Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Participants and Industry Members that is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Participants and Industry Members and their relative impact upon the Company's resources and operations;
- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSS, are based upon the level of market share; (ii) Industry

⁴³ The Operating Committee notes that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁴⁴ Section 11.2(e) of the CAT NMS Plan.

⁴⁵ Approval Order at 84796.

⁴⁶ *Id.* at 84792.

⁴⁷ 26 U.S.C. 501(c)(6).

⁴⁸ Approval Order at 84793.

Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSs) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus,

each such Industry Member will be placed into one of seven tiers of fixed fees, based on "message traffic" for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSs) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain

comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will

be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT

reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as

executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁹ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁵⁰

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵¹ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however,

the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵² The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵³

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The

Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (i.e., equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national securities association’s market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee

⁴⁹ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

⁵⁰ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵¹ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Rel. No. 77265 (Mar. 1, 2017, 81 FR 11856 (Mar. 7, 2016)). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

⁵² The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016–June 2017 that were compiled by the Financial Information Forum using data from NASDAQ and SIAC.

⁵³ Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue's NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages (the "Equity Execution Venue Percentages"). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. ("Bats"). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility

("TRF") and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and the otcmarkets.com, ATSS accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵⁴ The average shares per trade

ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity Execution Venue tier will be determined by predefined percentage allocations (the "Equity Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue Recovery	Percentage of total recovery
Tier 1	25.00	33.25	8.31
Tier 2	42.00	25.73	6.43
Tier 3	23.00	8.00	2.00
Tier 4	10.00	0.02	0.01
Total	100	67	16.75

⁵⁴ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly

available market volume data from Bats and OTC Markets Group, and the totals were divided to

determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue's Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue's Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages (the "Options Execution Venue Percentages"). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the "Options Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue Recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets. Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution

Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of market share of Execution Venue ATSS exclusively trading OTC Equity Securities, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of

historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion

of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSS) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSS) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1,541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution

Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly, under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000 in total for the year beginning November 21, 2016.⁵⁵

The Plan Processor costs relate to costs incurred and to be incurred

through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2–5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
Non-Plan Processor	Third Party Support Costs	5,200,000
	Operational Reserve	⁵⁶ 5,000,000
	Cyber-insurance Costs	3,000,000
Estimated Total		50,700,000

⁵⁵ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

Based on these estimated costs and the calculations for the funding model described above, the Operating

Committee determined to impose the following fees:⁵⁷

For Industry Members (other than Execution Venue ATs):

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899

6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

For Execution Venues for Listed Options:

Tier	Percentage of Options Execution Venues	Quarterly CAT Fee
1	75.00	\$81,381
2	25.00	37,629

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATs) and Execution

Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541

Industry Members (other than Execution Venue ATs) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS ("IM")

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

⁵⁶ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁷ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Total	50,700,000
Excess ⁵⁸	7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATSs), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required

to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated

Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any

⁵⁸ The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the fees would be adjusted upward.⁵⁹ Furthermore, any surplus of the Company's revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁶⁰ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and the Participants will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act and Rule 19b-4 thereunder, and any such changes will become effective in accordance with the requirements of those provisions.

(J) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter's assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATSS) in each tier is relative such that such Industry Member's assigned tier

will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter's activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters

have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor

⁵⁹The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the

Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁶⁰Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee’s approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on the Exchange’s members. The proposed fee schedule has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunseting of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms “CAT”, “CAT NMS Plan,” “Industry Member,” “NMS Stock,” “OTC Equity Security”, “Options Market Maker”, and “Participant” are defined as set forth in Rule 1701 (Consolidated Audit Trail Compliance Rule—Definitions).

The proposed fee schedule imposes different fees on Equity ATSs and Industry Members that are not Equity ATSs. Accordingly, the proposed fee schedule defines the term “Equity ATS.” First, paragraph (a)(2) defines an “ATS” to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an “Execution Venue.” Then, paragraph (a)(4) defines an “Equity ATS” as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term “CAT Fee” to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

Finally, Paragraph (a)(6) defines an “Execution Venue” as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an “Equity Execution Venue” as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSs.⁶¹ These are the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for Equity ATSs exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and

⁶¹ Note that no fee schedule is provided for Execution Venue ATSs that execute transactions in Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by Regulatory Circular.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the

collection of CAT fees established by the Company.⁶²

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposes to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, the Exchange proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶³ The SEC suspended the Original Proposal and instituted proceedings to determine whether to

approve or disapprove it.⁶⁴ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁵ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSS) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan

amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (e.g., those Equity ATSS representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁶ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁷ Tier 2 required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share

⁶⁶ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁷ Note that while these equity market share thresholds were referenced as data points to help differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

⁶² Section 11.4 of the CAT NMS Plan.

⁶³ For a description of the comments submitted in response to the Original Proposal, see Suspension Order.

⁶⁴ Suspension Order.

⁶⁵ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁸ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger

fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁶⁹ To address this concern, the Operating Committee proposes to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA may

be subject to higher tiers than their operations may warrant.⁷⁰ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the share volume of such Execution Venue ATSS as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks.

Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSS exclusively trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATS exclusively trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In

⁶⁸ Section 11.2(b) of the CAT NMS Plan.

⁶⁹ See Suspension Order at 31664–5.

⁷⁰ Suspension Order at 31664–5.

addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷¹ As discussed above, the larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the market share for Equity ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSS, including those that exclusively trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

⁷¹ Section 11.2(b) of the CAT NMS Plan.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSS). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷² To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than Execution Venue ATSS). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷³ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the

⁷² See Suspension Order at 31663-4; SIFMA Letter at 4-6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2-6; Group One Letter at 2-6; and Belvedere Letter at 2.

⁷³ Suspension Order at 31664.

objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷⁴ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of

⁷⁴ Section 11.2(b) of the CAT NMS Plan.

the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATSS) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁵

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven; (2) change the allocation of CAT costs between Equity

Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATSS). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters,

while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest

⁷⁵ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members, Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁶ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35%

allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATs) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) of the

proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATs) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁷ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATs) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATs) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATs). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since

⁷⁶ Securities Exchange Act Rel. No. 67457 (Jul 18, 2012), 77 FR 45722, 45726 (Aug. 1, 2012) (“Rule 613 Adopting Release”).

⁷⁷ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATs), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁸ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATs as Execution Venues under the proposed funding model since ATs have business models that are similar to those of exchanges, and ATs also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging

Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, the Exchange proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁷⁹

The Operating Committee does not believe that decreasing cost per additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by

Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (*e.g.*, the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁸⁰ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸¹ The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸² As discussed in

⁸⁰ See FIA Principal Traders Group Letter at 2; Belvedere Letter at 4.

⁸¹ See Suspension Order at 31662; MFA Letter at 1-2.

⁸² Letter from Participants to Brent J. Fields, Secretary, SEC (Sept. 23, 2016) ("Plan Response Letter"); Letter from CAT NMS Plan Participants to

⁷⁸ The Participants note that this analysis did not place MIAX PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁷⁹ Suspension Order at 31667.

those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸³ Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸⁴ The Participants previously responded to this concern in both the Plan Response Letter and the Fee Rule Response Letter.⁸⁵ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁶ The Operating Committee provided a detailed

discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: user support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry Members.⁸⁷ The Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁸ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁸⁹ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with the provisions of Section 6(b)(5) of the Act,⁹⁰ which require, among other things, that the Exchange rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to

permit unfair discrimination between customers, issuers, brokers and dealers, and Section 6(b)(4) of the Act,⁹¹ which requires that Exchange rules provide for equitable allocation of reasonable dues, fees and other charges among its members and issuers and other persons using its facilities. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹² To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and

Brent J. Fields, Secretary, SEC (June 29, 2017) (“Fee Rule Response Letter”).

⁹¹ 15 U.S.C. 78f(b)(4).

⁹² Approval Order at 84697.

among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSS) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tier 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSS) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

B. Self-Regulatory Organization's Statement on Burden on Competition

Section 6(b)(8) of the Act⁹³ requires that Exchange rules not impose any burden on competition that is not

necessary or appropriate. The Exchange does not believe that the proposed amendments to its Fee Schedule will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSS) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSS and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter's size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to

the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹⁴

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSS), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹⁵

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported

⁹³ 15 U.S.C. 78f(b)(8).

⁹⁴ Section 11.2(e) of the CAT NMS Plan.

⁹⁵ Section 11.1(c) of the CAT NMS Plan.

CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁶

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁷

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATs) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATs) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATs trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁸ including views as to

⁹⁶ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁷ Section 11.2(c) of the CAT NMS Plan.

⁹⁸ Section 11.2(e) of the CAT NMS Plan.

whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.⁹⁹

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATs) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and

Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82247; File No. SR-OCC-2017-808]

Self-Regulatory Organizations; The Options Clearing Corporation; Notice of Filing of Advance Notice, as Modified by Amendment No. 1, Concerning the Adoption of a New Minimum Cash Requirement for the Clearing Fund

December 8, 2017.

Pursuant to Section 806(e)(1) of Title VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act, entitled Payment, Clearing and Settlement Supervision Act of 2010 ("Clearing Supervision Act")¹ and Rule 19b-4(n)(1)(i) under the Securities Exchange Act of 1934 ("Act"),² notice is hereby given that on November 14, 2017, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission ("Commission") an advance notice as described in Items I, II and III below, which Items have been prepared by OCC. On November 22, 2017, OCC filed Amendment No. 1 to the advance notice.³ The Commission is publishing this notice to solicit comments on the advance notice from interested persons.

I. Clearing Agency's Statement of the Terms of Substance of the Advance Notice

This advance notice is filed in connection with a proposed change would (1) revise OCC's By-Laws to adopt a new minimum cash requirement for the Clearing Fund; (2) revise OCC's By-Laws to provide for the pass-through of interest earned on Clearing Fund cash held in OCC's Federal Reserve bank account; (3) enact changes to OCC's Fee Policy that reflect the pass through of interest earned on Clearing Fund cash held in OCC's Federal Reserve bank account; and (4) make certain conforming changes to OCC's Rules and By-Laws to affect the aforementioned changes.

The proposed changes to OCC's By-Laws and Rules were submitted as Exhibits 5A and 5B of the filing, and OCC's Fee Policy was submitted as

¹ 12 U.S.C. 5465(e)(1).

² 17 CFR 240.19b-4(n)(1)(i).

³ In Amendment No. 1, OCC modified the proposed change to Article VIII, Section 4(a) of the By-Laws to clarify that interest earned on Clearing Fund cash deposits held at a Federal Reserve Bank accruing to the benefit of Clearing Members would be calculated daily based on each Clearing Member's pro rata share of Clearing Fund cash. OCC did not propose any other changes to the filing in Amendment No. 1.

confidential Exhibit 5C of the filing.⁴ The proposed change is described in detail in Item 10 below. All terms with initial capitalization not defined herein have the same meaning as set forth in OCC's By-Laws and Rules.⁵

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Advance Notice

In its filing with the Commission, OCC included statements concerning the purpose of and basis for the advance notice and discussed any comments it received on the advance notice. The text of these statements may be examined at the places specified in Item IV below. OCC has prepared summaries, set forth in sections A and B below, of the most significant aspects of these statements.

(A) Clearing Agency's Statement on Comments on the Advance Notice Received From Members, Participants or Others

Written comments were not and are not intended to be solicited with respect to the proposed rule change and none have been received. OCC will notify the Commission of any written comments received by OCC.

(B) Advance Notices Filed Pursuant to Section 806(e) of the Payment, Clearing, and Settlement Supervision Act

Description of the Proposed Change

OCC proposes to establish a minimum cash contribution requirement for its Clearing Fund in order to increase the amount of qualifying liquid resources available to OCC to account for extreme scenarios that may result in liquidity demands exceeding OCC's current Cover 1 liquidity resources, as calculated under the current historically-based methodology, and provide for a more consistent level of cash resources in its available prefunded financial resources. The proposed rule change also would provide for the pass-through of interest income earned on such deposits to its Clearing Members. OCC's current practices and the proposed changes to such practices are described in more detail below.

Current Practice

Presently, Article VIII, Section 3(a) of OCC's By-Laws provides that Clearing Fund contributions shall be in the form of cash and Government securities, but neither OCC's By-Laws nor Rules

⁴ OCC has filed a proposed rule change with the Commission in connection with the proposed change. See SR-OCC-2017-019.

⁵ OCC's By-Laws and Rules can be found on OCC's public website: <http://optionsclearing.com/about/publications/bylaws.jsp>.

provides a minimum cash requirement for contributions in the Clearing Fund. Article VIII, Section 4(a) of OCC's By-Laws allows for OCC to invest cash contributions to the Clearing Fund, partially or wholly, in OCC's account in Government securities, and to the extent that such contributions are not so invested they shall be deposited by OCC in a separate account or accounts for Clearing Fund contributions in approved custodians. Article VIII, Section 4(a) of OCC's By-Laws, however, presently does not account for the treatment of interest earned on cash deposits held in the OCC's Federal Reserve bank account.

Proposed Change

1. Minimum Cash Clearing Fund Requirement

OCC proposes to establish a minimum cash contribution requirement for its Clearing Fund in order to increase the amount of highly liquid resources available to OCC to account for extreme scenarios that may result in liquidity demands exceeding OCC's current Cover 1 liquidity resources, as calculated under the current historically-based methodology, and provide for a more consistent level of cash resources in its available prefunded financial resources.⁶ Specifically, the proposed rule change would require that Clearing Members collectively contribute \$3 billion in cash to the Clearing Fund ("Cash Clearing Fund Requirement"). Each Clearing Member's proportionate share of the Cash Clearing Fund Requirement shall be equal in percentage to its proportionate share of the Clearing Fund as determined by the Clearing Fund allocation methodology in current Rule 1001.

OCC has historically sized its liquidity resources based on historically observed liquidity demands and analysis of potential large forecasted liquidity demands over at least the next twelve months. OCC forecasts its future daily settlement activity under normal market conditions (*e.g.*, mark-to-market settlements, and settlements resulting from the expiration of derivatives contracts) and compares such demands to its resources to ensure that at all times it will maintain a positive liquidity position to meet settlement obligations.

⁶ OCC's Current Cover 1 liquidity resources are sized based on the liquidity needed to address exposures derived solely from historical results. Introducing the Cash Clearing Fund Requirement would increase OCC's liquidity resources to address the exposures observed in a stress liquidity analysis performed using proposed sizing stress tests for OCC's Clearing Fund.

OCC has performed an analysis of its stress liquidity demands based on a 1-in-70 year hypothetical market event. OCC started its analysis by selecting the largest historical peak monthly settlements that occurred over the historical look back period of data generated by the stress test system. It then also selected certain large non-expiration days to supplement the analysis. From this it estimated the mark-to-market and cash settled exercise and assignment obligations for the members driving the historical peak demand under the proposed stress tests scenario to determine the stressed peak demand. Through this analysis, OCC observed that peak stressed liquidity demands of the largest 1 or 2 members, which normally occur in conjunction with certain monthly expirations, can exceed the size OCC's committed liquidity facilities (which currently total \$3 billion). In these cases, while OCC did have cash in the Clearing Fund to supplement its liquidity resources, and the total of credit facilities and cash in the Clearing Fund did cover these peak stressed liquidity demands, OCC is unable to rely on these cash contributions to be present at any given time since there is no obligation on members to maintain any amount of their contribution in cash. As a result, OCC believes it is necessary to increase or otherwise ensure the availability of highly liquid resources in the Clearing Fund to account for extreme scenarios that may result in liquidity demands exceeding OCC's Cover 1 liquidity resources, as calculated under the current historically-based methodology. The proposed Cash Clearing Fund Requirement, when taken together with OCC's \$3 billion in committed liquidity facilities, would provide liquidity resources sufficient to cover 100% of the peak stressed liquidity demands of the largest 1 or 2 members observed in OCC's analysis.

In addition, the proposed changes would allow OCC's Executive Chairman, Chief Administrative Officer ("CAO"), or Chief Operating Officer ("COO"), upon providing notice to the Risk Committee, to temporarily increase the amount of cash required to be maintained in the Clearing Fund up to an amount that includes the size of the Clearing Fund as determined in accordance with Rule 1001 for the month in question for the protection of OCC, clearing members or the general public. Any determination by the Executive Chairman, CAO and/or COO to implement a temporary increase in Clearing Fund size would (i) be based upon then-existing facts and

circumstances, (ii) be in furtherance of the integrity of OCC and the stability of the financial system, and (iii) take into consideration the legitimate interests of Clearing Members and market participants.

The proposed rule change would require that any temporary increase in the Cash Clearing Fund Requirement be reviewed by the Risk Committee as soon as practicable, but in any event within 20 calendar days of the increase. In its review, the Risk Committee shall determine whether (1) the increase in the minimum Cash Clearing Fund Requirement is no longer required or (2) OCC's Clearing Fund contribution requirements and other related rules should be modified to ensure that OCC continues to maintain sufficient liquid resources to cover its largest aggregate payment obligations in extreme but plausible market conditions. In the event that the Risk Committee would determine to permanently increase the Cash Clearing Fund Requirement, OCC would initiate any regulatory approval process required to effect such a change.⁷ A Clearing Member will be required to satisfy any increase in its required cash contribution pursuant to an increase in the Cash Clearing Fund Requirement no later than one hour before the close of the Fedwire on the business day following OCC's issuance of an instruction to increase cash contributions.

These changes would be reflected in new paragraph (a)(i) of Section 3 of Article VIII of OCC's By-Laws, as well as in new Interpretation and Policy .04 to Section 3 of Article VIII.

2. Interest Pass Through for Clearing Fund Cash Held at the Federal Reserve

In connection with the proposed Cash Clearing Fund Requirement, substantially all of OCC's Clearing Fund deposits consisting of cash would be held in an account established by OCC at a Federal Reserve Bank.⁸ OCC proposes that it would pass the interest income earned in such account through to its Clearing Members. As a result, OCC proposes to revise Article VIII, Section 4(a) of OCC's By-Laws to include a sentence to provide that any interest earned on cash deposits held at

⁷ However, OCC will not decrease the Cash Clearing Fund Requirement while the regulatory approvals for a change in the Cash Clearing Fund Requirement are being obtained to ensure that OCC continues to maintain sufficient liquid resources to cover its liquidity demands during that time.

⁸ OCC notes that it would retain the discretion to maintain a small portion of Clearing Fund cash deposits in other accounts (*e.g.*, accounts with commercial banks) for various reasons, including facilitating normal substitution activity by its Clearing Members.

a Federal Reserve Bank shall accrue to the benefit of Clearing Members (calculated daily based on each Clearing Member's pro rata share of Clearing Fund cash deposits), provided that such Clearing Members have provided OCC with all tax documentation as OCC may from time to time require in order to effectuate such payment.⁹

3. Changes to the Fee Policy to Accommodate Interest Passed Through to Clearing Members

In order to accommodate the pass through of interest income, OCC would also amend its Fee Policy to add definitions for "Pass-Through Interest Revenue" and "Operating Expenses" to exclude from the calculation of the Business Risk Buffer projected interest revenue and expense, respectively, related to the pass-through of earned interest from OCC to Clearing Members.¹⁰ OCC also proposes to add a new example of the Business Risk Buffer calculation reflecting this change and make clarifying changes throughout the Policy to incorporate the use of the new defined terms. In addition, OCC proposes to amend the Fee Policy to remove references to "Proposed Rule 17Ad-22(e)(15)" to reflect the adoption of the Commission's Covered Clearing Agency Standards.

4. Conforming Changes

In conjunction with the aforementioned changes, OCC is also proposing to make four related conforming changes. First, OCC proposes to revise Interpretation and Policy .01 of Rule 1001 to reflect that the new minimum Clearing Fund size is \$3 billion (instead of \$1 billion) plus 110% of the size of OCC's committed liquidity facilities, which conforms to the proposed new minimum cash requirement for the Clearing Fund. Second, OCC proposes to amend the definition of "Approved Custodian" in Article I, Section 1 of the By-Laws to clarify that the Federal Reserve Bank may also be an Approved Custodian, to the extent it is available to OCC. Third, OCC is proposing to delete existing Article VIII, Section 4(b), regarding the establishment of a segregated funds

account for cash contributions to the Clearing Fund. The segregated funds account allows a Clearing Member to contribute cash to a bank or trust company account maintained in the name of OCC, subject to OCC's exclusive control, but the account also includes the name of the Clearing Member and any interest accrues to the Clearing Member rather than OCC. OCC proposes to eliminate the account type because Clearing Members have not expressed interest in using such an account, no such accounts are in use today, and moving forward, substantially all cash Clearing Fund contributions will be held in OCC's account at the Federal Reserve Bank. Fourth, OCC proposes to introduce new language to Article VIII, Section 4(a) to clarify that cash contributions to the Clearing Fund that are deposited at approved custodians may be commingled with the Clearing Fund contributions of different Clearing Members.

Expected Effect on and Management of Risk

The proposal is expected to improve OCC's liquidity risk management by establishing the Cash Clearing Fund Requirement and by permitting OCC to temporarily increase that requirement. The Cash Clearing Fund Requirement would increase the amount of highly liquid resources available to OCC to account for extreme scenarios that may result in liquidity demands exceeding OCC's current Cover 1 liquidity resources, as calculated under the current historically-based methodology. The Cash Clearing Fund Requirement also would provide a more consistent level of cash resources in OCC's available prefunded financial resources, thereby further strengthening OCC's liquidity risk management.

The proposed ability to allow OCC to temporarily increase its minimum Clearing Fund cash up to an amount that includes the size of the Clearing Fund as determined in accordance with Rule 1001 is expected to enhance OCC's liquidity risk management by providing a process to effectively replenish the liquid resources that OCC may employ during a stress event and would provide OCC with an additional means of addressing liquidity shortfalls that otherwise would not be covered by OCC's liquid resources and would provide a form of replenishment of OCC's liquid resources. OCC recognizes that exercising its authority to increase the minimum amount of cash in the Clearing Fund could potentially impose a liquidity constraint on its clearing members, and for this reason, OCC has

limited its authority to increase the minimum amount of cash in the Clearing Fund to circumstances in which such increase would protect OCC, clearing members or the general public and required that any such increase be based upon then-existing facts and circumstances, be in furtherance of the integrity of OCC and the stability of the financial system, and take into consideration the legitimate interests of clearing members and market participants.

OCC expects that its proposal to pass through interest earned on Clearing Fund cash deposits at a Federal Reserve Bank ultimately may potentially benefit clearing members' by providing them with a comparatively higher rate of return on their deposited cash (as compared to a comparable account with a commercial bank). This potential increased rate of return may ultimately strengthen the financial position of certain of OCC's clearing members.

Consistency With the Clearing Supervision Act

The stated purpose of the Clearing Supervision Act is to mitigate systemic risk in the financial system and promote financial stability by, among other things, promoting uniform risk management standards for systemically important financial market utilities and strengthening the liquidity of systemically important financial market utilities.¹¹

Section 805(a)(2) of the Clearing Supervision Act¹² also authorizes the Commission to prescribe risk management standards for the payment, clearing and settlement activities of designated clearing entities, like OCC, for which the Commission is the supervisory agency. Section 805(b) of the Clearing Supervision Act¹³ states that the objectives and principles for risk management standards prescribed under Section 805(a) shall be to:

- Promote robust risk management;
- promote safety and soundness;
- reduce systemic risks; and
- support the stability of the broader financial system.

The Commission has adopted risk management standards under Section 805(a)(2) of the Clearing Supervision Act and the Act in furtherance of these objectives and principles, including those standards adopted pursuant to the Commission rules cited below.¹⁴ For the

⁹ Article VIII, Section 4(a) currently states that all interest gained on cash Clearing Fund deposits belongs to OCC.

¹⁰ While interest income earned by OCC from its Federal Reserve bank account would be passed on to its Clearing Members, OCC anticipates that it would charge a cash management fee to cover associated costs (*i.e.*, administrative and similar costs). OCC would file a separate proposed rule change with the Commission, subject to receiving all necessary regulatory approvals for the proposed changes described herein, prior to implementing any cash management fee.

¹¹ 12 U.S.C. 5461(b).

¹² 12 U.S.C. 5464(a)(2).

¹³ 12 U.S.C. 5464(b).

¹⁴ 17 CFR 240.17Ad-22. See Securities Exchange Act Release Nos. 68080 (October 22, 2012), 77 FR 66220 (November 2, 2012) (S7-08-11) ("Clearing

reasons set forth below, OCC believes that the proposed change is consistent with the risk management standards promulgated under Section 805(a) of the Clearing Supervision Act.¹⁵

Rule 17Ad–22(e)(7)¹⁶ requires that a covered clearing agency (“CCA”) establish, implement, maintain and enforce written policies and procedures reasonably designed to effectively measure, monitor and manage liquidity risk that arises in or is borne by the CCA. Rule 17Ad–22(e)(7)(i)¹⁷ requires CCAs to establish, implement, maintain, and enforce written policies and procedures reasonably designed to effectively measure, monitor, and manage the liquidity risk that arises in or is borne by OCC by maintaining sufficient liquid resources at the minimum in all relevant currencies to effect same-day settlement, and where appropriate, intraday and multiday settlement of payment obligations with a high degree of confidence under a wide range of stress scenarios, that includes but is not limited to, the default of the participant family that would generate the largest aggregate payment obligation for OCC in extreme but plausible market conditions. As explained above, OCC has performed an analysis of its stress liquidity demands using proposed sizing stress tests for the Clearing Fund and has observed that peak stressed liquidity demands of the largest 1 or 2 members, which normally occur in conjunction with certain monthly expirations, can exceed the size OCC’s committed liquidity facilities (which currently total \$3 billion). OCC believes that the proposed minimum \$3 billion Cash Clearing Fund Requirement will adjust OCC’s available liquidity resources to account for extreme scenarios that may result in liquidity demands exceeding OCC’s Cover 1 liquidity resources. In this regard, OCC believes the proposed Cash Clearing Fund Requirement is designed to satisfy the requirements of Rule 17Ad–22(e)(7)(i).¹⁸

Further, Rule 17Ad–22(e)(7)(viii)¹⁹ requires that a CCA address foreseeable liquidity shortfalls that would not be covered by its liquid resources and Rule

17Ad–22(e)(7)(ix)²⁰ requires that a CCA describe its process to replenish any liquid resources that it may employ during a stress event. OCC believes that the proposed authority to temporarily increase the minimum cash requirement from \$3 billion up to an amount that includes the size of the Clearing Fund (as determined in accordance with Rule 1001 for the month in question) would provide OCC with an additional means of addressing liquidity shortfalls that otherwise would not be covered by OCC’s liquid resources. Further, because the Clearing Fund is a resource that is replenished in accordance with Section 6 of Article VIII of OCC’s By-Laws, to the extent that Clearing Members are required to replenish their required contributions—in whole or in part—with cash following a proportionate charge during, the proposed change would provide a form of replenishment of OCC’s liquid resources. In this regard, OCC believes the proposed authority to require up to an all cash Clearing Fund requirement is designed to satisfy the requirements of Rules 17Ad–22(e)(7)(viii) and (ix).²¹

III. Date of Effectiveness of the Advance Notice and Timing for Commission Action

The proposed change may be implemented if the Commission does not object to the proposed change within 60 days of the later of (i) the date the proposed change was filed with the Commission or (ii) the date any additional information requested by the Commission is received. OCC shall not implement the proposed change if the Commission has any objection to the proposed change.

The Commission may extend the period for review by an additional 60 days if the proposed change raises novel or complex issues, subject to the Commission providing the clearing agency with prompt written notice of the extension. A proposed change may be implemented in less than 60 days from the date the advance notice is filed, or the date further information requested by the Commission is received, if the Commission notifies the clearing agency in writing that it does not object to the proposed change and authorizes the clearing agency to implement the proposed change on an earlier date, subject to any conditions imposed by the Commission.

OCC shall post notice on its website of proposed changes that are implemented.

The proposal shall not take effect until all regulatory actions required with respect to the proposal are completed.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the advance notice is consistent with the Clearing Supervision Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR–OCC–2017–808 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–OCC–2017–808. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the advance notice that are filed with the Commission, and all written communications relating to the advance notice between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of OCC and on OCC’s website at https://www.theocc.com/components/docs/legal/rules_and_bylaws/sr_occ_17_808.pdf.

All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–OCC–2017–808 and

Agency Standards’); 78961 (September 28, 2016), 81 FR 70786 (October 13, 2016) (S7–03–14) (“Standards for Covered Clearing Agencies”). The Standards for Covered Clearing Agencies became effective on December 12, 2016. OCC is a “covered clearing agency” as defined in Rule 17Ad–22(a)(5) and therefore is subject to section (e) of Rule 17Ad–22.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82239; File No. SR-NASDAQ-2017-127]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Exchange's Transaction Fees at Chapter XV, Section 2(1)

December 8, 2017.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 1, 2017, The Nasdaq Stock Market LLC ("Nasdaq" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Exchange's transaction fees at Chapter XV, Section 2(1), which governs the pricing for Nasdaq Participants using the Nasdaq Options Market ("NOM"), Nasdaq's facility for executing and routing standardized equity and index options.

The text of the proposed rule change is available on the Exchange's website at <http://nasdaq.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the

places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Exchange's transaction fees at Chapter XV, Section 2(1) to introduce a new NOM Market Maker³ Rebate to Add Liquidity in Non-Penny Pilot Options. Today, the Exchange charges Participants a \$0.35 per contract NOM Market Maker Fee for Adding Liquidity in Non-Penny Pilot Options.⁴ To incentivize Participants to add NOM Market Maker liquidity in Non-Penny Pilot Options, the Exchange offers Participants an opportunity to reduce this \$0.35 per contract fee to \$0.00 per contract, provided the Participant adds NOM Market Maker liquidity in Non-Penny Pilot Options of 7,500 or more ADV contracts per day in a month.⁵

In order to further incentivize NOM Market Makers to transact in Non-Penny Pilot Options on NOM, the Exchange proposes to introduce a new NOM Market Maker Rebate to Add Liquidity in Non Penny-Pilot Options, provided the Participant adds NOM Market Maker liquidity in Non-Penny Pilot Options of 10,000 or more ADV contracts per day in a month. The Participant would receive a \$0.30 per contract Rebate to Add Liquidity in Non-Penny Pilot Options as a NOM Market Maker. Participants that qualify for this proposed rebate would not be charged the NOM Market Maker Fee for Adding Liquidity in Non-Penny Pilot Options by virtue of already having qualified for the discounted fee of \$0.00 in note 5 (*i.e.*, by meeting the lower NOM Market Maker Non-Penny volume threshold of 7,500 or more ADV contracts per day).

In essence, the Exchange is creating a new volume threshold that is higher than the existing threshold with this proposal. As such, there will be two NOM Market Maker volume-based tiers for adding liquidity in Non-Penny Pilot Options, the lower of which would provide a discounted fee of \$0.00 from

³ The term "NOM Market Maker" or ("M") is a Participant that has registered as a Market Maker on NOM pursuant to Chapter VII, Section 2, and must also remain in good standing pursuant to Chapter VII, Section 4. In order to receive NOM Market Maker pricing in all securities, the Participant must be registered as a NOM Market Maker in at least one security. See Chapter XV.

⁴ See Chapter XV, Section 2(1).

⁵ *Id.* at note 5.

\$0.35 for the qualifying Participant, while the higher would provide a rebate of \$0.30 for the qualifying Participant in lieu of the \$0.35 fee. Accordingly, the Exchange proposes to amend the existing volume requirement for the discounted fee in note 5 to state that Participants that add NOM Market Maker liquidity in Non-Penny Pilot Options of 7,500 to 9,999 ADV contracts per day in a month will be assessed a \$0.00 per contract Non-Penny Options Fee for Adding Liquidity in that month. Participants that add Non-Penny NOM Market Maker liquidity of 10,000 or more ADV contracts per day in a month will not be charged a Non-Penny Options Fee for Adding Liquidity and will instead receive the proposed \$0.30 per contract Non-Penny Rebate to Add Liquidity. Finally, the Exchange proposes to clarify in note 5 that the \$0.35 fee for adding liquidity will apply unless Participants meet the proposed volume thresholds, as described above.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁶ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,⁷ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The proposed change to offer Participants that send NOM Market Maker order flow the opportunity to receive a \$0.30 per contract Non-Penny Rebate to Add Liquidity, provided the Participant adds NOM Market Maker liquidity in Non-Penny Pilot Options of 10,000 or more ADV contracts per day in a month, is reasonable because the Exchange seeks to further incentivize Participants to add NOM Market Maker liquidity in Non-Penny Pilot Options to obtain the rebate. The Exchange believes that its proposal will encourage Participants to select NOM as a venue and in turn benefit other market participants with the opportunity to interact with such liquidity. Other options exchanges also offer volume-based rebates to market makers for adding liquidity.⁸

The Exchange also believes that the proposed NOM Market Maker Non-

⁶ 15 U.S.C. 78f(b).

⁷ 15 U.S.C. 78f(b)(4) and (5).

⁸ See MIAx Pearl Fee Schedule, Section 1)a) for the non-penny maker rebates offered to MIAx Pearl market makers. See also Nasdaq GEMX Schedule of Fees, Section I for the non-penny maker rebates offered to GEMX market makers.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

Penny Rebate to Add Liquidity is equitable and not unfairly discriminatory because all NOM Market Makers can qualify for the rebate by meeting the volume requirements described above. Furthermore, NOM Market Makers, unlike other market participants, add value through continuous quoting⁹ and the commitment of capital. In addition, encouraging NOM Market Makers to add greater liquidity benefits all market participants in the quality of order interaction. As such, the Exchange believes it is equitable and not unfairly discriminatory to offer only NOM Market Makers the opportunity to earn the proposed rebate because of the obligations borne by these market participants, as noted herein.

The Exchange also believes that the proposed change to amend the existing NOM Market Maker Non-Penny volume threshold from “7,500 or more ADV contracts” to “7,500 to 9,999 ADV contracts” is reasonable because the Exchange is essentially adding a higher volume-based tier with this proposal. The Exchange believes that the proposed change would clarify how the two NOM Market Maker Non-Penny tiers are applied—meeting the volume threshold in the lower tier would qualify the Participant for a discounted fee, and meeting the volume threshold in the higher tier would qualify the Participant for a rebate in lieu of the fee, as described above. In the same vein, the proposed change to clarify in note 5 that the \$0.35 fee for adding liquidity will apply unless Participants meet these volume thresholds is reasonable because it will clarify how the fee and rebate program proposed herein will apply.

The Exchange further believes that these clarifying changes to amend the existing NOM Market Maker Non-Penny volume threshold and describe how the \$0.35 fee will apply are equitable and not unfairly discriminatory because the changes will apply to all qualifying Participants.

⁹Pursuant to Chapter VII (Market Participants), Section 5 (Obligations of Market Makers), in registering as a market maker, an Options Participant commits himself to various obligations. Transactions of a Market Maker in its market making capacity must constitute a course of dealings reasonably calculated to contribute to the maintenance of a fair and orderly market, and Market Makers should not make bids or offers or enter into transactions that are inconsistent with such course of dealings. Further, all Market Makers are designated as specialists on NOM for all purposes under the Act or rules thereunder. See Chapter VII, Section 5.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposed rebate and corresponding changes to the volume-based thresholds described above are all designed to increase competition by encouraging NOM Market Makers to provide greater liquidity and maintain tight markets in Non-Penny Pilot Options. The Exchange operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees to remain competitive. Because competitors are free to modify their own fees in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.¹⁰

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

¹⁰ 15 U.S.C. 78s(b)(3)(A)(ii).

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2017-127 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NASDAQ-2017-127. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NASDAQ-2017-127 and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹¹

Eduardo A. Aleman,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–82252; File No. SR–CHX–2017–08]

Self-Regulatory Organizations; Chicago Stock Exchange, Inc.; Notice of Filing of Amendment No. 2 to the Proposed Rule Change To Amend the Schedule of Fees and Assessments To Adopt a Fee Schedule To Establish Fees for Industry Members Related to the National Market System Plan Governing the Consolidated Audit Trail

December 8, 2017.

On May 3, 2017, Chicago Stock Exchange, Inc. (“Exchange” or “CHX”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) ¹ and Rule 19b–4 thereunder, ² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (“CAT NMS Plan”). The proposed rule change was published in the **Federal Register** for comment on May 22, 2017. ³ The Commission received seven comment letters on the proposed rule change, ⁴ and a response to

comments from the CAT NMS Plan Participants. ⁵ On June 30, 2017, the Commission temporarily suspended and initiated proceedings to determine whether to approve or disapprove the proposed rule change. ⁶ The Commission thereafter received seven comment letters, ⁷ and a response to comments from the Participants. ⁸ On November 9, 2017, the Exchange filed Amendment No. 1 to the proposed rule change. ⁹ On November 9, 2017, the Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to

comments/sr-batsedgx-2017-22/batsedgx201722-154443.pdf. The Commission also received a comment letter which is not pertinent to these proposed rule changes. See Letter from Christina Crouch, Smart Ltd., to Brent J. Fields, Secretary, Commission (dated June 5, 2017), available at: <https://www.sec.gov/comments/sr-batsbxz-2017-38/batsbxz201738-1785545-153152.htm>.

⁵ See Letter from CAT NMS Plan Participants to Brent J. Fields, Secretary, Commission (dated June 29, 2017), available at: <https://www.sec.gov/comments/sr-batsbyx-2017-11/batsbyx201711-1832632-154584.pdf>.

⁹ Amendment No. 1 to the proposed rule change replaced and superseded the Original Proposal in its entirety. See Securities Exchange Act Release No. 82251 (December 8, 2017).

January 14, 2018. ¹⁰ On November 30, 2017, the Exchange filed Amendment No. 2 to the proposed rule change, as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 2.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

On May 3, 2017, the Chicago Stock Exchange, Inc. (“Exchange” or “CHX”) filed with the Securities and Exchange Commission (“Commission” or “SEC”) proposed rule change SR–CHX–2017–08 (the “Original Proposal”), pursuant to which the Exchange proposed to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the “CAT NMS Plan” or “Plan”). ¹¹ On November 9, 2017, the Exchange filed an amendment to the Original Proposal (“First Amendment”). The Exchange files this proposed rule change (the “Second Amendment”) to amend the Original Proposal as amended by the First Amendment.

The text of this proposed rule change is available on the Exchange’s website at (www.chx.com) and in the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the CHX included statements concerning the purpose of and basis for the proposed rule changes and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The CHX has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the “Company”), of which each Plan Participant is a member, to operate the CAT.²² Under the CAT NMS Plan, the Operating Committee of the Company (“Operating Committee”) has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Plan Participants will pay, and establishing fees for Industry Members that will be implemented by the Plan Participants (“CAT Fees”).²³ The Plan Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁴ Accordingly, the Exchange submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are Exchange members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on May 22, 2017,²⁵ and received comments in response to the Original Proposal or similar fee filings by other Plan Participants.²⁶ On June 30, 2017, the Commission suspended, and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁷ The Commission received seven comment letters in response to those proceedings.²⁸

²²The Plan also serves as the limited liability company agreement for the Company.

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility (“ORF”) by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of June 2017) when calculating the market share of Execution Venue ATS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Plan Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. On November 9, 2017, the Exchange filed the First Amendment and proposed to amend the Original Proposal to reflect these changes.

The Exchange submits this Second Amendment to revise the proposal as set

Letter”); and Letter from Joseph Molluso, Executive Vice President, Virtu Financial, to Brent J. Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

forth in the First Amendment to discount the OTC Equity Securities market share of all Execution Venue ATSS trading OTC Equity Securities, rather than applying the discount solely to those Execution Venue ATSS that exclusively trade OTC Equity Securities, when calculating the market share of Execution Venue ATSS trading OTC Equity Securities. As discussed in the First Amendment:

The Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant.²⁹

The Operating Committee believes that this argument applies equally to both Execution Venue ATSS exclusively trading OTC Equity Securities and to Execution Venue ATSS that trade OTC Equity Securities as well as other securities. Accordingly, the Exchange proposes to amend paragraph (b)(2) of the Consolidated Audit Trail Funding Fees to apply the discount to all Execution Venue ATSS trading OTC Equity Securities. Specifically, the Exchange proposes to change the parenthetical regarding the OTC Equity Securities discount in paragraph (b)(2) of the proposed fee schedule from “with a discount for Equity ATSS exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities” to “with a discount for OTC Equity Securities market share of Equity ATSS trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities.”

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)(5) of the Act,³⁰ which require, among other things, that the Exchange’s rules must be designed to prevent fraudulent and

manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to permit unfair discrimination between customers, issuers, brokers and dealer, and Section 6(b)(4) of the Act,³¹ which requires that exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using its facilities. The Exchange believes that the proposed change is consistent with the Act, and that the proposed fees are reasonable, equitably allocated and not unfairly discriminatory. In particular, the Exchange believes that the proposed change would treat all Equity ATSS trading OTC Equity Securities in a comparable manner when calculating applicable fees. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including all ATSS trading OTC Equity Securities.

B. Self-Regulatory Organization’s Statement of Burden on Competition

Section 6(b)(8) of the Act³² require that the Exchange’s rules not impose any burden on competition that is not necessary or appropriate. The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters. The Exchange believes that the proposed change would treat all Equity ATSS trading OTC Equity Securities in a comparable manner when calculating applicable fees. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including all ATSS trading OTC Equity Securities. Moreover, the Operating Committee believes that the proposed changes address certain competitive concerns raised by commenters related to ATSS trading OTC Equity Securities.

C. Self-Regulatory Organization’s Statement on Comments Regarding the Proposed Rule Changes Received From Members, Plan Participants or Others

The Exchange set forth responses to comments received regarding the Original Proposal in the First

Amendment. In addition, the proposed changes set forth in this Second Amendment further respond to comments made regarding ATSS trading OTC Equity Securities.

III. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal, as amended by Amendment No. 1 and Amendment No. 2, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CHX-2017-08 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-CHX-2017-08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CHX-2017-08, and should

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82285; File No. SR-NASDAQ-2017-046]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC.; Notice of Filing of Amendment No. 2 to a Proposed Rule Change To Adopt Rule 7004 and Chapter XV, Section 11

December 11, 2017.

On May 2, 2017, The Nasdaq Stock Market LLC. (“Nasdaq” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”)¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (“CAT NMS Plan”). The proposed rule change was published in the *Federal Register* for comment on May 22, 2017.³ The Commission received seven comment letters on the proposed rule change,⁴ and a response to

comments from the Participants.⁵ On June 30, 2017, the Commission temporarily suspended and initiated proceedings to determine whether to approve or disapprove the proposed rule change.⁶ The Commission thereafter received seven comment letters,⁷ and a response to comments from the Participants.⁸ On November 6, 2017, the Exchange filed Amendment No. 1 to the proposed rule change.⁹ On

⁹ Amendment No. 1 to the proposed rule change replaced and superseded the Original Proposal in

November 9, 2017, the Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to January 14, 2018.¹⁰ On December 4, 2017, the Exchange filed Amendment No. 2 to the proposed rule change, as described in Items I and II below, which Items have been prepared by the Exchange.¹¹ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 2.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

On May 2, 2017, The Nasdaq Stock Market LLC filed with the Securities and Exchange Commission (“Commission” or “SEC”) proposed rule change SR-NASDAQ-2017-046 (the “Original Proposal”), pursuant to which the Exchange proposed to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the “CAT NMS Plan” or “Plan”).¹² The Exchange is filing this proposed rule change (the “Amendment”) to amend the Original Proposal. On November 6, 2017, the Exchange filed an amendment to the Original Proposal (“Amendment No. 1”), which replaced the Original Proposal in its entirety. The Exchange is now filing this Amendment No. 2 to replace Amendment No. 1 in its entirety. This Amendment No. 2 describes the changes from the Original Proposal.

With this Amendment No. 2, the Exchange is including *Exhibit 4*, which reflects the changes to the text of the proposed rule change as set forth in the Original Proposal, and *Exhibit 5*, which reflects all proposed changes to the Exchange’s current rule text.

The text of the proposed rule change is available on the Exchange’s website at <http://nasdaq.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

its entirety. Amendment No. 1 is available on the Commission’s website for Nasdaq at: <https://www.sec.gov/comments/sr-nasdaq-2017-046/nasdaq2017046-2673136-161450.pdf>.

¹⁰ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹¹ Amendment No. 2 replaces and supersedes Amendment No. 1 in its entirety.

¹² Unless otherwise specified, capitalized terms used in this fee filing are defined as set forth herein, the CAT Compliance Rule Series, in the CAT NMS Plan, or the Original Proposal.

³³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

NMS Plan.¹⁹ The Participants filed the Plan to comply with Rule 613 of Regulation NMS under the Exchange Act. The Plan was published for comment in the **Federal Register** on May 17, 2016,²⁰ and approved by the Commission, as modified, on November 15, 2016.²¹ The Plan is designed to create, implement and maintain a consolidated audit trail ("CAT") that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the "Company"), of which each Participant is a member, to operate the CAT.²² Under the CAT NMS Plan, the Operating Committee of the Company ("Operating Committee") has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Participants will pay, and establishing fees for Industry Members that will be implemented by the Participants ("CAT Fees").²³ The Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁴ Accordingly, the Exchange submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are SRO members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on May 22, 2017,²⁵ and received comments in response to the Original Proposal or similar fee filings by other Participants.²⁶ On June 30, 2017, the Commission suspended,

¹⁹ See Letter from the Participants to Brent J. Fields, Secretary, Commission, dated September 30, 2014; and Letter from Participants to Brent J. Fields, Secretary, Commission, dated February 27, 2015. On December 24, 2015, the Participants submitted an amendment to the CAT NMS Plan. See Letter from Participants to Brent J. Fields, Secretary, Commission, dated December 23, 2015.

and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁷ The Commission received seven comment letters in response to those proceedings.²⁸

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility ("ORF") by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATS trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focuses the comparability of CAT Fees on the individual entity level, rather

than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. As discussed in detail below, the Exchange proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members' rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- **CAT Costs.** The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Participants. The overall CAT costs used in calculating the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. Although the CAT costs from November 21, 2016 through November 21, 2017 were used in calculating the CAT Fees, the CAT Fees set forth in this fee filing would be in effect until the automatic sunset date, as discussed below. (See Section 3(a)(2)(E) below)

- **Bifurcated Funding Model.** The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share, and (2) Industry Members (other than alternative trading systems ("ATs")) that execute transactions in Eligible Securities ("Execution Venue ATs") through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- **Industry Member Fees.** Each Industry Member (other than Execution Venue ATs) will be placed into one of seven tiers of fixed fees, based on "message traffic" in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, "message traffic" will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member begins reporting to the CAT, "message traffic" will be calculated based on the Industry Member's Reportable Events reported to the CAT. Industry Members with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- **Execution Venue Fees.** Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the OTC Equity Securities market share of Execution Venue ATs trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- **Cost Allocation.** For the reasons discussed below, in designing the model, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATs) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee

determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- **Comparability of Fees.** The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- **Fee Schedule.** The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in the Consolidated Audit Trail Funding Fees, one for Equity ATs and one for Industry Members other than Equity ATs. (See Section 3(a)(3)(B) below)

- **Quarterly Invoices.** Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- **Centralized Payment.** Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- **Billing Commencement.** Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(G) below)

- **Sunset Provision.** The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(J) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming year. In addition to a budget, Article XI of the CAT NMS Plan provides that the Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central

Repository would be borne by (1) Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATs) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”²⁹ and “reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT.”³⁰

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³¹ The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated SRO services.³²

Accordingly, the funding model approved by the Operating Committee imposes fees on both Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³³ After analyzing the various alternatives, the Operating Committee determined that the proposed tiered, fixed fee funding model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model, provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors

are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

In addition, reviews from varying time periods of current broker-dealer order and trading data submitted under existing reporting requirements showed a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁴ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁵ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it was concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated across the CAT Reporters on a tiered basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT and lower costs to those that contribute less.³⁶ The fees to be assessed at each tier are calculated so as to recoup a

proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a smaller fee for the CAT.³⁷

Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed smaller fees for the CAT.³⁸

The CAT NMS Plan states that Industry Members (other than Execution Venue ATs) will be charged based on message traffic, and that Execution Venues will be charged based on market share.³⁹ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴⁰ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATs) will be based on the message traffic generated by such Industry Member.⁴¹

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitute CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular, between large and small options exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (i.e., a single tier may include both Execution Venues and Industry Members). The Operating

³⁹ Section 11.3(a) and (b) of the CAT NMS Plan.

⁴⁰ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85005.

⁴¹ Section 11.3(b) of the CAT NMS Plan.

Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴² Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴³ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be . . . less likely to have an incremental deterrent effect on liquidity provision."⁴⁴

The funding model also is structured to avoid a reduction market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts

raised by the Operating Committee determining fees applicable to its own members—the Participants. First, the Company will operate on a "break-even" basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Participants as profits.⁴⁵ To ensure that the Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c) of the CAT NMS Plan specifically states that "[a]ny surplus of the Company's revenues over its expenses shall be treated as an operational reserve to offset future fees." In addition, as set forth in Article VIII of the CAT NMS Plan, the Company "intends to operate in a manner such that it qualifies as a 'business league' within the meaning of Section 501(c)(6) of the [Internal Revenue] Code." To qualify as a business league, an organization must "not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual."⁴⁶ As the SEC stated when approving the CAT NMS Plan, "the Commission believes that the Company's application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan's proposed allocation of profit and loss by mitigating concerns that the Company's earnings could be used to benefit individual Participants."⁴⁷ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS

Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Participants and Industry Members that is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Participants and Industry Members and their relative impact upon the Company's resources and operations;

⁴² The Operating Committee notes that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁴³ Section 11.2(e) of the CAT NMS Plan.

⁴⁴ Approval Order at 84796.

⁴⁵ *Id.* at 84792.

⁴⁶ 26 U.S.C. 501(c)(6).

⁴⁷ Approval Order at 84793.

- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSS, are based upon the level of market share; (ii) Industry Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSS) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that

establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on "message traffic" for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSS) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the

CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned

periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and

for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the

start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT

reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁸ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (*e.g.*, order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁴⁹

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵⁰ To

address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵¹ The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that

exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

⁵¹ The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016–June 2017 that were compiled by the Financial Information Forum using data from Nasdaq and SIA.

operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵²

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (*i.e.*, equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS

⁵² Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

⁴⁸ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

⁴⁹ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵⁰ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. *See* Securities Exchange Act Release No. 77265 (March 1, 2017), 81 FR 11856 (March 7, 2016). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting

Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association's market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue's NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Equity Execution Venue Percentages"). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market

shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. ("Bats"). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility ("TRF") and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and *otcmarkets.com*, ATSS accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the

second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵³ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity Execution Venue tier will be determined by predefined percentage allocations (the "Equity Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

• Equity Execution Venue tier	• Percentage of Equity Execution Venues	• Percentage of Execution Venue Recovery	• Percentage of total recovery
• Tier 1	• 25.00	• 33.25	• 8.31
• Tier 2	• 42.00	• 25.73	• 6.43
• Tier 3	• 23.00	• 8.00	• 2.00

⁵³ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly

available market volume data from Bats and OTC Markets Group, and the totals were divided to

determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

• Equity Execution Venue tier	• Percentage of Equity Execution Venues	• Percentage of Execution Venue Recovery	• Percentage of total recovery
• Tier 4	• 10.00	• 0.02	• 0.01
• Total	• 100	• 67	• 16.75

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue's Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue's Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Options Execution Venue Percentages"). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the "Options Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue Recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets.

Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution Venue market share will be determined by calculating each Equity Execution

Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities as well as the market share of the FINRA ORF, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution

Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSs) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSs) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly,

under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000 in total for the year beginning November 21, 2016.⁵⁴

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2–5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

⁵⁴ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
	Third Party Support Costs	5,200,000
Non-Plan Processor	Operational Reserve	⁵⁵ 5,000,000
	Cyber-insurance Costs	3,000,000
Estimated Total		50,700,000

Based on these estimated costs and the calculations for the funding model described above, the Operating

Committee determined to impose the following fees:⁵⁶

For Industry Members (other than Execution Venue ATs):

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

For Execution Venues for Listed Options:

Tier	Percentage of Options Execution Venues	Quarterly CAT Fee
1	75.00	\$81,381
2	25.00	37,629

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATs) and Execution

Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541

Industry Members (other than Execution Venue ATs) as of June 2017.

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50

⁵⁵ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁶ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 7	59.300	1.00	0.75
Total	100	100	75

Industry Member tier	Estimated number of Industry Members
Tier 1	14
Tier 2	33
Tier 3	43
Tier 4	119
Tier 5	128
Tier 6	290
Tier 7	914
Total	1,541

Total		15		4,182,828
Total				50,700,000
Excess ⁵⁷				\$7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability

⁵⁷ The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required

to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such

development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent

that the total CAT costs increase, the fees would be adjusted upward.⁵⁸ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁵⁹ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and the Participants will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act and Rule 19b-4 thereunder, and any such changes will become effective in accordance with the requirements of those provisions.

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATs) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

⁵⁸The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the

Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁵⁹Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee's approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on the Exchange's members. The proposed fee schedule has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms "CAT", "CAT NMS Plan," "Industry Member," "NMS Stock," "OTC Equity Security", "Options Market Maker", and "Participant" are defined as set forth in Rule 6810 and Chapter IX, Section 8(a) (Consolidated Audit Trail—Definitions).

The proposed fee schedule imposes different fees on Equity ATSs and Industry Members that are not Equity

ATSs. Accordingly, the proposed fee schedule defines the term "Equity ATS." First, paragraph (a)(2) defines an "ATS" to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an "Execution Venue." Then, paragraph (a)(4) defines an "Equity ATS" as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term "CAT Fee" to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

Finally, Paragraph (a)(6) defines an "Execution Venue" as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an "Equity Execution Venue" as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSs.⁶⁰ These are the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for the OTC Equity Securities market share of Equity ATSs trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To

⁶⁰ Note that no fee schedule is provided for Execution Venue ATSs that execute transactions in Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by *Regulatory Notice*.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶¹

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposed to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date

until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, the Exchange proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶² The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶³ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁴ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATSs trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4)

discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (*e.g.*, those Equity ATSs representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁵ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁶ Tier 2

⁶² For a description of the comments submitted in response to the Original Proposal, see Suspension Order.

⁶³ Suspension Order.

⁶⁴ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

⁶⁵ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁶ Note that while these equity market share thresholds were referenced as data points to help

⁶¹ Section 11.4 of the CAT NMS Plan.

required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentage of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for

differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁷ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁶⁸ To address this concern, the Operating

Committee proposes to discount the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSs trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁶⁹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the OTC Equity Securities share volume of such Execution Venue ATSs as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

⁶⁷ Section 11.2(b) of the CAT NMS Plan.

⁶⁸ See Suspension Order at 31664–5.

⁶⁹ Suspension Order at 31664–5.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSs trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATS trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSs trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSs trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷⁰ As discussed above, the larger number of

tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the OTC Equity Securities market share for Equity ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSs, including those that trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSs). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷¹ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of

tiering for Industry Members (other than Execution Venue ATSs). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷² The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the

⁷¹ See Suspension Order at 31663-4; SIFMA Letter at 4-6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2-6; Group One Letter at 2-6; and Belvedere Letter at 2.

⁷² Suspension Order at 31664.

⁷⁰ Section 11.2(b) of the CAT NMS Plan.

model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷³ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATs) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation

places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁴

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATs) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATs), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATs). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the

distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the

⁷⁴ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

⁷³ Section 11.2(b) of the CAT NMS Plan.

level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is

generated by Industry Members, Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁵ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSSs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes

into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSSs) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) of the proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSSs) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁶ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSSs) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed

⁷⁵ Securities Exchange Act Release No. 67457 (July 18, 2012), 77 FR 45722, 45726 (August 1, 2012) (“Rule 613 Adopting Release”).

⁷⁶ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

that charging Execution Venues based on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATs) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATs). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATs), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all

CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁷ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATs as Execution Venues under the proposed funding model since ATs have business models that are similar to those of exchanges, and ATs also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, the Exchange proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

⁷⁷ The Participants note that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁷⁸

The Operating Committee does not believe that decreasing cost per additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (*e.g.*, the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered

⁷⁸ Suspension Order at 31667.

allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁷⁹ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸⁰ The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸¹ As discussed in those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸² Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸³ The Participants previously responded to this concern in both the Plan Response

Letter and the Fee Rule Response Letter.⁸⁴ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁵ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: user support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry Members.⁸⁶ The Participants previously

responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁷ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁸⁸ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁸⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,⁹⁰ in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility, is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers, and is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹¹ To the

⁸⁹ 15 U.S.C. 78f(b).

⁹⁰ 15 U.S.C. 78f(b)(4) and (5).

⁹¹ Approval Order at 84697.

extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSS) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and

Options Execution Venues (*i.e.*, those Execution Venues in Tier 1). Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSS) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSS) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSS and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter's size, smaller

CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has set forth responses to comments received regarding the Original Proposal in Section 3(a)(4) above.

III. Solicitation of Comments on Amendment No. 2

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 2 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹²

(2) Commenters' views as to whether the allocation of 25% of CAT costs to

⁹² Section 11.2(e) of the CAT NMS Plan.

the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSs), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹³

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁴

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁵

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSs) from nine to seven, the

revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSs) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATSs trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁶ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.⁹⁷

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATSs) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

⁹³ Section 11.1(c) of the CAT NMS Plan.

⁹⁴ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁵ Section 11.2(c) of the CAT NMS Plan.

⁹⁶ Section 11.2(e) of the CAT NMS Plan.

⁹⁷ Section 11.1(c) of the CAT NMS Plan.

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2017-046 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NASDAQ-2017-046. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for

inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NASDAQ-2017-046, and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹⁸

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82286; File No. SR-GEMX-2017-17]

Self-Regulatory Organizations; Nasdaq GEMX, LLC; Notice of Filing of Amendment No. 2 to a Proposed Rule Change To Adopt Rule 7004 and Chapter XV, Section 11

December 11, 2017.

On May 12, 2017, Nasdaq GEMX, LLC ("GEMX" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail ("CAT NMS Plan"). The proposed rule change was published in the **Federal Register** for comment on May 24, 2017.³ The Commission received seven comment letters on the proposed rule change,⁴

⁹⁸ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 80713 (May 18, 2017), 82 FR 23956 (May 24, 2017) ("Original Proposal").

