times. Except as provided in § 800.16(e)(2), operating without a bond is a violation of a condition upon which the permit is issued.

§ 800.5 Definitions.

(a) *Surety bond* means an indemnity agreement in a sum certain payable to the regulatory authority, executed by the permittee as principal and which is supported by the performance guarantee of a corporation licensed to do business as a surety in the State where the operation is located.

(b) *Collateral bond* means an indemnity agreement in a sum certain executed by the permittee as principal which is supported by the deposit with the regulatory authority of one or more of the following:

(1) A cash account, which shall be the deposit of cash in one or more federally-insured or equivalently protected accounts, payable only to the regulatory authority upon demand, or the deposit of cash directly with the regulatory authority;

(2) Negotiable bonds of the United States, a State, or a municipality, endorsed to the order of, and placed in the possession of, the regulatory authority;

(3) Negotiable certificates of deposit, made payable or assigned to the regulatory authority and placed in its possession or held by a federally-insured bank;

(4) An irrevocable letter of credit of any bank organized or authorized to transact business in the United States, payable only to the regulatory authority upon presentation;

(5) A perfected, first-lien security interest in real property in favor of the regulatory authority; or

(6) Other investment-grade rated securities having a rating of AAA, AA, or A or an equivalent rating issued by a nationally recognized securities rating service, endorsed to the order of, and placed in the possession of, the regulatory authority.

(c) *Self-bond* means an indemnity agreement in a sum certain executed by the applicant or by the applicant and any corporate guarantor and made payable to the regulatory authority, with or without separate surety.

§ 800.10 Information collection.

The collection of information contained in §§ 800.11, 800.21(c), 800.23(b)(2), 800.23(b)(3), 800.40(a), and 800.60(a) have been approved by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0043. The information will be used to determine if reclamation bonds are sufficient to comply with the Act. Response is required to obtain a benefit in accordance with the requirements of 30 U.S.C. 1201 *et seq.* Public reporting burden for this collection of information is estimated to average 28 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspects of this collection of information, including suggestions for reducing the burden, to the Office of Surface Mining Reclamation and Enforcement, Information Collection Clearance Officer, 1951 Constitution Avenue NW., rm 5415 L, Washington, DC 20240 and the Office of Management and Budget, Paperwork Reduction Project (1029–0043), Washington, DC 20503.

§ 800.11 Requirement to file a bond.

(a) After a permit application under subchapter G of this chapter has been approved, but before a permit is issued, the applicant shall file with the regulatory authority, on a form prescribed and furnished by the regulatory authority, a bond or bonds for performance made payable to the regulatory authority and conditioned upon the faithful performance of all the requirements of the Act, the regulatory program, the permit, and the reclamation plan.

(b)(1) The bond or bonds shall cover the entire permit area, or an identified increment of land within the permit area upon which the operator will initiate and conduct surface coal mining and reclamation operations during the initial term of the permit.

(2) As surface coal mining and reclamation operations on succeeding increments are initiated and conducted within the permit area, the permittee shall file with the regulatory authority an additional bond or bonds to cover such increments in accordance with this section.

(3) The operator shall identify the initial and successive areas or increments for bonding on the permit application map submitted for approval as provided in the application (under parts 780 and 784 of this chapter), and shall specify the bond amount to be provided for each area or increment.

(4) Independent increments shall be of sufficient size and configuration to provide for efficient reclamation operations should reclamation by the regulatory authority become necessary pursuant to § 800.50.

(c) An operator shall not disturb any surface areas, succeeding increments, or extend any underground shafts, tunnels or operations prior to acceptance by the regulatory authority of the required performance bond.

(d) The applicant shall file, with the approval of the regulatory authority, a bond or bonds under one of the following schemes to cover the bond amounts for the permit area as determined in accordance with § 800.14:

(1) A performance bond or bonds for the entire permit area;

(2) A cumulative bond schedule and the performance bond required for full reclamation of the initial area to be disturbed; or

(3) An incremental bond schedule and the performance bond required for the first increment in the schedule.

(e) OSM may approve, as part of a State or Federal program, an alternative

bonding system, if it will achieve the following objectives and purposes of the bonding program:

(1) The alternative must assure that the regulatory authority will have available sufficient money to complete the reclamation plan for any areas which may be in default at any time; and

(2) The alternative must provide a substantial economic incentive for the permittee to comply with all reclamation provisions.

§ 800.12 Form of the performance bond.

The regulatory authority shall prescribe the form of the performance bond. The regulatory authority may allow for:

(a) A surety bond;

(b) A collateral bond;

(c) A self-bond; or

(d) A combination of any of these bonding methods.

§ 800.13 Period of liability.

(a)(1) Performance bond liability shall be for the duration of the surface coal mining and reclamation operation and for a period which is coincident with the operator's period of extended responsibility for successful revegetation provided in § 816.116 or § 817.116 of this chapter or until achievement of the reclamation requirements of the Act, regulatory programs, and permit, whichever is later.

(2) With the approval of regulatory authority, a bond may be posted and approved to guarantee specific phases of reclamation within the permit area provided the sum of phase bonds posted equals or exceeds the total amount required under §§ 800.14 and 800.15. The scope of work to be guaranteed and the liability assumed under each phase bond shall be specified in detail.

(b) Isolated and clearly defined portions of the permit area requiring extended liability may be separated from the original area and bonded separately with the approval of the regulatory authority. Such areas shall be limited in extent and not constitute a scattered, intermittent, or checkerboard pattern of failure. Access to the separated areas for remedial work may be included in the area under extended liability if deemed necessary by the regulatory authority.

(c) If the regulatory authority approves a long-term, intensive agricultural postmining land use, in accordance with § 816.133 or § 817.133 of this chapter, the applicable 5 or 10 year period of liability shall commence at the date of initial planting for such long-term agricultural use.

(d)(1) The bond liability of the permittee shall include only those actions which he or she is obligated to take under the permit, including completion of the reclamation plan, so that the land will be capable of supporting the postmining land use approved under § 816.133 or § 817.133 of this chapter.

(2) Implementation of an alternative postmining land use approved under §§ 816.133(c) and 817.133(c) which is beyond the control of the permittee, need not be covered by the bond. Bond liability for prime farmland shall be as specified in § 800.40(c)(2).

§ 800.14 Determination of bond amount.

(a) The amount of the bond required for each bonded area shall:

(1) Be determined by the regulatory authority;

(2) Depend upon the requirements of the approved permit and reclamation plan;

(3) Reflect the probable difficulty of reclamation, giving consideration to such factors as topography, geology, hydrology, and revegetation potential; and

(4) Be based on, but not limited to, the estimated cost submitted by the permit applicant.

(b) The amount of the bond shall be sufficient to assure the completion of the reclamation plan if the work has to be performed by the regulatory authority in the event of forfeiture, and in no case shall the total bond initially posted for the entire area under one permit be less than $10,000.

(c) An operator's financial responsibility under § 817.121(c) of this chapter for repairing material damage resulting from subsidence may be satisfied by the liability insurance policy required under § 800.60.

§ 800.15 Adjustment of amount.

(a) The amount of the bond or deposit required and the terms of the acceptance of the applicant's bond shall be adjusted by the regulatory authority from time to time as the area requiring bond coverage is increased or decreased or where the cost of future reclamation changes. The regulatory authority may specify periodic times or set a schedule for reevaluating and adjusting the bond amount to fulfill this requirement.

(b) The regulatory authority shall—

(1) Notify the permittee, the surety, and any person with a property interest in collateral who has requested notification under § 800.21(f) of any proposed adjustment to the bond amount; and

(2) Provide the permittee an opportunity for an informal conference on the adjustment.

(c) A permittee may request reduction of the amount of the performance bond upon submission of evidence to the regulatory authority proving that the permittee's method of operation or other circumstances reduces the estimated cost for the regulatory authority to reclaim the bonded area. Bond adjustments which involve undisturbed land or revision of the cost estimate of reclamation are not considered bond release subject to procedures of § 800.40.

(d) In the event that an approved permit is revised in accordance with subchapter G of this chapter, the regulatory authority shall review the bond for adequacy and, if necessary, shall require adjustment of the bond to conform to the permit as revised.

§ 800.16 General terms and conditions of bond.

(a) The performance bond shall be in an amount determined by the regulatory authority as provided in § 800.14.

(b) The performance bond shall be payable to the regulatory authority.

(c) The performance bond shall be conditioned upon faithful performance of all the requirements of the Act, this chapter, the regulatory program, and the approved permit, including completion of the reclamation plan.

(d) The duration of the bond shall be for the time period provided in § 800.13.

(e)(1) The bond shall provide a mechanism for a bank or surety company to give prompt notice to the regulatory authority and the permittee of any action filed alleging the insolvency or bankruptcy of the surety company, the bank, or the permittee, or alleging any violations which would result in suspension or revocation of the surety or bank charter or license to do business.

(2) Upon the incapacity of a bank or surety company by reason of bankruptcy, insolvency, or suspension or revocation of a charter or license, the permittee shall be deemed to be without bond coverage and shall promptly notify the regulatory authority. The regulatory authority, upon notification received through procedures of paragraph (e)(1) of this section or from the permittee, shall, in writing, notify the operator who is without bond coverage and specify a reasonable period, not to exceed 90 days, to replace bond coverage. If an adequate bond is not posted by the end of the period allowed, the operator shall cease coal extraction and shall comply with the provisions of § 816.132 or § 817.132 of this chapter and shall immediately begin to conduct reclamation operations in accordance with the reclamation plan. Mining

operations shall not resume until the regulatory authority has determined that an acceptable bond has been posted.

§ 800.17 Bonding requirements for underground coal mines and long-term coal-related surface facilities and structures.

(a) *Responsibilities.* The regulatory authority shall require bond coverage, in an amount determined under § 800.14, for long-term surface facilities and structures, and for areas disturbed by surface impacts incident to underground mines, for which a permit is required. Specific reclamation techniques required for underground mines and long-term facilities shall be considered in determining the amount of bond to complete the reclamation.

(b) *Long-term period of liability.* (1) The period of liability for every bond covering long-term surface disturbances shall commence with the issuance of a permit, except that to the extent that such disturbances will occur on a succeeding increment to be bonded, such liability will commence upon the posting of the bond for that increment before the initial surface disturbance of that increment. The liability period shall extend until all reclamation, restoration, and abatement work under the permit has been completed and the bond is released under the provisions of § 800.40, or until the bond has been replaced or extended in accordance with § 800.17(b)(3).

(2) Long-term surface disturbances shall include long-term coal-related surface facilities and structures, and surface impacts incident to underground coal mining, which disturb an area for a period that exceeds 5 years. Long-term surface disturbances include, but are not limited to: surface features of shafts and slope facilities, coal refuse areas, powerlines, bore-holes, ventilation shafts, preparation plants, machine shops, roads, and loading and treatment facilities.

(3) To achieve continuous bond coverage for long-term surface disturbances, the bond shall be conditioned upon extension, replacement, or payment in full, 30 days prior to the expiration of the bond term.

(4) Continuous bond coverage shall apply throughout the period of extended responsibility for successful revegetation and until the provisions of § 800.40 have been met.

(c) *Bond forfeiture.* The regulatory authority shall take action to forfeit a bond pursuant to this section, if 30 days prior to bond expiration, the operator has not filed: (1) A performance bond for a new term as required for continuous coverage, or (2) a performance bond providing coverage for the period of liability, including the period of extended responsibility for successful revegetation.

§ 800.20 Surety bonds.

(a) A surety bond shall be executed by the operator and a corporate surety licensed to do business in the State where the operation is located.

(b) Surety bonds shall be noncancellable during their terms, except that surety bond coverage for lands not disturbed may be cancelled with the prior consent of the regulatory authority. The regulatory authority shall advise the surety, within 30 days after receipt of a notice to cancel bond, whether the bond may be cancelled on an undisturbed area.

§ 800.21 Collateral bonds.

(a) Collateral bonds, except for letters of credit, cash accounts, and real property, shall be subject to the following conditions:

(1) The regulatory authority shall keep custody of collateral deposited by the applicant until authorized for release or replacement as provided in this subchapter.

(2) The regulatory authority shall value collateral at its current market value, not at face value.

(3) The regulatory authority shall require that certificates of deposit be made payable to or assigned to the regulatory authority, both in writing and upon the records of the bank issuing the certificates. If assigned, the regulatory authority shall require the banks issuing these certificates to waive all rights of setoff or liens against those certificates.

(4) The regulatory authority shall not accept an individual certificate of deposit in an amount in excess of $100,000 or the maximum insurable amount as determined by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation.

(b) Letters of credit shall be subject to the following conditions:

(1) The letter may be issued only by a bank organized or authorized to do business in the United States;

(2) Letters of credit shall be irrevocable during their terms. A letter of credit used as security in areas requiring continuous bond coverage shall be forfeited and shall be collected by the regulatory authority if not replaced by other suitable bond or letter of credit at least 30 days before its expiration date.

(3) The letter of credit shall be payable to the regulatory authority upon demand, in part or in full, upon receipt from the regulatory authority of a notice of forfeiture issued in accordance with § 800.50.

(c) Real property posted as a collateral bond shall meet the following conditions:

(1) The applicant shall grant the regulatory authority a first mortgage, first deed of trust, or perfected first-lien security interest in real property with a right to sell or otherwise dispose of the property in the event of forfeiture under § 800.50.

(2) In order for the regulatory authority to evaluate the adequacy of the real property offered to satisfy collateral requirements, the applicant shall submit a schedule of the real property which shall be mortgaged or pledged to secure the obligations under the indemnity agreement. The list shall include—

(i) A description of the property;

(ii) The fair market value as determined by an independent appraisal conducted by a certified appraiser; and

(iii) Proof of possession and title to the real property.

(3) The property may include land which is part of the permit area; however, land pledged as collateral for a bond under this section shall not be disturbed under any permit while it is serving as security under this section.

(d) Cash accounts shall be subject to the following conditions:

(1) The regulatory authority may authorize the operator to supplement the bond through the establishment of a cash account in one or more federally-insured or equivalently protected accounts made payable upon demand to, or deposited directly with, the regulatory authority. The total bond including the cash account shall not be less than the amount required under terms of performance bonds including any adjustments, less amounts released in accordance with § 800.40.

(2) Any interest paid on a cash account shall be retained in the account and applied to the bond value of the account unless the regulatory authority has approved the payment of interest to the operator.

(3) Certificates of deposit may be substituted for a cash account with the approval of the regulatory authority.

(4) The regulatory authority shall not accept an individual cash account in an amount in excess of $100,000 or the maximum insurable amount as determined by the Federal Deposit Insurance Corporation or the Federal Savings and Loan Insurance Corporation.

(e)(1) The estimated bond value of all collateral posted as assurance under this section shall be subject to a margin which is the ratio of bond value to

market value, as determined by the regulatory authority. The margin shall reflect legal and liquidation fees, as well as value depreciation, marketability, and fluctuations which might affect the net cash available to the regulatory authority to complete reclamation.

(2) The bond value of collateral may be evaluated at any time but it shall be evaluated as part of permit renewal and, if necessary, the performance bond amount increased or decreased. In no case shall the bond value of collateral exceed the market value.

(f) Persons with an interest in collateral posted as a bond, and who desire notification of actions pursuant to the bond, shall request the notification in writing to the regulatory authority at the time collateral is offered.

§ 800.23 Self-bonding.

(a) *Definitions.* For the purposes of this section only:

Current assets means cash or other assets or resources which are reasonably expected to be converted to cash or sold or consumed within one year or within the normal operating cycle of the business.

Current liabilities means obligations which are reasonably expected to be paid or liquidated within one year or within the normal operating cycle of the business.

Fixed assets means plants and equipment, but does not include land or coal in place.

Liabilities means obligations to transfer assets or provide services to other entities in the future as a result of past transactions.

Net worth means total assets minus total liabilities and is equivalent to owners' equity.

Parent corporation means a corporation which owns or controls the applicant.

Tangible net worth means net worth minus intangibles such as goodwill and rights to patents or royalties.

(b) The regulatory authority may accept a self-bond from an applicant for a permit if all of the following conditions are met by the applicant or its parent corporation guarantor:

(1) The applicant designates a suitable agent to receive service of process in the State where the proposed surface coal mining operation is to be conducted.

(2) The applicant has been in continuous operation as a business entity for a period of not less than 5 years. Continuous operation shall mean that business was conducted over a period of 5 years immediately preceding the time of application.

(i) The regulatory authority may allow a joint venture or syndicate with less than 5 years of continuous operation to qualify under this requirement, if each member of the joint venture or syndicate has been in continuous operation for at least 5 years immediately preceding the time of application.

(ii) When calculating the period of continuous operation, the regulatory authority may exclude past periods of interruption to the operation of the business entity that were beyond the applicant's control and that do not affect the applicant's likelihood of remaining in business during the proposed surface coal mining and reclamation operations.

(3) The applicant submits financial information in sufficient detail to show that the applicant meets one of the following criteria:

(i) The applicant has a current rating for its most recent bond issuance of ''A'' or higher as issued by either Moody's Investor Service or Standard and Poor's Corporation;

(ii) The applicant has a tangible net worth of at least $10 million, a ratio of total liabilities to net worth of 2.5 times or less, and a ratio of current assets to current liabilities of 1.2 times or greater; or

(iii) The applicant's fixed assets in the United States total at least $20 million, and the applicant has a ratio of total liabilities to net worth of 2.5 times or less, and a ratio of current assets to current liabilities of 1.2 times or greater.

(4) The applicant submits;

(i) Financial statements for the most recently completed fiscal year accompanied by a report prepared by an independent certified public accountant in conformity with generally accepted accounting principles and containing the accountant's audit opinion or review opinion of the financial statements with no adverse opinion;

(ii) Unaudited financial statements for completed quarters in the current fiscal year; and

(iii) Additional unaudited information as requested by the regulatory authority.

(c)(1) The regulatory authority may accept a written guarantee for an applicant's self-bond from a parent corporation guarantor, if the guarantor meets the conditions of paragraphs (b)(1) through (b)(4) of this section as if it were the applicant. Such a written guarantee shall be referred to as a ''corporate guarantee.'' The terms of the corporate guarantee shall provide for the following:

(i) If the applicant fails to complete the reclamation plan, the guarantor shall do so or the guarantor shall be liable under the indemnity agreement to provide funds to the regulatory authority sufficient to complete the reclamation plan, but not to exceed the bond amount.

(ii) The corporate guarantee shall remain in force unless the guarantor sends notice of cancellation by certified mail to the applicant and to the regulatory authority at least 90 days in advance of the cancellation date, and the regulatory authority accepts the cancellation.

(iii) The cancellation may be accepted by the regulatory authority if the applicant obtains suitable replacement bond before the cancellation date or if the lands for which the self-bond, or portion thereof, was accepted have not been disturbed.

(2) The regulatory authority may accept a written guarantee for an applicant's self-bond from any corporate guarantor, whenever the applicant meets the conditions of paragraphs (b)(1), (b)(2) and (b)(4) of this section, and the guarantor meets the conditions of paragraphs (b)(1) through (b)(4) of this section. Such a written guarantee shall be referred to as a ''non-parent corporate guarantee.'' The terms of this guarantee shall provide for compliance with the conditions of paragraphs (c)(1)(i) through (c)(1)(iii) of this section. The regulatory authority may require the applicant to submit any information specified in paragraph (b)(3) of this section in order to determine the financial capabilities of the applicant.

(d) For the regulatory authority to accept an applicant's self-bond, the total amount of the outstanding and proposed self-bonds of the applicant for surface coal mining and reclamation operations shall not exceed 25 percent of the applicant's tangible net worth in the United States. For the regulatory authority to accept a corporate guarantee, the total amount of the parent corporation guarantor's present and proposed self-bonds and guaranteed self-bonds for surface coal mining and reclamation operations shall not exceed 25 percent of the guarantor's tangible net worth in the United States. For the regulatory authority to accept a non-parent corporate guarantee, the total amount of the non-parent corporate guarantor's present and proposed self-bonds and guaranteed self-bonds shall not exceed 25 percent of the guarantor's tangible net worth in the United States.

(e) If the regulatory authority accepts an applicant's self-bond, an indemnity agreement shall be submitted subject to the following requirements:

(1) The indemnity agreement shall be executed by all persons and parties who are to be bound by it, including the parent corporation guarantor, and shall bind each jointly and severally.

(2) Corporations applying for a self-bond, and parent and non-parent corporations guaranteeing an applicant's self-bond shall submit an indemnity agreement signed by two corporate officers who are authorized to bind their corporations. A copy of such authorization shall be provided to the regulatory authority along with an affidavit certifying that such an agreement is valid under all applicable Federal and State laws. In addition, the guarantor shall provide a copy of the corporate authorization demonstrating that the corporation may guarantee the self-bond and execute the indemnity agreement.

(3) If the applicant is a partnership, joint venture or syndicate, the agreement shall bind each partner or party who has a beneficial interest, directly or indirectly, in the applicant.

(4) Pursuant to § 800.50, the applicant, parent or non-parent corporate guarantor shall be required to complete the approved reclamation plan for the lands in default or to pay to the regulatory authority an amount necessary to complete the approved reclamation plan, not to exceed the bond amount. If permitted under State law, the indemnity agreement when under forfeiture shall operate as a judgment against those parties liable under the indemnity agreement.

(f) A regulatory authority may require self-bonded applicants, parent and non-parent corporate guarantors to submit an update of the information required under paragraphs (b)(3) and (b)(4) of this section within 90 days after the close of each fiscal year following the issuance of the self-bond or corporate guarantee.

(g) If at any time during the period when a self-bond is posted, the financial conditions of the applicant, parent or non-parent corporate guarantor change so that the criteria of paragraphs (b)(3) and (d) of this section are not satisfied, the permittee shall notify the regulatory authority immediately and shall within 90 days post an alternate form of bond in the same amount as the self-bond. Should the permittee fail to post an adequate substitute bond, the provisions of § 800.16(e) shall apply.

§ 800.30 Replacement of bonds.

(a) The regulatory authority may allow a permittee to replace existing bonds with other bonds that provide equivalent coverage.

(b) The regulatory authority shall not release existing performance bonds until the permittee has submitted, and the regulatory authority has approved, acceptable replacement performance bonds. Replacement of a performance bond pursuant to this section shall not constitute a release of bond under § 800.40.

§ 800.40 Requirement to release performance bonds.

(a) *Bond release application.* (1) The permittee may file an application with the regulatory authority for the release of all or part of a performance bond. Applications may be filed only at times or during seasons authorized by the regulatory authority in order to properly evaluate the completed reclamation operations. The times or seasons appropriate for the evaluation of certain types of reclamation shall be established in the regulatory program or identified in the mining and reclamation plan required in subchapter G of this chapter and approved by the regulatory authority.

(2) Within 30 days after an application for bond release has been filed with the regulatory authority, the permittee shall submit a copy of an advertisement placed at least once a week for four successive weeks in a newspaper of general circulation in the locality of the surface coal mining operation. The advertisement shall be considered part of any bond release application and shall contain the permittee's name, permit number and approval date, notification of the precise location of the land affected, the number of acres, the type and amount of the bond filed and the portion sought to be released, the type and appropriate dates of reclamation work performed, a description of the results achieved as they relate to the permittee's approved reclamation plan, and the name and address of the regulatory authority to which written comments, objections, or requests for public hearings and informal conferences on the specific bond release may be submitted pursuant to § 800.40 (f) and (h). In addition, as part of any bond release application, the permittee shall submit copies of letters which he or she has sent to adjoining property owners, local governmental bodies, planning agencies, sewage and water treatment authorities, and water companies in the locality in which the surface coal mining and reclamation operation took place, notifying them of the intention to seek release from the bond.

(3) The permittee shall include in the application for bond release a notarized statement which certifies that all applicable reclamation activities have been accomplished in accordance with the requirements of the Act, the regulatory program, and the approved reclamation plan. Such certification shall be submitted for each application or phase of bond release.

(b) *Inspection by regulatory authority.* (1) Upon receipt of the bond release application, the regulatory authority shall, within 30 days, or as soon thereafter as weather conditions permit, conduct an inspection and evaluation of the reclamation work involved. The evaluation shall consider, among other factors, the degree of difficulty to complete any remaining reclamation, whether pollution of surface and subsurface water is occurring, the probability of future occurrence of such pollution, and the estimated cost of abating such pollution. The surface owner, agent, or lessee shall be given notice of such inspection and may participate with the regulatory authority in making the bond release inspection. The regulatory authority may arrange with the permittee to allow access to the permit area, upon request by any person with an interest in bond release, for the purpose of gathering information relevant to the proceeding.

(2) Within 60 days from the filing of the bond release application, if no public hearing is held pursuant to paragraph (f) of this section, or, within 30 days after a public hearing has been held pursuant to paragraph (f) of this section, the regulatory authority shall notify in writing the permittee, the surety or other persons with an interest in bond collateral who have requested notification under § 800.21(f), and the persons who either filed objections in writing or objectors who were a party to the hearing proceedings, if any, of its decision to release or not to release all or part of the performance bond.

(c) The regulatory authority may release all or part of the bond for the entire permit area or incremental area if the regulatory authority is satisfied that all the reclamation or a phase of the reclamation covered by the bond or portion thereof has been accomplished in accordance with the following schedules for reclamation of Phases I, II, and III:

(1) At the completion of Phase I, after the operator completes the backfilling, regrading (which may include the replacement of topsoil) and drainage control of a bonded area in accordance with the approved reclamation plan, 60 percent of the bond or collateral for the applicable area.

(2) At the completion of Phase II, after revegetation has been established on the regraded mined lands in accordance with the approved reclamation plan, an additional amount of bond. When determining the amount of bond to be released after successful revegetation has been established, the regulatory authority shall retain that amount of bond for the revegetated area which

would be sufficient to cover the cost of reestablishing revegetation if completed by a third party and for the period specified for operator responsibility in section 515 of the Act for reestablishing revegetation. No part of the bond or deposit shall be released under this paragraph so long as the lands to which the release would be applicable are contributing suspended solids to streamflow or runoff outside the permit area in excess of the requirements set by section 515(b)(10) of the Act and by subchapter K of this chapter or until soil productivity for prime farmlands has returned to the equivalent levels of yield as nonmined land of the same soil type in the surrounding area under equivalent management practices as determined from the soil survey performed pursuant to section 507(b)(16) of the Act and part 823 of this chapter. Where a silt dam is to be retained as a permanent impoundment pursuant to subchapter K of this chapter, the Phase II portion of the bond may be released under this paragraph so long as provisions for sound future maintenance by the operator or the landowner have been made with the regulatory authority.

(3) At the completion of Phase III, after the operator has completed successfully all surface coal mining and reclamation activities, the release of the remaining portion of the bond, but not before the expiration of the period specified for operator responsibility in § 816.116 or § 817.116 of this chapter. However, no bond shall be fully released under provisions of this section until reclamation requirements of the Act and the permit are fully met.

(d) If the regulatory authority disapproves the application for release of the bond or portion thereof, the regulatory authority shall notify the permittee, the surety, and any person with an interest in collateral as provided for in § 800.21(f), in writing, stating the reasons for disapproval and recommending corrective actions necessary to secure the release and allowing an opportunity for a public hearing.

(e) When any application for total or partial bond release is filed with the regulatory authority, the regulatory authority shall notify the municipality in which the surface coal mining operation is located by certified mail at least 30 days prior to the release of all or a portion of the bond.

(f) Any person with a valid legal interest which might be adversely affected by release of the bond, or the responsible officer or head of any Federal, State, or local governmental agency which has jurisdiction by law or special expertise with respect to any environmental, social, or economic impact involved in the operation or which is authorized to develop and enforce environmental standards with respect to such operations, shall have the right to file written objections to the proposed release from bond with the regulatory authority within 30 days after the last publication of the notice required by § 800.40(a)(2). If written objections are filed and a hearing is requested, the regulatory authority shall inform all the interested parties of the time and place of the hearing, and shall hold a public hearing within 30 days after receipt of the request for the hearing. The date, time, and location of the public hearing shall be advertised by the regulatory authority in a newspaper of general circulation in the locality for two consecutive weeks. The public hearing shall be held in the locality of the surface coal mining operation from which bond release is sought, at the location of the regulatory authority office, or at the State capital, at the option of the objector.

(g) For the purpose of the hearing under paragraph (f) of this section, the regulatory authority shall have the authority to administer oaths, subpoena witnesses or written or printed material, compel the attendance of witnesses or the production of materials, and take evidence including, but not limited to, inspection of the land affected and other surface coal mining operations carried on by the applicant in the general vicinity. A verbatim record of each public hearing shall be made, and a transcript shall be made available on the motion of any party or by order of the regulatory authority.

(h) Without prejudice to the right of an objector or the applicant, the regulatory authority may hold an informal conference as provided in section 513(b) of the Act to resolve such written objections. The regulatory authority shall make a record of the informal conference unless waived by all parties, which shall be accessible to all parties. The regulatory authority shall also furnish all parties of the informal conference with a written finding of the regulatory authority based on the informal conference, and the reasons for said finding.

§ 800.50 Forfeiture of bonds.

(a) If an operator refuses or is unable to conduct reclamation of an unabated violation, if the terms of the permit are not met, or if the operator defaults on the conditions under which the bond was accepted, the regulatory authority shall take the following action to forfeit all or part of a bond or bonds for any permit area or an increment of a permit area:

(1) Send written notification by certified mail, return receipt requested, to the permittee and the surety on the bond, if any, informing them of the determination to forfeit all or part of the bond, including the reasons for the forfeiture and the amount to be forfeited. The amount shall be based on the estimated total cost of achieving the reclamation plan requirements.

(2) Advise the permittee and surety, if applicable, of the conditions under which forfeiture may be avoided. Such conditions may include, but are not limited to—

(i) Agreement by the permittee or another party to perform reclamation operations in accordance with a compliance schedule which meets the conditions of the permit, the reclamation plan, and the regulatory program and a demonstration that such party has the ability to satisfy the conditions; or

(ii) The regulatory authority may allow a surety to complete the reclamation plan, or the portion of the reclamation plan applicable to the bonded phase or increment, if the surety can demonstrate an ability to complete the reclamation in accordance with the approved reclamation plan. Except where the regulatory authority may approve partial release authorized under § 800.40, no surety liability shall be released until successful completion of all reclamation under the terms of the permit, including applicable liability periods of § 800.13.

(b) In the event forfeiture of the bond is required by this section, the regulatory authority shall—

(1) Proceed to collect the forfeited amount as provided by applicable laws for the collection of defaulted bonds or other debts if actions to avoid forfeiture have not been taken, or if rights of appeal, if any, have not been exercised within a time established by the regulatory authority, or if such appeal, if taken, is unsuccessful.

(2) Use funds collected from bond forfeiture to complete the reclamation plan, or portion thereof, on the permit area or increment, to which bond coverage applies.

(c) Upon default, the regulatory authority may cause the forfeiture of any and all bonds deposited to complete reclamation for which the bonds were posted. Unless specifically limited, as provided in § 800.11(b), bond liability shall extend to the entire permit area under conditions of forfeiture.

(d)(1) In the event the estimated amount forfeited is insufficient to pay for the full cost of reclamation, the

operator shall be liable for remaining costs. The regulatory authority may complete, or authorize completion of, reclamation of the bonded area and may recover from the operator all costs of reclamation in excess of the amount forfeited.

(2) In the event the amount of performance bond forfeited was more than the amount necessary to complete reclamation, the unused funds shall be returned by the regulatory authority to the party from whom they were collected.

§ 800.60 Terms and conditions for liability insurance.

(a) The regulatory authority shall require the applicant to submit as part of its permit application a certificate issued by an insurance company authorized to do business in the United States certifying that the applicant has a public liability insurance policy in force for the surface coal mining and reclamation operations for which the permit is sought. Such policy shall provide for personal injury and property damage protection in an amount adequate to compensate any persons injured or property damaged as a result of the surface coal mining and reclamation operations, including the use of explosives, and who are entitled to compensation under the applicable provisions of State law. Minimum insurance coverage for bodily injury and property damage shall be $300,000 for each occurrence and $500,000 aggregate.

(b) The policy shall be maintained in full force during the life of the permit or any renewal thereof and the liability period necessary to complete all reclamation operations under this Chapter.

(c) The policy shall include a rider requiring that the insurer notify the regulatory authority whenever substantive changes are made in the policy including any termination or failure to renew.

(d) The regulatory authority may accept from the applicant, in lieu of a certificate for a public liability insurance policy, satisfactory evidence from the applicant that it satisfies applicable State self-insurance requirements approved as part of the regulatory program and the requirements of this section.

§ 800.70 Bonding for anthracite operations in Pennsylvania.

