Comment: Commenters described the clinical benefits that they have observed using the X-WRAP® product in the treatment of wounds, bone, and soft

¹⁶ Gaspar, M.P., et al. (2016). Recurrent cubital tunnel syndrome treated with revision neurolysis and amniotic membrane nerve wrapping. *Journal of Shoulder and Elbow Surgery*, 25, 2057–2065.

tissue repairs. One commenter submitted several studies related to amniotic fluid and amniotic membrane-based products; however, none of these studies were specific to the X-WRAP® product.

Response: We appreciate the commenters' responses on the X-WRAP® product. However, the commenters did not provide new empirical evidence that addressed our concerns regarding the evidence of substantial clinical improvement that was submitted with the application, specifically that this evidence was limited to one retrospective study that lacked a comparison arm and did not include group assignment or blinding of patients. At this time, we have not been able to determine that X-WRAP® represents a substantial clinical improvement relative to existing therapies currently available for wound care.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that several CPT codes would be used to report X-WRAP®, including: CPT codes 29826, 29827, 29828, 23473, 23420, 23412, 27605, 27650, 29891, 29888, 29889, 28008, 22551, 22856, 27179, 29861, 29862, 15271, 15272, 15273, and 15277. To meet the cost criterion for device pass-through payment, a device must pass all three tests for cost threshold for at least one APC. These CPT codes are assigned to APCs 5121 through 5125 (Level 1 through Level 5 Musculoskeletal Procedures) and APCs 5054 and 5055 (Level 4 and Level 5 Skin Procedures). For our calculations, we used APC 5121 (Level 1 Musculoskeletal Procedures), which had a CY 2016 payment rate of \$1,455 and a device offset amount of \$15.86 at the time the application was received. According to the applicant, the X-WRAP® product is available in several sizes, the largest being 4x8 cm with a cost of \$5,280.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of \$5,280 for X-WRAP® exceeds the applicable APC payment amount for the service related to the category of devices of \$1,455 by

363 percent ($\$5,280/\$1,455 \times 100 = 363$ percent). Therefore, we stated in the proposed rule that it appears that X-WRAP® meets the first cost significance test.

The second cost significance test, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device related portion of the APC found on the offset list). The average reasonable cost of \$5,280 for X-WRAP® exceeds the device-related portion of the APC payment amount of \$15.86 by 33,291 percent ($\$5,280/\$15.86 \times 100 = 33,291$ percent). Therefore, we stated in the proposed rule that it appears that X-WRAP® meets the second cost significance test.

The third cost significance test, at § 419.66(d)(3), requires that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the average reasonable cost of \$5,280 for X-WRAP® and the portion of the APC payment amount for the device of \$15.86 exceeds the APC payment amount for the related service of \$1,455 by 361 percent ($(\$5,280 - \$15.86)/\$1,455 \times 100 = 361$ percent). Therefore, we stated in the proposed rule that it appears that X-WRAP® meets the third cost significance test.

We invited public comments on whether X-WRAP® meets the device pass-through payment cost criteria discussed in this section.

We did not receive any public comments on this issue. We continue to believe that X-WRAP® meets the device pass-through payment cost criteria.

After consideration of the public comments we received, we are not approving device pass-through payment status for the X-WRAP® product for CY 2018.

B. Device-Intensive Procedures

1. Background

Under the OPPIs, prior to CY 2017, device-intensive APCs were defined as those APCs with a device offset greater than 40 percent (79 FR 66795). In assigning device-intensive status to an APC, the device costs of all of the procedures within the APC were calculated and the geometric mean device offset of all of the procedures had

to exceed 40 percent. Almost all of the procedures assigned to device-intensive APCs utilize devices, and the device costs for the associated HCPCS codes exceed the 40-percent threshold. The no cost/full credit and partial credit device policy (79 FR 66872 through 66873) applies to device-intensive APCs and is discussed in detail in section IV.B.4. of this final rule with comment period. A related device policy was the requirement that certain procedures assigned to device-intensive APCs require the reporting of a device code on the claim (80 FR 70422). For further background information on the device-intensive APC policy, we refer readers to the CY 2016 OPPIs/ASC final rule with comment period (80 FR 70421 through 70426).

2. HCPCS Code-Level Device-Intensive Determination

As stated above, prior to CY 2017, the device-intensive methodology assigned device-intensive status to all procedures requiring the implantation of a device, which were assigned to an APC with a device offset greater than 40 percent. Historically, the device-intensive designation was at the APC level and applied to the applicable procedures within that given APC. In the CY 2017 OPPIs/ASC final rule with comment period (81 FR 79658), we changed our methodology to assign device-intensive status to all procedures that require the implantation of a device and have an individual HCPCS code-level device offset of greater than 40 percent, regardless of the APC assignment. Under this policy, all procedures with significant device costs (defined as a device offset of more than 40 percent) are assigned device-intensive status, regardless of their APC placement. Also, we believe that a HCPCS code-level device offset is, in most cases, a better representation of a procedure's device cost than an APC-wide average device offset based on the average device offset of all of the procedures assigned to an APC. Unlike a device offset calculated at the APC level, which is a weighted average offset for all devices used in all of the procedures assigned to an APC, a HCPCS code-level device offset is calculated using only claims for a single HCPCS code. We believe that such a methodological change results in a more accurate representation of the cost attributable to implantation of a high-cost device, which ensures consistent device-intensive designation of procedures with a significant device cost. Further, we believe a HCPCS code-level device offset removes inappropriate device-intensive status to procedures without a significant device

cost but which are granted such status because of APC assignment.

Under our CY 2017 finalized policy, procedures that have an individual HCPCS code-level device offset of greater than 40 percent are identified as device-intensive procedures and are subject to all the policies applicable to procedures assigned device-intensive status under our established methodology, including our policies on device edits and device credits. Therefore, all procedures requiring the implantation of a medical device and that have an individual HCPCS code-level device offset of greater than 40 percent are subject to the device edit and no cost/full credit and partial credit device policies, discussed in sections IV.B.3. and IV.B.4. of this final rule with comment period, respectively.

In addition, for new HCPCS codes describing procedures requiring the implantation of medical devices that do not yet have associated claims data, in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79658), we finalized a policy for CY 2017 to apply device-intensive status with a default device offset set at 41 percent for new HCPCS codes describing procedures requiring the implantation of a medical device that do not yet have associated claims data until claims data are available to establish the HCPCS code-level device offset for the procedures. This default device offset amount of 41 percent is not calculated from claims data; instead, it is applied as a default until claims data are available upon which to calculate an actual device offset for the new code. The purpose of applying the 41-percent default device offset to new codes that describe procedures that implant medical devices is to ensure ASC access for new procedures until claims data become available. However, in certain rare instances, for example, in the case of a very expensive implantable device, we may temporarily assign a higher offset percentage if warranted by additional information such as pricing data from a device manufacturer (81 FR 79658). Once claims data are available for a new procedure requiring the implantation of a medical device, device-intensive status will be applied to the code if the HCPCS code-level device offset is greater than 40 percent, according to our finalized policy of determining device-intensive status by calculating the HCPCS code-level device offset.

The full listing of proposed CY 2018 device-intensive procedures was included in Addendum P to the proposed rule (which is available via the Internet on the CMS Web site). The full listing of the final CY 2018 device-

intensive procedures is included in Addendum P to this final rule with comment period.

In response to comments received in the CY 2017 OPPTS/ASC final rule with comment period, we specified that additional information for our consideration of an offset percentage higher than the default of 41 percent for new HCPCS codes describing procedures requiring the implantation (or in some cases the insertion) of a medical device that do not yet have associated claims data, such as pricing data or invoices from a device manufacturer, should be directed to the Division of Outpatient Care, Mail Stop C4-01-26, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244-1850, or electronically at outpatientpps@cms.hhs.gov. Additional information can be submitted prior to issuance of an OPPTS/ASC proposed rule or as a public comment in response to an issued OPPTS/ASC proposed rule. Device offset percentages will be set in each year's final rule.

We did not propose any changes to this policy for CY 2018.

Comment: Several commenters suggested that CMS use alternate device offset percentage thresholds for assigning device-intensive status. One of those commenters suggested that the device-intensive designation be given for any specified procedure with a HCPCS code level device offset percentage of greater than 30 percent. Another commenter suggested that CMS apply the device-intensive designation to any procedure for which the individual HCPCS code level device offset is greater than 40 percent of the procedure's unadjusted ASC payment rate. In addition, one commenter requested that CMS provide clarification on the criteria for device-intensive procedures, specifically with respect to temporarily inserted devices.

Response: We thank the commenters for their suggestions. However, we continue to believe that our current methodology to assign device-intensive status to all procedures that require the implantation of a device and have an individual HCPCS code-level device offset of greater than 40 percent is appropriate. With respect to the request for clarification about the criteria for device-intensive procedures pertaining to temporarily inserted devices, we would like to clarify that device-intensive procedures require the implantation of a device and additionally are subject to the following criteria: (1) All procedures must involve implantable devices that would be reported if device insertion procedures

were performed; (2) the required devices must be surgically inserted or implanted devices that remain in the patient's body after the conclusion of the procedure (at least temporarily); and (3) the device offset amount must be significant, which is defined as exceeding 40 percent of the procedure's mean cost.

Comment: One commenter supported the proposed designation of CPT code 28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint) as a device-intensive procedure. A few commenters requested that the following HCPCS codes be assigned device-intensive status: HCPCS codes 55874 (placeholder code 55X87) (Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed); 0275T (Percutaneous laminotomy/laminectomy (interlaminar approach) for decompression of neural elements, (with or without ligamentous resection, discectomy, facetectomy and/or foraminotomy), any method, under indirect image guidance (e.g., fluoroscopic, ct), single or multiple levels, unilateral or bilateral; lumbar); and 28297 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method).

Response: We thank the commenter for its support for our proposed designation of CPT code 28740. With respect to the commenters' request that we assign the device-intensive designation to HCPCS codes 55874, 0275T, and 28297, we note that the device offset percentage for all three of these procedures (as identified by the above mentioned HCPCS codes or predecessor codes) is not above the 40 percent threshold, and therefore, these procedures are not eligible to be assigned device-intensive status.

Comment: Several commenters suggested that CMS develop a mechanism that prevents significant payment reductions for device-intensive procedures due to wage index adjustments.

Response: In response to the commenters' suggestion that CMS develop a mechanism that prevents significant payment reductions for device-intensive procedures due to wage index adjustments, we note that we did not include such a proposal in the CY 2018 proposed rule. However, we will take this comment into consideration for future rulemaking.

3. Device Edit Policy

In the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66795), we

finalized a policy and implemented claims processing edits that require any of the device codes used in the previous device-to-procedure edits to be present on the claim whenever a procedure code assigned to any of the APCs listed in Table 5 of the CY 2015 OPPS/ASC final rule with comment period (the CY 2015 device-dependent APCs) is reported on the claim. In addition, in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70422), we modified our previously existing policy and applied the device coding requirements exclusively to procedures that require the implantation of a device that are assigned to a device-intensive APC. In the CY 2016 OPPS/ASC final rule with comment period, we also finalized our policy that the claims processing edits are such that any device code, when reported on a claim with a procedure assigned to a device-intensive APC (listed in Table 42 of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70422)) will satisfy the edit.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658 through 79659), we changed our policy for CY 2017 and subsequent years to apply the CY 2016 device coding requirements to the newly defined (individual HCPCS code-level device offset greater than 40 percent) device-intensive procedures. For CY 2017 and subsequent years, we also specified that any device code, when reported on a claim with a device-intensive procedure, will satisfy the edit. In addition, we created HCPCS code C1889 to recognize devices furnished during a device-intensive procedure that are not described by a specific Level II HCPCS Category C-code. Reporting HCPCS code C1889 with a device-intensive procedure will satisfy the edit requiring a device code to be reported on a claim with a device-intensive procedure.

We did not propose any changes to this policy for CY 2018.

Comment: One commenter requested that CMS restore the device-to-procedure and procedure-to-device edits. Another commenter requested that CMS adopt an additional policy for device-intensive procedures that have a device offset percentage above 75 percent, that would implement device-to-procedure and procedure-to-device edits for all such procedures (having a device offset percentage above 75 percent) and would only utilize claims that passed those edits for establishing the geometric mean cost and the HCPCS-level device offset for those procedures. Also, as part of this commenter's suggested new policy, the commenter requested that CMS only allow clinically similar, device-

intensive procedures with a device offset above 75 percent to be grouped into an APC together and that all other procedures be excluded (both nondevice-intensive procedures and device-intensive procedures that have a device offset percentage below 75 percent).

Response: As we stated in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66794), we continue to believe that the elimination of device-to-procedure edits and procedure-to-device edits is appropriate due to the experience hospitals now have in coding and reporting these claims fully. More specifically, for the more costly devices, we believe the C-APCs will reliably reflect the cost of the device if charges for the device are included anywhere on the claim. We remind commenters that, under our current policy, hospitals are still expected to adhere to the guidelines of correct coding and append the correct device code to the claim when applicable. We also remind commenters that, as with all other items and services recognized under the OPPS, we expect hospitals to code and report their costs appropriately, regardless of whether there are claims processing edits in place. In addition, we remind commenters that, under our current policy, the APC assignment of a device-intensive procedure has no bearing on the procedure's device-intensive designation. With respect to the commenter's request for an additional policy specifically for device-intensive procedures that have a device offset percentage above 75 percent, for the reasons stated above in this comment response, we do not believe that such a policy is needed.

4. Adjustment to OPPS Payment for No Cost/Full Credit and Partial Credit Devices

a. Background

To ensure equitable OPPS payment when a hospital receives a device without cost or with full credit, in CY 2007, we implemented a policy to reduce the payment for specified device-dependent APCs by the estimated portion of the APC payment attributable to device costs (that is, the device offset) when the hospital receives a specified device at no cost or with full credit (71 FR 68071 through 68077). Hospitals were instructed to report no cost/full credit device cases on the claim using the "FB" modifier on the line with the procedure code in which the no cost/full credit device is used. In cases in which the device is furnished without cost or with full credit,

hospitals were instructed to report a token device charge of less than \$1.01. In cases in which the device being inserted is an upgrade (either of the same type of device or to a different type of device) with a full credit for the device being replaced, hospitals were instructed to report as the device charge the difference between the hospital's usual charge for the device being implanted and the hospital's usual charge for the device for which it received full credit. In CY 2008, we expanded this payment adjustment policy to include cases in which hospitals receive partial credit of 50 percent or more of the cost of a specified device. Hospitals were instructed to append the "FC" modifier to the procedure code that reports the service provided to furnish the device when they receive a partial credit of 50 percent or more of the cost of the new device. We refer readers to the CY 2008 OPPS/ASC final rule with comment period for more background information on the "FB" and "FC" modifiers payment adjustment policies (72 FR 66743 through 66749).

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75007), beginning in CY 2014, we modified our policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit. For CY 2013 and prior years, our policy had been to reduce OPPS payment by 100 percent of the device offset amount when a hospital furnishes a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device. For CY 2014, we reduced OPPS payment, for the applicable APCs, by the full or partial credit a hospital receives for a replaced device. Specifically, under this modified policy, hospitals are required to report on the claim the amount of the credit in the amount portion for value code "FD" (Credit Received from the Manufacturer for a Replaced Medical Device) when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device. For CY 2014, we also limited the OPPS payment deduction for the applicable APCs to the total amount of the device offset when the "FD" value code appears on a claim. For CY 2015, we continued our existing policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit and to use the three

criteria established in the CY 2007 OPSS/ASC final rule with comment period (71 FR 68072 through 68077) for determining the APCs to which our CY 2015 policy will apply (79 FR 66872 through 66873). In the CY 2016 OPSS/ASC final rule with comment period (80 FR 70424), we finalized our policy to no longer specify a list of devices to which the OPSS payment adjustment for no cost/full credit and partial credit devices would apply and instead apply this APC payment adjustment to all replaced devices furnished in conjunction with a procedure assigned to a device-intensive APC when the hospital receives a credit for a replaced specified device that is 50 percent or greater than the cost of the device.

b. Policy for No Cost/Full Credit and Partial Credit Devices

In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79659 through 79660), for CY 2017 and subsequent years, we finalized our policy to reduce OPSS payment for device-intensive procedures, by the full or partial credit a provider receives for a replaced device, when a hospital furnishes a specified device without cost or with a full or partial credit. Under our current policy, hospitals continue to be required to report on the claim the amount of the credit in the amount portion for value code "FD" when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device.

In addition, for CY 2017 and subsequent years, we finalized our policy to use the following three criteria for determining the procedures to which our final policy applies: (1) All procedures must involve implantable devices that would be reported if device insertion procedures were performed; (2) the required devices must be surgically inserted or implanted devices that remain in the patient's body after the conclusion of the procedure (at least temporarily); and (3) the procedure must be device intensive; that is, the device offset amount must be significant, which is defined as exceeding 40 percent of the procedure's mean cost.

We did not propose any changes to this policy for CY 2018 and did not receive any public comments on this policy.

5. Payment Policy for Low-Volume Device-Intensive Procedures

For CY 2016, we used our equitable adjustment authority under section 1833(t)(2)(E) of the Act and used the median cost (instead of the geometric mean cost per our standard

methodology) to calculate the payment rate for the implantable miniature telescope procedure described by CPT code 0308T (Insertion of ocular telescope prosthesis including removal of crystalline lens or intraocular lens prosthesis), which is the only code assigned to APC 5494 (Level 4 Intraocular Procedures) (80 FR 70388). We note that, as stated in the CY 2017 OPSS/ASC proposed rule (81 FR 45656), we proposed to reassign the procedure described by CPT code 0308T to APC 5495 (Level 5 Intraocular Procedures) for CY 2017, but it would be the only procedure code assigned to APC 5495. The payment rates for a procedure described by CPT code 0308T (including the predecessor HCPCS code C9732) were \$15,551 in CY 2014, \$23,084 in CY 2015, and \$17,551 in CY 2016. The procedure described by CPT code 0308T is a high-cost device-intensive surgical procedure that has a very low volume of claims (in part because most of the procedures described by CPT code 0308T are performed in ASCs), and we believe that the median cost is a more appropriate measure of the central tendency for purposes of calculating the cost and the payment rate for this procedure because the median cost is impacted to a lesser degree than the geometric mean cost by more extreme observations. We stated that, in future rulemaking, we would consider proposing a general policy for the payment rate calculation for very low-volume device-intensive APCs (80 FR 70389).

For CY 2017, we proposed and finalized a payment policy for low-volume device-intensive procedures that is similar to the policy applied to the procedure described by CPT code 0308T in CY 2016. In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79660 through 79661), we established our current policy that the payment rate for any device-intensive procedure that is assigned to a clinical APC with fewer than 100 total claims for all procedures in the APC be calculated using the median cost instead of the geometric mean cost, for the reasons described above for the policy applied to the procedure described by CPT code 0308T in CY 2016. The CY 2017 final rule geometric mean cost for the procedure described by CPT code 0308T (based on 19 claims containing the device HCPCS C-code in accordance with the device-intensive edit policy) was approximately \$21,302, and the median cost was approximately \$19,521. The final CY 2017 payment rate (calculated using the median cost) is approximately \$18,984.

For CY 2018, in the CY 2018 OPSS/ASC proposed rule (82 FR 33620), we proposed to continue with our current policy of establishing the payment rate for any device-intensive procedure that is assigned to a clinical APC with fewer than 100 total claims for all procedures in the APC based on calculations using the median cost instead of the geometric mean cost. For CY 2018, this policy would continue to apply only to a procedure described by CPT code 0308T in APC 5495 because this APC is the only clinical APC containing a device-intensive procedure with fewer than 100 total claims in the APC. As we have stated before (81 FR 79660), we believe that this approach will help to mitigate significant year-to-year payment rate fluctuations while preserving accurate claims data-based payment rates for low-volume device-intensive procedures. The CY 2018 proposed rule median cost for the procedure described by CPT code 0308T was approximately \$17,643.75. The proposed CY 2018 payment rate (calculated using the median cost and the claims that reported the device consistent with our device edit policy for device intensive procedures) was approximately \$16,963.69.

Comment: Some commenters supported CMS' proposal to base payment on the median cost instead of the geometric mean cost for any device-intensive procedure that is assigned to an APC with fewer than 100 total claims. Other commenters requested that CMS limit the impact of geometric mean cost reductions on payment rates for low-volume procedures by a certain percentage to ensure payment stability for low-volume procedures.

Response: We thank commenters for their support. With respect to the commenters' request to limit the impact of the geometric mean cost reductions on payment rates for low volume procedures by a certain percentage, we disagree with commenters that such a percentage-based limitation is necessary. We continue to believe our current policy—establishing the payment rate for any device-intensive procedure that is assigned to a clinical APC with fewer than 100 total claims for all procedures in the APC based on calculations using the median cost instead of the geometric mean cost—will help to mitigate significant year-to-year payment rate fluctuations while preserving accurate claims data-based payment rates for low-volume device-intensive procedures.

After consideration of the public comments we received, we are finalizing our proposal, without modification, that the payment rate for

any device-intensive procedure that is assigned to a clinical APC with fewer than 100 total claims for all procedures in the APC be calculated using the median cost instead of the geometric mean cost. The CY 2018 final rule median cost for the procedure described by CPT code 0308T is \$17,550.18. The final CY 2018 payment rate (calculated using updated median cost and the claims that reported the device consistent with our device edit policy for device-intensive procedures) is \$17,560.07.

V. OPPTS Payment Changes for Drugs, Biologicals, and Radiopharmaceuticals

A. OPPTS Transitional Pass-Through Payment for Additional Costs of Drugs, Biologicals, and Radiopharmaceuticals

1. Background

Section 1833(t)(6) of the Act provides for temporary additional payments or “transitional pass-through payments” for certain drugs and biologicals. Throughout this final rule with comment period, the term “biological” is used because this is the term that appears in section 1861(t) of the Act. A “biological” as used in this final rule with comment period includes (but is not necessarily limited to) a “biological product” or a “biologic” as defined in the Public Health Service Act. As enacted by the Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), this pass-through payment provision requires the Secretary to make additional payments to hospitals for: Current orphan drugs, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act; current drugs and biologicals and brachytherapy sources used in cancer therapy; and current radiopharmaceutical drugs and biologicals. “Current” refers to those types of drugs or biologicals mentioned above that are hospital outpatient services under Medicare Part B for which transitional pass-through payment was made on the first date the hospital OPPTS was implemented.

Transitional pass-through payments also are provided for certain “new” drugs and biologicals that were not being paid for as an HOPD service as of December 31, 1996 and whose cost is “not insignificant” in relation to the OPPTS payments for the procedures or services associated with the new drug or biological. For pass-through payment purposes, radiopharmaceuticals are included as “drugs.” As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of

at least 2 years, but not more than 3 years, after the payment was first made for the product as a hospital outpatient service under Medicare Part B. CY 2018 pass-through drugs and biologicals and their designated APCs are assigned status indicator “G” in Addenda A and B to this final rule with comment period (which are available via the Internet on the CMS Web site).

Section 1833(t)(6)(D)(i) of the Act specifies that the pass-through payment amount, in the case of a drug or biological, is the amount by which the amount determined under section 1842(o) of the Act for the drug or biological exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the drug or biological. The methodology for determining the pass-through payment amount is set forth in regulations at 42 CFR 419.64. These regulations specify that the pass-through payment equals the amount determined under section 1842(o) of the Act minus the portion of the APC payment that CMS determines is associated with the drug or biological.

Section 1847A of the Act establishes the average sales price (ASP) methodology, which is used for payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. The ASP methodology, as applied under the OPPTS, uses several sources of data as a basis for payment, including the ASP, the wholesale acquisition cost (WAC), and the average wholesale price (AWP). In this final rule with comment period, the term “ASP methodology” and “ASP-based” are inclusive of all data sources and methodologies described therein. Additional information on the ASP methodology can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/index.html>.

The pass-through application and review process for drugs and biologicals is described on the CMS Web site at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthrough_payment.html.

2. 3-Year Transitional Pass-Through Payment Period for All Pass-Through Drugs, Biologicals, and Radiopharmaceuticals and Quarterly Expiration of Pass-Through Status

As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of at least 2 years, but

not more than 3 years, after the payment was first made for the product as a hospital outpatient service under Medicare Part B. Our current policy is to accept pass-through applications on a quarterly basis and to begin pass-through payments for newly approved pass-through drugs and biologicals on a quarterly basis through the next available OPPTS quarterly update after the approval of a product’s pass-through status. However, prior to CY 2017, we expired pass-through status for drugs and biologicals on an annual basis through notice-and-comment rulemaking (74 FR 60480). In the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79662), we finalized a policy change, beginning with pass-through drugs and biologicals newly approved in CY 2017 and subsequent calendar years, to allow for a quarterly expiration of pass-through payment status for drugs and biologicals to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through drugs, biologicals, and radiopharmaceuticals.

This change eliminated the variability of the pass-through payment eligibility period, which previously varied based on when a particular application was initially received. We adopted this change for pass-through approvals beginning on or after CY 2017, to allow, on a prospective basis, for the maximum pass-through payment period for each pass-through drug without exceeding the statutory limit of 3 years.

3. Drugs and Biologicals With Expiring Pass-Through Payment Status in CY 2017

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33621), we proposed that the pass-through payment status of 19 drugs and biologicals would expire on December 31, 2017, as listed in Table 21 of the proposed rule (82 FR 33622). All of these drugs and biologicals will have received OPPTS pass-through payment for at least 2 years and no more than 3 years by December 31, 2017. These drugs and biologicals were approved for pass-through payment status on or before January 1, 2016. In accordance with the policy finalized last year and described above, pass-through payment status for drugs and biologicals newly approved in CY 2017 and subsequent years will expire on a quarterly basis, with a pass-through payment period as close to 3 years as possible. With the exception of those groups of drugs and biologicals that are always packaged when they do not have pass-through payment status (specifically, anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as

supplies when used in a diagnostic test or procedure (including diagnostic radiopharmaceuticals, contrast agents, and stress agents); and drugs and biologicals that function as supplies when used in a surgical procedure), our standard methodology for providing payment for drugs and biologicals with expiring pass-through payment status in an upcoming calendar year is to determine the product's estimated per day cost and compare it with the OPPS drug packaging threshold for that calendar year (which is \$120 for CY 2018), as discussed further in section V.B.2. of this final rule with comment period. In the CY 2018 OPPS/ASC proposed rule (82 FR 33622), we proposed that if the estimated per day cost for the drug or biological is less than or equal to the applicable OPPS drug packaging threshold, we would package payment for the drug or biological into the payment for the associated procedure in the upcoming calendar year. If the estimated per day cost of the drug or biological is greater than the OPPS drug packaging threshold, we proposed to provide separate payment at the applicable relative ASP-based payment amount (which was proposed at ASP+6 percent for CY 2018, and is finalized at ASP+6 percent for CY 2018, as discussed further in section V.B.3. of this final rule with comment period).

Comment: Several commenters responded to the proposed expiration of pass-through status for HCPCS code A9586 (Florbetapir f18) on December 31, 2017. (We note that the brand name for the radiopharmaceutical described by HCPCS code A9586 is Amyvid®. Amyvid is a FDA-approved radioactive diagnostic agent for Positron Emission Tomography (PET) imaging of the brain to estimate beta-amyloid neuritic plaque density in adult patients with cognitive impairment who are being evaluated for Alzheimer's Disease and other causes of cognitive decline. Amyvid was approved for drug pass-through payment status effective January 1, 2015.)

One commenter, the manufacturer of Amyvid, urged CMS to extend pass-through payment status for another year on the basis that CMS could not have paid a legitimately billed claim for Amyvid in CY 2015, given the manufacturer's assertion regarding CED trial sites' dates of approval and start dates for patient enrollment. In addition, while the commenter acknowledged that the period of drug and biological pass-through payment status starts on the first date on which payment is made for the drug or biological as an outpatient hospital

service (42 CFR 419.64(c)(2)), the commenter believed that an erroneous payment by Medicare should not have triggered the start of pass-through payment for Amyvid in 2015. In addition, the commenter asserted that expiration of pass-through payment status for Amyvid prior to completion of the CED trial will adversely affect the trial results. The commenter requested that, if CMS finalized expiration of pass-through payment status as proposed, CMS create a new APC for PET procedures with Amyvid to avoid violating the 2 times rule—which provides that items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median cost (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost (or mean cost, if elected by the Secretary) for an item or service within the same APC group. The commenter stated that the median cost of Amyvid is approximately \$2,756, over two times the median cost of the PET scan procedure.

One commenter, a manufacturer of another radiopharmaceutical, recommended that CMS allow for those products whose pass-through payment status will expire after a period of at least 2 years and no more than 3 years to expire as proposed, as a matter of applying policy consistently.

Several commenters recommended that CMS allow products covered by Medicare in the context of coverage with evidence development (CED) clinical trial to retain their pass-through status for the duration of the CED trial.

Response: CMS issued a Medicare National Coverage Determination (NCD) on September 27, 2013, which allows conditional coverage of amyloid PET under CED. Currently, there are three Medicare-approved amyloid PET CED trials. The first CED trial was approved on April 2, 2014. The second CED trial was approved on March 3, 2015. The third CED trial was approved January 5, 2016. Information on these clinical trials is available on the CMS amyloid PET Web page available via the Internet at: <https://www.cms.gov/Medicare/Coverage/Coverage-with-Evidence-Development/Amyloid-PET.html>. The effective date of Medicare billing for CED trial sites is the CMS approval date. CMS has provided billing instructions for providers and practitioner that specify proper coding for clinical trial claims. For example, providers and practitioner must report certain diagnosis codes, procedure codes, modifiers, and a national clinical trial number. Therefore, providers enrolled

in one of these trials could have begun appropriate billing Medicare for the amyloid PET procedures and associated Amyloid PET tracers beginning April 2, 2014.

Based on our claims analysis, we found that HCPCS code A9586 was billed by hospital providers 14 times in CY 2015, with 1 claim being paid. Based on our review of provider enrollment in the CED trials, it appears that this paid Medicare claim from CY 2015 was submitted from a CED clinical trial participant and not paid in error as the commenter suggests. According to section 1833(t)(6)(C)(i)(II) of the Act and the regulations at 42 CFR 419.66(g), the pass-through payment eligibility period begins on the first date on which pass-through payment is made. Because there is a paid claim from CY 2015, the pass-through payment period for HCPCS code A9586 began in CY 2015. Therefore, based on the CY 2015 paid claim for HCPCS code A9586 as a hospital outpatient service, which triggered the start of the pass-through payment period, we are expiring pass-through payment status on December 31, 2017. From the start of the pass-through payment period through December 31, 2017, Medicare will have provided an OPPS pass-through payment for at least 2 years and no more than 3 years by December 31, 2017. Extending pass-through payment status into CY 2018 would cause pass-through payments for HCPCS code A9586 to extend into a fourth year, thereby exceeding the pass-through payment period authorized by section 1833(t)(6)(C)(i)(II) of the Act.

In addition, regarding the commenters' concern that expiration of pass-through payment status for Amyvid, and subsequent packaging of it as a "policy-packaged" drug, will skew trial results (presumably because providers will not receive an ASP-based payment), we disagree, given that analysis of CY 2016 claims data across different sites of care shows that the vast majority of billings for HCPCS code A9586 is concentrated in the physician office and the independent diagnostic testing facility (IDTF) setting. Further, we note that hospitals are not precluded from billing for HCPCS code A9586 in the context of a CED trial once its pass-through payment status expires. We also note that the payment for HCPCS A9586 would be reflected in the payment rate for the associated procedure.

With respect to the request that we create a new APC for PET procedures with Amyvid, we do not believe it is appropriate, prudent, or practicable to create unique APCs for specific drugs or biologicals or other individual items

that are furnished with a particular procedure or procedures. We disagree with the commenter's assertion that packaging of Amyvid with the associated PET procedure described by CPT code 78814 (Pet image w/ct lmt) creates a 2 times rule violation in APC 5594 (Level 4 Nuclear Medicine) (we refer readers to section III.B. of this final rule with comment period for discussion of 2 times rule) and believe that the commenter may have misunderstood the application of the 2 times rule. Specifically, we note that, in determining the APCs with a 2 times rule violation, we do not consider the cost of an individual packaged item that may be furnished with a procedure or service, but rather the geometric mean cost of the service (which includes aggregate cost of packaged items that may be furnished with a procedure). Moreover, we disagree with the commenter's statement that the median cost of Amyvid is approximately \$2,756. While it is correct that the CY 2017 pass-through payment for Amyvid is \$2,756, the pass-through payment rate of ASP+6 percent is not indicative of the cost incurred by hospitals to acquire, store, handle, and dispense Amyvid. Our analysis of the updated CY 2016 claims data used for CY 2018 ratesetting for this CY 2018 OPPTS/ASC final rule with comment period shows that the median cost of Amyvid is \$1,275.75, which when combined with the aggregate cost of packaged items that may be furnished with CPT code 78814, would not create a 2 times rule violation.

With respect to the commenters' request that we allow drug or biological pass-through payment status for products covered by CED for the duration of the CED trial, we reiterate that the statute limits the period of pass-through payment eligibility to at least 2 years, but no more than 3 years, after the product's first payment as a hospital outpatient service under Medicare Part B. As such, we are unable to extend pass-through payment status beyond 3 years.

Finally, with respect to the commenter's support of our proposal to finalize the expiration of pass-through payment status as proposed for consistent policy application, we agree with the commenter.

In summary, we are finalizing our proposal to expire pass-through payment status for HCPCS code A9586 on December 31, 2017. Because pass-through payment was effective in CY 2015, HCPCS code A9586 will have had pass-through payment status for at least 2 years but no more than 3 years in

accordance with section 1833(t)(6) of the Act.

Comment: Several commenters requested that CMS not package payment for Omidria® (described by HCPCS code C9447) upon expiration of pass-through payment status on December 31, 2017, and continue to pay separately for the drug at ASP+6 percent. One commenter, the manufacturer of Omidria, reiterated many previous arguments (81 FR 79667) for why CMS should dispense with classifying Omidria as drug that functions as a surgical supply when used in a surgical procedure. Specially, the commenter made the following arguments:

- The language used to construct the "packaging as a surgical supply" policy is overly broad and not consistent with Congressional intent that requires clinically comparable APC groups. CMS has not defined surgery or provided a rationale for applying different packaging policies to surgery than would be applied to other drugs with therapeutic indications;

- Mischaracterization of drugs used in surgery as "supplies", given regulatory requirements that apply to drugs. The FDA-approved label indicates its specific use in intraocular procedures;

- Packaging Omidria and other drugs as surgical supplies creates barriers to access, especially in ASC settings, low-volume HOPDs, and hospitals with low percentage of insured patients (presumably because providers may choose lower cost alternatives because separate payment would no longer be made);

- Packaging Omidria and other drugs as surgical supplies may affect quality of care improvements and patient outcomes; and

- Packaging drugs as "surgical supplies" interferes with physician discretion and is inconsistent with the principles that guide packaging under the OPPTS.

A few commenters requested that CMS consider a narrow exception to the "drug as a supply" packaging policy to enable separate payment for Omidria.

Response: We have addressed many of these comments in prior rulemaking. We refer readers to the CY 2017 OPPTS/ASC final rule with comment period for a detailed discussion on why we believe Omidria is a drug that functions as a surgical supply (81 FR 79668). We did not propose any policy changes to the criteria applied to a drug that functions as a surgical supply when used in a surgical procedure in the CY 2018 OPPTS/ASC proposed rule, nor do we believe the commenters provided any

new information that would cause us to change our position that Omidria is a drug that functions as a surgical supply. Therefore, we are not addressing these comments in this final rule with comment period. However, in the proposed rule, we did solicit comments on packaging policies generally, including drugs that function as a surgical supply, and will take responses to the comment solicitation, along with these commenters' recommendations and suggestions, into consideration in future rulemaking.

Comment: Commenters urged CMS to apply quarterly expiration of drug pass-through payment to drugs and biologicals first added to the pass-through payment list in CYs 2015 and 2016 that would otherwise transition off pass-through payment in less than 3 years. Commenters suggested CMS could apply the quarterly expiration of pass-through payment policy to devices approved for pass-through payment status in CY 2015 or 2016 because it would not cause harm to providers or beneficiaries. As stated earlier in this section, one commenter suggested that CMS allow for those products whose pass-through payment status will expire after a period of at least 2 years and no more than 3 years to expire as proposed, as a matter of applying policy consistently.

Response: As finalized in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79662), the quarterly expiration of pass-through payment policy applies to drugs and biologicals newly approved for pass-through payment in CY 2017. We note that, even prior to the policy change adopted in CY 2017 rulemaking, the Agency's prior policy practice of making drug pass-through payments for a minimum of 2 years, but not more than 3 years, was consistent with statutory authority. Further, once a drug's pass-through payment status period expires, its costs are packaged into the associated procedure(s) with which it is billed, and accordingly, reversing past expirations of pass-through payment would potentially cause payment rates established for a prior year for certain services to be incorrect.

We agree with the commenter who stated that we should expire the drug-pass-through payment status for drugs and biologicals as proposed, to allow for consistent application of our policy.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to expire the pass-through payment status of the 19 drugs and biologicals listed in Table 69 below on December 31, 2017.

TABLE 69—DRUGS AND BIOLOGICALS FOR WHICH PASS-THROUGH PAYMENT STATUS EXPIRES DECEMBER 31, 2017

CY 2018 HCPCS code	CY 2018 long descriptor	Final CY 2018 status indicator	Final CY 2018 APC	Pass-through payment effective date
A9586	Florbetapir f18, diagnostic, per study dose, up to 10 millicuries	N	N/A	01/01/2015
C9447	Injection, phenylephrine and ketorolac, 4 ml vial	N	N/A	01/01/2015
J0596	Injection, c-1 esterase inhibitor (human), Ruconest, 10 units	K	9445	04/01/2015

Q4172	PuraPly, and PuraPly Antimicrobial, any type, per square centimeter	N	N/A	01/01/2015
Q9950	Injection, sulfur hexafluoride lipid microsphere, per ml	N	N/A	10/01/2015

The final packaged or separately payable status of each of these drugs or biologicals is listed in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site).

4. Drugs, Biologicals, and Radiopharmaceuticals With New or Continuing Pass-Through Payment Status in CY 2018

In the CY 2018 OPPS/ASC proposed rule (82 FR 33622), we proposed to continue pass-through payment status in CY 2018 for 38 drugs and biologicals. None of these drugs and biologicals will have received OPPS pass-through payment for at least 2 years and no more than 3 years by December 31, 2017. These drugs and biologicals, which were approved for pass-through payment status between January 1, 2016, and July 1, 2017, were listed in Table 22 of the proposed rule (82 FR 33623). The APCs and HCPCS codes for these drugs and biologicals approved for pass-through payment status through July 1, 2017 were assigned status indicator “G” in Addenda A and B to the proposed rule (which are available via the Internet on the CMS Web site).

Section 1833(t)(6)(D)(i) of the Act sets the amount of pass-through payment for pass-through drugs and biologicals (the pass-through payment amount) as the difference between the amount authorized under section 1842(o) of the Act and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological. For CY 2018, we proposed to continue to pay for pass-through drugs and biologicals at ASP+6

percent, equivalent to the payment rate these drugs and biologicals would receive in the physician’s office setting in CY 2018. We proposed that a \$0 pass-through payment amount would be paid for pass-through drugs and biologicals under the CY 2018 OPPS because the difference between the amount authorized under section 1842(o) of the Act, which was proposed at ASP+6 percent, and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is appropriate, which was proposed at ASP+6 percent, is \$0.

In the case of policy-packaged drugs (which include the following: Anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including contrast agents, diagnostic radiopharmaceuticals, and stress agents); and drugs and biologicals that function as supplies when used in a surgical procedure), we proposed that their pass-through payment amount would be equal to ASP+6 percent for CY 2018 because, if not for their pass-through payment status, payment for these products would be packaged into the associated procedure.

In addition, we proposed to continue to update pass-through payment rates on a quarterly basis on the CMS Web site during CY 2018 if later quarter ASP submissions (or more recent WAC or AWP information, as applicable) indicate that adjustments to the payment rates for these pass-through drugs or biologicals are necessary. For a full description of this policy, we refer readers to the CY 2006 OPPS/ASC final

rule with comment period (70 FR 68632 through 68635).

For CY 2018, consistent with our CY 2017 policy for diagnostic and therapeutic radiopharmaceuticals, we proposed to provide payment for both diagnostic and therapeutic radiopharmaceuticals that are granted pass-through payment status based on the ASP methodology. As stated earlier, for purposes of pass-through payment, we consider radiopharmaceuticals to be drugs under the OPPS. Therefore, if a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2018, we proposed to follow the standard ASP methodology to determine the pass-through payment rate that drugs receive under section 1842(o) of the Act, which was proposed at ASP+6 percent. If ASP data are not available for a radiopharmaceutical, we proposed to provide pass-through payment at WAC+6 percent, the equivalent payment provided to pass-through payment drugs and biologicals without ASP information. If WAC information also is not available, we proposed to provide payment for the pass-through radiopharmaceutical at 95 percent of its most recent AWP.

Comment: Commenters supported CMS’ proposal to provide payment at ASP+6 percent for drugs, biologicals, contrast agents, and radiopharmaceuticals that are granted pass-through payment status.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to provide

payment for drugs, biologicals, diagnostic and therapeutic radiopharmaceuticals, and contrast agents that are granted pass-through payment status based on the ASP methodology. If a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2018, we will follow the standard ASP methodology to determine

the pass-through payment rate that drugs receive under section 1842(o) of the Act, which is ASP+6 percent. If ASP data are not available for a radiopharmaceutical, we will provide pass-through payment at WAC+6 percent, the equivalent payment provided to pass-through payment drugs and biologicals without ASP information. If WAC information also is

not available, we will provide payment for the pass-through payment radiopharmaceutical at 95 percent of its most recent AWP.

The 50 drugs and biologicals that continue to have pass-through payment status for CY 2018 or have been granted pass-through payment status as of January 2018 are shown in Table 70 below.

TABLE 70—DRUGS AND BIOLOGICALS WITH PASS-THROUGH PAYMENT STATUS IN CY 2018

5. Provisions for Reducing Transitional Pass-Through Payments for Policy-Packaged Drugs, Biologicals, and Radiopharmaceuticals To Offset Costs Packaged Into APC Groups

Under the regulations at 42 CFR 419.2(b), nonpass-through drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure are packaged in the OPPS. This category includes diagnostic radiopharmaceuticals, contrast agents, stress agents, and other diagnostic drugs. Also under 42 CFR 419.2(b), nonpass-through drugs and biologicals that function as supplies in a surgical procedure are packaged in the OPPS. This category includes skin substitutes and other surgical-supply drugs and biologicals. As described earlier, section 1833(t)(6)(D)(i) of the Act specifies that the transitional pass-through payment amount for pass-through drugs and biologicals is the difference between the amount paid under section 1842(o) of the Act and the otherwise applicable OPD fee schedule amount. Because a payment offset is necessary in order to provide an appropriate transitional pass-through payment, we deduct from the pass-through payment for policy packaged drugs, biologicals, and radiopharmaceuticals an amount reflecting the portion of the APC payment associated with predecessor products in order to ensure no duplicate payment is made. This amount reflecting the portion of the APC payment associated with predecessor products is called the payment offset.

The payment offset policy applies to all policy packaged drugs, biologicals, and radiopharmaceuticals. For a full description of the payment offset policy as applied to diagnostic radiopharmaceuticals, contrast agents, stress agents, and skin substitutes, we refer readers to the discussion in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70430 through 70432). In the CY 2018 OPPS/ASC proposed rule (82 FR 33624), for CY

2018, as we did in CY 2017, we proposed to continue to apply the same policy packaged offset policy to payment for pass-through diagnostic radiopharmaceuticals, pass-through contrast agents, pass-through stress agents, and pass-through skin substitutes. The proposed APCs to which a payment offset may be applicable for pass-through diagnostic radiopharmaceuticals, pass-through contrast agents, pass-through stress agents, and pass-through skin substitutes were identified in Table 23 of the proposed rule.

Comment: A few commenters requested that CMS separate the costs of diagnostic radiopharmaceuticals and stress agents from the “packaged drug cost” in the APC offset file published with the yearly proposed and final rules.

Response: We thank the commenter for this recommendation. However, we do not believe that the suggested change is necessary at this time. The offset amount is the portion of each APC payment rate that could reasonably be attributed to the cost of a predecessor contrast agent, diagnostic radiopharmaceutical, or stress agent when considering a new contrast agent, diagnostic radiopharmaceutical, or stress agent for pass-through payment and has no bearing on APC assignment. The exact data used to calculate all of the proposed and final payment rates, including the associated offset amounts, for this CY 2018 OPPS final rule with comment are available for purchase under a CMS data use agreement through the CMS Web site available via the Internet at: <https://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/IdentifiableDataFiles/index.html>.

After consideration of the public comments we received, we are finalizing our proposal, without modification, for CY 2018, to continue to apply the same policy-packaged offset policy to payment for pass-through diagnostic radiopharmaceuticals, pass-through contrast agents, pass-through

stress agents, and pass-through skin substitutes as we did in CY 2017.

TABLE 71—APCS TO WHICH A POLICY-PACKAGED DRUG OR RADIO-PHARMACEUTICAL OFFSET ARE APPLICABLE IN CY 2018

CY 2018 APC	CY 2018 APC title

5591	Level 1 Nuclear Medicine and Related Services.
5592	Level 2 Nuclear Medicine and Related Services.
5593	Level 3 Nuclear Medicine and Related Services.
5594	Level 4 Nuclear Medicine and Related Services.
Contrast Agent	
5571	Level 1 Imaging with Contrast.
5572	Level 2 Imaging with Contrast.
5573	Level 3 Imaging with Contrast.
Stress Agent	
5722	Level 2 Diagnostic Tests and Related Services.
5593	Level 3 Nuclear Medicine and Related Services.
Skin Substitute	
5054	Level 4 Skin Procedures.
5055	Level 5 Skin Procedures.

We also are finalizing our proposal to continue to post annually on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Annual-Policy-Files.html> a file that contains the APC offset amounts that will be used for that year for purposes of both evaluating cost significance for candidate pass-through payment device categories and drugs and biologicals and establishing any appropriate APC offset amounts. Specifically, the file will continue to provide the amounts and percentages of APC payment associated with packaged implantable devices, policy-packaged drugs, and threshold

packaged drugs and biologicals for every OPPS clinical APC.

B. OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals Without Pass-Through Payment Status

1. Criteria for Packaging Payment for Drugs, Biologicals, and Radiopharmaceuticals

a. Packaging Threshold

In accordance with section 1833(t)(16)(B) of the Act, the threshold for establishing separate APCs for payment of drugs and biologicals was set to \$50 per administration during CYs 2005 and 2006. In CY 2007, we used the four quarter moving average Producer Price Index (PPI) levels for Pharmaceutical Preparations (Prescription) to trend the \$50 threshold forward from the third quarter of CY 2005 (when the Pub. L. 108–173 mandated threshold became effective) to the third quarter of CY 2007. We then rounded the resulting dollar amount to the nearest \$5 increment in order to determine the CY 2007 threshold amount of \$55. Using the same methodology as that used in CY 2007 (which is discussed in more detail in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68085 through 68086)), we set the packaging threshold for establishing separate APCs for drugs and biologicals at \$110 for CY 2017 (81 FR 79665).

Following the CY 2007 methodology, for this CY 2018 OPPS/ASC final rule with comment period, we used the most recently available four quarter moving average PPI levels to trend the \$50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2018 and rounded the resulting dollar amount (\$118.52) to the nearest \$5 increment, which yielded a figure of \$120. In performing this calculation, we used the most recent forecast of the quarterly index levels for the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from CMS' Office of the Actuary.

Therefore, for this CY 2018 OPPS/ASC final rule with comment period, using the CY 2007 OPPS methodology, we are finalizing a packaging threshold for CY 2018 of \$120.

b. Packaging of Payment for HCPCS Codes That Describe Certain Drugs, Certain Biologicals, and Therapeutic Radiopharmaceuticals Under the Cost Threshold ("Threshold-Packaged Drugs")

In the CY 2018 OPPS/ASC proposed rule (82 FR 33625), to determine the proposed CY 2018 packaging status for

all nonpass-through drugs and biologicals that are not policy packaged, we calculated, on a HCPCS code-specific basis, the per day cost of all drugs, biologicals, and therapeutic radiopharmaceuticals (collectively called "threshold-packaged" drugs) that had a HCPCS code in CY 2016 and were paid (via packaged or separate payment) under the OPPS. We used data from CY 2016 claims processed before January 1, 2017 for this calculation. However, we did not perform this calculation for those drugs and biologicals with multiple HCPCS codes that include different dosages, as described in section V.B.1.d. of the proposed rule, or for the following policy-packaged items that we proposed to continue to package in CY 2018: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure.

In order to calculate the per day costs for drugs, biologicals, and therapeutic radiopharmaceuticals to determine their proposed packaging status in CY 2018, we used the methodology that was described in detail in the CY 2006 OPPS proposed rule (70 FR 42723 through 42724) and finalized in the CY 2006 OPPS final rule with comment period (70 FR 68636 through 68638). For each drug and biological HCPCS code, we used an estimated payment rate of ASP+6 percent (which is the payment rate we proposed for separately payable drugs and biologicals for CY 2018, as discussed in more detail in section V.B.2.b. of the proposed rule) to calculate the CY 2018 proposed rule per day costs. We used the manufacturer submitted ASP data from the fourth quarter of CY 2016 (data that were used for payment purposes in the physician's office setting, effective April 1, 2017) to determine the proposed rule per day cost.

As is our standard methodology, for CY 2018, we proposed to use payment rates based on the ASP data from the first quarter of CY 2017 for budget neutrality estimates, packaging determinations, impact analyses, and completion of Addenda A and B to the proposed rule (which are available via the Internet on the CMS Web site) because these were the most recent data available for use at the time of development of the proposed rule. These data also were the basis for drug payments in the physician's office setting, effective April 1, 2017. For items that did not have an ASP-based payment rate, such as some therapeutic radiopharmaceuticals, we used their mean unit cost derived from the CY

2016 hospital claims data to determine their per day cost.

We proposed to package items with a per day cost less than or equal to \$120, and identify items with a per day cost greater than \$120 as separately payable. Consistent with our past practice, we cross-walked historical OPPS claims data from the CY 2016 HCPCS codes that were reported to the CY 2017 HCPCS codes that we displayed in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site) for proposed payment in CY 2018.

Comment: Many commenters requested that CMS eliminate the threshold packaging policy and pay separately for all drugs and biologicals described by a unique HCPCS code. Several commenters expressed concern with the annual increases in the drug packaging threshold, citing that yearly increases have outpaced conversion factor updates and place a financial burden on hospitals. A few commenters recommended that CMS delay the proposed increase in the packaging threshold for drugs or freeze the packaging threshold at the current level (\$110).

Response: We have received and addressed similar comments in prior rules and most recently in CY 2017 OPPS/ASC final rule with comment (81 FR 79666). As we stated in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68086), we believe that packaging certain items is a fundamental component of a prospective payment system, that updating the packaging threshold of \$50 for the CY 2005 OPPS is consistent with industry and government practices, and that the PPI for Prescription Drugs is an appropriate mechanism to gauge Part B drug inflation. Therefore, because packaging is a fundamental component of a prospective payment system that continues to provide important flexibility and efficiency in the delivery of high quality hospital outpatient services, we are not adopting the commenters' recommendations to pay separately for all drugs, biologicals, and radiopharmaceuticals for CY 2018, eliminate the packaging threshold, and delay updating the packaging threshold or freeze the packaging threshold at \$110.

After consideration of the public comments we received, and consistent with our methodology for establishing the packaging threshold using the most recent PPI forecast data, we are adopting a CY 2018 packaging threshold of \$120.

Our policy during previous cycles of the OPPS has been to use updated ASP and claims data to make final

determinations of the packaging status of HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals for the OPPTS/ASC final rule with comment period. We note that it is also our policy to make an annual packaging determination for a HCPCS code only when we develop the OPPTS/ASC final rule with comment period for the update year. Only HCPCS codes that are identified as separately payable in the final rule with comment period are subject to quarterly updates. For our calculation of per day costs of HCPCS codes for drugs and biologicals in this CY 2018 OPPTS/ASC final rule with comment period, we used ASP data from the first quarter of CY 2017, which is the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective July 1, 2017, along with updated hospital claims data from CY 2016. We note that we also used these data for budget neutrality estimates and impact analyses for this CY 2018 OPPTS/ASC final rule with comment period.

Payment rates for HCPCS codes for separately payable drugs and biologicals included in Addenda A and B for this final rule with comment period are based on ASP data from the third quarter of CY 2017. These data are the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective October 1, 2017. These payment rates will be updated in the January 2018 OPPTS update, based on the most recent ASP data to be used for physician's office and OPPTS payment as of January 1, 2018. For items that do not currently have an ASP-based payment rate, we proposed to recalculate their mean unit cost from all of the CY 2016 claims data and updated cost report information available for this CY 2018 final rule with comment period to determine their final per day cost.

Consequently, as stated in the CY 2018 OPPTS/ASC proposed rule (82 FR 33625), the packaging status of some HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals in the proposed rule may be different from the same drug HCPCS code's packaging status determined based on the data used for this final rule with comment period. Under such circumstances, in the CY 2018 OPPTS/ASC proposed rule, we proposed to continue to follow the established policies initially adopted for the CY 2005 OPPTS (69 FR 65780) in order to more equitably pay for those drugs whose cost fluctuates relative to the proposed CY 2018 OPPTS drug packaging threshold and the drug's payment status (packaged or separately

payable) in CY 2017. These established policies have not changed for many years and are the same as described in the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70434). Specifically, for CY 2018, consistent with our historical practice, we proposed to apply the following policies to these HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals whose relationship to the drug packaging threshold changes based on the updated drug packaging threshold and on the final updated data:

- HCPCS codes for drugs and biologicals that were paid separately in CY 2017 and that were proposed for separate payment in CY 2018, and that then have per day costs equal to or less than the CY 2018 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for this CY 2018 final rule, would continue to receive separate payment in CY 2018.
- HCPCS codes for drugs and biologicals that were packaged in CY 2017 and that were proposed for separate payment in CY 2018, and that then have per day costs equal to or less than the CY 2018 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for this CY 2018 final rule, would remain packaged in CY 2018.
- HCPCS codes for drugs and biologicals for which we proposed packaged payment in CY 2018 but then have per day costs greater than the CY 2018 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for this CY 2018 final rule, would receive separate payment in CY 2018.

We did not receive any public comments on our proposal to recalculate the mean unit cost for items that do not currently have an ASP-based payment rate from all of the CY 2016 claims data and updated cost report information available for this CY 2018 final rule with comment period to determine their final per day cost. We also did not receive any public comments on our proposal to continue to follow the established policies initially adopted for the CY 2005 OPPTS (69 FR 65780), when the packaging status of some HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals in the proposed rule may be different from the same drug HCPCS code's packaging status determined based on the data used for the final rule with comment period. Therefore, for CY 2018, we are finalizing these two CY 2018 proposals without modification.

c. Policy Packaged Drugs, Biologicals, and Radiopharmaceuticals

As mentioned briefly earlier, in the OPPTS, we package several categories of drugs, biologicals, and radiopharmaceuticals, regardless of the cost of the products. Because the products are packaged according to the policies in 42 CFR 419.2(b), we refer to these packaged drugs, biologicals, and radiopharmaceuticals as "policy-packaged" drugs, biologicals, and radiopharmaceuticals. These policies are either longstanding or based on longstanding principles and inherent to the OPPTS and are as follows:

- Anesthesia, certain drugs, biologicals, and other pharmaceuticals; medical and surgical supplies and equipment; surgical dressings; and devices used for external reduction of fractures and dislocations (§ 419.2(b)(4));
- Intraoperative items and services (§ 419.2(b)(14));
- Drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including but not limited to, diagnostic radiopharmaceuticals, contrast agents, and pharmacologic stress agents (§ 419.2(b)(15)); and
- Drugs and biologicals that function as supplies when used in a surgical procedure (including, but not limited to, skin substitutes and similar products that aid wound healing and implantable biologicals) (§ 419.2(b)(16)).

The policy at § 419.2(b)(16) is broader than that at § 419.2(b)(14). As we stated in the CY 2015 OPPTS/ASC final rule with comment period: "We consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy" (79 FR 66875). The category described by § 419.2(b)(15) is large and includes diagnostic radiopharmaceuticals, contrast agents, stress agents, and some other products. The category described by § 419.2(b)(16) includes skin substitutes and some other products. We believe it is important to reiterate that cost consideration is not a factor when determining whether an item is a surgical supply (79 FR 66875).

We did not make any proposals to revise our policy-packaged drug policy. We solicited public comment on the general OPPTS packaging policies as discussed in section II.A.3.d. of this final rule with comment period.

Comment: Several commenters requested that CMS revise its packaging

policies to allow for separate payment for Cysview® (hexaminolevulinate HCl), which is described by HCPCS code C9275, according to the ASP methodology. The commenters also provided recommendations in response to the general comment solicitation on packaging under the OPSS.

Response: We appreciate the comments in response to the packaging solicitation, including feedback on the “packaging as a supply” policy and will consider these recommendations in future rulemaking. However, because we did not propose to modify our policy-packaged drug policy for drugs that function as a supply when used in a diagnostic test or procedure, or receive information from commenters that caused us to believe that Cysview® is not a drug that functions as a supply when used in a diagnostic test or procedure and, accordingly, should be paid separately, payment for HCPCS code C9275 will continue to be packaged with the primary procedure in CY 2018.

Comment: Numerous commenters requested that CMS pay separately for Exparel®, an FDA approved post-surgical analgesia drug. Several commenters, including many commenters who received care from the same provider, shared their experience with receiving Exparel® after their knee replacement surgery and urged CMS to pay hospitals and/or physicians for the use of Exparel®.

Response: We refer readers to the CY 2015 OPSS/ASC final rule with comment (79 FR 66874 and 66875) for a detailed discussion on our decision to package Exparel® (bupivacaine liposome injectable suspension) described by HCPCS code C9290 (Injection, bupivacaine liposome, 1 mg) as a drug that functions as a supply in a surgical procedure. Because we did not propose to modify our packaged drug policy for drugs that function as a surgical supply when used in a surgical procedure, and believe payment for HCPCS code C9290 is appropriately packaged with the primary surgical procedure, payment for HCPCS code C9290 will remain packaged in CY 2018.

Comment: A few commenters recommended that CMS continue to apply the nuclear medicine procedure to radiolabeled product edits to ensure that all packaged costs are included on nuclear medicine claims in order to establish appropriate payment rates in the future.

Response: We do not agree with commenters that we should reinstate the nuclear medicine procedure to radiolabeled product edits, which

required a diagnostic radiopharmaceutical to be present on the same claim as a nuclear medicine procedure for payment under the OPSS to be made. The edits were in place between CY 2008 and CY 2014 (78 FR 75033). We believe the period of time in which the edits were in place was sufficient for hospitals to gain experience reporting procedures involving radiolabeled products and to grow accustomed to ensuring that they code and report charges so that their claims fully and appropriately reflect the costs of those radiolabeled products. As with all other items and services recognized under the OPSS, we expect hospitals to code and report their costs appropriately, regardless of whether there are claims processing edits in place.

Comment: One commenter recommended that CMS use ASP information, when voluntarily reported by the manufacturer, as a better price input to account for the packaged costs of the diagnostic radiopharmaceuticals and more appropriately reflect hospitals’ actual acquisition costs. This commenter also requested that CMS provide an additional payment for radiopharmaceuticals that are granted pass-through payment status.

Response: We disagree with commenter’s recommendation that we use voluntarily-reported ASP information for nonpass-through payment for radiopharmaceuticals as an approximation of their acquisition cost. Packaging hospital costs based on hospital claims data is how all the costs of all packaged items are factored into payment rates for associated procedures under the OPSS, and we do not believe it is appropriate to depart from that policy for radiopharmaceuticals.

Radiopharmaceuticals for which we have not established a separate APC will receive packaged payment under the OPSS. We provide payment for diagnostic radiopharmaceuticals based on a proxy for average acquisition cost. We continue to believe that the line-item estimated cost for a diagnostic radiopharmaceutical in our claims data is a reasonable approximation of average acquisition and preparation and handling costs for diagnostic radiopharmaceuticals.

In addition, we note that not all manufacturers would be able to submit ASP data through the established ASP reporting methodology. Therefore, if we were to use ASP data to package the costs of some diagnostic radiopharmaceuticals, but use hospital claims data for others, our methodologies for packaging the costs of diagnostic radiopharmaceuticals into

their associated nuclear medicine procedures would be inconsistent among nuclear medicine procedures. The foundation of a system of relative weights is the relativity of the costs of all services to one another, as derived from a standardized system that uses standardized inputs and a consistent methodology. Adoption of a ratesetting methodology for certain APCs containing nuclear medicine procedures that is different from the standard APC ratesetting methodology would undermine this relativity. For this reason, we do not believe it would be appropriate to use external pricing information in place of the costs derived from the claims and Medicare cost report data because to do so would distort the relativity that is fundamental to the integrity of the OPSS.

With respect to the request to provide an additional payment for radiopharmaceuticals that are granted pass-through payment status, the commenter did not provide information on what expenses or costs incurred by providers would be covered by an additional payment. We continue to believe that a single payment is appropriate for radiopharmaceuticals with pass-through payment status in CY 2018 and that the payment rate of ASP+6 percent is appropriate to provide payment for both the radiopharmaceutical’s acquisition cost and any associated nuclear medicine handling and compounding costs.

d. High Cost/Low Cost Threshold for Packaged Skin Substitutes

In the CY 2014 OPSS/ASC final rule with comment period (78 FR 74938), we unconditionally packaged skin substitute products into their associated surgical procedures as part of a broader policy to package all drugs and biologicals that function as supplies when used in a surgical procedure. As part of the policy to finalize the packaging of skin substitutes, we also finalized a methodology that divides the skin substitutes into a high cost group and a low cost group, in order to ensure adequate resource homogeneity among APC assignments for the skin substitute application procedures (78 FR 74933).

Skin substitutes assigned to the high cost group are described by HCPCS codes 15271 through 15278. Skin substitutes assigned to the low cost group are described by HCPCS codes C5271 through C5278. Geometric mean costs for the various procedures are calculated using only claims for the skin substitutes that are assigned to each group. Specifically, claims billed with HCPCS code 15271, 15273, 15275, or 15277 are used to calculate the

geometric mean costs for procedures assigned to the high cost group, and claims billed with HCPCS code C5271, C5273, C5275, or C5277 are used to calculate the geometric mean costs for procedures assigned to the low cost group (78 FR 74935).

Each of the HCPCS codes described above are assigned to one of the following three skin procedure APCs according to the geometric mean cost for the code: APC 5053 (Level 3 Skin Procedures) (HCPCS codes C5271, C5275, and C5277); APC 5054 (Level 4 Skin Procedures) (HCPCS codes C5273, 15271, 15275, and 15277); or APC 5055 (Level 5 Skin Procedures) (HCPCS code 15273). In CY 2017, the payment rate for APC 5053 (Level 3 Skin Procedures) was \$466, the payment rate for APC 5054 (Level 4 Skin Procedures) was \$1,468, and the payment rate for APC 5055 (Level 5 Skin Procedures) was \$2,575. This information also is available in Addenda A and B of the CY 2017 OPPTS/ASC final rule with comment period (which is available via the Internet on the CMS Web site).

We have continued the high cost/low cost categories policy since CY 2014, and in the CY 2018 OPPTS/ASC proposed rule (82 FR 33626 through 33627), we proposed to continue it for CY 2018 with the modification discussed below. Under this current policy, skin substitutes in the high cost category are reported with the skin substitute application CPT codes, and skin substitutes in the low cost category are reported with the analogous skin substitute HCPCS C-codes. For a discussion of the CY 2014 and CY 2015 methodologies for assigning skin substitutes to either the high cost group or the low cost group, we refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 74932 through 74935) and the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66882 through 66885).

For a discussion of the high cost/low cost methodology that was adopted in CY 2016 and has been in effect since then, we refer readers to the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70434 through 70435). For CY 2018, as in CY 2016 and CY 2017, we proposed to continue to determine the high/low cost status for each skin substitute product based on either a product's geometric mean unit cost (MUC) exceeding the geometric MUC threshold or the product's per day cost (PDC) (the total units of a skin substitute multiplied by the mean unit cost and divided by the total number of days) exceeding the PDC threshold. For CY 2018, as for CY 2017, we proposed to assign each skin substitute that

exceeds either the MUC threshold or the PDC threshold to the high cost group. In addition, as described in more detail later in this section, for CY 2018, as for CY 2017, we proposed to assign any skin substitute with an MUC or a PDC that does not exceed either the MUC threshold or the PDC threshold to the low cost group. For CY 2018, we proposed that any skin substitute product that was assigned to the high cost group in CY 2017 would be assigned to the high cost group for CY 2018, regardless of whether it exceeds or falls below the CY 2018 MUC or PDC threshold.

For this CY 2018 OPPTS/ASC final rule with comment period, consistent with the methodology as established in the CY 2014 through CY 2017 final rules with comment period, we analyzed updated CY 2016 claims data to calculate the MUC threshold (a weighted average of all skin substitutes' MUCs) and the PDC threshold (a weighted average of all skin substitutes' PDCs). The final CY 2018 MUC threshold is \$46 per cm² (rounded to the nearest \$1) (proposed at \$47 per cm²) and the final CY 2018 PDC threshold is \$861 (rounded to the nearest \$1) (proposed at \$755).

For CY 2018, we proposed to continue to assign skin substitutes with pass-through payment status to the high cost category. However, there are no skin substitutes that are proposed to have pass-through payment status for CY 2018. We proposed to assign skin substitutes with pricing information but without claims data to calculate a geometric MUC or PDC to either the high cost or low cost category based on the product's ASP+6 percent payment rate as compared to the MUC threshold. If ASP is not available, we stated in the proposed rule that we would use WAC+6 percent or 95 percent of AWP to assign a product to either the high cost or low cost category. We also stated in the proposed rule that new skin substitutes without pricing information would be assigned to the low cost category until pricing information is available to compare to the CY 2018 MUC threshold. For a discussion of our existing policy under which we assign skin substitutes without pricing information to the low cost category until pricing information is available, we refer readers to the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70436).

Some skin substitute manufacturers have raised concerns about significant fluctuation in both the MUC threshold and the PDC threshold from year to year. The fluctuation in the thresholds may result in the reassignment of

several skin substitutes from the high cost group to the low cost group which, under current payment rates, can be a difference of approximately \$1,000 in the payment amount for the same procedure. In addition, these stakeholders were concerned that the inclusion of cost data from skin substitutes with pass-through payment status in the MUC and PDC calculations would artificially inflate the thresholds. Skin substitute stakeholders requested that CMS consider alternatives to the current methodology used to calculate the MUC and PDC thresholds and also requested that CMS consider whether it might be appropriate to establish a new cost group in between the low cost group and the high cost group to allow for assignment of moderately priced skin substitutes to a newly created middle group.

We share the goal of promoting payment stability for skin substitute products and their related procedures as price stability allows hospitals using such products to more easily anticipate future payments associated with these products. We have attempted to limit year to year shifts for skin substitute products between the high cost and low cost groups through multiple initiatives implemented since CY 2014, including: establishing separate skin substitute application procedure codes for low-cost skin substitutes (78 FR 74935); using a skin substitute's MUC calculated from outpatient hospital claims data instead of an average of ASP+6 percent as the primary methodology to assign products to the high cost or low cost group (79 FR 66883); and establishing the PDC threshold as an alternate methodology to assign a skin substitute to the high cost group (80 FR 70434 through 70435).

In order to allow additional time to evaluate concerns and suggestions from stakeholders about the volatility of the MUC and PDC thresholds, for CY 2018, we proposed that a skin substitute that was assigned to the high cost group for CY 2017 would be assigned to the high cost group for CY 2018, even if it does not exceed the CY 2018 MUC or PDC thresholds. Our analysis has found that seven skin substitute products that would have otherwise been assigned to the low cost group for CY 2018 would instead be assigned to the high cost group under this proposed policy. The skin substitute products affected by this proposed policy were identified with an "*" in Table 24 of the proposed rule (82 FR 33627 through 33628). For CY 2019 and subsequent years, we requested public comments on how we should calculate data for products in determining the MUC and PDC

thresholds that are included in the high cost group solely based on assignment to the high cost group in CY 2017.

We stated in the proposed rule that the goal of our proposal to retain the same skin substitute cost group assignments in CY 2018 as in CY 2017 is to maintain similar levels of payment for skin substitute products for CY 2018 while we study our current skin substitute payment methodology to determine whether refinement to the existing policies is consistent with our policy goal of providing payment stability for skin substitutes. We requested public comments on the methodologies that are used to calculate pricing thresholds as well as the payment groupings that recognize a low cost group and a high cost group. We stated that we are especially interested in suggestions that are based on analysis of Medicare claims data from hospital outpatient departments that might better promote improved payment stability for skin substitute products under the OPPS. This proposal was intended to apply for CY 2018 to allow time for the public to submit other ideas that could be evaluated for the CY 2019 rulemaking.

In summary, we proposed to assign skin substitutes with a MUC or a PDC that does not exceed either the MUC threshold or the PDC threshold to the low cost group, unless the product was assigned to the high cost group in CY 2017, in which case we proposed to assign the product to the high cost group for CY 2018, regardless of whether it exceeds the CY 2018 MUC or PDC threshold. We also proposed to assign to the high cost group skin substitute products that exceed the CY 2018 MUC or PDC threshold and assign to the low cost group skin substitute products that did not exceed either the CY 2017 or CY 2018 MUC or PDC thresholds and were not assigned to the high cost group in CY 2017. We proposed to continue to use payment methodologies including ASP+6 percent, WAC+6 percent, or 95 percent of AWP for skin substitute products that have pricing information but do not have claims data to determine if their costs exceed the CY 2018 MUC threshold. Finally, we proposed to continue to assign new skin substitute products without pricing information to the low cost group.

Comment: Several commenters responded to CMS' request for public comments on the methodologies that are used to calculate pricing thresholds as well as the payment groupings that recognize a low cost group and a high cost group with the goal of improving payment stability for skin substitute

products in the OPPS. The commenters covered such issues as: Improving the quality of claims data CMS uses to determine the MUC and PDC thresholds; using ASP pricing data for the skin substitutes either in addition to or in place of claims data to determine the MUC and PDC thresholds; limiting annual changes to the MUC and PDC thresholds to the change in the consumer price index; adding more cost groups where skin substitutes may be assigned; ending the packaging of skin substitute products in general and ending packaging costs for add-on codes into the primary service codes for skin substitute procedures; establishing device offsets when the cost of a skin substitute used in a procedure is more than 40 percent of total cost of the procedure; and reducing incentives that favor the use of more expensive skin substitutes or products that require an excessive number of applications.

Response: We appreciate the feedback we received from the commenters. We will continue to study issues related to the payment of skin substitutes and take these comments into consideration for future rulemaking.

Comment: One commenter requested that PuraPly and PuraPly antimic reported with HCPCS code Q4172 retain its pass-through status in CY 2018. The commenter believed that giving PuraPly and PuraPly antimic an additional year of pass-through payment status would be consistent with CMS' policy proposal to assign all skin substitute products that were in the high cost skin substitute group in CY 2017 to the high cost skin substitute group in CY 2018. The commenter believed that, consistent with the spirit of this proposal, PuraPly and PuraPly antimic should receive the same payment treatment in CY 2017 as it did in CY 2018; that is, continued pass-through payment status.

Response: PuraPly and PuraPly antimic (HCPCS code Q4172) became eligible for drug and biological pass-through payments effective January 1, 2015. Therefore, 2017 is the third year of pass-through payment status for these skin substitutes. Section 1833(t)(6)(B)(iii) provides for temporary pass-through payments for devices for a period of at least 2 years but not more than 3 years. Extending PuraPly and PuraPly antimic for a fourth year of pass-through payment status would be contrary to the statute. Therefore, PuraPly and PuraPly antimic will be assigned to the high-cost skin substitute group for CY 2018 and the product will receive payment in the same manner as other skin substitute products assigned to the high cost group.

Comment: One commenter opposed CMS' proposal to assign all skin substitutes that qualified for the high cost group in CY 2017 to the high cost group in CY 2018, including those skin substitutes that would have not met either the MUC or PDC threshold in CY 2018 and would have instead been assigned to the low-cost group. The commenter stated that the products included in the high cost group that otherwise would have been assigned to the low cost group have generated enough payment data for CMS to estimate their costs. The commenter believed the proposal would encourage excessive use of the skin substitute products that should have been assigned to the low cost group.

Response: We appreciate the concerns of the commenter. However, as we stated in the proposed rule, we aim to encourage the goal of payment stability for all skin substitute products to help hospitals anticipate future costs related to skin substitute procedures. The MUC has nearly doubled since CY 2016, with an increase from \$25 per cm² to the proposed CY 2018 threshold of \$47 per cm². Likewise, the PDC has fluctuated over \$300, between \$715 and \$1,050, since it was established in CY 2016. We requested suggestions from the public to help address these stability issues in future rulemaking. We believe allowing all skin substitute products assigned to the high cost group in CY 2017 to remain in the high cost group for CY 2018 gives us time to consider revisions to the payment of skin substitute procedures and products while avoiding substantial payment reductions to hospitals during our review period.

Comment: Several commenters supported the proposal to assign all skin substitutes that qualified for the high cost group in CY 2017 to the high cost group in CY 2018, including those skin substitutes that would have not met either the MUC or PDC threshold in CY 2018 and would have instead been assigned to the low cost group.

Response: We appreciate the commenters' support.

Comment: One commenter supported the proposed assignment of HCPCS code Q4150 (Allowrap DS or Dry 1 sq cm) to the high cost group.

Response: We appreciate the commenter's support.

After consideration of the public comments we received, we are finalizing our proposals without modification for CY 2018. Table 72 below displays the CY 2018 cost category assignment for each skin substitute product.

For this final rule with comment period, we have identified 10 skin

substitute products that would otherwise have been assigned to the low cost group for CY 2018, but will instead be assigned to the high cost group under our policy to include in the high cost group for CY 2018 any skin substitute that was in the high cost group for CY 2017. The skin substitute products affected by this policy are identified with an asterisk “*” in Table 72 below.

TABLE 72—SKIN SUBSTITUTE ASSIGNMENTS TO HIGH COST AND LOW COST GROUPS FOR CY 2018

CY 2018 HCPCS code	CY 2018 short descriptor	CY 2017 high/low assignment	CY 2018 high/low assignment
Q9363	Integra Meshed Bil Wound Mat	High	High.

Q4180	Revita, per square centimeter	Low	Low.
Q4181	Amnio wound, per square centimeter	Low	Low.
Q4182	Transcyte, per square centimeter	Low	Low.

* These products do not exceed either the MUC or PDC threshold for CY 2018, but are assigned to the high cost group because they were assigned to the high cost group in CY 2017.

e. Packaging Determination for HCPCS Codes That Describe the Same Drug or Biological but Different Dosages

In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60490 through 60491), we finalized a policy to make a single packaging determination for a drug, rather than an individual HCPCS code, when a drug has multiple HCPCS codes describing different dosages because we believed that adopting the standard HCPCS code-specific packaging determinations for these codes could lead to inappropriate payment incentives for hospitals to report certain HCPCS codes instead of others. We continue to believe that making packaging determinations on a drug-specific basis eliminates payment incentives for hospitals to report certain HCPCS codes for drugs and allows hospitals flexibility in choosing to report all HCPCS codes for different dosages of the same drug or only the lowest dosage HCPCS code. Therefore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33628), we proposed to continue our policy to make packaging determinations on a drug-specific basis, rather than a HCPCS code-specific basis, for those HCPCS codes that describe the same drug or biological but different dosages in CY 2018.

For CY 2018, in order to propose a packaging determination that is consistent across all HCPCS codes that describe different dosages of the same drug or biological, we aggregated both our CY 2016 claims data and our pricing information at ASP+6 percent across all of the HCPCS codes that describe each distinct drug or biological in order to determine the mean units per day of the drug or biological in terms of the HCPCS code with the lowest dosage descriptor. The following drugs did not have pricing information available for the ASP methodology for the CY 2018 OPPS/ASC proposed rule, and as is our current policy for determining the packaging status of other drugs, we used the mean unit cost available from the CY 2016 claims data to make the proposed packaging determinations for these drugs: HCPCS code J7100 (infusion, dextran 40,500 ml) and HCPCS code J7110 (infusion, dextran 75,500 ml).

For all other drugs and biologicals that have HCPCS codes describing different doses, we then multiplied the proposed weighted average ASP+6 percent per unit payment amount across all dosage levels of a specific drug or biological by the estimated units per day for all HCPCS codes that describe each

drug or biological from our claims data to determine the estimated per day cost of each drug or biological at less than or equal to the proposed CY 2018 drug packaging threshold of \$120 (so that all HCPCS codes for the same drug or biological would be packaged) or greater than the proposed CY 2018 drug packaging threshold of \$120 (so that all HCPCS codes for the same drug or biological would be separately payable). The proposed packaging status of each drug and biological HCPCS code to which this methodology would apply in CY 2018 was displayed in Table 25 of the CY 2018 OPPS/ASC proposed rule (82 FR 33629).

We did not receive any public comments on this proposal. Therefore, for CY 2018, we are finalizing our CY 2018 proposal, without modification, to continue our policy to make packaging determinations on a drug-specific basis, rather than a HCPCS code-specific basis, for those HCPCS codes that describe the same drug or biological but different dosages. Table 73 below displays the final packaging status of each drug and biological HCPCS code to which the finalized methodology applies for CY 2018.

TABLE 73—HCPCS CODES TO WHICH THE CY 2018 DRUG-SPECIFIC PACKAGING DETERMINATION METHODOLOGY APPLIES

CY 2018 HCPCS code	CY 2018 long descriptor	CY 2018 SI
C9257	Injection, bevacizumab, 0.25 mg	K
J9035	Injection, bevacizumab, 10 mg	K
J1020	Injection, methylprednisolone acetate, 20 mg	N
J1030	Injection, methylprednisolone acetate, 40 mg	N
J1040	Injection, methylprednisolone acetate, 80 mg	N

J1560	Injection, gamma globulin, intramuscular over 10 cc	K
J1642	Injection, heparin sodium, (heparin lock flush), per 10 units	N
J1644	Injection, heparin sodium, per 1000 units	N
J1840	Injection, kanamycin sulfate, up to 500 mg	N
J1850	Injection, kanamycin sulfate, up to 75 mg	N
J2788	Injection, rho d immune globulin, human, minidose, 50 micrograms (250 i.u.)	N
J2790	Injection, rho d immune globulin, human, full dose, 300 micrograms (1500 i.u.)	N
J2920	Injection, methylprednisolone sodium succinate, up to 40 mg	N
J2930	Injection, methylprednisolone sodium succinate, up to 125 mg	N
J3471	Injection, hyaluronidase, ovine, preservative free, per 1 usp unit (up to 999 usp units)	N
J3472	Injection, hyaluronidase, ovine, preservative free, per 1000 usp units	N
J7030	Infusion, normal saline solution, 1000 cc	N
J7040	Infusion, normal saline solution, sterile (500 ml = 1 unit)	N
J7050	Infusion, normal saline solution, 250 cc	N
J7100	Infusion, dextran 40, 500 ml	N
J7110	Infusion, dextran 75, 500 ml	N
J7515	Cyclosporine, oral, 25 mg	N
J7502	Cyclosporine, oral, 100 mg	N
J8520	Capecitabine, oral, 150 mg	N
J8521	Capecitabine, oral, 500 mg	N
J9250	Methotrexate sodium, 5 mg	N
J9260	Methotrexate sodium, 50 mg	N

2. Payment for Drugs and Biologicals Without Pass-Through Status That Are Not Packaged

a. Payment for Specified Covered Outpatient Drugs (SCODs) and Other Separately Payable and Packaged Drugs and Biologicals

Section 1833(t)(14) of the Act defines certain separately payable radiopharmaceuticals, drugs, and biologicals and mandates specific payments for these items. Under section 1833(t)(14)(B)(i) of the Act, a “specified covered outpatient drug” (known as a SCOD) is defined as a covered outpatient drug, as defined in section 1927(k)(2) of the Act, for which a separate APC has been established and that either is a radiopharmaceutical agent or is a drug or biological for which payment was made on a pass-through basis on or before December 31, 2002.

Under section 1833(t)(14)(B)(ii) of the Act, certain drugs and biologicals are designated as exceptions and are not included in the definition of SCODs. These exceptions are—

- A drug or biological for which payment is first made on or after January 1, 2003, under the transitional pass-through payment provision in section 1833(t)(6) of the Act.
- A drug or biological for which a temporary HCPCS code has not been assigned.
- During CYs 2004 and 2005, an orphan drug (as designated by the Secretary).

Section 1833(t)(14)(A)(iii) of the Act requires that payment for SCODs in CY 2006 and subsequent years be equal to the average acquisition cost for the drug for that year as determined by the Secretary, subject to any adjustment for overhead costs and taking into account the hospital acquisition cost survey data collected by the Government Accountability Office (GAO) in CYs 2004 and 2005, and later periodic surveys conducted by the Secretary as set forth in the statute. If hospital acquisition cost data are not available, the law requires that payment be equal to payment rates established under the methodology described in section 1842(o), section 1847A, or section 1847B of the Act, as calculated and adjusted by the Secretary as necessary. We refer to this alternative methodology as the “statutory default.” Most physician Part B drugs are paid at ASP+6 percent in accordance with section 1842(o) and section 1847A of the Act.

Section 1833(t)(14)(E)(ii) of the Act provides for an adjustment in OPSS payment rates for SCODs to take into account overhead and related expenses,

such as pharmacy services and handling costs. Section 1833(t)(14)(E)(i) of the Act required MedPAC to study pharmacy overhead and related expenses and to make recommendations to the Secretary regarding whether, and if so how, a payment adjustment should be made to compensate hospitals for overhead and related expenses. Section 1833(t)(14)(E)(ii) of the Act authorizes the Secretary to adjust the weights for ambulatory procedure classifications for SCODs to take into account the findings of the MedPAC study.¹⁷

It has been our policy since CY 2006 to apply the same treatment to all separately payable drugs and biologicals, which include SCODs, and drugs and biologicals that are not SCODs. Therefore, we apply the payment methodology in section 1833(t)(14)(A)(iii) of the Act to SCODs, as required by statute, but we also apply it to separately payable drugs and biologicals that are not SCODs, which is a policy determination rather than a statutory requirement. In the CY 2018 OPSS/ASC proposed rule (82 FR 33630), we proposed to apply section 1833(t)(14)(A)(iii)(II) of the Act to all separately payable drugs and biologicals, including SCODs. Although we do not distinguish SCODs in this discussion, we note that we are required to apply section 1833(t)(14)(A)(iii)(II) of the Act to SCODs, but we also are applying this provision to other separately payable drugs and biologicals, consistent with our history of using the same payment methodology for all separately payable drugs and biologicals.

For a detailed discussion of our OPSS drug payment policies from CY 2006 to CY 2012, we refer readers to the CY 2013 OPSS/ASC final rule with comment period (77 FR 68383 through 68385). In the CY 2013 OPSS/ASC final rule with comment period (77 FR 68386 through 68389), we first adopted the statutory default policy to pay for separately payable drugs and biologicals at ASP+6 percent based on section 1833(t)(14)(A)(iii)(II) of the Act. We continued this policy of paying for separately payable drugs and biologicals at the statutory default for CY 2014, CY 2015, CY 2016, and CY 2017 (81 FR 79673).

b. CY 2018 Payment Policy

In the CY 2018 OPSS/ASC proposed rule (82 FR 33630), for CY 2018, we

proposed to continue our payment policy that has been in effect from CY 2013 to present and pay for separately payable drugs and biologicals at ASP+6 percent in accordance with section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default). We proposed that the ASP+6 percent payment amount for separately payable drugs and biologicals requires no further adjustment and represents the combined acquisition and pharmacy overhead payment for drugs and biologicals. We also proposed that payments for separately payable drugs and biologicals are included in the budget neutrality adjustments, under the requirements in section 1833(t)(9)(B) of the Act, and that the budget neutral weight scalar is not applied in determining payments for these separately paid drugs and biologicals.

We note that we proposed, as specified below, to pay for separately payable, nonpass-through drugs acquired with a 340B discount at a rate of ASP minus 22.5 percent. We refer readers to the full discussion of this proposal in section V.B.7. of the proposed rule and this final rule with comment period.

Comment: Numerous commenters supported CMS’ proposal to continue to pay for separately payable drugs and biologicals based on the statutory default rate of ASP+6 percent.

Response: We thank commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to pay for separately payable drugs and biologicals at ASP+6 percent based on section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default). The ASP+6 percent payment amount for separately payable drugs and biologicals requires no further adjustment and represents the combined acquisition and pharmacy overhead payment for drugs and biologicals for CY 2018. In addition, we are finalizing our proposal that payment for separately payable drugs and biologicals be included in the budget neutrality adjustments, under the requirements of section 1833(t)(9)(B) of the Act, and that the budget neutral weight scalar is not applied in determining payment of these separately paid drugs and biologicals. We refer readers to section V.B.7. of the final rule with comment period for the final payment policy for drugs acquired with a 340B discount.

We note that separately payable drug and biological payment rates listed in Addenda A and B to this final rule with comment period (available via the Internet on the CMS Web site), which illustrate the final CY 2018 payment of

¹⁷ Medicare Payment Advisory Committee. June 2005 Report to the Congress. Chapter 6: Payment for pharmacy handling costs in hospital outpatient departments. Available at: http://www.medpac.gov/docs/default-source/reports/June05_ch6.pdf?sfvrsn=0.

ASP+6 percent for separately payable nonpass-through drugs and biologicals and ASP+6 percent for pass-through drugs and biologicals, reflect either ASP information that is the basis for calculating payment rates for drugs and biologicals in the physician's office setting effective October 1, 2017, or WAC, AWP, or mean unit cost from CY 2016 claims data and updated cost report information available for this final rule with comment period. In general, these published payment rates are not the same as the actual January 2018 payment rates. This is because payment rates for drugs and biologicals with ASP information for January 2018 will be determined through the standard quarterly process where ASP data submitted by manufacturers for the third quarter of 2017 (July 1, 2017 through September 30, 2017) will be used to set the payment rates that are released for the quarter beginning in January 2018 near the end of December 2017. In addition, payment rates for drugs and biologicals in Addenda A and B to this final rule with comment period for which there was no ASP information available for October 2017 are based on mean unit cost in the available CY 2016 claims data. If ASP information becomes available for payment for the quarter beginning in January 2018, we will price payment for these drugs and biologicals based on their newly available ASP information. Finally, there may be drugs and biologicals that have ASP information available for this final rule with comment period (reflecting October 2017 ASP data) that do not have ASP information available for the quarter beginning in January 2018. As stated in the CY 2018 OPPS/ASC proposed rule (82 FR 33630), these drugs and biologicals will then be paid based on mean unit cost data derived from CY 2016 hospital claims. Therefore, the payment rates listed in Addenda A and B to this final rule with comment period are not for January 2018 payment purposes and are only illustrative of the CY 2018 OPPS payment methodology using the most recently available information at the time of issuance of this final rule with comment period.

c. Biosimilar Biological Products

For CY 2016 and CY 2017, we finalized a policy to pay for biosimilar biological products based on the payment allowance of the product as determined under section 1847A of the Act and to subject nonpass-through biosimilar biological products to our annual threshold-packaged policy (for CY 2016, 80 FR 70445 through 70446; and for CY 2017, 81 FR 79674). In the

CY 2018 OPPS/ASC proposed rule (82 FR 33630), for CY 2018, we proposed to continue this same payment policy for biosimilar biological products.

We noted in the proposed rule that public comments on the Medicare Part B biosimilar biological product payment policy should be submitted in response to the biosimilar biological product payment policy comment solicitation in the CY 2018 MPFS proposed rule.

Comment: Several comments urged CMS to assign separate HCPCS codes for each biosimilar biological product rather than combining biosimilar biological products of the same reference product into one HCPCS code. Some commenters who addressed the biosimilar payment policy as it relates to the 340B proposal stated that current policy (adopted in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70445)) for pass-through payment for biosimilar biological products is restricted to the first biosimilar biological product of a reference product. The commenters believed that, if the 340B proposal is finalized as proposed, the preclusion on pass-through payment eligibility for second and subsequent biosimilar biological products of the same reference product would be significantly disadvantaged by the reduced payment if purchased with a 340B discount. These commenters urged CMS to reevaluate pass-through payment eligibility for biosimilar biological products and their payment under the 340B payment proposal in the proposed rule.

Response: Comments related to policy for coding for biosimilar biological products are outside of the scope of the CY 2018 OPPS/ASC proposed rule. As we indicated in the CY 2018 OPPS/ASC proposed rule, commenters should refer to the CY 2018 MPFS final rule for discussion of the biosimilar biological product coding policy. With respect to comments regarding OPPS payment for biosimilar biological products, in the CY 2018 MPFS final rule, CMS finalized a policy to implement separate HCPCS codes for biosimilar biological products. Therefore, consistent with our established OPPS drug, biological, and radiopharmaceutical payment policy, HCPCS coding for biosimilar biological products will be based on policy established under the CY 2018 MPFS rule.

Comments related to 340B and biosimilar biological products are discussed in section V.B.7. of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposed payment policy for biosimilar biological products, with

the following technical correction: All biosimilar biological products will be eligible for pass-through payment and not just the first biosimilar biological product for a reference product.

3. Payment Policy for Therapeutic Radiopharmaceuticals

In the CY 2018 OPPS/ASC proposed rule (82 FR 33630), for CY 2018, we proposed to continue the payment policy for therapeutic radiopharmaceuticals that began in CY 2010. We pay for separately paid therapeutic radiopharmaceuticals under the ASP methodology adopted for separately payable drugs and biologicals. If ASP information is unavailable for a therapeutic radiopharmaceutical, we base therapeutic radiopharmaceutical payment on mean unit cost data derived from hospital claims. We believe that the rationale outlined in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524 through 60525) for applying the principles of separately payable drug pricing to therapeutic radiopharmaceuticals continues to be appropriate for nonpass-through, separately payable therapeutic radiopharmaceuticals in CY 2018. Therefore, we proposed for CY 2018 to pay all nonpass-through, separately payable therapeutic radiopharmaceuticals at ASP+6 percent, based on the statutory default described in section 1833(t)(14)(A)(iii)(II) of the Act. For a full discussion of ASP-based payment for therapeutic radiopharmaceuticals, we refer readers to the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520 through 60521). We also proposed to rely on CY 2016 mean unit cost data derived from hospital claims data for payment rates for therapeutic radiopharmaceuticals for which ASP data are unavailable and to update the payment rates for separately payable therapeutic radiopharmaceuticals according to our usual process for updating the payment rates for separately payable drugs and biologicals on a quarterly basis if updated ASP information is unavailable. For a complete history of the OPPS payment policy for therapeutic radiopharmaceuticals, we refer readers to the CY 2005 OPPS final rule with comment period (69 FR 65811), the CY 2006 OPPS final rule with comment period (70 FR 68655), and the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524). The proposed CY 2018 payment rates for nonpass-through, separately payable therapeutic radiopharmaceuticals were in Addenda A and B to the proposed rule (which are

available via the Internet on the CMS Web site).

Comment: Commenters supported continuation of the policy to pay ASP+6 percent for therapeutic radiopharmaceuticals, if available, and to base payment on the mean unit cost derived from hospital claims data when not available. Commenters also requested that CMS examine ways to compensate hospitals for their documented higher overhead and handling costs associated with radiopharmaceuticals.

Response: We appreciate the commenters' support. However, as we stated earlier in section V.B.1.c. of this final rule with comment period in response to a similar request for additional radiopharmaceutical payment, we continue to believe that a single payment is appropriate for radiopharmaceuticals with pass-through payment status in CY 2018 and that the payment rate of ASP+6 percent is appropriate to provide payment for both the radiopharmaceutical's acquisition cost and any associated nuclear medicine handling and compounding costs incurred by the hospital pharmacy. Payment for the radiopharmaceutical and radiopharmaceutical processing services is made through the single ASP-based payment. We refer readers to the CMS guidance document available via the Internet at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Archives.html> for details on submission of ASP data for therapeutic radiopharmaceuticals.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to continue to pay all nonpass-through, separately payable therapeutic radiopharmaceuticals at ASP+6 percent. We also are finalizing our proposal to continue to rely on CY 2016 mean unit cost data derived from hospital claims data for payment rates for therapeutic radiopharmaceuticals for which ASP data are unavailable. The CY 2018 final rule payment rates for nonpass-through separately payable therapeutic radiopharmaceuticals are included in Addenda A and B to this final rule with comment period (which are available via the Internet on the CMS Web site).

4. Payment Adjustment Policy for Radioisotopes Derived From Non-Highly Enriched Uranium Sources

Radioisotopes are widely used in modern medical imaging, particularly for cardiac imaging and predominantly for the Medicare population. Some of

the Technetium-99 (Tc-99m), the radioisotope used in the majority of such diagnostic imaging services, is produced in legacy reactors outside of the United States using highly enriched uranium (HEU).

The United States would like to eliminate domestic reliance on these reactors, and is promoting the conversion of all medical radioisotope production to non-HEU sources. Alternative methods for producing Tc-99m without HEU are technologically and economically viable, and conversion to such production has begun. We expect that this change in the supply source for the radioisotope used for modern medical imaging will introduce new costs into the payment system that are not accounted for in the historical claims data.

Therefore, beginning in CY 2013, we finalized a policy to provide an additional payment of \$10 for the marginal cost for radioisotopes produced by non-HEU sources (77 FR 68323). Under this policy, hospitals report HCPCS code Q9969 (Tc-99m from non-highly enriched uranium source, full cost recovery add-on per study dose) once per dose along with any diagnostic scan or scans furnished using Tc-99m as long as the Tc-99m doses used can be certified by the hospital to be at least 95 percent derived from non-HEU sources (77 FR 68321).

We stated in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68321) that our expectation is that this additional payment will be needed for the duration of the industry's conversion to alternative methods to producing Tc-99m without HEU. We also stated that we would reassess, and propose if necessary, on an annual basis whether such an adjustment continued to be necessary and whether any changes to the adjustment were warranted (77 FR 68316). We have reassessed this payment for CY 2018 and did not identify any new information that would cause us to modify payment. Therefore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33631), for CY 2018, we proposed to continue to provide an additional \$10 payment for radioisotopes produced by non-HEU sources.

Comment: Commenters supported CMS' proposal to provide an additional \$10 payment for the marginal cost of radioisotopes produced by non-HEU sources and supported continuation of the policy. However, the commenters requested that CMS update the payment amount using the hospital market basket update or hospital cost data. The commenters also requested that CMS assess whether the collection of a

beneficiary copayment could discourage hospital adoption.

Response: We appreciate the commenters' support. As discussed in the CY 2013 OPPS/ASC final rule with comment period, we did not finalize a policy to use the usual OPPS methodologies to update the non-HEU add-on payment (77 FR 68317). The purpose for the additional payment is limited to mitigating any adverse impact of transitioning to non-HEU sources and is based on the authority set forth at section 1833(t)(2)(E) of the Act. Accordingly, because we do not have authority to waive beneficiary copayment for this incentive payment, we believe it is unnecessary to assess whether a beneficiary copayment liability would deter a hospital from reporting HCPCS code Q9969. Furthermore, reporting of HCPCS code Q9969 is optional. Hospitals that are not experiencing high volumes of significantly increased costs are not obligated to request this additional payment (77 FR 68323).

Comment: One commenter requested that CMS publish HCPCS code volume and cost data in the proposed and final rule "Drug Blood Brachy Cost Statistics" files yearly.

Response: We appreciate the request and will consider revising the content of the "Drug Blood Brachy Cost statistics" file to include data on HCPCS code Q9969 for future rulemaking. In the interim, claims data on HCPCS code Q9969 are available for purchase in the claims data sets released with publication of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to continue the policy of providing an additional \$10 payment for radioisotopes produced by non-HEU sources for CY 2018, which will be the sixth year in which this policy is in effect in the OPPS. We will continue to reassess this policy annually, consistent with the original policy in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68319).

5. Payment for Blood Clotting Factors

For CY 2017, we provided payment for blood clotting factors under the same methodology as other nonpass-through separately payable drugs and biologicals under the OPPS and continued paying an updated furnishing fee (81 FR 79676). That is, for CY 2017, we provided payment for blood clotting factors under the OPPS at ASP+6 percent, plus an additional payment for the furnishing fee. We note that when blood clotting factors are provided in

physicians' offices under Medicare Part B and in other Medicare settings, a furnishing fee is also applied to the payment. The CY 2017 updated furnishing fee was \$0.209 per unit.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33631), for CY 2018, we proposed to pay for blood clotting factors at ASP+6 percent, consistent with our proposed payment policy for other nonpass-through, separately payable drugs and biologicals, and to continue our policy for payment of the furnishing fee using an updated amount. Our policy to pay for a furnishing fee for blood clotting factors under the OPSS is consistent with the methodology applied in the physician's office and in the inpatient hospital setting. These methodologies were first articulated in the CY 2006 OPSS final rule with comment period (70 FR 68661) and later discussed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66765). The proposed furnishing fee update was based on the percentage increase in the Consumer Price Index (CPI) for medical care for the 12-month period ending with June of the previous year. Because the Bureau of Labor Statistics releases the applicable CPI data after the MPFS and OPSS/ASC proposed rules are published, we were not able to include the actual updated furnishing fee in the proposed rules. Therefore, in accordance with our policy, as finalized in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66765), we proposed to announce the actual figure for the percent change in the applicable CPI and the updated furnishing fee calculated based on that figure through applicable program instructions and posting on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/index.html>.

Comment: Commenters' supported CMS' proposal to continue to pay for a blood clotting factor furnishing fee in the hospital outpatient department.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to provide payment for blood clotting factors under the same methodology as other separately payable drugs and biologicals under the OPSS and to continue payment of an updated furnishing fee. We will announce the actual figure of the percent change in the applicable CPI and the updated furnishing fee calculation based on that figure through the applicable program instructions and posting on the CMS Web site.

6. Payment for Nonpass-Through Drugs, Biologicals, and Radiopharmaceuticals With HCPCS Codes but Without OPSS Hospital Claims Data

In the CY 2018 OPSS/ASC proposed rule (82 FR 33631), for CY 2018, we proposed to continue to use the same payment policy as in CY 2017 for nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPSS hospital claims data, which describes how we determine the payment rate for drugs, biologicals, or radiopharmaceuticals without an ASP. For a detailed discussion of the payment policy and methodology, we refer readers to the CY 2016 OPSS/ASC final rule with comment period (80 FR 70442 through 70443). The proposed CY 2018 payment status of each of the nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPSS hospital claims data was listed in Addendum B to the proposed rule, which is available via the Internet on the CMS Web site.

Comment: One commenter, the manufacturer of Mylotarg[®], requested that CMS change the dose descriptor for HCPCS code J9300 from "Injection, gemtuzumab ozogamicin, 5 mg" to "Injection, gemtuzumab ozogamicin, 0.1 mg," to accommodate the new 4.5 mg vial size for Mylotarg[®]. The commenter noted that HCPCS code J9300 was inactive for a period of time because the prior version of gemtuzumab ozogamicin was removed from the market. As such, HCPCS code J9300 is assigned status indicator "E2 (items and services for which pricing information and claims data are not available)." The commenter also requested that CMS change the status indicator from "E2" to a payable status indicator.

Response: This comment is outside of the scope of the proposed rule. Requests for changes to Level II Alphanumeric HCPCS codes should be submitted to the CMS HCPCS Workgroup using CMS' standard procedures. Information on the Level II HCPCS code process is available via the Internet on the CMS Web site, which is publicly available at: <https://www.cms.gov/Medicare/Coding/MedHCPCSGenInfo/HCPCSCODINGPROCESS.html>.

After consideration of the public comments we received, we are finalizing our CY 2018 proposal without modification, including our proposal to assign drug or biological products status indicator "K" and pay for them separately for the remainder of CY 2018 if pricing information becomes available. The CY 2018 payment status of each of the nonpass-through drugs,

biologicals, and radiopharmaceuticals with HCPCS codes but without OPSS hospital claims data is listed in Addendum B to this final rule with comment period, which is available via the Internet on the CMS Web site.

7. Alternative Payment Methodology for Drugs Purchased Under the 340B Program

a. Background

The 340B Program, which was established by section 340B of the Public Health Service Act by the Veterans Health Care Act of 1992, is administered by the Health Resources and Services Administration (HRSA) within HHS. The 340B Program allows participating hospitals and other health care providers to purchase certain "covered outpatient drugs" (as defined under section 1927(k) of the Act and interpreted by HRSA through various guidance documents) at discounted prices from drug manufacturers. The statutory intent of the 340B Program is to maximize scarce Federal resources as much as possible, reaching more eligible patients, and providing care that is more comprehensive.¹⁸

The 340B statute defines which health care providers are eligible to participate in the program ("covered entities"). In addition to Federal health care grant recipients, covered entities include hospitals with a Medicare disproportionate share hospital (DSH) percentage above 11.75 percent. However, under Public Law 111-148, section 7101 expanded eligibility to critical access hospitals (CAHs), children's hospitals with a DSH adjustment greater than 11.75 percent, sole community hospitals (SCHs) with a DSH adjustment percentage of 8.0 percent or higher, rural referral centers (RRCs) with a DSH adjustment percentage of 8.0 percent or higher, and freestanding cancer hospitals with a DSH adjustment percentage above 11.75 percent. In accordance with section 340B(a)(4)(L)(i) of the Public Health Service Act, all participating hospital types must also meet other criteria.

HRSA calculates the ceiling price for each covered outpatient drug. The ceiling price is the drug's average manufacturer price (AMP) minus the unit rebate amount (URA), which is a statutory formula that varies depending on whether the drug is an innovator

¹⁸The House report that accompanied the authorizing legislation for the 340B Program stated: "In giving these 'covered entities' access to price reductions the Committee intends to enable these entities to stretch scarce Federal resources as far as possible, reaching more eligible patients and providing more comprehensive services." (H.R. Rept. No. 102-384(II), at 12 (1992)).

single source drug (no generic available), an innovator multiple source drug (a brand drug with available generic(s)), or a non-innovator multiple source (generic) drug.¹⁹ The ceiling price represents the maximum price a participating drug manufacturer can charge a covered entity for the drug. However, covered entities also have the option to participate in HRSA's Prime Vendor Program (PVP), under which the prime vendor can negotiate even deeper discounts (known as "subceiling prices") on some covered outpatient drugs. By the end of FY 2015, the PVP had nearly 7,600 products available to participating entities below the 340B ceiling price, including 3,557 covered outpatient drugs with an estimated average savings of 10 percent below the 340B ceiling price.²⁰

As we discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33632 and 33633), several recent studies and reports on Medicare Part B payments for 340B purchased drugs highlight a difference in Medicare Part B drug spending between 340B hospitals and non-340B hospitals as well as varying differences in the amount by which the Part B payment exceeds the drug acquisition cost.^{21 22 23} Links to the full reports referenced in this section can be found in the cited footnotes.