⁴ Since the CAT NMS Plan Participants' proposed rule changes to adopt fees to be charged to Industry Members to fund the consolidated audit trail are substantively identical, the Commission is considering all comments received on the proposed rule changes regardless of the comment file to which they were submitted. See text accompanying notes 13-16 *infra*, for a list of the CAT NMS Plan Participants. See Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, Securities Industry and Financial Markets Association, to Brent J. Fields, Secretary, Commission (dated June 6, 2017), available at: <https://www.sec.gov/comments/sr-batsbzx-2017-38/batsbzx201738-1788188-153228.pdf>; Letter from

and a response to comments from the Participants.⁵ On June 30, 2017, the Commission temporarily suspended and initiated proceedings to determine whether to approve or disapprove the proposed rule change.⁶ The Commission thereafter received seven comment letters,⁷ and a response to comments

Patricia L. Cerny and Steven O'Malley, Compliance Consultants, to Brent J. Fields, Secretary, Commission (dated June 12, 2017), available at: <https://www.sec.gov/comments/sr-cboe-2017-040/cboe2017040-1799253-153675.pdf>; Letter from Daniel Zimm, General Counsel, OTC Markets Group Inc., to Eduardo A. Continued

from the Participants.⁸ On November 6, 2017, the Exchange filed Amendment No. 1 to the proposed rule change.⁹ On November 9, 2017, the Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to January 14, 2018.¹⁰ On December 6, 2017, the Exchange filed Amendment No. 2 to the proposed rule change, as described in Items I and II below, which Items have been prepared by the Exchange.¹¹ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 2.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

On May 12, 2017, Nasdaq GEMX, LLC ("GEMX" or "Exchange"), filed with the Securities and Exchange Commission ("Commission" or "SEC") proposed rule change SR-GEMX-2017-17 (the "Original Proposal"), pursuant to which the Exchange proposed to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan" or "Plan").¹² On November 6, 2017, the Exchange filed an amendment to the Original Proposal ("Amendment No. 1"), which replaced the Original Proposal in its entirety. The Exchange is now filing this Amendment No. 2 to replace Amendment No. 1 in its entirety. This Amendment No. 2 describes the changes from the Original Proposal.

With this Amendment, the Exchange is including *Exhibit 4*, which reflects the changes to the text of the proposed rule change as set forth in the Original Proposal, and *Exhibit 5*, which reflects all proposed changes to the Exchange's current rule text.

www.sec.gov/comments/sr-finra-2017-011/finra2017011-2238648-160830.pdf.

⁸ See Letter from Michael Simon, Chair, CAT NMS Plan Operating Committee, to Brent J. Fields, Commission, Secretary (dated November 2, 2017), available at: <https://www.sec.gov/comments/sr-batsbyx-2017-11/batsbyx201711-2674608-161412.pdf>.

⁹ Amendment No. 1 to the proposed rule change replaced and superseded the Original Proposal in its entirety. Amendment No. 1 is available on the Commission's website for GEMX at: <https://www.sec.gov/comments/sr-gemx-2017-17/gemx201717-2673139-161452.pdf>.

¹⁰ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹¹ Amendment No. 2 replaces and supersedes Amendment No. 1 in its entirety.

¹² Unless otherwise specified, capitalized terms used in this fee filing are defined as set forth herein, the CAT Compliance Rule Series, in the CAT NMS Plan, or the Original Proposal.

The text of the proposed rule change is available on the Exchange's website at <http://nasdaqgemx.cchwallstreet.com/>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

BOX Options Exchange LLC, Cboe BYX Exchange, Inc., Cboe BZX Exchange, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Cboe C2 Exchange, Inc., Cboe Exchange, Inc.,¹³ Chicago Stock Exchange, Inc., Financial Industry Regulatory Authority, Inc. "Participants") filed with the Commission, pursuant to Section 11A of the Exchange Act¹⁷ and Rule 608 of Regulation NMS thereunder,¹⁸ the CAT NMS Plan.¹⁹ The Participants filed the Plan to comply with Rule 613 of Regulation NMS under the Exchange Act. The Plan was published for comment in the **Federal Register** on May 17, 2016,²⁰ and approved by the Commission, as modified, on November 15, 2016.²¹ The Plan is designed to create, implement and maintain a consolidated audit trail ("CAT") that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the "Company"), of which each Participant is a member, to operate the CAT.²² Under the CAT NMS Plan, the Operating Committee of the Company ("Operating Committee") has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Participants will pay, and establishing fees for Industry Members that will be implemented by the Participants ("CAT Fees").²³ The Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁴ Accordingly, the Exchange submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are SRO members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on May 24, 2017,²⁵ and received comments in response to

¹⁷ 15 U.S.C. 78k-1.

the Original Proposal or similar fee filings by other Participants.²⁶ On June 30, 2017, the Commission suspended, and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁷ The Commission received seven comment letters in response to those proceedings.²⁸

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility (“ORF”) by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATS trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages

and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. As discussed in detail below, the Exchange proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members’ rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- *CAT Costs.* The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Participants. The overall CAT costs used in calculating the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. Although the CAT costs from November 21, 2016 through November 21, 2017 were used in calculating the CAT Fees, the CAT Fees set forth in this fee filing would be in effect until the automatic sunset date, as discussed below. (See Section 3(a)(2)(E) below)

- *Bifurcated Funding Model.* The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share, and (2) Industry Members (other than alternative trading systems (“ATSs”)

that execute transactions in Eligible Securities (“Execution Venue ATSs”) through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- *Industry Member Fees.* Each Industry Member (other than Execution Venue ATSs) will be placed into one of seven tiers of fixed fees, based on “message traffic” in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT. Industry Members with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- *Execution Venue Fees.* Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue’s proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue’s proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- *Cost Allocation.* For the reasons discussed below, in designing the model, the Operating Committee determined that 75 percent of total costs

Fields, Secretary, SEC (July 28, 2017) (“MFA Letter”); Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, SIFMA, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“SIFMA Letter”); Joanna Mallers, Secretary, FIA Principal Traders Group, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“FIA Principal Traders Group Letter”); Letter from Kevin Coleman, General Counsel & Chief Compliance Officer, Belvedere Trading LLC, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“Belvedere Letter”); Letter from W. Hardy Callcott, Sidley Austin LLP, to Brent J. Fields, Secretary, SEC (July 27, 2017) (“Sidley Letter”); Letter from John Kinahan, Chief Executive Officer, Group One Trading, L.P., to Brent J. Fields, Secretary, SEC (Aug. 10, 2017) (“Group One Letter”); and Letter from Joseph Molluso, Executive Vice President, Virtu Financial, to Brent J. Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

recovered would be allocated to Industry Members (other than Execution Venue ATs) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- *Comparability of Fees.* The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- *Fee Schedule.* The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in the Consolidated Audit Trail Funding Fees, one for Equity ATs and one for Industry Members other than Equity ATs. (See Section 3(a)(3)(B) below)

- *Quarterly Invoices.* Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- *Centralized Payment.* Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- *Billing Commencement.* Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(G) below)

- *Sunset Provision.* The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(I) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming year. In addition to a budget, Article XI of the CAT NMS Plan provides that the

Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central Repository would be borne by (1) Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATs) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”²⁹ and “reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT.”³⁰

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³¹ The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated SRO services.³²

Accordingly, the funding model approved by the Operating Committee imposes fees on both Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³³ After analyzing the various alternatives, the Operating Committee determined that the proposed tiered, fixed fee funding model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model,

provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

In addition, reviews from varying time periods of current broker-dealer order and trading data submitted under existing reporting requirements showed a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁴ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁵ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it was concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated across the CAT Reporters on a tiered basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT

³⁴ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

³⁵ Moreover, as the SEC noted in approving the CAT NMS Plan, “[t]he Participants also have offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be easier to implement.” Approval Order at 84796.

and lower costs to those that contribute less.³⁶ The fees to be assessed at each tier are calculated so as to recoup a proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a smaller fee for the CAT.³⁷

Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed smaller fees for the CAT.³⁸

The CAT NMS Plan states that Industry Members (other than Execution Venue ATSS) will be charged based on message traffic, and that Execution Venues will be charged based on market share.³⁹ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴⁰ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATSS) will be based on the message traffic generated by such Industry Member.⁴¹

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitute CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular, between large and small options exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to

June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴² Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴³ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be . . . less likely to have an incremental deterrent effect on liquidity provision."⁴⁴

The funding model also is structured to avoid a reduction market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the

market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts raised by the Operating Committee determining fees applicable to its own members—the Participants. First, the Company will operate on a "break-even" basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Participants as profits.⁴⁵ To ensure that the Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c) of the CAT NMS Plan specifically states that "[a]ny surplus of the Company's revenues over its expenses shall be treated as an operational reserve to offset future fees." In addition, as set forth in Article VIII of the CAT NMS Plan, the Company "intends to operate in a manner such that it qualifies as a 'business league' within the meaning of Section 501(c)(6) of the [Internal Revenue] Code." To qualify as a business league, an organization must "not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual."⁴⁶ As the SEC stated when approving the CAT NMS Plan, "the Commission believes that the Company's application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan's proposed allocation of profit and loss by mitigating concerns that the Company's earnings could be used to benefit individual Participants."⁴⁷ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in

the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Participants and Industry Members that is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading

operations of Participants and Industry Members and their relative impact upon the Company's resources and operations;

- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSS, are based upon the level of market share; (ii) Industry Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members);
- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSS) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members,

and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on "message traffic" for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSS) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining

the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members

and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its

corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages

and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁸ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity

⁴⁸ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁴⁹

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵⁰ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic

⁴⁹ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵⁰ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Release No. 77265 (March 1, 2017), 81 FR 11856 (March 7, 2016). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵¹ The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is

⁵¹ The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016–June 2017 that were compiled by the Financial Information Forum using data from Nasdaq and SIAC.

required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵²

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (*i.e.*, equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share

volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association’s market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue’s NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the “Equity Execution Venue Percentages”). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. (“Bats”). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility

(“TRF”) and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and otcmrkt.com, ATSs accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSs trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵³ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity

⁵² Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

⁵³ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly available market volume data from Bats and OTC Markets Group, and the totals were divided to determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

Execution Venue tier will be determined by predefined percentage allocations (the “Equity Execution Venue Recovery Allocation”). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the

determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate

burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

• Equity Execution Venue tier	• Percentage of Equity Execution Venues	• Percentage of Execution Venue Recovery	• Percentage of total recovery
• Tier 1	• 25.00	• 33.25	• 8.31
• Tier 2	• 42.00	• 25.73	• 6.43
• Tier 3	• 23.00	• 8.00	• 2.00
• Tier 4	• 10.00	• 0.02	• 0.01
• Total	• 100	• 67	• 16.75

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue’s Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue’s Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the “Options Execution Venue Percentages”). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the “Options Execution Venue Recovery Allocation”). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

• Options Execution Venue tier	• Percentage of Options Execution Venues	• Percentage of Execution Venue Recovery	• Percentage of total recovery
Tier 1	75.00	28.25	7.06

	• Percentage of Options Execution Venues	• Percentage of Execution Venue Recovery	• Percentage of total recovery
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets. Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of OTC Equity Securities market share of Execution Venue ATSS trading OTC Equity Securities as well as the market share of the FINRA ORF, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably

shared among the Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSSs) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSSs) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly, under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000

in total for the year beginning November 21, 2016.⁵⁴

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal

fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2-5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan

Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
	Third Party Support Costs	5,200,000
Non-Plan Processor	Operational Reserve	⁵⁵ 5,000,000
	Cyber-insurance Costs	3,000,000
	Estimated Total	50,700,000

Based on these estimated costs and the calculations for the funding model described above, the Operating Committee determined to impose the following fees:⁵⁶

For Industry Members (other than Execution Venue ATSS):

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

For Execution Venues for Listed Options:

Tier	Percentage of Options Execution Venues	Quarterly CAT fee
1	75.00	\$81,381
2	25.00	37,629

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATSS) and Execution Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541 Industry Members (other than Execution Venue ATSS) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS
["IM"]

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

⁵⁴ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

⁵⁵ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁶ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATs), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it

deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the fees would be adjusted upward.⁵⁸ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁵⁹ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and the Participants will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act and Rule 19b-4 thereunder, and any such changes will become effective in accordance with the requirements of those provisions.

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data

prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATs) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1

⁵⁷ The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

⁵⁸ The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the Participants, such as any changes in costs related

to the retirement of existing regulatory systems, such as OATS.

⁵⁹ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee’s approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on the Exchange’s members. The proposed fee schedule has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset

of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms “CAT”, “CAT NMS Plan,” “Industry Member,” “NMS Stock,” “OTC Equity Security”, “Options Market Maker”, and “Participant” are defined as set forth in Rule 900 (Consolidated Audit Trail—Definitions).

The proposed fee schedule imposes different fees on Equity ATSS and Industry Members that are not Equity ATSS. Accordingly, the proposed fee schedule defines the term “Equity ATS.” First, paragraph (a)(2) defines an “ATS” to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an “Execution Venue.” Then, paragraph (a)(4) defines an “Equity ATS” as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term “CAT Fee” to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

Finally, Paragraph (a)(6) defines an “Execution Venue” as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an “Equity Execution Venue” as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSS. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSS.⁶⁰ These are

⁶⁰ Note that no fee schedule is provided for Execution Venue ATSS that execute transactions in

the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for the OTC Equity Securities market share of Equity ATSs trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by

Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by *Regulatory Notice*.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶¹

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposed to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, the Exchange proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding

Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶² The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶³ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁴ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATSs trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other

⁶³ Suspension Order.

⁶⁴ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

⁶¹ Section 11.4 of the CAT NMS Plan.

than Execution Venue ATs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (*e.g.*, those Equity ATs representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁵ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁶ Tier 2 required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four

tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentage of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act.

Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁷ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁶⁸ To address this concern, the Operating Committee proposes to discount the OTC Equity Securities market share of Execution Venue ATs trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at

⁶⁵ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁶ Note that while these equity market share thresholds were referenced as data points to help differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

⁶⁷ Section 11.2(b) of the CAT NMS Plan.

⁶⁸ See Suspension Order at 31664–5.

less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSs trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁶⁹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the OTC Equity Securities market share of Execution Venue ATSs trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the OTC Equity Securities share volume of such Execution Venue ATSs as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSs trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATS trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSs trading OTC Equity Securities and FINRA, the Operating Committee

evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSs trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷⁰ As discussed above, the larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the OTC Equity Securities market share for Equity ATSs trading OTC Equity

Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSs, including those that trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSs). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷¹ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than Execution Venue ATSs). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷² The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the

⁷¹ See Suspension Order at 31663–4; SIFMA Letter at 4–6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2–6; Group One Letter at 2–6; and Belvedere Letter at 2.

⁷² Suspension Order at 31664.

⁶⁹ Suspension Order at 31664–5.

⁷⁰ Section 11.2(b) of the CAT NMS Plan.

Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees

appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷³ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATSS) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁴

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the

interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATSS). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages

⁷³ Section 11.2(b) of the CAT NMS Plan.

⁷⁴ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations

for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members, Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁵ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSSs) and 25% should be paid by Execution Venues

was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSSs) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the

⁷⁵ Securities Exchange Act Release No. 67457 (July 18, 2012), 77 FR 45722, 45726 (August 1, 2012) (“Rule 613 Adopting Release”).

same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) of the proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSs) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁶ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSs) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATSs) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the

standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATSs). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATSs), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁷ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options

exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, the Exchange proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁷⁸

The Operating Committee does not believe that decreasing cost per

⁷⁶ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

⁷⁷ The Participants note that this analysis did not place MIAX PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁷⁸ Suspension Order at 31667.

additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (e.g., the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁷⁹ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member

input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸⁰ The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸¹ As discussed in those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸² Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸³ The Participants previously responded to this concern in both the Plan Response Letter and the Fee Rule Response Letter.⁸⁴ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an

independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁵ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: user support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry Members.⁸⁶ The Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁷ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁸⁸ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Participants and

Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁸⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,⁹⁰ in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility, is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers, and is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹¹ To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees

would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSS) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1). Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSS) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and

predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSS) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSS and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter's size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

⁸⁹ 15 U.S.C. 78f(b).

⁹⁰ 15 U.S.C. 78f(b)(4) and (5).

⁹¹ Approval Order at 84697.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

The Exchange has set forth responses to comments received regarding the Original Proposal in Section 3(a)(4) above.

III. Solicitation of Comments on Amendment No. 2

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 2 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹²

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSS), when such costs are development and build costs and when Industry Member reporting is

scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹³

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁴

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁵

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSS) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-

makers, equities market-makers, and Equity ATSS trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁶ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.⁹⁷

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATSS) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among

⁹³ Section 11.1(c) of the CAT NMS Plan.

⁹⁴ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. ⁹⁵ Section 11.2(c) of the CAT NMS Plan.

⁹⁶ Section 11.2(e) of the CAT NMS Plan.

⁹⁷ Section 11.1(c) of the CAT NMS Plan.

⁹² Section 11.2(e) of the CAT NMS Plan.

CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or

- Send an email to rule-comments@sec.gov. Please include File Number SR-GEMX-2017-17 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-GEMX-2017-17. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-GEMX-2017-17, and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹⁸

Robert W. Errett,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82254; File No. SR-PEARL-2017-20]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing of Amendment No. 1 to a Proposed Rule Change To Amend the Fee Schedule

December 11, 2017.

On May 1, 2017, MIAX PEARL, LLC ("MIAX PEARL" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail ("CAT NMS Plan"). The proposed rule change was published in the **Federal Register** for comment on May 19, 2017.³ The Commission received seven comment letters on the proposed rule change,⁴ and a response to

⁹⁸ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 80676 (May 15, 2017), 82 FR 23083 (May 19, 2017) ("Original Proposal").

⁴ Since the CAT NMS Plan Participants' proposed rule changes to adopt fees to be charged to Industry Members to fund the consolidated audit trail are substantively identical, the Commission is considering all comments received on the proposed rule changes regardless of the comment file to which they were submitted. See text accompanying notes 14-17 *infra*, for a list of the CAT NMS Plan Participants. See Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, Securities Industry and Financial Markets Association, to Brent J. Fields, Secretary, Commission (dated June 6, 2017), available at: <https://www.sec.gov/comments/sr-batsbzx-2017-38/batsbzx201738-1788188-153228.pdf>; Letter from Patricia L. Cerny and Steven O'Malley, Compliance Consultants, to Brent J. ⁹ Amendment No. 1 to the proposed rule change replaces and supersedes the Original Proposal in its entirety.

Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to January 14, 2018.¹⁰ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 1.¹¹

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

On May 1, 2017, MIA X PEARL, LLC ("MIA X PEARL" or "Exchange") filed with the Securities and Exchange Commission ("Commission" or "SEC") a proposed rule change SR-PEARL-2017-20 (the "Original Proposal"),¹² to amend the MIA X PEARL Fee Schedule (the "Fee Schedule") to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan" or "Plan").¹³ MIA X PEARL files this proposed rule change (the "Amendment") to amend the Original Proposal. This Amendment replaces the Original Proposal in its entirety, and also describes the changes from the Original Proposal.

The text of the proposed rule change is available on the Exchange's website at <http://www.miaoptions.com/rule-filings/pearl>, at MIA X's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the

¹⁰ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹¹ The Commission notes that on December 1, 2017, the Exchange filed Amendment No. 2 to the proposed rule change. Amendment No. 2 is a partial amendment to the proposed rule change, as amended by Amendment No. 1. Amendment No. 2 proposes to change the parenthetical regarding the OTC Equity Securities discount in paragraph (b)(2) of the proposed fee schedule from "with a discount for Equity ATSS exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities" to "with a discount for OTC Equity Securities market share of Equity ATSS trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities." See Securities Exchange Act Release No. 82255 (December 11, 2017).

¹² See Securities Exchange Act Release No. 80676 (May 15, 2017), 82 FR 23083 (May 19, 2017) (SR-PEARL-2017-20).

¹³ Unless otherwise specified, capitalized terms used in this fee filing are defined as set forth herein, in the CAT Compliance Rule Series, the CAT NMS Plan, or the Original Proposal.

proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

Fields, Secretary, Commission, dated February 27, 2015. On December 24, 2015, the Participants submitted an amendment to the CAT NMS Plan. See Letter from Participants to Brent J. Fields, Secretary, Commission, dated December 23, 2015.

comment in the **Federal Register** on May 17, 2016,²¹ and approved by the Commission, as modified, on November 15, 2016.²² The Plan is designed to create, implement and maintain a consolidated audit trail (“CAT”) that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the “Company”), of which each Participant is a member, to operate the CAT.²³ Under the CAT NMS Plan, the Operating Committee of the Company (“Operating Committee”) has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Participants will pay, and establishing fees for Industry Members that will be implemented by the Participants (“CAT Fees”).²⁴ The Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁵ Accordingly, the Exchange submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are Exchange members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on May 19, 2017,²⁶ and received comments in response to the Original Proposal or similar fee filings by other Participants.²⁷ On June 30, 2017, the Commission suspended, and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁸ The Commission received seven comment letters in response to those proceedings.²⁹

Fields, Secretary, SEC (July 28, 2017) (“MFA Letter”); Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, SIFMA, to Brent J. Fields, Secretary, SEC (July 28, 2017)

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Add two additional CAT Fee tiers for Equity Execution Venues; (2) discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility (“ORF”) by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATS exclusively trading OTC Equity Securities and FINRA; (3) discount the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discount equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decrease the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commence invoicing CAT Reporters as promptly as possible following the latest operative date of the respective Consolidated Audit Trail Funding Fees filed or to be filed by each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) require the proposed fees to automatically expire two years from the operative date of the

Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

CAT NMS Plan amendment adopting CAT Fees for Participants. As discussed in detail below, the Exchange proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members’ rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- *CAT Costs.* The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Participants. The overall CAT costs used in calculating the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. Although the CAT costs from November 21, 2016 through November 21, 2017 were used in calculating the CAT Fees, the CAT Fees set forth in this fee filing would be in effect until the automatic sunset date, as discussed below. (See Section 3(a)(2)(E) below)

- *Bifurcated Funding Model.* The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share, and (2) Industry Members (other than alternative trading systems (“ATSs”) that execute transactions in Eligible Securities (“Execution Venue ATSs”)) through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- *Industry Member Fees.* Each Industry Member (other than Execution Venue ATSs) will be placed into one of seven tiers of fixed fees, based on “message traffic” in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member

begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT. Industry Members with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- **Execution Venue Fees.** Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue’s proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the market share of Execution Venue ATs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue’s proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- **Cost Allocation.** For the reasons discussed below, in designing the model, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATs) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- **Comparability of Fees.** The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- **Fee Schedule.** The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in the Consolidated Audit Trail Funding Fees, one for Equity ATs and one for Industry Members other than Equity ATs. (See Section 3(a)(3)(B) below)

- **Quarterly Invoices.** Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- **Centralized Payment.** Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- **Billing Commencement.** Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(G) below)

- **Sunset Provision.** The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(J) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming year. In addition to a budget, Article XI of the CAT NMS Plan provides that the Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central Repository would be borne by (1) Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATs) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”³⁰ and “reflects a

reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT.”³¹

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³² The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated SRO services.³³

Accordingly, the funding model approved by the Operating Committee imposes fees on both Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³⁴ After analyzing the various alternatives, the Operating Committee determined that the proposed tiered, fixed fee funding model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model, provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

Reviews from varying time periods of current broker-dealer order and trading

³⁰ Approval Order at 84796.

data submitted under existing reporting requirements showed a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁵ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁶ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated across the CAT Reporters on a tiered basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT and lower costs to those that contribute less.³⁷ The fees to be assessed at each tier are calculated so as to recoup a proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a smaller fee for the CAT.³⁸ Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged

higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed smaller fees for the CAT.³⁹

The CAT NMS Plan states that Industry Members (other than Execution Venue ATs) will be charged based on message traffic, and that Execution Venues will be charged based on market share.⁴⁰ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴¹ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATs) will be based on the message traffic generated by such Industry Member.⁴²

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular, between large and small options exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (i.e., a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴³ Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between

large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴⁴ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be less likely to have an incremental deterrent effect on liquidity provision."⁴⁵

The funding model also is structured to avoid a reduction market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts raised by the Operating Committee determining fees applicable to its own members—the Participants. First, the Company will operate on a "break-even" basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Participants as profits.⁴⁶ To ensure that the Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c) of

⁴⁶ *Id.* at 84792.

the CAT NMS Plan specifically states that “[a]ny surplus of the Company’s revenues over its expenses shall be treated as an operational reserve to offset future fees.” In addition, as set forth in Article VIII of the CAT NMS Plan, the Company “intends to operate in a manner such that it qualifies as a ‘business league’ within the meaning of Section 501(c)(6) of the [Internal Revenue] Code.” To qualify as a business league, an organization must “not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual.”⁴⁷ As the SEC stated when approving the CAT NMS Plan, “the Commission believes that the Company’s application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan’s proposed allocation of profit and loss by mitigating concerns that the Company’s earnings could be used to benefit individual Participants.”⁴⁸ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT

costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company’s related costs among Participants and Industry Members that is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Participants and Industry Members and their relative impact upon the Company’s resources and operations;
- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSs, are based upon the level of market share; (ii) Industry Members’ non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT

Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSs) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on “message traffic” for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry

⁴⁷ 26 U.S.C. 501(c)(6).

⁴⁸ Approval Order at 84793.

Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSS) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar

levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate Message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to

define the term “message traffic” separately for the period before the commencement of CAT reporting and

for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will

be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁹ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁵⁰

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once

⁴⁹ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

⁵⁰ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

CAT reporting commences.⁵¹ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵² The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

⁵¹ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Rel. No. 77265 (Mar. 1, 2017, 81 FR 11856 (Mar. 7, 2016)). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

⁵² The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016–June 2017 that were compiled by the Financial Information Forum using data from NASDAQ and SIA.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵³

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (i.e., equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For

⁵³ Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

these purposes, market share for Execution Venues that execute transactions will be calculated by share volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association's market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue's NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Equity Execution

Venue Percentages"). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. ("Bats"). ATS market shares of share volume were sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility ("TRF") and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and the *otcmarkets.com*, ATSS accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust

for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵⁴ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity Execution Venue tier will be determined by predefined percentage allocations (the "Equity Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	25.00	33.25	8.31

⁵⁴ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly

available market volume data from Bats and OTC Markets Group, and the totals were divided to

determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 2	42.00	25.73	6.43
Tier 3	23.00	8.00	2.00
Tier 4	10.00	0.02	0.01
Total	100	67	16.75

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue's Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue's Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Options Execution Venue Percentages"). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the "Options Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets.

Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution Venue market share will be determined by calculating each Equity Execution

Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of market share of Execution Venue ATSS exclusively trading OTC Equity Securities, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options

contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSS) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSS) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tier 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1,541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly,

under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000 in total for the year beginning November 21, 2016.⁵⁵

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2–5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

⁵⁵ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
Non-Plan Processor	Third Party Support Costs	5,200,000
	Operational Reserve	⁵⁶ 5,000,000
	Cyber-insurance Costs	3,000,000
Estimated Total		50,700,000

Based on these estimated costs and the calculations for the funding model described above, the Operating Committee determined to impose the following fees:⁵⁷

For Industry Members (other than Execution Venue ATs):

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	\$129

Tier	Percentage of Options Execution Venues	Quarterly CAT fee
1	75.00	81,381
2	25.00	37,629

For Execution Venues for Listed Options:

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATs) and Execution Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541 Industry Members (other than Execution Venue ATs) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS ("IM")

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

Industry Member tier	Estimated number of Industry Members
Tier 1	14
Tier 2	33
Tier 3	43
Tier 4	119
Tier 5	128
Tier 6	290
Tier 7	914
Total	1,541

⁵⁶ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁷ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Calculation 1.1 (Calculation of a Tier 1 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot.IMs]} \times 0.9\% \text{ [% of Tier 1 IMs]} = 14 \text{ [Estimated Tier 1 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot.Ann.CAT Costs]} \times 75\% \text{ [IM \% of Tot.Ann.CAT Costs]} \times 12\% \text{ [% of Tier 1 IM Recovery]}}{14 \text{ [Estimated Tier 1 IMs]}} \right) \div$$

Total		15		4,182,828
Total				50,700,000
⁵⁸ Excess				7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as

applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry

⁵⁸The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the

adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the fees would be adjusted upward.⁵⁹ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁶⁰ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and the Participants will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act and Rule 19b-4 thereunder, and any such changes will become effective in accordance with the requirements of those provisions.

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier

using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATSS) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1

⁵⁹The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the

Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁶⁰Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee’s approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on the Exchange’s members. The proposed fee schedule has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms “CAT”, “CAT NMS Plan,” “Industry Member,” “NMS Stock,” “OTC Equity Security”, “Options Market Maker”, and “Participant” are defined as set forth in Rule 1701 (Consolidated Audit Trail Compliance Rule—Definitions).⁶¹

The proposed fee schedule imposes different fees on Equity ATSs and Industry Members that are not Equity ATSs. Accordingly, the proposed fee schedule defines the term “Equity ATS.” First, paragraph (a)(2) defines an “ATS” to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an “Execution Venue.” Then, paragraph (a)(4) defines an “Equity ATS” as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term “CAT Fee” to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

⁶¹ The rules contained in Miami International Securities Exchange, LLC Rule Book Chapter XVII, as such rules may be in effect from time to time (the “Chapter XVII Rules”), have been incorporated by reference into MIAx PEARL Chapter XVII, and are thus MIAx PEARL Rules and thereby applicable to MIAx PEARL members. MIAx PEARL members shall comply with the Chapter XVII Rules as though such rules were fully-set forth in the MIAx PEARL Rule Book. All defined terms, including any variations thereof, contained in Chapter XVII Rules shall be read to refer to the MIAx PEARL related meaning of such term. See Securities Exchange Act Release No. 80256 (March 15, 2017), 82 FR 14,526 (March 21, 2017) (SR-PEARL-2017-004) and Securities Exchange Act Release No. 80338 (March 29, 2017), 82 FR 16,464 (April 4, 2017).

Finally, Paragraph (a)(6) defines an “Execution Venue” as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an “Equity Execution Venue” as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428

Tier	Percentage of Industry Members	Quarterly CAT fee
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSS.⁶² These are the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for Equity ATSS exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSS with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSS with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will

⁶² Note that no fee schedule is provided for Execution Venue ATSS that execute transactions in Listed Options, as no such Execution Venue ATSS currently exist due to trading restrictions related to Listed Options.

provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by Regulatory Circular.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶³

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposes to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the

⁶³ Section 11.4 of the CAT NMS Plan.

maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, the Exchange proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶⁴ The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶⁵ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁶ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as

⁶⁴ For a description of the comments submitted in response to the Original Proposal, see Suspension Order.

⁶⁵ Suspension Order.

⁶⁶ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (*e.g.*, those Equity ATs representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁷ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁸ Tier 2

required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for the range of market shares of smaller

by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁹ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁷⁰ To address this concern, the Operating Committee proposes to discount the

⁶⁷ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁸ Note that while these equity market share thresholds were referenced as data points to help differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not

⁶⁹ Section 11.2(b) of the CAT NMS Plan.

⁷⁰ See Suspension Order at 31664–5.

market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁷¹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the share volume of such Execution Venue ATSS as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue

ATSS exclusively trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATSS exclusively trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATSS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷² As discussed above, the larger number of tiers more closely tracks the variety of

sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the market share for Equity ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSS, including those that exclusively trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSS). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷³ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than

⁷¹ Suspension Order at 31664–5.

⁷² Section 11.2(b) of the CAT NMS Plan.

⁷³ See Suspension Order at 31663–4; SIFMA Letter at 4–6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2–6; Group One Letter at 2–6; and Belvedere Letter at 2.

Execution Venue ATSS). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷⁴ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT

costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷⁵ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATSS) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or

reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁶

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATSS). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels

⁷⁶ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

⁷⁴ Suspension Order at 31664.

⁷⁵ Section 11.2(b) of the CAT NMS Plan.

of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the level of fee comparability for the largest

CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members,

Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁷ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between

⁷⁷ Securities Exchange Act Rel. No. 67457 (Jul 18, 2012), 77 FR 45722, 45726 (Aug. 1, 2012) (“Rule 613 Adopting Release”).

or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSS) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) of the proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSS) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁸ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSS) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based

on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATSS) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATSS). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATSS), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier

framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁹ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATSS as Execution Venues under the proposed funding model since ATSS have business models that are similar to those of exchanges, and ATSS also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, the Exchange proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

⁷⁹The Participants note that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁷⁸Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁸⁰

The Operating Committee does not believe that decreasing cost per additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (e.g., the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered

allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁸¹ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸² The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸³ As discussed in those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸⁴ Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸⁵ The Participants previously responded to this concern in both the Plan Response

⁸¹ See FIA Principal Traders Group Letter at 2; Belvedere Letter at 4.

⁸² See Suspension Order at 31662; MFA Letter at 1–2.

⁸³ Letter from Participants to Brent J. Fields, Secretary, SEC (Sept. 23, 2016) (“Plan Response Letter”); Letter from CAT NMS Plan Participants to Brent J. Fields, Secretary, SEC (June 29, 2017) (“Fee Rule Response Letter”).

⁸⁴ Fee Rule Response Letter at 2; Plan Response Letter at 18.

⁸⁵ See Suspension Order at 31662; FIA Principal Traders Group at 3.

Letter and the Fee Rule Response Letter.⁸⁶ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁷ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: User support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry

⁸⁶ See Plan Response Letter at 16, 17; Fee Rule Response Letter at 10–12.

⁸⁷ See FIA Principal Traders Group at 3; SIFMA Letter at 3.

⁸⁰ Suspension Order at 31667.

Members.⁸⁸ The Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁹ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁹⁰ thereby benefitting all market participants. Therefore, the Operating Committing continues to believe that it is equitable for both Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with the provisions of Section 6(b)(5) of the Act,⁹¹ which require, among other things, that the Exchange rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to permit unfair discrimination between customers, issuers, brokers and dealers, and Section 6(b)(4) of the Act,⁹² which requires that Exchange rules provide for equitable allocation of reasonable dues, fees and other charges among its members and issuers and other persons using its facilities. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect

the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹³ To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSSs) and Execution Venues maintains the greatest level of comparability across the funding model.

For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tier 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1). Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSSs) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

B. Self-Regulatory Organization’s Statement on Burden on Competition

Section 6(b)(8) of the Act⁹⁴ requires that Exchange rules not impose any burden on competition that is not necessary or appropriate. The Exchange does not believe that the proposed amendments to its Fee Schedule will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSSs) with

⁸⁸ See Suspension Order at 31661–2; SIFMA Letter at 2.

⁸⁹ See Plan Response Letter at 9–10; Fee Rule Response Letter at 3–4.

⁹⁰ Rule 613 Adopting Release at 45726.

⁹¹ 15 U.S.C. 78f(b)(5).

⁹² 15 U.S.C. 78f(b)(4).

⁹³ Approval Order at 84697.

⁹⁴ 15 U.S.C. 78f(b)(8).

higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSS and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter's size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in

the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹⁵

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSS), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹⁶

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁷

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration

affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁸

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSS) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATSS trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁹ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.¹⁰⁰

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in

⁹⁵ Section 11.2(e) of the CAT NMS Plan.

⁹⁶ Section 11.1(c) of the CAT NMS Plan.

⁹⁷ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁸ Section 11.2(c) of the CAT NMS Plan.

⁹⁹ Section 11.2(e) of the CAT NMS Plan.

¹⁰⁰ Section 11.1(c) of the CAT NMS Plan.

charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATSS) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the

fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-PEARL-2017-20 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-PEARL-2017-20. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official

business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-PEARL-2017-20, and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰¹

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82262; File No. SR-NYSEMKT-2017-26]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing of Amendment No. 1 to a Proposed Rule Change Amending the Consolidated Audit Trail Funding Fees

December 11, 2017.

On May 10, 2017, NYSE MKT LLC¹ (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")² and Rule 19b-4 thereunder,³ a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail ("CAT NMS Plan"). The proposed rule change was published in the **Federal Register** for comment on May 22, 2017.⁴ The Commission received seven comment letters on the proposed rule change,⁵ and a response to

¹⁰¹ 17 CFR 200.30-3(a)(12).

¹ NYSE MKT LLC has been renamed NYSE American LLC. See Securities Exchange Act Rel. No. 80283 (Mar. 21, 2017), 82 FR 15244 (Mar. 27, 2017).

² 15 U.S.C. 78s(b)(1).

³ 17 CFR 240.19b-4.

⁴ See Securities Exchange Act Release No. 80694 (May 16, 2017), 82 FR 23416 (May 22, 2017) ("Original Proposal").

⁵ Since the CAT NMS Plan Participants' proposed rule changes to adopt fees to be charged to Industry Members to fund the consolidated audit trail are substantively identical, the Commission is considering all comments received on the proposed rule changes regardless of the comment file to

comments from the Participants.⁶ On June 30, 2017, the Commission temporarily suspended and initiated proceedings to determine whether to approve or disapprove the proposed rule change.⁷ The Commission thereafter received seven comment letters,⁸ and a response to comments

which they were submitted. See text accompanying notes 14–16 *infra*, for a list of the CAT NMS Plan Participants. See Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, Securities Industry and Financial Markets Association, to Brent J. Fields, Secretary, Commission (dated June 6, 2017), available at: <https://www.sec.gov/comments/sr-batsbzx-2017-38/batsbzx201738-1788188-153228.pdf>; Letter from Patricia L. Cerny and Steven O'Malley, Compliance Consultants, to Brent J. Fields, Secretary, Commission (dated June 12, 2017), available at: <https://www.sec.gov/comments/sr-cboe-2017-040/cboe2017040-1799253-153675.pdf>; Letter from Daniel Zinn, General Counsel, OTC Markets Group Inc., to Eduardo A. from the Participants.⁹ On October 25, 2017, the Exchange filed Amendment No. 1 to the proposed rule change, as described in Items I and II below, which Items have been prepared by the Exchange.¹⁰ On November 9, 2017, the Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to January 14, 2018.¹¹ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 1.¹²

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE American Equities Price List (“Price List”) and the NYSE American Options Fee Schedule (“Fee Schedule”) to adopt the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the “CAT NMS Plan” or “Plan”).¹³ The Exchange files this

John Kinahan, Chief Executive Officer, Group One Trading, L.P., to Brent J. Fields, Secretary, Commission (dated August 10, 2017), available at: <https://www.sec.gov/comments/sr-finra-2017-011/finra2017011-2214568-160619.pdf>; Letter from Joseph Molluso, Executive Vice President and CFO, Virtu Financial, to Brent J. Fields, Secretary, Commission (dated August 18, 2017), available at: <https://www.sec.gov/comments/sr-finra-2017-011/finra2017011-2238648-160830.pdf>.

⁹ See Letter from Michael Simon, Chair, CAT NMS Plan Operating Committee, to Brent J. Fields, Secretary, Commission (dated November 2, 2017), available at: <https://www.sec.gov/comments/sr-batsbyx-2017-11/batsbyx201711-2674608-161412.pdf>.

¹⁰ Amendment No. 1 to the proposed rule change replaces and supersedes the Original Proposal in its entirety.

¹¹ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹² The Commission notes that on November 29, 2017, the Exchange filed Amendment No. 2 to the proposed rule change. Amendment No. 2 is a partial amendment to the proposed rule change, as amended by Amendment No. 1. Amendment No. 2 proposes to change the parenthetical regarding the OTC Equity Securities discount in paragraph (b)(2) of the proposed fee schedule from “with a discount for Equity ATSS exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities” to “with a discount for OTC Equity Securities market share of Equity ATSS trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities.” Amendment No. 2 also deletes footnote 45 in Section 3(a) on page 23 of the First Amendment which reads, “The discount is only applied to the market share of Execution Venue ATSS exclusively trading OTC Equity Securities. Accordingly, FINRA’s market share, which includes market share from the OTC Reporting Facility, is not discounted as a result of its OTC Equity Securities activity,” as the footnote is erroneous and was included inadvertently. See Securities Exchange Act Release No. 82263 (December 11, 2017).

¹³ Unless otherwise specified, capitalized terms used in this rule filing are defined as set forth

proposed rule change (the “Amendment”) to amend the Original Proposal. This Amendment replaces the Original Proposal in its entirety, and also describes the changes from the Original Proposal. The proposed change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

BOX Options Exchange LLC, Cboe BYX Exchange, Inc., Cboe BZX Exchange, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Cboe C2 Exchange, Inc., Cboe Exchange, Inc.,¹⁴ Chicago Stock Exchange, Inc., Financial Industry Regulatory Authority, Inc. (“FINRA”), Investors’ Exchange LLC, Miami International Securities Exchange, LLC, MIAIX PEARL, LLC, NASDAQ BX, Inc., Nasdaq GEMX, LLC, Nasdaq ISE, LLC, Nasdaq MRX, LLC,¹⁵ NASDAQ PHLX LLC, The NASDAQ Stock Market LLC, New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc. and NYSE

herein, the CAT Compliance Rule Series or in the CAT NMS Plan.

¹⁴ Note that Bats BYX Exchange, Inc., Bats BZX Exchange, Inc., Bats EDGA Exchange, Inc., Bats EDGX Exchange, Inc., LLC, C2 Options Exchange, Incorporated, and Chicago Board Options Exchange, Incorporated, have been renamed Cboe BYX Exchange, Inc., Cboe BZX Exchange, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Cboe C2 Exchange, Inc., Cboe Exchange, Inc., respectively.

¹⁵ ISE Gemini, LLC, ISE Mercury, LLC and International Securities Exchange, LLC have been renamed Nasdaq GEMX, LLC, Nasdaq MRX, LLC, and Nasdaq ISE, LLC, respectively. See Securities Exchange Act Rel. No. 80248 (Mar. 15, 2017), 82 FR 14547 (Mar. 21, 2017); Securities Exchange Act Rel. No. 80326 (Mar. 29, 2017), 82 FR 16460 (Apr. 4, 2017); and Securities Exchange Act Rel. No. 80325 (Mar. 29, 2017), 82 FR 16445 (Apr. 4, 2017).

National, Inc.¹⁶ (collectively, the “Participants”) filed with the Commission, pursuant to Section 11A of the Exchange Act¹⁷ and Rule 608 of Regulation NMS thereunder,¹⁸ the CAT NMS Plan.¹⁹ The Participants filed the Plan to comply with Rule 613 of Regulation NMS under the Exchange Act. The Plan was published for comment in the **Federal Register** on May 17, 2016,²⁰ and approved by the Commission, as modified, on November 15, 2016.²¹ The Plan is designed to create, implement and maintain a consolidated audit trail (“CAT”) that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the “Company”), of which each Participant is a member, to operate the CAT.²² Under the CAT NMS Plan, the Operating Committee of the Company (“Operating Committee”) has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Participants will pay, and establishing fees for Industry Members that will be implemented by the Participants (“CAT Fees”).²³ The Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁴ Accordingly, the Exchange submitted the Original Proposal to amend the Price List and the Fee Schedule to adopt the Consolidated Audit Trail Funding Fees, which would require Industry Members that are Exchange members to pay the CAT Fees determined by the Operating Committee.

¹⁶ National Stock Exchange, Inc. has been renamed NYSE National, Inc. See Securities Exchange Act Rel. No. 79902 (Jan. 30, 2017), 82 FR 9258 (Feb. 3, 2017).

Fields, Secretary, SEC (Aug. 10, 2017) (“Group One Letter”); and Letter from Joseph Molluso, Executive Vice President, Virtu Financial, to Brent J. Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

number of tiers for Industry Members (other than the Execution Venue ATSS) from nine to seven; (6) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS); (8) focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commence invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) require the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. As discussed in detail below, the Exchange proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members’ rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- *CAT Costs.* The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Participants. The overall CAT costs for the calculation of the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. (See Section 3(a)(2)(E) below)
- *Bifurcated Funding Model.* The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share, and (2) Industry Members (other than

alternative trading systems (“ATs”) that execute transactions in Eligible Securities (“Execution Venue ATs”) through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- *Industry Member Fees.* Each Industry Member (other than Execution Venue ATs) will be placed into one of seven tiers of fixed fees, based on “message traffic” in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT. Industry Members with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- *Execution Venue Fees.* Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue’s proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the market share of Execution Venue ATs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue’s proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- *Cost Allocation.* For the reasons discussed below, in designing the model, the Operating Committee

determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATs) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- *Comparability of Fees.* The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- *Fee Schedule.* The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in the Consolidated Audit Trail Funding Fees, one for Equity ATs and one for Industry Members other than Equity ATs. (See Section 3(a)(3)(B) below)

- *Quarterly Invoices.* Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- *Centralized Payment.* Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- *Billing Commencement.* Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(G) below)

- *Sunset Provision.* The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(J) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming year. In addition to a budget, Article XI

of the CAT NMS Plan provides that the Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central Repository would be borne by (1) Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATs) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”²⁹ and “reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT.”³⁰

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³¹ The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated SRO services.³²

Accordingly, the funding model approved by the Operating Committee imposes fees on both Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³³ After analyzing the various alternatives, the Operating Committee determined that the

²⁹ Approval Order at 84796.

³⁰ *Id.* at 84794.

³¹ *Id.* at 84795.

³² *Id.* at 84794.

³³ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

proposed tiered, fixed fee funding model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model, provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

In addition, reviews from varying time periods of current broker-dealer order and trading data submitted under existing reporting requirements showed a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁴ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁵ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it was concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated

across the CAT Reporters on a tiered basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT and lower costs to those that contribute less.³⁶ The fees to be assessed at each tier are calculated so as to recoup a proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a lower fee for the CAT.³⁷

Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed lower fees for the CAT.³⁸

The CAT NMS Plan states that Industry Members (other than Execution Venue ATSS) will be charged based on message traffic, and that Execution Venues will be charged based on market share.³⁹ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴⁰ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATSS) will be based on the message traffic generated by such Industry Member.⁴¹

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitute CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions on their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular,

between large and small options exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (i.e., a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴² Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴³ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be . . . less likely to have an incremental deterrent effect on liquidity provision."⁴⁴

The funding model also is structured to avoid a reduction in market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to

³⁴ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

³⁵ Moreover, as the SEC noted in approving the CAT NMS Plan, "[t]he Participants also have offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be easier to implement." Approval Order at 84796.

³⁶ Approval Order at 85005.

⁴⁴ Approval Order at 84796.

discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts raised by the Operating Committee determining fees applicable to its own members—the Participants. First, the Company will operate on a “break-even” basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Participants as profits.⁴⁵ To ensure that the Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c) of the CAT NMS Plan specifically states that “[a]ny surplus of the Company's revenues over its expenses shall be treated as an operational reserve to offset future fees.” In addition, as set forth in Article VIII of the CAT NMS Plan, the Company “intends to operate in a manner such that it qualifies as a ‘business league’ within the meaning of Section 501(c)(6) of the [Internal Revenue] Code.” To qualify as a business league, an organization must “not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual.”⁴⁶ As the SEC stated when approving the CAT NMS Plan, “the Commission believes that the Company's application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan's proposed allocation of profit and loss by mitigating concerns that the Company's earnings could be used to benefit individual Participants.”⁴⁷ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as

the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Participants and Industry Members that

is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Participants and Industry Members and their relative impact upon the Company's resources and operations;

- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSs, are based upon the level of market share; (ii) Industry Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSs) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of

⁴⁵ *Id.* at 84792.

⁴⁶ 26 U.S.C. 501(c)(6).

⁴⁷ Approval Order at 84793.

the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on “message traffic” for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA’s Order Audit Trail System (“OATS”), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSS) will be ranked by message traffic and tiered by predefined Industry Member percentages (the “Industry Member Percentages”). The Operating

Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the “Industry Member Recovery Allocation”). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members

and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member’s tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and Executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will

be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT

reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as

executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁸ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁴⁹

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵⁰ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however,

⁴⁸ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

⁴⁹ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵⁰ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Rel. No. 77265 (Mar. 1, 2017, 81 FR 11856 (Mar. 7, 2016)). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵¹ The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵²

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The

⁵¹ The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016—June 2017 that were compiled by the Financial Information Forum using data from NASDAQ and SIAC.

⁵² Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity Execution Venues and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity Execution Venues and Options Execution Venues makes comparison of activity between Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (i.e., equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association’s market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee

structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue's NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Equity Execution Venue Percentages"). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. ("Bats"). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility

("TRF") and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and otcmarkets.com, ATSs accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12%/60.88% split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSs exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is

0.17%.⁵³ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.⁵⁴

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity Execution Venue tier will be determined by predefined percentage allocations (the "Equity Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue Recovery	Percentage of total recovery
Tier 1	25.00	33.25	8.31
Tier 2	42.00	25.73	6.43
Tier 3	23.00	8.00	2.00
Tier 4	10.00	0.02	0.01
Total	100	67	16.75

⁵³ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly available market volume data from Bats and OTC Markets Group, and the totals were divided to

determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

⁵⁴ The discount is only applied to the market share of Execution Venue ATSs exclusively trading

OTC Equity Securities. Accordingly, FINRA's market share, which includes market share from the OTC Reporting Facility, is not discounted as a result of its OTC Equity Securities activity.

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue's Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue's Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSs) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Options Execution Venue Percentages"). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the "Options Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue Recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets. Set forth in Exhibit 3 of the proposed rule change are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution

Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of market share of Execution Venue ATSs exclusively trading OTC Equity Securities, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of

historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion

of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSS) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSS) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution

Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity Execution Venues and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity Execution Venues and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity Execution Venues and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly, under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000 in total for the year beginning November 21, 2016.⁵⁵

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2–5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
Non-Plan Processor	Third Party Support Costs	5,200,000
	Operational Reserve	5,000,000 ⁵⁶
	Cyber-insurance Costs	3,000,000
Estimated Total		\$50,700,000

⁵⁵ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

Based on these estimated costs and the calculations for the funding model described above, the Operating

Committee determined to impose the following fees:⁵⁷

For Industry Members (other than Execution Venue ATSs):

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Options Execution Venues	Quarterly CAT Fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

For Execution Venues for Listed Options:

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	75.00	\$81,381
2	25.00	37,629

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATSs) and Execution

Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541

Industry Members (other than Execution Venue ATSs) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS ("IM")

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member Recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

⁵⁶ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁷ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Industry Member tier	Estimated number of Industry Members
Tier 1	14
Tier 2	33
Tier 3	43
Tier 4	119
Tier 5	128
Tier 6	290
Tier 7	914
Total	1,541

Calculation 1.1 (Calculation of a Tier 1 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 0.9\% \text{ [% of Tier 1 IMs]} = 14 \text{ [Estimated Tier 1 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 12\% \text{ [% of Tier 1 IM Recovery]}}{14 \text{ [Estimated Tier 1 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$27,161}$$

Calculation 1.2 (Calculation of a Tier 2 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 2.15\% \text{ [% of Tier 2 IMs]} = 33 \text{ [Estimated Tier 2 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 20.5\% \text{ [% of Tier 2 IM Recovery]}}{33 \text{ [Estimated Tier 2 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$19,685}$$

Calculation 1.3 (Calculation of a Tier 3 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 2.125\% \text{ [% of Tier 3 IMs]} = 43 \text{ [Estimated Tier 3 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 18.5\% \text{ [% of Tier 3 IM Recovery]}}{43 \text{ [Estimated Tier 3 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$13,633}$$

Calculation 1.4 (Calculation of a Tier 4 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 7.75\% \text{ [% of Tier 4 IMs]} = 119 \text{ [Estimated Tier 4 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 32\% \text{ [% of Tier 4 IM Recovery]}}{119 \text{ [Estimated Tier 4 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$8522}$$

Calculation 1.5 (Calculation of a Tier 5 Industry Member Annual Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 8.3\% \text{ [% of Tier 5 IMs]} = 128 \text{ [Estimated Tier 5 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 7.75\% \text{ [% of Tier 5 IM Recovery]}}{128 \text{ [Estimated Tier 5 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$2476}$$

Calculation 1.6 (Calculation of a Tier 6 Industry Member Monthly Fee)

$$1,541 \text{ [Estimated Tot. IMs]} \times 18.8\% \text{ [% of Tier 6 IMs]} = 290 \text{ [Estimated Tier 6 IMs]}$$

$$\left(\frac{\$50,700,000 \text{ [Tot. Ann. CAT Costs]} \times 75\% \text{ [IM \% of Tot. Ann. CAT Costs]} \times 6\% \text{ [% of Tier 6 IM Recovery]}}{290 \text{ [Estimated Tier 6 IMs]}} \right) \div 12 \text{ [Months per year]} = \mathbf{\$656}$$

Calculation 1.7 (Calculation of a Tier 7 Industry Member Monthly Fee)

TRACEABILITY OF TOTAL CAT FEES—Continued

Type	Industry Member tier	Estimated number of members	CAT Fees paid annually	Total recovery
Total		15	4,182,828
Total	50,700,000
Excess ⁵⁸	7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at

⁵⁸ The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the fees would be adjusted upward.⁵⁹ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁶⁰ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Exchange will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act, and any such changes will become effective in accordance with the requirements of Section 19(b).

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or

⁵⁹ The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁶⁰ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATSS) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1

Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market Share Rank	Tier	Options Execution Venue	Market Share Rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee’s approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to adopt the CAT Fees determined by the Operating Committee on the Exchange’s Industry Members. The

proposed fee change has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) sets forth the definitions applicable to the proposed Consolidated Audit Trail Funding Fees. Proposed paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms “CAT”, “CAT NMS Plan,” “Industry Member,” “NMS Stock,” “OTC Equity Security”, “Options Market Maker”, and “Participant” are defined as set forth in Rule 6810 (Consolidated Audit Trail—Definitions) of the CAT Compliance Rule.⁶¹

The Exchange proposes to adopt different fees for Equity ATSs and Industry Members that are not Equity ATSs. Accordingly, the Exchange proposes to define the term “Equity ATS.” First, paragraph (a)(2) defines an “ATS” to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an “Execution Venue.” Then, paragraph (a)(4) defines an “Equity ATS” as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) defines the term “CAT Fee” to mean the Consolidated

Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) of the proposed rule change.

Finally, Paragraph (a)(6) defines an “Execution Venue” as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an “Equity Execution Venue” as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to adopt the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed rule change. Paragraph (b)(1) of the proposed rule change sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following

⁶¹ Securities Exchange Act Rel. No. 80256 (Mar. 15, 2017), 82 FR 14526 (Mar. 21, 2017) (SR-NYSEMKT-2017-02).

CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	0.900	81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed rule change sets forth the CAT Fees applicable to Equity ATSs.⁶² These are the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for Equity ATSs exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the highest total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	25.00	81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection

⁶² Note that no fee schedule is provided for Execution Venue ATSs that execute transactions in Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed rule change states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed rule change, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by Trader Update.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶³

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposes to adopt paragraph (c)(2), which states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date

⁶³ Section 11.4 of the CAT NMS Plan.

until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, the Exchange proposes to adopt paragraph (d) of the proposed rule change, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Original Proposal

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶⁴ The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶⁵ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁶ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of June 2017) when calculating the market share of Execution Venue ATSs exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity

⁶⁴ For a description of the comments submitted in response to those Original Proposal, see Suspension Order.

⁶⁵ Suspension Order.

⁶⁶ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSS) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (*e.g.*, those Equity ATSS representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁷ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁸ Tier 2

required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to 1%), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentage of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for

differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Exchange believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 of the Exchange Act. Moreover, the Exchange believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁹ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed rule change to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks were grouped in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁷⁰ To address this concern, the Operating Committee proposes to discount the market share of Execution

⁶⁷ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁸ Note that while these equity market share thresholds were referenced as data points to help

⁶⁹ Section 11.2(b) of the CAT NMS Plan.

⁷⁰ See Suspension Order at 31664–5.

Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁷¹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the share volume of such Execution Venue ATSS as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSS exclusively trading OTC Equity

Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATSS exclusively trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATSS would be ranked in Tier 3 and would be subject to a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Exchange believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 of the Exchange Act. Moreover, the Exchange believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷² As discussed above, the larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the

proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed rule change to indicate that the market share for Equity ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSS, including those that exclusively trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed rule change to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the proposed funding model included both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSS). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷³ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than Execution Venue ATSS). Commenters noted, however, that charging Industry Members on the basis of message traffic

⁷¹ Suspension Order at 31664–5.

⁷² Section 11.2(b) of the CAT NMS Plan.

⁷³ See Suspension Order at 31663–4; SIFMA Letter at 4–5; FIA Principal Traders Group Letter at 3; Sidley Letter at 2–6; Group One Letter at 2–5; and Belvedere Letter at 2.

will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷⁴ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would be subject to a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.0002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it

directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Exchange believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 of the Exchange Act. Moreover, the Exchange believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷⁵ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Exchange believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed rule change to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed rule change.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATs) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees

disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁶

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees at the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATs) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATs), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATs). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of

⁷⁴ Suspension Order at 31664.

⁷⁵ Section 11.2(b) of the CAT NMS Plan.

⁷⁶ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity Execution Venues and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity Execution Venues and Options Execution Venues enhances the level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity Execution Venues and Options

Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity Execution Venues and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity Execution Venues and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more Industry Members expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members, Industry Members could be

expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁷ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSSs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether

⁷⁷ Securities Exchange Act Rel. No. 67457 (Jul 18, 2012), 77 FR 45722, 45726 (Aug. 1, 2012) (“Rule 613 Adopting Release”).

Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSS) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed rule change for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed rule change to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSS) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁸ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSS) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based on message traffic would result in both large and small Execution Venues

paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATSS) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATSS). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATSS), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions on their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and

Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁹ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATSS as Execution Venues under the proposed funding model since ATSS have business models that are similar to those of exchanges, and ATSS also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, the Exchange proposes to add paragraph (d) to the proposed rule change to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission

⁷⁸ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

⁷⁹ The Participants note that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁸⁰

The Operating Committee does not believe that decreasing cost per additional unit places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the revised funding model, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (e.g., the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁸¹ The Operating Committee

determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸² The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸³ As discussed in those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸⁴ Moreover, Industry Members currently have representation on the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸⁵ The Participants previously responded to this concern in both the Plan Response Letter and the Fee Rule Response Letter.⁸⁶ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues

raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁷ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: user support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry Members.⁸⁸ The Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁹ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers

⁸² See Suspension Order at 31662; MFA Letter at 1–3.

contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁹⁰ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)(4) of the Act,⁹¹ because it provides for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using its facilities. The Exchange believes the proposed rule change is also consistent with Section 6(b)(5) of the Act,⁹² which requires, among other things, that the Exchange’s rules be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to permit unfair discrimination between customers, issuers, brokers and dealers. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹³ To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the

objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSSs) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tier 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1). Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are

Industry Members (other than Execution Venue ATSSs) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% division between Equity Execution Venues and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

For the foregoing reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization’s Statement on Burden on Competition

Section 6(b)(8) of the Act⁹⁴ require that the Exchange’s rules not impose any burden on competition that is not necessary or appropriate. The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing a similar proposed fee change to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSSs) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSSs and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share

⁹⁰ Rule 613 Adopting Release at 45726.

⁹¹ 15 U.S.C. 78f(b)(4).

⁹² 15 U.S.C. 78f(b)(6).

⁹³ Approval Order at 84697.

⁹⁴ 15 U.S.C. 78f(b)(8).

will pay lower fees. Therefore, given that there is generally a relationship between message traffic and market share to the CAT Reporter's size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Exchange believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Exchange believes that this Amendment addresses the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an

inappropriate burden on competition and a reduction in market quality."⁹⁵

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSS), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹⁶

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁷

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁸

⁹⁵ Section 11.2(e) of the CAT NMS Plan.

⁹⁶ Section 11.1(c) of the CAT NMS Plan.

⁹⁷ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁸ Section 11.2(c) of the CAT NMS Plan.

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSS) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATSS trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁹ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.¹⁰⁰

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

⁹⁹ Section 11.2(e) of the CAT NMS Plan.

¹⁰⁰ Section 11.1(c) of the CAT NMS Plan.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATs) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentive the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEMKT-2017-26 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEMKT-2017-26. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for

inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEMKT-2017-26 and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰¹

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82238; File No. SR-MSRB-2017-08]

**Self-Regulatory Organizations;
Municipal Securities Rulemaking Board; Order Granting Approval of a Proposed Rule Change To Amend MSRB Form G-45 To Collect Additional Data About the Transactional Fees Primarily Assessed by Programs Established To Implement the ABLE Act**

December 8, 2017.

I. Introduction

On October 13, 2017, the Municipal Securities Rulemaking Board (the "MSRB" or "Board") filed with the Securities and Exchange Commission (the "SEC" or "Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to amend MSRB Form G-45 under MSRB Rule G-45, on reporting of information on municipal fund securities,³ to collect additional data about the transactional fees primarily assessed by programs established to implement the Stephen Beck, Jr., Achieving a Better Life Experience Act of 2014 (the "ABLE Act" and an "ABLE program") (the "proposed rule change").⁴ The proposed rule change

¹⁰¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Form G-45 is an electronic form on which submissions of the information required by Rule G-45 are made to the MSRB.

⁴ The ABLE Act was enacted on December 19, 2014 as part of The Tax Increase Prevention Act of 2014 (Pub. L. 113-295).

was published for comment in the **Federal Register** on October 27, 2017.⁵

The Commission received one comment letter on the proposed rule change.⁶ On December 1, 2017, the MSRB responded to the comments received by the Commission.⁷

II. Description of Proposed Rule Change

In the Notice of Filing, the MSRB stated that the proposed rule change would amend Form G-45 to collect additional information relating to fees and expenses to help ensure that the MSRB continues to receive comprehensive information regarding ABL programs and 529 college savings plans.⁸ The MSRB stated that this data would enhance the MSRB's understanding of the markets for ABL programs and 529 college savings plans, including the differences among such programs or plans.⁹ Further, the MSRB stated that the additional fee and expense information would assist the MSRB in fulfilling its investor protection mission.¹⁰ The MSRB also stated that the information about fees and expenses would continue to be submitted in a format that is consistent with the disclosure principles of the College Savings Plan Network ("CSPN"), an affiliate of the National Association of State Treasurers, which, the MSRB added, commenters on previous MSRB rulemaking proposals relating to MSRB Form G-45 have stated is the industry norm.¹¹

As further described by the MSRB in the Notice of Filing, under the proposed rule change, an underwriter to an ABL program or a 529 college savings plan would be required to submit data on Form G-45 about the following additional fees and expenses, as applicable:

- account opening fee;
- investment administration fee;
- change in account owner fee;
- cancellation/withdrawal fee;
- change in investment option/transfer fee;

- rollover fee;
- returned excess aggregate contributions fee;
- rejected ACH or EFT fee;
- overnight delivery fee;
- in-network ATM fee;
- out-of-network ATM fee;
- ATM mini statement fee;
- international POS/ATM transaction fee;
- foreign transaction fee;
- overdraft fee;
- copy of check or statement fee (per request);
- copy of check images mailed with monthly statement fee;
- check fee (*i.e.*, fee for blank checks);
- returned check fee;
- checking account option fee;
- re-issue of disbursement check fee;
- stop payment fee;
- debit card fee;
- debit card replacement fee;
- outgoing wire fee;
- expedited debit card rush delivery fee;
- paper fee; and
- miscellaneous fee (to address any miscellaneous transactional fee that is not otherwise specified on Form G-45).¹²

In addition, under the proposed rule change, the MSRB stated that it would collect data about any variance in the annual account maintenance fee due to the residency of the account owner.¹³ The MSRB also stated that the proposed rule would apply to underwriters to ABL programs as well as to underwriters to 529 college savings plans.¹⁴ The MSRB, however, stated that it anticipates that most of the data that would be collected by the proposed rule change would relate to ABL programs.¹⁵ The MSRB also noted that it believes that 529 college savings plans generally do not assess the fees and charges that are the subject of this proposed rule change.¹⁶

The MSRB requested in the Notice of Filing that the proposed rule change be approved with an effective date of June 30, 2018.¹⁷

III. Summary of Comments Received and MSRB's Responses to Comments

As noted previously, the Commission received one comment letter on the proposed rule change, as well as the MSRB Response Letter. The commenter, SIFMA, stated that it was "supportive of the MSRB's efforts to fully understand

the ABL programs and 529 college savings plans market and fulfill its mission" but believed that municipal securities dealers who underwrite ABL programs and 529 college savings plans "should only be required to submit the information required by Form G-45 to the extent it is within their possession, custody, or control".¹⁸ SIFMA also stated that the MSRB should be mindful of the possibility that additional regulatory requirements such as the proposed rule change could increase costs to investors in dealer-sold 529 college savings plans and ABL programs versus direct-sold programs that are not regulated by the MSRB.¹⁹ The MSRB stated that it believes the proposed rule change is consistent with its statutory mandate and has responded to the comments, as discussed below.²⁰

1. Submission of Information Within Custody of Dealer

SIFMA stated that some of the information about fees that underwriters would be required to submit on MSRB Form G-45, under the proposed rule change, may be contained in ABL program or 529 college savings plan disclosure documents and suggested that those underwriters could provide hyperlinks to those documents to the MSRB.²¹ The MSRB responded by stating that even if some of the information required to be submitted on MSRB Form G-45 were contained in those ABL program or 529 college savings plan disclosure documents, that the information would not be published in a uniform electronic format that would allow for the MSRB's efficient analysis or comparison of such information.²² The MSRB noted that, at this time, there is no requirement that state issuers prepare those disclosure documents in a uniform format and, unlike for 529 college savings plans, there are not even voluntary disclosure principles for state issuers in the preparation of their disclosure documents that are applicable to ABL programs.²³ As result, the MSRB stated, it is even more likely that the information in the ABL program disclosure documents would not be presented in a uniform format that would allow the MSRB to readily analyze and compare ABL programs.²⁴ In addition, the MSRB stated that referencing the ABL program or 529

college savings plan disclosure documents would not meet the MSRB's regulatory need because the data provided to the MSRB must be in a uniform electronic format that can be aggregated and analyzed.²⁵ The MSRB acknowledged that the proposed rule change would result in some up-front costs to underwriters due to technical changes to underwriters' reporting systems, but the MSRB stated that those costs should mostly be one-time only costs and that the cumulative benefits of receiving data in a uniform electronic format should exceed the upfront costs over time.²⁶

2. Applicability of Proposed Rule Change to Advisor-Sold and Direct-Sold ABLÉ Programs and 529 College Savings Plans

SIFMA suggested that the duty to submit information about the fees assessed by ABLÉ programs and 529 college savings plans on MSRB Form G-45 would create an undue burden because, in SIFMA's view, the MSRB's jurisdiction is limited to underwriters to dealer-sold ABLÉ programs or 529 college savings plans.²⁷ The MSRB responded by stating that such an undue burden on competition would not exist because the MSRB believes it has jurisdiction over all underwriters of ABLÉ programs and 529 college savings plans.²⁸ The MSRB stated that it has jurisdiction over underwriters to all 529 college savings plans, regardless of the marketing channel through which such plans are sold (whether sold with the advice of a dealer, *i.e.*, "advisor-sold," or without the advice of a dealer, *i.e.*, "direct-sold"), and this view has equal application to similar ABLÉ programs.²⁹ The MSRB also stated that it has previously discussed the application of Rule G-45 to dealers, and in doing so has said that the activities of an entity may cause that entity to be within the definition of dealer and/or underwriter set forth in the Act or rules thereunder and thus subject to MSRB Rule G-45.³⁰ The MSRB stated that, for example, the activities of a program manager to an ABLÉ program or 529 college savings plan, or its affiliates or contractors, could include direct contact with investors through the development and distribution of ABLÉ program or 529 college savings plan advertising sales literature, or maintaining ABLÉ program or 529 college savings plan websites,

including processing enrollment funds.³¹ The MSRB stated that those activities could, depending on the facts and circumstances, cause one or more of those entities to be underwriters under Rule G-45.³² The MSRB also noted that it believed the Commission has agreed with the MSRB that each entity must make its own determination about whether its activity would qualify as "underwriting" activity as that term is defined in SEC Rule 15c2-12(f)(8) under the Act.³³ In addition, the MSRB stated that, beginning in 2015, the MSRB has received data from underwriters to 529 college savings plans under Rule G-45.³⁴ The MSRB stated that it has every reason to believe that there is widespread compliance by those underwriters with their reporting obligations under Rule G-45.³⁵ Consequently, the MSRB stated, it does not believe that the requirement to submit fee information, as would be required under the proposed rule change, on MSRB Form G-45 would unduly burden competition between underwriters to advisor-sold ABLÉ programs or 529 college savings plans versus underwriters to direct-sold ABLÉ programs or 529 college savings plans.³⁶

3. Underwriter Reporting Obligation

SIFMA stated that it believed dealers that underwrite ABLÉ programs and 529 college savings plans should only be required to submit information required by MSRB Form G-45 to the extent that such information is within their possession, custody and control.³⁷ The MSRB stated that, under the proposed rule change, and consistent with the MSRB's previous position on this issue, an underwriter to an ABLÉ program or 529 college savings plan would not be required to submit information on MSRB Form G-45 that the underwriter neither possesses nor has the legal right to obtain.³⁸ The MSRB also noted that the legal right to obtain the information for purposes of the proposed rule change is not affected by a voluntary relinquishment, by contract or otherwise, of such right.³⁹ Therefore, the MSRB stated, an underwriter may designate an affiliate or contractor to perform activities in the underwriter's stead in connection with the underwriting, but that the underwriter

would be properly viewed as having the legal right to obtain all information.⁴⁰

IV. Discussion and Commission Findings

The Commission has carefully considered the proposed rule change, the comment letter received, and the MSRB Response Letter. The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the MSRB.

In particular, the proposed rule change is consistent with Sections 15B(b)(2)(C) of the Act.⁴¹ Section 15B(b)(2)(C) of the Act states that the MSRB's rules shall be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in municipal securities and municipal financial products, to remove impediments to and perfect the mechanism of a free and open market in municipal securities and municipal financial products, and, in general, to protect investors, municipal entities, obligated persons, and the public interest.⁴² The Commission believes the proposed rule change is consistent with Section 15B(b)(2)(C) and necessary and appropriate to help the MSRB receive complete and reliable information about ABLÉ programs and 529 college savings plans which it can use to monitor such programs and plans and detect potential investor harm. The Commission believes that, for that data set to be complete and reliable, such data should include the data about the fees and expenses associated with an investment in an ABLÉ program or a 529 college savings plan that are included in the proposed rule change. In addition, the Commission believes the proposed rule change is necessary for the MSRB to gather relevant data required to ensure the MSRB's regulatory scheme is sufficient and/or to determine whether additional rulemaking is necessary to protect investors and the public interest.

The Commission believes that the proposed rule change would facilitate the MSRB's ability to better analyze the market for ABLÉ programs and 529 college savings plans as well as improve the MSRB's ability to evaluate trends and differences among ABLÉ programs and 529 college savings plans. Further,

⁴¹ 15 U.S.C. 78o-4(b)(2)(C).

⁴² 15 U.S.C. 78o-4(b)(2)(C).

the Commission believes that the MSRB, as well as other financial regulators charged with enforcing the MSRB's rules, use (or will use) the information submitted on MSRB Form G-45 to enhance their understanding of, and ability to monitor, ABL programs and 529 college savings plans.

The Commission believes that the MSRB or other regulators could use the information submitted on MSRB Form G-45 to, among other things, determine if the disclosure documents or marketing materials prepared or reviewed by underwriters are consistent with the data submitted to the MSRB for regulatory purposes.

In approving the proposed rule change, the Commission also has considered the impact of the proposed rule change on efficiency, competition, and capital formation.⁴³ The Commission does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The additional data that the proposed rule change would collect is understood by the Commission to be readily available and known to the underwriters of ABL programs and 529 college savings plans. Additionally, the Commission understands that these underwriters are already required to submit certain information to the MSRB on MSRB Form G-45 on a semi-annual basis. Also, the Commission believes that the additional information required to be submitted by the proposed rule change would be submitted on an equal and non-discriminatory basis, and the requirement would apply equally to all dealers that serve as underwriters to ABL programs and/or 529 college savings plans. Furthermore, the Commission believes that the potential burdens created by the proposed rule change are to be likely outweighed by the benefits.

For the reasons noted above, the Commission believes that the proposed rule change is consistent with the Act.

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,⁴⁴ that the proposed rule change (SR-MSRB-2017-08) be, and hereby is, approved.

For the Commission, pursuant to delegated authority.⁴⁵

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82251; File No. SR-CHX-2017-08]

Self-Regulatory Organizations; Chicago Stock Exchange, Inc.; Notice of Filing of Amendment No. 1 to a Proposed Rule Change To Amend the Schedule of Fees and Assessments To Adopt a Fee Schedule To Establish Fees for Industry Members Related to the National Market System Plan Governing the Consolidated Audit Trail

December 8, 2017.

On May 3, 2017, the Chicago Stock Exchange, Inc. ("CHX" or the "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan"). The proposed rule change was published in the **Federal Register** for comment on May 22, 2017.³ The Commission received seven comment letters on the proposed rule change,⁴

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 80691 (May 16, 2017), 82 FR 23344 (May 22, 2017) ("Original Proposal").

⁴ Since the CAT NMS Plan Participants' proposed rule changes to adopt fees to be charged to Industry Members to fund the consolidated audit trail are substantively identical, the Commission is considering all comments received on the proposed rule changes regardless of the comment file to which they were submitted. See text accompanying notes 13-16 *infra*, for a list of the CAT NMS Plan Participants. See Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, Securities Industry and Financial Markets Association, to Brent J. Fields, Secretary, Commission (dated June 6, 2017), available at: <https://www.sec.gov/comments/sr-batsbxz-2017-38/batsbxz201738-1788188-153228.pdf>; Letter from Patricia L. Cerny and Steven O'Malley, Compliance Consultants, to Brent J. ⁹ Amendment No. 1 to the proposed rule change replaces and supersedes the Original Proposal in its entirety.

January 14, 2018.¹⁰ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 1.¹¹

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

On May 3, 2017, the Exchange filed with the Commission a proposed rule change SR-CHX-2017-08 (the "Original Proposal"), pursuant to which the Exchange proposed to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan" or "Plan").¹² The Exchange files this proposed rule change (the "Amendment") to amend the Original Proposal. This Amendment replaces the Original Proposal in its entirety, and also describes the changes from the Original Proposal.

The text of this proposed rule change is available on the Exchange's website at (www.chx.com) and in the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the CHX included statements concerning the purpose of and basis for the proposed rule changes and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The CHX has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

¹⁰ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹¹ The Commission notes that on November 30, 2017, the Exchange filed Amendment No. 2 to the proposed rule change. Amendment No. 2 is a partial amendment to the proposed rule change, as amended by Amendment No. 1. Amendment No. 2 proposes to change the parenthetical regarding the OTC Equity Securities discount in paragraph (b)(2) of the proposed fee schedule from "with a discount for Equity ATSs exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities" to "with a discount for OTC Equity Securities market share of Equity ATSs trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities." See Securities Exchange Act Release No. 82252 (December 8, 2017).

¹² Unless otherwise specified, capitalized terms used in this fee filing are defined as set forth herein, the CAT Compliance Rule Series, in the CAT NMS Plan, or the Original Proposal.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Changes

1. Purpose

Fields, Secretary, Commission, dated February 27, 2015. On December 24, 2015, the Plan Participants submitted an amendment to the CAT NMS Plan. See Letter from Plan Participants to Brent J. Fields, Secretary, Commission, dated December 23, 2015.

²¹ Securities Exchange Act Rel. No. 77724 (Apr. 27, 2016), 81 FR 30614 (May 17, 2016).

Commission, as modified, on November 15, 2016.²² The Plan is designed to create, implement and maintain a consolidated audit trail ("CAT") that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the "Company"), of which each Plan Participant is a member, to operate the CAT.²³ Under the CAT NMS Plan, the Operating Committee of the Company ("Operating Committee") has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Plan Participants will pay, and establishing fees for Industry Members that will be implemented by the Plan Participants ("CAT Fees").²⁴ The Plan Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁵ Accordingly, the Exchange submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are Exchange members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on May 22, 2017,²⁶ and received comments in response to the Original Proposal or similar fee filings by other Plan Participants.²⁷ On June 30, 2017, the Commission suspended, and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁸ The Commission received seven comment letters in response to those proceedings.²⁹

Fields, Secretary, SEC (July 28, 2017) ("MFA Letter"); Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, SIFMA, to Brent J. Fields, Secretary, SEC (July 28, 2017) ("SIFMA Letter"); Joanna Mallers, Secretary, FIA

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility (“ORF”) by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of June 2017) when calculating the market share of Execution Venue ATS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSS) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Plan Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants; and (10) requires the proposed fees to automatically expire

Principal Traders Group, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“FIA Principal Traders Group Letter”); Letter from Kevin Coleman, General Counsel & Chief Compliance Officer, Belvedere Trading LLC, to Brent J. Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. As discussed in detail below, the Exchange proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members’ rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- *CAT Costs.* The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Plan Participants. The overall CAT costs for the calculation of the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. (See Section 3(a)(2)(E) below)

- *Bifurcated Funding Model.* The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Plan Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share, and (2) Industry Members (other than alternative trading systems (“ATSS”) that execute transactions in Eligible Securities (“Execution Venue ATSS”)) through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- *Industry Member Fees.* Each Industry Member (other than Execution Venue ATSS) will be placed into one of seven tiers of fixed fees, based on “message traffic” in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT. Industry Members

with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- *Execution Venue Fees.* Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue’s proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue’s proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- *Cost Allocation.* For the reasons discussed below, in designing the model, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSS) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- *Comparability of Fees.* The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- *Fee Schedule.* The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in

the Consolidated Audit Trail Funding Fees, one for Equity ATs and one for Industry Members other than Equity ATs. (See Section 3(a)(3)(B) below)

- *Quarterly Invoices.* Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- *Centralized Payment.* Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- *Billing Commencement.* Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Plan Participants and the operative date of the Plan amendment adopting CAT Fees for Plan Participants. (See Section 3(a)(2)(G) below)

- *Sunset Provision.* The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. (See Section 3(a)(2)(f) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming year. In addition to a budget, Article XI of the CAT NMS Plan provides that the Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central Repository would be borne by (1) Plan Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATs) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”³⁰ and “reflects a reasonable exercise of the Participants’ funding authority to recover the

Participants’ costs related to the CAT.”³¹

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³² The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated Exchange services.³³

Accordingly, the funding model approved by the Operating Committee imposes fees on both Plan Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³⁴ After analyzing the various alternatives, the Operating Committee determined that the proposed tiered, fixed fee funding model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model, provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

In addition, reviews from varying time periods of current broker-dealer order and trading data submitted under existing reporting requirements showed

a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁵ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁶ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it was concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated across the CAT Reporters on a tiered basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT and lower costs to those that contribute less.³⁷ The fees to be assessed at each tier are calculated so as to recoup a proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a smaller fee for the CAT.³⁸ Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged

³⁵ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

³⁶ Moreover, as the SEC noted in approving the CAT NMS Plan, “[t]he Participants also have offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be easier to implement.” Approval Order at 84796.

higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed smaller fees for the CAT.³⁹

The CAT NMS Plan states that Industry Members (other than Execution Venue ATs) will be charged based on message traffic, and that Execution Venues will be charged based on market share.⁴⁰ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴¹ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATs) will be based on the message traffic generated by such Industry Member.⁴²

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitute CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular, between large and small options exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴³ Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between

large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴⁴ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be . . . less likely to have an incremental deterrent effect on liquidity provision."⁴⁵

The funding model also is structured to avoid a reduction market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts raised by the Operating Committee determining fees applicable to its own members—the Plan Participants. First, the Company will operate on a "break-even" basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Plan Participants as profits.⁴⁶ To ensure that the Plan Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c)

of the CAT NMS Plan specifically states that "[a]ny surplus of the Company's revenues over its expenses shall be treated as an operational reserve to offset future fees." In addition, as set forth in Article VIII of the CAT NMS Plan, the Company "intends to operate in a manner such that it qualifies as a 'business league' within the meaning of Section 501(c)(6) of the [Internal Revenue] Code." To qualify as a business league, an organization must "not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual."⁴⁷ As the SEC stated when approving the CAT NMS Plan, "the Commission believes that the Company's application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan's proposed allocation of profit and loss by mitigating concerns that the Company's earnings could be used to benefit individual Plan Participants."⁴⁸ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Plan Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the market share of Execution Venue ATs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT

costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Plan Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Plan Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Plan Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Plan Participants and Industry Members that is consistent with the Exchange Act, taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Plan Participants and Industry Members and their relative impact upon the Company's resources and operations;
- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSs, are based upon the level of market share; (ii) Industry Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT

Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) an ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSs) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on "message traffic" for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry

Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSs) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the

percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Industry Members and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the

second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across

tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	> 10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	< 10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages

and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁹ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT

⁴⁹ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁵⁰

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵¹ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio

⁵⁰ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵¹ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Rel. No. 77265 (Mar. 1, 2017, 81 FR 11856 (Mar. 7, 2016)). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵² The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵³

⁵² The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016–June 2017 that were compiled by the Financial Information Forum using data from NASDAQ and SIAC.

⁵³ Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

The Operating Committee determined that ATSS should be included within the definition of Execution Venue. The Operating Committee believes that it is appropriate to treat ATSS as Execution Venues under the proposed funding model since ATSS have business models that are similar to those of exchanges, and ATSS also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (*i.e.*, equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue's NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association's market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue's NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Equity Execution Venue Percentages"). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. ("Bats"). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility ("TRF") and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and *otcmartets.com*, ATSS accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the market share of

Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵⁴ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.⁵⁵

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity Execution Venue tier will be determined by predefined percentage allocations (the "Equity Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the

⁵⁴ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly available market volume data from Bats and OTC Markets Group, and the totals were divided to determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

⁵⁵ The discount is only applied to the market share of Execution Venue ATSS exclusively trading OTC Equity Securities. Accordingly, FINRA's market share, which includes market share from the OTC Reporting Facility, is not discounted as a result of its OTC Equity Securities activity.

distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues

had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the

Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	25.00	33.25	8.31
Tier 2	42.00	25.73	6.43
Tier 3	23.00	8.00	2.00
Tier 4	10.00	0.02	0.01
Total	100	67	16.75

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue's Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue's Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the "Options Execution Venue Percentages"). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the "Options Execution Venue Recovery Allocation"). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Plan Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets. Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of market share of Execution Venue ATSs exclusively trading OTC Equity Securities, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Plan Participants and Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion of CAT costs allocated to Execution Venues would be allocated between

Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSs) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSs) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues

maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly, under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000 in total for the year beginning November 21, 2016.⁵⁶

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2–5 million cyber-insurance premium on \$100 million coverage, the Company has

⁵⁶ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-

insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the

operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
Non-Plan Processor	Third Party Support Costs	5,200,000
	Operational Reserve	⁵⁷ 5,000,000
	Cyber-insurance Costs	3,000,000
Estimated Total		50,700,000

Based on these estimated costs and the calculations for the funding model described above, the Operating Committee determined to impose the following fees:⁵⁸

For Industry Members (other than Execution Venue ATSS):

Tier	Percentage of Industry Members	Quarterly CAT Fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT Fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

Tier	Percentage of Options Execution Venues	Quarterly CAT Fee
1	75.00	\$81,381
2	25.00	37,629

For Execution Venues for Listed Options:

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATSS) and Execution Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541 Industry Members (other than Execution Venue ATSS) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS (“IM”)

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

Industry Member tier	Estimated number of Industry Members
Tier 1	14
Tier 2	33
Tier 3	43
Tier 4	119
Tier 5	128
Tier 6	290

⁵⁷ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁸ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Total	50,700,000
Excess ⁵⁹	7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes

⁵⁹The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and implementation of the CAT, the Company shall time the imposition and collection of all fees on Plan Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue

to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Plan Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Plan Participants and the operative date of the Plan amendment adopting CAT Fees for Plan Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the

fees would be adjusted upward.⁶⁰ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁶¹ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and any such changes will become effective in accordance with the requirements of Rule 608.

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is

relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATs) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2
Options Execution Venue O	15	2	Options Execution Venue O	15	2

⁶⁰The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the Plan

Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁶¹Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee's approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

The Exchange proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on the Exchange's members. The proposed fee schedule (i.e., proposed Section R of the CHX Fee Schedule) has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms "CAT", "CAT NMS Plan," "Industry Member," "NMS Stock," "OTC Equity Security", "Options Market Maker", and "Participant" are defined under Article 23, Rule 1 (Consolidated Audit Trail—Definitions).

The proposed fee schedule imposes different fees on Equity ATSs and Industry Members that are not Equity

ATSs. Accordingly, the proposed fee schedule defines the term "Equity ATS." First, paragraph (a)(2) defines an "ATS" to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an "Execution Venue." Then, paragraph (a)(4) defines an "Equity ATS" as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term "CAT Fee" to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

Finally, Paragraph (a)(6) defines an "Execution Venue" as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an "Equity Execution Venue" as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

The Exchange proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSs.⁶² These are the same fees that Plan Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for Equity ATSs exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be

⁶² Note that no fee schedule is provided for Execution Venue ATSs that execute transactions in Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. The Exchange will provide Industry Members with details regarding the manner of payment of CAT Fees by Information Memorandum.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Plan Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Plan Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶³

Section 11.4 of the CAT NMS Plan also states that Plan Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, the Exchange proposed to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date

until such fee is paid at a per annum rate equal to the lesser of: (i) the Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. Accordingly, the Exchange proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶⁴ The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶⁵ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁶ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of June 2017) when calculating the market share of Execution Venue ATs exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options

Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Plan Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Plan Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (e.g., those Equity ATs representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on competition.⁶⁷ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume

⁶⁴ For a description of the comments submitted in response to the Original Proposal, see Suspension Order.

⁶⁵ Suspension Order.

⁶⁷ See Suspension Order at 31664; SIFMA Letter at 3.

⁶³ Section 11.4 of the CAT NMS Plan.

greater than or equal to 1%.⁶⁸ Tier 2 required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentage of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The

⁶⁸ Note that while these equity market share thresholds were referenced as data points to help differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁹ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC

Equity Securities and NMS Stocks.⁷⁰ To address this concern, the Operating Committee proposes to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁷¹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the share volume of such Execution Venue ATSS as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per

⁷⁰ See Suspension Order at 31664–5.

⁷¹ Suspension Order at 31664–5.

⁶⁹ Section 11.2(b) of the CAT NMS Plan.

trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSS exclusively trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATS exclusively trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding

principles of the CAT NMS Plan.⁷² As discussed above, the larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the market share for Equity ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSS, including those that exclusively trade OTC Equity Securities, the Exchange proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSS). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to a reduction in market quality.⁷³ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than Execution Venue ATSS). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷⁴ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were

⁷² Section 11.2(b) of the CAT NMS Plan.

⁷³ See Suspension Order at 31663-4; SIFMA Letter at 4-6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2-6; Group One Letter at 2-6; and Belvedere Letter at 2.

⁷⁴ Suspension Order at 31664.

considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷⁵ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, the Exchange proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, the Exchange proposes to define the term "Options Market Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATSS) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT

costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁶

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATSS) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATSS), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATSS). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic

generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The

⁷⁶ Section 11.2(b) of the CAT NMS Plan.

Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Plan Participants (*i.e.*,

1,541 broker-dealer CAT Reporters versus 22 Plan Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members, Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁷ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSSs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) to each relevant tier as well as various percentages of recovery allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as

applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSSs) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, the Exchange proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, the Exchange proposes to amend paragraph (b)(1) and (2) of the proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSSs) based on message traffic. Commenters questioned the use of the two different metrics for calculating CAT Fees.⁷⁸ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSSs) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which

⁷⁷ Securities Exchange Act Rel. No. 67457 (Jul 18, 2012), 77 FR 45722, 45726 (Aug. 1, 2012) (“Rule 613 Adopting Release”).

⁷⁸ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATSS) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATSS). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATSS), which determine the degree to which they produce the message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the

message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁹ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATSS as Execution Venues under the proposed funding model since ATSS have business models that are similar to those of exchanges, and ATSS also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Plan Participants. Specifically, the Exchange proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the

⁷⁹ The Plan Participants note that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

performance of the proposed funding model.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁸⁰

The Operating Committee does not believe that decreasing cost per additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (*e.g.*, the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible

⁸⁰ Suspension Order at 31667.

funding models. For example, the Operating Committee considered allocating the total CAT costs equally among each of the Plan Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁸¹ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸² The Plan Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸³ As discussed in those letters, the Plan Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸⁴ Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan. The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Plan Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸⁵ The

Plan Participants previously responded to this concern in both the Plan Response Letter and the Fee Rule Response Letter.⁸⁶ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Plan Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Plan Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Plan Participants are receiving in return for the CAT Fees.⁸⁷ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: User support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry Members and Plan Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Plan Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to

impose CAT Fees on Industry Members.⁸⁸ The Plan Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁹ As the Plan Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁹⁰ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Plan Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)(5) of the Act⁹¹, which require, among other things, that the Exchange rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to permit unfair discrimination between customers, issuers, brokers and dealer, and Section 6(b)(4) of the Act⁹², which requires that Exchange rules provide for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using its facilities. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Plan Participants and Industry Members. The Exchange believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

The Exchange believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist the Exchange and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the

⁹¹ 15 U.S.C. 78f(b)(5).

⁹² 15 U.S.C. 78f(b)(4).

maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹³ To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, the Exchange believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

The Exchange believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Plan Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, the Exchange believes that the total level of the CAT Fees is reasonable.

In addition, the Exchange believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Plan Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, the Exchange believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than

Execution Venue ATSS) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSS) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, the Exchange believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

B. Self-Regulatory Organization's Statement of Burden on Competition

Section 6(b)(8) of the Act⁹⁴ require that Exchange rules not impose any burden on competition that is not necessary or appropriate. The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist the Exchange in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, the Exchange believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar

fees. For example, Industry Members (other than Execution Venue ATSS) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSS and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter's size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, the Exchange does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSS and exchanges will pay the same fees based on market share. Therefore, the Exchange does not believe that the fees will impose any burden on the competition between ATSS and exchanges. Accordingly, the Exchange believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSS, ATSS trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

C. Self-Regulatory Organization's Statement on Comments Regarding the Proposed Rule Changes Received From Members, Participants or Others

No written comments were either solicited or received.

III. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. In particular, the Commission seeks comment on the following:

⁹³ Approval Order at 84697.

⁹⁴ 15 U.S.C. 78f(b)(8).

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹⁵

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSs), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹⁶

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁷

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/

or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁸

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSs) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSs) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATSs trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁹ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.¹⁰⁰

(11) Commenters' views on dividing CAT costs equally among each of the

Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATSs) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

⁹⁵ Section 11.2(e) of the CAT NMS Plan.

⁹⁶ Section 11.1(c) of the CAT NMS Plan.

⁹⁷ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁸ Section 11.2(c) of the CAT NMS Plan.

⁹⁹ Section 11.2(e) of the CAT NMS Plan.

¹⁰⁰ Section 11.1(c) of the CAT NMS Plan.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments:

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CHX-2017-08 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to File Number SR-CHX-2017-08. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be

available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CHX-2017-08, and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰¹

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-82274; File No. SR-BatsBYX-2017-11]

Self-Regulatory Organizations; Cboe BYX Exchange, Inc.; Notice of Filing of Amendment No. 1 to a Proposed Rule Change To Establish the Fees for Industry Members Related to the National Market System Plan Governing the Consolidated Audit Trail

December 11, 2017.

On May 16, 2017, Bats BYX Exchange Inc., n/k/a Cboe BYX Exchange, Inc., ("Exchange" or "SRO") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to adopt a fee schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail ("CAT NMS Plan"). The proposed rule change was published in the **Federal Register** for comment on June 5, 2017.³ The Commission received seven comment letters on the proposed rule change,⁴

¹⁰¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 80809 (May 30, 2017), 82 FR 25837 (June 5, 2017) ("Original Proposal").

⁴ Since the CAT NMS Plan Participants' proposed rule changes to adopt fees to be charged to Industry

and a response to comments from the Participants.⁵ On June 30, 2017, the Commission temporarily suspended and initiated proceedings to determine whether to approve or disapprove the proposed rule change.⁶ The Commission thereafter received seven comment letters,⁷ and a response to comments

Members to fund the consolidated audit trail are substantively identical, the Commission is considering all comments received on the proposed rule changes regardless of the comment file to which they were submitted. See text accompanying notes 13-16 *infra*, for a list of the CAT NMS Plan Participants. See Letter from Theodore R. from the Participants.⁸ On November 3, 2017, the Exchange filed Amendment No. 1 to the proposed rule change, as described in Items I and II below, which Items have been prepared by the Exchange.⁹ On November 9, 2017, the Commission extended the time period within which to approve the proposed rule change or disapprove the proposed rule change to January 14, 2018.¹⁰ The Commission is publishing this notice to solicit comments from interested persons on Amendment No. 1.¹¹

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposed rule change SR-BatsBYX-2017-11 (the "Original Proposal"), pursuant to which SRO proposed to amend its Fee Schedule to establish the fees for Industry Members related to the National Market System Plan Governing the Consolidated Audit Trail (the "CAT NMS Plan" or "Plan").¹² SRO files this proposed rule change (the "Amendment") to amend the Original Proposal. This Amendment replaces the Original Proposal in its

Managing Director, General Counsel, Managed Funds Association, to Brent J. Fields, Secretary, Commission (dated July 28, 2017), available at: <https://www.sec.gov/comments/sr-batsbyx-2017-11/batsbyx201711-2150818-157743.pdf>; Letter from John Kinahan, Chief Executive Officer, Group One Trading, L.P., to Brent J. Fields, Secretary, Commission (dated August 10, 2017), available at: <https://www.sec.gov/comments/sr-finra-2017-011/finra2017011-2214568-160619.pdf>; Letter from Joseph Molluso, Executive Vice President and CFO, Virtu Financial, to Brent J. ⁸ See Letter from Michael Simon, Chair, CAT NMS Plan Operating Committee, to Brent J. Fields, Commission, Secretary (dated November 2, 2017), available at <https://www.sec.gov/comments/sr-batsbyx-2017-11/batsbyx201711-2674608-161412.pdf>.

⁹ Amendment No. 1 to the proposed rule change replaces and supersedes the Original Proposal in its entirety.

¹⁰ See Securities Exchange Act Release No. 82049 (November 9, 2017), 82 FR 53549 (November 16, 2017).

¹¹ The Commission notes that on December 7, 2017, the Exchange filed Amendment No. 2 to the proposed rule change. Amendment No. 2 is a partial amendment to the proposed rule change, as amended by Amendment No. 1. Amendment No. 2 proposes to change the parenthetical regarding the OTC Equity Securities discount in paragraph (b)(2) of the proposed fee schedule from "with a discount for Equity ATSS exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities" to "with a discount for OTC Equity Securities market share of Equity ATSS trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities." See Securities Exchange Act Release No. 34-82275 (December 11, 2017).

¹² Unless otherwise specified, capitalized terms used in this fee filing are defined as set forth herein, the CAT Compliance Rule Series, in the CAT NMS Plan, or the Original Proposal.

entirety, and also describes the changes from the Original Proposal.

The text of the proposed rule change is available at the Exchange's website at www.markets.cboe.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

BOX Options Exchange LLC, Cboe BYX Exchange, Inc., Cboe BZX Exchange, Inc., Cboe EDGA Exchange, Inc., Cboe EDGX Exchange, Inc., Cboe C2 Exchange, Inc., Cboe Exchange, Inc.,¹³ Chicago Stock Exchange, Inc., Financial Industry Regulatory Authority, Inc. ("FINRA"), Investors' Exchange LLC, Miami International Securities Exchange, LLC, MIA X PEARL, LLC, NASDAQ BX, Inc., Nasdaq GEMX, LLC, Nasdaq ISE, LLC, Nasdaq MRX, LLC,¹⁴ NASDAQ PHLX LLC, The NASDAQ Stock Market LLC, New York Stock Exchange LLC, NYSE American LLC,¹⁵ NYSE Arca, Inc. and NYSE National, Inc.¹⁶ (collectively, the

"Participants") filed with the Commission, pursuant to Section 11A of the Exchange Act¹⁷ and Rule 608 of Regulation NMS thereunder,¹⁸ the CAT NMS Plan.¹⁹ The Participants filed the Plan to comply with Rule 613 of Regulation NMS under the Exchange Act. The Plan was published for comment in the **Federal Register** on May 17, 2016,²⁰ and approved by the Commission, as modified, on November 15, 2016.²¹ The Plan is designed to create, implement and maintain a consolidated audit trail ("CAT") that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities, across all markets, from the time of order inception through routing, cancellation, modification, or execution in a single consolidated data source. The Plan accomplishes this by creating CAT NMS, LLC (the "Company"), of which each Participant is a member, to operate the CAT.²² Under the CAT NMS Plan, the Operating Committee of the Company ("Operating Committee") has discretion to establish funding for the Company to operate the CAT, including establishing fees that the Participants will pay, and establishing fees for Industry Members that will be implemented by the Participants ("CAT Fees").²³ The Participants are required to file with the SEC under Section 19(b) of the Exchange Act any such CAT Fees applicable to Industry Members that the Operating Committee approves.²⁴ Accordingly, SRO submitted the Original Proposal to propose the Consolidated Audit Trail Funding Fees, which would require Industry Members that are SRO members to pay the CAT Fees determined by the Operating Committee.

The Commission published the Original Proposal for public comment in the **Federal Register** on June 5, 2017,²⁵

No. 80326 (Mar. 29, 2017), 82 FR 16460 (Apr. 4, 2017); and Securities Exchange Act Rel. No. 80325 (Mar. 29, 2017), 82 FR 16445 (Apr. 4, 2017).

¹⁵ NYSE MKT LLC has been renamed NYSE American LLC. See Securities Exchange Act Rel. No. 80283 (Mar. 21, 2017), 82 FR 15244 (Mar. 27, 2017).

¹⁶ National Stock Exchange, Inc. has been renamed NYSE National, Inc. See Securities

and received comments in response to the Original Proposal or similar fee filings by other Participants.²⁶ On June 30, 2017, the Commission suspended, and instituted proceedings to determine whether to approve or disapprove, the Original Proposal.²⁷ The Commission received seven comment letters in response to those proceedings.²⁸

In response to the comments on the Original Proposal, the Operating Committee determined to make the following changes to the funding model: (1) Adds two additional CAT Fee tiers for Equity Execution Venues; (2) discounts the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA over-the-counter reporting facility (“ORF”) by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSs) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options

Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSs); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. As discussed in detail below, SRO proposes to amend the Original Proposal to reflect these changes.

(1) Executive Summary

The following provides an executive summary of the CAT funding model approved by the Operating Committee, as well as Industry Members’ rights and obligations related to the payment of CAT Fees calculated pursuant to the CAT funding model, as amended by this Amendment. A detailed description of the CAT funding model and the CAT Fees, as amended by this Amendment, as well as the changes made to the Original Proposal follows this executive summary.

(A) CAT Funding Model

- *CAT Costs.* The CAT funding model is designed to establish CAT-specific fees to collectively recover the costs of building and operating the CAT from all CAT Reporters, including Industry Members and Participants. The overall CAT costs used in calculating the CAT Fees in this fee filing are comprised of Plan Processor CAT costs and non-Plan Processor CAT costs incurred, and estimated to be incurred, from November 21, 2016 through November 21, 2017. Although the CAT costs from November 21, 2016 through November 21, 2017 were used in calculating the CAT Fees, the CAT Fees set forth in this fee filing would be in effect until the automatic sunset date, as discussed below. (See Section 3(a)(2)(E) below)

- *Bifurcated Funding Model.* The CAT NMS Plan requires a bifurcated funding model, where costs associated with building and operating the CAT would be borne by (1) Participants and Industry Members that are Execution Venues for Eligible Securities through fixed tier fees based on market share,

and (2) Industry Members (other than alternative trading systems (“ATSs”) that execute transactions in Eligible Securities (“Execution Venue ATSs”)) through fixed tier fees based on message traffic for Eligible Securities. (See Section 3(a)(2) below)

- *Industry Member Fees.* Each Industry Member (other than Execution Venue ATSs) will be placed into one of seven tiers of fixed fees, based on “message traffic” in Eligible Securities for a defined period (as discussed below). Prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT. Industry Members with lower levels of message traffic will pay a lower fee and Industry Members with higher levels of message traffic will pay a higher fee. To avoid disincentives to quoting behavior, Options Market Maker and equity market maker quotes will be discounted when calculating message traffic. (See Section 3(a)(2)(B) below)

- *Execution Venue Fees.* Each Equity Execution Venue will be placed in one of four tiers of fixed fees based on market share, and each Options Execution Venue will be placed in one of two tiers of fixed fees based on market share. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue’s proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period. For purposes of calculating market share, the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF will be discounted. Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue’s proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period. Equity Execution Venues with a larger market share will pay a larger CAT Fee than Equity Execution Venues with a smaller market share. Similarly, Options Execution Venues with a larger market share will pay a larger CAT Fee than Options Execution Venues with a smaller market share. (See Section 3(a)(2)(C) below)

- *Cost Allocation.* For the reasons discussed below, in designing the

²⁶ For a summary of comments, see generally Securities Exchange Act Rel. No. 81067 (June 30, 2017), 82 FR 31656 (July 7, 2017) (“Suspension Order”).

²⁷ Suspension Order.

²⁸ See Letter from Stuart J. Kaswell, Executive Vice President, Managing Director and General Counsel, Managed Funds Association, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“MFA Letter”); Letter from Theodore R. Lazo, Managing Director and Associate General Counsel, SIFMA, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“SIFMA Letter”); Joanna Mallers, Secretary, FIA Principal Traders Group, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“FIA Principal Traders Group Letter”); Letter from Kevin Coleman, General Counsel & Chief Compliance Officer, Belvedere Trading LLC, to Brent J. Fields, Secretary, SEC (July 28, 2017) (“Belvedere Letter”); Letter from W. Hardy Callcott, Sidley Austin LLP, to Brent J. Fields, Secretary, SEC (July 27, 2017) (“Sidley Letter”); Letter from John Kinahan, Chief Executive Officer, Group One Trading, L.P., to Brent J. Fields, Secretary, SEC (Aug. 10, 2017) (“Group One Letter”); and Letter from Joseph Molluso, Executive Vice President, Virtu Financial, to Brent J. Fields, Secretary, SEC (Aug. 18, 2017) (“Virtu Financial Letter”).

model, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSS) and 25 percent would be allocated to Execution Venues. In addition, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. (See Section 3(a)(2)(D) below)

- *Comparability of Fees.* The CAT funding model charges CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) comparable CAT Fees. (See Section 3(a)(2)(F) below)

(B) CAT Fees for Industry Members

- *Fee Schedule.* The quarterly CAT Fees for each tier for Industry Members are set forth in the two fee schedules in the Consolidated Audit Trail Funding Fees, one for Equity ATSS and one for Industry Members other than Equity ATSS. (See Section 3(a)(3)(B) below)

- *Quarterly Invoices.* Industry Members will be billed quarterly for CAT Fees, with the invoices payable within 30 days. The quarterly invoices will identify within which tier the Industry Member falls. (See Section 3(a)(3)(C) below)

- *Centralized Payment.* Each Industry Member will receive from the Company one invoice for its applicable CAT Fees, not separate invoices from each Participant of which it is a member. Each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Operating Committee. (See Section 3(a)(3)(C) below)

- *Billing Commencement.* Industry Members will begin to receive invoices for CAT Fees as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(G) below)

- *Sunset Provision.* The Consolidated Audit Trail Funding Fees will sunset automatically two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. (See Section 3(a)(2)(J) below)

(2) Description of the CAT Funding Model

Article XI of the CAT NMS Plan requires the Operating Committee to approve the operating budget, including projected costs of developing and operating the CAT for the upcoming

year. In addition to a budget, Article XI of the CAT NMS Plan provides that the Operating Committee has discretion to establish funding for the Company, consistent with a bifurcated funding model, where costs associated with building and operating the Central Repository would be borne by (1) Participants and Industry Members that are Execution Venues through fixed tier fees based on market share, and (2) Industry Members (other than Execution Venue ATSS) through fixed tier fees based on message traffic. In its order approving the CAT NMS Plan, the Commission determined that the proposed funding model was “reasonable”²⁹ and “reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT.”³⁰

More specifically, the Commission stated in approving the CAT NMS Plan that “[t]he Commission believes that the proposed funding model is reasonably designed to allocate the costs of the CAT between the Participants and Industry Members.”³¹ The Commission further noted the following:

The Commission believes that the proposed funding model reflects a reasonable exercise of the Participants’ funding authority to recover the Participants’ costs related to the CAT. The CAT is a regulatory facility jointly owned by the Participants and . . . the Exchange Act specifically permits the Participants to charge their members fees to fund their self-regulatory obligations. The Commission further believes that the proposed funding model is designed to impose fees reasonably related to the Participants’ self-regulatory obligations because the fees would be directly associated with the costs of establishing and maintaining the CAT, and not unrelated SRO services.³²

Accordingly, the funding model approved by the Operating Committee imposes fees on both Participants and Industry Members.

As discussed in Appendix C of the CAT NMS Plan, in developing and approving the approved funding model, the Operating Committee considered the advantages and disadvantages of a variety of alternative funding and cost allocation models before selecting the proposed model.³³ After analyzing the various alternatives, the Operating Committee determined that the proposed tiered, fixed fee funding

model provides a variety of advantages in comparison to the alternatives.

In particular, the fixed fee model, as opposed to a variable fee model, provides transparency, ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes. Additionally, a strictly variable or metered funding model based on message volume would be far more likely to affect market behavior and place an inappropriate burden on competition.

In addition, reviews from varying time periods of current broker-dealer order and trading data submitted under existing reporting requirements showed a wide range in activity among broker-dealers, with a number of broker-dealers submitting fewer than 1,000 orders per month and other broker-dealers submitting millions and even billions of orders in the same period. Accordingly, the CAT NMS Plan includes a tiered approach to fees. The tiered approach helps ensure that fees are equitably allocated among similarly situated CAT Reporters and furthers the goal of lessening the impact on smaller firms.³⁴ In addition, in choosing a tiered fee structure, the Operating Committee concluded that the variety of benefits offered by a tiered fee structure, discussed above, outweighed the fact that CAT Reporters in any particular tier would pay different rates per message traffic order event or per market share (e.g., an Industry Member with the largest amount of message traffic in one tier would pay a smaller amount per order event than an Industry Member in the same tier with the least amount of message traffic). Such variation is the natural result of a tiered fee structure.³⁵ The Operating Committee considered several approaches to developing a tiered model, including defining fee tiers based on such factors as size of firm, message traffic or trading dollar volume. After analyzing the alternatives, it was concluded that the tiering should be based on message traffic which will reflect the relative impact of CAT Reporters on the CAT System.

Accordingly, the CAT NMS Plan contemplates that costs will be allocated across the CAT Reporters on a tiered

²⁹ Approval Order at 84796.

³⁰ *Id.* at 84794.

³¹ *Id.* at 84795.

³² *Id.* at 84794.

³³ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

³⁴ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

³⁵ Moreover, as the SEC noted in approving the CAT NMS Plan, “[t]he Participants also have offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be easier to implement.” Approval Order at 84796.

basis in order to allocate higher costs to those CAT Reporters that contribute more to the costs of creating, implementing and maintaining the CAT and lower costs to those that contribute less.³⁶ The fees to be assessed at each tier are calculated so as to recoup a proportion of costs appropriate to the message traffic or market share (as applicable) from CAT Reporters in each tier. Therefore, Industry Members generating the most message traffic will be in the higher tiers, and will be charged a higher fee. Industry Members with lower levels of message traffic will be in lower tiers and will be assessed a smaller fee for the CAT.³⁷ Correspondingly, Execution Venues with the highest market shares will be in the top tier, and will be charged higher fees. Execution Venues with the lowest market shares will be in the lowest tier and will be assessed smaller fees for the CAT.³⁸

The CAT NMS Plan states that Industry Members (other than Execution Venue ATSS) will be charged based on message traffic, and that Execution Venues will be charged based on market share.³⁹ While there are multiple factors that contribute to the cost of building, maintaining and using the CAT, processing and storage of incoming message traffic is one of the most significant cost drivers for the CAT.⁴⁰ Thus, the CAT NMS Plan provides that the fees payable by Industry Members (other than Execution Venue ATSS) will be based on the message traffic generated by such Industry Member.⁴¹

In contrast to Industry Members, which determine the degree to which they produce message traffic that constitute CAT Reportable Events, the CAT Reportable Events of the Execution Venues are largely derivative of quotations and orders received from Industry Members that they are required to display. The business model for Execution Venues (other than FINRA), however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Focusing on message traffic would make it more difficult to draw distinctions between large and small Execution Venues and, in particular, between large and small options

exchanges. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁴² Given the resulting concentration of options exchanges in Tiers 1 and 2 under this approach, the analysis shows that a funding model for Execution Venues based on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed fee approach that bases fees for Execution Venues on market share.

The CAT NMS Plan's funding model also is structured to avoid a "reduction in market quality."⁴³ The tiered, fixed fee funding model is designed to limit the disincentives to providing liquidity to the market. For example, the Operating Committee expects that a firm that has a large volume of quotes would likely be categorized in one of the upper tiers, and would not be assessed a fee for this traffic directly as they would under a more directly metered model. In contrast, strictly variable or metered funding models based on message volume are far more likely to affect market behavior. In approving the CAT NMS Plan, the SEC stated that "[t]he Participants also offered a reasonable basis for establishing a funding model based on broad tiers, in that it may be . . . less likely to have an incremental deterrent effect on liquidity provision."⁴⁴

The funding model also is structured to avoid a reduction market quality because it discounts Options Market Maker and equity market maker quotes when calculating message traffic for Options Market Makers and equity market makers, respectively. As discussed in more detail below, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by

the trade to quote ratio for equities when calculating message traffic for equity market makers. The proposed discounts recognize the value of the market makers' quoting activity to the market as a whole.

The CAT NMS Plan is further structured to avoid potential conflicts raised by the Operating Committee determining fees applicable to its own members—the Participants. First, the Company will operate on a "break-even" basis, with fees imposed to cover costs and an appropriate reserve. Any surpluses will be treated as an operational reserve to offset future fees and will not be distributed to the Participants as profits.⁴⁵ To ensure that the Participants' operation of the CAT will not contribute to the funding of their other operations, Section 11.1(c) of the CAT NMS Plan specifically states that "[a]ny surplus of the Company's revenues over its expenses shall be treated as an operational reserve to offset future fees." In addition, as set forth in Article VIII of the CAT NMS Plan, the Company "intends to operate in a manner such that it qualifies as a 'business league' within the meaning of Section 501(c)(6) of the [Internal Revenue] Code." To qualify as a business league, an organization must "not [be] organized for profit and no part of the net earnings of [the organization can] inure[] to the benefit of any private shareholder or individual."⁴⁶ As the SEC stated when approving the CAT NMS Plan, "the Commission believes that the Company's application for Section 501(c)(6) business league status addresses issues raised by commenters about the Plan's proposed allocation of profit and loss by mitigating concerns that the Company's earnings could be used to benefit individual Participants."⁴⁷ The Internal Revenue Service recently has determined that the Company is exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code.

The funding model also is structured to take into account distinctions in the securities trading operations of Participants and Industry Members. For example, the Operating Committee designed the model to address the different trading characteristics in the OTC Equity Securities market. Specifically, the Operating Committee proposes to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by

the average shares per trade ratio between NMS Stocks and OTC Equity Securities to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks. In addition, the Operating Committee also proposes to discount Options Market Maker and equity market maker message traffic in recognition of their role in the securities markets. Furthermore, the funding model creates separate tiers for Equity and Options Execution Venues due to the different trading characteristics of those markets.

Finally, by adopting a CAT-specific fee, the Operating Committee will be fully transparent regarding the costs of the CAT. Charging a general regulatory fee, which would be used to cover CAT costs as well as other regulatory costs, would be less transparent than the selected approach of charging a fee designated to cover CAT costs only.

A full description of the funding model is set forth below. This description includes the framework for the funding model as set forth in the CAT NMS Plan, as well as the details as to how the funding model will be applied in practice, including the number of fee tiers and the applicable fees for each tier. The complete funding model is described below, including those fees that are to be paid by the Participants. The proposed Consolidated Audit Trail Funding Fees, however, do not apply to the Participants; the proposed Consolidated Audit Trail Funding Fees only apply to Industry Members. The CAT Fees for Participants will be imposed separately by the Operating Committee pursuant to the CAT NMS Plan.

(A) Funding Principles

Section 11.2 of the CAT NMS Plan sets forth the principles that the Operating Committee applied in establishing the funding for the Company. The Operating Committee has considered these funding principles as well as the other funding requirements set forth in the CAT NMS Plan and in Rule 613 in developing the proposed funding model. The following are the funding principles in Section 11.2 of the CAT NMS Plan:

- To create transparent, predictable revenue streams for the Company that are aligned with the anticipated costs to build, operate and administer the CAT and other costs of the Company;
- To establish an allocation of the Company's related costs among Participants and Industry Members that is consistent with the Exchange Act,

taking into account the timeline for implementation of the CAT and distinctions in the securities trading operations of Participants and Industry Members and their relative impact upon the Company's resources and operations;

- To establish a tiered fee structure in which the fees charged to: (i) CAT Reporters that are Execution Venues, including ATSS, are based upon the level of market share; (ii) Industry Members' non-ATS activities are based upon message traffic; (iii) the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members);

- To provide for ease of billing and other administrative functions;
- To avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality; and
- To build financial stability to support the Company as a going concern.

(B) Industry Member Tiering

Under Section 11.3(b) of the CAT NMS Plan, the Operating Committee is required to establish fixed fees to be payable by Industry Members, based on message traffic generated by such Industry Member, with the Operating Committee establishing at least five and no more than nine tiers.

The CAT NMS Plan clarifies that the fixed fees payable by Industry Members pursuant to Section 11.3(b) shall, in addition to any other applicable message traffic, include message traffic generated by: (i) An ATS that does not execute orders that is sponsored by such Industry Member; and (ii) routing orders to and from any ATS sponsored by such Industry Member. In addition, the Industry Member fees will apply to Industry Members that act as routing broker-dealers for exchanges. The Industry Member fees will not be applicable, however, to an ATS that qualifies as an Execution Venue, as discussed in more detail in the section on Execution Venue tiering.

In accordance with Section 11.3(b), the Operating Committee approved a tiered fee structure for Industry Members (other than Execution Venue ATSS) as described in this section. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create

funding tiers that take into account the relative impact on CAT System resources of different Industry Members, and that establish comparable fees among the CAT Reporters with the most Reportable Events. The Operating Committee has determined that establishing seven tiers results in an allocation of fees that distinguishes between Industry Members with differing levels of message traffic. Thus, each such Industry Member will be placed into one of seven tiers of fixed fees, based on "message traffic" for a defined period (as discussed below).

A seven tier structure was selected to provide a wide range of levels for tiering Industry Members such that Industry Members submitting significantly less message traffic to the CAT would be adequately differentiated from Industry Members submitting substantially more message traffic. The Operating Committee considered historical message traffic from multiple time periods, generated by Industry Members across all exchanges and as submitted to FINRA's Order Audit Trail System ("OATS"), and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, charging those firms with higher impact on the CAT more, while lowering the burden on Industry Members that have less CAT-related activity. Furthermore, the selection of seven tiers establishes comparable fees among the largest CAT Reporters.

Each Industry Member (other than Execution Venue ATSS) will be ranked by message traffic and tiered by predefined Industry Member percentages (the "Industry Member Percentages"). The Operating Committee determined to use predefined percentages rather than fixed volume thresholds to ensure that the total CAT Fees collected recover the expected CAT costs regardless of changes in the total level of message traffic. To determine the fixed percentage of Industry Members in each tier, the Operating Committee analyzed historical message traffic generated by Industry Members across all exchanges and as submitted to OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee identified seven tiers that would group firms with similar levels of message traffic.