(a) All of the provisions of this subchapter shall apply to bonding and insuring anthracite surface coal mining and reclamation operations in Pennsylvania except that—

(1) Specified bond limits shall be determined by the regulatory authority in accordance with applicable provisions of Pennsylvania statutes, rules and regulations promulgated thereunder, and implementing policies of the Pennsylvania Department of Environmental Resources.

(2) The period of liability for responsibility under each bond shall be established for those operations in accordance with applicable laws of the State of Pennsylvania, rules and regulations promulgated thereunder, and implementing policies of the Pennsylvania Department of Environmental Resources.

(b) Upon amendment of the Pennsylvania permanent regulatory program with respect to specified bond limits and period of revegetation responsibility for anthracite surface coal mining and reclamation operations, any person engaging in or seeking to engage in those operations shall comply with additional regulations the Secretary may issue as are necessary to meet the purposes of the Act.

■ 12. Revise part 816 to read as follows:

PART 816—PERMANENT PROGRAM PERFORMANCE STANDARDS—SURFACE MINING ACTIVITIES

Sec.

816.1 Scope.
816.2 Objectives.
816.10 Information collection.
816.11 Signs and markers.
816.13 Casing and sealing of drilled holes: General requirements.
816.14 Casing and sealing of drilled holes: Temporary.
816.15 Casing and sealing of drilled holes: Permanent.
816.22 Topsoil and subsoil.
816.41 Hydrologic-balance protection.
816.42 Hydrologic balance: Water quality standards and effluent limitations.
816.43 Diversions.
816.45 Hydrologic balance: Sediment control measures.
816.46 Hydrologic balance: Siltation structures.
816.47 Hydrologic balance: Discharge structures.
816.49 Impoundments.
816.56 Postmining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.
816.57 Hydrologic balance: Stream buffer zones.
816.59 Coal recovery.
816.61 Use of explosives: General requirements.
816.62 Use of explosives: Preblasting survey.
816.64 Use of explosives: Blasting schedule.
816.66 Use of explosives: Blasting signs, warnings, and access control.
816.67 Use of explosives: Control of adverse effects.
816.68 Use of explosives: Records of blasting operations.
816.71 Disposal of excess spoil: General requirements.
816.72 Disposal of excess spoil: Valley fills/head-of-hollow fills.
816.73 Disposal of excess spoil: Durable rock fills.
816.74 Disposal of excess spoil: Preexisting benches.
816.79 Protection of underground mining.
816.81 Coal mine waste: General requirements.
816.83 Coal mine waste: Refuse piles.
816.84 Coal mine waste: Impounding structures.
816.87 Coal mine waste: Burning and burned waste utilization.
816.89 Disposal of noncoal mine wastes.
816.95 Stabilization of surface areas.
816.97 Protection of fish, wildlife, and related environmental values.
816.99 Slides and other damage.
816.100 Contemporaneous reclamation.
816.101 Backfilling and grading: Time and distance requirements.
816.102 Backfilling and grading: General grading requirements.
816.104 Backfilling and grading: Thin overburden.
816.105 Backfilling and grading: Thick overburden.
816.106 Backfilling and grading: Previously mined areas.
816.107 Backfilling and grading: Steep slopes.
816.111 Revegetation: General requirements.
816.113 Revegetation: Timing.
816.114 Revegetation: Mulching and other soil stabilizing practices.
816.116 Revegetation: Standards for success.
816.131 Cessation of operations: Temporary.
816.132 Cessation of operations: Permanent.
816.133 Postmining land use.
816.150 Roads: General.
816.151 Primary roads.
816.180 Utility installations.
816.181 Support facilities.
816.200 Interpretative rules related to general performance standards.

Authority: 30 U.S.C. 1201 *et seq.;* and sec 115 of Pub. L. 98–146.

§ 816.1 Scope.

This part sets forth the minimum environmental protection performance standards to be adopted and implemented under regulatory programs for surface mining activities.

§ 816.2 Objectives.

This part is intended to ensure that all surface mining activities are conducted in a manner which preserves and enhances environmental and other values in accordance with the Act.

§ 816.10 Information collection.

(a) The collections of information contained in part 816 have been approved by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

and assigned clearance number 1029–0047. The information will be used by the regulatory authority to monitor and inspect surface coal mining activities to ensure that they are in compliance with the Surface Mining Control and Reclamation Act. Response is required to obtain a benefit.

(b) Public Reporting Burden for this information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, to the Information Collection Clearance Officer, Office of Surface Mining Reclamation and Enforcement, 1951 Constitution Ave. NW., Room 203, Washington, DC 20240; and the Office of Management and Budget, Paperwork Reduction Project (1029–0047), Washington, DC 20503.

§ 816.11 Signs and markers.

(a) *Specifications.* Signs and markers required under this part shall—

(1) Be posted and maintained by the person who conducts the surface mining activities;

(2) Be of a uniform design throughout the operation that can be easily seen and read;

(3) Be made of durable material; and

(4) Conform to local ordinances and codes.

(b) *Duration of maintenance.* Signs and markers shall be maintained during the conduct of all activities to which they pertain.

(c) *Mine and permit identification signs.* (1) Identification signs shall be displayed at each point of access to the permit area from public roads.

(2) Signs shall show the name, business address, and telephone number of the person who conducts the surface mining activities and the identification number of the current permit authorizing surface mining activities.

(3) Signs shall be retained and maintained until after the release of all bonds for the permit area.

(d) *Perimeter markers.* The perimeter of a permit area shall be clearly marked before the beginning of surface mining activities.

(e) *Buffer zone markers.* Buffer zones shall be marked along their boundaries as required under § 816.57.

(f) *Topsoil markers.* Where topsoil or other vegetation-supporting material is segregated and stockpiled as required under § 816.22, the stockpiled material shall be clearly marked.

§ 816.13 Casing and sealing of drilled holes: General requirements.

Each exploration hole, other drill or borehole, well, or other exposed underground opening shall be cased, sealed, or otherwise managed, as approved by the regulatory authority, to prevent acid or other toxic drainage from entering ground or surface waters, to minimize disturbance to the prevailing hydrologic balance, and to ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. If these openings are uncovered or exposed by surface mining activities within the permit area they shall be permanently closed, unless approved for water monitoring, or otherwise managed in a manner approved by the regulatory authority. Use of a drilled hole or borehole or monitoring well as a water well must meet the provisions of § 816.41 of this part. This section does not apply to holes solely drilled and used for blasting.

§ 816.14 Casing and sealing of drilled holes: Temporary.

Each exploration hole, other drill or boreholes, wells and other exposed underground openings which have been identified in the approved permit application for use to return coal processing waste or water to underground workings, or to be used to monitor ground water conditions, shall be temporarily sealed before use and protected during use by barricades, or fences, or other protective devices approved by the regulatory authority. These devices shall be periodically inspected and maintained in good operating condition by the person who conducts the surface mining activities.

§ 816.15 Casing and sealing of drilled holes: Permanent.

When no longer needed for monitoring or other use approved by the regulatory authority upon a finding of no adverse environmental or health and safety effect, or unless approved for transfer as a water well under § 816.41, each exploration hole, other drilled hole or borehole, well, and other exposed underground opening shall be capped, sealed, backfilled, or otherwise properly managed, as required by the regulatory authority, under § 816.13 and consistent with 30 CFR 75.1711. Permanent closure measures shall be designed to prevent access to the mine workings by people, livestock, fish and wildlife, and machinery, and to keep acid or other toxic drainage from entering ground or surface waters.

§ 816.22 Topsoil and subsoil.

(a) *Removal.* (1)(i) All topsoil shall be removed as a separate layer from the area to be disturbed, and segregated.

(ii) Where the topsoil is of insufficient quantity or poor quality for sustaining vegetation, the materials approved by the regulatory authority in accordance with paragraph (b) of this section shall be removed as a separate layer from the area to be disturbed, and segregated.

(2) If topsoil is less than 6 inches thick, the operator may remove the topsoil and the unconsolidated materials immediately below the topsoil and treat the mixture as topsoil.

(3) The regulatory authority may choose not to require the removal of topsoil for minor disturbances which—

(i) Occur at the site of small structures, such as power poles, signs, or fence lines; or

(ii) Will not destroy the existing vegetation and will not cause erosion.

(4) *Timing.* All material to be removed under this section shall be removed after the vegetative cover that would interfere with its salvage is cleared from the area to be disturbed, but before any drilling, blasting, mining, or other surface disturbance takes place.

(b) *Substitutes and supplements.* Selected overburden materials may be substituted for, or used as a supplement to topsoil if the operator demonstrates to the regulatory authority that the resulting soil medium is equal to, or more suitable for sustaining vegetation than, the existing topsoil, and the resulting soil medium is the best available in the permit area to support revegetation.

(c) *Storage.* (1) Materials removed under paragraph (a) of this section shall be segregated and stockpiled when it is impractical to redistribute such materials promptly on regraded areas.

(2) Stockpiled materials shall—

(i) Be selectively placed on a stable site within the permit area;

(ii) Be protected from contaminants and unnecessary compaction that would interfere with revegetation;

(iii) Be protected from wind and water erosion through prompt establishment and maintenance of an effective, quick growing vegetative cover or through other measures approved by the regulatory authority; and

(iv) Not be moved until required for redistribution unless approved by the regulatory authority.

(3) Where long-term surface disturbances will result from facilities such as support facilities and preparation plants and where stockpiling of materials removed under paragraph (a)(1) of this section would be detrimental to the quality or quantity of

those materials, the regulatory authority may approve the temporary distribution of the soil materials so removed to an approved site within the permit area to enhance the current use of that site until needed for later reclamation, provided that—

(i) Such action will not permanently diminish the capability of the topsoil of the host site; and

(ii) The material will be retained in a condition more suitable for redistribution than if stockpiled.

(d) *Redistribution.* (1) Topsoil materials and topsoil substitutes and supplements removed under paragraphs (a) and (b) of this section shall be redistributed in a manner that—

(i) Achieves an approximately uniform, stable thickness when consistent with the approved postmining land use, contours, and surface-water drainage systems. Soil thickness may also be varied to the extent such variations help meet the specific revegetation goals identified in the permit;

(ii) Prevents excess compaction of the materials; and

(iii) Protects the materials from wind and water erosion before and after seeding and planting.

(2) Before redistribution of the material removed under paragraph (a) of this section the regraded land shall be treated if necessary to reduce potential slippage of the redistributed material and to promote root penetration. If no harm will be caused to the redistributed material and reestablished vegetation, such treatment may be conducted after such material is replaced.

(3) The regulatory authority may choose not to require the redistribution of topsoil or topsoil substitutes on the approved postmining embankments of permanent impoundments or of roads if it determines that—

(i) Placement of topsoil or topsoil substitutes on such embankments is inconsistent with the requirement to use the best technology currently available to prevent sedimentation, and

(ii) Such enbankments will be otherwise stabilized.

(4) *Nutrients and soil amendments.* Nutrients and soil amendments shall be applied to the initially redistributed material when necessary to establish the vegetative cover.

(e) *Subsoil segregation.* The regulatory authority may require that the B horizon, C horizon, or other underlying strata, or portions thereof, be removed and segrgated, stockpiled, and redistributed as subsoil in accordance with the requirements of paragraphs (c) and (d) of this section if it finds that such subsoil layers are necessary to comply with the revegetation requirements of §§ 816.111, 816.113, 816.114, and 816.116 of this chapter.

§ 816.41 Hydrologic-balance protection.

(a) *General.* All surface mining and reclamation activities shall be conducted to minimize disturbance of the hydrologic balance within the permit and adjacent areas, to prevent material damage to the hydrologic balance outside the permit area, to assure the protection or replacement of water rights, and to support approved postmining land uses in accordance with the terms and conditions of the approved permit and the performance standards of this part. The regulatory authority may require additional preventative, remedial, or monitoring measures to assure that material damage to the hydrologic balance outside the permit area is prevented. Mining and reclamation practices that minimize water pollution and changes in flow shall be used in preference to water treatment.

(b) *Ground-water protection.* In order to protect the hydrologic balance, surface mining activities shall be conducted according to the plan approved under § 780.21(h) of this chapter and the following:

(1) Ground-water quality shall be protected by handling earth materials and runoff in a manner that minimizes acidic, toxic, or other harmful infiltration to ground-water systems and by managing excavations and other disturbances to prevent or control the discharge of pollutants into the ground water.

(2) Ground-water quantity shall be protected by handling earth materials and runoff in a manner that will restore the approximate premining recharge capacity of the reclaimed area as a whole, excluding coal mine waste disposal areas and fills, so as to allow the movement of water to the ground-water system.

(c) *Ground-water monitoring.* (1) Ground-water monitoring shall be conducted according to the ground-water monitoring plan approved under § 780.21(i) of this chapter. The regulatory authority may require additional monitoring when necessary.

(2) Ground-water monitoring data shall be submitted every 3 months to the regulatory authority or more frequently as prescribed by the regulatory authority. Monitoring reports shall include analytical results from each sample taken during the reporting period. When the analysis of any ground-water sample indicates noncompliance with the permit conditions, then the operator shall promptly notify the regulatory authority and immediately take the actions provided for in §§ 773.17(e) and 780.21(h) of this chapter.

(3) Ground-water monitoring shall proceed through mining and continue during reclamation until bond release. Consistent with the procedures of § 774.13 of this chapter, the regulatory authority may modify the monitoring requirements, including the parameters covered and the sampling frequency, if the operator demonstrates, using the monitoring data obtained under this paragraph, that—

(i) The operation has minimized disturbance to the hydrologic balance in the permit and adjacent areas and prevented material damage to the hydrologic balance outside the permit area; water quantity and quality are suitable to support approved postmining land uses; and the water rights of other users have been protected or replaced; or

(ii) Monitoring is no longer necessary to achieve the purposes set forth in the monitoring plan approved under § 780.21(i) of this chapter.

(4) Equipment, structures, and other devices used in conjuction with monitoring the quality and quantity of ground water onsite and offsite shall be properly installed, maintained, and operated and shall be removed by the operator when no longer needed.

(d) *Surface-water protection.* In order to protect the hydrologic balance, surface mining activities shall be conducted according to the plan approved under § 780.21(h) of this chapter, and the following:

(1) Surface-water quality shall be protected by handling earth materials, ground-water discharges, and runoff in a manner that minimizes the formation of acidic or toxic drainage; prevents, to the extent possible using the best technology currently available, additional contribution of suspended solids to streamflow outside the permit area; and otherwise prevents water pollution. If drainage control, restabilization and revegetation of disturbed areas, diversion of runoff, mulching, or other reclamation and remedial practices are not adequate to meet the requirements of this section and § 816.42, the operator shall use and maintain the necessary water-treatment facilities or water quality controls.

(2) Surface-water quality and flow rates shall be protected by handling earth materials and runoff in accordance with the steps outlined in the plan approved under § 780.21(h) of this chapter.

(e) *Surface-water monitoring.* (1) Surface-water monitoring shall be

conducted according to the surface-water monitoring plan approved under § 780.21(j) of this chapter. The regulatory authority may require additional monitoring when necessary.

(2) Surface-water monitoring data shcll be submitted every 3 months to the regulatory authority or more frequently as prescribed by the regulatory authority. Monitoring reports shall include analytical results from each sample taken during the reporting period. When the analysis of any surface-water sample indicates noncompliance with the permit conditions, the operator shall promptly notify the regulatory authority and immediately take the actions provided for in §§ 773.17(e) and 780.21(h) of this chapter. The reporting requirements of this paragraph do not exempt the operator from meeting any National Pollutant Discharge Elimination System (NPDES) reporting requirements.

(3) Surface-water monitoring shall proceed through mining and continue during reclamation until bond release. Consistent with § 774.13 of this chapter, the regulatory authority may modify the monitoring requirements, except those required by the NPDES permitting authority, including the parameters covered and sampling frequency if the operator demonstrates, using the monitoring data obtained under this paragraph, that—

(i) The operation has minimized disturbance to the hydrologic balance in the permit and adjacent areas and prevented material damage to the hydrologic balance outside the permit area; water quantity and quality are suitable to support approved postmining land uses; and the water rights of other users have been protected or replaced; or

(ii) Monitoring is no longer necessary to achieve the purposes set forth in the monitoring plan approved under § 780.21(j) of this chapter.

(4) Equipment, structures, and other devices used in conjunction with monitoring the quality and quantity of surface water onsite and offsite shall be properly installed, maintained, and operated and shall be removed by the operator when no longer needed.

(f) *Acid- and toxic-forming materials.* (1) Drainage from acid- and toxic-forming materials into surface water and ground water shall be avoided by—

(i) Identifying and burying and/or treating, when necessary, materials which may adversely affect water quality, or be detrimental to vegetation or to public health and safety if not buried and/or treated, and

(ii) Storing materials in a manner that will protect surface water and ground water by preventing erosion, the formation of polluted runoff, and the infiltration of polluted water. Storage shall be limited to the period until burial and/or treatment first become feasible, and so long as storage will not result in any risk of water pollution or other environmental damage.

(2) Storage, burial or treatment practices shall be consistent with other material handling and disposal provisions of this chapter.

(g) *Transfer of wells.* Before final release of bond, exploratory or monitoring wells shall be sealed in a safe and environmentally sound manner in accordance with §§ 816.13 to 816.15. With the prior approval of the regulatory authority, wells may be transferred to another party for further use. At a minimum, the conditions of such transfer shall comply with State and local law and the permittee shall remain responsible for the proper management of the well until bond release in accordance with §§ 816.13 to 816.15.

(h) *Water rights and replacement.* Any person who conducts surface mining activities shall replace the water supply of an owner of interest in real property who obtains all or part of his or her supply of water for domestic, agricultural, industrial, or other legitimate use from an underground or surface source, where the water supply has been adversely impacted by contamination, diminution, or interruption proximately resulting from the surface mining activities. Baseline hydrologic information required in §§ 780.21 and 780.22 of this chapter shall be used to determine the extent of the impact of mining upon ground water and surface water.

(i) *Discharges into an underground mine.* (1) Discharges into an underground mine are prohibited, unless specifically approved by the regulatory authority after a demonstration that the discharge will—

(i) Minimize disturbance to the hydrologic balance on the permit area, prevent material damage outside the permit area and otherwise eliminate public hazards resulting from surface mining activities;

(ii) Not result in a violation of applicable water quality standards or effluent limitations;

(iii) Be at a known rate and quality which shall meet the effluent limitations of § 816.42 for pH and total suspended solids, except that the pH and total suspended-solids limitations may be exceeded, if approved by the regulatory authority; and

(iv) Meet with the approval of the Mine Safety and Health Administration.

(2) Discharges shall be limited to the following:

(i) Water;

(ii) Coal processing waste;

(iii) Fly ash from a coal-fired facility;

(iv) Sludge from an acid-mine-drainage treatment facility;

(v) Flue-gas desulfurization sludge;

(vi) Inert materials used for stabilizing underground mines; and

(vii) Underground mine development wastes.

§ 816.42 Hydrologic balance: Water quality standards and effluent limitations.

Discharges of water from areas disturbed by surface mining activities shall be made in compliance with all applicable State and Federal water quality laws and regulations and with the effluent limitations for coal mining promulgated by the U.S. Environmental Protection Agency set forth in 40 CFR part 434.

§ 816.43 Diversions.

(a) *General requirements.* (1) With the approval of the regulatory authority, any flow from mined areas abandoned before May 3, 1978, and any flow from undisturbed areas or reclaimed areas, after meeting the criteria of § 816.46 for siltation structure removal, may be diverted from disturbed areas by means of temporary or permanent diversions. All diversions shall be designed to minimize adverse impacts to the hydrologic balance within the permit and adjacent areas, to prevent material damage outside the permit area and to assure the safety of the public. Diversions shall not be used to divert water into underground mines without approval of the regulatory authority under § 816.41(i).

(2) The diversion and its appurtenant structures shall be designed, located, constructed, maintained and used to—

(i) Be stable;

(ii) Provide protection against flooding and resultant damage to life and property;

(iii) Prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow outside the permit area; and

(iv) Comply with all applicable local, State, and Federal laws and regulations.

(3) Temporary diversions shall be removed promptly when no longer needed to achieve the purpose for which they were authorized. The land disturbed by the removal process shall be restored in accordance with this part. Before diversions are removed, downstream water-treatment facilities previously protected by the diversion shall be modified or removed, as

necessary, to prevent overtopping or failure of the facilities. This requirement shall not relieve the operator from maintaining water-treatment facilities as otherwise required. A permanent diversion or a stream channel reclaimed after the removal of a temporary diversion shall be designed and constructed so as to restore or approximate the premining characteristics of the original stream channel including the natural riparian vegetation to promote the recovery and the enhancement of the aquatic habitat.

(4) The regulatory authority may specify design criteria for diversions to meet the requirements of this section.

(b) *Diversion of perennial and intermittent streams.* (1) Diversion of perennial and intermittent streams within the permit area may be approved by the regulatory authority after making the finding relating to stream buffer zones that the diversion will not adversely affect the water quantity and quality and related environmental resources of the stream.

(2) The design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the unmodified stream channel immediately upstream and downstream from the diversion.

(3) The requirements of paragraph (a)(2)(ii) of this section shall be met when the temporary and permanent diversions for perennial and intermittent streams are designed so that the combination of channel, bank and flood-plain configuration is adequate to pass safely the peak runoff of a 10-year, 6-hour precipitation event for a temporary diversion and a 100-year, 6-hour precipitation event for a permanent diversion.

(4) The design and construction of all stream channel diversions of perennial and intermittent streams shall be certified by a qualified registered professional engineer as meeting the performance standards of this part and any design criteria set by the regulatory authority.

(c) *Diversion of miscellaneous flows.* (1) Miscellaneous flows, which consist of all flows except for perennial and intermittent streams, may be diverted away from disturbed areas if required or approved by the regulatory authority. Miscellaneous flows shall include ground-water discharges and ephemeral streams.

(2) The design, location, construction, maintenance, and removal of diversions of miscellaneous flows shall meet all of the performance standards set forth in paragraph (a) of this section:

(3) The requirements of paragraph (a)(2)(ii) of this section shall be met when the temporary and permanent diversions for miscellaneous flows are designed so that the combination of channel, bank and flood-plain configuration is adequate to pass safely the peak runoff of a 2-year, 6-hour precipitation event for a temporary diversion and a 10-year, 6-hour precipitation event for a permanent diversion.

§ 816.45 Hydrologic balance: Sediment control measures.

(a) Appropriate sediment control measures shall be designed, constructed, and maintained using the best technology currently available to:

(1) Prevent, to the extent possible, additional contributions of sediment to streamflow or to runoff outside the permit area,

(2) Meet the more stringent of applicable State or Federal effluent limitations,

(3) Minimize erosion to the extent possible.

(b) Sediment control measures include practices carried out within and adjacent to the disturbed area. The sedimentation storage capacity of practices in and downstream from the disturbed area shall reflect the degree to which successful mining and reclamation techniques are applied to reduce erosion and control sediment. Sediment control measures consist of the utilization of proper mining and reclamation methods and sediment control practices, singly or in combination. Sediment control methods include but are not limited to—

(1) Disturbing the smallest practicable area at any one time during the mining operation through progressive backfilling, grading, and prompt revegetation as required in § 816.111(b);

(2) Stabilizing the backfill material to promote a reduction in the rate and volume of runoff, in accordance with the requirements of § 816.102;

(3) Retaining sediment within disturbed areas;

(4) Diverting runoff away from disturbed areas;

(5) Diverting runoff using protected channels or pipes through disturbed areas so as not to cause additional erosion;

(6) Using straw dikes, riprap, check dams, mulches, vegetative sediment filters, dugout ponds, and other measures that reduce overland flow velocity, reduce runoff volume, or trap sediment; and

(7) Treating with chemicals.

§ 816.46 Hydrologic balance: Siltation structures.

(a) For the purpose of this section only, *disturbed areas* shall not include those areas—

(1) In which the only surface mining activities include diversion ditches, siltation structures, or roads that are designed constructed and maintained in accordance with this part; and

(2) For which the upstream area is not otherwise disturbed by the operator.

(b) *General requirements.* (1) Additional contributions of suspended solids sediment to streamflow or runoff outside the permit area shall be prevented to the extent possible using the best technology currently available.

(2) All surface drainage from the disturbed area shall be passed through a siltation structure before leaving the permit area, except as provided in paragraph (b)(5) or (e) of this section. The requirements of this paragraph are suspended effective December 22, 1986, per court order.

(3) Siltation structures for an area shall be constructed before beginning any surface mining activities in that area, and upon construction shall be certified by a qualified registered professional engineer, or in any State which authorizes land surveyors to prepare and certify plans in accordance with § 780.25(a) of this chapter a qualified registered professional land surveyor, to be constructed as designed and as approved in the reclamation plan.

(4) Any siltation structure which impounds water shall be designed, constructed and maintained in accordance with § 816.49 of this chapter.

(5) Siltation structures shall be maintained until removal is authorized by the regulatory authority and the disturbed area has been stabilized and revegetated. In no case shall the structure be removed sooner than 2 years after the last augmented seeding.

(6) When siltation structure is removed, the land on which the siltation structure was located shall be regraded and revegetated in accordance with the reclamation plan and §§ 816.111 through 816.116 of this chapter. Sedimentation ponds approved by the regulatory authority for retention as permanent impoundments may be exempted from this requirement.

(c) *Sedimentation ponds.* (1) When used, sedimentation ponds shall—

(i) Be used individually or in series;

(ii) Be located as near as possible to the disturbed area and out of perennial streams unless approved by the regulatory authority, and

(iii) Be designed, constructed, and maintained to—

(A) Provide adequate sediment storage volume;

(B) Provide adequate detention time to allow the effluent from the ponds to meet State and Federal effluent limitations;

(C) Contain or treat the 10-year, 24-hour precipitation event (''design event'') unless a lesser design event is approved by the regulatory authority based on terrain, climate, other site-specific conditions and on a demonstration by the operator that the effluent limitations of § 816.42 will be met;

(D) Provide a nonclogging dewatering device adequate to maintain the detention time required under paragraph (c)(1)(iii)(B) of this section;

(E) Minimize, to the extent possible, short circuiting;

(F) Provide periodic sediment removal sufficient to maintain adequate volume for the design event;

(G) Ensure against excessive settlement;

(H) Be free of sod, large roots, frozen soil, and acid- or toxic-forming coal-processing waste; and

(I) Be compacted properly.

(2) *Spillways.* A sedimentation pond shall include either a combination of principal and emergency spillways or single spillway configured as specified in § 816.49(a)(9).

(d) *Other treatment facilities.* (1) Other treatment facilities shall be designed to treat the 10-year, 24-hour precipitation event unless a lesser design event is approved by the regulatory authority based on terrain, climate, other site-specific conditions and a demonstration by the operator that the effluent limitations of § 816.42 will be met.

(2) Other treatment facilities shall be designed in accordance with the applicable requirements of paragraph (c) of this section.

(e) *Exemptions.* Exemptions to the requirements of this section may be granted if—

(1) The disturbed drainage area within the total disturbed area is small; and

(2) The operator demonstrates that siltation structures and alternate sediment control measures are not necessary for drainage from the disturbed area to meet the effluent limitations under § 816.42 and the applicable State and Federal water quality standards for the receiving waters.

§ 816.47 Hydrologic balance: Discharge structures.

Discharge from sedimentation ponds, permanent and temporary impoundments, coal processing waste dams and embankments, and diversions shall be controlled, by energy dissipators, riprap channels, and other devices, where necessary, to reduce erosion, to prevent deepening or enlargement of stream channels, and to minimize disturbance of the hydrologic balance. Discharge structures shall be designed according to standard engineering-design procedures.

§ 816.49 Impoundments.

(a) *General requirements.* The requirements of this paragraph apply to both temporary and permanent impoundments.

(1) Impoundments meeting the Class B or C criteria for dams in the U.S. Department of Agriculture, Soil Conservation Service Technical Release No. 60 (210–VI–TR60, Oct. 1985), ''Earth Dams and Reservoirs,'' 1985 shall comply with ''Minimum Emergency Spillway Hydrologic Criteria'' table in TR–60 and the requirements of this section. The technical release is hereby incorporated by reference. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161, order No. PB 87–157509/AS. Copies can be inspected at the OSM Headquarters Office, Office of Surface Mining Reclamation and Enforcement, Administrative Record, 1951 Constitution Avenue NW., Washington, DC, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

(2) An impoundment meeting the size or other criteria of § 77.216(a) of this title shall comply with the requirements of § 77.216 of this title and this section.

(3) *Design certification.* The design of impoundments shall be certified in accordance with § 780.25(a) of this chapter as designed to meet the requirements of this part using current, prudent, engineering practices and any design criteria established by the regulatory authority. The qualified, registered, professional engineer or qualified, registered, professional, land surveyor shall be experienced in the design and construction of impoundments.

(4) *Stability.* (i) An impoundment meeting the Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title shall have a minimum static safety factor of 1.5 for a normal pool with steady state seepage saturation conditions, and a seismic safety factor of at least 1.2.

(ii) Impoundments not included in paragraph (a)(4)(i) of this section, except for a coal mine waste impounding structure, shall have a minimum static safety factor of 1.3 for a normal pool with steady state seepage saturation conditions or meet the requirements of § 780.25(c)(3).

(5) *Freeboard.* Impoundments shall have adequate freeboard to resist overtopping by waves and by sudden increases in storage volume. Impoundments meeting the Class B or C criteria for dams in TR–60 shall comply with the freeboard hydrograph criteria in the ''Minimum Emergency Spillway Hydrologic Criteria'' table in TR–60.

(6) *Foundation.* (i) Foundations and abutments for an impounding structure shall be stable during all phases of construction and operation and shall be designed based on adequate and accurate information on the foundation conditions. For an impoundment meeting the Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title, foundation investigation, as well as any necessary laboratory testing of foundation material, shall be performed to determine the design requirements for foundation stability.

(ii) All vegetative and organic materials shall be removed and foundations excavated and prepared to resist failure. Cutoff trenches shall be installed if necessary to ensure stability.

(7) Slope protection shall be provided to protect against surface erosion at the site and protect against sudden drawdown.

(8) Faces of embankments and surrounding areas shall be vegetated, except that faces where water is impounded may be riprapped or otherwise stabilized in accordance with accepted design practices.

(9) *Spillways.* An impoundment shall include either a combination of principal and emergency spillways or a single spillway configured as specified in paragraph (a)(9)(i) of this section, designed and constructed to safely pass the applicable design precipitation event specified in paragraph (a)(9)(ii) of this section, except as set forth in paragraph (c)(2) of this section.

(i) The regulatory authority may approve a single open-channel spillway that is:

(A) Of nonerodible construction and designed to carry sustained flows; or

(B) Earth- or grass-lined and designed to carry short-term, infrequent flows at

non-erosive velocities where sustained flows are not expected.

(ii) Except as specified in paragraph (c)(2) of this section, the required design precipitation event for an impoundment meeting the spillway requirements of paragraph (a)(9) of this section is:

(A) For an impoundment meeting the Class B or C criteria for dams in TR–60, the emergency spillway hydrograph criteria in the ''Minimum Emergency Spillway Hydrologic Criteria'' table in TR–60, or greater event as specified by the regulatory authority.

(B) For an impoundment meeting or exceeding the size or other criteria of § 77.216(a) of this title, a 100-year 6-hour event, or greater event as specified by the regulatory authority.

(C) For an impoundment not included in paragraph (a)(9)(ii) (A) and (B) of this section, a 25-year 6-hour or greater event as specified by the regulatory authority.

(10) The vertical portion of any remaining highwall shall be located far enough below the low-water line along the full extent of highwall to provide adequate safety and access for the proposed water users.

(11) *Inspections.* Except as provided in paragraph (a)(11)(iv) of this section, a qualified registered professional engineer or other qualified professional specialist under the direction of a professional engineer, shall inspect each impoundment as provided in paragraph (a)(11)(i) of this section. The professional engineer or specialist shall be experienced in the construction of impoundments.

(i) Inspections shall be made regularly during construction, upon completion of construction, and at least yearly until removal of the structure or release of the performance bond.

(ii) The qualified registered professional engineer, or qualified registered professional land surveyor as specified in paragraph (a)(11)(iv) of this section, shall promptly after each inspection required in paragraph (a)(11)(i) of this section provide to the regulatory authority a certified report that the impoundment has been constructed and/or maintained as designed and in accordance with the approved plan and this chapter. The report shall include discussion of any appearance of instability, structural weakness or other hazardous condition, depth and elevation of any impounded waters, existing storage capacity, any existing or required monitoring procedures and instrumentation, and any other aspects of the structure affecting stability.

(iii) A copy of the report shall be retained at or near the minesite.

(iv) In any State which authorizes land surveyors to prepare and certify plans in accordance with § 780.25(a) of this chapter, a qualified registered professional land surveyor may inspect any temporary or permanent impoundment that does not meet the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title and certify and submit the report required by paragraph (a)(11)(ii) of this section, except that all coal mine waste impounding structures covered by § 816.84 of this chapter shall be certified by a qualified registered professional engineer. The professional land surveyor shall be experienced in the construction of impoundments.