In its May 2015 Report to Congress, MedPAC analyzed Medicare hospital outpatient claims (excluding CAHs) along with information from HRSA on which hospitals participate in the 340B Program. MedPAC included data on all separately payable drugs under the OPPS except for vaccines and orphan drugs provided by freestanding cancer hospitals, RRCs, and SCHs. To estimate costs that 340B hospitals incur to acquire drugs covered under the OPPS,

¹⁹ 42 U.S.C. 256b(a)(1–2). Occasionally, a drug's URA is equal to its AMP, resulting in a 340B ceiling price of \$0. In these instances, HRSA has advised manufacturers to charge covered entities \$0.01 per unit.

²² Medicare Payment Advisory Commission. Report to the Congress: Overview of the 340B Drug Pricing Program. May 2015. Available at: <http://www.medpac.gov/docs/default-source/reports/may-2015-report-to-the-congress-overview-of-the-340b-drug-pricing-program.pdf?sfvrsn=0>.

²³ Government Accountability Office. "Medicare Part B Drugs: Action Needed to Reduce Financial Incentives to Prescribe 340B Drugs at Participating Hospitals GAO-15-442". June 2015. Available at: <https://www.gao.gov/assets/680/670676.pdf>.

MedPAC generally used the formula for calculating the 340B ceiling price: (AMP)—unit rebate amount (URA) × drug package size. The URA is determined by law and depends upon whether a drug is classified as single source, innovator multiple source, non-innovator multiple source, a clotting factor drug, or an exclusively pediatric drug. CMS provides this URA information to States as a courtesy. However, drug manufacturers remain responsible for correctly calculating the URA for their covered outpatient drugs. More information on the URA calculation and the Medicaid Drug Rebate Program may be found on the Web site at: <https://www.medicaid.gov/medicaid/prescription-drugs/medicaid-drug-rebate-program/index.html>.

Because MedPAC did not have access to AMP data, it used each drug's ASP as a proxy for AMP. MedPAC noted that ASP is typically slightly lower than AMP. The AMP is defined under section 1927(k)(1) of the Act as the average price paid to the manufacturer by wholesalers in the United States for drugs distributed to the retail pharmacy class of trade, minus customary prompt pay discounts. Manufacturers participating in Medicaid are required to report AMP data quarterly to the Secretary, and these prices are confidential. As described under section 1847A of the Act, the ASP is a manufacturer's unit sales of a drug to all purchasers in the United States in a calendar quarter divided by the total number of units of the drug sold by the manufacturer in that same quarter. The ASP is net of any price concessions such as volume, prompt pay, and cash discounts. Certain sales are exempt from the calculation of ASP, including sales at a nominal charge and 340B discounts.

In addition, MedPAC noted that, due to data limitations, its estimates of ceiling prices are conservative and likely higher (possibly much higher) than actual ceiling prices. Further details on the methodology used to calculate the average minimum discount for separately payable drugs can be found in Appendix A of MedPAC's May 2015 Report to Congress. In this report, MedPAC estimated that, on average, hospitals in the 340B Program "receive a minimum discount of 22.5 percent of the [ASP] for drugs paid under the [OPPS]."

In its March 2016 Report to Congress (page 79), MedPAC noted that another report, which MedPAC attributed to the Office of the Inspector General (OIG), recently estimated that discounts across all 340B providers (hospitals and certain clinics) average 33.6 percent of ASP, allowing these providers to generate

significant profits when they administer Part B drugs. According to the U.S. Government Accountability Office (GAO) report, the amount of the 340B discount ranges from an estimated 20 to 50 percent discount, compared to what the entity would have otherwise paid to purchase the drug. In addition, participation in the PVP often results in a covered entity paying a subceiling price on some covered outpatient drugs (estimated to be approximately 10 percent below the ceiling price) (U.S. Department of Health and Human Services, HRSA FY 2018 Budget Justification). Participation in the PVP is voluntary and free.

As noted in the CY 2018 OPPS/ASC proposed rule, with respect to chemotherapy drugs and drug administration services, MedPAC examined Medicare Part B spending for 340B and non-340B hospitals for a 5-year period from 2008 to 2012 and found that "Medicare spending grew faster among hospitals that participated in the 340B Program for all five years than among hospitals that did not participate in the 340B Program at any time during [the study] period" (MedPAC May 2015 Report to Congress, page 14). This is just one example of drug spending increases that are correlated with participation in the 340B Program and calls into question whether Medicare's current policy to pay for separately payable drugs at ASP+6 percent is appropriate in light of the discounted rates at which 340B hospitals acquire such drugs.

Further, GAO found that "in both 2008 and 2012, per beneficiary Medicare Part B drug spending, including oncology drug spending, was substantially higher at 340B DSH hospitals than at non-340B hospitals." According to the GAO report, this indicates that, on average, beneficiaries at 340B DSH hospitals were either prescribed more drugs or more expensive drugs than beneficiaries at the other non-340B hospitals in GAO's analysis. For example, in 2012, average per beneficiary spending at 340B DSH hospitals was \$144, compared to approximately \$60 at non-340B hospitals. The differences did not appear to be explained by the hospital characteristics GAO examined or patients' health status (GAO Report 15-442, page 20).

Under the OPPS, all hospitals (other than CAHs, which are paid based on 101 percent of reasonable costs as required by section 1834(g) of the Act) are currently paid the same rate for separately payable drugs (ASP+6 percent), regardless of whether the hospital purchased the drug at a

discount through the 340B Program. Medicare beneficiaries are liable for a copayment that is equal to 20 percent of the OPPI payment rate, which is currently ASP+6 percent (regardless of the 340B purchase price for the drug). Based on an analysis of almost 500 drugs billed in the hospital outpatient setting in 2013, the OIG found that, for 35 drugs, the “difference between the Part B [payment] amount and the 340B ceiling price was so large that, in at least one quarter of 2013, the beneficiary’s coinsurance alone . . . was greater than the amount a covered entity spent to acquire the drug” (OIG November 2015, Report OEI-12-14-00030, page 9).

In the CY 2009 OPPI/ASC final rule with comment period (73 FR 68655), we requested comments regarding the drug costs of hospitals that participate in the 340B Program and whether we should consider an alternative drug payment methodology for participating 340B hospitals. As noted above, in the time since that comment solicitation, access to the 340B Program was expanded under section 7101 of Public Law 111-148, which amended section 340B(a)(4) of the Public Health Service Act to expand the types of covered entities eligible to participate in the 340B Program. It is estimated that covered entities saved \$3.8 billion on outpatient drugs purchased through the 340B Program in 2013.²⁴ In addition, the number of hospitals participating in the program has grown from 583 in 2005 to 1,365 in 2010 and 2,140 in 2014 (MedPAC May 2015 Report to Congress). In its November 2015 report entitled “Part B Payments for 340B-Purchased Drugs,” the OIG found that Part B payments were 58 percent more than 340B ceiling prices, which allowed covered entities to retain approximately \$1.3 billion in 2013 (OEI-12-14-00030, page 8). Given the growth in the number of providers participating in the 340B Program and recent trends in high and growing prices of several separately payable drugs administered under Medicare Part B to hospital outpatients, we stated in the CY 2018 OPPI/ASC proposed rule that we believe it is timely to reexamine the appropriateness of continuing to apply the current OPPI methodology of ASP+6 percent to hospitals that have acquired those drugs under the 340B Program at significantly discounted rates.

MedPAC and OIG have recommended alternative drug payment methodologies for hospitals that participate in the 340B Program. In its March 2016 Report to

Congress, MedPAC recommended a legislative proposal related to payment for Part B drugs furnished by 340B hospitals under which Medicare would reduce payment rates for 340B hospitals’ separately payable 340B drugs by 10 percent of the ASP and direct the program savings from reducing Part B drug payment rates to the Medicare funded uncompensated care pool.²⁵ In its November 2015 report, the OIG described three options under which both the Medicare program and Medicare beneficiaries would be able to share in the program savings realized by hospitals and other covered entities that participate in the 340B Program (OEI-12-14-00030, pages 11-12). These options included: (1) Paying ASP with no additional add-on percentage; (2) paying ASP minus 14.4 percent; and (3) making payment based on the 340B ceiling price plus 6 percent of ASP for each 340B purchased drug (OEI-12-14-00030, page 11). Analysis in several of these reports notes limitations in estimating 340B-purchased drugs’ acquisition costs; the inability to identify which drugs were purchased through the 340B Program within Medicare claims data was one of those limitations.

b. OPPI Payment Rate for 340B Purchased Drugs

In the CY 2018 OPPI/ASC proposed rule (82 FR 33633 through 33634), we proposed changes to our current Medicare Part B drug payment methodology for 340B hospitals that we believe would better, and more appropriately, reflect the resources and acquisition costs that these hospitals incur. Such changes would allow the Medicare program and Medicare beneficiaries to pay less for drugs when hospitals participating in the 340B Program furnish drugs to Medicare beneficiaries that are purchased under the 340B Program.

Our goal is to make Medicare payment for separately payable drugs more aligned with the resources expended by hospitals to acquire such drugs while recognizing the intent of the 340B Program to allow covered entities, including eligible hospitals, to stretch scarce resources in ways that enable hospitals to continue providing access to care for Medicare beneficiaries and other patients. Medicare expenditures on Part B drugs have been rising and are projected to continue to rise faster than

overall health spending, thereby increasing this sector’s share of health care spending due to a number of underlying factors such as new higher price drugs and price increases for existing drugs.^{26,27} While we recognize the intent of the 340B Program, we believe it is inappropriate for Medicare to subsidize other activities through Medicare payments for separately payable drugs. We believe that any payment changes we adopt should be limited to separately payable drugs under the OPPI, with some additional exclusions. As a point of further clarity, CAHs are not included in this 340B policy change because they are paid under section 1834(g) of the Act. As stated in the CY 2018 OPPI/ASC proposed rule, these exclusions are for: (1) Drugs on pass-through payment status, which are required to be paid based on the ASP methodology, and (2) vaccines, which are excluded from the 340B Program. In addition, we solicited public comments on whether other types of drugs, such as blood clotting factors, should also be excluded from the reduced payment.

Data limitations inhibit our ability to identify which drugs were acquired under the 340B Program in the Medicare OPPI claims data. This lack of information within the claims data has limited researchers’ and our ability to precisely analyze differences in acquisition cost of 340B and non-340B acquired drugs with Medicare claims data. Accordingly, in the CY 2018 OPPI/ASC proposed rule (82 FR 33633), we stated our intent to establish a modifier, to be effective January 1, 2018, for hospitals to report with separately payable drugs that were not acquired under the 340B Program. Because a significant portion of hospitals paid under the OPPI participate in the 340B Program, we stated our belief that it is appropriate to presume that a separately payable drug reported on an OPPI claim was purchased under the 340B Program, unless the hospital identifies that the drug was not purchased under the 340B Program. We stated in the proposed rule that we intended to provide further details about this modifier in this CY 2018 OPPI/ASC final rule with comment period and/or through

subregulatory guidance, including guidance related to billing for dually eligible beneficiaries (that is, beneficiaries covered under Medicare and Medicaid) for whom covered entities do not receive a discount under the 340B Program.

A summary of public comments received and our responses pertaining to the modifier are included later in this section. As described in detail later in this section, we are implementing the modifier such that it is required for drugs that were acquired under the 340B Program instead of requiring its use on drugs that were *not* acquired under the 340B Program. In addition, we are establishing an informational modifier for use by certain providers who will be excepted from the 340B payment reduction.

Further, we note that the confidentiality of ceiling and subceiling prices limits our ability to precisely calculate the price paid by 340B hospitals for a particular covered outpatient drug. We recognize that each separately payable OPSS drug will have a different ceiling price (or subceiling price when applicable). Accordingly, we stated in the proposed rule that we believe using an average discounted price was appropriate for our proposal. Therefore, for CY 2018, we proposed to apply an average discounted price of 22.5 percent of the ASP for nonpass-through separately payable drugs purchased under the 340B Program, as estimated by MedPAC (MedPAC's May 2015 Report to Congress, page 7).

In the near-term, we believe that the estimated average minimum discount MedPAC calculated—22.5 percent of the ASP—adequately represents the average minimum discount that a 340B participating hospital receives for separately payable drugs under the OPSS. Given the limitations in calculating a precise discount for each OPSS separately payable drug, we did not attempt to do so for the proposed rule. Instead, we stated that we believed that using the analysis from the MedPAC report is appropriate and noted that the analysis is spelled out in detail and can be replicated by interested parties. As MedPAC noted, its estimate was conservative and the actual average discount experienced by 340B hospitals is likely much higher than 22.5 percent of the ASP. As GAO mentioned, discounts under the 340B Program range from 20 to 50 percent of the ASP (GAO-11-836, page 2). We believe that such reduced payment would meet the requirements under section 1833(t)(14)(A)(iii)(II) of the Act, which states that if hospital acquisition cost data are not available, the payment

for an applicable drug shall be the average price for the drug in the year established under section 1842(o), section 1847A, or section 1847B of the Act, as the case may be, as calculated and adjusted by the Secretary as necessary. We do not have hospital acquisition cost data for 340B drugs and, therefore, proposed to continue to pay for these drugs under our authority at section 1833(t)(14)(A)(iii)(II) of the Act at ASP, and then to adjust that amount by applying a reduction of 22.5 percent, which, as explained throughout this section, is the adjustment we believe is necessary for drugs acquired under the 340B Program.

Specifically, in the CY 2018 OPSS/ASC proposed rule, we proposed to apply section 1833(t)(14)(A)(iii)(II) of the Act to all separately payable drugs and biologicals, including SCODs. However, we proposed to exercise the Secretary's authority to adjust the applicable payment rate as necessary and, for separately payable drugs and biologicals (other than drugs with pass-through payment status and vaccines) acquired under the 340B Program, we proposed to adjust the rate to ASP minus 22.5 percent, which we believe better represents the average acquisition cost for these drugs and biologicals.

As indicated earlier, because ceiling prices are confidential, we are unable to publicly disclose those prices or set payment rates in a way that would allow the public to determine the ceiling price for a particular drug. We believe that the MedPAC analysis that found the average minimum discount of 22.5 percent of ASP adequately reflects the average minimum discount that 340B hospitals paid under the OPSS receive. In addition, we believe that using an average discount to set payment rates for OPSS separately payable drugs would achieve the dual goals of (1) adjusting payments to better reflect resources expended to acquire such drugs, and (2) protecting the confidential nature of discounts applied to a specific drug. Moreover, we do not believe that Medicare beneficiaries should be liable for a copayment rate that is tied to the current methodology of ASP+6 percent when the actual cost to the hospital to purchase the drug under the 340B Program is much lower than the ASP for the drug.

We note that MedPAC excluded vaccines from its analysis because vaccines are not covered under the 340B Program, but it did not exclude drugs with pass-through payment status. Further, because data used to calculate ceiling prices are not publicly available, MedPAC instead estimated “the lower bound of the average discount received

by 340B hospitals for drugs paid under the [OPSS]” (MedPAC May 2015 Report to Congress, page 6). Accordingly, it is likely that the average discount is higher, potentially significantly higher, than the average minimum of 22.5 percent that MedPAC found through its analysis. In the proposed rule, we encouraged the public to analyze the analysis presented in Appendix A of MedPAC's May 2015 Report to Congress.

As noted earlier, we believe that the discount amount of 22.5 percent below the ASP reflects the average minimum discount that 340B participating hospitals receive for drugs acquired under the 340B Program, and in many cases, the average discount may be higher for some covered outpatient drugs due to hospital participation in the PVP, substitution of ASP (which includes additional rebates) for AMP, and that drugs with pass-through payment status were included rather than excluded from the MedPAC analysis. We believe that a payment rate of ASP+6 percent does not sufficiently recognize the significantly lower acquisition costs of such drugs incurred by a 340B-participating hospital. Accordingly, as noted earlier, we proposed to reduce payment for separately payable drugs, excluding drugs on pass-through payment status and vaccines, that were acquired under the 340B Program by 22.5 percent of ASP for all drugs for which a hospital does not append on the claim the modifier mentioned in the proposed rule and discussed further in this final rule with comment period. (As detailed later in this section, we are instead requiring hospitals to append the applicable modifier on the claim line with any drugs that were acquired under the 340B Program.)

Finally, as detailed in the impact analysis section (section XIX.A.5.a.2) of the proposed rule, we also proposed that the reduced payments for separately payable drugs and biologicals purchased under the 340B Program are included in the budget neutrality adjustments, under the requirements in section 1833(t)(9)(B) of the Act, and that the budget neutral weight scalar is not applied in determining payments for these separately paid drugs and biologicals purchased under the 340B Program. In that section, we also solicited public comments on whether we should apply all or part of the savings generated by this payment reduction to increase payments for specific services paid under the OPSS, or under Part B generally, in CY 2018, rather than simply increasing the conversion factor. In particular, we

requested public comments on whether and how the offsetting increase could be targeted to hospitals that treat a large share of indigent patients, especially those patients who are uninsured. In addition, we requested public comments on whether savings associated with this proposal would result in unnecessary increases in the volume of covered services paid under the OPPIs that should be adjusted in accordance with section 1833(t)(2)(F) of the Act. More information on the impact estimate associated with this proposal was included in section XIX.A.5.a.2. of the proposed rule. A summary of the public comments received on the impact estimate, along with our responses to those comments and our estimate of this provision for this final rule with comment period, are included in section XVIII.A.5. of this final rule with comment period.

c. Summaries of Public Comments Received and Our Responses

(1) Overall Comments

Comment: Several commenters, including organizations representing physician oncology practices, pharmaceutical research and manufacturing companies, a large network of community-based oncology practices, and several individual Medicare beneficiaries, supported the proposal. Some of these commenters commended CMS for its proposal, which they believed would help address the growth of the 340B Program, stem physician practice consolidation with hospitals, and preserve patient access to community-based care.

One of these commenters stated that the proposals would reduce drug costs for seniors by an estimated \$180 million a year; help to stop hospital “abuses” of the 340B program; and help reverse the “perverse incentives” that have driven the closure and consolidation of the nation’s community cancer care system.

Another commenter, representing a large network of community-based oncology practices, noted that since 2008, 609 community cancer practices have been acquired or become affiliated with hospitals, with 75 percent of those community cancer practices acquired by 340B-participating hospitals. The commenter stated that the consolidation in oncology care has resulted in a 30 percent shift in the site of service for chemotherapy administration from the physician office setting to the more costly hospital outpatient setting.

One commenter, an organization representing community oncology practices, cited several issues that the proposal would help address, including

that only a small minority of 340B participating hospitals are using the program to benefit patients in need; cancer patients in need are being denied care at 340B participating hospitals or placed on wait lists; and hospitals are making extreme profits on expensive cancer drugs and are consolidating the nation’s cancer care system, reducing patient choice and access and shifting care away from the private, physician-owned community oncology clinics into the more expensive 340B hospital setting, which is increasing costs for Medicare and its beneficiaries. In addition, this commenter stated that the increasing scope and magnitude of required 340B discounts are increasing drug prices to record-breaking levels as manufacturers factor these discounts into pricing decisions. The commenter also cited a report that it recently released that suggests, and provides anecdotal evidence supporting, that some 340B hospitals offered little charity care and turned away some patients in need because those patients were uninsured.²⁸

With respect to the magnitude of the proposed payment reduction of ASP minus 22.5 percent, one commenter noted that although the proposed decrease in payment may seem “severe,” ASP minus 22.5 percent is the minimum discount that hospitals in the 340B Program receive. The commenter further noted that, with 340B discounts on brand drugs approaching, and even exceeding, 50 percent, there is still substantial savings—on the order of 50 percent drug margins—for hospitals to use to provide direct and indirect patient benefits. The commenter also noted that this proposal would result in cost-sharing savings to Medicare beneficiaries, for whom drug cost is an important component of overall outpatient cancer care costs.

Some commenters urged HHS, specifically CMS and HRSA, to work with Congress to reform the 340B Program. One commenter requested greater transparency and accountability on how 340B savings are being used, as well as a specific definition of the “340B patient,” which the commenter noted would require a legislative change.

Response: We thank the commenters for their support. As mentioned in the proposed rule, we share the commenters’ concern that current Medicare payments for drugs acquired under the 340B Program are well in

excess of the overhead and acquisition costs for drugs purchased under the 340B Program. We continue to believe that our proposal would better align Medicare payment for separately payable drugs acquired under the 340B Program with the actual resources expended to acquire such drugs. Importantly, we continue to believe that Medicare beneficiaries should be able to share in the savings on drugs acquired through the 340B Program at a significant discount. We also appreciate the comments supporting the proposed payment amount for drugs acquired under the 340B Program of ASP minus 22.5 percent, which we believe, like several commenters, is an amount that allows hospitals to retain a profit on these drugs for use in the care of low-income and uninsured patients. As detailed later in this section, we are finalizing our proposal, with modifications, in response to public comments.

As previously stated, CMS does not administer the 340B Program. Accordingly, feedback related to eligibility for the 340B Program as well as 340B Program policies are outside the scope of the proposed rule and are not addressed in this final rule with comment period.

Comment: Several commenters expressed concern with the rising cost of drugs and the impact on beneficiaries and taxpayers. These commenters offered varied opinions on whether the proposal would achieve CMS’ goal of lowering drug prices and reducing beneficiary out-of-pocket costs. Some commenters stated that the proposal has the potential to alleviate the financial burden that high-cost drugs place on patients. Other commenters stated that, because the proposal does not address the issue of expansion of 340B entities, the volume of 340B discounted drugs, and the affordability of drugs, especially oncology drugs, CMS should not finalize the proposal.

One commenter, an individual who supported the proposal, stated that although the majority of patients with Medicare Part B coverage have supplemental coverage to pay their coinsurance, significant numbers do not have this additional protection. The commenter noted that, for a drug that is paid at \$10,000 per month, the price reduction would save a beneficiary approximately \$500 a month, which may be the difference between getting treatment and foregoing treatment due to financial reasons.

Another commenter, a large organization with many members who are Medicare beneficiaries, stated that the proposal would provide a measure

²⁸ Community Oncology Alliance. Report: “How Abuse of the 340B Program is Hurting Patients” September 2017. Available at: https://www.communityoncology.org/wp-content/uploads/2017/09/COA_340B-PatientStories_FINAL.pdf.

of price relief to the 16 percent of Medicare beneficiaries without supplemental coverage. The commenter also expressed concern that the proposal would have serious health implications for beneficiaries in safety-net hospitals. The commenter urged HHS to develop proposals that will lower underlying drug prices, but did not provide any specific examples of such proposals. Another commenter stated that the cost of drugs is becoming unsustainable and applying the proposed policy is a decent “baby step” in controlling a situation that is “grossly” unfair to American taxpayers, especially when the development of new drugs is frequently funded to a large extent by taxpayers through Federal grants.

In addition, one commenter, a large organization representing its physician and medical student members, commented that it shares the Administration’s interest in addressing the rising costs of drugs and biologicals. The commenter appreciated that the proposal would address a longstanding concern: That the current payment policy for Part B drugs creates strong incentives to move Medicare beneficiary care from lower cost sites of care (such as physician offices) to higher cost sites of care (such as hospital outpatient departments). The commenter noted that many smaller physician practices have had to refer cancer and other patients who need chemotherapy and other expensive drugs to the hospital outpatient setting because the ASP+6 percent payment does not always cover a physician’s acquisition cost, thereby undermining continuity of care and creating burdens for frail and medically compromised patients.

This commenter also stated that, given the 340B Program’s focus on low-income patients, it is imperative to ensure that an across-the-board reduction actually reflects the size of the 340B discount to avoid creating barriers to access, should both physician practices and the hospital outpatient departments be unable to cover actual acquisition costs. Further, the commenter noted that it is essential that “a bright line policy does not inadvertently deleteriously impact patient access in all sites of care.” Finally, the commenter stated that, while the proposed policy alters the relative disparity between payments for some hospital outpatient departments and physician practices, it still does not address the persistent challenges physician practices face in obtaining payment that covers acquisition costs.

Response: We thank the commenters’ for their feedback and share their concern about the high cost of drugs and

their effect on Medicare beneficiaries. As discussed in detail later in this section, we are finalizing a change to the payment rate for certain Medicare Part B drugs purchased by hospitals through the 340B Program in order to lower the cost of drugs for seniors and ensure that they benefit from the discounts provided through the program. We look forward to working with Congress to provide HHS additional 340B programmatic flexibility, which could include tools to provide additional considerations for safety net hospitals, which play a critical role in serving our most vulnerable populations.

As a general matter, we note that, even though many beneficiaries have supplemental coverage, beneficiaries often pay a premium for such supplemental coverage and those plans make coinsurance payments for the beneficiary. Thus, to the extent Medicare would be lessening the coinsurance amount such supplemental plans would have to make, we would expect the price of such plans to decrease or otherwise reflect these lower costs in the future, thereby lowering the amount that beneficiaries pay for supplemental plan coverage. Further, for those Medicare beneficiaries who do not have supplemental coverage at all or who have a supplemental plan that does not cover all of a beneficiary’s cost-sharing obligation, the proposed policy would directly lower out-of-pocket spending for 340B-acquired drugs for those beneficiaries.

In addition, we note that in the hospital setting, not only are beneficiaries liable for cost-sharing for drugs they receive, but they also incur a “facility fee” solely because the drug was furnished in the hospital setting. As described in section II.A.3.b. of this final rule with comment period, for CY 2018, we are adopting a policy to conditionally package Level 1 and Level 2 Drug Administration services and believe that these steps, taken together, may help encourage site-neutral care in that beneficiaries may receive the same drugs and drug administration services at the physician office setting without a significant difference in their financial liability between settings.

As previously stated, we believe that ASP minus 22.5 percent is a lower bound estimate of the average discount given to hospitals participating in the 340B Program. Accordingly, we disagree that this proposal represents a “bright-line” policy that would hinder safety-net hospitals’ ability to treat patients.

While the commenter’s request that HHS develop proposals to lower underlying drug prices is outside the scope of the proposals made in the

proposed rule, we note that lowering the price of pharmaceuticals is a top priority, and we are committed to finding ways for Medicare payment policy not to incentivize use of overpriced drugs. With respect to Medicare Part B drug payment under the OPSS, we believe that reducing payments on 340B purchased drugs to better align with hospital acquisition costs directly lowers drug costs for those beneficiaries who receive a covered outpatient drug from a 340B participating hospital by reducing their copayments. Further, to the extent that studies have found that 340B participating hospitals tend to use more high cost drugs, we believe that this proposal helps address the incentive for hospitals to utilize these drugs in this manner solely for financial reasons.

The expansion of 340B entities, the volume of 340B discounted drugs, and the affordability of drugs are outside the authority conferred by section 1833(t) of the Act (and, thus, are outside the scope of the proposed rule), and we see no reason to withdraw the proposal solely on account of these issues not being addressed by the proposal. Likewise, we note that the public comments on Medicare Part B drug payment in the physician office setting are also outside the scope of the proposed rule, and, therefore, are not addressed in this final rule with comment period.

Comment: Several commenters, including organizations representing 340B-eligible safety-net hospitals in urban and rural areas and teaching hospitals, were generally opposed to the proposed changes and urged CMS to withdraw the proposal from consideration. As detailed further below, these commenters believed that the Secretary lacks statutory authority to impose such a large reduction in the payment rate for 340B drugs, and contended that such change would effectively eviscerate the 340B Program. The commenters further noted that Medicare payment cuts of this magnitude would greatly “undermine 340B hospitals’ ability to continue programs designed to improve access to services—the very goal of the 340B Program.”

These commenters urged that, rather than “punitively targeting” 340B safety-net hospitals serving vulnerable patients, including those in rural areas, CMS instead redirect its efforts to halt the “unchecked, unsustainable increases” in the price of drugs.

Response: We do not believe that our proposed policy “punitively” targets safety-net hospitals. The current OPSS payment rate of ASP+6 percent significantly exceeds the discounts

received for covered outpatient drugs by hospitals enrolled in the 340B Program, which can be as much as 50 percent below ASP (or higher through the PVP). As stated throughout this section, ASP minus 22.5 percent represents the average minimum discount that 340B enrolled hospitals paid under the OPPS receive. We also have noted that 340B participation does not appear to be well-aligned with the provision of uncompensated care, as some commenters suggested. As stated earlier in this section, while the commenter's request that HHS develop proposals to lower underlying drug prices is outside the scope of the proposals made in the proposed rule, we note that lowering the price of pharmaceuticals is a top priority.

(2) Comments on the Statutory Authority for the 340B Payment Proposal

Many commenters challenged the statutory authority of various aspects of the proposal. These comments are summarized into the broad categories below. For the reasons stated below, we disagree with these comments and believe that our proposal is within our statutory authority to promulgate.

• Secretary's Authority to Calculate and Adjust 340B-Acquired Drug Payment Rates

Comment: Commenters asserted that section 1833(t)(14)(A)(iii)(II) of the Act does not authorize CMS to "calculate and adjust" the payment rate in a manner that would "eviscerate" the 340B Program as it applies to 340B hospitals. Some commenters asserted that the plain and ordinary meaning of the terms "calculate" and "adjust" express a limited and circumscribed authority to set the payment rate. The commenters noted that the Oxford Dictionaries define "calculate" as "determine (the amount or number of something) mathematically;" likewise, to "adjust" is to "alter or move (something) slightly in order to achieve the desired fit, appearance, or result." Consequently, the commenters asserted that section 1833(t)(14)(A)(iii)(II) of the Act restricts the agency to mathematically determining "an appropriate, slight alteration." Further, they posited that the law does not convey the power to adopt what they referred to as a novel, sweeping change to the payment rate that is a significant numerical departure from the previous rate and that would result in a reduction in payment to 340B hospitals of at least \$900 million, according to the agency's own estimates, or \$1.65 billion, according to the commenter's estimates.

Another commenter stated that the Secretary's limited adjustment authority under section 1833(t)(14)(A)(iii)(II) of the Act does not "extend so far as to gut" what it referred to as an "explicit statutory directive". For example, the commenter referred the agency to *Pettibone Corp. v. United States*, 34 F.3d 536, 541 (7th Cir. 1994) (an agency's authority to interpret a statute "must not be confused with a power to rewrite").

Some commenters, including an organization representing over 1,300 providers enrolled in the 340B Program, argued that the proposal would take away almost the entire 340B discount for many 340B drugs, especially brand name drugs (which they asserted were many of the drugs affected by the proposal). These commenters asserted that the Secretary does not have the authority to calculate and adjust 340B-acquired drug rates in this manner and noted that the standard 340B ceiling price for a brand name drug is AMP minus 23.1 percent, although the price can be lower if the drug's best price is lower or if the manufacturer increases the price of the drug more quickly than the rate of inflation. In addition, the commenters asserted that if a brand name drug's 340B ceiling price was based on the standard formula, the proposal would strip the hospital of nearly all its 340B savings because "AMP has been found to be close to ASP." Thus, the commenters asserted, the proposed payment rate of ASP minus 22.5 percent is nearly identical to AMP minus 23.1 percent, leaving the hospital with "virtually no 340B savings."

Some commenters stated that the proposal mistakenly assumes that 340B hospitals purchase most 340B drugs at subceiling prices negotiated by the PVP. These commenters noted that some hospitals estimate that less than 10 percent of the drugs affected by the proposal are available at a subceiling price.

In addition, some commenters contended that subclause (I) of section 1833(t)(14)(A)(iii) establishes that the payment rate for subsequent years be set to the average acquisition cost of the drug taking into account hospital acquisition costs survey data collected through surveys meeting precise statutory requirements, and that such subclause does not provide adjustment authority for the agency. They stated that subclause (II) of section 1833(t)(14)(A)(iii) of the Act directs CMS, where acquisition cost data are not available, to set payment rates by reference to ASP provisions. Considered in context, the commenters stated that the statute reflects Congress's intent to

limit CMS' authority to set payment rates and, consequently, is consistent with adjustment authority under subclause (II)—to convey only limited authority for any agency to adjust the payment rate. The commenters referred to *Roberts v. Sea-Land Servs., Inc.*, 566 U.S. 93, 101 (2012) (Statutory provisions ". . . cannot be construed in a vacuum. It is a fundamental canon of statutory construction that the words of a statute must be read in their context and with a view to their place in the overall statutory scheme") to support their conclusions, although the commenters did not elaborate on the particular relevance of this case.

Finally, some commenters raised concern over the Secretary's use of the May 2015 MedPAC estimate as support for the 340B payment proposal. These commenters stated that the Secretary did not conduct his own independent analysis to support the payment proposal nor did he provide justification for use of MedPAC's analysis. One commenter stated that the Secretary cannot implement a payment cut of the magnitude proposed without providing a sufficient and replicable methodology that supports the proposal and that relying on a MedPAC analysis does not suffice for this "important fiduciary, and legal, requirement."

Response: We believe our authority under section 1833(t)(14)(A)(iii)(II) of the Act to "calculate and adjust" drug payments "as necessary for purposes of this paragraph" gives the Secretary broad discretion to adjust payments for drugs, which we believe includes an ability to adjust Medicare payment rates according to whether or not certain drugs are acquired at a significant discount. We disagree that this Medicare payment policy would effectively eviscerate the 340B Program and note that this proposal solely applies to applicable drug payments under the Medicare program; it does not change a hospital's eligibility for the 340B program. Further, under our proposal, we anticipate that the Medicare payment rate would continue to exceed the discounted 340B price the hospital received under the 340B program.

As previously stated, MedPAC's estimate of ASP minus 22.5 percent represents a lower bound estimate of the average minimum discount and the actual discount is likely much higher—up to 50 percent higher, according to some estimates, for certain drugs. In some cases, beneficiary coinsurance alone exceeds the amount the hospital paid to acquire the drug under the 340B Program (OIG November 2015, Report OEI-12-14-00030, page 9). We did not

receive public comments suggesting an alternative minimum discount off the ASP that would better reflect the hospital acquisition costs for 340B-acquired drugs. We believe this is notable because hospitals have their own data regarding their own acquisition costs, as well as data regarding OPPS payment rates for drugs. The fact that hospitals did not submit comments suggesting an alternative minimum discount that would be a better, more accurate reflection of the discount at issue is instructive for two reasons. One, it gives us confidence that our suggested payment of ASP minus 22.5 percent is, in fact, the low bound of the estimate and keeps Medicare payment within the range where hospitals will not be underpaid for their acquisition costs of such drugs. Two, it gives us confidence that the affected hospital community does not believe there is some other number, such as ASP minus 24 percent or ASP minus 17 percent, that would be a better, more accurate measure of what Medicare Part B should pay for drugs acquired at a discount through the 340B Program. Given the limitations in calculating a precise discount for each OPPS separately payable drug, we did not attempt to do so for the proposed rule. Instead, we stated that we believed that using the analysis from the MedPAC report is appropriate because MedPAC's estimate is based on all drugs separately paid under the OPPS except for vaccines, which are not eligible for 340B prices. Furthermore, the analysis is publicly available and can be replicated by interested parties.

With respect to the comments about the PVP, as previously stated, by the end of FY 2015, the PVP had nearly 7,600 products available to participating entities below the 340B ceiling price, including 3,557 covered outpatient drugs with an estimated average savings of 10 percent below the 340B ceiling price. Participation in the PVP is voluntary and free, and we are aware of no reason that an eligible entity would not participate.

Furthermore, we disagree that the Secretary's authority under section 1834(t)(14)(A)(iii)(II) of the Act to calculate and adjust drugs rates as necessary is limited to what some might consider minor changes and find no evidence in the statute to support that position. As previously stated, we believe that ASP minus 22.5 percent represents the average minimum discount that hospitals paid under the OPPS received for drugs acquired under the 340B Program and reiterate that, in many instances, the discount is much higher. Thus, we are using this authority

to apply a downward adjustment that is necessary to better reflect acquisition costs of those drugs.

- Authority To Vary Payment by Hospital Group

Comment: Some commenters asserted that only subparagraph (I), and not subparagraph (II), of section 1833(t)(14)(A)(iii) of the Act permits CMS to vary payment "by hospital group." These commenters suggested that, by including "by hospital group" in subparagraph (I) and omitting it in subparagraph (II), Congress expressed its intent that CMS may not vary prices by hospital group under subparagraph (II). They further commented that the subparagraph (II) methodology must apply to "the drug," and CMS may not vary payment for the same drug based upon the type of hospital.

Response: We disagree with the commenters who argue that the proposed policy would exceed the Secretary's authority under the statute by inappropriately varying payments for drugs by "hospital group" because we rely on section 1833(t)(14)(A)(iii)(II) of the Act, even though the explicit authority to vary payment rates by hospital group is in subclause (I) of section 1833(t)(14)(A)(iii) of the Act, not subclause (II). As noted above, we believe our authority under section 1833(t)(14)(A)(iii)(II) of the Act to "calculate and adjust" drug payments "as necessary for purposes of this paragraph" gives the Secretary broad discretion to adjust payments for drugs, which we believe includes an ability to adjust payment rates according to whether or not certain drugs are acquired at a significant discount for Medicare beneficiaries. Although we acknowledge that hospitals are eligible to receive drugs at discounted rates under the 340B Program if they qualify as a "covered entity" for purposes of the 340B Program, not all drugs for which a covered entity submits a claim for payment under the OPPS are necessarily acquired under the 340B Program. The OPPS payment for those drugs not acquired under the 340B Program would continue to be paid at ASP+6 percent.

We also note generally that the OPPS statute authorized the Secretary to establish appropriate Medicare OPPS payment rates for covered outpatient drugs. After specifically setting forth the payment methodology for 2004 and 2005, Congress provided that the Secretary could set OPPS drug prices in one of two ways: Using the average acquisition cost for the drug for that year, or using the average price for that drug in the year. However, in either case, prices set using either benchmark

may be adjusted by the Secretary. Such adjustments may occur under section 1833(t)(14)(A)(iii)(II) of the Act if the Secretary determines they are "necessary for purposes of" section 1833(t)(14) of the Act, and this paragraph of the Medicare OPPS statute repeatedly discusses terms like "hospital acquisition cost" and "variation in hospital acquisition costs", and specifically notes in one section that it is within the Secretary's authority to determine that the payment rate for one drug "may vary by hospital group." It would be odd for Congress to have a significant delegation of authority to the Secretary, use these specific terms and considerations throughout section 1833(t)(14) of the Act, and then assume the Secretary is foreclosed from taking into account those considerations in adjusting ASP "as necessary for purposes" of section 1833(t)(14) of the Act. The Secretary is generally empowered to adjust drug prices "as necessary" for the overall purposes of section 1833(t)(14) of the Act, and there is nothing in section 1833(t)(14) of the Act to indicate the Secretary is foreclosed from varying Medicare OPPS payment for a drug, depending on whether a 340B hospital acquired that drug at such a substantially lower acquisition cost.

- Authority To Establish Payment Rates in the Absence of Acquisition Cost Survey Data and Authority to Base Payment on an Average Discount

Comment: Some commenters, including a commenter representing teaching hospitals, stated that the Secretary ignored the statutory directive in section 1833(t)(14) of the Act to set payment rates at the average acquisition cost for specific drugs and not to use averages for all drugs. In addition, the commenters stated that section 1833(t)(14) of the Act requires the Secretary to rely on an average of acquisition cost data and sales prices for a given drug, not an average discount that is applied to all drugs acquired under the 340B Program.

One commenter stated that the Secretary impermissibly conflates the two alternative methods for setting payment rates, "essentially discarding Congress' requirement that any survey data used in setting payment rates must be derived from statistically rigorous surveys." This commenter asserted that the Secretary is using MedPAC's estimate of average discounts as a proxy or replacement for the surveys required under subsection (iii)(I).

Response: We disagree that section 1833(t)(14)(A)(iii)(II) of the Act requires use of survey data and note that, unlike

subclause (I) of this section, subclause (II) does not require taking survey data into account for determining average price for the drug in the year. We continue to believe that section 1833(t)(14)(A)(iii)(II) of the Act grants the Secretary the authority to calculate and adjust rates as necessary in the absence of acquisition cost. Moreover, under section 1833(t)(14)(A) of the Act, there still will be one starting, baseline price for an applicable drug, that is, the rate that applies under 1842(o), 1847A, or section 1847B, as the case may be, as calculated and adjusted by the Secretary. For drugs not acquired under the 340B Program, we will continue to utilize that price (ASP+6 percent), which as we have explained “requires no further adjustment” because it “represents the combined acquisition and pharmacy overhead payment for drugs and biologicals.” However, for drugs acquired through the 340B Program, we are adjusting that price downward (ASP minus 22.5 percent) to more closely align with the hospital acquisition cost for a drug when purchased at a discounted price under the 340B Program. In the absence of acquisition costs from hospitals that purchase drugs through the 340B Program, we believe it is appropriate to exercise our authority to adjust the average price for 340B-acquired drugs, which are estimated to be acquired at an average minimum discount of ASP minus 22.5 percent. Importantly, because we are not using authority under section 1833(t)(14)(A)(iii)(I) of the Act (as the commenter suggested), we disagree with the commenter’s suggestion that the Secretary is using the MedPAC analysis to stand in the place of the survey requirement under subclause (I).

- Current Agency View Contrasts With Longstanding Practice

Comment: Some commenters contended that the proposal contrasts sharply with the agency’s previous view and longstanding practice of applying the statutory scheme of section 1833(t)(14) of the Act. These commenters noted that since CMS began relying on subclause (II) in 2012 to set the payment rate, the agency has never invoked the discretionary authority. The commenters stated that, instead, CMS stated that the statutory default of ASP+6 percent “requires no further adjustment” because it “represents the combined acquisition and pharmacy overhead payment for drugs and biologicals.” Moreover, the commenters added, CMS has applied the statutory default rate without further adjustment in each subsequent year. They asserted

that the CY 2018 proposal, in contrast, departs dramatically from longstanding prior practice and adopts a substantially reduced payment rate of ASP minus 22.5 percent for drugs acquired under a 340B Program.

Response: As discussed in the earlier background section, section 1833(t)(14)(A)(iii)(II) of the Act grants the Secretary authority to adjust, as necessary for purposes of paragraph (14) of section 1833(t) of the Act, the applicable payment rate for separately payable covered outpatient drugs under the OPSS. Specifically, we believe that the proposed reduced payment for 340B-acquired drugs would meet the requirements under section 1833(t)(14)(A)(iii)(II) of the Act, which states that if hospital acquisition cost data are not available, the payment for an applicable drug shall be the average price for the drug in the year established under section 1842(o), section 1847A, or section 1847B of the Act, as the case may be, *as calculated and adjusted by the Secretary as necessary for purposes of this paragraph* (paragraph (14) of section 1833(t) of the Act) (emphasis added). We do not have hospital acquisition cost data for 340B drugs and, therefore, we proposed to continue to pay for these drugs under the methodology in our authority at section 1833(t)(14)(A)(iii)(II) of the Act which we determined to be ASP, and then to adjust that amount by applying a reduction of 22.5 percent to that payment methodology, which, as explained throughout this section, is the adjustment we believe is necessary to more closely align with the acquisition costs for drugs acquired under the 340B Program.

As previously stated, we believe that using an average discount to set payment rates for separately payable 340B-acquired drugs will achieve the dual goals of (1) adjusting payments to better reflect resources expended to acquire such drugs and (2) protecting the confidential nature of discounts applied to a specific drug. Furthermore, our proposed and finalized policy will lower OPSS payment rates for Medicare beneficiaries who receive drugs at hospitals subject to the 340B payment reduction.

In addition, we do not believe that the fact that we have not historically utilized our adjustment authority under section 1833(t)(14)(A)(iii)(II) of the Act to adjust payment amounts for separately payable 340B-acquired drugs means we are permanently barred from adjusting these payments where, as here, we have provided a reasoned explanation for doing so. We continue to believe, as the commenter noted, that

ASP+6 percent requires no further adjustment for drugs that are not acquired under the 340B Program because, at this time, we have not found similar evidence of the difference between the statutory benchmark (ASP+6 percent) and average hospital acquisition costs for such drugs. However, that is not the case for 340B-acquired drugs. As explained in detail throughout this section, we believe that a payment amount of ASP minus 22.5 percent for drugs acquired under the 340B Program is better aligned to hospitals’ acquisition costs and thus this adjustment, for drugs acquired under the 340B Program, is necessary for Medicare OPSS payment policy.

- Violation of Section 340B of the Public Health Service Act

Comment: Some commenters stated that the proposed payment reduction would violate the 340B statute, which expressly defines the types of hospitals that may receive the benefits of 340B discounts. One commenter asserted that the payment proposal would “hijack Congress’ carefully crafted statutory scheme by seizing 340B discounts from hospitals and transferring the funds to providers that Congress excluded from the 340B Program,” thereby violating section 340B of the Public Health Service Act. The commenter further noted that discounts under the 340B Program are only available to “covered entities” that are defined by law and that Congress thus intended the benefits of the program to accrue to these providers only. The commenter contended that Congress’ reference to Medicare definitions when describing covered entities demonstrates that it considered the Medicare program when it adopted the 340B Program and decided not to grant discounts to all Medicare hospitals. Rather, the commenter believed that Congress made a deliberate decision to limit the benefits of the 340B Program only to Medicare hospitals that serve large numbers of low-income or other underprivileged patients. In addition, the commenter stated that when Congress has intended Federal health care programs to intrude upon the 340B Program, it has been crystal clear.

In contrast, commenters asserted that Congress has been wholly silent on the relationship between 340B and Medicare Part B, which indicates Congress’s intent that Medicare should not “encroach” upon the 340B Program by “redistributing [340B] discounts to non-340B providers.” The commenters noted that the 340B statute and Medicare have coexisted for several years and that Congress has had ample

opportunity to amend the Medicare statute governing Part B payments and/or the 340B statute to expressly permit CMS to reduce Medicare payments to 340B hospitals, but has not done so. As an example, the commenters cited legislation enacted in 2010, in which Congress amended both the 340B and the Medicare statutes, but did not authorize CMS to redistribute 340B savings to non-340B hospitals or to Part B generally.

Commenters further asserted that the proposed cut to 340B hospitals is also contrary to Congress's intent for the 340B Program to enable safety-net providers to reach more patients and furnish more comprehensive services and would undermine this purpose by preventing the operation of the 340B statute. These commenters suggested that, although manufacturers would still have to give 340B discounts, 340B participating hospitals would receive no benefit from those discounts; thus, the statutory purpose of 340B would be fatally undermined.

Response: We do not believe that this proposal under section 1833(t) of the Act is in conflict with section 340B of the Public Health Service Act. Section 1833(t) of the Act governs Medicare payment policies for covered hospital outpatient department services paid under the OPSS, while section 340B of the Public Health Service Act governs eligibility and program rules for participation in the 340B Program. There are no references in either section of law to each other. In fact, the failure of either statute to reference the other proves the opposite—that each statute stands on its own and neither is hindered or rendered null and void by the other. There is no requirement in the Public Health Service Act that the 340B Program “guarantee” or provide a certain profit from the Medicare program. Likewise, there is no requirement in section 1833(t) of the Act to pay a particular rate for a hospital enrolled in the 340B Program. We agree with the commenters that Congress was aware of both the 340B Program and the OPSS and of the programs' relationships to one another. However, we believe that the silence of each statute with respect to the other should not be viewed as a constraint on the broad authority conferred to the Secretary under section 1833(t) of the Act to establish payment rates under the OPSS.

Furthermore, we are unaware of legislative history or other evidence to corroborate the commenters' belief that Congress' silence on the relationship between 340B and Medicare Part B OPSS payments should be viewed as constraining the Secretary's ability

under section 1833(t)(14) of the Act as to how to calculate payment rates for drugs acquired under the 340B Program under the OPSS. While legislative silence can be difficult to interpret, we note that Congress' silence regarding the 340B Program in enacting Medicare OPSS payment for certain drugs would create the opposite inference. The 340B Program existed well before Congress enacted the Medicare OPSS and payment for certain drugs. If Congress wanted to exempt 340B drugs or entities with a 340B agreement from Medicare OPSS payment for drugs generally, it easily could have done so. Instead, Congress provided for Medicare OPSS drug payments “as calculated and adjusted by the Secretary as necessary,” without any mention of, or restriction regarding, the already existent 340B Program.

We also disagree with commenters who believe that implementing the OPSS payment methodology for 340B-acquired drugs as proposed will “eviscerate” or “gut” the 340B Program. As discussed earlier in the background section, the findings from several 340B studies conducted by the GAO, OIG, and MedPAC show a wide range of discounts that are afforded to 340B hospitals, with some reports finding discounts of up to 50 percent. As stated in the proposed rule, we believe ASP minus 22.5 percent is a conservative estimate of the discount for 340B-acquired drugs and that even with the reduced payment, hospitals will continue to receive savings that can be directed at programs and services to carry out the intent of the 340B Program.

With respect to the comment that the proposal would frustrate the intent of the 340B Program and redirect Medicare payments to other hospitals that do not participate in the 340B Program, we reiterate that we proposed to redistribute the savings in an equal and offsetting manner to all hospitals paid under the OPSS, including those in the 340B Program, in accordance with the budget neutrality requirements under section 1833(t)(9)(B) of the Act. However, we remain interested in exploring ways to better target the offsetting amount to those hospitals that serve low-income and uninsured patients, as measured by uncompensated care. Details on the redistribution of funds are included in section XVIII. of this final rule with comment period.

• Proposal is Procedurally Defective and Inconsistent With Advisory Panel Recommendations

Comment: Some commenters contended that the proposal is procedurally defective under the OPSS statute. The commenters asserted that the Secretary's justification for the proposed reduced rate rests, in part, on intertwined issues related to clinical use and hospital cost of drugs. The commenters objected to CMS' reference to studies suggesting that 340B hospitals may be unnecessarily prescribing more drugs and/or more expensive drugs relative to non-340B hospitals as support for proposing a payment rate that eliminates the differential between acquisition cost and Medicare payment. These commenters cited other studies in an effort to refute the evidence presented in the proposed rule.^{29 30} The commenters believed that CMS should have asked the HOP Panel to consider the intertwined issues of drug cost and clinical use prior to making a proposal to reduce payment for 340B-acquired drugs, and the Secretary should have consulted with the HOP Panel in accordance with section 1833(t)(9)(A) of the Act, as part of the process of review and revision of the payment groups for covered outpatient department services and the relative payment weights for the groups. The commenters argued that, because the Secretary did not consult with the HOP Panel before publishing its 340B payment proposal, the Secretary acted contrary to the statute. The commenters noted that at the August 21, 2017 meeting of the HOP Panel that occurred after publication of the proposed rule, the Panel urged that CMS not finalize the proposed payment reduction.

At the August 21, 2017 meeting of the HOP Panel, the Panel made the following recommendations with respect to the proposed policy for OPSS payment for drugs acquired under the 340B Program:

- The Panel recommended that CMS:
- Not finalize its proposal to revise the payment rate for drugs purchased under the 340B Program;
 - Collect data from public comments and other sources, such as State

²⁹ Dobson Davanzo & Associates, Update to a 2012 Analysis of 340B Disproportionate Share Hospital Services Delivered to Vulnerable Patient Populations Eligibility Criteria for 340B DSH Hospitals Continue to Appropriately Target Safety Net Hospitals (Nov. 15, 2016). Available at: http://www.340bhealth.org/files/Update_Report_FINAL_11.15.16.pdf.

³⁰ Dobson DaVanzo, Analysis of the Proportion of 340B DSH Hospital Services Delivered to Low-Income Oncology Drug Recipients Compared to Non-340B Provider (2017). Available at: <http://www.340bhealth.org/files/LowIncomeOncology.pdf>;

Medicaid programs in Texas and New York, on the potential impact of revising the payment rate, implementing a modifier code, and the effects of possible mechanisms for redistributing the savings that result from changing the payment rate; and

- Assess the regulatory burden of changing the payment rate and the potential impact on 340B hospitals of redistributing dollars saved.

In addition, one commenter suggested that the proposal was “procedurally defective” because the proposal was solely articulated through preamble and did not propose to amend the Code of Federal Regulations (CFR). The commenter asserted that the proposal cannot be implemented without a change to the Medicare regulations and stated that the Medicare statute requires CMS to issue regulations when altering the substantive standards for payment.³¹ The commenter stated that the proposal falls squarely within this requirement because it would change the substantive legal standard governing payments to 340B hospitals for separately payable drugs.

Another commenter stated that CMS’ proposal also violates section 1833(t)(2)(E) of the Act because the agency is not authorized and did not offer a reasoned basis for applying savings achieved as a result of its proposal to reduce significantly payments to 340B hospitals to Part B services generally. Likewise, a few commenters stated that the Administrative Procedure Act (APA) requires the Secretary to offer a “reasoned basis” for proposing to take an unprecedented action. The commenters suggested that, as a matter of longstanding policy and practice, the Secretary has never applied such a sweeping change to drug rates nor has it ever applied savings from OPPS outside of the OPPS.

Response: We remind the commenters that our proposal was based on findings that ASP minus 22.5 percent reflects the minimum average discount that hospitals in the 340B Program receive. We are familiar with the reports the commenters referenced in their comments. However, we continue to believe, based on numerous studies and reports, that 340B participation is not well correlated to the provision of

uncompensated care and is associated with differences in prescribing patterns and drug costs. For example, as noted earlier in this section, GAO found that “in both 2008 and 2012, per beneficiary Medicare Part B drug spending, including oncology drug spending, was substantially higher at 340B DSH hospitals than at non-340B hospitals,” thus indicating that, on average, beneficiaries at 340B DSH hospitals were either prescribed more drugs or more expensive drugs than beneficiaries at the other non-340B hospitals in GAO’s analysis.

With respect to the HOP Panel, we believe that this comment reflects a misunderstanding of the Panel’s role in advising the Secretary. Section 1833(t)(9)(A) of the Act provides that the Secretary shall consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to review (and advise the Secretary concerning) the clinical integrity of the groups and weights. Such panel may use data collected or developed by entities and organizations (other than the Department of Health and Human Services) in conducting such review.

The provisions described under section 1833(t)(9)(A) of the Act do not impose an obligation on the Secretary to consult with the HOP Panel *prior* to issuing a notice of proposed rulemaking nor do they require the Secretary to adopt the Panel’s recommendation(s). Rather, the statute provides that the Secretary shall consult with the Panel on policies affecting the clinical integrity of the ambulatory payment classifications and their associated weights under the OPPS. The Secretary met the requirement of section 1833(t)(9)(A) of the Act at the HOP Panel August 21, 2017 meeting in which the Panel made recommendations on this very proposed policy. The HOP Panel’s recommendations, along with public comments to the proposed rule, have all been taken into consideration in the development of this final rule with comment period.

While we are not accepting the HOP Panel’s recommendation not to finalize the payment reduction for drugs purchased under the 340B Program, as discussed later in this section, we are modifying our position on the modifier in an effort to ease administrative burden on providers, taking into account the way in which the modifier is used in several State Medicaid programs, as the Panel recommended. In addition, we have collected data from public comments on the potential impact of revising the payment rate, implementing a modifier, and the effects

of possible mechanisms for redistributing the “savings” (or the dollars that result) from changing the payment rate and have assessed the regulatory burden of changing the payment rate and the potential impact on 340B hospitals of redistributing dollars saved, all of which were steps the HOP Panel recommended we take.

Regarding the comments asserting that the Secretary is out of compliance with procedures used to promulgate regulations as described under section 1871 of the Act (42 U.S.C. 1395hh), we note that we have received public comments on our interpretation of the Medicare statute, and we respond to those comments above. We further note that we did not establish in the Code of Federal Regulations the rates for separately payable, nonpass-through drugs and biologicals in past rulemakings. Because we have not adopted regulation text that prescribes the specific payment amounts for separately payable, nonpass-through drugs and biologicals, there was no regulation text to amend to include our proposed payment methodology for drugs acquired under the 340B Program. However, this does not mean that payment rates for separately payable drugs were not available to the public. That information is available in Addendum B to this final rule with comment period, which lists the national payment rates for services paid under the OPPS, including the payment rates for separately payable drugs and biologicals based on ASP+6 percent. We note that we have not provided the reduced payment rates for separately payable drugs and biologicals acquired under the 340B Program in Addendum B, but hospitals can arrive at those rates using the ASP+6 percent rate that is included in Addendum B. Finally, with respect to comments on redistribution of the dollars that result from the 340B payment policy, we are finalizing our proposal to achieve budget neutrality for the payment reduction for 340B-acquired drugs through an increase in the conversion factor. We disagree that our proposal to apply budget neutrality in accordance with section 1833(t)(9)(B) of the Act violates the APA or statutory authority. Further, we note that if we decide to take a different approach with respect to the redistribution of funds for budget neutrality in the future, we will consider such approach in future rulemaking.

- Impact on Medicare Beneficiary Cost-Sharing

Comment: Some commenters noted that Medicare beneficiaries, including dual-eligible Medicare beneficiaries,

³¹ “No rule, requirement, or other statement of policy (other than a national coverage determination) that establishes or changes a substantive legal standard governing the scope of benefits, the payment for services, or the eligibility of individuals, entities, or organizations to furnish or receive services or benefits under this subchapter shall take effect unless it is promulgated by the Secretary by regulation. . . .” Section 1871 of the Social Security Act (42 U.S.C. 1395hh).

would not directly benefit from a lowered drug copayment amount. The commenters noted that many beneficiaries have supplemental insurance that covers their out-of-pocket drug costs, in whole or in part. These commenters asserted that the proposal would actually increase their out-of-pocket costs for other Part B benefits.

Response: The cost-sharing obligation for Medicare beneficiaries is generally 20 percent of the Medicare payment rate. While many Medicare beneficiaries may have supplemental coverage that covers some or all of their out-of-pocket expenses, not all beneficiaries have such coverage. This policy will lower both the amount that a beneficiary is responsible to pay as well as the amount that any supplemental insurance, including the Medicaid program, will pay on behalf of the beneficiary. While we are implementing this policy in a budget neutral manner equally across the OPSS for CY 2018 for non-drug items and services, we may revisit how any savings from the lowered drug payment rate for 340B drugs may be allocated in the future and continue to be interested in ways to better target the savings to hospitals that serve the uninsured and low-income populations or that provide a disproportionate share of uncompensated care.

In addition, as noted earlier in this section, in the hospital setting, not only are beneficiaries liable for cost-sharing for drugs they receive, but they also incur a “facility fee” solely because the drug was furnished in the hospital setting. As described in section II.A.3.b. of this final rule with comment period, for CY 2018, we are adopting a policy to conditionally package Level 1 and Level 2 drug administration services and believe that these steps taken together may help encourage site-neutral care in that beneficiaries may receive the same drugs and drug administration services at the physician office setting without a significant difference in their financial liability between settings.

- Calculation of Savings

Comment: Commenters disagreed with CMS’ impact estimate and a few commenters provided their own analysis of the 340B drug payment proposal. One commenter believed that even if CMS implements the policy as proposed, in a budget neutral manner within the OPSS through an offsetting increase in the conversion factor, payments for non-drug APCs would increase across hospitals by approximately 3.7 percent (in contrast to CMS’ estimate of 1.4 percent). According to the commenter, this

redistribution would result in a net decrease in payments to 340B hospitals of approximately 2.6 percent, or approximately \$800 million. The commenter asserted that CMS’ proposal would remove \$800 million intended to support what it referred to as the congressionally mandated mission of 340B hospitals from these already vulnerable facilities and redistribute these dollars to other hospitals that do not participate in the 340B Program. Likewise, the commenter challenged CMS’ suggested alternative approaches to achieving budget neutrality, such as applying offsetting savings to specific services within the OPSS or outside of the OPSS to Part B generally (such as to physician services under the Medicare Physician Fee Schedule), which the commenter believed would similarly penalize these most vulnerable hospitals and inhibit their efforts to carry out the purpose of the 340B Program. Finally, other commenters noted that implementing the proposed policy in a non-budget neutral manner would effectively “gut” the 340B Program.

Response: With respect to comments on the proposed distribution of savings, we refer readers to section XVIII. of this 2018 OPSS/ASC final rule with comment for discussion on the redistribution of savings that result from the estimated impact of the 340B policy as well as calculation of budget neutrality. Briefly, for CY 2018, we are implementing the alternative payment methodology for drugs purchased under the 340B Program in a budget neutral manner within the OPSS through an offsetting increase in the conversion factor for non-drug services. Therefore, the resulting savings from the 340B payment policy will be redistributed pro rata through an increase in rates for non-drug items and services under the OPSS. We have already addressed comments relating to the assertion that our proposal would “gut” or “eviscerate” the 340B Program. Likewise, we have addressed the interaction between our authority under section 1833(t)(14)(A) of the Act relative to section 340B of the Public Health Service Act in our responses above.

(3) Other Areas

Comment: MedPAC commented reiterating its recommendations to Congress in its March 2016 Report to the Congress. Specifically, MedPAC commented that it recommended that payment rates for all separately payable drugs provided in a 340B hospital should be reduced to 10 percent of the ASP rate (resulting in ASP minus 5.3 percent after taking application of the sequester into account). MedPAC noted

that its March 2016 report also included a recommendation to the Congress that savings from the reduced payment rates be directed to the Medicare-funded uncompensated care pool, which would target hospitals providing the most care to the uninsured, and in that way benefit indigent patients, and that payments be distributed in proportion to the amount of uncompensated care that hospitals provide. MedPAC believed that legislation would be needed to direct drug payment savings to the uncompensated care pool and noted that current law requires the savings to be retained with the OPSS to make the payment system budget neutral. MedPAC encouraged the Secretary to work with Congress to enact legislation necessary to allow MedPAC’s recommendation to be implemented, if such recommendation could not be implemented administratively. MedPAC further noted that legislation would also allow Medicare to apply the policy to all OPSS separately payable drugs, including those on pass-through payment status.

Response: We thank MedPAC for its comments and for its clarification that its recommendation that “[t]he Congress should direct the Secretary of the Department of Health and Human Services to reduce Medicare payment rates for 340B hospitals’ separately payable 340B drugs by 10 percent of the average sales price (ASP)” was intended to be 10 percent lower than the current Medicare rate of ASP+6 percent and would result in a final OPSS payment of ASP minus 5.3 percent when taking the sequester into account. However, we do not believe that reducing the Medicare payment rate by only 10 percentage points below the current payment rate of ASP+6 percent (that is, ASP minus 4 percent) would better reflect the acquisition costs incurred by 340B participating hospitals. In its May 2015 Report to the Congress, MedPAC estimated that the average minimum discount for a 340B hospital paid under the OPSS was ASP minus 22.5 percent, which it noted was a conservative, “lower bound” estimate. Further, in its March 2016 Report to the Congress, MedPAC stated that, “[i]n aggregate, the Office of Inspector General (OIG) estimates that discounts across all 340B providers (hospitals and certain clinics) average 34 percent of ASP, allowing these providers to generate significant profits when they administer Part B drugs (MedPAC March 2016 Report to Congress, page 76). MedPAC further noted the estimate of the aggregate discount was based on all covered

entities (hospitals and certain clinics). Because 340B hospitals accounted for 91 percent of Part B drug spending for all covered entities in 2013, it is reasonable to assume that 340B hospitals received a discount similar to 33.6 percent of ASP (MedPAC March 2016 Report to Congress, page 79).

Further, as we stated in the proposed rule, the GAO reported that the amount of the 340B discount ranges from an estimated 20 to 50 percent discount, compared to what the entity would have otherwise paid to purchase the drug. In addition, voluntary participation in the PVP results in a covered entity paying a subceiling price on certain covered outpatient drugs (estimated to be approximately 10 percent below the ceiling price). (U.S. Department of Health and Human Services, HRSA FY 2018 Budget Justification)

Accordingly, we continue to believe that ASP minus 22.5 percent represents a conservative estimate of the average minimum discount that 340B-enrolled hospitals paid under the OPPI receive for drugs purchased with a 340B Program discount and that hospitals likely receive an even steeper discount on many drugs, especially brand name drugs. We also continue to believe that section 1833(t)(14)(A)(iii)(II) of the Act allows the Secretary to make adjustments, if hospital acquisition cost data is not available, as necessary, so that the Medicare payment rate better represents the acquisition cost for drugs and biologicals that have been acquired with a 340B discount.

With respect to MedPAC's comment regarding targeting the savings to uncompensated care, we refer readers to section XVIII.A.5. of this final rule with comment period.

- Comments Regarding Rural Hospitals

Comment: Commenters representing rural hospitals, particularly RRCs and SCHs, expressed opposition to the proposal, noting that it could be especially harmful to rural hospitals in light of the "hospital closure crisis." One commenter cited a report from a health analytics company and noted that since 2010, 80 rural hospitals have closed and that one-third of remaining rural hospitals are vulnerable to closure, with 41 percent of rural hospitals operating at a financial loss.

Commenters noted that rural hospitals enrolled in the 340B Program depend on the drug discounts to provide access to expensive, necessary care such as labor and delivery and oncology infusions. The commenters stated that rural Americans are more likely to be older, sicker, and poorer than their urban counterparts. The commenter gave

examples of rural hospitals that have used profit margins on 340B-acquired drugs to offset uncompensated care and staff emergency departments. In addition, the commenters stated that a portion of rural hospitals are excluded from purchasing orphan drugs through the 340B Program. Therefore, the commenters stated, these hospitals often use their 340B savings to offset the expense of purchasing orphan drugs, which they note comprise a growing number of new drug approvals.

In addition, a commenter representing several 340B-enrolled hospitals stated that multiple hospitals report that the 340B Program is the reason the hospital can provide oncology infusions in their local community and that the chemotherapy infusion centers tend to be small with variation in patients served based on the needs of the community. The commenter stated that, without the 340B Program, many rural hospitals would likely need to stop providing many of the outpatient infusions, thereby forcing patients to either travel 35 miles (in the case of SCHs which must generally be located at least 35 miles from the nearest like hospital) to another facility or receive care in a hospital inpatient setting, which is a more costly care setting.

Another commenter, a member of Congress representing a district in the State of Ohio, commented that while the 340B Program is in need of reform, the program remains an important safety net for rural hospitals in Ohio and around the country. The commenter stated that 340B hospitals offer safety-net programs to their communities, including opioid treatment programs, behavioral health science programs, and others. The commenter further stated that the 340B drug payment proposal did not address broader structural issues with the 340B Program itself, including lack of oversight and clear guidance and definitions, and that the proposal could harm the hospitals that the 340B Program was intended to help. In addition, the commenter noted that "arbitrary cuts" to the 340B Program for safety-net hospitals could have detrimental impacts on the economic growth and opportunities in the communities those hospitals serve and that the proposal does not advance the larger goals of 340B Program reform.

One commenter noted that SCHs face 47.5 percent higher levels of bad debt and 55 percent lower profit margins. Thus, even with 340B discounts, the commenter argued that rural hospitals like rural SCHs are financially threatened. Commenters also noted that rural hospitals are typically located in lower income economic areas and are

not able to absorb the proposed reduction in drug payment for 340B purchased drugs. Moreover, commenters suggested that the proposal disproportionately impacts rural hospitals compared to its effect on urban hospitals.

Finally, commenters requested that, if CMS finalizes the policy as proposed, CMS exempt hospitals with a RRC or SCH designation from the alternative 340B drug payment policy. The commenters asserted that RRCs and SCHs are rural safety-net hospitals that provide localized care for Medicare beneficiaries and also serve as "economic engines" for many rural communities.

Response: We share commenters' concerns about access to care, especially in rural areas where access issues may be even more pronounced than in other areas of the country. We note our proposal would not alter covered entities' access to the 340B Program. The alternative 340B drug payment methodology solely changes Medicare payment for 340B-acquired drugs.

Medicare has long recognized the particularly unique needs of rural communities and the financial challenges rural hospital providers face. Across the various Medicare payment systems, CMS has established a number of special payment provisions for rural providers to maintain access to care and to deliver high quality care to beneficiaries in rural areas. With respect to the OPPI, section 1833(t)(13) of the Act provided the Secretary the authority to make an adjustment to OPPI payments for rural hospitals, effective January 1, 2006, if justified by a study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas. Our analysis showed a difference in costs for rural SCHs. Therefore, for the CY 2006 OPPI, we finalized a payment adjustment for rural SCHs of 7.1 percent for all services and procedures paid under the OPPI, excluding separately payable drugs and biologicals, brachytherapy sources, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act. We have continued this 7.1 percent payment adjustment since 2006.

In the CY 2018 OPPI/ASC proposed rule, we sought public comment for future policy refinements on whether, due to access to care issues, exceptions should be granted to certain groups of hospitals, such as those with special adjustments under the OPPI (for example, rural SCHs or PPS-exempt cancer hospitals) if a policy were adopted to adjust OPPI payments for drugs acquired under the 340B program.

Taking into consideration the comments regarding rural hospitals, we believe further study on the effect of the 340B drug payment policy is warranted for classes of hospitals that receive statutory payment adjustments under the OPSS. In particular, given challenges such as low patient volume, it is important that we take a closer look at the effect of an ASP minus 22.5 percent payment on rural SCHs.

With respect to RRCs, we note that there is no special payment designation for RRCs under the OPSS. By definition, RRCs must have at least 275 beds and therefore are larger relative to rural SCHs. In addition, RRCs are not subject to a distance requirement from other hospitals. Accordingly, at this time, we are not exempting RRCs from the 340B payment adjustment.

For CY 2018, we are excluding rural SCHs (as described under the regulations at 42 CFR 412.92 and designated as rural for Medicare purposes) from this policy. We may revisit our policy to exempt rural SCHs, as well as other hospital designations for exemption from the 340B drug payment reduction, in the CY 2019 OPSS rulemaking.

- Children's and PPS-Exempt Cancer Hospitals

Comment: Commenters representing children's hospitals ("children's") raised objections to the proposal because of the potential impact on the approximate 8,000 children with end-stage renal disease (ESRD) who are eligible for Medicare. One commenter cited that currently 48 children's hospitals participate in the 340B Program and rely on the savings the program provides to enhance care for vulnerable children. According to the commenter, pediatric ESRD patients require high levels of care and rely on life-saving pharmaceuticals that often come at a high cost. Therefore, the commenters posited that it is because children's patients are more expensive to treat and not because of inappropriate drug use that 340B hospitals incur higher drug expenditures. In addition, the commenters expressed concern with the effect the 340B drug payment policy may have on State Medicaid programs, considering Medicaid is the predominant payer type for children's hospitals. The commenters requested that, unless CMS is able to examine the impact on pediatric Medicare beneficiaries, CMS should exempt children's hospitals from the alternative 340B drug payment methodology.

An organization representing PPS-exempt cancer hospitals commented that CMS' proposal would severely

harm the hospitals that treat the most vulnerable and underserved patients and communities, undermining these hospitals' ability to continue providing programs designed to improve access to services. The commenter believed that assumptions alluded to in the CY 2018 OPSS/ASC proposed rule, which suggested that providers are abusing the savings generated from the 340B Program or potentially creating incentives to over utilize drugs, are inaccurate and that clinicians provide the care that is necessary to treat a patient's disease. The commenter suggested that CMS work with, or defer to, HRSA to first conduct a complete analysis of how the 340B Program is utilized for the benefit of patients prior to proposing any changes to Medicare payment for drugs purchased through the program.

Response: We share the commenters' views on protecting access to high quality care for all Medicare beneficiaries, including those treated in children's or PPS-exempt cancer hospitals. Further, because of how these classes of hospitals are paid under the OPSS, we recognize that the 340B drug payment proposal may not result in reduced payments for these hospitals in the aggregate.

Specifically, in accordance with section 1833(t)(7)(D)(ii) of the Act, we make transitional outpatient payments (TOPs) to both children's and PPS-exempt cancer hospitals. That is, these hospitals are permanently held harmless to their "pre-BBA amount," and they receive hold harmless payments to ensure that they do not receive a payment that is lower in amount under the OPSS than the payment amount they would have received before implementation of the OPSS. Accordingly, if we were to reduce drug payments to these hospitals on a per claim basis, it is very likely that the reduction in payment would be paid back to these hospitals at cost report settlement, given the TOPs structure.

Accordingly, we believe it is appropriate to exempt children's and PPS-exempt cancer hospitals from the alternative 340B drug payment methodology for CY 2018. Therefore, for CY 2018, we are excluding children's and PPS-exempt cancer hospitals from the alternative 340B drug payment policy. As discussed in a later section in this final rule with comment period, because we are redistributing the dollars in a budget neutral manner within the OPSS through an offsetting increase to the conversion factor, children's hospitals and PPS-exempt cancer hospitals will receive a higher payment when providing a non-drug service.

In summary, we are adopting for CY 2018 an exemption for rural SCHs, children's hospitals, and PPS-exempt cancer hospitals from the alternative 340B drug payment methodology. These three types of hospitals will not be subject to a reduced drug payment for drugs that are purchased under the 340B Program in CY 2018. We may revisit the specific types of hospitals excluded, if any, from the 340B payment policy in CY 2019 rulemaking. However, as discussed in more detail below, it remains important to collect information on which drugs being billed to Medicare were acquired under the 340B Program. Accordingly, these three types of hospitals will still be required to report an informational modifier "TB" for tracking and monitoring purposes. We may revisit this 340B drug payment policy, including whether these types of hospitals should continue to be excepted from the reduced Medicare payment rate, in future rulemaking.

- Biosimilar Biological Products

Comment: Some commenters expressed opposing views about applying the proposed 340B payment methodology to biosimilar biological products. One pharmaceutical manufacturer recommended that the Secretary use his equitable adjustment authority at section 1833(t)(2)(E) of the Act to apply a narrow equitable adjustment to biosimilar biological products with pass-through payment status to pay for these drugs at ASP minus 22.5 percent of the reference product rather than ASP+6 percent of the reference product. The commenter asserted that excluding biosimilar biological products from the alternative 340B payment methodology would result in a significant payment differential between biosimilar biological products and reference products which may cause providers to switch patients to different products for financial reasons, rather than clinical factors. The commenter stated that, if the policy is implemented as proposed, the competitive biosimilar marketplace would significantly change because Medicare would pay more for the biosimilar biological product with pass-through payment status and weaken market forces. The commenter estimated that if the 340B drug policy is implemented as proposed, up to \$50 million of any savings could be lost due to hospitals switching to the biosimilar biological product on pass-through payment status (that will be paid at ASP+6 percent of the reference product). Moreover, the commenter pointed out that CMS' policy to only

provide pass-through payments for the first eligible biosimilar biological product of any reference biological product would also create a similar payment disadvantage for any subsequent biosimilar biological product, which would be ineligible for pass-through payment under CMS' policy.

Another commenter, a different pharmaceutical manufacturer, requested that CMS exclude biosimilar biological products from the proposed payment adjustment until such time as the biosimilar biological product market is better established. The commenter indicated that while a biosimilar biological product is less expensive to the Medicare program, hospitals are incented by the 340B Program to purchase the originator product because of "the spread" or payment differential with respect to the originator product. Moreover, the commenter stated that applying the proposed adjustment to payment for biosimilar biological products in certain hospitals will retain market share for the more expensive reference product that is further compounded by market practices of volume-based rebates and exclusionary contracts for the reference product.

Response: We understand the commenters' concerns. As discussed in section V.B.2. of this CY 2018 OPPS/ASC final rule with comment period, we are adopting the biosimilar biological products HCPCS coding established under the CY 2018 MPFS final rule. Briefly, we adopted a final policy to establish separate HCPCS codes for each biosimilar biological product for a particular reference product beginning January 1, 2018. In addition, we also stated in section V.B.2. of this CY 2018 OPPS/ASC final rule with comment period that we are making a conforming amendment to our pass-through payment policy for biosimilar biological products such that each FDA-approved biosimilar biological product will be eligible for transitional pass-through payment instead of only the first biosimilar for a particular reference product.

Therefore, given the policy changes affecting coding and payment for biosimilar biological products that we are adopting in the CY 2018 MPFS final rule and this CY 2018 OPPS/ASC final rule with comment period, we disagree with the commenters that we should exclude biosimilar biological products from the 340B payment policy or use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to adjust payment to ASP minus 22.5 percent of the reference product for biosimilar biological products with pass-through payment status. We

believe the statutory provision on transitional drug pass-through payment under section 1833(t)(6)(D)(i) of the Act provides for an explicit payment for drugs eligible for pass-through payment. Therefore, we are unable to accept the commenter's request to pay a biosimilar biological product on pass-through payment status the reduced 340B payment rate. We are adopting a policy that any biosimilar biological product with pass-through payment status will be exempt from the alternative payment methodology for 340B drugs and will continue to be paid at ASP+6 percent of the reference product. Biosimilar biological products that are not on pass-through payment status will be paid ASP minus 22.5 percent of the reference product. We believe it is appropriate to pay this amount for biosimilar biological products as it is consistent with the amount paid for non-340B-acquired biosimilar biological products, which is ASP+6 percent of the reference product. Currently, there are two biosimilar biological products available on the market and both are on pass-through payment status for the entirety of CY 2018. Therefore, no biosimilar biological products currently available will be affected by the alternative payment methodology for 340B-acquired drugs for CY 2018. We recognize the concerns about paying different rates for similar drugs and biologics and continue to assess the feasibility and practicality of an alternative 340B payment adjustment for biosimilar biological products in the future.

- **Nonexcepted Off-Campus Hospital Outpatient Departments**

Comment: A few commenters noted that CMS' proposed alternative payment methodology for 340B purchased drugs would not apply to nonexcepted off-campus provider-based departments (PBDs) of a hospital and could result in behavioral changes that may undermine CMS' policy goals of reducing beneficiary cost-sharing liability and undercut the goals of section 603 of the Bipartisan Budget Act of 2015. Commenters recommended that, if CMS adopts a final policy to establish an alternative payment methodology for 340B drugs in CY 2018, CMS also apply the same adjustment to payment rates for drugs furnished in nonexcepted off-campus PBDs of a hospital if such drugs are acquired under the 340B Program. In addition, the commenters believed that because CMS did not propose to limit the expansion of services or volume increases at excepted off-campus PBDs, CMS will create financial incentives for hospitals to shift or reallocate services

to the site of care that pays the highest rate for an item or service.

Response: We appreciate the commenter's concerns about potential unintended consequences of our proposal. We will continue to monitor the billing patterns of claims submitted by nonexcepted off-campus outpatient PBDs as we continue to explore whether to pursue future rulemaking on the issues of clinical service line expansion or volume increases, and other related section 603 implementation policies.

In the CY 2017 OPPS/ASC final rule with comment period, we discussed the provision of section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114-74), enacted on November 2, 2015, which amended section 1833(t) of the Act. Specifically, this provision amended the OPPS statute at section 1833(t) by amending paragraph (1)(B) and adding a new paragraph (21). As a general matter, under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, applicable items and services furnished by certain off-campus outpatient departments of a provider on or after January 1, 2017, are not considered covered outpatient department services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS and are instead paid "under the applicable payment system" under Medicare Part B if the requirements for such payment are otherwise met (81 FR 79699). We issued an interim final rule with comment period along with the CY 2017 OPPS/ASC final rule with comment period to establish the MPFS as the "applicable payment system," which will apply in most cases, and payment rates under the MPFS for non-excepted items and services furnished by nonexcepted off-campus outpatient provider based departments (PBDs) (81 FR 79720). (Other payment systems, such as the Clinical Laboratory Fee Schedule, continue to apply in appropriate cases.) That is, items and services furnished by nonexcepted off-campus outpatient PBDs, are nonexcepted items and services that are not covered outpatient services, and thus, are not payable under the OPPS. Rather, these nonexcepted items and services are paid "under the applicable payment system," which, in this case, is generally the MPFS.

As we discussed in the CY 2017 OPPS/ASC interim final with comment period (81 FR 79718) and reiterated in the CY 2018 MPFS final rule, payment for Part B drugs that would be separately payable under the OPPS (assigned status indicator "K") but are not payable under the OPPS because they are furnished by nonexcepted off-campus outpatient PBDs will be paid in

accordance with section 1847A of the Act (generally, ASP+6 percent), consistent with Part B drug payment policy in the physician office. We did not propose to adjust payment for 340B-acquired drugs in nonexcepted off-campus PBDs in CY 2018 but may consider adopting such a policy in CY 2019 notice-and-comment rulemaking.

- Data Collection and Modifier

Comment: The vast majority of commenters objected to CMS' intention to require hospitals that *do not* purchase a drug or biological through the 340B program to apply a modifier to avoid a reduced drug payment. A few commenters supported the modifier proposal. The commenters who disagreed with proposal stated that it would place an unnecessary administrative and financial burden on hospitals that do not participate or are not eligible to participate in the 340B Program. Similarly, the commenters stated that the modifier requirement as described in the proposed rule would put a financial and administrative strain on hospitals with fewer resources. In addition, the commenters contended that a requirement for hospitals to report a modifier for drugs that were not acquired under the 340B Program would place hospitals at significant risk for noncompliance if not implemented correctly, which many commenters believe is nearly impossible to do. As an alternative approach, numerous commenters recommended that CMS require hospitals that *do* purchase a drug under the 340B Program to report the modifier, rather than those that do not.

Regarding a January 1, 2018, implementation date for the modifier, some commenters expressed concern and doubted their ability to implement the modifier as described in the proposed rule accurately. The commenters indicated that additional time would be needed to adapt billing systems, allow for testing of claims reported with the modifier, and educate staff. Based on discussion of how the modifier would work in the proposed rule, the commenters stated that hospitals would either have to append the modifier to the claim at the time the drug is furnished, or retroactively apply the modifier, thus delaying claims submission to Medicare.

The commenters provided detailed descriptions on hospital pharmacy set up, including information on software tools to support inventory management of drugs dispensed to 340B and non-340B patients (based on HRSA definition of an eligible patient). One commenter indicated that the drug

supply system used for purchasing covered outpatient drugs is completely separate from—and does not necessarily communicate with—the hospital's pharmacy drug dispensing and patient billing systems. While these software tools enable split-billing to distinguish 340B and non-340B patients, the commenters noted that this patient determination is typically not done in real time when a drug is administered. Commenters noted that 340B hospitals that use split-billing software do not receive information on 340B patient status on a daily basis and the proposal could result in delayed billing. The commenters stated that hospitals typically make these determinations retrospectively and it may be 3 to 10 days post-dispensing before the hospital knows whether a drug was replenished under 340B or at regular pricing. The commenters noted that, under this “replenishment model,” hospitals track how many 340B-eligible drugs are used, and once enough drugs are dispensed to complete a package, they will replenish the drug at the 340B rate. As such, the commenters argued that hospitals do not know when the drug is dispensed whether it will cost them the 340B rate or the wholesale acquisition cost (WAC). Therefore, the commenters expressed concern that the modifier requirement as described in the proposed rule would result in billing delays and, for some hospitals, may cause a short-term interruption in cash flow.

In addition, the commenters requested that, while the payment reduction would apply to nonpass-through separately payable drugs purchased with a 340B discount, CMS accept the modifier when reported with drug HCPCS codes that are packaged (and for which no separate payment will be made) to reduce or prevent operational burden that may be caused if affected providers have to determine on a claim-by-claim basis whether a drug is eligible for separate payment.

With respect to State Medicaid programs that also require a modifier to identify 340B-purchased drugs on outpatient claims, the commenters noted that CMS' proposal would be counter to Medicaid requirements and would create confusion and add complexity for providers who treat Medicaid recipients in multiple states. The commenters reported that many State Medicaid programs require a modifier to identify drugs that were purchased under 340B to administer their Medicaid drug rebate programs to prevent duplicate discounts on 340B drugs. The commenters suggested that if CMS reversed its position on

application of the modifier, it would ensure crossover claims (claims transferred from Medicare to Medicaid) are correctly interpreted by State Medicaid programs so that they can appropriately request manufacturer rebates on drugs not purchased under the 340B Program. Moreover, some commenters believed that if CMS required the modifier to be reported for 340B-purchased drugs, State Medicaid programs would also adopt the modifier, leading to national uniformity in reporting of 340B drugs.

Finally, in the event that CMS required the modifier on claims for 340B drugs, rather than non-340B drugs, commenters sought clarity on whether the modifier applies only to drugs purchased under the 340B Program which are subject to a ceiling price payment from the manufacturer or if the modifier would also apply to drugs purchased by a 340B-registered facility, but purchased under the Prime Vendor Program for which only 340B facilities are eligible. One commenter asked that CMS emphasize that 340B pricing is not available on drugs furnished to hospital inpatients.

Response: We appreciate the detailed comments that were submitted. As noted in the proposed rule, we did not propose to establish the modifier but rather noted our intent to establish the modifier, regardless of whether we adopted the alternative payment methodology for drugs acquired through the 340B Program. However, we are responding to some of the comments submitted in this final rule with comment period with information on this modifier that we believe is important to communicate as soon as possible. We will consider whether additional details will need to be communicated through a subregulatory process, such as information posted to the CMS Web site.

After considering the administrative and financial challenges associated with providers reporting the modifier as described in the CY 2018 OPPI/ASC proposed rule, and in order to reduce regulatory burden, we are reversing our position on how the modifier will be used by providers to effectuate the payment adjustment for 340B-purchased drugs.

Specifically, beginning January 1, 2018, providers who are not excepted from the 340B payment adjustment will report modifier “JG” (Drug or biological acquired with 340B Drug Pricing Program Discount) to identify if a drug was acquired under the 340B Program. This requirement is aligned with the modifier requirement already mandated in several States under their Medicaid

programs. Therefore, we believe that this option will pose less of an administrative burden. Further, having consistent application of the modifier being required for a drug that was purchased under the 340B Program instead of a drug not purchased under the 340B Program will help improve program integrity by helping ensure that hospitals are not receiving “duplicate discounts” through both the Medicaid rebate program and the 340B Program. The phrase “acquired under the 340B Program” is inclusive of all drugs acquired under the 340B Program or PVP, regardless of the level of discount applied to the drug. Drugs that were not acquired under the 340B Program should not be reported with the modifier “JG”. For separately payable drugs (status indicator “K”), application of modifier “JG” will trigger a payment adjustment such that the 340B-acquired drug is paid at ASP minus 22.5 percent. In response to the commenters’ request that we allow the 340B modifier to be reported with status indicator “N” drugs (that is, drugs that are always packaged), we will accept modifier “JG” or “TB” to be reported with a packaged drug (although such modifier will not result in a payment adjustment).

In addition, beginning January 1, 2018, providers that are excepted from the 340B drug payment policy for CY 2018, which include rural SCHs, children’s hospitals, and PPS-exempt cancer hospitals, should not report modifier “JG”. Instead, these excepted providers should report the informational modifier “TB” (Drug or Biological Acquired With 340B Drug Pricing Program Discount, Reported for Informational Purposes) to identify OPPS separately payable drugs purchased with a 340B discount. The informational modifier “TB” will facilitate the collection and tracking of 340B claims data for OPPS providers that are excepted from the payment adjustment in CY 2018. However, use of modifier “TB” will not trigger a payment adjustment and these providers will receive ASP+6 percent for separately payable drugs furnished in CY 2018, even if such drugs were acquired under the 340B Program.

For drugs administered to dual-eligible beneficiaries (that is, beneficiaries covered under both Medicare and Medicaid) for whom covered entities do not receive a discount under the 340B Program, the State Medicaid programs should be aware of modifier “JG” to help further prevent inappropriate billing of manufacturer rebates.

With respect to comments about timing to operationalize a modifier, we

note that hospitals have been on notice since the proposed rule went on display at the Office of the Federal Register on July 13, 2017 that we intended to establish a modifier to implement the policy for payment of drugs acquired under the 340B Program, if finalized. In addition, the modifier will not be required until January 1, 2018, which after display of this final rule with comment period will give hospitals two additional months to operationalize the modifier. Under section 1835(a) of the Act, providers have 12 months after the date of service to timely file a claim for payment. Therefore, for those hospitals that may need more time to ensure that they are in compliance with the modifier requirements, they have 12 months from the date of service to do so.

Further, to the extent many hospitals already report a modifier through their State Medicaid program, we believe that also requiring the modifier on outpatient claims for 340B-acquired drugs paid for under the OPPS would not be a significant administrative burden and would promote consistency between the two programs. With respect to providers in States that are not currently required to report a modifier under the Medicaid program, we note that providers are nonetheless responsible for ensuring that drugs are furnished to “covered patients” under the 340B Program and, therefore, should already have a tracking mechanism in place to ensure that they are in compliance with this requirement. Furthermore, modifiers are commonly used for payment purposes; in this case, the presence of the modifier will enable us to pay the applicable 340B drug rate of ASP minus 22.5 percent and track these claims in the Medicare data (in the case of “JG” modifier) and will allow us to track other drugs billed on claims that are not subject to the payment reduction (modifier “TB”). In addition, the presence of the both modifiers will enable Medicare and other entities to conduct research on 340B-acquired drugs in the future.

We remind readers that our 340B payment policy applies to only OPPS separately payable drugs (status indicator “K”) and does not apply to vaccines (status indicator “L” or “M”), or drugs with transitional pass-through payment status (status indicator “G”).

Finally, Federal law permits Medicare to recover its erroneous payments. Medicare requires the return of any payment it erroneously paid as the primary payer. Medicare can also fine providers for knowingly, willfully, and repeatedly billing incorrectly coded claims. Providers are required to submit accurate claims, maintain current

knowledge of Medicare billing policies, and ensure all documentation required to support the validity of the services reported on the claim is available upon request.

d. Summary of Final Policies for CY 2018

In summary, for CY 2018, in accordance with section 1833(t)(14)(A)(iii)(II) of the Act, separately payable Part B drugs (assigned status indicator “K”), other than vaccines and drugs on pass-through payment status, that meet the definition of “covered outpatient drug” as defined in the section 1927(k) of the Act, that are acquired through the 340B Program or through the 340B PVP at or below the 340B ceiling price will be paid at the ASP minus 22.5 percent when billed by a hospital paid under the OPPS that is not excepted from the payment adjustment. Part B drugs or biologicals excluded from the 340B payment adjustment include vaccines (assigned status indicator “L” or “M”) and drugs with OPPS transitional pass-through payment status (assigned status indicator “G”). Medicare will continue to pay drugs that were not purchased with a 340B discount at ASP+6 percent.

Effective January 1, 2018, biosimilar biological products not on pass-through payment status that are purchased through the 340B program or through the 340B PVP will be paid at ASP minus 22.5 percent of the reference product’s ASP, while biosimilar biological products on drug pass-through payment status will continue to be paid ASP+6 percent of the reference product.

To effectuate the payment adjustment for 340B-acquired drugs, CMS is implementing modifier “JG”, effective January 1, 2018. Hospitals paid under the OPPS, other than a type of hospital excluded from the OPPS (such as CAHs or those hospitals paid under the Maryland waiver) or excepted from the 340B drug payment policy for CY 2018, are required to report modifier “JG” on the same claim line as the drug HCPCS code to identify a 340B-acquired drug. For CY 2018, rural SCHs, children’s hospitals and PPS-exempt cancer hospitals will be excepted from the 340B payment adjustment. These hospitals will be required to report informational modifier “TB” for 340B-acquired drugs, and will continue to be paid ASP+6 percent.

To maintain budget neutrality within the OPPS, the estimated \$1.6 billion in reduced drug payments from adoption of this final alternative 340B drug payment methodology will be redistributed in an equal offsetting amount to all hospitals paid under the

OPPS through increased payment rates for non-drug items and services furnished by all hospitals paid under the OPSS for CY 2018. Specifically, the redistributed dollars will increase the conversion factor across non-drug rates by 3.2 percent for CY 2018.

We may revisit the alternative 340B drug payment methodology in CY 2019 rulemaking.

e. Comment Solicitation on Additional 340B Considerations

As discussed above, we recognize there are data limitations in estimating the average discount for 340B drugs. In the CY 2018 OPSS/ASC proposed rule (82 FR 33634 through 33635), we welcomed stakeholder input with regard to MedPAC's May 2015 analysis and the resulting estimate of ASP minus 22.5 percent as the proposed payment rate for separately payable, nonpass-through OPSS drugs purchased under the 340B Program in CY 2018. We also requested comment on whether we should adopt a different payment rate to account for the average minimum discount of OPSS drugs purchased under the 340B Program. Also, we sought comment on whether the proposal to pay ASP minus 22.5 percent for 340B-acquired drugs should be phased in over time (such as over a period of 2 to 3 years).

In addition, we recognize that the acquisition costs for drugs may vary among hospitals, depending on a number of factors such as size, patient volume, labor market area and case-mix. Accordingly, in the longer term, we are interested in exploring ways to more closely align the actual acquisition costs that hospitals incur rather than using an average minimum discounted rate that would apply uniformly across all 340B hospitals. In the proposed rule, we requested public comment on whether, as a longer term option, Medicare should require 340B hospitals to report their acquisition costs in addition to charges for each drug on the Medicare claim. Having the acquisition cost on a drug-specific basis would enable us to pay a rate under the OPSS that is directly tied to the acquisition costs for each separately payable drug. To the extent that the acquisition costs for some drugs may equal the ceiling price for a drug, we recognize that there may be challenges with keeping the ceiling price confidential as required by section 1927(b)(3)(D) of the Act and we sought comment on this point.

Lastly, for consideration for future policy refinements, we requested public comment on (1) whether, due to access to care issues, exceptions should be granted to certain groups of hospitals, such as those with special adjustments

under the OPSS (for example, rural SCHs or PPS-exempt cancer hospitals) if a policy were adopted to adjust OPSS payments to 340B participating hospitals (if so, describe how adjusted rates for drugs purchased under the 340B Program would disproportionately affect access in these provider settings); (2) whether other types of drugs, such as blood clotting factors, should also be excluded from the reduced payment; and (3) whether hospital-owned or affiliated ASCs have access to 340B discounted drugs.

We received feedback on a variety of issues in response to the comment solicitation on additional future considerations. These comments are summarized below.

Comment: One commenter recommended that CMS establish an exemption mechanism for use by stakeholders to request exemptions for certain groups of hospitals. The commenters urged CMS to propose and seek comment on specific guidelines that outline procedures for stakeholders to request an exemption and the criteria CMS would use to determine whether to grant an exception.

Response: We appreciate the comment. As we stated in the summary of final policies, we may revisit the 340B drug payment policy in the CY 2019 rulemaking. For CY 2018, as stated earlier in this section, rural SCHs, children's hospitals and PPS-exempt cancer hospitals will be excepted from the alternative 340B drug payment methodology being adopted in this final rule with comment period. However, each of these excepted providers will report informational modifier "TB" on the same claim line as the HCPCS code for their 340B-acquired drugs.

Comment: In response to the solicitation of comments on whether CMS should exclude certain types of drugs from the proposed alternative 340B drug payment methodology, manufacturers of blood clotting factors and radiopharmaceuticals recommended that CMS continue to pay these drug types at ASP+6 percent. With respect to blood clotting factors, the commenters stated that individuals with bleeding disorders have unique needs and are expensive to treat such that the proposed reduced payment could threaten access and/or create unnecessary treatment delays for these patients. With respect to radiopharmaceuticals, the commenters stated that they do not believe that these products are covered outpatient drugs (because it is not possible for the manufacturer to accurately report final dose and pricing information), and therefore these drugs should be

excluded as a category of drugs included in the covered drug definition for the 340B Program.

In addition, one commenter recommended that CMS develop a process for stakeholders to request exemptions from the alternative 340B payment methodology that CMS would evaluate using objective patient guidelines designed to ensure patient access.

Response: We appreciate the comments. To the extent that blood clotting factors and radiopharmaceuticals are covered outpatient drugs purchased under the 340B Program, we believe that the OPSS payment rate for these drugs should account for the discounted rate under which they were purchased. Therefore, for CY 2018, OPSS payment for separately payable, nonpass-through drugs, biologicals, and radiopharmaceuticals, including blood clotting factors and radiopharmaceuticals, if purchased through the 340B Program, will be paid at ASP minus 22.5 percent. As we stated in the summary of final policies, we may revisit the 340B drug payment policy in the CY 2019 rulemaking. We will consider these requests for exceptions for certain drug classes in development of the CY 2019 OPSS/ASC proposed rule.

It is unclear to us whether the commenter meant that radiopharmaceuticals are not considered covered outpatient drugs under the OPSS or not considered a covered outpatient drug for purposes of the 340B Program. We assume the commenter was referring to the definition of covered outpatient drug for purposes of the 340B Program and, as such, these comments are outside the scope of the CY 2018 OPSS/ASC proposed rule. We refer commenters to HRSA with questions related to the 340B Program.

Comment: One commenter representing community oncology practices urged CMS not to "reduce the size of the reimbursement reduction" or to phase in the adjustment over 2 to 3 years because the commenter believed that hospitals would use that time to "aggressively strong-arm independent community oncology practices to sell out to them."

Response: As stated earlier in this section, we are finalizing our proposal to pay ASP minus 22.5 percent for separately payable nonpass-through drugs (other than vaccines). In addition, we agree that it is not necessary to phase in the payment reduction and are implementing the full adjustment for CY 2018.

Comment: Commenters expressed concern about the challenges and costs of implementing acquisition cost billing. The commenters reported that hospital charge masters are not designed to bill drugs to one payer at a different rate than other payers. The commenters cited a survey response from hospitals that revealed acquisition cost billing would require investment in expensive software upgrades, obtaining a second charge master, or devising burdensome manual workarounds. One commenter stated that hospital cost reports already reflect the 340B acquisition cost based on expenses reported in the pharmacy cost center. The commenter further stated that these lower costs are already reflected in the drug CCR, which will likely be lower because the cost to acquire these drugs is lower. Thus, the commenter asserted, the OPPS ratesetting process already reflects a blend of discounting/lower expenses with respect to 340B drug acquisition in the annual application of CCRs to pharmacy charges.

Response: We thank the commenters for their feedback and will take these comments into consideration for future policymaking. We note that several State Medicaid programs require reporting of actual acquisition cost (AAC) for 340B drugs so the magnitude of the challenges to implement may be less than the commenter suggests.

VI. Estimate of OPPS Transitional Pass-Through Spending for Drugs, Biologicals, Radiopharmaceuticals, and Devices

A. Background

Section 1833(t)(6)(E) of the Act limits the total projected amount of transitional pass-through payments for drugs, biologicals, radiopharmaceuticals, and categories of devices for a given year to an “applicable percentage,” currently not to exceed 2.0 percent of total program payments estimated to be made for all covered services under the OPPS furnished for that year. If we estimate before the beginning of the calendar year that the total amount of pass-through payments in that year would exceed the applicable percentage, section 1833(t)(6)(E)(iii) of the Act requires a uniform prospective reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded. We estimate the pass-through spending to determine whether payments exceed the applicable percentage and the appropriate prorata reduction to the conversion factor for the projected level

of pass-through spending in the following year to ensure that total estimated pass-through spending for the prospective payment year is budget neutral, as required by section 1833(t)(6)(E) of the Act.

For devices, developing an estimate of pass-through spending in CY 2018 entails estimating spending for two groups of items. The first group of items consists of device categories that are currently eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2018. The CY 2008 OPPS/ASC final rule with comment period (72 FR 66778) describes the methodology we have used in previous years to develop the pass-through spending estimate for known device categories continuing into the applicable update year. The second group of items consists of items that we know are newly eligible, or project may be newly eligible, for device pass-through payment in the remaining quarters of CY 2017 or beginning in CY 2018. The sum of the CY 2018 pass-through spending estimates for these two groups of device categories equals the total CY 2018 pass-through spending estimate for device categories with pass-through payment status. We base the device pass-through estimated payments for each device category on the amount of payment as established in section 1833(t)(6)(D)(ii) of the Act, and as outlined in previous rules, including the CY 2014 OPPS/ASC final rule with comment period (78 FR 75034 through 75036). We note that, beginning in CY 2010, the pass-through evaluation process and pass-through payment for implantable biologicals newly approved for pass-through payment beginning on or after January 1, 2010, that are surgically inserted or implanted (through a surgical incision or a natural orifice) use the device pass-through process and payment methodology (74 FR 60476). As has been our past practice (76 FR 74335), in the CY 2018 OPPS/ASC proposed rule (82 FR 33635), we proposed to include an estimate of any implantable biologicals eligible for pass-through payment in our estimate of pass-through spending for devices. Similarly, we finalized a policy in CY 2015 that applications for pass-through payment for skin substitutes and similar products be evaluated using the medical device pass-through process and payment methodology (76 FR 66885 through 66888). Therefore, as we did beginning in CY 2015, for CY 2018, we also proposed to include an estimate of any skin substitutes and similar products in our estimate of pass-through spending for devices.

For drugs and biologicals eligible for pass-through payment, section 1833(t)(6)(D)(i) of the Act establishes the pass-through payment amount as the amount by which the amount authorized under section 1842(o) of the Act (or, if the drug or biological is covered under a competitive acquisition contract under section 1847B of the Act, an amount determined by the Secretary equal to the average price for the drug or biological for all competitive acquisition areas and year established under such section as calculated and adjusted by the Secretary) exceeds the portion of the otherwise applicable fee schedule amount that the Secretary determines is associated with the drug or biological. Because we proposed to pay for most nonpass-through separately payable drugs and biologicals under the CY 2018 OPPS at ASP+6 percent, and because we proposed to pay for CY 2018 pass-through drugs and biologicals at ASP+6 percent, as we discussed in section V.A. of the proposed rule, our estimate of drug and biological pass-through payment for CY 2018 for this group of items was \$0, as discussed below. In the proposed rule, we noted that our estimate did not reflect the proposed payment policy for drugs purchased through the 340B program, as we discussed in section V.A. of the proposed rule.

Furthermore, payment for certain drugs, specifically diagnostic radiopharmaceuticals and contrast agents without pass-through payment status, is packaged into payment for the associated procedures, and these products will not be separately paid. In addition, we policy-package all nonpass-through drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure and drugs and biologicals that function as supplies when used in a surgical procedure, as discussed in section II.A.3. of the proposed rule and this final rule with comment period. In the CY 2018 OPPS/ASC proposed rule (82 FR 33635 through 33636), we proposed that all of these policy-packaged drugs and biologicals with pass-through payment status would be paid at ASP+6 percent, like other pass-through drugs and biologicals, for CY 2018. Therefore, our estimate of pass-through payment for policy-packaged drugs and biologicals with pass-through payment status approved prior to CY 2018 was not \$0, as discussed below. In section V.A.5. of the proposed rule, we discussed our policy to determine if the costs of certain policy-packaged drugs or biologicals are already packaged into the existing APC structure. If we

determine that a policy-packaged drug or biological approved for pass-through payment resembles predecessor drugs or biologicals already included in the costs of the APCs that are associated with the drug receiving pass-through payment, we proposed to offset the amount of pass-through payment for the policy-packaged drug or biological. For these drugs or biologicals, the APC offset amount is the portion of the APC payment for the specific procedure performed with the pass-through drug or biological, which we refer to as the policy-packaged drug APC offset amount. If we determine that an offset is appropriate for a specific policy-packaged drug or biological receiving pass-through payment, we proposed to reduce our estimate of pass-through payments for these drugs or biologicals by this amount.

Similar to pass-through spending estimates for devices, the first group of drugs and biologicals requiring a pass-through payment estimate consists of those products that were recently made eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2018. The second group contains drugs and biologicals that we know are newly eligible, or project will be newly eligible in the remaining quarter of CY 2017 or beginning in CY 2018. The sum of the CY 2018 pass-through spending estimates for these two groups of drugs and biologicals equals the total CY 2018 pass-through spending estimate for drugs and biologicals with pass-through payment status.

B. Estimate of Pass-Through Spending

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33636), we proposed to set the applicable pass-through payment percentage limit at 2.0 percent of the total projected OPPTS payments for CY 2018, consistent with section 1833(t)(6)(E)(ii)(III) of the Act and our OPPTS policy from CY 2004 through CY 2017 (81 FR 79676 through 79678).