The percentage of costs recovered by each Industry Member tier will be

determined by predefined percentage allocations (the "Industry Member Recovery Allocation"). In determining the fixed percentage allocation of costs recovered for each tier, the Operating Committee considered the impact of CAT Reporter message traffic on the CAT System as well as the distribution of total message volume across Industry Members while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the determination of the percentage of Industry Members in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical message traffic upon which Industry Members had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of costs recovered for each tier were assigned, allocating higher percentages of recovery to tiers with higher levels of message traffic while avoiding any inappropriate

burden on competition. Furthermore, by using percentages of Industry Members and costs recovered per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Industry Members or the total level of message traffic.

The following chart illustrates the breakdown of seven Industry Member tiers across the monthly average of total equity and equity options orders, cancels, quotes and executions in the second quarter of 2017 as well as message traffic thresholds between the largest of Industry Member message traffic gaps. The Operating Committee referenced similar distribution illustrations to determine the appropriate division of Industry Member percentages in each tier by considering the grouping of firms with similar levels of message traffic and seeking to identify relative breakpoints in the message traffic between such

groupings. In reviewing the chart and its corresponding table, note that while these distribution illustrations were referenced to help differentiate between Industry Member tiers, the proposed funding model is driven by fixed percentages of Industry Members across tiers to account for fluctuating levels of message traffic over time. This approach also provides financial stability for the CAT by ensuring that the funding model will recover the required amounts regardless of changes in the number of Industry Members or the amount of message traffic. Actual messages in any tier will vary based on the actual traffic in a given measurement period, as well as the number of firms included in the measurement period. The Industry Member Percentages and Industry Member Recovery Allocation for each tier will remain fixed with each Industry Member's tier to be reassigned periodically, as described below in Section 3(a)(2)(I).

Industry Member tier	Approximate message traffic per Industry Member (Q2 2017) (orders, quotes, cancels and executions)
Tier 1	>10,000,000,000
Tier 2	1,000,000,000–10,000,000,000
Tier 3	100,000,000–1,000,000,000
Tier 4	1,000,000–100,000,000
Tier 5	100,000–1,000,000
Tier 6	10,000–100,000
Tier 7	<10,000

Based on the above analysis, the Operating Committee approved the following Industry Member Percentages

and Industry Member Recovery Allocations:

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

For the purposes of creating these tiers based on message traffic, the Operating Committee determined to define the term “message traffic” separately for the period before the commencement of CAT reporting and for the period after the start of CAT reporting. The different definition for message traffic is necessary as there will be no Reportable Events as defined in the Plan, prior to the commencement of CAT reporting. Accordingly, prior to the start of CAT reporting, “message traffic” will be comprised of historical equity and equity options orders, cancels, quotes and executions provided by each exchange and FINRA over the previous three months. Prior to the start of CAT reporting, orders would be comprised of the total number of equity and equity options orders received and originated by a member of an exchange or FINRA over the previous three-month period, including principal orders, cancel/replace orders, market maker orders originated by a member of an exchange, and reserve (iceberg) orders as well as executions originated by a member of FINRA, and excluding order rejects, system-modified orders, order routes and implied orders.⁴⁸ In addition, prior to the start of CAT reporting, cancels would be comprised of the total number of equity and equity option cancels received and originated by a member of an exchange or FINRA over a three-month period, excluding order modifications (e.g., order updates, order splits, partial cancels) and multiple cancels of a complex order. Furthermore, prior to the start of CAT reporting, quotes would be comprised of information readily available to the exchanges and FINRA, such as the total number of historical equity and equity

⁴⁸ Consequently, firms that do not have “message traffic” reported to an exchange or OATS before they are reporting to the CAT would not be subject to a fee until they begin to report information to CAT.

options quotes received and originated by a member of an exchange or FINRA over the prior three-month period. Additionally, prior to the start of CAT reporting, executions would be comprised of the total number of equity and equity option executions received or originated by a member of an exchange or FINRA over a three-month period.

After an Industry Member begins reporting to the CAT, “message traffic” will be calculated based on the Industry Member’s Reportable Events reported to the CAT as will be defined in the Technical Specifications.⁴⁹

Quotes of Options Market Makers and equity market makers will be included in the calculation of total message traffic for those market makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.⁵⁰ To address potential concerns regarding burdens on competition or market quality of including quotes in the calculation of message traffic, however, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic

⁴⁹ If an Industry Member (other than an Execution Venue ATS) has no orders, cancels, quotes and executions prior to the commencement of CAT Reporting, or no Reportable Events after CAT reporting commences, then the Industry Member would not have a CAT Fee obligation.

⁵⁰ The SEC approved exemptive relief permitting Options Market Maker quotes to be reported to the Central Repository by the relevant Options Exchange in lieu of requiring that such reporting be done by both the Options Exchange and the Options Market Maker, as required by Rule 613 of Regulation NMS. See Securities Exchange Act Rel. No. 77265 (Mar. 1, 2017, 81 FR 11856 (Mar. 7, 2016)). This exemption applies to Options Market Maker quotes for CAT reporting purposes only. Therefore, notwithstanding the reporting exemption provided for Options Market Maker quotes, Options Market Maker quotes will be included in the calculation of total message traffic for Options Market Makers for purposes of tiering under the CAT funding model both prior to CAT reporting and once CAT reporting commences.

for Options Market Makers. Based on available data for June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Similarly, to avoid disincentives to quoting behavior on the equities side, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, the trade to quote ratio for equities is 5.43%.⁵¹ The trade to quote ratio for options and the trade to quote ratio for equities will be calculated every three months when tiers are recalculated (as discussed below).

The Operating Committee has determined to calculate fee tiers every three months, on a calendar quarter basis, based on message traffic from the prior three months. Based on its analysis of historical data, the Operating Committee believes that calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Industry Members while still providing predictability in the tiering for Industry Members. Because fee tiers will be calculated based on message traffic from the prior three months, the Operating Committee will begin calculating message traffic based on an Industry Member’s Reportable Events reported to the CAT once the Industry Member has been reporting to the CAT for three months. Prior to that, fee tiers will be calculated as discussed above with regard to the period prior to CAT reporting.

(C) Execution Venue Tiering

Under Section 11.3(a) of the CAT NMS Plan, the Operating Committee is

⁵¹ The trade to quote ratios were calculated based on the inverse of the average of the monthly equity SIP and OPRA quote to trade ratios from June 2016—June 2017 that were compiled by the Financial Information Forum using data from NASDAQ and SIAC.

required to establish fixed fees payable by Execution Venues. Section 1.1 of the CAT NMS Plan defines an Execution Venue as “a Participant or an alternative trading system (“ATS”) (as defined in Rule 300 of Regulation ATS) that operates pursuant to Rule 301 of Regulation ATS (excluding any such ATS that does not execute orders).”⁵²

The Operating Committee determined that ATSs should be included within the definition of Execution Venue. The Operating Committee believes that it is appropriate to treat ATSs as Execution Venues under the proposed funding model since ATSs have business models that are similar to those of exchanges, and ATSs also compete with exchanges.

Given the differences between Execution Venues that trade NMS Stocks and/or OTC Equity Securities and Execution Venues that trade Listed Options, Section 11.3(a) addresses Execution Venues that trade NMS Stocks and/or OTC Equity Securities separately from Execution Venues that trade Listed Options. Equity and Options Execution Venues are treated separately for two reasons. First, the differing quoting behavior of Equity and Options Execution Venues makes comparison of activity between such Execution Venues difficult. Second, Execution Venue tiers are calculated based on market share of share volume, and it is therefore difficult to compare market share between asset classes (*i.e.*, equity shares versus options contracts). Discussed below is how the funding model treats the two types of Execution Venues.

(I) NMS Stocks and OTC Equity Securities

Section 11.3(a)(i) of the CAT NMS Plan states that each Execution Venue that (i) executes transactions or, (ii) in the case of a national securities association, has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange, in NMS Stocks or OTC Equity Securities will pay a fixed fee depending on the market share of that Execution Venue in NMS Stocks and OTC Equity Securities, with the Operating Committee establishing at least two and not more than five tiers of fixed fees, based on an Execution Venue’s NMS Stocks and OTC Equity Securities market share. For these purposes, market share for Execution Venues that execute transactions will be calculated by share

volume, and market share for a national securities association that has trades reported by its members to its trade reporting facility or facilities for reporting transactions effected otherwise than on an exchange in NMS Stocks or OTC Equity Securities will be calculated based on share volume of trades reported, provided, however, that the share volume reported to such national securities association by an Execution Venue shall not be included in the calculation of such national security association’s market share.

In accordance with Section 11.3(a)(i) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Equity Execution Venues and Option Execution Venues. In determining the Equity Execution Venue Tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Equity Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Equity Execution Venue will be placed into one of four tiers of fixed fees, based on the Execution Venue’s NMS Stocks and OTC Equity Securities market share. In choosing four tiers, the Operating Committee performed an analysis similar to that discussed above with regard to the non-Execution Venue Industry Members to determine the number of tiers for Equity Execution Venues. The Operating Committee determined to establish four tiers for Equity Execution Venues, rather than a larger number of tiers as established for non-Execution Venue Industry Members, because the four tiers were sufficient to distinguish between the smaller number of Equity Execution Venues based on market share. Furthermore, the selection of four tiers serves to help establish comparability among the largest CAT Reporters.

Each Equity Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the “Equity Execution Venue Percentages”). In determining the fixed percentage of Equity Execution Venues in each tier, the Operating Committee reviewed historical market share of share volume for Execution Venues. Equity Execution Venue market shares of share volume were sourced from market statistics made publicly-available by Bats Global Markets, Inc. (“Bats”). ATS market shares of share volume was sourced from market statistics made publicly-available by FINRA. FINRA trade reporting facility

(“TRF”) and ORF market share of share volume was sourced from market statistics made publicly available by FINRA. Based on data from FINRA and otcmrkt.com, ATSs accounted for 39.12% of the share volume across the TRFs and ORFs during the recent tiering period. A 39.12/60.88 split was applied to the ATS and non-ATS breakdown of FINRA market share, with FINRA tiered based only on the non-ATS portion of its market share of share volume.

The Operating Committee determined to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF in recognition of the different trading characteristics of the OTC Equity Securities market as compared to the market in NMS Stocks. Many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—per share and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSs exclusively trading OTC Equity Securities and FINRA would likely be subject to higher tiers than their operations may warrant. To address this potential concern, the Operating Committee determined to discount the market share of Execution Venue ATSs exclusively trading OTC Equity Securities and the market share of the FINRA ORF by multiplying such market share by the average shares per trade ratio between NMS Stocks and OTC Equity Securities in order to adjust for the greater number of shares being traded in the OTC Equity Securities market. Based on available data for the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.⁵³ The average shares per trade ratio between NMS Stocks and OTC Equity Securities will be recalculated every three months when tiers are recalculated.

Based on this, the Operating Committee considered the distribution of Execution Venues, and grouped together Execution Venues with similar levels of market share. The percentage of costs recovered by each Equity

⁵² Although FINRA does not operate an execution venue, because it is a Participant, it is considered an “Execution Venue” under the Plan for purposes of determining fees.

⁵³ The average shares per trade ratio for both NMS Stocks and OTC Equity Securities from the second quarter of 2017 was calculated using publicly available market volume data from Bats and OTC Markets Group, and the totals were divided to determine the average number of shares per trade between NMS Stocks and OTC Equity Securities.

Execution Venue tier will be determined by predefined percentage allocations (the “Equity Execution Venue Recovery Allocation”). In determining the fixed percentage allocation of costs to be recovered from each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Equity Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Accordingly, following the

determination of the percentage of Execution Venues in each tier, the Operating Committee identified the percentage of total market volume for each tier based on the historical market share upon which Execution Venues had been initially ranked. Taking this into account along with the resulting percentage of total recovery, the percentage allocation of cost recovery for each tier were assigned, allocating higher percentages of recovery to the tier with a higher level of market share while avoiding any inappropriate

burden on competition. Furthermore, by using percentages of Equity Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Equity Execution Venues or changes in market share.

Based on this analysis, the Operating Committee approved the following Equity Execution Venue Percentages and Recovery Allocations:

Equity Execution Venue tier	Percentage of Equity Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	25.00	33.25	8.31
Tier 2	42.00	25.73	6.43
Tier 3	23.00	8.00	2.00
Tier 4	10.00	0.02	0.01
Total	100	67	16.75

(II) Listed Options

Section 11.3(a)(ii) of the CAT NMS Plan states that each Execution Venue that executes transactions in Listed Options will pay a fixed fee depending on the Listed Options market share of that Execution Venue, with the Operating Committee establishing at least two and no more than five tiers of fixed fees, based on an Execution Venue’s Listed Options market share. For these purposes, market share will be calculated by contract volume.

In accordance with Section 11.3(a)(ii) of the CAT NMS Plan, the Operating Committee approved a tiered fee structure for Options Execution Venues. In determining the tiers, the Operating Committee considered the funding principles set forth in Section 11.2 of the CAT NMS Plan, seeking to create funding tiers that take into account the relative impact on system resources of different Options Execution Venues, and that establish comparable fees among the CAT Reporters with the most Reportable Events. Each Options Execution Venue will be placed into one of two tiers of fixed fees, based on the Execution Venue’s Listed Options market share. In choosing two tiers, the Operating Committee performed an analysis similar to that discussed above with regard to Industry Members (other than Execution Venue ATSS) to

determine the number of tiers for Options Execution Venues. The Operating Committee determined to establish two tiers for Options Execution Venues, rather than a larger number, because the two tiers were sufficient to distinguish between the smaller number of Options Execution Venues based on market share. Furthermore, due to the smaller number of Options Execution Venues, the incorporation of additional Options Execution Venue tiers would result in significantly higher fees for Tier 1 Options Execution Venues and reduce comparability between Execution Venues and Industry Members. Furthermore, the selection of two tiers served to establish comparable fees among the largest CAT Reporters.

Each Options Execution Venue will be ranked by market share and tiered by predefined Execution Venue percentages, (the “Options Execution Venue Percentages”). To determine the fixed percentage of Options Execution Venues in each tier, the Operating Committee analyzed the historical and publicly available market share of Options Execution Venues to group Options Execution Venues with similar market shares across the tiers. Options Execution Venue market share of share volume were sourced from market statistics made publicly-available by

Bats. The process for developing the Options Execution Venue Percentages was the same as discussed above with regard to Equity Execution Venues.

The percentage of costs to be recovered from each Options Execution Venue tier will be determined by predefined percentage allocations (the “Options Execution Venue Recovery Allocation”). In determining the fixed percentage allocation of cost recovery for each tier, the Operating Committee considered the impact of CAT Reporter market share activity on the CAT System as well as the distribution of total market volume across Options Execution Venues while seeking to maintain comparable fees among the largest CAT Reporters. Furthermore, by using percentages of Options Execution Venues and cost recovery per tier, the Operating Committee sought to include elasticity within the funding model, allowing the funding model to respond to changes in either the total number of Options Execution Venues or changes in market share. The process for developing the Options Execution Venue Recovery Allocation was the same as discussed above with regard to Equity Execution Venues.

Based on this analysis, the Operating Committee approved the following Options Execution Venue Percentages and Recovery Allocations:

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 1	75.00	28.25	7.06

Options Execution Venue tier	Percentage of Options Execution Venues	Percentage of Execution Venue recovery	Percentage of total recovery
Tier 2	25.00	4.75	1.19
Total	100	33	8.25

(III) Market Share/Tier Assignments

The Operating Committee determined that, prior to the start of CAT reporting, market share for Execution Venues would be sourced from publicly-available market data. Options and equity volumes for Participants will be sourced from market data made publicly available by Bats while Execution Venue ATS volumes will be sourced from market data made publicly available by FINRA and OTC Markets. Set forth in the Appendix are two charts, one listing the current Equity Execution Venues, each with its rank and tier, and one listing the current Options Execution Venues, each with its rank and tier.

After the commencement of CAT reporting, market share for Execution Venues will be sourced from data reported to the CAT. Equity Execution Venue market share will be determined by calculating each Equity Execution Venue's proportion of the total volume of NMS Stock and OTC Equity shares reported by all Equity Execution Venues during the relevant time period (with the discounting of market share of Execution Venue ATSs exclusively trading OTC Equity Securities, as described above). Similarly, market share for Options Execution Venues will be determined by calculating each Options Execution Venue's proportion of the total volume of Listed Options contracts reported by all Options Execution Venues during the relevant time period.

The Operating Committee has determined to calculate fee tiers for Execution Venues every three months based on market share from the prior three months. Based on its analysis of historical data, the Operating Committee believes calculating tiers based on three months of data will provide the best balance between reflecting changes in activity by Execution Venues while still providing predictability in the tiering for Execution Venues.

(D) Allocation of Costs

In addition to the funding principles discussed above, including comparability of fees, Section 11.1(c) of the CAT NMS Plan also requires expenses to be fairly and reasonably shared among the Participants and

Industry Members. Accordingly, in developing the proposed fee schedules pursuant to the funding model, the Operating Committee calculated how the CAT costs would be allocated between Industry Members and Execution Venues, and how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. These determinations are described below.

(I) Allocation Between Industry Members and Execution Venues

In determining the cost allocation between Industry Members (other than Execution Venue ATSs) and Execution Venues, the Operating Committee analyzed a range of possible splits for revenue recovery from such Industry Members and Execution Venues, including 80%/20%, 75%/25%, 70%/30% and 65%/35% allocations. Based on this analysis, the Operating Committee determined that 75 percent of total costs recovered would be allocated to Industry Members (other than Execution Venue ATSs) and 25 percent would be allocated to Execution Venues. The Operating Committee determined that this 75%/25% division maintained the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1).

Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members versus CAT Reporters that are Execution Venues. Specifically, the cost allocation takes into consideration that there are approximately 23 times more Industry Members expected to report to the CAT than Execution Venues (*e.g.*, an estimated 1541 Industry Members versus 67 Execution Venues as of June 2017).

(II) Allocation Between Equity Execution Venues and Options Execution Venues

The Operating Committee also analyzed how the portion of CAT costs allocated to Execution Venues would be allocated between Equity Execution Venues and Options Execution Venues. In considering this allocation of costs, the Operating Committee analyzed a range of alternative splits for revenue recovered between Equity and Options Execution Venues, including a 70%/30%, 67%/33%, 65%/35%, 50%/50% and 25%/75% split. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67%/33% allocation between Equity and Options Execution Venues maintained the greatest level of fee equitability and comparability based on the current number of Equity and Options Execution Venues. For example, the allocation establishes fees for the larger Equity Execution Venues that are comparable to the larger Options Execution Venues. Specifically, Tier 1 Equity Execution Venues would pay a quarterly fee of \$81,047 and Tier 1 Options Execution Venues would pay a quarterly fee of \$81,379. In addition to fee comparability between Equity Execution Venues and Options Execution Venues, the allocation also establishes equitability between larger (Tier 1) and smaller (Tier 2) Execution Venues based upon the level of market share. Furthermore, the allocation is intended to reflect the relative levels of current equity and options order events.

(E) Fee Levels

The Operating Committee determined to establish a CAT-specific fee to collectively recover the costs of building and operating the CAT. Accordingly, under the funding model, the sum of the CAT Fees is designed to recover the total cost of the CAT. The Operating Committee has determined overall CAT costs to be comprised of Plan Processor costs and non-Plan Processor costs, which are estimated to be \$50,700,000

in total for the year beginning November 21, 2016.⁵⁴

The Plan Processor costs relate to costs incurred and to be incurred through November 21, 2017 by the Plan Processor and consist of the Plan Processor's current estimates of average yearly ongoing costs, including development costs, which total \$37,500,000. This amount is based upon the fees due to the Plan Processor pursuant to the Company's agreement with the Plan Processor.

The non-Plan Processor estimated costs incurred and to be incurred by the Company through November 21, 2017 consist of three categories of costs. The first category of such costs are third party support costs, which include legal

fees, consulting fees and audit fees from November 21, 2016 until the date of filing as well as estimated third party support costs for the rest of the year. These amount to an estimated \$5,200,000. The second category of non-Plan Processor costs are estimated cyber-insurance costs for the year. Based on discussions with potential cyber-insurance providers, assuming \$2-5 million cyber-insurance premium on \$100 million coverage, the Company has estimated \$3,000,000 for the annual cost. The final cost figures will be determined following receipt of final underwriter quotes. The third category of non-Plan Processor costs is the CAT operational reserve, which is comprised of three months of ongoing Plan

Processor costs (\$9,375,000), third party support costs (\$1,300,000) and cyber-insurance costs (\$750,000). The Operating Committee aims to accumulate the necessary funds to establish the three-month operating reserve for the Company through the CAT Fees charged to CAT Reporters for the year. On an ongoing basis, the Operating Committee will account for any potential need to replenish the operating reserve or other changes to total cost during its annual budgeting process. The following table summarizes the Plan Processor and non-Plan Processor cost components which comprise the total estimated CAT costs of \$50,700,000 for the covered period.

Cost category	Cost component	Amount
Plan Processor	Operational Costs	\$37,500,000
	Third Party Support Costs	5,200,000
Non-Plan Processor	Operational Reserve	⁵⁵ 5,000,000
	Cyber-insurance Costs	3,000,000
	Estimated Total	50,700,000

Based on these estimated costs and the calculations for the funding model described above, the Operating Committee determined to impose the following fees:⁵⁶

For Industry Members (other than Execution Venue ATSS):

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

For Execution Venues for NMS Stocks and OTC Equity Securities:

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

For Execution Venues for Listed Options:

Tier	Percentage of Options Execution Venues	Quarterly CAT fee
1	75.00	\$81,381
2	25.00	37,629

The Operating Committee has calculated the schedule of effective fees for Industry Members (other than Execution Venue ATSS) and Execution Venues in the following manner. Note that the calculation of CAT Fees assumes 52 Equity Execution Venues, 15 Options Execution Venues and 1,541 Industry Members (other than Execution Venue ATSS) as of June 2017.

CALCULATION OF ANNUAL TIER FEES FOR INDUSTRY MEMBERS ["IM"]

Industry Member tier	Percentage of Industry Members	Percentage of Industry Member recovery	Percentage of total recovery
Tier 1	0.900	12.00	9.00
Tier 2	2.150	20.50	15.38
Tier 3	2.800	18.50	13.88
Tier 4	7.750	32.00	24.00
Tier 5	8.300	10.00	7.50
Tier 6	18.800	6.00	4.50
Tier 7	59.300	1.00	0.75
Total	100	100	75

⁵⁴ It is anticipated that CAT-related costs incurred prior to November 21, 2016 will be addressed via a separate filing.

⁵⁵ This \$5,000,000 represents the gradual accumulation of the funds for a target operating reserve of \$11,425,000.

⁵⁶ Note that all monthly, quarterly and annual CAT Fees have been rounded to the nearest dollar.

Industry Member tier	Estimated number of Industry Members
Tier 1	14

Total				50,700,000
Excess ⁵⁷				7,656

(F) Comparability of Fees

The funding principles require a funding model in which the fees charged to the CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as

applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). Accordingly, in creating the model, the Operating Committee sought to establish comparable fees for the top tier of Industry Members (other than

Execution Venue ATSS), Equity Execution Venues and Options Execution Venues. Specifically, each Tier 1 CAT Reporter would be required to pay a quarterly fee of approximately \$81,000.

(G) Billing Onset

Under Section 11.1(c) of the CAT NMS Plan, to fund the development and

⁵⁷ The amount in excess of the total CAT costs will contribute to the gradual accumulation of the target operating reserve of \$11.425 million.

implementation of the CAT, the Company shall time the imposition and collection of all fees on Participants and Industry Members in a manner reasonably related to the timing when the Company expects to incur such development and implementation costs. The Company is currently incurring such development and implementation costs and will continue to do so prior to the commencement of CAT reporting and thereafter. In accordance with the CAT NMS Plan, all CAT Reporters, including both Industry Members and Execution Venues (including Participants), will be invoiced as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the Plan amendment adopting CAT Fees for Participants.

(H) Changes to Fee Levels and Tiers

Section 11.3(d) of the CAT NMS Plan states that “[t]he Operating Committee shall review such fee schedule on at least an annual basis and shall make any changes to such fee schedule that it deems appropriate. The Operating Committee is authorized to review such fee schedule on a more regular basis, but shall not make any changes on more than a semi-annual basis unless, pursuant to a Supermajority Vote, the Operating Committee concludes that such change is necessary for the adequate funding of the Company.” With such reviews, the Operating Committee will review the distribution of Industry Members and Execution Venues across tiers, and make any updates to the percentage of CAT Reporters allocated to each tier as may be necessary. In addition, the reviews will evaluate the estimated ongoing

CAT costs and the level of the operating reserve. To the extent that the total CAT costs decrease, the fees would be adjusted downward, and to the extent that the total CAT costs increase, the fees would be adjusted upward.⁵⁸ Furthermore, any surplus of the Company’s revenues over its expenses is to be included within the operational reserve to offset future fees. The limitations on more frequent changes to the fee, however, are intended to provide budgeting certainty for the CAT Reporters and the Company.⁵⁹ To the extent that the Operating Committee approves changes to the number of tiers in the funding model or the fees assigned to each tier, then the Operating Committee will file such changes with the SEC pursuant to Rule 608 of the Exchange Act, and the Participants will file such changes with the SEC pursuant to Section 19(b) of the Exchange Act and Rule 19b-4 thereunder, and any such changes will become effective in accordance with the requirements of those provisions.

(I) Initial and Periodic Tier Reassignments

The Operating Committee has determined to calculate fee tiers every three months based on market share or message traffic, as applicable, from the prior three months. For the initial tier assignments, the Company will calculate the relevant tier for each CAT Reporter using the three months of data prior to the commencement date. As with the initial tier assignment, for the tri-monthly reassignments, the Company will calculate the relevant tier using the three months of data prior to the relevant tri-monthly date. Any movement of CAT Reporters between tiers will not change the criteria for each

tier or the fee amount corresponding to each tier.

In performing the tri-monthly reassignments, the assignment of CAT Reporters in each assigned tier is relative. Therefore, a CAT Reporter’s assigned tier will depend, not only on its own message traffic or market share, but also on the message traffic/market share across all CAT Reporters. For example, the percentage of Industry Members (other than Execution Venue ATs) in each tier is relative such that such Industry Member’s assigned tier will depend on message traffic generated across all CAT Reporters as well as the total number of CAT Reporters. The Operating Committee will inform CAT Reporters of their assigned tier every three months following the periodic tiering process, as the funding model will compare an individual CAT Reporter’s activity to that of other CAT Reporters in the marketplace.

The following demonstrates a tier reassignment. In accordance with the funding model, the top 75% of Options Execution Venues in market share are categorized as Tier 1 while the bottom 25% of Options Execution Venues in market share are categorized as Tier 2. In the sample scenario below, Options Execution Venue L is initially categorized as a Tier 2 Options Execution Venue in Period A due to its market share. When market share is recalculated for Period B, the market share of Execution Venue L increases, and it is therefore subsequently reranked and reassigned to Tier 1 in Period B. Correspondingly, Options Execution Venue K, initially a Tier 1 Options Execution Venue in Period A, is reassigned to Tier 2 in Period B due to decreases in its market share.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue A	1	1	Options Execution Venue A	1	1
Options Execution Venue B	2	1	Options Execution Venue B	2	1
Options Execution Venue C	3	1	Options Execution Venue C	3	1
Options Execution Venue D	4	1	Options Execution Venue D	4	1
Options Execution Venue E	5	1	Options Execution Venue E	5	1
Options Execution Venue F	6	1	Options Execution Venue F	6	1
Options Execution Venue G	7	1	Options Execution Venue I	7	1
Options Execution Venue H	8	1	Options Execution Venue H	8	1
Options Execution Venue I	9	1	Options Execution Venue G	9	1
Options Execution Venue J	10	1	Options Execution Venue J	10	1
Options Execution Venue K	11	1	Options Execution Venue L	11	1
Options Execution Venue L	12	2	Options Execution Venue K	12	2
Options Execution Venue M	13	2	Options Execution Venue N	13	2
Options Execution Venue N	14	2	Options Execution Venue M	14	2

⁵⁸ The CAT Fees are designed to recover the costs associated with the CAT. Accordingly, CAT Fees would not be affected by increases or decreases in other non-CAT expenses incurred by the

Participants, such as any changes in costs related to the retirement of existing regulatory systems, such as OATS.

⁵⁹ Section B.7, Appendix C of the CAT NMS Plan, Approval Order at 85006.

Period A			Period B		
Options Execution Venue	Market share rank	Tier	Options Execution Venue	Market share rank	Tier
Options Execution Venue O	15	2	Options Execution Venue O	15	2

For each periodic tier reassignment, the Operating Committee will review the new tier assignments, particularly those assignments for CAT Reporters that shift from the lowest tier to a higher tier. This review is intended to evaluate whether potential changes to the market or CAT Reporters (e.g., dissolution of a large CAT Reporter) adversely affect the tier reassignments.

(J) Sunset Provision

The Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT. Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee determined to include an automatic sunset provision for the proposed fees. Specifically, the Operating Committee determined that the CAT Fees should automatically expire two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. The Operating Committee intends to monitor the operation of the funding model during this two year period and to evaluate its effectiveness during that period. Such a process will inform the Operating Committee’s approach to funding the CAT after the two year period.

(3) Proposed CAT Fee Schedule

SRO proposes the Consolidated Audit Trail Funding Fees to impose the CAT Fees determined by the Operating Committee on SRO’s members. The proposed fee schedule has four sections, covering definitions, the fee schedule for CAT Fees, the timing and manner of payments, and the automatic sunset of the CAT Fees. Each of these sections is discussed in detail below.

(A) Definitions

Paragraph (a) of the proposed fee schedule sets forth the definitions for the proposed fee schedule. Paragraph (a)(1) states that, for purposes of the Consolidated Audit Trail Funding Fees, the terms “CAT”, “CAT NMS Plan,” “Industry Member,” “NMS Stock,” “OTC Equity Security”, “Options

Market Maker”, and “Participant” are defined as set forth in Rule 4.5 (Consolidated Audit Trail—Definitions).

The proposed fee schedule imposes different fees on Equity ATSs and Industry Members that are not Equity ATSs. Accordingly, the proposed fee schedule defines the term “Equity ATS.” First, paragraph (a)(2) defines an “ATS” to mean an alternative trading system as defined in Rule 300(a) of Regulation ATS under the Securities Exchange Act of 1934, as amended, that operates pursuant to Rule 301 of Regulation ATS. This is the same definition of an ATS as set forth in Section 1.1 of the CAT NMS Plan in the definition of an “Execution Venue.” Then, paragraph (a)(4) defines an “Equity ATS” as an ATS that executes transactions in NMS Stocks and/or OTC Equity Securities.

Paragraph (a)(3) of the proposed fee schedule defines the term “CAT Fee” to mean the Consolidated Audit Trail Funding Fee(s) to be paid by Industry Members as set forth in paragraph (b) in the proposed fee schedule.

Finally, Paragraph (a)(6) defines an “Execution Venue” as a Participant or an ATS (excluding any such ATS that does not execute orders). This definition is the same substantive definition as set forth in Section 1.1 of the CAT NMS Plan. Paragraph (a)(5) defines an “Equity Execution Venue” as an Execution Venue that trades NMS Stocks and/or OTC Equity Securities.

(B) Fee Schedule

SRO proposes to impose the CAT Fees applicable to its Industry Members through paragraph (b) of the proposed fee schedule. Paragraph (b)(1) of the proposed fee schedule sets forth the CAT Fees applicable to Industry Members other than Equity ATSs. Specifically, paragraph (b)(1) states that the Company will assign each Industry Member (other than an Equity ATS) to a fee tier once every quarter, where such tier assignment is calculated by ranking each Industry Member based on its total message traffic (with discounts for equity market maker quotes and Options Market Maker quotes based on the trade to quote ratio for equities and options, respectively) for the three months prior to the quarterly tier calculation day and assigning each Industry Member to a tier based on that ranking and predefined

Industry Member percentages. The Industry Members with the highest total quarterly message traffic will be ranked in Tier 1, and the Industry Members with lowest quarterly message traffic will be ranked in Tier 7. Each quarter, each Industry Member (other than an Equity ATS) shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Industry Member for that quarter:

Tier	Percentage of Industry Members	Quarterly CAT fee
1	0.900	\$81,483
2	2.150	59,055
3	2.800	40,899
4	7.750	25,566
5	8.300	7,428
6	18.800	1,968
7	59.300	105

Paragraph (b)(2) of the proposed fee schedule sets forth the CAT Fees applicable to Equity ATSs.⁶⁰ These are the same fees that Participants that trade NMS Stocks and/or OTC Equity Securities will pay. Specifically, paragraph (b)(2) states that the Company will assign each Equity ATS to a fee tier once every quarter, where such tier assignment is calculated by ranking each Equity Execution Venue based on its total market share of NMS Stocks and OTC Equity Securities (with a discount for Equity ATSs exclusively trading OTC Equity Securities based on the average shares per trade ratio between NMS Stocks and OTC Equity Securities) for the three months prior to the quarterly tier calculation day and assigning each Equity ATS to a tier based on that ranking and predefined Equity Execution Venue percentages. The Equity ATSs with the higher total quarterly market share will be ranked in Tier 1, and the Equity ATSs with the lowest quarterly market share will be ranked in Tier 4. Specifically, paragraph (b)(2) states that, each quarter, each Equity ATS shall pay the following CAT Fee corresponding to the tier assigned by the Company for such Equity ATS for that quarter:

⁶⁰ Note that no fee schedule is provided for Execution Venue ATSs that execute transactions in Listed Options, as no such Execution Venue ATSs currently exist due to trading restrictions related to Listed Options.

Tier	Percentage of Equity Execution Venues	Quarterly CAT fee
1	25.00	\$81,048
2	42.00	37,062
3	23.00	21,126
4	10.00	129

(C) Timing and Manner of Payment

Section 11.4 of the CAT NMS Plan states that the Operating Committee shall establish a system for the collection of fees authorized under the CAT NMS Plan. The Operating Committee may include such collection responsibility as a function of the Plan Processor or another administrator. To implement the payment process to be adopted by the Operating Committee, paragraph (c)(1) of the proposed fee schedule states that the Company will provide each Industry Member with one invoice each quarter for its CAT Fees as determined pursuant to paragraph (b) of the proposed fee schedule, regardless of whether the Industry Member is a member of multiple self-regulatory organizations. Paragraph (c)(1) further states that each Industry Member will pay its CAT Fees to the Company via the centralized system for the collection of CAT Fees established by the Company in the manner prescribed by the Company. SRO will provide Industry Members with details regarding the manner of payment of CAT Fees by Regulatory Circular.

All CAT fees will be billed and collected centrally through the Company via the Plan Processor. Although each Participant will adopt its own fee schedule regarding CAT Fees, no CAT Fees or portion thereof will be collected by the individual Participants. Each Industry Member will receive from the Company one invoice for its applicable CAT fees, not separate invoices from each Participant of which it is a member. The Industry Members will pay the CAT Fees to the Company via the centralized system for the collection of CAT fees established by the Company.⁶¹

Section 11.4 of the CAT NMS Plan also states that Participants shall require each Industry Member to pay all applicable authorized CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). Section 11.4 further states that, if an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from

such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law. Therefore, in accordance with Section 11.4 of the CAT NMS Plan, SRO proposed to adopt paragraph (c)(2) of the proposed fee schedule. Paragraph (c)(2) of the proposed fee schedule states that each Industry Member shall pay CAT Fees within thirty days after receipt of an invoice or other notice indicating payment is due (unless a longer payment period is otherwise indicated). If an Industry Member fails to pay any such fee when due, such Industry Member shall pay interest on the outstanding balance from such due date until such fee is paid at a per annum rate equal to the lesser of: (i) The Prime Rate plus 300 basis points; or (ii) the maximum rate permitted by applicable law.

(D) Sunset Provision

The Operating Committee has determined to require that the CAT Fees automatically sunset two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Accordingly, SRO proposes paragraph (d) of the fee schedule, which states that “[t]hese Consolidated Audit Trailing Funding Fees will automatically expire two years after the operative date of the amendment of the CAT NMS Plan that adopts CAT fees for the Participants.”

(4) Changes to Prior CAT Fee Plan Amendment

The proposed funding model set forth in this Amendment is a revised version of the Original Proposal. The Commission received a number of comment letters in response to the Original Proposal.⁶² The SEC suspended the Original Proposal and instituted proceedings to determine whether to approve or disapprove it.⁶³ Pursuant to those proceedings, additional comment letters were submitted regarding the proposed funding model.⁶⁴ In developing this Amendment, the Operating Committee carefully considered these comments and made a number of changes to the Original Proposal to address these comments where appropriate.

This Amendment makes the following changes to the Original Proposal: (1) Adds two additional CAT Fee tiers for

⁶² For a description of the comments submitted in response to the Original Proposal, see Suspension Order.

⁶³ Suspension Order.

⁶⁴ See MFA Letter; SIFMA Letter; FIA Principal Traders Group Letter; Belvedere Letter; Sidley Letter; Group One Letter; and Virtu Financial Letter.

Equity Execution Venues; (2) discounts the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (calculated as 0.17% based on available data from the second quarter of 2017) when calculating the market share of Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA; (3) discounts the Options Market Maker quotes by the trade to quote ratio for options (calculated as 0.01% based on available data for June 2016 through June 2017) when calculating message traffic for Options Market Makers; (4) discounts equity market maker quotes by the trade to quote ratio for equities (calculated as 5.43% based on available data for June 2016 through June 2017) when calculating message traffic for equity market makers; (5) decreases the number of tiers for Industry Members (other than the Execution Venue ATSS) from nine to seven; (6) changes the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; (7) adjusts tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSS); (8) focuses the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities; (9) commences invoicing of CAT Reporters as promptly as possible following the latest of the operative date of the Consolidated Audit Trail Funding Fees for each of the Participants and the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants; and (10) requires the proposed fees to automatically expire two years from the operative date of the CAT NMS Plan amendment adopting CAT Fees for the Participants.

(A) Equity Execution Venues

(i) Small Equity Execution Venues

In the Original Proposal, the Operating Committee proposed to establish two fee tiers for Equity Execution Venues. The Commission and commenters raised the concern that, by establishing only two tiers, smaller Equity Execution Venues (e.g., those Equity ATSS representing less than 1% of NMS market share) would be placed in the same fee tier as larger Equity Execution Venues, thereby imposing an undue or inappropriate burden on

⁶¹ Section 11.4 of the CAT NMS Plan.

competition.⁶⁵ To address this concern, the Operating Committee proposes to add two additional tiers for Equity Execution Venues, a third tier for smaller Equity Execution Venues and a fourth tier for the smallest Equity Execution Venues.

Specifically, the Original Proposal had two tiers of Equity Execution Venues. Tier 1 required the largest Equity Execution Venues to pay a quarterly fee of \$63,375. Based on available data, these largest Equity Execution Venues were those that had equity market share of share volume greater than or equal to 1%.⁶⁶ Tier 2 required the remaining smaller Equity Execution Venues to pay a quarterly fee of \$38,820.

To address concerns about the potential for the \$38,820 quarterly fee to impose an undue burden on smaller Equity Execution Venues, the Operating Committee determined to move to a four tier structure for Equity Execution Venues. Tier 1 would continue to include the largest Equity Execution Venues by share volume (that is, based on currently available data, those with market share of equity share volume greater than or equal to one percent), and these Equity Execution Venues would be required to pay a quarterly fee of \$81,048. The Operating Committee determined to divide the original Tier 2 into three tiers. The new Tier 2 Equity Execution Venues, which would include the next largest Equity Execution Venues by equity share volume, would be required to pay a quarterly fee of \$37,062. The new Tier 3 Equity Execution Venues would be required to pay a quarterly fee of \$21,126. The new Tier 4 Equity Execution Venues, which would include the smallest Equity Execution Venues by share volume, would be required to pay a quarterly fee of \$129.

In developing the proposed four tier structure, the Operating Committee considered keeping the existing two tiers, as well as shifting to three, four or five Equity Execution Venue tiers (the maximum number of tiers permitted under the Plan), to address the concerns regarding small Equity Execution

Venues. For each of the two, three, four and five tier alternatives, the Operating Committee considered the assignment of various percentages of Equity Execution Venues to each tier as well as various percentage of Equity Execution Venue recovery allocations for each alternative. As discussed below in more detail, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the four tier alternative addressed the spectrum of different Equity Execution Venues. The Operating Committee determined that neither a two tier structure nor a three tier structure sufficiently accounted for the range of market shares of smaller Equity Execution Venues. The Operating Committee also determined that, given the limited number of Equity Execution Venues, that a fifth tier was unnecessary to address the range of market shares of the Equity Execution Venues.

By increasing the number of tiers for Equity Execution Venues and reducing the proposed CAT Fees for the smaller Equity Execution Venues, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁶⁷ The larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the reduction in the fees for the smaller Equity Execution Venues recognizes the potential burden of larger fees on smaller entities. In particular, the very small quarterly fee of \$129 for Tier 4 Equity Execution Venues reflects the fact that certain Equity Execution Venues have a very small share volume due to their typically more focused business models.

Accordingly, with this Amendment, SRO proposes to amend paragraph (b)(2) of the proposed fee schedule to add the two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(ii) Execution Venues for OTC Equity Securities

In the Original Proposal, the Operating Committee proposed to group Execution Venues for OTC Equity Securities and Execution Venues for NMS Stocks in the same tier structure. The Commission and commenters raised concerns as to whether this determination to place Execution Venues for OTC Equity Securities in the same tier structure as Execution Venues for NMS Stocks would result in an undue or inappropriate burden on competition, recognizing that the application of share volume may lead to different outcomes as applied to OTC Equity Securities and NMS Stocks.⁶⁸ To address this concern, the Operating Committee proposes to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF by the average shares per trade ratio between NMS Stocks and OTC Equity Securities (0.17% for the second quarter of 2017) in order to adjust for the greater number of shares being traded in the OTC Equity Securities market, which is generally a function of a lower per share price for OTC Equity Securities when compared to NMS Stocks.

As commenters noted, many OTC Equity Securities are priced at less than one dollar—and a significant number at less than one penny—and low-priced shares tend to trade in larger quantities. Accordingly, a disproportionately large number of shares are involved in transactions involving OTC Equity Securities versus NMS Stocks, which has the effect of overstating an Execution Venue's true market share when the Execution Venue is involved in the trading of OTC Equity Securities. Because the proposed fee tiers are based on market share calculated by share volume, Execution Venue ATSS trading OTC Equity Securities and FINRA may be subject to higher tiers than their operations may warrant.⁶⁹ The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to increase the number of Equity Execution Venue tiers, as discussed above. Second, the Operating Committee determined to discount the market share of Execution Venue ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF when calculating their tier placement. Because the disparity in share volume between Execution Venues trading in OTC

⁶⁵ See Suspension Order at 31664; SIFMA Letter at 3.

⁶⁶ Note that while these equity market share thresholds were referenced as data points to help differentiate between Equity Execution Venue tiers, the proposed funding model is directly driven not by market share thresholds, but rather by fixed percentages of Equity Execution Venues across tiers to account for fluctuating levels of market share across time. Actual market share in any tier will vary based on the actual market activity in a given measurement period, as well as the number of Equity Execution Venues included in the measurement period.

⁶⁷ Section 11.2(b) of the CAT NMS Plan.

⁶⁸ See Suspension Order at 31664–5.

⁶⁹ Suspension Order at 31664–5.

Equity Securities and NMS Stocks is based on the different number of shares per trade for OTC Equity Securities and NMS Stocks, the Operating Committee believes that discounting the share volume of such Execution Venue ATSS as well as the market share of the FINRA ORF would address the difference in shares per trade for OTC Equity Securities and NMS Stocks. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the average shares per trade ratio between NMS Stocks and OTC Equity Securities. Based on available data from the second quarter of 2017, the average shares per trade ratio between NMS Stocks and OTC Equity Securities is 0.17%.

The practical effect of applying such a discount for trading in OTC Equity Securities is to shift Execution Venue ATSS exclusively trading OTC Equity Securities to tiers for smaller Execution Venues and with lower fees. For example, under the Original Proposal, one Execution Venue ATSS exclusively trading OTC Equity Securities was placed in the first CAT Fee tier, which had a quarterly fee of \$63,375. With the imposition of the proposed tier changes and the discount, this ATSS would be ranked in Tier 3 and would owe a quarterly fee of \$21,126.

In developing the proposed discount for Equity Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA, the Operating Committee evaluated different alternatives to address the concerns related to OTC Equity Securities, including creating a separate tier structure for Execution Venues trading OTC Equity Securities (like the separate tier for Options Execution Venues) as well as the proposed discounting method for Execution Venue ATSS exclusively trading OTC Equity Securities and FINRA. For these alternatives, the Operating Committee considered how each alternative would affect the recovery allocations. In addition, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee did not adopt a separate tier structure for Equity Execution Venues trading OTC Equity Securities as they determined that the proposed discount approach appropriately addresses the concern. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the trading patterns and operations in

the OTC Equity Securities markets, and is an objective discounting method.

By increasing the number of tiers for Equity Execution Venues and imposing a discount on the market share of share volume calculation for trading in OTC Equity Securities, the Operating Committee believes that the proposed fees for Equity Execution Venues would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Equity Execution Venues, as required under the funding principles of the CAT NMS Plan.⁷⁰ As discussed above, the larger number of tiers more closely tracks the variety of sizes of equity share volume of Equity Execution Venues. In addition, the proposed discount recognizes the different types of trading operations at Equity Execution Venues trading OTC Equity Securities versus those trading NMS Stocks, thereby more closely matching the relative revenue generation by Equity Execution Venues trading OTC Equity Securities to their CAT Fees.

Accordingly, with this Amendment, SRO proposes to amend paragraph (b)(2) of the proposed fee schedule to indicate that the market share for Equity ATSS exclusively trading OTC Equity Securities as well as the market share of the FINRA ORF would be discounted. In addition, as discussed above, to address concerns related to smaller ATSS, including those that exclusively trade OTC Equity Securities, SRO proposes to amend paragraph (b)(2) of the proposed fee schedule to add two additional tiers for Equity Execution Venues, to establish the percentages and fees for Tiers 3 and 4 as described, and to revise the percentages and fees for Tiers 1 and 2 as described.

(B) Market Makers

In the Original Proposal, the Operating Committee proposed to include both Options Market Maker quotes and equities market maker quotes in the calculation of total message traffic for such market makers for purposes of tiering for Industry Members (other than Execution Venue ATSS). The Commission and commenters raised questions as to whether the proposed treatment of Options Market Maker quotes may result in an undue or inappropriate burden on competition or may lead to

a reduction in market quality.⁷¹ To address this concern, the Operating Committee determined to discount the Options Market Maker quotes by the trade to quote ratio for options when calculating message traffic for Options Market Makers. Similarly, to avoid disincentives to quoting behavior on the equities side as well, the Operating Committee determined to discount equity market maker quotes by the trade to quote ratio for equities when calculating message traffic for equities market makers.

In the Original Proposal, market maker quotes were treated the same as other message traffic for purposes of tiering for Industry Members (other than Execution Venue ATSS). Commenters noted, however, that charging Industry Members on the basis of message traffic will impact market makers disproportionately because of their continuous quoting obligations. Moreover, in the context of options market makers, message traffic would include bids and offers for every listed options strikes and series, which are not an issue for equities.⁷² The Operating Committee proposes to address this concern in two ways. First, the Operating Committee proposes to discount Options Market Maker quotes when calculating the Options Market Makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for options. Based on available data from June 2016 through June 2017, the trade to quote ratio for options is 0.01%. Second, the Operating Committee proposes to discount equities market maker quotes when calculating the equities market makers' tier placement. Specifically, the Operating Committee proposes to impose a discount based on the objective measure of the trade to quote ratio for equities. Based on available data for June 2016 through June 2017, this trade to quote ratio for equities is 5.43%.

The practical effect of applying such discounts for quoting activity is to shift market makers' calculated message traffic lower, leading to the potential shift to tiers for lower message traffic and reduced fees. Such an approach would move sixteen Industry Member CAT Reporters that are market makers to a lower tier than in the Original Proposal. For example, under the

⁷¹ See Suspension Order at 31663–4; SIFMA Letter at 4–6; FIA Principal Traders Group Letter at 3; Sidley Letter at 2–6; Group One Letter at 2–6; and Belvedere Letter at 2.

⁷² Suspension Order at 31664.

⁷⁰ Section 11.2(b) of the CAT NMS Plan.

Original Proposal, Broker-Dealer Firm ABC was placed in the first CAT Fee tier, which had a quarterly fee of \$101,004. With the imposition of the proposed tier changes and the discount, Broker-Dealer Firm ABC, an options market maker, would be ranked in Tier 3 and would owe a quarterly fee of \$40,899.

In developing the proposed market maker discounts, the Operating Committee considered various discounts for Options Market Makers and equity market makers, including discounts of 50%, 25%, 0.00002%, as well as the 5.43% for option market makers and 0.01% for equity market makers. Each of these options were considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined to adopt the proposed discount because it directly relates to the concern regarding the quoting requirement, is an objective discounting method, and has the desired potential to shift market makers to lower fee tiers.

By imposing a discount on Options Market Makers and equities market makers' quoting traffic for the calculation of message traffic, the Operating Committee believes that the proposed fees for market makers would not impose an undue or inappropriate burden on competition under Section 6 or Section 15A of the Exchange Act. Moreover, the Operating Committee believes that the proposed fees appropriately take into account the distinctions in the securities trading operations of different Industry Members, and avoid disincentives, such as a reduction in market quality, as required under the funding principles of the CAT NMS Plan.⁷³ The proposed discounts recognize the different types of trading operations presented by Options Market Makers and equities market makers, as well as the value of the market makers' quoting activity to the market as a whole. Accordingly, the Operating Committee believes that the proposed discounts will not impact the ability of small Options Market Makers or equities market makers to provide liquidity.

Accordingly, with this Amendment, SRO proposes to amend paragraph (b)(1) of the proposed fee schedule to indicate that the message traffic related to equity market maker quotes and Options Market Maker quotes would be discounted. In addition, SRO proposes to define the term "Options Market

Maker" in paragraph (a)(1) of the proposed fee schedule.

(C) Comparability/Allocation of Costs

Under the Original Proposal, 75% of CAT costs were allocated to Industry Members (other than Execution Venue ATSSs) and 25% of CAT costs were allocated to Execution Venues. This cost allocation sought to maintain the greatest level of comparability across the funding model, where comparability considered affiliations among or between CAT Reporters. The Commission and commenters expressed concerns regarding whether the proposed 75%/25% allocation of CAT costs is consistent with the Plan's funding principles and the Exchange Act, including whether the allocation places a burden on competition or reduces market quality. The Commission and commenters also questioned whether the approach of accounting for affiliations among CAT Reporters in setting CAT Fees disadvantages non-affiliated CAT Reporters or otherwise burdens competition in the market for trading services.⁷⁴

In response to these concerns, the Operating Committee determined to revise the proposed funding model to focus the comparability of CAT Fees on the individual entity level, rather than primarily on the comparability of affiliated entities. In light of the interconnected nature of the various aspects of the funding model, the Operating Committee determined to revise various aspects of the model to enhance comparability at the individual entity level. Specifically, to achieve such comparability, the Operating Committee determined to (1) decrease the number of tiers for Industry Members (other than Execution Venue ATSSs) from nine to seven; (2) change the allocation of CAT costs between Equity Execution Venues and Options Execution Venues from 75%/25% to 67%/33%; and (3) adjust tier percentages and recovery allocations for Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). With these changes, the proposed funding model provides fee comparability for the largest individual entities, with the largest Industry Members (other than Execution Venue ATSSs), Equity Execution Venues and Options Execution Venues each paying a CAT Fee of approximately \$81,000 each quarter.

(i) Number of Industry Member Tiers

In the Original Proposal, the proposed funding model had nine tiers for Industry Members (other than Execution Venue ATSSs). The Operating Committee determined that reducing the number of tiers from nine tiers to seven tiers (and adjusting the predefined Industry Member Percentages as well) continues to provide a fair allocation of fees among Industry Members and appropriately distinguishes between Industry Members with differing levels of message traffic. In reaching this conclusion, the Operating Committee considered historical message traffic generated by Industry Members across all exchanges and as submitted to FINRA's OATS, and considered the distribution of firms with similar levels of message traffic, grouping together firms with similar levels of message traffic. Based on this, the Operating Committee determined that seven tiers would group firms with similar levels of message traffic, while also achieving greater comparability in the model for the individual CAT Reporters with the greatest market share or message traffic.

In developing the proposed seven tier structure, the Operating Committee considered remaining at nine tiers, as well as reducing the number of tiers down to seven when considering how to address the concerns raised regarding comparability. For each of the alternatives, the Operating Committee considered the assignment of various percentages of Industry Members to each tier as well as various percentages of Industry Member recovery allocations for each alternative. Each of these options was considered in the context of its effects on the full funding model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the seven tier alternative provided the most fee comparability at the individual entity level for the largest CAT Reporters, while both providing logical breaks in tiering for Industry Members with different levels of message traffic and a sufficient number of tiers to provide for the full spectrum of different levels of message traffic for all Industry Members.

(ii) Allocation of CAT Costs Between Equity and Options Execution Venues

The Operating Committee also determined to adjust the allocation of CAT costs between Equity Execution Venues and Options Execution Venues to enhance comparability at the individual entity level. In the Original

⁷⁴ See Suspension Order at 31662-3; SIFMA Letter at 3; Sidley Letter at 6-7; Group One Letter at 2; and Belvedere Letter at 2.

⁷³ Section 11.2(b) of the CAT NMS Plan.

Proposal, 75% of Execution Venue CAT costs were allocated to Equity Execution Venues, and 25% of Execution Venue CAT costs were allocated to Options Execution Venues. To achieve the goal of increased comparability at the individual entity level, the Operating Committee analyzed a range of alternative splits for revenue recovery between Equity and Options Execution Venues, along with other changes in the proposed funding model. Based on this analysis, the Operating Committee determined to allocate 67 percent of Execution Venue costs recovered to Equity Execution Venues and 33 percent to Options Execution Venues. The Operating Committee determined that a 67/33 allocation between Equity and Options Execution Venues enhances the level of fee comparability for the largest CAT Reporters. Specifically, the largest Equity and Options Execution Venues would pay a quarterly CAT Fee of approximately \$81,000.

In developing the proposed allocation of CAT costs between Equity and Options Execution Venues, the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to a 70%/30%, 67%/33%, or 57.75%/42.25% allocation. For each of the alternatives, the Operating Committee considered the effect each allocation would have on the assignment of various percentages of Equity Execution Venues to each tier as well as various percentages of Equity Execution Venue recovery allocations for each alternative. Moreover, each of these options was considered in the context of the full model, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. The Operating Committee determined that the 67%/33% allocation between Equity and Options Execution Venues provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iii) Allocation of Costs Between Execution Venues and Industry Members

The Operating Committee determined to allocate 25% of CAT costs to Execution Venues and 75% to Industry Members (other than Execution Venue ATSSs), as it had in the Original Proposal. The Operating Committee determined that this 75%/25% allocation, along with the other changes proposed above, led to the most

comparable fees for the largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs). The largest Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) would each pay a quarterly CAT Fee of approximately \$81,000.

As a preliminary matter, the Operating Committee determined that it is appropriate to allocate most of the costs to create, implement and maintain the CAT to Industry Members for several reasons. First, there are many more broker-dealers expected to report to the CAT than Participants (*i.e.*, 1,541 broker-dealer CAT Reporters versus 22 Participants). Second, since most of the costs to process CAT reportable data is generated by Industry Members, Industry Members could be expected to contribute toward such costs. Finally, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁷⁵ thereby benefitting all market participants. After making this determination, the Operating Committee analyzed several different cost allocations, as discussed further below, and determined that an allocation where 75% of the CAT costs should be borne by the Industry Members (other than Execution Venue ATSSs) and 25% should be paid by Execution Venues was most appropriate and led to the greatest comparability of CAT Fees for the largest CAT Reporters.

In developing the proposed allocation of CAT costs between Execution Venues and Industry Members (other than Execution Venue ATSSs), the Operating Committee considered various different options for such allocation, including keeping the original 75%/25% allocation, as well as shifting to an 80%/20%, 70%/30%, or 65%/35% allocation. Each of these options was considered in the context of the full model, including the effect on each of the changes discussed above, as changes in each variable in the model affect other variables in the model when allocating the total CAT costs among CAT Reporters. In particular, for each of the alternatives, the Operating Committee considered the effect each allocation had on the assignment of various percentages of Equity Execution Venues, Options Execution Venues and Industry Members (other than Execution Venue ATSSs) to each relevant tier as well as various percentages of recovery

allocations for each tier. The Operating Committee determined that the 75%/25% allocation between Execution Venues and Industry Members (other than Execution Venue ATSSs) provided the greatest level of fee comparability at the individual entity level for the largest CAT Reporters, while still providing for appropriate fee levels across all tiers for all CAT Reporters.

(iv) Affiliations

The funding principles set forth in Section 11.2 of the Plan require that the fees charged to CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venue and/or Industry Members). The proposed funding model satisfies this requirement. As discussed above, under the proposed funding model, the largest Equity Execution Venues, Options Execution Venues, and Industry Members (other than Execution Venue ATSSs) pay approximately the same fee. Moreover, the Operating Committee believes that the proposed funding model takes into consideration affiliations between or among CAT Reporters as complexes with multiple CAT Reporters will pay the appropriate fee based on the proposed fee schedule for each of the CAT Reporters in the complex. For example, a complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member will pay the same as another complex with a Tier 1 Equity Execution Venue and Tier 2 Industry Member.

(v) Fee Schedule Changes

Accordingly, with this Amendment, SRO proposes to amend paragraphs (b)(1) and (2) of the proposed fee schedule to reflect the changes discussed in this section. Specifically, SRO proposes to amend paragraph (b)(1) and (2) of the proposed fee schedule to update the number of tiers, and the fees and percentages assigned to each tier to reflect the described changes.