(12) Impoundments meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216 of this title must be examined in accordance with § 77.216–3 of this title. Impoundments not meeting the SCS Class B or C criteria for dams in TR–60, or subject to § 77.216 of this title, shall be examined at least quarterly. A qualified person designated by the operator shall examine impoundments for the appearance of structural weakness and other hazardous conditions.

(13) *Emergency procedures.* If any examination or inspection discloses that a potential hazard exists, the person who examined the impoundment shall promptly inform the regulatory authority of the finding and of the emergency procedures formulated for public protection and remedial action. If adequate procedures cannot be formulated or implemented, the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate agencies that other emergency procedures are required to protect the public.

(b) *Permanent impoundments.* A permanent impoundment of water may be created, if authorized by the regulatory authority in the approved permit based upon the following demonstration:

(1) The size and configuration of such impoundment will be adequate for its intended purposes.

(2) The quality of impounded water will be suitable on a permanent basis for its intended use and, after reclamation, will meet applicable State and Federal water quality standards, and discharges from the impoundment will meet applicable effluent limitations and will not degrade the quality of receiving water below applicable State and Federal water quality standards.

(3) The water level will be sufficiently stable and be capable of supporting the intended use.

(4) Final grading will provide for adequate safety and access for proposed water users.

(5) The impoundment will not result in the diminution of the quality and quantity of water utilized by adjacent or surrounding landowners for agricultural, industrial, recreational, or domestic uses.

(6) The impoundment will be suitable for the approved postmining land use.

(c) *Temporary impoundments.* (1) The regulatory authority may authorize the construction of temporary impoundments as part of a surface coal mining operation.

(2) In lieu of meeting the requirements in paragraph (a)(9)(i) of this section, the regulatory authority may approve an impoundment that relies primarily on storage to control the runoff from the design precipitation event when it is demonstrated by the operator and certified by a qualified registered professional engineer or qualified registered professional land surveyor in accordance with § 780.25(a) of this chapter that the impoundment will safely control the design precipitation event, the water from which shall be safely removed in accordance with current, prudent, engineering practices. Such an impoundment shall be located where failure would not be expected to cause loss of life or serious property damage, except where:

(i) Impoundments meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title shall be designed to control the precipitation of the probable maximum precipitation of a 6-hour event, or greater event specified by the regulatory authority.

(ii) Impoundments not included in paragraph (c)(2)(i) of this section shall be designed to control the precipitation of the 100-year 6-hour event, or greater event specified by the regulatory authority.

§ 816.56 Postmining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.

Before abandoning a permit area or seeking bond release, the operator shall ensure that all temporary structures are removed and reclaimed, and that all permanent sedimentation ponds, diversions, impoundments, and treatment facilities meet the requirements of this chapter for permanent structures, have been maintained properly, and meet the requirements of the approved reclamation plan for permanent

structures and impoundments. The operator shall renovate such structures if necessary to meet the requirements of this chapter and to conform to the approved reclamation plan.

§ 816.57 Hydrologic balance: Stream buffer zones.

(a) No land within 100 feet of a perennial stream or an intermittent stream shall be disturbed by surface mining activities, unless the regulatory authority specifically authorizes surface mining activities closer to, or through, such a stream. The regulatory authority may authorize such activities only upon finding that—

(1) Surface mining activities will not cause or contribute to the violation of applicable State or Federal water quality standards, and will not adversely affect the water quantity and quality or other environmental resources of the stream; and

(2) If there will be a temporary or permanent stream-channel diversion, it will comply with § 816.43.

(b) The area not to be disturbed shall be designated as a buffer zone, and the operator shall mark it as specified in § 816.11.

§ 816.59 Coal recovery.

Surface mining activities shall be conducted so as to maximize the utilization and conservation of the coal, while utilizing the best appropriate technology currently available to maintain environmental integrity, so that reaffecting the land in the future through surface coal mining operations is minimized.

§ 816.61 Use of explosives: General requirements.

(a) Each operator shall comply with all applicable State and Federal laws and regulations in the use of explosives.

(b) Blasts that use more than 5 pounds of explosive or blasting agent shall be conducted according to the schedule required under § 816.64.

(c) *Blasters.* (1) No later than 12 months after the blaster certification program for a State required by part 850 of this chapter has been approved under the procedures of subchapter C of this chapter, all blasting operations in that State shall be conducted under the direction of a certified blaster. Before that time, all such blasting operations in that State shall be conducted by competent, experienced persons who understand the hazards involved.

(2) Certificates of blaster certification shall be carried by blasters or shall be on file at the permit area during blasting operations.

(3) A blaster and at least one other person shall be present at the firing of a blast.

(4) Any blaster who is responsible for conducting blasting operations at a blasting site shall:

(i) Be familiar with the blasting plan and site-specific performance standards; and

(ii) Give direction and on-the-job training to persons who are not certified and who are assigned to the blasting crew or assist in the use of explosives.

(d) *Blast design.* (1) An anticipated blast design shall be submitted if blasting operations will be conducted within—

(i) 1,000 feet of any building used as a dwelling, public building, school, church, or community or institutional building outside the permit area; or

(ii) 500 feet of an active or abandoned underground mine.

(2) The blast design may be presented as part of a permit application or at a time, before the blast, approved by the regulatory authority.

(3) The blast design shall contain sketches of the drill patterns, delay periods, and decking and shall indicate the type and amount of explosives to be used, critical dimensions, and the location and general description of structures to be protected, as well as a discussion of design factors to be used, which protect the public and meet the applicable airblast, flyrock, and ground-vibration standards in § 816.67.

(4) The blast design shall be prepared and signed by a certified blaster.

(5) The regulatory authority may require changes to the design submitted.

§ 816.62 Use of explosives: Preblasting survey.

(a) At least 30 days before initiation of blasting, the operator shall notify, in writing, all residents or owners of dwellings or other structures located within ½ mile of the permit area how to request a preblasting survey.

(b) A resident or owner of a dwelling or structure within ½ mile of any part of the permit area may request a preblasting survey. This request shall be made, in writing, directly to the operator or to the regulatory authority, who shall promptly notify the operator. The operator shall promptly conduct a preblasting survey of the dwelling or structure and promptly prepare a written report of the survey. An updated survey of any additions, modifications, or renovations shall be performed by the operator if requested by the resident or owner.

(c) The operator shall determine the condition of the dwelling or structure and shall document any preblasting damage and other physical factors that could reasonably be affected by the blasting. Structures such as pipelines, cables, transmission lines, and cisterns, wells, and other water systems warrant special attention; however, the assessment of these structures may be limited to surface conditions and other readily available data.

(d) The written report of the survey shall be signed by the person who conducted the survey. Copies of the report shall be promptly provided to the regulatory authority and to the person requesting the survey. If the person requesting the survey disagrees with the contents and/or recommendations contained therein, he or she may submit to both the operator and the regulatory authority a detailed description of the specific areas of disagreement.

(e) Any surveys requested more than 10 days before the planned initiation of blasting shall be completed by the operator before the initiation of blasting.

§ 816.64 Use of explosives: Blasting schedule.

(a) *General requirements.* (1) The operator shall conduct blasting operations at times approved by the regulatory authority and announced in the blasting schedule. The regulatory authority may limit the area covered, timing, and sequence of blasting as listed in the schedule, if such limitations are necessary and reasonable in order to protect the public health and safety or welfare.

(2) All blasting shall be conducted between sunrise and sunset, unless nighttime blasting is approved by the regulatory authority based upon a showing by the operator that the public will be protected from adverse noise and other impacts. The regulatory authority may specify more restrictive time periods for blasting.

(3) Unscheduled blasts may be conducted only where public or operator health and safety so require and for emergency blasting actions. When an operator conducts an unscheduled blast, the operator, using audible signals, shall notify residents within ½ mile of the blasting site and document the reason for the unscheduled blast in accordance with § 816.68(p).

(b) *Blasting schedule publication and distribution.* (1) The operator shall publish the blasting schedule in a newspaper of general circulation in the locality of the blasting site at least 10 days, but not more than 30 days, before beginning a blasting program.

(2) The operator shall distribute copies of the schedule to local governments and public utilities and to

each local residence within ½ mile of the proposed blasting site described in the schedule.

(3) The operator shall republish and redistribute the schedule at least every 12 months and revise and republish the schedule at least 10 days, but not more than 30 days, before blasting whenever the area covered by the schedule changes or actual time periods for blasting significantly differ from the prior announcement.

(c) *Blasting schedule contents.* The blasting schedule shall contain, at a minimum—

(1) Name, address, and telephone number of operator;

(2) Identification of the specific areas in which blasting will take place;

(3) Dates and time periods when explosives are to be detonated;

(4) Methods to be used to control access to the blasting area; and

(5) Type and patterns of audible warning and all-clear signals to be used before and after blasting.

§ 816.66 Use of explosives: Blasting signs, warnings, and access control.

(a) *Blasting signs.* Blasting signs shall meet the specifications of § 816.11. The operator shall—

(1) Conspicuously place signs reading ''Blasting Area'' along the edge of any blasting area that comes within 100 feet of any public road right-of-way, and at the point where any other road provides access to the blasting area; and

(2) At all entrances to the permit area from public roads or highways, place conspicuous signs which state ''Warning! Explosives in Use,'' which clearly list and describe the meaning of the audible blast warning and all-clear signals that are in use, and which explain the marking of blasting areas and charged holes awaiting firing within the permit area.

(b) *Warnings.* Warning and all-clear signals of different character or pattern that are audible within a range of ½ mile from the point of the blast shall be given. Each person within the permit area and each person who resides or regularly works within ½ mile of the permit area shall be notified of the meaning of the signals in the blasting schedule.

(c) *Access control.* Access within the blasting area shall be controlled to prevent presence of livestock or unauthorized persons during blasting and until an authorized representative of the operator has reasonably determined that—

(1) No unusual hazards, such as imminent slides or undetonated charges, exist; and

(2) Access to and travel within the blasting area can be safely resumed.

§ 816.67 Use of explosives: Control of adverse effects.

(a) *General requirements.* Blasting shall be conducted to prevent injury to persons, damage to public or private property outside the permit area, adverse impacts on any underground mine, and change in the course, channel, or availability of surface or ground water outside the permit area.

(b) *Airblast*—(1) *Limits.* (i) Airblast shall not exceed the maximum limits listed below at the location of any dwelling, public building, school, church, or community or institutional building outside the permit area, except as provided in paragraph (e) of this section.

Lower frequency limit of measuring system, in Hz (±3 dB)	Maximum level, in dB
0.1 Hz or lower—flat response [1]	134 peak.
2 Hz or lower—flat response	133 peak.
6 Hz or lower—flat response	129 peak.
C-weighted—slow response [1]	105 peak dBC.

[1] Only when approved by the regulatory authority.

(ii) If necessary to prevent damage, the regulatory authority shall specify lower maximum allowable airblast levels than those of paragraph (b)(1)(i) of this section for use in the vicinity of a specific blasting operation.

(2) *Monitoring.* (i) The operator shall conduct periodic monitoring to ensure compliance with the airblast standards. The regulatory authority may require airblast measurement of any or all blasts and may specify the locations at which such measurements are taken.

(ii) The measuring systems shall have an upper-end flat-frequency response of at least 200 Hz.

(c) *Flyrock.* Flyrock travelling in the air or along the ground shall not be cast from the blasting site—

(1) More than one-half the distance to the nearest dwelling or other occupied structure;

(2) Beyond the area of control required under § 816.66(c); or

(3) Beyond the permit boundary.

(d) *Ground vibration*—(1) *General.* In all blasting operations, except as otherwise authorized in paragraph (e) of this section, the maximum ground vibration shall not exceed the values approved in the blasting plan required under § 780.13 of this chapter. The maximum ground vibration for protected structures listed in paragraph (d)(2)(i) of this section shall be established in accordance with either the maximum peak-particle-velocity limits of paragraph (d)(2), the scaled-distance equation of paragraph (d)(3), the blasting-level chart of paragraph (d)(4) of this section, or by the regulatory authority under paragraph (d)(5) of this section. All structures in the vicinity of the blasting area, not listed in paragraph (d)(2)(i) of this section, such as water towers, pipelines and other utilities, tunnels, dams, impoundments, and underground mines, shall be protected from damage by establishment of a maximum allowable limit on the ground vibration, submitted by the operator in the blasting plan and approved by the regulatory authority.

(2) *Maximum peak particle velocity.* (i) The maximum ground vibration shall not exceed the following limits at the location of any dwelling, public building, school, church, or community or institutional building outside the permit area:

Distance (*D*), from the blasting site, in feet	Maximum allowable peak particle velocity (*V* max) for ground vibration, in inches/second [1]	Scaled-distance factor to be applied without seismic monitoring [2] (*Ds*)
0 to 300	1.25	50
301 to 5,000	1.00	55
5,001 and beyond	0.75	65

[1] Ground vibration shall be measured as the particle velocity. Particle velocity shall be recorded in three mutually perpendicular directions. The maximum allowable peak particle velocity shall apply to each of the three measurements.
[2] Applicable to the scaled-distance equation of paragraph (d)(3)(i) of this section.

(ii) A seismographic record shall be provided for each blast.

(3) *Scale-distance equation.* (i) An operator may use the scaled-distance equation, $W = (D/Ds)^2$, to determine the allowable charge weight of explosives to be detonated in any 8-millisecond period, without seismic monitoring; where W = the maximum weight of explosives, in pounds; D = the distance, in feet, from the blasting site to the nearest protected structure; and Ds = the scaled-distance factor, which may initially be approved by the regulatory authority using the values for scaled-distance factor listed in paragraph (d)(2)(i) of this section.

(ii) The development of a modified scaled-distance factor may be authorized by the regulatory authority on receipt of a written request by the operator, supported by seismographic records of blasting at the minesite. The modified scale-distance factor shall be determined such that the particle velocity of the predicted ground vibration will not exceed the prescribed maximum allowable peak particle velocity of paragraph (d)(2)(i) of this section, at a 95-percent confidence level.

(4) *Blasting-level chart.* (i) An operator may use the ground-vibration limits in Figure 1 to determine the maximum allowable ground vibration.

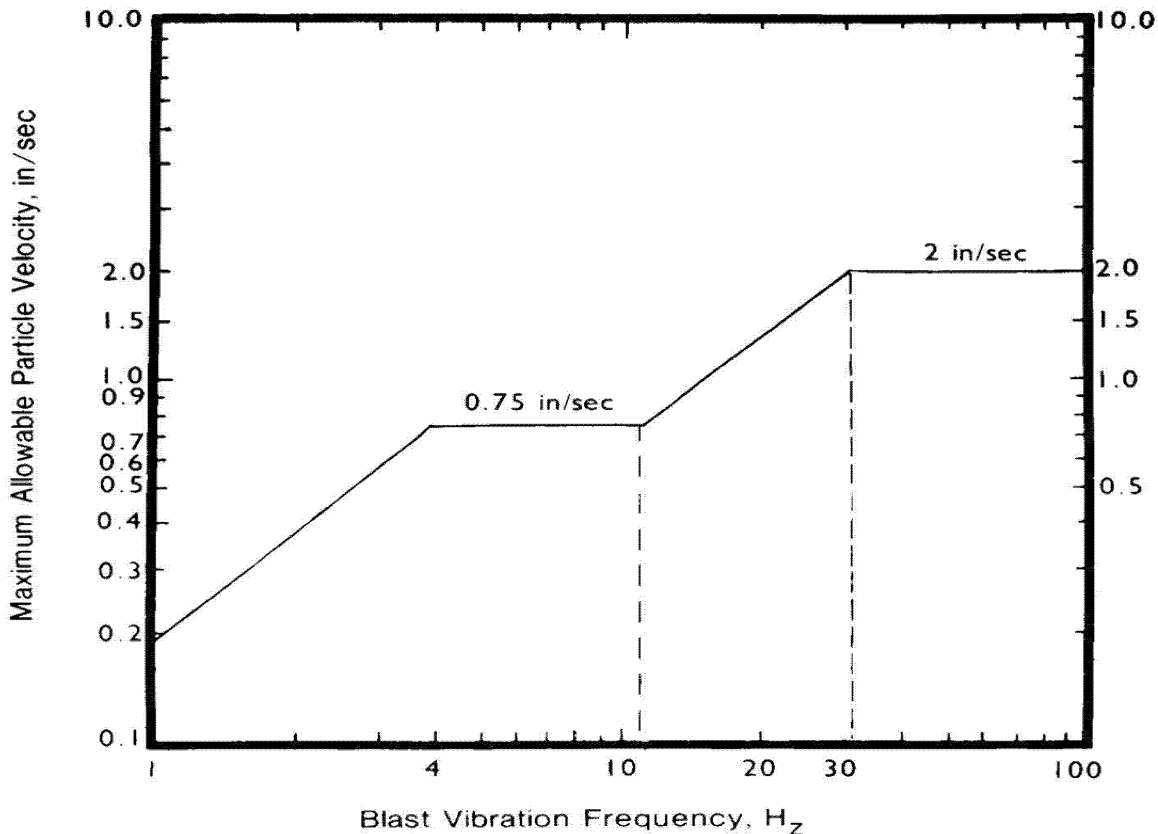

Figure 1. Alternative blasting level criteria.
(Source: Modified from figure B-1, Bureau of Mines RI 8507)

(ii) If the Figure 1 limits are used, a seismographic record including both particle velocity and vibration-frequency levels shall be provided for each blast. The method for the analysis of the predominant frequency contained in the blasting records shall be approved by the regulatory authority before application of this alternative blasting criterion.

(5) The maximum allowable ground vibration shall be reduced by the regulatory authority beyond the limits otherwise provided by this section, if

determined necessary to provide damage protection.

(6) The regulatory authority may require an operator to conduct seismic monitoring of any or all blasts or may specify the location at which the measurements are taken and the degree of detail necessary in the measurement.

(e) The maximum airblast and ground-vibration standards of paragraphs (b) and (d) of this section shall not apply at the following locations:

(1) At structures owned by the permittee and not leased to another person.

(2) At structures owned by the permittee and leased to another person, if a written waiver by the lessee is submitted to the regulatory authority before blasting.

§ 816.68 Use of explosives: Records of blasting operations.

The operator shall retain a record of all blasts for at least 3 years. Upon request, copies of these records shall be made available to the regulatory authority and to the public for inspection. Such records shall contain the following data:

(a) Name of the operator conducting the blast.

(b) Location, date, and time of the blast.

(c) Name, signature, and certification number of the blaster conducting the blast.

(d) Identification, direction, and distance, in feet, from the nearest blast hole to the nearest dwelling, public building, school, church, community or institutional building outside the permit area, except those described in § 816.67(e).

(e) Weather conditions, including those which may cause possible adverse blasting effects.

(f) Type of material blasted.

(g) Sketches of the blast pattern including number of holes, burden, spacing, decks, and delay pattern.

(h) Diameter and depth of holes.

(i) Types of explosives used.

(j) Total weight of explosives used per hole.

(k) The maximum weight of explosives detonated in an 8-millisecond period.

(l) Initiation system.

(m) Type and length of stemming.

(n) Mats or other protections used.

(o) Seismographic and airblast records, if required, which shall include—

(1) Type of instrument, sensitivity, and calibration signal or certification of annual calibration;

(2) Exact location of instrument and the date, time, and distance from the blast;

(3) Name of the person and firm taking the reading;

(4) Name of the person and firm analyzing the seismographic record; and

(5) The vibration and/or airblast level recorded.

(p) Reasons and conditions for each unscheduled blast.

§ 816.71 Disposal of excess spoil: General requirements.

(a) *General.* Excess spoil shall be placed in designated disposal areas within the permit area, in a controlled manner to—

(1) Minimize the adverse effects of leachate and surface water runoff from the fill on surface and ground waters;

(2) Ensure mass stability and prevent mass movement during and after construction; and

(3) Ensure that the final fill is suitable for reclamation and revegetation compatible with the natural surroundings and the approved postmining land use.

(b) *Design certification.* (1) The fill and appurtenant structures shall be designed using current, prudent engineering practices and shall meet any design criteria established by the regulatory authority. A qualified registered professional engineer experienced in the design of earth and rock fills shall certify the design of the fill and appurtenant structures.

(2) The fill shall be designed to attain a minimum long-term static safety factor of 1.5. The foundation and abutments of the fill must be stable under all conditions of construction.

(c) *Location.* The disposal area shall be located on the most moderately sloping and naturally stable areas available, as approved by the regulatory authority, and shall be placed, where possible, upon or above a natural terrace, bench, or berm, if such placement provides additional stability and prevents mass movement.

(d) *Foundation.* (1) Sufficient foundation investigations, as well as any necessary laboratory testing of foundation material, shall be performed in order to determine the design requirements for foundation stability. The analyses of foundation conditions shall take into consideration the effect of underground mine workings, if any, upon the stability of the fill and appurtenant structures.

(2) Where the slope in the disposal area is in excess of 2.8h:1v (36 percent), or such lesser slope as may be designated by the regulatory authority based on local conditions, keyway cuts (excavations to stable bedrock) or rock toe buttresses shall be constructed to ensure stability of the fill. Where the toe of the spoil rests on a downslope, stability analyses shall be performed in accordance with § 780.35(c) of this chapter to determine the size of rock toe buttresses and keyway cuts.

(e) *Placement of excess spoil.* (1) All vegetative and organic materials shall be removed from the disposal area prior to placement of the excess spoil. Topsoil shall be removed, segregated and stored or redistributed in accordance with § 816.22. If approved by the regulatory authority, organic material may be used as mulch or may be included in the topsoil to control erosion, promote growth of vegetation or increase the moisture retention of the soil.

(2) Excess spoil shall be transported and placed in a controlled manner in horizontal lifts not exceeding 4 feet in thickness; concurrently compacted as necessary to ensure mass stability and to prevent mass movement during and after construction; graded so that surface and subsurface drainage is compatible with the natural surroundings; and covered with topsoil or substitute material in accordance with § 816.22 of this chapter. The regulatory authority may approve a design which incorporates placement of excess spoil in horizontal lifts other than 4 feet in thickness when it is demonstrated by the operator and certified by a qualified registered professional engineer that the design will ensure the stability of the fill and will meet all other applicable requirements.

(3) The final configuration of the fill shall be suitable for the approved postmining land use. Terraces may be constructed on the outslope of the fill if required for stability, control of erosion, to conserve soil moisture, or to facilitate the approved postmining land use. The grade of the outslope between terrace benches shall not be steeper than 2h: 1v (50 percent).

(4) No permanent impoundments are allowed on the completed fill. Small depressions may be allowed by the regulatory authority if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation; and if they are not incompatible with the stability of the fill.

(5) Excess spoil that is acid- or toxic-forming or combustible shall be adequately covered with nonacid, nontoxic and noncombustible material, or treated, to control the impact on surface and ground water in accordance with § 816.41, to prevent sustained combustion, and to minimize adverse

effects on plant growth and the approved postmining land use.

(f) *Drainage control.* (1) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the fill design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the fill, and ensure stability.

(2) Diversions shall comply with the requirements of § 816.43.

(3) Underdrains shall consist of durable rock or pipe, be designed and constructed using current, prudent engineering practices and meet any design criteria established by the regulatory authority. The underdrain system shall be designed to carry the anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area and shall be protected from piping and contamination by an adequate filter. Rock underdrains shall be constructed of durable, nonacid-,nontoxic-forming rock (*e.g.,* natural sand and gravel, sandstone, limestone, or other durable rock) that does not slake in water or degrade to soil material, and which is free of coal, clay or other nondurable material. Perforated pipe underdrains shall be corrosion resistant and shall have characteristics consistent with the long-term life of the fill.

(g) *Surface area stabilization.* Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(h) *Inspections.* A qualified registered professional engineer, or other qualified professional specialist under the direction of the professional engineer, shall periodically inspect the fill during construction. The professional engineer or specialist shall be experienced in the construction of earth and rock fills.

(1) Such inspections shall be made at least quarterly throughout construction and during critical construction periods. Critical construction periods shall include at a minimum:

(i) Foundation preparation, including the removal of all organic material and topsoil; (ii) placement of underdrains and protective filter systems; (iii) installation of final surface drainage systems; and (iv) the final graded and revegetated fill. Regular inspections by the engineer or specialist shall also be conducted during placement and compaction of fill materials.

(2) The qualified registered professional engineer shall provide a certified report to the regulatory authority promptly after each inspection that the fill has been constructed and maintained as designed and in accordance with the approved plan and this chapter. The report shall include appearances of instability, structural weakness, and other hazardous conditions.

(3)(i) The certified report on the drainage system and protective filters shall include color photographs taken during and after construction, but before underdrains are covered with excess spoil. If the underdrain system is constructed in phases, each phase shall be certified separately.

(ii) Where excess durable rock spoil is placed in single or multiple lifts such that the underdrain system is constructed simultaneously with excess spoil placement by the natural segregation of dumped materials, in accordance with § 816.73, color photographs shall be taken of the underdrain as the underdrain system is being formed.

(iii) The photographs accompanying each certified report shall be taken in adequate size and number with enough terrain or other physical features of the site shown to provide a relative scale to the photographs and to specifically and clearly identify the site.

(4) A copy of each inspection report shall be retained at or near the mine site.

(i) *Coal mine waste.* Coal mine waste may be disposed of in excess spoil fills if approved by the regulatory authority and, if such waste is—

(1) Placed in accordance with § 816.83;

(2) Nontoxic and nonacid forming; and

(3) Of the proper characteristics to be consistent with the design stability of the fill.

(j) *Underground disposal.* Excess spoil may be disposed of in underground mine workings, but only in accordance with a plan approved by the regulatory authority and MSHA under § 784.25 of this chapter.

§ 816.72 Disposal of excess spoil: Valley fills/head-of-hollow fills.

Valley fills and head-of-hollow fills shall meet the requirements of § 816.71 and the additional requirements of this section.

(a) *Drainage control.* (1) The top surface of the completed fill shall be graded such that the final slope after settlement will be toward properly designed drainage channels. Uncontrolled surface drainage may not be directed over the outslope of the fill.

(2) Runoff from areas above the fill and runoff from the surface of the fill shall be diverted into stabilized diversion channels designed to meet the requirements of § 816.43 and, in addition, to safely pass the runoff from a 100-year, 6-hour precipitation event.

(b) *Rock-core chimney drains.* A rock-core chimney drain may be used in a head-of-hollow fill, instead of the underdrain and surface diversion system normally required, as long as the fill is not located in an area containing intermittent or perennial streams. A rock-core chimney drain may be used in a valley fill if the fill does not exceed 250,000 cubic yards of material and upstream drainage is diverted around the fill. The alternative rock-core chimney drain system shall be incorporated into the design and construction of the fill as follows.

(1) The fill shall have, along the vertical projection of the main buried stream channel or rill, a vertical core of durable rock at least 16 feet thick which shall extend from the toe of the fill to the head of the fill, and from the base of the fill to the surface of the fill. A system of lateral rock underdrains shall connect this rock core to each area of potential drainage or seepage in the disposal area. The underdrain system and rock core shall be designed to carry the anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area. Rocks used in the rock core and underdrains shall meet the requirements of § 816.71(f).

(2) A filter system to ensure the proper long-term functioning of the rock core shall be designed and constucted using current, prudent engineering practices.

(3) Grading may drain surface water away from the outslope of the fill and toward the rock core. In no case, however, may intermittent or perennial streams be diverted into the rock core. The maximum slope of the top of the fill shall be 33h:1v (3 percent). A drainage pocket may be maintained at the head of the fill during and after construction, to intercept surface runoff and discharge the runoff through or over the rock drain, if stability of the fill is not impaired. In no case shall this pocket or sump have a potential capacity for impounding more than 10,000 cubic feet of water. Terraces on the fill shall be graded with a 3 to 5 percent grade toward the fill and a 1 percent slope toward the rock core.

§ 816.73 Disposal of excess spoil: Durable rock fills.

The regulatory authority may approve the alternative method of disposal of excess durable rock spoil by gravity

placement in single or multiple lifts, provided the following conditions are met:

(a) Except as provided in this section, the requirements of § 816.71 are met.

(b) The excess spoil consists of at least 80 percent, by volume, durable, nonacid- and nontoxic-forming rock (*e.g.,* sandstone or limestone) that does not slake in water and will not degrade to soil material. Where used, noncemented clay shale, clay spoil, soil or other nondurable excess spoil materials shall be mixed with excess durable rock spoil in a controlled manner such that no more than 20 percent of the fill volume, as determined by tests performed by a registered engineer and approved by the regulatory authority, is not durable rock.

(c) A qualified registered professional engineer certifies that the design will ensure the stability of the fill and meet all other applicable requirements.

(d) The fill is designed to attain a minimum long-term static safety factor of 1.5, and an earthquake safety factor of 1.1.

(e) The underdrain system may be constructed simultaneously with excess spoil placement by the natural segregation of dumped materials, provided the resulting underdrain system is capable of carrying anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area and the other requirements for drainage control are met.

(f) Surface water runoff from areas adjacent to and above the fill is not allowed to flow onto the fill and is diverted into stabilized diversion channels designed to meet the requirements of § 816.43 and to safely pass the runoff from a 100-year, 6-hour precipitation event.

§ 816.74 Disposal of excess spoil: Preexisting benches.

(a) The regulatory authority may approve the disposal of excess spoil through placement on a preexisting bench if the affected portion of the preexisting bench is permitted and the standards set forth in §§ 816.102(c), (e) through (h), and (j), and the requirements of this section are met.

(b) All vegetation and organic materials shall be removed from the affected portion of the preexisting bench prior to placement of the excess spoil. Any available topsoil on the bench shall be removed, stored and redistributed in accordance with § 816.22 of this part. Substitute or supplemental materials may be used in accordance with § 816.22(b) of this part.

(c) The fill shall be designed and constructed using current, prudent engineering practices. The design will be certified by a registered professional engineer. The spoil shall be placed on the solid portion of the bench in a controlled manner and concurrently compacted as necessary to attain a long term static safety factor of 1.3 for all portions of the fill. Any spoil deposited on any fill portion of the bench will be treated as excess spoil fill under § 816.71.

(d) The preexisting bench shall be backfilled and graded to—

(1) Achieve the most moderate slope possible which does not exceed the angle of repose;

(2) Eliminate the highwall to the maximum extent technically practical;

(3) Minimize erosion and water pollution both on and off the site; and

(4) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the fill design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the fill, and ensure stability.

(e) All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(f) Permanent impoundments may not be constructed on preexisting benches backfilled with excess spoil under this regulation.

(g) Final configuration of the backfill must be compatible with the natural drainage patterns and the surrounding area, and support the approved postmining land use.

(h) Disposal of excess spoil from an upper actively mined bench to a lower preexisting bench by means of gravity transport may be approved by the regulatory authority provided that—

(1) The gravity transport courses are determined on a site-specific basis by the operator as part of the permit application and approved by the regulatory authority to minimize hazards to health and safety and to ensure that damage will be minimized between the benches, outside the set course, and downslope of the lower bench should excess spoil accidentally move;

(2) All gravity transported excess spoil, including that excess spoil immediately below the gravity transport courses and any preexisting spoil that is disturbed, is rehandled and placed in horizontal lifts in a controlled manner, concurrently compacted as necessary to ensure mass stability and to prevent mass movement, and graded to allow surface and subsurface drainage to be compatible with the natural surroundings and to ensure a minimum long-term static safety factor of 1.3. Excess spoil on the bench prior to the current mining operation that is not disturbed need not be rehandled except where necessary to ensure stability of the fill;

(3) A safety berm is constructed on the solid portion of the lower bench prior to gravity transport of the excess spoil. Where there is insufficient material on the lower bench to construct a safety berm, only that amount of excess spoil necessary for the construction of the berm may be gravity transported to the lower bench prior to construction of the berm.

(4) Excess spoil shall not be allowed on the downslope below the upper bench except on designated gravity transport courses properly prepared according to § 816.22. Upon completion of the fill, no excess spoil shall be allowed to remain on the designated gravity transport course between the two benches and each transport course shall be reclaimed in accordance with the requirements of this part.

§ 816.79 Protection of underground mining.

No surface mining activities shall be conducted closer than 500 feet to any point of either an active or abandoned underground mine, except to the extent that—

(a) The activities result in improved resource recovery, abatement of water pollution, or elimination of hazards to the health and safety of the public; and

(b) The nature, timing, and sequence of the activities that propose to mine closer than 500 feet to an active underground mine are jointly approved by the regulatory authority, the Mine Safety and Health Administration, and the State agency, if any, responsible for the safety of underground mine workers.

§ 816.81 Coal mine waste: General requirements.