For the first group, consisting of device categories that are currently eligible for pass-through payment and will continue to be eligible for pass-through payment in CY 2018, there are no active categories for CY 2018. Because there are no active device categories for CY 2018, we proposed an estimate for the first group of devices of \$0.

We did not receive any public comments on our proposed estimate for the first group of devices. For this final rule with comment period, using the latest available data, we calculated a CY 2018 spending estimate for this first group of devices of \$0.

In estimating our proposed CY 2018 pass-through spending for device categories in the second group, we included: Device categories that we knew at the time of the development of the proposed rule will be newly eligible for pass-through payment in CY 2018; additional device categories that we estimated could be approved for pass-through status subsequent to the development of the proposed rule and before January 1, 2018; and contingent projections for new device categories established in the second through fourth quarters of CY 2018. In the CY 2018 OPPTS/ASC proposed rule (82 FR 33636), we proposed to use the general methodology described in the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66778), while also taking into account recent OPPTS experience in approving new pass-through device categories. For the proposed rule, the estimate of CY 2018 pass-through spending for this second group of device categories was \$10 million.

We did not receive any public comments on our proposed estimate for the second group of devices. For this final rule with comment period, using the latest available data, we calculated a CY 2018 spending estimate for this second group of devices of \$10 million.

To estimate proposed CY 2018 pass-through spending for drugs and biologicals in the first group, specifically those drugs and biologicals recently made eligible for pass-through payment and continuing on pass-through payment status for CY 2018, we proposed to use the most recent Medicare hospital outpatient claims data regarding their utilization, information provided in the respective pass-through applications, historical hospital claims data, pharmaceutical industry information, and clinical information regarding those drugs or biologicals to project the CY 2018 OPPTS utilization of the products.

For the known drugs and biologicals (excluding policy-packaged diagnostic radiopharmaceuticals, contrast agents, drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure, and drugs and biologicals that function as supplies when used in a surgical procedure) that will be continuing on pass-through payment status in CY 2018, we estimated the pass-through payment amount as the difference between ASP+6 percent and the payment rate for nonpass-through drugs and biologicals that will be separately paid at ASP+6 percent, which is zero for this group of drugs. Because payment for policy-packaged drugs and biologicals is packaged if the

product was not paid separately due to its pass-through payment status, we proposed to include in the CY 2018 pass-through estimate the difference between payment for the policy-packaged drug or biological at ASP+6 percent (or WAC+6 percent, or 95 percent of AWP, if ASP or WAC information is not available) and the policy-packaged drug APC offset amount, if we determine that the policy-packaged drug or biological approved for pass-through payment resembles a predecessor drug or biological already included in the costs of the APCs that are associated with the drug receiving pass-through payment. For the proposed rule, using the proposed methodology described above, we calculated a CY 2018 proposed spending estimate for this first group of drugs and biologicals of approximately \$7.7 million.

We did not receive any public comments on our proposed spending estimate for this first group of drugs and biologicals. For this final rule with comment period, using the latest available data, we calculated a CY 2018 spending estimate for this first group of drugs and biologicals of approximately \$9.83 million. We note that this estimate does not reflect drugs purchased with a 340B discount and therefore subject to a payment reduction based on final policy for CY 2018.

To estimate proposed CY 2018 pass-through spending for drugs and biologicals in the second group (that is, drugs and biologicals that we knew at the time of development of the proposed rule were newly eligible for pass-through payment in CY 2018, additional drugs and biologicals that we estimated could be approved for pass-through status subsequent to the development of the proposed rule and before January 1, 2017, and projections for new drugs and biologicals that could be initially eligible for pass-through payment in the second through fourth quarters of CY 2018), we proposed to use utilization estimates from pass-through applicants, pharmaceutical industry data, clinical information, recent trends in the per unit ASPs of hospital outpatient drugs, and projected annual changes in service volume and intensity as our basis for making the CY 2018 pass-through payment estimate. We also proposed to consider the most recent OPPTS experience in approving new pass-through drugs and biologicals. Using our proposed methodology for estimating CY 2018 pass-through payments for this second group of drugs, we calculated a proposed spending estimate for this second group of drugs and biologicals of approximately \$8.5 million.

We did not receive any public comments on our proposed methodology or the proposed spending estimate for this second group of drugs. Therefore, for CY 2018, we are continuing to use the general methodology described earlier. For this final rule with comment period, based on the latest available data, we calculated a CY 2018 spending estimate for this second group of drugs and biologicals of approximately \$8.23 million.

In summary, in accordance with the methodology described earlier in this section, for this final rule with comment period, we estimate that total pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2018 and those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2018 is approximately \$28.06 million (approximately \$10 million for device categories and approximately \$18.06 million for drugs and biologicals) compared to the proposed \$26.2 million (approximately \$10 million for device categories and approximately \$16.2 million for drugs and biologicals), which represents 0.04 percent of total projected OPPS payments for CY 2018 (approximately \$70 billion). Therefore, we estimate that pass-through spending in CY 2018 will not amount to 2.0 percent of total projected OPPS CY 2018 program spending.

VII. OPPS Payment for Hospital Outpatient Visits and Critical Care Services

In the CY 2018 OPPS/ASC proposed rule (82 FR 33637), for CY 2018, we proposed to continue with our current clinic and emergency department (ED) hospital outpatient visits payment policies. For a description of the current clinic and ED hospital outpatient visits policies, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70448). We also proposed to continue with and not propose any change to our payment policy for critical care services for CY 2018. For a description of the current payment policy for critical care services, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70449), and for the history of the payment policy for critical care services, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75043). In the proposed rule, we sought public comments on any changes to these codes that we should consider for future rulemaking cycles. We continued to encourage those parties

who comment to provide the data and analysis necessary to justify any suggested changes.

We did not receive any public comments on our proposals for CY 2018. Therefore, we are finalizing our proposal, without modification, to continue our current clinic and ED hospital outpatient visits and critical care services payment policies. We also did not receive any public comments on any changes to these codes that we should consider for future rulemaking cycles.

VIII. Payment for Partial Hospitalization Services

A. Background

A partial hospitalization program (PHP) is an intensive outpatient program of psychiatric services provided as an alternative to inpatient psychiatric care for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression, schizophrenia, and substance use disorders. Section 1861(ff)(1) of the Act defines partial hospitalization services as the items and services described in paragraph (2) prescribed by a physician and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. Section 1861(ff)(2) of the Act describes the items and services included in partial hospitalization services. Section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital to its outpatients or by a community mental health center (CMHC), as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(3)(B) of the Act defines a CMHC for purposes of this benefit.

Section 1833(t)(1)(B)(i) of the Act provides the Secretary with the authority to designate the OPD services to be covered under the OPPS. The Medicare regulations that implement this provision specify, at 42 CFR 419.21, that payments under the OPPS will be made for partial hospitalization services furnished by CMHCs as well as Medicare Part B services furnished to

hospital outpatients designated by the Secretary, which include partial hospitalization services (65 FR 18444 through 18445).

Section 1833(t)(2)(C) of the Act requires the Secretary, in part, to establish relative payment weights for covered outpatient department (OPD) services (and any groups of such services described in section 1833(t)(2)(B) of the Act) based on median (or, at the election of the Secretary, mean) hospital costs using data on claims from 1996 and data from the most recent available cost reports. In pertinent part, section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered OPD services, within a classification system developed by the Secretary for covered OPD services, so that services classified within each group are comparable clinically and with respect to the use of resources. In accordance with these provisions, we have developed the PHP APCs. Because a day of care is the unit that defines the structure and scheduling of partial hospitalization services, we established a per diem payment methodology for the PHP APCs, effective for services furnished on or after July 1, 2000 (65 FR 18452 through 18455). Under this methodology, the median per diem costs were used to calculate the relative payment weights for the PHP APCs. Section 1833(t)(9)(A) of the Act requires the Secretary to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors.

We began efforts to strengthen the PHP benefit through extensive data analysis, along with policy and payment changes finalized in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66670 through 66676). In that final rule with comment period, we made two refinements to the methodology for computing the PHP median: The first remapped 10 revenue codes that are common among hospital-based PHP claims to the most appropriate cost centers; and the second refined our methodology for computing the PHP median per diem cost by computing a separate per diem cost for each day rather than for each bill.

In CY 2009, we implemented several regulatory, policy, and payment changes, including a two-tier payment approach for partial hospitalization services under which we paid one

amount for days with 3 services under PHP APC 0172 (Level 1 Partial Hospitalization) and a higher amount for days with 4 or more services under PHP APC 0173 (Level 2 Partial Hospitalization) (73 FR 68688 through 68693). We also finalized our policy to deny payment for any PHP claims submitted for days when fewer than 3 units of therapeutic services are provided (73 FR 68694). Furthermore, for CY 2009, we revised the regulations at 42 CFR 410.43 to codify existing basic PHP patient eligibility criteria and to add a reference to current physician certification requirements under 42 CFR 424.24 to conform our regulations to our longstanding policy (73 FR 68694 through 68695). We also revised the partial hospitalization benefit to include several coding updates (73 FR 68695 through 68697).

For CY 2010, we retained the two-tier payment approach for partial hospitalization services and used only hospital-based PHP data in computing the PHP APC per diem costs, upon which PHP APC per diem payment rates are based. We used only hospital-based PHP data because we were concerned about further reducing both PHP APC per diem payment rates without knowing the impact of the policy and payment changes we made in CY 2009. Because of the 2-year lag between data collection and rulemaking, the changes we made in CY 2009 were reflected for the first time in the claims data that we used to determine payment rates for the CY 2011 rulemaking (74 FR 60556 through 60559).

In the CY 2011 OPPTS/ASC final rule with comment period (75 FR 71994), we established four separate PHP APC per diem payment rates: Two for CMHCs (APC 0172 (for Level 1 services) and APC 0173 (for Level 2 services)) and two for hospital-based PHPs (APC 0175 (for Level 1 services) and 0176 (for Level 2 services)), based on each provider type's own unique data. For CY 2011, we also instituted a 2-year transition period for CMHCs to the CMHC APC per diem payment rates based solely on CMHC data. Under the transition methodology, CMHC APCs Level 1 and Level 2 per diem costs were calculated by taking 50 percent of the difference between the CY 2010 final hospital-based PHP median costs and the CY 2011 final CMHC median costs and then adding that number to the CY 2011 final CMHC median costs. A 2-year transition under this methodology moved us in the direction of our goal, which is to pay appropriately for partial hospitalization services based on each provider type's data, while at the same time allowing providers time to adjust their business

operations and protect access to care for Medicare beneficiaries. We also stated that we would review and analyze the data during the CY 2012 rulemaking cycle and, based on these analyses, we might further refine the payment mechanism. We refer readers to section X.B. of the CY 2011 OPPTS/ASC final rule with comment period (75 FR 71994 through 71994) for a full discussion.

In addition, in accordance with section 1301(b) of the Health Care and Education Reconciliation Act of 2010 (HCERA 2010), we amended the description of a PHP in our regulations to specify that a PHP must be a distinct and organized intensive ambulatory treatment program offering less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting. In accordance with section 1301(a) of HCERA 2010, we revised the definition of a CMHC in the regulations to conform to the revised definition now set forth under section 1861(ff)(3)(B) of the Act (75 FR 71990).

For CY 2012, as discussed in the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74348 through 74352), we determined the relative payment weights for partial hospitalization services provided by CMHCs based on data derived solely from CMHCs and the relative payment weights for partial hospitalization services provided by hospital-based PHPs based exclusively on hospital data.

In the CY 2013 OPPTS/ASC final rule with comment period, we finalized our proposal to base the relative payment weights that underpin the OPPTS APCs, including the four PHP APCs (APCs 0172, 0173, 0175, and 0176), on geometric mean costs rather than on the median costs. We established these four PHP APC per diem payment rates based on geometric mean cost levels calculated using the most recent claims and cost data for each provider type. For a detailed discussion on this policy, we refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68406 through 68412).

In the CY 2014 OPPTS/ASC proposed rule (78 FR 43621 through 43622), we solicited comments on possible future initiatives that may help to ensure the long-term stability of PHPs and further improve the accuracy of payment for PHP services, but proposed no changes. In the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75050 through 75053), we summarized the comments received on those possible future initiatives. We also continued to apply our established policies to calculate the four PHP APC per diem payment rates based on geometric mean

per diem costs using the most recent claims data for each provider type. For a detailed discussion on this policy, we refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75047 through 75050).

In the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66902 through 66908), we continued to apply our established policies to calculate the four PHP APC per diem payment rates based on PHP APC geometric mean per diem costs, using the most recent claims and cost data for each provider type.

In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70455 through 70465), we described our extensive analysis of the claims and cost data and ratesetting methodology. We found aberrant data from some hospital-based PHP providers that were not captured using the existing OPPTS ± 3 standard deviation trims for extreme CCRs and excessive CMHC charges resulting in CMHC geometric mean costs per day that were approximately the same as or more than the daily payment for inpatient psychiatric facility services. Consequently, we implemented a trim to remove hospital-based PHP service days that use a CCR that was greater than 5 (CCR5) to calculate costs for at least one of their component services, and a trim on CMHCs with a geometric mean cost per day that is above or below 2 (± 2) standard deviations from the mean. We stated in the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70456) that, without using a trimming process, the data from these providers would inappropriately skew the geometric mean per diem cost for Level 2 CMHC services.

In addition, in the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70459 through 70460), we corrected a cost inversion that occurred in the final rule data with respect to hospital-based PHP providers. We corrected the cost inversion with an equitable adjustment to the actual geometric mean per diem costs by increasing the Level 2 hospital-based PHP APC geometric mean per diem costs and decreasing the Level 1 hospital-based PHP APC geometric mean per diem costs by the same factor, to result in a percentage difference equal to the average percent difference between the hospital-based Level 1 PHP APC and the Level 2 PHP APC for partial hospitalization services from CY 2013 through CY 2015.

Finally, we renumbered the PHP APCs, which were previously 0172, 0173, 0175, and 0176, to 5851, 5852, 5861, and 5862, respectively. For a detailed discussion of the PHP ratesetting process, we refer readers to

the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70462 through 70467).

In the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79687 through 79691), we continued to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs using the most recent claims and cost data for each provider type. However, we finalized a policy to combine the Level 1 and Level 2 PHP APCs for CMHCs and to combine the Level 1 and Level 2 APCs for hospital-based PHPs because we believed this would best reflect actual geometric mean per diem costs going forward, provide more predictable per diem costs, particularly given the small number of CMHCs, and generate more appropriate payments for these services, for example by avoiding the cost inversions for hospital-based PHPs addressed in the CY 2016 and CY 2017 OPPTS/ASC final rules with comment period (80 FR 70459 and 81 FR 79682). We implemented an 8-percent outlier cap for CMHCs to mitigate potential outlier billing vulnerabilities by limiting the impact of inflated CMHC charges on outlier payments. We will continue to monitor the trends in outlier payments and consider policy adjustments as necessary.

For a comprehensive description on the background of the PHP payment policy, we refer readers to the CY 2016 and CY 2017 OPPTS/ASC final rules with comment period (80 FR 70453 through 70455 and 81 FR 79678 through 79680).

B. PHP APC Update for CY 2018

1. PHP APC Geometric Mean Per Diem Costs

For CY 2018, in the CY 2018 OPPTS/ASC proposed rule (82 FR 33639), we proposed to continue to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs using the most recent claims and cost data for each provider type. Specifically, we proposed to continue to use CMHC APC 5853 (Partial Hospitalization (3 or More Services Per Day)) and hospital-based PHP APC 5863 (Partial Hospitalization (3 or More Services Per Day)). We proposed to continue to calculate the geometric mean per diem costs for CY 2018 for APC 5853 for CMHCs using only CY 2016 CMHC claims data and the most recent CMHC cost data, and the CY 2018 geometric mean per diem costs for APC 5863 for hospital-based PHPs using only CY 2016 hospital-based PHP claims data and the most recent hospital cost data.

2. Development of the PHP APC Geometric Mean Per Diem Costs

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33639), for CY 2018 and subsequent years, we proposed to follow the PHP ratesetting methodology described in section VIII.B.2. of the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70462 through 70466) to determine the PHP APCs' geometric mean per diem costs and to calculate the payment rates for APCs 5853 and 5863, incorporating the modifications made in our CY 2017 OPPTS/ASC final rule with comment period. As discussed in section VIII.B.1. of the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79680 through 79687), we finalized our proposal that, for CY 2017 and subsequent years, the geometric mean per diem cost for hospital-based PHP APC 5863 would be based upon actual hospital-based PHP claims and costs for PHP service days providing 3 or more services. Similarly, we finalized our proposal that, for CY 2017 and subsequent years, the geometric mean per diem cost for CMHC APC 5853 would be based upon actual CMHC claims and costs for CMHC service days providing 3 or more services.

The CMHC or hospital-based PHP APC per diem costs are the provider-type specific costs derived from the most recent claims and cost data. The CMHC or hospital-based PHP APC per diem payment rates are the national unadjusted payment rates calculated from the CMHC or hospital-based PHP APC per diem costs, after applying the OPPTS budget neutrality adjustments described in section II.A.4. of this final rule with comment period.

We proposed to apply our established methodologies in developing the CY 2018 geometric mean per diem costs and payment rates, including the application of a ± 2 standard deviation trim on costs per day for CMHCs and a $CCR \leq 5$ hospital service day trim for hospital-based PHP providers. These two trims were finalized in the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70455 through 70462) for CY 2016 and subsequent years.

a. CMHC Data Preparation: Data Trims, Exclusions, and CCR Adjustments

For the CY 2018 proposed rule, prior to calculating the proposed geometric mean per diem cost for CMHC APC 5853, we prepared the data by first applying trims and data exclusions, and assessing CCRs as described in the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70463 through 70465), so that ratesetting is not skewed

by providers with extreme data. For this CY 2018 OPPTS/ASC final rule with comment period, we followed the same data preparation steps. Before any trims or exclusions, there were 50 CMHCs in the final PHP claims data file (compared to 47 CMHCs in the CY 2018 OPPTS/ASC proposed rule). Under the ± 2 standard deviation trim policy, we excluded any data from a CMHC for ratesetting purposes when the CMHC's geometric mean cost per day was more than ± 2 standard deviations from the geometric mean cost per day for all CMHCs. By applying this trim for CY 2018 ratesetting, in this final rule with comment period, we excluded 3 CMHCs with geometric mean per diem costs per day below the trim's lower limit of \$47.44 and 1 CMHC above the trim's upper limit of \$427.72 from the final ratesetting for CY 2018. This standard deviation trim removed 4 providers from ratesetting whose data would have skewed the calculated final geometric mean per diem cost.

In accordance with our PHP ratesetting methodology, in the proposed rule, we also removed service days with no wage index values because we use the wage index data to remove the effects of geographic variation in costs prior to APC geometric mean per diem cost calculation (80 FR 70465). In this CY 2018 final rule ratesetting, no CMHCs were missing wage index data for all of their service days. Therefore, we did not exclude any CMHCs due to lack of wage index data.

In addition to our trims and data exclusions, before determining the PHP APC geometric mean per diem costs, we also assess CCRs (80 FR 70463). Our longstanding PHP OPPTS ratesetting methodology defaults any CMHC $CCR > 1$ to the statewide hospital ancillary CCR (80 FR 70457). In this CY 2018 final rule ratesetting, we identified one CMHC that had a $CCR > 1$. This CMHC's CCR was 1.002, and it was defaulted to its appropriate statewide hospital ancillary CCR for CY 2018 ratesetting purposes.

In summary, these data preparation steps adjusted the CCR for 1 CMHC and excluded 4 CMHCs, resulting in the inclusion of a total of 46 CMHCs in our CY 2018 final rule ratesetting modeling (compared to 39 CMHCs in our proposed rule ratesetting modeling in the CY 2018 OPPTS/ASC proposed rule). The trims removed 864 CMHC claims from the 16,242 total CMHC claims, resulting in 15,378 CMHC claims used in ratesetting. We believe that excluding providers with extremely low or high geometric mean costs per day or extremely low or high CCRs protects CMHCs from having that data inappropriately skew the calculation of

the CMHC APC geometric mean per diem cost. Moreover, we believe that these trims, exclusions, and adjustments help prevent inappropriate fluctuations in the PHP APC geometric mean per diem payment rates.

After applying all of the above trims, exclusions, or adjustments, the final CY 2018 geometric mean per diem cost for all CMHCs for providing 3 or more services per day (APC 5853) is \$143.22 (compared to the proposed geometric mean per diem cost of \$128.81).

b. Hospital-Based PHP Data Preparation: Data Trims and Exclusions

For the CY 2018 proposed rule and for this CY 2018 final rule with comment period, we followed a data preparation process for hospital-based PHP providers that is similar to that used for CMHCs by applying trims and data exclusions as described in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70463 through 70465) so that our ratesetting is not skewed by providers with extreme data. Before any trimming or exclusions, there were 424 hospital-based PHP providers in the CY 2016 final PHP claims data used in this CY 2018 OPPS/ASC final rule with comment period (compared to 420 hospital-based PHPs in the CY 2018 OPPS/ASC proposed rule).

For hospital-based PHP providers, we applied a trim on hospital service days when the CCR was greater than 5 at the cost center level. The CCR>5 hospital service day trim removed hospital-based PHP service days that use a CCR>5 to calculate costs for at least one of their component services. Unlike the ± 2 standard deviation trim, which excluded CMHC providers that failed the trim, the CCR>5 trim excluded any hospital-based PHP service day where any of the services provided on that day were associated with a CCR>5.

Applying this trim removed from our final rule ratesetting service days from 8 hospital-based PHP providers with CCRs ranging from 5.2024 to 17.5702. However, all of the service days for these 8 hospital-based PHP providers had at least one service associated with a CCR>5, so the trim removed these providers entirely from our final rule ratesetting. In addition, 16 hospital-based PHPs reported zero daily costs, and therefore were removed for having no days with PHP payment; 1 hospital-based PHP was removed for missing wage index data; and 1 hospital-based PHP was removed by the OPPS ± 3 standard deviation trim on costs per day.

Therefore, we excluded 26 hospital-based PHP providers, resulting in 398 hospital-based PHP providers in the

data used for final rule ratesetting (compared to 393 hospital-based PHPs in the CY 2018 OPPS/ASC proposed rule). In addition, 2 hospital-based PHP providers were defaulted to using their overall hospital ancillary CCR due to outlier cost center CCR values (72.7362 and 117.1943). After completing these data preparation steps, we calculated the final geometric mean per diem cost for hospital-based PHP APC 5863 for hospital-based PHP services. The final geometric mean per diem cost for hospital-based PHP providers that provide 3 or more services per service day (hospital-based PHP APC 5863) is \$208.09 (compared to \$213.60 from the CY 2018 OPPS/ASC proposed rule).

We received a few public comments relating to our proposal to use our established methodology and policies in developing the PHP geometric mean per diem costs.

Comment: One commenter opposed CMS continuing to use the single-tier payment system implemented in CY 2017 OPPS/ASC rulemaking because the commenter believed this system punished CMHCs for the cost inversion in the hospital-based PHP data. The commenter suggested that CMS return to the two-tier payment system. Another commenter was concerned that the single-tier payment system could have unintended consequences, including reducing the number of PHPs or the number of services provided per day, and urged CMS to monitor the data.

One commenter disagreed with CMS paying CMHCs and hospital-based PHPs differently for providing the exact same services and believed that the APCs distinguished by provider type hurts rather than rewards CMHCs for being more cost effective than hospital-based PHPs. The commenter referred to a 2011 bill introduced in the Congress to address the “inequity” of the current payment system and stated that CMHCs should be paid the same rate as hospital-based PHPs. This commenter also stated that setting CMHCs’ payment rates based on a small number of CMHCs does not reflect the actual cost of providing these services and expressed concern that basing payments at the mean or median level would result in half of CMHCs receiving payments less than their costs, which would guarantee that more CMHCs would close, further limiting access to care.

Response: We thank the commenters for their input. We reiterate our single-tier payment policy and rationale. In the CY 2017 OPPS/ASC final rule with comment period, we combined the Level 1 and Level 2 PHP APCs into a single tier PHP APC for CMHCs, and we

did the same for hospital-based PHPs. We cited several reasons for implementing the single-tier payment system (81 FR 79682 through 79686) and noted that one primary reason for combining the two-tier system into a single tier, by provider type, was the decrease in the number of CMHCs (81 FR 79683). With a small number of providers, data from large providers with a high percentage of all PHP service days and unusually high or low geometric mean costs per day would have a more pronounced effect on the PHP APCs geometric mean per diem costs, skewing costs up or down. The effect would be magnified by continuing to split the geometric mean per diem costs further by distinguishing between Level 1 and Level 2 PHP services. We believed that creating a single PHP APC for each provider type for providing 3 or more PHP services per day would reduce these cost fluctuations and provide more stability in the PHP APC geometric mean per diem costs.

We do not believe that the single-tier payment system will lead to a reduction in the number of PHPs, but rather that the increased stability in CMHC and hospital-based PHP payment rates will provide more stability for the PHP APCs. In addition, the calculated rates for APCs 5853 and 5863 continue to be based upon the actual costs of CMHCs and hospital-based PHPs, respectively. Therefore, we believe that the payment rates for the single-tier PHP APCs should be an appropriate approximation of provider costs, and should not result in reduced access to care.

Because the single-tier PHP APCs 5853 and 5863 became effective January 1, 2017, we will have to wait until our CY 2017 claims data are available to determine any effect of the payment rates for these APCs on the provision of services per day. We will continue to monitor PHP data for any unintended consequences resulting from the single-tier APC policy.

The OPPS pays for hospital outpatient services, including partial hospitalization services. This system bases payment on the geometric mean per diem costs of providing services using provider data from claims and cost reports. We calculate the PHP APC geometric mean per diem costs based on the data provided for each type of provider to determine payment for these services. We believe that this system provides appropriate payment for partial hospitalization services based on actual provider costs. The final PHP APC geometric mean per diem costs for CY 2018 reflect these actual provider costs.

Regarding the 2011 bill introduced in the Congress that would have required CMHCs and hospital-based PHPs to be paid at the same rate, we note that this bill was not enacted.

The difference in payment between CMHCs and hospital-based PHPs is based upon differences in resource use (or costs). When Congress required the Secretary to implement an outpatient prospective payment system, it generally required that this payment system group clinically similar covered services with respect to resource use (section 1833(t)(2) of the Act). Because the resource uses of CMHCs and hospital-based PHPs are different, these two provider types are paid under different APCs, based on their actual resource use.

Because the cost of providing partial hospitalization services differs significantly by site of service, we established different PHP APC payment rates for hospital-based PHPs and CMHCs in the CY 2011 OPSS/ASC final rule with comment period (75 FR 71991 through 71994). However, we allowed a 2-year transition to the CMHC payment rates based solely on CMHC data. With respect to the continued use of PHP APC geometric mean per diem costs for determining payment rates by provider, we refer readers to the CY 2013 OPSS/ASC final rule with comment period (77 FR 68406 through 68412) for a discussion of the implementation of this policy. The resulting payment rates reflect the geometric mean cost of what providers expend to maintain such programs, based on data provided by CMHCs and hospital-based PHPs, which we believe are an improvement over the payment rates under the two-tier methodology calculated based on median costs using only hospital-based data.

Comment: One commenter was concerned that the PHP trim methodologies could cause changes to the payment rates which could lead to a reduction in the number of PHPs. The commenter urged CMS to monitor the data to ensure that there are no unintended consequences, such as a reduction in the number of PHPs.

Response: We thank the commenter for sharing these concerns. We are continuing to monitor PHP data, including the number of PHPs that provide care to Medicare beneficiaries. Our trim methodologies should protect PHP ratesetting from skewing by aberrant data, such as extremely low or extremely high costs per day. We do not believe that our PHP trim methodologies will lead to a reduction in PHPs, but rather that the trims we apply will provide stability to PHPs by reducing

fluctuations in their payment rates due to aberrant data.

Comment: One commenter suggested that CMS consider paying PHPs using a quality-based payment system, and that CMS use a value-based purchasing program for PHPs.

Response: Currently, there is no statutory language explicitly authorizing a value-based purchasing program for PHPs. We responded to a similar public comment in the CY 2016 OPSS/ASC final rule with comment period (80 FR 70462) and refer readers to a summary of that comment and our response. To reiterate, sections 1833(t)(2) and 1833(t)(9) of the Act set forth the requirements for establishing and adjusting OPSS payment rates, which include PHP payment rates. Section 1833(t)(17) of the Act authorizes the Hospital OQR Program, which applies a payment reduction to subsection (d) hospitals that fail to meet program requirements. In the CY 2015 OPSS/ASC proposed rule (79 FR 41040), we considered future inclusion of, and requested comments on, the following quality measures addressing PHP issues that would apply in the hospital outpatient setting: (1) 30-day Readmissions; (2) Group Therapy; and (3) No Individual Therapy. We also refer readers to the CY 2015 OPSS/ASC final rule with comment period (79 FR 66957 through 66959) for a detailed discussion of PHP measures considered for inclusion in the Hospital OQR Program in future years. The Hospital OQR Program does not apply to CMHCs.

Comment: One commenter presented a number of suggestions for a more holistic approach to the way Medicare (or Medicaid) pays for and covers PHP services, including coverage for case management, and assistance with medication compliance, proper housing, and work and training facilities.

Response: We appreciate these suggestions. As we noted in the preceding comment response, the payment methodology for PHP services is governed by sections 1833(t)(2) and 1833(t)(9) of the Act. PHP services are defined in section 1861(ff) of the Act and do not include those services described by the commenter. We do not have the authority to cover and pay for services beyond those described in the Act, or to pay outside of the statutory methodology.

Comment: One commenter stated that the CMHC PHP payment rate is too low, which can affect access to care by some of the most disadvantaged Medicare beneficiaries. This commenter expressed concern about the closure of CMHCs, which the commenter attributed to low CMHC PHP payment

rates. The commenter noted that declining payment rates are occurring at a time when CMHCs have experienced higher costs due to the establishment of CMHC conditions of participation (CoPs) and higher bad debt expenses. The commenter believed that CMS is only concerned about protecting access to hospital-based PHPs, and not to CMHCs PHPs.

Response: The final CY 2018 CMHC geometric mean per diem costs are 11 percent higher than the proposed geometric mean per diem costs, and are approximately 15 percent higher than those costs finalized in the CY 2017 rulemaking. These final CY 2018 CMHC geometric mean per diem costs are based upon the most recent CMHC claims and cost data reported by providers. Therefore, we believe the payment rate derived from these geometric mean per diem costs represents an appropriate payment to CMHCs and should not result in provider closures or affect beneficiary access to care.

Most (if not all) of the costs associated with adhering to CoPs should be captured in the cost report data used in ratesetting and, therefore, are accounted for when computing the geometric mean per diem costs. The reduction to bad debt reimbursement was a result of provisions of section 3201 of the Middle Class Tax Extension and Job Creation Act of 2012 (Pub. L. 112-96). The reduction to bad debt reimbursement impacted all providers eligible to receive bad debt reimbursement, as discussed in the CY 2013 End-Stage Renal Disease final rule (77 FR 67518). Medicare currently reimburses bad debt for eligible providers at 65 percent.

We appreciate the commenter's input regarding the effect any reduction in PHP payment rates would have on access to care, but we disagree with the commenter's assertion that CMS is only concerned about access to hospital-based PHPs. We are working to strengthen continued access to both CMHCs and hospital-based PHPs for eligible Medicare beneficiaries. For example, for the CY 2016 ratesetting, we conducted an extensive analysis of the ratesetting process, and discovered errors providers had made in claims coding of revenue and HCPCS codes that were leading to lower geometric mean per diem costs. In the CY 2016 OPSS/ASC final rule with comment period (80 FR 70462 through 70466), we also included a detailed description of the ratesetting process to help all PHPs record costs correctly so that we can more fully capture PHP costs in ratesetting. In that same final rule with comment period, we also addressed

fluctuations in payments and protected ratesetting from aberrant data by implementing trims on all PHP data used in ratesetting (80 FR 70455 through 70457). For example, the CMHC ±2 standard deviation trim has protected CMHCs by removing from ratesetting those providers with aberrantly low costs per day, which would have lowered total CMHC geometric mean per diem costs, and thus lowered CMHC per diem payment rates. In this CY 2018 final rule with comment period ratesetting, that ±2 standard deviation trim resulted in our removing 4 CMHCs from the ratesetting data, 3 of which had costs per day that were extremely low.

We agree that both CMHCs and hospital-based PHPs serve some of the most disadvantaged Medicare beneficiaries, and appreciate the care that these providers give. We remain concerned about access to all PHP services, and particularly about the small numbers of CMHCs. The CY 2016 PHP data file of claims used for CY 2018

ratesetting showed only 50 CMHCs before we applied our data trims. We want to ensure that CMHCs remain a viable option as providers of mental health care, and will continue to explore policy options for strengthening the PHP benefit and increasing access to the valuable services provided by CMHCs and hospital-based PHPs.

We did not receive any public comments on the hospital-based PHP geometric mean per diem costs.

After consideration of the public comments we received, we are finalizing our proposals to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs using the most recent claims and cost data for each provider type. Specifically, we are finalizing our proposal to continue to pay CMHCs using APC 5853 (Partial Hospitalization (3 or More Services Per Day)) and to continue to pay hospital-based PHPs using APC 5863 (Partial Hospitalization (3 or More Services Per

Day)). We calculated the geometric mean per diem costs for CY 2018 for APC 5853 for CMHCs using only CY 2016 CMHC claims data and the most recent CMHC cost data, and the CY 2018 geometric mean per diem costs for APC 5863 for hospital-based PHPs using only CY 2016 hospital-based PHP claims data and the most recent hospital cost data. We also are finalizing our proposal to continue applying our established trim methodologies, including the application of a ±2 standard deviation trim on costs per day for CMHCs and a CCR>5 hospital service day trim for hospital-based PHP providers.

The final CY 2018 PHP APC geometric mean per diem costs for CMHC PHP APC 5853 are \$143.22 and for hospital-based PHP APC 5863 are \$208.09, as shown in Table 74 below. The final PHP APC payment rates are included in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site).

TABLE 74—CY 2018 PHP APC GEOMETRIC MEAN PER DIEM COSTS

CY 2018 APC	Group title	Final PHP APC geometric mean per diem costs
5853	Partial Hospitalization (3 or more services per day) for CMHCs	\$143.22
5863	Partial Hospitalization (3 or more services per day) for hospital-based PHPs	\$208.09

3. PHP Service Utilization Updates

In the CY 2016 OPPS/ASC final rule with comment period (81 FR 79684 through 79685), we expressed concern over the low frequency of individual therapy provided to beneficiaries. The final CY 2016 claims data used for this CY 2018 final rule with comment period revealed some increases in the provision of individual therapy compared to CY 2015 claims data. In the CY 2016 final claims data, hospital-based PHPs provided individual therapy on 4.7 percent of days with only 3 services and 5.8 percent of days with 4 or more services (compared to 4.0 percent and 6.2 percent, respectively, in CY 2015). Similarly, in the CY 2016 final claims data, CMHCs provided individual

therapy on 8.5 percent of days with only 3 services provided and 5.0 percent of days with 4 or more services provided (compared to 7.9 percent and 4.4 percent, respectively, in CY 2015 claims).

In the CY 2018 OPPS/ASC proposed rule (82 FR 33640), we stated that we are aware that our single-tier payment policy may influence a change in service provision because providers are able to obtain payment that is heavily weighted to the cost of providing 4 or more services when they provide only 3 services. We indicated that we are interested in ensuring that providers furnish an appropriate number of services to beneficiaries enrolled in PHPs. Therefore, with the CY 2017

implementation of APC 5853 and APC 5863 for providing 3 or more PHP services per day, we are continuing to monitor utilization of days with only 3 PHP services.

For this CY 2018 final rule with comment period, we used the final update of the CY 2016 claims data. The final CY 2016 claims data showed that PHPs maintained an appropriately low utilization of 3 service days compared to CY 2015. Hospital-based PHPs have increased their provision of services since CY 2015 by providing fewer days with 3 services only, and more days with 5 or more services. CMHCs have remained steady in providing an appropriately low level of 3 service days.

TABLE 75—PERCENTAGE OF PHP DAYS BY SERVICE UNIT FREQUENCY

	CY 2015 (%)	CY 2016* (%)	Change (%)
CMHCs:			
Percent of Days with 3 services	4.7	4.8	2.1
Percent of Days with 4 services	62.9	70.3	11.8
Percent of Days with 5 or more services	32.4	24.9	-23.1
Hospital-based PHPs:			
Percent of Days with 3 services	12.4	10.9	-12.1
Percent of Days with 4 services	69.8	64.9	-7.0

TABLE 75—PERCENTAGE OF PHP DAYS BY SERVICE UNIT FREQUENCY—Continued

	CY 2015 (%)	CY 2016* (%)	Change (%)
Percent of Days with 5 or more services	17.8	24.1	35.4

* May not sum to 100 percent by provider type due to rounding.

As we noted in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79685), we will continue to monitor the provision of days with only 3 services, particularly now that the single-tier PHP APCs 5853 and 5863 are in place for providing 3 or more services per day to CMHCs and hospital-based PHPs, respectively.

It is important to reiterate our expectation that days with only 3 services are meant to be an exception and not the typical PHP day. In the CY 2009 OPPS/ASC final rule with comment period, we clearly stated that we consider the acceptable *minimum* units of PHP services required in a PHP day to be 3 and explained that it was never our intention that 3 units of service represent the number of services to be provided in a typical PHP day. PHP is furnished in lieu of inpatient psychiatric hospitalization and is intended to be more intensive than a half-day program. We further indicated that a typical PHP day should include 5 to 6 hours of services (73 FR 68687 through 68694). We explained that days with only 3 units of services may be appropriate to bill in certain limited circumstances, such as when a patient might need to leave early for a medical appointment and, therefore, would be unable to complete a full day of PHP treatment. At that time, we noted that if a PHP were to only provide days with 3 services, it would be difficult for patients to meet the eligibility requirement in 42 CFR 410.43, that patients must require a minimum of 20 hours per week of therapeutic services as evidenced in their plan of care (73 FR 68689).

4. Minimum Service Requirement: 20 Hours Per Week

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68694), we codified patient eligibility criteria to reflect the intensive nature of a PHP. At that time, we noted that many of the patient eligibility criteria had been longstanding policy requirements that did not reflect a change in policy. The added regulatory text was intended to

strengthen and enhance the integrity of the PHP benefit. We further stated that because PHP is provided in lieu of inpatient care, it should be a highly structured and clinically intensive program. Our goal was to improve the level of service furnished in a day of PHP, while also ensuring that the appropriate population utilizes the PHP benefit (73 FR 68695).

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33641 through 33642), when we codified these eligibility criteria, we acknowledged commenters' concerns related to the eligibility requirement that a patient must require a minimum of 20 hours per week of therapeutic services as evidenced in their plan of care. For example, we recognized commenters' concerns that it may sometimes be difficult for patients to receive 20 hours per week of therapeutic services, such as when transitioning into or out of a PHP program (73 FR 68695). Therefore, to permit flexibility in treating PHP patients, we require a minimum of 20 hours per week of therapeutic services, with the understanding that patients may not always meet this minimum, and qualified the requirement by adding "as evidenced in their plan of care." This eligibility requirement only addresses the minimum amount of PHP services beneficiaries must require as evidenced in their plan of care. It does not address whether or not beneficiaries receive a particular number of therapeutic services per week. However, we have noted in multiple prior OPPS/ASC final rules with comment period that a typical PHP day would include 5 to 6 hours per day of PHP services (70 FR 68548, 71 FR 67999, 72 FR 66671, and 73 FR 68687).

Most recently, we discussed the 20 hours of services requirement in the CY 2017 rulemaking when we reminded providers that our regulations at §§ 410.43(a)(3) and (c)(1) continue to require that PHP beneficiaries must require a minimum of 20 hours per week of therapeutic services as evidenced in their plan of care, and that

PHP services must be furnished in accordance with a physician certification and the beneficiary's plan of care reflecting that need.

We analyzed CY 2015 and CY 2016 PHP claims data to assess the intensity of PHP services provided, using PHP-allowable HCPCS codes and provider and service date information. To calculate the number of hours of PHP services provided to each beneficiary each day, we assumed each unit of service equaled 1 hour of time. Each service day was then mapped to its Sunday through Saturday calendar week, and the number of PHP hours per week was calculated for each beneficiary. Next, the service weeks for each beneficiary were sorted chronologically and assessed: The first service week in a continuous series of service weeks was flagged as an "Admission" week, and the last service week in a continuous series of service weeks was flagged as a "Discharge" week. We removed from the analysis the admission and discharge weeks for each beneficiary to permit us to assess the intensity of services provided to beneficiaries fully engaged in PHPs (that is, those in "nontransitional" weeks). We then calculated the total number of service weeks and the number of service weeks with at least 20 PHP hours for each beneficiary. These two values were then used to determine the percentage of nontransitional service weeks that met the 20-hour PHP threshold for each beneficiary.

As stated in the CY 2018 OPPS/ASC proposed rule (82 FR 33641), we found that a majority of PHP patients did not receive at least 20 hours of PHP services per week. Approximately half of Medicare beneficiaries receiving PHP services received 20 hours or more of services in 50 percent or more of nontransitional weeks. In CY 2016 claims data, only 16.4 percent of Medicare beneficiaries in CMHCs and 34.8 percent of Medicare beneficiaries in hospital-based PHPs received at least 20 hours of PHP services in 100 percent of nontransitional weeks.

TABLE 76—NUMBER AND PERCENTAGE OF MEDICARE BENEFICIARIES RECEIVING AT LEAST 20 HOURS OF PHP SERVICES PER WEEK—CY 2015 THROUGH CY 2016

Type	Beneficiaries Receiving 20 or more hours of PHP services per nontransitional week *	CY 2015		CY 2016	
		Number	Percentage	Number	Percentage
CMHC PHP Beneficiaries	In 50 percent or more of weeks	1,205	53.1	1,016	57.3
	In 100 percent of weeks	319	14.1	291	16.4
Hospital-Based PHP Beneficiaries	In 50 percent or more of weeks	8,610	51.0	8,333	56.7
	In 100 percent of weeks	5,003	29.6	5,115	34.8

* Weeks are trimmed to exclude admission and discharge weeks based on a Sunday through Saturday week. Nontransitional weeks are weeks that are not admission or discharge weeks.

Overall, the data suggest that some PHP beneficiaries may not be receiving the intensive services that eligible beneficiaries actually need. In the CY 2018 OPPS/ASC proposed rule, we stated that we were concerned about these findings, and encouraged PHPs to review their admission practices and ensure they are providing the services beneficiaries need.

Given similar concerns, in the CY 2017 OPPS/ASC final rule with comment period, we solicited public comments on potential future editing of PHP claims for the 20 hours per week minimum eligibility requirement and on strengthening the tie between a beneficiary’s receipt of 20 hours per week of PHP services and payment for those services (81 FR 79686). We received a number of public comments in response to our solicitation, which we addressed in the CY 2018 OPPS/ASC proposed rule (82 FR 33641 through 33642).

In the CY 2018 OPPS/ASC proposed rule, we solicited public comments on the advisability of applying a payment requirement conditioned on a beneficiary’s receipt of a minimum of 20 hours of therapeutic services per week. We also solicited public comments addressing the need for exceptions to such a policy. Specifically, we wanted to know and understand the type of occurrences or circumstances that would cause a PHP patient to not receive at least 20 hours of PHP services per week, particularly where payment would still be appropriate.

Comment: Many commenters agreed it is critical that beneficiaries requiring PHP services receive the appropriate intensity of services, but suggested that CMS work with industry to define “intensity” more broadly than total hours of services received per week. A few commenters suggested that CMS check the Local Coverage Determinations (LCDs) when evaluating intensity. One commenter provided a history of the PHP benefit, and noted that, historically, day programs similar to PHPs were required to offer 20 hours

per week in programming, but the patient and the treatment team determined the amount of time in treatment.

A few commenters suggested that CMS forego editing, and instead implement a targeted medical review of those providers whose data are problematic. These and other commenters suggested that CMS educate the PHP provider community about a 20-hour per week minimum service requirement. A number of commenters suggested that CMS reissue the rescinded Special Edition 1607 MedLearn Matters article and its associated Change Request 9880, about messaging on the remittance advice to providers. One commenter suggested that CMS include beneficiaries in any communications about a 20-hour per week minimum service requirement.

Several commenters believed that it would be premature to edit claims until CMS could determine the effect of the single-tier payment system on provision of services. These commenters urged a delay in editing until the CY 2019 rulemaking when CMS could analyze the CY 2017 data (the first year that could show the effect of the single-tier payment system on provision of services) and monitor utilization in the meantime. A few commenters stated that CMS should not require weekly billing of claims in order to implement payment editing of the 20-hour requirement, as it would increase providers’ administrative burden because it would increase the number of claims providers would be required to submit.

Some commenters cited language from the CY 2009 OPPS/ASC final rule with comment period which implemented this eligibility requirement: That CMS stated it is to be documented in the plan of care and the language did not require PHP patients to receive 20 hours of care. One commenter believed that an edit limiting payment would be unduly burdensome, particularly given the PHP preamble language in the CY 2009 final

rule with comment period. One commenter suggested that allowing nurse practitioners to create the treatment plan, and supervise and direct patients in PHPs, would give providers more flexibility in providing services to meet the minimum requirements.

One commenter was concerned that a 20-hour minimum service requirement, combined with limiting payment to essentially a 3-service encounter, would not fully serve the patients and would push patients out of PHPs and into “Intensive Outpatient Programs (IOPs).” One commenter stated that if there were editing for a 20-hour requirement, the PHP revenue for one provider, for example, would decline by \$100,000 at a time when the provider is struggling to find nursing staff, and its psychiatry and nursing costs are rising.

Multiple commenters described reasons why PHP patients are sometimes unable to attend the program for 20 hours per week. Commenters suggested exceptions for weather, acute illness or comorbid disease, family or childcare issues, holidays, transportation problems, other medical or social service appointments, court or legal appointments, and local emergencies or disasters. Several commenters discussed problems with medication compliance and medication adjustments, the cognitive effects of which could make attending for 20 hours per week clinically suboptimal. Several commenters noted that an overly strict edit could result in inappropriate changes and reduce access to PHP services.

Response: We thank the commenters for their insights and suggestions. We will consider these comments in future rulemaking and in developing subregulatory guidance.

We wish to correct two erroneous assumptions included in the comments. First, we have not rescinded Change Request 9880 about messaging on the provider remittance advice. This Change Request is available online at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2017->

Transmittals-Items/R1833OTN.html?DLPage=1&DLEntries=10&DLFilter=9880&DLSort=1&DLSortDir=ascending.

However, we did rescind MLN Special Edition (SE) article 1607, partly because it referred to requiring weekly billing. We do not currently require PHPs to bill weekly, although PHPs may do so if they wish. Second, regarding the comment about limiting payment to a 3-service encounter, it was unclear if the commenter believed that PHP per diem payment was limited to that for 3 services. We note that the single-tier APCs for CMHCs and for hospital-based PHPs are based upon the geometric mean per diem costs for providing 3 or more PHP services per day. PHP APCs 5853 and 5863 do not limit PHP services to 3 per day.

Our goal is for PHP providers to continue to have flexibility in providing PHP services. However, we must ensure that Medicare beneficiaries enrolled in PHPs are legitimately eligible for PHP services and receive appropriately intensive treatment. As we seek to understand the usage of PHP services by Medicare beneficiaries, we also will continue to monitor the intensity of services provided on a weekly basis.

C. Outlier Policy for CMHCs

As discussed in the CY 2004 OPPS final rule with comment period (68 FR 63469 through 63470), after examining the costs, charges, and outlier payments for CMHCs, we concluded that establishing a separate OPPS outlier policy for CMHCs would be appropriate. Beginning in CY 2004, we created a separate outlier policy specific to the estimated costs and OPPS payments provided to CMHCs. We designated a portion of the estimated OPPS outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS each year, excluding outlier payments, and established a separate outlier threshold for CMHCs.

The separate outlier threshold for CMHCs resulted in \$1.8 million in outlier payments to CMHCs in CY 2004, and \$0.5 million in outlier payments to CMHCs in CY 2005. In contrast, in CY 2003, more than \$30 million was paid to CMHCs in outlier payments. We note that, in the CY 2009 OPPS/ASC final rule with comment period, we also established an outlier reconciliation policy to address charging aberrations related to OPPS outlier payments (73 FR 68594 through 68599). In CY 2017, we implemented a CMHC outlier payment cap to be applied at the provider level, such that in any given year, an individual CMHC will receive no more than a set percentage of its CMHC total

per diem payments in outlier payments (81 FR 79692 through 79695). This outlier payment cap only affects CMHCs, and does not affect other provider types. This outlier payment cap is in addition to and separate from the current outlier policy and reconciliation policy in effect. We finalized the CMHC outlier payment cap to be set at 8 percent of the CMHC's total per diem payments (81 FR 79694 through 79695).

In the CY 2018 OPPS/ASC proposed rule (82 FR 33642), we proposed to continue to designate a portion of the estimated 1.0 percent hospital outpatient outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS in CY 2018, excluding outlier payments. This policy results in CMHC outliers being paid under limited circumstances associated with costs from complex cases, rather than as a substitute for the standard PHP payment to CMHCs. In the CY 2018 OPPS/ASC proposed rule, we also noted that CMHCs are projected to receive 0.02 percent of total hospital outpatient payments in CY 2018, excluding outlier payments. Therefore, we proposed to designate approximately 0.0027 percent of the estimated 1.0 percent hospital outpatient outlier threshold for CMHCs. As we do for each rulemaking cycle, we have updated the CMHC CCRs and claims data used to model the PHP payments rates for this final rule with comment period.

Based on our simulations of CMHC payments for CY 2018, in the proposed rule, we proposed to continue to set the cutoff point for outlier payments for CY 2018 at 3.4 times the highest CMHC APC payment rate implemented for that calendar year, which for CY 2018 is the payment rate for CMHC APC 5853. In addition, we proposed to continue to apply the same outlier payment percentage that applies to hospitals. Therefore, for CY 2018, we proposed to continue to pay 50 percent of CMHC APC geometric mean per diem costs over the cutoff point. For example, for CY 2018, if a CMHC's cost for partial hospitalization services paid under CMHC APC 5853 exceeds 3.4 times the proposed payment rate for CMHC APC 5853, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.4 times the payment rate for CMHC APC 5853.

In section II.G. of the proposed rule, for the hospital outpatient outlier payment policy, we proposed to set a fixed dollar threshold in addition to an APC multiplier threshold. APC 5853 is the only APC for which CMHCs may receive payment under the OPPS, and is

for providing a defined set of services that are relatively low cost when compared to other OPPS services. As such, it is not necessary to also impose a fixed dollar threshold on CMHCs. Therefore, we did not propose to set a dollar threshold for CMHC outlier payments.

In summary, we proposed to continue to calculate our CMHC outlier threshold and CMHC outlier payments according to our established policies.

We did not receive any public comments on these proposals. Therefore, we are finalizing our proposals to continue to calculate CMHC outlier threshold and CMHC outlier payments according to our established policies. Using the updated data for this final rule with comment period, CMHCs are projected to receive 0.03 percent of total hospital outpatient payments in CY 2018, excluding outlier payments. Therefore, for CY 2018 we are designating approximately 0.02 percent of the estimated 1.0 percent hospital outpatient outlier threshold for CMHCs.

IX. Procedures That Will Be Paid Only as Inpatient Procedures

A. Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74352 through 74353) for a full historical discussion of our longstanding policies on how we identify procedures that are typically provided only in an inpatient setting (referred to as the inpatient only (IPO) list) and, therefore, will not be paid by Medicare under the OPPS, and on the criteria that we use to review the IPO list each year to determine whether or not any procedures should be removed from the list. The complete list of codes that will be paid by Medicare in CY 2018 as inpatient only procedures is included as Addendum E to this final rule with comment period (which is available via the Internet on the CMS Web site).

B. Changes to the Inpatient Only (IPO) List

1. Methodology for Identifying Appropriate Changes to IPO List

In the CY 2018 OPPS/ASC proposed rule (82 FR 33642 through 33645), for CY 2018, we proposed to use the same methodology (described in the November 15, 2004 final rule with comment period (69 FR 65834)) of reviewing the current list of procedures on the IPO list to identify any procedures that may be removed from the list. We have established five criteria that are part of this methodology. As

noted in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74353), we utilize these criteria when reviewing procedures to determine whether or not they should be removed from the IPO list and assigned to an APC group for payment under the OPPS when provided in the hospital outpatient setting. We note that a procedure is not required to meet all of the established criteria to be removed from the IPO list. The criteria include the following:

1. Most outpatient departments are equipped to provide the services to the Medicare population.

2. The simplest procedure described by the code may be performed in most outpatient departments.

3. The procedure is related to codes that we have already removed from the IPO list.

4. A determination is made that the procedure is being performed in numerous hospitals on an outpatient basis.

5. A determination is made that the procedure can be appropriately and safely performed in an ASC, and is on the list of approved ASC procedures or has been proposed by us for addition to the ASC list.

Using the above-listed criteria, in the CY 2018 OPPS/ASC proposed rule (82 FR 33643 and 33644), we identified the procedures described by the following codes that we proposed to remove from the IPO list for CY 2018: CPT code 27447 (Arthroplasty, knee, condyle and plateau; medical and lateral compartments with or without patella resurfacing (total knee arthroplasty)) and CPT code 55866 (Laparoscopy, surgical prostatectomy, retroperitoneal radical, including nerve sparing, includes robotic assistance, when performed). The procedures that we proposed to remove from the IPO list for CY 2018 and subsequent years, including the HCPCS code, long descriptors, and the CY 2018 payment indicators, were displayed in Table 29 of the proposed rule.

We note that we address the public comments we received on removing the procedure described by CPT code 55866 from the IPO list under section IX.B.2. of this final rule with comment period. We address the public comments we received on removing CPT code 27447 from the IPO list under section IX.B.3. of this final rule with comment period.

2. Removal of Procedure Described by CPT Code 55866

In the CY 2018 OPPS/ASC proposed rule, we proposed to remove CPT code 55866 from the IPO list and to assign it to C-APC 5362 (Level 2 Laparoscopy &

Related Services) with status indicator "J1". We stated in the proposed rule that after consulting with stakeholders and our clinical advisors regarding the procedure described by CPT code 55866, we believe that this procedure meets criteria 1 and 2. We sought comment on whether the public believes that these criteria are met and whether CPT code 55866 meets any other of the five criteria cited earlier.

Comment: Commenters, including cancer centers, physicians, and individual stakeholders, supported the proposal to remove CPT code 55866 from the IPO list. These commenters believed this procedure could be safely performed on hospital outpatients and noted that many hospital outpatient departments are equipped to do so.

Response: We appreciate the commenters' support.

Comment: One commenter opposed the removal of CPT code 55866 from the IPO list, stating that the procedure cannot be safely performed as an outpatient procedure for a majority of patients.

Response: We continue to believe that the procedure described by CPT code 55866 can be safely performed in the hospital outpatient setting on patients who are appropriate candidates to receive the procedure in that setting. Because the procedure meets several of the criteria for removal from the IPO list, we believe it is appropriate to remove it.

3. Removal of the Total Knee Arthroplasty (TKA) Procedure Described by CPT Code 27447

For a number of years, total knee arthroplasty (TKA) has been a topic of discussion for removal from the IPO list with both stakeholder support and opposition. Most recently, in the CY 2017 OPPS/ASC proposed rule (81 FR 45679 through 45681), we sought public comments on the removal of the TKA procedure from the IPO list from interested parties, including specifically: Medicare beneficiaries and advocate associations for Medicare beneficiaries; orthopedic surgeons and physician specialty societies that represent orthopedic surgeons who perform TKA procedures; hospitals and hospital trade associations; and any other interested stakeholders. In the CY 2017 proposed rule comment solicitation, we requested stakeholder input on whether the TKA procedure met the established criteria used to identify procedures to remove from the IPO list. We also requested input regarding how to modify current Medicare payment models that include TKA, such as the Bundled Payments for

Care Improvement (BPCI) and the Comprehensive Care for Joint Replacement (CJR) initiatives, if the procedure was removed from the IPO list.

Below is a summary of the public comments we received in response to the comment solicitation in the CY 2017 OPPS/ASC proposed rule. These public comments were varied and nuanced.

- A number of commenters believed that continued refinements to the TKA surgical procedure allowed it to be performed safely on properly selected Medicare beneficiaries in the outpatient setting. A number of facilities indicated that they were currently performing TKA procedures on an outpatient basis in both the HOPD and ASC on non-Medicare patients. Commenters who supported removing the TKA procedure from the IPO list also noted recent peer-reviewed publications that reported on investigations of the feasibility of outpatient TKA with positive results; that is, TKA outpatients did not experience higher rates of complications or readmissions in comparison to TKA inpatients.

- A minority of commenters (including teaching hospital stakeholders and some professional organizations representing orthopedic surgeons) stated that the risk of postsurgical complications was too high for patients with the TKA procedure performed in the outpatient setting for the Medicare population and noted that patients appropriate for the TKA procedure performed on an outpatient basis tend to be younger, more active, have fewer complications, and have more at home support than most Medicare beneficiaries. These commenters also believed there was insufficient research on the TKA procedure performed on an outpatient basis to definitively claim that the procedure could be safely performed in the outpatient setting.

- Some commenters noted that if the TKA procedure was removed from the IPO list, inpatient TKA cases should not be subject to Recovery Audit Contractor (RAC) review for appropriate site-of-service. In addition, some commenters expressed concerns about the effect that removing the TKA procedure from the IPO list could have on the BPCI and CJR Medicare payment models. We stated in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699) that we would consider all public comments received in future policymaking.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33643), we stated that we have reviewed the clinical characteristics of the TKA procedure and related evidence, including current

length-of-stay (LOS) data for inpatient TKA procedures and peer-reviewed literature related to outpatient TKA procedures. We also stated that we have considered input from the comment solicitation in the CY 2017 OPPTS/ASC proposed rule (as summarized earlier) and the professional opinions of orthopedic surgeons and CMS clinical advisors. In addition, we stated that we have taken into account the recommendation from the summer 2016 meeting of the HOP Panel to remove the TKA procedure from the IPO list. Based on this information, we stated in the CY 2018 OPPTS/ASC proposed rule that we have determined that the TKA procedure would be an appropriate candidate for removal from the IPO list. We stated that we expect providers to carefully develop evidence-based patient selection criteria to identify patients who are appropriate candidates for an outpatient TKA procedure as well as exclusionary criteria that would disqualify a patient from receiving an outpatient TKA procedure. We believe that the subset of Medicare beneficiaries who meet patient selection criteria for performance of the TKA procedure on an outpatient basis may have the procedure performed safely in the outpatient setting.

In the CY 2018 OPPTS/ASC proposed rule, we stated that we believe that the TKA procedure described by CPT code 27447 meets a number of criteria for removal from the IPO list, including criteria 1, 2, and 4. We sought comments on whether the public believes that these criteria are met and whether the TKA procedure meets any other of the five criteria stated in the beginning of this section. In the proposed rule, we also proposed that CPT code 27447 would be assigned to C-APC 5115 (Level 5 Musculoskeletal Procedures) with status indicator “J1”.

Comment: Numerous commenters, including individual stakeholders, orthopedic surgeons, clinical specialty societies, national and State-level hospital associations, hospital systems, device manufacturers, and private insurance providers responded to this proposal. Some commenters, including some orthopedic specialty societies and surgeons, private insurance providers, ambulatory surgical centers, hospital systems, and beneficiaries supported the proposal to remove CPT code 27447 from the IPO list. Many of these commenters believed that TKA met CMS’ established criteria for removing a procedure from the IPO list and stated that appropriately selected patients who were in excellent health and with no or limited medical comorbidities and sufficient caregiver support could be

successful candidates for outpatient TKA. Several commenters referenced their personal, positive experiences with outpatient TKA. Other commenters supported the proposal, but with certain caveats regarding patient safety, including requests that CMS develop, with input from stakeholders, patient selection criteria and risk stratification protocols for TKA to be performed in an outpatient setting. Two orthopedic specialty societies stated that their organization was in the process of developing these patient selection and protocol tools.

In addition, some commenters requested that CMS explicitly state that the surgeon is the final arbiter of the appropriate site for the surgical procedure, that CMS provide an incentive for outpatient and ambulatory settings performing TKA, PHA, and THA to be a part of a registry such as the American Joint Replacement Registry, and that CMS confirm that surgeons will continue to have the option to select the appropriate setting (inpatient or outpatient) for the procedure.

Some commenters expressed concerns that removal of TKA from the IPO list may lead commercial payers to implement coverage policies that would drive these surgeries from the inpatient setting to lower cost outpatient settings that may not be sufficiently prepared to handle the complexities or risks associated with some outpatient TKA procedures. Further, some commenters stated that removing TKA from the IPO list could drive TKA to specific facilities based on cost alone, which could result in significant further stresses in isolated rural care settings.

Response: We appreciate the commenters’ support of our proposal. As previously stated in the discussion of the CY 2018 OPPTS/ASC proposed rule, we continue to believe that the decision regarding the most appropriate care setting for a given surgical procedure is a complex medical judgment made by the physician based on the beneficiary’s individual clinical needs and preferences and on the general coverage rules requiring that any procedure be reasonable and necessary. We also reiterate our previous statement that the removal of any procedure from the IPO list does *not* require the procedure to be performed only on an outpatient basis.

While we continue to expect providers who perform outpatient TKA on Medicare beneficiaries to use comprehensive patient selection criteria to identify appropriate candidates for the procedure, we believe that the surgeons, clinical staff, and medical specialty societies who perform

outpatient TKA and possess specialized clinical knowledge and experience are most suited to create such guidelines. Therefore, we do not expect to create or endorse specific guidelines or content for the establishment of providers’ patient selection protocols. However, we remind commenters that the “2-midnight” rule continues to be in effect and was established to provide guidance on when an inpatient admission would be appropriate for payment under Medicare Part A (inpatient hospital services). In general, this guidance provides that if the physician expects the beneficiary to require hospital care that spans at least 2 midnights and admits the beneficiary based upon that expectation, the case is appropriate for payment under the IPPS (80 FR 70539). For stays for which the physician expects the patient to need less than 2 midnights of hospital care, an inpatient admission is payable under Medicare Part A on a case-by-case basis if the documentation in the medical record supports the admitting physician’s determination that the patient requires inpatient hospital care. This documentation and the physician’s admission decision are subject to medical review, which is discussed in greater detail below (80 FR 70541). The 2-midnight rule does not apply to procedures on the IPO list; that is, medically necessary procedures that are on the IPO list are appropriate for Medicare Part A payment without regard to the actual or expected length of stay (80 FR 70539).

With regard to the behavior of commercial insurance providers and site selection for outpatient TKA, while we believe that these comments are out of the scope of the proposed rule, we note that commercial providers are responsible for establishing their own rules governing payment for services.

Comment: Several commenters opposed the proposal to remove the TKA procedure from the IPO list, including national and State-level hospital associations, hospital systems, and individual stakeholders. Some of these commenters expressed concerns that TKA was not clinically appropriate for the outpatient setting. The commenters stated that the TKA procedure is invasive and Medicare beneficiaries are more likely to have comorbidities that could make pain more difficult to control. The commenters also stated that, because of these comorbidities, Medicare beneficiaries will face greater complications, recovery times, and rehabilitation needs than non-Medicare populations to recover from TKA procedures.

Response: We continue to believe that the TKA procedure meets a number of our established criteria for removal from the IPO list, including criteria 1, 2, and 4. We also continue to believe that there are a subset of Medicare beneficiaries with less medical complexity who are able to receive this procedure safely on a hospital outpatient basis and that providers should adopt evidence-based patient selection protocols to appropriately identify these patients. As previously noted, removal of a procedure from the IPO list does not require the procedure to be performed only on an outpatient basis. Rather, it allows payment to be made under the OPSS when the procedure is performed on a hospital outpatient. In addition, we expect that physicians will continue to exercise their complex medical judgment, based on a number of factors, including the patient's comorbidities, the expected length of stay in the hospital (in accordance with the 2-midnight rule), the patient's anticipated need for postoperative skilled nursing care, and other factors.

Comment: Several commenters stated their concerns regarding the ability of beneficiaries to access postacute care for a TKA procedure at an SNF. By statute, beneficiaries must have a prior inpatient hospital stay of no fewer than 3 consecutive days to be eligible for Medicare coverage of inpatient SNF care. The commenters stated that discharging outpatient TKA patients without a 3-day stay and access to adequate rehabilitation would increase the likelihood of further medical concerns that may result in readmissions, which will result in higher expenses for the beneficiary, the Medicare program, and the hospital. These commenters stated that if there is no commensurate waiver of the SNF 3-day stay requirement, all outpatient TKA patients would need to be appropriate for discharge to home or home health care. One commenter questioned beneficiaries' ability to access the SNF benefit if a beneficiary has outpatient TKA surgery and is then admitted as an inpatient after being discharged from the hospital outpatient department. Other commenters noted that the vast majority of beneficiaries who fit the criteria for an outpatient TKA or THA procedure would not need institutional postacute care services. Commenters also stated that a large percentage of TKA inpatients do not require a 3-day length of stay, and that removing TKAs from the IPO list would not preclude these patients from meeting the 3-day qualifying stay requirement when warranted.

Response: We reiterate that removal of the TKA procedure from the IPO list does not require the procedure to be performed only on an outpatient basis. Removal of the TKA procedure from the IPO list allows for payment of the procedure in either the inpatient setting or the outpatient setting. The commenter is correct that a prior inpatient hospital stay of at least 3 consecutive days is required by law under Medicare FFS as a prerequisite for SNF coverage. We note that Medicare Advantage plans may elect, pursuant to 42 CFR 409.30 and 422.101(c), to provide SNF coverage without imposing the SNF 3-day qualifying stay requirement and that CMS has issued conditional waivers of the 3-day qualifying stay requirement as necessary to carry out the Medicare Shared Savings Program and to test certain Innovation Center payment models, including the Next Generation ACO Model.

We agree that the physician should take the beneficiaries' need for post-surgical services into account when selecting the site of care to perform the surgery. We would expect that Medicare beneficiaries who are selected for outpatient TKA would be less medically complex cases with few comorbidities and would not be expected to require SNF care following surgery. Instead, we expect that many of these beneficiaries would be appropriate for discharge to home (with outpatient therapy) or home health care. We believe that comprehensive patient selection protocols should be implemented to properly identify these beneficiaries. However, we do not believe that Medicare should establish such protocols and believe that physicians and providers should select an appropriate patient selection protocol.

Comment: Numerous commenters from stakeholders addressed the effect that removing TKA from the IPO list could potentially have on two Medicare payment models currently being administered by the Center for Medicare and Medicaid Innovation: BPCI and the CJR model. The commenters were concerned that the proposal to remove TKA from the IPO list could significantly alter the composition of BPCI and CJR participant hospitals' patient populations. Specifically, the commenters believed that younger and healthier patients would be more likely to receive outpatient TKAs and that a higher proportion of patients receiving inpatient TKAs would be high risk and/or more likely to require additional postacute care support. As a result, the commenters believed that a change in patient-mix could increase the average

episode payment of the remaining inpatient TKA BPCI and CJR episodes when compared to current payment levels and affect a hospital's ability to fall below the established target price for the episode, thereby hindering the hospital's ability to generate savings under the BPCI or CJR model. The commenters presented several proposed refinements to the BPCI and CJR models to mitigate these effects, including adjusting the target price for BPCI and CJR episodes involving TKA to exclude procedures that could have been performed in the HOPD or allowing BPCI Model 2 and CJR episodes to be initiated by TKA performed in the hospital outpatient department.

Response: As mentioned earlier, we believe that there is a subset of less medically complex TKA cases that could be appropriately and safely performed on an outpatient basis. However, we do not expect a significant volume of TKA cases currently being performed in the hospital inpatient setting to shift to the hospital outpatient setting as a result of removing this procedure from the IPO list. At this time, we expect that a significant number of Medicare beneficiaries will continue to receive treatment as an inpatient for TKA procedures. As providers' knowledge and experience in the delivery of hospital outpatient TKA treatment develops, there may be a greater migration of cases to the hospital outpatient setting. However, we do not expect a significant shift in TKA cases from the hospital inpatient setting to the hospital outpatient setting between January 1, 2018 (the effective date for the removal of TKA from the IPO list) and the current end dates of the performance periods for the BPCI and CJR models, September 30, 2018 and December 31, 2020, respectively. Accordingly, we do not expect a substantial impact on the patient-mix for the BPCI and CJR models. We intend to monitor the overall volume and complexity of TKA cases performed in the hospital outpatient department to determine whether any future refinements to these models are warranted.

Comment: Some commenters asked CMS to reconsider the proposed assignment of CPT code 27447 to C-APC 5115 (Level 5 Musculoskeletal Procedures) with status indicator "J1". The commenters presented an analysis of OPSS claims data which indicated that approximately one-third of the TKA claims reported no joint implant HCPCS C-code on the claim. Some of these commenters asserted that the claims that did not include a joint implant had a geometric mean cost of approximately

\$3,808 and the claims that did include a joint implant had a geometric mean cost of approximately \$13,843, while the overall geometric mean cost for claims with CPT code 27447 was approximately \$8,602. The commenters requested that CMS only use claims for ratesetting for CPT 27447 that include a joint implant and to assign the procedure to APC 5116 (Level 6 Musculoskeletal Procedures). One commenter also stated that CMS failed to provide the general public with an explanation of the source of the geometric mean cost of the TKA procedure, which was CMS' basis for assigning the TKA procedure to a C-APC.

Response: Since the assignment of CPT code 27447 to the IPO list, no payment for claim lines billing this procedure code were made. Based on clinical similarity with other musculoskeletal procedures, we continue to believe that C-APC 5115 is an appropriate APC assignment for CPT code 27447. Further, we note that the 50th percentile IPPS payment for TKA without major complications or comorbidities (MS-DRG 470) is roughly \$11,760 for FY 2018. We note that the geometric mean cost for C-APC 5116 is over \$15,000. As previously stated, we would expect that beneficiaries selected for outpatient TKA would generally be expected to be less complex and to not have major complications or comorbidities. Therefore, we do not believe that it would be appropriate for the OPSS payment rate to exceed the IPPS payment rate for TKA without major complications/comorbidities because IPPS cases would generally be expected to be more complicated and complex than those selected for performance in the hospital outpatient setting and because inpatient cases would include room and board as well as more time in the hospital.

With respect to the billing concern, we rely on hospitals to bill all HCPCS codes accurately in accordance with their code descriptors and CPT and CMS instructions, as applicable, and to report charges on claims and charges and costs on their Medicare hospital cost reports appropriately (77 FR 68324). As we do every year, we will review and evaluate the APC groupings based on the latest available data in the next rulemaking cycle.

After consideration of the public comments we received, we are

finalizing our proposal to remove the TKA procedure described by CPT code 27447 from the IPO list beginning in CY 2018 and to assign the TKA procedure to C-APC 5115 with status indicator "J1".

4. Recovery Audit Contractor (RAC) Review of TKA Procedures

In the CY 2018 OPSS/ASC proposed rule (82 FR 33643 and 33644), we proposed that if we finalized our proposal to remove the TKA procedure described by CPT code 27447 from the IPO list, we would also prohibit RAC review of patient status for TKA procedures performed in the inpatient setting for a period of 2 years to allow providers time to gain experience with these procedures in the outpatient setting. We believe this approach will help ensure that hospitals can determine whether to perform the procedure on a hospital outpatient or hospital inpatient basis without taking into account the possibility of an inpatient TKA claim being denied upon a patient status review by a RAC. That is, given that this surgical procedure is newly eligible for payment under either the IPPS or the OPSS, we proposed that RAC patient status reviews of a hospital claim is prohibited for a period of 2 years. We note that RAC reviews of TKA procedures described by CPT code 27447 will continue to be permitted for issues other than patient status as an inpatient or outpatient, including those for underlying medical necessity.

Comment: Many commenters supported a prohibition on RAC review for patient status for TKA procedures performed in the inpatient setting for a period of 2 years. Some commenters suggested that CMS prohibit RAC review for a period of at least 36 months to allow consensus to develop around appropriate evidence-based patient selection criteria. One commenter requested that CMS impose a permanent moratorium on RAC reviews of patient status for TKA or confirm that after any moratorium is lifted, a RAC will only be permitted to undertake such a review upon a referral by a Quality Improvement Organization ("QIO"). One commenter also requested that CMS also clarify that its current 2-midnight policy will apply to the TKA procedure if it were to be removed from the IPO, as it does for other inpatient admissions.

Response: We continue to believe that a 2-year prohibition on RAC review for TKA procedures performed in the inpatient setting is an adequate amount of time to allow providers to gain experience with determining the most appropriate setting to perform these procedures and establishing patient selection criteria to assist in the determination. As stated in the CY 2016 OPSS/ASC final rule with comment period (80 FR 70538 through 70549), under the 2-midnight rule, an inpatient admission is generally appropriate for Medicare Part A payment if the physician (or other qualified practitioner) admits the patient as an inpatient based upon the expectation that the patient will need hospital care that crosses at least 2 midnights. However, Medicare Part A payment is allowed on a case-by-case basis for inpatient admissions that do not satisfy the 2-midnight benchmark, if the documentation in the medical record supports the admitting physician's determination that the patient requires inpatient hospital care despite an expected length of stay that is less than 2 midnights. The initial medical reviews of claims for short-stay inpatient admissions are conducted by QIOs, which may refer providers to the RACs due to exhibiting persistent noncompliance with Medicare payment policies, including, but not limited to: Having high denial rates and consistently failing to adhere to the 2-midnight rule, or failing to improve their performance after QIO educational intervention. The 2-midnight rule and this medical review policy do not apply to procedures that are included on the IPO list. However, these policies do apply to other inpatient admissions for procedures that are not included on the IPO list and would also generally apply to TKA procedures performed in the hospital inpatient setting. As mentioned previously, however, RAC patient status reviews for TKA procedures performed in the hospital inpatient setting is prohibited for a period of 2 years.

5. Public Requests for Additions to or Removal of Procedures on the IPO List

Commenters who responded to the CY 2018 OPSS/ASC proposed rule also requested that CMS remove several additional procedures from the IPO list. These additional procedures are listed in Table 77 below.

TABLE 77—PROCEDURES REQUESTED BY COMMENTERS TO BE REMOVED FROM THE CY 2018 INPATIENT ONLY LIST

CY 2018 PT code	CY 2018 long descriptor
23470	Arthroplasty, glenohumeral joint; hemiarthroplasty.
23472	Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder)).
27125	Hemiarthroplasty, hip, partial (eg, femoral stem prosthesis, bipolar arthroplasty).
27130	Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft.
27702	Arthroplasty, ankle; with implant (total ankle).
27703	Arthroplasty, ankle; revision, total ankle.
43282	Laparoscopy, surgical, repair of paraesophageal hernia with implantation of mesh.
43772	Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device component only.
43773	Laparoscopy, surgical, gastric restrictive procedure; removal and replacement of adjustable gastric restrictive device component only.
43774	Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device and subcutaneous port components.

After evaluating the above list of codes that commenters requested to be removed from the IPO list against our established criteria, we believe that CPT codes 43282, 43772, 43773, 43774 meet several criteria to be removed from the IPO list, including criteria 3. Accordingly, we are removing these four CPT codes from the IPO list for CY 2018 and assigning them to APCs in this final rule with comment period.

For the remaining CPT codes requested to be removed from the IPO list that describe joint replacement procedures, because of the strong public interest and numerous comments that we have received from stakeholders regarding our proposals to remove other joint replacement procedures, namely the TKA procedure, from the IPO list, we are not removing these procedures from the IPO list at this time to allow for further discussion. We will take

these requests into consideration and any proposed policy changes regarding these procedures will be announced in future rulemaking. A further discussion of the comment solicitation of the possible removal of partial hip arthroplasty (PHA) and total hip arthroplasty (THA) procedures from the IPO list is included under section IX.C. of this final rule with comment period.

One commenter requested that CMS add the procedure described by CPT code 92941 (Percutaneous transluminal revascularization of acute total/subtotal occlusion during acute myocardial infarction, coronary artery or coronary artery bypass graft, any combination of intracoronary stent, arterectomy and angioplasty, including aspiration thrombectomy when performed, single vessel) to the IPO list because this procedure is performed emergently to

treat acute myocardial infarction patients.

We evaluated the procedure described by CPT code 92941 against our criteria, and we agree with the commenter that CPT code 92941 should be added to the IPO list.

6. Summary of Changes to the IPO List for CY 218

After consideration of the public comments we received and for the reasons discuss previously, we are removing the following procedures from the IPO list for CY 2018: CPT codes 27447, 43282, 43772, 43773, 43774, and 55866. We also are adding CPT code 92941 to the IPO list for CY 2018. The specific procedures, including the CPT code, long descriptors, and the CY 2018 status indicators, are displayed in Table 78 below.

TABLE 78—CHANGES TO THE INPATIENT ONLY LIST FOR CY 2018

CY 2018 CPT code	CY 2018 long descriptor	Status	CY 2018 OPPIs APC assignment	CY 2018 OPPIs Status indicator
27447	Arthroplasty, knee, condyle and plateau; medical and lateral compartments with or without patella resurfacing (total knee arthroplasty).	Removed	5115	J1
43282	Laparoscopy, surgical, repair of paraesophageal hernia with implantation of mesh.	Removed	5362	J1
43772	Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device component only.	Removed	5303	J1
43773	Laparoscopy, surgical, gastric restrictive procedure; removal and replacement of adjustable gastric restrictive device component only.	Removed	5361	J1
43774	Laparoscopy, surgical, gastric restrictive procedure; removal of adjustable gastric restrictive device and subcutaneous port components.	Removed	5303	J1
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed.	Removed	5362	J1
92941	Percutaneous transluminal revascularization of acute total/subtotal occlusion during acute myocardial infarction, coronary artery or coronary artery bypass graft, any combination of intracoronary stent, arterectomy and angioplasty, including aspiration thrombectomy when performed, single vessel.	Added	N/A	C

The complete list of codes (the IPO list) that will be paid by Medicare in CY 2018 as inpatient only procedures is

included as Addendum E to this final rule with comment period (which is

available via the Internet on the CMS Web site).

C. Discussion of Solicitation of Public Comments on the Possible Removal of Partial Hip Arthroplasty (PHA) and Total Hip Arthroplasty (THA) Procedures From the IPO List

1. Background

Partial hip arthroplasty (PHA), CPT code 27125 (Hemiarthroplasty, hip, partial (eg, femoral stem prosthesis, bipolar arthroplasty)), and total hip arthroplasty (THA) or total hip replacement, CPT code 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft), have traditionally been considered inpatient surgical procedures. The procedures were placed on the original IPO list in the CY 2001 OPSS final rule (65 FR 18780). In 2000, the primary factors that were used to determine the assignment of a procedure to the IPO list were as follows: (1) The invasive nature of the procedure; (2) the need for at least 24 hours of postoperative care; and (3) the underlying physical condition of the patient who would require the surgery (65 FR 18455). In 2000, the geometric mean average length of stay for the DRG to which uncomplicated PHA and THA procedures were assigned was 4.6 days, and in 2016, the average length of stay for current uncomplicated PHA and THA procedures for the MS-DRG was 2.7 days.

In the CY 2017 OPSS/ASC proposed rule, we solicited public comments on the possible removal of total knee arthroplasty (TKA) from the IPO list (81 FR 45679 through 45681). Included in the public comments received related to the removal of TKA from the IPO list were several comments in support of removal of THA from the IPO list as well. Among those commenters expressing support for removal of THA from the IPO list were several surgeons and other stakeholders who believed that, given thorough preoperative screening by medical teams with significant experience and expertise involving hip replacement procedures, the THA procedure could be provided on an outpatient basis for some Medicare beneficiaries. These commenters noted significant success involving same day discharge for patients who met the screening criteria and whose experienced medical teams were able to perform the procedure early enough in the day for the patients to achieve postoperative goals, allowing home discharge by the end of the day. The commenters believed that the benefits of providing the THA procedure on an outpatient basis will lead to significant enhancements in

patient well-being, improved efficiency, and cost savings to the Medicare program, including shorter hospital stays resulting in fewer medical complications, improved results, and enhanced patient satisfaction.

As discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33644 and 33645), recent innovations have enabled surgeons to perform the PHA and THA procedures on an outpatient basis on non-Medicare patients (both in the HOPD and in the ASC). These innovations in PHA and THA care include minimally invasive techniques, improved perioperative anesthesia, alternative postoperative pain management, and expedited rehabilitation protocols. Patients undergoing minimally invasive surgical procedures instead of open surgical techniques generally benefit from a shorter hospital stay. However, not all patients are candidates for minimally invasive PHA or THA. Commenters on the CY 2017 OPSS/ASC proposed rule comment solicitation on the TKA procedure have stated that benefits of outpatient PHA and THA procedures include a likelihood of fewer complications, more rapid recovery, increased patient satisfaction, recovery at home with the assistance of family members, and a likelihood of overall improved outcomes. On the contrary, unnecessary inpatient hospitalization exposes patients to the risk of hospital-acquired conditions such as infections and a host of other iatrogenic mishaps.

We stated in the CY 2018 OPSS/ASC proposed rule that, like most surgical procedures, both PHA and THA need to be tailored to the individual patient's needs. Patients with a relatively low anesthesia risk and without significant comorbidities who have family members at home who can assist them may likely be good candidates for an outpatient PHA or THA procedure. These patients may be determined to also be able to tolerate outpatient rehabilitation in either an outpatient facility or at home postsurgery. On the other hand, patients with multiple medical comorbidities, aside from their osteoarthritis, would more likely require inpatient hospitalization and possibly postacute care in a skilled nursing facility or other facility. Surgeons who have discussed outpatient PHA and THA procedures in public comments in response to our CY 2017 OPSS/ASC proposed rule comment solicitation on the TKA procedure have emphasized the importance of careful patient selection and strict protocols to optimize outpatient hip replacement outcomes. These protocols typically manage all aspects of the patient's care,

including the at-home preoperative and postoperative environment, anesthesia, pain management, and rehabilitation to maximize rapid recovery, ambulation, and performance of activities of daily living.

We also noted in the proposed rule that not uncommonly we receive questions from the public about the IPO list that lead us to believe that some members of the public may misunderstand certain aspects of the IPO list. Therefore, two important principles of the IPO list must be reiterated at the outset of this discussion. First, just because a procedure is not on the IPO list does not mean that the procedure cannot be performed on an inpatient basis. IPO list procedures must be performed on an inpatient basis (regardless of the expected length of the hospital stay) in order to qualify for Medicare payment, but procedures that are not on the IPO list can be and very often are performed on individuals who are inpatients (as well as individuals who are hospital outpatients and ASC patients). Second, the IPO list status of a procedure has no effect on the MPFS professional payment for the procedure. Whether or not a procedure is on the IPO list is not in any way a factor in the MPFS payment methodology.

2. Topics and Questions for Public Comments

In the CY 2018 OPSS/ASC proposed rule (82 FR 33645), we sought public comments on whether we should remove the procedures described by CPT codes 27125 and 27130 from the IPO list from all interested parties, including the following groups or individuals: Medicare beneficiaries and advocate associations for Medicare beneficiaries; orthopedic surgeons and physician specialty societies that represent orthopedic surgeons who perform PHA and/or THA procedures; hospitals and hospital trade associations; and any other interested stakeholders. We sought public comments on the following questions:

- Are most outpatient departments equipped to provide PHA and/or THA to some Medicare beneficiaries?
- Can the simplest procedure described by CPT codes 27125 and 27130 be performed in most outpatient departments?
- Are the procedures described by CPT codes 27125 and 27130 sufficiently related to or similar to other procedures we have already removed from the IPO list?
- How often is the procedure described by CPT codes 27125 and 27130 being performed on an outpatient

basis (either in an HOPD or ASC) on non-Medicare patients?

- Would it be clinically appropriate for some Medicare beneficiaries in consultation with his or her surgeon and other members of the medical team to have the option of either a PHA or THA procedure as a hospital outpatient, which may or may not include a 24-hour period of recovery in the hospital after the operation?

In addition, we sought public comments on whether the PHA and THA procedures may meet the criteria to be added to the ASC Covered Procedures List. We refer readers to section XII.C.1.d. of this final rule with comment period for a complete discussion of the ASC Covered Procedures List.

Finally, as noted when we solicited public comment on removing the TKA procedure from the IPO list in the CY 2017 rulemaking, we solicited public comment on the effect of removing the TKA procedure from the IPO list on the CJR Model and the BPCI Model. We refer readers to the CY 2017 OPPS/ASC proposed rule for a discussion of questions we raised for public comments, and we again sought public comment on the effect of removing the PHA and THA procedures from the IPO list on these models. For a discussion of these models in the CY 2017 rulemaking, we refer readers to 81 FR 79698 through 79699.

Comment: Numerous commenters representing a variety of stakeholders, including physicians and other care providers, individual stakeholders, specialty societies, hospital associations, hospital systems, ASCs, device manufacturers, and beneficiaries responded to our solicitation of comments regarding the removal of PHA and THA from the IPO list. The comments were diverse and some were similar to the comments we received on our proposal to remove TKA from the IPO list. Some commenters, including hospital systems and associations, as well as specialty societies and physicians, stated that it would not be clinically appropriate to remove PHA and THA from the IPO list, indicating that the patient safety profile of outpatient THA and PHA in the non-Medicare population is not well-established. Commenters representing orthopedic surgeons also stated that patients requiring a hemiarthroplasty (PHA) for fragility fractures are by nature higher risk, suffer more extensive comorbidities and require closer monitoring and preoperative optimization; therefore, it would not be medically appropriate to remove the PHA procedure from the IPO list.

Other commenters, including ambulatory surgery centers, physicians, and beneficiaries, supported the removal of PHA and THA from the IPO list. These commenters stated that the procedures were appropriate for certain Medicare beneficiaries and most outpatient departments are equipped to provide THA to some Medicare beneficiaries. They also referenced their own personal successful experiences with outpatient THA.

Finally, commenters stated concerns regarding the effect of removing THA on the pricing methodologies, target pricing, and reconciliation process of the procedure in certain Medicare payment models (that is, the CJR and the BPCI models). They requested modifications to these models if the THA procedure is removed from the IPO list and requested that these procedures be suspended from quality programs such as the Hospital Readmissions Reduction Program, the Hospital Value-Based Purchasing Program, and Hospital Inpatient Quality Reporting Program if they are removed from the IPO list.

Response: We thank the commenters for their detailed responses. We will consider these comments in future policymaking.

X. Nonrecurring Policy Changes

A. Payment for Certain Items and Services Furnished by Certain Off-Campus Departments of a Provider

1. Background

Section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted on November 2, 2015, amended section 1833(t) of the Act by amending paragraph (1)(B) and adding a new paragraph (21). As a general matter, under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, applicable items and services furnished by certain off campus outpatient departments of a provider on or after January 1, 2017, will not be considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS and will instead be paid “under the applicable payment system” under Medicare Part B if the requirements for such payment are otherwise met. To be considered part of a hospital, an off-campus department of a hospital must meet the provider-based criteria established under 42 CFR 413.65. The implementation of section 603 of the Bipartisan Budget Act of 2015 was finalized in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79719) and interim final rule with comment period (79720 through 79729).

2. Expansion of Services by Excepted Off-Campus Hospital Outpatient Departments

In the CY 2018 OPPS/ASC proposed rule (82 FR 33645 through 33648), we did not propose any policies to limit clinical service line expansion or volume increases at excepted off-campus provider-based departments (PBDs). However, we stated that we would continue to monitor claims data for changes in billing patterns and utilization, and continue to invite public comments on the issue of service expansion.

We received a number of comments from various stakeholders regarding both clinical service line expansion and volume increases, as well as other topics not discussed in the CY 2018 OPPS/ASC proposed rule, including relocation and change of ownership. We appreciate all of the comments received, and we will consider them as we consider whether to pursue future rulemaking on these issues.

We also received some public comments regarding issues that are outside the scope of the policies addressed in the CY 2018 OPPS/ASC proposed rule, including comments related to the proposed payment adjustment applied for nonexcepted items and services furnished by nonexcepted off-campus PBDs, which are addressed in the CY 2018 MPFS final rule, and comments regarding technical billing questions. With respect to the payment adjustment for nonexcepted items and services furnished by nonexcepted off-campus PBDs and changes to the payment relativity adjuster, we refer readers to the CY 2018 MPFS final rule for that information and, more broadly, for the payment rates under the MPFS that will apply to nonexcepted items and services furnished by nonexcepted off-campus PBDs for CY 2018. We expect the CY 2018 MPFS final rule to be issued on or about the same date as this OPPS/ASC final rule with comment. Comments submitted regarding technical billing questions are addressed through applicable program instructions.

3. Section 16002 of the 21st Century Cures Act (Treatment of Cancer Hospitals in Off-Campus Outpatient Department of a Provider Policy)

As discussed in the CY 2018 OPPS/ACS proposed rule (82 FR 33648), in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699), we finalized a number of proposals to implement section 603 of the Bipartisan Budget Act of 2016 (Pub. L. 114–74), enacted on November 2, 2015, which

amended section 1833(t) of the Act. Specifically, this provision amended the OPSS statute to require that certain items and services furnished by certain off-campus PBDs on or after January 1, 2017 will not be considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPSS, and instead will be paid “under the applicable payment system” under Medicare Part B if the requirements for such payment are otherwise met. In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79699), we established the Medicare Physician Fee Schedule as the “applicable payment system” for the majority of the nonexcepted items and services furnished by nonexcepted off-campus PBDs.

Section 16002(a) of the 21st Century Cures Act (Pub. L. 114–255) amended the Act at section 1833(t)(20)(B) and provided that, with respect to applicable items and services furnished during 2017 or a subsequent year, the term “off-campus outpatient department of a provider” excludes certain cancer hospitals. To meet this exclusion, section 16002(a) requires that such cancer hospitals (1) be described in section 1886(d)(1)(B)(v) of the Act; and (2) for hospital outpatient departments that meet the requirements for 42 CFR 413.65, after November 1, 2015 and before December 15, 2016, that the Secretary has received from the provider an attestation that the department met such requirements not later than 60 days after the date of enactment of section 16002 (December 13, 2016), or, for departments that meet the requirements after December 13, 2016, the Secretary has received from the provider an attestation that the department met the requirements not later than 60 days after the date the department first met the requirements of 42 CFR 413.65. As we stated in the CY 2018 OPSS/ASC proposed rule, through operational guidance, we have provided direction to all MACs regarding this provision. We also have provided guidance on this provision to hospital providers, which can be found on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/Sections-16001-16002.pdf>.

Section 16002(b) of Public Law 114–255 amended section 1833(t)(18) of the Act by adding a new subparagraph (C) that requires the Secretary, in applying 42 CFR 419.43(i) for services furnished on or after January 1, 2018, to use a target payment-to-cost ratio (PCR) that is 1 percentage point less than the target PCR that would otherwise apply. In addition to the 1 percentage point

reduction, the Secretary may consider making an additional percentage point reduction to the target PCR that takes into account payment rates for applicable items and services described in section 1833(t)(21)(C) of the Act other than for services furnished by certain cancer hospitals. Further, in making any budget neutrality adjustments under section 1833(t) of the Act, the Secretary shall not take into account the reduced expenditures that result from application of section 1833(t)(18)(C) of the Act. We refer readers to section II.F. of this final rule with comment period for a discussion on the calculation of the target PCR for cancer hospitals for CY 2018.

B. Medicare Site-of-Service Price Transparency (Section 4011 of the 21st Century Cures Act)

Section 4011 of the 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016, amended section 1834 of the Act by adding a new subsection (t). New section 1834(t) of the Act provides that, in order to facilitate price transparency with respect to items and services for which payment may be made either to a hospital outpatient department or to an ambulatory surgical center under Title XVIII, the Secretary shall, for 2018 and each year thereafter, make available to the public via a searchable Web site, with respect to an appropriate number of items and services, the estimated payment amount for the item or service under the OPSS and ASC payment system and the estimated beneficiary liability applicable to the item or service. In the CY 2018 OPSS/ASC proposed rule (82 FR 33648), we announced our plan to establish the searchable Web site required by section 1834(t) of the Act. We indicated that details regarding the Web site will be issued through our subregulatory process. We stated in the proposed rule that we anticipate that the Web site will be made available in early CY 2018.

Comment: One commenter requested that CMS ensure that the Web site is designed in a user-friendly manner, and err on the side of including services for display. Another commenter requested that Web site users be provided with the proper context for understanding some of the reasons for potential cost differences.

Response: We appreciate these comments and will take them into consideration as we develop the Web site.

C. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

Section 218(b) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93) added subsection (q) to section 1834 of the Act, which directs the Secretary to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services (the AUC program). Section 1834(q)(1)(B) of the Act defines AUC as criteria that are evidence-based (to the extent feasible) and assist professionals who order and furnish applicable imaging services to make the most appropriate treatment decisions for a specific clinical condition. The current policies for the AUC program for advanced diagnostic imaging services are codified in the regulations at 42 CFR 414.94.

There are four components of the AUC program for advanced diagnostic imaging services program. In the CY 2016 MPFS final rule with comment period (80 FR 71102 through 71116 and 80 FR 71380 through 71382), we addressed the first component of the Medicare AUC program. The first component includes the requirements and process for the establishment and specification of the AUC. In the CY 2017 MPFS final rule (81 FR 80403 through 80428 and 81 FR 80554 through 80555), we addressed the second component of the AUC program. The second component includes the specification of qualified clinical decision support mechanisms (CDSMs). A CDSM is the electronic tool through which the ordering practitioner consults AUC. In the CY 2018 OPSS/ASC proposed rule (82 FR 33648 and 33649), we stated that we had proposed in the CY 2018 MPFS proposed rule to address the third component of the AUC program. The third component includes the requirements for an ordering professional to consult with a qualified CDSM when ordering an applicable imaging service, and for the furnishing professional to include that consultation information on claims for the service that is furnished in an applicable setting and paid under an applicable payment system. Based on the statutory language of section 1834(q)(4)(B) of the Act, the AUC program applies to advanced imaging services for which payment is made under the following applicable payment systems: The MPFS; the OPSS; and the ASC payment system. The fourth component of the program is prior authorization for outlier ordering professionals. This component will be discussed in future rulemaking.

We indicated in the CY 2018 OPSS/ASC proposed rule that public

comments related to the requirements for the AUC program should be addressed in response to the CY 2018 MPFS proposed rule. Therefore, we refer readers to the CY 2018 MPFS final rule for further information governing the Medicare AUC program and the finalized policies for CY 2018, including summaries of any public comments we received on the proposals in the CY 2018 MPFS proposed rule and our responses to those comments.

D. Enforcement Instruction for the Supervision of Outpatient Therapeutic Services in Critical Access Hospitals (CAHs) and Certain Small Rural Hospitals

As discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33649), in the CY 2009 OPSS/ASC proposed rule and final rule with comment period (73 FR 41518 through 41519 and 73 FR 68702 through 68704, respectively), we clarified that direct supervision is required for hospital outpatient therapeutic services covered and paid by Medicare that are furnished in hospitals as well as in PBDs of hospitals, as set forth in the CY 2000 OPSS final rule with comment period (65 FR 18525). In the CY 2010 OPSS/ASC final rule with comment period (74 FR 60575 through 60591), we finalized a technical correction to the title and text of the applicable regulation at 42 CFR 410.27 to clarify that this standard applies in CAHs as well as hospitals. In response to concerns expressed by the hospital community, in particular CAHs and small rural hospitals, that they would have difficulty meeting this standard, on March 15, 2010, we instructed all MACs not to evaluate or enforce the supervision requirements for therapeutic services provided to outpatients in CAHs from January 1, 2010 through December 31, 2010, while the agency revisited the supervision policy during the CY 2011 OPSS/ASC rulemaking cycle.

Due to continued concerns expressed by CAHs and small rural hospitals, we extended this notice of nonenforcement (“enforcement instruction”) as an interim measure for CY 2011, and expanded it to apply to small rural hospitals having 100 or fewer beds (75 FR 72007). We continued to consider the issue further in our annual OPSS notice-and-comment rulemaking, and implemented an independent review process in 2012 to obtain advice from the HOP Panel on this matter (76 FR 74360 through 74371). Under this process used since CY 2012, the HOP Panel considers and advises CMS regarding stakeholder requests for changes in the required level of

supervision of individual hospital outpatient therapeutic services. In addition, we extended the enforcement instruction through CY 2012 and CY 2013. The enforcement instruction has not been in effect since December 31, 2013. Congress has taken legislative action (Pub. L. 113–198 and Pub. L. 114–112) to extend nonenforcement of the direct supervision requirement for hospital outpatient therapeutic services in CAHs and small rural hospitals having 100 or fewer beds since December 31, 2013. The latest legislative action (Pub. L. 114–255) extended nonenforcement until December 31, 2016. The current enforcement instruction is available on the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/Downloads/Moratorium-on-Hospital-Supervision-Enforcement.pdf>.

As discussed in the CY 2018 OPSS/ASC proposed rule, stakeholders have consistently requested that CMS continue the nonenforcement of the direct supervision requirement for hospital outpatient therapeutic services for CAHs and small rural hospitals having 100 or fewer beds. Stakeholders stated that some small rural hospitals and CAHs have insufficient staff available to furnish direct supervision. The primary reason stakeholders cited for this request is the difficulty that CAHs and small rural hospitals have in recruiting physicians and nonphysician practitioners to practice in rural areas. These stakeholders noted that it is particularly difficult to furnish direct supervision for critical specialty services, such as radiation oncology services, that cannot be directly supervised by a hospital emergency department physician or nonphysician practitioner because of the volume of emergency patients or lack of specialty expertise. In addition, we are not aware of any quality of care complaints from beneficiaries or providers relating to the enforcement instruction related to direct physician supervision.

Therefore, in the CY 2018 OPSS/ASC proposed rule, we proposed to reinstate the enforcement instruction for outpatient therapeutic services furnished in CAHs and small rural hospitals having 100 or fewer beds for CYs 2018 and 2019 to give these CAHs and small rural hospitals more time to comply with the supervision requirements for outpatient therapeutic services and to give all parties additional time to submit specific services to be evaluated by the HOP Panel for a recommended change in the supervision level. We stated that these hospitals will continue to be subject to

conditions of participation for hospitals and other Medicare rules regarding supervision. We welcomed public comments on this proposal.

Comment: A few commenters opposed the proposal to reinstate the enforcement instruction for CAHs and small rural hospitals because of concerns about patient safety or having qualified physicians perform certain medical services. One commenter believed that supervision requirements should be applied uniformly to hospitals in all care settings to ensure patient safety. Another commenter focused on radiation oncology services and believed that those services should be delivered by personnel trained in radiation oncology. The commenter understood concerns about physician availability in rural areas, but encouraged CMS to create more incentives for radiation oncologists to practice in rural areas instead of not enforcing requirements for direct supervision.

Response: We agree that patient safety is a critically important consideration for each service, and that only qualified physicians and nonphysician practitioners who are practicing within their State scope of practice should perform and oversee therapeutic services, as applicable. We note that our proposal did not change State licensure and scope of practice requirements. We would expect all hospitals to ensure that appropriate clinical personnel direct and oversee each beneficiary’s care such that patient safety is not compromised. As stated in our proposal, we are not aware of any quality of care complaints from beneficiaries or providers relating to the level of physician supervision for hospital outpatient therapeutic services. In addition, CAHs and small rural hospitals will continue to be subject to the Medicare conditions of participation for hospitals and other Medicare rules regarding supervision.

Comment: Several commenters supported the proposal for CYs 2018 and 2019. Some commenters suggested that CMS adopt the nonenforcement policy for CY 2017 and permanently beyond CY 2019. Commenters also suggested changing the level of supervision for some or most hospital outpatient therapeutic services, such as therapy services, to general supervision as the default supervision level. These commenters also suggested that the change in supervision level should apply to additional categories of hospitals or to all hospitals and not just for CAHs and small rural hospitals. The commenters believed changing the level of supervision for all hospitals will help rural providers with the shortages of

health care professionals and reduce the regulatory burden on providers while providing a level of supervision consistent with the conditions of participation for CAHs.

Response: We appreciate the support for this proposal. Permanent changes to the supervision level for outpatient therapeutic services for all hospitals are beyond the scope of this proposal. We note that we have an established process for stakeholders to submit specific services to be evaluated by the HOP Panel for a recommended change in the supervision levels. Likewise, permanently reinstating the enforcement instruction after CY 2019 is beyond the scope of this proposal. As we stated in the CY 2018 OPPS/ASC proposed rule, we proposed to reinstate the enforcement instruction for 2 years to give small rural hospitals and CAHs additional time to comply with the supervision requirements for outpatient therapeutic services and to give all parties additional time to submit specific services to be evaluated by the HOP Panel for a recommended change in the supervision level.

With respect to applying the nonenforcement policy to CY 2017, we proposed to reinstate the enforcement instruction prospectively, for services administered beginning on the effective date of this final rule with comment period, which is scheduled for January 1, 2018; and we are finalizing that proposal. We anticipate issuing guidance outside of this rule to address enforcement policy for the direct supervision requirement for outpatient therapeutic services for CY 2017.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to reinstate the nonenforcement policy for direct supervision enforcement of outpatient therapeutic services furnished in CAHs and small rural hospitals having 100 or fewer beds, and to reinstate our enforcement instruction for CYs 2018 and 2019.

E. Payment Changes for Film X-Ray Services and Payment Changes for X-Rays Taken Using Computed Radiography Technology

Section 502 of Division O, title V of the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), which was enacted on December 18, 2015, contains provisions to incentivize the transition from traditional X-ray imaging to digital radiography. In particular, section 502(b) of Public Law 114–113 amended section 1833(t)(16) of the Act by adding subparagraph (F), which includes provisions that limit payment for film

X-ray imaging services and computed radiography imaging services.

Section 1833(t)(16)(F)(i) of the Act specifies that, effective for services furnished during 2017 or a subsequent year, the payment under the OPPS for imaging services that are X-rays taken using film (including the X-ray component of a packaged service) that would otherwise be made under the OPPS (without application of subparagraph (F)(i) and before application of any other adjustment under section 1833(t) of the Act) shall be reduced by 20 percent. Section 1833(t)(16)(F)(iii) of the Act provides that the reductions made under section 1833(t)(16)(F) of the Act shall not be considered an adjustment under section 1833(t)(2)(E) of the Act, and shall not be implemented in a budget neutral manner.

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33649 through 33650), consistent with section 1833(t)(16)(F)(iv) of the Act, which requires the implementation of the reductions in payment set forth in subparagraph (F) through appropriate mechanisms, which may include modifiers, we implemented section 1833(t)(16)(F)(i) of the Act by establishing the modifier “FX” (X-ray taken using film), effective January 1, 2017. The payment for X-rays taken using film and furnished during 2017 or a subsequent year is reduced by 20 percent when modifier “FX” (X-ray taken using film) is reported with the appropriate HCPCS codes. The applicable HCPCS codes describing imaging services can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site). When payment for an X-ray service taken using film is packaged into the payment for another item or service under the OPPS, no separate payment for the X-ray service is made and, therefore, there is no payment amount that can be attributed to the X-ray service. Accordingly, the amount of the payment reduction for a packaged film X-ray service is \$0 (20 percent of \$0). Further discussion of these policies and modifier “FX” can be found in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79729 through 79730).