(D) Market Share/Message Traffic

In the Original Proposal, the Operating Committee proposed to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATSSs) based on message traffic. Commenters questioned the use of the two different

⁷⁵ Securities Exchange Act Rel. No. 67457 (Jul 18, 2012), 77 FR 45722, 45726 (Aug. 1, 2012) (“Rule 613 Adopting Release”).

metrics for calculating CAT Fees.⁷⁶ The Operating Committee continues to believe that the proposed use of market share and message traffic satisfies the requirements of the Exchange Act and the funding principles set forth in the CAT NMS Plan. Accordingly, the proposed funding model continues to charge Execution Venues based on market share and Industry Members (other than Execution Venue ATs) based on message traffic.

In drafting the Plan and the Original Proposal, the Operating Committee expressed the view that the correlation between message traffic and size does not apply to Execution Venues, which they described as producing similar amounts of message traffic regardless of size. The Operating Committee believed that charging Execution Venues based on message traffic would result in both large and small Execution Venues paying comparable fees, which would be inequitable, so the Operating Committee determined that it would be more appropriate to treat Execution Venues differently from Industry Members in the funding model. Upon a more detailed analysis of available data, however, the Operating Committee noted that Execution Venues have varying levels of message traffic. Nevertheless, the Operating Committee continues to believe that a bifurcated funding model—where Industry Members (other than Execution Venue ATs) are charged fees based on message traffic and Execution Venues are charged based on market share—complies with the Plan and meets the standards of the Exchange Act for the reasons set forth below.

Charging Industry Members based on message traffic is the most equitable means for establishing fees for Industry Members (other than Execution Venue ATs). This approach will assess fees to Industry Members that create larger volumes of message traffic that are relatively higher than those fees charged to Industry Members that create smaller volumes of message traffic. Since message traffic, along with fixed costs of the Plan Processor, is a key component of the costs of operating the CAT, message traffic is an appropriate criterion for placing Industry Members in a particular fee tier.

The Operating Committee also believes that it is appropriate to charge Execution Venues CAT Fees based on their market share. In contrast to Industry Members (other than Execution Venue ATs), which determine the degree to which they produce the

message traffic that constitutes CAT Reportable Events, the CAT Reportable Events of Execution Venues are largely derivative of quotations and orders received from Industry Members that the Execution Venues are required to display. The business model for Execution Venues, however, is focused on executions in their markets. As a result, the Operating Committee believes that it is more equitable to charge Execution Venues based on their market share rather than their message traffic.

Similarly, focusing on message traffic would make it more difficult to draw distinctions between large and small exchanges, including options exchanges in particular. For instance, the Operating Committee analyzed the message traffic of Execution Venues and Industry Members for the period of April 2017 to June 2017 and placed all CAT Reporters into a nine-tier framework (*i.e.*, a single tier may include both Execution Venues and Industry Members). The Operating Committee's analysis found that the majority of exchanges (15 total) were grouped in Tiers 1 and 2. Moreover, virtually all of the options exchanges were in Tiers 1 and 2.⁷⁷ Given the concentration of options exchanges in Tiers 1 and 2, the Operating Committee believes that using a funding model based purely on message traffic would make it more difficult to distinguish between large and small options exchanges, as compared to the proposed bifurcated fee approach.

In addition, the Operating Committee also believes that it is appropriate to treat ATs as Execution Venues under the proposed funding model since ATs have business models that are similar to those of exchanges, and ATs also compete with exchanges. For these reasons, the Operating Committee believes that charging Execution Venues based on market share is more appropriate and equitable than charging Execution Venues based on message traffic.

(E) Time Limit

In the Original Proposal, the Operating Committee did not impose any time limit on the application of the proposed CAT Fees. As discussed above, the Operating Committee developed the proposed funding model by analyzing currently available historical data. Such historical data, however, is not as comprehensive as data that will be submitted to the CAT.

Accordingly, the Operating Committee believes that it will be appropriate to revisit the funding model once CAT Reporters have actual experience with the funding model. Accordingly, the Operating Committee proposes to include a sunset provision in the proposed fee model. The proposed CAT Fees will sunset two years after the operative date of the CAT NMS Plan amendment adopting CAT Fees for Participants. Specifically, SRO proposes to add paragraph (d) of the proposed fee schedule to include this sunset provision. Such a provision will provide the Operating Committee and other market participants with the opportunity to reevaluate the performance of the proposed funding model.

(F) Tier Structure/Decreasing Cost per Unit

In the Original Proposal, the Operating Committee determined to use a tiered fee structure. The Commission and commenters questioned whether the decreasing cost per additional unit (of message traffic in the case of Industry Members, or of share volume in the case of Execution Venues) in the proposed fee schedules burdens competition by disadvantaging small Industry Members and Execution Venues and/or by creating barriers to entry in the market for trading services and/or the market for broker-dealer services.⁷⁸

The Operating Committee does not believe that decreasing cost per additional unit in the proposed fee schedules places an unfair competitive burden on Small Industry Members and Execution Venues. While the cost per unit of message traffic or share volume necessarily will decrease as volume increases in any tiered fee model using fixed fee percentages and, as a result, Small Industry Members and small Execution Venues may pay a larger fee per message or share, this comment fails to take account of the substantial differences in the absolute fees paid by Small Industry Members and small Execution Venues as opposed to large Industry Members and large Execution Venues. For example, under the fee proposals, Tier 7 Industry Members would pay a quarterly fee of \$105, while Tier 1 Industry Members would pay a quarterly fee of \$81,483. Similarly, a Tier 4 Equity Execution Venue would pay a quarterly fee of \$129, while a Tier 1 Equity Execution Venue would pay a quarterly fee of \$81,048. Thus, Small Industry Members and small Execution Venues are not disadvantaged in terms

⁷⁶ Suspension Order at 31663; FIA Principal Traders Group Letter at 2.

⁷⁷ The Participants note that this analysis did not place MIAx PEARL in Tier 1 or Tier 2 since the exchange commenced trading on February 6, 2017.

⁷⁸ Suspension Order at 31667.

of the total fees that they actually pay. In contrast to a tiered model using fixed fee percentages, the Operating Committee believes that strictly variable or metered funding models based on message traffic or share volume would be more likely to affect market behavior and may present administrative challenges (e.g., the costs to calculate and monitor fees may exceed the fees charged to the smallest CAT Reporters).

(G) Other Alternatives Considered

In addition to the various funding model alternatives discussed above regarding discounts, number of tiers and allocation percentages, the Operating Committee also discussed other possible funding models. For example, the Operating Committee considered allocating the total CAT costs equally among each of the Participants, and then permitting each Participant to charge its own members as it deems appropriate.⁷⁹ The Operating Committee determined that such an approach raised a variety of issues, including the likely inconsistency of the ensuing charges, potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges. The Operating Committee therefore determined that the proposed funding model was preferable to this alternative.

(H) Industry Member Input

Commenters expressed concern regarding the level of Industry Member input into the development of the proposed funding model, and certain commenters have recommended a greater role in the governance of the CAT.⁸⁰ The Participants previously addressed this concern in its letters responding to comments on the Plan and the CAT Fees.⁸¹ As discussed in those letters, the Participants discussed the funding model with the Development Advisory Group (“DAG”), the advisory group formed to assist in the development of the Plan, during its original development.⁸² Moreover, Industry Members currently have a voice in the affairs of the Operating Committee and operation of the CAT generally through the Advisory Committee established pursuant to Rule 613(b)(7) and Section 4.13 of the Plan.

⁷⁹ See FIA Principal Traders Group Letter at 2; Belvedere Letter at 4.

⁸⁰ See Suspension Order at 31662; MFA Letter at 1–2.

⁸¹ Letter from Participants to Brent J. Fields, Secretary, SEC (Sept. 23, 2016) (“Plan Response Letter”); Letter from CAT NMS Plan Participants to Brent J. Fields, Secretary, SEC (June 29, 2017) (“Fee Rule Response Letter”).

⁸² Fee Rule Response Letter at 2; Plan Response Letter at 18.

The Advisory Committee attends all meetings of the Operating Committee, as well as meetings of various subcommittees and working groups, and provides valuable and critical input for the Participants’ and Operating Committee’s consideration. The Operating Committee continues to believe that that Industry Members have an appropriate voice regarding the funding of the Company.

(I) Conflicts of Interest

Commenters also raised concerns regarding Participant conflicts of interest in setting the CAT Fees.⁸³ The Participants previously responded to this concern in both the Plan Response Letter and the Fee Rule Response Letter.⁸⁴ As discussed in those letters, the Plan, as approved by the SEC, adopts various measures to protect against the potential conflicts issues raised by the Participants’ fee-setting authority. Such measures include the operation of the Company as a not for profit business league and on a break-even basis, and the requirement that the Participants file all CAT Fees under Section 19(b) of the Exchange Act. The Operating Committee continues to believe that these measures adequately protect against concerns regarding conflicts of interest in setting fees, and that additional measures, such as an independent third party to evaluate an appropriate CAT Fee, are unnecessary.

(J) Fee Transparency

Commenters also argued that they could not adequately assess whether the CAT Fees were fair and equitable because the Operating Committee has not provided details as to what the Participants are receiving in return for the CAT Fees.⁸⁵ The Operating Committee provided a detailed discussion of the proposed funding model in the Plan, including the expenses to be covered by the CAT Fees. In addition, the agreement between the Company and the Plan Processor sets forth a comprehensive set of services to be provided to the Company with regard to the CAT. Such services include, without limitation: User support services (e.g., a help desk); tools to allow each CAT Reporter to monitor and correct their submissions; a comprehensive compliance program to monitor CAT Reporters’ adherence to Rule 613; publication of detailed Technical Specifications for Industry

⁸³ See Suspension Order at 31662; FIA Principal Traders Group at 3.

⁸⁴ See Plan Response Letter at 16, 17; Fee Rule Response Letter at 10–12.

⁸⁵ See FIA Principal Traders Group at 3; SIFMA Letter at 3.

Members and Participants; performing data linkage functions; creating comprehensive data security and confidentiality safeguards; creating query functionality for regulatory users (i.e., the Participants, and the SEC and SEC staff); and performing billing and collection functions. The Operating Committee further notes that the services provided by the Plan Processor and the costs related thereto were subject to a bidding process.

(K) Funding Authority

Commenters also questioned the authority of the Operating Committee to impose CAT Fees on Industry Members.⁸⁶ The Participants previously responded to this same comment in the Plan Response Letter and the Fee Rule Response Letter.⁸⁷ As the Participants previously noted, SEC Rule 613 specifically contemplates broker-dealers contributing to the funding of the CAT. In addition, as noted by the SEC, the CAT “substantially enhance[s] the ability of the SROs and the Commission to oversee today’s securities markets,”⁸⁸ thereby benefitting all market participants. Therefore, the Operating Committee continues to believe that it is equitable for both Participants and Industry Members to contribute to funding the cost of the CAT.

2. Statutory Basis

SRO believes that the proposed rule change is consistent with the provisions of Section 6(b)(5) of the Act,⁸⁹ which require, among other things, that the SRO rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest, and not designed to permit unfair discrimination between customers, issuers, brokers and dealer, and Section 6(b)(4) of the Act,⁹⁰ which requires that SRO rules provide for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using its facilities. As discussed above, the SEC approved the bifurcated, tiered, fixed fee funding model in the CAT NMS Plan, finding it was reasonable and that it equitably allocated fees among Participants and Industry Members. SRO believes that the proposed tiered fees adopted pursuant to the funding model approved by the SEC in the CAT

⁸⁶ See Suspension Order at 31661–2; SIFMA Letter at 2.

⁸⁷ See Plan Response Letter at 9–10; Fee Rule Response Letter at 3–4.

⁸⁸ Rule 613 Adopting Release at 45726.

⁸⁹ 15 U.S.C. 78f(b)(5).

⁹⁰ 15 U.S.C. 78f(b)(4).

NMS Plan are reasonable, equitably allocated and not unfairly discriminatory.

SRO believes that this proposal is consistent with the Act because it implements, interprets or clarifies the provisions of the Plan, and is designed to assist SRO and its Industry Members in meeting regulatory obligations pursuant to the Plan. In approving the Plan, the SEC noted that the Plan “is necessary and appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanism of a national market system, or is otherwise in furtherance of the purposes of the Act.”⁹¹ To the extent that this proposal implements, interprets or clarifies the Plan and applies specific requirements to Industry Members, SRO believes that this proposal furthers the objectives of the Plan, as identified by the SEC, and is therefore consistent with the Act.

SRO believes that the proposed tiered fees are reasonable. First, the total CAT Fees to be collected would be directly associated with the costs of establishing and maintaining the CAT, where such costs include Plan Processor costs and costs related to insurance, third party services and the operational reserve. The CAT Fees would not cover Participant services unrelated to the CAT. In addition, any surplus CAT Fees cannot be distributed to the individual Participants; such surpluses must be used as a reserve to offset future fees. Given the direct relationship between the fees and the CAT costs, SRO believes that the total level of the CAT Fees is reasonable.

In addition, SRO believes that the proposed CAT Fees are reasonably designed to allocate the total costs of the CAT equitably between and among the Participants and Industry Members, and are therefore not unfairly discriminatory. As discussed in detail above, the proposed tiered fees impose comparable fees on similarly situated CAT Reporters. For example, those with a larger impact on the CAT (measured via message traffic or market share) pay higher fees, whereas CAT Reporters with a smaller impact pay lower fees. Correspondingly, the tiered structure lessens the impact on smaller CAT Reporters by imposing smaller fees on those CAT Reporters with less market share or message traffic. In addition, the fee structure takes into consideration distinctions in securities trading operations of CAT Reporters, including ATSS trading OTC Equity Securities, and equity and options market makers.

Moreover, SRO believes that the division of the total CAT costs between Industry Members and Execution Venues, and the division of the Execution Venue portion of total costs between Equity and Options Execution Venues, is reasonably designed to allocate CAT costs among CAT Reporters. The 75%/25% division between Industry Members (other than Execution Venue ATSSs) and Execution Venues maintains the greatest level of comparability across the funding model. For example, the cost allocation establishes fees for the largest Industry Members (*i.e.*, those Industry Members in Tiers 1) that are comparable to the largest Equity Execution Venues and Options Execution Venues (*i.e.*, those Execution Venues in Tier 1). Furthermore, the allocation of total CAT cost recovery recognizes the difference in the number of CAT Reporters that are Industry Members (other than Execution Venue ATSSs) versus CAT Reporters that are Execution Venues. Similarly, the 67%/33% allocation between Equity and Options Execution Venues also helps to provide fee comparability for the largest CAT Reporters.

Finally, SRO believes that the proposed fees are reasonable because they would provide ease of calculation, ease of billing and other administrative functions, and predictability of a fixed fee. Such factors are crucial to estimating a reliable revenue stream for the Company and for permitting CAT Reporters to reasonably predict their payment obligations for budgeting purposes.

(B) Self-Regulatory Organization’s Statement on Burden on Competition

Section 6(b)(8) of the Act⁹² require that SRO rules not impose any burden on competition that is not necessary or appropriate. SRO does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. SRO notes that the proposed rule change implements provisions of the CAT NMS Plan approved by the Commission, and is designed to assist SRO in meeting its regulatory obligations pursuant to the Plan. Similarly, all national securities exchanges and FINRA are proposing this proposed fee schedule to implement the requirements of the CAT NMS Plan. Therefore, this is not a competitive fee filing and, therefore, it does not raise competition issues between and among the exchanges and FINRA.

Moreover, as previously described, SRO believes that the proposed rule change fairly and equitably allocates costs among CAT Reporters. In particular, the proposed fee schedule is structured to impose comparable fees on similarly situated CAT Reporters, and lessen the impact on smaller CAT Reporters. CAT Reporters with similar levels of CAT activity will pay similar fees. For example, Industry Members (other than Execution Venue ATSSs) with higher levels of message traffic will pay higher fees, and those with lower levels of message traffic will pay lower fees. Similarly, Execution Venue ATSSs and other Execution Venues with larger market share will pay higher fees, and those with lower levels of market share will pay lower fees. Therefore, given that there is generally a relationship between message traffic and/or market share to the CAT Reporter’s size, smaller CAT Reporters generally pay less than larger CAT Reporters. Accordingly, SRO does not believe that the CAT Fees would have a disproportionate effect on smaller or larger CAT Reporters. In addition, ATSSs and exchanges will pay the same fees based on market share. Therefore, SRO does not believe that the fees will impose any burden on the competition between ATSSs and exchanges. Accordingly, SRO believes that the proposed fees will minimize the potential for adverse effects on competition between CAT Reporters in the market.

Furthermore, the tiered, fixed fee funding model limits the disincentives to providing liquidity to the market. Therefore, the proposed fees are structured to limit burdens on competitive quoting and other liquidity provision in the market.

In addition, the Operating Committee believes that the proposed changes to the Original Proposal, as discussed above in detail, address certain competitive concerns raised by commenters, including concerns related to, among other things, smaller ATSSs, ATSSs trading OTC Equity Securities, market making quoting and fee comparability. As discussed above, the Operating Committee believes that the proposals address the competitive concerns raised by commenters.

(C) Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

SRO has set forth responses to comments received regarding the Original Proposal in Section 3(a)(4) above.

⁹¹ Approval Order at 84697.

⁹² 15 U.S.C. 78f(b)(8)

III. Solicitation of Comments on Amendment No. 1

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether Amendment No. 1 is consistent with the Act. In particular, the Commission seeks comment on the following:

Allocation of Costs

(1) Commenters' views as to whether the allocation of CAT costs is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality."⁹³

(2) Commenters' views as to whether the allocation of 25% of CAT costs to the Execution Venues (including all the Participants) and 75% to Industry Members, will incentivize or disincentivize the Participants to effectively and efficiently manage the CAT costs incurred by the Participants since they will only bear 25% of such costs.

(3) Commenters' views on the determination to allocate 75% of all costs incurred by the Participants from November 21, 2016 to November 21, 2017 to Industry Members (other than Execution Venue ATSSs), when such costs are development and build costs and when Industry Member reporting is scheduled to commence a year later, including views on whether such "fees, costs and expenses . . . [are] fairly and reasonably shared among the Participants and Industry Members" in accordance with the CAT NMS Plan.⁹⁴

(4) Commenters' views on whether an analysis of the ratio of the expected Industry Member-reported CAT messages to the expected SRO-reported CAT messages should be the basis for determining the allocation of costs between Industry Members and Execution Venues.⁹⁵

(5) Any additional data analysis on the allocation of CAT costs, including any existing supporting evidence.

Comparability

(6) Commenters' views on the shift in the standard used to assess the comparability of CAT Fees, with the

emphasis now on comparability of individual entities instead of affiliated entities, including views as to whether this shift is consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to establish a fee structure in which the fees charged to "CAT Reporters with the most CAT-related activity (measured by market share and/or message traffic, as applicable) are generally comparable (where, for these comparability purposes, the tiered fee structure takes into consideration affiliations between or among CAT Reporters, whether Execution Venues and/or Industry Members)."⁹⁶

(7) Commenters' views as to whether the reduction in the number of tiers for Industry Members (other than Execution Venue ATSSs) from nine to seven, the revised allocation of CAT costs between Equity Execution Venues and Options Execution Venues from a 75%/25% split to a 67%/33% split, and the adjustment of all tier percentages and recovery allocations achieves comparability across individual entities, and whether these changes should have resulted in a change to the allocation of 75% of total CAT costs to Industry Members (other than Execution Venue ATSSs) and 25% of such costs to Execution Venues.

Discounts

(8) Commenters' views as to whether the discounts for options market-makers, equities market-makers, and Equity ATSSs trading OTC Equity Securities are clear, reasonable, and consistent with the funding principle expressed in the CAT NMS Plan that requires the Operating Committee to "avoid any disincentives such as placing an inappropriate burden on competition and a reduction in market quality,"⁹⁷ including views as to whether the discounts for market-makers limit any potential disincentives to act as a market-maker and/or to provide liquidity due to CAT fees.

Calculation of Costs and Imposition of CAT Fees

(9) Commenters' views as to whether the amendment provides sufficient information regarding the amount of costs incurred from November 21, 2016 to November 21, 2017, particularly, how those costs were calculated, how those costs relate to the proposed CAT Fees, and how costs incurred after November 21, 2017 will be assessed upon Industry Members and Execution Venues;

(10) Commenters' views as to whether the timing of the imposition and collection of CAT Fees on Execution Venues and Industry Members is reasonably related to the timing of when the Company expects to incur such development and implementation costs.⁹⁸

(11) Commenters' views on dividing CAT costs equally among each of the Participants, and then each Participant charging its own members as it deems appropriate, taking into consideration the possibility of inconsistency in charges, the potential for lack of transparency, and the impracticality of multiple SROs submitting invoices for CAT charges.

Burden on Competition and Barriers to Entry

(12) Commenters' views as to whether the allocation of 75% of CAT costs to Industry Members (other than Execution Venue ATSSs) imposes any burdens on competition to Industry Members, including views on what baseline competitive landscape the Commission should consider when analyzing the proposed allocation of CAT costs.

(13) Commenters' views on the burdens on competition, including the relevant markets and services and the impact of such burdens on the baseline competitive landscape in those relevant markets and services.

(14) Commenters' views on any potential burdens imposed by the fees on competition between and among CAT Reporters, including views on which baseline markets and services the fees could have competitive effects on and whether the fees are designed to minimize such effects.

(15) Commenters' general views on the impact of the proposed fees on economies of scale and barriers to entry.

(16) Commenters' views on the baseline economies of scale and barriers to entry for Industry Members and Execution Venues and the relevant markets and services over which these economies of scale and barriers to entry exist.

(17) Commenters' views as to whether a tiered fee structure necessarily results in less active tiers paying more per unit than those in more active tiers, thus creating economies of scale, with supporting information if possible.

(18) Commenters' views as to how the level of the fees for the least active tiers would or would not affect barriers to entry.

(19) Commenters' views on whether the difference between the cost per unit (messages or market share) in less active

⁹³ Section 11.2(e) of the CAT NMS Plan.

⁹⁴ Section 11.1(c) of the CAT NMS Plan.

⁹⁵ The Notice for the CAT NMS Plan did not provide a comprehensive count of audit trail message traffic from different regulatory data sources, but the Commission did estimate the ratio of all SRO audit trail messages to OATS audit trail messages to be 1.9431. See Securities Exchange Act Release No. 77724 (April 27, 2016), 81 FR 30613, 30721 n.919 and accompanying text (May 17, 2016).

⁹⁶ Section 11.2(c) of the CAT NMS Plan.

⁹⁷ Section 11.2(e) of the CAT NMS Plan.

⁹⁸ Section 11.1(c) of the CAT NMS Plan.

tiers compared to the cost per unit in more active tiers creates regulatory economies of scale that favor larger competitors and, if so:

(a) How those economies of scale compare to operational economies of scale; and

(b) Whether those economies of scale reduce or increase the current advantages enjoyed by larger competitors or otherwise alter the competitive landscape.

(20) Commenters' views on whether the fees could affect competition between and among national securities exchanges and FINRA, in light of the fact that implementation of the fees does not require the unanimous consent of all such entities, and, specifically:

(a) Whether any of the national securities exchanges or FINRA are disadvantaged by the fees; and

(b) If so, whether any such disadvantages would be of a magnitude that would alter the competitive landscape.

(21) Commenters' views on any potential burden imposed by the fees on competitive quoting and other liquidity provision in the market, including, specifically:

(a) Commenters' views on the kinds of disincentives that discourage liquidity provision and/or disincentives that the Commission should consider in its analysis;

(b) Commenters' views as to whether the fees could disincentivize the provision of liquidity; and

(c) Commenters' views as to whether the fees limit any disincentives to provide liquidity.

(22) Commenters' views as to whether the amendment adequately responds to and/or addresses comments received on related filings.

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BatsBYX-2017-11 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-BatsBYX-2017-11. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/>

[rules/sro.shtml](http://www.sec.gov/rules/sro.shtml)). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BatsBYX-2017-11, and should be submitted on or before January 4, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹⁹

Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SMALL BUSINESS ADMINISTRATION

Agency Information Collection Activities: Proposed Collection; Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

AGENCY: Small Business Administration.
ACTION: 30-day notice and request for comments.

SUMMARY: The U.S. Small Business Administration (SBA) is submitting a Generic Information Collection Request (Generic ICR): "Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery" to the Office of Management and Budget (OMB) for approval under the Paperwork Reduction Act (PRA). This information collection is part of a Federal Government-wide effort to streamline the process to seek feedback from the public on the agency's service delivery. SBA previously published a

60-day notice soliciting public comment on the proposed information collection. This 30-day notice, as required by the PRA, provides an additional opportunity for public comment on the Generic ICR.

DATES: Comments must be submitted January 16, 2018.

ADDRESSES: Send all comments to Curtis B. Rich, Agency Clearance Officer, Small Business Administration, 409 3rd Street, 5th Floor, Washington, DC 20416. (202) 205-7030 curtis.rich@sba.gov; and SBA Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Amber Chaudhry, Presidential Management Fellow, Office of Communications and Public Liaison, amber.chaudhry@sba.gov, 202-205-0085.

SUPPLEMENTARY INFORMATION:

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Abstract: The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: The target population to which

⁹⁹ 17 CFR 200.30-3(a)(12).

generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

The Agency did not receive any comments in response to the 60-day public comment notice published in the **Federal Register** on September 26, 2017, at 82 FR 44865.

Below we provide the SBA's projected average annual estimates for the next three years:

Current Actions: New collection of information.

Type of Review: New Collection.

Affected Public: Individuals and Households, Businesses and Organizations, State, Local or Tribal Government.

Average Expected Annual Number of Activities: 20 *Estimated Annual Respondents:* 7,500.

Estimated Annual responses: 7,500.

Frequency of Response: Once per request; on occasion.

Average Minutes per Response: 38 minutes.

Burden Hours: 2690.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number.

Curtis B. Rich,
Management Analyst.

BILLING CODE 8025-01-P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36157]

City and County of Denver— Acquisition Exemption—Western Stock Show Association in the City and County of Denver, CO

The City and County of Denver, Colo. (the City), a political subdivision of the State of Colorado and a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to acquire from the Western Stock Show Association (WSSA) the real property underlying two lines of railroad for a total distance of approximately 1.2 miles in the

Denver Stockyards in the City (the Lines). The Lines consist of two corridors of rail line: (1) The National Western Drive Corridor (NWD Corridor), which is adjacent to National Western Drive, from the south right-of-way line of East 47th Avenue, extending northeast and then north to the northeastern right-of-way line of Race Court; and (2) the River Corridor, which is adjacent to the east bank of the South Platte River, from the intersection with the NWD Corridor at a point just north of that corridor's southern endpoint, extending north and then northeast to an intersection with the NWD Corridor just south of Race Court.

The City states that it will acquire no right or obligation to provide freight rail service over the Lines.¹ According to the City, although WSSA owns the real property, the Lines are operated by the Denver Rock Island Railroad (DRIR), a Class III rail carrier, which owns the rail, ties, and ballast over which it conducts its service. The City states that DRIR will retain its common carrier rights to provide rail service over the Lines and ownership of the rails, ties, and track bed, and it will continue its operations on the Lines following the City's acquisition of the real property from WSSA.² According to the City, DRIR's nonexclusive freight operating easement over the Lines will remain in effect, subject to any amendments necessary to address the City's acquisition of the underlying real property and future improvements to and relocation of the Lines, on which the City states it will coordinate with DRIR.³ The City states that it will at no

¹ A motion to dismiss the notice of exemption on grounds that the transaction does not require authorization from the Board was concurrently filed with this notice of exemption. The motion to dismiss will be addressed in a subsequent Board decision.

² The City states that over time a number of railroads have operated on the Denver Stockyards. Due to acquisitions and consolidations, the City has not been able to confirm that all prior operators have either merged into DRIR or the two carriers for which the agency has authorized discontinuance of service. However, according to the City, for the past two decades DRIR has been the only freight rail operator on the Lines. The City states that it will pursue further proceedings as appropriate to resolve the status of any lingering previously granted common carrier interests.

³ The notice states that following the acquisition, the status quo would continue "with respect to freight rail operations . . . and any future alterations to the site [would] be designed to allow current operations to continue. Further Board approval would be required for DRIR to discontinue or abandon any freight service that DRIR currently offers on the line." (Notice 6-7.) The concurrently filed motion to dismiss states that the "redevelopment includes the proposed consolidation of rail operations on a single corridor." (Mot. 5.) This notice should not be construed as approving, or indicating whether Board approval would be required for, any

time have the right to interfere with DRIR's ability to fulfill its common carrier freight obligation.

The City explains that it is acquiring the property to implement a comprehensive redevelopment plan of the Denver Stockyards to: (a) Provide improved facilities for Denver's annual National Western Stock Show and Rodeo; (b) develop, in conjunction with Colorado State University (CSU), an equine sport medicine facility and stock animal research complex; (c) create additional mixed-use facilities, and (d) establish a public park. In connection with the real property acquisition and development project, the City states that the City, WSSA, and CSU entered into a Framework Agreement. As part of the agreement, the parties entered into a Real Property Conveyance Agreement that will govern the transfers of real property including the real property associated with the Lines.

The City certifies that, because it will not conduct any rail carrier operations on the Line, its projected revenues from freight operations will not result in the creation of a Class I or Class II carrier.

The City states that it expects to consummate the proposed transaction in approximately the second quarter of 2018. The earliest this transaction may be consummated is December 28, 2017, the effective date of the exemption (30 days after the verified notice of exemption was filed).

If the notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than December 21, 2017 (at least seven days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36157, must be filed with the Surface Transportation Board, 395 E Street SW, Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Charles A. Spitulnik, Kaplan Kirsch & Rockwell LLP, 1001 Connecticut Ave. NW, Suite 800, Washington, DC 20036.

Board decisions and notices are available on our website at WWW.STB.GOV.

Decided: December 11, 2017.

consolidation of track associated with the redevelopment.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Jeffrey Herzig,
Clearance Clerk.

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[FHWA Docket No. FHWA-2017-0038]

Surface Transportation Project Delivery Program; TxDOT Audit #4 Report

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice, request for comment.

SUMMARY: The Surface Transportation Project Delivery Program allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for Federal highway projects. When a State assumes these Federal responsibilities, the State becomes solely responsible and liable for carrying out the responsibilities it has assumed, in lieu of FHWA. Prior to the Fixing America's Surface Transportation (FAST) Act of 2015, the Program required semiannual audits during each of the first 2 years of State participation to ensure compliance by each State participating in the Program. This notice announces and solicits comments on the fourth audit report for the Texas Department of Transportation's (TxDOT) participation in accordance with these pre-FAST Act requirements.

DATES: Comments must be received on or before January 16, 2018.

ADDRESSES: Mail or hand deliver comments to Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12-140, Washington, DC 20590. You may also submit comments electronically at www.regulations.gov. All comments should include the docket number that appears in the heading of this document. All comments received will be available for examination and copying at the above address from 9 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard or you may print the acknowledgment page that appears after submitting comments electronically. Anyone is able to search the electronic form of all comments in any one of our dockets by the name of

the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, or labor union). The DOT posts these comments, without edits, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.dot.gov/privacy.

FOR FURTHER INFORMATION CONTACT: Dr. Owen Lindauer, Office of Project Development and Environmental Review, (202) 366-2655, owen.lindauer@dot.gov, or Mr. Jomar Maldonado, Office of the Chief Counsel, (202) 366-1373, jomar.maldonado@dot.gov, Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590. Office hours are from 8:00 a.m. to 4:30 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access

An electronic copy of this notice may be downloaded from the specific docket page at www.regulations.gov.

Background

The Surface Transportation Project Delivery Program allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for Federal highway projects. This provision has been codified at 23 U.S.C. 327. Since December 16, 2014, TxDOT has assumed FHWA's responsibilities under National Environmental Policy Act and the responsibilities for reviews under other Federal environmental requirements under this authority.

Prior to December 4, 2015, 23 U.S.C. 327(g) required the Secretary to conduct semiannual audits during each of the first 2 years of State participation, annual audits during years 3 and 4, and monitoring each subsequent year of State participation to ensure compliance by each State participating in the program. The results of each audit were required to be presented in the form of an audit report and be made available for public comment. On December 4, 2015, the President signed into law the FAST Act, Pub. L. 114-94, 129 Stat. 1312 (2015). Section 1308 of the FAST Act amended the audit provisions by limiting the number of audits to one audit each year during the first 4 years of a State's participation. This notice announces the availability of the report for the fourth audit for TxDOT conducted prior to the FAST Act and solicits public comment on it.

Authority: Section 1313 of Public Law 112-141; Section 6005 of Public Law 109-59; Public Law 114-94; 23 U.S.C. 327; 49 CFR 1.85.

Issued on: December 8, 2017.

Brandye L. Hendrickson,
Acting Administrator, Federal Highway Administration.

DRAFT

Surface Transportation Project Delivery Program

FHWA Audit #4 of the Texas Department of Transportation

June 16, 2016 to August 1, 2017

Executive Summary

This report summarizes the results of FHWA's fourth audit review (Audit #4) to assess the performance by the Texas Department of Transportation (TxDOT) regarding its assumption of responsibilities assigned by Federal Highway Administration (FHWA), under a memorandum of understanding (MOU) that took effect on December 16, 2014. TxDOT assumed FHWA's National Environmental Policy Act (NEPA) responsibilities and other environmental review responsibilities related to Federal-aid highway projects in Texas. The status of FHWA's observations from the third audit review (Audit #3), including any TxDOT self-imposed corrective actions, is detailed at the end of this report. The FHWA Audit #4 team (team) appreciates the cooperation and professionalism of TxDOT staff in conducting this review.

The team was formed in October 2016 and met regularly to prepare for the audit. Prior to the on-site visit, the team: (1) performed reviews of project files in TxDOT's Environmental Compliance Oversight System (ECOS), (2) examined TxDOT's responses to FHWA's information requests, and (3) developed interview questions. Interviews of TxDOT and resource agency staff occurred during the on-site portion of this audit, conducted on May 22-26, 2017.

The TxDOT continues to develop, revise, and implement procedures and processes required to carry out the NEPA Assignment Program. Based on information provided by TxDOT and from interviews, TxDOT is committed to maintaining a successful program. This report describes two (2) categories of non-compliance observations and eight (8) observations that represent opportunities for TxDOT to improve its program. It also includes brief status updates of the Audit #3 conclusions.

The TxDOT has continued to make progress toward meeting the responsibilities it has assumed in

accordance with the MOU. The non-compliance observations identified in this review will require TxDOT to take corrective action. By taking corrective action and considering changes based on the observations in this report, TxDOT should continue to move the NEPA Assignment Program forward successfully.

Background

The Surface Transportation Project Delivery Program (NEPA Assignment Program) allows a State to assume FHWA's environmental responsibilities for review, consultation, and compliance for highway projects. This program is codified at 23 U.S.C. 327. When a State assumes these Federal responsibilities for NEPA project decision-making, the State becomes solely responsible and liable for carrying out these obligations in lieu of, and without further NEPA related approval by, FHWA.

The State of Texas was assigned the responsibility for making project NEPA approvals and the responsibility for making other related environmental decisions for highway projects on December 16, 2014. In enacting Texas Transportation Code, § 201.6035, the State has waived its sovereign immunity under the 11th Amendment of the U.S. Constitution and consents to defend against any actions brought by its citizens for NEPA decisions it has made in Federal court.

The FHWA project-specific environmental review responsibilities assigned to TxDOT are specified in the MOU. These responsibilities include: compliance with the Endangered Species Act (ESA), Section 7 consultations with the U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration's National Marine Fisheries Service, and Section 106 consultations with the Texas Historical Commission (THC) regarding impacts to historic properties. Other responsibilities may not be assigned and remain with FHWA. They include: (1) responsibility for project-level conformity determinations under the Clean Air Act, and (2) the responsibility for government-to-government consultation with federally-recognized Indian tribes. Based on 23 U.S.C. 327(a)(2)(D), any responsibility not explicitly assigned in the MOU is retained by FHWA.

The MOU specifies that FHWA is required to conduct six audit reviews. These audits are part of FHWA's oversight responsibility for the NEPA Assignment Program. The reviews are to assess a State's compliance with the

provisions of the MOU. They also are used to evaluate a State's progress toward achieving its performance measures as specified in the MOU; to evaluate the success of the NEPA Assignment Program; and to inform the administration of the findings regarding the NEPA Assignment Program. In December 2015, statutory changes in Section 1308 of the Fixing America's Surface Transportation Act (FAST Act) reduced the frequency of these audit reviews to one audit per year during the first four years of state participation in the program. This audit is the fourth completed in Texas. The 5th and final audit is planned for 2018.

Scope and Methodology

The overall scope of this audit review is defined both in statute (23 U.S.C. 327) and the MOU (Part 11). An audit generally is defined as an official and careful examination and verification of accounts and records, especially of financial accounts, by an independent, unbiased body. Regarding accounts or financial records, audits may follow a prescribed process or methodology, and be conducted by "auditors" who have special training in those processes or methods. The FHWA considers this review to meet the definition of an audit because it is an unbiased, independent, official, and careful examination and verification of records and information about TxDOT's assumption of environmental responsibilities. Principal members of the team that conducted this audit have completed special training in audit processes and methods.

The diverse composition of the team and the process of developing the review report and publishing it in the **Federal Register** help to maintain an unbiased review and establish the audit as an official action taken by FHWA. The team for Audit #4 included NEPA subject-matter experts from the FHWA Texas Division Office, as well as FHWA offices in Washington, DC, Atlanta, GA, Charleston, SC, and Salt Lake City, UT. In addition to the NEPA experts, the team included FHWA planners, engineers, and air quality specialists from the Texas Division office.

Audits, as stated in the MOU (Parts 11.1.1 and 11.1.5), are the primary mechanism used by FHWA to oversee TxDOT's compliance with the MOU, evaluate TxDOT's progress toward achieving the performance measures identified in the MOU (Part 10.2), and collect information needed for the Secretary's annual report to Congress. These audits also consider TxDOT's technical competency and organizational capacity, adequacy of the

financial resources committed by TxDOT to administer the responsibilities assumed, quality assurance/quality control process, attainment of performance measures, compliance with the MOU requirements, and compliance with applicable laws and policies in administering the responsibilities assumed.

This audit reviewed processes and procedures (i.e., toolkits and handbooks) TxDOT staff use to process and make NEPA approvals. The information the team gathered that served as the basis for this audit came from three primary sources: (1) TxDOT's response to a pre-audit #4 information request (PAIR #4), (2) a review of both a judgmental and random sample of project files in ECOS with approval dates after February 1, 2016, and (3) interviews with TxDOT and the USFWS staff. The TxDOT provided information in response to FHWA pre-audit questions and requests for documents and provided a written clarification to FHWA thereafter. That material covered the following six topics: program management, documentation and records management, quality assurance/quality control, legal sufficiency review, performance measurement, and training. In addition to considering these six topics, the team also considered the following topics: Endangered Species Act (ESA) compliance, consideration of noise impacts and noise mitigation (Noise), and adherence to the TxDOT Public Involvement plan.

The intent of the review was to check that TxDOT has the proper procedures in place to implement the responsibilities assumed through the MOU, ensure that the staff is aware of those procedures, and make certain the staff implements the procedures appropriately to achieve compliance with NEPA and other assigned responsibilities. The review did not second guess project-specific decisions, as such decisions are the sole responsibility of TxDOT. The team focused on whether the procedures TxDOT followed complied with all Federal statutes, regulation, policy, procedure, process, guidance, and guidelines.

The team defined the timeframe for highway project environmental approvals subject to this fourth audit to be between February 1, 2016, and January 31, 2017. The project file review effort occurred in two phases: approvals made during Round 1 (Feb 1, 2016–July 31, 2016) and Round 2 (Aug 1, 2016–Jan 31, 2017). One important note is that this audit project file review time frame spans a full 12 months, where previous

audits reviewed project approvals that spanned 6 months. The population of environmental approvals included 224 projects based on 12 certified lists of NEPA approvals reported monthly by TxDOT. The NEPA project file approvals reviewed included: (1) categorical exclusion determinations (CEs), (2) approvals to circulate draft Environmental Assessments (EAs), (3) findings of no significant impacts (FONSI), (4) re-evaluations of EAs, Section 4(f) decisions, (5) approvals of a draft environmental impact statement (DEIS), and (6) re-evaluations of EISs and records of decision (RODs). Project files reviewed constitute a sample of randomly selected c-listed CE, and 100 percent of the following file approvals: 4(f) approvals; CE determinations for actions not listed in the “c” or “d” lists; the FONSI and its EA; the ROD and its EIS; and re-evaluations of these documents and approvals.

The interviews conducted by the team focused on TxDOT’s leadership and staff at the Environmental Affairs Division (ENV) Headquarters in Austin and staff in four of TxDOT’s Districts. The team interviewed the Austin District and then divided into two groups (the next day) to complete the face-to-face interviews of District staff in Waco and San Antonio. Members of the team interviewed staff from the Ft. Worth District via teleconference. The team used the same ECOS project document review form but updated interview questions for Districts and ENV staff with new focus areas to gather data.

Overall Audit Opinion

The TxDOT continues to make progress in the implementation of its program that assumes FHWA’s NEPA project-level decision responsibility and other environmental responsibilities. The team acknowledges TxDOT’s effort to refine and, when necessary, establish additional written internal policies and procedures. The team found evidence of TxDOT’s continuing efforts to train staff in clarifying the roles and responsibilities of TxDOT staff, and in educating staff in an effort to assure compliance with all of the assigned responsibilities.

The team identified two non-compliant observations in this audit that TxDOT will need to address through corrective actions. These non-compliance observations come from a review of TxDOT procedures, project file documentation, and interview information. This report also identifies several notable observations and successful practices that we recommend be expanded.

Non-Compliance Observations

Non-compliance observations are instances where the team found the TxDOT was out of compliance or deficient in proper implementation of a Federal regulation, statute, guidance, policy, the terms of the MOU, or TxDOT’s own procedures for compliance with the NEPA process. Such observations may also include instances where TxDOT has failed to maintain technical competency, adequate personnel, and/or financial resources to carry out the assumed responsibilities. Other non-compliance observations could suggest a persistent failure to adequately consult, coordinate, or consider the concerns of other Federal, State, tribal, or local agencies with oversight, consultation, or coordination responsibilities. The FHWA expects TxDOT to develop and implement corrective actions to address all non-compliance observations. As part of information gathered for this audit, TxDOT informed the team they are still implementing some recommendations made by FHWA on Audit #3 to address non-compliance. The FHWA will conduct followup reviews of non-compliance observations in Audit #5 from this review.

The MOU (Part 3.1.1) states that “[p]ursuant to 23 U.S.C. 327(a)(2)(A), on the Effective Date, FHWA assigns, and TxDOT assumes, subject to the terms and conditions set forth in 23 U.S.C. 327 and this MOU, all of the USDOT Secretary’s responsibilities for compliance with the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 et seq. with respect to the highway projects specified under subpart 3.3. This includes statutory provisions, regulations, policies, and guidance related to the implementation of NEPA for Federal highway projects such as 23 U.S.C. 139, 40 CFR 1500–1508, DOT Order 5610.1C, and 23 CFR 771 as applicable.” Also, the performance measure in MOU Part 10.2.1(A) for compliance with NEPA and other Federal environmental statutes and regulations commits TxDOT to maintaining documented compliance with requirements of all applicable statutes and regulations, as well as provisions in the MOU. The following non-compliance observations are presented as two categories of non-compliance observations: (1) with procedures specified in Federal laws, regulations, policy, or guidance, or (2) with the State’s environmental review procedures.

Audit #4 Non-Compliance Observation #1: Section 5.1.1 of the MOU requires

the State to follow Federal laws, regulations, policy, and procedures to implement the responsibilities assumed. This review identified several examples of deficient adherence to these Federal procedures.

(a) *Project scope analyzed for impacts differed from the scope approved*

Making an approval that includes actions not considered as part of environmental review is deficient according to the FHWA Technical Advisory 6640.8A. The scope of the FONSI cannot include actions not considered in the EA. This recurring deficiency was also identified for a project file in Audit #3.

(b) *Plan consistency prior to NEPA approval*

Section 3.3.1 of the MOU requires that prior to approving any CE determination, FONSI, Final EIS, or final EIS/ROD, TxDOT will ensure and document that the project is consistent with the current Transportation Improvement Plan (TIP), Regional Transportation Plan (RTP), or Metropolitan Transportation Plan (MTP). The team identified two projects where TxDOT made NEPA approval without meeting the MOU consistency requirement.

(c) *Public Involvement*

The FHWA’s regulation at 23 CFR 771.119(h) requires a second public notification to occur 30 days prior to issuing a FONSI. The team reviewed a project file where TxDOT approved a FONSI for an action described in 23 CFR 771.115(a) without evidence of a required additional public notification. TxDOT acknowledges this requirement in their updated public involvement handbook.

(d) *Timing of NEPA approval*

One project file lacked documentation for Section 106 compliance prior to TxDOT making a NEPA approval. The FHWA regulation at 23 CFR 771.133 expects compliance with all applicable laws or reasonable assurance all requirements will be met at the time of an approval.

Audit #4 Non-Compliance Observation #2: Section 7.2.1 of the MOU requires the State to develop State procedures to implement the responsibilities assumed. This review identified several examples of deficient adherence to these state procedures.

(a) *Reporting of approvals made by TxDOT*

MOU section 8.7.1 requires the State to certify on a list the approvals it makes pursuant to the terms of the MOU and Federal review requirements so FHWA

knows which projects completed NEPA and are eligible for Federal-aid funding. The FHWA identified a project whose approval was made pursuant to State law and therefore should not have been on the certified list of projects eligible for Federal-aid funding. This is a recurrence from Audit #3.

(b) *Noise workshop timing*

One project did not follow the TxDOT Noise guidelines for the timing of a required noise workshop. TxDOT improperly held a noise workshop months before the public hearing opportunity. The TxDOT noise guidelines (Guidelines for Analysis and Abatement of Roadway Traffic Noise, 2011) identifies procedures for compliance with 23 CFR 772. This is a recurrence of the same non-compliance observation in Audit #3.

(c) *Endangered Species Act Section 7*

The TxDOT provided training to staff and updated its Section 7 compliance procedures, as part of a partnering effort after Audit #3 between FHWA, TxDOT, and USFWS. However, one project was still not in compliance with the updated procedures.

(d) *Indirect & Cumulative Impacts*

One project file reviewed by the team lacked the indirect and cumulative impact analysis that is expected according to TxDOT's indirect and cumulative impact evaluation procedures.

(e) *Federal approval request for a State-funded project*

The review team reviewed a project file where TxDOT followed State environmental laws and then requested Federal-aid to purchase right-of-way. TxDOT informed the team that they are removing Federal funds from the ROW portion of this project as corrective action. This is a recurrence from Audit #3.

Successful Practices and Other Observations

This section summarizes the team's observations about issues or practices that TxDOT may consider as areas to improve. It also summarizes practices that the team believes are successful, so that TxDOT can consider continuing or expanding those programs in the future. Further information on these successful practices and observations is contained in the following subsections that address these six topic areas: program management; documentation and records management; quality assurance/quality control; legal sufficiency; performance management; and training.

Throughout the following subsections, the team lists 8

observations for TxDOT to consider in order to make improvements. The FHWA's suggested implementation methods of action include: corrective action, targeted training, revising procedures, continued self-assessment, improved QA/QC, or some other means. The team acknowledges that, by sharing the preliminary draft audit report with TxDOT, TxDOT has begun the process of implementing actions to address these observations and improve its program prior to the publication of this report.

1. Program Management

Successful Practices and Observations

The team appreciates TxDOT ENV willingness to partner with FHWA before, during, and after audit reviews. This has resulted in improved communication and assisted the team in verifying many of the conclusions in this report. The quarterly partnering sessions, started in 2016, will be an ongoing effort. These exchanges of information between FHWA and TxDOT have clarified and refined FHWA's reviews and assisted TxDOT's efforts to make improvements to their environmental review processes and procedures.

The team noted in District and ENV staff interviews that they welcomed the opportunity to be responsible and accountable for NEPA decisions. Additionally, TxDOT District staff members and management have said in interviews that they are more diligent with their documentation because they know that these approvals will be internally assessed and the District held accountable by the TxDOT ENV Program Review Team (formerly TxDOT's Self-Assessment Branch, [SAB]). District staff indicated in interviews that the former SAB detailed reviews were highly valued because they learned from their mistakes and make improvements. Accountability, in part, is driving an enhanced desire for TxDOT staff to consistently and carefully complete environmental reviews.

The team recognizes enhanced communication among individuals in the project development process through the Core Team (a partnership of District and ENV environmental staff assigned to an individual EIS project) as a valuable concept. Information gained from interviews and materials provided by TxDOT in most cases demonstrate improved communication amongst Districts and between Districts and ENV. The team noted that "NEPA Chats" (regular conference calls led by ENV, providing a platform for Districts

to discuss complex NEPA implementation issues) are still, for the most part, well received. Districts also provide internal self-initiated training across disciplines so everyone in the District Office is aware of TxDOT procedures to try to ensure that staff follows NEPA-related, discipline specific processes. This keeps projects on-schedule or ensures that there are no surprises if projected schedules slip.

Audit #4 Observation #1: Noise procedure clarification.

TxDOT ENV is currently in the process of proposing an update to their Noise Guidelines. The team reviewed a project file where the decisions based on an original noise study were re-examined to reach a different conclusion. The current TxDOT Noise Guidelines do not address how, or under what conditions a re-examination of an original Noise Study report that reaches different conclusions could occur. The team urges TxDOT to clarify their noise guidelines to ensure consistent and fair and equitable treatment of stakeholders affected by highway noise impacts.

Audit #4 Observation #2: Section 7 of the Endangered Species Act

During the interviews, the review team learned that there is a disincentive for "may affect" determinations because TxDOT cannot predict the amount of time required to complete informal consultation. If a particular project's schedule could accommodate the time required for informal consultation, a "may affect" determination might be made to minimize a risk of a legal challenge.

The review team would like to draw TxDOT's attention to the possibility that risk management decisionmaking can introduce a bias or "disincentive" to coordinate with USFWS when it is expected according to Federal policy and guidance. In fulfilling ESA Section 7(a)(2) responsibilities, Congress intended the "benefit of the doubt" to be given to the species (H.R. Conf. Rep. 96-697, 96 Cong., 1st sess. 1979).

The team acknowledges that TxDOT plans to train staff on its revised ESA handbook and standard operating procedures, and this may inform staff of this bias. Through interviews, the team learned that in certain Districts with sensitive habitats (i.e., karst) or the possibility of a species present (i.e., a salamander), ENV managers would review a project's information in addition to the District's and/or ENV biologists. This enhanced review process is currently limited only to two Districts and could be expanded to

include instances where such bias may occur.

Audit #4 Observation #3: Project description and logical termini

The team reviewed one project where the scope described in the NEPA document differed from what was proposed to be implemented. A proposed added capacity project's description indicated a longer terminus compared to a schematic. The team could not determine whether the description or the schematic accurately reflected the project proposal.

A second reviewed project contained a description of the proposed project as the project's purpose instead of identifying a purpose that would accommodate more than one reasonable alternative. The team urges TxDOT to make reviewers aware of these challenges.

2. Documentation and Records Management

The team relied on information in ECOS, TxDOT's official file of record, to evaluate project documentation and records management practices. Many TxDOT toolkit and handbook procedures mention the requirement to store official documentation in ECOS. The ECOS is also a tool for storage and management of information records, as well as for disclosure within TxDOT District Offices. ECOS is how TxDOT identifies and procures information required to be disclosed to, and requested by, the public. ECOS is being upgraded, and there are four more phased upgrades planned over time. The most recent work includes incorporation of a revised scope development tool, Biological Evaluation (BE) form, and new way to electronically approve a CE determination form in lieu of paper. The TxDOT staff noted that ECOS is both adaptable and flexible.

Successful Practices and Observations

A number of successful practices demonstrated by TxDOT were evident as a result of the documentation and records management review. The team learned that ECOS continues to improve in download speed and compatibility. The team learned through interviews with TxDOT staff members that ENV is changing the scope development tool within ECOS and that functionality will improve. Some staff indicated that they also utilized the scope development tool to develop their own checklists to ensure that all environmental requirements have been met prior to making a NEPA approval.

Audit #4 Observation #4: Record keeping integrity

The team's review included project files that were incomplete because of missing or incorrect CSJ references that would link the files to environmental review documentation. TxDOT has indicated that they are working to address this problem. In addition to the issue of database links, the team identified a project file that lacked a record of required public involvement required per TxDOT procedures. The team learned from interviews that ENV and District staff do not consistently include such documentation in ECOS. Also, one reviewed project file had outdated data for threatened and endangered species. The team urges TxDOT staff to rely upon up to date and complete data in making project decisions.

The team identified one project file where total project costs were not presented in the project documentation and EA documents were added after the FONSI was signed. The added EA documentation was editorial in nature. The team urges TxDOT to ensure the project file contains supportive documentation. Material that was not considered as part of the NEPA decision, and that was dated after the NEPA approval should not be included in a project's file.

The team found a project file that had conflicting information about a detour. The review form indicated that no detour was proposed, but letters to a county agency said that a road would be closed, which would require addressing the need for a detour. Our review was unable to confirm the detour or whether the impact road closure was considered.

3. Quality Assurance/Quality Control (QA/QC)

Successful Practices and Observations

The team observed some continued successful practices from previous audits in (QA/QC). These successful practices include the use of established checklists, certifications, NEPA Chats, and the CORE Team concept (items described in previous audit reports). The TxDOT District Office environmental staff continue to do peer reviews of environmental decisions to double check the quality and accuracy of documentation. The Environmental Affairs Division has established a post-NEPA review team (performance review team) that was briefly mentioned in the Self-Assessment report to FHWA. Through our interviews, we learned that the team reaches out to ENVs own Section Directors and subject matter experts, in addition to District

environmental staff, regarding their observations to improve the quality of documentation in future NEPA decisions. The FHWA team observed increased evidence in ECOS of documentation of collaboration illustrating the efforts to improve document quality and accuracy.

Audit #4 Observation #5: Effectiveness and change in QA/QC

Based on project file reviews, the team found errors and omissions that should have been identified and addressed through TxDOT quality control. Also, TxDOT's certified monthly list of project decisions contained errors, some of which were recurring.

During this review period, the team was informed that TxDOT's approach to QA/QC had changed since the previous audit review. In audit #3, the team identified the Self-Assessment Branch (SAB) as a successful practice. TxDOT's response in the PAIR #4 indicated SAB was disbanded and ENV did not explain how its function would be replaced. Through interviews, the team learned that TxDOT had reorganized its SAB staff and modified its approach to QA/QC. This report identifies a higher number of observations that were either non-compliant or the result of missing or erroneous information compared to previous audits. The team could not assess the validity and relevance of TxDOT's self-assessment of QA/QC because TxDOT's methodology (sampling and timeframe) was not explained. Lastly, through interviews with District environmental staff, the team learned that they are unclear on how errors and omissions now identified by the new "performance review team" and ENV SMEs are to be resolved. The team urges TxDOT to evaluate its new approach to QA/QC with relevant and valid performance measures and to explain its approach to QA/QC to its staff.

4. Legal Sufficiency Review

Based on the interviews with two of the General Counsel Division (GCD) staff and documentation review, the requirements for legal sufficiency under the MOU continue to be adequately fulfilled.

There are five attorneys in TxDOT's GCD, with one serving as lead attorney. Additional assistance is provided by a consultant attorney who has delivered environmental legal assistance to ENV for several years and by an outside law firm. The contract for the outside law firm is currently going through a scheduled re-procurement. The GCD assistance continues to be guided by

ENVs Project Delivery Manual Sections 303.080 through 303.086. These sections provide guidance on conducting legal sufficiency review of FHWA-funded projects and those documents that are to be published in the **Federal Register**, such as the Notice of Intent (NOI) to prepare an EIS, Statute of Limitation (139(l)), and Notice of Availability of EIS.

GCD continues to serve as a resource to ENV and the Districts and is involved early in the development of large and complex projects. One example is the very large Houston District IH 45 project around downtown Houston with an estimated cost of \$4.5 billion. The GCD lead attorney has been involved in the project and participated in the project's public hearing. GCD participates in the monthly NEPA chats and recently provided informal training during the chat on project scoping, logical termini, and independent utility.

According to TxDOT's response to FHWA's PAIR #4, GCD staff has reviewed or been involved in legal review for eight projects. The ENV project delivery managers make requests for review of a document or assistance to the lead attorney, who then assigns that project to an attorney for legal review. Attorney comments are provided in the standard comment response matrix back to ENV and are reviewed by the lead attorney. All comments must be satisfactorily addressed for GCD to complete its legal sufficiency determination. The GCD does not issue conditional legal sufficiency determinations. Legal sufficiency is documented by email to ENV.

A notable effort by GCD, in the last year, were the two lawsuits on TxDOT issued Federal environmental FONSI decision on the MOPAC intersections, the ongoing environmental process on the widening of south MOPAC, and State environmental decision on SH 45 SW. The lawsuit advanced only the Federal environmental decision on the MOPAC intersections. GCD worked first to develop the administrative record, having the numerous consultant and TxDOT staff provide documentation of their involvement on the MOPAC intersections project. Staff from GCD, Attorney General, and outside counsel then developed the voluminous record, which is their first since assuming NEPA responsibilities. The initial request by the plaintiffs for a preliminary injunction on the project was denied in Federal court, and, since a hearing on the merits was held later, they are awaiting the judge's decision. The FHWA and DOJ were notified, as

appropriate, of the notices of pleadings through the court's PACE database.

Successful Practice

ENV involves GCD early on projects and issues in need of their attention and expertise. Based on our discussions, GCD continues to be involved with the Districts and ENV throughout the NEPA project development process, when needed, and addresses legal issues, as appropriate. Based on interview responses, observation, and the comments above, TxDOT's approach to legal sufficiency is adequate.

5. Performance Measurement

TxDOT states in their self-assessment summary report that they achieved acceptable performance goals for all five performance-based performance metrics with the remaining seven performance goals remaining, consistent with the March 2016 self-assessment. The TxDOT continues to devote a high level of effort to develop the metrics to measure performance. During this audit, the team learned through interviews that the methodology employed to assess QA/QC performance had been revamped to the point that the results do not appear to be comparable with measures from previous years.