(a) *General.* All coal mine waste disposed of in an area other than the mine workings or excavations shall be placed in new or existing disposal areas within a permit area, which are approved by the regulatory authority for this purpose. Coal mine waste shall be hauled or conveyed and placed for final placement in a controlled manner to—

(1) Minimize adverse effects of leachate and surface-water runoff on surface and ground water quality and quantity;

(2) Ensure mass stability and prevent mass movement during and after construction;

(3) Ensure that the final disposal facility is suitable for reclamation and

revegetation compatible with the natural surroundings and the approved postmining land use;

(4) Not create a public hazard; and

(5) Prevent combustion.

(b) Coal mine waste material from activities located outside a permit area may be disposed of in the permit area only if approved by the regulatory authority. Approval shall be based upon a showing that such disposal will be in accordance with the standards of this section.

(c) *Design certification.* (1) The disposal facility shall be designed using current, prudent engineering practices and shall meet any design criteria established by the regulatory authority. A qualified registered professional engineer, experienced in the design of similar earth and waste structures, shall certify the design of the disposal facility.

(2) The disposal facility shall be designed to attain a minimum long-term static safety factor of 1.5. The foundation and abutments must be stable under all conditions of construction.

(d) *Foundation.* Sufficient foundation investigations, as well as any necessary laboratory testing of foundation material, shall be performed in order to determine the design requirements for foundation stability. The analyses of the foundation conditions shall take into consideration the effect of underground mine workings, if any, upon the stability of the disposal facility.

(e) *Emergency procedures.* If any examination or inspection discloses that a potential hazard exists, the regulatory authority shall be informed promptly of the finding and of the emergency procedures formulated for public protection and remedial action. If adequate procedures cannot be formulated or implemented, the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate agencies that other emergency procedures are required to protect the public.

(f) *Underground disposal.* Coal mine waste may be disposed of in underground mine workings, but only in accordance with a plan approved by the regulatory authority and MSHA under § 784.25 of this chapter.

§ 816.83 Coal mine waste: Refuse piles.

Refuse piles shall meet the requirements of § 816.81, the additional requirements of this section, and the requirements of §§ 77.214 and 77.215 of this title.

(a) *Drainage control.* (1) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the disposal facility and ensure stability.

(2) Uncontrolled surface drainage may not be diverted over the outslope of the refuse piles. Runoff from the areas above the refuse pile and runoff from the surface of the refuse pile shall be diverted into stabilized diversion channels designed to meet the requirements of § 816.43 to safely pass the runoff from a 100-year, 6-hour precipitation event. Runoff diverted from undisturbed areas need not be commingled with runoff from the surface of the refuse pile.

(3) Underdrains shall comply with the requirements of § 816.71(f)(3).

(b) *Surface area stabilization.* Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(c) *Placement.* (1) All vegetative and organic materials shall be removed from the disposal area prior to placement of coal mine waste. Topsoil shall be removed, segregated and stored or redistributed in accordance with § 816.22. If approved by the regulatory authority, organic material may be used as mulch, or may be included in the topsoil to control erosion, promote growth of vegetation or increase the moisture retention of the soil.

(2) The final configuration of the refuse pile shall be suitable for the approved postmining land use. Terraces may be constructed on the outslope of the refuse pile if required for stability, control or erosion, conservation of soil moisture, or facilitation of the approved postmining land use. The grade of the outslope between terrace benches shall not be steeper than 2h:1v (50 percent).

(3) No permanent impoundments shall be allowed on the completed refuse pile. Small depressions may be allowed by the regulatory authority if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation, and if they are not incompatible with stability of the refuse pile.

(4) Following final grading of the refuse pile, the coal mine waste shall be covered with a minimum of 4 feet of the best available, nontoxic and noncombustible material, in a manner that does not impede drainage from the underdrains. The regulatory authority may allow less than 4 feet of cover material based on physical and chemical analyses which show that the requirements of §§ 816.111 through 816.116 will be met.

(d) *Inspections.* A qualified registered professional engineer, or other qualified professional specialist under the direction of the professional engineer, shall inspect the refuse pile during construction. The professional engineer or specialist shall be experienced in the construction of similar earth and waste structures.

(1) Such inspections shall be made at least quarterly throughout construction and during critical construction periods. Critical construction periods shall include at a minimum:

(i) Foundation preparation including the removal of all organic material and topsoil; (ii) placement of underdrains and protective filter systems; (iii) installation of final surface drainage systems; and (iv) the final graded and revegetated facility. Regular inspections by the engineer or specialist shall also be conducted during placement and compaction of coal mine waste materials. More frequent inspections shall be conducted if a danger of harm exists to the public health and safety or the environment. Inspections shall continue until the refuse pile has been finally graded and revegetated or until a later time as required by the regulatory authority.

(2) The qualified registered professional engineer shall provide a certified report to the regulatory authority promptly after each inspection that the refuse pile has been constructed and maintained as designed and in accordance with the approved plan and this chapter. The report shall include appearances of instability, structural weakness, and other hazardous conditions.

(3) The certified report on the drainage system and protective filters shall include color photographs taken during and after construction, but before underdrains are covered with coal mine waste. If the underdrain system is constructed in phases, each phase shall be certified separately. The photographs accompanying each certified report shall be taken in adequate size and number with enough terrain or other physical features of the site shown to provide a relative scale to the photographs and to specifically and clearly identify the site.

(4) A copy of each inspection report shall be retained at or near the minesite.

§ 816.84 Coal mine waste: Impounding structures.

New and existing impounding structures constructed of coal mine waste or intended to impound coal mine

waste shall meet the requirements of § 816.81.

(a) Coal mine waste shall not be used for construction of impounding structures unless it has been demonstrated to the regulatory authority that the stability of such a structure conforms to the requirements of this part and the use of coal mine waste will not have a detrimental effect on downstream water quality or the environment due to acid seepage through the impounding structure. The stability of the structure and the potential impact of acid mine seepage through the impounding structure shall be discussed in detail in the design plan submitted to the regulatory authority in accordance with § 780.25 of this chapter.

(b)(1) Each impounding structure constructed of coal mine waste or intended to impound coal mine waste shall be designed, constructed and maintained in accordance with § 816.49 (a) and (c). Such structures may not be retained permanently as part of the approved postmining land use.

(2) Each impounding structure constructed of coal mine waste or intended to impound coal mine waste that meets the criteria of § 77.216(a) of this title shall have sufficient spillway capacity to safely pass, adequate storage capacity to safely contain, or a combination of storage capacity and spillway capacity to safely control, the probable maximum precipitation of a 6-hour precipitation event, or greater event as specified by the regulatory authority.

(c) Spillways and outlet works shall be designed to provide adequate protection against erosion and corrosion. Inlets shall be protected against blockage.

(d) *Drainage control.* Runoff from areas above the disposal facility or runoff from surface of the facility that may cause instability or erosion of the impounding structure shall be diverted into stabilized diversion channels designed to meet the requirements of § 816.43 and designed to safely pass the round off from a 100-year, 6-hour design precipitation event.

(e) Impounding structures constructed of or impounding coal mine waste shall be designed so that at least 90 percent of the water stored during the design precipitation event can be removed within a 10-day period.

(f) For an impounding structure constructed of or impounding coal mine waste, at least 90 percent of the water stored during the design precipitation event shall be removed within the 10-day period following the design precipitation event.

§ 816.87 Coal mine waste: Burning and burned waste utilization.

(a) Coal mine waste fires shall be extinguished by the person who conducts the surface mining activities, in accordance with a plan approved by the regulatory authority and the Mine Safety and Health Administration. The plan shall contain, at a minimum, provisions to ensure that only those persons authorized by the operator, and who have an understanding of the procedures to be used, shall be involved in the extinguishing operations.

(b) No burning or burned coal mine waste shall be removed from a permitted disposal area without a removal plan approved by the regulatory authority. Consideration shall be given to potential hazards to persons working or living in the vicinity of the structure.

§ 816.89 Disposal of noncoal mine wastes.

(a) Noncoal mine wastes including, but not limited to grease, lubricants, paints, flammable liquids, garbage, abandoned mining machinery, lumber and other combustible materials generated during mining activities shall be placed and stored in a controlled manner in a designated portion of the permit area. Placement and storage shall ensure that leachate and surface runoff do not degrade surface or ground water, that fires are prevented, and that the area remains stable and suitable for reclamation and revegetation compatible with the natural surroundings.

(b) Final disposal of noncoal mine wastes shall be in a designated disposal site in the permit area or a State-approved solid waste disposal area. Disposal sites in the permit area shall be designed and constructed to ensure that leachate and drainage from the noncoal mine waste area does not degrade surface or underground water. Wastes shall be routinely compacted and covered to prevent combustion and wind-borne waste. When the disposal is completed, a minimum of 2 feet of soil cover shall be placed over the site, slopes stabilized, and revegetation accomplished in accordance with §§ 816.111 through 816.116. Operation of the disposal site shall be conducted in accordance with all local, State and Federal requirements.

(c) At no time shall any noncoal mine waste be deposited in a refuse pile or impounding structure, nor shall an excavation for a noncoal mine waste disposal site be located within 8 feet of any coal outcrop or coal storage area.

§ 816.95 Stabilization of surface areas.

(a) All exposed surface areas shall be protected and stabilized to effectively control erosion and air pollution attendant to erosion.

(b) Rills and gullies, which form in areas that have been regraded and topsoiled and which either (1) disrupt the approved postmining land use or the reestablishment of the vegetative cover, or (2) cause or contribute to a violation of water quality standards for receiving streams shall be filled, regraded, or otherwise stabilized; topsoil shall be replaced; and the areas shall be reseeded or replanted.

§ 816.97 Protection of fish, wildlife, and related environmental values.

(a) The operator shall, to the extent possible using the best technology currently available, minimize disturbances and adverse impacts on fish, wildlife, and related environmental values and shall achieve enhancement of such resources where practicable.

(b) *Endangered and threatened species.* No surface mining activity shall be conducted which is likely to jeopardize the continued existence of endangered or threatened species listed by the Secretary or which is likely to result in the destruction or adverse modification of designated critical habitats of such species in violation of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*). The operator shall promptly report to the regulatory authority any State- or federally-listed endangered or threatened species within the permit area of which the operator becomes aware. Upon notification, the regulatory authority shall consult with appropriate State and Federal fish and wildlife agencies and, after consultation, shall identify whether, and under what conditions, the operater may proceed.

(c) *Bald and golden eagles.* No surface mining activity shall be conducted in a manner which would result in the unlawful taking of a bald or golden eagle, its nest, or any of its eggs. The operator shall promptly report to the regulatory authority any golden or bald eagle nest within the permit area of which the operator becomes aware. Upon notification, the regulatory authority shall consult with the U.S. Fish and Wildlife Service and also, where appropriate, the State fish and wildlife agency and, after consultation, shall identify whether, and under what conditions, the operator may proceed.

(d) Nothing in this chapter shall authorize the taking of an endangered or threatened species or a bald or golden eagle, its nest, or any of its eggs in violation of the Endangered Species Act

of 1973, as amended, 16 U.S.C. 1531 *et seq.,* or the Bald Eagle Protection Act, as amended, 16 U.S.C. 668 *et seq.*

(e) Each operator shall, to the extent possible using the best technology currently available—

(1) Ensure that electric powerlines and other transmission facilities used for, or incidental to, surface mining activities on the permit area are designed and constructed to minimize electrocution hazards to raptors, except where the regulatory authority determines that such requirements are unnecessary;

(2) Locate and operate haul and access roads so as to avoid or minimize impacts on important fish and wildlife species or other species protected by State or Federal law;

(3) Design fences, overland conveyors, and other potential barriers to permit passage for large mammals, except where the regulatory authority determines that such requirements are unnecessary; and

(4) Fence, cover, or use other appropriate methods to exclude wildlife from ponds which contain hazardous concentrations of toxic-forming materials.

(f) *Wetlands and habitats of unusually high value for fish and wildlife.* The operator conducting surface mining activities shall avoid disturbances to, enhance where practicable, restore, or replace, wetlands, and riparian vegetation along rivers and streams and bordering ponds and lakes. Surface mining activities shall avoid disturbances to, enhance where practicable, or restore, habitats of unusually high value for fish and wildlife.

(g) Where fish and wildlife habitat is to be a postmining land use, the plant species to be used on reclaimed areas shall be selected on the basis of the following criteria:

(1) Their proven nutritional value for fish or wildlife.

(2) Their use as cover for fish or wildlife.

(3) Their ability to support and enhance fish or wildlife habitat after the release of performance bonds. The selected plants shall be grouped and distributed in a manner which optimizes edge effect, cover, and other benefits to fish and wildlife.

(h) Where cropland is to be the postmining land use, and where appropriate for wildlife- and crop-management practices, the operator shall intersperse the fields with trees, hedges, or fence rows throughout the harvested area to break up large blocks of monoculture and to diversify habitat types for birds and other animals.

(i) Where residential, public service, or industrial uses are to be the postmining land use, and where consistent with the approved postmining land use, the operator shall intersperse reclaimed lands with greenbelts utilizing species of grass, shrubs, and trees useful as food and cover for wildlife.

§ 816.99 Slides and other damage.

(a) An undisturbed natural barrier shall be provided beginning at the elevation of the lowest coal seam to be mined and extending from the outslope for such distance as may be determined by the regulatory authority as is needed to assure stability. The barrier shall be retained in place to prevent slides and erosion.

(b) At any time a slide occurs which may have a potential adverse affect on public property, health, safety, or the environment, the person who conducts the surface mining activities shall notify the regulatory authority by the fastest available means and comply with any remedial measures required by the regulatory authority.

§ 816.100 Contemporaneous reclamation.

Reclamation efforts, including but not limited to backfilling, grading, topsoil replacement, and revegetation, on all land that is disturbed by surface mining activities shall occur as contemporaneously as practicable with mining operations, except when such mining operations are conducted in accordance with a variance for concurrent surface and underground mining activities issued under § 785.18 of this chapter.

§ 816.101 Backfilling and grading: Time and distance requirements.

(a) Except as provided in paragraph (b) of this section, rough backfilling and grading for surface mining activities shall be completed according to one of the following schedules:

(1) Contour mining. Within 60 days or 1,500 linear feet following coal removal;

(2) Area mining. Within 180 days following coal removal, and not more than four spoil ridges behind the pit being worked, the spoil from the active pit constituting the first ridge; or

(3) Other surface mining methods. In accordance with the schedule established by the regulatory authority. For States with approved State programs, schedules are subject to the State program approval process.

(b) The regulatory authority may extend the time allowed for rough backfilling and grading for the entire permit area or for a specified portion of the permit area if the permittee demonstrates in accordance with § 780.18(b)(3) of this chapter that additional time is necessary.

§ 816.102 Backfilling and grading: General requirements.

(a) Disturbed areas shall be backfilled and graded to—

(1) Achieve the approximate original contour, except as provided in paragraph (k) of this section;

(2) Eliminate all highwalls, spoil piles, and depressions, except as provided in paragraph (h) (small depressions) and in paragraph (k)(3)(iii) (previously mined highwalls) of this section;

(3) Achieve a postmining slope that does not exceed either the angle of repose or such lesser slope as is necessary to achieve a minimum long-term static safety factor of 1.3 and to prevent slides;

(4) Minimize erosion and water pollution both on and off the site; and

(5) Support the approved postmining land use.

(b) Spoil, except excess spoil disposed of in accordance with §§ 816.71 through 816.74, shall be returned to the mined-out area.

(c) Spoil and waste materials shall be compacted where advisable to ensure stability or to prevent leaching of toxic materials.

(d) Spoil may be placed on the area outside the mined-out area in nonsteep slope areas to restore the approximate original contour by blending the spoil into the surrounding terrain if the following requirements are met:

(1) All vegetative and organic material shall be removed from the area.

(2) The topsoil on the area shall be removed, segregated, stored, and redistributed in accordance with § 816.22.

(3) The spoil shall be backfilled and graded on the area in accordance with the requirements of this section.

(e) Disposal of coal processing waste and underground development waste in the mined-out area shall be in accordance with §§ 816.81 and 816.83, except that a long-term static safety factor of 1.3 shall be achieved.

(f) Exposed coal seams, acid- and toxic-forming materials, and combustible materials exposed, used, or produced during mining shall be adequately covered with nontoxic and noncombustible material, or treated, to control the impact on surface and ground water in accordance with § 816.41, to prevent sustained combustion, and to minimize adverse effects on plant growth and the approved postmining land use.

(g) Cut-and-fill terraces may be allowed by the regulatory authority where—

(1) Needed to conserve soil moisture, ensure stability, and control erosion on final-graded slopes, if the terraces are compatible with the approved postmining land use; or

(2) Specialized grading, foundation conditions, or roads are required for the approved postmining land use, in which case the final grading may include a terrace of adequate width to ensure the safety, stability, and erosion control necessary to implement the postmining land-use plan.

(h) Small depressions may be constructed if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation.

(i) Permanent impoundments may be approved if they meet the requirements of §§ 816.49 and 816.56 and if they are suitable for the approved postmining land use.

(j) Preparation of final-graded surfaces shall be conducted in a manner that minimizes erosion and provides a surface for replacement of topsoil that will minimize slippage.

(k) The postmining slope may vary from the approximate original contour when—

(1) The standards for thin overburden in § 816.104 are met;

(2) The standards for thick overburden in § 816.105 are met; or

(3) Approval is obtained from the regulatory authority for—

(i) Mountaintop removal operations in accordance with § 785.14 of this chapter;

(ii) A variance from approximate original contour requirements in accordance with § 785.16 of this chapter; or

(iii) Incomplete elimination of highwalls in previously mined areas in accordance with § 816.106.

§ 816.104 Backfilling and grading: Thin overburden.

(a) *Definition.* Thin overburden means insufficient spoil and other waste materials available from the entire permit area to restore the disturbed area to its approximate original contour. Insufficient spoil and other waste materials occur where the overburden thickness times the swell factor, plus the thickness of other available waste materials, is less than the combined thickness of the overburden and coal bed prior to removing the coal, so that after backfilling and grading the surface configuration of the reclaimed area would not:

(1) Closely resemble the surface configuration of the land prior to mining; or

(2) Blend into and complement the drainage pattern of the surrounding terrain.

(b) *Performance standards.* Where thin overburden occurs within the permit area, the permittee at a minimum shall:

(1) Use all spoil and other waste materials available from the entire permit area to attain the lowest practicable grade, but not more than the angle of repose; and

(2) Meet the requirements of §§ 816.102(a)(2) through (j) of this part.

§ 816.105 Backfilling and grading: Thick overburden.

(a) *Definition.* Thick overburden means more than sufficient spoil and other waste materials available from the entire permit area to restore the disturbed area to its approximate original contour. More than sufficient spoil and other waste materials occur where the overburden thickness times the swell factor exceeds the combined thickness of the overburden and coal bed prior to removing the coal, so that after backfilling and grading the surface configuration of the reclaimed area would not:

(1) Closely resemble the surface configuration of the land prior to mining; or

(2) Blend into and complement the drainage pattern of the surrounding terrain.

(b) *Performance standards.* Where thick overburden occurs within the permit area, the permittee at a minimum shall:

(1) Restore the approximate original contour and then use the remaining spoil and other waste materials to attain the lowest practicable grade, but not more than the angle of repose;

(2) Meet the requirements of §§ 816.102 (a)(2) through (j) of this part; and

(3) Dispose of any excess spoil in accordance with §§ 816.71 through 816.74 of this part.

§ 816.106 Backfilling and grading: Previously mined areas.

(a) Remining operations on previously mined areas that contain a preexisting highwall shall comply with the requirements of §§ 816.102 through 816.107 of this chapter, except as provided in this section.

(b) The requirements of § 816.102(a)(1) and (2) requiring the elimination of highwalls shall not apply to remining opertions where the volume of all reasonably available spoil is demonstrated in writing to the regulatory authority to be insufficient to completely backfill the reaffected or enlarged highwall. The highwall shall be eliminated to the maximum extent technically practical in accordance with the following criteria:

(1) All spoil generated by the remining operation and any other reasonably available spoil shall be used to backfill the area. Reasonably available spoil in the immediate vicinity of the remining operation shall be included within the permit area.

(2) The backfill shall be graded to a slope which is compatible with the approved postmining land use and which provides adequate drainage and long-term stability.

(3) Any highwall remnant shall be stable and not pose a hazard to the public health and safety or to the environment. The operator shall demonstrate, to the satisfaction of the regulatory authority, that the highwall remnant is stable.

(4) Spoil placed on the outslope during previous mining operations shall not be disturbed if such disturbances will cause instability of the remaining spoil or otherwise increase the hazard to the public health and safety or to the environment.

§ 816.107 Backfilling and grading: Steep slopes.

(a) Surface mining activities on steep slopes shall be conducted so as to meet the requirements of §§ 816.102–816.106, and the requirements of this section except where mining is conducted on flat or gently rolling terrain with an occasional steep slope through which the mining proceeds and leaves a plain or predominantly flat area or where operations are conducted in accordance with part 824 of this chapter.

(b) The following materials shall not be placed on the downslope:

(1) Spoil.

(2) Waste materials of any type.

(3) Debris, including that from clearing and grubbing.

(4) Abandoned or disabled equipment.

(c) Land above the highwall shall not be disturbed unless the regulatory authority finds that this disturbance will facilitate compliance with the environmental protection standards of this subchapter and the disturbance is limited to that necessary to facilitate compliance.

(d) Woody materials shall not be buried in the backfilled area unless the regulatory authority determines that the proposed method for placing woody material within the backfill will not deteriorate the stable condition of the backfilled area.

§ 816.111 Revegetation: General requirements.

(a) The permittee shall establish on regraded areas and on all other disturbed areas except water areas and surface areas of roads that are approved as part of the postmining land use, a vegetative cover that is in accordance with the approved permit and reclamation plan and that is—

(1) Diverse, effective, and permanent;

(2) Comprised of species native to the area, or of introduced species where desirable and necessary to achieve the approved postmining land use and approved by the regulatory authority;

(3) At least equal in extent of cover to the natural vegetation of the area; and

(4) Capable of stabilizing the soil surface from erosion.

(b) The reestablished plant species shall—

(1) Be compatible with the approved postmining land use;

(2) Have the same seasonal characteristics of growth as the original vegetation;

(3) Be capable of self-regeneration and plant succession;

(4) Be compatible with the plant and animal species of the area; and

(5) Meet the requirements of applicable State and Federal seed, poisonous and noxious plant, and introduced species laws or regulations.

(c) The regulatory authority may grant exception to the requirements of paragraphs (b) (2) and (3) of this section when the species are necessary to achieve a quick-growing, temporary, stabilizing cover, and measures to establish permanent vegetation are included in the approved permit and reclamation plan.

(d) When the regulatory authority approves a cropland postmining land use, the regulatory authority may grant exception to the requirements of paragraphs (a) (1), (3), (b) (2), and (3) of this section. The requirements of part 823 of this chapter apply to areas identified as prime farmland.

§ 816.113 Revegetation: Timing.

Disturbed areas shall be planted during the first normal period for favorable planting conditions after replacement of the plant-growth medium. The normal period for favorable planting is that planting time generally accepted locally for the type of plant materials selected.

§ 816.114 Revegetation: Mulching and other soil stabilizing practices.

Suitable mulch and other soil stabilizing practices shall be used on all areas that have been regraded and covered by topsoil or topsoil substitutes. The regulatory authority may waive this requirement if seasonal, soil, or slope factors result in a condition where mulch and other soil stabilizing practices are not necessary to control erosion and to promptly establish an effective vegetative cover.

§ 816.116 Revegetation: Standards for success.

(a) Success of revegetation shall be judged on the effectiveness of the vegetation for the approved postmining land use, the extent of cover compared to the cover occurring in natural vegetation of the area, and the general requirements of § 816.111.

(1) Standards for success and statistically valid sampling techniques for measuring success shall be selected by the regulatory authority, described in writing, and made available to the public.

(2) Standards for success shall include criteria representative of unmined lands in the area being reclaimed to evaluate the appropriate vegetation parameters of ground cover, production, or stocking. Ground cover, production, or stocking shall be considered equal to the approved success standard when they are not less than 90 percent of the success standard. The sampling techniques for measuring success shall use a 90-percent statistical confidence interval (*i.e.,* one-sided test with a 0.10 alpha error).

(b) Standards for success shall be applied in accordance with the approved postmining land use and, at a minimum, the following conditions:

(1) For areas developed for use as grazing land or pasture land, the ground cover and production of living plants on the revegetated area shall be at least equal to that of a reference area or such other success standards approved by the regulatory authority.

(2) For areas developed for use as cropland, crop production on the revegetated area shall be at least equal to that of a reference area or such other success standards approved by the regulatory authority.

(3) For areas to be developed for fish and wildlife habitat, recreation, undeveloped land, or forest products, success of vegetation shall be determined on the basis of tree and shrub stocking and vegetative ground cover. Such parameters are described as follows:

(i) Minimum stocking and planting arrangements shall be specified by the regulatory authority on the basis of local and regional conditions and after consultation with and approval by the State agencies responsible for the administration of forestry and wildlife programs. Consultation and approval may occur on either a programwide or a permit-specific basis.

(ii) Trees and shrubs that will be used in determining the success of stocking and the adequacy of the plant arrangement shall have utility for the approved postmining land use. Trees and shrubs counted in determining such success shall be healthy and have been in place for not less than two growing seasons. At the time of bond release, at least 80 percent of the trees and shrubs used to determine such success shall have been in place for 60 percent of the applicable minimum period of responsibility. The requirements of this section apply to trees and shrubs that have been seeded or transplanted and can be met when records of woody vegetation planted show that no woody plants were planted during the last two growing seasons of the responsibility period and, if any replanting of woody plants took place during the responsibility period, the total number planted during the last 60 percent of that period is less than 20 percent of the total number of woody plants required. Any replanting must be by means of transplants to allow for adequate accounting of plant stocking. This final accounting may include volunteer trees and shrubs of approved species. Volunteer trees and shrubs of approved species shall be deemed equivalent to planted specimens two years of age or older and can be counted towards success. Suckers on shrubby vegetation can be counted as volunteer plants when it is evident the shrub community is vigorous and expanding.

(iii) Vegetative ground cover shall not be less than that required to achieve the approved postmining land use.

(4) For areas to be developed for industrial, commercial, or residential use less than 2 years after regrading is completed, the vegetative ground cover shall not be less than that required to control erosion.

(5) For areas previously disturbed by mining that were not reclaimed to the requirements of this subchapter and that are remined or otherwise redisturbed by surface coal mining operations, as a minimum, the vegetative ground cover shall be not less than the ground cover existing before redisturbance and shall be adequate to control erosion.

(c)(1) The period of extended responsibility for successful revegetation shall begin after the last year of augmented seeding, fertilizing, irrigation, or other work, excluding husbandry practices that are approved by the regulatory authority in accordance with paragraph (c)(4) of this section.

(2) In areas of more than 26.0 inches of annual average precipitation, the period of responsibility shall continue for a period of not less than:

(i) Five full years, except as provided in paragraph (c)(2)(ii) of this section. The vegetation parameters identified in paragraph (b) of this section for grazing land, pasture land, or cropland shall equal or exceed the approved success standard during the growing season of any 2 years of the responsibility period, except the first year. Areas approved for the other uses identified in paragraph (b) of this section shall equal or exceed the applicable success standard during the growing season of the last year of the responsibility period.

(ii) Two full years for lands eligible for remining included in a permit for which a finding has been made under § 773.15(m) of this chapter. To the extent that the success standards are established by paragraph (b)(5) of this section, the lands must equal or exceed the standards during the growing season of the last year of the responsibility period.

(3) In areas of 26.0 inches or less average annual precipitation, the period of responsibility shall continue for a period of not less than:

(i) Ten full years, except as provided in paragraph (c)(3)(ii) in this section. The vegetation parameters identified in paragraph (b) of this section for grazing land, pasture land, or cropland shall equal or exceed the approved success standard during the growing season of any two years after year six of the responsibility period. Areas approved for the other uses identified in paragraph (b) of this section shall equal or exceed the applicable success standard during the growing season of the last year of the responsibility period.

(ii) Five full years for lands eligible for remining included in a permit for which a finding has been made under § 773.15(m) of this chapter. To the extent that the success standards are established by paragraph (b)(5) of this section, the lands must equal or exceed the standards during the growing seasons of the last two consecutive years of the responsibility period.

(4) The regulatory authority may approve selective husbandry practices, excluding augmented seeding, fertilization, or irrigation, provided it obtains prior approval from the Director in accordance with § 732.17 of this chapter that the practices are normal husbandry practices, without extending the period of responsibility for revegetation success and bond liability, if such practices can be expected to continue as part of the postmining land use or if discontinuance of the practices after the liability period expires will not reduce the probability of permanent revegetation success. Approved practices shall be normal husbandry practices within the region for unmined lands having land uses similar to the approved postmining land use of the disturbed area, including such practices as disease, pest, and vermin control; and any pruning, reseeding, and transplanting specifically necessitated by such actions.

§ 816.131 Cessation of operations: Temporary.

(a) Each person who conducts surface mining activities shall effectively secure surface facilities in areas in which there are no current operations, but in which operations are to be resumed under an approved permit. Temporary abandonment shall not relieve a person of their obligation to comply with any provisions of the approved permit.

(b) Before temporary cessation of mining and reclamation operations for a period of thirty days or more, or as soon as it is known that a temporary cessation will extend beyond 30 days, persons who conduct surface mining activities shall submit to the regulatory authority a notice of intention to cease or abandon mining and reclamation operations. This notice shall include a statement of the exact number of acres which will have been affected in the permit area, prior to such temporary cessation, the extent and kind of reclamation of those areas which will have been accomplished, and identification of the backfilling, regrading, revegetation, environmental monitoring, and water treatment activities that will continue during the temporary cessation.

§ 816.132 Cessation of operations: Permanent.

(a) Persons who cease surface mining activities permanently shall close or backfill or otherwise permanently reclaim all affected areas, in accordance with this chapter and the permit approved by the regulatory authority.

(b) All underground openings, equipment, structures, or other facilities not required for monitoring, unless approved by the regulatory authority as suitable for the postmining land use or environmental monitoring, shall be removed and the affected land reclaimed.

§ 816.133 Postmining land use.

(a) *General.* All disturbed areas shall be restored in a timely manner to conditions that are capable of supporting—

(1) The uses they were capable of supporting before any mining; or

(2) Higher or better uses.

(b) *Determining premining uses of land.* The premining uses of land to which the postmining land use is compared shall be those uses which the land previously supported, if the land has not been previously mined and has been properly managed. The postmining land use for land that has been previously mined and not reclaimed shall be judged on the basis of the land use that existed prior to any mining: *Provided that,* if the land cannot be reclaimed to the land use that existed prior to any mining because of the previously mined condition, the postmining land use shall be judged on the basis of the highest and best use that can be achieved which is compatible with surrounding areas and does not require the disturbance of areas previously unaffected by mining.

(c) *Criteria for alternative postmining land uses.* Higher or better uses may be approved by the regulatory authority as alternative postmining land uses after consultation with the landowner or the land management agency having jurisdiction over the lands, if the proposed uses meet the following criteria:

(1) There is a reasonable likelihood for achievement of the use.

(2) The use does not present any actual or probable hazard to public health or safety, or threat of water diminution or pollution.

(3) The use will not—

(i) Be impractical or unreasonable;

(ii) Be inconsistent with applicable land use policies or plans;

(iii) Involve unreasonable delay in implementation; or

(iv) Cause or contribute to violation of Federal, State, or local law.

(d) *Approximate original contour: Criteria for variance.* Surface coal mining operations that meet the requirements of this paragraph may be conducted under a variance from the requirement to restore disturbed areas to their approximate original contour, if the following requirements are satisfied:

(1) The regulatory authority grants the variance under a permit issued in accordance with § 785.16 of this chapter.

(2) The alternative postmining land use requirements of paragraph (c) of this section are met.

(3) All applicable requirements of the Act and the regulatory program, other than the requirement to restore disturbed areas to their approximate original contour, are met.

(4) After consultation with the appropriate land use planning agencies, if any, the potential use is shown to

constitute an equal or better economic or public use.

(5) The proposed use is designed and certified by a qualified registered professional engineer in conformance with professional standards established to assure the stability, drainage, and configuration necessary for the intended use of the site.

(6) After approval, where required, of the appropriate State environmental agencies, the watershed of the permit and adjacent areas is shown to be improved.

(7) The highwall is completely backfilled with spoil material, in a manner which results in a static factor of safety of at least 1.3, using standard geotechnical analysis.

(8) Only the amount of spoil as is necessary to achieve the postmining land use, ensure the stability of spoil retained on the bench, and meet all other requirements of the Act and this chapter is placed off the mine bench. All spoil not retained on the bench shall be placed in accordance with §§ 816.71–816.74 of this chapter.