Section 1833(t)(16)(F)(ii) of the Act provides for a phased-in reduction of payments for imaging services that are taken using computed radiography technology (as defined in section 1848(b)(9)(C) of the Act). Payments for such services (including the X-ray component of a packaged service) furnished during CY 2018, 2019, 2020,

2021, or 2022, that would otherwise be determined under section 1833(t) of the Act (without application of subparagraph (F)(ii) and before application of any other adjustment), will be reduced by 7 percent, and if such services are furnished during CY 2023 or a subsequent year, by 10 percent. For purposes of this reduction, computed radiography technology is defined in section 1848(b)(9)(C) of the Act as cassette-based imaging which utilizes an imaging plate to create the image involved. (82 FR 33650).

To further implement this provision, we stated in the proposed rule that we were establishing a new modifier (82 FR 33650), specifically, “FY” (X-ray taken using computed radiography technology/cassette-based imaging), as permitted by section 1833(t)(16)(F)(iv) of the Act, that would be reported on claims to identify those HCPCS codes that describe X-rays taken using computed radiography technology. (We note that modifier “FY” was listed as placeholder “XX” in the CY 2018 OPPS/ASC proposed rule and that we indicated (82 FR 33650) that the 2-digit modifier and long descriptor would be described in this final rule with comment period.) We proposed that the payment reduction would be taken when this payment modifier is reported with the applicable HCPCS code(s) to describe imaging services that are taken using computed radiography technology (82 FR 33650). In the proposed rule, we stated that the applicable HCPCS codes describing imaging services could be found in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site). When payment for an X-ray service taken using computed radiography imaging is packaged into the payment for another item or service under the OPPS, no separate payment for the X-ray service is made and, therefore, there is no payment amount that can be attributed to the X-ray. Accordingly, the amount of the payment reduction for a packaged X-ray service would be \$0 (7 percent of \$0, and 10 percent of \$0). We invited public comments on these proposals.

Comment: One commenter believed that reporting the modifier “FY” would be burdensome to hospitals and create another opportunity for miscoding.

Response: Modifier “FY” will be reported by hospitals only to identify those services that involve X-rays taken using computed radiography technology. We do not believe that the use of this modifier would be unduly burdensome to hospitals. The reporting of this modifier is similar to the reporting of other existing modifiers that hospitals currently include when

reporting HCPCS codes and modifiers for procedures, services, and items on Medicare claims under the OPPIs. To the extent the hospital is already reporting a code for an X-ray taken using computed radiography, appending the modifier to the same claim should not be unduly burdensome. Further, Medicare is required by law to make this payment adjustment and the commenter did not offer an alternative (less burdensome) method by which Medicare could ensure payment accuracy for these services.

Comment: One commenter urged CMS to publish the list of specific CPT and HCPCS codes that would apply to this new modifier ("FY") as well as to the film x-ray modifier ("FX") that was implemented last year. The commenter indicated that not having published lists is burdensome to providers and also exposes them to additional risk of audit. This same commenter offered to provide technical assistance from its X-ray manufacturer members on the creation of such a list.

Response: We thank the commenter for the offer of assistance. However, we expect hospitals to appropriately report the "FY" modifier to identify those services that involve X-rays taken using computed radiography technology, and to appropriately report the "FX" modifier to identify those X-ray services taken using film. The applicable HCPCS codes describing imaging services can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site).

Comment: One commenter requested detailed guidance on the implementation of the computed radiography to digital X-ray payment differential. Specifically, the commenter stated that CMS instructions are unclear as to which specific CPT and HCPCS codes require the amended modifier. Prior to implementation, the commenter suggested that CMS publish all applicable codes requiring the modifier, with specific billing guidance.

Response: As indicated above, the new "FY" modifier will be used to report those services that involve X-rays taken using computed radiography technology. HOPDs should append modifier "FY" to those HCPCS codes that involve the use of X-ray systems taken using computed radiography technology. We believe that hospitals should know when they are billing a HCPCS code that involves the use of an X-ray taken using computed radiography and, therefore, we are not providing a list of codes.

In addition, in accordance with section 1833(t)(16)(F)(ii) of the Act,

payments for X-rays taken using computed radiography technology will be reduced by 7 percent during CY 2018, 2019, 2020, 2021, or 2022, and thereafter by 10 percent when furnished during CY 2023 or a subsequent year. Specifically, the payment reduction will apply when the "FY" modifier is reported with the applicable HCPCS code(s) to describe imaging services that are taken using computed radiography technology. In addition, when payment for an X-ray service taken using computed radiography imaging is packaged into the payment for another item or service under the OPPIs, no separate payment for the X-ray service is made and, therefore, there is no payment amount that can be attributed to the X-ray. Accordingly, the amount of the payment reduction for a packaged X-ray service will be \$0 (7 percent of \$0, and 10 percent of \$0). We note that the applicable HCPCS codes describing imaging services could be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site).

Comment: Some commenters supported the transition to digital radiography. However, several commenters expressed concern with the statute requiring hospitals to upgrade to digital radiography systems and indicated that the requirement is financially burdensome and difficult to justify. One commenter stated that a typical computed radiography reader can cost between \$60,000 and \$80,000, while a new digital radiography system can cost up to \$200,000. Another commenter indicated that it estimated its cost to replace or retrofit its nearly 120 computed radiography systems to digital radiography systems to be approximately \$11 million.

One commenter suggested that, to truly incentivize the transition to digital radiography technology, CMS should offer bonus payments similar to the recently proposed 2015 Certified Health Record Technology (CEHRT) bonus under the Quality Payment Program (QPP) Year 2. This same commenter recommended that, in lieu of bonus payments, CMS work with Congress to implement a delay of these cuts for the useful life of a typical computed radiography machine (5 years) to allow practices time to replace older equipment with digital radiography technology.

Other commenters further indicated there is no clinical benefit to using digital radiography systems, and that, for certain clinical situations, computed radiography systems are preferable. Still other commenters stated that the reduction in payments not only

penalizes hospitals, particularly in rural and underserved communities that do not have the financial resources to update their equipment systems, but would also force small clinics and hospitals to no longer provide imaging services that require computed radiography technology.

Response: We are required by section 1833(t)(16)(F) of the Act to reduce payments under the OPPIs for X-rays taken using film and X-rays taken using computed radiography technology. We note that the statute did not address either bonus payments to incentivize the transition to digital radiography technology or a delay in the implementation of section 1833(t)(16)(F) of the Act.

After consideration of the public comments we received, we are finalizing our proposal to establish a new modifier "FY" (X-ray taken using computed radiography technology/cassette-based imaging) as permitted by section 1833(t)(16)(F)(iv) of the Act, that will be reported on claims to identify those HCPCS codes that describe X-rays taken using computed radiography technology. The payment reduction will be taken when this modifier is reported with the applicable HCPCS code(s) to describe imaging services that are taken using computed radiography technology. The applicable HCPCS codes describing imaging services can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site).

In addition, although we adopted the payment reduction for the film X-ray imaging services, as required by section 1833(t)(16)(F)(i) of the Act in the CY 2017 OPPIs/ASC final rule with comment period, we did not adopt corresponding regulation text. Therefore, in the CY 2018 OPPIs/ASC proposed rule (82 FR 33650 and 33723 through 33724), we proposed to add new regulation text at 42 CFR 419.71 to codify our existing policies and our proposed policies for computed radiography technology services. We proposed to add the definition of "computed radiography technology," as it is defined in section 1848(b)(9)(C) of the Act, in paragraph (a) of proposed new § 419.71. We stated that the proposed regulation text under paragraph (b) of proposed new § 419.71 would specify the 20-percent reduction for film X-ray imaging services. We proposed that the phased-in payment reduction for computed radiography technology imaging services would be codified at paragraph (c) of proposed new § 419.71. Finally, we proposed that paragraph (d) of proposed new § 419.71

would provide that the payment reductions taken under the section are not considered adjustments under section 1833(t)(2)(E) of the Act and are not implemented in a budget neutral manner. We invited public comments on this proposed regulation text.

We did not receive any public comments on our proposed regulation text. Therefore, we are finalizing our proposal to codify our previously adopted and newly finalized policies regarding section 1833(t)(16)(F) of the Act, without modifications.

F. Revisions to the Laboratory Date of Service Policy

1. Background on the Medicare Part B Laboratory Date of Service Policy

As we discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33650), the date of service (DOS) is a required data field on all Medicare claims for laboratory services. However, a laboratory service may take place over a period of time—the date the physician orders the laboratory test, the date the specimen is collected from the patient, the date the laboratory accesses the specimen, the date the laboratory performs the test, and the date results are produced may occur on different dates. In the final rule on coverage and administrative policies for clinical diagnostic laboratory services published in the **Federal Register** on November 23, 2001 (66 FR 58791 through 58792), we adopted a policy under which the DOS for clinical diagnostic laboratory services generally is the date the specimen is collected.

A special rule was developed to apply to “archived” specimens. For laboratory tests that use an archived specimen, we established that the DOS is the date the specimen was obtained from storage (66 FR 58792).

In 2002, we issued Program Memorandum AB–02–134 which permitted contractors discretion in making determinations regarding the length of time a specimen must be stored to be considered “archived.” In response to comments requesting that we issue a national standard to clarify when a stored specimen can be considered “archived,” in the Procedures for Maintaining Code Lists in the Negotiated National Coverage Determinations for Clinical Diagnostic Laboratory Services final notice, published in the **Federal Register** on February 25, 2005 (70 FR 9357), we defined an “archived” specimen as a specimen that is stored for more than 30 calendar days before testing. We established that the DOS for archived specimens is the date the specimen was

obtained from storage. Specimens stored for 30 days or less continued to have a DOS of the date the specimen was collected.

2. Current Medicare DOS Policy (“14-Day Rule”)

In the final rule with comment period entitled, in relevant part, “Revisions to Payment Policies, Five-Year Review of Work Relative Value Units, Changes to the Practice Expense Methodology Under the Physician Fee Schedule, and Other Changes to Payment Under Part B” published in the **Federal Register** on December 1, 2006 (MPFS final rule) (71 FR 69705 through 69706), we added a new § 414.510 in Title 42 of the CFR regarding the clinical laboratory DOS requirements and revised our DOS policy for stored specimens. We explained in the MPFS final rule that the DOS of a test may affect payment for the test, especially in situations in which a specimen that is collected while the patient is being treated in a hospital setting (for example, during a surgical procedure), is later used for testing after the patient has been discharged from the hospital. We noted that payment for the test is usually bundled with payment for the hospital service, even where the results of the test did not guide treatment during the hospital stay. To address concerns raised for tests related to cancer recurrence and therapeutic interventions, we finalized modifications to the DOS policy in § 414.510(b)(2)(i) for a test performed on a specimen stored less than or equal to 30 calendar days from the date it was collected (a non-archived specimen), so that the DOS is the date the test was performed (instead of the date of collection) if the following conditions are met:

- The test is ordered by the patient’s physician at least 14 days following the date of the patient’s discharge from the hospital;
- The specimen was collected while the patient was undergoing a hospital surgical procedure;
- It would be medically inappropriate to have collected the sample other than during the hospital procedure for which the patient was admitted;
- The results of the test do not guide treatment provided during the hospital stay; and
- The test was reasonable and medically necessary for the treatment of an illness.

As we stated in the MPFS final rule, we established these five criteria, which we refer to as the “14-day rule,” to distinguish laboratory tests performed as part of post-hospital care from the

care a beneficiary receives in the hospital. When the 14-day rule applies, laboratory tests are not bundled into the hospital stay, but are instead paid separately under Medicare Part B (as explained in more detail below).

We also revised the DOS requirements for a chemotherapy sensitivity test performed on live tissue. As discussed in the MPFS final rule (71 FR 69706), we agreed with commenters that these tests, which are primarily used to determine post-hospital chemotherapy care for patients who also require hospital treatment for tumor removal or resection, appear to be unrelated to the hospital treatment in cases where it would be medically inappropriate to collect a test specimen other than at the time of surgery, especially when the specific drugs to be tested are ordered at least 14 days following hospital discharge. As a result, we revised the DOS policy for chemotherapy sensitivity tests, based on our understanding that the results of these tests, even if they were available immediately, would not typically affect the treatment regimen at the hospital. Specifically, we modified the DOS for chemotherapy sensitivity tests performed on live tissue in § 414.510(b)(3) so that the DOS is the date the test was performed if the following conditions are met:

- The decision regarding the specific chemotherapeutic agents to test is made at least 14 days after discharge;
- The specimen was collected while the patient was undergoing a hospital surgical procedure;
- It would be medically inappropriate to have collected the sample other than during the hospital procedure for which the patient was admitted;
- The results of the test do not guide treatment provided during the hospital stay; and
- The test was reasonable and medically necessary for the treatment of an illness.

We explained in the MPFS final rule that, for chemotherapy sensitivity tests that meet this DOS policy, Medicare would allow separate payment under Medicare Part B, that is, separate from the payment for hospital services.

3. Billing and Payment for Laboratory Services Under the OPPTS

As discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33651), the DOS requirements at 42 CFR 414.510 are used to determine whether a hospital bills Medicare for a clinical diagnostic laboratory test (CDLT) or whether the laboratory performing the test bills Medicare directly. This is because separate regulations at 42 CFR

410.42(a) and 411.15(m) generally provide that Medicare will not pay for a service furnished to a hospital patient during an encounter by an entity other than the hospital unless the hospital has an arrangement (as defined in 42 CFR 409.3) with that entity to furnish that particular service to its patients, with certain exceptions and exclusions. These regulations, which we will call the “under arrangements” provisions in this discussion, require that if the DOS falls during an inpatient or outpatient stay, payment for the laboratory test is usually bundled with the hospital service.

Under our current rules, if a test meets all DOS requirements in § 414.510(b)(2)(i) or § 414.510(b)(3), the DOS is the date the test was performed, and the laboratory would bill Medicare directly for the test and would be paid under the Clinical Laboratory Fee Schedule (CLFS) directly by Medicare. However, if the test does *not* meet the DOS requirements in § 414.510(b)(2)(i) or § 414.510(b)(3), the DOS is the date the specimen was collected from the patient. In that case, the *hospital* would bill Medicare for the test and then would pay the laboratory that performed the test, if the laboratory provided the test under arrangement.

In recent rulemakings, we have reviewed appropriate payment under the OPSS for certain diagnostic tests that are not commonly performed by hospitals. In CY 2014, we finalized a policy to package certain CDLTs under the OPSS (78 FR 74939 through 74942 and 42 CFR 419.2(b)(17) and 419.22(l)). In CYs 2016 and 2017, we made some modifications to this policy (80 FR 70348 through 70350; 81 FR 79592 through 79594). Under our current policy, certain CDLTs that are listed on the CLFS are packaged as integral, ancillary, supportive, dependent, or adjunctive to the primary service or services provided in the hospital outpatient setting during the same outpatient encounter and billed on the same claim. Specifically, we conditionally package most CDLTs and only pay separately for a laboratory test when it is: (1) The only service provided to a beneficiary on a claim; (2) considered a preventive service; (3) a molecular pathology test; or (4) an advanced diagnostic laboratory test (ADLT) that meets the criteria of section 1834A(d)(5)(A) of the Act (78 FR 74939 through 74942; 80 FR 70348 through 70350; and 81 FR 79592 through 79594). In the CY 2016 OPSS/ASC final rule with comment period, we excluded all molecular pathology laboratory tests from packaging because we believed these relatively new tests may have a

different pattern of clinical use, which may make them generally less tied to a primary service in the hospital outpatient setting than the more common and routine laboratory tests that are packaged.

For similar reasons, in the CY 2017 OPSS/ASC final rule with comment period, we extended the exclusion to also apply to all ADLTs that meet the criteria of section 1834A(d)(5)(A) of the Act.³² We stated that we will assign status indicator “A” (Separate payment under the CLFS) to ADLTs once a laboratory test is designated an ADLT under the CLFS. Laboratory tests that are separately payable and are listed on the CLFS are paid at the CLFS payment rates outside the OPSS.

4. ADLTs Under the New Private Payor Rate-Based CLFS

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), requires significant changes to how Medicare pays for CDLTs under the CLFS. Section 216(a) of PAMA also establishes a new subcategory of CDLTs known as ADLTs with separate reporting and payment requirements under section 1834A of the Act. In the CLFS final rule published in the **Federal Register** on June 23, 2016, entitled “Medicare Program; Medicare Clinical Diagnostic Laboratory Tests Payment System Final Rule” (CLFS final rule) (81 FR 41036), we implemented the requirements of section 1834A of the Act.

As defined in § 414.502, an ADLT is a CLDT covered under Medicare Part B that is offered and furnished only by a single laboratory. In addition, an ADLT cannot be sold for use by a laboratory other than the single laboratory that designed the test or a successor owner. Also, an ADLT must meet either Criterion (A), which implements section 1834A(d)(5)(A) of the Act, or Criterion (B), which implements section 1834A(d)(5)(B) of the Act, as follows:

- *Criterion (A)*: The test is an analysis of multiple biomarkers of deoxyribonucleic acid (DNA), ribonucleic acid (RNA), or proteins; when combined with an empirically derived algorithm, yields a result that predicts the probability a specific

³² Under section 1834A(d)(5)(A) of the Act, an ADLT is a CDLT covered under Medicare Part B that is offered and furnished only by a single laboratory and not sold for use by a laboratory other than the original developing laboratory (or a successor owner) and . . . “the test is an analysis of multiple biomarkers of DNA, RNA, or proteins combined with a unique algorithm to yield a single patient-specific result.” CMS has established a regulatory definition for this type of ADLT in 42 CFR 414.502.

individual patient will develop a certain condition(s) or respond to a particular therapy(ies); provides new clinical diagnostic information that cannot be obtained from any other test or combination of tests; and may include other assays.

Or:

- *Criterion (B)*: The test is cleared or approved by the Food and Drug Administration.

Generally, under the revised CLFS, ADLTs are paid using the same methodology based on the weighted median of private payor rates as other CDLTs. However, updates to ADLT payment rates occur annually instead of every 3 years. The payment methodology for ADLTs is detailed in the CLFS final rule (81 FR 41076 through 41083).

5. Discussion of Potential Revisions to the Laboratory DOS Policy in the CY 2018 OPSS/ASC Proposed Rule

In the CY 2018 OPSS/ASC proposed rule (82 FR 33650 through 33653), we described the history of our laboratory DOS policy and discussed potentially modifying the DOS policy for certain ADLTs and molecular pathology tests. We explained that, recently, we have heard from certain laboratory stakeholders about operational issues the current laboratory DOS policy creates for hospitals and laboratories with regard to molecular pathology tests and laboratory tests they expect will be designated by CMS as ADLTs that meet the criteria of section 1834A(d)(5)(A) of the Act. These stakeholders have expressed that although these particular tests are not packaged under the OPSS, under current DOS policy, if the tests are ordered within 14 days of a patient’s discharge from the hospital, Medicare still treats the tests as though they were ordered and furnished by the hospital itself. Under those circumstances, laboratories cannot directly seek Medicare payment for the molecular pathology test or ADLT. The hospital must bill Medicare for the test, and the laboratory must seek payment from the hospital. Specifically, we noted that stakeholders representing laboratories have expressed the following concerns:

- The current DOS policy permits hospitals to bill for tests they did not perform and that may have no relationship to or bearing on treatment received by the patient while in the hospital.
- The DOS policy may create inconsistent billing for specialty laboratories. For example, if the hospital is located in a different jurisdiction than the MAC used by the laboratory, a different MAC may be billed.

- Hospitals may be discouraged from utilizing ADLTs because billing for such tests that are not performed by hospitals could create administrative and financial complexities.

- The DOS policy is a potential barrier to CMS' goal of promoting personalized medicine because the policy may disproportionately impact smaller laboratories performing innovative diagnostic tests.

- Billing complexities may affect beneficiary access to needed laboratory tests and therapies. For example, orders might be delayed until at least 14 days after discharge or even canceled to avoid the DOS policy. This may restrict patient access to tests and reduce efficacy of treatment plans due to hospitals delaying or foregoing patient testing to avoid financial risk.

- The DOS policy may limit access for Medicare beneficiaries under original Medicare fee-for-service (that is, Medicare Part A and Part B) due to the fact that Medicare Advantage Plans under Medicare Part C and private payors allow laboratories to bill directly for tests they perform.

As we stated in the proposed rule (82 FR 33652), we recognize that the current laboratory DOS rule may impose administrative difficulties for hospitals and laboratories that furnish laboratory tests that are excluded from OPSS packaging and therefore paid separately at CLFS payment rates. Hospitals may be reluctant to bill Medicare for laboratory tests they do not perform, which as noted by stakeholders, could lead to delays in patient access to care.

In light of the concerns raised by stakeholders, we stated in the proposed rule that we were considering potential modifications to the DOS policy that would allow laboratories to bill Medicare directly for certain laboratory tests excluded from the OPSS packaging policy. We noted that one approach under consideration would create a new exception to the DOS policy for molecular pathology tests and ADLTs that meet the criteria of section 1834A(5)(A) of the Act and have been granted ADLT status by CMS. As we stated in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79592 through 79594), we believe these tests are relatively new and may have a different pattern of clinical use than more conventional laboratory tests, which may make them generally less tied to a primary service in the hospital outpatient setting than more common and routine laboratory tests that are packaged. In the proposed rule, we sought public comment on whether these tests, by their nature, are appropriately separable from the

hospital stay that preceded the test and therefore should have a DOS that is the date of performance rather than the date of collection.

As an example, we stated that we would consider modifying 42 CFR 414.510(b) by adding a new paragraph (5) to establish that in the case of a molecular pathology test or an ADLT that meets the criteria of section 1834A(d)(5)(A) of the Act, the DOS must be the date the test was performed only if:

- The physician orders the test following the date of a hospital outpatient's discharge from the hospital outpatient department;
- The specimen was collected from a hospital outpatient during an encounter (as both are defined 42 CFR 410.2);
- It would be medically inappropriate to have collected the sample from the hospital outpatient other than during the hospital outpatient encounter;
- The results of the test do not guide treatment provided during the hospital outpatient encounter; and
- The test was reasonable and medically necessary for the treatment of an illness.

We requested specific comments on this potential modification to the current laboratory DOS policy, which would allow laboratories to bill Medicare directly for molecular pathology tests and ADLTs that meet the criteria of section 1834A(d)(5)(A) of the Act and have been granted ADLT status by CMS, when the specimen is collected during a hospital outpatient procedure and the test is ordered after the patient is discharged from the hospital outpatient department. We also noted that we would consider finalizing this modification (82 FR 33653).

Comment: Many commenters supported revising the laboratory DOS policy so that laboratories may bill Medicare and receive payment directly for ADLTs and molecular pathology tests performed on specimens collected from hospital outpatients, which are excluded from the OPSS packaging policy. The commenters indicated that revising the current laboratory DOS policy so that the performing laboratory can bill Medicare directly for molecular pathology tests and ADLTs is consistent with CMS' policy of excluding "precision diagnostics" performed on specimens collected in the hospital outpatient setting from the OPSS packaging policy. In general, commenters urged CMS to finalize a policy that focuses on whether the test was performed outside the hospital after the outpatient encounter, rather than on the date the specimen was collected or the date the test was initially ordered.

These commenters stated that this approach would be consistent with how tests are ordered and billed for under Medicare Advantage plans and commercial insurers, which allow laboratories to bill directly for these tests.

Commenters also reiterated previous concerns regarding administrative and billing complexities resulting from the current DOS policy that may affect timely beneficiary access to necessary molecular pathology tests. These commenters noted that hospitals may be reluctant to order a test that the hospital itself does not perform until at least 14 days following the date the patient is discharged from the hospital outpatient department so that the laboratory performing the test may bill Medicare directly for the test. One commenter explained that, for molecular pathology tests performed by an independent laboratory that is not affiliated with the hospital, the administrative complexity of the current laboratory DOS policy frequently leads hospitals to delay ordering of these tests.

In addition, several commenters recommended specific modifications to the potential revisions to laboratory DOS policy discussed in the CY 2018 OPSS/ASC proposed rule. These suggested modifications are summarized below.

- *Expand the laboratory tests subject to the DOS exception.* Commenters suggested that CMS expand the laboratory tests subject to the potential DOS exception to include *all* ADLTs (that is, both Criterion (A) and Criterion (B) ADLTs) and *all* Multi-Analyte Assays with Algorithmic Analysis (MAAA), Genomic Sequencing Procedures (GSP), and Proprietary Laboratory Analysis (PLA) test codes, even if they are not currently excluded from the OPSS packaging policy. The commenters argued that expanding the potential revision to the DOS policy to include the aforementioned laboratory tests would encompass all laboratory testing that has a different pattern of clinical use from routine testing and therefore is unconnected to the primary hospital outpatient service.

- *Remove the test order date requirement.* Several commenters recommended that CMS not finalize a requirement that the physician must order the test following the date of a hospital outpatient's discharge from the hospital outpatient department because testing on a "liquid-based" specimen is typically ordered before the specimen is collected. These commenters noted that requiring the physician to *order* the test at least 1 day following the date of a patient's discharge from the hospital

outpatient department would exclude a blood-based molecular pathology test from an exception to the laboratory DOS policy.

- *Require that it be “medically appropriate” to have collected the sample during the hospital outpatient encounter.* Several commenters noted that it would be medically appropriate for an independent laboratory that is not associated with the hospital to collect a liquid-based specimen. These commenters suggested that the potential revision to the laboratory DOS policy that specified it would be medically *inappropriate* to have collected the sample from the hospital outpatient other than during the hospital outpatient encounter, applies to tests performed on tissue-based samples, but could inadvertently create incentives for hospitals to require hospital outpatients to go elsewhere for liquid-based specimen collection. These commenters also stated that requiring a patient to travel to a different location for the specimen collection could present access issues for patients with limited mobility. Therefore, these commenters suggested a modification to the potential revised DOS policy to focus on what *is* medically appropriate rather than what is not medically appropriate. To that end, these commenters requested that CMS replace the term “medically inappropriate” with a requirement that it “was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter.”

A few additional commenters suggested regulatory language to modify the existing laboratory DOS policy in accordance with the specific recommendations discussed previously. Specifically, these commenters suggested adding a new exception to the DOS policy so that, in the case of a molecular pathology test or an ADLT that meets the criteria of section 1834A(d)(5) of the Act, or a test that is a MAAA, the date of service must be the date the test was performed only if: (1) The specimen was collected from a hospital outpatient during an encounter (as both are defined 42 CFR 410.2); (2) it was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter; (3) the results of the test do not guide treatment provided during the hospital outpatient encounter; and (4) the test was reasonable and medically necessary for the diagnosis or treatment of an illness or injury.

Response: We appreciate the support from commenters for our potential revisions to the laboratory DOS policy.

We agree that some of the potential revisions to the laboratory DOS policy that we described in the CY 2018 OPPS/ASC proposed rule may not allow ADLT or molecular pathology testing performed on liquid-based samples to qualify for a DOS exception. In particular, we recognize that a requirement that it would be “medically inappropriate” to have collected the specimen from the hospital outpatient other than during the hospital outpatient encounter is primarily applicable to tissue-based specimens. It would not be applicable to liquid-based samples because it could be medically *appropriate* to collect a liquid-based specimen in settings outside of a hospital outpatient encounter, such as an independent laboratory not associated with the hospital. As such, we believe use of the term “medically inappropriate” would inappropriately exclude laboratory testing performed on liquid-based specimens from qualifying for the proposed exception to the laboratory DOS policy. Therefore, we believe the revision suggested by the commenters, that is, to specify that it “was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter,” would address concerns that the DOS exception should encompass testing performed on liquid-based samples as well as testing performed on tissue-based samples.

In addition, we agree with the commenters that requiring the physician to order the test following the date of a hospital outpatient’s discharge from the hospital outpatient department (as we described in the proposed rule) could also inappropriately exclude tests performed on liquid-based specimens from the DOS exception, because a blood test is typically ordered before the sample is collected. We proposed including the order date requirement for the same reason we included such a requirement in the 14-day rule: Because we believe it is more difficult to determine that a test ordered before discharge is appropriately separable from the hospital stay that preceded the test (71 FR 69706). However, as discussed more fully below, we believe the ADLTs and molecular pathology tests excluded from the OPPS packaging policy are, by their nature, tests that are used to determine posthospital care, and therefore can be legitimately distinguished from the care the patient receives in the hospital even if they are ordered prior to the patient’s discharge. Therefore, we do not believe it is necessary to include an order date requirement as part of this exception.

However, to help ensure that only tests that are not related to the care provided in the hospital fall under this provision, we will specify that the tests must be *performed* following the hospital outpatient’s discharge. That is, in order for the DOS to be the date the test was performed, instead of the date the sample was collected, the test must be performed following a hospital outpatient’s discharge from the hospital outpatient department. We understand this is standard practice for these types of tests and, therefore, we would not expect this provision to change current laboratory practices or have any adverse effect on patient care.

We note that some of the commenters’ suggested modifications to our potential DOS revisions are inconsistent with the current OPPS packaging policy and would result in allowing the laboratory to bill Medicare directly for a test that is not paid at the CLFS rate but paid under the hospital OPPS bundled rate. In the proposed rule (82 FR 33652), we specifically discussed creating an exception to the current DOS policy for ADLTs approved by CMS under section 1834A(d)(5)(A) of the Act and molecular pathology tests because we have already recognized that these tests may have a different pattern of clinical use than more conventional laboratory tests, which may make them generally less tied to a primary service in the hospital outpatient setting than the more common and routine tests that are packaged. In addition, these tests are already paid separately outside of the OPPS at CLFS payment rates. We note that laboratory tests granted ADLT status under section 1834A(d)(5)(B) of the Act³³ currently are not excluded from the OPPS packaging policy. Likewise, GSP testing, PLA tests, and protein-based MAAAs that are not considered molecular pathology tests are also conditionally packaged under the OPPS at this time. In the proposed rule, we did not specifically discuss expanding the laboratory tests that may qualify for a DOS exception beyond the ADLTs and molecular pathology tests that are currently excluded from OPPS packaging, and therefore we are not including ADLTs under Criterion (B), GSP tests, PLA tests, or protein-based MAAAs in the revised DOS policy at this time. We intend to study this issue

³³ Under section 1834A(d)(5)(B) of the Act, an ADLT is a CDLT covered under Medicare Part B that is offered and furnished only by a single laboratory and not sold for use by a laboratory other than the original developing laboratory (or a successor owner) and . . . “[t]he test is cleared or approved by the Food and Drug Administration.” CMS has established a regulatory definition for this type of ADLT in 42 CFR 414.502.

and, if warranted, consider proposing changes to the laboratory tests subject to a DOS exception in future rulemaking.

As noted previously in this section, we believe the current laboratory DOS policy creates administrative complexities for hospitals and laboratories with regard to molecular pathology tests and laboratory tests expected to be designated by CMS as ADLTs that meet the criteria of section 1834A(d)(5)(A) of the Act. Under the current laboratory DOS policy, if the tests are ordered less than 14 days following a hospital outpatient's discharge from the hospital outpatient department, laboratories generally cannot bill Medicare directly for the molecular pathology test or ADLT. In those circumstances, the hospital must bill Medicare for the test, and the laboratory must seek payment from the hospital. We have heard from commenters that because ADLTs are performed by only a single laboratory and molecular pathology tests are often performed by only a few laboratories, and hospitals may not have the technical ability to perform these complex tests, the hospital may be reluctant to bill Medicare for a test it would not typically (or never) perform. As a result, the hospital might delay ordering the test until at least 14 days after the patient is discharged from the hospital outpatient department or even cancel the order to avoid the DOS policy, which may restrict a patient's timely access to these tests. In addition, we have heard from commenters that the current laboratory DOS policy may disproportionately limit access for Medicare beneficiaries under original Medicare fee-for-service (that is, Medicare Part A and Part B) because Medicare Advantage plans under Medicare Part C and other private payors allow laboratories to bill directly for tests they perform.

We also recognize that greater consistency between the laboratory DOS rules and the current OPPTS packaging policy would be beneficial and would address some of the administrative and billing issues created by the current DOS policy. As noted previously, we exclude all molecular pathology tests and ADLTs under section 1834A(d)(5)(A) of the Act from the OPPTS packaging policy because we believe these tests may have a different pattern of clinical use, which may make them generally less tied to a primary service in the hospital outpatient setting than the more common and routine laboratory tests that are packaged. Under the current DOS policy, we have established exceptions that permit the DOS to be the date of performance for

certain tests that we believe are not related to the hospital treatment and are used to determine posthospital care. We believe a similar exception is justified for the molecular pathology tests and ADLTs excluded from the OPPTS packaging policy, which we understand are used to guide and manage the patient's care after the patient is discharged from the hospital outpatient department. We believe that, like the other tests currently subject to DOS exceptions, these tests can legitimately be distinguished from the care the patient receives in the hospital, and thus we would not be unbundling services that are appropriately associated with hospital treatment. Moreover, as noted previously, these tests are already paid separately outside of the OPPTS at CLFS payment rates. Therefore, we agree with the commenters that the laboratory performing the test should be permitted to bill Medicare directly for these tests, instead of relying on the hospital to bill Medicare on behalf of the laboratory under arrangements.

For these reasons and in light of the commenters' suggestions, we are revising the current laboratory DOS policy at 42 CFR 414.510(b) for tests granted ADLT status by CMS under section 1834A(d)(5)(A) of the Act and molecular pathology tests that are excluded from the OPPTS packaging policy under 42 CFR 419.2(b), so that the performing laboratory may bill and be paid by Medicare directly for these tests under the circumstances described below. The revision will provide an exception to the general laboratory DOS rule—that is, the DOS is the date the specimen was collected—so that the DOS for these tests is the date the laboratory test was performed. This exception to the current laboratory DOS policy will only apply to tests granted ADLT status by CMS under paragraph (1) of the definition of “advanced diagnostic laboratory test” in 42 CFR 414.502, which CMS promulgated to implement section 1834A(d)(5)(A) of the Act, and molecular pathology tests excluded from the OPPTS packaging policy as defined in 42 CFR 419.2(b). By adding an exception to the current laboratory DOS policy at 42 CFR 414.510(b) for molecular pathology tests and ADLTs that are excluded from the OPPTS packaging policy under 42 CFR 419.2(b), the performing laboratory will be required to bill Medicare directly for tests that meet this exception. The hospital will no longer bill Medicare for these tests, and the laboratory will no longer have to seek payment from the

hospital for these tests, if all of the conditions are met.

We note that this new exception to the laboratory DOS policy will *not* apply to tests granted ADLT status by CMS under section 1834A(d)(5)(A) of the Act and molecular pathology tests when performed on a specimen collected from a hospital inpatient. As discussed more fully below, we believe adding a laboratory DOS exception for hospital inpatients would have policy and ratesetting implications under the IPPS diagnosis related group (DRG) payment, and we did not solicit comments on potential revisions to our current laboratory DOS policy specific to the hospital inpatient setting.

In order to allow a laboratory to bill Medicare directly for an ADLT or molecular pathology test excluded from the OPPTS packaging policy, we are modifying 42 CFR 414.510(b) by adding a new paragraph (5) to establish that, in the case of a molecular pathology test or a test designated by CMS as an ADLT under paragraph (1) of the definition of advanced diagnostic laboratory test in 42 CFR 414.502, the DOS of the test must be the date the test was performed only if—

- The test was performed following a hospital outpatient's discharge from the hospital outpatient department;
- The specimen was collected from a hospital outpatient during an encounter (as both are defined in 42 CFR 410.2);
- It was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter;
- The results of the test do not guide treatment provided during the hospital outpatient encounter; and
- The test was reasonable and medically necessary for the treatment of an illness.

We intend to continue to study the laboratory DOS policy and determine whether any additional changes are warranted. In particular, we will consider whether there should be any changes to the current 14-day rule, including whether to address any inconsistencies with our new exception, and any changes to the “under arrangements” provisions, including with respect to the hospital inpatient setting. We expect to propose any future changes to the laboratory DOS policy through notice-and-comment rulemaking.

Comment: A few commenters requested that any changes to the laboratory DOS policy apply to ADLTs and molecular pathology tests performed on specimens collected from both hospital inpatients and hospital outpatients. These commenters stated

that it would be an administrative burden on hospitals that collect specimens, and laboratories that furnish and bill for ADLTs and molecular pathology tests, to track tests ordered for hospital outpatients in a way that is inconsistent with those performed on specimens obtained from hospital inpatients.

One commenter stated that consistency between the DOS for hospital inpatients and hospital outpatients is important for evaluating data on patient outcomes. For example, the commenter noted that laboratory tests ordered for hospital inpatients do not have the tests' HCPCS code(s) on the inpatient claim. As a result, CMS cannot track patients who have received these tests using claims data, or evaluate how advanced testing contributes to cancer care and other advanced treatments, or evaluate the total cost of care. To that end, a few commenters suggested that CMS use coding modifiers to identify ADLTs and molecular pathology tests that do not guide treatment during an inpatient hospital stay so that separate payment can be made at the HCPCS code level for these laboratory tests.

In contrast to the commenters suggesting a laboratory DOS revision for both hospital outpatients and hospital inpatients, one commenter requested that CMS limit revisions to the laboratory DOS policy to outpatient laboratory tests that are excluded from the OPPTS packaging policy and separately payable at CLFS rates because it would merely change which entity bills for the laboratory test. The commenter noted that because all laboratory testing ordered on specimens obtained from hospital *inpatients* less than 14 days after discharge are currently bundled into the hospital IPPS rates, a change in the laboratory DOS policy for hospital inpatients would entail many other policy changes.

Response: As discussed previously, we believe an exception to the DOS policy that is limited to the hospital outpatient setting is warranted for Criterion (A) ADLTs and molecular pathology tests excluded from the OPPTS packaging policy because these tests are already paid at CLFS rates and not paid under the OPPTS, among other reasons. We did not discuss or propose an analogous DOS exception for tests performed on specimens collected from hospital inpatients in the CY 2018 OPPTS/ASC proposed rule, and we agree with the commenter who stated that such an exception would have broader policy implications for the IPPS that need to be carefully considered. We acknowledge that there could be an administrative burden for hospitals and

laboratories to track the DOS for ADLTs and molecular pathology tests ordered for hospital outpatients in a way that is different from those ordered for hospital inpatients. However, because laboratories will no longer need to seek payment from the hospital outpatient department for these tests if all requirements in new § 414.510(b)(5) are met, we believe that some of the additional burden mentioned by the commenters is likely to be offset by the revised DOS policy. With regard to the comments on evaluating data on patient outcomes, we note that, in the CY 2018 OPPTS/ASC proposed rule, we focused only on potential revisions to the laboratory DOS policy for Criterion (A) ADLTs and molecular pathology tests excluded from the OPPTS packaging policy that are performed on a specimen collected from a hospital outpatient during a hospital outpatient encounter to enable the laboratory to bill Medicare directly for those tests. We did not discuss revising the laboratory DOS policy to improve CMS' ability to evaluate patient outcomes. As noted previously, we intend to continue studying this issue and, if warranted, consider changes to the laboratory DOS policy for laboratory tests performed on specimens collected during an inpatient hospital stay in future rulemaking.

Comment: A few commenters suggested that any changes to the DOS rule also apply to "referred nonpatient specimens." The commenters explained that hospitals receive tissue and/or blood samples for testing from physician's offices or other locations in circumstances in which no hospital encounter occurs. The commenters recommended that CMS allow this type of testing to be billed separately and not be required to be billed with other outpatient hospital services.

Response: In the situation described by the commenters, the laboratory would be performing the test as a hospital outreach laboratory. A hospital outreach laboratory is a hospital-based laboratory that furnishes laboratory tests to patients who are not admitted hospital inpatients or registered outpatients of the hospital. As discussed previously, the new exception to the laboratory DOS policy will apply to tests granted ADLT status under Criterion (A) by CMS and molecular pathology tests excluded from the OPPTS packaging policy that are performed on a specimen collected from a hospital outpatient during a hospital outpatient encounter. Because hospital outreach laboratories perform laboratory tests on specimens collected from beneficiaries who are not patients of the hospital, a revision to the laboratory DOS policy is

not necessary to allow a hospital outreach laboratory to bill Medicare separately for the test.

Comment: One commenter requested clarification as to whether an exception to the laboratory DOS policy would allow a hospital to continue billing for ADLTs or molecular pathology tests excluded from the OPPTS packaging policy or whether the policy change would require a laboratory to bill Medicare directly for these tests. Another commenter recommended that any change to laboratory DOS policy or the "under arrangements" provisions should allow either the hospital or the laboratory that performed the test to bill the Medicare program directly. The commenter indicated that, in some circumstances, other laboratory tests in addition to ADLTs and or molecular pathology tests are ordered following the patient's discharge from the hospital outpatient department and that it may be less of a burden on the laboratory to allow the hospital to bill for all laboratory tests ordered rather than require some tests to be billed by the hospital and other tests to be billed by the laboratory.

Response: If a test meets all requirements for the new exception to the DOS policy in § 414.510(b)(5), the DOS of the test must be the date the test was performed, which means the laboratory performing the test must bill Medicare for the test. The hospital would no longer be permitted to bill for these tests unless the hospital laboratory actually performed the test. That is, if the hospital laboratory performed the ADLT or molecular pathology test, the hospital laboratory would bill Medicare for the test. We believe the potential administrative burden on the laboratory to bill for some of the tests performed on a specimen collected from a hospital outpatient during a hospital outpatient encounter will be offset, to some degree, because the laboratory would no longer need to seek payment from the hospital outpatient department for those tests, if all requirements in § 414.510(b)(5) are met.

Comment: A few commenters requested that CMS clarify that the date of performance is the date of a laboratory's final report. They suggested this clarification would avoid any ambiguity regarding the date of performance of the test. One commenter urged CMS to define the DOS as the date of final report for all laboratory tests.

Response: We considered the commenters' suggestion to use the date of final report as the DOS for ADLTs and molecular pathology tests excluded from the OPPTS packaging policy that are

performed on a specimen collected from a hospital outpatient during a hospital outpatient encounter. However, we have concerns with this approach because we believe there is no clear and consistent definition of “final report” that applies to all laboratories and all types of specimens collected; that is, liquid-based, cellular, or tissue samples. Regarding the comment requesting a revision to the DOS policy for all laboratory tests, we note that we focused on potential revisions regarding Criterion (A) ADLTs and molecular pathology tests excluded from the OPSS packaging policy in the CY 2018 OPSS/ASC proposed rule, and did not discuss potential revisions to the DOS policy for all laboratory tests.

Comment: A few commenters requested that CMS modify the 14-day rule requirement for all laboratory tests because it is operationally complicated and may result in delays in testing until after the 14-day window has passed.

Response: As discussed previously in this section, the discussion in the CY 2018 OPSS/ASC proposed rule was primarily focused on potential modifications to the DOS policy for Criterion (A) ADLTs and molecular pathology tests excluded from the OPSS packaging policy. We did not address potential modifications to the DOS policy that would apply to all laboratory tests, so we will not make such changes in this rule. However, as noted previously, we intend to continue studying this issue and, if warranted, will consider proposing further changes to the DOS policy in future rulemaking.

(a) Limiting the DOS Rule Exception to ADLTs

In the CY 2018 OPSS/ASC proposed rule (82 FR 33653), we also indicated that we were considering potentially revising the DOS rule to create an exception only for ADLTs that meet the criteria in section 1834A(d)(5)(A) of the Act. This exception would not cover molecular pathology tests. We stated that we were considering this approach because ADLTs approved by CMS under Criterion (A), like all ADLTs, are offered and furnished only by a single laboratory (as defined in 42 CFR 414.502). The hospital, or another laboratory, that is not the single laboratory (as defined in 42 CFR 414.502), cannot furnish the ADLT. Therefore, we noted in the proposed rule that there may be additional beneficiary access concerns for these ADLTs that may not apply to molecular pathology tests, and that could be addressed by allowing the laboratories to bill Medicare directly for these tests. For example, a hospital may not have an

arrangement with the single laboratory that furnishes a particular ADLT, which could lead the hospital to delay the order for the ADLT until 14 days after the patient's discharge to avoid financial risk and thus potentially delay medically necessary care for the beneficiary.

We stated in the proposed rule that we believe the circumstances may be different for molecular pathology tests, which are not required to be furnished by a single laboratory. In particular, we understood there may be “kits” for certain molecular pathology tests that a hospital can purchase, allowing the hospital to perform the test. Therefore, we stated that molecular pathology tests may not present the same concerns of delayed access to medically necessary care as ADLTs, which *must* be performed by a single laboratory.

Thus, in the proposed rule, we requested specific comments on potentially creating an exception to the DOS policy that is limited to ADLTs that meet the criteria in section 1834A(d)(5)(A) of the Act and have been granted ADLT status by CMS. We also requested public comments on how the current laboratory DOS policy may affect billing for other separately payable laboratory test codes that are not packaged under the OPSS, such as a laboratory test that is the only service provided to a beneficiary on a claim or molecular pathology tests.

Comment: Many commenters supported revising the current laboratory DOS policy for both Criterion (A) ADLTs and molecular pathology tests. They did not support an exception to the current laboratory DOS policy that would be limited only to ADLTs that meet the criteria in section 1834A(d)(5)(A) of the Act and have been granted ADLT status by CMS (and therefore exclude molecular pathology tests from the DOS exception). Several commenters noted that creating an exception for only ADLTs would not be consistent with current OPSS packaging policy, which excludes both Criterion (A) ADLTs and molecular pathology tests.

In addition, a few commenters indicated that beneficiary access issues similar to those for ADLTs, which are furnished by a single laboratory, may also exist for molecular pathology tests because molecular pathology testing is highly specialized and may be performed by only a few laboratories. The commenters also noted that a coverage policy for a given molecular pathology test may have only been issued by a MAC in the jurisdiction in which the laboratory is located. This could be problematic if the hospital that

is billing for the test is located in a different MAC jurisdiction from the laboratory, and the MAC processing claims for the jurisdiction in which the hospital is located has not made a coverage determination for the test.

A few other commenters explained that molecular pathology tests are important tools that guide patient treatment plans and that many hospitals currently lack the in-house technical expertise and Clinical Laboratory Improvement Amendments (CLIA) licensure to perform these tests and, therefore, send them out to a performing laboratory. The commenters noted that molecular pathology “kits” (as referenced by CMS in the CY 2018 OPSS/ASC proposed rule) are different from those used for other CDLTs. For example, the commenters explained that molecular pathology test kits require the hospital to have the highest licensure level under CLIA, as well as obtain specialized training for correct use and interpretation of the results, and that most hospitals are unlikely to have either the expertise or the technology to use these kits. To ensure appropriate access to molecular pathology tests by rural and community hospitals, as well as academic and specialty hospitals, the commenters requested that the revisions to the current laboratory DOS policy apply to both ADLTs and molecular pathology tests.

Response: We agree with commenters that limiting the new laboratory DOS exception to include only ADLTs (and not molecular pathology tests) would be inconsistent with the OPSS packaging policy, which currently excludes tests granted ADLT status by CMS under section 1834A(d)(5)(A) of the Act and molecular pathology tests. As noted by the commenters, relatively few laboratories may perform certain molecular pathology testing. We also acknowledge that hospitals may not have the technical expertise or certification requirements necessary to perform molecular pathology testing and therefore must rely on independent laboratories to perform the test. Therefore, we believe similar beneficiary access concerns that apply to ADLTs may also apply to molecular pathology tests. As indicated previously, after consideration of the public comments received on this issue, in this final rule with comment period, we are revising the current laboratory DOS policy to create a new exception for tests granted ADLT status by CMS under Criterion (A) and molecular pathology tests excluded from the OPSS packaging policy.

(b) Other Alternative Approaches

Finally, in the CY 2018 OPPS/ASC proposed rule (82 FR 33653), we invited public comments on alternative approaches to addressing stakeholders' concerns regarding the DOS policy, such as potentially modifying the "under arrangements" provisions in 42 CFR 410.42 and 411.15(m). Specifically, we requested comments on whether an exception should be added to § 410.42(b) and/or § 411.15(m)(3) for molecular pathology tests and ADLTs that are excluded from the OPPS packaging policy under 42 CFR 419.2(b) and how such an exception should be framed.

Comment: Several commenters preferred modifications to the "under arrangements" provisions to a laboratory DOS revision. They stated that modifying the "under arrangements" provisions could be a more direct approach for permitting a performing laboratory to bill Medicare directly for ADLTs and molecular pathology tests. Therefore, the commenters requested that CMS add another exception to the "under arrangements" provisions so that a revision to the laboratory DOS policy would not be necessary. They suggested that changes to the "under arrangements" provisions could be made in lieu of modifying the laboratory DOS rules and asserted that this approach would only revise the "billing regulation" for tests performed on hospital outpatient specimens to align with CMS' existing exclusions from the OPPS packaging policy.

In addition, a few commenters noted that certain practitioner services, such as physician services and nurse practitioner services, are not performed by the hospital outpatient department and paid under a separate fee schedule, and therefore, are currently excluded from the "under arrangements" provisions. They contended that adding an exception to the "under arrangements" provisions for nonpackaged laboratory tests which are paid at the CLFS rates would be consistent with the exceptions for other services (for example, physician services) paid separately from the hospital service.

A few commenters also provided specific recommendations on how CMS should revise the "under arrangements" regulations at §§ 410.42(b) and 411.15(m). Similar to their recommendations for revising the laboratory DOS policy, the commenters suggested adding an exception to the "under arrangements" provisions for molecular pathology tests, *all* ADLTs,

and *all* MAAAs, irrespective of whether these tests are currently excluded from the OPPS packaging policy.

Response: We appreciate the feedback that commenters provided in response to our request for comments on potential modifications to the "under arrangements" provisions. As discussed previously, in this final rule with comment period, we are finalizing a revision to the current laboratory DOS policy so that laboratories performing Criterion (A) ADLTs and molecular pathology tests excluded from the OPPS packaging policy can bill Medicare directly for those tests, instead of seeking payment from the hospital outpatient department. We believe including this revision as part of § 414.510 is more consistent with how we have historically addressed laboratory DOS issues and, at this stage, is the appropriate way to address stakeholders' administrative and billing concerns regarding these tests. As noted previously, we intend to continue to study this issue and specifically consider whether further revisions to the "under arrangements" provisions are warranted. If we believe revisions to the "under arrangements" provisions may be warranted, we expect we would propose those changes through notice-and-comment rulemaking.

In summary, after considering the public comments we received, we are adding an additional exception to our current laboratory DOS regulations at § 414.510(b)(5) so that the DOS for molecular pathology tests and tests designated by CMS as Criterion (A) ADLTs is the date the test was performed only if: (1) The test was performed following a hospital outpatient's discharge from the hospital outpatient department; (2) the specimen was collected from a hospital outpatient during an encounter (as both are defined in § 410.2); (3) it was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter; (4) the results of the test do not guide treatment provided during the hospital outpatient encounter; and (5) the test was reasonable and medically necessary for the treatment of an illness. This new exception to the laboratory DOS policy will enable laboratories performing Criterion (A) ADLTs and molecular pathology tests excluded from the OPPS packaging policy to bill Medicare directly for those tests, instead of requiring them to seek payment from the hospital outpatient department.

XI. CY 2018 OPPS Payment Status and Comment Indicators**A. CY 2018 OPPS Payment Status Indicator Definitions**

Payment status indicators (SIs) that we assign to HCPCS codes and APCs serve an important role in determining payment for services under the OPPS. They indicate whether a service represented by a HCPCS code is payable under the OPPS or another payment system and also whether particular OPPS policies apply to the code.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33653), for CY 2018, we did not propose to make any changes to the definitions of status indicators that were listed in Addendum D1 to the CY 2017 OPPS/ASC final rule with comment period available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices-Items/CMS-1656-FC.html?DLPage=1&DLEntries=10&DLSort=2&DLSortDir=descending>.

We requested public comments on the proposed definitions of the OPPS status indicators for CY 2018. We did not receive any public comments. We believe that the existing CY 2017 definitions of the OPPS status indicators continue to be appropriate for CY 2018. Therefore, we are finalizing our proposed CY 2018 definitions of the OPPS status indicators without modifications.

The complete list of the payment status indicators and their definitions that apply for CY 2018 is displayed in Addendum D1 to this final rule with comment period, which is available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

The CY 2018 payment status indicator assignments for APCs and HCPCS codes are shown in Addendum A and Addendum B, respectively, to this final rule with comment period, which are available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

B. CY 2018 Comment Indicator Definitions

In the CY 2018 OPPS/ASC proposed rule (82 FR 33654), we proposed to use four comment indicators for the CY 2018 OPPS. These comment indicators, "CH", "NC", "NI", and "NP", are in effect for CY 2017 and we proposed to continue their use in CY 2018. The proposed CY 2018 OPPS comment indicators are as follows:

- “CH”—Active HCPCS code in current and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year.

- “NC”—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year for which we requested comments in the proposed rule, final APC assignment; comments will *not* be accepted on the final APC assignment for the new code.

- “NI”—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, interim APC assignment; comments will be accepted on the interim APC assignment for the new code.

- “NP”—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code.

We requested public comments on our proposed use of comment indicators for CY 2018. We did not receive any public comments. We believe that the CY 2017 definitions of the OPSS comment indicators continue to be appropriate for CY 2018. Therefore, we are continuing to use those definitions without modification for CY 2018.

The definitions of the final OPSS comment indicators for CY 2018 are listed in Addendum D2 to this final rule with comment period, which is available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

XII. Updates to the Ambulatory Surgical Center (ASC) Payment System

A. Background

1. Legislative History, Statutory Authority, and Prior Rulemaking for the ASC Payment System

For a detailed discussion of the legislative history and statutory authority related to payments to ASCs under Medicare, we refer readers to the CY 2012 OPSS/ASC final rule with comment period (76 FR 74377 through 74378) and the June 12, 1998 proposed rule (63 FR 32291 through 32292). For a discussion of prior rulemaking on the ASC payment system, we refer readers to the CYs 2012, 2013, 2014, 2015, 2016, and 2017 OPSS/ASC final rules with comment period (76 FR 74378 through

74379; 77 FR 68434 through 68467; 78 FR 75064 through 75090; 79 FR 66915 through 66940; 80 FR 70474 through 70502; and 81 FR 79732 through 79753, respectively).

2. Policies Governing Changes to the Lists of Codes and Payment Rates for ASC Covered Surgical Procedures and Covered Ancillary Services

Under 42 CFR 416.2 and 416.166 of the Medicare regulations, subject to certain exclusions, covered surgical procedures in an ASC are surgical procedures that are separately paid under the OPSS, that would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure (“overnight stay”). We adopted this standard for defining which surgical procedures are covered under the ASC payment system as an indicator of the complexity of the procedure and its appropriateness for Medicare payment in ASCs. We use this standard only for purposes of evaluating procedures to determine whether or not they are appropriate to be furnished to Medicare beneficiaries in ASCs. We define surgical procedures as those described by Category I CPT codes in the surgical range from 10000 through 69999 as well as those Category III CPT codes and Level II HCPCS codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we have determined do not pose a significant safety risk, that we would not expect to require an overnight stay when performed in ASCs, and that are separately paid under the OPSS (72 FR 42478).

In the August 2, 2007 final rule (72 FR 42495), we also established our policy to make separate ASC payments for the following ancillary items and services when they are provided integral to ASC covered surgical procedures: (1) Brachytherapy sources; (2) certain implantable items that have pass-through payment status under the OPSS; (3) certain items and services that we designate as contractor-priced, including, but not limited to, procurement of corneal tissue; (4) certain drugs and biologicals for which separate payment is allowed under the OPSS; and (5) certain radiology services for which separate payment is allowed under the OPSS. In the CY 2015 OPSS/ASC final rule with comment period (79 FR 66932 through 66934), we expanded the scope of ASC covered ancillary services to include certain diagnostic

tests within the medicine range of CPT codes for which separate payment is allowed under the OPSS when they are provided integral to an ASC covered surgical procedure. Covered ancillary services are specified in § 416.164(b) and, as stated previously, are eligible for separate ASC payment. Payment for ancillary items and services that are not paid separately under the ASC payment system is packaged into the ASC payment for the covered surgical procedure.

We update the lists of, and payment rates for, covered surgical procedures and covered ancillary services in ASCs in conjunction with the annual proposed and final rulemaking process to update the OPSS and the ASC payment system (§ 416.173; 72 FR 42535). We base ASC payment and policies for most covered surgical procedures, drugs, biologicals, and certain other covered ancillary services on the OPSS payment policies, and we use quarterly change requests (CRs) to update services covered under the OPSS. We also provide quarterly update CRs for ASC covered surgical procedures and covered ancillary services throughout the year (January, April, July, and October). We release new and revised Level II HCPCS codes and recognize the release of new and revised CPT codes by the AMA and make these codes effective (that is, the codes are recognized on Medicare claims) via these ASC quarterly update CRs. We recognize the release of new and revised Category III CPT codes in the July and January CRs. These updates implement newly created and revised Level II HCPCS and Category III CPT codes for ASC payments and update the payment rates for separately paid drugs and biologicals based on the most recently submitted ASP data. New and revised Category I CPT codes, except vaccine codes, are released only once a year, and are implemented only through the January quarterly CR update. New and revised Category I CPT vaccine codes are released twice a year and are implemented through the January and July quarterly CR updates. We refer readers to Table 41 in the CY 2012 OPSS/ASC proposed rule for an example of how this process, which we finalized in the CY 2012 OPSS/ASC final rule with comment period, is used to update HCPCS and CPT codes (76 FR 42291; 76 FR 74380 through 74381).

In our annual updates to the ASC list of, and payment rates for, covered surgical procedures and covered ancillary services, we undertake a review of excluded surgical procedures (including all procedures newly proposed for removal from the OPSS

inpatient list), new codes, and codes with revised descriptors, to identify any that we believe meet the criteria for designation as ASC covered surgical procedures or covered ancillary services. Updating the lists of ASC covered surgical procedures and covered ancillary services, as well as their payment rates, in association with the annual OPSS rulemaking cycle is particularly important because the OPSS relative payment weights and, in some cases, payment rates, are used as the basis for the payment of many covered surgical procedures and covered ancillary services under the revised ASC payment system. This joint update process ensures that the ASC updates occur in a regular, predictable, and timely manner.

3. Definition of ASC Covered Surgical Procedures

Since the implementation of the ASC prospective payment system, we have defined a “surgical” procedure under the payment system as any procedure described within the range of Category I CPT codes that the CPT Editorial Panel of the American Medical Association (AMA) defines as “surgery” (CPT codes 10000 through 69999) (72 FR 42478). We also have included as “surgical,” procedures that are described by Level II HCPCS codes or by Category III CPT codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we have determined do not pose a significant safety risk, would not expect to require an overnight stay when performed in an ASC, and are separately paid under the OPSS (72 FR 42478).

As we noted in the CY 2008 final rule that implemented the revised ASC payment system, using this definition of surgery would exclude from ASC payment certain invasive, “surgery-like” procedures, such as cardiac catheterization or certain radiation treatment services that are assigned codes outside the CPT surgical range (72 FR 42477). We stated in that final rule that we believed continuing to rely on the CPT definition of surgery is administratively straightforward, is logically related to the categorization of services by physician experts who both establish the codes and perform the procedures, and is consistent with a policy to allow ASC payment for all outpatient surgical procedures (72 FR 42477).

Recently, some stakeholders have suggested that certain procedures that are outside the CPT surgical range but that are similar to surgical procedures currently covered in an ASC setting should be ASC covered surgical

procedures. For example, these stakeholders stated that certain cardiac catheterization services, cardiac device programming services, and electrophysiology services should be added to the covered surgical procedures list. While we continue to believe that using the CPT code range to define surgery represents a logical, appropriate, and straightforward approach to defining a surgical procedure, we also believe it may be appropriate for us to use the CPT surgical range as a guide rather than a requirement as to whether a procedure is surgical, which would give us more flexibility to include “surgery-like” procedures on the ASC Covered Procedures List (CPL). We are cognizant of the dynamic nature of ambulatory surgery and the continued shift of services from the inpatient setting to the outpatient setting over the past decade. Therefore, in the CY 2018 OPSS/ASC proposed rule (82 FR 33655), we solicited public comments regarding services that are described by Category I CPT codes outside of the surgical range, or Level II HCPCS codes or Category III CPT codes that do not directly crosswalk and are not clinically similar to procedures in the CPT surgical range, but that nonetheless may be appropriate to include as covered surgical procedures that are payable when furnished in the ASC setting. In particular, we stated our interest in the public’s views regarding additional criteria we might use to consider when a procedure that is surgery-like could be included on the ASC CPL. We requested that commenters on this issue take into consideration whether each individual procedure can be safely and appropriately performed in an ASC, as required by the regulations at 42 CFR 416.166 (including that standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure), and whether the procedure requires the resources, staff, and equipment typical of an ASC. We also indicated that we were interested in the public’s views on whether and how, if we were to include such services as ASC covered surgical procedures, we would need to revise our definition of ASC covered surgical procedures.

Comment: Some commenters suggested that revising the definition of ASC covered surgical procedures would inappropriately move procedures from a hospital setting to an ASC setting and place Medicare patients in greater risk. Some commenters also suggested that

revising the definition could further stress hospitals in isolated rural care settings because many ASCs are located in rural areas.

Other commenters suggested that CMS develop and solicit comments on a clear definition and criteria for surgical site selection. Commenters also suggested patient selection and risk stratification protocols that would harmonize the different criteria of hospital outpatient departments and ASCs. In addition, they recommended that further clinical evaluation of the consequences to the Medicare population be performed before revising the definition of ASC covered surgical procedures.

Many commenters supported revising the definition of ASC covered surgical procedures. Commenters supporting the revision of the definition of ASC covered surgical procedures suggested that the CPT surgical code range (10000–69999) has not properly accounted for technical advances in treatment and does not include invasive procedures that do not pose a significant safety risk, do not require an overnight stay for Medicare patients, and would otherwise be appropriate procedures to be added to the ASC list of covered surgical procedures. For example, some commenters believed that several catheter-based procedures would be appropriately performed in the ASC setting. Further, commenters stated that CMS has relied on alternative definitions of a surgical procedure in other operations of the Medicare program that are broader than the current definition of an ASC covered surgical procedure.

Response: We appreciate the feedback we received from commenters. We acknowledge the importance of having clear criteria for covered surgical procedures that account for advances in surgical treatment in an ASC setting that also do not expose Medicare patients to significant safety risks. In the CY 2018 OPSS/ASC proposed rule (82 FR 33654 through 33655), we did not propose any revisions to our current definition of ASC covered surgical procedures. For CY 2018, we will continue to define “surgical” procedures under the payment system as those procedures described by Category I CPT codes within the range the CPT Editorial Panel of the AMA defines as “surgery” (CPT codes 10000 through 69999), or Level II HCPCS codes or Category III CPT codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we have determined do not pose a significant safety risk, would not be expected to require an overnight stay when performed in an

ASC, and are separately paid under the OPPS. However, we will take these comments into consideration in future rulemaking.

B. Treatment of New and Revised Codes

1. Background on Current Process for Recognizing New and Revised Category I and Category III CPT Codes and Level II HCPCS Codes

Category I CPT, Category III CPT, and Level II HCPCS codes are used to report procedures, services, items, and supplies under the ASC payment system. Specifically, we recognize the following codes on ASC claims:

- Category I CPT codes, which describe surgical procedures and vaccine codes;
- Category III CPT codes, which describe new and emerging technologies, services, and procedures; and
- Level II HCPCS codes, which are used primarily to identify items, supplies, temporary procedures, and services not described by CPT codes.

We finalized a policy in the August 2, 2007 final rule (72 FR 42533 through 42535) to evaluate each year all new and revised Category I and Category III CPT codes and Level II HCPCS codes that describe surgical procedures, and to

make preliminary determinations during the annual OPPS/ASC rulemaking process regarding whether or not they meet the criteria for payment in the ASC setting as covered surgical procedures and, if so, whether or not they are office-based procedures. In addition, we identify new and revised codes as ASC covered ancillary services based upon the final payment policies of the revised ASC payment system. In prior rulemakings, we refer to this process as recognizing new codes. However, this process has always involved the recognition of new and revised codes. We consider revised codes to be new when they have substantial revision to their code descriptors that necessitate a change in the current ASC payment indicator. To clarify, we refer to these codes as new and revised in this CY 2018 OPPS/ASC final rule with comment period.

We have separated our discussion below based on when the codes are released and whether we propose to solicit public comments in the CY 2018 OPPS/ASC proposed rule (and respond to those comments in the CY 2018 OPPS/ASC final rule with comment period) or whether we are soliciting public comments in this CY 2018 OPPS/ASC final rule with comment period

(and responding to those comments in the CY 2019 OPPS/ASC final rule with comment period).

We note that we sought public comments in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79735 through 79736) on the new and revised Level II HCPCS codes effective October 1, 2016, or January 1, 2017. These new and revised codes, with an effective date of October 1, 2016, or January 1, 2017, were flagged with comment indicator “NI” in Addenda AA and BB to the CY 2017 OPPS/ASC final rule with comment period to indicate that we were assigning them an interim payment status and payment rate, if applicable, which were subject to public comment following publication of the CY 2017 OPPS/ASC final rule with comment period. We are responding to public comments and finalize the treatment of these codes under the ASC payment system in this CY 2018 OPPS/ASC final rule with comment period.

In Table 79 below, we summarize our process for updating codes through our ASC quarterly update CRs, seeking public comments, and finalizing the treatment of these new codes under the OPPS.

TABLE 79—COMMENT AND FINALIZATION TIMEFRAMES FOR NEW OR REVISED HCPCS CODES

ASC quarterly update CR	Type of code	Effective date	Comments sought	When finalized
April 1, 2017 ..	Level II HCPCS Codes	April 1, 2017 ..	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.
July 1, 2017 ...	Level II HCPCS Codes	July 1, 2017 ...	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.
	Category I (certain vaccine codes) and III CPT codes.	July 1, 2017 ...	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.
October 1, 2017.	Level II HCPCS Codes	October 1, 2017.	CY 2018 OPPS/ASC final rule with comment period.	CY 2019 OPPS/ASC final rule with comment period.
January 1, 2018.	Level II HCPCS Codes	January 1, 2018.	CY 2018 OPPS/ASC final rule with comment period.	CY 2019 OPPS/ASC final rule with comment period.
	Category I and III CPT Codes	January 1, 2018.	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.

Note: In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66841 through 66844), we finalized a revised process of assigning APC and status indicators for new and revised Category I and III CPT codes that would be effective January 1. We refer readers to section III.A.3. of this CY 2018 OPPS/ASC final rule with comment period for further discussion of this issue.

2. Treatment of New and Revised Level II HCPCS Codes Implemented in April 2017 for Which We Solicited Public Comments in the CY 2018 OPPS/ASC Proposed Rule

In the April 2017 ASC quarterly update (Transmittal 3726, CR 9998, dated March 03, 2017), we added six new drug and biological Level II HCPCS codes to the list of covered ancillary services. Table 31 of the proposed rule listed the new Level II HCPCS codes that were implemented April 1, 2017,

along with their payment indicators for CY 2018.

We invited public comments on these proposed payment indicators and the proposed payment rates for the new Level II HCPCS codes that were recognized as ASC covered ancillary services in April 2017 through the quarterly update CRs, as listed in Table 31 of the proposed rule. We proposed to finalize their payment indicators and their payment rates in the CY 2018 OPPS/ASC final rule with comment period.

We did not receive any public comments regarding the proposed ASC payment indicators and payment rates. Therefore, we are adopting as final the CY 2018 proposed payment indicators for these codes, as indicated in Table 80. We note that several of the HCPCS C-codes have been replaced with HCPCS J-codes, effective January 1, 2018. Their replacement codes are listed in Table 80. The final payment rates for these codes can be found in Addendum BB to this final rule with comment period (which is available via the Internet on

the CMS Web site). In addition, the payment indicator meanings can be

found in Addendum DD1 to this final rule with comment period (which is

available via the Internet on the CMS Web site).

TABLE 80—NEW LEVEL II HCPCS CODES FOR COVERED ANCILLARY SERVICES EFFECTIVE ON APRIL 1, 2017

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	CY 2018 payment indicator
C9484	J1428	Injection, eteplirsen, 10 mg	K2
C9485	J9285	Injection, olaratumab, 10 mg	K2
C9486	J1627	Injection, granisetron extended release, 0.1 mg	K2
C9487*	J3358	Ustekinumab, for intravenous injection, 1 mg	K2
C9488	C9488	Injection, conivaptan hydrochloride, 1 mg	K2
J7328	J7328	Hyaluronan or derivative, gelsyn-3, for intra-articular injection, 0.1 mg	K2

* HCPCS code C9487, which was effective April 1, 2017, was deleted June 30, 2017 and replaced with HCPCS code Q9989 (Ustekinumab, for intravenous injection, 1 mg) effective July 1, 2017 through December 31, 2017.

3. Treatment of New and Revised Level II HCPCS Codes Implemented in July 2017 for Which We Solicited Public Comments in the CY 2018 OPPS/ASC Proposed Rule

In the July 2017 ASC quarterly update (Transmittal 3792, CR 10138, dated June 9, 2017), we added seven new Level II HCPCS codes to the list of covered surgical procedures and ancillary services. Table 32 of the proposed rule listed the new Level II HCPCS codes that are effective July 1, 2017. The proposed payment rates, where applicable, for these July codes were included in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site).

Through the July 2017 quarterly update CR, we also implemented ASC payment for one new Category III CPT code as an ASC covered surgical procedure, effective July 1, 2017. This code was listed in Table 33 of the proposed rule, along with its proposed payment indicator. The proposed payment rate for this new Category III CPT code was included in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

We invited public comments on these proposed payment indicators and the proposed payment rates for the new Category III CPT code and Level II HCPCS codes that were or are expected to be newly recognized as ASC covered surgical procedures or covered ancillary services in July 2017 through the

quarterly update CRs, as listed in Tables 32 and 33 of the proposed rule. We proposed to finalize their payment indicators and their payment rates in the CY 2018 OPPS/ASC final rule with comment period.

Comment: One commenter supported the assignment of HCPCS code Q9986 (Injection, hydroxyprogesterone caproate (Makena), 10 mg) to payment indicator “K2”. However, the commenter requested that CMS review the calculated payment rate for the new HCPCS code Q9986, as it appeared to the commenter to be inaccurate. The commenter pointed out the following: The July 2017 OPPS and ASC Update indicates that this new HCPCS code is “per 10 mg” with a payment rate of \$2.72 (as indicated in the July 2017 Addendum B/BB and in Addendum B and Addendum BB to the CY 2018 OPPS/ASC proposed rule). Prior to July 1, 2017, Makena® (NDC #64011–0247–02 and NDC #64011–0243–01) was reported under HCPCS code J1725, which had a dose and measure of “per 1 mg” and a payment rate of \$2.74 (April 2017 Addendum B/BB). Makena® also has a WAC price of \$30.57 per 10 mg. The commenter believed that when the new HCPCS code was added with a description of 10 mg instead of the prior 1 mg, the payment rate was not appropriately adjusted to reflect the dosage change.

Response: We agree with the commenter. The July 2017 and October 2017 OPPS and ASC addenda

incorrectly reflected a price for HCPCS code Q9986 based on a 1 mg dose rather than the revised 10 mg dose descriptor. We intend to correct the price for HCPCS code Q9986 retroactive to July 1, 2017, in the respective January 2018 updates to the OPPS and ASC payment systems. Applicable program instructions will be posted to the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2017-Transmittals.html>.

After consideration of the public comment we received, we are finalizing the proposed payment indicators for the new Category III CPT code and Level II HCPCS codes that were newly recognized as ASC covered surgical procedures or covered ancillary services in July 2017 through the quarterly update CRs, as indicated in Table 81 below. We note that several of the HCPCS C- and Q-codes have been replaced with HCPCS J-codes, effective January 1, 2018. Their replacement codes are listed in Table 81 below. The CY 2018 final payment rates, where applicable, for these July codes can be found in Addendum BB to this final rule with comment period rule (which is available via the Internet on the CMS Web site). Table 82 below lists Category III CPT code 0474T, along with its final payment indicator. The CY 2018 final payment rate for this new Category III CPT code can be found in Addendum AA to the final rule with comment period (which is available via the Internet on the CMS Web site).

TABLE 81—NEW LEVEL II HCPCS CODES FOR COVERED SURGICAL PROCEDURES AND ANCILLARY SERVICES EFFECTIVE ON JULY 1, 2017

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	CY 2018 payment indicator
C9489	J2326	Injection, nusinersen, 0.1 mg	K2
C9490	J0565	Injection, bezlotoxumab, 10 mg	K2
C9745	C9745	Nasal endoscopy, surgical; balloon dilation of eustachian tube	J8

TABLE 81—NEW LEVEL II HCPCS CODES FOR COVERED SURGICAL PROCEDURES AND ANCILLARY SERVICES EFFECTIVE ON JULY 1, 2017—Continued

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	CY 2018 payment indicator
C9746	C9746	Transperineal implantation of permanent adjustable balloon continence device, with cystourethroscopy, when performed and/or fluoroscopy, when performed.	J8
C9747	C9747	Ablation of prostate, transrectal, high intensity focused ultrasound (HIFU), including imaging guidance.	J8
Q9986	J1726	Injection, hydroxyprogesterone caproate (Makena), 10 mg	K2
Q9989 *	J3358	Ustekinumab, for intravenous injection, 1 mg	K2

* HCPCS code C9487, which was effective April 1, 2017, was replaced with HCPCS code Q9989 (Ustekinumab, for intravenous injection, 1 mg) effective July 1, 2017.

0474T	0474T	Insertion of anterior segment aqueous drainage device, with creation of intraocular reservoir, internal approach, into the supraciliary space.	J8

4. Process for New and Revised Level II HCPCS Codes That Are Effective October 1, 2017 and January 1, 2018 for Which We Are Soliciting Public Comments in This CY 2018 OPPS/ASC Final Rule With Comment Period

As has been our practice in the past, we incorporate those new and revised Level II HCPCS codes that are effective January 1 in the final rule with comment period, thereby updating the OPPS and the ASC payment system for the following calendar year. These codes are released to the public via the CMS HCPCS Web site, and also through the January OPPS quarterly update CRs. In the past, we also released new and revised Level II HCPCS codes that are effective October 1 through the October OPPS quarterly update CRs and incorporated these new codes in the final rule with comment period.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33657), for CY 2018, consistent with our established policy, we proposed that the Level II HCPCS codes that will be effective October 1, 2017, and January 1, 2018, would be flagged with comment indicator “NI” in Addendum B to the CY 2018 OPPS/ASC final rule with comment period to indicate that we have assigned the codes an interim OPPS payment status for CY 2018. We did not receive any public comments on our proposal. As we stated we would do in the proposed rule, we are inviting public comments in this CY 2018 OPPS/ASC final rule with comment period on the interim payment indicators and payment rates for these codes that will be finalized in the CY 2019 OPPS/ASC final rule with comment period.

5. Process for Recognizing New and Revised Category I and Category III CPT Codes That Are Effective January 1, 2018 for Which We Are Soliciting Public Comments in This CY 2018 OPPS/ASC Final Rule With Comment Period

For new and revised CPT codes effective January 1, 2018, that were received in time to be included in the CY 2018 OPPS/ASC proposed rule, we proposed APC and status indicator assignments (82 FR 33657). We stated in the proposed rule that we would accept comments and finalize the APC and status indicator assignments in the CY 2018 OPPS/ASC final rule with comment period. For those new/revised CPT codes that were received too late for inclusion in the CY 2018 OPPS/ASC proposed rule, we stated that we may either make interim final assignments in the final rule with comment period or possibly use HCPCS G-codes that mirror the predecessor CPT codes and retain the current APC and status indicator assignments for a year until we can propose APC and status indicator assignments in the following year’s rulemaking cycle.

We stated in the proposed rule that, for the CY 2018 ASC update, the new and revised CY 2018 Category I and III CPT codes will be effective on January 1, 2018, and were included in ASC Addendum AA and Addendum BB to the proposed rule (which are available via the Internet on the CMS Web site). The new and revised CY 2018 Category I and III CPT codes were assigned to comment indicator “NP” to indicate that the code is new for the next calendar year or the code is an existing

code with substantial revision to its code descriptor in the next calendar year, as compared to the current calendar year, and that comments will be accepted on the proposed payment indicator. Further, in the proposed rule, we reminded readers that the CPT code descriptors that appear in Addendum AA and Addendum BB are short descriptors and do not fully describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors for the new and revised CY 2018 CPT codes in Addendum O to the proposed rule (which is available via the Internet on the CMS Web site) so that the public can have time to adequately comment on our proposed payment indicator assignments. We stated in the proposed rule that the 5-digit placeholder codes can be found in Addendum O, specifically under the column labeled “CY 2018 OPPS/ASC Proposed Rule 5-Digit Placeholder Code,” to the proposed rule. We stated that the final CPT code numbers would be included in the CY 2018 OPPS/ASC final rule with comment period. We noted that not every code listed in Addendum O is subject to comment. For the new/revised Category I and III CPT codes, we requested comments on only those codes that are assigned to comment indicator “NP”.

In summary, we solicited public comments on the proposed CY 2018 payment indicators for the new and revised Category I and III CPT codes that will be effective January 1, 2018. The CPT codes were listed in Addendum AA and Addendum BB to the proposed rule with short descriptors only. We

listed them again in Addendum O to the proposed rule with long descriptors. We also proposed to finalize the payment indicator for these codes (with their final CPT code numbers) in the CY 2018 OPPS/ASC final rule with comment period. The proposed payment indicators for these codes were included in Addendum AA and Addendum BB to the proposed rule (which are available via the Internet on the CMS Web site).

Comment: Some commenters addressed the proposed establishment of HCPCS G-codes under the MPFS to report the insertion and removal of buprenorphine hydrochloride, formulated as a 4-rod, 80 mg, long-acting subdermal drug implant for the treatment of opioid addiction (82 FR 34011 through 34012). Specifically, the commenters requested that the MPFS proposal also apply to the OPPS and ASC payment systems. In addition, the commenters recommended that CMS assign the HCPCS G-codes to payment indicator “P3” (Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility Practice Expense Relative Value Units (PE RVUs); payment based on MPFS nonfacility PE RVUs).

Response: As discussed in section III.D. (OPPS APC-Specific Policies) of this final rule with comment period, we are establishing these HCPCS G-codes in the OPPS, effective January 1, 2018, with status indicator “Q1” (Packaged APC payment if billed on the same claim as a HCPCS code assigned status indicator “S”, “T”, or “V”). However, because these services are conditionally packaged under the OPPS, they are unconditionally packaged under the ASC payment system (payment indicator “N1”). Therefore, we are not accepting the commenters’ request to assign payment indicator “P3” to these HCPCS G-codes.

Comment: One commenter disagreed with the proposed payment rate for four new CPT codes (31XX2, 31XX3, 31XX4, and 31XX5) that describe endoscopic sinus surgery services. The commenter noted that the multiple procedure reduction applies to these procedures when performed in an ASC which results in payment at 100 percent for the highest ranking procedure and 50 percent for each subsequent procedure when performed in the same encounter. Because the commenter believed that these payment rates are inadequate, the commenter requested that CMS consider an ASC payment rate that more closely aligns with ASCs’ costs.

Response: The national unadjusted ASC payment rates are calculated using our standard ASC ratesetting methodology of multiplying the ASC

relative payment weight for the procedure by the ASC conversion factor for that same year. We have no cost data or information to assess whether ASC payments rates calculated using the standard ratesetting methodology align with ASC costs. Therefore, we are not accepting the commenter’s recommendation and we are finalizing payment for proposed CPT codes 31XX2, 31XX3, 31XX4, and 31XX5, as replaced by CPT codes 31253, 31257, 31259, and 31298, respectively, according to our standard ASC ratesetting methodology for CY 2018. We note the OPPS cost data informs ASC payment rates, and as data become available from hospitals paid under the OPPS, we will reassess the APC assignments for these codes.

After consideration of the public comments we received, we are finalizing, without modification, the proposed CY 2018 ASC payment indicator assignments for new and revised CPT codes, effective January 1, 2018. The final CY 2018 payment indicators for the new and revised Category I and III CPT codes (with their final CPT code numbers) that will be effective January 1, 2018 are listed in Addendum AA and Addendum BB to this final rule with comment period with short descriptors only. We list them again in Addendum O to the final rule with comment period with long descriptors.

C. Update to the List of ASC Covered Surgical Procedures and Covered Ancillary Services

1. Covered Surgical Procedures

a. Covered Surgical Procedures Designated as Office-Based

(1) Background

In the August 2, 2007 ASC final rule, we finalized our policy to designate as “office-based” those procedures that are added to the ASC list of covered surgical procedures in CY 2008 or later years that we determine are performed predominantly (more than 50 percent of the time) in physicians’ offices based on consideration of the most recent available volume and utilization data for each individual procedure code and/or, if appropriate, the clinical characteristics, utilization, and volume of related codes. In that rule, we also finalized our policy to exempt all procedures on the CY 2007 ASC list from application of the office-based classification (72 FR 42512). The procedures that were added to the ASC list of covered surgical procedures beginning in CY 2008 that we determined were office-based were

identified in Addendum AA to that rule by payment indicator “P2” (Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight); “P3” (Office-based surgical procedures added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on MPFS nonfacility PE RVUs); or “R2” (Office-based surgical procedure added to ASC list in CY 2008 or later without MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight), depending on whether we estimated the procedure would be paid according to the standard ASC payment methodology based on its OPPS relative payment weight or at the MPFS nonfacility PE RVU-based amount.

Consistent with our final policy to annually review and update the list of covered surgical procedures eligible for payment in ASCs, each year we identify covered surgical procedures as either temporarily office-based (these are new procedure codes with little or no utilization data that we have determined are clinically similar to other procedures that are permanently office-based), permanently office-based, or nonoffice-based, after taking into account updated volume and utilization data.

(2) Changes for CY 2018 to Covered Surgical Procedures Designated as Office-Based

In developing the CY 2018 OPPS/ASC proposed rule and this final rule with comment period, we followed our policy to annually review and update the covered surgical procedures for which ASC payment is made and to identify new procedures that may be appropriate for ASC payment, including their potential designation as office-based. We reviewed CY 2016 volume and utilization data and the clinical characteristics for all covered surgical procedures that are assigned payment indicator “G2” (Nonoffice-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) in CY 2016, as well as for those procedures assigned one of the temporary office-based payment indicators, specifically “P2”, “P3”, or “R2” in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79736 through 79738).

As discussed in the CY 2018 OPPS/ASC proposed rule, our review of the CY 2016 volume and utilization data resulted in our identification of two covered surgical procedures, CPT code 37241 (Vascular embolize/occlude venous) and CPT code 67227

(Destruction extensive retinopathy), that we believe meet the criteria for designation as office-based. The data indicate that these procedures are performed more than 50 percent of the

time in physicians' offices, and we believe that the services are of a level of complexity consistent with other procedures performed routinely in physicians' offices. The CPT codes that

we proposed to permanently designate as office-based for CY 2018 were listed in Table 34 of the proposed rule.

TABLE 83—ASC COVERED SURGICAL PROCEDURES NEWLY DESIGNATED AS PERMANENTLY OFFICE-BASED FOR CY 2018

CY 2018 CPT code	CY 2018 long descriptor	CY 2017 ASC payment indicator	CY 2018 ASC payment indicator*
37241	Vascular embolization or occlusion, inclusive of all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the intervention; venous, other than hemorrhage (eg, congenital or acquired venous malformations, venous and capillary hemangiomas, varices, varicoceles).	G2	P3
67227	Destruction of extensive or progressive retinopathy (eg, diabetic retinopathy), cryotherapy, diathermy.	G2	P3

* Payment indicators are based on a comparison of the final rates according to the ASC standard ratesetting methodology and the MPFS final rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2018. For a discussion of the MPFS rates, we refer readers to the CY 2018 MPFS final rule with comment period.

We also reviewed CY 2016 volume and utilization data and other information for 10 procedures designated as temporary office-based in Tables 48 and 49 in the CY 2017 OPFS/ASC final rule with comment period (81 FR 79736 through 79738). Of these 10 procedures, there were very few claims in our data and no claims data for 8 procedures: CPT code 0402T (Collagen cross-linking of cornea (including removal of the corneal epithelium and intraoperative pachymetry when performed)); CPT code 10030 (Image-guided fluid collection drainage by catheter (eg, abscess, hematoma, seroma, lymphocele, cyst), soft tissue (eg, extremity, abdominal wall, neck), percutaneous); CPT code 36473 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated); CPT code 36901 (Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report); CPT code 64461 (Paravertebral block (PVB) (paraspinal block), thoracic; single injection site (includes imaging guidance, when performed)); CPT code 64463 (Paravertebral block (PVB) (paraspinal block), thoracic; continuous infusion by

catheter (includes imaging guidance, when performed)); CPT code 65785 (Implantation of intrastromal corneal ring segments); and CPT code 67229 (Treatment of extensive or progressive retinopathy, one or more sessions; preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (for example, retinopathy of prematurity), photocoagulation or cryotherapy). Consequently, we proposed to maintain the temporary office-based designations for these eight codes for CY 2018. We listed all of these codes for which we proposed to maintain the temporary office-based designations for CY 2018 in Table 35 of the proposed rule. The procedures for which the proposed office-based designations for CY 2018 are temporary also were indicated by asterisks in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site). The volume and utilization data for one procedure that has a temporary office-based designation for CY 2017, HCPCS code G0429 (Dermal injection procedure(s) for facial lipodystrophy syndrome (LDS) and provision of Radiesse or Sculptra dermal filler, including all items and supplies), is sufficient to indicate that this procedure is performed predominantly in physicians' offices and, therefore, should be assigned an office-based payment indicator in CY 2018. Consequently, we proposed to assign payment indicator "P2/P3" to this covered surgical procedure code in CY 2018. HCPCS code 0299T (Extracorporeal shock wave for integumentary wound

healing, high energy, including topical application and dressing care; initial wound) was finalized for temporary office-based status in the CY 2017 OPFS/ASC final rule with comment period. However, this code will be deleted by the AMA, effective December 31, 2017. We invited public comment on our proposals. *Comment:* One commenter objected to the proposal to designate CPT codes 10030, 36473, and 36901 as temporarily office-based procedures for CY 2018. The commenter did not provide a clinical rationale but stated that, in the absence of data to examine site of service, it is premature to designate these CPT codes as temporarily office-based. *Response:* In consultation with our medical advisors, we reviewed the clinical characteristics, utilization, and volume of related codes and determined that the procedures described by CPT codes 10030, 36473, and 36901 would be predominantly performed in physicians' offices. However, because we do not have utilization data for these CPT codes, we made the office-based designation temporary rather than permanent for CY 2018. We will reevaluate office-based status for CPT codes 10030, 36473, and 36901 in the CY 2019 rulemaking. After consideration of the public comment we received, for CY 2018 we are finalizing our proposal, without modification, to designate the procedures listed in Table 84 below as temporary office-based.

TABLE 84—CY 2018 PAYMENT INDICATORS FOR ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARY OFFICE-BASED IN THE CY 2018 OPPS/ASC FINAL RULE WITH COMMENT PERIOD

CY 2018 CPT code	CY 2018 long descriptor	CY 2017 ASC payment indicator*	CY 2018 ASC payment indicator**
0299T	Extracorporeal shock wave for integumentary wound healing, high energy, including topical application and dressing care; initial wound.	R2*	NA
0402T	Collagen cross-linking of cornea (including removal of the corneal epithelium and intraoperative pachymetry when performed).	R2*	R2**
10030	Image-guided fluid collection drainage by catheter (e.g., abscess, hematoma, seroma, lymphocele, cyst), soft tissue (e.g., extremity abdominal wall, neck), percutaneous.	P2*	P2**
36473	Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated.	P2*	P2**
36901	Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow, including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report.	P2*	P2**
64461	Paravertebral block (PVB) (paraspinous block), thoracic; single injection site (includes imaging guidance, when performed).	P3*	P3**
64463	Continuous infusion by catheter (includes imaging guidance, when performed)	P3*	P3**
65785	Implantation of intrastromal corneal ring segments	R2*	P2**
67229	Treatment of extensive or progressive retinopathy, one or more sessions; preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (e.g., retinopathy of prematurity), photocoagulation or cryotherapy.	R2*	R2**
G0429	Dermal injection procedure(s) for facial lipodystrophy syndrome (LDS) and provision of Radiesse or Sculptra dermal filler, including all items and supplies.	P3*	P3**

* If designation is temporary.

** Payment indicators are based on a comparison of the final rates according to the ASC standard ratesetting methodology and the MPFS final rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2018. For a discussion of the MPFS rates, we refer readers to the CY 2018 MPFS final rule with comment period.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33660), for CY 2018, we proposed to designate one new CY 2018 CPT code for ASC covered surgical procedures as temporary office-based, as displayed in Table 36 of the proposed rule. After reviewing the clinical characteristics, utilization, and volume of related procedure codes, we determined that the procedure described by this new CPT code would be predominantly performed in physicians' offices. However, because

we had no utilization data for the procedure specifically described by this new CPT code, we proposed to make the office-based designation temporary rather than permanent, and we stated that we will reevaluate the procedure when data become available. The procedure for which the proposed office-based designation for CY 2018 is temporary was indicated by asterisks in Addendum AA to the proposed rule (which is available via the Internet on the CMS Web site).

We did not receive any public comments on our proposal. Therefore, for CY 2018, we are finalizing our proposal, without modification, to designate CPT code 38222 as temporary office-based for CY 2018 as displayed in Table 85 of this final rule with comment period. The procedure for which the office-based designation for CY 2018 is temporary is indicated by asterisks in Addendum AA to this final rule with comment period (which is available via the Internet on the CMS Web site).

TABLE 85—CY 2018 PAYMENT INDICATORS FOR NEW CY 2018 CPT CODES FOR ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARY OFFICE-BASED

CY 2017 OPPS/ASC proposed rule 5-digit CMS placeholder code	CY 2018 CPT code	CY 2018 long descriptor	CY 2018 ASC payment indicator**
382X3	38222	Diagnostic bone marrow; biopsy(ies) and aspiration(s)	P3*

* If designation is temporary.

** Payment indicators are based on a comparison of the final rates according to the ASC standard ratesetting methodology and the MPFS final rates. Current law specifies a 0.5 percent update to the MPFS payment rates for CY 2018. For a discussion of the MPFS rates, we refer readers to the CY 2018 MPFS final rule with comment period.

b. ASC Covered Surgical Procedures To Be Designated as Device-Intensive

(1) Background

As discussed in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79739 through 79740), we implemented a payment methodology for calculating the ASC payment rates for covered surgical procedures that are designated as device-intensive. Under § 416.171(b)(2) of the regulations, we define an ASC device-intensive procedure as a procedure with a HCPCS code-level device offset of greater than 40 percent when calculated according to the standard OPPS APC ratesetting methodology.

According to this ASC payment methodology, we apply the device offset percentage based on the standard OPPS APC ratesetting methodology to the OPPS national unadjusted payment to determine the device cost included in the OPPS payment rate for a device-intensive ASC covered surgical procedure, which we then set as equal to the device portion of the national unadjusted ASC payment rate for the procedure. We calculate the service portion of the ASC payment for device-intensive procedures by applying the uniform ASC conversion factor to the service (non-device) portion of the OPPS relative payment weight for the device-intensive procedure. Finally, we sum the ASC device portion and ASC service portion to establish the full payment for the device-intensive procedure under the revised ASC payment system.

We also finalized that device-intensive procedures will be subject to all of the payment policies applicable to procedures designated as an ASC device-intensive procedure under our established methodology, including our policies on device credits and discontinued procedures.

In addition, in the CY 2017 OPPS/ASC final rule with comment period, we adopted a policy for new HCPCS codes describing procedures involving the implantation of medical devices that do not yet have associated claims data, to designate these procedures as device-intensive with a default device offset set at 41 percent until claims data are available to establish the HCPCS code-level device offset for the procedures (81 FR 79739 through 79740). This default device offset amount of 41 percent would not be calculated from claims data; instead, it would be applied as a default until claims data are available upon which to calculate an actual device offset for the new code. The purpose of applying the 41-percent default device offset to new codes that

describe procedures that involve the implantation of medical devices would be to ensure ASC access for new procedures until claims data become available. However, in certain rare instances, for example, in the case of a very expensive implantable device, we may temporarily assign a higher offset percentage if warranted by additional information, such as pricing data from a device manufacturer. Once claims data are available for a new procedure involving the implantation of a medical device, the device-intensive designation will be applied to the code if the HCPCS code device offset is greater than 40 percent, according to our policy of determining device-intensive status, by calculating the HCPCS code-level device offset.

(2) Changes to List of ASC Covered Surgical Procedures Designated as Device-Intensive for CY 2018

In the CY 2018 OPPS/ASC proposed rule, for CY 2018, we proposed to update the ASC list of covered surgical procedures that are eligible for payment according to our device-intensive procedure payment methodology, reflecting the proposed individual HCPCS code device-offset percentages based on CY 2016 OPPS claims and cost report data available for the proposed rule (82 FR 33660).

The ASC covered surgical procedures that we proposed to designate as device-intensive, and therefore subject to the device-intensive procedure payment methodology for CY 2018, are assigned payment indicator “J8” and were included in Addendum AA to the proposed rule (which is available on the CMS Web site). The CPT code, the CPT code short descriptor, the proposed CY 2018 ASC payment indicator, and an indication of whether the full credit/partial credit (FB/FC) device adjustment policy would apply also were included in Addendum AA to the proposed rule.

We invited public comments on the proposed list of ASC device-intensive procedures.

Comment: A few commenters requested that CMS lower the ASC device offset threshold to 30 percent to qualify a larger number of ASC procedures as device-intensive.

Response: We did not propose to change to lower the ASC device offset threshold and, therefore, are not accepting this request. We note that we addressed a similar comment in the CY 2017 OPPS/ASC final rule with comment period, and we refer readers to our response (81 FR 79739).

Comment: One commenter requested that CMS designate CPT code 55X87 (which is replaced by CPT code 55874

in this final rule with comment period and effective January 1, 2018) as a device-intensive procedure in the ASC. The commenter stated that the procedure described by CPT code 55874 requires the implantation of an expensive device which represents an approximate range of 80 to 87 percent of the procedure cost.

Response: When claims data are available for a new procedure requiring the implantation of a medical device, device-intensive status will be applied to the code if the HCPCS code level device offset is greater than 40 percent, according to our finalized policy of determining device-intensive status by calculating the HCPCS code-level device offset (81 FR 79658). With respect to CPT code 55874, although the CPT code is new, the procedure itself was previously described by two predecessor codes, HCPCS code C9743 and CPT code 0438T, for which we have claims data. Therefore, based on our analysis of the OPPS claims data used to determine the packaged device costs attributed to the predecessor HCPCS codes, CPT code 55874 is not eligible for device-intensive status because the device offset for its predecessor codes are below the 40 percent threshold. For more information on how codes are designated as device-intensive status, we refer readers to section IV.B. (Device-Intensive Procedures) of this final rule with comment period.

Comment: Commenters requested that CMS designate CPT code 0275T, a procedure described as percutaneous image guided lumbar decompression (PILD) for lumbar spinal stenosis, as a device-intensive procedure until claims data become available. Commenters stated that, beginning in CY 2017, PILD is the only procedure reported with CPT code 0275T. In addition, to ensure CMS collects robust data on the cost of the device, one commenter requested that CMS establish a specific device code.

Response: As discussed in section IV.B.2 of this final rule with comment period, claims data for CPT code 0275T shows that the percentage of packaged device cost is below the 40 percent threshold; therefore, it is not eligible for designation as a device-intensive procedure. CPT code 0275T was implemented as a payable code in the OPPS and ASC settings on July 1, 2011 (July 2011 OPPS Update, Transmittal 2234, Change Request 7443). We are unclear why a separate device code is needed if PILD is the only procedure reported with CPT code 0275T.

Comment: One commenter requested that CMS designate CPT code 67027 (Implant eye drug system) as a device-intensive procedure in the ASC.

Response: CPT code 67027 does not have a device offset that is greater than 40 percent. Accordingly, it is not device-intensive under current policy.

After consideration of the public comments we received, we are designating the ASC covered surgical procedures displayed in Addendum AA as device-intensive and subject to the device-intensive procedure payment methodology for CY 2018. The CPT code, the CPT code short descriptor, the final CY 2018 ASC payment indicator, and an indication of whether the full credit/partial credit (FB/FC) device adjustment policy will apply are included in the ASC policy file labeled “CY 2018 ASC Procedures to which the No Cost/Full Credit and Partial Credit Device Adjustment Policy Applies,” which is available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Policy-Files.html>.

c. Adjustment to ASC Payments for No Cost/Full Credit and Partial Credit Devices

Our ASC payment policy for costly devices implanted in ASCs at no cost/full credit or partial credit, as set forth in § 416.179 of our regulations, is consistent with the OPPS policy that was in effect until CY 2014. Specifically, the OPPS policy that was in effect through CY 2013 provided a reduction in OPPS payment by 100 percent of the device offset amount when a hospital furnishes a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device (77 FR 68356 through 68358). The established ASC policy reduces payment to ASCs when a specified device is furnished without cost or with full credit or partial credit for the cost of the device for those ASC covered surgical procedures that are assigned to APCs under the OPPS to which this policy applies. We refer readers to the CY 2009 OPPS/ASC final rule with comment period for a full discussion of the ASC payment adjustment policy for no cost/full credit and partial credit devices (73 FR 68742 through 68744).

As discussed in section IV.B. of the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75006), we finalized our proposal to modify our former policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit. Formerly, under the OPPS, our

policy was to reduce OPPS payment by 100 percent of the device offset amount when a hospital furnished a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital received partial credit in the amount of 50 percent or more (but less than 100 percent) of the cost for the specified device. For CY 2014, we finalized our proposal to reduce OPPS payment for applicable APCs by the full or partial credit a provider receives for a replaced device, capped at the device offset amount.

Although we finalized our proposal to modify the policy of reducing payments when a hospital furnishes a specified device without cost or with full or partial credit under the OPPS, in that final rule with comment period (78 FR 75076 through 75080), we finalized our proposal to maintain our ASC policy for reducing payments to ASCs for specified device-intensive procedures when the ASC furnishes a device without cost or with full or partial credit. Unlike the OPPS, there is currently no mechanism within the ASC claims processing system for ASCs to submit to CMS the actual amount received when furnishing a specified device at full or partial credit. Therefore, under the ASC payment system, we finalized our proposal for CY 2014 to continue to reduce ASC payments by 100 percent or 50 percent of the device offset amount when an ASC furnishes a device without cost or with full or partial credit, respectively.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33661), we proposed to update the list of ASC covered device-intensive procedures that would be subject to the no cost/full credit and partial credit device adjustment policy for CY 2018. Specifically, when a device-intensive procedure is subject to the no cost/full credit or partial credit device adjustment policy and is performed to implant a device that is furnished at no cost or with full credit from the manufacturer, the ASC would append the HCPCS “FB” modifier on the line in the claim with the procedure to implant the device. The contractor would reduce payment to the ASC by the device offset amount that we estimate represents the cost of the device when the necessary device is furnished without cost or with full credit to the ASC. We continue to believe that the reduction of ASC payment in these circumstances is necessary to pay appropriately for the covered surgical procedure furnished by the ASC.

For partial credit, we proposed to reduce the payment for implantation

procedures that are subject to the no cost/full credit or partial credit device adjustment policy by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the new device. The ASC would append the HCPCS “FC” modifier to the HCPCS code for a device-intensive surgical procedure that is subject to the no cost/full credit or partial credit device adjustment policy, when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a new device, ASCs would have the option of either: (1) Submitting the claim for the device replacement procedure to their Medicare contractor after the procedure’s performance, but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment, once the credit determination is made; or (2) holding the claim for the device implantation procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the “FC” modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the replacement device. Beneficiary coinsurance would be based on the reduced payment amount. As finalized in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), to ensure our policy covers any situation involving a device-intensive procedure where an ASC may receive a device at no cost/full credit or partial credit, we apply our FB/FC policy to all device-intensive procedures.

We invited public comments on our proposals to adjust ASC payments for no cost/full credit and partial credit devices.

We did not receive any public comment on these proposals. Therefore, we are finalizing these proposals without modification. Specifically, we will apply the HCPCS “FB”/“FC” modifier policy to all device-intensive procedures in CY 2018. For CY 2018, we will reduce the payment for the procedures listed in the ASC device adjustment file by the full device offset amount if a device is furnished without cost or with full credit. ASCs must append the HCPCS modifier “FB” to the HCPCS code for a surgical procedure listed in the ASC device adjustment file previously mentioned when the device

is furnished without cost or with full credit. In addition, for CY 2018, we will reduce the payment for the procedures listed in the ASC device adjustment file by one-half of the device offset amount if a device is provided with partial credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the device cost. The ASC must append the HCPCS "FC" modifier to the HCPCS code for a surgical procedure listed in the ASC device adjustment file when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device.

d. Additions to the List of ASC Covered Surgical Procedures

As discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33661), we conducted a review of HCPCS codes that currently are paid under the OPPTS, but not included on the ASC list of covered surgical procedures, to determine if changes in technology and/or medical practice affected the clinical appropriateness of these procedures for the ASC setting. Based on this review, we proposed to update the list of ASC covered surgical procedures by adding three procedures to the list for CY 2018. These procedures included procedures described by CPT codes 22856, 22858, and 58572. We determined that these three procedures are separately paid under the OPPTS, would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and would not be expected to require active medical monitoring and care of the beneficiary at midnight following the procedure. Therefore, we proposed to include these three procedures on the

list of ASC covered surgical procedures for CY 2018.

The procedures that we proposed to add to the ASC list of covered surgical procedures, including the HCPCS code long descriptors and the proposed CY 2018 payment indicators, were displayed in Table 37 of the proposed rule. We invited public comments on our proposals.

Comment: Some commenters supported adding the three procedures described by CPT codes 22856, 22858, and 58572 to the ASC list of covered surgical procedures. These commenters believed that all three procedures met the criteria to be added to the ASC list of covered surgical procedures.

Response: We appreciate the commenters' support. As indicated later in this section, we are finalizing our proposal to add these procedures to the ASC list of covered surgical procedures.

Comment: One commenter suggested that including the procedures described by CPT codes 22856, 22858, and 58572 on the ASC list of covered surgical procedures would allow physicians to inappropriately direct patients to receive these procedures in an ASC setting with which they have a financial relationship rather than an inpatient hospital setting, and thereby jeopardize patient access to these procedures in an inpatient setting.

Response: We do not believe that including the procedures described by CPT codes 22856, 22858, and 58572 on the ASC list of covered surgical procedures would lead to inappropriate shifting of patients to the ASC setting or jeopardize access to these procedures in an inpatient hospital setting. We believe the decision regarding the most

appropriate care setting for a given surgical procedure is made by the physician based on the beneficiary's individual clinical needs and preferences. In addition, as discussed in the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74377 and 74378), section 1832(a)(2)(F)(i) of the Act provides that benefits under Medicare Part B include payment for facility services furnished in connection with surgical procedures specified by the Secretary that are performed in an ASC. Under 42 CFR 416.2 and 416.166 of the Medicare regulations, subject to certain exclusions, we define covered surgical procedures as those procedures which are separately paid under the OPPTS, would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure. We believe it is appropriate and necessary to include procedures that meet these criteria on the list of ASC covered surgical procedures for Medicare patients who may be suitable candidates to undergo these procedures in an ASC setting.