Successful Practices and Observations

As part of TxDOT's response to the PAIR #4, TxDOT provided an alternate performance metric for EA timeframes that analyzed the distribution of EA durations for projects initiated and completed prior to assignment, initiated prior to assignment but completed after assignment, and ones initiated and completed after assignment. This creative approach identified both improved and diminished performance in EA timeframes for projects initiated before assignment but completed after assignment. TxDOT reports in their response to the PAIR #4 that, at a 95 percent confidence interval, comparing completion times for EA projects before and after assignment, the post-assignment median timeframe for completion is faster after assignment.

Audit #4 Observation #6: Performance measure awareness and effectiveness

The team noted through interviews of TxDOT District Office staff that many were unaware of TxDOT performance measures and their results. We encourage TxDOT environmental leadership to make these results available to their staff, if only as a means of feedback on performance. Overall, these measures are a positive reflection of actions taken by TxDOT staff, and sharing changes in

performance measures may lead to improved performance.

As mentioned above, the team learned that TxDOT's QA/QC methodology changed from that utilized since the previous audit. Previously, the measure reported the percent of project files determined to be complete and accurate, but included information on substantive errors made across different documents. Now the measure is limited only to the percent of project files determined to be complete that relies upon new yes/no/NA response questions whose result lacks an evaluation of the substantialness of errors of accuracy or completion. The team urges TxDOT to continue to analyze the information they are already collecting on the completeness and accuracy of project files as means of implementing information that usually leads to continuous improvement.

6. Training Program

Since the period of the previous audit, TxDOT has revamped its on-line training program, as training courses content were out of date. Training continues to be offered to TxDOT staff informally through NEPA chats as well as through in-person instructor training. All of the training information for any individual TxDOT District staff environmental professional can be found on a TxDOT sharepoint site and is monitored by the training coordinator (especially the qualifications in the Texas Administrative Code). This makes it much more straightforward for third parties (including FHWA) to assess the District staff competency and exposure to training. Since Audit #3 TxDOT has increased the number of hours of training that staff are required to have to maintain environmental certification from 16 to 32 hours. Based on interviews, we learned that some individuals had far exceeded the minimal number of training hours required. We learned that training hours could be earned by participating in the environmental conference, but with a stipulation that other sources of training would be required.

Successful Practices and Observations

The team recognizes the following successful training practices. We learned from interviews that two TxDOT District Offices conduct annual training events for staff of local governments as a means to help them develop their own projects. This training identifies the TxDOT expectations for successful project development, including environmental review.

Another successful practice we learned from interviews, and reported

by TxDOT in the list of training scheduled, is that public involvement training has been revised to emphasize additional outreach that goes beyond the minimum requirements. The emphasis appears to be on achieving meaningful public engagement rather than simple public disclosure.

Finally, the team would like to acknowledge that TxDOT has recognized and taken advantage of cross training that is a successful practice. The TxDOT ENV strategic planning coordinator informed us in an interview that he co-taught a class on planning consistency by adding an environmental component. The team taught how the planning issues relate to environmental review and compliance 5 or 6 times throughout the State. The ENV strategic planning coordinator is now working with the local government division to add an environment module to the Local Project Assistance (LPA) class with specific discussion of environmental reviews (adding information on how to work with ENV at TxDOT, or how to find consultants who are approved to do work for TxDOT).

Audit #4 Observation #7: Additional outreach on improvements.

The team learned through interviews the value and importance of NEPA chats for informing ENV staff when there are changes in procedures, guidance, or policy. For example, when the handbook for compliance with ESA was first completed, it was the subject of a NEPA chat. The team is aware of recent changes TxDOT made to the handbook related to a non-compliance related to ESA compliance. Based on information gained from interviews, the team learned that the changes to the ESA SOP/handbook were not followed by a NEPA chat. As a result, we confirmed that most of the TxDOT Biology SMEs were unaware of the handbook changes. The team appreciates that TxDOT has revised its ESA handbook and urges staff to implement training or other outreach to inform TxDOT staff of these revisions.

Audit #4 Observation #8: FAST Act training.

The Fixing America's Transportation (FAST) Act included several new statutory requirements for the environmental review process, as well as other changes that change NEPA procedures and requirements. The FHWA's Office of Project Development and Environmental Review has released some guidance on how to implement these requirements and anticipates releasing additional information. Even though additional information on these

changes is forthcoming, States under NEPA assignment are required to implement these changes. The team learned through TxDOT's PAIR #4, and through interviews, that TxDOT has neither developed nor delivered training to its staff concerning new requirements for the FAST Act for environmental review. In response to this observation, TxDOT is currently collaborating with FHWA to develop a presentation on this topic for its annual environmental conference.

Status of Non-Compliance Observations and Other Observations From Audit #3 (April 2017)

Audit #3 Non-Compliance Observations

1. *Section 7 Consultation*— TxDOT ENV made revisions to their ESA procedures that they have shared with FHWA and USFWS via partnering sessions. TxDOT implementation and training efforts are still pending by ENV management on the revised procedures to ENV and District staff.
2. *Noise Policy*— TxDOT has informed the team that they are in the process of updating the 2011 Noise Guidelines. TxDOT will submit those guidelines to FHWA for review and approval once they are updated. TxDOT has not indicated whether they intend to provide training on these guidelines for TxDOT District Office and consultant staff.
3. *Public Involvement*— TxDOT updated their FHWA approved Handbook in November of 2016. There was one recurrence of a non-compliant action that was reported in Audit #3 during Audit #4. TxDOT informed FHWA that ENV will request that FHWA review their Texas Administrative Code in lieu of their previous request that FHWA review only their Public Involvement Handbook.
4. *Section 4(f)*— FHWA did not have any non-compliance observations in regards to TxDOT carrying out their assigned Section 4(f) responsibilities during Audit #4.

Audit #3 Observations

1. *A certified project had an incomplete review*— TxDOT continues to certify NEPA approvals for projects on a list provided to FHWA. This audit review identified an error of the inclusion of a project on a certified list.
2. *Inconsistent and contradictory information in some project files*— TxDOT has made ECOS software upgrades recently that address this problem. This audit review continued to identify project file errors in the consistency of information.

3. *TxDOT's QA/QC performance measure could demonstrate continuous improvement*— Since Audit #3, TxDOT has developed a new approach to the QA/QC performance measure. For CE reviews, the methodology is based on "yes/no/NA" answers to 50 questions (for EA projects there are 100 questions) based on requirements in the TxDOT handbooks. The measures are an average of the individual projects reviewed. TxDOT has not addressed how this new measure may demonstrate continuous improvement.

4. *Consider implementing more meaningful timeliness measures*— TxDOT's response to the pre-audit information request as well as in their self-assessment summary included detailed discussions of the timeliness measures for CEs as well as for EA projects that are meaningful.
5. *TxDOT's ability to monitor the certification and competency status of their qualified staff*— TxDOT has included on its training sharepoint site a database that identifies each environmental staff member, a complete list of training they have completed, and when that training occurred. TxDOT's training coordinator is responsible for monitoring this database to ensure all staff maintain their competency and qualification status per State law as well as the ongoing training requirement specified by the ENV director.

Next Steps

The FHWA provided a preliminary draft audit report to TxDOT for a 14-day review and comment period. The team has considered TxDOT comments in developing this draft Audit #4 report. As the next step, FHWA will publish a notice in the **Federal Register** to make it available to the public for a 30-day review comment period [23 U.S.C. 327(g)]. No later than 60 days after the close of the comment period, FHWA will respond to all comments submitted in finalizing this draft audit report [pursuant to 23 U.S.C. 327(g)(2)(B)]. Once finalized, the audit report will be published in the **Federal Register**.

BILLING CODE 4910-22-P

DEPARTMENT OF VETERANS AFFAIRS**Reasonable Charges for Medical Care or Services; v3.23, 2018 Calendar Year Update and National Average Administrative Prescription Drug Charge Update****AGENCY:** Department of Veterans Affairs.**ACTION:** Notice.

SUMMARY: This Department of Veterans Affairs (VA) notice updates the data for calculating the “Reasonable Charges” collected or recovered by VA for medical care or services. This notice also updates the “National Average Administrative Prescription Costs” for purposes of calculating VA’s charges for prescription drugs that were not administered during treatment, but provided or furnished by VA to a veteran.

FOR FURTHER INFORMATION CONTACT:

Romona Greene, Office of Community Care, Revenue Operations, Payer Relations and Services, Rates and Charges (10D1C1), Veterans Health Administration (VHA), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, (202) 382-2521. (This is not a toll free number).

SUPPLEMENTARY INFORMATION: Section 17.101 of Title 38 of the Code of Federal Regulations sets forth the “Reasonable Charges” for medical care or services provided or furnished by VA to a veteran: “For a nonservice-connected disability for which the veteran is entitled to care (or the payment of expenses for care) under a health plan contract; For a nonservice-connected disability incurred incident to the veteran’s employment and covered under a worker’s compensation law or plan that provides reimbursement or indemnification for such care and services; or For a nonservice-connected disability incurred as a result of a motor vehicle accident in a State that requires automobile accident reparations insurance.” Section 17.101 provides the methodologies for establishing billed amounts for several types of charges; however, this notice will only address partial hospitalization facility charges; outpatient facility charges; physician and other professional charges, including professional charges for anesthesia services and dental services; pathology and laboratory charges; observation care facility charges; ambulance and other emergency transportation charges; and charges for durable medical equipment, drugs, injectables, and other medical services, items, and supplies identified by

Healthcare Common Procedure Coding System (HCPCS) Level II codes.

Section 17.101 provides that the actual charge amounts at individual VA medical facilities based on these methodologies and the data sources used for calculating those actual charge amounts will either be published as a notice in the **Federal Register** or will be posted on the internet site of the Veterans Health Administration Office of Community Care’s website at https://www.va.gov/communitycare/revenue_ops/payer_rates.asp.

Certain charges are hereby updated as stated in this notice and will be effective on January 1, 2018.

In cases where VA has not established charges for medical care or services provided or furnished at VA expense (by either VA or non-VA providers) under other provisions or regulations, the method for determining VA’s charges is set forth at 38 CFR 17.101(a)(8).

Based on the methodologies set forth in § 17.101, this notice provides an update to charges for 2018 HCPCS Level II and Current Procedural Terminology (CPT) codes. Charges are also being updated based on more recent versions of data sources for the following charge types: partial hospitalization facility charges; outpatient facility charges; physician and other professional charges, including professional charges for anesthesia services and dental services; pathology and laboratory charges; observation care facility charges; ambulance and other emergency transportation charges; and charges for durable medical equipment, drugs, injectables, and other medical services, items, and supplies identified by HCPCS Level II codes. As of the date of this notice, the actual charge amounts at individual VA medical facilities based on the methodologies in § 17.101 will be posted on the VHA Office of Community Care’s website at https://www.va.gov/communitycare/revenue_ops/payer_rates.asp under the heading “Reasonable Charges Data Tables” and identified as “v3.23 Data Tables (Outpatient and Professional).”

The list of data sources used for calculating the actual charge amounts listed above also will be posted on the VHA Office of Community Care’s website under the heading “Reasonable Charges Data Sources” and identified as “Reasonable Charges v3.23 Data Sources (Outpatient and Professional) (PDF).”

Acute inpatient facility charges and skilled nursing facility/sub-acute inpatient facility charges remain the same as set forth in the notice published in the **Federal Register** on September 25, 2017 (82 FR 44701).

We are also updating the list of VA medical facility locations. The list of VA medical facility locations, including the first three digits of their zip codes as well as provider-based/non-provider-based designations, will be posted on the VHA Office of Community Care’s website under the heading “VA Medical Facility Locations” and identified as “v3.23 (Jan18).”

As indicated in 38 CFR 17.101(m), when VA provides or furnishes prescription drugs not administered during treatment, “charges billed separately for such prescription drugs will consist of the amount that equals the total of the actual cost to VA for the drugs and the national average of VA administrative costs associated with dispensing the drugs for each prescription.” Section 17.101(m) includes the methodology for calculating the national average administrative cost for prescription drug charges not administered during treatment.

VA determines the amount of the national average administrative cost annually for the prior fiscal year (October through September) and then applies the charge at the start of the next calendar year. The national average administrative drug cost for calendar year 2018 is \$16.64. This change will be posted on the VHA Office of Community Care’s website at https://www.va.gov/COMMUNITYCARE/revenue_ops/admin_costs.asp under the heading “CY 2018 Average Administrative Cost for Prescriptions.”

Consistent with § 17.101, the national average administrative cost, the updated data, and supplementary tables containing the changes described in this notice will be posted online, as indicated in this notice. This notice will be posted on the VHA Office of Community Care’s website under the heading “**Federal Registers**, Rules, and Notices” and identified as “v3.23 **Federal Register** Notice 01/01/18 (Outpatient and Professional), and National Administrative Cost (PDF).” The national average administrative cost, updated data, and supplementary tables containing the changes described will be effective until changed by a subsequent **Federal Register** notice.

Signing Authority

The Secretary of Veterans Affairs, or designee, approved this document and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs. Gina S. Farrisee, Deputy Chief of Staff, Department of Veterans Affairs,

approved this document on November 24, 2017, for publication.

Dated: November 24, 2017.

Jeffrey Martin,

*Office Program Manager, Office of Regulation
Policy & Management, Office of the Secretary,
Department of Veterans Affairs.*

Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs*Republication*

Editorial Note: Rule document 2017-23932 was originally published on pages 52356 through 52637 in the issue of Monday, November 13, 2017. In that publication, a section of the document was omitted due to a printing error. The corrected document is published here in its entirety.

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare hospital outpatient prospective payment system (OPPS) and the Medicare ambulatory surgical center (ASC) payment system for CY 2018 to implement changes arising from our continuing experience with these systems. In this final rule with comment period, we describe the changes to the amounts and factors used to determine the payment rates for Medicare services paid under the OPPS and those paid under the ASC payment system. In addition, this final rule with comment period updates and refines the requirements for the Hospital Outpatient Quality Reporting (OQR) Program and the ASC Quality Reporting (ASCQR) Program.

DATES:

Effective date: This final rule with comment period is effective on January 1, 2018, unless otherwise noted.

Comment period: To be assured consideration, comments on the payment classifications assigned to HCPCS codes identified in Addenda B, AA, and BB with the comment indicator "NI" and on other areas specified throughout this final rule with comment period must be received at one of the addresses provided in the **ADDRESSES** section no later than 5 p.m. EST on December 31, 2017.

ADDRESSES: In commenting, please refer to file code CMS-1678-FC when commenting on the issues in this proposed rule. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (no duplicates, please):

1. *Electronically.* You may (and we encourage you to) submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the instructions under the "submit a comment" tab.

2. *By regular mail.* You may mail written comments to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1678-FC, P.O. Box 8013, Baltimore, MD 21244-1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments via express or overnight mail to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1678-FC, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, please call the telephone number (410) 786-7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, we refer readers to the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: (We note that public comments must be submitted through one of the four channels outlined in the **ADDRESSES** section above. Comments may not be submitted via email.)

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: <http://www.regulations.gov/>. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection, generally beginning approximately 3 weeks after publication of the rule, at

the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244, on Monday through Friday of each week from 8:30 a.m. to 4 p.m. EST. To schedule an appointment to view public comments, phone 1-800-743-3951.

Electronic Access

This **Federal Register** document is also available from the **Federal Register** online database through Federal Digital System (FDSys), a service of the U.S. Government Printing Office. This database can be accessed via the Internet at <https://www.gpo.gov/fdsys/>.

Addenda Available Only Through the Internet on the CMS Web Site

In the past, a majority of the Addenda referred to in our OPPS/ASC proposed and final rules were published in the **Federal Register** as part of the annual rulemakings. However, beginning with the CY 2012 OPPS/ASC proposed rule, all of the Addenda no longer appear in the **Federal Register** as part of the annual OPPS/ASC proposed and final rules to decrease administrative burden and reduce costs associated with publishing lengthy tables. Instead, these Addenda are published and available only on the CMS Web site. The Addenda relating to the OPPS are available at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>. The Addenda relating to the ASC payment system are available at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

I. Summary and Background

A. Executive Summary of This Document

1. Purpose

In this final rule with comment period, we are updating the payment

policies and payment rates for services furnished to Medicare beneficiaries in hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs) beginning January 1, 2018. Section 1833(t) of the Social Security Act (the Act) requires us to annually review and update the payment rates for services payable under the Hospital Outpatient Prospective Payment System (OPPS). Specifically, section 1833(t)(9)(A) of the Act requires the Secretary to review certain components of the OPPS not less often than annually, and to revise the groups, relative payment weights, and other adjustments that take into account changes in medical practices, changes in technologies, and the addition of new services, new cost data, and other relevant information and factors. In addition, under section 1833(i) of the Act, we annually review and update the ASC payment rates. We describe these and various other statutory authorities in the relevant sections of this final rule with comment period. In addition, this final rule with comment period updates and refines the requirements for the Hospital Outpatient Quality Reporting (OQR) Program and the ASC Quality Reporting (ASCQR) Program.

2. Summary of the Major Provisions

- *OPPS Update:* For CY 2018, we are increasing the payment rates under the OPPS by an Outpatient Department (OPD) fee schedule increase factor of 1.35 percent. This increase factor is based on the hospital inpatient market basket percentage increase of 2.7 percent for inpatient services paid under the hospital inpatient prospective payment system (IPPS), minus the multifactor productivity (MFP) adjustment of 0.6 percentage point, and minus a 0.75 percentage point adjustment required by the Affordable Care Act. Based on this update, we estimate that total payments to OPPS providers (including beneficiary cost-sharing and estimated changes in enrollment, utilization, and case-mix) for CY 2018 is approximately \$70 billion, an increase of approximately \$5.8 billion compared to estimated CY 2017 OPPS payments.

We are continuing to implement the statutory 2.0 percentage point reduction in payments for hospitals failing to meet the hospital outpatient quality reporting requirements, by applying a reporting factor of 0.980 to the OPPS payments and copayments for all applicable services.

- *High Cost/Low Cost Threshold for Packaged Skin Substitutes:* As we did for CY 2017, we are assigning skin substitutes with a geometric mean unit

cost (MUC) or a per day cost (PDC) that exceeds either the MUC threshold or the PDC threshold to the high cost group. In addition, for CY 2018, we are establishing that a skin substitute product that does not exceed either the CY 2018 MUC or PDC threshold for CY 2018, but was assigned to the high cost group for CY 2017, is assigned to the high cost group for CY 2018. The goal of our policy is to maintain similar levels of payment for skin substitute products for CY 2018 while we study our current skin substitute payment methodology to determine whether refinements to our existing methodologies may be warranted.

- *Supervision of Hospital Outpatient Therapeutic Services:* In the CY 2009 and CY 2010 OPPS/ASC proposed rules and final rules with comment period, we clarified that direct supervision is required for hospital outpatient therapeutic services covered and paid by Medicare that are furnished in hospitals, CAHs, and in provider-based departments (PBDs) of hospitals, as set forth in the CY 2000 OPPS final rule with comment period. For several years, there has been a moratorium on the enforcement of the direct supervision requirement for CAHs and small rural hospitals, with the latest moratorium on enforcement expiring on December 31, 2016. In this final rule with comment period, as we proposed, we are reinstating the nonenforcement policy for direct supervision of outpatient therapeutic services furnished in CAHs and small rural hospitals having 100 or fewer beds and reinstating our enforcement instruction for CY 2018 and CY 2019.

- *340B Drug Pricing:* We are changing our current Medicare Part B drug payment methodology for 340B hospitals that we believe will better, and more appropriately, reflect the resources and acquisition costs that these hospitals incur. These changes will lower drug costs for Medicare beneficiaries for drugs acquired by hospitals under the 340B Program. For CY 2018, we are exercising the Secretary's authority to adjust the applicable payment rate as necessary for separately payable drugs and biologicals (other than drugs on pass-through payment status and vaccines) acquired under the 340B Program from average sales price (ASP) plus 6 percent to ASP minus 22.5 percent. Rural sole community hospitals (SCHs), children's hospitals, and PPS-exempt cancer hospitals are excluded from this payment adjustment in CY 2018. In addition, in this final rule with comment period, we are establishing two modifiers to identify whether a drug

billed under the OPPS was purchased under the 340B Program—one for hospitals that are subject to the payment reduction and another for hospitals not subject to the payment reduction but that acquire drugs under the 340B Program.

- *Device Pass-Through Payment Applications:* For CY 2018, we evaluated five devices for eligibility to receive pass through payments and sought public comments in the CY 2018 proposed rule on whether each of these items meet the criteria for device pass-through payment status. None of the applications were approved for device pass-through payments for CY 2018.

- *Rural Adjustment:* We are continuing the adjustment of 7.1 percent to the OPPS payments to certain rural SCHs, including essential access community hospitals (EACHs). This adjustment will apply to all services paid under the OPPS, excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to cost.

- *Cancer Hospital Payment Adjustment:* For CY 2018, we are continuing to provide additional payments to cancer hospitals so that the cancer hospital's payment-to-cost ratio (PCR) after the additional payments is equal to the weighted average PCR for the other OPPS hospitals using the most recently submitted or settled cost report data. However, beginning CY 2018, section 16002(b) of the 21st Century Cures Act requires that this weighted average PCR be reduced by 1.0 percentage point. Based on the data and the required 1.0 percentage point reduction, a target PCR of 0.88 will be used to determine the CY 2018 cancer hospital payment adjustment to be paid at cost report settlement. That is, the payment adjustments will be the additional payments needed to result in a PCR equal to 0.88 for each cancer hospital.

- *Changes to the Inpatient Only List:* For CY 2018, we are finalizing our proposal to remove total knee arthroplasty (TKA) from the inpatient only list. In addition, we are precluding the Recovery Audit Contractors from reviewing TKA procedures for "patient status" (that is, site of service) for a period of 2 years. We note that we will monitor changes in site of service to determine whether changes may be necessary to certain CMS Innovation Center models. In addition, we are removing five other procedures from the inpatient only list and adding one procedure to the list.

- *Comprehensive APCs:* For CY 2018, we did not propose to create any new

C-APCs or make any extensive changes to the already established methodology used for C-APCs. There will be a total number of 62 C-APCs as of January 1, 2018. For CY 2018, for the C-APC for stereotactic radio surgery (SRS), specifically, C-APC 5627 (Level 7 Radiation Therapy), we are continuing to make separate payments for the 10 planning and preparation services adjunctive to the delivery of the SRS treatment using either the Cobalt-60-based or LINAC-based technology when furnished to a beneficiary within 30 days of the SRS treatment. In addition, the data collection period for SRS claims with modifier "CP" is set to conclude on December 31, 2017. Accordingly, for CY 2018, we are deleting this modifier and discontinuing its required use.

- *Packaging Policies:* In CY 2015, we implemented a policy to conditionally package ancillary services assigned to APCs with a geometric mean cost of \$100 or less prior to packaging, with some exceptions, including drug administration services. For CY 2018, we are removing the exception for certain drug administration services and conditionally packaging payment for low-cost drug administration services. We did not propose to package drug administration add-on codes for CY 2018, but solicited comments on this policy. The public comments that we received are discussed in this final rule with comment period. In addition, we solicited comments on existing packaging policies that exist under the OPPS, including those related to drugs that function as a supply in a diagnostic test or procedure or in a surgical procedure. The public comments that we received are also discussed in this final rule with comment period.

- *Payment Changes for X-rays Taken Using Computed Radiography Technology:* Section 502(b) of Division O, Title V of the Consolidated Appropriations Act, 2016 (Pub. L. 114-113) amended section 1833(t)(16) of the Act by adding new subparagraph (F). New section 1833(t)(16)(F)(ii) of the Act provides for a phased-in reduction of payments for imaging services that are taken using computed radiography technology. That section provides that payments for such services furnished during CYs 2018 through 2022 shall be reduced by 7 percent, and if such services are furnished during CY 2023 or a subsequent year, payments for such services shall be reduced by 10 percent. We are establishing a new modifier that will be reported on claims to identify those HCPCS codes that describe X-rays taken using computed radiography technology. Specifically, this modifier,

as allowed under the provisions of new section 1833(t)(16)(F)(ii) of the Act, will be reported with the applicable HCPCS code to describe imaging services that are taken using computed radiography technology beginning January 1, 2018.

- *ASC Payment Update:* For CY 2018, we are increasing payment rates under the ASC payment system by 1.2 percent for ASCs that meet the quality reporting requirements under the ASCQR Program. This increase is based on a projected CPI-U update of 1.7 percent minus a multifactor productivity adjustment required by the Affordable Care Act of 0.5 percentage point. Based on this update, we estimate that total payments to ASCs (including beneficiary cost-sharing and estimated changes in enrollment, utilization, and case-mix) for CY 2018 is approximately \$4.62 billion, an increase of approximately \$130 million compared to estimated CY 2017 Medicare payments. In addition, in the CY 2018 proposed rule, we solicited comment on payment reform for ASCs, including the collection of cost data which may support a rate update other than CPI-U. We discuss the public comments that we received in response to this solicitation in this final rule with comment period.

- *Comment Solicitation on ASC Payment Reform:* In the CY 2018 proposed rule, we indicated that we were broadly interested in feedback from stakeholders and other interested parties on potential reforms to the current payment system, including, but not limited to (1) the rate update factor applied to ASC payments, (2) whether and how ASCs should submit data relating to costs, (3) whether ASCs should bill on the institutional claim form rather than the professional claim form, and (4) other ideas to improve payment accuracy for ASCs. We discuss the feedback we received in this final rule with comment period.

- *Changes to the List of ASC Covered Surgical Procedures:* For CY 2018, we are adding three procedures to the ASC covered procedures list. In addition, in the CY 2018 proposed rule, we solicited comment on whether total knee arthroplasty, partial hip arthroplasty and total hip arthroplasty meet the criteria to be added to the ASC covered procedures list. We also solicited comments from stakeholders on whether there are codes that are outside the AMA-CPT surgical code range that nonetheless, should be considered to be a covered surgical procedure. We discuss the public comments we received on this solicitation in this final rule with comment period.

- *Revisions to the Laboratory Date of Service Policy:* To better understand the potential impact of the current date of service (DOS) policy on billing for molecular pathology tests and advanced diagnostic laboratory tests (ADLTs) under the new private payor rate-based Clinical Laboratory Fee Schedule (CLFS), in the CY 2018 proposed rule, we solicited public comments on billing for molecular pathology tests and certain ADLTs ordered less than 14 days of a hospital outpatient discharge and discussed potential modifications to our DOS policy to address those tests. After considering the public comments received, we are adding an additional exception to our current laboratory DOS regulations at 42 CFR 414.510. This new exception to the laboratory DOS policy generally permits laboratories to bill Medicare directly for ADLTs and molecular pathology tests excluded from OPPS packaging policy if the specimen was collected from a hospital outpatient during a hospital outpatient encounter and the test was performed following the patient's discharge from the hospital outpatient department. We discuss the public comments we received on this solicitation in this final rule with comment period.

- *Hospital Outpatient Quality Reporting (OQR) Program:* For the Hospital OQR Program, we are finalizing our proposals to remove and delay certain measures for the CY 2020 payment determination and subsequent years. Specifically, beginning with the CY 2020 payment determination, we are finalizing our proposals to remove: (1) OP-21: Median Time to Pain Management for Long Bone Fracture; and (2) OP-26: Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures. While we proposed to remove: OP-1: Median Time to Fibrinolysis, OP-4: Aspirin at Arrival, OP-20: Door to Diagnostic Evaluation by a Qualified Medical Professional, and OP-25: Safe Surgery Checklist for the CY 2021 payment determination and subsequent years, we are finalizing these proposals with modification, such that we are removing them for the CY 2020 payment determination and subsequent years, one year earlier than proposed. We are also finalizing our proposal to delay the OAS CAHPS Survey-based measures (OP-37 a-e) beginning with the CY 2020 payment determination (CY 2018 reporting). In addition, for the CY 2020 payment determination and subsequent years we are: (1) Providing clarification on our procedures for validation of chart-abstracted measures for targeting the poorest performing outlier hospitals; (2)

formalizing the validation educational review process and updating it to allow corrections of incorrect validation results for chart-abstracted measures, and modifying the CFR accordingly; (3) aligning the first quarter for which to submit data for hospitals that did not participate in the previous year's Hospital OQR Program and make corresponding changes to the CFR; and (4) aligning the naming of the Extraordinary Circumstances Exceptions (ECE) policy with that used in our other quality reporting and value-based payment programs and making corresponding changes to the CFR. We are not finalizing our proposal to extend the Notice of Participation (NOP) deadline and make corresponding changes to the CFR. Lastly, we are finalizing with modifications our proposal to publicly report OP-18c: Median Time from Emergency Department Arrival to Emergency Department Departure for Discharged Emergency Department Patients—Psychiatric/Mental Health Patients.

• *Ambulatory Surgical Center Quality Reporting (ASCQR) Program:* For the ASCQR Program, we are finalizing measures and policies for the CY 2019 payment determination, 2021 payment determination, and CY 2022 payment determination and subsequent years. Specifically, we are finalizing our proposals to, beginning with the CY 2019 payment determination, remove three measures from the ASCQR Program measure set: (1) ASC-5: Prophylactic Intravenous (IV) Antibiotic Timing; (2) ASC-6: Safe Surgery Checklist Use; and, (3) ASC-7: Ambulatory Surgical Center Facility Volume Data on Selected Ambulatory Surgical Center Surgical Procedures. In addition, we are also finalizing our proposal to delay the OAS CAHPS Survey measures (ASC-15a-e) beginning with the CY 2020 payment determination (CY 2018 data collection). Furthermore, starting with CY 2018, we are finalizing our proposals to: (1) Expand the CMS online tool to also allow for batch submission of measure data and make corresponding changes to the CFR; and (2) align the naming of the Extraordinary Circumstances Exceptions (ECE) policy with that used in our other quality reporting and value-based payment programs and make corresponding changes to the CFR. We are not finalizing our proposal to adopt one new measure, ASC-16: Toxic Anterior Segment Syndrome, beginning with the CY 2021 payment determination. However, we are finalizing proposals to adopt two new measures collected via claims,

beginning with the CY 2022 payment determination, ASC-17: Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures and ASC-18: Hospital Visits after Urology Ambulatory Surgical Center Procedures.

3. Summary of Costs and Benefits

In sections XVIII. and XIX. of this final rule with comment period, we set forth a detailed analysis of the regulatory and Federalism impacts that the changes will have on affected entities and beneficiaries. Key estimated impacts are described below.

a. Impacts of the OPSS Update

(1) Impacts of All OPSS Changes

Table 88 in section XVIII. of this final rule with comment period displays the distributional impact of all the OPSS changes on various groups of hospitals and CMHCs for CY 2018 compared to all estimated OPSS payments in CY 2017. We estimate that policies in this final rule with comment period will result in a 1.4 percent overall increase in OPSS payments to providers. We estimate that total OPSS payments for CY 2018, including beneficiary cost-sharing, to the approximate 3,900 facilities paid under the OPSS (including general acute care hospitals, children's hospitals, cancer hospitals, and CMHCs) will increase by approximately \$690 million compared to CY 2017 payments, excluding our estimated changes in enrollment, utilization, and case-mix.

We estimated the isolated impact of our OPSS policies on CMHCs because CMHCs are only paid for partial hospitalization services under the OPSS. Continuing the provider-specific structure that we adopted beginning in CY 2011 and basing payment fully on the type of provider furnishing the service, we estimate a 17.2 percent increase in CY 2018 payments to CMHCs relative to their CY 2017 payments.

(2) Impacts of the Updated Wage Indexes

We estimate that our update of the wage indexes based on the FY 2018 IPPS final rule wage indexes results in no change for urban and rural hospitals under the OPSS. These wage indexes include the continued implementation of the OMB labor market area delineations based on 2010 Decennial Census data.

(3) Impacts of the Rural Adjustment and the Cancer Hospital Payment Adjustment

There are no significant impacts of our CY 2018 payment policies for hospitals that are eligible for the rural

adjustment or for the cancer hospital payment adjustment. We are not making any change in policies for determining the rural hospital payment adjustments. While we are implementing the required reduction to the cancer hospital payment adjustment in Section 16002 of the 21st Century Cures Act for CY 2018, the adjustment amounts do not significantly impact the budget neutrality adjustments for these policies.

(4) Impacts of the OPD Fee Schedule Increase Factor

We estimate that, for most hospitals, the application of the OPD fee schedule increase factor of 1.35 percent to the conversion factor for CY 2018 will mitigate the impacts of the budget neutrality adjustments. As a result of the OPD fee schedule increase factor and other budget neutrality adjustments, we estimate that rural and urban hospitals will experience increases of approximately 1.3 percent for urban hospitals and 2.7 percent for rural hospitals. Classifying hospitals by teaching status, we estimate non-teaching hospitals will experience increases of 2.9 percent, minor teaching hospitals will experience increases of 1.7 percent, and major teaching hospitals will experience decreases of -0.9 percent. We also classified hospitals by type of ownership. We estimate that hospitals with voluntary ownership will experience increases of 1.3 percent, hospitals with proprietary ownership will experience increases of 4.5 percent and hospitals with government ownership will experience no change in payments.

b. Impacts of the ASC Payment Update

For impact purposes, the surgical procedures on the ASC list of covered procedures are aggregated into surgical specialty groups using CPT and HCPCS code range definitions. The percentage change in estimated total payments by specialty groups under the CY 2018 payment rates, compared to estimated CY 2017 payment rates, generally ranges between an increase of 1 to 5 percent, depending on the service, with some exceptions.

B. Legislative and Regulatory Authority for the Hospital OPSS

When Title XVIII of the Social Security Act was enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the reasonable cost-

based payment methodology with a prospective payment system (PPS). The Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) added section 1833(t) to the Act, authorizing implementation of a PPS for hospital outpatient services. The OPSS was first implemented for services furnished on or after August 1, 2000. Implementing regulations for the OPSS are located at 42 CFR parts 410 and 419.

The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) made major changes in the hospital OPSS. The following Acts made additional changes to the OPSS: The Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554); the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173); the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171), enacted on February 8, 2006; the Medicare Improvements and Extension Act under Division B of Title I of the Tax Relief and Health Care Act of 2006 (MIEA–TRHCA) (Pub. L. 109–432), enacted on December 20, 2006; the Medicare, Medicaid, and SCHIP Extension Act of 2007 (MMSEA) (Pub. L. 110–173), enacted on December 29, 2007; the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275), enacted on July 15, 2008; the Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), enacted on March 30, 2010 (these two public laws are collectively known as the Affordable Care Act); the Medicare and Medicaid Extenders Act of 2010 (MMEA, Pub. L. 111–309); the Temporary Payroll Tax Cut Continuation Act of 2011 (TPTCCA, Pub. L. 112–78), enacted on December 23, 2011; the Middle Class Tax Relief and Job Creation Act of 2012 (MCTRJCA, Pub. L. 112–96), enacted on February 22, 2012; the American Taxpayer Relief Act of 2012 (Pub. L. 112–240), enacted January 2, 2013; the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) enacted on December 26, 2013; the Protecting Access to Medicare Act of 2014 (PAMA, Pub. L. 113–93), enacted on March 27, 2014; the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 (Pub. L. 114–10), enacted April 16, 2015; the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted November 2, 2015; the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), enacted on December 18, 2015, and the 21st

Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016.

Under the OPSS, we generally pay for hospital Part B services on a rate-per-service basis that varies according to the APC group to which the service is assigned. We use the Healthcare Common Procedure Coding System (HCPCS) (which includes certain Current Procedural Terminology (CPT) codes) to identify and group the services within each APC. The OPSS includes payment for most hospital outpatient services, except those identified in section I.C. of this final rule with comment period. Section 1833(t)(1)(B) of the Act provides for payment under the OPSS for hospital outpatient services designated by the Secretary (which includes partial hospitalization services furnished by CMHCs), and certain inpatient hospital services that are paid under Medicare Part B.

The OPSS rate is an unadjusted national payment amount that includes the Medicare payment and the beneficiary copayment. This rate is divided into a labor-related amount and a nonlabor-related amount. The labor-related amount is adjusted for area wage differences using the hospital inpatient wage index value for the locality in which the hospital or CMHC is located.

All services and items within an APC group are comparable clinically and with respect to resource use (section 1833(t)(2)(B) of the Act). In accordance with section 1833(t)(2) of the Act, subject to certain exceptions, items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median cost (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost (or mean cost, if elected by the Secretary) for an item or service within the same APC group (referred to as the “2 times rule”). In implementing this provision, we generally use the cost of the item or service assigned to an APC group.

For new technology items and services, special payments under the OPSS may be made in one of two ways. Section 1833(t)(6) of the Act provides for temporary additional payments, which we refer to as “transitional pass-through payments,” for at least 2 but not more than 3 years for certain drugs, biological agents, brachytherapy devices used for the treatment of cancer, and categories of other medical devices. For new technology services that are not eligible for transitional pass-through payments, and for which we lack sufficient clinical information and cost data to appropriately assign them to a clinical APC group, we have established

special APC groups based on costs, which we refer to as New Technology APCs. These New Technology APCs are designated by cost bands which allow us to provide appropriate and consistent payment for designated new procedures that are not yet reflected in our claims data. Similar to pass-through payments, an assignment to a New Technology APC is temporary; that is, we retain a service within a New Technology APC until we acquire sufficient data to assign it to a clinically appropriate APC group.

C. Excluded OPSS Services and Hospitals

Section 1833(t)(1)(B)(i) of the Act authorizes the Secretary to designate the hospital outpatient services that are paid under the OPSS. While most hospital outpatient services are payable under the OPSS, section 1833(t)(1)(B)(iv) of the Act excludes payment for ambulance, physical and occupational therapy, and speech-language pathology services, for which payment is made under a fee schedule. It also excludes screening mammography, diagnostic mammography, and effective January 1, 2011, an annual wellness visit providing personalized prevention plan services. The Secretary exercises the authority granted under the statute to also exclude from the OPSS certain services that are paid under fee schedules or other payment systems. Such excluded services include, for example, the professional services of physicians and nonphysician practitioners paid under the Medicare Physician Fee Schedule (MPFS); certain laboratory services paid under the Clinical Laboratory Fee Schedule (CLFS); services for beneficiaries with end-stage renal disease (ESRD) that are paid under the ESRD prospective payment system; and services and procedures that require an inpatient stay that are paid under the hospital IPPS. In addition, section 1833(t)(1)(B)(v) of the Act does not include applicable items and services (as defined in subparagraph (A) of paragraph (21)) that are furnished on or after January 1, 2017 by an off-campus outpatient department of a provider (as defined in subparagraph (B) of paragraph (21)). We set forth the services that are excluded from payment under the OPSS in regulations at 42 CFR 419.22.

Under § 419.20(b) of the regulations, we specify the types of hospitals that are excluded from payment under the OPSS. These excluded hospitals include:

- Critical access hospitals (CAHs);

- Hospitals located in Maryland and paid under the Maryland All-Payer Model;
- Hospitals located outside of the 50 States, the District of Columbia, and Puerto Rico; and
- Indian Health Service (IHS) hospitals.

D. Prior Rulemaking

On April 7, 2000, we published in the **Federal Register** a final rule with comment period (65 FR 18434) to implement a prospective payment system for hospital outpatient services. The hospital OPSS was first implemented for services furnished on or after August 1, 2000. Section 1833(t)(9)(A) of the Act requires the Secretary to review certain components of the OPSS, not less often than annually, and to revise the groups, relative payment weights, and other adjustments that take into account changes in medical practices, changes in technologies, and the addition of new services, new cost data, and other relevant information and factors.

Since initially implementing the OPSS, we have published final rules in the **Federal Register** annually to implement statutory requirements and changes arising from our continuing experience with this system. These rules can be viewed on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html>.

E. Advisory Panel on Hospital Outpatient Payment (the HOP Panel or the Panel)

1. Authority of the Panel

Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of Public Law 106–113, and redesignated by section 202(a)(2) of Public Law 106–113, requires that we consult with an external advisory panel of experts to annually review the clinical integrity of the payment groups and their weights under the OPSS. In CY 2000, based on section 1833(t)(9)(A) of the Act, the Secretary established the Advisory Panel on Ambulatory Payment Classification Groups (APC Panel) to fulfill this requirement. In CY 2011, based on section 222 of the PHS Act which gives discretionary authority to the Secretary to convene advisory councils and committees, the Secretary expanded the panel's scope to include the supervision of hospital outpatient therapeutic services in addition to the APC groups and weights. To reflect this new role of the panel, the Secretary

changed the panel's name to the Advisory Panel on Hospital Outpatient Payment (the HOP Panel or the Panel). The HOP Panel is not restricted to using data compiled by CMS, and in conducting its review, it may use data collected or developed by organizations outside the Department.

2. Establishment of the Panel

On November 21, 2000, the Secretary signed the initial charter establishing the Panel, and at that time named the APC Panel. This expert panel is composed of appropriate representatives of providers (currently employed full-time, not as consultants, in their respective areas of expertise), reviews clinical data, and advises CMS about the clinical integrity of the APC groups and their payment weights. Since CY 2012, the Panel also is charged with advising the Secretary on the appropriate level of supervision for individual hospital outpatient therapeutic services. The Panel is technical in nature, and it is governed by the provisions of the Federal Advisory Committee Act (FACA). The current charter specifies, among other requirements, that the Panel—

- May advise on the clinical integrity of Ambulatory Payment Classification (APC) groups and their associated weights;
- May advise on the appropriate supervision level for hospital outpatient services;
- Continues to be technical in nature;
- Is governed by the provisions of the FACA;
- Has a Designated Federal Official (DFO); and
- Is chaired by a Federal Official designated by the Secretary.

The Panel's charter was amended on November 15, 2011, renaming the Panel and expanding the Panel's authority to include supervision of hospital outpatient therapeutic services and to add critical access hospital (CAH) representation to its membership. The Panel's charter was also amended on November 6, 2014 (80 FR 23009), and the number of members was revised from up to 19 to up to 15 members. The Panel's current charter was approved on November 21, 2016, for a 2-year period (81 FR 94378).

The current Panel membership and other information pertaining to the Panel, including its charter, **Federal Register** notices, membership, meeting dates, agenda topics, and meeting reports, can be viewed on the CMS Web site at: <https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelonAmbulatoryPaymentClassificationGroups.html>.

3. Panel Meetings and Organizational Structure

The Panel has held multiple meetings, with the last meeting taking place on August 21, 2017. Prior to each meeting, we publish a notice in the **Federal Register** to announce the meeting and, when necessary, to solicit nominations for Panel membership, to announce new members and to announce any other changes of which the public should be aware. Beginning in CY 2017, we have transitioned to one meeting per year (81 FR 31941). Further information on the 2017 summer meeting can be found in the meeting notice titled "Medicare Program: Announcement of the Advisory Panel on Hospital Outpatient Payment (the Panel) Meeting on August 21–22, 2017" (82 FR 24128).

In addition, the Panel has established an operational structure that, in part, currently includes the use of three subcommittees to facilitate its required review process. The three current subcommittees include the following:

- APC Groups and Status Indicator Assignments Subcommittee, which advises the Panel on the appropriate status indicators to be assigned to HCPCS codes, including but not limited to whether a HCPCS code or a category of codes should be packaged or separately paid, as well as the appropriate APC assignment of HCPCS codes regarding services for which separate payment is made;
- Data Subcommittee, which is responsible for studying the data issues confronting the Panel and for recommending options for resolving them; and
- Visits and Observation

Subcommittee, which reviews and makes recommendations to the Panel on all technical issues pertaining to observation services and hospital outpatient visits paid under the OPSS.

Each of these subcommittees was established by a majority vote from the full Panel during a scheduled Panel meeting, and the Panel recommended at the August 21, 2017 meeting that the subcommittees continue. We accepted this recommendation.

In addition, discussions of the other recommendations made by the Panel at the August 21, 2017 Panel meeting are included in the sections of this final rule with comment period that are specific to each recommendation. For discussions of earlier Panel meetings and recommendations, we refer readers to previously published OPSS/ASC proposed and final rules, the CMS Web site mentioned earlier in this section, and the FACA database at <http://facadatabase.gov>.

We note that we received some public comments on the CY 2018 OPPS/ASC proposed rule related to the HOP Panel meeting presentations, which we address below.

Comment: One commenter supported CMS' extension of the HOP Panel meeting presentation submission deadline when there is a truncated submittal timeframe due to delayed publication of the OPPS/ASC proposed rule. However, to avoid the need to modify the submission deadline in the future, the commenter suggested that CMS revise the submission deadline in the **Federal Register** notice from a firm date to a fluid 21 days from the proposed rule display date to avoid this deadline issue in the future.

Response: We appreciate the commenter's request to modify the HOP Panel meeting submission deadline format. However, frequency, timing, and presentation deadlines are outside the scope of the proposed rule and are generally announced through either a separate **Federal Register** notice or subregulatory channel such as the CMS Web site, or both.

Comment: One commenter requested that CMS reinstate the winter Panel meetings as part of a multifaceted process that would allow for multiple proposal refinements with Panel input prior to finalization of a policy. The commenter also suggested that CMS use this winter meeting as a vehicle to allow stakeholders to review and discuss updated cost data for HCPCS codes and APCs prior to the release of the data in the proposed rule.

Response: We appreciate the commenter's request to modify the Panel meeting processes. However, the frequency of Panel meetings is outside the scope of the proposed rule; meetings are generally announced through either a separate **Federal Register** notice or a subregulatory channel such as the CMS Web site, or both.

F. Public Comments Received on the CY 2017 OPPS/ASC Final Rule With Comment Period

We received 39 timely pieces of correspondence on the CY 2017 OPPS/ASC final rule with comment period that appeared in the **Federal Register** on November 14, 2016 (81 FR 79562), some of which contained comments on the interim APC assignments and/or status indicators of new or replacement Level II HCPCS codes (identified with comment indicator "NI" in OPPS Addendum B, ASC Addendum AA, and ASC Addendum BB to that final rule), the potential limitation on clinical service line expansion or volume of service increases by nonexcepted off-

campus provider-based departments, and the Medicare Physician Fee Schedule (MPFS) payment rates for nonexcepted items and services furnished and billed by nonexcepted off-campus provider-based departments of hospitals. Summaries of the public comments are set forth in the CY 2018 proposed rule and this final rule with comment period under the appropriate subject matter headings. Summaries of public comments on the MPFS payment rates for nonexcepted items and services are set forth in the CY 2018 MPFS final rule with comment period.

II. Updates Affecting OPPS Payments

A. Recalibration of APC Relative Payment Weights

1. Database Construction

a. Database Source and Methodology

Section 1833(t)(9)(A) of the Act requires that the Secretary review not less often than annually and revise the relative payment weights for APCs. In the April 7, 2000 OPPS final rule with comment period (65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000 for each APC group.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33568), for CY 2018, we proposed to recalibrate the APC relative payment weights for services furnished on or after January 1, 2018, and before January 1, 2019 (CY 2018), using the same basic methodology that we described in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79574 through 79595). For this final rule with comment period, for CY 2018, we recalibrated the APC relative payment weights for services furnished on or after January 1, 2018, and before January 1, 2019 (CY 2018), using the same basic methodology that we described in the CY 2017 OPPS/ASC final rule with comment period, using updated CY 2016 claims data. That is, we recalibrate the relative payment weights for each APC based on claims and cost report data for hospital outpatient department (HOPD) services, using the most recent available data to construct a database for calculating APC group weights.

For the purpose of recalibrating the APC relative payment weights for CY 2018, we began with approximately 163 million final action claims (claims for which all disputes and adjustments have been resolved and payment has been made) for HOPD services furnished on or after January 1, 2016, and before January 1, 2017, before applying our exclusionary criteria and other methodological adjustments. After the

application of those data processing changes, we used approximately 86 million final action claims to develop the CY 2018 OPPS payment weights. For exact numbers of claims used and additional details on the claims accounting process, we refer readers to the claims accounting narrative under supporting documentation for this CY 2018 OPPS/ASC final rule with comment period on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

Addendum N to this final rule with comment period (which is available via the Internet on the CMS Web site) includes the list of bypass codes for CY 2018. The list of bypass codes contains codes that were reported on claims for services in CY 2016 and, therefore, includes codes that were in effect in CY 2016 and used for billing, but were deleted for CY 2017. We retained these deleted bypass codes on the CY 2018 bypass list because these codes existed in CY 2016 and were covered OPD services in that period, and CY 2016 claims data are used to calculate CY 2018 payment rates. Keeping these deleted bypass codes on the bypass list potentially allows us to create more "pseudo" single procedure claims for ratesetting purposes. "Overlap bypass codes" that are members of the multiple imaging composite APCs are identified by asterisks (*) in the third column of Addendum N to this final rule with comment period. HCPCS codes that we are adding for CY 2018 are identified by asterisks (*) in the fourth column of Addendum N.

Table 1 below contains the list of codes that we are removing from the CY 2018 bypass list.

TABLE 1—HCPCS CODES REMOVED FROM THE CY 2018 BYPASS LIST

HCPCS code	HCPCS short descriptor
77305	Teletx isodose plan simple.
77310	Teletx isodose plan intermed.
77315	Teletx isodose plan complex.
77327	Brachytx isodose calc intern.
90801	Psy dx interview.
90802	Intac psy dx interview.
90804	Psytx office 20–30 min.
90805	Psytx off 20–30 min w/e&m.
90806	Psytx off 45–50 min.
90807	Psytx off 45–50 min w/e&m.
90808	Psytx office 75–80 min.
90809	Psytx off 75–80 w/e&m.
90810	Intac psytx off 20–30 min.
90811	Intac psytx 20–40 w/e&m.
90812	Intac psytx off 45–50 min.
90857	Intac group psytx.
90862	Medication management.
95115	Immunotherapy one injection.
95117	Immunotherapy injections.

M0064	Visit for drug monitoring.

Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html.

To ensure the completeness of the revenue code-to-cost center crosswalk, we reviewed changes to the list of revenue codes for CY 2016 (the year of claims data we used to calculate the CY 2018 OPPS payment rates) and found that the National Uniform Billing Committee (NUBC) did not add any new revenue codes to the NUBC 2016 Data Specifications Manual.

In accordance with our longstanding policy, we calculate CCRs for the standard and nonstandard cost centers accepted by the electronic cost report database. In general, the most detailed level at which we calculate CCRs is the hospital-specific departmental level. For a discussion of the hospital-specific overall ancillary CCR calculation, we refer readers to the CY 2007 OPPS/ASC final rule with comment period (71 FR 67983 through 67985). The calculation of blood costs is a longstanding exception (since the CY 2005 OPPS) to this general methodology for calculation of CCRs used for converting charges to costs on each claim. This exception is discussed in detail in the CY 2007 OPPS/ASC final rule with comment period and discussed further in section II.A.2.a.(1) of this final rule with comment period.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 74840 through 74847), we finalized our policy of creating new cost centers and distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization. However, in response to the CY 2014 OPPS/ASC proposed rule, commenters reported that some hospitals currently use an imprecise “square feet” allocation methodology for the costs of large moveable equipment like CT scan and MRI machines. They indicated that while CMS recommended using two alternative allocation methods, “direct assignment” or “dollar value,” as a more accurate methodology for directly assigning equipment costs, industry

analysis suggested that approximately only half of the reported cost centers for CT scans and MRIs rely on these preferred methodologies. In response to concerns from commenters, we finalized a policy for the CY 2014 OPPS to remove claims from providers that use a cost allocation method of “square feet” to calculate CCRs used to estimate costs associated with the CT and MRI APCs (78 FR 74847). Further, we finalized a transitional policy to estimate imaging APC relative payment weights using only CT and MRI cost data from providers that do not use “square feet” as the cost allocation statistic. We provided that this finalized policy would sunset in 4 years to provide a sufficient time for hospitals to transition to a more accurate cost allocation method and for the related data to be available for ratesetting purposes (78 FR 74847). Therefore, beginning CY 2018, with the sunset of the transition policy, we will estimate the imaging APC relative payment weight using cost data from all providers, regardless of the cost allocation statistic employed.

As we discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33570), some stakeholders have raised concerns regarding using claims from all providers to calculate CT and MRI CCRs, regardless of the cost allocations statistic employed (78 FR 74840 through 74847). Stakeholders noted that providers continue to use the “square feet” cost allocation method and that including claims from such providers would cause significant reductions in imaging APC payment rates.

Table 2 below demonstrates the relative effect on imaging APC payments after removing cost data for providers that report CT and MRI standard cost centers using “square feet” as the cost allocation method by extracting HCRIS data on Worksheet B–1. Table 3 below provides statistical values based on the CT and MRI standard cost center CCRs using the different cost allocation methods.

b. Calculation and Use of Cost-to-Charge Ratios (CCRs)

For CY 2018, in this CY 2018 OPPS/ASC final rule with comment period, as we proposed, we are continuing to use the hospital-specific overall ancillary and departmental cost-to-charge ratios (CCRs) to convert charges to estimated costs through application of a revenue code-to-cost center crosswalk. To calculate the APC costs on which the CY 2018 APC payment rates are based, we calculated hospital-specific overall ancillary CCRs and hospital-specific departmental CCRs for each hospital for which we had CY 2016 claims data by comparing these claims data to the most recently available hospital cost reports, which, in most cases, are from CY 2015. For the final CY 2018 OPPS payment rates, we used the set of claims processed during CY 2016. We applied the hospital-specific CCR to the hospital’s charges at the most detailed level possible, based on a revenue code-to-cost center crosswalk that contains a hierarchy of CCRs used to estimate costs from charges for each revenue code. That crosswalk is available for review and continuous comment on the CMS Web site at: <http://www.cms.gov/>

TABLE 2—PERCENTAGE CHANGE IN ESTIMATE COST FOR CT AND MRI APCS WHEN EXCLUDING CLAIMS FROM PROVIDER USING “SQUARE FEET” AS THE COST ALLOCATION METHOD

APC	APC descriptor	Percentage change
5521	Level 1 Imaging without Contrast	–3.8
5522	Level 2 Imaging without Contrast	5.3
5523	Level 3 Imaging without Contrast	6.3
5524	Level 4 Imaging without Contrast	5.0
5571	Level 1 Imaging with Contrast	9.0
5572	Level 2 Imaging with Contrast	7.0
5573	Level 3 Imaging with Contrast	2.1
8005	CT and CTA without Contrast Composite	14.4
8006	CT and CTA with Contrast Composite	11.9

TABLE 2—PERCENTAGE CHANGE IN ESTIMATE COST FOR CT AND MRI APCS WHEN EXCLUDING CLAIMS FROM PROVIDER USING “SQUARE FEET” AS THE COST ALLOCATION METHOD—Continued

APC	APC descriptor	Percentage change
8007	MRI and MRA without Contrast Composite	7.2
8008	MRI and MRA with Contrast Composite	7.5

TABLE 3—CCR STATISTICAL VALUES BASED ON USE OF DIFFERENT COST ALLOCATION METHODS

Cost allocation method	CT		MRI	
	Median CCR	Mean CCR	Median CCR	Mean CCR
All Providers	0.0387	0.0538	0.0795	0.1059
Square Feet Only	0.0317	0.0488	0.0717	0.0968
Direct Assign	0.0557	0.0650	0.1032	0.1222
Dollar Value	0.0457	0.0603	0.0890	0.1178
Direct Assign and Dollar Value	0.0457	0.0603	0.0893	0.1175

Our analysis showed that since the CY 2014 OPSS in which we established the transition policy, the number of valid MRI CCRs has increased by 17.5 percent to 2,177 providers and the number of valid CT CCRs has increased by 15.1 percent to 2,251 providers. However, in the proposed rule, we noted that, as shown in Table 2 above, nearly all imaging APCs would see an increase in payment rates for CY 2018 if claims from providers that report “square feet” cost allocation method were removed. This can be attributed to the generally lower CCR values from providers that use a cost allocation method of “square feet” as shown in Table 3 above. We stated in the proposed rule that we believe that the imaging CCRs that we have are appropriate for ratesetting. However, in response to provider concerns and to provide added flexibility for hospitals to improve their cost allocation methods, we proposed to extend the transition policy an additional year, for the CY 2018 OPSS.

For the CY 2018 OPSS, we proposed to continue to remove claims from providers that use a cost allocation method of “square feet” to calculate CCRs used to estimate costs with the CT and MRI APCs identified in Table 2 above. Beginning in CY 2019, we would estimate the imaging APC relative payment weights using cost data from all providers, regardless of the cost allocation statistic employed.

Comment: Commenters supported CMS’ proposal to extend the transition policy an additional year, for the CY 2018 OPSS. Several commenters recommended that CMS continue to remove claims from providers that use a cost allocation method of “square feet” to calculate CT and MRI CCRs in subsequent calendar years.

Response: We thank the commenters for their support. As we discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33570), our analysis shows that the number of valid MRI and CT CCRs has increased since we established the transition policy. We believe extending our transition policy for 1 additional year will provide hospitals adequate time to implement a more accurate cost allocation method for the costs of large moveable equipment like CT scan and MRI machines.

Comment: Some commenters recommended that CMS discontinue the use of CT and MRI cost centers for developing CT and MRI CCRs. One commenter believed that creating separate CT and MRI cost centers has resulted in a decline in geometric means for imaging APCs which can be attributed to costs being dropped out and changes in hospital charging practices.

Response: We are not convinced that the change in CT and MRI CCRs over the previous years is a result of costs not being reported accurately. The standard cost centers for CT scans and MRIs have been in effect since cost reporting periods beginning on or after May 1, 2010, on the revised Medicare cost report Form CMS–2552–10. Therefore, the cost reports that we used to develop the CY 2018 OPSS relative payment weights were the fifth or sixth opportunity for hospitals to submit cost reports with the CT and MRI cost centers. However, we will continue to monitor cost reporting practices with respect to CT scan and MRI cost centers as well as trends in CT and MRI CCRs.

After consideration of the public comments we received, we are finalizing our proposal to extend our transition policy for 1 additional year and continue to remove claims from

providers that use a cost allocation method of “square feet” to calculate CT and MRI CCRs for the CY 2018 OPSS.