(9) The surface landowner of the permit area has knowingly requested, in writing, that a variance be granted, so as to render the land, after reclamation, suitable for an industrial, commercial, residential, or public use (including recreational facilities).

(10) Federal, State, and local government agencies with an interest in the proposed land use have an adequate period in which to review and comment on the proposed use.

§ 816.150 Roads: general.

(a) *Road classification system.* (1) Each road, as defined in § 701.5 of this chapter, shall be classified as either a primary road or an ancillary road.

(2) A primary road is any road which is—

(i) Used for transporting coal or spoil;

(ii) Frequently used for access or other purposes for a period in excess of six months; or

(iii) To be retained for an approved postmining land use.

(3) An ancillary road is any road not classified as a primary road.

(b) *Performance standards.* Each road shall be located, designed, constructed, reconstructed, used, maintained, and reclaimed so as to:

(1) Control or prevent erosion, siltation, and the air pollution attendant to erosion, including road dust as well as dust occurring on other exposed surfaces, by measures such as vegetating, watering, using chemical or other dust suppressants, or otherwise stabilizing all exposed surfaces in accordance with current, prudent engineering practices;

(2) Control or prevent damage to fish, wildlife, or their habitat and related environmental values;

(3) Control or prevent additional contributions of suspended solids to stream flow or runoff outside the permit area;

(4) Neither cause nor contribute to, directly or indirectly, the violation of State or Federal water quality standards applicable to receiving waters;

(5) Refrain from seriously altering the normal flow of water in streambeds or drainage channels;

(6) Prevent or control damage to public or private property, including the prevention or mitigation of adverse effects on lands within the boundaries of units of the National Park System, the National Wildlife Refuge System, the National System of Trails, the National Wilderness Preservation System, the Wild and Scenic Rivers System, including designated study rivers, and National Recreation Areas designated by Act of Congress;

(7) Use nonacid- and nontoxic-forming substances in road surfacing.

(c) *Design and construction limits and establishment of design criteria.* To ensure environmental protection appropriate for their planned duration and use, including consideration of the type and size of equipment used, the design and construction or reconstruction of roads shall incorporate appropriate limits for grade, width, surface materials, surface drainage control, culvert placement, and culvert size, in accordance with current, prudent engineering practices, and any necessary design criteria established by the regulatory authority.

(d) *Location.* (1) No part of any road shall be located in the channel of an intermittent or perennial stream unless specifically approved by the regulatory authority in accordance with applicable §§ 816.41 through 816.43 and 816.57 of this chapter.

(2) Roads shall be located to minimize downstream sedimentation and flooding.

(e) *Maintenance.* (1) A road shall be maintained to meet the performance standards of this part and any additional criteria specified by the regulatory authority.

(2) A road damaged by a catastrophic event, such as a flood or earthquake, shall be repaired as soon as is practicable after the damage has occurred.

(f) *Reclamation.* A road not to be retained under an approved postmining land use shall be reclaimed in accordance with the approved reclamation plan as soon as practicable after it is no longer needed for mining and reclamation operations. This reclamation shall include:

(1) Closing the road to traffic;

(2) Removing all bridges and culverts unless approved as part of the postmining land use;

(3) Removing or otherwise disposing of road-surfacing materials that are incompatible with the postmining land use and revegetation requirements;

(4) Reshaping cut and fill slopes as necessary to be compatible with the postmining land use and to complement the natural drainage pattern of the surrounding terrain;

(5) Protecting the natural drainage patterns by installing dikes or cross drains as necessary to control surface runoff and erosion; and

(6) Scarifying or ripping the roadbed; replacing topsoil or substitute material, and revegetating disturbed surfaces in accordance with §§ 816.22 and 816.111 through 816.116 of this chapter.

§ 816.151 Primary roads.

Primary roads shall meet the requirements of section 816.150 and the additional requirements of this section.

(a) *Certification.* The construction or reconstruction of primary roads shall be certified in a report to the regulatory authority by a qualified registered professional engineer, or in any State which authorizes land surveyors to certify the construction or reconstruction of primary roads, a qualified registered professional land surveyor with experience in the design and construction of roads. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan.

(b) *Safety Factor.* Each primary road embankment shall have a minimum static factor of 1.3 or meet the requirements established under § 780.37(c) of this chapter.

(c) *Location.* (1) To minimize erosion, a primary road shall be located, insofar as is practicable, on the most stable available surface.

(2) Fords or perennial or intermittent streams by primary roads are prohibited unless they are specifically approved by the regulatory authority as temporary routes during periods of road construction.

(d) *Drainage control.* In accordance with the approved plan—

(1) Each primary road shall be constructed or reconstructed, and maintained to have adequate drainage control, using structures such as, but not limited to bridges, ditches, cross drains, and ditch relief drains. The drainage control system shall be designed to safely pass the peak runoff from a 10-

year, 6-hour precipitation event, or greater event as specified by the regulatory authority;

(2) Drainage pipes and culverts shall be installed as designed, and maintained in a free and operating condition and to prevent or control erosion at inlets and outlets;

(3) Drainage ditches shall be constructed and maintained to prevent uncontrolled drainage over the road surface and embankment;

(4) Culverts shall be installed and maintained to sustain the vertical soil pressure, the passive resistance of the foundation, and the weight of vehicles using the road;

(5) Natural stream channels shall not be altered or relocated without the prior approval of the regulatory authority in accordance with applicable § 816.41 through 816.43 and 816.57 of this chapter; and

(6) Except as provided in paragraph (c)(2) of this section, structures for perennial or intermittent stream channel crossings shall be made using bridges, culverts, low-water crossings, or other structures designed, constructed, and maintained using current, prudent engineering practices. The regulatory authority shall ensure that low-water crossings are designed, constructed, and maintained to prevent erosion of the structure or streambed and additional contributions of suspended solids to steamflow.

(e) *Surfacing.* Primary roads shall be surfaced with material approved by the regulatory authority as being sufficiently durable for the anticipated volume of traffic and the weight and speed of vehicles using the road.

§ 816.180 Utility installations.

All surface coal mining operations shall be conducted in a manner which minimizes damage, destruction, or disruption of services provided by oil, gas, and water wells; oil, gas, and coal-slurry pipelines; railroads; electric and telephone lines; and water and sewage lines which pass over, under, or through the permit area, unless otherwise approved by the owner of those facilities and the regulatory authority.

§ 816.181 Support facilities.

(a) Support facilities shall be operated in accordance with a permit issued for the mine or coal preparation operation to which it is incident or from which its operation results.

(b) In addition to the other provisions of this part, support facilities shall be located, maintained, and used in a manner that—

(1) Prevents or controls erosion and siltation, water pollution, and damage to public or private property; and

(2) To the extent possible using the best technology currently available—

(i) Minimizes damage to fish, wildlife, and related environmental values; and

(ii) Minimizes additional contributions of suspended solids to streamflow or runoff outside the permit area. Any such contributions shall not be in excess of limitations of State or Federal law.

§ 816.200 Interpretative rules related to general performance standards.

The following interpretations of rules promulgated in part 816 of this chapter have been adopted by the Office of Surface Mining Reclamation and Enforcement.

(a)–(b) [Reserved]

(c) *Interpretation of § 816.22(e)—Topsoil Removal.* (1) Results of physical and chemical analyses of overburden and topsoil to demonstrate that the resulting soil medium is equal to or more suitable for sustaining revegetation than the available topsoil, provided that trials, and tests are certified by an approved laboratory in accordance with 30 CFR 816.22(e)(1)(ii), may be obtained from any one or a combination of the following sources:

(i) U.S. Department of Agriculture Soil Conservation Service published data based on established soil series;

(ii) U.S. Department of Agriculture Soil Conservation Service Technical Guides;

(iii) State agricultural agency, university, Tennessee Valley Authority, Bureau of Land Management or U.S. Department of Agriculture Forest Service published data based on soil series properties and behavior, or

(iv) Results of physical and chemical analyses, field site trials, or greenhouse tests of the topsoil and overburden materials (soil series) from the permit area.

(2) If the operator demonstrates through soil survey or other data that the topsoil and unconsolidated material are insufficient and substitute materials will be used, only the substitute materials must be analyzed in accordance with 30 CFR 816.22(e)(1)(i).

■ 13. Revise part 817 to read as follows:

PART 817—PERMANENT PROGRAM PERFORMANCE STANDARDS—UNDERGROUND MINING ACTIVITIES

Sec.

817.1 Scope.
817.2 Objectives.
817.10 Information collection.
817.11 Signs and markers.
817.13 Casing and sealing of exposed underground openings: General requirements.
817.14 Casing and sealing of underground openings: Temporary.
817.15 Casing and sealing of underground openings: Permanent.
817.22 Topsoil and subsoil.
817.41 Hydrologic-balance protection.
817.42 Hydrologic balance: Water quality standards and effluent limitations.
817.43 Diversions.
817.45 Hydrologic balance: Sediment control measures.
817.46 Hydrologic balance: Siltation structures.
817.47 Hydrologic balance: Discharge structures.
817.49 Impoundments.
817.56 Postmining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.
817.57 Hydrologic balance: Stream buffer zones.
817.59 Coal recovery.
817.61 Use of explosives: General requirements.
817.62 Use of explosives: Preblasting survey.
817.64 Use of explosives: General performance standards.
817.66 Use of explosives: Blasting signs, warnings, and access controls.
817.67 Use of explosives: Control of adverse effects.
817.68 Use of explosives: Records of blasting operations.
817.71 Disposal of excess spoil: General requirements.
817.72 Disposal of excess spoil: Valley fill/head-of-hollow fills.
817.73 Disposal of excess spoil: Durable rock fills.
817.74 Disposal of excess spoil: Preexisting benches.
817.81 Coal mine waste: General requirements.
817.83 Coal mine waste: Refuse piles.
817.84 Coal mine waste: Impounding structures.
817.87 Coal mine waste: Burning and burned waste utilization.
817.89 Disposal of noncoal mine wastes.
817.95 Stabilization of surface areas.
817.97 Protection of fish, wildlife and related environmental values.
817.99 Slides and other damage.
817.100 Contemporaneous reclamation.
817.102 Backfilling and grading: General requirements.
817.106 Backfilling and grading: Previously mined areas.
817.107 Backfilling and grading: Steep slopes.
817.111 Revegetation: General requirements.
817.113 Revegetation: Timing.
817.114 Revegetation: Mulching and other soil stabilizing practices.
817.116 Revegetation: Standards for success.
817.121 Subsidence control.
817.122 Subsidence control: Public notice.
817.131 Cessation of operations: Temporary.
817.132 Cessation of operations: Permanent.

817.133 Postmining land use.
817.150 Roads: General.
817.151 Primary roads.
817.180 Utility installations.
817.181 Support facilities.
817.200 Interpretative rules related to general performance standards.

Authority: 30 U.S.C. 1201 *et seq.*

§ 817.1 Scope.

This part sets forth the minimum environmental protection performance standards to be adopted and implemented under regulatory programs for underground mining activities.

§ 817.2 Objectives.

This part is intended to ensure that all underground mining activities are conducted in a manner which preserves and enhances environmental and other values in accordance with the Act.

§ 817.10 Information collection.

(a) The collections of information contained in part 817 have been approved by Office of Management and Budget under 44 U.S.C. 3501 *et seq.* and assigned clearance number 1029–0048. The information will be used to meet the requirements of 30 U.S.C. 1211, 1251, 1266, and 1309a which provide, among other things, that permittees conducting underground coal mining operations will meet the applicable performance standards of the Act. This information will be used by the regulatory authority in monitoring and inspecting underground mining activities. The obligation to respond is required to obtain a benefit.

(b) Public reporting burden for this information is estimated to average 4 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

§ 817.11 Signs and markers.

(a) *Specifications.* Signs and markers required under this part shall—

(1) Be posted, maintained, and removed by the person who conducts the underground mining activities;

(2) Be of a uniform design throughout the activities that can be easily seen and read;

(3) Be made of durable material; and

(4) Conform to local laws and regulations.

(b) *Duration of maintenance.* Signs and markers shall be maintained during all activities to which they pertain.

(c) *Mine and permit identification signs.* (1) Identification signs shall be displayed at each point of access from public roads to areas of surface operations and facilities on permit areas for underground mining activities.

(2) Signs will show the name, business address, and telephone number of the person who conducts underground mining activities and the identification number of the current regulatory program permit authorizing underground mining activities.

(3) Signs shall be retained and maintained until after the release of all bonds for the permit area.

(d) *Perimeter markers.* Each person who conducts underground mining activities shall clearly mark the perimeter of all areas affected by surface operations or facilities before beginning mining activities.

(e) *Buffer zone markers.* Buffer zones required by § 817.57 shall be clearly marked to prevent disturbance by surface operations and facilities.

(f) *Topsoil markers.* Where topsoil or other vegetation-supporting material is segregated and stockpiled as required under § 817.22, the stockpiled material shall be clearly marked.

§ 817.13 Casing and sealing of exposed underground openings: General requirements.

Each exploration hole, other drillhole or borehole, shaft, well, or other exposed underground opening shall be cased, lined, or otherwise managed as approved by the regulatory authority to prevent acid or other toxic drainage from entering ground and surface waters, to minimize disturbance to the prevailing hydrologic balance and to ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. Each exploration hole, drill hole or borehole or well that is uncovered or exposed by mining activities within the permit area shall be permanently closed, unless approved for water monitoring or otherwise managed in a manner approved by the regulatory authority. Use of a drilled hole or monitoring well as a water well must meet the provisions of § 817.41 of this part. This section does not apply to holes drilled and used for blasting, in the area affected by surface operations.

§ 817.14 Casing and sealing of underground openings: Temporary.

(a) Each mine entry which is temporarily inactive, but has a further projected useful service under the approved permit application, shall be protected by barricades or other covering devices, fenced, and posted with signs, to prevent access into the entry and to identify the hazardous nature of the opening. These devices shall be periodically inspected and maintained in good operating condition by the person who conducts the underground mining activities.

(b) Each exploration hole, other drill hole or borehole, shaft, well, and other exposed underground opening which has been identified in the approved permit application for use to return underground development waste, coal processing waste or water to underground workings, or to be used to monitor ground water conditions, shall be temporarily sealed until actual use.

§ 817.15 Casing and sealing of underground openings: Permanent.

When no longer needed for monitoring or other use approved by the regulatory authority upon a finding of no adverse environmental or health and safety effects, or unless approved for transfer as a water well under § 817.41, each shaft, drift, adit, tunnel, exploratory hole, entryway or other opening to the surface from underground shall be capped, sealed, backfilled, or otherwise properly managed, as required by the regulatory authority in accordance with § 817.13 and consistent with 30 CFR 75.1711. Permanent closure measures shall be designed to prevent access to the mine workings by people, livestock, fish and wildlife, machinery and to keep acid or other toxic drainage from entering ground or surface waters.

§ 817.22 Topsoil and subsoil.

(a) *Removal.* (1)(i) All topsoil shall be removed as a separate layer from the area to be disturbed, and segregated.

(ii) Where the topsoil is of insufficient quantity or of poor quality for sustaining vegetation, the materials approved by the regulatory authority in accordance with paragraph (b) of this section shall be removed as a separate layer from the area to be disturbed, and segregated.

(2) If topsoil is less than 6 inches thick, the operator may remove the topsoil and the unconsolidated materials immediately below the topsoil and treat the mixture as topsoil.

(3) The regulatory authority may choose not to require the removal of topsoil for minor disturbances which—

(i) Occur at the site of small structures, such as power poles, signs, or fence lines; or

(ii) Will not destroy the existing vegetation and will not cause erosion.

(4) *Timing.* All materials to be removed under this section shall be removed after the vegetative cover that would interfere with its salvage is cleared from the area to be disturbed, but before any drilling, blasting, mining, or other surface disturbance takes place.

(b) *Substitutes and supplements.* Selected overburden materials may be

substituted for, or used as a supplement to, topsoil if the operator demonstrates to the regulatory authority that the resulting soil medium is equal to, or more suitable for sustaining vegetation than, the existing topsoil, and the resulting soil medium is the best available in the permit area to support revegetation.

(c) *Storage.* (1) Materials removed under Paragraph (a) of this section shall be segregated and stockpiled when it is impractical to redistribute such materials promptly on regraded areas.

(2) Stockpiled materials shall—

(i) Be selectively placed on a stable site within the permit area;

(ii) Be protected from contaminants and unnecessary compaction that would interfere with revegetation;

(iii) Be protected from wind and water erosion through prompt establishment and maintenance of an effective, quick growing vegetative cover or through other measures approved by the regulatory authority; and

(iv) Not be moved until required for redistribution unless approved by the regulatory authority.

(3) Where long-term surface disturbances will result from facilities such as support facilities and preparation plants and where stockpiling of materials removed under paragraph (a)(1) of this section would be detrimental to the quality or quantity of those materials, the regulatory authority may approve the temporary distribution of the soil materials so removed to an approved site within the permit area to enhance the current use of that site until needed for later reclamation, provided that—

(i) Such action will not permanently diminish the capability of the topsoil of the host site; and

(ii) The material will be retained in a condition more suitable for redistribution than if stockpiled.

(d) *Redistribution.* (1) Topsoil materials and topsoil substitutes and supplements removed under paragraphs (a) and (b) of this section shall be redistributed in a manner that—

(i) Achieves an approximately uniform, stable thickness when consistent with the approved postmining land use, contours, and surface-water drainage systems. Soil thickness may also be varied to the extent such variations help meet the specific revegetation goals identified in the permit;

(ii) Prevents excess compaction of the materials; and

(iii) Protects the materials from wind and water erosion before and after seeding and planting.

(2) Before redistribution of the material removed under paragraph (a) of this section, the regraded land shall be treated if necessary to reduce potential slippage of the redistributed material and to promote root penetration. If no harm will be caused to the redistributed material and reestablished vegetation, such treatment may be conducted after such material is replaced.

(3) The regulatory authority may choose not to require the redistribution of topsoil or topsoil substitutes on the approved postmining embankments of permanent impoundments or of roads if it determines that—

(i) Placement of topsoil or topsoil substitutes on such embankments is inconsistent with the requirement to use the best technology currently available to prevent sedimentation, and

(ii) Such embankments will be otherwise stabilized.

(4) *Nutrients and soil amendments.* Nutrients and soil amendments shall be applied to the initially redistributed material when necessary to establish the vegetative cover.

(e) *Subsoil segregation.* The regulatory authority may require that the B horizon, C horizon, or other underlying strata, or portions thereof, be removed and segregated, stockpiled, and redistributed as subsoil in accordance with the requirements of paragraphs (c) and (d) of this section if it finds that such subsoil layers are necessary to comply with the revegetation requirements of §§ 817.111, 817.113, 817.114, and 817.116 of this chapter.

§ 817.41 Hydrologic-balance protection.

(a) *General.* All underground mining and reclamation activities shall be conducted to minimize disturbance of the hydrologic balance within the permit and adjacent areas, to prevent material damage to the hydrologic balance outside the permit area, and to support approved postmining land uses in accordance with the terms and conditions of the approved permit and the performance standards of this part. The regulatory authority may require additional preventative, remedial, or monitoring measures to assure that material damage to the hydrologic balance outside the permit area is prevented. Mining and reclamation practices that minimize water pollution and changes in flow shall be used in preference to water treatment.

(b) *Ground-water protection.* In order to protect the hydrologic balance underground mining activities shall be conducted according to the plan approved under § 784.14(g) of this chapter and the following.

(1) Ground-water quality shall be protected by handling earth materials and runoff in a manner that minimizes acidic, toxic, or other harmful infiltration to ground-water systems and by managing excavations and other disturbances to prevent or control the discharge of pollutants into the ground water.

(c) *Ground-water monitoring.* (1) Ground-water monitoring shall be conducted according to the ground-water monitoring plan approved under § 784.14(h) of this chapter. The regulatory authority may require additional monitoring when necessary.

(2) Ground-water monitoring data shall be submitted every 3 months to the regulatory authority or more frequently as prescribed by the regulatory authority. Monitoring reports shall include analytical results from each sample taken during the reporting period. When the analysis of any ground-water sample indicates noncompliance with the permit conditions, then the operator shall promptly notify the regulatory authority and immediately take the actions provided for in §§ 773.17(e) and 784.14(g) of this chapter.

(3) Ground-water monitoring shall proceed through mining and continue during reclamation until bond release. Consistent with the procedures of § 774.13 of this chapter, the regulatory authority may modify the monitoring requirements including the parameters covered and the sampling frequency if the operator demonstrates, using the monitoring data obtained under this paragraph, that—

(i) The operation has minimized disturbance to the prevailing hydrologic balance in the permit and adjacent areas and prevented material damage to the hydrologic balance outside the permit area; water quantity and quality are suitable to support approved postmining land uses; or

(ii) Monitoring is no longer necessary to achieve the purposes set forth in the monitoring plan approved under § 784.14(h) of this chapter.

(4) Equipment, structures, and other devices used in conjunction with monitoring the quality and quantity of ground water onsite and offsite shall be properly installed, maintained, and operated and shall be removed by the operator when no longer needed.

(d) *Surface-water protection.* In order to protect the hydrologic balance, underground mining activities shall be conducted according to the plan approved under § 784.14(g) of this chapter, and the following:

(1) Surface-water quality shall be protected by handling earth materials,

ground-water discharges, and runoff in a manner that minimizes the formation of acidic or toxic drainage; prevents, to the extent possible using the best technology currently available, additional contribution of suspended solids to streamflow outside the permit area; and otherwise prevent water pollution. If drainage control, restabilization and revegetation of disturbed areas, diversion of runoff, mulching, or other reclamation and remedial practices are not adequate to meet the requirements of this section and § 817.42, the operator shall use and maintain the necessary water-treatment facilities or water quality controls.

(2) Surface-water quantity and flow rates shall be protected by handling earth materials and runoff in accordance with the steps outlined in the plan approved under § 784.14(g) of this chapter.

(e) *Surface-water monitoring.* (1) Surface-water monitoring shall be conducted according to the surface-water monitoring plan approved under § 784.14(i) of this chapter. The regulatory authority may require additional monitoring when necessary.

(2) Surface-water monitoring data shall be submitted every 3 months to the regulatory authority or more frequently as prescribed by the regulatory authority. Monitoring reports shall include analytical results from each sample taken during the reporting period. When the analysis of any surface-water sample indicates noncompliance with the permit conditions, the operator shall promptly notify the regulatory authority and immediately take the actions provided for in §§ 773.17(e) and 784.14(g) of this chapter. The reporting requirements of this paragraph do not exempt the operator from meeting any National Pollutant Discharge Elimination System (NPDES) reporting requirements.

(3) Surface-water monitoring shall proceed through mining and continue during reclamation until bond release. Consistent with § 774.13 of this chapter, the regulatory authority may modify the monitoring requirements, except those required by the NPDES permitting authority, including the parameters covered and sampling frequency if the operator demonstrates, using the monitoring data obtained under this paragraph, that—

(i) The operation has minimized disturbance to the hydrologic balance in the permit and adjacent areas and prevented material damage to the hydrologic balance outside the permit area; water quantity and quality are suitable to support approved postmining land uses; and

(ii) Monitoring is no longer necessary to achieve the purposes set forth in the monitoring plan approved under § 784.14(i) of this chapter.

(4) Equipment, structures, and other devices used in conjunction with monitoring the quality and quantity of surface water onsite and offsite shall be properly installed, maintained, and operated and shall be removed by the operator when no longer needed.

(f) *Acid- and toxic-forming materials.* (1) Drainage from acid- and toxic-forming materials and underground development waste into surface water and ground water shall be avoided by—

(i) Identifying and burying and/or treating, when necessary, materials which may adversely affect water quality, or be detrimental to vegetation or to public health and safety if not buried and/or treated, and

(ii) Storing materials in a manner that will protect surface water and ground water by preventing erosion, the formation of polluted runoff, and the infiltration of polluted water. Storage shall be limited to the period until burial and/or treatment first become feasible, and so long as storage will not result in any risk of water pollution or other environmental damage.

(2) Storage, burial or treatment practices shall be consistent with other material handling and disposal provisions of this chapter.

(g) *Transfer of wells.* Before final release of bond, exploratory or monitoring wells shall be sealed in a safe and environmentally sound manner in accordance with §§ 817.13 and 817.15. With the prior approval of the regulatory authority, wells may be transferred to another party for further use. However, at a minimum, the conditions of such transfer shall comply with State and local laws and the permittee shall remain responsible for the proper management of the well until bond release in accordance with §§ 817.13 to 817.15.

(h) *Discharges into an underground mine.* (1) Discharges into an underground mine are prohibited, unless specifically approved by the regulatory authority after a demonstration that the discharge will—

(i) Minimize disturbance to the hydrologic balance on the permit area, prevent material damage outside the permit area and otherwise eliminate public hazards resulting from underground mining activities;

(ii) Not result in a violation of applicable water quality standards or effluent limitations;

(iii) Be at a known rate and quality which shall meet the effluent limitations of § 817.42 for pH and total suspended solids, except that the pH and total suspended solids limitations may be exceeded, if approved by the regulatory authority; and

(iv) Meet with the approval of the Mine Safety and Health Administration.

(2) Discharges shall be limited to the following:

(i) water;

(ii) Coal-processing waste;

(iii) Fly ash from a coal-fired facility;

(iv) Sludge from an acid-mine-drainage treatment facility;

(v) Flue-gas desulfurization sludge;

(vi) Inert materials used for stabilizing underground mines; and

(vii) Underground mine development wastes.

(3) Water from one underground mine may be diverted into other underground workings according to the requirements of this section.

(i) *Gravity discharges from underground mines.* (1) Surface entries and accesses to underground workings shall be located and managed to prevent or control gravity discharge of water from the mine. Gravity discharges of water from an underground mine, other than a drift mine subject to paragraph (i)(2) of this section, may be allowed by the regulatory authority if it is demonstrated that the untreated or treated discharge complies with the performance standards of this part and any additional NPDES permit requirements.

(2) Notwithstanding anything to the contrary in paragraph (i)(1) of this section, the surface entries and accesses of drift mines first used after the implementation of a State, Federal, or Federal Lands Program and located in acid-producing or iron-producing coal seams shall be located in such a manner as to prevent any gravity discharge from the mine.

(j) *Drinking, domestic or residential water supply.* The permittee must promptly replace any drinking, domestic or residential water supply that is contaminated, diminished or interrupted by underground mining activities conducted after October 24, 1992, if the affected well or spring was in existence before the date the regulatory authority received the permit application for the activities causing the loss, contamination or interruption. The baseline hydrologic information required in §§ 780.21 and 784.14 of this chapter and the geologic information concerning baseline hydrologic conditions required in §§ 780.21 and 784.22 of this chapter will be used to determine the impact of mining activities upon the water supply.

§ 817.42 Hydrologic balance: Water quality standards and effluent limitations.

Discharges of water from areas disturbed by underground mining activities shall be made in compliance with all applicable State and Federal water quality laws and regulations and with the effluent limitations for coal mining promulgated by the U.S. Environmental Protection Agency set forth in 40 CFR part 434.

§ 817.43 Diversions.

(a) *General requirements.* (1) With the approval of the regulatory authority, any flow from mined areas abandoned before May 3, 1978, and any flow from undisturbed areas or reclaimed areas, after meeting the criteria of § 817.46 for siltation structure removal, may be diverted from disturbed areas by means of temporary or permanent diversions. All diversions shall be designed to minimize adverse impacts to the hydrologic balance within the permit and adjacent areas, to prevent material damage outside the permit area and to assure the safety of the public. Diversions shall not be used to divert water into underground mines without approval of the regulatory authority in accordance with § 817.41(h).

(2) The diversion and its appurtenant structures shall be designed, located, constructed, and maintained to—

(i) Be stable;

(ii) Provide protection against flooding and resultant damage to life and property;

(iii) Prevent, to the extent possible using the best technology currently available, additional contributions of suspended solids to streamflow outside the permit area; and

(iv) Comply with all applicable local, State, and Federal laws and regulations.

(3) Temporary diversions shall be removed promptly when no longer needed to achieve the purpose for which they were authorized. The land disturbed by the removal process shall be restored in accordance with this part. Before diversions are removed, downstream water-treatment facilities previously protected by the diversion shall be modified or removed, as necessary, to prevent overtopping or failure of the facilities. This requirement shall not relieve the operator from maintaining water-treatment facilities as otherwise required. A permanent diversion or a stream channel reclaimed after the removal of a temporary diversion shall be designed and constructed so as to restore or approximate the premining characteristics of the original stream channel including the natural riparian vegetation to promote the recovery and the enhancement of the aquatic habitat.

(4) The regulatory authority may specify additional design criteria for diversions to meet the requirements of this section.

(b) *Diversion of perennial and intermittent streams.* (1) Diversion of perennial and intermittent streams within the permit area may be approved by the regulatory authority after making the finding relating to stream buffer zones called for in 30 CFR 817.57 that the diversions will not adversely affect the water quantity and quality and related environmental resources of the stream.

(2) The design capacity of channels for temporary and permanent stream channel diversions shall be at least equal to the capacity of the unmodified stream channel immediately upstream and downstream from the diversion.

(3) The requirements of paragraph (a)(2)(ii) of this section shall be met when the temporary and permanent diversions for perennial and intermittent streams are designed so that the combination of channel, bank and flood-plain configuration is adequate to pass safely the peak runoff of a 10-year, 6-hour precipitation event for a temporary diversion and a 100-year, 6-hour precipitation event for a permanent diversion.

(4) The design and construction of all stream channel diversions of perennial and intermittent streams shall be certified by a qualified registered professional engineer as meeting the performance standards of this part and any design criteria set by the regulatory authority.

(c) *Diversion of miscellaneous flows.* (1) Miscellaneous flows, which consist of all flows except for perennial and intermittent streams, may be diverted away from disturbed areas if required or approved by the regulatory authority. Miscellaneous flows shall include ground-water discharges and ephemeral streams.

(2) The design, location, construction, maintenance, and removal of diversions of miscellaneous flows shall meet all of the performance standards set forth in paragraph (a) of this section.

(3) The requirements of paragraph (a)(2)(ii) of this section shall be met when the temporary and permanent diversions for miscellaneous flows are designed so that the combination of channel, bank and flood-plain configuration is adequate to pass safely the peak runoff of a 2-year, 6-hour precipitation event for a temporary diversion and a 10-year, 6-hour precipitation event for a permanent diversion.

§ 817.45 Hydrologic balance: Sediment control measures.

(a) Appropriate sediment control measures shall be designed, constructed, and maintained using the best technology currently available to:

(1) Prevent, to the extent possible, additional contributions of sediment to stream flow or to runoff outside the permit area,

(2) Meet the more stringent of applicable State or Federal effluent limitations,

(3) Minimize erosion to the extent possible.

(b) Sediment control measures include practices carried out within and adjacent to the disturbed area. The sedimentation storage capacity of practices in and downstream from the disturbed areas shall reflect the degree to which successful mining and reclamation techniques are applied to reduce erosion and control sediment. Sediment control measures consist of the utilization of proper mining and reclamation methods and sediment control practices, singly or in combination. Sediment control methods include but are not limited to—

(1) Disturbing the smallest practicable area at any one time during the mining operation through progressive backfilling, grading, and prompt revegetation as required in § 817.111(b);

(2) Stabilizing the backfilled material to promote a reduction of the rate and volume of runoff in accordance with the requirements of § 817.102;

(3) Retaining sediment within disturbed areas;

(4) Diverting runoff away from disturbed areas;

(5) Diverting runoff using protected channels or pipes through disturbed areas so as not to cause additional erosion;

(6) Using straw dikes, riprap, check dams, mulches, vegetative sediment filters, dugout ponds, and other measures that reduce overland flow velocity, reduce runoff volume, or trap sediment;

(7) Treating with chemicals; and

(8) Treating mine drainage in underground sumps.

§ 817.46 Hydrologic balance: Siltation structures.

(a) For the purposes of this section only, *disturbed areas* shall not include those areas—

(1) In which the only surface mining activities include diversion ditches, siltation structures, or roads that are designed, constructed and maintained in accordance with this part; and

(2) For which the upstream area is not otherwise distributed by the operator.

(b) *General requirements.* (1) Additional contributions of suspended solids and sediment to streamflow or runoff outside the permit area shall be prevented to the extent possible using the best technology currently available.

(2) All surface drainage from the disturbed area shall be passed through a siltation structure before leaving the permit area, except as provided in paragraph (b)(5) or (e) of this section. The requirements of this paragraph are suspended effective December 22, 1986, per court order.

(3) Siltation structures for an area shall be constructed before beginning any underground mining activities in that area, and upon construction shall be certified by a qualified registered professional engineer, or, in any State which authorizes land surveyors to prepare and certify plans in accordance with § 784.16(a) of this chapter, a qualified registered professional land surveyor, to be constructed as designed and as approved in the reclamation plan.