After consideration of the public comments we received, we are finalizing our proposal to add the three procedures described by CPT codes 22856, 22858, and 58572 to the ASC list of covered surgical procedures. The procedures that we are adding to the ASC list of covered surgical procedures, including the code long descriptors and the final CY 2018 payment indicators, are displayed in Table 86 below.

TABLE 86—ADDITIONS TO THE LIST OF ASC COVERED SURGICAL PROCEDURES FOR CY 2018

CY 2018 CPT code	CY 2018 long descriptor	CY 2018 ASC payment indicator
22856	Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophylectomy for nerve root or spinal cord decompression and microdissection); single interspace, cervical.	J8
22858	Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophylectomy for nerve root or spinal cord decompression and microdissection); second level, cervical (list separately in addition to code for primary procedure).	N1
58572	Laparoscopy, surgical, with total hysterectomy, for uterus greater than 250g	G2

e. Discussion of Comment Solicitation on Adding Additional Procedures to the ASC Covered Procedures List

As we discussed in the CY 2009 OPPTS/ASC final rule with comment period (73 FR 68724), we adopted a policy to include, in our annual evaluation of the ASC list of covered

surgical procedures, a review of the procedures that are being proposed for removal from the OPPTS IPO list for possible inclusion on the ASC list of covered surgical procedures.

In the CY 2017 OPPTS/ASC proposed rule (81 FR 45679 through 45681), we solicited comments regarding whether

the TKA procedure described by CPT code 27447 should be removed from the OPPTS IPO list. During the comment period, some stakeholders requested that CMS also add the TKA procedure to the list of surgical procedures covered in an ASC setting. In the CY 2017 OPPTS/ASC proposed rule, we solicited public

comments on removing the TKA procedure from the OPPS IPO list for CY 2017. However, in the CY 2018 OPPS/ASC proposed rule (82 FR 33643 through 33644), we proposed to remove the TKA procedure from the OPPS IPO list for CY 2018, as discussed in section IX. of both the proposed rule and this final rule with comment period. In light of the public comments we received on the CY 2017 OPPS/ASC proposed rule (81 FR 79697 through 79699) and our proposal to remove the TKA procedure from the OPPS IPO list for CY 2018, in the CY 2018 OPPS/ASC proposed rule, we solicited public comments on whether the TKA procedure should also be added to the ASC list of covered surgical procedures. We also invited public comments on our proposed continued exclusion of CPT code 55866 (Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed) from the list of ASC covered surgical procedures.

In considering whether or not the TKA procedure should be added to the ASC list of covered surgical procedures, we requested that commenters take into consideration the regulations at 42 CFR 416.2 and 416.166. We indicated that commenters should assess, for example, whether this procedure would be expected to pose a significant risk to beneficiary safety when performed in an ASC, whether standard medical practice dictates that the beneficiary would typically be expected to require active medical monitoring and care at midnight following the procedure (“overnight stay”), and whether this procedure would fall under our general exclusions for covered surgical procedures at 42 CFR 416.166(c) (for example, would it generally result in extensive blood loss, require major or prolonged invasion of body cavities, directly involve major blood vessels, among others).

As discussed in the CY 2018 OPPS/ASC proposed rule, we evaluated each of the procedures described by CPT codes 27447 and 55866 that we proposed to remove from the OPPS IPO list for CY 2018 according to the criteria for inclusion on the list of ASC covered surgical procedures, and considered whether they should be added to the list of ASC covered surgical procedures for CY 2018. We stated that, because our understanding is that these procedures typically require more than 24 hours of active medical care following the procedure, we believed they should continue to be excluded from the list of ASC covered surgical procedures.

In addition, in the CY 2018 OPPS/ASC proposed rule, we solicited

comments on whether CPT codes 27125 (Hemiarthroplasty, hip, partial (eg, femoral stem prosthesis, bipolar arthroplasty)) and 27130 (Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft) meet the criteria to be removed from the OPPS IPO list, as discussed in section IX. of the proposed rule. As noted in that section, we also solicited comments on whether these two procedures meet the criteria to be added to the ASC covered surgical procedures list.

Comment: In addition to the comments CMS received as to whether CPT codes 27447, 27125, 27130, and 55866 should be removed from the OPPS IPO list, several commenters suggested that these procedures should be added to the ASC covered surgical procedures list. The commenters argued that many ASCs are equipped to perform these procedures and orthopedic surgeons in ASCs are increasingly performing these procedures safely and effectively on non-Medicare patients and appropriate Medicare patients. They also noted that CPT code 27446 (Arthroplasty, knee, condyle and plateau; medial or lateral compartment) is a similar procedure that is currently included on the list of ASC covered surgical procedures. In addition, the commenters also stated that adding TKA and partial and total hip arthroplasty procedures to the ASC covered surgical procedures list allows for greater choices in care settings for Medicare patients and would provide a more patient-centered approach to joint arthroplasty procedures. Further, commenters stated that, in some cases, it may be safer to have joint arthroplasty procedures performed in an outpatient setting to prevent certain hospital-acquired infections.

Some commenters suggested a stepwise approach to transitioning TKA to the ASC setting and recommended allowing performance of 1 to 2 years in the hospital outpatient department setting before adding TKA to the ASC covered surgical procedures list. Other commenters recommended that ASCs obtain enhanced certification from a national accrediting organization that certifies an ASC meets higher quality standards to safely perform joint arthroplasty procedures.

Some commenters opposed adding procedures described by CPT codes 27447, 27125, 27130, and 55866 to the ASC covered surgical procedures list. These commenters believed that the vast majority of ASCs are not equipped to safely perform these procedures on patients and that the vast majority of

Medicare patients are not suitable candidates to receive “overnight” joint arthroplasty procedures in an ASC setting.

Response: We appreciate the feedback we received as to whether TKA, partial and total hip replacement procedures meet the criteria to be added to the ASC covered surgical procedures list. For CY 2018, we are not removing CPT codes 27125 and 27130 from the OPPS IPO list. While we are finalizing our proposal to remove CPT codes 27447 and 55866 from the OPPS IPO list for CY 2018, we are not adding these procedures to the ASC covered surgical procedures list for CY 2018. We solicited comments on whether to add these procedures to the ASC list of covered surgical procedures, and we will take the suggestions and recommendations into consideration for future rulemaking.

Comment: Many commenters requested that CMS add certain CPT codes that are outside of the 10000–69999 CPT code surgical range. These codes are shown in Table 87 below and included gastrointestinal diagnostic procedures, chemotherapy, cardiac catheterization procedures, and cardiac diagnostic procedures, as well as other cardiology procedures.

Response: We reviewed all of the codes that commenters requested for addition to the ASC list of covered surgical procedures. Of the codes requested for addition to the ASC list,

we did not consider procedures that are reported by CPT codes that are on the OPSS IPO list. Codes that are on the OPSS IPO list for CY 2018 are not eligible for addition to the ASC list of covered surgical procedures.

As we discussed in section XII.A.3. of this final rule with comment period, we solicited public comments regarding our definition of a surgical procedures and whether services described by Category I CPT codes outside of the surgical range (10000–69999), or Level II HCPCS codes or Category III CPT codes that do not directly crosswalk and are not clinically similar to procedures in the CPT surgical range, may nonetheless be appropriate to include as covered surgical procedures that are payable when furnished in the ASC setting. We did not propose any revisions to our definition of covered surgical procedures, and, for CY 2018, we continue to use the current definition of surgical procedure.

We appreciate the commenters' recommendations for procedures that may be suitable candidates to include on the list of ASC covered surgical procedures. We acknowledge that some of the procedures may be "surgery-like." However, we remain concerned that these procedures may impose a significant safety risk to the Medicare population in an ASC setting. For CY 2018, we continue to rely on defining surgical procedures as those that are described by Category I CPT codes within the surgical range, or Level II HCPCS codes or Category III CPT codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range. Therefore, we do not believe that the remaining codes should be added to the list of ASC covered surgical procedures for CY 2018 because they do not meet our criteria for inclusion on the list. However, we will take these comments into consideration in future rulemakings.

D. ASC Payment for Covered Surgical Procedures and Covered Ancillary Services

1. ASC Payment for Covered Surgical Procedures

a. Background

Our ASC payment policies for covered surgical procedures under the revised ASC payment system are fully described in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66828 through 66831). Under our established policy, we use the ASC standard ratesetting methodology of multiplying the ASC relative payment weight for the procedure by the ASC conversion factor for that same year to

calculate the national unadjusted payment rates for procedures with payment indicators "G2" and "A2". Payment indicator "A2" was developed to identify procedures that were included on the list of ASC covered surgical procedures in CY 2007 and, therefore, were subject to transitional payment prior to CY 2011. Although the 4-year transitional period has ended and payment indicator "A2" is no longer required to identify surgical procedures subject to transitional payment, we retained payment indicator "A2" because it is used to identify procedures that are exempted from the application of the office-based designation.

The rate calculation established for device-intensive procedures (payment indicator "J8") is structured so that the packaged device payment amount is the same as under the OPSS, and only the service portion of the rate is subject to the ASC standard ratesetting methodology. In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79732 through 79753), we updated the CY 2016 ASC payment rates for ASC covered surgical procedures with payment indicators of "A2", "G2", and "J8" using CY 2015 data, consistent with the CY 2017 OPSS update. We also updated payment rates for device-intensive procedures to incorporate the CY 2017 OPSS device offset percentages calculated under the standard APC ratesetting methodology, as discussed earlier in this section.

Payment rates for office-based procedures (payment indicators "P2", "P3", and "R2") are the lower of the MPFS nonfacility PE RVU-based amount (we refer readers to the CY 2018 MPFS proposed and final rules) or the amount calculated using the ASC standard rate setting methodology for the procedure. In the CY 2017 OPSS/ASC final rule with comment period, we updated the payment amounts for office-based procedures (payment indicators "P2", "P3", and "R2") using the most recent available MPFS and OPSS data. We compared the estimated CY 2017 rate for each of the office-based procedures, calculated according to the ASC standard rate setting methodology, to the MPFS nonfacility PE RVU-based amount to determine which was lower and, therefore, would be the CY 2017 payment rate for the procedure under our final policy for the revised ASC payment system (§ 416.171(d)).

In the CY 2014 OPSS/ASC final rule with comment period (78 FR 75081), we finalized our proposal to calculate the CY 2014 payment rates for ASC covered surgical procedures according to our established methodologies, with the exception of device removal procedures.

For CY 2014, we finalized a policy to conditionally package payment for device removal codes under the OPSS. Under the OPSS, a conditionally packaged code (status indicators “Q1” and “Q2”) describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a covered surgical procedure, HCPCS codes that are conditionally packaged under the OPSS are always packaged (payment indicator “N1”) under the ASC payment system. Under the OPSS, device removal procedures are conditionally packaged and, therefore, would be packaged under the ASC payment system. There would be no Medicare payment made when a device removal procedure is performed in an ASC without another surgical procedure included on the claim; therefore, no Medicare payment would be made if a device was removed but not replaced. To address this concern, for the device removal procedures that are conditionally packaged in the OPSS (status indicator “Q2”), we assigned the current ASC payment indicators associated with these procedures and continued to provide separate payment since CY 2014.

b. Update to ASC Covered Surgical Procedure Payment Rates for CY 2018

In the CY 2018 OPSS/ASC proposed rule (82 FR 33663), we proposed to update ASC payment rates for CY 2018 and subsequent years using the established rate calculation methodologies under § 416.171 and using our definition of device-intensive procedures, as discussed in section XII.C.1.b. of the proposed rule. Because the proposed OPSS relative payment weights are based on geometric mean costs, the ASC system would use geometric means to determine proposed relative payment weights under the ASC standard methodology. We proposed to continue to use the amount calculated under the ASC standard ratesetting methodology for procedures assigned payment indicators “A2” and “G2”.

We proposed to calculate payment rates for office-based procedures (payment indicators “P2”, “P3”, and “R2”) and device-intensive procedures (payment indicator “J8”) according to our established policies and, for device-intensive procedures, using our modified definition of device-intensive procedures, as discussed in section XII.C.1.b. of the proposed rule. Therefore, we proposed to update the payment amount for the service portion

of the device-intensive procedures using the ASC standard rate setting methodology and the payment amount for the device portion based on the proposed CY 2018 OPSS device offset percentages that have been calculated using the standard OPSS APC ratesetting methodology. Payment for office-based procedures would be at the lesser of the proposed CY 2018 MPFS nonfacility PE RVU-based amount or the proposed CY 2018 ASC payment amount calculated according to the ASC standard ratesetting methodology.

As we did for CYs 2014 through 2017, for CY 2018, we proposed to continue our policy for device removal procedures, such that device removal procedures that are conditionally packaged in the OPSS (status indicators “Q1” and “Q2”) would be assigned the current ASC payment indicators associated with these procedures and would continue to be paid separately under the ASC payment system.

We invited public comments on these proposals.

Comment: A few commenters objected to the proposed payment indicator of “G2” (Non-office-based surgical procedure) for CPT code 0465T (Suprachoroidal injection of a pharmacologic agent (does not include supply of medication)) and requested that CMS designate it an office-based procedure. The commenters noted CMS’ recognition of CPT code 0465T as an office-based procedure in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79735).

Response: We agree with the commenters that CPT code 0465T is an office-based procedure. Therefore, we are modifying our proposal to assign CPT code 0465T to payment indicator “R2” for CY 2018.

Comment: One commenter requested that CMS use the CY 2016 ASC payment rates for six procedures to set the CY 2018 ASC payment rate for the same procedures. The specific procedures include:

- CPT 62321 (Cervicothoracic epidural);
- CPT 62323 (Lumbosacral epidural);
- CPT 64490 (Cervicothoracic facet joint injection);
- CPT 64493 (Lumbosacral facet joint injection);
- CPT G0620 (Sacroiliac joint injection); and
- CPT 62264 (Percutaneous adhesiolysis).

Response: We are required by law to review and update the data on which we establish payment rates on an annual basis. The ASC payment is dependent upon the APC assignment for the procedure. Based on our analysis of the

latest hospital outpatient and ASC claims data used for this final rule with comment period, we are updating ASC payment rates for CY 2018 using the established rate calculation methodologies under § 416.171 and using our finalized modified definition of device-intensive procedures, as discussed in section XII.C.1.b. of this final rule with comment period. We do not generally make additional payment adjustments to specific procedures.

After consideration of the public comments we received, we are finalizing our proposed policies, without modification, to calculate the CY 2018 payment rates for ASC covered surgical procedures according to our established methodologies using the modified definition of device-intensive procedures. For those covered office-based surgical procedures where the payment rate is the lower of the final rates under the ASC standard ratesetting methodology and the MPFS nonfacility PE RVU-based amount, the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the MPFS PE RVUs and conversion factor effective January 1, 2018. For a discussion of the MPFS rates, we refer readers to the CY 2018 MPFS final rule with comment period.

2. Payment for Covered Ancillary Services

a. Background

Our payment policies under the ASC payment system for covered ancillary services vary according to the particular type of service and its payment policy under the OPSS. Our overall policy provides separate ASC payment for certain ancillary items and services integrally related to the provision of ASC covered surgical procedures that are paid separately under the OPSS and provides packaged ASC payment for other ancillary items and services that are packaged or conditionally packaged (status indicators “N”, “Q1”, and “Q2”) under the OPSS. In the CY 2013 OPSS/ASC rulemaking (77 FR 45169 and 77 FR 68457 through 68458), we further clarified our policy regarding the payment indicator assignment of codes that are conditionally packaged in the OPSS (status indicators “Q1” and “Q2”). Under the OPSS, a conditionally packaged code describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are

conditionally packaged under the OPSS are always packaged (payment indicator “N1”) under the ASC payment system (except for device removal codes, as discussed in section IV. of the CY 2018 OPSS/ASC proposed rule). Thus, our policy generally aligns ASC payment bundles with those under the OPSS (72 FR 42495). In all cases, in order for those ancillary services also to be paid, ancillary items and services must be provided integral to the performance of ASC covered surgical procedures for which the ASC bills Medicare.

Our ASC payment policies provide separate payment for drugs and biologicals that are separately paid under the OPSS at the OPSS rates. We generally pay for separately payable radiology services at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (72 FR 42497). However, as finalized in the CY 2011 OPSS/ASC final rule with comment period (75 FR 72050), payment indicators for all nuclear medicine procedures (defined as CPT codes in the range of 78000 through 78999) that are designated as radiology services that are paid separately when provided integral to a surgical procedure on the ASC list are set to “Z2” so that payment is made based on the ASC standard ratesetting methodology rather than the MPFS nonfacility PE RVU amount (“Z3”), regardless of which is lower.

Similarly, we also finalized our policy to set the payment indicator to “Z2” for radiology services that use contrast agents so that payment for these procedures will be based on the OPSS relative payment weight using the ASC standard ratesetting methodology and, therefore, will include the cost for the contrast agent (42 CFR 416.171(d)(2)).

ASC payment policy for brachytherapy sources mirrors the payment policy under the OPSS. ASCs are paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPSS or, if OPSS rates are unavailable, at contractor-priced rates (72 FR 42499). Since December 31, 2009, ASCs have been paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPSS.

Our ASC policies also provide separate payment for: (1) Certain items and services that CMS designates as contractor-priced, including, but not limited to, the procurement of corneal tissue; and (2) certain implantable items that have pass-through payment status

under the OPSS. These categories do not have prospectively established ASC payment rates according to ASC payment system policies (72 FR 42502 and 42508 through 42509; 42 CFR 416.164(b)). Under the ASC payment system, we have designated corneal tissue acquisition and hepatitis B vaccines as contractor-priced. Corneal tissue acquisition is contractor-priced based on the invoiced costs for acquiring the corneal tissue for transplantation. Hepatitis B vaccines are contractor-priced based on invoiced costs for the vaccine.

Devices that are eligible for pass-through payment under the OPSS are separately paid under the ASC payment system and are contractor-priced. Under the revised ASC payment system (72 FR 42502), payment for the surgical procedure associated with the pass-through device is made according to our standard methodology for the ASC payment system, based on only the service (non-device) portion of the procedure’s OPSS relative payment weight if the APC weight for the procedure includes other packaged device costs. We also refer to this methodology as applying a “device offset” to the ASC payment for the associated surgical procedure. This ensures that duplicate payment is not provided for any portion of an implanted device with OPSS pass-through payment status.

In the CY 2015 OPSS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized that, beginning in CY 2015, certain diagnostic tests within the medicine range of CPT codes for which separate payment is allowed under the OPSS are covered ancillary services when they are integral to an ASC covered surgical procedure. We finalized that diagnostic tests within the medicine range of CPT codes include all Category I CPT codes in the medicine range established by CPT, from 90000 to 99999, and Category III CPT codes and Level II HCPCS codes that describe diagnostic tests that crosswalk or are clinically similar to procedures in the medicine range established by CPT. In the CY 2015 OPSS/ASC final rule with comment period, we also finalized our policy to pay for these tests at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (79 FR 66933 through 66934). We finalized that the diagnostic tests for which the payment is based on the ASC standard ratesetting methodology be assigned to payment indicator “Z2” and revised the definition of payment indicator “Z2” to

include a reference to diagnostic services and those for which the payment is based on the MPFS nonfacility PE RVU-based amount be assigned payment indicator “Z3,” and revised the definition of payment indicator “Z3” to include a reference to diagnostic services.

b. Payment for Covered Ancillary Services for CY 2018

In the CY 2018 OPSS/ASC proposed rule (82 FR 33663), for CY 2018 and subsequent years, we proposed to update the ASC payment rates and to make changes to ASC payment indicators, as necessary, to maintain consistency between the OPSS and ASC payment system regarding the packaged or separately payable status of services and the proposed CY 2018 OPSS and ASC payment rates and subsequent year payment rates. We also proposed to continue to set the CY 2018 ASC payment rates and subsequent year payment rates for brachytherapy sources and separately payable drugs and biologicals equal to the OPSS payment rates for CY 2018 and subsequent year payment rates.

Covered ancillary services and their proposed payment indicators for CY 2018 were listed in Addendum BB to the proposed rule (which is available via the Internet on the CMS Web site). For those covered ancillary services where the payment rate is the lower of the proposed rates under the ASC standard rate setting methodology and the MPFS proposed rates, the proposed payment indicators and rates set forth in the proposed rule were based on a comparison using the proposed MPFS rates effective January 1, 2018. For a discussion of the MPFS rates, we referred readers to the CY 2018 MPFS proposed rule that is available on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

We did not receive public comments on our proposals regarding payment for covered ancillary services. Therefore, we are finalizing these policies as proposed for CY 2018.

E. New Technology Intraocular Lenses (NTIOLs)

1. NTIOL Application Cycle

Our process for reviewing applications to establish new classes of NTIOLs is as follows:

- Applicants submit their NTIOL requests for review to CMS by the annual deadline. For a request to be considered complete, we require submission of the information that is

found in the guidance document entitled “Application Process and Information Requirements for Requests for a New Class of New Technology Intraocular Lenses (NTIOLs) or Inclusion of an IOL in an Existing NTIOL Class” posted on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/NTIOLs.html>.

- We announce annually, in the proposed rule updating the ASC and OPSS payment rates for the following calendar year, a list of all requests to establish new NTIOL classes accepted for review during the calendar year in which the proposal is published. In accordance with section 141(b)(3) of Public Law 103–432 and our regulations at 42 CFR 416.185(b), the deadline for receipt of public comments is 30 days following publication of the list of requests in the proposed rule.

- In the final rule updating the ASC and OPSS payment rates for the following calendar year, we—

- ++ Provide a list of determinations made as a result of our review of all new NTIOL class requests and public comments;

- ++ When a new NTIOL class is created, identify the predominant characteristic of NTIOLs in that class that sets them apart from other IOLs (including those previously approved as members of other expired or active NTIOL classes) and that is associated with an improved clinical outcome.

- ++ Set the date of implementation of a payment adjustment in the case of approval of an IOL as a member of a new NTIOL class prospectively as of 30 days after publication of the ASC payment update final rule, consistent with the statutory requirement.

- ++ Announce the deadline for submitting requests for review of an application for a new NTIOL class for the following calendar year.

2. Requests To Establish New NTIOL Classes for CY 2018

We did not receive any requests for review to establish a new NTIOL class for CY 2018 by March 1, 2017, the due date published in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79748).

3. Payment Adjustment

The current payment adjustment for a 5-year period from the implementation date of a new NTIOL class is \$50 per lens. Since implementation of the process for adjustment of payment amounts for NTIOLs in 1999, we have not revised the payment adjustment amount, and we did not propose to revise the payment adjustment amount

for CY 2018. The final ASC payment adjustment amount for NTIOLs for CY 2018 is \$50.

4. Announcement of CY 2019 Deadline for Submitting Requests for CMS Review of Applications for a New Class of NTIOLs

In accordance with § 416.185(a) of our regulations, CMS announces that in order to be considered for payment effective beginning in CY 2019, requests for review of applications for a new class of new technology IOLs must be received at CMS by 5:00 p.m. EST, on March 1, 2018. Send requests to ASC/NTIOL, Division of Outpatient Care, Mailstop C4–05–17, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850. To be considered, requests for NTIOL reviews must include the information requested on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/NTIOLs.html>.

F. ASC Payment and Comment Indicators

1. Background

In addition to the payment indicators that we introduced in the August 2, 2007 final rule, we created final comment indicators for the ASC payment system in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66855). We created Addendum DD1 to define ASC payment indicators that we use in Addenda AA and BB to provide payment information regarding covered surgical procedures and covered ancillary services, respectively, under the revised ASC payment system. The ASC payment indicators in Addendum DD1 are intended to capture policy-relevant characteristics of HCPCS codes that may receive packaged or separate payment in ASCs, such as whether they were on the ASC list of covered services prior to CY 2008; payment designation, such as device-intensive or office-based, and the corresponding ASC payment methodology; and their classification as separately payable ancillary services, including radiology services, brachytherapy sources, OPSS pass-through devices, corneal tissue acquisition services, drugs or biologicals, or NTIOLs.

We also created Addendum DD2 that lists the ASC comment indicators. The ASC comment indicators used in Addenda AA and BB to the proposed rules and final rules with comment period serve to identify, for the revised ASC payment system, the status of a specific HCPCS code and its payment

indicator with respect to the timeframe when comments will be accepted. The comment indicator “NP” is used in the OPSS/ASC proposed rule to indicate new codes for the next calendar year for which the interim payment indicator assigned is subject to comment. The comment indicator “NP” also is assigned to existing codes with substantial revisions to their descriptors, such that we consider them to be describing new services, as discussed in the CY 2010 OPSS/ASC final rule with comment period (74 FR 60622). In the CY 2017 OPSS/ASC final rule with comment period, we responded to public comments and finalized the ASC treatment of all codes that were labeled with comment indicator “NP” in Addenda AA and BB to the CY 2016 OPSS/ASC final rule with comment period (80 FR 70497).

The “CH” comment indicator is used in Addenda AA and BB to the proposed rule (which are available via the Internet on the CMS Web site) to indicate that the payment indicator assignment has changed for an active HCPCS code in the current year and the next calendar year; an active HCPCS code is newly recognized as payable in ASCs; or an active HCPCS code is discontinued at the end of the current calendar year. The “CH” comment indicators that are published in the final rule with comment period are provided to alert readers that a change has been made from one calendar year to the next, but do not indicate that the change is subject to comment.

In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79748 through 79749), for CY 2017 and subsequent years, we finalized our policy to continue using the current comment indicators of “NP” and “CH”.

2. ASC Payment and Comment Indicators

As discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33665), for CY 2018, there are proposed new and revised Category I and III CPT codes as well as new and revised Level II HCPCS codes. Therefore, proposed Category I and III CPT codes that are new and revised for CY 2017 and any new and existing Level II HCPCS codes with substantial revisions to the code descriptors for CY 2018 compared to the CY 2017 descriptors that were included in ASC Addenda AA and BB to the proposed rule are labeled with proposed new comment indicator “NP” to indicate that these CPT and Level II HCPCS codes were open for comment as part of the proposed rule. Comment indicator “NP” in the proposed rule meant a new code for the next calendar

year or an existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year; and denotes that comments will be accepted on the proposed ASC payment indicator for the new code.

We stated in the proposed rule that we will respond to public comments on ASC payment and comment indicators and finalize their ASC assignment in the CY 2018 OPPTS/ASC final rule with comment period. We referred readers to Addenda DD1 and DD2 to the proposed rule (which are available via the Internet on the CMS Web site) for the complete list of ASC payment and comment indicators proposed for the CY 2018 update.

We did not receive any public comments on the ASC payment and comment indicators. Therefore, we are finalizing their use as proposed without modification. Addenda DD1 and DD2 to this final rule with comment period (which are available via the Internet on the CMS Web site) contain the complete list of ASC payment and comment indicators for the CY 2018 update.

G. Calculation of the ASC Conversion Factor and the ASC Payment Rates

1. Background

In the August 2, 2007 final rule (72 FR 42493), we established our policy to base ASC relative payment weights and payment rates under the revised ASC payment system on APC groups and the OPPTS relative payment weights. Consistent with that policy and the requirement at section 1833(i)(2)(D)(ii) of the Act that the revised payment system be implemented so that it would be budget neutral, the initial ASC conversion factor (CY 2008) was calculated so that estimated total Medicare payments under the revised ASC payment system in the first year would be budget neutral to estimated total Medicare payments under the prior (CY 2007) ASC payment system (the ASC conversion factor is multiplied by the relative payment weights calculated for many ASC services in order to establish payment rates). That is, application of the ASC conversion factor was designed to result in aggregate Medicare expenditures under the revised ASC payment system in CY 2008 being equal to aggregate Medicare expenditures that would have occurred in CY 2008 in the absence of the revised system, taking into consideration the cap on ASC payments in CY 2007, as required under section 1833(i)(2)(E) of the Act (72 FR 42522). We adopted a policy to make the system budget neutral in subsequent calendar years (72

FR 42532 through 42533; 42 CFR 416.171(e)).

We note that we consider the term “expenditures” in the context of the budget neutrality requirement under section 1833(i)(2)(D)(ii) of the Act to mean expenditures from the Medicare Part B Trust Fund. We do not consider expenditures to include beneficiary coinsurance and copayments. This distinction was important for the CY 2008 ASC budget neutrality model that considered payments across the OPPTS, ASC, and MPFS payment systems. However, because coinsurance is almost always 20 percent for ASC services, this interpretation of expenditures has minimal impact for subsequent budget neutrality adjustments calculated within the revised ASC payment system.

In the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66857 through 66858), we set out a step-by-step illustration of the final budget neutrality adjustment calculation based on the methodology finalized in the August 2, 2007 final rule (72 FR 42521 through 42531) and as applied to updated data available for the CY 2008 OPPTS/ASC final rule with comment period. The application of that methodology to the data available for the CY 2008 OPPTS/ASC final rule with comment period resulted in a budget neutrality adjustment of 0.65.

For CY 2008, we adopted the OPPTS relative payment weights as the ASC relative payment weights for most services and, consistent with the final policy, we calculated the CY 2008 ASC payment rates by multiplying the ASC relative payment weights by the final CY 2008 ASC conversion factor of \$41,401. For covered office-based surgical procedures, covered ancillary radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents, as discussed in section XII.D.2. of this final rule with comment period), and certain diagnostic tests within the medicine range that are covered ancillary services, the established policy is to set the payment rate at the lower of the MPFS unadjusted nonfacility PE RVU-based amount or the amount calculated using the ASC standard ratesetting methodology. Further, as discussed in the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66841 through 66843), we also adopted alternative ratesetting methodologies for specific types of services (for example, device-intensive procedures).

As discussed in the August 2, 2007 final rule (72 FR 42517 through 42518) and as codified at § 416.172(c) of the regulations, the revised ASC payment

system accounts for geographic wage variation when calculating individual ASC payments by applying the pre-floor and pre-reclassified IPPS hospital wage indexes to the labor-related share, which is 50 percent of the ASC payment amount based on a GAO report of ASC costs using 2004 survey data. Beginning in CY 2008, CMS accounted for geographic wage variation in labor costs when calculating individual ASC payments by applying the pre-floor and pre-reclassified hospital wage index values that CMS calculates for payment under the IPPS, using updated Core Based Statistical Areas (CBSAs) issued by OMB in June 2003.

The reclassification provision in section 1886(d)(10) of the Act is specific to hospitals. We believe that using the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes results in the most appropriate adjustment to the labor portion of ASC costs. We continue to believe that the unadjusted hospital wage indexes, which are updated yearly and are used by many other Medicare payment systems, appropriately account for geographic variation in labor costs for ASCs. Therefore, the wage index for an ASC is the pre-floor and pre-reclassified hospital wage index under the IPPS of the CBSA that maps to the CBSA where the ASC is located.

On February 28, 2013, OMB issued OMB Bulletin No. 13–01, which provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010 in the **Federal Register** (75 FR 37246 through 37252) and 2010 Census Bureau data. (A copy of this bulletin may be obtained at: <https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/bulletins/2013/b13-01.pdf>). In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963), we implemented the use of the CBSA delineations issued by OMB in OMB Bulletin 13–01 for the IPPS hospital wage index beginning in FY 2015. In the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66937), we finalized a 1-year transition policy that we applied in CY 2015 for all ASCs that experienced any decrease in their actual wage index exclusively due to the implementation of the new OMB delineations. This transition does not apply in CY 2018.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. However, OMB

occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provides updates to and supersedes OMB Bulletin No. 13–01 that was issued on February 28, 2013. The attachment to OMB Bulletin No. 15–01 provides detailed information on the update to statistical areas since February 28, 2013. The updates provided in OMB Bulletin No. 15–01 are based on the application of the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas to Census Bureau population estimates for July 1, 2012 and July 1, 2013. The complete list of statistical areas incorporating these changes is provided in the attachment to OMB Bulletin No. 15–01. According to OMB, “[t]his bulletin establishes revised delineations for the Nation’s Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas. The bulletin also provides delineations of Metropolitan Divisions as well as delineations of New England City and Town Areas.” A copy of this bulletin may be obtained on the Web site at: <https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/bulletins/2015/15-01.pdf>.

OMB Bulletin No. 15–01 made changes that are relevant to the IPPS and ASC wage index. We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79750) for a discussion of these changes and our implementation of these revisions.

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33667), for CY 2018, the proposed CY 2018 ASC wage indexes fully reflect the OMB labor market area delineations (including the revisions to the OMB labor market delineations discussed above, as set forth in OMB Bulletin No. 15–01).

We note that, in certain instances, there might be urban or rural areas for which there is no IPPS hospital that has wage index data that could be used to set the wage index for that area. For these areas, our policy has been to use the average of the wage indexes for CBSAs (or metropolitan divisions as applicable) that are contiguous to the area that has no wage index (where “contiguous” is defined as sharing a border). For example, for CY 2014, we applied a proxy wage index based on this methodology to ASCs located in CBSA 25980 (Hinesville-Fort Stewart, GA) and CBSA 08 (Rural Delaware).

When all of the areas contiguous to the urban CBSA of interest are rural and there is no IPPS hospital that has wage

index data that could be used to set the wage index for that area, we determine the ASC wage index by calculating the average of all wage indexes for urban areas in the State (75 FR 72058 through 72059). (In other situations, where there are no IPPS hospitals located in a relevant labor market area, we continue our current policy of calculating an urban or rural area’s wage index by calculating the average of the wage indexes for CBSAs (or metropolitan divisions where applicable) that are contiguous to the area with no wage index.)

Comment: A few commenters made the same recommendation that was made in the CY 2010 (74 FR 60625), CY 2011 (75 FR 72059), CY 2012 (76 FR 74446), CY 2013 (77 FR 68463), CY 2014 (78 FR 75086), CY 2015 (79 FR 66937), CY 2016 (80 FR 70499), and CY 2017 (81 FR 79750) OPPS/ASC rulemakings—that is, that CMS adopt for the ASC payment system the same wage index values used for hospital payment under the OPPS.

Response: We have responded to this comment in the prior OPPS/ASC rules mentioned above, and believe our prior rationale for using unadjusted wage indexes is still sound. We continue to believe that the unadjusted hospital wage indexes, which are updated yearly and are used by almost all Medicare payment systems, appropriately account for geographic variance in labor costs for ASCs. We refer readers to our response to this comment in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72059).

2. Calculation of the ASC Payment Rates

a. Updating the ASC Relative Payment Weights for CY 2018 and Future Years

We update the ASC relative payment weights each year using the national OPPS relative payment weights (and MPFS nonfacility PE RVU-based amounts, as applicable) for that same calendar year and uniformly scale the ASC relative payment weights for each update year to make them budget neutral (72 FR 42533). Consistent with our established policy, in the CY 2018 OPPS/ASC proposed rule (82 FR 33667), we proposed to scale the CY 2018 relative payment weights for ASCs according to the following method. Holding ASC utilization, the ASC conversion factor, and the mix of services constant from CY 2016, we proposed to compare the total payment using the CY 2017 ASC relative payment weights with the total payment using the CY 2018 ASC relative payment weights to take into account the changes in the OPPS relative

payment weights between CY 2017 and CY 2018. We proposed to use the ratio of CY 2017 to CY 2018 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2018. The proposed CY 2018 ASC weight scalar was 0.8995 and scaling would apply to the ASC relative payment weights of the covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes, which are covered ancillary services for which the ASC payment rates are based on OPPS relative payment weights.

Scaling would not apply in the case of ASC payment for separately payable covered ancillary services that have a predetermined national payment amount (that is, their national ASC payment amounts are not based on OPPS relative payment weights), such as drugs and biologicals that are separately paid or services that are contractor-priced or paid at reasonable cost in ASCs. Any service with a predetermined national payment amount would be included in the ASC budget neutrality comparison, but scaling of the ASC relative payment weights would not apply to those services. The ASC payment weights for those services without predetermined national payment amounts (that is, those services with national payment amounts that would be based on OPPS relative payment weights) would be scaled to eliminate any difference in the total payment between the current year and the update year.

For any given year’s ratesetting, we typically use the most recent full calendar year of claims data to model budget neutrality adjustments. At the time of the proposed rule, we had available 98 percent of CY 2016 ASC claims data.

To create an analytic file to support calculation of the weight scalar and budget neutrality adjustment for the wage index (discussed below), we summarized available CY 2016 ASC claims by ASC and by HCPCS code. We used the National Provider Identifier for the purpose of identifying unique ASCs within the CY 2016 claims data. We used the supplier zip code reported on the claim to associate State, county, and CBSA with each ASC. This file, available to the public as a supporting data file for the proposed rule, is posted on the CMS Web site at: <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/Limited-Datasets/ASCPaymentSystem.html>.

Comment: Several commenters requested that CMS not scale the ASC relative payment weights when calculating the final CY 2018 ASC

payment rates. Some commenters requested that if CMS must apply a weight scalar, as an alternative, CMS make a one-time adjustment to restore the historical relativity between the OPSS and ASC setting at 65 percent.

Response: We note that applying the weight scalar in calculation of ASC payment rates ensures that the ASC payment system remains budget neutral. For a more detailed discussion on why we apply a budget neutrality adjustment to the ASC ratesetting methodology, we refer readers to the August 2, 2007 final rule (72 FR 42531 through 42533). We refer the commenters to that discussion for our detailed response in promulgating the scaling policy that was initially applied in CY 2009 to maintain budget neutrality of the ASC payment system. The ASC weight scaling methodology is consistent with the OPSS methodology for scaling the relative payment weights and the increased payment differentials between the ASC and OPSS payments for the same services are not, for the most part, attributable to scaling ASC relative payment weights. With respect to the relativity between the OPSS and the ASC payment system, we recognize that the relativity has declined from 65 percent in 2008 to 56 percent in 2017. We believe this change in relativity is based on a number of factors, including the addition of new surgical procedures in both payment settings, packaged payment policies, device-intensive policies, and the advent of the C-APC policy, which was implemented under the OPSS effective January 1, 2015, but could not be implemented in the ASC system, given systems limitations in ASC claims processing because ASC claims are submitted on the professional claim and are not processed by the same system as hospital claims. Further, the absence of cost data from ASCs makes it difficult to determine what an appropriate relativity between the two payment systems would be. That is, without cost data from ASCs, we are unable to determine precisely how ASC costs compare to those of hospitals paid under the OPSS. We note that the commenters did not provide any empirical evidence to support increasing ASC payment rates relative to OPSS payment rates.

b. Updating the ASC Conversion Factor

Under the OPSS, we typically apply a budget neutrality adjustment for provider level changes, most notably a change in the wage index values for the upcoming year, to the conversion factor. Consistent with our final ASC payment policy, for the CY 2017 ASC payment system and subsequent years, in the CY

2017 OPSS/ASC final rule with comment period (81 FR 79751 through 79753), we finalized our policy to calculate and apply a budget neutrality adjustment to the ASC conversion factor for supplier level changes in wage index values for the upcoming year, just as the OPSS wage index budget neutrality adjustment is calculated and applied to the OPSS conversion factor. For CY 2018, we calculated the proposed adjustment for the ASC payment system by using the most recent CY 2016 claims data available and estimating the difference in total payment that would be created by introducing the proposed CY 2018 ASC wage indexes. Specifically, holding CY 2016 ASC utilization, service-mix, and the proposed CY 2018 national payment rates after application of the weight scalar constant, we calculated the total adjusted payment using the CY 2017 ASC wage indexes (which would fully reflect the new OMB delineations) and the total adjusted payment using the proposed CY 2018 ASC wage indexes. We used the 50-percent labor-related share for both total adjusted payment calculations. We then compared the total adjusted payment calculated with the CY 2017 ASC wage indexes to the total adjusted payment calculated with the proposed CY 2018 ASC wage indexes and applied the resulting ratio of 1.0004 (the proposed CY 2018 ASC wage index budget neutrality adjustment) to the CY 2017 ASC conversion factor to calculate the proposed CY 2018 ASC conversion factor.

Section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated amounts established under the revised ASC payment system in a calendar year, the payment amounts shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (CPI-U), U.S. city average, as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. Therefore, the statute does not mandate the adoption of any particular update mechanism, but it requires the payment amounts to be increased by the CPI-U in the absence of any update. Because the Secretary updates the ASC payment amounts annually, we adopted a policy, which we codified at 42 CFR 416.171(a)(2)(ii), to update the ASC conversion factor using the CPI-U for CY 2010 and subsequent calendar years. Therefore, the annual update to the ASC payment system is the CPI-U (referred to as the CPI-U update factor).

Section 3401(k) of the Affordable Care Act amended section 1833(i)(2)(D) of the Act by adding a new clause (v), which

requires that any annual update under the ASC payment system for the year, after application of clause (iv), shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, effective with the calendar year beginning January 1, 2011. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the "MFP adjustment"). Clause (iv) of section 1833(i)(2)(D) of the Act authorizes the Secretary to provide for a reduction in any annual update for failure to report on quality measures. Clause (v) of section 1833(i)(2)(D) of the Act states that application of the MFP adjustment to the ASC payment system may result in the update to the ASC payment system being less than zero for a year and may result in payment rates under the ASC payment system for a year being less than such payment rates for the preceding year.

In the CY 2012 OPSS/ASC final rule with comment period (76 FR 74516), we finalized a policy that ASCs begin submitting data on quality measures for services beginning on October 1, 2012 for the CY 2014 payment determination under the ASC Quality Reporting (ASCQR) Program. In the CY 2013 OPSS/ASC final rule with comment period (77 FR 68499 through 68500), we finalized a methodology to calculate reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for the CY 2014 payment determination and subsequent years. The application of the 2.0 percentage point reduction to the annual update factor, which currently is the CPI-U, may result in the update to the ASC payment system being less than zero for a year for ASCs that fail to meet the ASCQR Program requirements. We amended §§ 416.160(a)(1) and 416.171 to reflect these policies.

In accordance with section 1833(i)(2)(C)(i) of the Act, before applying the MFP adjustment, the Secretary first determines the "percentage increase" in the CPI-U, which we interpret cannot be a negative percentage. Thus, in the instance where the percentage change in the CPI-U for a year is negative, we would hold the CPI-U update factor for the ASC payment system to zero. For the CY 2014 payment determination and subsequent years, under section

1833(i)(2)(D)(iv) of the Act, we would reduce the annual update by 2.0 percentage points for an ASC that fails to submit quality information under the rules established by the Secretary in accordance with section 1833(i)(7) of the Act. Section 1833(i)(2)(D)(v) of the Act, as added by section 3401(k) of the Affordable Care Act, requires that the Secretary reduce the annual update factor, after application of any quality reporting reduction, by the MFP adjustment, and states that application of the MFP adjustment to the annual update factor after application of any quality reporting reduction would result in an MFP-adjusted update factor that is less than zero, the resulting update to the ASC payment rates would be negative and payments would decrease relative to the prior year. We refer readers to the CY 2011 OPSS/ASC final rule with comment period (75 FR 72062 through 72064) for examples of how the MFP adjustment is applied to the ASC payment system.

For the proposed rule, based on IHS Global Inc.'s (IGI's) 2017 first quarter forecast with historical data through the fourth quarter of 2016, for the 12-month period ending with the midpoint of CY 2018, the CPI-U update was projected to be 2.3 percent. Also, based on IGI's 2017 first quarter forecast, the MFP adjustment for the period ending with the midpoint of CY 2018 was projected to be 0.4 percent. We finalized the methodology for calculating the MFP adjustment in the CY 2011 MPFS final rule with comment period (75 FR 73394 through 73396) and revised it in the CY 2012 MPFS final rule with comment period (76 FR 73300 through 73301) and the CY 2016 OPSS/ASC final rule with comment period (80 FR 70500 through 70501).

In the CY 2018 OPSS/ASC proposed rule (82 FR 33668), for CY 2018, we proposed to reduce the CPI-U update of 2.3 percent by the MFP adjustment of 0.4 percentage point, resulting in an MFP-adjusted CPI-U update factor of 1.9 percent for ASCs meeting the quality reporting requirements. Therefore, we proposed to apply a 1.9 percent MFP-adjusted CPI-U update factor to the CY 2017 ASC conversion factor for ASCs meeting the quality reporting requirements. The ASCQR Program affected payment rates beginning in CY 2014 and, under this program, there is a 2.0 percentage point reduction to the CPI-U for ASCs that fail to meet the ASCQR Program requirements. We

proposed to reduce the CPI-U update of 2.3 percent by 2.0 percentage points for ASCs that do not meet the quality reporting requirements and then apply the 0.4 percentage point MFP adjustment. Therefore, we proposed to apply a -0.1 percent MFP-adjusted CPI-U update factor to the CY 2017 ASC conversion factor for ASCs not meeting the quality reporting requirements. We also proposed that if more recent data are subsequently available (for example, a more recent estimate of the CY 2018 CPI-U update and MFP adjustment), we would use such data, if appropriate, to determine the CY 2018 ASC update for the final rule with comment period.

For CY 2018, we proposed to adjust the CY 2017 ASC conversion factor (\$45.003) by the proposed wage index budget neutrality factor of 1.0004 in addition to the MFP-adjusted CPI-U update factor of 1.9 percent discussed above, which resulted in a proposed CY 2018 ASC conversion factor of \$45.876 for ASCs meeting the quality reporting requirements. For ASCs not meeting the quality reporting requirements, we proposed to adjust the CY 2017 ASC conversion factor (\$45.003) by the proposed wage index budget neutrality factor of 1.0004 in addition to the quality reporting/MFP-adjusted CPI-U update factor of -0.1 percent discussed above, which resulted in a proposed CY 2018 ASC conversion factor of \$44.976.

We invited public comments on these proposals.

Comment: Numerous commenters urged CMS to update ASC payment rates using the same update factor as hospital outpatient departments, which is the IPSS hospital market basket. Commenters argued that because the ASC relative weights are derived from the OPSS weights, the same annual update factor that is used for the OPSS should also be used for ASCs. Commenters stated that the use of different update indices has contributed to the divergence in payments between the HOPD and ASC setting. Several commenters cited findings from a 2013 Ambulatory Surgery Center Association (ASCA) study (with cost savings analysis produced by the University of California-Berkeley) that found ASCs saved the Medicare program and its beneficiaries \$7.5 billion during the 4-year period from 2008 to 2011 over what would have been paid if care had been provided in other settings. The study also projected that ASCs have the potential to save the Medicare system an additional \$57.6 billion over the next decade "if policymakers take steps to encourage the use of these innovative

healthcare facilities within the Medicare system."³⁴

One commenter, a trade association representing several ASCs noted that surgical care in too many markets continues to be provided predominantly in hospitals, which the commenter attributed to Medicare's failure to pay competitive rates to ASCs. The commenter asserted that this lack of migration comes at a high price to the Medicare program, the taxpayers who fund it, and the beneficiaries who needlessly incur higher out-of-pocket expenses. This commenter also noted that the hospital market basket is comprised of data that reflects the cost of items and services necessary to furnish an outpatient surgical procedure, such as compensation, utilities, labor-related services and non-labor related services. In addition, in response to the comment solicitation on ASC payment reform (including the collection of cost data), described later in this section, this commenter stated its willingness to work with the Secretary to collaborate on ideas and asserted its belief that that the same types of costs that apply to the hospital outpatient department are also present in the ASC, but that it did not know if they are weighted the same. This commenter welcomed the opportunity to discuss how ASCs might potentially use a simple, cost-effective survey, perhaps voluntary in nature, that calculates expense categories as a percentage of total expenses to help determine the appropriate weights and price proxies for the ASC setting. The commenter noted that "a complicating factor, however, remains the heterogeneity of the ASC model—the range of size and specialty care varies greatly from one ASC to the next."

Commenters also made the following arguments in support of replacing the CPI-U with the hospital market basket:

- The CPI-U does not accurately represent the costs borne by ASC facilities to furnish surgical services. Approximately 8.5 percent of the CPI-U inputs are directly related to health care, yet the CPI-U is based on consumer experience purchasing health care rather than a provider's experience necessary to furnish a health care service.

³⁴ ASCA. Medicare Cost Savings Tied to Ambulatory Surgery Centers with Cost Analysis done by Nicholas C. Petris University of California-Berkeley Center on Health Care Markets and Consumer Welfare. September 2013. Available at: <http://www.ascassociation.org/HigherLogic/System/DownloadDocumentFile.aspx?DocumentFileKey=7b33b916-f3f1-42e5-a646-35cc2f38fe4d&forceDialog=0>.

- ASCs are one of few remaining Medicare payment systems tied to the CPI-U. Most other systems use indices derived from the basket of goods those providers purchase (for example, ESRD PPS uses ESRD bundled market basket; FQHC PPS uses Medicare Economic Index; IPPS and OPSS uses the hospital market basket).

- The hospital market basket is a more accurate reflection of ASC costs because it is comprised of data that reflects the cost of items and services necessary to furnish an outpatient surgical procedure, such as compensation, utilities, labor-related services and nonlabor-related services.

MedPAC objected to the proposed 1.9 percent update based on CPI-U and recommended that CMS not update payments to ASCs in 2018, consistent with its recommendation to Congress in the March 2017 Report to the Congress. MedPAC contended that, because indicators of payment adequacy for ASCs—capacity and supply of providers, volume of services, access to capital, payment to providers per fee-for-service beneficiary—are positive, and in light of the importance of maintaining financial pressure on providers to constrain costs, the proposed 1.9 percent update is unnecessarily high. While MedPAC acknowledged that the CPI-U likely does not reflect ASC's cost structure because the CPI-U is heavily weighted for factors that have a relatively small effect on ASCs such as housing and transportation, it commented that it understood that the method for arriving at the proposed 1.9 percent CPI-U update is mandated by law. MedPAC strongly urged CMS to collect cost data from ASCs to better assess payment adequacy to ASCs.

Response: As we have stated in response to similar comments in the past (for example, 77 FR 68465; 78 FR 75088 through 75089; 79 FR 66939; 80 FR 70501; and 81 FR 79752), we continue to believe that, while commenters believed that the items included in the CPI-U index may not adequately measure inflation for the goods and services provided by ASCs, the hospital market basket may also not be well aligned with the cost structures of ASCs. While there are some similarities between the cost structure of hospitals and ASCs, hospitals provide a wider range of services, such as room and board and emergency services, and the costs associated with providing these services do not appear to be part of the ASC cost structure. Therefore, at this time, we do not believe that it is appropriate to use the hospital market basket for the ASC annual update.

Nonetheless, we recognize that ASCs may incur some of the same costs that hospitals incur and share the commenters' concern that the disparity in payments between the OPSS and ASC payment systems may affect migration from the HOPD setting to the less costly ASC setting. To the extent that it is clinically appropriate for a beneficiary to receive services in a lower cost setting, we believe it would be appropriate to continue to develop payment incentives and remove payment disincentives to facilitate this choice. We will continue to monitor access to services, such as by reviewing utilization in different settings and soliciting stakeholder input, to ascertain the degree to which choices are available. While there are several factors that contribute to the divergence in payment between the two systems, certain of which are identified in the comment solicitation on ASC payment reform, we believe that an alternative update factor could be a mitigating step to address the differential between OPSS and ASC payment. In other words, to the extent that the CPI-U has been lower than the hospital market basket, we believe this difference or gap has contributed to the difference between payments for services when they are provided by an ASC or a HOPD. Additionally, we believe that, in response to our proposal and comment solicitation, commenters have raised an important issue that merits consideration given the Administration's priorities, particularly those seeking to promote and improve affordability and accessibility of care. For example, under Executive Order 13813 (issued October 12, 2017), entitled "Presidential Executive Order Promoting Healthcare Choice and Competition Across the United States," "it shall be the policy of the executive branch, to the extent consistent with law, to facilitate . . . the development and operation of a healthcare system that provides high-quality care at affordable prices for the American people" and the Administration shall "continue to focus on promoting competition in healthcare markets and limiting excessive consolidation throughout the healthcare system."³⁵

While MedPAC recommends a zero percent update, we do not believe that such update would serve to promote competition in health care markets and it could hinder ASCs' ability to provide services to Medicare beneficiaries at a lower cost than HOPDs. We know that the differential in payments between

hospitals paid under the OPSS and the ASC has increased from approximately 65 percent in 2008 to approximately 56 percent in 2017. Accordingly, we plan to study this issue further to ensure ASCs can continue to offer lower cost surgical services to Medicare beneficiaries.

With respect to MedPAC's comment about collecting cost data and comments from ASCs expressing a willingness to work with CMS to share data in a way that balances administrative risk with the benefit of collecting such data, we will take these comments under advisement for future consideration, as discussed in greater detail in the comment solicitation section below. For the reasons stated above, we are finalizing our proposal to use the CPI-U update factor to update ASC rates for CY 2018. However, given the many comments supporting alternative update methodologies, such as the hospital market basket, and given our interest in site neutrality and the efficiency of care in the ASC setting, we intend to explore this issue further.

After consideration of the public comments we received, we are finalizing our proposal to apply our established methodology for determining the final CY 2018 ASC conversion factor. Using more complete CY 2016 data for this final rule with comment period than were available for the proposed rule, we calculated a wage index budget neutrality adjustment of 1.0007. Based on IGI's 2017 third quarter forecast, the CPI-U for the 12-month period ending with the midpoint of CY 2018 is now projected to be 1.7 percent, while the MFP adjustment (as discussed in the CY 2011 MPFS final rule with comment period (75 FR 73394 through 73396), and revised in the CY 2012 MPFS final rule with comment period (76 FR 73300 through 73301) and in the CY 2016 OPSS/ASC final rule with comment period (80 FR 70500 through 70501)) is 0.5 percent, resulting in an MFP-adjusted CPI-U update factor of 1.2 percent for ASCs that meet the quality reporting requirements. The final ASC conversion factor of \$45.575, for ASCs that meet the quality reporting requirements, is the product of the CY 2017 conversion factor of \$45.003 multiplied by the wage index budget neutrality adjustment of 1.0007 and the MFP-adjusted CPI-U payment update of 1.2 percent. For ASCs that do not meet the quality reporting requirements, we are reducing the CPI-U update of 1.7 percent by 2.0 percentage points and then we are applying the 0.5 percentage point MFP adjustment, resulting in a -0.8 percent MFP adjusted CPI-U update factor for CY 2018. The final

³⁵ Available at: <https://www.gpo.gov/fdsys/pkg/FR-2017-10-17/pdf/2017-22677.pdf>.

ASC conversion factor of \$44.663 for ASCs that do not meet the quality reporting requirements is the product of the CY 2017 conversion factor of \$45.003 multiplied by the wage index budget neutrality adjustment of 1.0007 and the MFP-adjusted CPI-U payment update of -0.8 percent.

3. Discussion of Comment Solicitation on ASC Payment Reform

a. Historical Perspective

In 1982, Medicare implemented the ASC benefit to provide payment to ASCs to perform certain covered surgical procedures.³⁶ ASCs were recognized by Medicare as a less costly alternative to hospital inpatient care given differences in patient acuity and specialization of services, which promotes efficient and cost-effective delivery of care. Medicare's initial payment rates to ASCs were based on ASC historical cost and charge data from 1979 and 1980 collected from approximately 40 ASCs and used to establish four facility payment rate groups (55 FR 4527).

The ASC facility payment rate was set as a standard overhead amount based on CMS' (known then as the Health Care Financing Administration (HCFA)) estimate of a fair fee, taking into account the costs incurred by ASCs generally in providing facility services in connection with the performance of a specific procedure. The Report of the Conference Committee accompanying section 934 of the Omnibus Budget Reconciliation Act of 1980 (Pub. L. 96-499), which enacted the ASC benefit in December 1980, states, "This overhead factor is expected to be calculated on a prospective basis . . . utilizing sample survey and similar techniques to establish reasonable estimated overhead allowances for each of the listed procedures which take account of volume (within reasonable limits)" (H.R. Rep. No 7479, 96th Cong., 2nd Sess. 134 (1980)).

In 1987, we updated the ASC facility payment rates for the first time since 1982. The updated rates were based on the projected increase in the CPI-U from September 1982 to January 1988. CMS (then, HCFA) rebased payments to ASCs in 1990, relying on a survey of 1986 ASC cost, charge, and utilization data. The ASC payments were updated annually based on the 1986 cost data until implementation of the revised ASC payment system in 2008.

Congress directed the GAO to conduct a study comparing the relative costs of procedures furnished in ASCs to those

furnished in HOPDs paid under the OPSS, including examining the accuracy of the APC codes, with respect to surgical procedures furnished in ASCs. On November 30, 2006, the GAO published the statutorily mandated report entitled, "Medicare: Payment for Ambulatory Surgical Centers Should Be Based on the Hospital Outpatient Payment System" (GAO-07-86).³⁷ As directed by section 626(d) of Public Law 108-173, the report included recommendations on the following issues:

1. Appropriateness of using groups of covered services and relative weights established for the OPSS as the basis of payment for ASCs.

2. If the OPSS relative weights are appropriate for this purpose, whether the ASC payments should be based on a uniform percentage of the payment rates or weights under the OPSS, or should vary, or the weights should be revised based on specific procedures or types of services.

3. Whether a geographic adjustment should be used for ASC payment and, if so, the labor and nonlabor shares of such payment.

We refer readers to the CY 2008 OPSS/ASC final rule with comment period (71 FR 42474) for a detailed summary of the GAO's methodology, results, and recommendations. Notably, based on the findings from the study, the GAO recommended that CMS implement a payment system for procedures performed in ASCs based on the OPSS, taking into account the lower relative costs of procedures performed in ASCs compared to HOPDs in determining ASC payment rates.

We considered the report's methodology, findings, and recommendations implementing the current ASC payment system, effective in 2008 (71 FR 42474). Consistent with statutory requirements and the GAO's recommendations, we finalized policies to implement a revised ASC payment system based on the OPSS resource costs and relativity of service offerings.

The payment system for ASC facility services was designed as a prospective payment system to pay all procedures included in an APC a standard rate. Under a prospective payment system, payment is set to reflect the average cost to furnish a service. That is, some cases may be more costly than the average while others may be less costly. This type of payment system inherently provides incentives for each facility to be more efficient.

MedPAC conducts an annual review of the ASC payment system and submits its findings and recommendations in a report to Congress. As part of this review, MedPAC examines indicators such as beneficiaries' access to care, capacity and supply of providers, and volume of services, in part to assess the adequacy of Medicare payments to ASCs. Based on its analysis of indicators of payment adequacy, in its March 2017 Report to Congress, MedPAC found that the number of Medicare-certified ASCs had increased, beneficiaries' use of ASCs had increased, and access to capital has been adequate. As a result, for CY 2018, MedPAC stated that payments to ASCs are adequate and recommended that no payment update should be given for 2018 (that is, the update factor would be 0 percent). In addition, MedPAC recommended that Congress require ASCs to report cost data to enable the Commission to examine the growth of ASCs' costs over time and analyze Medicare payments relative to the costs of efficient providers, which would help inform decisions about the ASC update. Also, while MedPAC is concerned that the CPI-U may not reflect ASCs' cost structure, until cost information is available from ASCs, MedPAC cannot determine whether an alternative update factor would be more appropriate.³⁸

b. Solicitation of Comments

In the CY 2018 OPSS/ASC proposed rule (82 FR 33668), we stated that we are broadly interested in feedback, including recommendations and ideas for ASC payment system reform. We recognize that ASCs provide a critically important access point to beneficiaries who may be too ill or have the need for too complicated a procedure to be treated in the physician office setting, but for whom hospital care is either not medically necessary or undesirable. The current ASC payment system was implemented in 2008 and major revisions have not been made since that time. Average ASC payment rates have declined relative to OPSS payments rates over the past 10 years, from 65 percent of average OPSS rates in CY 2008 to 56 percent (as proposed) of average OPSS rates in CY 2018. However, in the absence of ASC-specific cost data, it is difficult, if not impossible, to determine whether ASC facility payment rates are in line with

³⁶ Omnibus Reconciliation Act of 1980 (ORA), Public Law 96-499, 934(b), 94 Stat. 2599, 2637 (codified, as amended, at 42 U.S.C. 1395l(i)).

³⁷ Available at: <http://www.gao.gov/assets/260/253992.pdf>.

³⁸ MedPAC, March 2017 Report to Congress, Chapter 5 "Ambulatory Surgical Center Services". Available at: http://www.medpac.gov/docs/default-source/reports/mar17_medpac_ch5.pdf?sfvrsn=0.

ASC facility resource costs and the impact on beneficiary access to care.

With respect to the update factor that is applied to ASC payments, section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated the payment amounts established under the revised ASC payment system in a calendar year, the payment amounts shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (CPI-U), (U.S. city average), as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. Therefore, the statute does not mandate the adoption of any particular update mechanism, except in the absence of any update, when it requires the payment amounts to be increased by the increase in the CPI-U.

CMS adopted a policy, codified at 42 CFR 416.171(a)(2)(ii), to update the ASC conversion factor using the CPI-U for CY 2010 and subsequent calendar years. Therefore, the annual update to the ASC payment system is the CPI-U (referred to as the CPI-U update factor). This update factor is adjusted by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, as required by section 1833(i)(2)(D)(v) of the Act. In the CY 2018 OPPI/ASC proposed rule, we solicited comments on the ASC payment system update factor and indicated that we are interested in data from ASCs that would help determine whether the ASC payment system should continue to be updated by the CPI-U, or by an alternative update factor, such as the hospital market basket, the Medicare Economic Index, and a blend of update factors or other mechanism. The hospital market basket update is typically higher than the CPI-U, while the Medicare Economic Index is typically lower. Because the rate update is not applied in a budget neutral manner, applying a higher update factor would be a cost to the Medicare program while applying a lower update factor would result in savings to the Medicare program. As mentioned above, in the absence of an alternative update, the Act requires payments to ASCs to be increased in an amount equal to the percentage increase in the CPI-U.

With respect to the ASC update, in its March 2017 Report to Congress, MedPAC stated that ASCs have a much higher share of expenses for supplies and drugs than do hospitals or physician offices, a much smaller share of employee compensation costs than hospitals, and a smaller share of all other costs (such as rent) than physician offices. In the proposed rule, we sought public comments on information related

to ASC costs for items such as supplies, drugs, employee compensation, rent, and other inputs, as compared to those of hospitals or physician offices, including qualitative and quantitative data from ASCs. We stated that information on the cost structure of ASCs will help to identify an appropriate alternative update factor.

In addition, we sought public comments on whether the Secretary should collect cost data from ASCs to use in determining ASC payment rates. To the extent commenters recommend that ASC cost data should be used in the determination of ASC payment rates, we sought comments on what specific method of cost collection commenters recommend (such as cost reports or a survey). We recognize that the submission of costs may be an administrative burden to ASCs, and we stated that we were interested in comments that detail how we could mitigate the burden of reporting costs on ASCs while also collecting enough data to reliably use such data in the determination of ASC costs. We noted that the ability to calculate ASC-specific costs may obviate the need for tying the ASC payment system to that of the OPPI. In addition, collecting cost data from ASCs could inform whether an alternative input price index would be an appropriate proxy for ASC costs or whether an ASC-specific market basket should be developed.

With respect to the ability to adopt payment policies that exist under the OPPI into the ASC payment system, as discussed in prior rulemaking, due to differences in the systems used to process claims for hospitals and ASCs, we were not able to implement certain OPPI payment policies in the ASC payment system, such as comprehensive APCs, conditional packaging, and the "FD" value modifier for device credits (79 FR 66923). ASC facilities report services on a professional claim (or CMS-1500) rather than an institutional claim (or UB-04) used by hospitals. The ASC claim form is processed in the Medicare Claims System (MCS), the same system used to process claims submitted by physicians and other clinicians, while hospital claims are processed through the Fiscal Intermediary Shared System (FISS). In part, because of differences in the claim form and the claims processing systems, it is not always possible to adopt OPPI payment policies into the ASC payment system. The resulting divergence in payment policies between the two systems may contribute to unintended disparities in payment rates for the same services. In the CY 2018 proposed rule, we stated that we were interested in

stakeholder comments on whether billing on an institutional claim form rather than a professional claim form would address some of the issues affecting ASC payment reform.

As noted earlier in this section, we stated we were broadly interested in feedback from stakeholders and other interested parties on potential reforms to the current ASC payment system, including, but not limited to (1) the rate update factor applied to ASC payments, (2) whether and how ASCs should submit costs, (3) whether ASCs should bill on the institutional claim form rather than the professional claim form, and (4) other ideas to improve payment accuracy for ASCs.

Comment: Many commenters provided detailed comments and their feedback is summarized below.

- *Rate update factor:* The vast majority of commenters were in favor of applying the hospital market basket to update annual ASC payment. Commenters believed that because ASC provide the types of surgical services as hospitals that the hospital market basket is the most appropriate index. As an alternative to the hospital market basket, one commenter noted that there are other indices in the CPI and MEI that would be suitable to both the OPPI and ASC settings; for example, the CPI for medical care.

- *Collection of cost data:* One commenter stated that the same types of costs that apply to HOPDs also apply to ASCs, but they may not be weighted the same. The commenter offered to collaborate with CMS on ways to collect ASC cost information. For example, a simple, cost effective survey, perhaps voluntary, cost collection tool that calculates expense categories as a percentage of total expenses to help determine the appropriate weights and price proxies for the ASC setting. However, the commenter urged CMS to be mindful of imposing an excessive administrative burden. Commenters representing individual ASCs were generally opposed to submitting formal cost reports but expressed a willingness to complete a survey so long as it was not administratively burdensome.

MedPAC recommended that CMS begin collecting new cost data and use that information to examine whether an existing Medicare price index is an appropriate proxy for the cost of ASC facilities or an ASC-specific market basket should be developed. MedPAC suggested that, to minimize burden on ASCs and CMS, CMS could require all ASCs to submit streamlined cost reports or require a random sample of ASCs to respond to annual surveys. For example, MedPAC recommended that CMS

collect cost data for items such as drugs, medical supplies (including costly implantable devices), medical equipment, employee compensation, building expenses (such as rent), and other professional services (such as legal, accounting, and billing services).

- *Billing:* One commenter noted that the major issues affecting the payment differential between the ASC and OPSS would not be fixed by billing on an institutional claim form.

A few ASC facilities expressed support for requiring ASCs to bill on a UB-04 (institutional claim). These commenters stated they currently bill on a UB-04 for commercial payers and would benefit from a consistent claim form across all payers, especially for Medicare crossover claims. One commenter noted that billing on a UB-04 “is not a foreign concept” and that it warranted further exploration by CMS. A few commenters acknowledged that because not all ASCs currently bill on an UB-04, a transition period would be necessary to allow for successful implementation, though a suggested timeframe was not provided.

MedPAC also recommended that CMS transition ASCs to billing on an UB-04. MedPAC stated that because the ASC payment system is closely linked to the OPSS, to fully align OPSS payment policies with the ASC payment system, ASCs and hospitals should use the same claim form. However, MedPAC suggested that implementation of a requirement to bill on an UB-04 and to submit cost data should be staggered.

- *Payment relativity:* Several commenters recommended that CMS discontinue applying the “secondary scaling adjustment” and instead to apply the OPSS relative weights to ASC services. In addition, commenters also recommended that CMS restore the historical relativity between the OPSS and ASC setting. Some commenters suggested a conservative relativity adjustment of 55 percent while others suggested 65 percent (CY 2008 ratio).

Response: We will take the feedback on all of these potential ASC payment reform issues under advisement and consideration for future policymaking.

4. Display of CY 2018 ASC Payment Rates

Addenda AA and BB to this final rule with comment period (which are available on the CMS Web site) display the final updated ASC payment rates for CY 2018 for covered surgical procedures and covered ancillary services, respectively. For those covered surgical procedures and covered ancillary services where the payment rate is the lower of the final rates under the ASC

standard ratesetting methodology and the MPFS final rates, the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the final MPFS rates that will be effective January 1, 2018. For a discussion of the MPFS rates, we refer readers to the CY 2018 MPFS final rule with comment period.

The final payment rates included in these addenda reflect the full ASC payment update and not the reduced payment update used to calculate payment rates for ASCs not meeting the quality reporting requirements under the ASCQR Program. These addenda contain several types of information related to the final CY 2018 payment rates. Specifically, in Addendum AA, a “Y” in the column titled “To be Subject to Multiple Procedure Discounting” indicates that the surgical procedure will be subject to the multiple procedure payment reduction policy. As discussed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66829 through 66830), most covered surgical procedures are subject to a 50-percent reduction in the ASC payment for the lower-paying procedure when more than one procedure is performed in a single operative session.

Display of the comment indicator “CH” in the column titled “Comment Indicator” indicates a change in payment policy for the item or service, including identifying discontinued HCPCS codes, designating items or services newly payable under the ASC payment system, and identifying items or services with changes in the ASC payment indicator for CY 2018. Display of the comment indicator “NI” in the column titled “Comment Indicator” indicates that the code is new (or substantially revised) and that comments will be accepted on the interim payment indicator for the new code. Display of the comment indicator “NP” in the column titled “Comment Indicator” indicates that the code is new (or substantially revised) and that comments will be accepted on the ASC payment indicator for the new code.

The values displayed in the column titled “Final CY 2018 Payment Weight” are the final relative payment weights for each of the listed services for CY 2018. The final relative payment weights for all covered surgical procedures and covered ancillary services where the ASC payment rates are based on OPSS relative payment weights were scaled for budget neutrality. Therefore, scaling was not applied to the device portion of the device-intensive procedures, services that are paid at the MPFS nonfacility PE RVU-based amount, separately payable

covered ancillary services that have a predetermined national payment amount, such as drugs and biologicals and brachytherapy sources that are separately paid under the OPSS, or services that are contractor-priced or paid at reasonable cost in ASCs.

To derive the final CY 2018 payment rate displayed in the “Final CY 2018 Payment Rate” column, each ASC payment weight in the “Final CY 2018 Payment Weight” column was multiplied by the final CY 2018 conversion factor of \$45,575. The final conversion factor includes a budget neutrality adjustment for changes in the wage index values and the annual update factor as reduced by the productivity adjustment (as discussed in section XII.G.2.b. of this final rule with comment period).

In Addendum BB, there are no relative payment weights displayed in the “Final CY 2018 Payment Weight” column for items and services with predetermined national payment amounts, such as separately payable drugs and biologicals. The “Final CY 2018 Payment” column displays the final CY 2018 national unadjusted ASC payment rates for all items and services. The final CY 2018 ASC payment rates listed in Addendum BB for separately payable drugs and biologicals are based on ASP data used for payment in physicians’ offices in October 2017.

Addendum EE provides the HCPCS codes and short descriptors for surgical procedures that are to be excluded from payment in ASCs for CY 2018.

XIII. Requirements for the Hospital Outpatient Quality Reporting (OQR) Program

A. Background

1. Overview

CMS seeks to promote higher quality and more efficient healthcare for Medicare beneficiaries. Consistent with these goals, CMS has implemented quality reporting programs for multiple care settings including the quality reporting program for hospital outpatient care, known as the Hospital Outpatient Quality Reporting (OQR) Program, formerly known as the Hospital Outpatient Quality Data Reporting Program (HOP QDRP). The Hospital OQR Program is generally aligned with the quality reporting program for hospital inpatient services known as the Hospital Inpatient Quality Reporting (IQR) Program (formerly known as the Reporting Hospital Quality Data for Annual Payment Update (RHQDAPU) Program).

In addition to the Hospital IQR and Hospital OQR Programs, CMS has

implemented quality reporting programs for other care settings that provide financial incentives for the reporting of quality data to CMS. These additional programs include reporting for care furnished by:

- Physicians and other eligible professionals, under the Physician Quality Reporting System (PQRS, formerly referred to as the Physician Quality Reporting Program Initiative (PQRI)). We note that 2018 is the last year of the PQRS payment adjustment. Beginning in 2019, eligible clinicians may be subject to upward or downward payment adjustments under the Merit-based Incentive Payment System (MIPS) or be able to earn a positive payment incentives through participation in certain advanced alternative payment models (APMs) under the Quality Payment Program (QPP) (81 FR 77008);
- Inpatient rehabilitation facilities, under the Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP);
- Long-term care hospitals, under the Long-Term Care Hospital Quality Reporting Program (LTCH QRP);
- PPS-exempt cancer hospitals, under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program;
- Ambulatory surgical centers, under the Ambulatory Surgical Center Quality Reporting (ASCQR) Program;
- Inpatient psychiatric facilities, under the Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program;
- Home health agencies, under the Home Health Quality Reporting Program (HH QRP); and
- Hospices, under the Hospice Quality Reporting Program (HQRP).

In addition, CMS has implemented several value-based purchasing programs that link payment to performance, including the Hospital Value-Based Purchasing (VBP) Program; the Hospital-Acquired Condition (HAC) Reduction Program; and the End-Stage Renal Disease (ESRD) Quality Incentive Program (QIP); and the Quality Payment Program (QPP).

In implementing the Hospital OQR Program and other quality reporting programs, we have focused on measures that have high impact and support national priorities for improved quality and efficiency of care for Medicare beneficiaries as reflected in the National Quality Strategy (NQS) and the CMS Quality Strategy for conditions with reported wide cost and treatment variations despite established clinical treatment guidelines. To the extent possible under various authorizing statutes, our ultimate goal is to align the clinical quality measure requirements of the various quality reporting programs.

As appropriate, we will consider the adoption of measures with electronic specifications to enable the collection of this information for our quality programs.

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68467 through 68469) for a discussion on the principles underlying consideration for future measures that we intend to use in implementing this and other quality reporting programs. We did not propose any changes to these policies.

2. Statutory History of the Hospital OQR Program

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72064 through 72065) for a detailed discussion of the statutory history of the Hospital OQR Program.

3. Regulatory History of the Hospital OQR Program

We refer readers to the CY 2008 through 2017 OPPS/ASC final rules with comment period (72 FR 66860 through 66875; 73 FR 68758 through 68779; 74 FR 60629 through 60656; 75 FR 72064 through 72110; 76 FR 74451 through 74492; 77 FR 68467 through 68492; 78 FR 75090 through 75120; 79 FR 66940 through 66966; 80 FR 70502 through 70526; and 81 FR 79753 through 79797). We have also codified certain requirements under the Hospital OQR Program at 42 CFR 419.46. In the CY 2018 OPPS/ASC proposed rule (82 FR 33671), we proposed editorial changes to 42 CFR 419.46, replacing the terms “Web” and “Web site” with the terms “web” and “website,” respectively.

We did not receive any comments on our proposal. Therefore, we are finalizing our changes to 42 CFR 419.46 as proposed, by replacing the terms “Web” and “Web site” with the terms “web” and “website,” respectively.

B. Hospital OQR Program Quality Measures

1. Considerations in the Selection of Hospital OQR Program Quality Measures

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74458 through 74460) for a detailed discussion of the priorities we consider for the Hospital OQR Program quality measure selection. We did not propose any changes to our measure selection policy.

2. Accounting for Social Risk Factors in the Hospital OQR Program

We understand that social risk factors such as income, education, race and

ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)³⁹ and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS’ value-based purchasing and quality reporting programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.⁴⁰ The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, that body provided various potential methods for measuring and accounting for social risk factors, including stratified public reporting.⁴¹

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF has undertaken a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period can be assessed to determine whether risk adjustment for selected social risk factors is appropriate

³⁹ Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare’s Value-Based Purchasing Programs. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

⁴⁰ Ibid.

⁴¹ National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for these measures. Since publication of the proposed rule, we have learned that the National Quality Forum (NQF) has concluded their initial trial on risk adjustment for quality measures.⁴² Based on the findings from the initial trial, we have been informed that the NQF intends to continue its work to evaluate the impact of social risk factor adjustment on intermediate outcome and outcome measures for an additional three years. We understand that the extension of this work will allow NQF to determine further how to effectively account for social risk factors through risk adjustment and other strategies in quality measurement.

As we continue to consider the analyses and recommendations from these reports and the results of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, in the proposed rule we sought public comment on whether we should account for social risk factors in the Hospital OQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, we requested public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We requested comments on which of these factors, including current

data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters' input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the Hospital OQR Program.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others), so we also welcome comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

We received extensive comments in response to our request for public comments on whether we should account for social risk factors in the Hospital OQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors.

Comment: Many commenters supported CMS' effort to address social risk factors in the Hospital OQR Program, noting that social risk factors are powerful drivers of outcomes and requested that CMS adopt risk adjustment methodologies soon. Commenters also noted that lack of risk adjustment can contribute to disparities by diverting resources away from communities in need.

One commenter specifically recommended risk adjustment in quality measurement in the psychiatric setting. Another commenter recommended that when identifying social risk factors, CMS consider the relationship with the outcome of interest, a risk factor's presence at the start of care, and whether it can be modified or manipulated through providers' actions. A third commenter noted that approaches to risk adjustment should be measure-specific.

A few commenters recommended that CMS apply risk adjustment by stratifying providers into groups by proportion of patients that are at risk, noting that this approach does not require measure-level research and recommending that risk adjustment results be shared with providers. One

commenter supported methodologies including providing confidential reporting of stratified measure rates to providers and risk adjustment of measures. Several commenters expressed concern with public reporting of risk adjusted data, while others recommended that publicly reported data specifically be risk adjusted.

A few commenters noted concern that adjusting for social risk factors will not address the underlying disparities that are associated with poor health outcomes and could instead lead to masking these disparities. One commenter noted that using social risk factors may not be appropriate until it is clear how the information is collected and shared. One commenter recommended that any risk adjustment methodology adopted adhere to CMS' previously adopted standards of setting minimum case volumes and using confidence intervals. Some commenters noted that better data sources for socioeconomic status are needed, including patient-level and community-level data sources.

Response: We appreciate all the comments and interest in this topic. As we have previously stated regarding risk adjustment of publicly reported data for these factors, we are concerned about holding providers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities or minimize incentives to improve outcomes for disadvantaged populations. With respect to public reporting, while we agree with commenters and believe it is important to avoid a scenario in which underlying disparities are masked rather than addressed, we also agree with commenters who support the public reporting of risk-adjusted data. We appreciate the need to balance risk adjustment as a strategy to account for social risk factors with the concern that risk adjustment could minimize incentives and reduce efforts to address disparities for patients with social risk factors. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have access to excellent care.

As with previous policies, we intend to follow our previously adopted standards for setting case minimums. We refer readers to the CY 2009 OPPI/ASC final rule with comment period (73 FR 68773 through 68775) where we discuss these standards. In addition, we acknowledge that administrative claims data can be limited; we will investigate the feasibility and appropriateness of

⁴² NQF. NQF Initiative to Determine the Impact of Adjusting Healthcare Performance Measures for Social Risk Factors Highlights Successes, Opportunities. Available at: https://www.qualityforum.org/News_And_Resources/Press_Releases/2017/NQF_Initiative_to_Determine_the_Impact_of_Adjusting_Healthcare_Performance_Measures_for_Social_Risk_Factors_Highlights_Successes,_Opportunities.aspx.

additional data sources for obtaining patient and community-level data.

We reiterate that we are committed to ensuring that CMS beneficiaries have access to and receive excellent care and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs. We thank the commenters, and we will consider their views as we develop further policy regarding social risk factors in the Hospital OQR Program.

Comment: Many commenters recommended many factors to consider including: Body mass index; race; smoking status; age; sex; back pain; pain in non-operative lower extremity joint; health risk status; mental health factors; chronic narcotic use; socioeconomic status; pre-procedure ambulatory status; literacy; marital status; live-in home support; family support structure; home health resources; patient travel distance; homelessness; community distress; unavoidable readmissions; readmission risks; and poverty; as well as access to health care, transportation, and healthy food.

One commenter recommended that the following variables not be used: American Society of Anesthesiologists score; range of motion; or mode of patient-reported outcome measure collection. Several commenters supported the use of dual eligible status as a factor, while one commenter opposed it and noted concern that that it does not reflect the conditions where the hospital is located and that there are variations between States in dual eligibility status.

Response: We appreciate commenters' recommendations regarding specific social risk factor variables and will consider them as we continue exploring options for accounting for social risk factors in the Hospital OQR Program.

Comment: Several commenters recommended empirical testing to prioritize the national collection of data that are most essential for valid risk adjustment methodologies and that CMS focus on factors that have an empirically proven relationship to outcomes or processes of care metrics. Some commenters recommended that CMS consider recommendations from NQF, ASPE, the National Academy of Medicine, and the Agency for Healthcare Research and Quality (AHRQ). One commenter suggested that CMS engage providers and vendors in demonstration projects allowing collection of sociodemographic data elements in electronic health records. A few commenters recommended that testing and methodologies be made transparent. Some commenters also recommended that CMS monitor any

unintended consequences that result from risk adjustment.

Response: We plan to actively perform additional research and monitor for trends to prevent unintended consequences. We intend to conduct further analyses on the impact of different approaches to accounting for social risk factors in quality programs. In addition, we will consider the commenters' suggestion that we conduct empirical testing of risk-adjusted quality metrics, and assess the potential impact of the findings from such testing on the prioritization of national data collection, in relation to risk adjustment methodologies. We look forward to continuing to work with stakeholders such as NQF, ASPE, the National Academy of Medicine, and AHRQ.

We thank commenters for their suggestion that we allow collection of sociodemographic data elements in electronic health records, but note that the Hospital OQR Program does not yet include eQMs. Any testing and methodologies used would be made transparent through future rulemaking, which includes the public notice and comment process. Moreover, any proposals would be made in future rulemaking after further analysis, research, and continued stakeholder engagement.

Comment: Several commenters recommended that CMS align across quality payment programs when accounting for social risk factors.

Response: We thank the commenters for their feedback. We intend to investigate options for adjusting for social risk factors with continued consideration of alignment across programs.

Comment: Several commenters asked that CMS consider the impact of socioeconomic data collection on the patient as well as on provider burden. A few commenters recommended that CMS consider potential administrative complexities as CMS develops social risk factor adjustment processes.

Response: As we consider the feasibility of collecting patient-level data and the impact of strategies to account for social risk factors through further analysis, we will also continue to evaluate the reporting burden on providers and patients.

We thank all of the commenters for their input and will consider all suggestions as we continue to assess the issue of accounting for social risk factors within individual measures, the Hospital OQR Program as a whole, and across CMS quality programs.

3. Retention of Hospital OQR Program Measures Adopted in Previous Payment Determinations

We previously adopted a policy to retain measures from the previous year's Hospital OQR Program measure set for subsequent years' measure sets in the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68471). Quality measures adopted in a previous year's rulemaking are retained in the Hospital OQR Program for use in subsequent years unless otherwise specified. We refer readers to that rule for more information. We did not propose any changes to our retention policy for previously adopted measures.

4. Removal of Quality Measures From the Hospital OQR Program Measure Set

a. Considerations in Removing Quality Measures From the Hospital OQR Program

In the FY 2010 IPPS/LTCH PPS final rule (74 FR 43863), for the Hospital IQR Program, we finalized a process for immediate retirement, which we later termed "removal," of Hospital IQR Program measures based on evidence that the continued use of the measure as specified raised patient safety concerns. We adopted the same immediate measure retirement policy for the Hospital OQR Program in the CY 2010 OPPTS/ASC final rule with comment period (74 FR 60634 through 60635). We refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68472 through 68473) for a discussion of our reasons for changing the term "retirement" to "removal" in the Hospital OQR Program. We did not propose any changes to our policy to immediately remove measures as a result of patient safety concerns.

In the CY 2013 OPPTS/ASC final rule with comment period, we finalized a set of criteria for determining whether to remove measures from the Hospital OQR Program. We refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68472 through 68473) for a discussion of our policy on removal of quality measures from the Hospital OQR Program. The benefits of removing a measure from the Hospital OQR Program will be assessed on a case-by-case basis (79 FR 66941 through 66942). We note that, under this case-by-case approach, a measure will not be removed solely on the basis of meeting any specific criterion. We refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68472 through 68473) for our list of factors considered in removing measures from the Hospital OQR Program. We did not

propose any changes to our measure removal policy.

b. Criteria for Removal of “Topped-Out” Measures

We refer readers to the CY 2015 OPPS/ASC final rule with comment period where we finalized our proposal to refine the criteria for determining when a measure is “topped-out” (79 FR 66942). We did not propose any changes to our “topped-out” criteria policy.

c. Removal of Quality Measures From the Hospital OQR Program Measure Set

In the CY 2018 OPPS/ASC proposed rule (82 FR 33673), we proposed to remove a total of six measures. Specifically, beginning with the CY 2020 payment determination, we proposed to remove: (1) OP–21: Median Time to Pain Management for Long Bone Fracture; and (2) OP–26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. In addition, beginning with the CY 2021 payment determination, we proposed to remove: (1) OP–1: Median Time to Fibrinolysis; (2) OP–4: Aspirin at Arrival; (3) OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional; and (4) OP–25: Safe Surgery Checklist. By removing these six measures, our intent is to alleviate the maintenance costs and administrative burden to hospitals associated with retaining them. While we proposed to remove two measures beginning with the CY 2020 payment determination and four measures for the CY 2021 payment determination, in this final rule, we are finalizing removal of all six measures for the CY 2020 payment determination. These are discussed in detail below.

(1) Removal of OP–21: Median Time to Pain Management for Long Bone Fracture Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72088), where we adopted the OP–21: Median Time to Pain Management for Long Bone Fracture measure. This process of care measure assesses the median time from emergency department arrival to time of initial oral, nasal, or parenteral pain medication (opioid and non-opioid) administration for emergency department patients with a principal diagnosis of long bone fracture (LBF).

We have previously finalized a policy to note that the benefits of removing a measure from the Hospital OQR Program will be assessed on a case-by-case basis (79 FR 66941 through 66942). Accordingly, although it does not

exactly meet one of the specific measure removal criteria finalized for the Hospital OQR Program (77 FR 68472 through 68473), it has the potential to lead to negative unintended consequences (removal factor #7). Therefore, we proposed to remove OP–21: Median Time to Pain Management for Long Bone Fracture for the CY 2020 payment determination and subsequent years due to the concerns described in more detail below.

Given the growing body of evidence on the risks of opioid misuse, CMS has developed a strategy to impact the national opioid misuse epidemic by combating nonmedical use of prescription opioids, opioid use disorder, and overdose through the promotion of safe and appropriate opioid utilization, improved access to treatment for opioid use disorders, and evidence-based practices for acute and chronic pain management.⁴³

Due to the potential for a misinterpretation of the intent of the measure, we are concerned that OP–21: Median Time to Pain Management for Long Bone Fracture may create undue pressure for hospital staff to prescribe more opioids. We note that the measure only assesses the time to initial, acute administration of pain medication in a specific acute clinical situation, and does not promote long-term pain medication prescriptions. In fact, this measure assesses an element of appropriate pain management, specifically the time to pain medication administration in the case of long bone fracture. In addition, the measure assesses the use of both opioid and nonopioid pain medications. While we acknowledge that pain control is an important issue for patients and clinical care, and the measure does not call for increased opioid prescriptions, many factors outside the control of CMS quality program requirements may contribute to the perception of a link between the measure and opioid prescribing practices. Although we are not aware of any scientific studies that support an association between this measure and opioid prescribing practices, out of an abundance of caution, we proposed to remove the measure in order to remove any potential ambiguity and to avoid misinterpretation of the intent of the measure. We also note that, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79856), we removed the Pain Management

dimension of the HCAHPS Survey in the Patient- and Caregiver-Centered Experience of Care/Care Coordination domain beginning with the FY 2018 program year for the Hospital VBP Program for similar reasons. In addition, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38342), we finalized refinements to the former pain management questions in the HCAHPS Survey measure for the Hospital IQR Program.

We invited public comment on our proposal to remove the OP–21: Median Time to Pain Management for Long Bone Fracture measure for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Many commenters supported the removal of OP–21 for the CY 2020 payment determination noting concern about the potential incentive to over prescribe opioids. One commenter applauded CMS’ efforts to combat the opioid epidemic. A few commenters noted that the measure could be more appropriate or valuable if it were refined, for example to include oral pain medication or to ensure that it does not incentivize prescribing opioids. One commenter recommended that CMS remove the measure for the CY 2019 payment determination.

Response: We disagree that it would be more appropriate to refine this measure. We do not believe that introducing a modified version of the measure would address our main concern regarding potential for misinterpretation of the intent of the measure because whether pain management is initiated, our main concern for misinterpretation, is what this measure is meant to assess. As stated in our proposal, many factors outside the control of CMS quality program requirements may contribute to the perception of a link between the measure and opioid prescribing practices. Although we are not aware of any scientific studies that support an association between this measure and opioid prescribing practices, out of an abundance of caution, we proposed to remove the measure in order to remove any potential ambiguity and to avoid misinterpretation of the intent of the measure. We note that due to operational limitations, we cannot remove the measure for the CY 2019 payment determination. The CY 2020 payment determination (CY 2018 data collection) is the earliest we can remove this measure from the program.

Comment: One commenter did not support the proposal to remove OP–21 and noted that there is a lack of evidence that the measure incentivizes overprescribing of opioids.

⁴³ CMS Opioid Misuse Strategy 2016. Available at: <https://www.cms.gov/Outreach-and-Education/Outreach/Partnerships/Prescription-Drug-Information-for-Partners-Items/CMS-Opioid-Misuse-Strategy-2016.html>.

Response: We acknowledge the commenter's concerns. As stated in our proposal, although we are not aware of any scientific studies that support an association between this measure and opioid prescribing practices, out of an abundance of caution, however, we believe it is important to remove the measure in order to remove any potential ambiguity and to avoid any misinterpretation of the intent of the measure. We want to ensure that the Hospital OQR Program measure set does not create any potential undue pressure for hospital staff to overprescribe opioids.

After consideration of the public comments we received, we are finalizing the proposal to remove OP-21: Median Time to Pain Management for Long Bone Fracture for the CY 2020 payment determination and subsequent years, as proposed.

(2) Removal of OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74468), where we adopted OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures beginning with the CY 2014 payment determination. This measure, which is submitted via a web-based tool, collects surgical procedure volume data on eight categories of procedures frequently performed in the outpatient hospital setting.

We believe there is a lack of evidence to support this measure's link to improved clinical quality. The measure requires hospitals to report on the volumes of surgical procedures performed at the facility.⁴⁴ This information, number of surgical procedures, does not offer insight into the facilities' overall performance or quality improvement in regard to surgical procedures. Accordingly, this measure meets the following measure removal criterion: performance or improvement on a measure does not result in better patient outcomes (79 FR 66941). We believe the burden of this measure, which is submitted via a web-based tool, outweighs the value, and, therefore, we proposed to remove OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures for the CY 2020 payment determination and subsequent years. We also refer

readers to section XIV.B.3.b.(3) of this final rule with comment period, where the ASCQR Program is finalizing the removal of a similar measure.

We invited public comment on our proposal to remove the OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures measure for the CY 2020 payment determination and subsequent years as discussed above.

Comment: Many commenters supported the removal of OP-26 for the CY 2020 payment determination. One commenter recommended that CMS remove the measure for the CY 2019 payment determination.

Response: We thank the commenters for their support and feedback. We note that due to operational limitations, we cannot remove the measure for the CY 2019 payment determination. The CY 2020 payment determination (CY 2018 data collection) is the earliest we can remove this measure from the program.

After consideration of the public comments we received, we are finalizing our proposal to remove OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures for the CY 2020 payment determination and subsequent years, as proposed.

(3) Removal of OP-1: Median Time to Fibrinolysis Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2008 OPPS/ASC final rule with comment period (referred to as "ED-AMI-2—Median Time to Fibrinolysis" in 72 FR 66862 through 66865) where we adopted OP-1: Median Time to Fibrinolysis beginning with services furnished in CY 2009. This chart-abstracted measure assesses the median time from ED arrival to administration of fibrinolytic therapy in ED patients with ST-segment elevation on the ECG performed closest to ED arrival and prior to transfer.

We believe that this measure meets the following measure removal criterion—the availability of a measure that is more strongly associated with desired patient outcomes for the particular topic (79 FR 66941). We note that the currently adopted OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival (72 FR 66862 through 66865) has been designed with a threshold that is based on a clinical standard, allows us to measure this topic area, and provides meaningful and clinically relevant data on the receipt of fibrinolytic therapy. National guidelines recommend that fibrinolytic therapy be given within 30 minutes of hospital arrival in patients with ST-segment

elevation myocardial infarction.⁴⁵ Because OP-1: Median Time to Fibrinolysis measures only the median time from door to needle and does not note whether or not that value exceeds the clinical best practice of 30 minutes, we do not believe that reporting of OP-1 improves quality of care or patient outcomes. In addition, we believe that retaining OP-1: Median Time to Fibrinolysis would be redundant with OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival. As a result, we proposed to remove OP-1: Median Time to Fibrinolysis for the CY 2021 payment determination and subsequent years. We note that although OP-1: Median Time to Fibrinolysis is a chart-abstracted measure, we do not expect removing this measure would reduce burden, as the data collected for this measure is required to calculate another program measure in the AMI measure set (OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival) and will, therefore, continue to be collected even if the proposal to remove OP-1: Median Time to Fibrinolysis is finalized as proposed.

We invited public comment on our proposal to remove OP-1: Median Time to Fibrinolysis for the CY 2021 payment determination and subsequent years as discussed above.

Comment: Several commenters supported the proposal to remove OP-1: Median Time to Fibrinolysis for the CY 2021 payment determination. Some commenters supported the proposal to remove the measure, but recommended that it be removed as soon as possible. Many commenters supported the proposal to remove the measure, but recommended that it be removed beginning with the CY 2020 payment determination, one year earlier than proposed.

Response: We thank the commenters for their support and feedback. While planning for the proposed rule, we did not believe we had the logistical capacity to support successful removal of all six measures at once from our systems. Upon further consideration however, we have determined it is, in fact, operationally feasible to remove OP-1 beginning with the CY 2020 payment determination rather than the

⁴⁴ OP-26 Measure Information Form. Available at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FSpecsManualTemplate&cid=1228775748170>.

⁴⁵ Antman EM, Hand M, Armstrong PW, Bates ER, Green LA, Halasyamani LK, et al. 2007 focused update of the ACC/AHA 2004 Guidelines for the Management of Patients With ST-Elevation Myocardial Infarction: A report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines (Writing Group to Review New Evidence and Update the ACC/AHA 2004 Guidelines for the Management of Patients With ST-Elevation Myocardial Infarction). Journal of the American College of Cardiology. 2008; 51:210-47.

CY 2021 payment determination as proposed. We believe that removing this measure one year earlier than proposed will reduce hourly and financial burden on hospital. Therefore, we agree that we should remove the measure as soon as possible.

After consideration of the public comments we received, we are finalizing our proposal to remove OP-1: Median Time to Fibrinolysis with modification. Instead of beginning with the CY 2021 payment determination as proposed, we are finalizing the removal of this measure for the CY 2020 payment determination and subsequent years, one year earlier than proposed.

(4) Removal of OP-4: Aspirin at Arrival Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66862 through 66865) where we adopted OP-4: Aspirin at Arrival beginning with services furnished in CY 2009. This chart-abstracted measure assesses the rate of patients with chest pain or possible heart attack who received aspirin within 24 hours of arrival or before transferring from the emergency department.

We previously finalized two criteria for determining when a measure is “topped out” under the Hospital OQR Program: (1) When there is statistically

indistinguishable performance at the 75th and 90th percentiles of national facility performance; and (2) when the measure’s truncated coefficient of variation (COV) is less than or equal to 0.10 (79 FR 66942). Based on our analysis of Hospital OQR Program measure data, we have determined that performance on this measure is so high and unvarying that meaningful distinctions in improvement cannot be made; specifically, our analyses show that there is statistically indistinguishable performance at the 75th and 90th percentiles of national facility performance for this measure. These analyses are captured in the table below.

OP-4—ASPIRIN AT ARRIVAL TOPPED OUT ANALYSIS

Encounters	Number of hospitals	75th percentile	90th percentile	Truncated COV
CY 2014	1,706	100.00	100.00	0.030
CY 2015	1,749	100.00	100.00	0.035
CY 2016	1,803	100.00	100.00	0.042

As displayed in the table above, there is no distinguishable difference in hospital performance between the 75th and 90th percentiles under the OP-4: Aspirin at Arrival measure, and the truncated coefficient of variation has been below 0.10 since 2014. Therefore, this measure meets both “topped out” measure criteria for the ASCQR Program.

Thus, we believe the burden of reporting this chart-abstracted measure is not justified by the value of retaining it in the program and we proposed to remove OP-4: Aspirin at Arrival from the program for the CY 2021 payment determination and subsequent years.

We invited public comment on our proposal to remove the OP-4: Aspirin at Arrival measure for the CY 2021 payment determination and subsequent years as discussed above.

Comment: Several commenters supported the removal of OP-4: Aspirin at Arrival for the CY 2021 payment determination. Some commenters supported the proposal to remove the measure, but recommended that it be removed as soon as possible. Many commenters supported the proposal to remove the measure, but recommended that it be removed beginning with the CY 2020 payment determination, one year earlier than proposed.

Response: We thank the commenters for their support. While planning for the proposed rule, we did not believe we had the logistical capacity to support successful removal of all six measures at once from our systems. Upon further

consideration, we have determined it is, in fact, operationally feasible to remove OP-4 beginning with the CY 2020 payment determination rather than the CY 2021 payment determination as proposed. We believe that removing this measure one year earlier than proposed will reduce hourly and financial burden on hospitals. Therefore, we agree that we should remove the measure as soon as possible.

After consideration of the public comments we received, we are finalizing our proposal to remove OP-4: Aspirin at Arrival measure with modification. Instead of beginning with the CY 2021 payment determination as proposed, we are finalizing the removal of this measure for the CY 2020 payment determination and subsequent years, one year earlier than proposed.

(5) Removal of OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72087 through 72088) where we adopted OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional for the CY 2013 payment determination. This chart-abstracted measure assesses the time from ED arrival to provider contact for Emergency Department patients.

During regular measure maintenance, specific concerns about OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional were raised by a

Technical Expert Panel (TEP), comprised of experts representing a variety of stakeholders and was convened by a CMS contractor. These concerns include: (1) Limited evidence linking the measure to improved patient outcomes; (2) validity concerns related to wait times and the accuracy of door-to-door time stamps; and (3) potential for skewed measure performance due to disease severity and institution-specific confounders. After our own analysis, we agree with the TEP’s analysis and believe that this measure meets the following measure removal criterion: Performance or improvement on a measure does not result in better patient outcomes. As a result, we believe the burden of continuing to include this chart-abstracted measure in the program outweighs the benefits; and thus, we proposed to remove OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional for the CY 2021 payment determination and subsequent years.

We invited public comment on our proposal to remove OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional for the CY 2021 payment determination and subsequent years as discussed above.

Comment: Several commenters supported the proposal to remove OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional for the CY 2021 payment determination. Some commenters supported the proposal to remove the measure, but recommended that it be removed as soon as possible.

Many commenters supported the proposal to remove the measure, but recommended that it be removed beginning with the CY 2020 payment determination, one year earlier than proposed.

Response: We thank the commenters for their support. While planning for the proposed rule, we did not believe we had the logistical capacity to support successful removal of all six measures at once from our systems. Upon further consideration, we have determined it is, in fact, operationally feasible to remove OP–20 beginning with the CY 2020 payment determination rather than the CY 2021 payment determination as proposed. We believe that removing this measure one year earlier than proposed will reduce hourly and financial burden on hospitals. Therefore, we agree that we should remove the measure as soon as possible.

Comment: A few commenters expressed concern that there are socioeconomic pressures that can vary by community that cause variation in performance on this measure. However, these commenters also noted the value of the measure and recommended that CMS consider a refined version of OP–20 that stratifies by hospital size and other factors related to measure performance.

Response: We acknowledge the suggestion that OP–20 be refined to account for community factors that influence performance. While the TEP

found a potential for skewed measure performance due to disease severity and institution-specific confounders, we do not believe modifying the measure to account for social risk factors will address our primary concern that the measure is not adequately tied to better patient outcomes. We thank the commenters for their recommendation, however; we will take these comments into consideration as we continue to review and refine the Hospital OQR Program measure set. In addition, we acknowledge the suggestion that OP–20 be refined to account for community factors that influence performance and note that the TEP found a potential for skewed measure performance due to disease severity and institution-specific confounders. However, modifying the measure to account for social risk factors in this or future rulemaking will not address our primary concern that the measure is not adequately tied to patient outcomes.

After consideration of the public comments we received, we are finalizing our proposal to remove OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional with modification. Instead of beginning with the CY 2021 payment determination as proposed, we are finalizing the removal of this measure for the CY 2020 payment determination and subsequent years, one year earlier than proposed.

(6) Removal of OP–25: Safe Surgery Checklist Use Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74464 through 74466), where we adopted OP–25: Safe Surgery Checklist Use beginning with the CY 2014 payment determination. This structural measure of hospital process assesses whether a hospital employed a safe surgery checklist that covered each of the three critical perioperative periods (prior to administering anesthesia, prior to skin incision, and prior to patient leaving the operating room) for the entire data collection period. Based on our review of reported data under the measure, this measure meets our first criterion for measure removal that measure performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made.

The Hospital OQR Program previously finalized two criteria for determining when a measure is “topped out”: (1) When there is statistically indistinguishable performance at the 75th and 90th percentiles of national facility performance; and (2) when the measure’s truncated coefficient of variation is less than or equal to 0.10 (79 FR 66942). Our estimations indicate that performance on this measure is trending towards topped out status. This analysis is captured in the table below.

OP–25—SAFE SURGERY CHECKLIST USE PERFORMANCE ANALYSIS

Encounters	Number of hospitals	Rate	75th percentile	90th percentile	Truncated COV
CY 2012	3,227	0.910	100.000	100.000	0.314
CY 2013	3,184	0.949	100.000	100.000	0.232
CY 2014	3,177	0.963	100.000	100.000	0.196
CY 2015	3,166	0.970	100.000	100.000	0.176

Based on the analysis above, the national rate of “Yes” response for the OP–25 measure is nearly 1.0, or 100 percent, nationwide, and has remained at this level for the last two years. In addition, the truncated coefficient of variation has decreased such that it is trending towards 0.10 and there is no distinguishable difference in hospital performance between the 75th and 90th percentiles. We have previously stated the benefits of removing a measure from the Hospital OQR Program will be assessed on a case-by-case basis (79 FR 66941 through 66942). We believe that removal of this measure from the Hospital OQR Program measure set is appropriate, as there is little room for improvement. We believe that safe

surgical checklist is widely used and that hospitals will continue its use. In addition, removal of this measure would alleviate the administrative burden to hospitals associated with reporting on this measure. As such, we believe the reporting burden of this measure outweigh the benefits of keeping the measure in the Hospital OQR Program.

Therefore, we proposed to remove OP–25: Safe Surgery Checklist Use for the CY 2021 payment determination and subsequent years. We refer readers to section XIV.B.3.b.(2) of this final rule with comment period, where the ASCQR Program is finalizing a proposal to remove a similar measure.

We invited public comment on our proposal to remove the OP–25: Safe

Surgery Checklist Use measure for the CY 2021 payment determination and subsequent years as discussed above.

Comment: Several commenters supported the proposal to remove OP–25 for the CY 2021 payment determination. Some commenters supported the proposal to remove the measure, but recommended removal as soon as possible. Many commenters supported the proposal to remove the measure, but recommended that it be removed beginning with the CY 2020 payment determination, one year earlier than proposed.