2. Data Development Process and Calculation of Costs Used for Ratesetting

In this section of this final rule with comment period, we discuss the use of claims to calculate the OPSS payment rates for CY 2018. The Hospital OPSS page on the CMS Web site on which this final rule with comment period is posted (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>) provides an accounting of claims used in the development of the payment rates. That accounting provides additional detail regarding the number of claims derived at each stage of the process. In addition, below in this section we discuss the file of claims that comprises the data set that is available upon payment of an administrative fee under a CMS data use agreement. The CMS Web site, <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>, includes information about obtaining the “OPSS Limited Data Set,” which now includes the additional variables previously available only in the OPSS Identifiable Data Set, including ICD–10–CM diagnosis codes and revenue code payment amounts. This file is derived from the CY 2016 claims that were used to calculate the payment rates for the CY 2018 OPSS.

In the history of the OPSS, we have traditionally established the scaled relative weights on which payments are based using APC median costs, which is a process described in the CY 2012 OPSS/ASC final rule with comment period (76 FR 74188). However, as discussed in more detail in section II.A.2.f. of the CY 2013 OPSS/ASC final

rule with comment period (77 FR 68259 through 68271), we finalized the use of geometric mean costs to calculate the relative weights on which the CY 2013 OPPS payment rates were based. While this policy changed the cost metric on which the relative payments are based, the data process in general remained the same, under the methodologies that we used to obtain appropriate claims data and accurate cost information in determining estimated service cost. For CY 2018, in this CY 2018 OPPS/ASC final rule with comment period, as we proposed, we are continuing to use geometric mean costs to calculate the relative weights on which the CY 2018 OPPS payment rates are based.

We used the methodology described in sections II.A.2.a. through II.A.2.c. of this final rule with comment period to calculate the costs we used to establish the relative payment weights used in calculating the OPPS payment rates for CY 2018 shown in Addenda A and B to this final rule with comment period (which are available via the Internet on the CMS Web site). We refer readers to section II.A.4. of this final rule with comment period for a discussion of the conversion of APC costs to scaled payment weights.

For details of the claims process used in this final rule with comment period, we refer readers to the claims accounting narrative under supporting documentation for this CY 2018 OPPS/ASC final rule with comment period on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

a. Calculation of Single Procedure APC Criteria-Based Costs

(1) Blood and Blood Products

(a) Methodology

Since the implementation of the OPPS in August 2000, we have made separate payments for blood and blood products through APCs rather than packaging payment for them into payments for the procedures with which they are administered. Hospital payments for the costs of blood and blood products, as well as for the costs of collecting, processing, and storing blood and blood products, are made through the OPPS payments for specific blood product APCs.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33571), we proposed to continue to establish payment rates for blood and blood products using our blood-specific CCR methodology, which utilizes actual or simulated CCRs from the most recently available hospital cost reports to convert hospital charges for

blood and blood products to costs. This methodology has been our standard ratesetting methodology for blood and blood products since CY 2005. It was developed in response to data analysis indicating that there was a significant difference in CCRs for those hospitals with and without blood-specific cost centers, and past public comments indicating that the former OPPS policy of defaulting to the overall hospital CCR for hospitals not reporting a blood-specific cost center often resulted in an underestimation of the true hospital costs for blood and blood products. Specifically, in order to address the differences in CCRs and to better reflect hospitals' costs, we proposed to continue to simulate blood CCRs for each hospital that does not report a blood cost center by calculating the ratio of the blood-specific CCRs to hospitals' overall CCRs for those hospitals that do report costs and charges for blood cost centers. We also proposed to apply this mean ratio to the overall CCRs of hospitals not reporting costs and charges for blood cost centers on their cost reports in order to simulate blood-specific CCRs for those hospitals. We proposed to calculate the costs upon which the proposed CY 2018 payment rates for blood and blood products are based using the actual blood-specific CCR for hospitals that reported costs and charges for a blood cost center and a hospital-specific, simulated blood-specific CCR for hospitals that did not report costs and charges for a blood cost center.

We continue to believe that the hospital-specific, simulated blood-specific CCR methodology better responds to the absence of a blood-specific CCR for a hospital than alternative methodologies, such as defaulting to the overall hospital CCR or applying an average blood-specific CCR across hospitals. Because this methodology takes into account the unique charging and cost accounting structure of each hospital, we believe that it yields more accurate estimated costs for these products. We continue to believe that this methodology in CY 2018 would result in costs for blood and blood products that appropriately reflect the relative estimated costs of these products for hospitals without blood cost centers and, therefore, for these blood products in general.

We note that, as discussed in section II.A.2.e. of the CYs 2014 through 2017 OPPS/ASC final rules with comment period (78 FR 74861 through 74910, 79 FR 66798 through 66810, 80 FR 70325 through 70339, and 81 FR 79580 through 79585, respectively), we defined a comprehensive APC (C-APC)

as a classification for the provision of a primary service and all adjunctive services provided to support the delivery of the primary service. Under this policy, we include the costs of blood and blood products when calculating the overall costs of these C-APCs. In the CY 2018 OPPS/ASC proposed rule (82 FR 33571), we proposed to continue to apply the blood-specific CCR methodology described in this section when calculating the costs of the blood and blood products that appear on claims with services assigned to the C-APCs. Because the costs of blood and blood products would be reflected in the overall costs of the C-APCs (and, as a result, in the proposed payment rates of the C-APCs), we proposed to not make separate payments for blood and blood products when they appear on the same claims as services assigned to the C-APCs (we refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66796)).

We also referred readers to Addendum B to the proposed rule (which is available via the Internet on the CMS Web site) for the proposed CY 2018 payment rates for blood and blood products (which are identified with status indicator "R"). For a more detailed discussion of the blood-specific CCR methodology, we refer readers to the CY 2005 OPPS proposed rule (69 FR 50524 through 50525). For a full history of OPPS payment for blood and blood products, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66807 through 66810).

We invited public comments on our proposals.

Comment: Several commenters continued to support using the blood-specific CCR methodology to establish payment rates for blood and blood products, which utilizes actual or simulated CCRs from the most recently available hospital cost reports to convert hospital charges for blood and blood products to costs. The commenters also supported using a blood-specific APC with a separate APC for each blood and blood product service code. The commenters viewed the blood-specific CCR methodology as the best current methodology to report the costs of blood and blood products.

Response: We appreciate the commenters' support.

Comment: Several commenters expressed concerns about reduced payment for several blood and blood products HCPCS codes, including HCPCS codes P9010 (Blood (whole), for transfusion, per unit), P9011 (Blood, split unit), P9012 (Cryoprecipitate, each

unit), P9016 (Red blood cells, leukocytes reduced, each unit), P9023 (Plasma, pooled multiple donor, solvent/detergent treated, frozen, each unit), P9035 (Platelets, pheresis, leukocytes reduced, each unit), P9043 (Infusion, plasma protein fraction (human), 5%, 50 ml), P9048 (Infusion, plasma protein fraction (human), 5%, 250 ml), P9055 (Platelets, leukocytes reduced, cmv-negative, apheresis/pheresis, each unit), and P9060 (Fresh frozen plasma, donor retested, each unit). Commenters supported the higher payment rates for several HCPCS codes, including HCPCS codes P9019 (Platelets, each unit) and P9034 (Platelets, pheresis, each unit).

Response: We used claims data from CY 2016 and the same blood-specific CCR methodology we used in previous years to calculate these proposed payment rates and believe the changes in costs for the services mentioned by these commenters are a result of normal variations in the claims data.

Comment: Two commenters expressed concern that the proposed payment rate for HCPCS code P9070 (Plasma, pooled multiple donor, pathogen reduced, frozen, each unit) does not accurately reflect the cost of the blood product.

Response: HCPCS code P9070 was established on January 1, 2016, and for CY 2016 and CY 2017, we linked the payment of HCPCS code P9070 to a blood product, HCPCS code P9059 (Fresh frozen plasma between 8–24 hours of collection, each unit), that we believed would have a comparable cost to HCPCS code P9070. CY 2018 is the first year for which we have claims data that will allow us to directly determine the cost of HCPCS code P9070. In this case, the payment rate for HCPCS code P9070 in CY 2018 is lower than the CY 2017 payment rate. However, we believe the CY 2018 payment rate is appropriate because it is based on actual claims data for HCPCS code P9070 rather than for HCPCS code P9059.

Comment: Commenters requested that CMS immediately include the cost of newly implemented FDA blood safety measures for blood and blood products prior to receiving claims data that would contain the costs for the new safety measures.

Response: As stated earlier in this section, the OPPTS covers hospital payments for the costs of blood and blood products, as well as for the costs of collecting, processing, and storing blood and blood products. The cost of blood and blood products is determined using claims data and blood-specific CCRs from hospitals. To the extent that compliance with blood safety measures

is included in hospital reporting of the cost of collecting, processing and storing blood and blood products, these costs would be reflected in the hospital rates. It is not possible to estimate the potential costs of new safety measures outside of claims data.

Comment: Several commenters resubmitted the comments they made in response to a solicitation for public comments in the CY 2017 OPPTS/ASC proposed rule (81 FR 45617 through 45618) and summarized in the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79577) on the current set of active HCPCS P-codes that describe blood products regarding how the code descriptors could be revised and updated (if necessary) to reflect the current blood products provided to hospital outpatients.

The commenters supported a thorough examination of the current set of HCPCS P-codes for blood products as a necessary undertaking because the HCPCS P-codes were created several years ago. Several commenters recommended that CMS convene a stakeholder group that includes representatives of hospitals, blood banks, the American Red Cross, and others to discuss a framework to systematically review and revise the HCPCS P-codes for blood products. Commenters also suggested that CMS establish a “not otherwise classified (NOC)” code for blood products, which would allow hospitals to begin immediately billing for a new blood product that is not described by a specific HCPCS P-code. One commenter supported the use of broader descriptions for HCPCS P-codes when more granular language is no longer meaningful for differentiating between different types of blood and blood products, and where the costs and volume of the HCPCS P-codes are similar. Other commenters suggested specific modifications to the order, classification, and code descriptors of the blood and blood product HCPCS P-codes.

Response: We appreciate the commenters’ detailed responses. The safety of the nation’s blood supply continues to be among the highest priorities, and we will work with the commenters and other stakeholders to ensure that any future updates to the HCPCS P-codes will support our goal of maintaining the safety of the blood supply.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to establish payment rates for blood and blood products using our blood-specific CCR methodology.

Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site) contains the final CY 2018 payment rates for blood and blood products (which are identified with status indicator “R”).

(b) Pathogen-Reduced Platelets and Rapid Bacterial Testing for Platelets

In March 2016, the Food and Drug Administration (FDA) issued draft guidance for blood collection establishments and transfusion services entitled “Bacterial Risk Control Strategies for Blood Collection Establishments and Transfusion Services to Enhance the Safety and Availability of Platelets for Transfusion” (available at: <https://www.fda.gov/downloads/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/Blood/UCM425952.pdf>). This draft guidance recommended, among other things, the use of rapid bacterial testing devices secondary to testing using a culture-based bacterial detection device or the implementation of pathogen-reduction technology for platelets to adequately control the risk of bacterial contamination of platelets.

In the CY 2016 OPPTS/ASC final rule with comment period (80 FR 70322), we established HCPCS code P9072 (Platelets, pheresis, pathogen reduced, each unit). The CMS HCPCS Workgroup later revised HCPCS code P9072 to include the use of pathogen-reduction technology or rapid bacterial testing. Specifically, the descriptor for this code was revised, effective January 1, 2017, to read as follows: HCPCS code P9072 (Platelets, pheresis, pathogen reduced or rapid bacterial tested, each unit). The payment rate for HCPCS code P9072 is based on a crosswalk to HCPCS code P9037 (Platelets, pheresis, leukocyte reduced, irradiated, each unit). We refer readers to the CY 2016 OPPTS/ASC final rule with comment period for a further discussion of crosswalks for pathogen-reduced blood products (80 FR 70323).

As discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33571 and 33572), after the release of the CY 2017 OPPTS/ASC final rule with comment period, several blood and blood product stakeholders expressed concerns about the revised code descriptor for HCPCS code P9072. The stakeholders believed that the revision to HCPCS code P9072 to describe both pathogen reduction and rapid bacterial testing was an inappropriate code descriptor. They stated that separate coding is needed to describe each service because each service is distinct. The stakeholders also noted that the code descriptor for

HCPCS code P9072 results in hospitals receiving the same payment rate for platelets undergoing rapid bacterial testing that the hospitals receive for platelets treated with pathogen reduction technology, despite the fact that pathogen reduction is significantly more expensive than rapid bacterial testing.

After review of the concerns expressed by the blood and blood product stakeholders, the CMS HCPCS Workgroup deactivated HCPCS code P9072 for Medicare reporting and replaced the code with two new HCPCS codes effective July 1, 2017. Specifically, effective July 1, 2017, HCPCS code Q9988 (Platelets, pheresis, pathogen reduced, each unit) is used to report the use of pathogen-reduction technology and HCPCS code Q9987 (Pathogen(s) test for platelets) is used to report rapid bacterial testing or other pathogen tests for platelets, instead of HCPCS code P9072. We note that HCPCS code Q9987 should be reported to describe the test used for the detection of bacterial contamination in platelets as well as any other test that may be used to detect pathogen contamination. HCPCS code Q9987 should not be used for reporting donation testing for infectious agents such as viruses. The coding changes associated with these codes were published on the CMS HCPCS Quarterly Update Web site, effective July 2017, at: <https://www.cms.gov/Medicare/Coding/HCPCSReleaseCodeSets/HCPCS-Quarterly-Update.html>. In addition, for OPSS, we announced the new HCPCS codes that were effective July 1, 2017 through the July 2017 OPSS quarterly update Change Request (Transmittal 3783, Change Request 10122, dated May 26, 2017). We note that, effective July 1, 2017, HCPCS code Q9988 is assigned to APC 9536 (Pathogen Reduced Platelets), with a payment rate of \$647.12, and HCPCS code Q9987 is assigned to New Technology APC 1493, with a payment rate of \$25.50.

In the CY 2016 OPSS/ASC final rule with comment period (80 FR 70322 through 70323), we reiterated that we calculate payment rates for blood and blood products using our blood-specific CCR methodology, which utilizes actual or simulated CCRs from the most recently available hospital cost reports to convert hospital charges for blood and blood products to costs. Because HCPCS code P9072 was new for CY 2016, there were no claims data available on the charges and costs for this blood product upon which to apply our blood-specific CCR methodology. Therefore, we established an interim payment rates for this HCPCS code

based on a crosswalk to existing blood product HCPCS code P9037, which we believed provided the best proxy for the costs of the new blood product. In addition, we stated that once we had claims data for HCPCS code P9072, we would calculate its payment rate using the claims data that should be available for the code beginning in CY 2018, which is our practice for other blood product HCPCS codes for which claims data have been available for 2 years.

We stated in the proposed rule that, although our standard practice for new codes involves using claims data to set payment rates once claims data become available, we are concerned that there may have been confusion among the provider community about the services that HCPCS code P9072 described. That is, as early as 2016, there were discussions about changing the descriptor for HCPCS code P9072 to include the phrase “or rapid bacterial tested”, which is a much less costly technology than pathogen reduction. In addition, as noted above, effective January 2017, the code descriptor for HCPCS code P9072 was, in fact, changed to also describe rapid bacterial testing of platelets and, effective July 1, 2017, the descriptor for the temporary successor code for HCPCS code P9072 (that is, HCPCS code Q9988) was changed again back to the original descriptor for HCPCS code P9072 that was in place for 2016.

Based on the ongoing discussions involving changes to the original HCPCS code P9072 established in CY 2016, we believe that claims for pathogen reduced platelets may potentially reflect certain claims for rapid bacterial testing of platelets. The geometric mean costs based on submitted claims for HCPCS code P9072 based on available claims data from CY 2016 is \$491.53, which is a 24-percent reduction from the CY 2017 payment rate of \$647.12. Because we believe that there may have been confusion related to ongoing discussions about changes to the original code descriptor for HCPCS code P9072, we believe it is appropriate to continue to crosswalk the payment amount for at least 1 additional year. Therefore, in the CY 2018 OPSS/ASC proposed rule (82 FR 33571 and 33572), we proposed for CY 2018 to determine the payment rate for HCPCS code Q9988 (the successor code to HCPCS code P9072) by continuing to use the payment rate that has been crosswalked from HCPCS code P9037 of \$647.12.

In the CY 2018 OPSS/ASC proposed rule, we solicited public comments on the proposed APC and status indicator assignments for HCPCS codes Q9987 and Q9988 for the CY 2018 OPSS

update. The proposed payment rates for HCPCS codes Q9987 and Q9988 were included in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site).

Comment: Commenters expressed their appreciation to CMS for working collaboratively with the American Red Cross and other stakeholders in the blood banking community to respond to their concerns about HCPCS code P9072. The commenters supported the actions of CMS to deactivate HCPCS code P9072 and replace it with HCPCS codes Q9987 and Q9988 to have coding options that more accurately reflect available technologies. The commenters also appreciated that separate payment for each code was established in the OPSS and is proposed to continue in CY 2018.

Response: We appreciate the support for our actions in CY 2017 and our proposal for CY 2018.

Comment: One commenter requested that the description of HCPCS code Q9987 (Pathogen(s) test for platelets) be modified by adding the word “secondary” to clarify in the procedure code descriptor that HCPCS code Q9987 is intended to be used for secondary bacterial testing of platelets.

Response: We believe the guidance we have provided through the CY 2018 proposed rule (82 FR 33571 and 33572) and associated subregulatory guidance (Pub. 100-04 Medicare Claims Processing, Transmittal 3783, Change Request 10122) are sufficient for providers to understand how to appropriately report HCPCS code Q9987. We do not agree with the suggestion to modify the descriptor of HCPCS code Q9987, as we want the code to have the flexibility to be used to report new tests that may be developed in the future that are designed to identify pathogen contamination of platelets.

After consideration of the public comments we received, we are finalizing our CY 2018 proposal for reporting pathogen-reduced platelets and rapid bacterial testing for platelets. The only changes are to replace HCPCS code Q9987 (Pathogen(s) test for platelets) with HCPCS code P9100 (Pathogen(s) test for platelets) and to replace HCPCS code Q9988 (Platelets, pheresis, pathogen-reduced, each unit) with HCPCS code P9073 (Platelets, pheresis, pathogen-reduced, each unit). Details of the replacement of HCPCS codes Q9987 and Q9988 with HCPCS codes P9100 and P9073, respectively, are found in Table 4 below. The final payment rates for HCPCS codes P9100 and P9073 can be found in Addendum B to this final rule with comment period

(which is available via the Internet on the CMS Web site).

TABLE 4—REPLACEMENT CODES FOR HCPCS CODES Q9987 AND Q9988 AS OF JANUARY 1, 2018

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	Final CY 2018 SI	Final CY 2018 APC
Q9987	P9100	Pathogen(s) test for platelets	S	1493
Q9988	P9073	Platelets, pheresis, pathogen-reduced, each unit	R	9536

(2) Brachytherapy Sources

Section 1833(t)(2)(H) of the Act mandates the creation of additional groups of covered OPD services that classify devices of brachytherapy consisting of a seed or seeds (or radioactive source) (“brachytherapy sources”) separately from other services or groups of services. The statute provides certain criteria for the additional groups. For the history of OPSS payment for brachytherapy sources, we refer readers to prior OPSS final rules, such as the CY 2012 OPSS/ASC final rule with comment period (77 FR 68240 through 68241). As we have stated in prior OPSS updates, we believe that adopting the general OPSS prospective payment methodology for brachytherapy sources is appropriate for a number of reasons (77 FR 68240). The general OPSS methodology uses costs based on claims data to set the relative payment weights for hospital outpatient services. This payment methodology results in more consistent, predictable, and equitable payment amounts per source across hospitals by averaging the extremely high and low values, in contrast to payment based on hospitals’ charges adjusted to costs. We believe that the OPSS methodology, as opposed to payment based on hospitals’ charges adjusted to cost, also would provide hospitals with incentives for efficiency in the provision of brachytherapy services to Medicare beneficiaries. Moreover, this approach is consistent with our payment methodology for the vast majority of items and services paid under the OPSS. We refer readers to the CY 2016 OPSS/ASC final rule with comment period (80 FR 70323 through 70325) for further discussion of the history of OPSS payment for brachytherapy sources.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33572), for CY 2018, we proposed to use the costs derived from CY 2016 claims data to set the proposed CY 2018 payment rates for brachytherapy sources because CY 2016 is the same year of data we proposed to use to set the proposed payment rates for most other items and services that would be paid under the CY 2018 OPSS.

We proposed to base the payment rates for brachytherapy sources on the geometric mean unit costs for each source, consistent with the methodology that we proposed for other items and services paid under the OPSS, as discussed in section II.A.2. of the proposed rule. We also proposed to continue the other payment policies for brachytherapy sources that we finalized and first implemented in the CY 2010 OPSS/ASC final rule with comment period (74 FR 60537). We proposed to pay for the stranded and nonstranded not otherwise specified (NOS) codes, HCPCS codes C2698 and C2699, at a rate equal to the lowest stranded or nonstranded prospective payment rate for such sources, respectively, on a per source basis (as opposed to, for example, a per mCi), which is based on the policy we established in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66785). We also proposed to continue the policy we first implemented in the CY 2010 OPSS/ASC final rule with comment period (74 FR 60537) regarding payment for new brachytherapy sources for which we have no claims data, based on the same reasons we discussed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66786; which was delayed until January 1, 2010 by section 142 of Pub. L. 110–275). Specifically, this policy is intended to enable us to assign new HCPCS codes for new brachytherapy sources to their own APCs, with prospective payment rates set based on our consideration of external data and other relevant information regarding the expected costs of the sources to hospitals.

The proposed CY 2018 payment rates for brachytherapy sources were included in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site) and were identified with status indicator “U”. For CY 2018, we proposed to assign status indicator “E2” (Items and Services for Which Pricing Information and Claims Data Are Not Available) to HCPCS code C2645 (Brachytherapy planar, palladium-103, per square millimeter) because this code was not

reported on CY 2016 claims. Therefore, we are unable to calculate a proposed payment rate based on the general OPSS ratesetting methodology described earlier. Although HCPCS code C2645 became effective January 1, 2016, and although we would expect that if a hospital furnished a brachytherapy source described by this code in CY 2016, HCPCS code C2645 should appear on the CY 2016 claims, there were no CY 2016 claims reporting this code available for the proposed rule. In addition, unlike our policy for new brachytherapy sources HCPCS codes, we did not consider external data to determine a proposed payment rate for HCPCS code C2645 for CY 2018. Therefore, we proposed to assign status indicator “E2” to HCPCS code C2645.

In addition, we assigned status indicator “E2” to HCPCS code C2644 (Brachytherapy, cesium-131 chloride, per square millimeter) because this code was not reported on any CY 2015 claims (that is, there were no Medicare claims submitted by any hospitals in 2015 that reported this HCPCS code). In our review of CY 2016 claims (which are used to set rates for CY 2018), we found that one hospital submitted one claim reporting HCPCS code C2644. Therefore, we proposed to assign status indicator “U” to HCPCS code C2644.

We invited public comments on our proposals.

Comment: One commenter suggested that CMS set the CY 2018 APC payment rate for HCPCS code C2636 (Brachytherapy linear, non-stranded, palladium-103, per 1mm) at \$26.99 per millimeter.

Response: As noted in past rulemaking cycles and in the CY 2018 OPSS/ASC proposed rule (82 FR 33572), we believe that adopting the general OPSS prospective payment methodology for brachytherapy sources is consistent with our payment methodology for the vast majority of items and services paid under the OPSS. Further, while we assign new HCPCS codes for new brachytherapy sources to their own APCs, with prospective payment rates set based on our consideration of external data and other

relevant information regarding the expected costs of the sources to hospitals, HCPCS code C2636 is neither new nor lacks claim information. HCPCS code C2636 became effective July 1, 2007. The final CY 2018 APC payment rate for HCPCS code C2636 is \$27.08 based on data for the 8 claims we received for the CY 2018 OPSS standard ratesetting process and can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site).

Comment: Some commenters suggested that HCPCS code C2645 (Brachytherapy, planar, palladium-103) had been incorrectly assigned status indicator “E2” (Items and Services for Which Pricing Information and Claims Data Are Not Available). These commenters stated that CMS has considered external data and other relevant information where no claims data exist for new HCPCS codes for new brachytherapy sources. For example, commenters included the following excerpt from the CY 2008 OPSS/ASC final rule with comment period regarding CMS’ policy with respect to establishing a payment rate for HCPCS code C2637 (Brachytherapy non-stranded, yttrium-169, per source) for which CMS lacked claims data: “if in public comments to the proposed rule or later in CYs 2007 or 2008, we would receive relevant and reliable information on the hospital cost for yttrium-169 and information that this source is being marketed, we could establish a prospective payment rate for the source in the CY 2008 final rule with comment period or in a quarterly OPSS update, respectively” (72 FR 66786).

In addition, commenters noted that, for CY 2016 and CY 2017, HCPCS code C2645 was assigned an OPSS status indicator of “U” (Brachytherapy Sources, Paid under OPSS; separate APC payment) and a payment rate of \$4.69 per mm² and that the payment rate was based upon external pricing data previously supplied by the developer of the brachytherapy source described by HCPCS code C2645. The developer of the brachytherapy source noted that there were no outpatient claims from CY 2016 for HCPCS code C2645 because all of the cases in CY 2016 that used the brachytherapy source were inpatient cases. However, the commenter noted its expectation that such source would begin to be used in the hospital outpatient department setting beginning approximately in mid-2018. This commenter noted that the “E2” status indicator would effectively render the outpatient payment rate as \$0 for CY 2018. The commenter supplied

external invoices to support maintaining the current payment rate of \$4.69 per mm².

Response: We note that the CY 2008 final rule with comment period preamble language that the commenters referenced to support their argument that external data have been used in the past was in reference to a brachytherapy source for which there appeared to have been erroneous claims submitted since the claims were from 2006, but the brachytherapy source did not come to market until 2007. This is distinguishable from the situation with HCPCS code C2645 which has been on the market since August 29, 2014 and had a code effective date of January 1, 2016. Nonetheless, as the commenters noted, there are no Medicare claims data available at this time. While this brachytherapy source is no longer “new,” the absence of even a single Medicare claim in the outpatient hospital data leads us to agree with the commenter that using an external source of data would be appropriate at this time. Accordingly, for CY 2018, we are assigning status indicator “U” to HCPCS code C2645 and are using external data (invoice prices) and other relevant information to establish the APC payment rate for HCPCS code C2645. Specifically, we are setting the payment rate at \$4.69 per mm², the same rate that was in effect for CYs 2016 and 2017.

After consideration of the public comments we received, we are finalizing our proposal to assign status indicator “U” to HCPCS code C2636 (Brachytherapy linear, non-stranded, palladium-103, per 1mm) and assigning an APC payment rate for HCPCS code C2636 at \$27.08 based on the 8 claims we received for the CY 2018 OPSS standard ratesetting process. We also are finalizing our proposal to assign status indicator “U” to HCPCS code C2644 (Brachytherapy, cesium-131 chloride, per millicurie) and are modifying our proposal to assign status indicator “E2” to HCPCS code C2645 (Brachytherapy planar, palladium-103, per square millimeter) and instead adopting a status indicator of “U” for CY 2018. The final CY 2018 payment rates for brachytherapy sources can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site) and are identified with status indicator “U”.

We continue to invite hospitals and other parties to submit recommendations to us for new codes to describe new brachytherapy sources. Such recommendations should be directed to the Division of Outpatient Care, Mail Stop C4-01-26, Centers for Medicare and Medicaid Services, 7500

Security Boulevard, Baltimore, MD 21244. We will continue to add new brachytherapy source codes and descriptors to our systems for payment on a quarterly basis.

b. Comprehensive APCs (C-APCs) for CY 2018

(1) Background

In the CY 2014 OPSS/ASC final rule with comment period (78 FR 74861 through 74910), we finalized a comprehensive payment policy that packages payment for adjunctive and secondary items, services, and procedures into the most costly primary procedure under the OPSS at the claim level. The policy was finalized in CY 2014, but the effective date was delayed until January 1, 2015, to allow additional time for further analysis, opportunity for public comment, and systems preparation. The comprehensive APC (C-APC) policy was implemented effective January 1, 2015, with modifications and clarifications in response to public comments received regarding specific provisions of the C-APC policy (79 FR 66798 through 66810).

A C-APC is defined as a classification for the provision of a primary service and all adjunctive services provided to support the delivery of the primary service. We established C-APCs as a category broadly for OPSS payment and implemented 25 C-APCs beginning in CY 2015 (79 FR 66809 through 66810). In the CY 2016 OPSS/ASC final rule with comment period (80 FR 70332), we finalized 10 additional C-APCs to be paid under the existing C-APC payment policy and added one additional level to both the Orthopedic Surgery and Vascular Procedures clinical families. In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79584 through 79585), we finalized another 25 C-APCs.

Under this policy, we designate a service described by a HCPCS code assigned to a C-APC as the primary service when the service is identified by OPSS status indicator “J1”. When such a primary service is reported on a hospital outpatient claim, taking into consideration the few exceptions that are discussed below, we make payment for all other items and services reported on the hospital outpatient claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service (hereinafter collectively referred to as “adjunctive services”) and representing components of a complete comprehensive service (78 FR 74865 and 79 FR 66799). Payments for adjunctive services are packaged into

the payments for the primary services. This results in a single prospective payment for each of the primary, comprehensive services based on the costs of all reported services at the claim level.

Services excluded from the C-APC policy under the OPSS include services that are not covered OPD services, services that cannot by statute be paid for under the OPSS, and services that are required by statute to be separately paid. This includes certain mammography and ambulance services that are not covered OPD services in accordance with section 1833(t)(1)(B)(iv) of the Act; brachytherapy seeds, which also are required by statute to receive separate payment under section 1833(t)(2)(H) of the Act; pass-through payment drugs and devices, which also require separate payment under section 1833(t)(6) of the Act; self-administered drugs (SADs) that are not otherwise packaged as supplies because they are not covered under Medicare Part B under section 1861(s)(2)(B) of the Act; and certain preventive services (78 FR 74865 and 79 FR 66800 through 66801). A list of services excluded from the C-APC policy is included in Addendum J to this final rule with comment period (which is available via the Internet on the CMS Web site).

The C-APC policy payment methodology set forth in the CY 2014 OPSS/ASC final rule with comment period for the C-APCs and modified and implemented beginning in CY 2015 is summarized as follows (78 FR 74887 and 79 FR 66800):

Basic Methodology. As stated in the CY 2015 OPSS/ASC final rule with comment period, we define the C-APC payment policy as including all covered OPD services on a hospital outpatient claim reporting a primary service that is assigned to status indicator “J1”, excluding services that are not covered OPD services or that cannot by statute be paid for under the OPSS. Services and procedures described by HCPCS codes assigned to status indicator “J1” are assigned to C-APCs based on our usual APC assignment methodology by evaluating the geometric mean costs of the primary service claims to establish resource similarity and the clinical characteristics of each procedure to establish clinical similarity within each APC.

In the CY 2016 OPSS/ASC final rule with comment period, we expanded the C-APC payment methodology to qualifying extended assessment and management encounters through the “Comprehensive Observation Services” C-APC (C-APC 8011). Services within

this APC are assigned status indicator “J2”. Specifically, we make a payment through C-APC 8011 for a claim that:

- Does not contain a procedure described by a HCPCS code to which we have assigned status indicator “T” that is reported with a date of service on the same day or 1 day earlier than the date of service associated with services described by HCPCS code G0378;

- Contains 8 or more units of services described by HCPCS code G0378 (Observation services, per hour);

- Contains services provided on the same date of service or 1 day before the date of service for HCPCS code G0378 that are described by one of the following codes: HCPCS code G0379 (Direct referral of patient for hospital observation care) on the same date of service as HCPCS code G0378; CPT code 99281 (Emergency department visit for the evaluation and management of a patient (Level 1)); CPT code 99282 (Emergency department visit for the evaluation and management of a patient (Level 2)); CPT code 99283 (Emergency department visit for the evaluation and management of a patient (Level 3)); CPT code 99284 (Emergency department visit for the evaluation and management of a patient (Level 4)); CPT code 99285 (Emergency department visit for the evaluation and management of a patient (Level 5)) or HCPCS code G0380 (Type B emergency department visit (Level 1)); HCPCS code G0381 (Type B emergency department visit (Level 2)); HCPCS code G0382 (Type B emergency department visit (Level 3)); HCPCS code G0383 (Type B emergency department visit (Level 4)); HCPCS code G0384 (Type B emergency department visit (Level 5)); CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes); or HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient); and

- Does not contain services described by a HCPCS code to which we have assigned status indicator “J1”.

The assignment of status indicator “J2” to a specific combination of services performed in combination with each other allows for all other OPSS payable services and items reported on the claim (excluding services that are not covered OPD services or that cannot by statute be paid for under the OPSS) to be deemed adjunctive services representing components of a comprehensive service and resulting in a single prospective payment for the comprehensive service based on the costs of all reported services on the claim (80 FR 70333 through 70336).

Services included under the C-APC payment packaging policy, that is, services that are typically adjunctive to the primary service and provided during the delivery of the comprehensive service, include diagnostic procedures, laboratory tests, and other diagnostic tests and treatments that assist in the delivery of the primary procedure; visits and evaluations performed in association with the procedure; uncoded services and supplies used during the service; durable medical equipment as well as prosthetic and orthotic items and supplies when provided as part of the outpatient service; and any other components reported by HCPCS codes that represent services that are provided during the complete comprehensive service (78 FR 74865 and 79 FR 66800).

In addition, payment for hospital outpatient department services that are similar to therapy services and delivered either by therapists or nontherapists is included as part of the payment for the packaged complete comprehensive service. These services that are provided during the perioperative period are adjunctive services and are deemed not to be therapy services as described in section 1834(k) of the Act, regardless of whether the services are delivered by therapists or other nontherapist health care workers. We have previously noted that therapy services are those provided by therapists under a plan of care in accordance with section 1835(a)(2)(C) and section 1835(a)(2)(D) of the Act and are paid for under section 1834(k) of the Act, subject to annual therapy caps as applicable (78 FR 74867 and 79 FR 66800). However, certain other services similar to therapy services are considered and paid for as hospital outpatient department services. Payment for these nontherapy outpatient department services that are reported with therapy codes and provided with a comprehensive service is included in the payment for the packaged complete comprehensive service. We note that these services, even though they are reported with therapy codes, are hospital outpatient department services and not therapy services. Therefore, the requirement for functional reporting under the regulations at 42 CFR 410.59(a)(4) and 42 CFR 410.60(a)(4) does not apply. We refer readers to the July 2016 OPSS Change Request 9658 (Transmittal 3523) for further instructions on reporting these services in the context of a C-APC service.

Items included in the packaged payment provided in conjunction with the primary service also include all

drugs, biologicals, and radiopharmaceuticals, regardless of cost, except those drugs with pass-through payment status and SADs, unless they function as packaged supplies (78 FR 74868 through 74869 and 74909 and 79 FR 66800). We refer readers to Section 50.2M, Chapter 15, of the Medicare Benefit Policy Manual for a description of our policy on SADs treated as hospital outpatient supplies, including lists of SADs that function as supplies and those that do not function as supplies.

We define each hospital outpatient claim reporting a single unit of a single primary service assigned to status indicator “J1” as a single “J1” unit procedure claim (78 FR 74871 and 79 FR 66801). Line item charges for services included on the C-APC claim are converted to line item costs, which are then summed to develop the estimated APC costs. These claims are then assigned one unit of the service with status indicator “J1” and later used to develop the geometric mean costs for the C-APC relative payment weights. (We note that we use the term “comprehensive” to describe the geometric mean cost of a claim reporting “J1” service(s) or the geometric mean cost of a C-APC, inclusive of all of the items and services included in the C-APC service payment bundle.) Charges for services that would otherwise be separately payable are added to the charges for the primary service. This process differs from our traditional cost accounting methodology only in that all such services on the claim are packaged (except certain services as described above). We apply our standard data trims, which exclude claims with extremely high primary units or extreme costs.

The comprehensive geometric mean costs are used to establish resource similarity and, along with clinical similarity, dictate the assignment of the primary services to the C-APCs. We establish a ranking of each primary service (single unit only) to be assigned to status indicator “J1” according to its comprehensive geometric mean costs. For the minority of claims reporting more than one primary service assigned to status indicator “J1” or units thereof, we identify one “J1” service as the primary service for the claim based on our cost-based ranking of primary services. We then assign these multiple “J1” procedure claims to the C-APC to which the service designated as the primary service is assigned. If the reported “J1” services on a claim map to different C-APCs, we designate the “J1” service assigned to the C-APC with the highest comprehensive geometric

mean cost as the primary service for that claim. If the reported multiple “J1” services on a claim map to the same C-APC, we designate the most costly service (at the HCPCS code level) as the primary service for that claim. This process results in initial assignments of claims for the primary services assigned to status indicator “J1” to the most appropriate C-APCs based on both single and multiple procedure claims reporting these services and clinical and resource homogeneity.

Complexity Adjustments. We use complexity adjustments to provide increased payment for certain comprehensive services. We apply a complexity adjustment by promoting qualifying paired “J1” service code combinations or paired code combinations of “J1” services and certain add-on codes (as described further below) from the originating C-APC (the C-APC to which the designated primary service is first assigned) to the next higher paying C-APC in the same clinical family of C-APCs. We apply this type of complexity adjustment when the paired code combination represents a complex, costly form or version of the primary service according to the following criteria:

- Frequency of 25 or more claims reporting the code combination (frequency threshold); and
- Violation of the 2 times rule in the originating C-APC (cost threshold).

These criteria identify paired code combinations that occur commonly and exhibit materially greater resource requirements than the primary service. The CY 2017 OPPI/ASC final rule with comment period (81 FR 79582) included a revision to the complexity adjustment eligibility criteria. Specifically, we finalized a policy to discontinue the requirement that a code combination (that qualifies for a complexity adjustment by satisfying the frequency and cost criteria thresholds described above) also not create a 2 times rule violation in the higher level or receiving APC.

After designating a single primary service for a claim, we evaluate that service in combination with each of the other procedure codes reported on the claim assigned to status indicator “J1” (or certain add-on codes) to determine if there are paired code combinations that meet the complexity adjustment criteria. For a new HCPCS code, we determine initial C-APC assignment and qualification for a complexity adjustment using the best available information, crosswalking the new HCPCS code to a predecessor code(s) when appropriate.

Once we have determined that a particular code combination of “J1” services (or combinations of “J1” services reported in conjunction with certain add-on codes) represents a complex version of the primary service because it is sufficiently costly, frequent, and a subset of the primary comprehensive service overall according to the criteria described above, we promote the claim including the complex version of the primary service as described by the code combination to the next higher cost C-APC within the clinical family, unless the primary service is already assigned to the highest cost APC within the C-APC clinical family or assigned to the only C-APC in a clinical family. We do not create new APCs with a comprehensive geometric mean cost that is higher than the highest geometric mean cost (or only) C-APC in a clinical family just to accommodate potential complexity adjustments. Therefore, the highest payment for any claim including a code combination for services assigned to a C-APC would be the highest paying C-APC in the clinical family (79 FR 66802).

We package payment for all add-on codes into the payment for the C-APC. However, certain primary service add-on combinations may qualify for a complexity adjustment. As noted in the CY 2016 OPPI/ASC final rule with comment period (80 FR 70331), all add-on codes that can be appropriately reported in combination with a base code that describes a primary “J1” service are evaluated for a complexity adjustment.

To determine which combinations of primary service codes reported in conjunction with an add-on code may qualify for a complexity adjustment for CY 2018, in the CY 2018 OPPI/ASC proposed rule (82 FR 33575), we proposed to apply the frequency and cost criteria thresholds discussed above, testing claims reporting one unit of a single primary service assigned to status indicator “J1” and any number of units of a single add-on code for the primary “J1” service. If the frequency and cost criteria thresholds for a complexity adjustment are met and reassignment to the next higher cost APC in the clinical family is appropriate (based on meeting the criteria outlined above), we make a complexity adjustment for the code combination; that is, we reassign the primary service code reported in conjunction with the add-on code to the next higher cost C-APC within the same clinical family of C-APCs. As previously stated, we package payment for add-on codes into the C-APC

payment rate. If any add-on code reported in conjunction with the “J1” primary service code does not qualify for a complexity adjustment, payment for the add-on service continues to be packaged into the payment for the primary service and is not reassigned to the next higher cost C–APC. We listed the complexity adjustments proposed for “J1” and add-on code combinations for CY 2018, along with all of the other proposed complexity adjustments, in Addendum J to the proposed rule (which is available via the Internet on the CMS Web site).

Addendum J to the proposed rule included the cost statistics for each code combination that would qualify for a complexity adjustment (including primary code and add-on code combinations). Addendum J to the proposed rule also contained summary cost statistics for each of the paired code

combinations that describe a complex code combination that would qualify for a complexity adjustment and were proposed to be reassigned to the next higher cost C–APC within the clinical family. The combined statistics for all proposed reassigned complex code combinations were represented by an alphanumeric code with the first 4 digits of the designated primary service followed by a letter. For example, the proposed geometric mean cost listed in Addendum J for the code combination described by complexity adjustment assignment 3320R, which is assigned to C–APC 5224 (Level 4 Pacemaker and Similar Procedures), included all paired code combinations that were proposed to be reassigned to C–APC 5224 when CPT code 33208 is the primary code. Providing the information contained in Addendum J to the proposed rule allowed stakeholders the opportunity to

better assess the impact associated with the proposed reassignment of claims with each of the paired code combinations eligible for a complexity adjustment.

Comment: Several commenters requested exceptions to the current complexity adjustment criteria of 25 or more claims reporting the code combination (frequency) and a violation of the 2 times rule in the originating C–APC (cost) to allow claims with code combinations that do not currently meet these criteria to be paid at the next higher paying C–APC. The C–APC complexity adjustments requested by the commenters are listed in Table 5 below. We did not propose for claims with these code combinations to receive complexity adjustments because they failed to meet either the cost or frequency criteria.

TABLE 5—C–APC COMPLEXITY ADJUSTMENTS REQUESTED BY THE COMMENTERS

Primary “J1” HCPCS code	Secondary “J1” HCPCS code	Primary APC assignment	Requested complexity adjusted APC assignment
20983 (Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radio frequency)).	22513 (Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (e.g., kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; thoracic).	5114	5115
20983 (Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radio frequency)).	22514 (Percutaneous vertebral augmentation, including cavity creation (fracture reduction and bone biopsy included when performed) using mechanical device (e.g., kyphoplasty), 1 vertebral body, unilateral or bilateral cannulation, inclusive of all imaging guidance; lumbar).	5114	5115
28297 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint with arthrodesis, any method).	28285 (Correction, hammertoe (e.g., interphalangeal fusion, partial or total phalangectomy)).	5114	5115
28297 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint with arthrodesis, any method).	28292 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with resection of proximal phalanx base, when performed, any method).	5114	5115
28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint).	28285 (Correction, hammertoe (e.g., interphalangeal fusion, partial or total phalangectomy)).	5114	5115
61885 (Insertion or replacement of cranial nuerostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array).	61885 (Insertion or replacement of cranial nuerostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array).	5463	5464
28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint).	28292 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with resection of proximal phalanx base, when performed, any method).	5114	5115
52234 (Cystourethroscopy, with biopsy(s))	C9738* (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)).	5374	5375
52235 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands).	C9738* (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)).	5374	5375
52240 (Cystourethroscopy with fulguration (including cryosurgery or laser surgery) or treatment of MINOR (less than 0.5 cm) lesion(s) with or without biopsy).	C9738* (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)).	5375	5376

* HCPCS code C9738 was identified in the proposed rule as HCPCS code C97XX.

Other commenters requested various changes to the complexity adjustment criteria. One commenter requested that CMS amend the current cost criterion for a complexity adjustment to allow for code combinations that have qualified for a complexity adjustment in the previous year to qualify for a complexity adjustment for the subsequent year if the code combination is within 5 percent of the cost criterion for the subsequent year. Another commenter requested that CMS eliminate the criterion that the code combination must create a violation of the 2 times rule in the originating C-APC in order to qualify for a complexity adjustment.

Some commenters recommended that CMS create a complexity adjustment for endoscopic sinus surgery claims that include a drug or device code (C-code or a J-code), or more than two "J1" procedures. Other commenters requested that CMS revise its complexity adjustment methodology to account for the higher costs that essential hospitals incur when performing complex procedures and treating sicker patients.

Response: We appreciate these comments. However, at this time, we do not believe changes to the C-APC complexity adjustment criteria are necessary or that we should make exceptions to the criteria to allow claims with the code combinations suggested by the commenters to receive complexity adjustments. As stated previously (81 FR 79582), we continue to believe that the complexity adjustment criteria, which require a frequency of 25 or more claims reporting a code combination and a violation of the 2 times rule in the originating C-APC in order to receive payment in the next higher cost C-APC within the clinical family, are adequate to determine if a combination of procedures represents a complex, costly subset of the primary service. If a code combination meets these criteria, the combination receives payment at the next higher cost C-APC. Code combinations that do not meet these criteria receive the C-APC payment rate associated with the primary "J1" service.

A minimum of 25 claims is already very low for a national payment system. Lowering the minimum of 25 claims further could lead to unnecessary complexity adjustments for service combinations that are rarely performed. The complexity adjustment cost threshold compares the code combinations to the lowest cost significant procedure assigned to the APC. If the cost of the code combination does not exceed twice the cost of the

lowest cost significant procedure within the APC, no complexity adjustment is made. Lowering or eliminating this threshold could remove so many claims from the accounting for the primary "J1" service that the geometric mean costs attributed to the primary procedure could be skewed.

Regarding the request for a code combination that qualified previously for a complexity adjustment to qualify for the subsequent year if the code combination is within 5 percent of the cost criterion for the subsequent year, we evaluate code combinations each year against our complexity adjustment criteria using the latest available data. We do not believe it is necessary to expand the ability for code combinations to meet the cost criterion in this manner.

We also do not believe that it is necessary to adjust the complexity adjustment criteria to allow claims that include a drug or device code, more than two "J1" procedures, or procedures performed at certain hospitals to qualify for a complexity adjustment. As mentioned earlier, we believe the current criteria are adequate to determine if a combination of procedures represents a complex, costly subset of the primary service.

Comment: Some commenters noted that there were certain code combinations that met the complexity adjustment criteria that were not included in Addendum J of the CY 2018 OPPI/ASC proposed rule. Specifically, commenters noted that the combinations of procedures described by the following codes were not included in Addendum J:

- CPT code 22510 (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; cervicothoracic) and CPT code 22512 (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; each additional cervicothoracic or lumbosacral vertebral body) for multi-level vertebroplasty in the cervicothoracic region);

- CPT code 22511 (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral) and CPT code 22512 (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; each additional

cervicothoracic or lumbosacral vertebral body); and

- CPT code 22511 (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral) and CPT code 20982 (Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis), including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency).

Response: These code combinations were inadvertently excluded from Addendum J to the CY 2018 OPPI/ASC proposed rule. These code combinations and all other code combinations that qualify for complexity adjustments are included in Addendum J to this final rule with comment period.

Comment: One commenter stated that CMS should have included the following add-on CPT codes in the complexity adjustment evaluation:

- CPT code 92978 (Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; initial vessel (List separately in addition to code for primary procedure));

- CPT code 92979 (Endoluminal imaging of coronary vessel or graft using intravascular ultrasound (IVUS) or optical coherence tomography (OCT) during diagnostic evaluation and/or therapeutic intervention including imaging supervision, interpretation and report; each additional vessel (List separately in addition to code for primary procedure));

- CPT code 93571 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (List separately in addition to code for primary procedure)); and

- CPT code 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (List separately in addition to code for primary procedure)) in the complexity adjustment evaluation.

Response: We note that CPT codes 92978 and 93571 were both included in the complexity adjustment evaluation in Addendum J to the CY 2018 OPPI/ASC proposed rule. However, CPT codes

92979 and 93572 are not add-on codes to primary “J1” services. As stated in the CY 2018 OPPS/ASC proposed rule, to determine the code combinations that qualify for complexity adjustments, we apply the established frequency and cost criteria thresholds and tests claims reporting one unit of a single primary service assigned to status indicator “J1” and any number of units of a single add-on code for the primary “J1” service (82 FR 33575). Accordingly, because CPT codes 92979 and 93572 are not add-on codes for any primary “J1” services, it would not have been appropriate to include them in our complexity adjustment evaluation.

After consideration of the public comments we received, we are applying the complexity adjustment criteria as proposed. The finalized complexity adjustments for CY 2018 can be found in Addendum J to this final rule with comment period (which is available via the Internet on the CMS Web site).

(2) C-APCs for CY 2018

For CY 2018 and subsequent years, in the CY 2018 OPPS/ASC proposed rule (82 FR 33576), we proposed to continue to apply the C-APC payment policy methodology made effective in CY 2015 and updated with the implementation of status indicator “J2” in CY 2016. A discussion of the C-APC payment policy methodology can be found at 81 FR 79583.

As a result of our annual review of the services and APC assignments under the OPPS, we did not propose any additional C-APCs to be paid under the existing C-APC payment policy beginning in CY 2018. Table 4 of the proposed rule listed the proposed C-APCs for CY 2018, all of which were established in past rules. All C-APCs were displayed in Addendum J to the proposed rule (which is available via the Internet on the CMS Web site). Addendum J to the proposed rule also contained all of the data related to the C-APC payment policy methodology, including the list of proposed complexity adjustments and other information.

Comment: Several commenters supported the proposed C-APCs for CY 2018.

Response: We appreciate the commenters’ support.

Comment: Several commenters noted that CPT code 67027 (Implantation of intravitreal drug delivery system (e.g., ganciclovir implant), includes concomitant removal of vitreous) is assigned to a single-procedure C-APC (C-APC 5494 (Level 4 Intraocular Procedures)) with status indicator “J1”. The commenters stated that the C-APC

policy packages payment for adjunctive services into the payment for the primary “J1” procedure at the claim level, and that when the drug Retisert (described by HCPCS code J7311) is included on the claim with CPT code 62707, payment for the drug is packaged into the C-APC payment. The commenters noted that the costs of claims for the procedure, including the drug (approximately \$18,433), were more than twice the proposed CY 2018 geometric mean cost for C-APC 5494 (approximately \$9,134) and that, as such, this represents a violation of the 2 times rule. The commenters suggested that CMS address this issue by either separately paying for Retisert (described by HCPCS code J7311) or creating a unique APC for procedures with which HCPCS code J7311 may be billed.

Response: As stated in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79612), section 1833(t)(2) of the Act provides that items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest cost for an item or service in the APC group is more than 2 times greater than the lowest cost for an item or service within the same APC group (the 2 times rule). In accordance with section 1833(t)(2) of the Act and § 419.31 of the regulations, we annually review the items and services within an APC group to determine if there are any APC violations of the 2 times rule and whether there are any appropriate revisions to APC assignments that may be necessary or exceptions to be made. In determining the APCs with a 2 times rule violation, we consider only those HCPCS codes that are significant based on the number of claims.

It is the cost of the primary item or service that drives assignment to an APC group. In this case, the primary service is described by CPT code 67027, which is the only CPT code assigned to C-APC 5494 (Level 4 Intraocular Procedures). The costs of drugs or other packaged ancillary items or services that may be used with a primary service are packaged into the costs of the primary service and are not separately paid. In this case, because CPT code 67027 is assigned to a C-APC, the costs of drugs, such as Retisert, and any other items or services that are billed with the “J1” service are packaged into the geometric mean cost for HCPCS code 67027 and are bundled into the C-APC payment. The geometric mean cost is based on reported costs for all hospitals paid under the OPPS; to the extent that Retisert or other items are billed with the primary service, those costs are also reflected in the cost of the primary

service. Therefore, because the cost of the Retisert drug is packaged into the cost of CPT code 67027, assignment of HCPCS code 67027 to C-APC 5494 does not create a 2 times rule violation.

In addition, with regard to the packaging of the drug Retisert based on the C-APC policy, as stated in previous rules (78 FR 74868 through 74869 and 74909 and 79 FR 66800), items included in the packaged payment provided with the primary “J1” service include all drugs, biologicals, and radiopharmaceuticals, regardless of cost, except those drugs with pass-through payment status and SADs, unless they function as packaged supplies. Therefore, we believe that HCPCS code J3711 is appropriately packaged, and we are not providing separate payment for the drug.

Comment: One commenter suggested that APC 5491 (Level 1 Intraocular Procedures) no longer be labeled a C-APC and instead be considered a traditional APC. The commenter noted that there was little cost difference for APC 5491 if it is considered a C-APC or a traditional APC and that no specific justification was given for making APC 5491 a C-APC. The commenter suggested that only higher level Intraocular Procedure APCs have enough complexity to suggest that they should be classified as C-APCs.

Response: We continue to believe that the procedures assigned to C-APC 5491 are appropriately paid through a comprehensive APC. As stated in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79584), procedures assigned to C-APCs are primary services (mostly major surgical procedures) that are typically the focus of the hospital outpatient stay. Therefore, we believe that these procedures are appropriately assigned to a C-APC.

Comment: One commenter expressed concern that the proposal to continue to assign status indicator “J2” to CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes) and to assign it to C-APC 8011 (Comprehensive Observation Services) when certain criteria are met would have negative effects on critical care (CPT codes 99291 and 99292 (Critical care, evaluation and management of the critically ill or critically injured patient; each additional 30 minutes)) provided in the intensive care unit ICU). Specifically, the commenter was concerned that the proposal would impact payment for tests that were ordered and furnished in the emergency room when they are appropriately repeated in the ICU and urged CMS to

move with caution, and provide transparency and impact tables for hospitals, in continuing C-APC 8011.

Response: We appreciate this comment and will continue to monitor the impact of this C-APC on critical care services. We note that in situations where a patient receives critical care services in the hospital outpatient setting and is subsequently transferred to the ICU as part of an appropriate hospital inpatient admission, payment for the services furnished in the hospital outpatient setting, including critical care services, may be bundled into the Part A hospital inpatient claim via the

“Payment Window for Outpatient Services Treated as Inpatient Services (also known as the 3-day payment rule), when certain criteria are met. In addition, when a patient receiving critical care services in the hospital outpatient setting is transferred to the ICU but is not admitted to the hospital as an inpatient, payment for all eligible services is made through C-APC 8011, when certain criteria are met. We also note that CPT code 99292 is an add-on code which is packaged under the OPPI and is not one of the codes eligible to trigger payment through C-APC 8011.

After consideration of the public comments we received, we are finalizing the proposed C-APCs for CY 2018. Table 6 below lists the final C-APCs for CY 2018, all of which were established in past rules. All C-APCs are displayed in Addendum J to this final rule with comment period (which is available via the Internet on the CMS Web site). Addendum J to this final rule with comment period also contains all of the data related to the C-APC payment policy methodology, including the list of complexity adjustments and other information for CY 2018.

(3) Brachytherapy Insertion Procedures

In the CY 2017 OPPI/ASC final rule with comment period (81 FR 79584), we finalized 25 new C-APCs. Some of the HCPCS codes assigned to the C-APCs established for CY 2017 described surgical procedures for inserting brachytherapy catheters/needles and other related brachytherapy procedures such as the insertion of tandem and/or ovoids and the insertion of Heyman capsules. In the CY 2017 OPPI/ASC final rule with comment period (81 FR 79583), we stated that we received public comments which noted that claims that included several insertion codes for brachytherapy devices often did not also contain a brachytherapy treatment delivery code (CPT codes 77750 through 77799). The brachytherapy insertion codes that commenters asserted were not often billed with a brachytherapy treatment code included the following:

- CPT code 57155 (Insertion of uterine tandem and/or vaginal ovoids for clinical brachytherapy);
- CPT code 20555 (Placement of needles or catheters into muscle and/or soft tissue for subsequent interstitial radioelement application (at the time of or subsequent to the procedure));
- CPT code 31643 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with placement of catheter(s) for intracavitary radioelement application);
- CPT code 41019 (Placement of needles, catheters, or other device(s) into the head and/or neck region (percutaneous, transoral, or transnasal) for subsequent interstitial radioelement application);
- CPT code 43241 (Esophagogastroduodenoscopy, flexible, transoral; with insertion of intraluminal tube catheter);

- CPT code 55920 (Placement of needles or catheters into pelvic organs and/or genitalia (except prostate) for subsequent interstitial radioelement application); and
- CPT code 58346 (Insertion of Heyman capsules for clinical brachytherapy).

The commenters concluded that brachytherapy delivery charges are being underrepresented in ratesetting under the C-APC methodology because a correctly coded claim should typically include an insertion and treatment delivery code combination. The commenters stated that the insertion procedure and brachytherapy treatment delivery generally occur on the same day or within the same week and therefore the services should appear on a claim together. In the CY 2017 OPPI/ASC final rule with comment period, we indicated that we would not exclude claims from the CY 2017 ratesetting calculation because we generally do not remove claims from the claims accounting when stakeholders believe that hospitals included incorrect information on some claims (81 FR 79583). However, we stated that we would examine the claims for the brachytherapy insertion codes in question and determine if any future adjustment to the methodology (or possibly code edits) would be appropriate.

As discussed in the CY 2018 OPPI/ASC proposed rule (82 FR 33577 through 33578), we analyzed the claims that include brachytherapy insertion codes assigned to status indicator “J1” and that received payment through a C-APC, and we determined that several of these codes are frequently billed without an associated brachytherapy treatment code. As mentioned above, stakeholders have expressed concerns that using claims for ratesetting for

brachytherapy insertion procedures that do not also include a brachytherapy treatment code may not capture all of the costs associated with the insertion procedure. To address this issue and base payment on claims for the most common clinical scenario, for CY 2018 and subsequent years, we indicated in the CY 2018 OPPI/ASC proposed rule (82 FR 33578) that we were establishing a code edit that requires a brachytherapy treatment code when a brachytherapy insertion code is billed.

As noted in section II.A.2.c. of the proposed rule and this final rule with comment period, we also proposed to delete composite APC 8001 (LDR Prostate Brachytherapy Composite) and assign HCPCS code 55875 (Transperineal placement of needles or catheters into prostate for interstitial radioelement application, with or without cystoscopy) to status indicator “J1” and to provide payment for this procedure through the C-APC payment methodology, similar to the payment methodology for other surgical insertion procedures related to brachytherapy. Specifically, when HCPCS code 55875 is the primary service reported on a hospital outpatient claim, we proposed to package payments for all adjunctive services reported on the claim into the payment for HCPCS code 55875. We proposed to assign HCPCS code 55875 to C-APC 5375 (Level 5 Urology and Related Services). The code edit for claims with brachytherapy services described above that will be effective January 1, 2018, will require the brachytherapy application HCPCS code 77778 (Interstitial radiation source application; complex) to be included on the claim with the brachytherapy insertion procedure (HCPCS code 55875).