(4) Any siltation structure which impounds water shall be designed, constructed and maintained in accordance with § 817.49 of this chapter.

(5) Siltation structures shall be maintained until removal is authorized by the regulatory authority and the disturbed area has been stabilized and revegetated. In no case shall the structure be removed sooner than 2 years after the last augmented seeding.

(6) When the siltation structure is removed, the land on which the siltation structure was located shall be regraded and revegetated in accordance with the reclamation plan and §§ 817.111 through 817.116 of this chapter. Sedimentation ponds approved by the regulatory authority for retention as permanent impoundments may be exempted from this requirement.

(7) Any point-source discharge of water from underground workings to surface waters which does not meet the effluent limitations of § 817.42 shall be passed through a siltation structure before leaving the permit area.

(c) *Sedimentation ponds.* (1) Sedimentation ponds, when used, shall—

(i) Be used individually or in series;

(ii) Be located as near as possible to the distrubed area and out of perennial streams unless approved by the regulatory authority; and

(iii) Be designed, constructed, and maintained to—

(A) Provide adequate sediment storage volume;

(B) Provide adequate detention time to allow the effluent from the ponds to meet State and Federal effluent limitations;

(C) Contain or treat the 10-year, 24-hour precipitation event (''design event'') unless a lesser design event is approved by the regulatory authority based on terrain, climate, other site-specific conditions and on a demonstration by the operator that the effluent limitations of § 817.42 will be met;

(D) Provide a nonclogging dewatering device adequate to maintain the detention time required under paragraph (c)(1)(iii)(B) of this section;

(E) Minimize, to the extent possible, short circuiting;

(F) Provide periodic sediment removal sufficient to maintain adequate volume for the design event;

(G) Ensure against excessive settlement;

(H) Be free of sod, large roots, frozen soil, and acid- or toxic-forming coal-processing waste; and

(I) Be compacted properly.

(2) *Spillways.* A sedimentation pond shall include either a combination of principal and emergency spillways or single spillway configured as specified in § 817.49(a)(9).

(d) *Other treatment facilities.* (1) Other treatment facilities shall be designed to treat the 10-year, 24-hour precipitation even unless a lesser design event is approved by the regulatory authority based on terrain, climate, other site-specific conditions and a demonstration by the operator that the effluent limitations of § 817.42 will met.

(2) Other treatment facilities shall be designed in accordance with the applicable requirements of paragraph (c) of this section.

(e) *Exemptions.* Exemptions to the requirements of this section may be granted if—

(1) The disturbed drainage area within the total disturbed area is small; and

(2) The operator demonstrates that siltation structures and alternate sediment control measures are not necessary for drainage from the disturbed drainage areas to meet the effluent limitations under § 817.42 and the applicable State and Federal water quality standards for the receiving waters.

§ 817.47 Hydrologic balance: Discharge structures.

Discharge from sedimentation ponds, permanent and temporary impoundments, coal processing waste dams and embankments, and diversions shall be controlled, by energy dissipators, riprap channels, and other devices, where necessary, to reduce erosion, to prevent deepening or enlargement of stream channels, and to minimize disturbance of the hydrologic balance. Discharge structures shall be designed according to standard engineering design procedures.

§ 817.49 Impoundments.

(a) *General requirements.* The requirements of this paragraph apply to both temporary and permanent impoundments.

(1) Impoundments meeting the Class B or C criteria for dams in the U.S. Department of Agriculture, Soil Conservation Service Technical Release No. 60 (210–VI–TR60, Oct. 1985), ''Earth Dams and Reservoirs,'' shall comply with the, ''Minimum Emergency Spillway Hydrologic Criteria,'' table in TR–60 and the requirements of this section. The technical release is hereby incorporated by reference. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161, order No. PB 87–157509–AS. Copies can be inspected at the OSM Headquarters Office, Office of Surface Mining Reclamation and Enforcement, Administrative Record, 1951 Constitution Avenue NW., Washington, DC or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

(2) An impoundment meeting the size or other criteria of § 77.216(a) of this title shall comply with the requirements of § 77.216 of this title and this section.

(3) *Design certification.* The design of impoundments shall be certified in accordance with § 784.16(a) of this chapter as designed to meet the requirements of this part using current, prudent, engineering practices and any design criteria established by the regulatory authority. The qualified, registered, professional engineer or qualified, registered, professional, land surveyor shall be experienced in the design and construction or impoundments.

(4) *Stability.* (i) An Impoundment meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title shall have a minimum static safety factor of 1.5 for a normal pool with steady state seepage saturation conditions, and a seismic safety factor of at least 1.2.

(ii) Impoundments not included in paragraph (a)(4)(i) of this section, except

for a coal mine waste impounding structure, shall have a minimum static safety factor of 1.3 for a normal pool with steady state seepage saturation conditions or meet the requirements of § 784.16(c)(3).

(5) *Freeboard.* Impoundments shall have adequate freeboard to resist overtopping by waves and by sudden increases in storage volume. Impoundments meeting the SCS Class B or C criteria for dams in TR–60 shall comply with the freeboard hydrograph criteria in the ''Minimum Emergency Spillway Hydrologic Criteria'' table in TR–60.

(6) *Foundation.* (i) Foundations and abutments for an impounding structure shall be stable during all phases of construction and operation and shall be designed based on adequate and accurate information on the foundation conditions. For an impoundment meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title, foundation investigation, as well as any necessary laboratory testing of foundation material, shall be performed to determine the design requirements for foundation stability.

(ii) All vegetative and organic materials shall be removed and foundations excavated and prepared to resist failure. Cutoff trenches shall be installed if necessary to ensure stability.

(7) Slope protection shall be provided to protect against surface erosion at the site and protect against sudden drawdown.

(8) Faces of embankments and surrounding areas shall be vegetated, except that faces where water is impounded may be riprapped or otherwise stabilized in accordance with accepted design practices.

(9) *Spillways.* An impoundment shall include either a combination of principal and emergency spillways or a single spillway configured as specified in paragraph (a)(9)(i) of this section, designed and constructed to safely pass the applicable design precipitation event specified in paragraph (a)(9)(ii) of this section, except as set forth in paragraph (c)(2) of this section.

(i) The regulatory authority may approve a single open-channel spillway that is:

(A) Of nonerodible construction and designed to carry sustained flows; or

(B) Earth- or grass-lined and designed to carry short-term, infrequent flows at non-erosive velocities where sustained flows are not expected.

(ii) Except as specified in paragraph (c)(2) of this section, the required design precipitation event for an impoundment meeting the spillway requirements of paragraph (a)(9) of this section is:

(A) For an impoundment meeting the SCS Class B or C criteria for dams in TR–60, the emergency spillway hydrograph criteria in the ''Minimum Emergency Spillway Hydrologic Criteria'' table in TR–60, or greater event as specified by the regulatory authority.

(B) For an impoundment meeting or exceeding the size or other criteria of § 77.216(a) of this title, a 100-year 6-hour event, or greater event as specified by the regulatory authority.

(C) For an impoundment not included in paragraph (a)(9)(ii) (A) and (B) of this section, a 25-year 6-hour event, or greater event as specified by the regulatory authority.

(10) The vertical portion of any remaining highwall shall be located far enough below the low-water line along the full extent of highwall to provide adequate safety and access for the proposed water users.

(11) *Inspections.* Except as provided in paragraph (a)(11)(iv) of this section, a qualified registered professional engineer or other qualified professional specialist under the direction of a professional engineer, shall inspect each impoundment as provided in paragraph (a)(11)(i) of this section. The professional engineer or specialist shall be experienced in the construction of impoundments.

(i) Inspections shall be made regularly during construction, upon completion of construction, and at least yearly until removal of the structure or release of the performance bond.

(ii) The qualified registered professional engineer, or qualified registered professional land surveyor as specified in paragraph (a)(11)(iv) of this section, shall promptly after each inspection required in paragraph (a)(11)(i) of this section provide to the regulatory authority a certified report that the impoundment has been constructed and/or maintained as designed and in accordance with the approved plan and this chapter. The report shall include discussion of any appearance of instability, structural weakness or other hazardous condition, depth and elevation of any impounded waters, existing storage capacity, any existing or required monitoring procedures and instrumentation, and any other aspects of the structure affecting stability.

(iii) A copy of the report shall be retained at or near the minesite.

(iv) In any State which authorizes land surveyors to prepare and certify plans in accordance with § 784.16(a) of this chapter, a qualified registered professional land surveyor may inspect any temporary or permanent impoundment that does not meet the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title and certify and submit the report required by paragraph (a)(11)(ii) of this section, except that all coal mine waste impounding structures covered by § 817.84 of this chapter shall be certified by a qualified registered professional engineer. The professional land surveyor shall be experienced in the construction of impoundments.

(12) Impoundments meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216 of this title must be examined in accordance with § 77.216–3 of this title. Impoundments not meeting the SCS Class B or C Criteria for dams in TR–60, or subject to § 77.216 of this title, shall be examined at least quarterly. A qualified person designated by the operator shall examine impoundments for the appearance of structural weakness and other hazardous conditions.

(13) *Emergency procedures.* If any examination or inspection discloses that a potential hazard exists, the person who examined the impoundment shall promptly inform the regulatory authority of the finding and of the emergency procedures formulated for public protection and remedial action. If adequate procedures cannot be formulated or implemented, the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate agencies that other emergency procedures are required to protect the public.

(b) *Permanent impoundments.* A permanent impoundment of water may be created, if authorized by the regulatory authority in the approved permit based upon the following demonstration:

(1) The size and configuration of such impoundment will be adequate for its intended purposes.

(2) The quality of impounded water will be suitable on a permanent basis for its intended use and, after reclamation, will meet applicable State and Federal water quality standards, and discharges from the impoundment will meet applicable effluent limitations and will not degrade the quality of receiving water below applicable State and Federal water quality standards.

(3) The water level will be sufficiently stable and be capable of supporting the intended use.

(4) Final grading will provide for adequate safety and access for proposed water users.

(5) The impoundment will not result in the diminution of the quality and quantity of water utilized by adjacent or surrounding landowners for agricultural, industrial, recreational, or domestic uses.

(6) The impoundment will be suitable for the approved postmining land use.

(c) *Temporary impoundments.* (1) The regulatory authority may authorize the construction of temporary impoundments as part of underground mining activities.

(2) In lieu of meeting the requirements in paragraph (a)(9)(i) of this section, the regulatory authority may approve an impoundment that relies primarily on storage to control the runoff from the design precipitation event when it is demonstrated by the operator and certified by a qualified registered professional engineer or qualified registered professional land surveyor in accordance with § 784.16(a) of this chapter that the impoundment will safely control the design precipitation event, the water from which shall be safely removed in accordance with current, prudent, engineering practices. Such an impoundment shall be located where failure would not be expected to cause loss of life or serious property damage, except where:

(i) Impoundments meeting the SCS Class B or C criteria for dams in TR–60, or the size or other criteria of § 77.216(a) of this title shall be designed to control the precipitation of the probable maximum precipitation of a 6-hour event, or greater event specified by the regulatory authority.

(ii) Impoundments not included in paragraph (c)(2)(i) of this section shall be designed to control the precipitation of the 100-year 6-hour event, or greater event specified by the regulatory authority.

§ 817.56 Postmining rehabilitation of sedimentation ponds, diversions, impoundments, and treatment facilities.

Before abandoning a permit area or seeking bond release, the operator shall ensure that all temporary structures are removed and reclaimed, and that all permanent sedimentation ponds, diversions, impoundments, and treatment facilities meet the requirements of this chapter for permanent structures, have been maintained properly, and meet the requirements of the approved reclamation plan for permanent structures and impoundments. The operator shall renovate such structures if necessary to meet the requirements of this chapter and to conform to the approved reclamation plan.

§ 817.57 Hydrologic balance: Stream buffer zones.

(a) No land within 100 feet of a perennial stream or an intermittent stream shall be disturbed by underground mining activities, unless the regulatory authority specifically authorizes underground mining activities closer to, or through, such a stream. The regulatory authority may authorize such activities only upon finding that—

(1) Underground mining activities will not cause or contribute to the violation of applicable State or Federal water quality standards and will not adversely affect the water quantity and quality or other environmental resources of the stream; and

(2) If there will be a temporary or permanent stream-channel diversion, it will comply with § 817.43.

(b) The area not to be disturbed shall be designated as a buffer zone, and the operator shall mark it as specified in § 817.11.

§ 817.59 Coal recovery.

Underground mining activities shall be conducted so as to maximize the utilization and conservation of the coal, while utilizing the best technology currently available to maintain environmental integrity, so that reaffecting the land in the future through surface coal mining operations is minimized.

§ 817.61 Use of explosives: General requirements.

(a) Sections 817.61–817.68 apply to surface blasting activities incident to underground coal mining, including, but not limited to, initial rounds of slopes and shafts.

(b) Each operator shall comply with all applicable State and Federal laws and regulations in the use of explosives.

(c) *Blasters.* (1) No later than 12 months after the blaster certification program for a State required by part 850 of this chapter has been approved under the procedures of subchapter C of this chapter, all surface blasting operations incident to underground mining in that State shall be conducted under the direction of a certified blaster. Before that time, all such blasting operations in that State shall be conducted by competent, experienced persons who understand the hazards involved.

(2) Certificates of blaster certification shall be carried by blasters or shall be on file at the permit area during blasting operations.

(3) A blaster and at least one other person shall be present at the firing of a blast.

(4) Any blaster who is responsible for conducting blasting operations at a blasting site shall:

(i) Be familiar with the site-specific performance standards; and

(ii) Give direction and on-the-job training to persons who are not certified and who are assigned to the blasting crew or assist in the use of explosives.

(d) *Blast design.* (1) An anticipated blast design shall be submitted if blasting operations will be conducted within—

(i) 1,000 feet of any building used as a dwelling, public building, school, church or community or institutional building; or

(ii) 500 feet of active or abandoned underground mines.

(2) The blast design may be presented as part of a permit application or at a time, before the blast, approved by the regulatory authority.

(3) The blast design shall contain sketches of the drill patterns, delay periods, and decking and shall indicate the type and amount of explosives to be used, critical dimensions, and the location and general description of structures to be protected, as well as a discussion of design factors to be used, which protect the public and meet the applicable airblast, flyrock, and ground-vibration standards in § 817.67.

(4) The blast design shall be prepared and signed by a certified blaster.

(5) The regulatory authority may require changes to the design submitted.

§ 817.62 Use of explosives: Preblasting survey.

(a) At least 30 days before initiation of blasting, the operator shall notify, in writing, all residents or owners of dwellings or other structures located within ½ mile of the permit area how to request a preblasting survey.

(b) A resident or owner of a dwelling or structure within ½ mile of any part of the permit area may request a preblasting survey. This request shall be made, in writing, directly to the operator or to the regulatory authority, who shall promptly notify the operator. The operator shall promptly conduct a preblasting survey of the dwelling or structure and promptly prepare a written report of the survey. An updated survey of any additions, modifications, or renovations shall be performed by the operator if requested by the resident or owner.

(c) The operator shall determine the condition of the dwelling or structure and shall document any preblasting damage and other physical factors that could reasonably be affected by the blasting. Structures such as pipelines, cables, transmission lines, and cisterns,

wells, and other water systems warrant special attention; however, the assessment of these structures may be limited to surface conditions and other readily available data.

(d) The written report of the survey shall be signed by the person who conducted the survey. Copies of the report shall be promptly provided to the regulatory authority and to the person requesting the survey. If the person requesting the survey disagrees with the contents and/or recommendations contained therein, he or she may submit to both the operator and the regulatory authority a detailed description of the specific areas of disagreement.

(e) Any surveys requested more than 10 days before the planned initiation of blasting shall be completed by the operator before the initiation of blasting.

§ 817.64 Use of explosives: General performance standards.

(a) The operator shall notify, in writing, residents within ½ mile of the blasting site and local governments of the proposed times and locations of blasting operations. Such notice of times that blasting is to be conducted may be announced weekly, but in no case less than 24 hours before blasting will occur.

(b) Unscheduled blasts may be conducted only where public or operator health and safety so requires and for emergency blasting actions. When an operator conducts an unscheduled surface blast incidental to underground coal mining operations, the operator, using audible signals, shall notify residents within ½ mile of the blasting site and document the reason in accordance with § 817.68(p).

(c) All blasting shall be conducted between sunrise and sunset unless nighttime blasting is approved by the regulatory authority based upon a showing by the operator that the public will be protected from adverse noise and other impacts. The regulatory authority may specify more restrictive time periods for blasting.

§ 817.66 Use of explosives: Blasting signs, warnings, and access control.

(a) *Blasting signs.* Blasting signs shall meet the specifications of § 817.11. The operator shall—

(1) Conspicuously place signs reading ''Blasting Area'' along the edge of any blasting area that comes within 100 feet of any public-road right-of-way, and at the point where any other road provides access to the blasting area; and

(2) At all entrances to the permit area from public roads or highways, place conspicuous signs which state ''Warning! Explosives in Use,'' which clearly list and describe the meaning of the audible blast warning and all-clear signals that are in use, and which explain the marking of blasting areas and charged holes awaiting firing within the permit area.

(b) *Warnings.* Warning and all-clear signals of different character or pattern that are audible within a range of ½ mile from the point of the blast shall be given. Each person within the permit area and each person who resides or regularly works within ½ mile of the permit area shall be notified of the meaning of the signals in the blasting notification required in § 817.64(a).

(c) *Access control.* Access within the blasting areas shall be controlled to prevent presence of livestock or unauthorized persons during blasting and until an authorized representative of the operator has reasonably determined that—

(1) No unusual hazards, such as imminent slides or undetonated charges, exist; and

(2) Access to and travel within the blasting area can be safely resumed.

§ 817.67 Use of explosives: Control of adverse effects.

(a) *General requirements.* Blasting shall be conducted to prevent injury to persons, damage to public or private property outside the permit area, adverse impacts on any underground mine, and change in the course, channel, or availability of surface or ground water outside the permit area.

(b) *Airblast*—(1) *Limits.* (i) Airblast shall not exceed the maximum limits listed below at the location of any dwelling, public building, school, church, or community or institutional building outside the permit area, except as provided in paragraph (e) of this section.

Lower frequency limit of measuring system, in Hz (±3 dB)	Maximum level, in dB
0.1 Hz or lower—flat response [1]	134 peak.
2 Hz or lower—flat response	133 peak.
6 Hz or lower—flat response	129 peak.
C-weighted—slow response [1]	105 peak dBC.

[1] Only when approved by the regulatory authority.

(ii) If necessary to prevent damage, the regulatory authority may specify lower maximum allowable airblast levels than those of paragraph (b)(1)(i) of this section for use in the vicinity of a specific blasting operation.

(2) *Monitoring.* (i) The operator shall conduct periodic monitoring to ensure compliance with the airblast standards. The regulatory authority may require airblast measurement of any or all blasts and may specify the locations at which such measurements are taken.

(ii) The measuring systems used shall have an upper-end flat-frequency response of at least 200 Hz.

(c) *Flyrock.* Flyrock travelling in the air or along the ground shall not be cast from the blasting site—

(1) More than one-half the distance to the nearest dwelling or other occupied structure;

(2) Beyond the area of control required under § 817.66(c); or

(3) Beyond the permit boundary.

(d) *Ground vibration*—(1) *General.* In all blasting operations, except as otherwise authorized in paragraph (e) of this section, the maximum ground vibration shall not exceed the values approved by the regulatory authority. The maximum ground vibration for protected structures listed in paragraph (d)(2)(i) of this section shall be established in accordance with either the maximum peak-particle-velocity limits of paragraph (d)(2), the scaled-distance equation of paragraph (d)(3), the blasting-level chart of paragraph (d)(4) of this section, or by the regulatory authority under paragraph (d)(5) of this section. All structures in the vicinity of the blasting area, not listed in paragraph (d)(2)(i) of this section, such as water towers, pipelines and other utilities, tunnels, dams, impoundments, and underground mines shall be protected from damage by establishment of a maximum allowable limit on the ground vibration, submitted by the operator and approved by the regulatory authority before the initiation of blasting.

(2) *Maximum peak-particle velocity.* (i) The maximum ground vibration shall not exceed the following limits at the location of any dwelling, public building, school, church, or community or institutional building outside the permit area:

Distance (*D*), from the blasting site, in feet	Maximum allowable peak particle velocity (*V* max) for ground vibration, in inches/second [1]	Scaled-distance factor to be applied without seismic monitoring [2] (Ds)
0 to 300	1.25	50
301 to 5,000	1.00	55
5,001 and beyond	0.75	65

[1] Ground vibration shall be measured as the particle velocity. Particle velocity shall be recorded in three mutually perpendicular directions. The maximum allowable peak particle velocity shall apply to each of the three measurements.

[2] Applicable to the scaled-distance equation of Paragraph (d)(3)(i) of this section.

(ii) A seismographic record shall be provided for each blast.

(3) *Scaled-distance equation.* (i) An operator may use the scaled-distance equation, $W = (D/Ds)^2$, to determine the allowable charge weight of explosives to be detonated in any 8-millisecond period, without seismic monitoring; where W = the maximum weight of explosives, in pounds; D = the distance, in feet, from the blasting site to the nearest protected structure; and Ds = the scaled-distance factor, which may initially be approved by the regulatory authority using the values for scaled-distance factor listed in paragraph (d)(2)(i) of this section.

(ii) The development of a modified scaled-distance factor may be authorized by the regulatory authority on receipt of a written request by the operator, supported by seismographic records of blasting at the minesite. The modified scaled-distance factor shall be determined such that the particle velocity of the predicted ground vibration will not exceed the prescribed maximum allowable peak particle velocity of paragraph (d)(2)(i) of this section, at a 95-percent confidence level.

(4) *Blasting-level chart.* (i) An operator may use the ground-vibration limits in Figure 1 to determine the maximum allowable ground vibration.

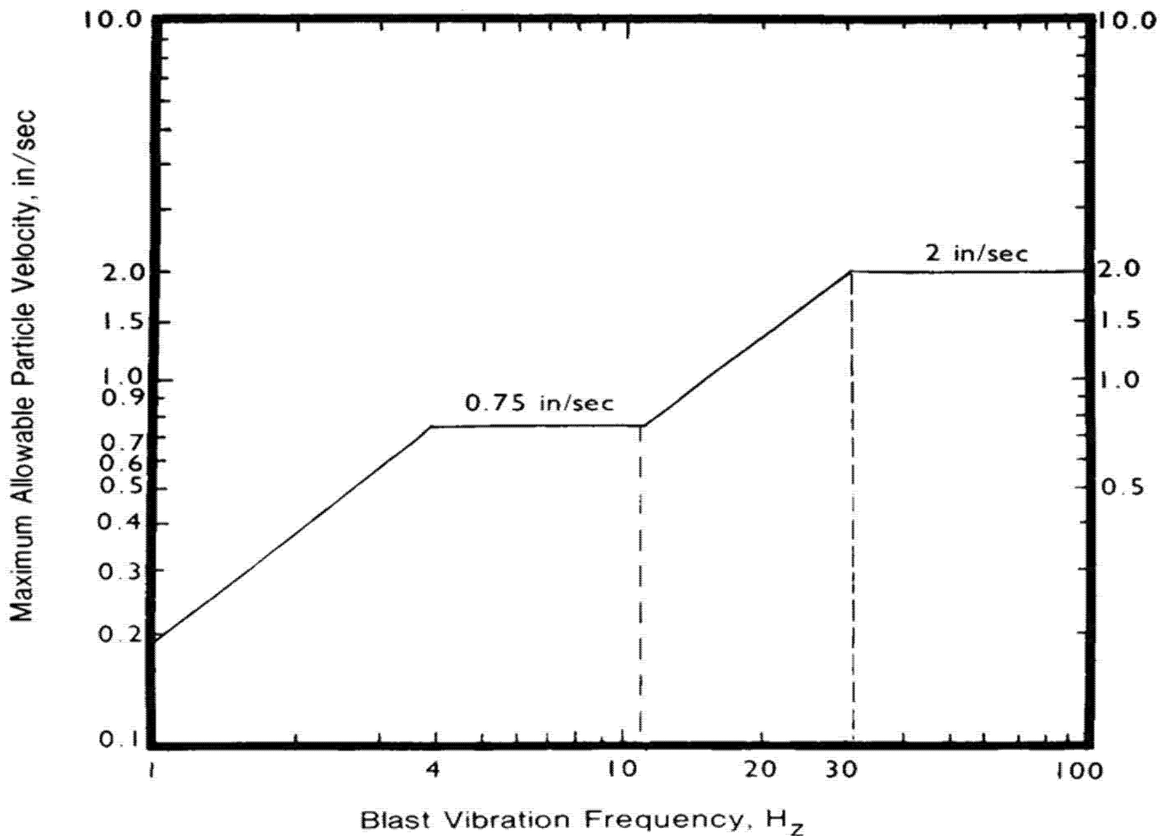

Figure 1. Alternative blasting level criteria.
(Source: Modified from figure B-1, Bureau of Mines RI 8507)

(ii) If the Figure 1 limits are used, a seismographic record including both particle velocity and vibration-frequency levels shall be provided for each blast. The method for the analysis of the predominant frequency contained in the blasting records shall be approved by the regulatory authority before application of this alternative blasting criterion.

(5) The maximum allowable ground vibration shall be reduced by the regulatory authority beyond the limits otherwise provided by this section, if

determined necessary to provide damage protection.

(6) The regulatory authority may require an operator to conduct seismic monitoring of any or all blasts and may specify the location at which the measurements are taken and the degree of detail necessary in the measurement.

(e) The maximum airblast and ground-vibration standards of paragraphs (b) and (d) of this section shall not apply at the following locations:

(1) At structures owned by the permittee and not leased to another person,

(2) At structures owned by the permittee and leased to another person, if a written waiver by the lessee is submitted to the regulatory authority before blasting.

§ 817.68 Use of explosives: Records of blasting operations.

The operator shall retain a record of all blasts for at least 3 years. Upon request, copies of these records shall be made available to the regulatory authority and to the public for inspection. Such records shall contain the following data:

(a) Name of the operator conducting the blast.

(b) Location, date, and time of the blast.

(c) Name, signature, and certification number of the blaster conducting the blast.

(d) Identification, direction, and distance, in feet, from the nearest blast hole to the nearest dwelling, public building, school, church, community or institutional building outside the permit area, except those described in § 817.67 (e).

(e) Weather conditions, including those which may cause possible adverse blasting effects.

(f) Type of material blasted.

(g) Sketches of the blast pattern including number of holes, burden, spacing, decks, and delay pattern.

(h) Diameter and depth of holes.

(i) Types of explosives used.

(j) Total weight of explosives used per hole.

(k) The maximum weight of explosives detonated in an 8-millisecond period.

(l) Initiation system.

(m) Type and length of stemming.

(n) Mats or other protections used.

(o) Seismographic and airblast records, if required, which shall include—

(1) Type of instrument, sensitivity, and calibration signal or certification of annual calibration;

(2) Exact location of instrument and the date, time, and distance from the blast;

(3) Name of the person and firm taking the reading;

(4) Name of the person and firm analyzing the seismographic record; and

(5) The vibration and/or airblast level recorded.

(p) Reasons and conditions for each unscheduled blast.

§ 817.71 Disposal of excess spoil: General requirements.

(a) *General.* Excess spoil shall be placed in designated disposal areas within the permit area, in a controlled manner to—

(1) Minimize the adverse effects of leachate and surface water runoff from the fill on surface and ground waters;

(2) Ensure mass stability and prevent mass movement during and after construction; and

(3) Ensure that the final fill is suitable for reclamation and revegetation compatible with the natural surroundings and the approved postmining land use.

(b) *Design certification.* (1) The fill and appurtenant structures shall be designed using current, prudent engineering practices and shall meet any design criteria established by the regulatory authority. A qualified registered professional engineer experienced in the design of earth and rock fills shall certify the design of the fill and appurtenant structures.

(2) The fill shall be designed to attain a minimum long-term static safety factor of 1.5. The foundation and abutments of the fill must be stable under all conditions of construction.

(c) *Location.* The disposal area shall be located on the most moderately sloping and naturally stable areas available, as approved by the regulatory authority, and shall be placed, where possible, upon or above a natural terrace, bench, or berm, if such placement provides additional stability and prevents mass movement.

(d) *Foundation.* (1) Sufficient foundation investigations, as well as any necessary laboratory testing of foundation material, shall be performed in order to determine the design requirements for foundation stability. The analyses of foundation conditions shall take into consideration the effect of underground mine workings, if any, upon the stability of the fill and appurtenant structures.

(2) When the slope in the disposal area is in excess of 2.8h:lv (36 percent), or such lesser slope as may be designated by the regulatory authority based on local conditions, keyway cuts (excavations to stable bedrock) or rock toe buttresses shall be constructed to ensure stability of the fill. Where the toe of the spoil rests on a downslope, stability analyses shall be performed in accordance with § 784.19 of this chapter to determine the size of rock toe buttresses and keyway cuts.

(e) *Placement of excess spoil.* (1) All vegetative and organic materials shall be removed from the disposal area prior to placement of excess spoil. Topsoil shall be removed, segregated and stored or redistributed in accordance with § 817.22. If approved by the regulatory authority, organic material may be used as mulch or may be included in the topsoil to control erosion, promote growth of vegetation or increase the moisture retention of the soil.

(2) Excess spoil shall be transported and placed in a controlled manner in horizontal lifts not exceeding 4 feet in thickness; concurrently compacted as necessary to ensure mass stability and to prevent mass movement during and after construction; graded so that surface and subsurface drainage is compatible with the natural surroundings; and covered with topsoil or substitute material in accordance with § 817.22 of this chapter. The regulatory authority may approve a design which incorporates placement of excess spoil in horizontal lifts other than 4 feet in thickness when it is demonstrated by the operator and certified by a qualified registered professional engineer that the design will ensure the stability of the fill and will meet all other applicable requirements.

(3) The final configuration of the fill shall be suitable for the approved postmining land use. Terraces may be constructed on the outslope of the fill if required for stability, control of erosion, to conserve soil moisture, or to facilitate the approved postmining land use. The grade of the outslope between terrace benches shall not be steeper than 2h:lv (50 percent).

(4) No permanent impoundments are allowed on the completed fill. Small depressions may be allowed by the regulatory authority if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation; and if they are not incompatible with the stability of the fill.

(5) Excess spoil that is acid- or toxic-forming or combustible shall be adequately covered with nonacid, nontoxic and noncombustible material, or treated, to control the impact on surface and ground water in accordance with § 817.41, to prevent sustained combustion, and to minimize adverse

effects on plant growth and the approved postmining land use.

(f) *Drainage control.* (1) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the fill design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the fill, and ensure stability.

(2) Diversions shall comply with the requirements of § 817.43.

(3) Underdrains shall consist of durable rock or pipe, be designed and constructed using current, prudent engineering practices and meet any design criteria established by the regulatory authority. The underdrain system shall be designed to carry the anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area and shall be protected from piping and contamination by an adequate filter. Rock underdrains shall be constructed of durable, nonacid-, nontoxic-forming rock (*e.g.,* natural sand and gravel, sandstone, limestone, or other durable rock) that does not slake in water or degrade to soil materials, and which is free of coal, clay or other nondurable material. Perforated pipe underdrains shall be corrosion resistant and shall have characteristics consistent with the long-term life of the fill.

(g) *Surface area stabilization.* Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(h) *Inspections.* A qualified registered professional engineer or other qualified professional specialist under the direction of the professional engineer, shall periodically inspect the fill during construction. The professional engineer or specialist shall be experienced in the construction of earth and rock fills.

(1) Such inspections shall be made at least quarterly throughout construction and during critical construction periods. Critical construction periods shall include at a minimum: (i) Foundation preparation, including the removal of all organic material and topsoil; (ii) placement of underdrains and protective filter systems; (iii) installation of final surface drainage systems; and (iv) the final graded and revegetated fill. Regular inspections by the engineer or specialist shall also be conducted during placement and compaction of fill materials.

(2) The qualified registered professional engineer shall provide a certified report to the regulatory authority promptly after each inspection that the fill has been constructed and maintained as designed and in accordance with the approved plan and this chapter. The report shall include appearances of instability, structural weakness, and other hazardous conditions.

(3)(i) The certified report on the drainage system and protective filters shall include color photographs taken during and after construction, but before underdrains are covered with excess spoil. If the underdrain system is constructed in phases, each phase shall be certified separately.

(ii) Where excess durable rock spoil is placed in single or multiple lifts such that the underdrain system is constructed simultaneously with excess spoil placement by the natural segregation of dumped materials, in accordance with § 817.73, color photographs shall be taken of the underdrain as the underdrain system is being formed.