Response: We thank the commenters for their support. While planning for the proposed rule, we did not believe we had the logistical capacity to support

successful removal of all six measures at once from our systems. Upon further consideration, we have determined it is, in fact, operationally feasible to remove OP–25 beginning with the CY 2020 payment determination rather than the CY 2021 payment determination as proposed. We believe that removing this measure one year earlier than proposed will reduce hourly and financial burden on hospitals. Therefore, we agree that we should remove the measure as soon as possible.

Comment: A few commenters opposed the proposal to remove OP–25: Safe Surgery Checklist Use, noting that the measure adds value. One commenter recommended that CMS retain the measure until there is further evidence that the use of a safe surgery checklist is supporting effective perioperative communication.

Response: As stated in our proposal, we believe that there is little room for improvement as shown by the data in our table above. In addition, removal of this measure would alleviate the maintenance costs and administrative burden to hospitals of data collection and reporting. While retaining the measure may add some nominal value, we believe that the burdens outweigh the benefits. In addition, in response to the suggestion that we retain the measure until there is further evidence that the use of a safe surgery checklist is supporting effective perioperative communication, we would like to make clear that high performance on OP–25: Safe Surgery Checklist Use is not intended to indicate whether perioperative communication among team members is effective; this measure is not specified to assess the effectiveness of a team’s communication, only whether a safe surgery checklist is used. Therefore, we do not believe continuing to collect—or, conversely, ceasing to collect—data under this measure will assess or affect the effectiveness of perioperative communication within Hospital Outpatient Departments.

After consideration of the public comments we received, we are finalizing our proposal to remove OP–25: Safe Surgery Checklist Use with modification. Instead of beginning with the CY 2021 payment determination as proposed, we are finalizing the removal of this measure for the CY 2020 payment determination and subsequent years, one year earlier than proposed.

5. Delay of OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2017 OPSS/ASC final rule with comment period where we adopted OP–37a–e (81 FR 79771 through 79784), and finalized data collection and data submission timelines (81 FR 79792 through 79794). These measures assess patients’ experience with care following a procedure or surgery in a hospital outpatient department by rating patient experience as a means for empowering patients and improving the quality of their care.

In CY 2018 OPSS/ASC proposed rule (82 FR 33675), we proposed to delay implementation of the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures OP–37a–e beginning with the CY 2020 payment determination (2018 data collection) and subsequent years. Since our adoption of these measures, we have come to believe that we need to collect more operational and implementation data. Specifically, we want to ensure that the survey measures appropriately account for patient response rates, both aggregate and by survey administration method; reaffirm the reliability of national implementation of OAS CAHPS Survey data; and appropriately account for the burden associated with administering the survey in the outpatient setting of care. We note that commenters expressed concern over the burden associated with the survey in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79777). We believe that the voluntary national implementation of the survey, which began in January 2016, would provide valuable information moving forward.⁴⁶ We plan to conduct analyses of the national implementation data to undertake any necessary modifications to the survey tool and/or CMS systems. We believe it is important to allow time for any modifications before requiring the survey under the Hospital OQR Program. However, we continue to believe that these measures address an area of care that is not adequately addressed in our current measure set and will be useful to assess aspects of care where the patient is the best or only source of information. Further, we continue to believe these measures will

enable objective and meaningful comparisons between hospital outpatient departments. Therefore, we proposed to delay implementation of OP–37a–e beginning with the CY 2020 payment determination (2018 data collection) until further action in future rulemaking. We also refer readers to section XIV.B.4. of this final rule with comment period where we are finalizing a similar proposal in the ASCQR Program.

We invited public comment on our proposal to delay the OAS CAHPS Survey measures beginning with the CY 2020 payment determination (2018 data collection) as discussed above.

Comment: Many commenters supported the proposal to delay implementation of the OAS CAHPS Survey, noting agreement that an analysis of the national implementation will provide valuable information. One commenter noted that the high volume of facilities and hospitals participating in the voluntary national implementation indicates that the data collection burden of the survey is low.

Response: We thank the commenters for their support, and note our belief that an analysis of the national implementation of OAS CAHPS Survey will provide valuable information.

Comment: Citing the importance of patient experience data, a few commenters recommended that CMS move toward mandatory data collection in the future as some hospitals have already invested resources to begin data collection. One commenter recommended a dry run for the first quarter of mandatory implementation. A few commenters recommended that the survey be voluntary for all future years of the program. Another commenter recommended that the survey be introduced with advance notice so hospitals can prepare.

Response: We thank the commenters for their recommendations, and will take these comments under consideration as we craft future policy for the OAS CAHPS Survey. First, we acknowledge the work completed thus far by hospitals beginning to prepare for OAS CAHPS Survey data collection and thank them for their commitment to improving patient experience. We note that changes to this measure would be made in notice and comment rulemaking so that stakeholders can prepare. Finally, while we do not anticipate conducting a dry run for this survey at this time, we refer readers to the voluntary national implementation of the OAS CAHPS Survey.⁴⁷

⁴⁶ About the National Implementation and Public Reporting. Available at: <https://oascahps.org/General-Information/National-Implementation>.

⁴⁷ Ibid.

Comment: Several commenters noted specific concerns about the OAS CAHPS Survey, including that the survey is unnecessarily long, that not all of the questions are relevant, and that requiring a standardized survey prevents hospitals from targeting specific areas for improvement. Some commenters noted that the use of a third-party vendor is too costly. Several commenters recommended that vendors should provide electronic or email options for conducting the OAS CAHPS Survey in order to increase response rates. Others recommended that CMS administer the survey on its Web site. One commenter noted concern that timely results are not provided. A few commenters expressed concern about the use of CPT codes to determine eligibility for the survey and one noted that the CPT codes include procedures that a patient may not perceive as a surgery.

Response: While web-based surveys are not available survey modes at present, we are actively investigating these modes as possible options for the future. We are exploring whether hospitals and ASCs receive reliable email addresses from patients and whether there is adequate access to the internet across all types of patients. Ultimately, the purpose of the investigation is to ensure that any future survey administration method does not introduce bias in the survey process and reduces length and burden if at all possible. Although we are investigating other modes of survey administration, we do not expect that CMS will directly administer the survey; the survey would still be administered through vendors. Finally, we acknowledge the concern about the use of CPT codes, including those for procedures that patients may not perceive as surgery, and note that we will consider this issue. We note that many CPT codes have been excluded from inclusion in the OAS CAHPS

Survey, including services like application of a cast or splint, in order to ensure that only patients receiving applicable procedures are surveyed.⁴⁸ We thank the commenters and will take all comments under consideration as we craft future policy for the OAS CAHPS Survey.

Comment: Several commenters recommended that the survey be NQF-endorsed prior to implementation and that the survey should be refined with input from stakeholders.

Response: Section 1833(t)(17)(C)(i) of the Act does not require that each measure we adopt for the Hospital OQR Program be endorsed by a national consensus building entity, or the NQF specifically. While we strive to adopt NQF-endorsed measures when feasible and practicable, we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, stakeholder input via a Technical Expert Panel (TEP), review by the MAP, broad acceptance and use of the measure, and public comments. As stated in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79772), the OAS CAHPS Survey measures were included on the CY 2014 MUC list,⁴⁹ and reviewed by the MAP.⁵⁰ The MAP encouraged continued development of these survey-based measures; however, we note that these measures had not been fully specified by the time of submission to the MUC List.⁵¹ The MAP stated that these are high impact measures that will improve both quality and efficiency of care and be meaningful to consumers.⁵² Further, the MAP stated that given that these measures are also under consideration for the ASCQR Program, they help to promote alignment across care settings.⁵³ It also stated that these measures would begin to fill a gap MAP has previously identified for this

program including patient reported outcomes and patient and family engagement.⁵⁴ Several MAP workgroup members noted that CMS should consider how these measures are related to other existing ambulatory surveys to ensure that patients and facilities are not overburdened. In addition, we refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79775), where we received public comments on this measure during development.

Comment: One commenter requested that survey development and testing data be made public.

Response: We refer commenters to the voluntary national implementation of the OAS CAHPS Survey for more information on results to date (<https://oascahps.org/General-Information/National-Implementation>).

After consideration of the public comments we received, we are finalizing the proposal to delay implementation of the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based Measures (OP-37a-e) beginning with the CY 2020 payment determination (CY 2018 data collection) until further action in future rulemaking, as proposed. We refer readers to section XIV.B.4. of this final rule with comment where we are also finalizing delay of the OAS CAHPS Survey-based measures in the ASCQR Program.

6. Previously Adopted Hospital OQR Program Measure Set for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79784) for the previously finalized measure set for the Hospital OQR Program CY 2020 payment determination and subsequent years. These measures also are listed below.

PREVIOUSLY FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

*** Measure voluntarily collected as set forth in section XIII.D.3.b. of the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66946 through 66947).

**** Measure reporting delayed beginning with CY 2018 reporting and for subsequent years as discussed in section XIII.B.5. of this final rule with comment period.

7. Newly Finalized Hospital OQR Program Measure Set for the CY 2020 Payment Determination and Subsequent Years

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33676), we did not propose any new measures for the Hospital OQR

Program. However, beginning with the CY 2020 payment determination, in section XIII.B.4.c. of this final rule with comment period, we are finalizing proposals to remove six measures, and in section XIII.B.5. of this final rule with comment period, we are finalizing a proposal to delay OP-37a-e beginning

with the CY 2020 payment determination (2018 data collection). The table below outlines the Hospital OQR Program measure set we are finalizing in this final rule with comment period for the CY 2020 payment determination and subsequent years.

NEWLY FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

NQF No.	Measure name
0288	OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival.
0290	OP-3: Median Time to Transfer to Another Facility for Acute Coronary Intervention.
0289	OP-5: Median Time to ECG.†
0514	OP-8: MRI Lumbar Spine for Low Back Pain.
None	OP-9: Mammography Follow-up Rates.
None	OP-10: Abdomen CT—Use of Contrast Material.
0513	OP-11: Thorax CT—Use of Contrast Material.
None	OP-12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their ONC-Certified EHR System as Discrete Searchable Data.
0669	OP-13: Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery.
None	OP-14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT).
0491	OP-17: Tracking Clinical Results between Visits.†
0496	OP-18: Median Time from ED Arrival to ED Departure for Discharged ED Patients.
0499	OP-22: Left Without Being Seen.†

NEWLY FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS—Continued

NQF No.	Measure name
0661	OP-23: Head CT or MRI Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival.
0431	OP-27: Influenza Vaccination Coverage among Healthcare Personnel.
0658	OP-29: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.*
0659	OP-30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use.*
1536	OP-31: Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.**
2539	OP-32: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
1822	OP-33: External Beam Radiotherapy for Bone Metastases.
None	OP-35: Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy.
2687	OP-36: Hospital Visits after Hospital Outpatient Surgery.
None	OP-37a: OAS CAHPS—About Facilities and Staff.***
None	OP-37b: OAS CAHPS—Communication About Procedure.***
None	OP-37c: OAS CAHPS—Preparation for Discharge and Recovery.***
None	OP-37d: OAS CAHPS—Overall Rating of Facility.***
None	OP-37e: OAS CAHPS—Recommendation of Facility.***

† We note that NQF endorsement for this measure was removed.

○ OP-26: Procedure categories and corresponding HCPCS codes are located at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1196289981244>.

* We note that measure name was revised to reflect NQF title.

** Measure voluntarily collected as set forth in section XIII.D.3.b. of the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66946 through 66947).

*** Measure reporting delayed beginning with CY 2018 reporting and for subsequent years as discussed in section XIII.B.5. of this final rule with comment period.

8. Hospital OQR Program Measures and Topics for Future Consideration

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33678), we requested public comment on: (1) Future measure topics; and (2) future development of OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival as an electronic clinical quality measure (eCQM). These are discussed in detail below.

a. Future Measure Topics

We seek to develop a comprehensive set of quality measures to be available for widespread use for informed decision-making and quality improvement in the hospital outpatient setting. The current measure set for the Hospital OQR Program includes measures that assess process of care, imaging efficiency patterns, care transitions, ED throughput efficiency, Health Information Technology (health IT) use, care coordination, and patient safety. Measures are of various types, including those of process, structure, outcome, and efficiency. Through future rulemaking, we intend to propose new measures that help us further our goal of achieving better health care and improved health for Medicare beneficiaries who receive health care in hospital outpatient settings, while aligning quality measures across the Medicare program.

We are moving towards the use of outcome measures and away from the use of clinical process measures across our Medicare quality reporting and value-based purchasing programs. We

invited public comments on possible measure topics for future consideration in the Hospital OQR Program. We specifically requested comment on any outcome measures that would be useful to add to the Hospital OQR Program as well as any clinical process measures that should be eliminated from the Hospital OQR Program.

Comment: A few commenters recommended that we adopt the eCQM version of OP-18: Median Time from ED Arrival to ED Departure for Discharged ED Patients.

Response: We thank the commenters for their feedback. We will consider these suggestions as we consider including and developing eCQMs for future rulemaking.

Comment: Several commenters suggested measure topics for future consideration, including measures that address Total Knee Arthroplasty (TKA) and Total Hip Arthroplasty (THA) procedures and measures that address recommended vaccines for adults, including pneumococcal immunization measures. A few commenters noted support for outcome measures, and recommended that CMS engage with stakeholders in identifying priority measurement areas. One commenter specifically recommended patient reported outcomes and patient reported experience measures. A commenter recommended the inclusion of pain experience and management measures. One commenter recommended the following topic areas for quality measures: Patient safety outcomes, readmission rates, risk-adjusted

mortality, effective patient transitions, diabetes, obesity, guidelines for overused procedures, end of life care according to preferences, cost per episode, behavioral health and patient experience.

Response: We thank the commenters for their recommendations and suggestions and agree that there are additional high priority topic measurement areas that may be appropriate for the Hospital OQR Program. We will consider the suggested topic areas for future rulemaking and intend to work with stakeholders as we continue to develop the Hospital OQR Program measure set.

b. Possible Future Adoption of the Electronic Version of OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival

We have previously stated that automated electronic extraction and reporting of clinical quality data, including measure results calculated automatically by appropriately certified health IT, could significantly reduce the administrative burden on hospitals under the Hospital OQR Program (81 FR 79785). In the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79786), some commenters supported CMS' goal to incorporate electronic clinical quality measures (eCQMs) in the Hospital OQR Program.

OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival was finalized in the CY 2008 OPPTS/ASC final rule with comment period (72 FR 66865), where

it was designated as ED-AMI-3. In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68761), the measure was re-labeled as OP-2 for the CY 2010 payment determination and subsequent years. OP-2 measures the number of AMI patients receiving fibrinolytic therapy during the ED visit with a time from hospital arrival to fibrinolysis of 30 minutes or less.

We are considering developing OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival⁵⁵ as an eCQM and proposing the eCQM in future rulemaking. We note that since OP-2 is not yet developed as an eCQM; electronic measure specifications are not available at this time. We are considering OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival in particular because we believe this measure is the most feasible out of all the existing Hospital OQR Program measures for development as an eCQM.

We invited public comment on the possible future development and future adoption of an eCQM version of OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival.

Comment: A few commenters supported the adoption of an eCQM version of OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival. Several commenters noted their support for the adoption of eCQMs, but expressed concern about the future adoption of an eCQM version OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival in the Hospital OQR Program noting that other measures, such as OP-18, are already specified as an eCQM and that other measures may be more relevant to the Hospital OQR Program since fibrinolytic therapy is not always appropriate with the increasing availability of cardiac catheterization labs.

Response: We will consider OP-18 for future rulemaking. In addition, while we acknowledge that OP-2 may not be relevant to all hospitals due to the increased availability of cardiac catheterization labs, we believe this measure would be important for smaller hospitals that continue to rely on fibrinolytic therapy. We thank the commenters for their feedback and will consider these concerns and suggestions before we decide whether to develop an eCQM version of OP-2: Fibrinolytic Therapy Received Within 30 Minutes of

Emergency Department Arrival or propose the eCQM in future rulemaking.

Comment: Other commenters opposed the adoption of eCQMs in the Hospital OQR Program and expressed concern that eCQMs add, rather than reduce, administrative burden. Some commenters recommended that CMS delay implementation of eCQMs in the Hospital OQR Program until the vendor and CMS systems issues noted in Hospital IQR Program rulemaking are addressed and until the Hospital IQR Program demonstrates accurate and feasible submission of electronic data.

Response: In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38355), commenters raised concerns about EHR system upgrades, the difficulty of transitioning to a new EHR vendor, and updating to new editions of certified health IT. We appreciate commenters sharing their concerns about the challenges associated with eCQM reporting, including the significant expenditure of resources required to make necessary changes to health IT systems, documentation or utilization of EHRs, and workflow process changes and acknowledge commenters' feedback that many hospitals may not be ready to report eCQMs. We will take lessons learned from eCQM submission in the Hospital IQR Program into consideration as we develop policy for the Hospital OQR Program. As we stated in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57177) regarding the Hospital IQR Program, however, we acknowledge that there are initial costs, but believe that long-term benefits associated with electronic data capture outweigh those costs. In addition, as we stated in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49696) regarding the Hospital IQR Program, we believe that it is appropriate to consider reporting of eCQMs given that measures available now and those being developed for the future are increasingly based on electronic standards. We thank the commenters for their feedback and acknowledge the concerns raised. We will consider these concerns and suggestions as we further consider developing OP-2: Fibrinolytic Therapy Received Within 30 Minutes of Emergency Department Arrival as an eCQM or proposing the eCQM in future rulemaking.

9. Maintenance of Technical Specifications for Quality Measures

CMS maintains technical specifications for previously adopted Hospital OQR Program measures. These specifications are updated as we modify the Hospital OQR Program measure set. The manuals that contain specifications

for the previously adopted measures can be found on the QualityNet Web site at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPPage%2FQnetTier2&cid=1196289981244>.

For a history of our policies regarding maintenance of technical specifications for quality measures, we refer readers to the CY 2010 OPPS/ASC final rule with comment period (74 FR 60631), the CY 2011 OPPS/ASC final rule with comment period (75 FR 72069), and the CY 2013 OPPS/ASC final rule with comment period (77 FR 68469 through 68470). We did not propose any changes to our technical specifications policies.

10. Public Display of Quality Measures

a. Background

We refer readers to the CY 2014 and CY 2017 OPPS/ASC final rules with comment period (78 FR 75092 and 81 FR 79791, respectively) for our previously finalized policies regarding public display of quality measures.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33679), we proposed to update public reporting for the OP-18: Median Time from ED Arrival to ED Departure for Discharged ED Patients measure.

b. Public Reporting of OP-18c: Median Time From Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/ Mental Health Patients

OP-18 Median Time from ED Arrival to ED Departure for Discharged ED Patients was finalized for reporting for the CY 2013 payment determination and subsequent years in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72086). This measure addresses ED efficiency in the form of the median time from ED arrival to time of departure from the ED for patients discharged from the ED (also known as ED throughput). Reducing the time patients spend in the ED can improve the quality of care. As discussed in the measure specifications and Measure Information Form (MIF),^{56 57} OP-18 measure data is stratified into four separate calculations: (1) OP-18a is defined as the overall rate; (2) OP-18b is defined as the reporting measure; (3) OP-18c is defined as assessing

⁵⁶ A Measure Information Form provides detail on the rationale for a measure as well as the relevant numerator statements, denominator statements and measure calculations.

⁵⁷ Hospital OQR Program ED Throughput Measures Information Form. Available at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPPage%2FSpecsManualTemplate&cid=1228775748170>.

⁵⁵ eCQI Resource Center: <https://ecqi.healthit.gov/eh/ecqms-2016-reporting-period/fibrinolytic-therapy-received-within-30-minutes-hospital-arrival>.

Psychiatric/Mental Health Patients; and (4) OP–18d is defined as assessing Transfer Patients.

Section 1833(t)(17)(E) of the Act, requires that the Secretary establish procedures to make data collected under the Hospital OQR Program available to the public and that such procedures must ensure that a hospital has the opportunity to review the data that are to be made public, with respect to the hospital prior to such data being made public. Currently, and as detailed in the OP–18 MIF, the OP–18 measure publicly reports data only for the calculations designated as OP–18b: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Reporting Measure, which excludes psychiatric/mental health patients and transfer patients.⁵⁸

The ICD–10 diagnostic codes for OP–18c include numerous substance abuse codes for inclusion in this subset, along with numerous nonsubstance abuse codes. We believe it is important to publicly report data for OP–18c (Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients) to address a behavioral health gap in the publicly reported Hospital OQR Program measure set. Therefore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33679), we proposed to also publicly report OP–18c and begin public reporting as early as July of 2018 using data from patient encounters during the third quarter of 2017. In addition, we would make corresponding updates to our MIF to reflect these proposals,⁵⁹ such as: (1) Renaming OP–18b from “Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Reporting Measure” to “OP–18b: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Excluding Psychiatric/Mental Health Patients and Transfer Patients;” and (2) modifying the form to reflect that OP–18c would also be publicly reported. Administrative changes made to the MIF would not affect hospital reporting requirements or burden. The data required for public reporting are already collected and submitted by participating outpatient hospital departments and our proposal to publicly report OP–18c does not create additional burden. We note

that hospitals would be able to preview these data in accordance with our previously established 30-day preview period procedures (81 FR 79791).

In developing this proposal, we also considered proposing to publicly report around July 2019 (not 2018 as proposed) using data from patient encounters occurring during the first quarter of 2018. However, we decided against this timeline, because under this reporting option, we would not be able to publicly report behavioral health data until as early as July of 2019, creating a delay in our efforts to address the behavioral health data gap in the publicly reported measure set.

We invited public comment on our proposal to publicly report OP–18c: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients beginning with third quarter 2017 data as discussed above.

Comment: Some commenters supported the proposal to publicly display OP–18c Median Time from ED Arrival to ED Departure for Discharged ED Patients—Psychiatric/Mental Health Patient, noting that the data can be valuable to improving patient care.

Response: We thank the commenters for their support; we agree that these data can be useful toward improving patient care for these patients.

Comment: Several commenters opposed the proposal to publicly report OP–18c: Median Time from ED Arrival to ED Departure for Discharged ED Patients—Psychiatric/Mental Health Patients. These commenters expressed concern that publicly reporting the measure will not address the behavioral health gap in the Hospital OQR Program. Several commenters expressed concern that data on time to departure may not help patients make care decisions. One commenter expressed concern that the measure sample size is small, leading to large variation in month-to-month performance. Another commenter recommended that data for substance abuse and non-substance abuse patients be separated in publicly reported OP–18c data, citing a concern that substance abuse patients may spend more time in the ED.

A few commenters cited concerns that delays in discharging psychiatric patients are caused by a lack of community resources rather than poor quality of care. One commenter recommended that publicly displayed data for OP–18c also include data on mental health resources in the community to provide context for the data. Other commenters expressed

concern that the data could incentivize limiting the care provided to these patients in the ED in order to discharge them quickly.

Response: We disagree that OP–18c does not address the Hospital OQR Program’s gap in measuring behavioral health or that it would not provide useful information. We believe this helps to address a gap in measuring behavioral health by attempting to address the increased wait times experienced by mental health patients in EDs. Research has indicated that mental health patients experience a prolonged ED length of stay as compared to other patients, and that these longer wait times can lead to medication errors and adverse outcomes.⁶⁰ Another study demonstrated that patients presenting to the ED with acute myocardial infarction who have a history of depression are given lower priority care.⁶¹ In addition, we believe data from OP–18c will be useful to researchers and hospital staff as they attempt to address these disparities, as well as to patients choosing a care location. We further disagree that measure sample size will lead to inconsistent measure results. This measure has undergone the NQF endorsement process and, as such, has been tested and determined to be reliable.⁶² Although, we acknowledge commenters concerns that substance abuse patients may spend more time in the ED, we believe it is important to not separate substance abuse patients in the measure, as research shows that illicit drug use is particularly high among adults with serious mental illnesses and that these co-occurring disorders tend to go undetected and untreated, especially among the elderly population.^{63 64} Given this, we believe it is important to include substance abuse populations for quality improvement.

However, the comments received have shed some light on aspects of this particular subset of data that may need additional consideration prior to posting on the consumer-facing *Hospital*

⁶⁰ Pearlmutter, Mark D. et al. Analysis of Emergency Department Length of Stay for Mental Health Patients at Ten Massachusetts Emergency Departments. *Annals of Emergency Medicine*, Volume 70, Issue 2, 193–202.e16.

⁶⁴ Robert Drake. “Dual Diagnosis and Integrated Treatment of Mental Illness and Substance Abuse Disorder.”

⁵⁸ Ibid.

⁵⁹ Ibid.

Compare Web site. We acknowledge commenters' concerns regarding unintended consequences, including that the time to discharge for mental health patients may be influenced, in part, by the availability of community resources and that the measure could be perceived as creating pressure on providers to inappropriately limit care in order to quickly discharge mental health patients. Literature has shown that the number of inpatient psychiatric beds as decreased from 400,000 in 1970 to 50,000 in 2006.⁶⁵

Therefore, after considering the public comments we received, including these additional factors, we would like to err on the side of caution and take additional time for further consideration prior to posting this particular subset of data on *Hospital Compare*, a consumer-facing Web site. As background, we typically allow 30 days for hospitals to preview their data two months prior to public reporting, after which we deliver final public reporting files for the *Hospital Compare* Web site (77 FR 68483). Simultaneously, in addition to posting on *Hospital Compare*, Hospital OQR Program quality measure data are also typically published on data.medicare.gov in downloadable data files.^{66 67 68} While we will not publicly report OP-18c on *Hospital Compare*, we will instead publish it on data.medicare.gov. Affected parties will be notified via CMS listservs, CMS email blasts, national provider calls, and QualityNet announcements regarding the release of preview reports followed by the posting of data on a Web site other than *Hospital Compare* (76 FR 74453).

Based on the public comments we received, we intend to make measure data available in a downloadable data file rather than on *Hospital Compare* so that we may continue to evaluate the concerns raised by commenters regarding unintended consequences. We believe this modified approach to our original proposal is more appropriate than publishing on *Hospital Compare*, which is more public facing, because we want to avoid any potential circumstance in which the publication

of these data exacerbate the concerns raised by commenters. We continue to believe the measure provides value to hospital quality improvement efforts and to patients. However, out of an abundance of caution, we intend to make data available on data.medicare.gov instead of *Hospital Compare* until we have been able to evaluate the concerns raised by commenters.

To be clear, data for what is referred to as OP-18b Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Reporting Measure will still continue to be made available on *Hospital Compare* as it has in the past. In addition, in accordance with our decision to not publish OP-18c data on *Hospital Compare*, we are also not finalizing the proposed measure subset name changes or MIF form changes described in our proposal. We will continue to work toward finding the best means to make this subset of information more easily understandable to the public and consider other measures to help fill the behavioral health gap in the future.

After consideration of the public comments we received, we are finalizing the proposal, with modification, as discussed in our response above, such that we will make OP-18c rates available to the public on <https://data.medicare.gov> in downloadable files. We will take additional time to further assess how best to make this subset of data available on the *Hospital Compare* Web site for consumers. In addition, we are not finalizing our proposals to: (1) Rename OP-18b from “Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Reporting Measure” to “OP 18b: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Excluding Psychiatric/Mental Health Patients and Transfer Patients;” and (2) modify the MIF to reflect that OP-18c would also be publicly reported on *Hospital Compare*.

C. Administrative Requirements

1. QualityNet Account and Security Administrator

The previously finalized QualityNet security administrator requirements, including setting up a QualityNet account and the associated timelines, are described in the CY 2014 OPPS/ASC final rule with comment period (78 FR

75108 through 75109). In that final rule with comment period, we codified these procedural requirements at 42 CFR 419.46(a).

2. Requirements Regarding Participation Status

a. Background

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75108 through 75109) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519) for requirements for participation and withdrawal from the Hospital OQR Program. We also codified these procedural requirements at 42 CFR 419.46(a) and 42 CFR 419.46(b). In the CY 2018 OPPS/ASC proposed rule (82 FR 33679), we proposed changes to the NOP submission deadline, as described below.

b. Proposed Changes to the NOP Submission Deadline

We finalized in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75108 through 75109) that participation in the Hospital OQR Program requires that hospitals must: (1) Register on the QualityNet Web site before beginning to report data; (2) identify and register a QualityNet security administrator; and (3) complete and submit an online participation form available at the QualityNet.org Web site if this form has not been previously completed, if a hospital has previously withdrawn, or if the hospital acquires a new CMS Certification Number (CCN). In addition, in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75108 through 75109) we finalized the requirement that hospitals must submit the NOP according to the following deadlines:

- If a hospital has a Medicare acceptance date before January 1 of the year prior to the affected annual payment update, the hospital must complete and submit to CMS a completed Hospital OQR Program Notice of Participation Form by July 31 of the calendar year prior to the affected annual payment update.
- If a hospital has a Medicare acceptance date on or after January 1 of the year prior to the affected annual payment update, the hospital must submit a completed participation form no later than 180 days from the date identified as its Medicare acceptance date.

These requirements are also codified at 42 CFR 419.46(a).

In the CY 2018 OPPS/ASC proposed rule (82 FR 33680), beginning with the CY 2020 payment determination, we

⁶⁵ Tuttle GA. Report of the Council on Medical Service, American Medical Association: Access to psychiatric beds and impact on emergency medicine [Internet]. Chicago (IL): AMA; 2008.

⁶⁶ [Data.medicare.gov](https://data.medicare.gov) OP Imaging Measures: <https://data.medicare.gov/Hospital-Compare/Outpatient-Imaging-Efficiency-Hospital/wkfw-kthe>.

⁶⁷ [Data.medicare.gov](https://data.medicare.gov) OP Procedure Volume: <https://data.medicare.gov/Hospital-Compare/Outpatient-Procedures-Volume/xbz4-gvaz>.

⁶⁸ [Data.medicare.gov](https://data.medicare.gov) Timely and Effective Care Measures: <https://data.medicare.gov/Hospital-Compare/Timely-and-Effective-Care-Hospital/yv7e-xc69>.

proposed to: (1) Revise the NOP submission deadline described above, and (2) make corresponding revisions at 42 CFR 419.46(a). Specifically, we proposed to change the NOP submission deadlines such that hospitals are required to submit the NOP any time prior to registering on the QualityNet Web site, rather than by the deadlines specified above. For example, under this proposal, and in accordance with the data submission deadlines described in section XIII.D.1. of this final rule with comment period, below and finalized in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519 through 70520), a hospital submitting data for Q1 2019 encounters would be required to submit the NOP only prior to registering on the QualityNet Web site, which must be done prior to the data submission deadline of August 1, 2019 (80 FR 70519 through 70520).

We believe this proposed timeline is appropriate, because registration with the QualityNet Web site is necessary to submit data. We believe that extending the NOP submission deadline will better enable hospitals to meet the Hospital OQR Program participation requirements.

As discussed above, we also proposed to make conforming revisions at 42 CFR 419.46(a).

We invited public comment on our proposals as discussed above.

We did not receive any public comment on our proposal to require submission of the NOP any time prior to registering on the QualityNet Web site. However, due to logistical and operational constraints, participants in the Hospital OQR Program must still first login to QualityNet in order to access the NOP form; therefore, we are unable to implement this proposal. As a result, we are not finalizing our proposals to extend the NOP submission deadline and to make conforming revisions at 42 CFR 419.46(a). We intend to revisit this issue in future rulemaking, because we believe that extending the NOP submission deadline will better enable hospitals to meet the Hospital OQR Program participation requirements.

D. Form, Manner, and Timing of Data Submitted for the Hospital OQR Program

1. Hospital OQR Program Annual Payment Determinations

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75110 through 75111) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519 through 70520), we specified our data submission deadlines. We also

codified our submission requirements at 42 CFR 419.46(c).

We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70519 through 70520), where we finalized our proposal to shift the quarters upon which the Hospital OQR Program payment determinations are based, beginning with the CY 2018 payment determination. The finalized deadlines for the CY 2020 payment determination and subsequent years are illustrated in the tables below.

CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

Patient encounter quarter	Clinical data submission deadline
Q2 2018 (April 1–June 30)	11/1/2018
Q3 2018 (July 1–September 30)	2/1/2019
Q4 2018 (October 1–December 31)	5/1/2019
Q1 2019 (January 1–March 31)	8/1/2019

For the CY 2020 payment determination and subsequent years, we proposed to revise the data submission requirements for hospitals that did not participate in the previous year’s Hospital OQR Program. Specifically, we proposed to revise the first quarter for which newly participating hospitals are required to submit data (see details below). We did not propose any changes to the previously finalized data submission deadlines for each quarter.

In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68482), we finalized the following data submission requirements for hospitals that did not participate in the previous year’s Hospital OQR Program:

- If a hospital has a Medicare acceptance date before January 1 of the year prior to the affected annual payment update, the hospital must submit data beginning with encounters occurring during the first calendar quarter of the year prior to the affected annual payment update;
- If a hospital has a Medicare acceptance date on or after January 1 of the year prior to the affected annual payment update, the hospital must submit data for encounters beginning with the first full quarter following submission of the completed Hospital OQR Program Notice of Participation Form; and
- Hospitals with a Medicare acceptance date before or after January 1 of the year prior to an affected annual payment update must follow data submission deadlines as posted on the QualityNet Web site.

These policies are also codified at 42 CFR 419.46(c)(3). In the CY 2018 OPPS/ASC proposed rule (82 FR 33680), we proposed to: (1) Align the timeline specifying the initial quarter for which hospitals must submit data for all hospitals that did not participate in the previous year’s Hospital OQR Program, rather than specifying different timelines for hospitals with Medicare acceptance dates before versus after January 1 of the year prior to an affected annual payment update; and (2) make conforming revisions at 42 CFR 419.46(c)(3). Specifically, we proposed that any hospital that did not participate in the previous year’s Hospital OQR Program must submit data beginning with encounters occurring during the first calendar quarter of the year prior to the affected annual payment update. We note that hospitals must still follow data submission deadlines corresponding to the quarter for which they are reporting data as posted on the QualityNet Web site.

We invited public comment on our proposals to align the initial data submission timeline for all hospitals that did not participate in the previous year’s Hospital OQR Program and to make conforming revisions at 42 CFR 419.46(c)(3).

We did not receive any public comment on our proposals. Therefore, we are finalizing our proposals to align the initial data submission timeline for all hospitals that did not participate in the previous year’s Hospital OQR Program and to make conforming revisions at 42 CFR 419.46(c)(3), as proposed.

2. Requirements for Chart-Abstracted Measures Where Patient-Level Data Are Submitted Directly to CMS for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68481 through 68484) for a discussion of the form, manner, and timing for data submission requirements of chart-abstracted measures for the CY 2014 payment determination and subsequent years.

We did not propose any changes to our policies regarding the submission of chart abstracted measure data where patient-level data are submitted directly to CMS.

We note that, in section XIII.B.4.c. of this final rule with comment period, we are finalizing the removal of OP–21: Median Time to Pain Management for Long Bone Fracture, OP–1: Median Time to Fibrinolysis, OP–4: Aspirin at Arrival, and OP–20: Door to Diagnostic Evaluation by a Qualified Medical

Professional for the CY 2020 payment determination and subsequent years. Therefore, the following previously finalized Hospital OQR Program chart-abstracted measures will require patient-level data to be submitted for the CY 2020 payment determination and subsequent years:

- OP–2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival (NQF #0288);
- OP–3: Median Time to Transfer to Another Facility for Acute Coronary Intervention (NQF #0290);
- OP–5: Median Time to ECG (NQF #0289);
- OP–18: Median Time from ED Arrival to ED Departure for Discharged ED Patients (NQF #0496);
- OP–23: Head CT Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke Patients who Received Head CT Scan Interpretation Within 45 Minutes of ED Arrival (NQF #0661).

3. Claims-Based Measure Data Requirements for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2014 OP/ASC final rule with comment period (78 FR 75111 through 75112) for a discussion of the general claims-based measure data submission requirements for the CY 2015 payment determination and subsequent years. We did not propose any changes to our claims-based measures submission policies for the CY 2020 payment determination and subsequent years.

There are a total of nine claims-based measures for the CY 2020 payment determination and subsequent years:

- OP–8: MRI Lumbar Spine for Low Back Pain (NQF #0514);
- OP–9: Mammography Follow-Up Rates;
- OP–10: Abdomen CT—Use of Contrast Material;
- OP–11: Thorax CT—Use of Contrast Material (NQF #0513);
- OP–13: Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low Risk Surgery (NQF #0669);
- OP–14: Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT);
- OP–32: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy (NQF #2539);
- OP–35: Admissions and Emergency Department Visits for Patients Receiving Outpatient Chemotherapy; and
- OP–36: Hospital Visits after Hospital Outpatient Surgery (NQF #2687).

4. Data Submission Requirements for the OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2017 OP/ASC final rule with comment period (81 FR 79792 through 79794) for a discussion of the previously finalized requirements related to survey administration and vendors for the OAS CAHPS Survey-based measures. However, we refer readers to section XIII.B.5. of this final rule with comment period, where we are finalizing our proposal to delay implementation of the OP–37a–e OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination (2018 data collection) until further action in future rulemaking.

As noted in the CY 2017 OP/ASC final rule with comment period (81 FR 79815), some commenters suggested shortening sections of the survey, such as the “About You” section. We continue to evaluate the utility of individual questions as we collect new data from the survey’s voluntary national implementation, and will consider different options for shortening the OAS CAHPS Survey without the loss of important data in the future. Specifically, we continue to consider the removal of two demographic questions—the “gender” and “age” questions—from the OAS CAHPS Survey in a future update.

Comment: Some commenters supported removal of the gender and age questions from the survey.

Response: We thank the commenters for their support. We will take these comments under consideration as we craft future policies for the OAS CAHPS Survey.

5. Data Submission Requirements for Previously Finalized Measures for Data Submitted via a Web-Based Tool for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2014 OP/ASC final rule with comment period (78 FR 75112 through 75115) and the CY 2016 OP/ASC final rule with comment period (80 FR 70521) and the CMS QualityNet Web site (<https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1205442125082>) for a discussion of the requirements for measure data submitted via the CMS QualityNet Web site for the CY 2017 payment determination and subsequent years. In addition, we refer readers to

the CY 2014 OP/ASC final rule with comment period (78 FR 75097 through 75100) for a discussion of the requirements for measure data (specifically, the Influenza Vaccination Coverage Among Healthcare Personnel measure (NQF #0431)) submitted via the Centers for Disease Control and Prevention (CDC) NHSN Web site. We did not propose any changes to our policies regarding the submission of measure data submitted via a web-based tool.

We note that, in section XIII.B.4.c. of this final rule with comment period, we are finalizing the removal of OP–25: Safe Surgery Checklist Use and OP–26: Hospital Outpatient Volume on Selected Outpatient Surgical Procedures beginning with the CY 2020 payment determination and for subsequent years. Therefore, the following web-based quality measures previously finalized and retained in the Hospital OQR Program will require data to be submitted via a web-based tool (CMS’ QualityNet Web site or CDC’s NHSN Web site) for the CY 2020 payment determination and subsequent years:

- OP–12: The Ability for Providers with HIT to Receive Laboratory Data Electronically Directly into their ONC-Certified EHR System as Discrete Searchable Data (via CMS’ QualityNet Web site);
- OP–17: Tracking Clinical Results between Visits (NQF #0491) (via CMS’ QualityNet Web site);
- OP–22: Left Without Being Seen (NQF #0499) (via CMS’ QualityNet Web site);
- OP–27: Influenza Vaccination Coverage among Healthcare Personnel (via the CDC NHSN Web site) (NQF #0431);
- OP–29: Appropriate Follow-up Interval for Normal Colonoscopy in Average Risk Patients (NQF #0658) (via CMS’ QualityNet Web site);
- OP–30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use (NQF #0659) (via CMS’ QualityNet Web site);
- OP–31: Cataracts: Improvement in Patient’s Visual Function within 90 Days Following Cataract Surgery (NQF #1536) (via CMS’ QualityNet Web site); and
- OP–33: External Beam Radiotherapy (EBRT) for Bone Metastases (NQF #1822) (via CMS’ QualityNet Web site).

6. Population and Sampling Data Requirements for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2011 OP/ASC final rule with comment

period (75 FR 72100 through 72103) and the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74482 through 74483) for discussions of our population and sampling requirements.

We did not propose any changes to our population and sampling requirements.

7. Hospital OQR Program Validation Requirements for Chart-Abstracted Measure Data Submitted Directly to CMS for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68484 through 68487) and the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66964 through 66965) for a discussion of finalized policies regarding our validation requirements. We also refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68486 through 68487) for a discussion of finalized policies regarding our medical record validation procedure requirements. We codified these policies at 42 CFR 419.46(e). For the CY 2018 payment determination and subsequent years, validation is based on four quarters of data (validation quarter 1 (January 1–March 31), validation quarter 2 (April 1–June 30), validation quarter 3 (July 1–September 30), and validation quarter 4 (October 1–December 31)) (80 FR 70524).

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33682), we: (1) Clarified the hospital selection process previously finalized for validation; (2) proposed to codify the procedures for targeting hospitals at 42 CFR 419.46(e); and (3) proposed to formalize and update our educational review process. These are discussed in more detail below.

a. Clarification

In the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74485), we finalized a validation selection process in which we select a random sample of 450 hospitals for validation purposes, and select an additional 50 hospitals based on the following specific criteria:

- Hospital fails the validation requirement that applies to the previous year's payment determination; or
- Hospital has an outlier value for a measure based on the data it submits. We defined an "outlier value" for purposes of this targeting as a measure value that appears to deviate markedly from the measure values for other hospitals. Specifically, we would select hospitals for validation if their measure value for a measure is greater than 5 standard deviations from the mean, placing the expected occurrence of such

a value outside of this range at 1 in 1,744,278.

We note that the criteria for targeting 50 outlier hospitals, described above, does not specify whether high or low performing hospitals will be targeted. Therefore, we clarified that hospitals with outlier values indicating specifically poor scores on a measure (for example, a long median time to fibrinolysis) will be targeted for validation. In other words, an "outlier value" is a measure value that is greater than 5 standard deviations from the mean of the measure values for other hospitals, and indicates a poor score.

Comment: One commenter recommended that CMS target hospitals for validation whether their score is greater than five standard deviations above or below the mean, noting that very good scores may especially indicate a need for validation.

Response: The intent of this policy is to target and prevent extreme negative values rather than to identify high performance. This is also evidenced in the first of our two criteria for targeting hospitals for validation—to target hospitals that fail the validation requirement that applies to the previous year's payment determination. We believe it is appropriate to specifically target hospitals with poor performance, rather than those performing well to encourage improved performance among low performing hospitals. We note that only 50 hospitals will be selected for validation through these targeting criteria and in order to address the issue of very low performance, we believe it is appropriate to use these targeting criteria to identify extreme negative measure values. An additional 450 hospitals will be selected at random, and will include both low and high performing hospitals. However, we thank the commenter for their feedback that extremely high performance could indicate a need for validation, and will take this into consideration as we craft future policies.

b. Codification

We note that the previously finalized procedures for targeting hospitals for validation, described in section XIII.D.7.a. of this final rule with comment period, and finalized in the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74485), are not yet codified at 42 CFR 419.46. We proposed to codify the previously finalized procedures for targeting hospitals and well as the procedures regarding outlier hospitals as discussed and clarified above at 42 CFR 419.46(e)(3).

We invited public comment on our proposal to codify our validation targeting criteria as discussed above.

We did not receive any public comments on this proposal. Therefore, we are finalizing our proposal to codify the previously finalized procedures for targeting hospitals and well as the procedures regarding outlier hospitals as discussed and clarified above at 42 CFR 419.46(e)(3), as proposed.

c. Formalization and Modifications to the Educational Review Process for Chart-Abstracted Measures Validation (1) Background

We have described our processes for educational review on the QualityNet Web site.⁶⁹ We note that historically this process functioned as an outreach and education opportunity we provided to hospitals, but based on our experience, stakeholder feedback, and more robust validation requirements, we believed that it would be beneficial to hospitals to propose formalizing and updating this process.

Under the current informal process, if results of an educational review indicate that CDAC or CMS has incorrectly scored a hospital after validation, those results are not changed, but are taken into consideration if the hospital submits a reconsideration request. Stakeholder feedback, provided via email, has indicated that while the educational review process is helpful to participating hospitals, it is limited in its impact, given that a hospital's validation result is not corrected even after an educational review determines that CMS reached an incorrect conclusion regarding a hospital's validation score for a given quarter. Based on this feedback, we proposed to formalize and update the Hospital OQR Program's chart-abstracted measure validation educational review process. Our goal is to reduce the number of reconsideration requests by identifying and correcting errors before the final yearly validation score is derived. By identifying and correcting any mistakes early on, this process could help decrease the burden during the annual reconsideration process, both for hospitals and CMS.

Therefore, in an effort to streamline this process, we proposed to: (1) Formalize this process; and (2) specify that if the results of an educational review indicate that we incorrectly scored a hospital's medical records

⁶⁹ Data Validation—Educational Reviews: Hospitals-Outpatient. Available at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic/Page/QnetTier3&cid=1228764927987>.

selected for validation, the corrected quarterly validation score would be used to compute the hospital's final validation score at the end of the calendar year. These proposals are discussed in more detail below.

(2) Educational Review Process for the CY 2020 Payment Determination and Subsequent Years

(a) Formalizing the Educational Review Process

As stated above, our informal processes for educational review have been described on the QualityNet Web site.⁷⁰ Under the informal process, hospitals that were selected and received a score for validation may request an educational review in order to better understand the results. Many times, hospitals request an educational review to examine any data element discrepancies, if they believe the score is incorrect, or when they have general questions about their score. Currently, hospitals receive validation results on a quarterly basis⁷¹ and can request informal educational reviews for each quarter. Under this informal process, a hospital has 30 calendar days from the date the validation results are posted on the QualityNet Secure Portal Web site to contact the CMS designated contractor, currently known as the Validation Support Contractor (VSC), to request an educational review.⁷² In response to a request, the VSC obtains and reviews medical records directly from the Clinical Data Abstraction Center (CDAC) and provides feedback. CMS, or its contractor, generally provides educational review results and responses via a secure file transfer to the hospital.⁷³

We proposed to formalize this educational review process, as described above, for the CY 2020 payment determination and subsequent years—in other words, starting for validations of CY 2018 data affecting the CY 2020 payment determination and subsequent years.

We invited public comment on our proposal to formalize the chart-abstracted measures validation educational review process for the CY

2020 payment determination and subsequent years as described above.

We did not receive any public comments on our proposal. Therefore, we are finalizing the proposal to formalize the chart-abstracted measures validation educational review process for the CY 2020 payment determination and subsequent years, as proposed.

(b) Validation Score Review and Correction

We previously finalized, in the CY 2011 OPPTS/ASC final rule with comment period (75 FR 72105 to 72106), that we calculate validation scores under the Hospital OQR Program using the upper bound of a one-tailed confidence interval (CI) with a 75 percent threshold level with a binomial approach. Using that approach, at the end of each calendar year, CMS computes a CI using the results of all four quarters to determine the final validation score.⁷⁴ If the upper bound of this confidence interval is 75 percent or higher, the hospital will pass the Hospital OQR Program validation requirement.⁷⁵ We proposed that if the results of a validation educational review determine that the original quarterly validation score was incorrect, the corrected score would be used to compute the final validation score and CI at the end of each calendar year.

To determine whether a quarterly validation score was correct, in the CY 2018 OPPTS/ASC proposed rule (82 FR 33683), we proposed to use a similar process as one previously finalized for reconsideration requests. Specifically, we proposed that during an educational review request, evaluating a validation score would consist of and be limited to reviewing data elements that were labeled as mismatched (between the originally calculated measure score and the measure score calculated in validation) in the original validation results. We would also take into consideration written justifications provided by hospitals in the Educational Review request. For more information about the previously finalized reconsideration request procedures, we refer readers to the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68487 through 68489), the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75118 through 75119), the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70524), and the CY 2017 OPPTS/ASC

final rule with comment period (81 FR 79795).

For the CY 2020 payment determination and subsequent years, we further proposed that if an educational review requested for any of the first 3 quarters of validation yields incorrect CMS validation results for chart-abstracted measures, according to the review process described above, we would use the corrected quarterly score, as recalculated during the educational review process, to compute the final CI at the end of the calendar year.⁷⁶ We note that for the last quarter of validation, because of the need to calculate the confidence interval in a timely manner and the insufficient time available to conduct educational reviews prior to the annual payment update, the validation score review and correction would not be available. Instead, the existing reconsideration process would be used to dispute any unsatisfactory validation result. We refer readers to section XIII.D.9. of this final rule with comment period for a discussion about our reconsideration and appeals process.

The corrected scores would be applicable to the corresponding quarter, for the first 3 quarters of validation, for which a request was submitted. Under this proposal, after evaluating the validation score during the educational review process, if results show that there was indeed an error in the originally calculated score, we would take steps to correct it. However, so as not to dissuade participation in the educational review process, corrected scores identified through the educational review would only be used to recalculate the CI if they indicate that the hospital performed more favorably than previously determined. If the hospital performed less favorably, their score would not be updated to reflect the less favorable score.

We note that under this proposal, the quarterly validation reports issued to hospitals would not be updated to reflect the corrected score due to the burden associated with reissuing corrected reports. However, the corrected score would be communicated to the hospital via secure file format as discussed above.

We invited public comment on our proposal, as discussed above for the CY 2020 payment determination and subsequent years, to use corrected quarterly scores, as recalculated during the educational review process

⁷³ Hospital OQR Validation Educational Review Process: Available at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228764927987>.

⁷⁴ QualityNet Data Validation Overview.

Available at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228758729356>.

⁷⁵ Ibid.

⁷⁶ Validation pass-fail status is determined by the confidence interval report. Detail at: <http://www.qualityreportingcenter.com/wp-content/uploads/2017/01/OQR-CY18-Validation-Webinar.508.2.pdf>.

described and finalized in section XIII.D.7.c.(2)(a) of this final rule with comment period above, to compute the final confidence interval for the first 3 quarters of validation.

Comment: Several commenters supported the proposed changes to use the educational review process to correct validation scores, noting that the policy will increase efficiency and help hospitals understand their annual validation score. One commenter recommended that CMS accept educational review requests from facilities that have a passing validation score, given that there could be errors that result in a mistakenly low, though still passing, score.

Response: We thank the commenters for their support and note that under the formalized process we are finalizing, hospitals may request an educational review to examine any data element discrepancies, if they believe the score is incorrect, or when they have general questions about their score (82 FR 33682). Under this process, hospitals receive validation results on a quarterly basis and can request informal educational reviews for each quarter. A hospital has 30 calendar days from the date the validation results are posted on the QualityNet Secure Portal Web site to contact the CMS designated contractor, currently known as the Validation Support Contractor (VSC), to request an educational review. To be clear, educational review requests are not limited to hospitals that fail validation; any hospital that receives validation results (pass or fail) may request a validation educational review.

After consideration of the public comments received, we are finalizing our proposal to use corrected quarterly scores, as recalculated during the educational review process described in section XIII.D.7.c.(2)(a) of this final rule with comment period above, to compute the final confidence interval for the first 3 quarters of validation for the CY 2020 payment determination and subsequent years, as proposed.

8. Extraordinary Circumstances Exception Process for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68489), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75119 through 75120), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66966), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524), and 42 CFR 419.46(d) for a complete discussion of our extraordinary circumstances

extension or exception process under the Hospital OQR Program.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79795), we finalized an update to our extraordinary circumstances exemption (ECE) policy to extend the ECE request deadline for both chart-abstracted and web-based measures from 45 days following an event causing hardship to 90 days following an event causing hardship, effective with ECEs requested on or after January 1, 2017.

We note that many of our quality reporting and value-based purchasing programs share a common process for requesting an exception from program reporting due to an extraordinary circumstance not within a provider's control. The Hospital IQR, Hospital OQR, IPFQR, ASCQR, and PCHQR Programs, as well as the Hospital Acquired Condition Reduction Program and the Hospital Readmissions Reduction Program, share similar processes for ECE requests. We refer readers to policies for the Hospital IQR Program (76 FR 51651 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), the IPFQR Program (77 FR 53659 through 53660 and 79 FR 45978), the ASCQR Program (77 FR 53642 through 53643 and 78 FR 75140 through 75141), the PCHQR Program (78 FR 50848), the HAC Reduction Program (80 FR 49579 through 49581), and the Hospital Readmissions Reduction Program (80 FR 49542 through 49543) for program specific information about extraordinary circumstances exceptions requests. As noted below, some of these policies were updated in the FY 2018 IPPS/LTCH PPS final rule.

In reviewing the policies for these programs, we recognized that there are five areas in which these programs have variances regarding ECE requests. These are: (1) Allowing the facilities or hospitals to submit a form signed by the facility's or hospital's CEO versus CEO or designated personnel; (2) requiring the form be submitted within 30 days following the date that the extraordinary circumstance occurred versus within 90 days following the date the extraordinary circumstance occurred; (3) inconsistency regarding specification of a timeline for us to provide our formal response notifying the facility or hospital of our decision; (4) inconsistency regarding specification of our authority to grant ECEs due to CMS data system issues; and (5) referring to the program as "extraordinary extensions/exemptions" versus as "extraordinary circumstances exceptions." We believe addressing

these five areas, as appropriate, can improve administrative efficiencies for affected facilities or hospitals.

We note that, in the FY 2018 IPPS/LTCH PPS final rule, we examined our policies in these areas for the Hospital Readmissions Reduction Program, the HAC Reduction Program, the Hospital IQR Program, the PCHQR Program and the IPFQR Program (82 FR 38240, 38277, 38410, 38425 and 38473 through 38474, respectively) and finalized proposals to address differences in these areas for those programs. In section XIV.D.6. of this final rule with comment period, we are also finalizing revisions to our ECE policies for the ASCQR Program.

With the exception of the specification of a timeline for us to provide our formal response and the terminology used to describe these processes (items 3 and 5 above), the Hospital OQR Program is aligned with the existing and proposed policies for the other quality reporting programs discussed above. As a result, we proposed to rename the process as the extraordinary circumstances exceptions (ECE) policy and make conforming changes to 42 CFR 419.46(d).

a. ECE Policy Nomenclature

We have observed that while all quality programs listed above have developed similar policies to provide exceptions from program requirements to facilities that have experienced extraordinary circumstances, such as natural disasters, these programs refer to these policies using inconsistent terminology. Some programs refer to these policies as "extraordinary circumstances extensions/exemptions" while others refer to the set of policies as "extraordinary circumstances exceptions." Several programs (specifically, the Hospital VBP Program, HAC Reduction Program, and the Hospital Readmissions Reduction Program) are not able to grant extensions to required data reporting timelines due to their reliance on data external to their program and, thus, the term, "extraordinary circumstances extensions/exemptions" is not applicable to all programs. However, all of the described programs are able to offer exceptions from their reporting requirements.

As stated above, in order to align this policy across CMS quality programs, we proposed to: (1) Change the name of this policy from "extraordinary circumstances extensions or exemptions" to "extraordinary circumstances exceptions" for the Hospital OQR Program, beginning January 1, 2018; and (2) revise 42 CFR

419.46(d) of our regulations to reflect this change. We note that changing the terminology for this policy does not change the availability for a hospital to request an extension under the Hospital OQR Program.

We invited public comment on these proposals as discussed above.

Comment: One commenter supported the proposed alignment of the ECE process across quality reporting programs.

Response: We appreciate the commenter's support.

After consideration of the public comment we received, we are finalizing the proposal to rename the process as the extraordinary circumstances exceptions (ECE) policy and make conforming changes to 42 CFR 419.46(d), as proposed.

b. Timeline for CMS Response to ECE Requests

We also note that we believe it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize that the number of requests we receive, and the complexity of the information provided impacts the actual timeframe to make ECE determinations. To improve transparency of our process, we believe it is appropriate to specify that we will strive to complete our review of each request within 90 days of receipt.

9. Hospital OQR Program Reconsideration and Appeals Procedures for the CY 2020 Payment Determination and Subsequent Years

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68487 through 68489), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75118 through 75119), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524), and the CY 2017 OPPS/ASC final rule with comment period (81 FR 79795) for a discussion of our reconsideration and appeals procedures. We codified the process by which participating hospitals may submit requests for reconsideration at 42 CFR 419.46(f). We also codified language at § 419.46(f)(3) regarding appeals with the Provider Reimbursement Review Board.

We did not propose any changes to our reconsideration and appeals procedure.

E. Payment Reduction for Hospitals That Fail To Meet the Hospital OQR Program Requirements for the CY 2018 Payment Determination

1. Background

Section 1833(t)(17) of the Act, which applies to subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act), states that hospitals that fail to report data required to be submitted on measures selected by the Secretary, in the form and manner, and at a time, specified by the Secretary will incur a 2.0 percentage point reduction to their Outpatient Department (OPD) fee schedule increase factor; that is, the annual payment update factor. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction applies only to the payment year involved and will not be taken into account in computing the applicable OPD fee schedule increase factor for a subsequent year.

The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data in order to receive the full payment update factor and that fail to meet the Hospital OQR Program requirements. Hospitals that meet the reporting requirements receive the full OPPS payment update without the reduction. For a more detailed discussion of how this payment reduction was initially implemented, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68769 through 68772).

The national unadjusted payment rates for many services paid under the OPPS equal the product of the OPPS conversion factor and the scaled relative payment weight for the APC to which the service is assigned. The OPPS conversion factor, which is updated annually by the OPD fee schedule increase factor, is used to calculate the OPPS payment rate for services with the following status indicators (listed in Addendum B to the final rule, which is available via the Internet on the CMS Web site): “J1”, “J2”, “P”, “Q1”, “Q2”, “Q3”, “R”, “S”, “T”, “V”, or “U”. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79796), we clarified that the reporting ratio does not apply to codes with status indicator “Q4” because services and procedures coded with status indicator “Q4” are either packaged or paid through the Clinical Laboratory Fee Schedule and are never paid separately through the OPPS. Payment for all services assigned to these status indicators will be subject to the reduction of the national

unadjusted payment rates for hospitals that fail to meet Hospital OQR Program requirements, with the exception of services assigned to New Technology APCs with assigned status indicator “S” or “T”. We refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68770 through 68771) for a discussion of this policy.

The OPD fee schedule increase factor is an input into the OPPS conversion factor, which is used to calculate OPPS payment rates. To reduce the OPD fee schedule increase factor for hospitals that fail to meet reporting requirements, we calculate two conversion factors—a full market basket conversion factor (that is, the full conversion factor), and a reduced market basket conversion factor (that is, the reduced conversion factor). We then calculate a reduction ratio by dividing the reduced conversion factor by the full conversion factor. We refer to this reduction ratio as the “reporting ratio” to indicate that it applies to payment for hospitals that fail to meet their reporting requirements. Applying this reporting ratio to the OPPS payment amounts results in reduced national unadjusted payment rates that are mathematically equivalent to the reduced national unadjusted payment rates that would result if we multiplied the scaled OPPS relative payment weights by the reduced conversion factor. For example, to determine the reduced national unadjusted payment rates that applied to hospitals that failed to meet their quality reporting requirements for the CY 2010 OPPS, we multiplied the final full national unadjusted payment rate found in Addendum B of the CY 2010 OPPS/ASC final rule with comment period by the CY 2010 OPPS final reporting ratio of 0.980 (74 FR 60642).

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68771 through 68772), we established a policy that the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies would each equal the product of the reporting ratio and the national unadjusted copayment or the minimum unadjusted copayment, as applicable, for the service. Under this policy, we apply the reporting ratio to both the minimum unadjusted copayment and national unadjusted copayment for services provided by hospitals that receive the payment reduction for failure to meet the Hospital OQR Program reporting requirements. This application of the reporting ratio to the national unadjusted and minimum unadjusted copayments is calculated according to

§ 419.41 of our regulations, prior to any adjustment for a hospital's failure to meet the quality reporting standards according to § 419.43(h). Beneficiaries and secondary payers thereby share in the reduction of payments to these hospitals.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we established the policy that all other applicable adjustments to the OPPS national unadjusted payment rates apply when the OPD fee schedule increase factor is reduced for hospitals that fail to meet the requirements of the Hospital OQR Program. For example, the following standard adjustments apply to the reduced national unadjusted payment rates: the wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; the rural sole community hospital adjustment; and the adjustment for devices furnished with full or partial credit or without cost. Similarly, OPSS outlier payments made for high cost and complex procedures will continue to be made when outlier criteria are met. For hospitals that fail to meet the quality data reporting requirements, the hospitals' costs are compared to the reduced payments for purposes of outlier eligibility and payment calculation. We established this policy in the OPSS beginning in the CY 2010 OPSS/ASC final rule with comment period (74 FR 60642). For a complete discussion of the OPSS outlier calculation and eligibility criteria, we refer readers to section II.G. of this final rule with comment period.

2. Reporting Ratio Application and Associated Adjustment Policy for CY 2018

In the CY 2018 OPSS/ASC proposed rule (82 FR 33684 through 33685), we proposed to continue our established policy of applying the reduction of the OPD fee schedule increase factor through the use of a reporting ratio for those hospitals that fail to meet the Hospital OQR Program requirements for the full CY 2018 annual payment update factor. For the CY 2018 OPSS, the proposed reporting ratio was 0.980, calculated by dividing the proposed reduced conversion factor of 74.953 by the proposed full conversion factor of 76.483. We proposed to continue to apply the reporting ratio to all services calculated using the OPSS conversion factor. For the CY 2018 OPSS, we proposed to apply the reporting ratio, when applicable, to all HCPCS codes to which we have proposed status indicator assignments of "J1", "J2", "P", "Q1", "Q2", "Q3", "R", "S", "T", "V", and "U" (other than new technology

APCs to which we have proposed status indicator assignment of "S" and "T"). We proposed to continue to exclude services paid under New Technology APCs. We proposed to continue to apply the reporting ratio to the national unadjusted payment rates and the minimum unadjusted and national unadjusted copayment rates of all applicable services for those hospitals that fail to meet the Hospital OQR Program reporting requirements. We also proposed to continue to apply all other applicable standard adjustments to the OPSS national unadjusted payment rates for hospitals that fail to meet the requirements of the Hospital OQR Program. Similarly, we proposed to continue to calculate OPSS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements.

We invited public comments on these proposals but no comments were received. For the CY 2018 OPSS, the final reporting ratio is 0.980, calculated by dividing the final reduced conversion factor of 77.064 by the final full conversion factor of 78.636. We are finalizing the rest of our proposal without modification.

XIV. Requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

A. Background

1. Overview

We refer readers to section XIII.A.1. of this final rule with comment period for a general overview of our quality reporting programs.

2. Statutory History of the ASCQR Program

We refer readers to section XIV.K.1. of the CY 2012 OPSS/ASC final rule with comment period (76 FR 74492 through 74494) for a detailed discussion of the statutory history of the ASCQR Program.

3. Regulatory History of the ASCQR Program

We seek to promote higher quality and more efficient health care for beneficiaries. This effort is supported by the adoption of widely-agreed-upon quality measures. We have worked with relevant stakeholders to define measures of quality in almost every healthcare setting and currently measure some aspect of care for almost all Medicare beneficiaries. These measures assess structural aspects of care, clinical processes, patient experiences with care, and outcomes. We have implemented quality measure reporting programs for multiple settings of care.

To measure the quality of ASC services, we implemented the ASCQR Program. We refer readers to section XV.A.3. of the CY 2014 OPSS/ASC final rule with comment period (78 FR 75122), section XIV. of the CY 2015 OPSS/ASC final rule with comment period (79 FR 66966 through 66987), section XIV. of the CY 2016 OPSS/ASC final rule with comment period (80 FR 70526 through 70538) and section XIV. of the CY 2017 OPSS/ASC final rule with comment period (81 FR 79797 through 79826) for an overview of the regulatory history of the ASCQR Program.

B. ASCQR Program Quality Measures

1. Considerations in the Selection of ASCQR Program Quality Measures

We refer readers to the CY 2013 OPSS/ASC final rule with comment period (77 FR 68493 through 68494) for a detailed discussion of the priorities we consider for ASCQR Program quality measure selection. We did not propose any changes to this policy.

2. Accounting for Social Risk Factors in the ASCQR Program

We understand that social risk factors such as income, education, race and ethnicity, employment, disability, community resources, and social support (certain factors of which are also sometimes referred to as socioeconomic status (SES) factors or socio-demographic status (SDS) factors) play a major role in health. One of our core objectives is to improve beneficiary outcomes including reducing health disparities, and we want to ensure that all beneficiaries, including those with social risk factors, receive high quality care. In addition, we seek to ensure that the quality of care furnished by providers and suppliers is assessed as fairly as possible under our programs while ensuring that beneficiaries have adequate access to excellent care.

We have been reviewing reports prepared by the Office of the Assistant Secretary for Planning and Evaluation (ASPE)⁷⁷ and the National Academies of Sciences, Engineering, and Medicine on the issue of measuring and accounting for social risk factors in CMS' value-based purchasing and quality reporting programs, and considering options on how to address the issue in these programs. On December 21, 2016, ASPE submitted a

⁷⁷ Office of the Assistant Secretary for Planning and Evaluation. 2016. Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs. 21 Dec. 2016. Available at: <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

Report to Congress on a study it was required to conduct under section 2(d) of the Improving Medicare Post-Acute Care Transformation (IMPACT) Act of 2014. The study analyzed the effects of certain social risk factors of Medicare beneficiaries on quality measures and measures of resource use used in one or more of nine Medicare value-based purchasing programs.⁷⁸ The report also included considerations for strategies to account for social risk factors in these programs. In a January 10, 2017 report released by the National Academies of Sciences, Engineering, and Medicine, the body provided various potential methods for accounting for social risk factors, including stratified public reporting.⁷⁹

As noted in the FY 2017 IPPS/LTCH PPS final rule, the NQF has undertaken a 2-year trial period in which new measures, measures undergoing maintenance review, and measures endorsed with the condition that they enter the trial period can be assessed to determine whether risk adjustment for selected social risk factors is appropriate for these measures. This trial entailed temporarily allowing inclusion of social risk factors in the risk-adjustment approach for some performance measures. Since publication of the proposed rule, we have learned that the National Quality Forum (NQF) has concluded their initial trial on risk adjustment for quality measures.⁸⁰ Based on the findings from the initial trial, we have been informed that the NQF intends to continue its work to evaluate the impact of social risk factor adjustment on intermediate outcome and outcome measures for an additional three years. We understand that the extension of this work will allow NQF to determine further how to effectively account for social risk factors through risk adjustment and other strategies in quality measurement.

As we continue to consider the analyses and recommendations from these reports and the results of the NQF trial on risk adjustment for quality measures, we are continuing to work with stakeholders in this process. As we have previously communicated, we are

concerned about holding providers to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities or minimize incentives to improve the outcomes for disadvantaged populations. Keeping this concern in mind, in the proposed rule we sought public comment on whether we should account for social risk factors in the ASCQR Program, and if so, what method or combination of methods would be most appropriate for accounting for social risk factors. Examples of methods include: Confidential reporting to providers of measure rates stratified by social risk factors; public reporting of stratified measure rates; and potential risk adjustment of a particular measure as appropriate based on data and evidence.

In addition, we requested public comment on which social risk factors might be most appropriate for reporting stratified measure scores and/or potential risk adjustment of a particular measure. Examples of social risk factors include, but are not limited to, dual eligibility/low-income subsidy, race and ethnicity, and geographic area of residence. We sought comments on which of these factors, including current data sources where this information would be available, could be used alone or in combination, and whether other data should be collected to better capture the effects of social risk. We will take commenters' input into consideration as we continue to assess the appropriateness and feasibility of accounting for social risk factors in the ASCQR Program. We note that any such changes would be proposed through future notice and comment rulemaking.

We look forward to working with stakeholders as we consider the issue of accounting for social risk factors and reducing health disparities in CMS programs. Of note, implementing any of the above methods would be taken into consideration in the context of how this and other CMS programs operate (for example, data submission methods, availability of data, statistical considerations relating to reliability of data calculations, among others), so we also welcome comment on operational considerations. CMS is committed to ensuring that its beneficiaries have access to and receive excellent care, and that the quality of care furnished by providers and suppliers is assessed fairly in CMS programs.

We received extensive comments in response to our request for public comment on whether we should account for social risk factors in the ASCQR Program, and if so, what method or combination of methods

would be most appropriate for accounting for social risk factors.

Comment: Many commenters expressed support for CMS' effort to address social risk factors in the ASCQR Program, noting that social risk factors are powerful drivers of care provision and clinical outcomes.

One commenter recommended that CMS apply risk adjustment by stratifying providers into groups by proportion of at-risk patients, noting that this approach does not require measure-level research. Another commenter recommended that CMS determine whether or not social risk factor disparities exist in the ASC setting prior to committing to adjusting any measures for these factors, and that CMS rely on data elements existing in CMS databases. A few commenters recommended that CMS provide ASCs with both risk-adjusted and unadjusted data in order to allow for transparency.

One commenter noted that better data sources for socioeconomic status are needed, including patient-level and community-level data sources, and that measure-specific risk adjustment methodologies are appropriate. Finally, one commenter noted that risk adjustment should balance fair measurement with ensuring that disparities are not masked.

Response: We appreciate all the comments and interest in this topic. As we have previously stated regarding risk adjustment of publicly reported data for these factors, we are concerned about holding providers and suppliers to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities or minimize incentives to improve outcomes for disadvantaged populations. With respect to public reporting, while we agree with commenters and believe it is important to avoid a scenario in which underlying disparities are masked rather than addressed, we also agree with commenters who support the public reporting of risk-adjusted data. We appreciate the need to balance risk adjustment as a strategy to account for social risk factors with the concern that risk adjustment could minimize incentives and reduce efforts to address disparities for patients with social risk factors. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have access to excellent care. We will consider all suggestions as we continue to assess the issue of accounting for social risk factors within individual measures and the program as a whole, and will actively perform

⁷⁸ Ibid.

⁷⁹ National Academies of Sciences, Engineering, and Medicine. 2017. Accounting for social risk factors in Medicare payment. Washington, DC: The National Academies Press.

⁸⁰ NQF. NQF Initiative to Determine the Impact of Adjusting Healthcare Performance Measures for Social Risk Factors Highlights Successes, Opportunities. Available at: https://www.qualityforum.org/News_And_Resources/Press_Releases/2017/NQF_Initiative_to_Determine_the_Impact_of_Adjusting_Healthcare_Performance_Measures_for_Social_Risk_Factors_Highlights_Successes,_Opportunities.aspx.

additional research and monitor for trends to prevent unintended consequences. We intend to conduct further analyses on the impact of different approaches to accounting for social risk factors in quality programs.

Comment: Many commenters recommended several social variables and comorbidities, including: Body mass index; race; smoking status; age; gender; back pain; pain in non-operative lower extremity joint; health risk status; mental health factors; chronic narcotic use; socioeconomic status; and pre-procedure ambulatory status.

Commenters also recommended that future risk variables could include literacy, marital status, live-in home support, family support structure, and home health resources. One commenter recommended that the following variables not be used: American Society of Anesthesiologists score; range of motion; and mode of patient-reported outcome measure collection. One commenter expressed concern with the use of dual eligible status as a factor, noting that it does not identify or address the specific factors that result in higher spending and/or poorer health outcomes.

Response: We appreciate commenters' recommendations regarding specific social risk factor variables and will consider them as we continue exploring options for accounting for social risk factors in the ASCQR Program.

Comment: Several commenters recommended that CMS consider potential administrative complexities as well as patient impact when implementing risk-adjustment methodologies.

Response: As we consider the feasibility of collecting patient-level data and the impact of strategies to account for social risk factors through further analysis, we will also continue to evaluate the reporting burden on patients and providers. We reiterate that we are committed to ensuring that CMS beneficiaries have access to and receive excellent care and that the quality of

care furnished by providers and suppliers is assessed fairly in CMS programs.

Comment: Some commenters recommended that CMS consider recommendations from NQF, ASPE, and the Agency for Healthcare Research and Quality (AHRQ).

Response: Any proposals would be made in future rulemaking after further research and continued stakeholder engagement including from NQF. In addition, we look forward to working with all stakeholders, including NQF, ASPE, the National Academy of Medicine, and AHRQ.

We thank all of the commenters for their input and will consider all suggestions as we continue to assess the issue of accounting for social risk factors within individual measures, the ASCQR Program as a whole, and across CMS quality programs.

3. Policies for Retention and Removal of Quality Measures From the ASCQR Program

a. Retention of Previously Adopted ASCQR Program Measures

We previously adopted a policy that quality measures adopted for an ASCQR Program measure set for a previous payment determination year be retained in the ASCQR Program for measure sets for subsequent payment determination years, except when they are removed, suspended, or replaced as indicated (76 FR 74494 and 74504; 77 FR 68494 through 68495; 78 FR 75122; and 79 FR 66967 through 66969). We did not propose any changes to this policy.

b. Measure Removal

We refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66967 through 66969) and 42 CFR 416.320 for a detailed discussion of the process for removing adopted measures from the ASCQR Program. We did not propose any changes to this process.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33687), we proposed to

remove a total of three measures for the CY 2019 payment determination and subsequent years: (1) ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing; (2) ASC-6: Safe Surgery Checklist Use; and (3) ASC-7: ASC Facility Volume Data on Selected Procedures. These proposals are discussed in more detail below.

(1) Removal of ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing Beginning With the CY 2019 Payment Determination

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74499 through 74501) where we adopted ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure (formerly NQF #0264) beginning with the CY 2014 payment determination and finalized the measure's data collection and data submission timelines (76 FR 74515 through 74516). This measure assesses whether intravenous antibiotics given for prevention of surgical site infection were administered on time per clinical guidelines.

Based on our analysis of ASCQR Program measure data for CY 2014 through 2016 encounters, ASC performance on this measure is so high and unvarying that meaningful distinctions in improvement cannot be made; as a result, we believe this measure meets removal criterion number one under the ASCQR Program's finalized measure removal criteria. The ASCQR Program previously finalized two criteria for determining when a measure is "topped out:" (1) When there is statistically indistinguishable performance at the 75th and 90th percentiles of national facility performance; and (2) when the measure's truncated coefficient of variation (COV) is less than or equal to 0.10 (79 FR 66968 through 66969). These analyses are captured in the table below.

ASC-5—PROPHYLACTIC INTRAVENOUS (IV) ANTIBIOTIC TIMING TOPPED OUT ANALYSIS

Encounters	Number of ASCs	75th percentile	90th percentile	Truncated COV
CY 2014	2,206	100.000	100.000	0.02633
CY 2015	2,196	100.000	100.000	0.03289
CY 2016	2,158	100.000	100.000	0.02619

As displayed in the table above, there is no distinguishable difference in ASC performance between the 75th and 90th percentiles under the ASC-5: Prophylactic Intravenous (IV) Antibiotic

Timing measure, and the truncated coefficient of variation has been below 0.10 since 2014. Therefore, the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure meets both "topped

out" measure criteria for the ASCQR Program.

Furthermore, we note that the NQF endorsement was removed on February 13, 2015; in its discussion of whether to

continue endorsement for the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure, the Surgery Standing Committee also noted that ASC performance on this measure was very high, with 99 percent of facilities meeting the timely antibiotic administration threshold in CY 2013.⁸¹ We believe that removal of this measure from the ASCQR Program measure set is appropriate, as there is little room for improvement and removal would alleviate maintenance costs and administrative burden to ASCs. As such, we believe the burdens outweigh the benefits of keeping the measure in the ASCQR Program. Therefore, in the CY 2018 OPPTS/ASC proposed rule (82 FR 33687), we proposed to remove the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure for the CY 2019 payment determination and subsequent years. Furthermore, we note that a similar measure was removed from the Hospital OQR Program in the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66942 through 66944) due to topped-out status.

We invited public comment on our proposal to remove the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure for the CY 2019 payment determination and subsequent years as discussed above.

Comment: Many commenters supported the proposal to remove the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure, and agreed with CMS' rationale that the measure does not add value and that removal of

this measure reduces administrative burden.

Response: We thank the commenters for their support.

Comment: One commenter opposed the proposed removal of ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure. The commenter noted that the measure provides value and recommended that the measure be retained in the ASCQR Program despite having "topped-out" status.

Response: We understand commenter's concern with removing the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure, and agree that the data captured under the ASC-5 measure could be useful in selecting an ASC at which to receive care. However, we believe that removal of this measure from the ASCQR Program measure set is appropriate as there is little room for improvement, as shown by our data in the table above, and removal would alleviate maintenance costs and administrative burden to ASCs. Overall, we believe the burdens outweigh the benefits of keeping the measure in the ASCQR Program, as stated in our proposal. In response to concerns that the measure adds value, we note that Prophylactic Intravenous (IV) Antibiotic Timing measure data are collected and publicly reported by the ASC Quality Collaboration.

After consideration of the public comments we received, we are finalizing the proposal to remove the ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing measure for the CY

2019 payment determination and subsequent years, as proposed.

(2) Removal of ASC-6: Safe Surgery Checklist Use Beginning With the CY 2019 Payment Determination

We refer readers to the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74505 through 74507 and 74509), where we adopted the ASC-6: Safe Surgery Checklist Use measure beginning with the CY 2015 payment determination. This structural measure of facility process assesses whether an ASC employed a safe surgery checklist that covered each of the three critical perioperative periods (prior to administering anesthesia, prior to skin incision, and prior to patient leaving the operating room) for the entire data collection period.

Based on our analysis of ASCQR Program measure data for CYs 2014 to 2016 encounters, the ASC-6: Safe Surgery Checklist Use measure meets our first criterion for measure removal that measure performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made. The ASCQR Program previously finalized two criteria for determining when a measure is "topped out:" (1) When there is statistically indistinguishable performance at the 75th and 90th percentiles of national facility performance; and (2) when the measure's truncated coefficient of variation is less than or equal to 0.10 (79 FR 66968 through 66969). These analyses are captured in the table below.

ASC-6—SAFE SURGERY CHECKLIST USE PERFORMANCE ANALYSIS

Encounters	Number of ASCs	Rate	75th percentile	90th percentile	Truncated COV
CY 2012	4,356	0.989	100.000	100.000	0.106
CY 2013 ⁸²	(*)	(*)	(*)	(*)	(*)
CY 2014	4,328	0.997	100.000	100.000	0.050
CY 2015	4,305	0.998	100.000	100.000	0.043

Based on the analysis above the national rate of "Yes" response for the ASC-6: Safe Surgery Checklist Use measure is nearly 1.0, or 100 percent, nationwide, and has remained at this level for the last 2 years. In addition, there is no distinguishable difference in ASC performance between the 75th and 90th percentiles under measure, and the truncated coefficient of variation has been below 0.10 since 2014. We believe

that removal of this measure from the ASCQR Program measure set is appropriate, as there is little room for improvement. In addition, removal of this measure would alleviate the maintenance costs and administrative burden to ASCs associated with retaining the measure. As such, we believe the burdens of this measure outweigh the benefits of keeping the measure in the Program.

Therefore, in the CY 2018 OPPTS/ASC proposed rule (82 FR 33688), we proposed to remove ASC-6: Safe Surgery Checklist Use from the ASCQR Program measure set beginning with the CY 2019 payment determination. We also refer readers to section XIII.B.4.c.(6) of this final rule with comment period, where the Hospital OQR Program is removing a similar measure.

⁸¹ NQF. "NQF-Endorsed Measures for Surgical Procedures." Technical Report. Available at: http://www.qualityforum.org/Publications/2015/02/NQF-Endorsed_Measures_for_Surgical_Procedures.aspx.

⁸² We note that no performance data was collected for CY 2013 events for the web-based

measures; therefore, we lack performance data for the ASC-6 measure for this year of the ASCQR Program. Available at: <https://www.qualitynet.org/dcs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1228890196351&blobheader=multipart%2Foctet-stream&blobheadername1=>

Content-Disposition&blobheadername1=attachment%3Bfilename%3DASC_wbnr_prsntn_121813_1ppg.pdf&blobcol=urldata&blobtable=MungoBlobs.

We invited public comment on our proposal to remove the ASC-6: Safe Surgery Checklist Use measure for the CY 2019 payment determination and subsequent years as discussed above.

Comment: Many commenters supported the proposal to remove the ASC-6: Safe Surgery Checklist Use measure, and agreed with our rationale that the measure does not add value and that removal would reduce administrative burden.

Response: We thank the commenters for their support.

Comment: A few commenters opposed the proposed removal of the ASC-6: Safe Surgery Checklist Use measure, noting that this measure provides value and recommending retention of this measure in the ASCQR Program. One commenter expressed concern that high performance on the measure does not indicate whether perioperative communication among team members is effective, and recommended that CMS retain the measure until there is further evidence of whether the use of a safe surgery checklist is supporting effective perioperative communication.

Response: While we agree the ASC-6: Safe Surgery Checklist Use measure captures data patients may find useful in comparing ASCs while selecting an ASC for their care, we believe that removal of this measure from the ASCQR Program measure set is appropriate as there is little room for improvement, as shown by our data in the table above. In addition, removal of this measure would alleviate the maintenance costs and administrative burden to ASCs. Therefore, overall, we believe the burden outweighs the benefits of keeping the measure in the ASCQR Program, as stated in our proposal. We also note that high performance on the ASC-6: Safe Surgery Checklist Use measure does not indicate whether perioperative communication among team members is effective; this measure is not specified to assess the effectiveness of a team's communication, only whether a safe surgery checklist is used at the ASC. Therefore, we do not believe continuing to collect—or, conversely, ceasing to collect—data under this measure will assess or affect the effectiveness of perioperative communication within ASCs.

After consideration of the public comments we received, we are finalizing the proposal to remove ASC-6: Safe Surgery Checklist Use from the ASCQR Program measure set beginning with the CY 2019 payment determination, as proposed. We also refer readers to section XIII.B.4.c.(6) of

this final rule where we are finalizing removal of a similar measure from the Hospital OQR Program.

(3) Removal of ASC-7: ASC Facility Volume Data on Selected Procedures Beginning With the CY 2019 Payment Determination

We refer readers to the CY 2012 OPPI/ASC final rule with comment period (76 FR 74507 through 74509), where we adopted the ASC-7: ASC Facility Volume Data on Selected Procedures measure beginning with the CY 2015 payment determination. This structural measure of facility capacity collects surgical procedure volume data on six categories of procedures frequently performed in the ASC setting (76 FR 74507).

We adopted the ASC-7: ASC Facility Volume Data on Selected Procedures measure based on evidence that volume of surgical procedures, particularly of high-risk surgical procedures, is related to better patient outcomes, including decreased medical errors and mortality (76 FR 74507). We further stated our belief that publicly reporting volume data would provide patients with beneficial performance information to use in selecting a care provider. However, over time, we have adopted, and intend to continue to adopt, more measures assessing ASCs' performance on specific procedure types, like ASC-14. As stated below, we believe measures on specific procedure types will provide patients with more valuable ASC performance data. These types of measures are also more strongly associated with desired patient outcomes for the particular topic. For example, in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79801 through 79803), we adopted ASC-14: Unplanned Anterior Vitrectomy, a measure assessing patient outcomes following ophthalmologic procedures, and proposed to adopt a second ophthalmology-specific measure, ASC-16: Toxic Anterior Segment Syndrome, in the CY 2018 proposed rule (82 FR 33689 through 33691). We believe these procedure-type-specific measures provide patients with more valuable ASC performance data than the ASC-7: ASC Facility Volume Data on Selected Procedures measure in selecting an ASC for their care. For this reason, we believe the ASC-7: ASC Facility Volume Data on Selected Procedures measure meets our second criterion for removal from the program; specifically, that there are other measures available that are more strongly associated with desired patient outcomes for the particular topic. In addition, removal of this measure would

alleviate the maintenance costs and administrative burden to ASCs associated with retaining the measure. As such, we believe the burdens of this measure outweigh the benefits of keeping the measure in the ASCQR Program. Therefore, in the CY 2018 OPPI/ASC proposed rule (82 FR 33688), we proposed to remove ASC-7: ASC Facility Volume Data on Selected Procedures from the ASCQR Program beginning with the CY 2019 payment determination. We refer readers to section XIII.B.4.c.(2) of this final rule with comment period where we are removing a similar measure from the Hospital OQR Program.

We invited public comment on our proposal to remove the ASC-7: ASC Facility Volume Data on Selected Procedures measure for the CY 2019 payment determination and subsequent years as discussed above.

Comment: Many commenters supported the proposal to remove the ASC-7: ASC Facility Volume Data on Selected Procedures measure and agreed with CMS' rationale that the measure does not add value and that its removal reduces administrative burden.

Response: We thank the commenters for their support.

Comment: A few commenters opposed the proposal to remove the ASC-7: ASC Facility Volume Data on Selected Procedures measure. One commenter cited concern that removal of this measure will limit the availability of important data that informs comparative research, outcomes research, and that this measure provides immediate consumer value. Moreover, the commenter expressed concern that reducing the data available will interfere with the growing acceptance of ASC-based procedures. Another commenter noted that the measure is not overly burdensome and that it is helpful for strategic planning.

Response: While we believe that continuing to collect and publicly report facility volume data would provide patients with beneficial performance information to use in selecting a care provider, over time, we have adopted, and intend to continue to adopt, more measures assessing ASCs' performance on specific procedure types. In addition, removal of this measure would alleviate the maintenance costs and administrative burden to ASCs associated with retaining the measure. As such, although we recognize the value of the measure for research, strategic planning, and in demonstrating the value of ASC-based procedures, overall we believe the burden of this measure outweighs the benefits of

keeping the measure in the ASCQR Program as stated in our proposal.

After consideration of the public comments we received, we are finalizing our proposal to remove ASC-7: ASC Facility Volume Data on Selected Procedures from the ASCQR Program beginning with the CY 2019 payment determination, as proposed.

4. Delaying Implementation of ASC-15a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures Beginning With the CY 2020 Payment Determination

We refer readers to the CY 2017 OPSS/ASC final rule with comment period where we adopted ASC-15a-e (81 FR 79803 through 79817), and finalized data collection and data submission timelines (81 FR 79822 through 79824). These measures assess patients' experience with care following a procedure or surgery in an ASC by rating patient experience as a means for empowering patients and improving the quality of their care.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33688), we proposed to delay implementation of the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based Measures (ASC-15a-e) beginning with the CY 2020 payment determination (CY 2018 data collection) until further action in future rulemaking. Since our adoption of these measures, we have come to believe that we need to collect more operational and implementation data. Specifically, we want to ensure that the survey measures appropriately account for patient response rates, both aggregate and by survey administration method; reaffirm the reliability of national implementation of OAS CAHPS Survey data; and appropriately account for the burden associated with administering the survey in the outpatient setting of care. We note that commenters expressed concern over the burden associated with the survey in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79810). We believe that the voluntary national implementation of the survey, which began in January 2016, would provide valuable information moving forward. We plan to conduct analyses of the national implementation data to undertake any necessary modifications to the survey tool and/or CMS systems. We believe it is important to allow time for any modifications before requiring the survey under the ASCQR Program. However, we continue to believe that these measures address an area of care

that is not adequately addressed in our current measure set and will be useful to assess aspects of care where the patient is the best or only source of information.

Further, we continue to believe these measures will enable objective and meaningful comparisons between ASCs. Therefore, we proposed to delay implementation of ASC-15a-e beginning with the CY 2020 payment determination (CY 2018 data collection) until further action in future rulemaking. We also refer readers to section XIII.B.5. of this final rule with comment period where we are finalizing a similar policy in the Hospital OQR Program.

We invited public comment on our proposal to delay the OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination as discussed above.

Comment: Many commenters supported the proposal to delay implementation of the OAS CAHPS Survey and noted that if the survey could be improved, ASCs would benefit from having their scores available for comparison to hospital outpatient departments. One commenter agreed that an analysis of the national implementation will provide valuable information. Another commenter noted that the high volume of facilities and hospitals participating in the voluntary national implementation indicates that the data collection burden of the survey is low.

Response: We thank the commenters for their support, and agree that an analysis of the national implementation of OAS CAHPS Survey will provide valuable information as we continue to assess the survey. We also acknowledge that comparing scores between ASCs and hospital outpatient departments may be useful to ASCs and that some ASCs may find the survey to have only limited burden. However, as discussed below, in order to be responsive to concerns about vendor costs and to review the results of the national implementation, we are finalizing our proposal to delay implementation of the OAS CAHPS Survey.

Comment: A few commenters opposed the proposal to delay implementation of the OAS CAHPS Survey, noting the importance of patient experience data. One commenter noted that the survey assesses areas of care not yet adequately addressed and that patient experience of care is a priority area. Another commenter noted a belief that the use of surveys about patient experience in health care settings is the best way to examine whether high-

quality, patient-centered care actually takes place.

Response: We agree that patient experience of care data is valuable in assessing the quality of care provided at an ASC and assisting patients in selecting a provider or supplier for their care. However, we seek to ensure the value of this data is appropriately balanced against the implementation and operational burdens imposed to collect and submit these data. As we stated in the proposed rule, we believe delaying implementation of the OAS CAHPS Survey will provide additional time to assess these issues before moving forward.

Comment: A few commenters recommended that the survey be voluntary indefinitely or until implementation issues with the survey are addressed. One commenter recommended that CMS delay implementation of the OAS CAHPS indefinitely and instead increase the number of surveyors that inspect ASCs. Another commenter recommended that CMS adopt the CAHPS surgical care survey as a survey option.

Response: We thank the commenters for their recommendations, and we will take these comments under consideration as we craft future policy. We do not believe that inspectors replace a patient-experience-of-care survey, because inspections and surveys collect different information. Specifically, we believe that patient experience data is an important category of information to collect and would not be captured by surveyors. Further, we believe a patient experience of care survey will provide important information to not just providers, but also patients and the general public. Therefore, we will continue to work towards a successful implementation of a patient experience survey. In addition, we acknowledge the commenter's suggestion that we adopt the surgical CAHPS survey and we will consider this recommendation.

Comment: A few commenters expressed concern about the burden associated with collecting 300 surveys and requested that only 100 surveys be required. Other commenters noted that the survey is unnecessarily long, which could reduce response rates or skew results if only patients with negative feedback respond, and that not all of the questions are relevant. Some commenters noted that the use of a third-party vendor is too costly and could lead to more impersonal contacts with patients than if ASCs surveyed patients directly. Several commenters recommended that vendors should provide electronic or email options for

conducting the OAS CAHPS Survey in order to increase response rates. Other commenters recommended that CMS administer the survey on its Web site. One commenter noted concern that timely results are not provided. A few commenters expressed concern that the CPT codes included in the eligibility criteria for the survey are not always applicable.

Response: While web-based surveys are not available survey modes at present, we are actively investigating these modes as possible options for the future. We are exploring whether hospitals and ASCs receive reliable email addresses from patients and whether there is adequate access to the internet across all types of patients. Ultimately, the purpose of the investigation is to ensure that any future survey administration method does not introduce bias in the survey process and reduces length and burden if at all possible. Although we are investigating other modes of survey administration, we do not expect that CMS will directly

administer the survey; the survey would still be administered through vendors. In addition, we acknowledge commenters concerns that ASCs would not receive immediate feedback from patients that is obtained through the survey. Finally, we acknowledge the concern about the use of CPT codes, including those for procedures that patients may not perceive as surgery. We note that many CPT codes have been excluded from inclusion in the OAS CAHPS, including services like application of a cast or splint, in order to ensure that only patients receiving applicable procedures are surveyed.⁸³ We thank the commenters and will take all comments under consideration as we craft future policy for the OAS CAHPS Survey.

After consideration of the public comments we received, we are finalizing the proposal to delay implementation of the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based

Measures (ASC-15a-e) beginning with the CY 2020 payment determination (CY 2018 data collection) until further action in future rulemaking, as proposed. We refer readers to section XIII.B.5. of this final rule with comment where we are also finalizing delay of the OAS CAHPS Survey-based measures in the Hospital OQR Program.

5. ASCQR Program Quality Measures Adopted in Previous Rulemaking

For the CY 2020 payment determination and subsequent years, we have previously finalized the following measure set. We note that this chart still includes the ASC-5, ASC-6, and ASC-7 measures, which are being finalized for removal beginning with the CY 2019 payment determination as discussed above, as well as the ASC-15a-e measures, which are being finalized for delay beginning with the CY 2020 payment determination and until further action as discussed above:

ASCQR PROGRAM MEASURE SET PREVIOUSLY FINALIZED FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

ASC No.	NQF No.	Measure name
ASC-1	0263	Patient Burn.
ASC-2	0266	Patient Fall.
ASC-3	0267	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant.
ASC-4	0265†	All-Cause Hospital Transfer/Admission.
ASC-5	0264†	Prophylactic Intravenous (IV) Antibiotic Timing.*
ASC-6	None	Safe Surgery Checklist Use.*
ASC-7	None	ASC Facility Volume Data on Selected Procedures.*
ASC-8	0431	Influenza Vaccination Coverage Among Healthcare Personnel.
ASC-9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
ASC-10	0659	Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps-Avoidance of Inappropriate Use.
ASC-11	1536	Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery.**
ASC-12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
ASC-13	None	Normothermia Outcome.
ASC-14	None	Unplanned Anterior Vitrectomy.
ASC-15a	None	OAS CAHPS—About Facilities and Staff.***
ASC-15b	None	OAS CAHPS—Communication About Procedure.***
ASC-15c	None	OAS CAHPS—Preparation for Discharge and Recovery.***
ASC-15d	None	OAS CAHPS—Overall Rating of Facility.***
ASC-15e	None	OAS CAHPS—Recommendation of Facility.***

† We note that NQF endorsement for this measure was removed.

* Measure finalized for removal beginning with the CY 2019 payment determination, as discussed in section XIV.B.3.b. of this final rule with comment period.

** Measure voluntarily collected effective beginning with the CY 2017 payment determination as set forth in section XIV.E.3.c. of the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66984 through 66985).

*** Measure finalized for delay in reporting beginning with the CY 2020 payment determination (CY 2018 data collection) until further action in future rulemaking as discussed in section XIV.B.4. of this final rule with comment period.

6. New ASCQR Program Quality Measures for the CY 2021 and CY 2022 Payment Determinations and Subsequent Years

We refer readers to the CY 2014 OPSS/ASC final rule with comment period (78 FR 75124) for a detailed discussion of our approach to measure selection for the ASCQR Program. In the CY 2018 OPSS/ASC proposed rule (82 FR 33689 through 33698), we proposed to adopt a total of three new measures for the ASCQR Program: one measure collected via a CMS web-based tool for the CY 2021 payment determination and subsequent years (ASC–16: Toxic Anterior Segment Syndrome), and two measures collected via claims for the CY 2022 payment determination and subsequent years (ASC–17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures; and ASC–18: Hospital Visits after Urology Ambulatory Surgical Center Procedures). These measures are discussed in detail below.

a. Proposal To Adopt ASC–16: Toxic Anterior Segment Syndrome Beginning With the CY 2021 Payment Determination

(1) Background

Toxic Anterior Segment Syndrome (TASS), an acute, noninfectious inflammation of the anterior segment of the eye, is a complication of anterior segment eye surgery that typically develops within 24 hours after surgery.⁸⁴ The TASS measure assesses the number of ophthalmic anterior segment surgery patients diagnosed with TASS within two days of surgery. Although most cases of TASS can be treated, the inflammatory response associated with TASS can cause serious damage to intraocular tissues, resulting in vision loss.⁸⁵ Prevention requires careful attention to solutions, medications, and ophthalmic devices and to cleaning and sterilization of surgical equipment because of the numerous potential etiologies.⁸⁶ Despite a recent focus on prevention, cases of

TASS continue to occur, sometimes in clusters.⁸⁷ With millions of anterior segment surgeries being performed in the United States each year, measurement and public reporting have the potential to serve as an additional tool to drive further preventive efforts.

TASS is of interest to the ASCQR Program because cataract surgery is an anterior segment surgery commonly performed at ASCs. In addition, the TASS measure addresses the MAP-identified priority measure area of procedure complications for the ASCQR Program.⁸⁸

(2) Overview of Measure

We believe it is important to monitor the rate of TASS in the ASC setting because ophthalmologic procedures such as anterior segment surgery are commonly performed in this setting of care. Therefore, in the CY 2018 OPSS/ASC proposed rule (82 FR 33690), we proposed to adopt the ASC–16: Toxic Anterior Segment Syndrome measure, which is based on aggregate measure data collected by the ASC and submitted via a CMS online data submission tool (QualityNet), in the ASCQR Program for the CY 2021 payment determination and subsequent years. We expect the measure would promote improvement in patient care over time, because measurement coupled with transparency in publicly reporting of measure information would make patient outcomes following anterior segment procedures more visible to ASCs and patients and incentivize ASCs to incorporate quality improvement activities to reduce the incidence of TASS where necessary.

Section 1890A of the Act requires the Secretary to establish a prerulemaking process with respect to the selection of certain categories of quality and efficiency measures. Under section 1890A(a)(2) of the Act, the Secretary must make available to the public by December 1 of each year a list of quality and efficiency measures that the Secretary is considering for the Medicare program. The ASC–16 measure was included on the 2015 MUC list⁸⁹ and reviewed by the MAP. The

MAP reviewed the measure (MUC15–1047) and conditionally supported it for the ASCQR Program pending NQF review and endorsement.⁹⁰ The MAP noted the high value and urgency of this measure, given many new entrants to the ambulatory surgical center space, as well as the clustering outbreaks of TASS. The MAP also cautioned that the measure be reviewed and endorsed by NQF before adoption into the ASCQR Program, so that a specialized standing committee can evaluate the measure for scientific acceptability.⁹¹ A summary of the MAP recommendations can be found at: <https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81593>.

Sections 1833(i)(7)(B) and 1833(t)(17)(C)(i) of the Act, when read together, require the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by ASCs that reflect consensus among affected parties and, to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or by the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. As stated in the CY 2012 OPSS/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of measures, and consensus through public comment. We believe this measure meets these statutory requirements.

The proposed ASC–16: Toxic Anterior Segment Syndrome measure is not NQF-endorsed. However, this measure is maintained by the ASC Quality Collaboration,⁹² an entity recognized within the community as an expert in measure development for the ASC

⁹¹ *Ibid*.

⁹² ASC Quality Collaboration. “ASC Quality Collaboration.” Available at: <http://www.ascquality.org/>.

setting. We believe that this measure is appropriate for the measurement of quality care furnished by ASCs because ophthalmologic procedures are commonly performed in ASCs and, as discussed above, the inflammatory response associated with TASS can cause serious damage to patients' vision, but TASS is also preventable through careful attention to solutions, medications, ophthalmic devices, and to cleaning and sterilization of surgical equipment. While the ASC-16: Toxic Anterior Segment Syndrome measure is not NQF-endorsed, we believe this measure reflects consensus among affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure⁹³ for use in the ASCQR Program. The MAP agreed that this measure is high-value and urgent in the current healthcare marketplace and the number of new entrants to the surgical center place, as well as the clustering outbreaks of TASS.⁹⁴ Furthermore, we believe that this measure is scientifically acceptable, because the measure steward has completed reliability testing and validity assessment of the measure.⁹⁵ Specifically, an internal retrospective chart audit of the ASCs participating in measurement testing found no differences between the originally submitted and re-abstracted TASS rates, providing strong evidence the measure is reliable. The measure steward also conducted a formal consensus review to assess the measure's validity; the results of this assessment showed participants believe the measure appears to measure what it is intended to, and is defined in a way that will allow for consistent interpretation of the inclusion and exclusion criteria from ASC to ASC.

(3) Data Sources

This measure is based on aggregate measure data collected via chart-abstraction by the ASC and submitted via a CMS online data submission tool (that is, QualityNet).

We proposed that the data collection period for the proposed ASC-16 measure would be the calendar year two years prior to the applicable payment determination year. For example, for the

CY 2021 payment determination, the data collection period would be CY 2019. We also proposed that ASCs submit these data to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2021 payment determination, the submission period would be January 1, 2020 to May 15, 2020. We refer readers to section XIV.D.3.b. of this final rule with comment period for a more detailed discussion of the requirements for data submitted via a CMS online data submission tool.

(4) Measure Calculation

The outcome measured in the proposed ASC-16: Toxic Anterior Segment Syndrome measure is the number of ophthalmic anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The numerator for this measure is all anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The denominator for this measure is all anterior segment surgery patients. The specifications for this measure for the ASC setting can be found at: <http://ascquality.org/documents/ASC%20QC%20Implementation%20Guide%203.2%20October%202015.pdf>.

(5) Cohort

The measure includes all patients, regardless of age, undergoing anterior segment surgery at an ASC. Additional methodology and measure development details are available at: <http://www.ascquality.org/qualitymeasures.cfm> under "ASC Quality Collaboration Measures Implementation Guide."

(6) Risk Adjustment

The proposed ASC-16: Toxic Anterior Segment Syndrome measure is not risk-adjusted; risk adjustment for patient characteristics is not appropriate for this measure.

We invited public comment on our proposal to adopt the ASC-16: Toxic Anterior Segment Syndrome measure for the CY 2021 payment determination and subsequent years as discussed above.

Comment: Some commenters supported CMS' proposal to adopt ASC-16: Toxic Anterior Segment Syndrome beginning with the CY 2021 payment determination, citing the measure's clinical significance and impact on patients. One commenter specifically noted the measure could improve patient care while adding little administrative burden. One commenter noted the measure's potential to

promote collaboration between surgeons and facilities and ensure that prevention guidelines are appropriately followed. Another commenter noted this measure is currently in use as part of the ASC Quality Collaboration's public report of ASC quality data, and expressed particular support for submission of aggregated measure data for the proposed ASC-16: Toxic Anterior Segment Syndrome measure via QualityNet.

Response: We thank the commenters for their support.

Comment: Another commenter specifically noted the measure could improve patient care while adding little administrative burden, but also expressed concern about an ASC's ability to collect measure data if patients do not present back to the ASC where their procedure was performed.

Response: We thank the commenter for their feedback and acknowledge that it may be difficult to collect data based on where patients present.

Comment: One commenter expressed conditional support for the proposed ASC-16: Toxic Anterior Segment Syndrome measure pending NQF endorsement prior to adoption. Other commenters expressed concern that the measure is not NQF-endorsed and recommended CMS secure NQF endorsement for the measure prior to adopting it for use in the ASCQR Program.

Response: Sections 1833(i)(7)(B) and 1833(t)(17)(C)(i) of the Act, when read together, require the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by ASCs that reflect consensus among affected parties and, to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or by the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non NQF-endorsed measures. As stated in the CY 2012 OPPI/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of

⁹³ National Quality Forum. 2016 Spreadsheet of Final Recommendations to HHS and CMS. Available at: <https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=81593>.