(iii) The photographs accompanying each certified report shall be taken in adequate size and number with enough terrain or other physical features of the site shown to provide a relative scale to the photographs and to specifically and clearly identify the site.

(4) A copy of each inspection report shall be retained at or near the mine site.

(i) *Coal mine waste.* Coal mine waste may be disposed of in excess spoil fills if approved by the regulatory authority and, if such waste is—

(1) Placed in accordance with § 817.83;

(2) Nontoxic and nonacid forming; and

(3) Of the proper characteristics to be consistent with the design stability of the fill.

(j) *Underground disposal.* Excess spoil may be disposed of in underground mine workings, but only in accordance with a plan approved by the regulatory authority and MSHA under § 784.25 of this chapter.

(k) *Face-up operations.* Spoil resulting from face-up operations for underground coal mine development may be placed at drift entries as part of a cut and fill structure, if the structure is less than 400 feet in horizontal length, and designed in accordance with § 817.71.

§ 817.72 Disposal of excess spoil: Valley fill/head-of-hollow fills.

Valley fills and head-of-hollow fills shall meet the requirements of § 817.71 and the additional requirements of this section.

(a) *Drainage control.* (1) The top surface of the completed fill shall be graded such that the final slope after settlement will be toward properly designed drainage channels. Uncontrolled surface drainage may not be directed over the outslope of the fill.

(2) Runoff from areas above the fill and runoff from the surface of the fill shall be diverted into stabilized diversion channels designed to meet the requirements of § 817.43 and to safely pass the runoff from a 100-year, 6-hour precipitation event.

(b) *Rock-core chimney drains.* A rock-core chimney drain may be used in a head-of-hollow fill, instead of the underdrain and surface diversion system normally required, as long as the fill is not located in an area containing intermittent or perennial streams. A rock-core chimney drain may be used in a valley fill if the fill does not exceed 250,000 cubic yards of material and upstream drainage is diverted around the fill. The alternative rock-core chimney drain system shall be incorporated into the design and construction of the fill as follows:

(1) The fill shall have, along the vertical projection of the main buried stream channel or rill, a vertical core of durable rock at least 16 feet thick which shall extend from the toe of the fill to the head of the fill, and from the base of the fill to the surface of the fill. A system of lateral rock underdrains shall connect this rock core to each area of potential drainage or seepage in the disposal area. The underdrain system and rock core shall be designed to carry the anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area. Rocks used in the rock core and underdrains shall meet the requirements of § 817.71(f).

(2) A filter system to ensure the proper long-term functioning of the rock core shall be designed and constructed using current, prudent engineering practices.

(3) Grading may drain surface water away from the outslope of the fill and toward the rock core. In no case, however, may intermittent or perennial streams be diverted into the rock core. The maximum slope of the top of the fill shall be 33h:lv (3 percent). A drainage pocket may be maintained at the head of the fill during and after construction, to intercept surface runoff and discharge the runoff through or over the rock drain, if stability of the fill is not impaired. In no case shall this pocket or sump have a potential capacity for impounding more than 10,000 cubic feet of water. Terraces on the fill shall be

graded with a 3 to 5 percent grade toward the fill and a 1 percent slope toward the rock core.

§ 817.73 Disposal of excess spoil: Durable rock fills.

The regulatory authority may approve the alternative method of disposal of excess durable rock spoil by gravity placement in single or multiple lifts, provided the following conditions are met:

(a) Except as provided in this section, the requirements of § 817.71 are met.

(b) The excess spoil consists of at least 80 percent, by volume, durable, nonacid- and nontoxic-forming rock (*e.g.,* sandstone or limestone) that does not slake in water and will not degrade to soil material. Where used, noncemented clay shale, clay spoil, soil or other nondurable excess spoil material shall be mixed with excess durable rock spoil in a controlled manner such that no more than 20 percent of the fill volume, as determined by tests performed by a registered engineer and approved by the regulatory authority, is not durable rock.

(c) A qualified registered professional engineer certifies that the design will ensure the stability of the fill and meet all other applicable requirements.

(d) The fill is designed to attain a minimum long-term static safety factor of 1.5, and an earthquake safety factor of 1.1.

(e) The underdrain system may be constructed simultaneously with excess spoil placement by the natural segregation of dumped materials, provided the resulting underdrain system is capable of carrying anticipated seepage of water due to rainfall away from the excess spoil fill and from seeps and springs in the foundation of the disposal area and the other requirements for drainage control are met.

(f) Surface water runoff from areas adjacent to and above the fill is not allowed to flow onto the fill and is diverted into stabilized diversion channels designed to meet the requirements of § 817.43 and to safely pass the runoff from a 100-year, 6-hour precipitation event.

§ 817.74 Disposal of excess spoil: Preexisting benches.

(a) The regulatory authority may approve the disposal of excess spoil through placement on a preexisting bench if the affected portion of the preexisting bench is permitted and the standards set forth in § 817.102 (c), (e) through (h), and (j), and the requirements of this section are met.

(b) All vegetation and organic materials shall be removed from the affected portion of the preexisting bench prior to placement of the excess spoil. Any available topsoil on the bench shall be removed, stored and redistributed in accordance with § 817.22 of this part. Substitute or supplemental materials may be used in accordance with § 817.22(b) of this part.

(c) The fill shall be designed and constructed using current, prudent engineering practices. The design will be certified by a registered professional engineer. The spoil shall be placed on the solid portion of the bench in a controlled manner and concurrently compacted as necessary to attain a long term static safety factor of 1.3 for all portions of the fill. Any spoil deposited on any fill portion of the bench will be treated as excess spoil fill under § 817.71.

(d) The preexisting bench shall be backfilled and graded to—

(1) Achieve the most moderate slope possible which does not exceed the angle of repose;

(2) Eliminate the highwall to the maximum extent technically practical;

(3) Minimize erosion and water pollution both on and off the site; and

(4) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the fill design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the fill, and ensure stability.

(e) All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(f) Permanent impoundments may not be constructed on preexisting benches backfilled with excess spoil under this regulation.

(g) Final configuration of the backfill must be compatible with the natural drainage patterns and the surrounding area, and support the approved postmining land use.

(h) Disposal of excess spoil from an upper actively mined bench to a lower preexisting bench by means of gravity transport may be approved by the regulatory authority provided that—

(1) The gravity transport courses are determined on a site-specific basis by the operator as part of the permit application and approved by the regulatory authority to minimize hazards to health and safety and to ensure that damage will be minimized between the benches, outside the set course, and downslope of the lower bench should excess spoil accidentally move;

(2) All gravity transported excess spoil, including that excess spoil immediately below the gravity transport courses and any preexisting spoil that is disturbed, is rehandled and placed in horizontal lifts in a controlled manner, concurrently compacted as necessary to ensure mass stability and to prevent mass movement, and graded to allow surface and subsurface drainage to be compatible with the natural surroundings and to ensure a minimum long-term static safety factor of 1.3. Excess spoil on the bench prior to the current mining operation that is not disturbed need not be rehandled except where necessary to ensure stability of the fill;

(3) A safety berm is constructed on the solid portion of the lower bench prior to gravity transport of the excess spoil. Where there is insufficient material on the lower bench to construct a safety berm, only that amount of excess spoil necessary for the construction of the berm may be gravity transported to the lower bench prior to construction of the berm;

(4) Excess spoil shall not be allowed on the downslope below the upper bench except on designated gravity transport courses properly prepared according to § 817.22. Upon completion of the fill, no excess spoil shall be allowed to remain on the designated gravity transport course between the two benches and each transport course shall be reclaimed in accordance with the requirements of this part.

§ 817.81 Coal mine waste: General requirements.

(a) *General.* All coal mine waste disposed of in an area other than the mine workings or excavations shall be placed in new or existing disposal areas within a permit area, which are approved by the regulatory authority for this purpose. Coal mine waste shall be hauled or conveyed and placed for final placement in a controlled manner to—

(1) Minimize adverse effects of leachate and surface-water runoff on surface and ground water quality and quantity;

(2) Ensure mass stability and prevent mass movement during and after construction;

(3) Ensure that the final disposal facility is suitable for reclamation and revegetation compatible with the natural surroundings and the approved postmining land use;

(4) Not create a public hazard; and

(5) Prevent combustion.

(b) Coal mine waste materials from activities located outside a permit area may be disposed of in the permit area only if approved by the regulatory authority. Approval shall be based upon a showing that such disposal will be in

accordance with the standards of this section.

(c) *Design certification.* (1) The disposal facility shall be designed using current, prudent engineering practices and shall meet any design criteria established by the regulatory authority. A qualified registered professional engineer, experienced in the design of similar earth and waste structures, shall certify the design of the disposal facility.

(2) The disposal facility shall be designed to attain a minimum long-term static safety factor of 1.5. The foundation and abutments must be stable under all conditions of construction.

(d) *Foundation.* Sufficient foundation investigations, as well as any necessary laboratory testing of foundation material, shall be performed in order to determine the design requirements for foundation stability. The analyses of the foundation conditions shall take into consideration the effect of underground mine workings, if any, upon the stability of the disposal facility.

(e) *Emergency procedures.* If any examination or inspection discloses that a potential hazard exists, the regulatory authority shall be informed promptly of the finding and of the emergency procedures formulated for public protection and remedial action. If adequate procedures cannot be formulated or implemented, the regulatory authority shall be notified immediately. The regulatory authority shall then notify the appropriate agencies that other emergency procedures are required to protect the public.

(f) *Underground disposal.* Coal mine waste may be disposed of in underground mine workings, but only in accordance with a plan approved by the regulatory authority and MSHA under § 784.25 of this chapter.

§ 817.83 Coal mine waste: Refuse piles.

Refuse piles shall meet the requirements of § 817.81, the additional requirements of this section, and the requirements of §§ 77.214 and 77.215 of this title.

(a) *Drainage control.* (1) If the disposal area contains springs, natural or manmade water courses, or wet weather seeps, the design shall include diversions and underdrains as necessary to control erosion, prevent water infiltration into the disposal facility and ensure stability.

(2) Uncontrolled surface drainage may not be diverted over the outslope of the refuse pile. Runoff from areas above the refuse pile and runoff from the surface of the refuse pile shall be diverted into stabilized diversion channels designed to meet the requirements of § 817.43 to safely pass the runoff from a 100-year, 6-hour precipitation event. Runoff diverted from undisturbed areas need not be commingled with runoff from the surface of the refuse pile.

(3) Underdrains shall comply with the requirements of § 817.71(f)(3).

(b) *Surface area stabilization.* Slope protection shall be provided to minimize surface erosion at the site. All disturbed areas, including diversion channels that are not riprapped or otherwise protected, shall be revegetated upon completion of construction.

(c) *Placement.* (1) All vegetative and organic materials shall be removed from the disposal area prior to placement of coal mine waste. Topsoil shall be removed, segregated and stored or redistributed in accordance with § 817.22. If approved by the regulatory authority, organic material may be used as mulch or may be included in the topsoil to control erosion, promote growth of vegetation or increase the moisture retention of the soil.

(2) The final configuration of the refuse pile shall be suitable for the approved postmining land use. Terraces may be constructed on the outslope of the refuse pile if required for stability, control of erosion, conservation of soil moisture, or facilitation of the approved postmining land use. The grade of the outslope between terrace benches shall not be steeper than 2h:1v (50 percent).

(3) No permanent impoundments shall be allowed on the completed refuse pile. Small depressions may be allowed by the regulatory authority if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation, and if they are not incompatible with stability of the refuse pile.

(4) Following final grading of the refuse pile, the coal mine waste shall be covered with a minimum of 4 feet of the best available, nontoxic and noncombustible material, in a manner that does not impede drainage from the underdrains. The regulatory authority may allow less than 4 feet of cover material based on physical and chemical analyses which show that the requirements of §§ 817.111 through 817.116 will be met.

(d) *Inspections.* A qualified registered professional engineer, or other qualified professional specialist under the direction of the professional engineer, shall inspect the refuse pile during construction. The professional engineer or specialist shall be experienced in the construction of similar earth and waste structures.

(1) Such inspection shall be made at least quarterly throughout construction and during critical construction periods. Critical construction periods shall include at a minimum: (i) Foundation preparation including the removal of all organic material and topsoil; (ii) placement of underdrains and protective filter systems; (iii) installation of final surface drainage systems; and (iv) the final graded and revegetated facility. Regular inspections by the engineer or specialist shall also be conducted during placement and compaction of coal mine waste materials. More frequent inspections shall be conducted if a danger of harm exists to the public health and safety or the environment. Inspections shall continue until the refuse pile has been finally graded and revegetated or until a later time as required by the regulatory authority.

(2) The qualified registered professional engineer shall provide a certified report to the regulatory authority promptly after each inspection that the refuse pile has been constructed and maintained as designed and in accordance with the approved plan and this chapter. The report shall include appearances of instability, structural weakness, and other hazardous conditions.

(3) The certified report on the drainage system and protective filters shall include color photographs taken during and after construction, but before underdrains are covered with coal mine waste. If the underdrain system is constructed in phases, each phase shall be certified separately. The photographs accompanying each certified report shall be taken in adequate size and number with enough terrain or other physical features of the site shown to provide a relative scale to the photographs and to specifically and clearly identify the site.

(4) A copy of each inspection report shall be retained at or near the minesite.

§ 817.84 Coal mine waste: Impounding structures.

New and existing impounding structures constructed of coal mine waste or intended to impound coal mine waste shall meet the requirements of § 817.81.

(a) Coal mine waste shall not be used for construction of impounding structures unless it has been demonstrated to the regulatory authority that the stability of such a structure conforms to the requirements of this part and the use of coal mine waste will not have a detrimental effect on downstream water quality or the environment due to acid seepage

through the impounding structure. The stability of the structure and the potential impact of acid mine seepage through the impounding structure and shall be discussed in detail in the design plan submitted to the regulatory authority in accordance with § 780.25 of this chapter.

(b)(1) Each impounding structure constructed of coal mine waste or intended to impound coal mine waste shall be designed, constructed and maintained in accordance with § 817.49 (a) and (c). Such structures may not be retained permanently as part of the approved postmining land use.

(2) Each impounding structure constructed of coal mine waste or intended to impound coal mine waste that meets the criteria of § 77.216(a) of this title shall have sufficient spillway capacity to safely pass, adequate storage capacity to safely contain, or a combination of storage capacity and spillway capacity to safely control, the probable maximum precipitation of a 6-hour precipitation event, or greater event as specified by the regulatory authority.

(c) Spillways and outlet works shall be designed to provide adequate protection against erosion and corrosion. Inlets shall be protected against blockage.

(d) *Drainage control.* Runoff from areas above the disposal facility or runoff from the surface of the facility that may cause instability or erosion of the impounding structure shall be diverted into stabilized diversion channels designed to meet the requirements of § 817.43 and designed to safely pass the runoff from a 100-year, 6-hour design precipitation event.

(e) Impounding structures constructed of or impounding coal mine waste shall be designed so that at least 90 percent of the water stored during the design precipitation event can be removed within a 10-day period.

(f) For an impounding structure constructed of or impounding coal mine waste, at least 90 percent of the water stored during the design precipitation event shall be removed within the 10-day period following the design precipitation event.

§ 817.87 Coal mine waste: Burning and burned waste utilization.

(a) Coal mine waste fires shall be extinguished by the person who conducts the surface mining activities, in accordance with a plan approved by the regulatory authority and the Mine Safety and Health Administration. The plan shall contain, at a minimum, provisions to ensure that only those persons authorized by the operator, and who have an understanding of the procedures to be used, shall be involved in the extinguishing operations.

(b) No burning or unburned coal mine waste shall be removed from a permitted disposal area without a removal plan approved by the regulatory authority. Consideration shall be given to potential hazards to persons working or living in the vicinity of the structure.

§ 817.89 Disposal of noncoal mine wastes.

(a) Noncoal mine wastes including, but not limited to grease, lubricants, paints, flammable liquids, garbage, abandoned mining machinery, lumber and other combustible materials generated during mining activities shall be placed and stored in a controlled manner in a designated portion of the permit area. Placement and storage shall ensure that leachate and surface runoff do not degrade surface or ground water, that fires are prevented, and that the area remains stable and suitable for reclamation and revegetation compatible with the natural surroundings.

(b) Final disposal of noncoal mine wastes shall be in a designated disposal site in the permit area or a State-approved solid waste disposal area. Disposal sites in the permit area shall be designed and constructed to ensure that leachate and drainage from the noncoal mine waste area does not degrade surface or underground water. Wastes shall be routinely compacted and covered to prevent combustion and wind-borne waste. When the disposal is completed, a minimum of 2 feet of soil cover shall be placed over the site, slopes stabilized, and revegetation accomplished in accordance with §§ 817.111 through 817.116. Operation of the disposal site shall be conducted in accordance with all local, State, and Federal requirements.

(c) At no time shall any noncoal mine waste be deposited in a refuse pile or impounding structure, nor shall any excavation for a noncoal mine waste disposal site be located within 8 feet of any coal outcrop or coal storage area.

§ 817.95 Stabilization of surface areas.

(a) All exposed surface areas shall be protected and stabilized to effectively control erosion and air pollution attendant to erosion.

(b) Rills and gullies which form in areas that have been regraded and topsoiled and which either (1) disrupt the approved postmining land use or the reestablishment of the vegetative cover, or (2) cause or contribute to a violation of water quality standards for receiving streams; shall be filled, regraded, or otherwise stabilized; topsoil shall be replaced; and the areas shall be reseeded or replanted.

§ 817.97 Protection of fish, wildlife, and related environmental values.

(a) The operator shall, to the extent possible using the best technology currently available, minimize disturbances and adverse impacts on fish, wildlife, and related environmental values and shall achieve enhancement of such resources where practicable.

(b) *Endangered and threatened species.* No underground mining activity shall be conducted which is likely to jeopardize the continued existence of endangered or threatened species listed by the Secretary or which is likely to result in the destruction or adverse modification of designated critical habitats of such species in violation of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*). The operator shall promptly report to the regulatory authority any State- or federally-listed endangered or threatened species within the permit area of which the operator becomes aware. Upon notification, the regulatory authority shall consult with appropriate State and Federal fish and wildlife agencies and, after consultation, shall identify whether, and under what conditions, the operator may proceed.

(c) *Bald and golden eagles.* No underground mining activity shall be conducted in a manner which would result in the unlawful taking of a bald or golden eagle, its nest, or any of its eggs. The operator shall promptly report to the regulatory authority any golden or bald eagle nest within the permit area of which the operator becomes aware. Upon notification, the regulatory authority shall consult with the U.S. Fish and Wildlife Service and also, where appropriate, the State fish and wildlife agency and, after consultation, shall identify whether, and under what conditions, the operator may proceed.

(d) Nothing in this chapter shall authorize the taking of an endangered or threatened species or a bald or golden eagle, its nest, or any of its eggs in violation of the Endangered Species Act of 1973, as amended, 16 U.S.C. 1531 *et seq.,* or the Bald Eagle Protection Act, as amended, 16 U.S.C. 668 *et seq.*

(e) Each operator shall, to the extent possible using the best technology currently available—

(1) Ensure that electric powerlines and other transmission facilities used for, or incidental to, underground mining activities on the permit area are designed and constructed to minimize electrocution hazards to raptors, except where the regulatory authority

determines that such requirements are unnecessary;

(2) Locate and operate haul and access roads so as to avoid or minimize impacts on important fish and wildlife species or other species protected by State or Federal law;

(3) Design fences, overland conveyors, and other potential barriers to permit passage for large mammals except where the regulatory authority determines that such requirements are unnecessary; and

(4) Fence, cover, or use other appropriate methods to exclude wildlife from ponds which contain hazardous concentrations of toxic-forming materials.

(f) *Wetlands and habitats of unusually high value for fish and wildlife.* The operator conducting underground mining activities shall avoid disturbances to, enhance where practicable, restore, or replace, wetlands, and riparian vegetation along rivers and streams and bordering ponds and lakes. Underground mining activities shall avoid disturbances to, enhance where practicable, or restore, habitats of unusually high value for fish and wildlife.

(g) Where fish and wildlife habitat is to be a postmining land use, the plant species to be used on reclaimed areas shall be selected on the basis of the following criteria:

(1) Their proven nutritional value for fish or wildlife.

(2) Their use as cover for fish or wildlife.

(3) Their ability to support and enhance fish or wildlife habitat after the release of performance bonds. The selected plants shall be grouped and distributed in a manner which optimizes edge effect, cover, and other benefits to fish and wildlife.

(h) Where cropland is to be the postmining land use, and where appropriate for wildlife- and crop-management practices, the operator shall intersperse the fields with trees, hedges, or fence rows throughout the harvested area to break up large blocks of monoculture and to diversify habitat types for birds and other animals.

(i) Where residential, public service, or industrial uses are to be the postmining land use, and where consistent with the approved postmining land use, the operator shall intersperse reclaimed lands with greenbelts utilizing species of grass, shrubs, and trees useful as food and cover for wildlife.

§ 817.99 Slides and other damage.

At any time a slide occurs which may have a potential adverse effect on public, property, health, safety, or the environment, the person who conducts the underground mining activities shall notify the regulatory authority by the fastest available means and comply with any remedial measures required by the regulatory authority.

§ 817.100 Contemporaneous reclamation.

Reclamation efforts, including but not limited to backfilling, grading, topsoil replacement, and revegetation, on all areas affected by surface impacts incident to an underground coal mine shall occur as contemporaneously as practicable with mining operations, except when such mining operations are conducted in accordance with a variance for concurrent surface and underground mining activities issued under § 785.18 of this chapter. The regulatory authority may establish schedules that define contemporaneous reclamation.

§ 817.102 Backfilling and grading: General requirements.

(a) Disturbed areas shall be backfilled and graded to—

(1) Achieve the approximate original contour, except as provided in paragraph (k) of this section;

(2) Eliminate all highwalls, spoil piles, and depressions, except as provided in paragraph (h) (small depressions) and in paragraph (k)(2) (previously mined highwalls) of this section;

(3) Achieve a postmining slope that does not exceed either the angle of repose or such lesser slope as is necessary to achieve a minimum long-term static safety factor of 1.3 and to prevent slides;

(4) Minimize erosion and water pollution both on and off the site; and

(5) Support the approved postmining land use.

(b) Spoil, except as provided in paragraph (l) of this section, and except excess spoil disposed of in accordance with §§ 817.71 through 817.74, shall be returned to the mined-out surface area.

(c) Spoil and waste materials shall be compacted where advisable to ensure stability or to prevent leaching of toxic materials.

(d) Spoil may be placed on the area outside the mined-out surface area in nonsteep slope areas to restore the approximate original contour by blending the spoil into the surrounding terrain if the following requirements are met:

(1) All vegetative and organic material shall be removed from the area.

(2) The topsoil on the area shall be removed, segregated, stored, and redistributed in accordance with § 817.22.

(3) The spoil shall be backfilled and graded on the area in accordance with the requirements of this section.

(e) Disposal of coal processing waste and underground development waste in the mined-out surface area shall be in accordance with §§ 817.81 and 817.83, except that a long-term static safety factor of 1.3 shall be achieved.

(f) Exposed coal seams, acid- and toxic-forming materials, and combustible materials exposed, used, or produced during mining shall be adequately covered with nontoxic and noncombustible materials, or treated, to control the impact on surface and ground water in accordance with § 817.41, to prevent sustained combustion, and to minimize adverse effects on plant growth and the approved postmining land use.

(g) Cut-and-fill terraces may be allowed by the regulatory authority where—

(1) Needed to conserve soil moisture, ensure stability, and control erosion on final-graded slopes, if the terraces are compatible with the approved postmining land use; or

(2) Specialized grading, foundation conditions, or roads are required for the approved postmining land use, in which case the final grading may include a terrace of adequate width to ensure the safety, stability, and erosion control necessary to implement the postmining land-use plan.

(h) Small depressions may be constructed if they are needed to retain moisture, minimize erosion, create and enhance wildlife habitat, or assist revegetation.

(i) Permanent impoundments may be approved if they meet the requirements of §§ 817.49 and 817.56 and if they are suitable for the approved postmining land use.

(j) Preparation of final-graded surfaces shall be conducted in a manner that minimizes erosion and provides a surface for replacement of topsoil that will minimize slippage.

(k) The postmining slope may vary from the approximate original contour when approval is obtained from the regulatory authority for—

(1) A variance from approximate original contour requirements in accordance with § 785.16 of this chapter; or

(2) Incomplete elimination of highwalls in previously mined areas in accordance with § 817.106.

(l) Regrading of settled and revegetated fills to achieve approximate original contour at the conclusion of underground mining activities shall not be required if the conditions of

paragraph (l)(1) or (l)(2) of this section are met.

(1)(i) Settled and revegetated fills shall be composed of spoil or non-acid- or non-toxic-forming underground development waste.

(ii) The spoil or underground development waste shall not be located so as to be detrimental to the environment, to the health and safety of the public, or to the approved postmining land use.

(iii) Stability of the spoil or underground development waste shall be demonstrated through standard geotechnical analysis to be consistent with backfilling and grading requirements for material on the solid bench (1.3 static safety factor) or excess spoil requirements for material not placed on a solid bench (1.5 static safety factor).

(iv) The surface of the spoil or underground development waste shall be vegetated according to § 817.116, and surface runoff shall be controlled in accordance with § 817.43.

(2) If it is determined by the regulatory authority that disturbance of the existing spoil or underground development waste would increase environmental harm or adversely affect the health and safety of the public, the regulatory authority may allow the existing spoil or underground development waste pile to remain in place. The regulatory authority may require stabilization of such spoil or underground development waste in accordance with the requirements of paragraphs (l)(1)(i) through (l)(1)(iv) of this section.

§ 817.106 Backfilling and grading: Previously mined areas.

(a) Remining operations on previously mined areas that contain a preexisting highwall shall comply with the requirements of §§ 817.102 through 817.107 of this chapter, except as provided in this section.

(b) The requirements of § 817.102(a) (1) and (2) requiring that elimination of highwalls shall not apply to remining operations where the volume of all reasonably available spoil is demonstrated in writing to the regulatory authority to be insufficient to completely backfill the reaffected or enlarged highwall. The highwall shall be eliminated to the maximum extent technically practical in accordance with the following criteria:

(1) All spoil generated by the remining operation and any other reasonably available spoil shall be used to backfill the area. Reasonably available spoil in the immediate vicinity of the remining operation shall be included within the permit area.

(2) The backfill shall be graded to a slope which is compatible with the approved postmining land use and which provides adequate drainage and long-term stability.

(3) Any highwall remnant shall be stable and not pose a hazard to the public health and safety or to the environment. The operator shall demonstrate, to the satisfaction of the regulatory authority, that the highwall remnant is stable.

(4) Spoil placed on the outslope during previous mining operations shall not be disturbed if such disturbances will cause instability of the remaining spoil or otherwise increase the hazard to the public health and safety or to the environment.

§ 817.107 Backfilling and grading: Steep slopes.

(a) Underground mining activities on steep slopes shall be conducted so as to meet the requirements of §§ 817.102–817.106 and the requirements of this section.

(b) The following materials shall not be placed on the downslope:

(1) Spoil.

(2) Waste materials of any type.

(3) Debris, including that from clearing and grubbing.

(4) Abandoned or disabled equipment.

(c) Land above the highwall shall not be disturbed unless the regulatory authority finds that this disturbance will facilitate compliance with the environmental protection standards of this subchapter and the disturbance is limited to that necessary to facilitate compliance.

(d) Woody materials shall not be buried in the backfilled area unless the regulatory authority determines that the proposed method for placing woody material within the backfill will not deteriorate the stable condition of the backfilled area.

§ 817.111 Revegetation: General requirements.

(a) The permittee shall establish on regraded areas and on all other disturbed areas except water areas and surface areas of roads that are approved as part of the postmining land use, as vegetative cover that is in accordance with the approved permit and reclamation plan and that is—

(1) Diverse, effective, and permanent;

(2) Comprised of species native to the area, or of introduced species where desirable and necessary to achieve the approved postmining land use and approved by the regulatory authority;

(3) At least equal in extent of cover to the natural vegetation of the area; and

(4) Capable of stabilizing the soil surface from erosion.

(b) The reestablished plant species shall—

(1) Be compatible with the approved postmining land use;

(2) Have the same seasonal characteristics of growth as the original vegetation;

(3) Be capable of self-regeneration and plant succession;

(4) Be compatible with the plant and animal species of the area; and

(5) Meet the requirements of applicable State and Federal seed, poisonous and noxious plant, and introduced species laws or regulations.

(c) The regulatory authority may grant exception to the requirements of paragraphs (b) (2) and (3) of this section when the species are necessary to achieve a quick-growing, temporary, stabilizing cover, and measures to establish permanent vegetation are included in the approved permit and reclamation plan.

(d) When the regulatory authority approves a cropland postmining land use, the regulatory authority may grant exceptions to the requirements of paragraphs (a) (1), (3), (b) (2), and (3) of this section. The requirements of part 823 of this chapter apply to areas identified as prime farmland.

§ 817.113 Revegetation: Timing.

Disturbed areas shall be planted during the first normal period for favorable planting conditions after replacement of the plant-growth medium. The normal period for favorable planting is that planting time generally accepted locally for the type of plant materials selected.

§ 817.114 Revegetation: Mulching and other soil stabilizing practices.

Suitable mulch and other soil stabilizing practices shall be used on all areas that have been regraded and covered by topsoil or topsoil substitutes. The regulatory authority may waive this requirement if seasonal, soil, or slope factors result in a condition where mulch and other soil stabilizing practices are not necessary to control erosion and to promptly establish an effective vegetative cover.

§ 817.116 Revegetation: Standards for success.

(a) Success of revegetation shall be judged on the effectiveness of the vegetation for the approved postmining land use, the extent of cover compared to the cover occurring in natural vegetation of the area, and the general requirements of § 817.111.

(1) Standards for success and statistically valid sampling techniques for measuring success shall be selected by the regulatory authority, described in writing, and made available to the public.

(2) Standards for success shall include criteria representative of unmined lands in the area being reclaimed to evaluate the appropriate vegetation parameters of ground cover, production, or stocking. Ground cover, production, or stocking shall be considered equal to the approved success standard when they are not less than 90 percent of the success standard. The sampling techniques for measuring success shall use a 90-percent statistical confidence interval (*i.e.,* a one-sided test with a 0.10 alpha error).

(b) Standards for success shall be applied in accordance with the approved postmining land use and, at a minimum, the following conditions:

(1) For areas developed for use as grazing land or pasture land, the ground cover and production of living plants on the revegetated area shall be at least equal to that of a reference area or such other success standards approved by the regulatory authority.

(2) For areas developed for use as cropland, crop production on the revegetated area shall be at least equal to that of a reference area or such other success standards approved by the regulatory authority.

(3) For areas to be developed for fish and wildlife habitat, recreation, undeveloped land, or forest products, success of vegetation shall be determined on the basis of tree and shrub stocking and vegetative ground cover. Such parameters are described as follows:

(i) Minimum stocking and planting arrangements shall be specified by the regulatory authority on the basis of local and regional conditions and after consultation with and approval by the State agencies responsible for the administration of forestry and wildlife programs. Consultation and approval may occur on either a programwide or a permit-specific basis.

(ii) Trees and shrubs that will be used in determining the success of stocking and the adequacy of the plant arrangement shall have utility for the approved postmining land use. Trees and shrubs counted in determining such success shall be healthy and have been in place for not less than two growing seasons. At the time of bond release, at least 80 percent of the trees and shrubs used to determine such success shall have been in place for 60 percent of the applicable minimum period of responsibility. The requirements of this section apply to trees and shrubs that have been seeded or transplanted and can be met when records of woody vegetation planted show that no woody plants were planted during the last two growing seasons of the responsibility period and, if any replanting of woody plants took place during the responsibility period, the total number planted during the last 60 percent of that period is less than 20 percent of the total number of woody plants required. Any replanting must be by means of transplants to allow for adequate accounting of plant stocking. This final accounting may include volunteer trees and shrubs of approved species. Volunteer trees and shrubs of approved species shall be deemed equivalent to planted specimens two years of age or older and can be counted towards success. Suckers on shrubby vegetation can be counted as volunteer plants when it is evident the shrub community is vigorous and expanding.

(iii) Vegetative ground cover shall not be less than that required to achieve the approved postmining land use.

(4) For areas to be developed for industrial, commercial, or residential use less than 2 years after regrading is completed, the vegetative ground cover shall not be less than that required to control erosion.

(5) For areas previously disturbed by mining that were not reclaimed to the requirements of this subchapter and that are remined or otherwise redisturbed by surface coal mining operations, as a minimum, the vegetative ground cover shall be not less than the ground cover existing before redisturbance and shall be adequate to control erosion.