⁹⁵ AHRQ Measure Summary. Available at: <https://www.qualitymeasures.ahrq.gov/summaries/summary/49582/ambulatory-surgery-percentage-of-ophthalmic-anterior-segment-surgery-patients-diagnosed-with-toxic-anterior-segment-syndrome-tass-within-2-days-of-surgery>.

measures, and consensus through public comment. This measure is maintained by the ASC Quality Collaboration,⁹⁶ an entity recognized within the community as an expert in measure development for the ASC setting. Furthermore, the ASC-16 measure was included on the 2015 MUC list⁹⁷ and reviewed by the MAP. While the ASC-16: Toxic Anterior Segment Syndrome measure is not NQF-endorsed, we believe this measure reflects consensus among affected parties, because the MAP, which represents stakeholder groups, reviewed and conditionally supported the measure⁹⁸ for use in the ASCQR Program. The MAP agreed that this measure is high-value and urgent in the current healthcare marketplace and the number of new entrants to the surgical center place, as well as the clustering outbreaks of TASS.⁹⁹

Comment: Several commenters did not support adoption of the proposed ASC-16: Toxic Anterior Segment Syndrome measure. Two commenters noted it may not be feasible for ASCs to implement the measure due to the small number of patients experiencing TASS. Other commenters similarly asserted ASCs will encounter operational difficulties incorporating the measure into their clinical workflow, because the measure requires information sharing across clinicians in order to collect accurate data, making accurate data collection both expensive and labor-intensive. A commenter also expressed concern that patients may not understand the difference between TASS and infection, leading to inaccurate data being present in charts. Another commenter expressed concern that the measure's reliance on self-reported data may lead to subjective results or manipulation, and that the measure is limited to a segment of the larger ASC industry, as only very few ASCs will have patients presenting with

TASS. One commenter expressed concern that the proposed ASC-16: Toxic Anterior Segment Syndrome measure will not improve healthcare quality because the measure provides data that is retrospective in nature and the commenter believes the measure will not assist ASCs in implementing improvement activities.

Response: We thank the commenters for their suggestions and note the concerns about the proposal to adopt ASC-16: Toxic Anterior Segment Syndrome beginning with the CY 2021 payment determination. While we believe the measure is reliable, we recognize that there are concerns over the feasibility of implementing the TASS measure. Some commenters expressed concern that ASCs will have difficulty reporting the measure if patients present to another facility with TASS within 2 days of a procedure and we acknowledge that some cases could be missing from inclusion in the measure especially given the very low incidence of TASS. In response to concerns that ASCs will receive retrospective data on the measure, rather than during the time that a patient is experiencing TASS, we note our belief that tracking TASS for the purpose of the measure reporting would increase facility awareness of potential outbreaks. In addition, we disagree with commenters that the measure relies on subjective or self-reported data, as data sources for this measure include physician diagnosis and report, clinical administrative data, paper medical records, or incident/occurrence reports.¹⁰⁰

Regarding concerns about the low volume of procedures, although data show that TASS occurs in clusters, these clusters do indeed include low numbers, ranging from just a few cases to up to 20 cases during a year's time.¹⁰¹ As a result of this low volume, we agree

that this measure may not be appropriate for national implementation in the ASCQR Program. Upon further consideration of the difficulty of implementing the measure, the likelihood of applicability to only very specific ASC facilities where TASS occurs, and from incoming comments, we believe that the burden of the measure would outweigh the benefits and no longer believe that the measure is appropriate for the ASCQR Program at this time. Therefore, we are not finalizing this measure. However, we refer readers to the ASC Quality Collaboration, the measure steward, which is independently collecting and publicly reporting this TASS measure: <http://ascquality.org/documents/ASC-QC-Implementation-Guide-4.0-September-2016.pdf>.

Comment: One commenter recommended CMS instead enable ASCs to learn best practices and techniques from other facilities by facilitating data-sharing among facilities.

Response: We agree that data-sharing among facilities could inform quality improvement activities. We will consider opportunities to further promote the sharing of best practices across ASCs.

After consideration of the public comments we received, we are not finalizing the proposal to adopt the ASC-16: Toxic Anterior Segment Syndrome measure for the CY 2021 payment determination and subsequent years for reasons discussed in our responses above.

The measure set for the ASCQR Program CY 2021 payment determination and subsequent years is as listed below. We note that the measures we are finalizing for removal in this final rule with comment period are not included in this chart.

ASCQR PROGRAM MEASURE SET FINALIZED FOR THE CY 2021 PAYMENT DETERMINATION AND SUBSEQUENT YEARS ***

ASC No.	NQF No.	Measure name

b. Adoption of ASC-17: Hospital Visits After Orthopedic Ambulatory Surgical Center Procedures Beginning With the CY 2022 Payment Determination

(1) Background

Reporting the quality of care provided at ASCs is a key priority in the context of growth in the number of ASCs and the number of procedures performed in this setting. More than 60 percent of all medical or surgical procedures performed in 2006 were performed at ASCs; this represents a three-fold increase from the late 1990s.¹⁰² In 2015, more than 3.4 million fee-for-service Medicare beneficiaries were treated at 5,475 Medicare-certified ASCs, and spending on ASC services by Medicare and its beneficiaries amounted to 4.1 billion dollars.¹⁰³ The patient population served at ASCs has increased not only in volume, but also in age and complexity, which can be partially attributed to improvements in anesthetic care and innovations in minimally invasive surgical techniques.¹⁰⁴ ¹⁰⁵ As such, ASCs have become the preferred setting for the provision of low-risk surgical and medical procedures in the United States, as many patients experience shorter wait times, prefer to avoid

hospitalization, and are able to return to work more quickly.¹⁰⁶ As the number of orthopedic procedures performed in ASCs increases, it is increasingly important to report the quality of care for patients undergoing these procedures. According to Medicare claims data, approximately seven percent of surgeries performed in ASCs in 2007 were orthopedic in nature, which reflects a 77-percent increase in orthopedic procedures performed at ASCs from 2000 to 2007.¹⁰⁷

We believe measuring and reporting seven-day unplanned hospital visits following orthopedic ASC procedures will incentivize ASCs to improve care and care transitions. Patients that have hospital visits that occur at or after discharge from the ASC and may not be readily visible to clinicians because such patients often present to alternative facilities, such as emergency departments where patient information is not linked back to the ASC. Furthermore, many of the reasons for hospital visits following surgery at an ASC are preventable; patients often present to the hospital for complications of medical care, including infection, post-operative bleeding, urinary retention, nausea and vomiting, and pain. One study found that of 10,032 patients who underwent orthopedic surgery in an ASC between 1993 and 2012, 121 (1.2 percent) needed attention in the emergency department in the first 24 hours after discharge due to pain or

bleeding, while others were admitted later for issues related to pain and swelling.¹⁰⁸ Therefore, we believe tracking and reporting these events would facilitate efforts to lower the rate of preventable adverse events and to improve the quality of care following orthopedic surgeries performed at an ASC.

(2) Overview of Measure

Based on the increasing prevalence of orthopedic surgery in the ASC setting, we believe it is important to minimize adverse patient outcomes associated with these orthopedic ASC surgeries. Therefore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33692), we proposed to adopt the ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure into the ASCQR Program for the CY 2022 payment determination and subsequent years. We expect the measure would promote improvement in patient care over time, because measurement coupled with transparency in publicly reporting measure information would make the rate of unplanned hospital visits (emergency department visits, observation stays, and unplanned inpatient admissions) following orthopedic surgery at ASCs more visible to both ASCs and patients and would incentivize ASCs to incorporate quality improvement activities to reduce these unplanned hospital visits. The measure also addresses the CMS National Quality Strategy domains of making care safer by reducing harm caused in the delivery of care and promoting effective

communication and coordination of care.

Section 1890A of the Act requires the Secretary to establish a prerulemaking process with respect to the selection of certain categories of quality and efficiency measures. Under section 1890A(a)(2) of the Act, the Secretary must make available to the public by December 1 of each year a list of quality and efficiency measures that the Secretary is considering for the Medicare program. The ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure was included on a publicly available document entitled “List of Measures under Consideration for December 1, 2016.”¹⁰⁹ The MAP reviewed this measure (MUC16-152) and recommended this measure be refined and resubmitted prior to adoption, stating that testing results should demonstrate reliability and validity at the facility level in the ambulatory surgical setting.¹¹⁰ MAP also recommended that this measure be submitted to NQF for review and endorsement.¹¹¹ At the time of the MAP’s review, this measure was still undergoing field testing.

Since the MAP’s review and recommendation of ‘Refine and Resubmit’ in 2016, we have completed testing for this measure and continued to refine this proposed measure in response to the MAP’s recommendations. Results of continued development activities, including stakeholder feedback from the public comment period and pilot test findings will be presented to the MAP during the MAP feedback loop meeting in fall 2017. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. Facility-level testing showed variation in unplanned hospital visits among ASCs after adjusting for case-mix differences, which suggests variation in quality of care and opportunities for quality improvement; and reliability testing showed fair measure score reliability.¹¹² As expected, the

reliability increased for ASCs with more patients; ASCs with at least 250 cases showed moderate reliability, consistent with other publicly reported Medicare claims-based, risk-adjusted outcome measures.¹¹³ The validity testing results demonstrated that the measure scores are valid and useful measures of ASC orthopedic surgical quality of care and will provide ASCs with information that can be used to improve their quality of care. Detailed testing results are available in the technical report for this measure, located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

Sections 1833(i)(7)(B) and 1833(t)(17)(C)(i) of the Act, when read together, require the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by ASCs that reflect consensus among affected parties and, to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or by the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-NQF-endorsed measures. As stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of measures, and consensus through public comment. We believe this proposed measure meets these statutory requirements.

The proposed ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure is not currently NQF-endorsed. However, we intend to submit this measure for review and endorsement by NQF once an

appropriate NQF project has a call for measures. We believe that this measure is appropriate for the measurement of quality care furnished by ASCs, because surgeries are becoming increasingly common in ASCs and, as discussed above, can signify unanticipated admissions after care provided in ASCs. Such visits are an unexpected and potentially preventable outcome for patients with a low anticipated perioperative risk. We also believe this proposed measure reflects consensus among affected parties, because it was developed with stakeholder input from a Technical Expert Panel convened by a CMS contractor as well as from the measure development public comment period.¹¹⁴ During the MAP and measure development processes, public commenters supported the measure’s focus on assessing patient outcomes after orthopedic surgery performed in ASC setting of care, and agreed that the measure would be meaningful and improve quality of care. In addition, the ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure addresses the MAP-identified priority measure area of surgical complications for the ASCQR Program.¹¹⁵ Therefore, we believe it is appropriate to incorporate this measure into the ASCQR Program measure set because collecting and publicly reporting these data will improve transparency, inform patients and providers, and foster quality improvement efforts.

(3) Data Sources

This measure is claims-based and uses Part A and Part B Medicare administrative claims and Medicare enrollment data to calculate the measure.

We proposed that the data collection period for the proposed ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure would be the two calendar years ending two years prior to the applicable payment determination year. For example, for the CY 2022 payment determination, the data collection period would be CY 2019 to 2020. Because the measure data are collected via claims, ASCs will not need to submit any additional data directly to CMS. We refer readers to section XIV.D.4. of this final rule with comment period for a more detailed discussion of

the requirements for data submitted via claims.

(4) Measure Calculation

The measure outcome is all-cause, unplanned hospital visits within seven days of an orthopedic procedure performed at an ASC. For the purposes of this measure, “hospital visits” include emergency department visits, observation stays, and unplanned inpatient admissions. When there are two or more qualifying surgical procedures within a 7-day period, the measure considers all procedures as index procedures; however, the timeframe for outcome assessment is defined as the interval between procedures (including the day of the next procedure) and then 7 days after the last procedure.

The facility-level score is a risk-standardized hospital visit rate, calculated by multiplying the ratio of the predicted to the expected number of post-surgical hospital visits among the given ASC’s patients by the national observed hospital visit rate for all ASCs. For each ASC, the numerator of the ratio is the number of hospital visits predicted for the ASC’s patients accounting for its observed rate, the number of the orthopedic surgeries performed at the ASC, the case-mix, and the surgical complexity mix. The denominator of the ratio is the expected number of hospital visits given the ASC’s case-mix and surgical complexity mix. A ratio of less than one indicates the ASC facility’s patients were estimated as having fewer post-surgical visits than expected compared to ASCs with similar surgical complexity and patients; and a ratio of greater than one indicates the ASC facility’s patients were estimated as having more visits than expected. The national observed hospital visit rate is the national unadjusted proportion of patients who had a hospital visit following an orthopedic ASC surgery. For more information on measure calculations, we refer readers to: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(5) Cohort

The patient cohort for the proposed ASC–17 measure includes all Medicare beneficiaries ages 65 and older undergoing outpatient orthopedic surgery at an ASC who have 12 prior months of Medicare fee-for-service Parts A and B enrollment. The target group of procedures includes those that: (1) Are routinely performed at ASCs; (2) involve some increased risk of post-surgery

hospital visits; and (3) are routinely performed by orthopedists.

Procedures included in the measure cohort are on Medicare’s list of covered ambulatory surgical center (ASC) procedures.¹¹⁶ Medicare developed this list to identify surgeries that have a low to moderate risk profile. Surgeries on the ASC list of covered procedures do not involve or require major or prolonged invasion of body cavities, extensive blood loss, major blood vessels, or care that is either emergent or life threatening. Medicare annually reviews and updates this list, and includes a transparent public comment submission and review process for addition and/or removal of procedure codes.¹¹⁷ The current list is accessible in the Downloads section at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/11_addenda_updates.html.

In addition, to focus the measure only on the subset of surgeries on Medicare’s list of covered ASC procedures that impose a meaningful risk of post-orthopedic ASC surgery hospital visits, the measure includes only “major” and “minor” procedures, as indicated by the Medicare Physician Fee Schedule global surgery indicator (GSI) values of 090 and 010, respectively. This list of GSI values is publicly available at: <https://www.cms.gov/Medicare/Medicare-fee-for-service-payment/physicianfeesched/pfs-federal-regulation-notices-items/cms-1590-fc.html> (download Addendum B). Moreover, to identify the subset of ASC procedures typically performed by orthopedists, we used the Clinical Classifications Software (CCS) developed by the Agency for Healthcare Research and Quality (AHRQ) and include in this measure procedures from AHRQ’s “operations on the musculoskeletal system” group of procedures.¹¹⁸ For more cohort details, we refer readers to the measure technical report located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

The measure excludes patients who survived at least 7 days following orthopedic surgery at an ASC, but were not continuously enrolled in Medicare fee-for-service Parts A and B in the 7

¹¹⁶ Centers for Medicare and Medicaid Services. “Ambulatory Surgical Center (ASC) Payment: Addenda Updates.” Available at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/11_addenda_updates.html.

days after surgery. These patients are excluded to ensure all patients captured under this measure have full data available for outcome assessment. There are no additional inclusion or exclusion criteria for the proposed ASC–17 measure. Additional methodology and measure development details are available at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(6) Risk Adjustment

The statistical risk-adjustment model includes 29 clinically relevant risk-adjustment variables that are strongly associated with risk of hospital visits within seven days following ASC orthopedic surgery. The measure risk adjusts for age, 27 comorbidities, and a variable for work Relative Value Units (RVUs) to adjust for surgical complexity.¹¹⁹ Additional risk adjustment details are available in the technical report at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(7) Public Reporting

As stated above, facility-level testing showed variation in unplanned hospital visits among ASCs after adjusting for case-mix differences, which suggests variation in quality of care and opportunities for quality improvement.¹²⁰ Reliability testing showed fair measure score reliability.¹²¹ As expected, the reliability increased for ASCs with more patients; ASCs with at least 250 cases showed moderate reliability, consistent with other publicly reported Medicare claims-based, risk-adjusted outcome measures. We proposed that if this measure were adopted, we would publicly report results only for facilities with sufficient case numbers to meet moderate reliability standards.¹²² CMS will determine the case size cutoff for meeting moderate reliability standards using the intraclass correlation (ICC)

¹²² Ibid.

during the measure dry run (discussed below) by testing the reliability of the scores at different case sizes in the dry run data. However, we would also provide confidential performance data directly to smaller facilities, which do not meet the criteria for sufficient case numbers for reliability considerations that would benefit from seeing their measure results and individual patient-level outcomes. These data are currently largely unknown to ASCs and providers. The validity testing results demonstrated that the measure scores are valid and useful measures of ASC orthopedic surgical quality of care and will provide ASCs with information that can be used to improve their quality of care. Detailed testing results are available in the technical report for this measure, located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(8) Provision of Facility-Specific Information Prior to Public Reporting

In the CY 2018 OPPS/ASC proposed rule (82 FR 33694), we stated that if this proposed measure is finalized as proposed, we intend to conduct a dry run before the official data collection period or any public reporting. A dry run is a period of confidential reporting and feedback during which ASCs may review their dry-run measure results, and in addition, further familiarize themselves with the measure methodology and ask questions. For the dry-run, we intend to use the most current 2-year set of complete claims (usually 12 months prior to the start date) available at the time of dry run. For example, if the dry run began in June 2018, the most current 2-year set of data available would likely be July 2015 to June 2017. Because we use paid, final action Medicare claims, ASCs would not need to submit any additional data for the dry run. The dry run would generate confidential feedback reports for ASCs, including patient-level data indicating whether the patient had a hospital visit and, if so, the type of visit (emergency department visit, observation stay, or unplanned inpatient admission), the admitting facility, and the principal discharge diagnosis. Further, the dry run would enable ASCs to see their risk-standardized hospital visit rate prior to the measure being implemented. General information about the dry run as well as confidential facility-specific reports would be made available for ASCs to review on their accounts at: <http://www.qualitynet.org>. We plan to continue to generate these reports for ASCs after we implement the

measure so ASCs can use the information to identify performance gaps and develop quality improvement strategies.

These confidential dry run results are not publicly reported and do not affect payment. We expect the dry run to take approximately one month to conduct, during which facilities would be provided the confidential report and the opportunity to review their performance and provide feedback to us. However, after the dry run, measure results would have a payment impact and be publicly reported beginning with the CY 2022 payment determination and for subsequent years as proposed. Although not previously stated in the CY 2018 OPPS/ASC proposed rule (82 FR 33694), we note that the primary purpose of the records maintained in the National Claims History system of records (SOR) is for evaluating and studying the operation and effectiveness of the Medicare program, which aligns with the purposes of the ASCQR Program and a permissible use of beneficiary information. In addition, under 45 CFR 164.506(c)(4) of the HIPAA Privacy Rule, we may disclose protected health information to another covered entity, such as the ASCs, provided that both the ASC and CMS have or had a relationship with each individual who is the subject of the PHI being requested, the PHI pertains to such relationship, and the disclosure is for the purposes of conducting quality assessment and improvement activities listed in paragraph (1) or (2) of the definition of "health care operations" at 45 CFR 164.501. We believe that this provision is extensive enough to cover the uses that we would expect an ASC to make of the PHI.

We invited public comment on our proposal to adopt the ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure beginning with the CY 2022 payment determination as discussed above.

Comment: A few commenters supported the proposed adoption of the ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures in the ASCQR Program. One of the commenters noted that these measures will provide patients with valuable data and address clinical areas critical to providers.

Response: We thank the commenters for their support. We agree that measuring quality of care associated with orthopedic procedures performed at ASCs is patient-centered and is an important clinical care area to evaluate.

Comment: Two commenters believed that the measure should be refined and resubmitted prior to rulemaking, as

suggested by the MAP. Several commenters noted or were concerned that the measure lacks NQF endorsement. A few commenters also suggested that CMS seek input from the MAP on the finalized measure prior to including the measure in the program.

Response: Section 1833(h)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or the NQF specifically. Under this provision, the Secretary has further authority to adopt non-endorsed measures. As stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74465 and 74505), we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, broad acceptance and use of the measure, and public comments. As part of the measure development process, a national Technical Expert Panel (TEP), clinical experts, and stakeholders provided input at multiple points during development. We believe the ASC-17 measure meets these statutory requirements.

We strive to adopt NQF-endorsed measures when possible. Although ASC-17 is not currently NQF-endorsed, our research and analysis conducted during development demonstrate that the measure is accurate, valid, and actionable. We refer readers to the technical report for more information about the measure and testing results: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Version-10_Hospital-Visits_Orthopedic-ASC-Procedures_Measure-Technical-Report_052017.pdf. We will submit this measure, with complete evidence, specifications, and testing results, to NQF for endorsement when an appropriate NQF project has a call for the measure.

In addition, in December 2016, the MAP Hospital Workgroup reviewed and classified the measure as "Refine and Resubmit Prior to Rulemaking."¹²³ We understand that the measure received this classification because: (1) The measure was still undergoing field testing at the time, and (2) the MAP also recommended that the measure be submitted to the NQF for review and endorsement. Between that initial MAP review in December 2016 and the CY 2018 OPPS/ASC proposed rule, we

¹²³ Spreadsheet of MAP 2017 Final Recommendations, February 1, 2017. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

completed field testing and refined the measure.¹²⁴ The final methodology report, which was presented in the proposed rule, included the final results of measure testing and completed measure specifications that occurred between the MAP's review in December 2016 and CMS' proposal to adopt the measure in the ASCQR Program.¹²⁵ We also intend to update the MAP at the next appropriate opportunity. As stated above, we also intend to submit the measure to the NQF for endorsement during the next appropriate call for measures.

Comment: A few commenters expressed concerns over the measure outcome. One commenter stated that it is not well proven that a hospital visit within 7 days of ASC procedure is a sign of poor quality. Similarly, one commenter suggested that CMS should adopt a measure that captures hospital visits directly tied to complications arising from orthopedic procedures performed in an ASC, and another commenter suggested that CMS exclude unrelated hospital visits. A commenter suggested that CMS remove ED visits and observation stays from the measure outcome because the ED is seen not as a healthcare resource to be avoided, but a key stabilization and decision point for patient disposition. Another commenter expressed concern about the attribution of outcomes. Specifically, the commenter flagged four of the top reasons for hospital visits within 7 days of orthopedic procedures that likely reflect routine follow-up rather than quality of care as intended by the measure.

Response: We have designed the measure to capture all unplanned hospital visits that may be a signal of poor quality of care and encourage ASCs to minimize the risk of follow-up hospital visits. The outcome captures the full range of adverse events related to undergoing orthopedic ASC surgery. We believe that the measure, as specified, has the potential to illuminate differences in quality, inform patient choice, drive quality improvement, enhance care coordination, and

ultimately to minimize acute complications and reduce unplanned hospital visits following orthopedic procedures performed at ASCs.

The measure was purposely designed to evaluate all-cause hospital visits to broadly capture serious adverse events experienced by patients after undergoing orthopedic ASC procedures, rather than a narrow set of identifiable complications, for many reasons. The outcome of all-cause hospital visits is consistent with a patient-centric view of care that is designed to prompt ASC providers to minimize the risk and reduce the need for a broad range of outcomes after undergoing orthopedic ASC procedures, including the risk of dehydration, nausea and vomiting, dizziness, and urinary retention. Measuring only hospital visits that are overtly related to a procedure, such as visits for pain and bleeding, would limit the measure's intended broad impact on quality improvement efforts.

Furthermore, the rate of hospital visits is not expected to be zero, since some patients will have visits for reasons unrelated to the procedure. In designing the measure, we narrowed the measure to include surgical procedure that: (1) Are routinely performed at ASCs; (2) involve increased risk of post-surgery hospital visits; and (3) are routinely performed by orthopedists. In addition, the measure is risk adjusted for patient demographics, clinical characteristics, and surgical procedural complexity, so that facilities that experience more unrelated visits due to a generally higher-risk patient mix will not be disadvantaged. We refer readers to the methods section in the measure specifications for more information about the risk-adjustment methodology.

In addition, we only measure the rate of *unplanned* hospital admissions; ED visits and observation stays are never considered planned.^{126 127} This approach removes from the outcome admissions that are not a signal of quality of care, because they represent: (1) A condition or diagnosis that is considered to be always planned (such as transplants or maintenance chemotherapy); or (2) that are considered potentially planned (such as cardiovascular procedures) and are not accompanied by an acute diagnosis. The planned admission algorithm is based

on CMS' widely-used Planned Readmission Algorithm v4.0.¹²⁸ We refer readers to the measure methodology report at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html> for more details.

Furthermore, we disagree with the commenter's suggestion that we remove ED visits and observation stays from the measure outcome, because these are unplanned visits for patients undergoing low- to moderate-risk outpatient procedures. From a patient perspective, we believe that ED visits and observation stays are an undesirable outcome. We believe a quality measure assessing hospital visits following ASC surgery will serve to improve transparency, inform patients and providers, and foster quality improvement, because providers at ASCs are often unaware of patients' subsequent acute care visits given that patients tend to present to the emergency department or to hospitals unaffiliated with the ASC. Moreover, the measure outcome of hospital visits within 7 days after a procedure aligns with the NQF-endorsed measure Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy Measure (NQF #2539).

Regarding the commenter's concerns about the attribution of outcomes and whether hospital visits within 7 days of ASC procedure is a sign of poor quality, we believe that the measure captures the full range of potentially serious adverse events related to orthopedic procedures performed as ASCs. We limited the outcome timeframe for hospital visits (ED visits, observation stays, and unplanned admissions) to 7 days because existing literature suggests that the vast majority of adverse events after an orthopedic procedure occur within the first 7 days following the procedure and because the highest rates of hospital visits were observed in claims data within 7 days following the procedure.^{129 130} A 7-day timeframe helps to ensure that the measure will capture adverse events following the procedure, but will not capture events impacted by factors unrelated to the

¹²⁷ Ranasinghe, Isuru, et al. "Differences in colonoscopy quality among facilities: development of a post-colonoscopy risk-standardized rate of unplanned hospital visits." *Gastroenterology* 150.1 (2016): 103–113.

care patients received.¹³¹ We appreciate the commenter's careful review of the top hospital visit diagnoses within seven days of orthopedic procedures. We welcome specific examples of potentially planned admissions following outpatient orthopedic procedures.

Comment: One commenter suggested that CMS provide a detailed clinical review of all the measure results by several seasoned orthopedic surgeons to ensure the measure algorithm is appropriate.

Response: In developing the measure, we incorporated significant input from various experts and stakeholders. In addition to the MUC and MAP processes described above, a multidisciplinary team of clinicians, health services researchers, and statisticians were informed, in part, by a national TEP consisting of patients, methodologists, researchers, and providers, including orthopedists who conducted a detailed clinical review of all the measure results to ensure the measure algorithm is appropriate. We also held a public comment period soliciting stakeholder input on the measure methodology, including the planned admission algorithm. However, we will continue to evaluate the measure as our goal is to ensure that the measure accurately reflects the quality of care provided in ASCs.

We appreciate the commenter's careful review of the top hospital visit diagnoses within seven days of orthopedic procedures. We welcome specific examples of potentially planned admissions following outpatient orthopedic procedures.

Comment: Some commenters were concerned that ASCs may not have actionable information generated from ASC-17. Specifically, some commenters did not support adoption of the measure, because measure score calculation relies on retrospective claims data. The commenters expressed concerns that the delay in providing data to facilities would provide limited usefulness for quality improvement or for consumers in choosing an ASC facility. Regarding a similar measure, ASC-12 Facility Risk-Standardized Visit Rate after Outpatient Colonoscopy, one commenter noted that in their members' experience with the confidential feedback reports, facilities were already aware of most of the visits in the claims detail report and did not review the reports unless the facilities were categorized as underperforming. The commenter also questioned the

usefulness of the measure to make distinction among facilities and to consumers, because the performance for the overwhelming majority of the facilities would be no different than expected.

Response: We acknowledge the commenters' concerns regarding the use of claims data for the ASC-17 measure; however, the measure would provide facilities with the most recently available, patient-level data to help guide quality improvement efforts that would also be low burden.

Further, we believe that measures of hospital events following specific types of surgical procedures fully based on Medicare FFS claims recently adopted (for example, ASC-12: Facility 7-Day Risk Standardized Hospital Visit Rate after Outpatient Colonoscopy Measure) and including those newly finalized in this final rule with comment period (that is, ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures) will better inform Medicare beneficiaries and other consumers about post-procedure complication rates. Existing ASC quality measures tend to focus on very rare, patient safety-related events. For example, ASC-3 counts cases in which a wrong site, wrong side, wrong patient, wrong procedure, or wrong implant event occurred (76 FR 74499).¹³² Measures designed to capture more common adverse outcomes that patients experience, such as pain, bleeding, urinary retention, and other complications, prompting acute care hospital visits or admissions are lacking at this time, and this is what this measure is intended to accomplish.

While we appreciate the commenter's feedback that some ASCs were already aware of most of the visits in the claims detail report and did not review the reports unless the facilities were categorized as underperforming, that is not always the case. Providers at ASCs are often unaware of patients' subsequent acute care visits given that separate providers (for example, emergency department physicians) tend to provide post-surgical care when it is required.¹³³ This measure is intended to bring greater awareness to a larger

number of ASCs and patients, in addition to actionable information to lower the rate of preventable adverse events and to improve the quality of care following procedures performed at an ASC.

Although the majority of ASCs would be expected to have risk-standardized rates that would be classified as "no different than the national rate" on *Hospital Compare*, we believe that the measure will be able to make distinction among facilities and to consumers because the variation in risk-standardized hospital visit rates across ASCs nationally suggests that there is still room for quality improvement. *Hospital Compare* will also report facilities' risk-standardized rates, and facilities will receive confidential feedback reports to support quality improvement efforts. Furthermore, feedback from national TEP members showed that the ASC-17 measure, as specified, can be used to distinguish between better and worse quality facilities.¹³⁴ This shows TEP agreement with the overall face validity of the measure.

Comment: A few commenters expressed concerns about risk adjustment. A commenter noted that the measure is not risk adjusted to account for socioeconomic status and other factors beyond an ASC's control. Another commenter noted that successful application of risk stratification methods must be accomplished before using claims data, especially with the move from traditionally inpatient procedures to the outpatient and ambulatory settings. A third commenter expressed a concern about including condition category (CC 82), Respirator dependence/tracheostomy status, on the list of condition categories that are not risk-adjusted if the condition occurs only at the time of the procedure. The commenter noted that this type of condition is not something that develops acutely within the timeframe of an ASC procedure, but rather is reflective of a more chronic patient condition.

Response: We understand the important role that factors outside of an ASC's control, for example, socioeconomic and sociodemographic status, play in the care of patients.

¹³¹ Parry, Nicola. "7-Day Readmissions: Better Indicators of Patient Care." *Medscape*, 2016.

Although the risk-adjustment methodology does not stratify by social risk factors, it does account for risk by adjusting for risk factors associated with increased risk for hospital visits after surgery. In developing this measure, we evaluated the potential effects of risk adjusting for three socioeconomic status (SES) factors that are available in CMS claims (Medicaid dual-eligibility status, African-American race, and the AHRQ SES index). Our results show that adjusting for these three factors at the patient level do not change the measure scores. We assessed the relationship of SES to hospital visits at the patient and facility levels. Unadjusted and adjusted ASC-level risk-standardized hospital visit rates were highly correlated (Spearman correlation coefficients of nearly 1.0) when calculated with and without the addition of the three SES variables (Medicaid dual-eligibility status, African-American race, and the AHRQ SES index). This indicates that including SES variables in the ASC-level risk-adjusted measure score will result in limited differences in measure results after accounting for other risk factors, such as age and comorbidities. We refer readers to the methodology in the measure specifications for more information about SES testing for this measure at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. We also refer readers to section XIV.B.2. of this final rule with comment period where we discuss social risk factors in the ASCQR Program in more detail.

In addition, analyses of ASCs categorized into quartiles based on proportions of Medicaid dual-eligible patients, of African-American patients, and of low-SES patients (as identified by the AHRQ SES index),¹³⁵ showed largely overlapping distributions (with similar median values) of the risk-standardized hospital visit rates (RSHVRs) by quartile. This means that facilities serving larger proportions of low-SES patients perform similarly to facilities serving lower proportions of low-SES patients.

Furthermore, we appreciate the commenter's concern about including condition category (CC) 82 on the list of condition categories that are not risk-adjusted for if they occur only at the time of the procedure.¹³⁶ Condition

categories are used to classify diagnoses into clinically coherent groups.¹³⁷ We consolidated like risk factors into candidate variables, which were the variables that we considered for the risk-adjustment model. We agree with the commenter for noting that CC 82 is unlikely to develop acutely during the timeframe of a procedure; we will review this group of codes and will consider revising the list of CCs that are not risk-adjusted for if the condition occurs at the time of the procedure. As explained above, this measure was reviewed using a consensus-driven approach, with input from a national TEP and surgeons, including orthopedists, providing care in the ASC setting. Potential candidate risk factors and condition categories were identified from related quality measures and the literature;¹³⁸ a preliminary list of risk factors was developed and then revised based on national TEP and clinical expert review that included several orthopedists. These risk variables were further released and reviewed during the measure development public comment period prior to the selection of the final model.¹⁴⁰ This consensus-based approach was used to achieve clinical face validity prior to the model selection.

Comment: One commenter suggested that the ASC-17 should not be tied to payment or measure procedures until after the first year of provision in the ASC setting and noted concern that doing so at the outset would not accurately reflect quality and risks

incentivizing hospital services over ASCs. Another commenter noted that ASCs still receive a full payment update even if the ASCs are not involved in the measure.

Response: We thank the commenters for their suggestions regarding the link of the ASC-17 measure to payment. We do not believe that the measure risks incentivizing hospital services over ASCs. The ASCQR Program is a pay-for-reporting quality data program. This means that payments under our pay-for-reporting quality data program are tied to reporting of the measures in the form and manner specified, not to specific performance on the measures, like for pay-for-performance programs (for example, the Hospital VBP Program (82 FR 38240)). In addition, we believe that the measure does indeed reflect quality. Feedback from national TEP members showed that the ASC-17 measure, as specified, can be used to distinguish between better and worse quality facilities.¹⁴¹ This shows TEP agreement with the overall face validity of the measure.

We note that while ASCs will not be required to submit additional data for measure calculation, because this is a claims-based measure, we strongly encourage ASCs to review measure scores to improve quality of care and patient outcomes. The detailed feedback reports, which provide information on every procedure performed during the performance period and the details of the hospital visits within seven days of the orthopedic procedure, will enable ASCs to understand the post-surgical hospital visit patterns. We believe this will help to facilitate ASCs to tailor clinical and educational interventions with the goal of reducing or eliminating the risk of hospital visits for complication of an orthopedic surgery. We also believe that the measure will facilitate improvements via public reporting by informing the general public and ASCs even if particular ASCs are not active in the measure.

Comment: A few commenters expressed concerns about the reliability of the measure. One commenter noted that low-volume situations tend to produce measure scores that lack reliability. The commenter noted that the measure is only “fairly” reliable and suggested the reliability for a measure intended for public reporting should be substantially reliable, or have an ICC of 0.61 to 0.80. Furthermore, the commenter noted that the measure also suffers from limited discriminatory power because the number of underperforming facilities is very small.

¹⁴¹ Ibid.

¹³⁶ Yale New Haven Health Services Corporation—Center for Outcomes Research and

The commenter urged CMS to ensure that the publicly reported scores are reliable. A few commenters expressed concern about the reliability of the measure for public reporting.

Response: We thank the commenters for their feedback about the measure reliability. We disagree with the commenters and believe that ASC-17 is sufficiently reliable to be included in the ASCQR Program. Our calculated intraclass correlation coefficient (ICC),¹⁴² a measure of reliability or the degree to which the measure can produce accurate and consistent results across multiple measurements of the same entities in a time period, for this measure was 0.226.¹⁴³ The NQF considers ICC values ranging from 0.01–0.20 as “slight” reliability, 0.21–0.40 as “fair” reliability, 0.41 to 0.60 as “moderate” reliability, and 0.61 to 0.80 as “strong” reliability.¹⁴⁴ Although this value indicates fair measure score reliability,¹⁴⁵ we recognize that it is lower than for other claims-based outcomes measures developed by CMS.¹⁴⁶ However, as we would expect, the ICC increases for ASCs with more patients.¹⁴⁷ We disagree that the measure reliability should be “substantially” reliable, or have an ICC of 0.61 to 0.80, and believe the publicly reported scores will be sufficiently reliable based on results showing

increased reliability with increased case numbers.¹⁴⁸ Specifically, for ASCs with at least 250 cases in each of the two samples, the ICC was 0.359, which reflects better reliability that is more consistent with previously developed measures.¹⁴⁹ During the measure dry run, we intend to determine the case size cutoff for meeting moderate reliability standards using the ICC by testing the reliability of the scores at different case sizes in the dry run data. In the 4-year data set, of the 3,075 ASCs, 467 (15.2 percent) had 250 or more procedures, accounting for 57.3 percent of all procedures in the measure cohort.¹⁵⁰

Regarding the comment about lack of discriminatory power, we agree that the many small-volume ASCs will limit the ability to make distinctions in performance between facilities. ASCs with few cases in a given year limit our ability to capture variation in ASC-level measure scores because our modeling methodology is conservative and will estimate measure scores toward the national mean for facilities with small volumes. Specifically, ASCs with relatively few cases in the performance period may have a true rate that is worse/better than the national average. However, the model estimates their rate as close to the mean because their low volume does not provide enough information to accurately estimate a value near their true rate. As a result, the model may capture less variation than truly exists due to low case sizes. To improve the measure’s ability to detect quality differences, we crafted our proposal to use 2 years of data for public reporting to expand the number of cases available for estimating rates across all facilities and to increase both the reliability of the measure score and the ability to discriminate performance across facilities. Furthermore, ASC facilities that have too few cases to reliably estimate a measure score (moderate reliability as discussed in the prior paragraph) would be treated in the same way as other facilities with too few cases and would not have their scores posted on *Hospital Compare*; their data would be replaced with a footnote. We discuss our *Hospital Compare* footnotes at: <https://www.medicare.gov/hospital-compare/data/footnotes.html>. However, these facilities will still receive confidential feedback reports/facility-specific reports providing valuable information about post-surgery events. We refer readers to section XIV.B.6.b.(7) of this final rule with

comment period for more details about public reporting of this measure. We expect that smaller ASCs will still benefit from confidentially reviewing their measure results and individual patient-level outcomes in the facility-specific report, as these data are currently largely unknown to ASCs and providers.

Comment: One commenter requested that the dry run results be aggregated and made available in its entirety to the public for review and comment if the measure is finalized. The commenter also suggested that CMS conduct pilot testing for the measure with volunteer ASCs rather than conduct national dry runs.

Response: We refer readers to section XIV.B.6.b.(7) of this final rule with comment period where we discuss our dry run. The intent of the dry run is to test production of the measure and for ASCs to familiarize themselves with the measure and provide feedback to us. The dry run will generate confidential feedback reports for ASCs on measure performance and risk-standardized hospital visit rates, among other data. We plan to perform a dry run of the measure prior to implementation. The confidential dry run results will not be publicly reported or used for payment determination. We believe a dry run will be more beneficial than pilot testing. The dry run will include all ASCs rather than just a subset of volunteer ASCs and will enable all ASCs to gain familiarity with the measure and processes, as well as provide feedback to CMS on both the measure itself and the reports. This will also enable CMS to learn about any unanticipated nuances associated with measure implementation.

As proposed, we will not publicly report data for this measure until the CY 2022 payment determination and subsequent years. We do not believe publicly reporting data from the dry run is appropriate as we might still be working out unanticipated nuances; the data is preliminary and is therefore subject to change based on feedback provided by ASCs.

Comment: A commenter noted that although CMS believes that there would not be any additional burden because ASCs are not required to submit additional data, reviewing claims detail reports and measure scores would be associated with additional burden for someone at ASCs, likely a clinician.

Response: We thank the commenter for providing this input and acknowledge that this measure will be calculated completely from data already obtained from paid Medicare FFS claims submitted by ASCs, hospitals,

and physicians for billing purposes. Because claims data are used, there is no burden on the part of ASCs to submit additional data for measure calculation. We strongly suggest that facilities allocate time to review their feedback report, because they contain actionable information to identify performance gaps and further develop quality improvement strategies. However, we note that these activities do not represent burden related to program requirements.

After consideration of the public comments we received, we are finalizing the proposal to adopt the ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures measure in the ASCQR Program for the CY 2022 payment determination and subsequent years, as proposed.

c. Adoption of ASC-18: Hospital Visits After Urology Ambulatory Surgical Center Procedures Beginning With the CY 2022 Payment Determination

(1) Background

As the number of urology procedures performed in ASCs increases, it is of increasing importance to report the quality of care provided to patients undergoing these procedures. One study found that urology procedures accounted for 4.8 percent of unanticipated admissions, and that urology surgery patients were almost twice as likely as orthopedics, plastic surgery, or neurosurgery to be admitted following surgery.¹⁵¹ Similarly, a recent study found outpatient urology surgery has an overall 3.7 percent readmission rate.¹⁵² A third study using a 5-percent national sample of Medicare beneficiaries ages 65 and older who underwent one of 22 common outpatient urologic procedures at ASCs from 1998 to 2006 found a 7.9 percent 30-day risk-adjusted rate of inpatient admission following surgery, with more frequent same-day admissions following outpatient surgery at ASCs than at hospitals.¹⁵³

Because urology surgery performed at an ASC is a significant predictive factor for unanticipated admissions compared

to other procedures,¹⁵⁴ we believe measuring and reporting 7-day unplanned hospital visits following urology procedures will incentivize ASCs to improve care and care transitions. Many of the reasons for hospital visits following surgery at an ASC are preventable; patients often present to the hospital following urology surgery for complications of medical care, including urinary tract infection, calculus of the ureter, urinary retention, hematuria, and septicemia.¹⁵⁵ However, increased patient and staff education present opportunities to improve the success rate of urology surgeries in ASCs.¹⁵⁶ Therefore, we believe tracking and reporting these events would facilitate efforts to lower the rate of preventable adverse events and to improve the quality of care following urology procedures performed at an ASC.

(2) Overview of Measure

We believe it is important to minimize adverse patient outcomes associated with urology ASC surgeries. Therefore, in the CY 2018 OPPTS/ASC proposed rule (82 FR 33695), we proposed to adopt the ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure in the ASCQR Program for the CY 2022 payment determination and subsequent years. We expect the measure would promote improvement in patient care over time, because measurement coupled with transparency in publicly reporting measure information would make the rate of unplanned hospital visits (emergency department visits, observation stays, and unplanned inpatient admissions) following urology procedures at ASCs more visible to both ASCs and patients, and would incentivize ASCs to incorporate quality improvement activities to reduce these unplanned hospital visits. The measure also addresses the CMS National Quality Strategy domains of making care safer by reducing harm caused in the delivery of care and promoting effective communication and coordination of care.

Section 1890A of the Act requires the Secretary to establish a prerulemaking process with respect to the selection of certain categories of quality and efficiency measures. Under section 1890A(a)(2) of the Act, the Secretary

must make available to the public by December 1 of each year a list of quality and efficiency measures that the Secretary is considering for the Medicare program. The ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure was included on a publicly available document entitled “List of Measures under Consideration for December 1, 2016.”¹⁵⁷ The MAP reviewed this measure (MUC16-153) and recommended that this measure be refined and resubmitted prior to adoption by the ASCQR Program because, at the time of the MAP’s review, this measure was still undergoing field testing. The Workgroup stated testing results should demonstrate reliability and validity at the facility level in the ambulatory surgical setting, and recommended this measure be submitted to NQF for review and endorsement.¹⁵⁸

Since the MAP’s review and recommendation of ‘Refine and Resubmit’ in 2016, we have completed testing for this measure and continued to refine this proposed measure in response to the MAP’s recommendations. Results of continued development activities, including stakeholder feedback from the public comment period and pilot test findings will be presented to the MAP during the MAP feedback loop meeting in fall 2017. The proposed measure is consistent with the information submitted to the MAP, and the original MAP submission and our continued refinements support its scientific acceptability for use in quality reporting programs. Facility-level testing showed significant variation in unplanned hospital visits among ASCs after adjusting for case-mix differences, which suggests variation in quality of care. Our testing found moderate measure score reliability¹⁵⁹ for this measure, which is consistent with existing measures of patient outcomes in the ASC setting, such as ASC-12: Facility Seven-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy (described in the CY 2015 OPPTS/ASC final rule with comment period at 79 FR 66973). Validity testing demonstrated that the measure scores

identify differences in quality across facilities. Detailed testing results are available in the technical report for this measure, located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

Sections 1833(i)(7)(B) and 1833(t)(17)(C)(i) of the Act, when read together, require the Secretary, except as the Secretary may otherwise provide, to develop measures appropriate for the measurement of the quality of care furnished by ASCs that reflect consensus among affected parties and, to the extent feasible and practicable, that include measures set forth by one or more national consensus building entities. However, we note that section 1833(i)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or by the NQF specifically. Further, under section 1833(i)(7)(B) of the Act, section 1833(t)(17)(C)(i) of the Act applies to the ASCQR Program, except as the Secretary may otherwise provide. Under this provision, the Secretary has further authority to adopt non-endorsed measures. As stated in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74465 and 74505), we believe that consensus among affected parties can be reflected through means other than NQF endorsement, including consensus achieved during the measure development process, consensus shown through broad acceptance and use of measures, and consensus through public comment. We believe this proposed measure meets these statutory requirements.

The proposed ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure is not currently NQF-endorsed. However, we intend to submit this measure for review and endorsement by the NQF once an appropriate measure endorsement project has a call for measures. We believe that this measure is appropriate for the measurement of quality care furnished by ASCs because urology procedures are becoming increasingly common in ASCs and, as discussed above, can signify unanticipated admissions after care provided in ASCs. Such visits are an unexpected and potentially preventable outcome for patients with a low anticipated perioperative risk. We also believe this measure depicts consensus among affected parties, as it was developed with stakeholder input from both a Technical Expert Panel convened by a contractor as well as the measure

development public comment period.¹⁶⁰ During the MAP and measure development processes, public commenters supported the measure's focus on assessing patient outcomes after urology ASC and agreed that the measure would be meaningful and improve quality of care. In addition, the ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure addresses the MAP-identified priority measure area of surgical complications for the ASCQR Program.¹⁶¹ Therefore, we believe it is appropriate to incorporate this measure into the ASCQR Program measure set because collecting and publicly reporting this data will improve transparency, inform patients and providers, and foster quality improvement efforts.

(3) Data Sources

This measure is claims-based and uses Part A and Part B Medicare administrative claims and Medicare enrollment data to calculate the measure.

We proposed that the data collection period for the proposed ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure would be the 2 calendar years ending 2 years prior to the applicable payment determination year. For example, for the CY 2022 payment determination, the data collection period would be CY 2019 to 2020. Because these measure data are collected via claims, ASCs will not need to submit any additional data directly to CMS. We refer readers to section XIV.D.4. of this final rule with comment period for a more detailed discussion of the requirements for data submitted via claims.

(4) Measure Calculations

The measure outcome is all-cause, unplanned hospital visit occurring within seven days of the urology procedure performed at an ASC. For the purpose of this measure, "hospital visits" include emergency department visits, observation stays, and unplanned inpatient admissions. When there are

two or more qualifying surgical procedures within a 7-day period, the measure considers all procedures as index procedures. However, the timeframe for outcome assessment is defined as the interval between procedures (including the day of the next procedure) and then 7 days after the last procedure.

The facility-level score is a risk-standardized hospital visit rate, calculated by multiplying the ratio of the predicted to the expected number of postsurgical hospital visits among the given ASC's patients by the national observed hospital visit rate for all ASCs. For each ASC, the numerator of the ratio is the number of hospital visits predicted for the ASC's patients accounting for its observed rate, the number of the urology procedures performed at the ASCs, the case-mix, and the surgical complexity mix. The denominator of the ratio is the expected number of hospital visits given the ASC's case-mix and surgical complexity mix. A ratio of less than one indicates the ASC facility's patients were estimated as having fewer post-surgical visits than expected compared to ASCs with similar surgical complexity and patients; and a ratio of greater than one indicates the ASC facility's patients were estimated as having more visits than expected. The national observed hospital visit rate is the national unadjusted proportion of patients who had a hospital visit following a urology ASC surgery. For more information on measure calculations, we refer readers to: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(5) Cohort

The patient cohort for the proposed ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure includes all Medicare beneficiaries ages 65 and older undergoing outpatient urology procedures at an ASC who have 12 prior months of Medicare fee-for-service Parts A and B enrollment. The target group of procedures are those that: (1) Are routinely performed at ASCs; (2) involve increased risk of post-surgery hospital visits; and (3) are routinely performed by urologists.

Procedures included in the measure cohort are on Medicare's list of covered ambulatory surgical center (ASC) procedures.¹⁶² Medicare developed this

¹⁶² Centers for Medicare and Medicaid Services. "Ambulatory Surgical Center (ASC) Payment: Addenda Updates." Available at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/11_addenda_updates.html.

list to identify surgeries have a low to moderate risk profile. Surgeries on the ASC list of covered procedures do not involve or require major or prolonged invasion of body cavities, extensive blood loss, major blood vessels, or care that is either emergent or life threatening.¹⁶³ Medicare annually reviews and updates this list, and includes a transparent public comment submission and review process for addition and/or removal of procedure codes.¹⁶⁴ The current list is accessible in the Downloads section at: https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/11_addenda_updates.html. In addition, to focus the measure only on the subset of surgeries on Medicare's list of covered ASC procedures that impose a meaningful risk of post-urology ASC surgery hospital visits, the measure includes only "major" and "minor" procedures, as indicated by the MPFS global surgery indicator (GSI) values of 090 and 010, respectively, and therapeutic cystoscopy procedures. This list of GSI values is publicly available at: <https://www.cms.gov/Medicare/Medicare-fee-for-service-payment/physicianfeesched/pfs-federal-regulation-notices-items/cms-1590-fc.html> (download Addendum B). Moreover, to identify the subset of ASC procedures typically performed by urologists, we used the Clinical Classifications Software (CCS) developed by the Agency for Healthcare Research and Quality (AHRQ) and include in this measure procedures from two of AHRQ's categories, "operations on the urinary system" and "operations on the male genital organs."¹⁶⁵ For more cohort details, we refer readers to the measure technical report located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

The measure excludes patients who survived at least 7 days following a urology procedure at an ASC, but were not continuously enrolled in Medicare fee-for-service Parts A and B in the 7 days after surgery. These patients are excluded to ensure all patients captured under this measure have full data available for outcome assessment. There are no additional inclusion or exclusion criteria for the proposed ASC-18 measure. Additional methodology and measure development details are

available at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(6) Risk Adjustment

The statistical risk-adjustment model includes nine clinically relevant risk-adjustment variables that are strongly associated with risk of hospital visits within seven days following ASC urology surgery. The measure risk adjusts for age, six comorbidities, number of qualifying procedures, and work Relative Value Units (RVUs) to adjust for surgical complexity.¹⁶⁶ Additional risk adjustment details are available in the technical report at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(7) Public Reporting

As stated above, facility-level testing showed variation in unplanned hospital visits among ASCs after adjusting for case-mix differences, which suggests variation in quality of care and opportunities for quality improvement.¹⁶⁷ Reliability testing showed fair measure score reliability.¹⁶⁸ As expected, the reliability increased for ASCs with more patients; ASCs with at least 250 cases showed moderate reliability, consistent with other publicly reported Medicare claims-based, risk-adjusted outcome measures. In the CY 2018 OPPI/ASC proposed rule (82 FR 33694), we noted that if this measure is adopted, we proposed to publicly report results only for facilities with sufficient case numbers to meet moderate reliability standards.¹⁶⁹ CMS will determine the case size cutoff for meeting moderate reliability standards using the intraclass correlation (ICC) during the measure dry run (discussed below) by testing the reliability of the scores at different case sizes in the dry run data. However, we would also provide confidential performance data directly to smaller facilities which do not meet the criteria for sufficient case

numbers for reliability considerations that would benefit from seeing their measure results and individual patient-level outcomes, as these data are currently largely unknown to ASCs and providers. The validity testing results demonstrated that the measure scores are valid and useful measures of ASC urology surgical quality of care and will provide ASCs with information that can be used to improve their quality of care. Detailed testing results are available in the technical report for this measure, located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>.

(8) Provision of Facility-Specific Information Prior to Public Reporting

In the CY 2018 OPPI/ASC proposed rule (82 FR 33694), we noted that if this proposed measure is finalized, but before the official data collection period or public reporting for the proposed ASC-18 measure, we intend to conduct a dry run. A dry run is a period of confidential feedback during which ASCs may review their dry-run measure results, and in addition, further familiarize themselves with the measure methodology, and ask questions. For the dry-run, we intend to use the most current 2-year set of complete claims (usually 12 months prior to the start date) available at the time of dry run. For example, if the dry run began in June 2018, the most current 2-year set of data available would likely be July 2015 to June 2017. Because we use paid, final action Medicare claims, ASCs would not need to submit any additional data for the dry run. The dry run would generate confidential feedback reports for ASCs, including patient-level data indicating whether the patient had a hospital visit and, if so, the type of visit (emergency department visit, observation stay, or unplanned inpatient admission), the admitting facility, and the principal discharge diagnosis. Further, the dry run would enable ASCs to see their risk-standardized hospital visit rate prior to the measure being implemented. General information about the dry run as well as confidential facility-specific reports would be made available for ASCs to review on their accounts at: <http://www.qualitynet.org>. We intend to continue to generate these reports for ASCs after we implement the measure so ASCs can use the information to identify performance gaps and develop quality improvement strategies.

The confidential dry run results are not publicly reported and do not affect payment. We expect the dry run to take

¹⁶⁹ Ibid.

approximately one month to conduct, during which facilities would be provided the confidential report and the opportunity to review their performance and provide feedback to us. However, after the dry run, measure results would have a payment impact and would be publicly reported beginning with the CY 2022 payment determination and for subsequent years as proposed. Although not previously stated in the CY 2018 OPPTS/ASC proposed rule (82 FR 33694), we note that the primary purpose of the records maintained in the National Claims History system of records (SOR) is for evaluating and studying the operation and effectiveness of the Medicare program, which aligns with the purposes of the ASCQR Program and a permissible use of beneficiary information. In addition, under 45 CFR 164.506(c)(4) of the HIPAA Privacy Rule, we may disclose protected health information to another covered entity, such as the ASCs, provided that both the ASC and CMS have or had a relationship with each individual who is the subject of the PHI being requested, the PHI pertains to such relationship, and the disclosure is for the purposes of conducting quality assessment and improvement activities listed in paragraph (1) or (2) of the definition of "health care operations" at 45 CFR 164.501. We believe that this provision is extensive enough to cover the uses that we would expect an ASC to make of the PHI.

We invited public comment on our proposal to adopt the ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure beginning with the CY 2022 payment determination as discussed above.

Comment: A few commenters supported the proposed adoption of the ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure in the ASCQR Program. One of the commenters noted that the measure will provide patients with valuable data and address clinical areas critical to providers.

Response: We thank the commenters for their support. We agree that measuring quality of care associated with urology procedures performed at ASCs is patient-centered and is an important clinical care area to evaluate.

Comment: A few commenters believed that the measure should be refined and resubmitted prior to rulemaking, as suggested by the MAP. Several commenters noted or were concerned that the measure lacks NQF endorsement. A few commenters also suggested that CMS seek input from the MAP on the finalized measure prior to proposing for inclusion in the program.

Response: Section 1833(h)(7)(B) of the Act does not require that each measure we adopt for the ASCQR Program be endorsed by a national consensus building entity, or the NQF specifically. Under this provision, the Secretary has further authority to adopt non-endorsed measures. As stated in the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74465 and 74505), we believe the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, broad acceptance and use of the measure, and public comments. As part of the measure development process, a national Technical Expert Panel (TEP), clinical experts, and stakeholders provided input at multiple points during development. We believe the ASC-18 measure meets these statutory requirements.

We strive to adopt NQF-endorsed measures when possible. Although ASC-18 is not currently NQF-endorsed, our research and analysis conducted during development demonstrate that the measure is accurate, valid, and actionable. We refer readers to the technical report for more information about the measure and testing results: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Version-10_Hospital-Visits_Urology-ASC-Procedures_Measure-Technical-Report_052017.pdf. We will submit this measure, with complete evidence, specifications, and testing results, to NQF for endorsement when an appropriate NQF project has a call for the measure.

In addition, in December 2016, the MAP Hospital Workgroup reviewed and classified the measure as "Refine and Resubmit Prior to Rulemaking."¹⁷⁰ We understand that the measure received this classification because: (1) The measure was still undergoing field testing at the time, and (2) the MAP also recommended that the measure be submitted to the NQF for review and endorsement. Between that initial MAP review in December 2016 and the CY 2018 OPPTS/ASC proposed rule, we completed field testing and refined the measure.¹⁷¹ The final methodology

¹⁷⁰ Spreadsheet of MAP 2017 Final Recommendations. February 1, 2017. Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=84452>.

¹⁷¹ MAP 2017 Considerations for Implementing Measures in Federal Programs: Hospitals. Final Report. February 15, 2017. Available at: http://www.qualityforum.org/Publications/2017/02/2017_Considerations_for_Implementing_Measures_Final_Report_-_Hospitals.aspx.

report, which was presented in the proposed rule, included the final results of measure testing and completed measure specifications that occurred between the MAP's review in December 2016 and CMS' proposal to adopt the measure in the ASCQR Program.¹⁷² We also intend to update the MAP at the next appropriate opportunity. As stated above, we also intend to submit the measure to the NQF for endorsement during the next appropriate call for measures.

Comment: A commenter expressed concern about the attribution of outcomes. Specifically, the commenter flagged eight of the top reasons for hospital visits within 7 days of urologic procedures that likely reflect routine follow-up rather than quality of care as intended by the measure. Another commenter suggested that CMS develop a numerator exclusion for unrelated hospital visits.

Response: We acknowledge that the rate of hospital visits is not expected to be zero, since some patients will have visits for reasons unrelated to the procedure. In designing the measure, we narrowed the measure to include surgical procedures that: (1) Are routinely performed at ASCs; (2) involve increased risk of post-surgery hospital visits; and (3) are routinely performed by urologists. In addition, the measure is risk-adjusted for patient demographics, clinical characteristics, and surgical procedural complexity, so that facilities that experience more unrelated visits due to a generally higher-risk patient mix will not be disadvantaged. We refer readers to the methods section in the measure specifications for more information about the risk-adjustment methodology.

In addition, we only measure the rate of *unplanned* hospital admissions; ED visits and observation stays are never considered planned.^{173 174} This approach removes from the outcome admissions that are not a signal of quality of care, because they represent:

¹⁷² Yale New Haven Health Services Corporation—Center for Outcomes Research and Evaluation (CORE). Measure Technical Report: Hospital Visits after Urology Ambulatory Surgical Center Procedures (Version 1.0). May 2017. Available at: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Version-10_Hospital-Visits_Urology-ASC-Procedures_Measure-Technical-Report_052017.pdf.

¹⁷⁴ Ranasinghe, Isuru, et al. "Differences in colonoscopy quality among facilities: development of a post-colonoscopy risk-standardized rate of unplanned hospital visits." *Gastroenterology* 150.1 (2016): 103–113.

(1) A condition or diagnosis that is considered to be always planned (such as transplants or maintenance chemotherapy); or (2) that are considered potentially planned (such as cardiovascular procedures) and are not accompanied by an acute diagnosis. The planned admission algorithm is based on CMS' widely-used Planned Readmission Algorithm v4.0.¹⁷⁵ We refer readers to the measure methodology report at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html> for more details.

Regarding the commenter's concerns about the attribution of outcomes, and whether hospital visit within 7 days of ASC procedure is a sign of poor quality, we believe that the measure captures the full range of potentially serious adverse events related to urologic procedures performed at ASCs. We designed the outcome timeframe to encompass the first 7 days for capture of hospital visits (ED visits, observation stays, and unplanned admissions), because existing literature suggests that the vast majority of adverse events after an urology procedure occur within the first 7 days following the procedure.^{176 177} and because the highest rates of hospital visits were observed in claims data within 7 days following the procedure. A 7-day timeframe helps to ensure that the measure will capture adverse events following the procedure, but will not capture events impacted by factors unrelated to the care patients received.¹⁷⁸ We appreciate the commenter's careful review of the top hospital visit diagnoses within seven days of urologic procedures. We welcome specific examples of potentially planned admissions

following outpatient urologic procedures.

In response to a commenter's suggestion that we develop a numerator exclusion for unrelated hospital visits, this measure was intentionally designed to broadly evaluate all-cause hospital visits to capture serious adverse events experience by patients after undergoing urologic ASC procedures, rather than a narrow set of identifiable complications, for many reasons. The outcome of all-cause hospital visits is consistent with a patient-centric view of care that is designed to prompt ASC providers to minimize the risk and reduce the need for a broad range of outcomes after undergoing urologic ASC procedures, including the risk of dehydration, nausea and vomiting, dizziness, and urinary retention. Measuring only hospital visits that are overtly related to a procedure, such as visits for pain and bleeding, would limit the measure's intended broad impact on quality improvement efforts. These are common problems that may or may not be related to a recent ASC procedure. Thus, the measure is structured so that facilities that most effectively minimize patient risk of these outcomes will perform better on the measure.

Comment: A commenter suggested that CMS provide a detailed clinical review of all the measure results by several seasoned urologists to ensure the measure algorithm is appropriate.

Response: In developing the measure, we incorporated significant input from various experts and stakeholders. In addition to the MUC and MAP processes described above, a multidisciplinary team of clinicians, health services researchers, and statisticians were informed, in part, by a national TEP consisting of patients, methodologists, researchers, and providers, including urologists who conducted a detailed clinical review of all the measure results to ensure the measure algorithm is appropriate. We also held a public comment period soliciting stakeholder input on the measure methodology, including the planned admission algorithm. However, we will continue to evaluate the measure, as our goal is to ensure that the measure accurately reflects the quality of care provided in ASCs.

We appreciate the commenter's careful review of the top hospital visit diagnoses within seven days of urology procedures. We welcome specific examples of potentially planned admissions following outpatient urologic procedures.

Comment: Several commenters were concerned that ASCs may not have actionable information generated from

ASC-18. Specifically, some commenters did not support adoption of the measure, because measure score calculation relies on retrospective claims data. The commenters expressed concerns that the delay in providing data to facilities would provide limited usefulness for quality improvement or for consumers in choosing an ASC facility. Regarding a similar measure, ASC-12 Facility Risk-Standardized Visit Rate after Outpatient Colonoscopy, one commenter noted that in their members' experience with the confidential feedback reports, facilities were already aware of most of the visits in the claims detail report and did not review the reports unless the facilities were categorized as underperforming. The commenter also questioned the usefulness of the measure to make distinctions among facilities and to consumers, because the performance for the overwhelming majority of the ASCs would be no different than expected.

Response: We acknowledge the commenters' concerns regarding the use of claims data for the ASC-18 measure; however, the measure would provide facilities with the most recently available, patient-level data to help guide quality improvement efforts that would also be low burden.

Further, we believe that measures of hospital events following specific types of surgical procedures fully based on Medicare FFS claims recently adopted (for example, ASC-12: Facility 7-Day Risk Standardized Hospital Visit Rate after Outpatient Colonoscopy Measure) and including those newly finalized in this final rule that is, ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures) will better inform Medicare beneficiaries and other consumers about post-procedure complication rates. Existing ASC quality measures tend to focus on very rare, patient safety-related events. For example, ASC-3 counts cases in which a wrong site, wrong side, wrong patient, wrong procedure, or wrong implant event occurred (76 FR 74499).¹⁷⁹ Measures designed to capture more common adverse outcomes that patients experience, such as urinary retention, urinary tract infection, pain, and other complications prompting acute care hospital visits or admissions

¹⁷⁹ Centers for Medicare & Medicaid Services. Ambulatory Surgical Center Quality Reporting Specifications Manual Release Notes Version: 6.0. 2016; Available at: <http://qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier2&cid=1228772475754>.

¹⁷⁸ Parry, Nicola. "7-Day Readmissions: Better Indicators of Patient Care." *Medscape*, 2016.

are lacking at this time, and this is what this measure is intended to accomplish.

While we appreciate the commenter's feedback that some ASCs were already aware of most of the visits in the claims detail report and did not review the reports unless the facilities were categorized as underperforming, that is not always the case. Providers at ASCs are more often unaware of patients' subsequent acute care visits given that separate providers (for example, emergency department physicians) tend to provide post-urological care when it is required.¹⁸⁰ This measure is intended to bring greater awareness to a larger number of ASCs and patients, in addition to actionable information to lower the rate of preventable adverse events and to improve the quality of care following procedures performed at an ASC.

Although the majority of ASCs would be expected to have risk-standardized rates that would be classified as "no different than the national rate" on *Hospital Compare*, we believe that the measure will be able to make distinction among facilities and to consumers because the variation in risk-standardized hospital visit rates across ASCs nationally suggests that there is still room for quality improvement. *Hospital Compare* will also report facilities' risk-standardized rates, and facilities will receive confidential feedback reports to support quality improvement efforts. Furthermore, feedback from national TEP members showed that the ASC-18 measure, as specified, can be used to distinguish between better and worse quality facilities.¹⁸¹ This shows TEP agreement with the overall face validity of the measure.

Comment: A few commenters expressed concerns about risk adjustment. A commenter noted that the measure is not risk adjusted to account for socioeconomic status and other factors beyond a hospitals' control. Another commenter expressed concern about including condition category (CC 82), Respirator dependence/tracheostomy status, on the list of condition categories that are not risk-adjusted if the condition occurs only at

¹⁸⁰ Mezei G, Chung F. Return hospital visits and hospital readmissions after ambulatory surgery. *Annals of Surgery*. 1999;230(5):721-727.

¹⁸¹ Yale New Haven Health Services Corporation—Center for Outcomes Research and Evaluation (CORE). Measure Technical Report: Hospital Visits after Urology Ambulatory Surgical Center Procedures (Version 1.0). May 2017. Available at: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Version-10_Hospital-Visits_Urology-ASC-Procedures_Measure-Technical-Report_052017.pdf.

the time of the procedure. The commenter noted that this type of condition is not something that develops acutely within the timeframe of an ASC procedure, but rather is reflective of a more chronic patient condition.

Response: We understand the important role that factors outside of an ASC's control, for example, socioeconomic and sociodemographic status, play in the care of patients. Although the risk-adjustment methodology does not stratify by social risk factors, it does account for risk by adjusting for risk factors associated with increased risk for hospital visits after surgery. In developing this measure, we evaluated the potential effects of risk adjusting for three socioeconomic status (SES) factors that are available in CMS claims (Medicaid dual-eligibility status, African-American race, and the AHRQ SES index). Our results show that adjusting for these three factors at the patient level do not change the measure scores. We assessed the relationship of SES to hospital visits at the patient and facility levels. Unadjusted and adjusted ASC-level risk-standardized hospital visit rates were highly correlated (Spearman correlation coefficients of nearly 1.0) when calculated with and without the addition of the three SES variables (Medicaid dual-eligibility status, African-American race, and the AHRQ SES index). This indicates that including SES variables in ASC-level risk-adjusted measure score will result in limited differences in measure results after accounting for other risk factors, such as age and comorbidities. We refer readers to the methodology in the measure specifications for more information about SES testing for this measure at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. We also refer readers to section XIV.B.2. of this final rule with comment period where we discuss social risk factors in the ASCQR Program in more detail.

Furthermore, we appreciate the commenter's concern about including condition category (CC) 82 on the list of condition categories that are not risk-adjusted for if they occur only at the time of the procedure.¹⁸² Condition categories are used to classify diagnoses into clinically coherent groups.¹⁸³ We consolidated like risk factors into

¹⁸² Ibid.

¹⁸³ HCUP CCS Fact Sheet. Healthcare Cost and Utilization Project (HCUP). January 2012. Agency for Healthcare Research and Quality, Rockville, MD. <https://www.hcup-us.ahrq.gov/toolssoftware/ccs/ccsfactsheet.jsp>.

candidate variables, which were the variables that we considered for the risk-adjustment model. We agree with the commenter for noting that CC 82 is unlikely to develop acutely during the timeframe of a procedure; we will review this group of codes and will consider revising the list of CCs that are not risk-adjusted for if the condition occurs at the time of the procedure. As explained above, this measure was reviewed using a consensus-driven approach, with input from a national TEP and surgeons, including urologists, providing care in the ASC setting. Potential candidate risk factors and condition categories were identified from related quality measures and the literature;¹⁸⁴ ¹⁸⁵ ¹⁸⁶ a preliminary list of risk factors was developed and then revised based on national TEP and clinical expert review that included several urologists. These risk variables were further released and reviewed during the measure development public comment period prior to the selection of the final model.¹⁸⁷ This consensus-based approach was used to achieve clinical face validity prior to the model selection.

Comment: One commenter noted that low-volume situations tend to produce measure scores that lack reliability. The commenter noted that the measure is only "fairly" reliable and suggested the reliability for a measure intended for public reporting should be substantially reliable, or have an ICC of 0.61 to 0.80. Furthermore, the commenter noted that the measure also suffers from limited discriminatory power because the number of underperforming facilities is very small. The commenter urged CMS to ensure that the publicly reported scores are reliable.

Response: We thank the commenter for their feedback about the measure reliability. We disagree with the commenter and believe that ASC-18 is

¹⁸⁴ Crew JP, Turner KJ, Millar J, Cranston DW. Is day case surgery in urology associated with high admission rates? *Annals of The Royal College of Surgeons of England*. 1997;79(6):416-419.

¹⁸⁶ Paez A, Redondo E, Linares A, Rios E, Vallejo J, Sanchez-Castilla M. Adverse events and readmissions after day-case urological surgery. *International Brazilian Journal of Urology*. 2007;33(3):330-338.

¹⁸⁷ Yale New Haven Health Services Corporation. Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures (Version 1.0). May 2017. Available at: https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Downloads/Version-10_Hospital-Visits_Orthopedic-ASC-Procedures_Measure-Technical-Report_052017.pdf.

sufficiently reliable to be included in the ASCQR Program. Our calculated intraclass correlation coefficient (ICC),¹⁸⁸ a measure of reliability or the degree to which the measure can produce accurate and consistent results across multiple measurements of the same entities in a time period, for this measure was 0.45, indicating “moderate” reliability.¹⁸⁹ The NQF considers ICC values ranging from 0.01–0.20 as “slight” reliability, 0.21–0.40 as “fair” reliability, 0.41 to 0.60 as “moderate” reliability, and 0.61 to 0.80 as “strong” reliability.¹⁹⁰ We disagree that the measure reliability should be “substantially” reliable or have an ICC of 0.61 to 0.80, and believe the publicly reported scores will be sufficiently reliable. The results of reliability testing are consistent with existing measures of patient outcomes in the ambulatory surgery setting.¹⁹¹ Therefore, we believe the measure is sufficiently reliable.

Regarding the comment about lack of discriminatory power, we agree that the many small-volume ASCs will limit the ability to make distinctions in performance between facilities. ASCs with few cases in a given year limit our ability to capture variation in ASC-level measure scores because our modeling methodology is conservative and will estimate measure scores toward the national mean for facilities with small volumes. Specifically, hospitals with relatively few cases in the performance period may have a true rate that is worse/better than the national average. However, the model estimates their rate as close to the mean because their low volume does not provide enough information to accurately estimate a value near their true rate. As a result, the model may capture less variation than truly exists due to low case sizes. To improve the measure’s ability to detect quality differences, we crafted our proposal to use 2 years of data for public reporting to expand the number of cases available for estimating rates across all

facilities and to increase both the reliability of the measure score and the ability to discriminate performance across facilities. Furthermore, ASC facilities that have too few cases to reliably estimate a measure score (moderate reliability as discussed in the prior paragraph) would be treated in the same way as other facilities with too few cases and would not have their scores posted on *Hospital Compare*; their data would be replaced with a footnote. We discuss our *Hospital Compare* footnotes at: <https://www.medicare.gov/hospital-compare/data/Footnotes.html>. However, these facilities will still receive confidential feedback reports/facility-specific reports providing valuable information about post-surgery events. We refer readers to section XIV.B.6.c.(7) of this final rule with comment period for more details about public reporting of this measure. We expect that smaller ASCs will still benefit from confidentially reviewing their measure results and individual patient-level outcomes in the facility-specific report, as these data are currently largely unknown to ASCs and providers.

Comment: One commenter requested that the dry run results be aggregated and made available in its entirety to the public for review and comment if the measure is finalized. The commenter also suggested that CMS conduct pilot testing for the measure with volunteer ASCs rather than conduct national dry runs. Another commenter suggested that CMS pilot test the measure prior to implementation to ensure that the measure adequately account for the nuances related to urologic surgery.

Response: We refer readers to section XIV.B.6.c.(7) of this final rule with comment period where we discuss our dry run. The intent of the dry run is to test production of the measure and for ASCs to familiarize themselves with the measure and provide feedback to CMS. The dry run will generate confidential reports for ASCs on measure performance and risk-standardized hospital visit rates, among other data. We plan to perform a dry run of the measure prior to implementation. The confidential dry run results will not be publicly reported or used for payment determination. We believe a dry run will be more beneficial than pilot testing. The dry run will include all ASCs rather than just a subset of volunteer ASCs and will enable all ASCs to gain familiarity with the measure and processes, as well as provide feedback to CMS on both the measure itself and the reports. This will also enable CMS to learn about any

unanticipated nuances associated with measure implementation.

As proposed we will not publicly report data for this measure until the CY 2022 payment determination and subsequent years. We do not believe publicly reporting data from the dry run is appropriate as we might still be working out unanticipated nuances; the data is preliminary and is therefore subject to change based on feedback provided by ASCs.

Comment: One commenter noted that although CMS believes that there would not be any additional burden because ASCs are not required to submit additional data, reviewing claims detail reports and measure scores would be associated with additional burden for someone at ASCs, likely a clinician.

Response: We thank the commenter for providing this input and acknowledge that this measure will be calculated completely from data already obtained from paid Medicare FFS claims submitted by ASCs, hospitals, and physicians for billing purposes. Because claims data are used, there is no burden on the part of ASCs to submit additional data for measure calculation. We strongly suggest that facilities allocate time to review their feedback reports, because they contain actionable information to identify performance gaps and further develop quality improvement strategies. However, we note that these activities do not represent burden related to program requirements.

Comment: One commenter expressed concern over the measure specifications, including the accuracy of background data on the number of unplanned hospital visits.

Response: We interpret commenter to be referring to Table 4 in the ASC–18 Measure Technical Report published in May 2017 and located at: <https://www.cms.gov/medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html>. In the technical report for this measure, the column labeled “number of unplanned hospital visits” was incorrectly labeled and should read “number of procedure performed.” The remainder of the table is correct. We will address this discrepancy in future technical documentation. We thank the commenter for pointing out the inconsistency.

After consideration of the public comments we received, we are finalizing the proposal to adopt the ASC–18: Hospital Visits after Urology Ambulatory Surgical Center Procedures measure in the ASCQR Program for the

¹⁸⁸ Landis J, Koch G. The measurement of observer agreement for categorical data, *Biometrics* 1977;33:159–174.

¹⁸⁹ The NQF considers ICC values ranging from 0.01–0.20 as “slight” reliability, 0.21–0.40 as “fair” reliability, 0.41 to 0.60 as “moderate” reliability, and 0.61 to 0.80 as “strong” reliability. Available at: http://www.qualityforum.org/Measuring_Performance/Improving_NQF_Process/Measure_Testing_Task_Force_Final_Report.aspx.

CY 2022 payment determination and subsequent years, as proposed.

d. Summary of Previously Adopted Measures and Newly Finalized ASCQR Program Measures for the CY 2022 Payment Determination and Subsequent Years

determination and subsequent years is listed below.

The measure set for the ASCQR Program CY 2022 payment

ASCQR PROGRAM MEASURE SET WITH PREVIOUSLY AND NEWLY FINALIZED MEASURES FOR THE CY 2022 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

ASC No.	NQF No.	Measure name
ASC-1	0263	Patient Burn.
ASC-2	0266	Patient Fall.
ASC-3	0267	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant.
ASC-4	0265 †	All-Cause Hospital Transfer/Admission.
ASC-8	0431	Influenza Vaccination Coverage among Healthcare Personnel.
ASC-9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients.
ASC-10	0659	Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use.
ASC-11	1536	Cataracts: Improvement in Patient’s Visual Function within 90 Days Following Cataract Surgery.*
ASC-12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy.
ASC-13	None	Normothermia Outcome.
ASC-14	None	Unplanned Anterior Vitrectomy.
ASC-15a	None	OAS CAHPS—About Facilities and Staff.**
ASC-15b	None	OAS CAHPS—Communication About Procedure.**
ASC-15c	None	OAS CAHPS—Preparation for Discharge and Recovery.**
ASC-15d	None	OAS CAHPS—Overall Rating of Facility.**
ASC-15e	None	OAS CAHPS—Recommendation of Facility.**
ASC-17	None	Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures.***
ASC-18	None	Hospital Visits after Urology Ambulatory Surgical Center Procedures.***

† We note that NQF endorsement for this measure was removed.

* Measure voluntarily collected effective beginning with the CY 2017 payment determination as set forth in section XIV.E.3.c. of the CY 2015 OPPI/ASC final rule with comment period (79 FR 66984 through 66985).

** Measure finalized for delay beginning with CY 2018 reporting until further action in future rulemaking as discussed in section XIV.B.4. of this final rule with comment period.

*** New measure finalized for the CY 2022 payment determination and subsequent years.

7. ASCQR Program Measures and Topics for Future Consideration

In the CY 2013 OPPI/ASC final rule with comment period (77 FR 68493 through 68494), we set forth our considerations in the selection of ASCQR Program quality measures. We seek to develop a comprehensive set of quality measures to be available for widespread use for making informed decisions and quality improvement in the ASC setting (77 FR 68496). We also seek to align these quality measures with the National Quality Strategy (NQS), the CMS Strategic Plan (which includes the CMS Quality Strategy), and our other quality reporting and value-based purchasing (VBP) programs, as appropriate. Accordingly, as we stated in the CY 2015 OPPI/ASC final rule with comment period (79 FR 66979), in considering future ASCQR Program measures, we are focusing on the following NQS and CMS Quality Strategy measure domains: Make care safer by reducing harm caused in the delivery of care; strengthen person and family engagement as partners in their care; promote effective communication

and coordination of care; promote effective prevention and treatment of chronic disease; work with communities to promote best practices of healthy living; and make care affordable.

We invited public comment on one measure developed by the CDC for potential inclusion in the ASCQR Program in future rulemaking, the Ambulatory Breast Procedure Surgical Site Infection (SSI) Outcome measure (NQF #3025). This potential measure is discussed in more detail below.

Healthcare-associated infections (HAIs) are a major cause of morbidity and mortality in healthcare settings in the United States, with the most recent prevalence surveys of HAIs estimating that approximately four percent of inpatients in acute care settings have developed at least one HAI, translating to 721,800 infections in 648,000 patients in 2011.¹⁹² Surgical site infection (SSI) is one of the most common HAIs, comprising approximately 22 percent of all HAIs, and contribute greatly to the

mortality and cost burden of HAIs.¹⁹³ Breast SSIs represent a substantial proportion of SSIs overall in inpatient settings, and have one of the highest infection risks of any procedure type in outpatient settings.¹⁹⁴ While SSI rates following breast procedures vary from one percent to over 30 percent depending on procedure type,¹⁹⁵ the

¹⁹³ Ibid.

¹⁹⁴ This statement is based on an analysis of data reported to the National Healthcare Safety Network (NHSN). Out of 67,150 ASC procedures report to NHSN from 2010 to 2013, 30,787 (45.9 percent) were breast procedures. Out of the 142 surgical site infections reported from ASCs during the same time period, 78 (54.9 percent) were related to breast procedures, indicating an SSI risk of 0.25 percent. This was the highest volume and SSI risk out of all outpatient ASC procedures reported in the timeframe.

Surgical Site Infections in Breast Surgery: Case-Control Study. *World Journal of Surgery*. 2004;28(3):242–246; Mannien J, Wille JC, Snoeren RL, van den Hof S. Impact of Postdischarge Surveillance on Surgical Site Infection Rates for Several Surgical Procedures: Results from the Nosocomial Surveillance Network in the Netherlands. *Infection Control and Hospital Epidemiology*. 2006;27:809–816; Vilar-Compte D., Rosales S., Hernandez-Mello N, Maafs E and Volkow P. Surveillance, Control, and Prevention of Surgical Site Infections in Breast Cancer Surgery: A

¹⁹² Magill SS, Edwards JR, Bamberg W, Beldavs ZG, Dumyati G, Kainer MA. Multistate Point-Prevalence Survey of Health Care-Associated Infections. *NEJM*. 2014;370:1198–1208.

trend in surgery transitioning to outpatient and ambulatory surgery settings due to advances in surgical techniques and economic incentives for ambulatory surgery make these events an outcome of interest for the ASCQR Program.

Numerous individual studies and systematic reviews provide strong evidence that measurement and feedback of surgical site infections leads to lower SSI rates in the long term.¹⁹⁶ Although standardized metrics have been developed to measure SSI rates for inpatient surgeries in the hospital setting,¹⁹⁷ these have not yet been developed for outpatient surgeries in ASCs, which comprise a fast-growing proportion of all surgeries performed in the United States.¹⁹⁸ We believe this measure, if adopted in the future, could serve as a quantitative guide for ASCs, enabling them to benchmark SSI rates in their facilities against nationally aggregated data and set targets for improvement.

This issue is of interest to the ASCQR Program because breast procedures are becoming increasingly common at ASCs.¹⁹⁹ In addition, the Ambulatory Breast Procedure Surgical Site Infection Outcome measure addresses the MAP-identified measure gap area of surgical quality measures, including surgical site infection measures, for the ASCQR Program.²⁰⁰

The Ambulatory Breast Procedure Surgical Site Infection (SSI) Outcome measure was included on the 2016 MUC list²⁰¹ and reviewed by the MAP. The MAP conditionally supported the

measure (MUC16–155), noting the rapid shift of care to the ambulatory surgery setting and the need to ensure transparency about the safety of ambulatory surgery centers.²⁰² The MAP further noted that this measure should be submitted for NQF review and endorsement.²⁰³ A summary of the MAP recommendations can be found at: <https://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=81593>. We note that this measure received NQF endorsement in January 2017, and therefore satisfies the MAP's condition for support.²⁰⁴

The Ambulatory Breast Procedure Surgical Site Infection Outcome measure is used to assess the risk-adjusted Standardized Infection Ratio (SIR) for all SSIs following breast procedures conducted at ASCs among adult patients and reported to the CDC's National Healthcare Safety Network. The measure compares the reported number of SSIs observed at an ASC with a predicted value based on nationally aggregated data. The numerator for this measure is all SSIs during the 30-day and 90-day postoperative periods following breast procedures in ASCs. The term SSI as used in this measure is defined in accordance with the CDC NHSN's surveillance protocol as an infection, following a breast procedure, of either the skin, subcutaneous tissue and breast parenchyma at the incision site (superficial incisional SSI), deep soft tissues of the incision site (deep incisional SSI), or any part of the body deeper than the fascial/muscle layers that is opened or manipulated during the operative procedure (organ/space SSI).²⁰⁵ The denominator for this measure is all adult patients (defined as patients ages 18 to 108 years) undergoing breast procedures, as specified by the operative codes that comprise the breast procedure category of the NHSN Patient Safety Component Protocol, at an ASC. This measure cohort excludes hospital inpatient and outpatient departments, pediatric patients (patients younger than 18 years) and very elderly patients (older than 108 years), and brain-dead patients whose organs are being removed for donor purposes. The specifications for

this measure for the ASC setting can be found at: <http://www.qualityforum.org/QPS/> after searching "Ambulatory Breast Procedure Surgical Site Infection Outcome Measure."

We invited public comment on the possible inclusion of this measure in the ASCQR Program measure set in the future.

Comment: Several commenters supported the inclusion of the Ambulatory Breast Procedure Surgical Site Infection (SSI) Outcome measure (NQF #3025) in the ASCQR Program in future rulemaking, noting that the measure is fully developed, was tested in the ASC setting, and addresses an important area of care. One commenter recommended that CMS consider refining this and other measures so that data is collected at the NPI level, rather than by CCN. One commenter agreed that breast procedure SSI outcomes are a concern, but noted that significant development and testing may be required before the Ambulatory Breast Procedure Surgical Site Infection (SSI) Outcome measure (NQF #3025) is ready for implementation due to the difficulty of capturing data on whether an SSI has occurred. One commenter expressed concern that the measure could lead to unintended consequences related to the administration of perioperative antibiotics across breast procedures.

Response: We thank commenters for their support and recommendations. We will consider the suggestions and concerns as we craft future policy. In addition, we note that our goal is to develop a parsimonious measure set made up of meaningful measures that fill important gaps with consideration of the impact on burden in the ASCQR Program.

8. Maintenance of Technical Specifications for Quality Measures

We refer readers to the CY 2012 OPPI/ASC final rule with comment period (76 FR 74513 through 74514), where we finalized our proposal to follow the same process for updating the ASCQR Program measures that we adopted for the Hospital OQR Program measures, including the subregulatory process for making updates to the adopted measures. In the CY 2013 OPPI/ASC final rule with comment period (77 FR 68496 through 68497), the CY 2014 OPPI/ASC final rule with comment period (78 FR 75131), and the CY 2015 OPPI/ASC final rule with comment period (79 FR 66981), we provided additional clarification regarding the ASCQR Program policy in the context of the previously finalized Hospital OQR Program policy, including the processes for addressing

nonsubstantive and substantive changes to adopted measures. In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70531), we provided clarification regarding our decision to not display the technical specifications for the ASCQR Program on the CMS Web site, but stated that we will continue to display the technical specifications for the ASCQR Program on the QualityNet Web site. In addition, our policies regarding the maintenance of technical specifications for the ASCQR Program are codified at 42 CFR 416.325. We did not propose any changes to our policies regarding the maintenance of technical specifications for the ASCQR Program.

9. Public Reporting of ASCQR Program Data

In the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74514 through 74515), we finalized a policy to make data that an ASC submitted for the ASCQR Program publicly available on a CMS Web site after providing an ASC an opportunity to review the data to be made public. In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70531 through 70533), we finalized our policy to publicly display data by the National Provider Identifier (NPI) when the data are submitted by the NPI and to publicly display data by the CCN when the data are submitted by the CCN. In addition, we codified our policies regarding the public reporting of ASCQR Program data at 42 CFR 416.315 (80 FR 70533). In the CY 2017 OPPTS/ASC final rule with comment period, we formalized our current public display practices regarding timing of public display and the preview period by finalizing our proposals to publicly display data on the *Hospital Compare* Web site, or other CMS Web site as soon as practicable after measure data have been submitted to CMS; to generally provide ASCs with approximately 30 days to review their data before publicly reporting the data; and to announce the timeframes for each preview period starting with the CY 2018 payment determination on a CMS Web site and/or on our applicable listservs (81 FR 79819 through 79820). We did not propose any changes to these policies. However, we note that in section XIV.B.6.b. and c. of this final rule with comment period, we are finalizing two new measures: ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures, and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures, beginning with the CY 2022 payment determination, and specific

public reporting policies associated with these measures.

C. Administrative Requirements

1. Requirements Regarding QualityNet Account and Security Administrator

We refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75132 through 75133) for a detailed discussion of the QualityNet security administrator requirements, including setting up a QualityNet account, and the associated timelines, for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70533), we codified the administrative requirements regarding maintenance of a QualityNet account and security administrator for the ASCQR Program at 42 CFR 416.310(c)(1)(i). We refer readers to section XIV.D.3.b.1. of this final rule with comment period where we are finalizing our proposals to expand submission via the CMS online tool to also allow for batch data submission and make corresponding changes to the 42 CFR 416.310(c)(1)(i).

2. Requirements Regarding Participation Status

We refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75133 through 75135) for a complete discussion of the participation status requirements for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70533 and 70534), we codified these requirements regarding participation status for the ASCQR Program at 42 CFR 416.305. We did not propose any changes to these policies.

D. Form, Manner, and Timing of Data Submitted for the ASCQR Program

1. Requirements Regarding Data Processing and Collection Periods for Claims-Based Measures Using Quality Data Codes (QDCs)

We refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75135) for a complete summary of the data processing and collection periods for the claims-based measures using QDCs for the CY 2014 payment determination and subsequent years. In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70534), we codified the requirements regarding data processing and collection periods for claims-based measures using QDCs for the ASCQR Program at 42 CFR 416.310(a)(1) and (2). We did not propose any changes to these requirements.

We note that, in section XIV.B.3.b.(1) of this final rule with comment period, we are finalizing a proposal to remove one claims-based measure using QDCs, ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing, beginning with the CY 2019 payment determination. The following previously finalized claims-based measures using QDCs will be collected for the CY 2020 payment determination and subsequent years:

- ASC-1: Patient Burn;
- ASC-2: Patient Fall;
- ASC-3: Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant; and
- ASC-4: Hospital Transfer/ Admission.

2. Minimum Threshold, Minimum Case Volume, and Data Completeness for Claims-Based Measures Using QDCs

We refer readers to the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75135 through 75137), the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70534 through 70535) as well as 42 CFR 416.310(a)(3) and 42 CFR 416.305(c) for our policies about minimum threshold, minimum case volume, and data completeness for claims-based measures using QDCs. We did not propose any changes to these policies.

3. Requirements for Data Submitted via an Online Data Submission Tool

We refer readers to the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74505 through 74509); CY 2014 OPPTS/ASC final rule with comment period (78 FR 75137 through 75140); CY 2015 OPPTS/ASC final rule with comment period (79 FR 66983 through 66986); CY 2016 OPPTS/ASC final rule with comment period (80 FR 70535 through 70536); CY 2017 OPPTS/ASC final rule with comment period (81 FR 79820 through 79822); and 42 CFR 416.310(c) for our previously finalized policies for data submitted via an online data submission tool. For more information on data submission using QualityNet, we refer readers to: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPages%2FQnetTier2&cid=1228773314768>. We note that we are finalizing proposals to remove two measures submitted via a CMS online data submission tool, ASC-6 and ASC-7, in section XIV.B.3.b.(2) and XIV.B.3.b.(3) of this final rule with comment period. We are not finalizing our proposal to adopt one measure submitted via a CMS online data submission tool, as described in section XIV.B.6.a. of this final rule with comment period.

a. Requirements for Data Submitted via a Non-CMS Online Data Submission Tool

We refer readers to CY 2014 OPPS/ASC final rule with comment period (78 FR 75139 through 75140) and CY 2015 OPPS/ASC final rule with comment period (79 FR 66985 through 66986) for our requirements regarding data submitted via a non-CMS online data submission tool (CDC NHSN Web site). We codified our existing policies regarding the data collection time periods for measures involving online data submission and the deadline for data submission via a non-CMS online data submission tool at 42 CFR 416.310(c)(2). Currently, we only have one measure (ASC-8: Influenza Vaccination Coverage among Healthcare Personnel) that is submitted via a non-CMS online data submission tool.

We did not propose any changes to the reporting requirements for this measure.

b. Requirements for Data Submitted via a CMS Online Data Submission Tool

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75137 through 75139), CY 2016 OPPS/ASC final rule with comment period (80 FR 70535 through 70536), CY 2017 OPPS/ASC final rule with comment period (81 FR 79821 through 79822), and 42 CFR 416.310(c)(1) for our requirements regarding data submitted via a CMS online data submission tool. We are currently using the QualityNet Web site as our CMS online data submission tool: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetHomePage&cid=1120143435383>. In the CY 2018 OPPS/ASC proposed rule (82 FR 33701), we made one proposal to expand the method of data submission via a CMS online data submission tool.

(1) Batch Submission

We did not propose any changes to our policies regarding data submitted via a CMS online data submission tool when data is entered for individual facilities. Currently, for individual facility data entry, users must have a QualityNet account and use one Hospital Quality Reporting (HQR) External File per facility that is uploaded into the QualityNet secure portal. However, using one HQR External File that only allows data entry for one facility can be burdensome for entities responsible for submitting such data for multiple facilities, such as multi-facility ASCs. Therefore, in an effort to streamline the process, we

proposed to expand the CMS online tool to also allow for batch submission beginning with data submitted during CY 2018 for the CY 2020 payment determination and subsequent years.

Batch submission is submission of data for multiple facilities simultaneously using a single, electronic file containing data from multiple facilities submitted via one agent QualityNet account. Under the batch submission process, ASC agents (for example, a corporate representative for a corporate entity consisting of multiple ASC facilities with separate NPIs) would be assigned a vendor ID and an ASC's representative would submit the Security Administrator (SA) form with the assigned vendor ID for the agent to establish their own QualityNet account. Once approved, the agent may submit data for any ASC associated with that ID, individually or in a batch, and access data reports for the same ASCs. Agents would only have access to data reports for facilities that have authorized them to have access. For batch submission, agents would be provided the HQR external file layout with which to upload their associated ASCs' data under the agents' QualityNet account. In order to submit batch data, agents would need to meet all QualityNet account requirements, such as establishing a QualityNet account and maintaining a QualityNet security administrator. Additional details regarding logistics of batch data submission would be included in future guidance in the Specifications Manual.

In addition, we proposed to make corresponding changes to 42 CFR 416.310(c)(1)(i) to reflect this proposal and replace the term "ASCs" with the phrase "ASCs, and any agents submitting data on an ASC's behalf."

We invited public comment on our proposals, as discussed above, to: (1) Expand the CMS online tool to also allow for batch submission of measure data beginning with data submitted during CY 2018, and (2) make corresponding changes to modify 42 CFR 416.310(c)(1)(i) to reflect the aforementioned proposal.

Comment: Several commenters supported the proposal to allow batch submission, noting that it will increase submission efficiency and decrease administrative burden. One commenter requested that the process for batch submission be determined in a timely fashion to allow ASCs to use this option prior to the 2018 data submission deadline.

Response: We thank the commenters for their support and agree that batch submission will increase efficiency and decrease administrative burden. In

addition, as noted above, we proposed to expand the CMS online tool to allow for batch submission beginning with data submitted during CY 2018 for the CY 2020 payment determination and subsequent years, such that the option will be available prior to the 2018 data submission deadline.

After consideration of the public comments we received, we are finalizing our proposals to: (1) Expand the CMS online tool to also allow for batch submission of measure data beginning with data submitted during CY 2018, and (2) make corresponding changes to modify 42 CFR 416.310(c)(1)(i).

(2) Measures Using the CMS Online Data Submission Tool for the CY 2020 Payment Determination and Subsequent Years

In sections XIV.B.3.b.(2) and XIV.B.3.b.(3) of this final rule with comment period, respectively, we are finalizing proposals to remove two measures collected via a CMS online data submission tool—ASC-6: Safe Survey Checklist Use and ASC-7: ASC Facility Volume Data on Selected Surgical Procedures—beginning with the CY 2019 payment determination. The following previously finalized measures will require data to be submitted via a CMS online data submission tool for the CY 2020 payment determination and subsequent years:

- ASC-9: Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients;
- ASC-10: Endoscopy/Polyp Surveillance: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use; and
- ASC-11: Cataracts: Improvement in Patients' Visual Function within 90 Days Following Cataract Surgery.²⁰⁶

We are not finalizing our proposal to adopt one new measure collected via a CMS online data submission tool, ASC-16: Toxic Anterior Segment Syndrome, beginning with the CY 2021 payment determination, as described in section XIV.B.6.a. of this final rule with comment period.

4. Requirements for Non-QDC Based, Claims-Based Measure Data

We refer readers to the CY 2015 OPPS/ASC final rule with comment

²⁰⁶ We note that the ASC-11 measure is voluntarily collected effective beginning with the CY 2017 payment determination, as set forth in section XIV.E.3.c. of the CY 2015 OPPS/ASC final rule with comment period (79 FR 66984 through 66985).

period (79 FR 66985) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70536) for our previously adopted policies regarding data processing and collection periods for claims-based measures for the CY 2018 payment determination and subsequent years. In addition, in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70536), we codified these policies at 42 CFR 416.310(b). We did not propose any changes to these requirements.

We note that one previously finalized measure, ASC-12: Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy, will be collected via claims for the CY 2020 payment determination and subsequent years (79 FR 66970 through 66978). In addition, in sections XIV.B.6.b. and c., respectively, of this final rule with comment period, we are finalizing our proposals to adopt two new claims-based measures—ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures, and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures—beginning with the CY 2022 payment determination.

5. Requirements for Data Submission for ASC-15a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures

We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79822 through 79824) for our previously finalized policies regarding survey administration and vendor requirements for the CY 2020 payment determination and subsequent years. In addition, we codified these policies at 42 CFR 416.310(e). However, in section XIV.B.4. of this final rule with comment period, we are finalizing a proposal to delay implementation of the ASC-15a-e: OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data submission) until further action in future rulemaking and refer readers to that section for more details.

As noted in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79815), some commenters suggested shortening sections of the survey, such as the “About You” section. We continue to evaluate the utility of individual questions as we collect new data from the survey’s voluntary national implementation, and will consider different options for shortening the OAS CAHPS Survey without the loss of important data in the future. Specifically, we continue to consider the removal of two demographic

questions—the “gender” and “age” questions—from the OAS CAHPS Survey in a future update.

Comment: A few commenters supported removal of the gender and age questions from the survey.

Response: We thank the commenters for their suggestions. We will take these comments under consideration as we craft policies for the OAS CAHPS Survey.

6. Extraordinary Circumstances Extensions or Exemptions for the CY 2019 Payment Determination and Subsequent Years

a. Background

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53642 through 53643), the CY 2014 OPPS/ASC final rule with comment period (78 FR 75140 through 75141), the CY 2017 OPPS/ASC final rule with comment period (81 FR 79824 through 79825), and 42 CFR 416.310(d) for the ASCQR Program’s policies for extraordinary circumstance extensions or exemptions (ECE) requests.²⁰⁷

Many of our quality reporting and value-based purchasing programs share a common process for requesting an exception from program reporting due to an extraordinary circumstance not within a provider’s control. We refer readers to the Hospital IQR Program (76 FR 51615 through 51652, 78 FR 50836 through 50837, 79 FR 50277, 81 FR 57181 through 57182, and 42 CFR 412.140(c)(2)), the Hospital OQR Program (77 FR 68489, 78 FR 75119 through 75120, 79 FR 66966, and 80 FR 70524), the IPFQR Program (77 FR 53659 through 53660 and 79 FR 45978), and the PCHQR Program (78 FR 50848), as well as the HAC Reduction Program (80 FR 49542 through 49543) and the Hospital Readmissions Reduction Program (80 FR 49542 through 49543), for program-specific information about extraordinary circumstances exemption requests. As noted below, some of these policies were updated in the FY 2018 IPPS/LTCH PPS final rule.

In reviewing the policies for these programs, we recognized that there are five areas in which these programs have variances regarding ECE requests. These are: (1) Allowing the facilities or hospitals to submit a form signed by the facility’s or hospital’s CEO versus CEO or designated personnel; (2) requiring the form be submitted within 30 days

following the date that the extraordinary circumstance occurred versus within 90 days following the date the extraordinary circumstance occurred; (3) inconsistency regarding specification of a timeline for us to provide our formal response notifying the facility or hospital of our decision; (4) inconsistency regarding specification of our authority to grant ECEs due to CMS data system issues; and (5) referring to the program as “extraordinary extensions/exemptions” versus as “extraordinary circumstances exceptions.” We believe addressing these five areas, as appropriate, can improve administrative efficiencies for affected facilities or hospitals. We note that, in the FY 2018 IPPS/LTCH PPS final rule, we examined our policies in these areas for the Hospital Readmissions Reduction Program, the HAC Reduction Program, the Hospital IQR Program, the PCHQR Program and the IPFQR Program (82 FR 38240, 38277, 38410, 38425 and 38473 through 38474, respectively) and finalized proposals to address differences in these areas for those programs. In section XIII.D.8. of this final rule with comment period, we are also finalizing revisions to our ECE policies for the Hospital OQR Program.

With the exception of the terminology used to describe these processes (item 5 above), the ASCQR Program is aligned with other quality reporting programs. As a result, in the CY 2018 OPPS/ASC proposed rule (82 FR 33702), we proposed to rename the process as the extraordinary circumstances exceptions (ECE) policy and make conforming changes to 42 CFR 416.310(d). These are discussed below.

b. ECE Policy Nomenclature

We have observed that while all quality programs listed above have developed similar policies to provide exceptions from program requirements to facilities that have experienced extraordinary circumstances, such as natural disasters, these programs refer to these policies using inconsistent terminology. Some programs refer to these policies as “extraordinary circumstances extensions/exemptions” while others refer to the set of policies as “extraordinary circumstances exceptions.” Several programs (specifically, the Hospital VBP Program, the HAC Reduction Program, and the Hospital Readmissions Reduction Program) are not able to grant extensions to required data reporting timelines due to their reliance on data external to their program, and thus the term, “extraordinary circumstances extensions/exemptions” is not

²⁰⁷ In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66987), we stated that we will refer to the process as the “Extraordinary Circumstances Extensions or Exemptions” process rather than the “Extraordinary Circumstances Extensions or Waivers” process.

applicable to all programs. However, all of the described programs are able to offer exceptions from their reporting requirements. Therefore, in an effort to align across CMS quality programs, we proposed to change the name of this policy from “extraordinary circumstances extensions or exemption” to “extraordinary circumstances exceptions” for the ASCQR Program, beginning January 1, 2018, and to revise § 416.310(d) of our regulations to reflect this change.

We invited public comment on these proposals as discussed above.

Comment: A few commenters supported the proposal to align the ECE policy with other quality reporting programs.

Response: We thank commenters for their support.

After consideration of the public comments we received, we are finalizing the proposals to rename the process as the extraordinary circumstances exceptions (ECE) policy and make conforming changes to 42 CFR 416.310(d).

c. Timeline for CMS Response to ECE Requests

We also note that we believe it is important for facilities to receive timely feedback regarding the status of ECE requests. We strive to complete our review of each ECE request as quickly as possible. However, we recognize that the number of requests we receive, and the complexity of the information provided impacts the actual timeframe to make ECE determinations. To improve transparency of our process, we believe it is appropriate to clarify that we will strive to complete our review of each request within 90 days of receipt.

7. ASCQR Program Reconsideration Procedures

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53643 through 53644), the CY 2014 OPSS/ASC final rule with comment period (78 FR 75141), the CY 2016 OPSS/ASC final rule with comment period (80 FR 70537), and 42 CFR 416.330 for the ASCQR Program’s reconsideration policy. We did not propose any changes to this policy.

E. Payment Reduction for ASCs That Fail To Meet the ASCQR Program Requirements

1. Statutory Background

We refer readers to section XVI.D.1. of the CY 2013 OPSS/ASC final rule with comment period (77 FR 68499) for a detailed discussion of the statutory background regarding payment

reductions for ASCs that fail to meet the ASCQR Program requirements.

2. Reduction to the ASC Payment Rates for ASCs That Fail To Meet the ASCQR Program Requirements for a Payment Determination Year

The national unadjusted payment rates for many services paid under the ASC payment system equal the product of the ASC conversion factor and the scaled relative payment weight for the APC to which the service is assigned. Currently, the ASC conversion factor is equal to the conversion factor calculated for the previous year updated by the multifactor productivity (MFP)-adjusted CPI-U update factor, which is the adjustment set forth in section 1833(i)(2)(D)(v) of the Act. The MFP-adjusted CPI-U update factor is the Consumer Price Index for all urban consumers (CPI-U), which currently is the annual update for the ASC payment system, minus the MFP adjustment. As discussed in the CY 2011 MPFS final rule with comment period (75 FR 73397), if the CPI-U is a negative number, the CPI-U would be held to zero. Under the ASCQR Program in accordance with section 1833(i)(7)(A) of the Act and as discussed in the CY 2013 OPSS/ASC final rule with comment period (77 FR 68499), any annual increase shall be reduced by 2.0 percentage points for ASCs that fail to meet the reporting requirements of the ASCQR Program. This reduction applied beginning with the CY 2014 payment rates (77 FR 68500). For a complete discussion of the calculation of the ASC conversion factor, we refer readers to section XII.G. of this final rule with comment period.

In the CY 2013 OPSS/ASC final rule with comment period (77 FR 68499 through 68500), in order to implement the requirement to reduce the annual update for ASCs that fail to meet the ASCQR Program requirements, we finalized our proposal that we would calculate two conversion factors: A full update conversion factor and an ASCQR Program reduced update conversion factor. We finalized our proposal to calculate the reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for that calendar year payment determination. We finalized our proposal that application of the 2.0 percentage point reduction to the annual update may result in the update to the ASC payment system being less than zero prior to the application of the MFP adjustment.

The ASC conversion factor is used to calculate the ASC payment rate for services with the following payment indicators (listed in Addenda AA and BB to the proposed rule, which are available via the Internet on the CMS Web site): “A2”, “G2”, “P2”, “R2” and “Z2”, as well as the service portion of device-intensive procedures identified by “J8” (77 FR 68500). We finalized our proposal that payment for all services assigned the payment indicators listed above would be subject to the reduction of the national unadjusted payment rates for applicable ASCs using the ASCQR Program reduced update conversion factor (77 FR 68500).

The conversion factor is not used to calculate the ASC payment rates for separately payable services that are assigned status indicators other than payment indicators “A2”, “G2”, “J8”, “P2”, “R2” and “Z2.” These services include separately payable drugs and biologicals, pass-through devices that are contractor-priced, brachytherapy sources that are paid based on the OPSS payment rates, and certain office-based procedures, certain radiology services and diagnostic tests where payment is based on the MPFS nonfacility PE RVU-based amount, and a few other specific services that receive cost-based payment (77 FR 68500). As a result, we also finalized our proposal that the ASC payment rates for these services would not be reduced for failure to meet the ASCQR Program requirements because the payment rates for these services are not calculated using the ASC conversion factor and, therefore, not affected by reductions to the annual update (77 FR 68500).

Office-based surgical procedures (performed more than 50 percent of the time in physicians’ offices) and separately paid radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents) are paid at the lesser of the MPFS nonfacility PE RVU-based amounts or the amount calculated under the standard ASC ratesetting methodology. Similarly, in section XII.D.2.b. of the CY 2015 OPSS/ASC final rule with comment period (79 FR 66933 through 66934), we finalized our proposal that payment for the new category of covered ancillary services (that is, certain diagnostic test codes within the medical range of CPT codes for which separate payment is allowed under the OPSS and when they are integral to covered ASC surgical procedures) will be at the lower of the MPFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the standard

ASC ratesetting methodology. In the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the standard ASC ratesetting methodology for this type of comparison would use the ASC conversion factor that has been calculated using the full ASC update adjusted for productivity. This is necessary so that the resulting ASC payment indicator, based on the comparison, assigned to these procedures or services is consistent for each HCPCS code, regardless of whether payment is based on the full update conversion factor or the reduced update conversion factor.

For ASCs that receive the reduced ASC payment for failure to meet the ASCQR Program requirements, we believe that it is both equitable and appropriate that a reduction in the payment for a service should result in proportionately reduced coinsurance liability for beneficiaries (77 FR 68500). Therefore, in the CY 2013 OPPTS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the Medicare beneficiary's national unadjusted coinsurance for a service to which a reduced national unadjusted payment rate applies will be based on the reduced national unadjusted payment rate.

In that final rule with comment period, we finalized our proposal that all other applicable adjustments to the ASC national unadjusted payment rates would apply in those cases when the annual update is reduced for ASCs that fail to meet the requirements of the ASCQR Program (77 FR 68500). For example, the following standard adjustments would apply to the reduced national unadjusted payment rates: The wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; and the adjustment for devices furnished with full or partial credit or without cost (77 FR 68500). We believe that these adjustments continue to be equally applicable to payment for ASCs that do not meet the ASCQR Program requirements (77 FR 68500).

In the CY 2015, CY 2016 and CY 2017 OPPTS/ASC final rules with comment period (79 FR 66981 through 66982; 80 FR 70537 through 70538; and 81 FR 79825 through 79826, respectively), we did not make any other changes to these policies.

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33702 through 33703), we did not propose any changes to these policies for CY 2018.

XV. Files Available to the Public via the Internet

The Addenda to the OPPTS/ASC proposed rules and the final rules with comment period are published and available only via the Internet on the CMS Web site. To view the Addenda to this final rule with comment period pertaining to CY 2018 payments under the OPPTS, we refer readers to the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html>; select "1678-FC" from the list of regulations. All OPPTS Addenda to this final rule with comment period are contained in the zipped folder entitled "2018 OPPTS 1678-FC Addenda" at the bottom of the page. To view the Addenda to this final rule with comment period pertaining to CY 2018 payments under the ASC payment system, we refer readers to the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices.html>; select "1678-FC" from the list of regulations. All ASC Addenda to this final rule with comment period are contained in the zipped folders entitled "Addendum AA, BB, DD1, DD2, and EE."

XVI. Collection of Information Requirements

A. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2018 OPPTS/ASC proposed rule (82 FR 33705 through 33710), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs).

B. ICRs for the Hospital OQR Program

1. Background

The Hospital OQR Program is generally aligned with the CMS quality reporting program for hospital inpatient services known as the Hospital IQR Program (82 FR 20031 through 20075). We refer readers to the CY 2011 through CY 2017 OPPTS/ASC final rules with comment periods (75 FR 72111 through 72114; 76 FR 74549 through 74554; 77 FR 68527 through 68532; 78 FR 75170 through 75172; 79 FR 67012 through 67015; 80 FR 70580 through 70582; and 81 FR 79862 through 79863, respectively) for detailed discussions of Hospital OQR Program information collection requirements we have previously finalized. The information collection requirements associated with the Hospital OQR Program are currently approved under OMB control number 0938-1109.

In section XIII.B.4.c. of this final rule with comment period, we are finalizing the removal of six measures. Specifically, beginning with the CY 2020 payment determination, we are finalizing, as proposed, to remove: (1) OP-21: Median Time to Pain Management for Long Bone Fracture; and (2) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. Also, while we proposed to remove: (1) OP-1: Median Time to Fibrinolysis, (2) OP-4: Aspirin at Arrival, (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional, and (4) OP-25: Safe Surgery Checklist beginning with the CY 2021 payment determination, we are finalizing removal of these measures with modification so that removal begins with the CY 2020 payment determination, one year earlier than proposed. To summarize, the following measures will be removed for the CY 2020 payment determination: (1) OP-1: Median Time to Fibrinolysis; (2) OP-4: Aspirin at Arrival; (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional; (4) OP-21: Median Time to Pain Management for Long Bone Fracture; (5) OP-25: Safe Surgery Checklist; and (6) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. We expect these finalized proposals will reduce the burden of reporting for the Hospital OQR Program, as discussed in more detail below. We note that we discuss only the changes in burden resulting from the provisions in this final rule with comment period.

In section XIII.B.10.b. of this final rule with comment period, we are finalizing our proposal, with modification, to publicly report OP-18c using data

beginning with patient encounters during the third quarter of CY 2017. However, we do not expect our modifications to affect the burden estimates made in the CY 2018 OP/ASC proposed rule (82 FR 33705 through 33708), as discussed below.

In section XIII.B.5. of this final rule with comment period, we are finalizing our proposal to delay the OP-37a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection period) until further notice in future rulemaking.

In addition, in this final rule with comment period, beginning with the CY 2020 payment determination, we are finalizing our proposals: (1) To codify at § 419.46(e) our previously finalized process for targeting hospitals for validation of chart-abstracted measures (section XIII.D.7.b. of this final rule with comment period); (2) to formalize the educational review process and use it to correct incorrect validation results for chart-abstracted measures (section XIII.D.7.c. of this final rule with comment period); (3) to align the first quarter for which hospitals must submit data for all hospitals that did not participate in the previous year's Hospital OQR Program, and make corresponding revisions at 42 CFR 419.46(c)(3) (section XIII.D.1. of this final rule with comment period); and (4) to align the naming of the Extraordinary Circumstances Exceptions (ECE) policy and make conforming changes to the CFR (section XIII.D.8.a. of this final rule with comment period). We are not finalizing our proposal to change the NOP submission deadlines such that hospitals are required to submit the NOP any time prior to registering on the QualityNet Web site and to make conforming revisions at 42 CFR 419.46(a) (section XIII.C.2.b. of this final rule with comment period). We do not believe that these changes will affect our burden estimates, as further discussed below.

2. Newly Finalized Change in Hourly Labor Cost for Burden Calculation for the Hospital OQR Program

In previous rules (80 FR 70581), we estimated that a hospital pays an individual approximately \$30 per hour to abstract and submit clinical data. We previously did not specify whether our wage estimate of \$30 included overhead and fringe benefit costs. However, although we did not specify that this estimate included fringe benefit costs, in previous rules (80 FR 70581), we used \$30 to calculate the total cost to

hospitals to pay for staff that abstract and submit clinical data. In CY 2018 OP/ASC proposed rule (82 FR 33705), we proposed a new cost to hospitals and specified that this cost included both wage and overhead and fringe benefit costs. Specifically, we proposed to estimate that reporting data for the Hospital OQR Program can be accomplished by staff with a median hourly wage of \$18.29 per hour.²⁰⁸ This labor rate is based on the Bureau of Labor Statistics (BLS) median hourly wage for a medical records and health information technician. The BLS is the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.²⁰⁹ Acting as an independent agency, the BLS provides objective information for not only the government, but also for the public.²¹⁰ The BLS describes medical records and health information technicians as those responsible for processing and maintaining health information data.²¹¹ Therefore, we believe it is reasonable to assume that these individuals would be tasked with abstracting clinical data for the Hospital OQR Program measures.

We also proposed to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage rate ($\$18.29 \times 2 = \36.58) to estimate total cost is a reasonably accurate estimation method. Accordingly, we calculate cost burden to hospitals using a wage plus benefits estimate of \$36.58 throughout the discussion below for the Hospital OQR Program.

We invited public comment on these proposals.

Comment: One commenter expressed concern that a medical records and health information technician with a wage of \$18.29 per hour is not appropriate to complete chart-abstractation and requested that we not reduce the estimated hourly wage rate from previous years.

Response: We note that we believe the wage for a medical records and health information technician is appropriate

²⁰⁸ BLS Occupational Employment Statistics; May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

²⁰⁹ <http://www.bls.gov/bls/infohome.htm>.

²¹⁰ Ibid.

²¹¹ BLS Occupational Employment Statistics; May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

for use in this program, because such a technician is described as an individual who compiles, processes, and maintains medical records of hospital and clinic patients in a manner consistent with medical, administrative, ethical, legal, and regulatory requirements of the health care system.²¹² We previously estimated a total cost to hospitals of \$30 per hour (80 FR 70581), though we have not previously specified whether that rate included overhead and fringe benefits as well as wage. We note that our current calculations result in a higher estimate of total hourly cost for hospitals, as we proposed to use a median hourly wage of \$18.29 per hour and double it to account for overhead and fringe benefits ($\$18.29 \times 2 = \36.58), resulting in a higher hourly cost to hospitals of \$36.58 per hour (compared to \$30 per hour) to estimate burden in the Hospital OQR Program.

After consideration of the public comment we received, we are finalizing our estimates, as presented in the proposed rule to: (1) Estimate that reporting data for the Hospital OQR Program can be accomplished by staff with a median hourly wage of \$18.29 per hour, and (2) calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage. These result in a wage plus benefits estimate of \$36.58 for the Hospital OQR Program.

3. Estimated Burden Due to Newly Finalized Proposal To Delay OP-37a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures Beginning With the CY 2020 Payment Determination

As described in section XIII.B.5. of this final rule with comment period, we are finalizing our proposal to delay OP-37a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection period). As we stated in the CY 2017 OP/ASC final rule with comment period (81 FR 79863), the information collection requirements associated with the five OAS CAHPS Survey-based measures (OP-37a, OP-37b, OP-37c, OP-37d, and OP-37e) are currently approved under OMB Control Number 0938-1240. For this reason, in the CY 2017 OP/ASC final rule with comment period (81 FR 79863), we did not provide an independent estimate of the burden associated with OAS CAHPS Survey based measures for the Hospital

²¹² Ibid.

OQR Program. Similarly, our finalized proposal to delay implementation of these measures does not affect our current burden estimates.

4. Estimated Burden Due to Proposal to Publicly Report OP-18c: Median Time From Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients

In section XIII.B.10.b. of this final rule with comment period, we are finalizing, with modifications, our proposal to publicly report 18c: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients beginning with patient encounters from the third quarter of 2017. As noted in that section, the data required for public reporting of OP-18c are already collected as part of the existing Hospital OQR Program requirements. Accordingly, we did not estimate changes to burden due to this proposal, and we do not expect the modifications we are finalizing to affect burden.

5. Estimated Burden Due to Newly Finalized Proposals for the CY 2020 Payment Determination and Subsequent Years

a. Burden Due to Measure Removals

In section XIII.B.4.c. of this final rule with comment period, we are finalizing the removal of six measures from the Hospital OQR Program. Specifically, beginning with the CY 2020 payment determination, we are finalizing, as proposed, to remove: (1) OP-21: Median Time to Pain Management for Long Bone Fracture; and (2) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. Also, while we proposed to remove: (1) OP-1: Median Time to Fibrinolysis, (2) OP-4: Aspirin at Arrival, (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional, and (4) OP-25: Safe Surgery Checklist beginning with the CY 2021 payment determination, we are finalizing removal of these measures with modification so that removal begins with the CY 2020 payment determination, one year earlier than proposed. In summary, we are finalizing removal of six measures beginning with the CY 2020 payment determination. We note that we have modified our estimates from the proposed rule (82 FR 33673) in order to streamline our discussion in light of the modification.

Specifically, we are finalizing the removal of four chart-abstracted

measures ((1) OP-1: Median Time to Fibrinolysis; (2) OP-4: Aspirin at Arrival; (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional; and (4) OP-21: Median Time to Pain Management for Long Bone Fracture) and two web-based measures ((1) OP-25: Safe Surgery Checklist Use; and (2) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures). In total, we expect these finalized proposals will reduce burden by 457,490 hours and \$16.7 million for the CY 2020 payment determination. These estimates are described in detail below.

We calculated the burden reduction associated with the removal of chart-abstracted measures by considering the time per case to report chart-abstracted measures (submitted using a web-based tool) as well as the number of cases per hospital and the number of participating hospitals. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70582), we estimated the burden to collect chart-abstracted data for a single web-based measure, including OP-21, to be 2.92 minutes. In this final rule with comment period, we estimate that 3,300 outpatient hospitals report data under the Hospital OQR Program. Based on the most recent data from CY 2015 reporting, we also estimate that 947 cases are reported per hospital for each chart-abstracted measure. We note that although OP-1: Median Time to Fibrinolysis is a chart-abstracted measure, we do not expect removing this measure will reduce burden, as the data collected for this measure is required to calculate another program measure in the AMI measure set (OP-2: Fibrinolytic Therapy Received Within 30 Minutes of ED Arrival) and, therefore, will continue to be collected as an underlying part of OP-2 even though we are finalizing the proposal to remove OP-1. Accordingly, there is no change in burden associated with the finalized removal of this measure included in our calculations below.

Accordingly, we estimate a total burden reduction of 138.3 hours per outpatient hospital due to the removal of chart-abstracted measures (2.92 minutes per measure/60 minutes per hour \times 3 measure \times 947 cases per hospital). In total, across 3,300 outpatient hospitals, we estimate a burden reduction of 456,390 hours (138.3 hours per hospital \times 3,300 hospitals) and \$16,694,746 (456,390 total hours \times \$36.58 per hour) for the CY 2020 payment determination due to the finalized removal of (1) OP-1: Median Time to Fibrinolysis; (2) OP-4: Aspirin at Arrival; (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical

Professional; and (4) OP-21: Median Time to Pain Management for Long Bone Fracture.

We calculated the burden reduction associated with the finalized removal of two web-based measures (OP-25: Safe Surgery Checklist Use and OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures) by considering the time per measure to report web-based measures as well as the number of participating hospitals. As we previously stated in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70582), we estimate that hospitals spend approximately 10 minutes per measure to report web-based measures and that 3,300 outpatient hospitals report data under the Hospital OQR Program. Accordingly, for the CY 2020 payment determination, we estimate a total burden reduction of 1,100 hours across 3,300 outpatient hospitals due to the removal of two web-based measures (10 minutes per measure/60 minutes per hour \times 2 measures \times 3,300 hospitals). We further estimate a cost reduction of \$40,238 due to this finalized proposal (1,100 total hours \times \$36.58 per hour).

In total, we expect these finalized proposals will reduce burden by 457,490 hours (456,390 + 1,100) and \$16,734,984 (\$16,694,746 + \$40,238) for the CY 2020 payment determination.

b. Burden Due to Updates to Previously Finalized Chart-Abstracted Measure Validation Procedures and the Educational Review Process

We previously estimated the burden associated with validation of chart-abstracted measures in the CY 2013 and CY 2014 OPPS/ASC final rules with comment period (77 FR 68531 and 78 FR 75172, respectively). In section XIII.D.7.a. of this final rule with comment period, we are providing clarification on our procedures for validation of chart-abstracted measures to note that the 50 poorest performing outlier hospitals will be targeted for validation. We do not expect this clarification to affect burden because it does not alter the number of hospitals selected for validation or the requirements for those hospitals that are selected.

In addition, in section XIII.D.7.c. of this final rule with comment period, we are finalizing our proposal to formalize the process of allowing hospitals to use an educational review process to correct incorrect validation results for the first three quarters of validation for chart-abstracted measures. We also are finalizing our proposal to update the process to specify that if the results of an educational review indicate that we

incorrectly scored a hospital's medical records selected for validation, the corrected quarterly validation score will be used to compute the hospital's final validation score at the end of the calendar year. Under this policy, the educational review request process remains the same for the CY 2020 payment determination and subsequent years, except that revised scores identified through an educational review will be used to correct a hospital's validation score. As a result, we do not expect this policy to affect the burden experienced by hospitals, as our changes to this policy result in a change in the way we address educational review requests and not a change to the process hospitals must follow to request an education review.

As we stated in the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75171), we believe there is a burden associated with successful participation in the Hospital OQR Program, where successful participation results in a full annual payment update (APU) for a particular payment determination. This burden includes, but is not limited to, maintaining familiarity with the Hospital OQR Program requirements, which includes checking feedback reports to indicate a facility's current status or performance (78 FR 75171). The overall administrative burden was estimated at 42 hours per hospital (78 FR 75171). As stated above, we do not believe this burden will change with the finalization of our policy to update the educational review process to include corrections because no additional activity on the part of hospitals is required.

c. Burden Due to Proposal To Update to NOP Submission Deadline

We previously estimated the burden associated with Hospital OQR Program participation and requirements in the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75171). In section XIII.C.2. of this final rule with comment period, we are not finalizing our proposal to revise the NOP submission deadlines such that hospitals are required to submit the NOP any time prior to registering on the QualityNet Web site. We estimated that this proposal would have a negligible effect on the time and cost of completing the participation requirements. As a result, our decision not to finalize the proposal to revise the NOP submission deadline does not impact our burden estimates.

d. Burden Due To Aligning the First Quarter for Which Hospitals Must Submit Data for All Hospitals That Did Not Participate in the Previous Year's Hospital OQR Program

In section XIII.D.1 of this final rule with comment period, we are finalizing our proposals to align the timeline specifying the initial quarter for which hospitals must submit data for all hospitals that did not participate in the previous year's Hospital OQR Program, rather than specifying different timelines for hospitals with Medicare acceptance dates before versus after January 1 of the year prior to an affected annual payment update. Although this finalized proposal alters the timeline for hospitals to begin submitting data for the Hospital OQR Program, it does not alter program requirements. As a result, we do not anticipate that this proposal will affect burden.

e. Burden Due to Updates to the Previously Finalized ECE Policy

We previously estimated the burden associated with general and administrative Hospital OQR Program requirements in the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75171). In section XIII.D.8. of this final rule with comment period, we discuss our finalized alignment of the naming of this exception policy and finalized proposal to update 42 CFR 419.46(d) to reflect our current ECE policies. We also are clarifying the timing of our response to ECE requests. Because we do not seek any new or additional information in our finalized ECE proposals, we believe the updates will have no effect on burden for hospitals.

C. ICRs for the ASCQR Program

1. Background

We refer readers to the CY 2012 OPPTS/ASC final rule with comment period (76 FR 74554), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53672), and the CY 2013, CY 2014, CY 2015, CY 2016, and CY 2017 OPPTS/ASC final rules with comment periods (77 FR 68532 through 68533; 78 FR 75172 through 75174; 79 FR 67015 through 67016; 80 FR 70582 through 70584; and 81 FR 79863 through 79865, respectively) for detailed discussions of the ASCQR Program information collection requirements we have previously finalized. The information collection requirements associated with the ASCQR Program are currently approved under OMB control number 0938-1270. Below we discuss only the changes in burden that will result from the newly finalized provisions in this final rule with comment period.

In section XIV.B.3.b. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2019 payment determination, to remove three measures (ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing, ASC-6: Safe Surgery Checklist Use, and ASC-7: Ambulatory Surgical Center Facility Volume Data on Selected Ambulatory Surgical Center Surgical Procedures) from the ASCQR Program measure set. In section XIV.B.6.a. of this final rule with comment period, we are not finalizing our proposal, beginning with the CY 2021 payment determination, to adopt one new measure, ASC-16: Toxic Anterior Segment Syndrome. In section XIV.B.6.b. and c. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2022 payment determination, to adopt two new measures collected via claims (ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures). We expect these finalized proposals will reduce the overall burden of reporting data for the ASCQR Program, as discussed below.

In this final rule with comment period, we also are finalizing our proposals: (1) To delay ASC-15a-e: OAS CAHPS survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection) (section XIV.B.4. of this final rule with comment period); (2) to expand the CMS online tool to also allow for batch submission beginning with data submitted during CY 2018 and to make corresponding revisions to the CFR (section XIV.D.3.b. of this final rule with comment period); and, (3) to align the naming of the Extraordinary Circumstances Exceptions (ECE) policy beginning with CY 2018 and to make conforming changes to the CFR (section XIV.D.6.b. of this final rule with comment period). As discussed below, we do not expect these finalized proposals to affect our burden estimates.

2. Newly Finalized Change in Hourly Labor Cost for Burden Calculation for the ASCQR Program

To better align this program with our other quality reporting and value-based purchasing programs, we are finalizing our proposal to update our burden calculation methodology to standardize elements within our burden calculation. Specifically, we are finalizing our proposal to utilize an updated standard hourly labor cost for data reporting activities.

In the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79863

through 79864), we finalized our proposal to use the hourly labor cost of \$32.84 (hourly wage plus fringe and overhead, discussed in more detail below) in estimating the labor costs associated with abstracting clinical data. This labor rate was based on the Bureau of Labor Statistics (BLS) median hourly wage for a medical records and health information technician of \$16.42 per hour.²¹³ The BLS is the principal Federal agency responsible for measuring labor market activity, working conditions, and price changes in the economy.²¹⁴ Acting as an independent agency, the BLS provides objective information for not only the government, but also for the public.²¹⁵ The BLS describes medical records and health information technicians as those responsible for processing and maintaining health information data.²¹⁶ Therefore, we believe it is reasonable to assume that these individuals will be tasked with abstracting clinical data for ASCQR Program measures.

The BLS recently released updated wage estimates for Medical Records and Health Information Technicians. These updates increased the median hourly wage from \$16.42 per hour to \$18.29 per hour.²¹⁷ Applying the same 100 percent overhead cost estimate finalized in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79863 through 79864) to estimate the elements assigned as “indirect” or “overhead” costs, we estimate an updated total hourly cost to ASCs of \$36.58. Therefore, we proposed to apply an updated hourly labor cost of \$36.58 (\$18.29 base salary + \$18.29 fringe and overhead) to our burden calculations for chart abstraction.

We invited public comment on this proposal. We did not receive any public comments and are finalizing our proposal to apply an updated hourly labor cost of \$36.58 (\$18.29 base salary + \$18.29 fringe and overhead) to our burden calculations for chart abstraction.

3. Estimated Burden of Newly Finalized ASCQR Program Proposals Beginning With CY 2018

In section XIV.B.4. of this final rule with comment period, we are finalizing

²¹³ Available at: <http://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm>.

²¹⁴ Available at: <http://www.bls.gov/bls/infhome.htm>.

²¹⁵ *Ibid.*

²¹⁶ BLS Occupational Employment Statistics; May 2016. Available at: <https://www.bls.gov/oes/current/oes292071.htm>.

²¹⁷ Available at: <https://www.bls.gov/ooh/healthcare/medical-records-and-health-information-technicians.htm>.

our proposal to delay ASC–15a–e: OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection) until further notice in future rulemaking. As described in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79864), the information collection requirements associated with the five OAS CAHPS Survey based measures (ASC–15a, ASC–15b, ASC–15c, ASC–15d, and ASC–15e) are currently approved under OMB Control Number 0938–1240. For this reason, we did not provide an independent estimate of the burden associated with OAS CAHPS Survey administration for the ASCQR Program in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79864). Similarly, our finalized proposal to delay reporting on these measures does not affect our current burden estimates.

In section XIV.D.3. of this final rule with comment period, we are finalizing our proposals to expand the CMS online tool to also allow for batch submission beginning with data submitted during the CY 2018 reporting period and to make corresponding revisions to the CFR. We expect this finalized proposal to increase the efficiency of data submission via the CMS online tool. However, the finalized proposal does not change our data reporting requirements, and therefore, we do not expect a change in the burden experienced by ASCs.

In section XIV.D.6. of this final rule with comment period, we are finalizing our proposals to align the naming of the Extraordinary Circumstances Exceptions (ECE) policy beginning with CY 2018 and to make conforming changes to the CFR. We are also clarifying the timing of our response to ECE requests. Because we do not seek any new or additional information in our ECE finalized proposals, we believe the updates will have no effect on burden for hospitals.

4. Estimated Burden of Newly Finalized ASCQR Program Proposals for the CY 2019 Payment Determination

In section XIV.B.3.b. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2019 payment determination, to remove three measures from the ASCQR Program. These measures include one claims-based measure (ASC–5: Prophylactic Intravenous (IV) Antibiotic Timing) and two collected via a CMS online data submission tool (ASC–6: Safe Surgery Checklist Use and ASC–7: Ambulatory Surgical Center Facility Volume Data on Selected Ambulatory Surgical Center Surgical Procedures).

Data for ASC–5 is submitted via CMS claims using Quality Data Codes, which impose only a nominal burden on providers because these claims are already submitted for the purposes of payment. Therefore, we estimate a nominal reduction in burden associated with our finalized proposal to remove the ASC–5 measure from the ASCQR Program measure set beginning with the CY 2019 payment determination.

We believe 3,937 ASCs will experience a reduction in burden associated with our finalized proposals to remove ASC–6 and ASC–7 from the ASCQR Program measure set. In the CY 2014 OPPTS/ASC final rule with comment period (78 FR 75173), we finalized our estimates that each participating ASC will spend 10 minutes per measure per year to collect and submit the required data for the ASC–6 and ASC–7 measures, making the total estimated annual burden associated with each of these measures 657 hours (3,937 ASCs × 0.167 hours per ASC) and \$24,033 (657 hours × \$36.58 per hour). Therefore, we estimate a total reduction in burden of 1,314 (657 hours × 2 measures) hours and \$48,066 (1,314 hours × \$36.58 per hour) for all ASCs as a result of our finalized proposals to remove ASC–6 and ASC–7 from the ASCQR Program measure set. The reduction in burden associated with these requirements is available for review and comment under OMB Control Number 0938–1270.

5. Estimated Burden of ASCQR Program for the CY 2021 Payment Determination

In section XIV.B.6.a. of this final rule with comment period, we are not finalizing our proposal to adopt one new measure collected via a CMS online data submission tool, ASC–16: Toxic Anterior Segment Syndrome, beginning with the CY 2021 payment determination. Therefore, the initially estimated burden from the CY 2018 OPPTS/ASC proposed rule (82 FR 33709) does not apply.

6. Estimated Burden of ASCQR Program Newly Finalized Proposals for the CY 2022 Payment Determination

In section XIV.B.6.b. and c. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2022 payment determination, to adopt two measures collected via claims: (1) ASC–17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures; and (2) ASC–18: Hospital Visits after Urology Ambulatory Surgical Center Procedures. Data used to calculate scores for these measures is collected via Part A and Part B Medicare administrative claims and Medicare

enrollment data, and therefore does not require ASCs to report any additional data. Because these measures do not require ASCs to submit any additional data, we do not believe there will be any additional burden associated with these proposals.

XVII. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this final rule with comment period, and, when we proceed with a subsequent document(s), we will respond to those comments in the preamble to that document.

XVIII. Economic Analyses

A. Regulatory Impact Analysis

1. Introduction

We have examined the impacts of this final rule with comment period, as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017). This section of this final rule with comment period contains the impact and other economic analyses for the provisions that we are making for CY 2018.

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This final rule with comment period has been designated as an economically significant rule under section 3(f)(1) of Executive Order 12866 and a major rule under the Congressional Review Act. Accordingly, this final rule with

comment period has been reviewed by the Office of Management and Budget. We have prepared a regulatory impact analysis that, to the best of our ability, presents the costs and benefits of this final rule with comment period. In the CY 2018 OPPS/ASC proposed rule (82 FR 33710), we solicited public comments on the regulatory impact analysis in the proposed rule, and we are addressing any public comments we received in this final rule with comment period as appropriate.

2. Statement of Need

This final rule with comment period is necessary to make updates to the Medicare hospital OPPS rates. It is necessary to make changes to the payment policies and rates for outpatient services furnished by hospitals and CMHCs in CY 2018. We are required under section 1833(t)(3)(C)(ii) of the Act to update annually the OPPS conversion factor used to determine the payment rates for APCs. We also are required under section 1833(t)(9)(A) of the Act to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act. We must review the clinical integrity of payment groups and relative payment weights at least annually. We are revising the APC relative payment weights using claims data for services furnished on and after January 1, 2016, through and including December 31, 2016, and processed through June 30, 2017, and updated cost report information.

This final rule with comment period also is necessary to make updates to the ASC payment rates for CY 2018, enabling CMS to make changes to payment policies and payment rates for covered surgical procedures and covered ancillary services that are performed in an ASC in CY 2018. Because ASC payment rates are based on the OPPS relative payment weights for the majority of the procedures performed in ASCs, the ASC payment rates are updated annually to reflect annual changes to the OPPS relative payment weights. In addition, we are required under section 1833(i)(1) of the Act to review and update the list of surgical procedures that can be performed in an ASC not less frequently than every 2 years.

3. Overall Impacts for the OPPS and ASC Payment Provisions

We estimate that the total increase in Federal government expenditures under the OPPS for CY 2018, compared to CY 2017, due only to the changes to OPPS

finalized in this final rule with comment period, will be approximately \$690 million. Taking into account our estimated changes in enrollment, utilization, and case-mix for CY 2018, we estimate that the OPPS expenditures, including beneficiary cost-sharing, for CY 2018 will be approximately \$69.9 billion; approximately \$5.8 billion higher than estimated OPPS expenditures in CY 2017. Because this final rule with comment period is economically significant as measured by the threshold of an additional \$100 million in expenditures in 1 year, we have prepared this regulatory impact analysis that, to the best of our ability, presents its costs and benefits. Table 88 displays the distributional impact of the CY 2018 changes in OPPS payment to various groups of hospitals and for CMHCs.

We estimate that the update to the conversion factor and other adjustments (not including the effects of outlier payments, the pass-through estimates, and the application of the frontier State wage adjustment for CY 2017) will increase total OPPS payments by 1.3 percent in CY 2018. The changes to the APC relative payment weights, the changes to the wage indexes, the continuation of a payment adjustment for rural SCHs, including EACHs, and the payment adjustment for cancer hospitals will not increase OPPS payments because these changes to the OPPS are budget neutral. However, these updates will change the distribution of payments within the budget neutral system. We estimate that the total change in payments between CY 2017 and CY 2018, considering all payments, changes in estimated total outlier payments, pass-through payments, and the application of the frontier State wage adjustment outside of budget neutrality, in addition to the application of the OPD fee schedule increase factor after all adjustments required by sections 1833(t)(3)(F), 1833(t)(3)(G), and 1833(t)(17) of the Act, will increase total estimated OPPS payments by 1.4 percent.

We estimate the total increase (from changes to the ASC provisions in this final rule with comment period as well as from enrollment, utilization, and case-mix changes) in Medicare expenditures under the ASC payment system for CY 2018 compared to CY 2017 to be approximately \$130 million. Because the provisions for the ASC payment system are part of a final rule that is economically significant as measured by the \$100 million threshold, we have prepared a regulatory impact analysis of the changes to the ASC payment system that, to the best of our

ability, presents the costs and benefits of this portion of this final rule with comment period. Table 89 and 90 of this final rule with comment period display the redistributive impact of the CY 2018 changes regarding ASC payments, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

4. Regulatory Review Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this final rule with comment period, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this final rule with comment period. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed this year's proposed rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we believe that the number of past commenters would be a fair estimate of the number of reviewers of this final rule with comment period. In the CY 2018 OPPS/ASC proposed rule (82 FR 33711), we welcomed any comments on the approach in estimating the number of entities that will review the proposed rule. However, we did not receive any comments on our approach.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this final rule with comment period, and therefore for the purposes of our estimate, we assume that each reviewer reads approximately 50 percent of the rule. In the CY 2018 OPPS/ASC proposed rule, we also sought public comments on this assumption, but we did not receive any comments.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$105.16 per hour, including overhead and fringe benefits (https://www.bls.gov/oes/2016/may/naics4_621100.htm). Assuming an average reading speed, we estimate that it will take approximately 8 hours for the staff to review half of this final rule with comment period. For each facility that reviews the rule, the estimated cost is \$841.28 (8 hours × \$105.16). Therefore, we estimate that the total cost of reviewing this

regulation is \$2,851,939 (\$841.28 × 3,390 reviewers).

5. Detailed Economic Analyses

a. Estimated Effects of OPPS Changes in This Final Rule With Comment Period

(1) Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the CY 2018 policy changes on various hospital groups. We post on the CMS Web site our hospital-specific estimated payments for CY 2018 with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>. At the Web site, select "regulations and notices" from the left side of the page and then select "CMS-1678-FC" from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 88 below. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A. of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting and impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available, but do not attempt to predict behavioral responses to our policy changes. In addition, we have not made adjustments for future changes in variables such as service volume, service-mix, or number of encounters.

In the CY 2018 OPPS/ASC proposed rule, we solicited public comment and information about the anticipated effects of the proposed changes included in the proposed rule on providers and our methodology for estimating them. Any public comments that we receive are addressed in the applicable sections of this final rule with comment period that discuss the specific policies.

(2) Estimated Effects of OPPS Changes to Part B Drug Payment on 340B Eligible Hospitals Paid Under the OPPS

In section V.B.7. of this final rule with comment period, we discuss our finalized policies to reduce the payment for nonpass-through, separately payable drugs purchased by certain 340B-

participating hospitals through the 340B Program. Rural SCHs, children's hospitals, and PPS-exempt cancer hospitals are excepted from this payment policy in CY 2018. Specifically, in this final rule with comment period, for CY 2018, for hospitals paid under the OPPS (other than those that are excepted for CY 2018), we are paying for separately payable drugs and biologicals that are obtained with a 340B discount, excluding those on pass-through payment status and vaccines, at ASP minus 22.5 percent instead of ASP+6 percent. For context, based on CY 2016 claims data, the total OPPS Part B drug payment is approximately \$10.2 billion.

We recognize that it may be difficult to determine precisely what the impact on Medicare spending will be because OPPS claims data do not currently indicate if the drug being provided was purchased with a 340B discount. Furthermore, a list of outpatient drugs covered under the 340B program is not publicly available. Accordingly, for purposes of estimating the impact for this final rule with comment period, as we did in the CY 2018 OPPS/ASC proposed rule, we assumed that all applicable drugs purchased by hospitals eligible to participate in the 340B Program were purchased at a discounted price under the 340B program. While we recognize that certain newly covered entities do not have access to 340B drug pricing for designated orphan drugs, we believe that our CY 2018 policy to except newly covered entity types such as rural SCHs, PPS-exempt cancer hospitals, and children's hospitals, largely mitigates the 340B drug spend attributable to orphan drugs and therefore does not dramatically affect our final estimate. In addition, for this final rule with comment period, we utilized the HRSA covered entity database to identify 340B participating hospitals and cross-checked these providers with the CY 2018 OPPS facility impact public use file to determine which 340B hospitals are paid under the OPPS. The HRSA covered entity database is available via the Internet at <https://340bopais.hrsa.gov/coveredentitysearch>. Using this database, we found 1,338 OPPS hospitals in the 340B program (compared to the 954 estimated for the proposed rule). Of these, 270 were rural SCHs, 47 were children's hospitals, and 3 were PPS-exempt cancer hospitals. We did not assume changes in the quantity of 340B purchased drugs provided by hospitals participating in the 340B program (thereby affecting unit volume) or

changes in the number of hospitals participating in the 340B program that may occur due to the payment reduction.

While we acknowledge that there are some limitations in Medicare's ability to prospectively calculate a precise estimate for purposes of this final rule with comment period, we note that each hospital has the ability to calculate how this policy will change its Medicare payments for separately payable drugs in CY 2018. Specifically, each hospital that is not participating in the 340B program or that is excepted from the policy to pay for drugs acquired under the 340B Program at ASP minus 22.5 percent in CY 2018 will know that its Medicare payments for drugs will be unaffected by this finalized policy; whereas each hospital participating in the 340B Program has access to 340B ceiling prices (and subceiling prices if it participates in the Prime Vendor Program), knows the volume of 340B drugs that it has historically billed to Medicare, and can generally project the specific covered 340B drugs (and volume thereof) for which it expects to bill Medicare in CY 2018. Accordingly, a hospital participating in the 340B Program is able to estimate the difference in payment that it will receive if Medicare pays ASP minus 22.5 percent instead of ASP+6 percent for 340B drugs.

Using the list of participating 340B providers (derived from the HRSA database) and updated CY 2016 claims data available for this final rule with comment period for the applicable separately payable drugs and biologicals, excluding those on pass-through payment status and vaccines, billed by hospitals eligible to participate in the 340B Program, except for those hospital types that are excepted from this policy in CY 2018, we estimate that OPPS payments for separately payable drugs, including beneficiary copayments, will decrease by approximately \$1.6 billion under this finalized policy, which reflects an additional estimated reduction of \$700 million over the proposed rule estimate of \$900 million. If PPS-exempt cancer hospitals, children's hospitals, and rural SCHs had *not* been excluded from the reduced drug payment in CY 2018, drug payments to PPS-exempt cancer hospitals would have been reduced by approximately \$29 million, to children's hospitals by approximately \$2 million, and to rural SCHs by approximately \$199 million—this would have resulted in a total savings estimate of approximately \$1.8 billion. Because we are implementing this payment reduction in a budget neutral manner

within the OPPS, the reduced payments for separately payable drugs purchased through the 340B Program will increase payment rates for other non-drug items and services paid under the OPPS by an offsetting aggregate amount.

Because data on drugs that are purchased with a 340B discount are not publicly available, we do not believe it is possible to more accurately estimate the amount of the aggregate payment reduction and the offsetting amount of the adjustment that is necessary to ensure budget neutrality through higher payment rates for other services. Furthermore, there are potential offsetting factors, including possible changes in provider behavior and overall market changes that would likely lower the impact of the payment reduction. As a result, we may need to make an adjustment in future years to revise the conversion factor once we have received more accurate data on drugs purchased with a 340B discount within the OPPS, similar to the adjustment we made for clinical diagnostic laboratory test packaging policy in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70352 through 70357).

In this final rule, we project that reducing payment for 340B drugs to ASP minus 22.5 percent will increase OPPS payment rates for non-drug items and services by approximately 3.2 percent in CY 2018. The estimated impacts of this policy are displayed in Table 88 below. We note that the payment rates included in Addendum A and Addendum B of this final rule with comment period do not reflect the reduced payments for drugs purchased under the 340B Program; however, they do include the increase to payments rates for non-drug items and services due to the corresponding increase in the conversion factor. In the proposed rule (82 FR 33712), we reminded commenters that this estimate could change in the final rule based on a number of factors, including other policies that are adopted in the final rule and the availability of updated data and/or method of assessing the impact in the final rule. We sought public comment on our estimate and stated that we were especially interested in whether commenters believe there are other publicly available data sources or proxies that can be used for determining which drugs billed by hospitals paid under the OPPS were acquired under the 340B Program.

We proposed that the reduced payments for separately payable drugs and biologicals purchased under the 340B Program would be included in the budget neutrality adjustments, under

the requirements in section 1833(t)(9)(B) of the Act, and that the budget neutral weight scalar would not be applied in determining payments for these separately paid drugs and biologicals purchased under the 340B Program.

In addition, we solicited public comment on whether we should apply all or part of the savings generated by this payment reduction to increase payments for specific services paid under the OPPS, or under Part B generally, in CY 2018, rather than simply increasing the conversion factor. In particular, we sought public comment on whether and how the offsetting increase could be targeted to hospitals that treat a large share of indigent patients, especially those patients who are uninsured. Finally, we sought public comment on whether the redistribution of savings associated with the proposal would result in unnecessary increases in the volume of covered services paid under the OPPS that should be adjusted in accordance with section 1833(t)(2)(F) of the Act.

Comment: Several commenters stated that if the 340B drug payment policy was finalized, the funds should be redistributed across the OPPS, as has been the case for the application of budget neutrality in the past. One commenter supported CMS' proposal to implement the savings attributed to the 340B payment reduction in a budget neutral manner within the OPPS. Commenters noted that the budget neutrality requirement upon which CMS relied in the proposed rule at section 1833(t)(9)(B) of the Act has historically been interpreted by CMS as requiring budget neutrality within the OPPS. Commenters strongly urged CMS to follow its longstanding interpretation of section 1833(t)(9)(B) of the Act and offset the full amount of the aggregate 340B payment reduction through offsetting payment increases within the OPPS.

MedPAC reiterated its March 2016 recommendation that that payments be distributed in proportion to the amount of uncompensated care that hospitals provide, "to make sure that dollars in the uncompensated care pool actually go to the hospitals providing the most uncompensated care." MedPAC commented that the 340B Program is not well targeted to hospitals that provide high levels of uncompensated care and noted that 40 percent of 340B hospitals provide less than the median level of uncompensated care. MedPAC stated that it believed that legislation would be needed to direct the savings to the uncompensated care pool because current law would require that the savings be retained within the OPPS to

make it budget neutral. However, MedPAC encouraged CMS to request that Congress enact the legislation necessary to allow CMS to implement its recommendation. MedPAC further noted that legislation would also allow CMS to apply the policy to all separately payable drugs, including those that are separately payable as a result of their pass-through status.

Response: We thank the commenters for their feedback. After consideration of the public comments we received, we are finalizing our proposal to fully redistribute the savings associated with adoption of the alternative payment methodology for drugs acquired under the 340B Program within the OPSS to non-drug items and services. That is, we will redistribute \$1.6 billion dollars in estimated lower payment for OPSS drugs by increasing the conversion factor for all OPSS non-drug items and services by 3.2 percent. We may revisit how the funds should be targeted in the future.

Comment: Some commenters challenged the accuracy of the \$900 million estimate CMS calculated in the proposed rule. According to these commenters, their analysis of the proposal would have an estimated impact in the range of \$1.2 billion to \$1.65 billion. As a result, these commenters asserted that if the proposed payment reductions are applied in a budget neutral manner within the OPSS through an offsetting increase in the conversion factor, their analysis showed that payments for non-drug APCs would increase across hospitals by about 3.7 percent (in contrast to CMS's estimate of 1.4 percent) based on the proposed rule data. Moreover, based on their analysis, the commenters believed the redistribution of the savings would result in a net decrease in payments to 340B hospitals of approximately 2.6 percent, or approximately \$800 million—funding that they stated was intended to support the congressionally-mandated mission of 340B hospitals—not be redistributed to other hospitals that do not participate in the 340B Program.

Response: We stated in the proposed rule that the estimate of the 340B payment reductions would likely change in the final rule based on updated data, revised assumptions, and final policies. For this final rule with comment period, as discussed in detail earlier, we used updated CY 2016 claims data and an updated list of 340B eligible providers to calculate an estimated impact of \$1.6 billion based on the final policy. As shown in Table 88 below this reflects a reduction of

about \$1.5 billion to urban hospitals and \$86 million to rural hospitals. We are redistributing the savings from this payment reduction in a budget neutral manner within the OPSS through an offsetting increase in the conversion factor. This increase to the conversion factor increases all OPSS non-drug payment rates to all providers under the OPSS by 3.2 percent. With respect to comments on the redistribution of the 340B savings to non-340B participating hospitals, we note that 340B hospitals will also receive the conversion factor increase.

Comment: In response to the comment solicitation on whether the savings generated by the reduced payment on 340B drugs should be used to increase payments for specific services paid under the OPSS or under Part B generally in CY 2018, commenters generally objected to the notion that CMS has authority to redistribute savings outside of OPSS. One commenter stated that CMS did not provide any analysis or justification to support a reading that section 1833(t)(9)(B) of the Act establishes a budget neutrality concept for the Medicare Part B Trust Fund. Another commenter stated that CMS should not redistribute the savings gained by the 340B proposal based on Medicare DSH metrics (that is, insured low-income days) because such metrics are not well correlated with uncompensated care costs. This commenter also expressed concern regarding the suitability of using uncompensated care as a metric “to identify hospitals that provide the most help to needy patients because it includes bad debt as well as charity care.” The commenter stated that bad debt is the amount that hospitals billed but did not collect, and therefore is not a measure of hospital assistance to the poor. Several commenters challenged the logic of reducing 340B payments to participating 340B hospitals, only to return the savings to the very same hospitals.

Response: We appreciate the feedback. Because the OPSS is a budget neutral payment system, historically CMS has maintained budget neutrality through offsetting estimated payment decreases/increases within the OPSS, such as by increasing/decreasing the conversion factor by an equal offsetting amount. We have articulated the policy justification for reducing drug payment to ASP minus 22.5 percent for 340B-acquired drugs in section V.B.7. of this final rule with comment period and are redistributing the resulting dollars within the OPSS to maintain budget neutrality for CY 2018. Therefore, we are finalizing our proposal to

redistribute the estimated reduction in payment for 340B-acquired drugs and biologicals by increasing the conversion factor, and we are not targeting the savings to specific services paid under the OPSS or under Part B generally. We continue to be interested in exploring ways that funds from a subsequent proposal could be targeted in future years to hospitals that serve a high share of low-income or uninsured patients.

Comment: Many commenters noted that CMS' proposal to redistribute the savings that result from the 340B reduction in a budget neutral manner within the OPSS would increase beneficiary copayments on non-drug services. Accordingly, the commenters stated that most patients would not directly receive the benefit of the 340B copayment reduction even if reduced payments for 340B drugs lower coinsurance amounts for these drugs. The commenters stated the proposal will likely increase costs for uninsured patients because 340B hospitals provide a disproportionate amount of care to that population and participating 340B hospitals may no longer be able to provide “discounts to low-income patients” or other uncompensated care. One commenter suggested that CMS, with stakeholder input, develop an outpatient hospital charity care metric that could be used to redistribute the 340B savings based on the level of outpatient charity care provided by the hospital.

Response: We appreciate the stakeholders' concerns. We believe that reducing payments on 340B purchased drugs to better align with hospital acquisition costs directly lowers drug costs for those beneficiaries who receive a covered outpatient drug from a 340B participating hospital. Further, to the extent that studies have found that 340B participating hospitals tend to use more high cost drugs, we believe that this 340B payment policy helps address drug pricing in the hospital outpatient setting by lessening the incentive for unnecessary utilization of costly drugs. In addition, even though many beneficiaries have supplemental coverage, those plans make coinsurance payments on behalf of beneficiaries. Thus, to the extent this policy lessens the coinsurance amount such supplemental plans would have to make, we would expect the price of such plans could decrease or otherwise reflect these lower costs in the future.

In summary, to maintain budget neutrality within the OPSS, the estimated \$1.6 billion in reduced drug payments from adoption of this final 340B payment methodology will be redistributed in an equal offsetting

amount to all hospitals paid under the OPSS through increasing the payment rates by 3.2 percent for non-drug items and services furnished by all hospitals paid under the OPSS for CY 2018.

(3) Estimated Effects of OPSS Changes on Hospitals

Table 88 below shows the estimated impact of this final rule with comment period on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all facilities, has always included cancer and children's hospitals, which are held harmless to their pre-BBA amount. We also include CMHCs in the first line that includes all providers. We now include a second line for all hospitals, excluding permanently held harmless hospitals and CMHCs.

We present separate impacts for CMHCs in Table 88, and we discuss them separately below, because CMHCs are paid only for partial hospitalization services under the OPSS and are a different provider type from hospitals. In CY 2018, we are paying CMHCs for partial hospitalization services under APC 5853 (Partial Hospitalization for CMHCs), and we are paying hospitals for partial hospitalization services under APC 5863 (Partial Hospitalization for Hospital-Based PHPs).

The estimated increase in the total payments made under the OPSS is determined largely by the increase to the conversion factor under the statutory methodology. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The conversion factor is updated annually by the OPD fee schedule increase factor as discussed in detail in section II.B. of this final rule with comment period. Section 1833(t)(3)(C)(iv) of the Act provides that the OPD fee schedule increase factor is equal to the market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act, which we refer to as the IPPS market basket percentage increase. The IPPS market basket percentage increase for FY 2018 is 2.7 percent (82 FR 38177). Section 1833(t)(3)(F)(i) of the Act reduces that 2.7 percent by the multifactor productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, which is 0.6 percentage point for FY 2018 (which is also the MFP adjustment for FY 2018 in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38177 through 38178)), and sections 1833(t)(3)(F)(ii) and 1833(t)(3)(G)(v) of the Act further reduce the market basket percentage increase by 0.75 percentage point, resulting in the OPD fee schedule increase factor of 1.35 percent. We are

using the OPD fee schedule increase factor of 1.35 percent in the calculation of the CY 2018 OPSS conversion factor. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional expenditures outside budget neutrality for hospitals in certain frontier States that have a wage index less than 1.0000. The amounts attributable to this frontier State wage index adjustment are incorporated in the CY 2018 estimates in Table 88.

To illustrate the impact of the CY 2018 changes, our analysis begins with a baseline simulation model that uses the CY 2017 relative payment weights, the FY 2017 final IPPS wage indexes that include reclassifications, and the final CY 2017 conversion factor. Table 88 shows the estimated redistribution of the increase or decrease in payments for CY 2018 over CY 2017 payments to hospitals and CMHCs as a result of the following factors: the impact of the APC reconfiguration and recalibration changes between CY 2017 and CY 2018 (Column 2); the wage indexes and the provider adjustments (Column 3); the combined impact of all of the changes described in the preceding columns plus the 1.35 percent OPD fee schedule increase factor update to the conversion factor; and the estimated impact taking into account all payments for CY 2018 relative to all payments for CY 2017, including the impact of changes in estimated outlier payments, the frontier State wage adjustment, and changes to the pass-through payment estimate (Column 6).

We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we are maintaining the current adjustment percentage for CY 2018. Because the updates to the conversion factor (including the update of the OPD fee schedule increase factor), the estimated cost of the rural adjustment, and the estimated cost of projected pass-through payment for CY 2018 are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services will change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule with comment period will redistribute money during implementation also will depend on changes in volume, practice patterns, and the mix of services billed between CY 2017 and CY 2018 by various groups

of hospitals, which CMS cannot forecast.

In CY 2016, we excluded all molecular pathology laboratory tests from our packaging policy, and in CY 2017, we expanded the laboratory packaging exception to apply to all advanced diagnostic laboratory tests (ADLTs) that meet the criteria of section 1834A(d)(5)(A) of the Act. For CY 2018, we sought public comments on whether laboratories (instead of hospitals) should be permitted to bill Medicare directly for molecular pathology tests and ADLTs that meet the criteria of section 1834A(d)(5)(A) of the Act (and are granted ADLT status by CMS), that are ordered less than 14 days following the date of a hospital outpatient's discharge from the hospital outpatient department.

The laboratory date of service (DOS) issue is discussed in section X.F. of this final rule with comment period. Because there are currently no laboratory tests designated as ADLTs and because the payment rate for laboratory tests excluded from our packaging policy billed by a hospital would have been the applicable rate for the laboratory test under the CLFS, any aspect of this discussion that is finalized in this final rule with comment period will not result in a net costs or savings to the program. Accordingly, section X.F. of this final rule with comment period is not included in the impact table in the regulatory impact analysis.

Overall, we estimate that the rates for CY 2018 will increase Medicare OPSS payments by an estimated 1.4 percent. Removing payments to cancer and children's hospitals because their payments are held harmless to the pre-OPSS ratio between payment and cost and removing payments to CMHCs results in an estimated 1.5 percent increase in Medicare payments to all other hospitals. These estimated payments will not significantly impact other providers.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 88 shows the total number of facilities (3,878), including designated cancer and children's hospitals and CMHCs, for which we were able to use CY 2016 hospital outpatient and CMHC claims data to model CY 2017 and CY 2018 payments, by classes of hospitals, for CMHCs and for dedicated cancer hospitals. We excluded all hospitals and CMHCs for which we could not plausibly estimate CY 2017 or CY 2018 payment and entities that are not paid under the OPSS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S.

Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A. of this final rule with comment period. At this time, we are unable to calculate a DSH variable for hospitals that are not also paid under the IPPS because DSH payments are only made to hospitals paid under the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number of OPPS hospitals (3,765), excluding the hold-harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their "pre-BBA amount" as specified under the terms of the statute, and therefore, we removed them from our impact analyses. We show the isolated impact on the 49 CMHCs at the bottom of the impact table and discuss that impact separately below.

Column 2: APC Recalibration—All Changes

Column 2 shows the estimated effect of APC recalibration. Column 2 also reflects any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights. As a result of APC recalibration, we estimate that urban hospitals will experience an increase of 0.1 percent, with the impact ranging from an increase of 0.1 percent to no change, depending on the number of beds. Rural hospitals will experience a decrease of 0.3 percent, with the impact ranging from a decrease of 0.2 percent to a decrease of 0.5 percent, depending on the number of beds. Major teaching hospitals will experience an increase of 0.1 percent.

Column 3: Wage Indexes and the Effect of the Provider Adjustments

Column 3 demonstrates the combined budget neutral impact of the APC recalibration; the updates for the wage indexes with the FY 2018 IPPS post-reclassification wage indexes; the rural adjustment; and the cancer hospital payment adjustment. We modeled the independent effect of the budget neutrality adjustments and the OPD fee schedule increase factor by using the relative payment weights and wage indexes for each year, and using a CY 2017 conversion factor that included the OPD fee schedule increase and a budget

neutrality adjustment for differences in wage indexes.

Column 3 reflects the independent effects of the updated wage indexes, including the application of budget neutrality for the rural floor policy on a nationwide basis. This column excludes the effects of the frontier State wage index adjustment, which is not budget neutral and is included in Column 6. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are continuing the rural payment adjustment of 7.1 percent to rural SCHs for CY 2018, as described in section II.E. of this final rule with comment period.

We modeled the independent effect of updating the wage indexes by varying only the wage indexes, holding APC relative payment weights, service-mix, and the rural adjustment constant and using the CY 2018 scaled weights and a CY 2017 conversion factor that included a budget neutrality adjustment for the effect of the changes to the wage indexes between CY 2017 and CY 2018. The FY 2018 wage policy results in modest redistributions.

There is a slight increase of less than 0.1 in Column 3 for the CY 2018 cancer hospital payment adjustment budget neutrality calculation because we are using a payment-to-cost ratio target for the cancer hospital payment adjustment in CY 2018 of 0.88, compared to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79869) payment-to-cost ratio target of 0.91. We note that, in accordance with section 16002 of the 21st Century Cures Act, we are applying a budget neutrality factor calculated as if the cancer hospital adjustment target payment-to-cost ratio was 0.89, not the 0.88 target payment-to-cost ratio we are applying in section II.F. of this final rule with comment period.

Column 4: Effect of the Reduced Payment for 340B Drugs

Column 4 demonstrates the total payment effect of the finalized reduction in payment for drugs purchased under the 340B Program from ASP+6 percent to ASP minus 22.5 percent. This column includes both the reduced payment for 340B acquired drugs and the increase to the conversion factor for budget neutrality purposes, which increases payment for all non-drug services. For rural sole community hospitals, this column shows a 2.6 percent increase, reflecting a 0.0 percent increase for drugs (because these providers are exempt from these reductions) and a 3.2 percent increase for non-drug services.

Column 5: All Budget Neutrality Changes Combined With the Market Basket Update

Column 5 demonstrates the combined impact of all of the changes previously described and the update to the conversion factor of 1.35 percent. Overall, these changes will increase payments to urban hospitals by 1.2 percent and to rural hospitals by 2.5 percent. Urban hospitals will receive an increase in line with the 1.3 percent overall increase for all facilities after the update is applied to the proposed budget neutrality adjustments. The increase for classes of rural hospitals is more variable with sole community hospitals receiving a 3.9 percent increase and other rural hospitals receiving an increase of 0.8 percent.

Column 6: All Changes for CY 2018

Column 6 depicts the full impact of the CY 2018 policies on each hospital group by including the effect of all of the changes for CY 2018 and comparing them to all estimated payments in CY 2017. Column 6 shows the combined budget neutral effects of Columns 2 through 4; the OPD fee schedule increase; the impact of the frontier State wage index adjustment; the impact of estimated OPPS outlier payments as discussed in section II.G. of this final rule with comment period; the change in the Hospital OQR Program payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (discussed in section XIII. of this final rule with comment period); and the difference in total OPPS payments dedicated to transitional pass-through payments.

Of those hospitals that failed to meet the Hospital OQR Program reporting requirements for the full CY 2017 update (and assumed, for modeling purposes, to be the same number for CY 2018), we included 33 hospitals in our model because they had both CY 2016 claims data and recent cost report data. We estimate that the cumulative effect of all of the changes for CY 2018 will increase payments to all facilities by 1.4 percent for CY 2018. We modeled the independent effect of all of the changes in Column 6 using the final relative payment weights for CY 2017 and the final relative payment weights for CY 2018. We used the final conversion factor for CY 2017 of \$75.001 and the final CY 2018 conversion factor of \$78.636 discussed in section II.B. of this final rule with comment period.

Column 6 contains simulated outlier payments for each year. We used the 1-year charge inflation factor used in the

FY 2018 IPPS/LTCH PPS final rule (82 FR 38527) of 4.6 percent (1.04574) to increase individual costs on the CY 2016 claims, and we used the most recent overall CCR in the July 2017 Outpatient Provider-Specific File (OPSF) to estimate outlier payments for CY 2017. Using the CY 2016 claims and a 4.6 percent charge inflation factor, we currently estimate that outlier payments for CY 2017, using a multiple threshold of 1.75 and a fixed-dollar threshold of \$3,825 will be approximately 1.11 percent of total payments. The estimated current outlier payments of 1.11 percent are incorporated in the comparison in Column 6. We used the same set of claims and a charge inflation factor of 9.4 percent (1.09357) and the CCRs in the July 2017 OPSF, with an adjustment of 0.985569, to reflect relative changes in cost and charge inflation between CY 2016 and CY 2018,

to model the CY 2018 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed-dollar threshold of \$4,150. The charge inflation and CCR inflation factors are discussed in detail in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38527). Overall, we estimate that facilities will experience an increase of 1.4 percent under this final rule with comment period in CY 2018 relative to total spending in CY 2017. This projected increase (shown in Column 6) of Table 88 reflects the 1.35 percent OPD fee schedule increase factor, plus 0.2 percent for the change in the pass-through estimate between CY 2017 and CY 2018, minus a decrease of 0.11 percent for the difference in estimated outlier payments between CY 2017 (1.11 percent) and CY 2018 (1.0 percent). We estimate that the combined effect of all of the changes for CY 2018 will increase

payments to urban hospitals by 1.3 percent. Overall, we estimate that rural hospitals will experience a 2.7 percent increase as a result of the combined effects of all of the changes for CY 2018. Among hospitals by teaching status, we estimate that the impacts resulting from the combined effects of all changes will include a decrease of 0.9 percent for major teaching hospitals and an increase of 2.9 percent for nonteaching hospitals. Minor teaching hospitals will experience an estimated increase of 1.7 percent. In our analysis, we also have categorized hospitals by type of ownership. Based on this analysis, we estimate that voluntary hospitals will experience an increase of 1.3 percent, proprietary hospitals will experience an increase of 4.5 percent, and governmental hospitals will experience no change.

TABLE 88—ESTIMATED IMPACT OF THE CY 2018 CHANGES FOR THE HOSPITAL OUTPATIENT PROSPECTIVE PAYMENT SYSTEM

Column (1) shows total hospitals and/or CMHCs.

Column (2) includes all CY 2018 OPSS policies and compares those to the CY 2017 OPSS.

Column (3) shows the budget neutral impact of updating the wage index by applying the FY 2018 hospital inpatient wage index, including all hold harmless policies and transitional wages. The rural adjustment continues our current policy of 7.1 percent so the budget neutrality factor is 1. The budget neutrality adjustment for the cancer hospital adjustment is 1.0008 because the target payment-to-cost ratio changes from 0.91 in CY 2017 to 0.89 in CY 2018 and is further reduced by 1 percentage point to 0.88 in accordance with the 21st Century Cures Act. However, this reduction does not affect the budget neutrality adjustment consistent with statute.

Column (4) shows the impact of the 340B drug payment reductions and the corresponding increase in non-drug payments.

Column (5) shows the impact of all budget neutrality adjustments and the addition of the 1.35 percent OPD fee schedule update factor (2.7 percent reduced by 0.6 percentage points for the productivity adjustment and further reduced by 0.75 percentage point as required by law).

Column (6) shows the additional adjustments to the conversion factor resulting from the frontier adjustment, a change in the pass-through estimate, and adding estimated outlier payments.

* These 3,878 providers include children and cancer hospitals, which are held harmless to pre-BBA amounts, and CMHCs.

** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.

(4) Estimated Effects of OPSS Changes on CMHCs

The last line of Table 88 demonstrates the isolated impact on CMHCs, which furnish only partial hospitalization services under the OPSS. In CY 2017, CMHCs are paid under APC 5853 (Partial Hospitalization (3 or more services) for CMHCs). We modeled the impact of this APC policy assuming that CMHCs will continue to provide the same number of days of PHP care as seen in the CY 2016 claims data used for this final rule with comment period. We

excluded days with 1 or 2 services because our policy only pays a per diem rate for partial hospitalization when 3 or more qualifying services are provided to the beneficiary. We estimate that CMHCs will experience an overall 17.2 percent increase in payments from CY 2017 (shown in Column 6). We note that this includes the trimming methodology described in section VIII.B. of this final rule with comment period.

Column 3 shows that the estimated impact of adopting the FY 2018 wage index values will result in a small

increase of 0.2 percent to CMHCs.

Column 5 shows that combining this OPD fee schedule increase factor, along with changes in APC policy for CY 2018 and the FY 2018 wage index updates, will result in an estimated increase of 17.8 percent. Column 6 shows that adding the changes in outlier and pass-through payments will result in a total 17.2 percent increase in payment for CMHCs. This reflects all changes to CMHCs for CY 2018.

(5) Estimated Effect of OPSS Changes on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary's payment will increase for services for which the OPSS payments will rise and will decrease for services for which the OPSS payments will fall. For further discussion on the calculation of the national unadjusted copayments and minimum unadjusted copayments, we refer readers to section II.I. of this final rule with comment period. In all cases, section 1833(t)(8)(C)(i) of the Act limits beneficiary liability for copayment for a procedure performed in a year to the hospital inpatient deductible for the applicable year.

We estimate that the aggregate beneficiary coinsurance percentage will be 18.5 percent for all services paid under the OPSS in CY 2018. The estimated aggregate beneficiary coinsurance reflects general system adjustments, including the CY 2018 comprehensive APC payment policy discussed in section II.A.2.e. of this final rule with comment period.

(6) Estimated Effects of OPSS Changes on Other Providers

The relative payment weights and payment amounts established under the OPSS affect the payments made to ASCs as discussed in section XII. of this final rule with comment period. No types of providers or suppliers other than hospitals, CMHCs, and ASCs will be affected by the changes in this final rule with comment period.

(7) Estimated Effects of OPSS Changes on the Medicare and Medicaid Programs

The effect on the Medicare program is expected to be an increase of \$690 million in program payments for OPSS services furnished in CY 2018. The effect on the Medicaid program is expected to be limited to copayments that Medicaid may make on behalf of Medicaid recipients who are also Medicare beneficiaries. We refer readers to our discussion of the impact on beneficiaries in section XVIII.A.4.a.(4) of this final rule with comment period.

(8) Alternative OPSS Policies Considered

Alternatives to the OPSS changes we are making and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

- Alternatives considered for the enforcement instruction for the supervision of outpatient therapeutic services in critical access hospitals (CAHs) and certain small rural hospitals

We considered whether to address enforcement of the direct supervision requirement for outpatient therapeutic services in CAHs and small, rural hospitals with fewer than 100 beds by extending the notice of nonenforcement while we further develop our policies. There are grounds for applying the same supervision requirements to CAHs as to all other hospitals. One of these grounds is that hospital outpatient services are furnished "incident to" physicians' services, and we believe that the incident to rules apply equally to critical access and other types of hospitals. We also believe that Medicare should purchase the same basic level of quality and safe outpatient care for all beneficiaries, whether from a CAH, a small rural hospital, or other hospitals. At the same time, we acknowledge that in order to ensure the same level of outpatient care is furnished in CAHs and small rural hospitals as other hospitals, we need to continue the national discussion about what constitutes the appropriate supervision for a given service. We also need to acknowledge the challenges CAHs and small, rural hospitals have in recruiting and retaining physicians and qualified non-physician practitioners.

Therefore, we are extending the notice of nonenforcement for CAHs and small rural hospitals with fewer than 100 beds for CY 2018 and CY 2019, to give all parties time to submit specific services to be considered for a reduced minimum supervision standard. We believe that the policies in this final rule with comment period will address industry concerns while maintaining an adequate level of safety and quality of care in the hospital outpatient services that Medicare purchases.

- Alternatives Considered for the Methodology for Assigning Skin Substitutes to High or Low Cost Groups

We refer readers to section V.B.1.d. of this final rule with comment period for a discussion of our proposal to assign any skin substitute product that was assigned to the high cost group in CY 2017 to the high cost group in CY 2018, regardless of whether the product's mean unit cost (MUC) or the product's per day cost (PDC) exceeds or falls below the overall CY 2018 MUC or PDC threshold. We will continue to assign products that exceed either the overall CY 2018 MUC or PDC threshold to the high cost group. We also considered, but

did not propose or finalize, retaining our methodology from CY 2017 and assigning skin substitutes to the high cost group based on whether an individual product's MUC or PDC exceeded the overall CY 2018 MUC or PDC threshold based on calculations done for either the proposed rule or this final rule with comment period.

b. Estimated Effects of CY 2018 ASC Payment System Policies

Most ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XII. of this final rule with comment period, we are setting the CY 2018 ASC relative payment weights by scaling the CY 2018 OPSS relative payment weights by the ASC scalar of 0.8990. The estimated effects of the updated relative payment weights on payment rates are varied and are reflected in the estimated payments displayed in Tables 89 and 90 below.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system (which currently is the CPI-U) after application of any quality reporting reduction be reduced by a productivity adjustment. The Affordable Care Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period). For ASCs that fail to meet their quality reporting requirements, the CY 2018 payment determinations will be based on the application of a 2.0 percentage points reduction to the annual update factor, which currently is the CPI-U. We calculated the CY 2018 ASC conversion factor by adjusting the CY 2017 ASC conversion factor by 1.0007 to account for changes in the pre-floor and pre-reclassified hospital wage indexes between CY 2017 and CY 2018 and by applying the CY 2018 MFP-adjusted CPI-U update factor of 1.2 percent (projected CPI-U update of 1.7 percent minus a projected productivity adjustment of 0.5 percentage point). The CY 2018 ASC conversion factor is \$45.575.

(1) Limitations of Our Analysis

Presented here are the projected effects of the changes for CY 2018 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service-mix between CY 2016 and CY 2018 with precision. We believe that the net effect

on Medicare expenditures resulting from the CY 2018 changes will be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs will experience changes in payment that differ from the aggregated estimated impacts presented below.

(2) Estimated Effects of ASC Payment System Policies on ASCs

Some ASCs are multispecialty facilities that perform a wide range of surgical procedures from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect on an individual ASC of the update to the CY 2018 payments will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion presents tables that display estimates of the impact of the CY 2018 updates to the ASC payment system on Medicare payments to ASCs, assuming the same mix of services as reflected in our CY 2016 claims data. Table 89 depicts the estimated aggregate percent change in payment by surgical specialty or

ancillary items and services group by comparing estimated CY 2017 payments to estimated CY 2018 payments, and Table 90 shows a comparison of estimated CY 2017 payments to estimated CY 2018 payments for procedures that we estimate will receive the most Medicare payment in CY 2017.

Table 89 shows the estimated effects on aggregate Medicare payments under the ASC payment system by surgical specialty or ancillary items and services group. We have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 89.

- Column 1—Surgical Specialty or Ancillary Items and Services Group indicates the surgical specialty into which ASC procedures are grouped and the ancillary items and services group which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.
- Column 2—Estimated CY 2017 ASC Payments were calculated using CY 2016 ASC utilization (the most recent full year of ASC utilization) and CY 2017 ASC payment rates. The surgical

specialty and ancillary items and services groups are displayed in descending order based on estimated CY 2017 ASC payments.

- Column 3—Estimated CY 2018 Percent Change is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that are attributable to updates to ASC payment rates for CY 2018 compared to CY 2017.

As seen in Table 89, for the six specialty groups that account for the most ASC utilization and spending, we estimate that the update to ASC payment rates for CY 2017 will result in a 1-percent increase in aggregate payment amounts for eye and ocular adnexa procedures, a 2-percent increase in aggregate payment amounts for digestive system procedures, 1-percent increase in aggregate payment amounts for nervous system procedures, a 3-percent increase in aggregate payment amounts for musculoskeletal system procedures, a 1-percent increase in aggregate payment amounts for genitourinary system procedures, and a 5-percent increase in aggregate payment amounts for integumentary system procedures.

Also displayed in Table 89 is a separate estimate of Medicare ASC payments for the group of separately payable covered ancillary items and services. The payment estimates for the covered surgical procedures include the costs of packaged ancillary items and services. We estimate that aggregate payments for these items and services will decrease by 44 percent for CY 2018.

TABLE 89—ESTIMATED IMPACT OF THE CY 2018 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2018 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALTY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical specialty group (1)	Estimated CY 2017 ASC payments (in millions) (2)	Estimated CY 2018 percent change (3)
Total	\$4,460	1
Eye and ocular adnexa	1,688	1
Digestive system	852	2
Nervous system	849	1
Musculoskeletal system	530	3
Genitourinary system	186	1
Integumentary system	141	5
Ancillary items and services	55	-44

Table 90 below shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2018. The table

displays 30 of the procedures receiving the greatest estimated CY 2017 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending

order by estimated CY 2017 program payment.

- Column 1—CPT/HCPCS code.
- Column 2—Short Descriptor of the HCPCS code.

- Column 3—Estimated CY 2017 ASC Payments were calculated using CY 2016 ASC utilization (the most recent full year of ASC utilization) and the CY 2017 ASC payment rates. The estimated CY 2017 payments are expressed in millions of dollars.
- Column 4—Estimated CY 2018 Percent Change reflects the percent differences between the estimated ASC payment for CY 2017 and the estimated payment for CY 2018 based on the update.

TABLE 90—ESTIMATED IMPACT OF THE CY 2018 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE PAYMENTS FOR SELECTED PROCEDURES

CPT/HCPCS code (1)	Short descriptor (2)	Estimated CY 2017 ASC payment (in millions) (3)	Estimated CY 2018 percent change (4)

64561	Implant neuroelectrodes	22	6
50590	Fragmenting of kidney stone	21	1
67904	Repair eyelid defect	20	2

(3) Estimated Effects of ASC Payment System Policies on Beneficiaries

We estimate that the CY 2018 update to the ASC payment system will be generally positive for beneficiaries with respect to the new procedures that we are adding to the ASC list of covered surgical procedures and for those that we are designating as office-based for CY 2018. First, other than certain preventive services where coinsurance and the Part B deductible is waived to comply with sections 1833(a)(1) and (b) of the Act, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs under the OPSS, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment (other than for certain preventive services). Second, in almost all cases, the ASC payment rates under the ASC payment system are lower than payment

rates for the same procedures under the OPSS. Therefore, the beneficiary coinsurance amount under the ASC payment system will almost always be less than the OPSS copayment amount for the same services. (The only exceptions would be if the ASC coinsurance amount exceeds the inpatient deductible. The statute requires that copayment amounts under the OPSS not exceed the inpatient deductible.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the revised ASC payment system, depending on the particular service and the relative payment amounts under the MPFS compared to the ASC. However, for those additional procedures that we are designating as office-based in CY 2018, the beneficiary coinsurance amount under the ASC payment system generally will be no greater than the beneficiary coinsurance under the

MPFS because the coinsurance under both payment systems generally is 20 percent (except for certain preventive services where the coinsurance is waived under both payment systems).

(4) Alternative ASC Payment Policies Considered

Alternatives to the ASC changes we are making and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

c. Accounting Statements and Tables

As required by OMB Circular A-4 (available on the Office of Management and Budget Web site at: https://www.whitehouse.gov/omb/circulars_a004_a-4#a), we have prepared two accounting statements to illustrate the impacts of this final rule with comment period. The first accounting statement, Table 91 below, illustrates the

classification of expenditures for the CY 2018 estimated hospital OPSS incurred benefit impacts associated with the CY 2018 OPD fee schedule increase. The second accounting statement, Table 92

below, illustrates the classification of expenditures associated with the 1.2 percent CY 2018 update to the ASC payment system, based on the provisions of this final rule with

comment period and the baseline spending estimates for ASCs. Lastly, the tables classify most estimated impacts as transfers.

TABLE 91—ACCOUNTING STATEMENT: CY 2018 ESTIMATED HOSPITAL OPSS TRANSFERS FROM CY 2017 TO CY 2018 ASSOCIATED WITH THE CY 2018 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers	\$690 million.
From Whom to Whom	Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPSS.
Total	\$690 million.

TABLE 92—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2017 TO CY 2018 AS A RESULT OF THE CY 2018 UPDATE TO THE ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers	\$40 million.
From Whom to Whom	Federal Government to Medicare Providers and Suppliers.
Total	\$40 million.

d. Effects of Requirements for the Hospital OQR Program

(1) Background

We refer readers to the CY 2017 OPSS/ASC final rule with comment period (81 FR 79874), for the previously estimated effects of changes to the Hospital OQR Program for the CY 2018, CY 2019, and CY 2020 payment determinations. Of the 3,228 hospitals that met eligibility requirements for the CY 2017 payment determination, we determined that 87 hospitals did not meet the requirements to receive the full OPD fee schedule increase factor. Most of these hospitals (66 of the 87), chose not to participate in the Hospital OQR Program for the CY 2017 payment determination. We estimate that approximately 100 hospitals will not receive the full OPD fee schedule increase factor for the CY 2018 payment determination and subsequent years.

In section XIII.B.4.c. of this final rule with comment period, we are finalizing the removal of six measures. Specifically, beginning with the CY 2020 payment determination, we are finalizing, as proposed, to remove: (1) OP-21: Median Time to Pain Management for Long Bone Fracture; and (2) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. Also, while we proposed to remove: (1) OP-1: Median Time to Fibrinolysis, (2) OP-4: Aspirin at Arrival, (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional, and (4) OP-25: Safe Surgery Checklist beginning with the

CY 2021 payment determination, we are finalizing removal of these measures with modification so that removal begins with the CY 2020 payment determination, one year earlier than proposed. To summarize, the following measures will be removed for the CY 2020 payment determination: (1) OP-1: Median Time to Fibrinolysis; (2) OP-4: Aspirin at Arrival; (3) OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional; (4) OP-21: Median Time to Pain Management for Long Bone Fracture; (5) OP-25: Safe Surgery Checklist; and (6) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. We expect these finalized proposals will reduce the burden of reporting for the Hospital OQR Program, as discussed in more detail below.

In section XIII.B.10.b. of this final rule with comment period, we are finalizing, with modifications, our proposal to publicly report OP-18c using data beginning with patient encounters during the third quarter of 2017. However, we do not expect our modifications to affect the burden estimates made in the CY 2018 OPSS/ASC proposed rule (82 FR 33705 through 33708), as discussed below.

In section XIII.B.5. of this final rule with comment period, we are finalizing our proposal to delay the OP-37a-e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures beginning with the CY 2020 payment determination (CY

2018 data collection period) until further notice in future rulemaking.

In addition, in this final rule with comment period, beginning with the CY 2020 payment determination, we are finalizing our proposals: (1) To codify at § 419.46(e) our previously finalized process for targeting hospitals for validation of chart-abstracted measures (section XIII.D.7.b. of this final rule with comment period); (2) to formalize the educational review process and use it to correct incorrect validation results for chart-abstracted measures (section XIII.D.7.c. of this final rule with comment period); (3) to align the first quarter for which hospitals must submit data for all hospitals that did not participate in the previous year's Hospital OQR Program, and make corresponding revisions at 42 CFR 419.46(c)(3) (section XIII.D.1. of this final rule with comment period); and (4) to align the naming of the Extraordinary Circumstances Exceptions (ECE) policy and make conforming changes to the CFR (section XIII.D.8.a. of this final rule with comment period). We are not finalizing our proposals to change the NOP submission deadlines such that hospitals are required to submit the NOP any time prior to registering on the QualityNet Web site and to make conforming revisions at 42 CFR 419.46(a) (section XIII.C.2.b. of this final rule with comment period). We do not believe that these changes will affect our burden estimates, as further discussed below.

(2) Estimated Impact of Newly Finalized Proposal To Delay OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measures Beginning With the CY 2020 Payment Determination

As described in section XIII.B.5. of this final rule with comment period, we are finalizing our proposal to delay OP–37a–e: Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection period). As stated in the CY 2017 OP/ASC final rule with comment period (81 FR 79863), the information collection requirements associated with the five OAS CAHPS Survey-based measures (OP–37a, OP–37b, OP–37c, OP–37d, and OP–37e) are currently approved under OMB Control Number 0938–1240. For this reason, in the CY 2017 OP/ASC final rule with comment period (81 FR 79863), we did not provide an independent estimate of the burden associated with OAS CAHPS Survey based measures for the Hospital OQR Program. Similarly, our finalized proposal to delay implementation of these measures does not affect our current burden estimates.

(3) Estimated Impact of Proposal to Publicly Report OP–18c: Median Time From Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients

In section XIII.B.10.b. of this final rule with comment period, we are finalizing, with modifications, our proposal to publicly report 18c: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients beginning with patient encounters from the third quarter of 2017. As noted in that section, the data required for public reporting of OP–18c is already collected as part of the existing Hospital OQR Program requirements. Accordingly, we did not estimate changes to burden due to this proposal and we do not expect the modifications we are finalizing to affect burden.

(4) Estimated Impact of Newly Finalized Proposals for the CY 2020 Payment Determination and Subsequent Years

(a) Impact of Measure Removals

In section XIII.B.4.c. of this final rule with comment period, we are finalizing

our proposals to remove six measures from the Hospital OQR Program. Specifically, beginning with the CY 2020 payment determination, we are finalizing, as proposed, to remove: (1) OP–21: Median Time to Pain Management for Long Bone Fracture; and (2) OP–26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. Also, while we proposed to remove: (1) OP 1: Median Time to Fibrinolysis, (2) OP–4: Aspirin at Arrival, (3) OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional, and (4) OP–25: Safe Surgery Checklist beginning with the CY 2021 payment determination, we are finalizing removal of these measures with modification so that removal begins with the CY 2020 payment determination, one year earlier than proposed. In summary, we are finalizing removal of six measures beginning with the CY 2020 payment determination. We note that we have modified our estimates from the proposed rule (82 FR 33673) in order to streamline our discussion in light of the modification.

Specifically, we are finalizing the removal of four chart-abstracted measures ((1) OP–1: Median Time to Fibrinolysis; (2) OP–4: Aspirin at Arrival; (3) OP–20: Door to Diagnostic Evaluation by a Qualified Medical Professional; and (4) OP–21: Median Time to Pain Management for Long Bone Fracture) and two web-based measures ((1) OP–25: Safe Surgery Checklist Use; and (2) OP–26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures). As described in section XVI.B. of this final rule with comment period, we expect these measure removals to reduce burden by 457,490 hours and \$16.7 million for the CY 2020 payment determination.

(b) Impact of Updates to Previously Finalized Chart-Abstracted Measure Validation Procedures and the Educational Review Process

In section XIII.D.7.a. of this final rule with comment period, we provide clarification on our procedures for validation of chart-abstracted measures to note that the 50 poorest performing outlier hospitals will be targeted for validation. We do not expect this clarification to affect burden because it does not alter the number of hospitals selected for validation or the requirements for those hospitals that are selected.

In addition, in section XIII.D.7.c. of this final rule with comment period, we are finalizing our proposal to formalize the process of allowing hospitals to use an educational review process to correct

incorrect validation results for the first three quarters of validation for chart-abstracted measures. We are also finalizing our proposal to update the process to specify that if the results of an educational review indicate that we incorrectly scored a hospital's medical records selected for validation, the corrected quarterly validation score will be used to compute the hospital's final validation score at the end of the calendar year. Under this finalized policy, the educational review request process remains the same for the CY 2020 payment determination and subsequent years, except that revised scores identified through an educational review will be used to correct a hospital's validation score. As a result, we do not expect this policy to affect the burden experienced by hospitals, as our changes to this policy result in a change in the way we address educational review requests and not a change to the process hospitals must follow to request an education review. As we stated in the CY 2014 OP/ASC final rule with comment period (78 FR 75171), we believe there is a burden associated with successful participation in the Hospital OQR Program, where successful participation results in a full annual payment update (APU) for a particular payment determination. This burden includes, but is not limited to, maintaining familiarity with the Hospital OQR Program requirements, which includes checking feedback reports to indicate a facility's current status or performance (78 FR 75171). The overall administrative burden was estimated at 42 hours per hospital (78 FR 75171). As stated above, we do not believe this burden will change with the finalization of our policy to update the educational review process to include corrections.

(c) Impact of Proposed Update to NOP Submission Deadline

In section XIII.C.2. of this final rule with comment period, we are not finalizing our proposal to revise the NOP submission deadlines such that hospitals are required to submit the NOP any time prior to registering on the QualityNet Web site. We estimated that this proposal would have a negligible effect on the time and cost of completing the participation requirements. As a result, our decision not to finalize the proposal to revise the NOP submission deadline does not affect our burden estimates.

(d) Impact of Aligning the First Quarter for Which Hospitals Must Submit Data for All Hospitals That Did Not Participate in the Previous Year's Hospital OQR Program

In section XIII.D.1 of this final rule with comment period, we are finalizing our proposal to align the timeline specifying the initial quarter for which hospitals must submit data for all hospitals that did not participate in the previous year's Hospital OQR Program, rather than specifying different timelines for hospitals with Medicare acceptance dates before versus after January 1 of the year prior to an affected annual payment update. Although this finalized proposal alters the timeline for hospitals to begin submitting data for the Hospital OQR Program, it does not alter program requirements. As a result, we do not anticipate that this policy will affect burden.

(e) Impact of Updates to the Previously Finalized ECE Policy

We previously estimated the burden associated with general and administrative Hospital OQR Program requirements in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75171). In section XIII.D.8. of this final rule with comment period, we discuss our finalized alignment of the naming of this exception policy and finalized proposal to update 42 CFR 419.46(d) to reflect our current ECE policies. We are also clarifying the timing of our response to ECE requests. Because we do not seek any new or additional information in our finalized ECE proposals, we believe the updates will have no effect on burden for hospitals.

We refer readers to section XVI.B. of this final rule with comment period (information collection requirements) for a detailed discussion of the burden of the requirements for submitting data to the Hospital OQR Program.

e. Effects of Proposed Requirements for the ASCQR Program

1. Background

In section XIV. of this final rule with comment period, we discuss our proposals to adopt policies affecting the ASCQR Program. For the CY 2017 payment determination, of the 3,937 ASCs that met eligibility requirements for the ASCQR Program, 209 ASCs did not meet the requirements to receive the full annual payment update. We note that, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79874), we used the CY 2016 payment determination numbers as a baseline, and estimated that approximately 200 ASCs will not receive the full annual

payment update in CY 2018 due to failure to meet the ASCQR Program requirements (CY 2017 and CY 2018 payment determination information were not yet available).

In section XIV.B.3.b. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2019 payment determination, to remove three measures (ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing, ASC-6: Safe Surgery Checklist Use, and ASC-7: Ambulatory Surgical Center Facility Volume Data on Selected Ambulatory Surgical Center Surgical Procedures) from the ASCQR Program measure set. In section XIV.B.6.a. of this final rule with comment period, we are not finalizing our proposal, beginning with the CY 2021 payment determination, to adopt one new measure, ASC-16: Toxic Anterior Segment Syndrome. In section XIV.B.6.b. and c. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2022 payment determination, to adopt two new measures collected via claims (ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures). We expect these finalized proposals will reduce the overall burden of reporting data for the ASCQR Program, as discussed below.

In this final rule with comment period, we are also finalizing our proposals: (1) To delay ASC-15a-e: OAS CAHPS survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection) (section XIV.B.4. of this final rule with comment period); (2) to expand the CMS online tool to also allow for batch submission beginning with data submitted during CY 2018 and to make corresponding revisions to the CFR (section XIV.D.3.b. of this final rule with comment period); and, (3) to align the naming of the Extraordinary Circumstances Exceptions (ECE) policy beginning with CY 2018 and to make conforming changes to the CFR (section XIV.D.6.b. of this final rule with comment period). As discussed below, we do not expect these finalized proposals to affect our burden estimates.

2. Estimated Burden of Newly Finalized ASCQR Program Proposals Beginning With CY 2018

In section XIV.B.4. of this final rule with comment period, we are finalizing our proposal to delay ASC-15a-e: OAS CAHPS Survey-based measures beginning with the CY 2020 payment determination (CY 2018 data collection) until further notice in future

rulemaking. As described in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79864), the information collection requirements associated with the five OAS CAHPS Survey based measures (ASC-15a, ASC-15b, ASC-15c, ASC-15d, and ASC-15e) are currently approved under OMB Control Number 0938-1240. For this reason, we did not provide an independent estimate of the burden associated with OAS CAHPS Survey administration for the ASCQR Program in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79864). Similarly, our finalized proposal to delay reporting on these measures does not affect our current burden estimates.

For CY 2018, we are finalizing two additional policies. First, in section XIV.D.3.b. of this final rule with comment period, we are finalizing our proposal to expand the CMS online tool to also allow for batch submission beginning with data submitted during CY 2018 and to make corresponding revisions to the CFR. Second, in section XIV.D.6. of this final rule with comment period, we discuss our intent to align the naming of this exception policy and update 42 CFR 416.310(d) to reflect our current ECE policies. We are also clarifying the timing of CMS' response to ECE requests. Because none of these policies change the reporting requirements of the ASCQR Program or require ASCs to submit any new or additional information, we believe the updates will have no effect on burden for ASCs.

3. Estimated Burden of Newly Finalized ASCQR Program Proposals for the CY 2019 Payment Determination

In section XIV.B.3.b. of this final rule with comment period, we are finalizing our proposals to remove one claims-based measure (ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing²¹⁸) and two measures collected via a CMS online data submission tool (ASC-6: Safe Surgery Checklist Use and ASC-7: ASC Facility Volume Data on Selected ASC Surgical Procedures) from the ASCQR Program measure set beginning with the CY 2019 payment determination. As discussed in section XVI.C.4. of this final rule with comment period, data for ASC-5 is submitted via

²¹⁸ As discussed in section XVI.C.4. of this final rule with comment period, data for ASC-5 is submitted via CMS claims using Quality Data Codes, which impose only a nominal burden on providers because these claims are already submitted for the purposes of payment. We therefore estimate a nominal reduction in burden associated with our finalized proposal to remove the ASC-5 measure from the ASCQR Program measure set beginning with the CY 2019 payment determination.

CMS claims using Quality Data Codes, which impose only a nominal burden on providers because these claims are already submitted for the purposes of payment. Therefore, we estimate a nominal reduction in burden associated with our finalized proposal to remove the ASC-5 measure from the ASCQR Program measure set beginning with the CY 2019 payment determination. As also discussed in section XVI.C.4. of this final rule with comment period, we estimate the proposals to remove ASC-6 and ASC-7 from the ASCQR Program measure set will reduce ASCs' data collection and submission burden by approximately 657 hours (3,937 ASCs × 0.167 hours per ASC) and \$24,033 (657 hours × \$36.58 per hour) per measure, or a total burden reduction of 1,314 (657 hours × 2 measures) and \$48,066 (1,314 hours × \$36.58 per hour) across all ASCs.

We did not propose to add any quality measures to the ASCQR measure set for the CY 2020 payment determination, and we do not believe that the other measures we previously adopted will cause any additional ASCs to fail to meet the ASCQR Program requirements. (We refer readers to section XIV.B.5. of this final rule with comment period for a list of these measures.) Therefore, we do not believe that these policies will increase the number of ASCs that do not receive a full annual payment update for the CY 2020 payment determination.

4. Estimated Burden of ASCQR Program for the CY 2021 Payment Determination

In section XIV.B.6.a. of this final rule with comment period, we are not finalizing our proposal to adopt one new measure collected via a CMS online data submission tool, ASC-16: Toxic Anterior Segment Syndrome. Therefore, the initially estimated burden from the CY 2018 OPPS/ASC proposed rule (82 FR 33721) does not apply.

5. Estimated Burden of ASCQR Program Newly Finalized Proposals for the CY 2022 Payment Determination

In sections XIV.B.6.b. and c. of this final rule with comment period, we are finalizing our proposals, beginning with the CY 2022 payment determination, to adopt two measures collected via claims: (1) ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures; and (2) ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures. Data used to calculate scores for these measures is collected via Part A and Part B Medicare administrative claims and Medicare enrollment data, and therefore does not require ASCs to report any additional data. Because these measures do not

require ASCs to submit any additional data, we do not believe there will be any additional burden associated with these proposals.

We refer readers to the information collection requirements in section XVI.C. of this final rule with comment period for a detailed discussion of the financial and hourly burden of the ASCQR Program's current and proposed requirements.

B. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that most hospitals, ASCs and CMHCs are small entities as that term is used in the RFA. For purposes of the RFA, most hospitals are considered small businesses according to the Small Business Administration's size standards with total revenues of \$38.5 million or less in any single year or by the hospital's not-for-profit status. Most ASCs and most CMHCs are considered small businesses with total revenues of \$15 million or less in any single year. For details, see the Small Business Administration's "Table of Small Business Size Standards" at <http://www.sba.gov/content/table-small-business-size-standards>.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has 100 or fewer beds. We estimate that this final rule with comment period will increase payments to small rural hospitals by less than 3 percent; therefore, it should not have a significant impact on approximately 626 small rural hospitals.

The analysis above, together with the remainder of this preamble, provides a regulatory flexibility analysis and a regulatory impact analysis.

C. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. That threshold

level is currently approximately \$148 million. This final rule with comment period does not mandate any requirements for State, local, or tribal governments, or for the private sector.

D. Reducing Regulation and Controlling Regulatory Costs

Executive Order 13771, titled Reducing Regulation and Controlling Regulatory Costs, was issued on January 30, 2017. Section 2(a) of Executive Order 13771 requires an agency, unless prohibited by law, to identify at least two existing regulations to be repealed when the agency publicly proposes for notice and comment, or otherwise promulgates, a new regulation. In furtherance of this requirement, section 2(c) of Executive Order 13771 requires that the new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of existing costs associated with at least two prior regulations. OMB's guidance, issued on April 5, 2017, explains that "In general, Federal spending regulatory actions that cause only income transfers between taxpayers and program beneficiaries (e.g., regulations associated with . . . Medicare spending) are considered 'transfer rules' and are not covered by EO 13771. However, in some cases, such regulatory actions may impose requirements apart from transfers, or transfers may distort markets causing inefficiencies. In those cases, the actions would need to be offset to the extent they impose more than de minimis costs." As shown in the previous discussion of Regulatory Review Costs under section XVIII.A.4. of this final rule with comment period, we estimate that total regulatory review costs on the affected entities will be approximately \$2.8 million. As discussed in section XVI. of this final rule with comment period, we estimate that this rule leads to paperwork cost savings of approximately \$16.8 million per year on an ongoing basis. It has been determined that this final rule with comment period is a deregulatory action for the purposes of Executive Order 13771.

E. Conclusion

The changes we are making in this final rule with comment period will affect all classes of hospitals paid under the OPPS and will affect both CMHCs and ASCs. We estimate that most classes of hospitals paid under the OPPS will experience a modest increase or a minimal decrease in payment for services furnished under the OPPS in CY 2018. Table 88 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements

that will result in a 1.4 percent increase in payments for all services paid under the OPPI in CY 2018, after considering all of the changes to APC reconfiguration and recalibration, as well as the OPD fee schedule increase factor, wage index changes, including the frontier State wage index adjustment, estimated payment for outliers, and changes to the pass-through payment estimate. However, some classes of providers that are paid under the OPPI will experience more significant gains or losses in OPPI payments in CY 2018.

The updates to the ASC payment system for CY 2018 will affect each of the approximately 5,500 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on its mix of patients, the proportion of the ASC's patients who are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the ASC payment system, and the extent to which the ASC provides a different set of procedures in the coming year. Table 89 demonstrates the estimated distributional impact among ASC surgical specialties of the MFP-adjusted CPI-U update factor of 1.2 percent for CY 2018.

XIX. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have examined the OPPI and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local or tribal governments, preempt State law, or otherwise have a Federalism implication. As reflected in Table 88 of this final rule with comment period, we estimate that OPPI payments to governmental hospitals (including State and local governmental hospitals) will experience no change under this final rule with comment period. While we do not know the number of ASCs or CMHCs with government ownership, we anticipate that it is small. The analyses we have provided in this section of this final rule with comment period, in conjunction with the remainder of this document, demonstrate that this final rule with comment period is consistent with the regulatory philosophy and principles identified in Executive Order

12866, the RFA, and section 1102(b) of the Act.

This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals, CMHCs, and ASCs, and some effects may be significant.

List of Subjects

42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney disease, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

For reasons stated in the preamble of this document, the Centers for Medicare & Medicaid Services is amending 42 CFR chapter IV as set forth below:

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 1. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

■ 2. Section 414.510 is amended by adding paragraph (b)(5) to read as follows:

§ 414.510 Laboratory date of service for clinical laboratory and pathology specimens.

* * * * *

(b) * * *

(5) In the case of a molecular pathology test or a test designated by CMS as an ADLT under paragraph (1) of the definition of an advanced diagnostic laboratory test in § 414.502, the date of service of the test must be the date the test was performed only if—

(i) The test was performed following a hospital outpatient's discharge from the hospital outpatient department;

(ii) The specimen was collected from a hospital outpatient during an encounter (as both are defined in § 410.2 of this chapter);

(iii) It was medically appropriate to have collected the sample from the hospital outpatient during the hospital outpatient encounter;

(iv) The results of the test do not guide treatment provided during the hospital outpatient encounter; and

(v) The test was reasonable and medically necessary for the treatment of an illness.

PART 416—AMBULATORY SURGICAL SERVICES

■ 3. The authority citation for part 416 continues to read as follows:

Authority: Secs. 1102, 1138, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320b-8, and 1395hh) and section 371 of the Public Health Service Act (42 U.S.C. 273).

■ 4. Section 416.310 is amended by revising paragraphs (c)(1)(i) and (d) to read as follows:

§ 416.310. Data collection and submission requirements under the ASCQR Program.

* * * * *

(c) * * *

(1) * * *

(i) *QualityNet account for web-based measures.* ASCs, and any agents submitting data on an ASC's behalf, must maintain a QualityNet account in order to submit quality measure data to the QualityNet Web site for all web-based measures submitted via a CMS online data submission tool. A QualityNet security administrator is necessary to set up such an account for the purpose of submitting this information.

* * * * *

(d) *Extraordinary circumstances exceptions.* CMS may grant an exception with respect to quality data reporting requirements in the event of extraordinary circumstances beyond the control of the hospital, such as when an act of nature affects an entire region or if CMS determines that a systemic problem with one of its data collection systems directly affected the ability of the hospitals to submit data. CMS may grant an exception as follows:

(1) *Upon request of the ASC.* Specific requirements for submission of a request for an exception are available on the QualityNet Web site; or

(2) *At the discretion of CMS.* CMS may grant exceptions to ASCs that have not requested them when CMS determines that an extraordinary circumstance has occurred.

* * * * *

PART 419—PROSPECTIVE PAYMENT SYSTEM FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 5. The authority citation for part 419 continues to read as follows:

Authority: Secs. 1102, 1833(t), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395l(t), and 1395hh).

■ 6. Section 419.32 is amended by adding paragraph (b)(1)(iv)(B)(9) to read as follows:

§ 419.32 Calculation of prospective payment rates for hospital outpatient services.

* * * * *

(b) * * *

(1) * * *

(iv) * * *

(B) * * *

(9) For calendar year 2018, a multiproductivity adjustment (as determined by CMS) and 0.75 percentage point.

* * * * *

■ 7. Section 419.46 is amended—

■ a. In paragraph (a)(1) by removing the phrase “Web site” and adding in its place the term “website”.

■ b. In paragraphs (b) and (c)(2) by removing the phrase “Web site” and adding in its place the term “website”.

■ c. By revising paragraphs (c)(3)(i) and (ii) and (d).

■ d. By adding paragraph (e)(3).

■ e. In paragraphs (f)(1) and (g)(2) by removing the phrase “Web site” and adding in its place the term “website” wherever it appears.

The revisions and additions read as follow:

§ 419.46 Participation, data submission, and validation requirements under the Hospital Outpatient Quality Reporting (OQR) Program.

* * * * *

(c) * * *

(3) * * *

(i) Hospitals that did not participate in the previous year’s Hospital OQR Program must initially submit data beginning with encounters occurring during the first calendar quarter of the year prior to the affected annual payment update.

(ii) Hospitals that did not participate in the previous year’s Hospital OQR Program must follow data submission deadlines as specified in paragraph (c)(2) of this section.

* * * * *

(d) *Exception.* CMS may grant an exception to one or more data submission deadlines and requirements in the event of extraordinary circumstances beyond the control of the hospital, such as when an act of nature affects an entire region or locale or a systemic problem with one of CMS’ data collection systems directly or indirectly affects data submission. CMS may grant an exception as follows:

(1) *Upon request by the hospital.* Specific requirements for submission of a request for an exception are available on the QualityNet Web site.

(2) *At the discretion of CMS.* CMS may grant exceptions to hospitals that have not requested them when CMS determines that an extraordinary circumstance has occurred.

(e) * * *

(3) CMS will select a random sample of 450 hospitals for validation purposes, and will select an additional 50 hospitals for validation purposes based on the following criteria:

(i) The hospital fails the validation requirement that applies to the previous year’s payment determination; or

(ii) The hospital has an outlier value for a measure based on the data it submits. An “outlier value” is a measure value that is greater than 5 standard deviations from the mean of the measure values for other hospitals, and indicates a poor score.

* * * * *

■ 8. Section 419.71 is added to read as follows:

§ 419.71 Payment reduction for certain X-ray imaging services.

(a) *Definition.* For purposes of this section, the term “computed

radiography technology” means cassette-based imaging which utilizes an imaging plate to create the image involved.

(b) *Payment reduction for film X-ray imaging services.* For an imaging service that is an X-ray taken using film and that is furnished during 2017 or a subsequent year, the payment amount for such service (including the X-ray component of a packaged service) is reduced by 20 percent.

(c) *Payment reduction for computed radiography imaging services.* The payment amount for an imaging service that is an X-ray taken using computed radiography technology (including the X-ray component of a packaged service) is reduced by—

(1) 7 percent, for such services furnished in CY 2018, 2019, 2020, 2021, or 2022.

(2) 10 percent, for such services furnished in CY 2023 or a subsequent calendar year.

(d) *Application without regard to budget neutrality.* The reductions taken under this section are not considered adjustments under section 1833(t)(2)(E) of the Act and are not implemented in a budget neutral manner.

Dated: October 26, 2017.

Seema Verma,

Administrator, Centers for Medicare and Medicaid Services.

Dated: October 30, 2017.

Eric D. Hargan,

Acting Secretary, Department of Health and Human Services.

Editorial Note: Rule document 2017–23932 was originally published on pages 52356 through 52637 in the issue of Monday, November 13, 2017. In that publication, a section of the document was omitted due to a printing error. The corrected document is published here in its entirety.

No. 239

December 14, 2017

Part III

The President

Space Policy Directive-1 of December 11, 2017—Reinvigorating America's Human Space Exploration Program

Presidential Documents

Title 3—

Space Policy Directive–1 of December 11, 2017

The President

Reinvigorating America’s Human Space Exploration Program

Memorandum for the Vice President[,] the Secretary of State[,] the Secretary of Defense[,] the Secretary of Commerce[,] the Secretary of Transportation[,] the Secretary of Homeland Security[,] the Director of National Intelligence[,] the Director of the Office of Management and Budget[,] the Assistant to the President for National Security Affairs[,] the Administrator of the National Aeronautics and Space Administration[,] the Director of the Office of Science and Technology Policy[,] the Assistant to the President for Homeland Security and Counterterrorism[, and] the Chairman of the Joint Chiefs of Staff

Section 1. *Amendment to Presidential Policy Directive–4.*

Presidential Policy Directive–4 of June 28, 2010 (National Space Policy), is amended as follows:

The paragraph beginning “Set far-reaching exploration milestones” is deleted and replaced with the following:

“Lead an innovative and sustainable program of exploration with commercial and international partners to enable human expansion across the solar system and to bring back to Earth new knowledge and opportunities. Beginning with missions beyond low-Earth orbit, the United States will lead the return of humans to the Moon for long-term exploration and utilization, followed by human missions to Mars and other destinations;”.

Sec. 2. *General Provisions.* (a) Nothing in this memorandum shall be construed to impair or otherwise affect:

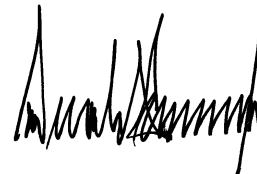

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This memorandum shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) This memorandum shall be published in the *Federal Register*.

A handwritten signature in black ink, appearing to be a stylized name, possibly "Donald Trump", written in a cursive style.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at <http://www.archives.gov/federal-register/laws>.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the

Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available on the Internet from GPO's Federal Digital System (FDsys) at <http://www.gpo.gov/fdsys>. Some laws may not yet be available.

H.R. 2810/P.L. 115-91
National Defense Authorization Act for Fiscal Year 2018 (Dec. 12, 2017; 131 Stat. 1283)

H.R. 4374/P.L. 115-92
To amend the Federal Food, Drug, and Cosmetic Act to

authorize additional emergency uses for medical products to reduce deaths and severity of injuries caused by agents of war, and for other purposes. (Dec. 12, 2017; 131 Stat. 2023)

Last List December 12, 2017

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To

subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