(c)(1) The period of extended responsibility for successful revegetation shall begin after the last year of augmented seeding, fertilizing, irrigation, or other work, excluding husbandry practices that are approved by the regulatory authority in accordance with paragraph (c)(4) of this section.

(2) In areas of more than 26.0 inches of annual average precipitation, the period of responsibility shall continue for a period of not less than:

(i) Five full years, except as provided in paragraph (c)(2)(ii) of this section. The vegetation parameters identified in paragraph (b) of this section for grazing land, pasture land, or cropland shall equal or exceed the approved success standard during the growing season of any 2 years of the responsibility period, except the first year. Areas approved for the other uses identified in paragraph (b) of this section shall equal or exceed the applicable success standard during the growing season of the last year of the responsibility period.

(ii) Two full years for lands eligible for remining included in a permit for which a finding has been made under § 773.15(m) of this chapter. To the extent that the success standards are established by paragraph (b)(5) of this section, the lands must equal or exceed the standards during the growing season of the last year of the responsibility period.

(3) In areas of 26.0 inches or less average annual precipitation, the period of responsibility shall continue for a period of not less than:

(i) Ten full years, except as provided in paragraph (c)(3)(ii) in this section. The vegetation parameters identified in paragraph (b) of this section for grazing land, pasture land, or cropland shall equal or exceed the approved success standard during the growing season of any two years after year six of the responsibility period. Areas approved for the other uses identified in paragraph (b) of this section shall equal or exceed the applicable success standard during the growing season of the last year of the responsibility period.

(ii) Five full years for lands eligible for remining included in a permit for which a finding has been made under § 773.15(m) of this chapter. To the extent that the success standards are established by paragraph (b)(5) of this section, the lands must equal or exceed the standards during the growing seasons of the last two consecutive years of the responsibility period.

(4) The regulatory authority may approve selective husbandry practices, excluding augmented seeding, fertilization, or irrigation, provided it obtains prior approval from the Director in accordance with § 732.17 of this chapter that the practices are normal husbandry practices, without extending the period of responsibility for revegetation success and bond liability, if such practices can be expected to continue as part of the postmining land use or if discontinuance of the practices after the liability period expires will not reduce the probability of permanent revegetation success. Approved practices shall be normal husbandry practices within the region for unmined lands having land uses similar to the approved postmining land use of the disturbed area, including such practices as disease, pest, and vermin control; and any pruning, reseeding, and transplanting specifically necessitated by such actions.

§ 817.121 Subsidence control.

(a) *Measures to prevent or minimize damage.* (1) The permittee must either

adopt measures consistent with known technology that prevent subsidence from causing material damage to the extent technologically and economically feasible, maximize mine stability, and maintain the value and reasonably foreseeable use of surface lands or adopt mining technology that provides for planned subsidence in a predictable and controlled manner.

(2) If a permittee employs mining technology that provides for planned subsidence in a predictable and controlled manner, the permittee must take necessary and prudent measures, consistent with the mining method employed, to minimize material damage to the extent technologically and economically feasible to non-commercial buildings and occupied residential dwellings and structures related thereto except that measures required to minimize material damage to such structures are not required if:

(i) The permittee has the written consent of their owners or

(ii) Unless the anticipated damage would constitute a threat to health or safety, the costs of such measures exceed the anticipated costs of repair.

(3) Nothing in this part prohibits the standard method of room-and-pillar mining.

(b) The operator shall comply with all provisions of the approved subsidence control plan prepared pursuant to § 784.20 of this chapter.

(c) *Repair of damage*—(1) *Repair of damage to surface lands.* The permittee must correct any material damage resulting from subsidence caused to surface lands, to the extent technologically and economically feasible, by restoring the land to a condition capable of maintaining the value and reasonably foreseeable uses that it was capable of supporting before subsidence damage.

(2) *Repair or compensation for damage to non-commercial buildings and dwellings and related structures.* The permittee must promptly repair, or compensate the owner for, material damage resulting from subsidence caused to any non-commercial building or occupied residential dwelling or structure related thereto that existed at the time of mining. If repair option is selected, the permittee must fully rehabilitate, restore or replace the damaged structure. If compensation is selected, the permittee must compensate the owner of the damaged structure for the full amount of the decrease in value resulting from the subsidence-related damage. The permittee may provide compensation by the purchase, before mining, of a non-cancelable premium-prepaid insurance policy. The requirements of this paragraph apply only to subsidence-related damage caused by underground mining activities conducted after October 24, 1992.

(3) *Repair or compensation for damage to other structures.* The permittee must, to the extent required under applicable provisions of State law, either correct material damage resulting from subsidence caused to any structures or facilities not protected by paragraph (c)(2) of this section by repairing the damage or compensate the owner of the structures or facilities for the full amount of the decrease in value resulting from the subsidence. Repair of damage includes rehabilitation, restoration, or replacement of damaged structures or facilities. Compensation may be accomplished by the purchase before mining of a non-cancelable premium-prepaid insurance policy.

(4) *Rebuttable presumption of causation by subsidence*—(i) *Rebuttable presumption of causation for damage within angle of draw.* If damage to any non-commercial building or occupied residential dwelling or structure related thereto occurs as a result of earth movement within an area determined by projecting a specified angle of draw from the outermost boundary of any underground mine workings to the surface of the land, a rebuttable presumption exists that the permittee caused the damage. The presumption will normally apply to a 30-degree angle of draw. A State regulatory authority may amend its program to apply the presumption to a different angle of draw if the regulatory authority shows in writing that the angle has a more reasonable basis than the 30-degree angle of draw, based on geotechnical analysis of the factors affecting potential surface impacts of underground coal mining operations in the State.

(ii) *Approval of site-specific angle of draw.* A permittee or permit applicant may request that the presumption apply to an angle of draw different from that established in the regulatory program. The regulatory authority may approve application of the presumption to a site-specific angle of draw different than that contained in the State or Federal program based on a site-specific analysis submitted by an applicant. To establish a site-specific angle of draw, an applicant must demonstrate and the regulatory authority must determine in writing that the proposed angle of draw has a more reasonable basis than the standard set forth in the State or Federal program, based on a site-specific geotechnical analysis of the potential surface impacts of the mining operation.

(iii) *No presumption where access for pre-subsidence survey is denied.* If the permittee was denied access to the land or property for the purpose of conducting the pre-subsidence survey in accordance with § 784.20(a) of this chapter, no rebuttable presumption will exist.

(iv) *Rebuttal of presumption.* The presumption will be rebutted if, for example, the evidence establishes that: The damage predated the mining in question; the damage was proximately caused by some other factor or factors and was not proximately caused by subsidence; or the damage occurred outside the surface area within which subsidence was actually caused by the mining in question.

(v) *Information to be considered in determination of causation.* In any determination whether damage to protected structures was caused by subsidence from underground mining, all relevant and reasonably available information will be considered by the regulatory authority.

(5) *Adjustment of bond amount for subsidence damage.* When subsidence-related material damage to land, structures or facilities protected under paragraphs (c)(1) through (c)(3) of this section occurs, or when contamination, diminution, or interruption to a water supply protected under § 817.41 (j) occurs, the regulatory authority must require the permittee to obtain additional performance bond in the amount of the estimated cost of the repairs if the permittee will be repairing, or in the amount of the decrease in value if the permittee will be compensating the owner, or in the amount of the estimated cost to replace the protected water supply if the permittee will be replacing the water supply, until the repair, compensation, or replacement is completed. If repair, compensation, or replacement is completed within 90 days of the occurrence of damage, no additional bond is required. The regulatory authority may extend the 90-day time frame, but not to exceed one year, if the permittee demonstrates and the regulatory authority finds in writing that subsidence is not complete, that not all probable subsidence-related material damage has occurred to lands or protected structures, or that not all reasonably anticipated changes have occurred affecting the protected water supply, and that therefore it would be unreasonable to complete within 90 days the repair of the subsidence-related material damage to lands or protected structures, or the replacement of protected water supply.

(d) Underground mining activities shall not be conducted beneath or adjacent to (1) public buildings and facilities; (2) churches, schools, and hospitals; or (3) impoundments with a storage capacity of 20 acre-feet or more or bodies of water with a volume of 20 acre-feet or more, unless the subsidence control plan demonstrates that subsidence will not cause material damage to, or reduce the reasonably foreseeable use of, such features or facilities. If the regulatory authority determines that it is necessary in order to minimize the potential for material damage to the features or facilities described above or to any aquifer or body of water that serves as a significant water source for any public water supply system, it may limit the percentage of coal extracted under or adjacent thereto.

(e) If subsidence causes material damage to any of the features or facilities covered by paragraph (d) of this section, the regulatory authority may suspend mining under or adjacent to such features or facilities until the subsidence control plan is modified to ensure prevention of further material damage to such features or facilities.

(f) The regulatory authority shall suspend underground mining activities under urbanized areas, cities, towns, and communities, and adjacent to industrial or commercial buildings, major impoundments, or perennial streams, if imminent danger is found to inhabitants of the urbanized areas, cities, towns, or communities.

(g) Within a schedule approved by the regulatory authority, the operator shall submit a detailed plan of the underground workings. The detailed plan shall include maps and descriptions, as appropriate, of significant features of the underground mine, including the size, configuration, and approximate location of pillars and entries, extraction ratios, measure taken to prevent or minimize subsidence and related damage, areas of full extraction, and other information required by the regulatory authority. Upon request of the operator, information submitted with the detailed plan may be held as confidential, in accordance with the requirements of § 773.6(d) of this chapter.

§ 817.122 Subsidence control: Public notice.

At least 6 months prior to mining, or within that period if approved by the regulatory authority, the underground mine operator shall mail a notification to all owners and occupants of surface property and structures above the underground workings. The notification shall include, at a minimum, identification of specific areas in which mining will take place, dates that specific areas will be undermined, and the location or locations where the operator's subsidence control plan may be examined.

§ 817.131 Cessation of operations: Temporary.

(a) Each person who conducts underground mining activities shall effectively support and maintain all surface access openings to underground operations, and secure surface facilities in areas in which there are no current operations, but operations are to be resumed under an approved permit. Temporary abandonment shall not relieve a person of his or her obligation to comply with any provisions of the approved permit.

(b) Before temporary cessation of mining and reclamation operations for a period of thirty days or more, or as soon as it is known that a temporary cessation will extend beyond 30 days, each person who conducts underground mining activities shall submit to the regulatory authority a notice of intention to cease or abandon operations. This notice shall include a statement of the exact number of surface acres and the horizontal and vertical extent of sub-surface strata which have been in the permit area prior to cessation or abandonment, the extent and kind of reclamation of surface area which will have been accomplished, and identification of the backfilling, regrading, revegetation, environmental monitoring, underground opening closures and water treatment activities that will continue during the temporary cessation.

§ 817.132 Cessation of operations: Permanent.

(a) The person who conducts underground mining activities shall close or backfill or otherwise permanently reclaim all affected areas, in accordance with this chapter and according to the permit approved by the regulatory authority.

(b) All surface equipment, structures, or other facilities not required for continued underground mining activities and monitoring, unless approved as suitable for the postmining land use or environmental monitoring, shall be removed and the affected lands reclaimed.

§ 817.133 Postmining land use.

(a) *General.* All disturbed areas shall be restored in a timely manner to conditions that are capable of supporting—

(1) The uses they were capable of supporting before any mining; or

(2) Higher or better uses.

(b) *Determining premining uses of land.* The premining uses of land to which the postmining land use is compared shall be those uses which the land previously supported, if the land has not been previously mined and has been properly managed. The postmining land use for land that has been previously mined and not reclaimed shall be judged on the basis of the land use that existed prior to any mining: *Provided that,* if the land cannot be reclaimed to the land use that existed prior to any mining because of the previously mined condition, the postmining land use shall be judged on the basis of the highest and best use that can be achieved which is compatible with surrounding areas and does not require the disturbance of areas previously unaffected by mining.

(c) *Criteria for alternative postmining land uses.* Higher or better uses may be approved by the regulatory authority as alternative postmining land uses after consultation with the landowner or the land management agency having jurisdiction over the lands, if the proposed uses meet the following criteria:

(1) There is a reasonable likelihood for achievement of the use.

(2) The use does not present any actual or probable hazard to public health and safety, or threat of water diminution or pollution.

(3) The use will not—

(i) Be impractical or unreasonable;

(ii) Be inconsistent with applicable land use policies or plans;

(iii) Involve unreasonable delay in implementation; or

(iv) Cause or contribute to violation of Federal, State, or local law.

(d) *Approximate original contour: Criteria for variance.* Surface coal mining operations that meet the requirements of this paragraph may be conducted under a variance from the requirement to restore disturbed areas to their approximate original contour, if the following requirements are satisfied:

(1) The regulatory authority grants the variance under a permit issued in accordance with § 785.16 of this chapter.

(2) The alternative postmining land use requirements of paragraph (c) of this section are met.

(3) All applicable requirements of the Act and the regulatory program, other than the requirement to restore disturbed areas to their approximate original contour, are met.

(4) After consultation with the appropriate land use planning agencies,

if any, the potential use is shown to constitute an equal or better economic or public use.

(5) The proposed use is designed and certified by a qualified registered professional engineer in conformance with professional standards established to assure the stability, drainage, and configuration necessary for the intended use of the site.

(6) After approval, where required, of the appropriate State environmental agencies, the watershed of the permit and adjacent areas is shown to be improved.

(7) The highwall is completely backfilled with spoil material, in a manner which results in a static factor of safety of at least 1.3, using standard geotechnical analysis.

(8) Only the amount of spoil as is necessary to achieve the postmining land use, ensure the stability of spoil retained on the bench, and meet all other requirements of the Act and this chapter is placed off the mine bench. All spoil not retained on the bench shall be placed in accordance with §§ 817.71 through 817.74 of this chapter.

(9) The surface landowner of the permit area has knowingly requested, in writing, that a variance be granted, so as to render the land, after reclamation, suitable for an industrial, commercial, residential, or public use (including recreational facilities).

(10) Federal, State, and local government agencies with an interest in the proposed land use have an adequate period in which to review and comment on the proposed use.

§ 817.150 Roads: General.

(a) *Road classification system.* (1) Each road, as defined in § 701.5 of this chapter, shall be classified as either a primary road or an ancillary road.

(2) A primary road is any road which is—

(i) Used for transporting coal or spoil;

(ii) Frequently used for access or other purposes for a period in excess of six months; or

(iii) To be retained for an approval postmining land use.

(3) An ancillary road is any road not classified as a primary road

(b) *Performance standards.* Each road shall be located, designed, constructed, reconstructed, used, maintained, and reclaimed so as to:

(1) Control or prevent erosion, siltation, and the air pollution attendant to erosion, including road dust and dust occurring on other exposed surfaces, by measures such as vegetating, watering, using chemical or other dust suppressants, or otherwise stabilizing all exposed surfaces in accordance with current, prudent engineering practices;

(2) Control or prevent damage to fish, wildlife, or otheir habitat and related environmental values;

(3) Control or prevent additional contributions of suspended solids to streamflow or runoff outside the permit area;

(4) Neither cause nor contribute to, directly or indirectly, the violation of State or Federal water quality standard applicable to receiving waters;

(5) Refrain from seriously altering the normal flow of water in streambeds or drainage channels;

(6) Prevent or control damage to public or private property, including the prevention or mitigation of adverse effects on lands within the boundaries of units of the National Park System, the National Wildlife Refuge System, the National System of Trails, the National Wilderness Preservation System, the Wild and Scenic Rivers System, including designated study rivers, and National Recreation Areas designated by Act of Congress; and

(7) Use nonacid- and nontoxic-forming substances in road surfacing.

(c) *Design and construction limits and establishment of design criteria.* To ensure environmental protection appropriate for their planned duration and use, including consideration of the type and size of equipment used, the design and construction or reconstruction of roads shall incorporate appropriate limits for grade, width, surface materials, surface drainage control, culvert placement, and culvert size, in accordance with current, prudent engineering practices, and any necessary design criteria established by the regulatory authority.

(d) *Location.* (1) No part of any road shall be located in the channel of an intermittent or perennial stream unless specifically approved by the regulatory authority in accordance with applicable §§ 817.41 through 817.43 and 817.57 of this chapter.

(2) Roads shall be located to minimize downstream sedimentation and flooding.

(e) *Maintenance.* (1) A road shall be maintained to meet the performance standards of this part and any additional criteria specified by the regulatory authority;

(2) A road damaged by a catastrophic event, such as a flood or earthquake, shall be repaired as soon as is practicable after the damage has occurred.

(f) *Reclamation.* A road not to be retained under an approved postmining land use shall be reclaimed in accordance with the approved reclamation plan as soon as practicable after it is no longer needed for mining and reclamation operations. This reclamation shall include:

(1) Closing the road to traffic;

(2) Removing all bridges and culverts unless approved as part of the postmining land use;

(3) Removing or otherwise disposing of road-surfacing materials that are incompatible with the postmining land use and revegetation requirements;

(4) Reshaping cut and fill slopes as necessary to be compatible with the postmining land use and to complement the natural drainage pattern of the surrounding terrain;

(5) Protecting the natural drainage patterns by installing dikes or cross drains as necessary to control surface runoff and erosion; and

(6) Scarifying or ripping the roadbed, replacing topsoil or substitute material and revegetating disturbed surfaces in accordance with §§ 817.22 and 817.111 through 817.116 of this chapter.

§ 817.151 Primary roads.

Primary roads shall meet the requirements of § 817.150 and the additional requirements of this section.

(a) *Certification.* The construction or reconstruction of primary roads shall be certified in a report to the regulatory authority by a qualified registered professional engineer, or in any State which authorizes land surveyors to certify the construction or reconstruction of primary roads, a qualified registered professional land surveyor, with experience in the design and construction of roads. The report shall indicate that the primary road has been constructed or reconstructed as designed and in accordance with the approved plan.

(b) *Safety factor.* Each primary road embankment shall have a minimum static factor of 1.3 or meet the requirements established under § 784.24(c).

(c) *Location.* (1) To minimize erosion, a primary road shall be located, insofar as is practicable, on the most stable available surface.

(2) Fords of perennial or intermittent streams by primary roads are prohibited unless they are specifically approved by the regulatory authority as temporary routes during periods of road construction.

(d) *Drainage control.* In accordance with the approved plan—

(1) Each primary road shall be constructed or reconstructed, and maintained to have adequate drainage control, using structures such as, but not limited to bridges, ditches, cross drains, and ditch relief drains. The drainage control system shall be designed to safely pass the peak runoff from a 10-

year, 6-hour precipitation event, or greater event as specified by the regulatory authority;

(2) Drainage pipes and culverts shall be installed as designed, and maintained in a free and operating condition and to prevent or control erosion at inlets and outlets;

(3) Drainage ditches shall be constructed and maintained to prevent uncontrolled drainage over the road surface and embankment;

(4) Culverts shall be installed and maintained to sustain the vertical soil pressure, the passive resistance of the foundation, and the weight of vehicles using the road;

(5) Natural stream channels shall not be altered or relocated without the prior approval of the regulatory authority in accordance with applicable §§ 816.41 through 816.43 and 816.57 of this chapter; and

(6) Except as provided in paragraph (c)(2) of this section, structures for perennial or intermittent stream channel crossings shall be made using bridges, culverts, low-water crossings, or other structures designed, constructed, and maintained using current, prudent engineering practices. The regulatory authority shall ensure that low-water crossings are designed, constructed, and maintained to prevent erosion of the structure or streambed and additional contributions of suspended solids to streamflow.

(e) *Surfacing.* Primary roads shall be surfaced with material approved by the regulatory authority as being sufficiently durable for the anticipated volume of traffic and the weight and speed of vehicles using the road.

§ 817.180 Utility installations.

All underground mining activities shall be conducted in a manner which minimizes damage, destruction, or disruption of services provided by oil, gas, and water wells; oil, gas, and coal-slurry pipelines, railroads; electric and telephone lines; and water and sewage lines which pass over, under, or through the permit area, unless otherwise approved by the owner of those facilities and the regulatory authority.

§ 817.181 Support facilities.

(a) Support facilities shall be operated in accordance with a permit issued for the mine or coal preparation plant to which it is incident or from which its operation results.

(b) In addition to the other provisions of this part, support facilities shall be located, maintained, and used in a manner that—

(1) Prevents or controls erosion and siltation, water pollution, and damage to public or private property; and

(2) To the extent possible using the best technology currently available—

(i) Minimizes damage to fish, wildlife, and related environmental values; and

(ii) Minimizes additional contributions of suspended solids to streamflow or runoff outside the permit area. Any such contributions shall not be in excess of limitations of State or Federal law.

§ 817.200 Interpretative rules related to general performance standards.

The following interpretations of rules promulgated in part 817 of this chapter have been adopted by the Office of Surface Mining Reclamation and Enforcement.

(a)–(b) [Reserved]

(c) *Interpretation of § 816.22(e)—Topsoil Removal.* (1) Results of physical and chemical analyses of overburden and topsoil to demonstrate that the resulting soil medium is equal to or more suitable for sustaining revegetation than the available topsoil, provided that trials, and tests are certified by an approved laboratory in accordance with 30 CFR 816.22(e)(1)(ii), may be obtained from any one or a combination of the following sources:

(i) U.S. Department of Agriculture Soil Conservation Service published data based on established soil series;

(ii) U.S. Department of Agriculture Soil Conservation Service Technical Guides;

(iii) State agricultural agency, university, Tennessee Valley Authority, Bureau of Land Management or U.S. Department of Agriculture Forest Service published data based on soil series properties and behavior, or

(iv) Results of physical and chemical analyses, field site trials, or greenhouse tests of the topsoil and overburden materials (soil series) from the permit area.

(2) If the operator demonstrates through soil survey or other data that the topsoil and unconsolidated material are insufficient and substitute materials will be used, only the substitute materials must be analyzed in accordance with 30 CFR 816.22(e)(1)(i).

(d) *Interpretation of § 817.133: Postmining land use.* (1) The requirements of 30 CFR 784.15(a)(2), for approval of an alternative postmining land use, may be met by requesting approval through the permit revision procedures of 30 CFR 774.13 rather than requesting such approval through the permit application. The original permit application, however, must demonstrate that the land will be returned to its premining land use capability as required by 30 CFR 817.133(a).

An application for a permit revision of this type, (i) must be submitted in accordance with the filing deadlines of 30 CFR 774.13, (ii) shall constitute a significant alteration from the mining operations contemplated by the original permit, and (iii) shall be subject to the requirements of 30 CFR part 773 and 775.

(2) [Reserved]

■ 14. Revise part 824 to read as follows:

PART 824—SPECIAL PERMANENT PROGRAM PERFORMANCE STANDARDS—MOUNTAINTOP REMOVAL

Sec.

824.1 Scope.
824.2 Objectives.
824.11 Mountaintop removal: Performance standards.

Authority: Secs. 102, 201, 501, 503, 504, 506, 508, 510, 515, 517, 701 Pub. L. 95–87, 91 Stat. 448, 449, 467, 470, 471, 474, 478, 480, 486, 498, 516 (30 U.S.C. 1202, 1211, 1251, 1253, 1254, 1256, 1258, 1260, 1265, 1267, 1291).

§ 824.1 Scope.

This part sets forth special environmental protection performance, reclamation, and design standards for surface coal mining activities constituting mountaintop removal mining.

§ 824.2 Objectives.

The objectives of this part are to—

(a) Enhance coal recovery;

(b) Reclaim the land to equal or higher postmining use; and

(c) Protect and enhance environmental and other values protected under the Act and this chapter.

§ 824.11 Mountaintop removal: Performance standards.

(a) Under an approved regulatory program, surface coal mining activities may be conducted under a variance from the requirement of this subchapter for restoring affected areas to their approximate original contour, if—

(1) The regulatory authority grants the variance under a permit, in accordance with 30 CFR 785.14;

(2) The activities involve the mining of an entire coal seam running through the upper fraction of a mountain, ridge, or hill, by removing all of the overburden and creating a level plateau or gently rolling contour with no highwalls remaining;

(3) An industrial, commercial, agricultural, residential, or public facility (including recreational facilities)

use is proposed and approved for the affected land;

(4) The alternative land use requirements of § 816.133(a) through (c) of this chapter are met;

(5) All applicable requirements of this subchapter and the regulatory program, other than the requirement to restore affected areas to their approximate original contour, are met;

(6) An outcrop barrier of sufficient width, consisting of the toe of the lowest coal seam, and its associated overburden, are retained to prevent slides and erosion, except that the regulatory authority may permit an exemption to the retention of the coal barrier requirement if the following conditions are satisfied:

(i) The proposed mine site was mined prior to May 3, 1978, and the toe of the lowest seam has been removed; or

(ii) A coal barrier adjacent to a head-of-hollow fill may be removed after the elevation of a head-of-hollow fill attains the elevation of the coal barrier if the head-of-hollow fill provides the stability otherwise ensured by the retention of a coal barrier;

(7) The final graded slopes on the mined area are less than 1*v*:5*h,* so as to create a level plateau or gently rolling configuration, and the outslopes of the plateau do not exceed 1*v*:2*h* except where engineering data substantiates, and the regulatory authority finds, in writing, and includes in the permit under 30 CFR 785.14, that a minimum static safety factor of 1.5 will be attained;

(8) The resulting level or gently rolling contour is graded to drain inward from the outslope, except at specified points where it drains over the outslope in stable and protected channels. The drainage shall not be through or over a valley or head-of-hollow fill.

(9) Natural watercourses below the lowest coal seam mined are not damaged;

(10) All waste and acid-forming or toxic-forming materials, including the strata immediately below the coal seam, are covered with non-toxic spoil to prevent pollution and achieve the approved postmining land use; and

(11) Spoil is placed on the mountaintop bench as necessary to achieve the postmining land use approved under paragraphs (a)(3) and (a)(4) of this section. All excess spoil material not retained on the mountaintop shall be placed in accordance with 30 CFR 816.41 and 816.43 and 816.71 through 816.74.

■ 15. Revise part 827 to read as follows:

PART 827—PERMANENT PROGRAM PERFORMANCE STANDARDS—COAL PREPARATION PLANTS NOT LOCATED WITHIN THE PERMIT AREA OF A MINE

Sec.
827.1 Scope.
827.11 General requirements.
827.12 Coal preparation plants: Performance standards.
827.13 Coal preparation plants: Interim performance standards.

Authority: 30 U.S.C. 1201 *et seq.,* and Pub. L. 100–34.

§ 827.1 Scope.

This part sets forth requirements for coal preparation plants operated in connection with a coal mine but outside the permit area for a specific mine.

§ 827.11 General requirements.

Each person who operates a coal preparation plant subject to this part shall obtain a permit in accordance with § 785.21 of this chapter, obtain a bond in accordance with subchapter J of this chapter, and operate that plant in accordance with the requirements of this part.

§ 827.12 Coal preparation plants: Performance standards.

Except as provided in § 827.13 of this part, the construction, operation, maintenance, modification, reclamation, and removal activities at coal preparation plants shall comply with the following:

(a) Signs and markers for the coal preparation plant, coal processing waste disposal area, and water-treatment facilities shall comply with § 816.11 of this chapter.

(b) Any stream channel diversion shall comply with § 816.43 of this chapter.

(c) Drainage from any disturbed area related to the coal preparation plant shall comply with §§ 816.45 through 816.47 of this chapter, and all discharges from these areas shall meet the requirements of §§ 816.41 and 816.42 of this chapter and any other applicable State or Federal law.

(d) Permanent impoundments associated with coal preparation plants shall meet the requirements of §§ 816.49 and 816.56 of this chapter. Dams constructed of, or impounding, coal processing waste shall comply with § 816.84 of this chapter.

(e) Disposal of coal processing waste, noncoal mine waste, and excess spoil shall comply with §§ 816.81, 816.83, 816.84, 816.87, 816.89, and 816.71 through 816.74 of this chapter, respectively.

(f) Fish, wildlife, and related environmental values shall be protection in accordance with § 816.97 of this chapter.

(g) Support facilities related to the coal preparation plant shall comply with § 816.181 of this chapter.

(h) Roads shall comply with §§ 816.150 and 816.151 of this chapter.

(i) Cessation of operations shall be in accordance with §§ 816.131 and 816.132 of this chapter.

(j) Erosion and air pollution attendant to erosion shall be controlled in accordance with § 816.95 of this chapter.

(k) Adverse effects upon, or resulting from, nearby underground coal mining activities shall be minimized by appropriate measures including, but not limited to, compliance with § 816.79 of this chapter.

(l) Reclamation shall follow proper topsoil handling, backfilling and grading, revegetation, and postmining land use procedures in accordance with §§ 816.22, 816.100. 816.102, 816.104, 816.106, 816.111, 816.113, 816.114, 816.116, and 816.133 of this chapter, respectively.

§ 827.13 Coal preparation plants: Interim performance standards.

(a) Persons operating or who have operated coal preparation plants after July 6, 1984, which were not subject to this chapter before July 6, 1984, shall comply with the applicable interim or permanent program performance standards of the State in which such plants are located, as follows:

(1) If located in a State in which either interim or permanent program performance standards apply to such plants, the applicable program standards of the State program shall apply;

(2) If located in a State with a State program which must be amended in order to regulate such plants, the interim program performance standards in subchapter B of this chapter shall apply; and

(3) If located in a State with a Federal program, all such plants shall be subject to the interim program performance standards in subchapter B of this chapter.

(b) After a person described in paragraph (a) of this section obtains a permit to operate a coal preparation plant, the performance standards specified in § 827.12 shall be applicable to the operation of that plant instead of those specified in paragraph (a) of this section.

Dated: October 26, 2017.

Katharine S. MacGregor,

Acting Assistant Secretary, Land and Minerals Management.

The President

Proclamation 9674—Commemoration of the 50th Anniversary of the Vietnam War

Federal Register
Vol. 82, No. 221
Friday, November 17, 2017

Presidential Documents

Title 3—

The President

Proclamation 9674 of November 10, 2017

Commemoration of the 50th Anniversary of the Vietnam War

By the President of the United States of America

A Proclamation

Today, I lead our Nation in somber reflection as we continue the 13-year Commemoration of the 50th Anniversary of the Vietnam War that began in 2012. We salute our brave Vietnam veterans who, in service to our Nation and in defense of liberty, fought gallantly against the spread of communism and defended the freedom of the Vietnamese people.

Fifty years ago, in 1967, nearly 500,000 American troops served in South Vietnam, along with approximately 850,000 troops of our allies. Today, during Veterans and Military Families Month and as the Federal Government observes Veterans Day, I am in Vietnam alongside business and political leaders to advance the interests of America, and to promote peace and stability in this region and around the world. I cherish this opportunity to recall, with humility, the sacrifices our veterans made for our freedom and our Nation's strength.

During this Commemoration of the 50th Anniversary of the Vietnam War, we embrace our responsibility to help our Vietnam veterans and their families heal from the heavy toll of war. We remember the more than 58,000 whose names are memorialized on a black granite wall in our Nation's capital for having borne the heaviest cost of war. We also pay tribute to the brave patriots who suffered as prisoners of war, and we stand steadfast in our commitment not to rest until we account for the 1,253 heroes who have not yet returned to American soil.

To ensure the sacrifices of the 9 million heroes who served during this difficult chapter of our country's history are remembered for generations to come, I signed into law the Vietnam War Veterans Recognition Act of 2017, designating March 29 of each year as National Vietnam War Veterans Day. Throughout this Commemoration of the 50th Anniversary of the Vietnam War, and every March 29 thereafter, we will honor all those who answered our Nation's call to duty. We vow to never again confuse personal disapproval of war with prejudice against those who honorably wear the uniform of our Armed Forces. With conviction, our Nation pledges our enduring respect, our continuing care, and our everlasting commitment to all Vietnam veterans.

We applaud the thousands of local, State, and national organizations, businesses, and governmental entities that have already partnered with the Federal Government in the Commemoration of the 50th Anniversary of the Vietnam War. Because of their remarkable leadership and dedication, countless Vietnam veterans and their families have been personally and publicly thanked and honored in ceremonies in towns and cities throughout our country. During my Administration, I promise to continue coordinated efforts to recognize all veterans of the Vietnam War for their service and sacrifice, and to provide them with the heartfelt acknowledgement and gratitude that they and their families so richly deserve.

NOW, THEREFORE, I, DONALD J. TRUMP, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby confirm the commitment of this Nation to the Commemoration of the 50th Anniversary of the Vietnam War, which began on Memorial Day, 2012 and will continue through Veterans

Day, 2025. I call upon all Americans to offer each of our Vietnam veterans and their families a thank you on behalf of the Nation, both privately and during public ceremonies and programs across our country.

IN WITNESS WHEREOF, I have hereunto set my hand this tenth day of November, in the year of our Lord two thousand seventeen, and of the Independence of the United States of America the two hundred and forty-second.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List November 6, 2017

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to *http://listserv.gsa.gov/archives/publaws-l.html*

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