Comment: Several commenters opposed the implementation of a code

edit that requires a brachytherapy treatment code when a brachytherapy insertion code is billed. These commenters noted that, in some cases, the insertion procedure and the brachytherapy treatment are performed on different days and reported on separate claims. The commenters also noted that the brachytherapy insertion procedure and radiation treatment delivery are not always performed in the same facility, in which case they would be on different claims. The commenters stated that this practice pattern is especially common in the treatment of breast cancer and related breast brachytherapy catheter codes.

Response: We appreciate the commenters' views. We intended to address the concerns raised by commenters in CY 2017 rulemaking regarding ratesetting for C-APCs for brachytherapy insertion procedures by establishing a code edit to require a brachytherapy treatment code when a brachytherapy insertion code is billed. This was largely based on information received from commenters last year, in which commenters had suggested that brachytherapy insertion procedures and brachytherapy radiation treatment are often performed on the same day or within the same week and are often billed on the same claim. However, based on comments received in response to the code edit, it appears that there may be some clinical scenarios where that is not the case. Accordingly, in light of the numerous comments opposing this code edit and the information provided by commenters that suggests that brachytherapy insertion and treatment services may be appropriately furnished on different dates and different claims, we have decided not to implement an edit which would require a brachytherapy treatment code when a brachytherapy insertion code is billed. As we have previously stated, we rely on hospitals to bill all HCPCS codes accurately in accordance with their code descriptors and CPT and CMS instructions, as applicable, and to report charges on claims and charges and costs on their Medicare hospital cost reports appropriately (77 FR 68324). We will continue to examine the issues involving ratesetting for brachytherapy insertion procedures assigned to C-APCs and welcome the public's input regarding alternative payment policies that could appropriately address the issue while maintaining the C-APC policy.

Comment: Some commenters requested that CMS discontinue the C-APC payment policy for all brachytherapy insertion codes identified

in the CY 2018 OPPI/ASC proposed rule. These commenters expressed concerns that hospital billing practices for radiation oncology services are variable and inconsistent with the C-APC policy which packages services at the claim level. The commenters stated that, in some cases, needles or catheters are surgically placed prior to the brachytherapy treatment delivery, which consists of multiple fractions over several days or weeks and may be delivered at a different site of service. The commenters also requested that CMS continue the composite APC for Low Dose Rate Brachytherapy instead of assigning CPT code 55875 (Transperineal placement of needles or catheters into prostate for interstitial radioelement application, with or without cystoscopy) to a C-APC (Level 5 Urology and Related Services). The commenters stated that CPT codes 55920 and 19298 should be assigned to a different C-APC if CMS maintained the C-APC payment policy for brachytherapy insertion procedures in CY 2018.

Response: We continue to believe that the C-APC payment policy is appropriately applied to brachytherapy insertion procedures, including the procedure described by CPT code 55875. These procedures, like other procedures assigned to C-APCs, are primary services (mostly major surgical procedures) that are typically the focus of the hospital outpatient stay. As mentioned previously, we welcome input on alternative payment policies to address concerns surrounding the variation in hospital billing practices for radiation oncology while maintaining the C-APC policy, and we will continue to monitor this issue. The APC assignments for CPT codes 55920 and 19298 are discussed in greater detail in section XII.D.2. of this final rule with comment period.

Comment: Some commenters requested that CMS continue to provide payment for the brachytherapy insertion procedures through the C-APC policy, but exclude all radiation oncology codes on the claim (defined as CPT codes 77261 through 77799) and make separate payment for the brachytherapy treatment delivery and related planning and preparation services in addition to the C-APC payment for the brachytherapy insertion procedures. These commenters stated that this was similar to the C-APC policy for stereotactic radiosurgery (SRS) treatment.

Response: The policy intent of C-APCs is to bundle payment for all services related and adjunctive to the primary "J1" procedure. We do not

believe that providing separate payment for radiation oncology codes that are included on a claim with a brachytherapy insertion procedure assigned to status indicator "J1" is in accordance with the C-APC policy. With regard to the SRS treatment policy to pay separately for the planning and preparation procedures, as stated in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79583), this policy is a temporary special exception to the C-APC packaging policy that packages all adjunctive services (with a few exceptions listed in Addendum J to this final rule with comment period).

After consideration of the public comments we received, we are not establishing a code edit that requires a brachytherapy treatment code when a brachytherapy insertion code is billed. We are finalizing our proposal to delete composite APC 8001 (LDR Prostate Brachytherapy Composite) and assign HCPCS code 55875 (Transperineal placement of needles or catheters into prostate for interstitial radioelement application, with or without cystoscopy) to status indicator "J1" and to provide payment for this procedure through the C-APC payment methodology, similar to the payment methodology for other surgical insertion procedures related to brachytherapy.

(4) C-APC 5627 (Level 7 Radiation Therapy) Stereotactic Radiosurgery (SRS)

Stereotactic radiosurgery (SRS) is a type of radiation therapy that targets multiple beams of radiation to precisely deliver radiation to a brain tumor while sparing the surrounding normal tissue. SRS treatment can be delivered by Cobalt-60-based (also referred to as gamma knife) technology or robotic linear accelerator-based (LINAC)-based technology. As stated in the CY 2016 OPPI/ASC final rule with comment period (80 FR 70336), section 634 of the American Taxpayer Relief Act (ATRA) of 2012 (Pub. L. 112-240) amended section 1833(t)(16) of the Act by adding a new subparagraph (D) to require that OPPI payments for Cobalt-60-based SRS be reduced to equal that of payments for LINAC-based SRS for covered OPD services furnished on or after April 1, 2013. Because section 1833(t)(16)(D) of the Act requires equal payment for SRS treatment delivered by Cobalt-60-based or LINAC-based technology, the two types of services involving SRS delivery instruments (which are described by HCPCS code 77371 (Radiation treatment delivery, stereotactic radiosurgery [SRS], complete course of treatment cranial lesion(s) consisting of 1 session; multi-source Cobalt 60-based) and

HCPCS code 77372 (Linear accelerator-based)) are assigned to the same C-APC (C-APC 5627 Level 7 Radiation Therapy).

In the CY 2016 OPPI/ASC final rule with comment period (80 FR 70336), we stated that we had identified differences in the billing patterns for SRS procedures delivered using Cobalt-60-based and LINAC-based technologies. In particular, our claims data analysis revealed that services involving SRS delivered by Cobalt-60-based technologies (as described by HCPCS code 77371) typically included SRS treatment planning services (for example, imaging studies, radiation treatment aids, and treatment planning) and the actual deliveries of SRS treatment on the same date of service and reported on the same claim. In contrast, claims data analysis results revealed that services involving SRS delivered by LINAC-based technologies (as described by HCPCS code 77372) frequently included services related to SRS treatment (for example, imaging studies, radiation treatment aids, and treatment planning) that were provided on different dates of service and reported on claims separate from the actual delivery of SRS treatment.

We stated in the CY 2016 OPPI/ASC final rule with comment period (80 FR 70336) that the intent of the C-APC policy is to package payment for all services adjunctive to the primary "J1" procedure and that we believed that all essential planning and preparation services related to the SRS treatment are adjunctive to the SRS treatment delivery procedure. Therefore, payment for these adjunctive services should be packaged into the C-APC payment for the SRS treatment instead of reported on a different claim and paid separately. To identify services that are adjunctive to the primary SRS treatment described by HCPCS codes 77371 and 77372, but reported on a different claim, we established modifier "CP" which became effective in CY 2016 and required the use of the modifier for CY 2016 and CY 2017.

To ensure appropriate ratesetting for the SRS C-APC, we believed it was necessary to unbundle payment for the adjunctive services for CY 2016 and CY 2017. Therefore, we finalized a policy to change the payment for SRS treatment for the 10 SRS planning and preparation services identified in our claims data (HCPCS codes 70551, 70552, 70553, 77011, 77014, 77280, 77285, 77290, 77295, and 77336) that were reported differentially using HCPCS codes 77371 and 77372 both on the same claim as the SRS services and on claims 1 month prior to the delivery of SRS services.

These codes were removed from the geometric mean cost calculations for C-APC 5627. In addition, for CY 2016 and CY 2017, we provided separate payment for the 10 planning and preparation services adjunctive to the delivery of the SRS treatment using either the Cobalt-60-based or LINAC-based technology, even when the planning service was included on the same claim as the primary "J1" SRS treatment service. The use of the modifier "CP" was not required to identify these 10 planning and preparation codes.

As discussed in the CY 2018 OPPI/ASC proposed rule (82 FR 33564 and 33465), the data collection period for SRS claims with modifier "CP" began on January 1, 2016 and concludes on December 31, 2017. Based on our analysis of preliminary data collected with modifier "CP", we have identified some additional services that are adjunctive to the primary SRS treatment and reported on a different claim outside of the 10 SRS planning and preparation codes that were removed from the SRS C-APC costs calculations and paid separately.

However, the "CP" modifier has been used by a small number of providers since its establishment. In addition, our analysis showed that several of the HCPCS codes that were billed with modifier "CP" belonged to the group of 10 SRS planning and preparation codes that we pay separately and do not require the use of modifier "CP". Also, some providers erroneously included the modifier when reporting the HCPCS code for the delivery of the LINAC-based SRS treatment. As stated above, the data collection period for SRS claims with modifier "CP" was set to conclude on December 31, 2017. Accordingly, for CY 2018, we are deleting this modifier and discontinuing its required use.

For CY 2018, we also proposed to continue to make separate payments for the 10 planning and preparation services adjunctive to the delivery of the SRS treatment using either the Cobalt-60-based or LINAC-based technology when furnished to a beneficiary within 1 month of the SRS treatment. The continued separate payment of these services will allow us to complete our analysis of the claims data including modifier "CP" from both CY 2016 and CY 2017 claims. As stated in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79583), we will consider in the future whether repackaging all adjunctive services (planning, preparation, and imaging, among others) back into cranial single session SRS is appropriate.

We invited public comments on these proposals.

Comment: Commenters generally supported the proposal to continue to make separate payments for the planning and preparation services adjunctive to the delivery of the SRS treatment and requested that CMS continue to pay separately for these services in the future. Commenters also supported the deletion of modifier "CP".

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to make separate payments for the 10 planning and preparation services adjunctive to the delivery of the SRS treatment using either the Cobalt-60-based or LINAC-based technology when furnished to a beneficiary within 1 month of the SRS treatment.

(5) Complexity Adjustment for Blue Light Cystoscopy Procedures

As discussed in prior OPPI/ASC final rules with comment period, and most recently in the CY 2017 OPPI/ASC final rule with comment period (81 FR 79668), we continue to believe that Cysview® (hexaminolevulinate HCl) (described by HCPCS code C9275) is a drug that functions as a supply in a diagnostic test or procedure and is therefore packaged with payment for the primary procedure. In addition, as discussed in section II.A.2.b.(1) of the CY 2018 OPPI/ASC proposed rule and this final rule with comment period, drugs that are not eligible for pass-through payment are always packaged when billed with a comprehensive service. To maintain the integrity of the OPPI, we believe it is generally not appropriate to allow exceptions to our drug packaging policy or comprehensive APC policy that would result in separate payment for the drug based on the product's ASP+6 percent payment rate. While we did not propose in the CY 2018 proposed rule to pay separately for Cysview®, we have heard concerns from stakeholders that the payment for blue light cystoscopy procedures involving Cysview® may be creating a barrier to beneficiaries receiving access to reasonable and necessary care for which there may not be a clinically comparable alternative. Therefore, as we stated in the proposed rule, we revisited our payment policy for blue light cystoscopy procedures. As described in more detail below, we believe certain code combinations for blue light cystoscopy procedures should be eligible to qualify for a complexity

adjustment, given the unique properties of the procedure and resource costs.

Traditionally, white light (or standard) cystoscopy, typically performed by urologists, has been the gold standard for diagnosing bladder cancer. Enhanced bladder cancer diagnostics, such as narrow band imaging or blue light cystoscopy, increase tumor detection in nonmuscle invasive bladder cancer over white light cystoscopy alone, thus enabling more precise tumor removal by the urologist. Blue light cystoscopy can only be performed after performance of white light cystoscopy. Because blue light cystoscopy requires specialized imaging equipment to view cellular uptake of the dye that is not otherwise used in white light cystoscopy procedures, some practitioners consider blue light cystoscopy to be a distinct and adjunctive procedure to white light cystoscopy. However, the current CPT coding structure for cystoscopy procedures does not identify blue light cystoscopy in the coding descriptions separate from white light cystoscopy. Therefore, the existing cystoscopy CPT codes do not distinguish cystoscopy procedures involving only white light cystoscopy from those involving both white and blue light cystoscopy, which require additional resources compared to white light cystoscopy alone.

As discussed in the CY 2018 OPPTS/ASC proposed rule, after discussion with our clinical advisors (including a urologist), we believe that blue light cystoscopy represents an additional elective but distinguishable service as compared to white light cystoscopy that, in some cases, may allow greater detection of bladder tumors in beneficiaries relative to white light cystoscopy alone. Given the additional equipment, supplies, operating room time, and other resources required to perform blue light cystoscopy in addition to white light cystoscopy, for CY 2018, in the proposed rule, we proposed to create a new HCPCS C-code to describe blue light cystoscopy and to allow for a complexity adjustment to APC 5374 (Level 4 Urology and Related Services) for certain code combinations in APC 5373 (Level 3 Urology and Related Services). (In the proposed rule, we cited HCPCS code "C97XX" as a placeholder for the new code. However, for ease of reading, hereafter in this section, we refer to the replacement code HCPCS code C9738 (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)) instead of the placeholder code.) Specifically, to determine which code pair combinations of a procedure

described by proposed new HCPCS code C9738 and a cystoscopy procedure would qualify for a complexity adjustment, we first crosswalked the costs of the procedure described by HCPCS code C9275

(Hexaminolevulinate hcl) to the procedure described by proposed new HCPCS code C9738 assigned status indicator "N". Next, we identified the procedure codes used to describe white light cystoscopy of the bladder which include the following CPT codes and APC assignments:

- APC 5372 (Level 2 Urology and Related Services)
 - CPT code 52000
- APC 5373 (Level 3 Urology and Related Services)
 - CPT code 52204
 - CPT code 52214
 - CPT code 52224
- APC 5374 (Level 4 Urology and Related Services)
 - CPT code 52234
 - CPT code 52235
- APC 5375 (Level 5 Urology and Related Services)
 - CPT code 52240

Because APC 5372 is not a C-APC, cystoscopy procedures assigned to Level 2 Urology are not eligible for a complexity adjustment, and therefore, we did not analyze these codes to determine whether they met the criteria for this adjustment. We modeled the data to determine which code pair combinations exceed the claim frequency and cost threshold in APC 5373, APC 5374, and APC 5375, which are all C-APCs. In the proposed rule, we stated that the results of our analysis indicate that the code pair combination of procedures described by proposed new HCPCS code C9738 and cystoscopy procedures assigned to APC 5373 would be eligible for a complexity adjustment based on current criteria and cost data because they meet the frequency and cost criteria thresholds. Likewise, our results indicated that the combination of procedures described by proposed new HCPCS code C9738 and cystoscopy procedures assigned to APC 5374 and APC 5375 would not qualify for a complexity adjustment because they do not meet the frequency and cost criteria thresholds.

We indicated in the proposed rule that, under the C-APC policy, blue light cystoscopy would be packaged, but when performed with a cystoscopy procedure in APC 5373 and reported with proposed new HCPCS code C9738 in addition to the cystoscopy CPT code, there would be a complexity adjustment to the next higher level APC in the series, resulting in a higher payment

than for the white light cystoscopy procedure alone. That is, if the code pair combination of proposed new HCPCS code C9738 with CPT code 52204, 52214, or 52224 is reported on a claim, the claim will qualify for payment reassignment from APC 5373 to APC 5374. We stated that we plan to track the utilization and the costs associated with white light/blue light cystoscopy procedure combinations that will receive a complexity adjustment.

We invited public comments on our CY 2018 proposal to allow for a complexity adjustment when a white light cystoscopy procedure followed by a blue light cystoscopy procedure is performed. In addition, we sought public comments on whether alternative procedures, such as narrow band imaging, may be disadvantaged by this proposed policy.

Comment: One commenter agreed that there are differences in resource utilization between cystoscopy procedures involving white light only and cystoscopy procedures involving both white light and blue light. However, the commenter recommended that a proposal to expand the cystoscopy CPT codes be submitted to the American Medical Association (AMA) to capture the resource distinction. The commenter stated that the use of CPT codes and HCPCS C-codes (for example, the proposed HCPCS code C9738) to capture cystoscopy procedures is duplicative, administratively burdensome, and can affect the quality of claims data.

Response: We appreciate the commenter's concerns. However, we proposed to establish this code based on programmatic need under the OPPTS to accurately describe blue light cystoscopy procedures. Given that a CPT code that describes blue light cystoscopy with an optical imaging agent does not exist in the CY 2018 CPT code set published by the AMA, it is unclear to us why the commenter believes HCPCS code C9738 would be duplicative, administratively burdensome, or affect the quality of claims data. Moreover, it is the combination of two different procedures that trigger a complexity adjustment; therefore, two distinct CPT or HCPCS codes are necessary to effectuate a complexity adjustment. If the AMA establishes a CPT code that describes blue light cystoscopy with an optical imaging agent, we would consider recognizing that CPT code under the OPPTS as a replacement for HCPCS code C9738.

Comment: A few commenters generally supported the proposal to allow for a complexity adjustment for

blue light cystoscopy with Cysview procedures. Many commenters, including several commenters with experience utilizing blue light cystoscopy with Cysview, shared their views on how this procedure has positively affected patient care management. These commenters recommended that CMS apply a complexity adjustment to all blue light cystoscopy with Cysview procedures performed in HOPDs to improve utilization and beneficiary access to care. Alternatively, the commenters recommended that CMS pay separately for Cysview to allow access in both white light and blue light cystoscopies in HOPD and ASC settings or establish a payment methodology conceptually similar to the device-intensive payment procedure for ASCs. The commenters suggested that a “device-intensive like” payment for a cystoscopy procedure performed in the ASC would be set based on the service cost and the drug cost (as determined by the manufacturer-reported average sales price).

Response: We appreciate the commenters’ support. In developing the blue light cystoscopy procedure complexity adjustment payment proposal, we considered the unique properties and resources required to perform blue light cystoscopy with Cysview. As described in the proposal, we approximated the costs for the additional resources required to perform blue light cystoscopy by crosswalking the costs associated with HCPCS code C9275 to HCPCS code C9738. We then applied the established complexity adjustment criteria to determine which cystoscopy procedures, when performed with blue light cystoscopy, would qualify for a complexity adjustment. For this final rule with comment period, we repeated the analysis to determine which code pair combinations of HCPCS code C9738 with a cystoscopy procedure CPT code satisfied the complexity adjustment criteria. Consistent with the proposed rule results, based on the updated final rule with comment period claims data, the code pair combination of HCPCS code C9738 with CPT code 52204, 52214, or 52224 each will qualify for a complexity adjusted payment from APC 5373 to APC 5374. Because APC 5372 is not a C–APC, cystoscopy procedures assigned to Level 2 Urology are not eligible for a complexity adjustment. Therefore, we did not analyze these codes to determine whether they were eligible for a complexity adjustment. Likewise, our analysis of the final rule claims data indicated that the combination of

proposed HCPCS code C9738 and cystoscopy procedures assigned to APC 5374 and APC 5375 would not qualify for a complexity adjustment because they do not meet the frequency and cost criteria thresholds.

We did not propose and the commenters did not provide evidence to support waiving application of the complexity adjustment criteria and allowing for a complexity adjustment whenever a blue light cystoscopy procedure is performed with any white light cystoscopy procedure. To allow for a complexity adjustment under any circumstance would require a change to the complexity adjustment criteria, which we did not propose. Therefore, we are finalizing the blue light cystoscopy complexity adjustment proposal, without modification. In addition we are establishing HCPCS code C9738 (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)), which replaces proposed HCPCS code C97XX. For CY 2018, the code pair combination of HCPCS code C9738 with CPT code 52204, 52214, or 52224 will qualify for a complexity adjusted payment from APC 5373 to APC 5374.

With respect to the public comments on unpackaging Cysview to allow for separate payment in both the HOPD and ASC settings, as we stated in the background section for the proposal, we continue to believe that Cysview is a drug that functions as a supply in a diagnostic test or procedure and therefore is packaged with payment for the primary procedure. In the CY 2018 OPPI/ASC proposed rule, we did not propose to make any changes to the “drugs that function as a supply” packaging policy or make any corresponding proposals to pay separately for Cysview in the HOPD and ASC settings. Therefore, Cysview will remain packaged.

With respect to the recommendation that we establish a payment methodology for blue light cystoscopy with Cysview procedures conceptually similar to the ASC device intensive payment policy, we did not propose revisions to the ASC device-intensive procedure policy. In addition, it is unclear to us exactly how such a policy would work and to what precise procedures in addition to blue light cystoscopy it might apply. Further, we believe that the C–APC payment adequately reflects the average resources expended by hospitals as reflected in hospital claims data. In addition, for especially costly cases, we believe our proposed policy appropriately recognizes the additional costs of blue

light cystoscopy with white light cystoscopy through the complexity adjustment. We will continue to analyze the data and evaluate whether refinements to the C–APC policy, including the complexity adjustment criteria, should be considered in future rulemaking.

Comment: A few commenters responded to the solicitation for public comments on whether an alternative procedure, such as narrow band imaging, would be disadvantaged by the blue light cystoscopy with Cysview complexity adjustment proposal. One commenter, the manufacturer of Cysview, requested that CMS not establish a complexity adjustment for narrow band imaging because this imaging does not require a drug, additional technology, or additional resource. The commenter stated that the equipment used in narrow band imaging cystoscopy procedures is not different than the equipment for white light cystoscopy and does not require more resource time, expense, or cost to the hospital because narrow band imaging technology is part of the standard equipment available for cystoscopic procedures. Another commenter, the developer of narrow band imaging, contended that the procedure shares many clinical and procedural similarities with blue light cystoscopy with Cysview procedures, and therefore narrow band imaging should be eligible for a complexity adjustment. In addition, the commenter expressed concern that a complexity adjustment for blue light cystoscopy with Cysview and not narrow band imaging would provide a financial incentive for providers to choose one technology over the other. However, the commenter did not provide cost information for narrow band imaging.

Response: We appreciate the commenters’ responses. We do not believe that the information presented supports a complexity adjustment for narrow band imaging. The lack of cost information for narrow band imaging and the fact that narrow band imaging does not require use of a contrast agent (and, therefore, avoids the cost of contrast and the time associated with the administration of contrast) lead us to question whether the resource costs of narrow band imaging are the same as those of blue light cystoscopy with Cysview. For these reasons, we do not believe it is appropriate to modify the proposal to allow for a complexity adjustment when narrow band imaging is performed with white light cystoscopy.

After consideration of the public comments we received, we are

finalizing our proposal, without modification, to allow for a complexity adjustment when HCPCS code C9738 is reported on the same claim as CPT code 52204, 52214, or 52224. The result of billing any one of these three code pair combinations is a payment reassignment from APC 5373 to APC 5374.

(6) Analysis of C-APC Packaging Under the OPSS

In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79584), we accepted a recommendation made at the August 22, 2016 HOP Panel meeting to analyze the effects of C-APCs. The HOP panel recommendation did not elucidate specific concerns with the C-APC policy or provide detailed recommendations on particular aspects of the policy to analyze. Therefore, we took a broad approach in studying HCPCS codes and APCs subject to the C-APC policy to determine whether aberrant trends in the data existed. Overall, we observed no such aberrancies and believe that the C-APC policy is working as intended.

As discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33580), specifically, using OPSS claims data for the CY 2016 final rule with comment period, the CY 2017 final rule with comment period, and the CY 2018 proposed rule, which reflect an observation period of CY 2014 to CY 2016, we examined the effects of C-APCs and their impact on OPSS payments. We started with all hospital outpatient claims billed on the 13X claim-type and, from that, separately identified HCPCS codes and APCs that were subject to the comprehensive methodology in CYs 2015 and 2016 (that is, HCPCS codes or APCs assigned status indicator “J1” or “J2”). Next, we analyzed the claims to create a subset of claims that contain the HCPCS codes and APCs that were subject to the comprehensive methodology. Using the claims noted above, we analyzed claim frequency, line frequency, number of billing units, and the total OPSS payment between CYs 2014 and 2016 for each HCPCS code and APC that had been previously identified. In reviewing the cost statistics for HCPCS codes for procedures with status indicator “S”, “T”, or “V” in CY 2014 that were assigned to a C-APC in either CY 2015 or CY 2016, overall, we observed an increase in claim line frequency, units billed, and Medicare payment, which suggest that the C-APC payment policy did not adversely affect access to care or reduce payments to hospitals. Decreases in these cost statistics would suggest our comprehensive packaging logic is not working as intended and/or the C-APC

payment rates were inadequate, resulting in lower volume due to migration of services to other settings or the cessation of providing these services. Likewise, because the cost statistics of major separately payable codes (that is, HCPCS codes with status indicator “S”, “T”, or “V”) that were packaged into a C-APC prospectively were consistent with the cost statistics of the codes packaged on the claim, in actuality, indicate that costs were appropriately redistributed, we believe the C-APC payment methodology is working as intended.

Comment: A few commenters appreciated CMS’ analysis of C-APC packaging under the OPSS and urged CMS to continue to monitor the data and report on any changes in billing patterns or utilization for particular items or services.

Response: We appreciate the commenters’ support. We will continue to monitor the impact of our C-APC policy on OPSS rate setting and evaluate if future adjustments are needed.

c. Calculation of Composite APC Criteria-Based Costs

As discussed in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66613), we believe it is important that the OPSS enhance incentives for hospitals to provide necessary, high quality care as efficiently as possible. For CY 2008, we developed composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Combining payment for multiple, independent services into a single OPSS payment in this way enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves. An additional advantage to the composite APC model is that we can use data from correctly coded multiple procedure claims to calculate payment rates for the specified combinations of services, rather than relying upon single procedure claims which may be low in volume and/or incorrectly coded. Under the OPSS, we currently have composite policies for low dose rate (LDR) prostate brachytherapy, mental health services, and multiple imaging services. We refer readers to the CY 2008 OPSS/ASC final rule with comment period for a full discussion of the development of the composite APC methodology (72 FR 66611 through 66614 and 66650 through 66652) and the CY 2012 OPSS/ASC final rule with comment period (76 FR 74163) for more recent background.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33580), for CY 2018 and subsequent years, we proposed to continue our composite APC payment policies for mental health services and multiple imaging services, as discussed below. As discussed in section II.A.2.b. of the proposed rule and this final rule with comment period, we proposed to assign CPT code 55875 (Transperineal placement of needs or catheters into prostate for interstitial radioelement application, with or without cystoscopy) a status indicator of “J1” and assign it to a C-APC. In conjunction with this proposal, we also proposed to delete the low dose rate (LDR) prostate brachytherapy composite APC for CY 2018 and subsequent years. We refer readers to section II.A.2.b. of the CY 2018 OPSS/ASC proposed rule and this final rule with comment period for our discussion on our low dose rate (LDR) prostate brachytherapy APC proposal for CY 2018 and subsequent years.

(1) Mental Health Services Composite APC

In the CY 2018 OPSS/ASC proposed rule (82 FR 33580), we proposed to continue our longstanding policy of limiting the aggregate payment for specified less resource-intensive mental health services furnished on the same date to the payment for a day of partial hospitalization services provided by a hospital, which we consider to be the most resource intensive of all outpatient mental health services. We refer readers to the April 7, 2000 OPSS final rule with comment period (65 FR 18452 through 18455) for the initial discussion of this longstanding policy and the CY 2012 OPSS/ASC final rule with comment period (76 FR 74168) for more recent background.

In the CY 2017 OPSS/ASC final rule with comment period (81 FR 79588 through 79589), we finalized a policy to combine the existing Level 1 and Level 2 hospital-based PHP APCs into a single hospital-based PHP APC and, thereby, discontinue APCs 5861 (Level 1 Partial Hospitalization (3 services) for Hospital-Based PHPs) and 5862 (Level 2 Partial Hospitalization (4 or more services) for Hospital-Based PHPs) and replace them with APC 5863 (Partial Hospitalization (3 or more services per day)). For CY 2018, and subsequent years, we proposed that when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the maximum per diem payment rate for partial hospitalization services provided

by a hospital, those specified mental health services would be paid through composite APC 8010 (Mental Health Services Composite) for CY 2018. In addition, we proposed to set the payment rate for composite APC 8010 for CY 2018 at the same payment rate that we proposed for APC 5863, which is the maximum partial hospitalization per diem payment rate for a hospital, and that the hospital continue to be paid the payment rate for composite APC 8010. Under this policy, the I/OCE would continue to determine whether to pay for these specified mental health services individually, or to make a single payment at the same payment rate established for APC 5863 for all of the specified mental health services furnished by the hospital on that single date of service. We stated that we continue to believe that the costs associated with administering a partial hospitalization program at a hospital represent the most resource intensive of all outpatient mental health services. Therefore, we do not believe that we should pay more for mental health services under the OPSS than the highest partial hospitalization per diem payment rate for hospitals.

We did not receive any public comments on these proposals. Therefore, we are finalizing our CY 2018 proposal, without modification, that when aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a date of service, based on the payment rates with the APCs for the individual services, exceeds the maximum per diem payment rate for partial hospitalization services provided by a hospital, those specified mental health services will be paid through composite APC 8010 for CY 2018. In addition, we are finalizing our CY 2018 proposal, without modification, to set the payment rate for composite APC 8010 for CY 2018 at the same payment rate that we established for APC 5863, which is the maximum partial hospitalization per diem payment rate for a hospital, and that the hospital continue to be paid the payment rate for composite APC 8010.

(2) Multiple Imaging Composite APCs (APCs 8004, 8005, 8006, 8007, and 8008)

Effective January 1, 2009, we provide a single payment each time a hospital submits a claim for more than one imaging procedure within an imaging family on the same date of service, in order to reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session (73 FR 41448

through 41450). We utilize three imaging families based on imaging modality for purposes of this methodology: (1) Ultrasound; (2) computed tomography (CT) and computed tomographic angiography (CTA); and (3) magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA). The HCPCS codes subject to the multiple imaging composite policy and their respective families are listed in Table 12 of the CY 2014 OPSS/ASC final rule with comment period (78 FR 74920 through 74924).

While there are three imaging families, there are five multiple imaging composite APCs due to the statutory requirement under section 1833(t)(2)(G) of the Act that we differentiate payment for OPSS imaging services provided with and without contrast. While the ultrasound procedures included under the policy do not involve contrast, both CT/CTA and MRI/MRA scans can be provided either with or without contrast. The five multiple imaging composite APCs established in CY 2009 are:

- APC 8004 (Ultrasound Composite);
- APC 8005 (CT and CTA without Contrast Composite);
- APC 8006 (CT and CTA with Contrast Composite);
- APC 8007 (MRI and MRA without Contrast Composite); and
- APC 8008 (MRI and MRA with Contrast Composite).

We define the single imaging session for the “with contrast” composite APCs as having at least one or more imaging procedures from the same family performed with contrast on the same date of service. For example, if the hospital performs an MRI without contrast during the same session as at least one other MRI with contrast, the hospital will receive payment based on the payment rate for APC 8008, the “with contrast” composite APC.

We make a single payment for those imaging procedures that qualify for payment based on the composite APC payment rate, which includes any packaged services furnished on the same date of service. The standard (noncomposite) APC assignments continue to apply for single imaging procedures and multiple imaging procedures performed across families. For a full discussion of the development of the multiple imaging composite APC methodology, we refer readers to the CY 2009 OPSS/ASC final rule with comment period (73 FR 68559 through 68569).

In the CY 2018 OPSS/ASC proposed rule (82 FR 33581), we proposed, for CY 2018 and subsequent years, to continue

to pay for all multiple imaging procedures within an imaging family performed on the same date of service using the multiple imaging composite APC payment methodology. We stated that we continue to believe that this policy would reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session.

The proposed CY 2018 payment rates for the five multiple imaging composite APCs (APCs 8004, 8005, 8006, 8007, and 8008) were based on proposed geometric mean costs calculated from a partial year of CY 2016 claims available for the CY 2018 OPSS/ASC proposed rule that qualified for composite payment under the current policy (that is, those claims reporting more than one procedure within the same family on a single date of service). To calculate the proposed geometric mean costs, we used the same methodology that we used to calculate the final geometric mean costs for these composite APCs since CY 2014, as described in the CY 2014 OPSS/ASC final rule with comment period (78 FR 74918). The imaging HCPCS codes referred to as “overlap bypass codes” that we removed from the bypass list for purposes of calculating the proposed multiple imaging composite APC geometric mean costs, in accordance with our established methodology as stated in the CY 2014 OPSS/ASC final rule with comment period (78 FR 74918), were identified by asterisks in Addendum N to the CY 2018 OPSS/ASC proposed rule (which is available via the Internet on the CMS Web site) and were discussed in more detail in section II.A.1.b. of the CY 2018 OPSS/ASC proposed rule.

For the CY 2018 OPSS/ASC proposed rule, we were able to identify approximately 634,918 “single session” claims out of an estimated 1.7 million potential claims for payment through composite APCs from our ratesetting claims data, which represents approximately 36 percent of all eligible claims, to calculate the proposed CY 2018 geometric mean costs for the multiple imaging composite APCs. Table 6 of the CY 2018 OPSS/ASC proposed rule listed the proposed HCPCS codes that would be subject to the multiple imaging composite APC policy and their respective families and approximate composite APC proposed geometric mean costs for CY 2018.

Comment: One commenter supported the composite APC policy for imaging services and recommended that CMS pay composite imaging APCs separately when billed on a claim with a service

that has been assigned a “J1” status indicator, that is, as a C-APC.

Response: We appreciate the commenter’s support. Regarding the recommendation about paying for composite APCs separately when billed on a claim with a service that has been assigned a “J1” status indicator, procedures assigned to C-APCs are primary services that are typically the focus of the hospital outpatient stay. As discussed in section II.A.2.b. of this final rule with comment period, our C-

APC policy packages payment for adjunctive and secondary items, services, and procedures, including diagnostic procedures, into the most costly procedure under the OPPTS at the claim level. We believe that paying for composite APCs separately when billed with a service that has been assigned a “J1” status indicator would be in conflict with the intent of our C-APC policy and would not be appropriate.

After consideration of the public comments we received, we are

finalizing our proposal to continue the use of multiple imaging composite APCs to pay for services providing more than one imaging procedure from the same family on the same date, without modification. Table 7 below lists the HCPCS codes that will be subject to the multiple imaging composite APC policy and their respective families and approximate composite APC proposed geometric mean costs for CY 2018.

TABLE 7—OPPS IMAGING FAMILIES AND MULTIPLE IMAGING PROCEDURE COMPOSITE APCS

CY 2018 APC 8004 (ultrasound composite)	CY 2018 approximate APC geometric mean cost = \$300

* If a “without contrast” MRI or MRA procedure is performed during the same session as a “with contrast” MRI or MRA procedure, the I/OCE assigns the procedure to APC 8008 rather than APC 8007.

3. Changes to Packaged Items and Services

a. Background and Rationale for Packaging in the OPPS

Like other prospective payment systems, the OPPS relies on the concept of averaging to establish a payment rate for services. The payment may be more or less than the estimated cost of providing a specific service or a bundle of specific services for a particular patient. The OPPS packages payments for multiple interrelated items and services into a single payment to create incentives for hospitals to furnish services most efficiently and to manage their resources with maximum flexibility. Our packaging policies support our strategic goal of using larger payment bundles in the OPPS to maximize hospitals’ incentives to provide care in the most efficient manner. For example, where there are a variety of devices, drugs, items, and supplies that could be used to furnish a service, some of which are more costly than others, packaging encourages hospitals to use the most cost-efficient item that meets the patient’s needs, rather than to routinely use a more expensive item, which often occurs if separate payment is provided for the item.

Packaging also encourages hospitals to effectively negotiate with manufacturers and suppliers to reduce the purchase price of items and services or to explore alternative group purchasing arrangements, thereby encouraging the most economical health care delivery. Similarly, packaging encourages hospitals to establish protocols that ensure that necessary services are furnished, while scrutinizing the services ordered by

practitioners to maximize the efficient use of hospital resources. Packaging payments into larger payment bundles promotes the predictability and accuracy of payment for services over time. Finally, packaging may reduce the importance of refining service-specific payment because packaged payments include costs associated with higher cost cases requiring many ancillary items and services and lower cost cases requiring fewer ancillary items and services. Because packaging encourages efficiency and is an essential component of a prospective payment system, packaging payments for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to a primary service has been a fundamental part of the OPPS since its implementation in August 2000. For an extensive discussion of the history and background of the OPPS packaging policy, we refer readers to the CY 2000 OPPS final rule (65 FR 18434), the CY 2008 OPPS/ASC final rule with comment period (72 FR 66580), the CY 2014 OPPS/ASC final rule with comment period (78 FR 74925), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66817), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70343), and the CY 2017 OPPS/ASC final rule with comment period (81 FR 79592). As we continue to develop larger payment groups that more broadly reflect services provided in an encounter or episode of care, we have expanded the OPPS packaging policies. Most, but not necessarily all, items and services currently packaged in the OPPS are listed in 42 CFR 419.2(b). Our overarching goal is to make OPPS payments for all services paid under the OPPS more consistent with those of a

prospective payment system and less like those of a per-service fee schedule, which pays separately for each coded item. As a part of this effort, we have continued to examine the payment for items and services provided under the OPPS to determine which OPPS services can be packaged to further achieve the objective of advancing the OPPS toward a more prospective payment system.

For CY 2018, we examined the items and services currently provided under the OPPS, reviewing categories of integral, ancillary, supportive, dependent, or adjunctive items and services for which we believe payment would be appropriately packaged into payment of the primary service that they support. Specifically, we examined the HCPCS code definitions (including CPT code descriptors) and outpatient hospital billing patterns to determine whether there were categories of codes for which packaging would be appropriate according to existing OPPS packaging policies or a logical expansion of those existing OPPS packaging policies. In the CY 2018 OPPS/ASC proposed rule (82 FR 33584 through 33585), for CY 2018, we proposed to conditionally package the costs of selected newly identified ancillary services into payment with a primary service where we believe that the packaged item or service is integral, ancillary, supportive, dependent, or adjunctive to the provision of care that was reported by the primary service HCPCS code. Below we discuss the items and services that we proposed to package beginning in CY 2018.

b. Drug Administration Packaging Policy

(1) Background of Drug Administration Packaging Policy

In the CY 2014 OPPTS/ASC final rule with comment period (78 FR 74942 through 74945), we finalized a policy to unconditionally package procedures described by add-on codes. Procedures described by add-on codes represent an extension or continuation of a primary procedure, which means that they are typically supportive, dependent, or adjunctive to a primary service. The primary code defines the purpose and typical scope of the patient encounter and the add-on code describes incremental work, when the extent of the procedure encompasses a range rather than a single defined endpoint applicable to all patients. Given the dependent nature and adjunctive characteristics of procedures described by add-on codes and in light of longstanding OPPTS packaging principles, we finalized a policy to unconditionally package add-on codes with the primary procedure. However, in response to stakeholder comments on the appropriateness of packaging drug administration add-on codes, we did not finalize our proposal to package drug administration add-on codes (78 FR 74945).

In the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66819 through 66822), we conditionally packaged payment for ancillary services assigned to APCs with a geometric mean cost of less than or equal to \$100 (prior to application of the conditional packaging status indicator). The ancillary services that we identified are primarily minor diagnostic tests and procedures that are often performed with a primary service, although there are instances where hospitals provide such services alone and without another primary service during the same encounter. Under this policy, we assigned the conditionally packaged services to status indicator "Q1", which indicates that the service is separately payable when not billed on the same claim as a HCPCS code assigned status indicator "S", "T", or "V". Exclusions to this ancillary service packaging policy include preventive services, certain psychiatric and counseling-related services, and certain low-cost drug administration services. In the CY 2015 OPPTS/ASC final rule with comment period (79 FR 66819), we indicated that we did not propose to package certain low-cost drug administration services because we were examining various alternative payment policies for drug

administration, including the associated drug administration add-on codes.

(2) Packaging of Level 1 and Level 2 Drug Administration Services

As stated earlier, our overarching goal is to make OPPTS payments for all services paid under the OPPTS more consistent with those of a prospective payment system and less like those of a per-service fee schedule. To achieve this goal, it is important that we are consistent in our approach to packaging items and services under the established packaging categories. Although we excluded packaging of low-cost drug administration services from the ancillary services packaging policy in the CY 2015 rulemaking, separate payment for drug administration services is an example of inconsistent application of our packaging policy where we are continuing to pay separately for a service, regardless of cost and performance with another service. Given the frequency of drug administration in hospital outpatient care, in the CY 2018 OPPTS/ASC proposed rule, we stated that we believe it is appropriate for us to reconsider whether payment for drug administration services with a geometric mean cost of less than or equal to \$100 (prior to application of the conditional packaging status indicator) should continue to be excluded from the ancillary services packaging policy.

As part of our review of CY 2016 claims data used for ratesetting in the CY 2018 OPPTS/ASC proposed rule, we examined drug administration billing patterns and payment for drug administration services under the OPPTS. Based on our analysis of CY 2016 claims data used for the CY 2018 proposed rule ratesetting, we found that the geometric mean cost for APC 5691 (Level 1 Drug Administration) is approximately \$37 and the geometric mean cost for APC 5692 (Level 2 Drug Administration) is approximately \$59. In addition, we observed that drug administration services in APC 5692 are frequently reported on the same claim with other separately payable services, such as an emergency department or clinic visit, while drug administration services in APC 5691 are sometimes reported with other separately payable services. Accordingly, Medicare data show that these drug administration services are currently being provided as part of another separately payable service for which two separate payments are made, and support that packaging these services, when they are reported with another separately payable service, is appropriate. Further, packaging for Levels 1 and 2 Drug Administration

services is consistent with the ancillary packaging policy that was adopted in CY 2015, as noted earlier in this section. Therefore, given the low geometric mean costs of drug administration services in APC 5691 and APC 5692 as well as their associated billing patterns, we stated in the CY 2018 OPPTS/ASC proposed rule that we believe that when these services are performed with another separately payable service, they should be packaged, but that they should be separately paid when performed alone. That is, we stated that we believe it is no longer necessary to exclude low-cost drug administration services from packaging under the ancillary services packaging policy adopted in CY 2015.

In addition, as we examine payment differences between the hospital outpatient department and the physician office for similar services, under the OPPTS, hospitals may receive separate payments for a clinic (office) visit and a drug administration service. In contrast, physicians are not eligible to receive payment for an office visit when a drug administration service is also provided. As a result, for furnishing the same drug administration service, hospitals receive an additional payment for which physician offices are not eligible. We stated in the proposed rule that we believe that conditional packaging of drug administration services would promote equitable payment between the physician office and the hospital outpatient hospital department. Accordingly, for CY 2018, we proposed to conditionally package payment for HCPCS codes describing drug administration services in APC 5691 and APC 5692, except for add-on codes and preventive services, when these services are performed with another service.

Because preventive services are excluded from our packaging policies, we proposed to continue to pay separately for Medicare Part B vaccine administration services. In addition, at that time, we did not propose to package any drug administration services in APC 5693 (Level 3 Drug Administration) or APC 5694 (Level 4 Drug Administration), but indicated our interest in public comments pertaining to whether payment for the services in these APCs may be appropriate for packaging. The proposed status indicators for drug administration services in APC 5691 and APC 5692 were listed in Table 7 of the proposed rule.

Comment: Numerous commenters disagreed with CMS' proposal to conditionally package low-cost drug administration services assigned to APC

5691 and APC 5692. The commonly cited concerns among the commenters who opposed the proposal were as follows:

- Low-cost drug administration services are dissimilar from other low cost ancillary services in that drug administration services are separate and distinct stand-alone services and not adjunctive, supportive, or dependent to a primary procedure.
- The proposal would not promote equitable payment between the physician's office and the hospital outpatient department because, in accordance with CMS guidelines, there are clinical circumstances where a physician may receive payment for both a drug administration service and an office visit.
- Because all drugs are separately payable in the physician's office, unlike under the OPSS, the proposal, if implemented, would exacerbate differences in payment between the hospital outpatient department and the physician office setting. Commenters expressed doubt that the full cost of a packaged drug administration service or drug would be appropriately and accurately reflected in the payment for another separately payable procedure.
- Packaging drug administration services with other services could result in hospitals scheduling patients for multiple visits, thereby reducing access to care and quality of care.
- Further analysis of the impact packaging drug administration services would have on APCs should be conducted prior to making a policy change.
- In general, packaging discourages full reporting of hospital costs, which impacts the accuracy of cost data that are used to calculate OPSS payment rates.

In addition, at the summer 2017 meeting of the HOP Panel, the HOP Panel recommended that CMS not implement its proposal to package drug administration services described under APC 5691 (Level 1 Drug Administration) and APC 5692 (Level 2 Drug Administration).

Response: We appreciate the detailed responses to our proposal and agree with the statements concerning the importance of payment accuracy to maintain access to care. However, we disagree that conditional packaging of low-level drug administration services, which are commonly furnished both in the hospital outpatient setting and in the physician office setting, would lead to payment inaccuracy for hospital rates for these services (which would include the packaged costs of these services) or to decreased access to drug

administration services. As stated in the proposed rule, we believe it is no longer necessary to exclude low-cost drug administration services from packaging under the ancillary services packaging policy adopted in CY 2015, which is supported by our analysis of drug administration billing patterns. As described earlier in the introduction to this section, our analysis of CY 2016 OPSS claims data showed that low-cost drug administration services are currently being provided as part of another separately payable service for which two separate payments are made, and supported a policy that packaging low-cost drug administration services, when they are reported with another separately payable service, is appropriate. In response to the commenters who raised concerns regarding potential behavioral changes by providers as a consequence of the proposal, we will continue to monitor the data for changes in drug administration billing patterns.

Furthermore, regarding the comments that low-cost drug administration services are separate and distinct standalone services and not adjunctive, supportive, or dependent to a primary procedure, we disagree based on typical billing patterns for these services. As stated earlier in the introduction to this section, ancillary services are often performed with a primary service. Because these low-cost drug administration services are typically furnished with another primary service and are assigned to APCs with a geometric mean cost of less than or equal to \$100 (prior to the application of the conditional packaging status indicator), we believe these services fall under the ancillary services packaging policy.

In addition, as stated in the proposed rule, we believe that conditional packaging of drug administration services will promote equitable payment between the physician office and the hospital outpatient department. However, we clarify that while typically physicians are not eligible to receive payment for an office visit when a drug administration service is also provided, we acknowledge that Medicare will pay for both services when the office visit CPT code is reported with Modifier 25 (Significant, separately identifiable evaluation and management services by the same physician on the day of the procedure).

With respect to data availability and general requests for further CMS analysis, we believe that the data made available to the public as part of the proposed rule were appropriate, clear, and sufficient for interested parties to

conduct analyses to evaluate facility-specific impacts of the proposed policy. It is unclear what the commenters meant by requesting that CMS further analyze the effects of the proposal on APCs, as the commenters did not specify any particular analysis that CMS should conduct or data that CMS should provide that is not already available to the public. Because the OPSS is a budget neutral payment system, packaging a procedure does not remove its costs from ratesetting.

With respect to commenters' concerns on reporting of hospital costs for packaged services, we remind commenters that hospitals are expected to report all HCPCS codes that describe the services provided, regardless of whether or not those services are separately paid or their payment is packaged. The calculation of OPSS relative payment weights that reflect the relative resources required for HOPD services is the foundation of the OPSS. We rely on hospitals to bill all HCPCS codes accurately in accordance with their code descriptors and CPT and CMS instructions, as applicable, and to report charges on claims and charges and costs on their Medicare hospital cost report appropriately (77 FR 68324).

Therefore, for the reasons stated above, we believe that it is appropriate, and a logical expansion of our ancillary services policy, to finalize our proposal to unconditionally package low-cost drug administration services assigned to APCs 5691 and 5692. Accordingly, we are not accepting the HOP Panel's recommendation to not finalize our proposal.

Comment: One commenter stated that the packaging proposal is a logical expansion of the current ancillary packaging policy but recommended a 1-year implementation delay to allow providers time to assess the administrative and fiscal impact.

Response: We appreciate the commenter's support. Packaging is a longstanding payment principle under the OPSS and CMS has packaged a number of items and services through the years and makes OPSS data available to all interested parties on its Web site. Therefore, we do not see a reason to delay implementation of the policy. With each proposed and final rule release, CMS posts on its Web site various public use files (PUFs), including payment rates and cost statistics for applicable items and procedures. Stakeholders interested in a more comprehensive analysis of OPSS claims data used to derive the CY 2018 OPSS/ASC payment rates may purchase the "OPSS Limited Data Set" (LDS) that is available on the CMS Web site at:

<https://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/HospitalOPPS.html>. We believe the information contained in the PUF and LDS files is sufficient to allow stakeholders to analyze the effects of our policies on their areas of interest. Therefore, we are finalizing our proposal to conditionally package low-cost drug administration services assigned to APC 5691 and APC 5692, effective January 1, 2018.

Comment: Some commenters believed that the proposal would conditionally package Medicare Part B vaccine administration. In addition, some commenters believed that if a hospital provides a low-cost drug administration service for a drug that is unconditionally packaged, CMS would make no payment to the hospital.

Response: We believe that some commenters may have misunderstood

the proposal. Consistent with our existing policy to exclude preventive services from packaging, administration of Part B vaccines—influenza, pneumococcal, and hepatitis B—are exempt from packaging and will continue to be paid separately. With respect to payment for a conditionally packaged low-cost drug administration service and an unconditionally packaged drug, the drug administration service is separately payable when not billed on the same claim as a HCPCS code with status indicator “S”, “T”, or “V”. Payment for the threshold-packaged drug would be packaged with the payment for the highest paying separately payable procedure reported on the claim. For example, if a threshold-packaged drug, a low-cost drug administration service, and a clinic visit are reported on the same claim,

payment for the drug and drug administration service would be packaged with the clinic visit payment.

In summary, after consideration of the public comments we received, we are finalizing, without modification, the proposed policy to conditionally package low-cost drug administration services assigned to APC 5691 and APC 5692.

Because preventive services are excluded from our packaging policies, we are continuing to pay separately for Medicare Part B vaccine administration services. In addition, at this time, we are not packaging any drug administration services assigned to APC 5693 (Level 3 Drug Administration) or APC 5694 (Level 4 Drug Administration). The status indicators for drug administration services in APC 5691 and APC 5692 for CY 2018 are listed in Table 8 below.

TABLE 8—CY 2018 STATUS INDICATORS FOR DRUG ADMINISTRATION SERVICES IN LEVEL 1 AND LEVEL 2 DRUG ADMINISTRATION APCs

HCPCS code	Short descriptor	CY 2018 status indicator
APC 5691—Level 1 Drug Administration		
95115	Immunotherapy one injection	Q1

(3) Discussion of Comment Solicitation Regarding Unconditionally Packaging Drug Administration Add-On Codes

With respect to drug administration add-on codes, as discussed in the CY 2014 OPPS/ASC proposed rule (78 FR 43573), we proposed to unconditionally package all drug administration services described by add-on codes. In response to the proposal, commenters objected to packaging drug administration add-on codes, which typically describe each additional hour of infusion or each additional intravenous push, among others, in addition to the initial drug administration service. The commenters believed that such a policy could disadvantage providers of longer drug administration services, which are often protocol-driven and are not necessarily dictated by the hospital, but by the characteristics of the specific drug or biological being administered to the patient. In response to these comments, we stated in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74945) that, given the frequency of drug administration services in the hospital outpatient department and their use in such a wide variety of different drug treatment protocols for various diseases in all types of hospitals, further study of the payment methodology for these services was warranted at that time. Therefore, we did not finalize our proposal to package the drug administration add-on codes in CY 2014. However, we stated we would continue to explore other payment options, including packaging and variations on packaging, in future years.

In the CY 2018 OPPS/ASC proposed rule, we did not propose to package drug administration add-on codes for CY 2018 because we wanted stakeholder input on a payment methodology that supports the principles of a prospective payment system while ensuring patient access to prolonged infusion services. Instead, we solicited public comment on whether conditionally or unconditionally packaging such codes would create access to care issues or have other unintended consequences. Specifically, we requested public comments on the following: (1) Whether we should conditionally or unconditionally package drug administration services add-on codes; (2) how we should consider or incorporate the varied clinical drug protocols that result in different infusion times into a drug administration service add-on code payment proposal; and (3) other recommendations on an encounter-based payment approach for drug administration services that are

described by add-on codes when furnished in the hospital outpatient department setting.

Comment: Many commenters raised concerns about the appropriateness of packaging drug administration services add-on codes, given the variation in clinical treatment protocols. The commenters believed that packaging drug administration services add-on codes could create a barrier to access for drugs or biologicals with a long infusion time. Without explicit incremental payment for additional hours of infusion, some commenters suggested hospitals could discontinue offering the infusion. A few commenters suggested that CMS consider the creation of a drug administration C-APC for common drug administration encounters but did not provide details on what specific services should comprise the C-APC.

Response: We appreciate the comments we received on this topic and will take them into consideration for future rulemaking.

c. Analysis of Packaging of Pathology Services in the OPPS

At the August 22, 2016 HOP Panel meeting, a stakeholder expressed concern regarding conditional packaging of multiple pathology services. When multiple conditionally packaged services are billed on the same claim, the costs of the lowest paying services are bundled into the cost of the highest paying service and payment is made based on the highest single payable service. The stakeholder requested that CMS create a pathology composite APC to more appropriately pay for claims with only multiple pathology services and no other separately payable service such as a surgical procedure or a clinic visit. The HOP panel recommended that CMS develop a composite APC for pathology services when multiple pathology services are provided on a claim with no other payable services. The HOP Panel also requested that CMS take into consideration the stakeholder presentation comments made at the August 22, 2016 HOP Panel meeting regarding hospital pathology laboratories as CMS evaluates conditional packaging to determine whether an accommodation can be made. Specifically, the stakeholder expressed concern with conditional packaging of pathology services, particularly when payment is limited to the single highest paying code, regardless of the number of services provided or specimens tested.

In response to these HOP Panel requests and recommendation, we stated that we may consider the

stakeholders' request for a pathology composite APC as well as additional composite APCs for future rulemaking (81 FR 79588). In light of these requests and recommendation, in development of the CY 2018 OPPS/ASC proposed rule, we evaluated and considered a pathology composite APC when multiple pathology services are performed and billed without a separately payable service on the same claim. To understand the frequency of billing multiple pathology services and no other separately payable codes on the same claim by hospital outpatient departments, we examined currently available claims data to identify the frequency distribution of pathology codes within the CPT code range 88300 to 88361. The claim frequency breakdown was displayed in Table 8 of the proposed rule (82 FR 33587).

Based on our analysis of claims data for the proposed rule, the majority of pathology only OPPS claims are reported with one pathology code. Therefore, as we stated in the CY 2018 OPPS/ASC proposed rule (82 FR 33588), we believe that it is neither a frequent occurrence nor a common occurrence for a provider to submit a claim for payment under the OPPS with multiple pathology services and no other separately payable service.

With regard to the HOP Panel's recommendation to develop a composite APC for pathology services when multiple pathology services are provided on a claim with no other payable services, we used CY 2016 claims data available for the CY 2018 OPPS/ASC proposed rule to model four hypothetical pathology composite APCs. That is, following our standard packaging methodology, we modeled four hypothetical pathology composite APCs based on the following clinical scenarios that were specifically requested by a stakeholder at the August 2016 HOP Panel meeting:

- Hypothetical Composite APC A: Claims that contain 2–4 pathology units (CPT codes 88302 through 88309) with or without special stains (CPT codes 88312 through 88314);
- Hypothetical Composite APC B: Claims that contain 5 or more pathology units (CPT codes 88302 through 88309) with or without special stains (CPT codes 88312 through 88314);
- Hypothetical Composite APC C: Claims that contain 2–4 pathology units (CPT codes 88302 through 88309) with immunostains (CPT codes 88341, 88342, 88346, 88350, 88360, 88361); and
- Hypothetical Composite APC D: Claims that contain 5 or more pathology units (CPT codes 88302 through 88309)

with immunostains (CPT codes 88341, 88342, 88346, 88350, 88360, 88361).

In addition, for the proposed rule, we evaluated the volume of services and costs for each hypothetical composite. Results from modeling the four composite scenarios showed low claim volume, which indicates that the suggested pathology code combinations are infrequently billed by hospital outpatient departments and which may mean that these are not likely clinical scenarios in hospital outpatient departments. A summary of the results from our composite analysis was presented in Table 9 of the proposed rule (82 FR 33587). We refer readers to Addendum B to the CY 2018 OPPS/ASC proposed rule (which is available via the Internet on the CMS Web site) for the CPT code descriptors.

As we move toward larger payment bundles under the OPPS, the necessity of composite APCs diminishes. For example, in the CY 2018 OPPS/ASC proposed rule, we proposed to delete composite APC 8001 (LDR Prostate Brachytherapy Composite) and to provide payment for the component procedures through the C-APC payment methodology. Composite APCs were a precursor to C-APCs. In CY 2008, we implemented composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service (72 FR 66650 through 66652). Because a C-APC would treat all individually reported codes as representing components of the comprehensive service, all of the elements of the composite service are included in the C-APC payment. In addition, given the infrequent occurrence of multiple pathology services on the same claim without a separately payable service, we do not believe a composite APC is necessary or warranted.

Therefore, for CY 2018, we did not propose to create a pathology composite APC or additional composite APCs for stakeholder-requested services, such as X-ray services, respiratory services, cardiology services, or allergy testing services. However, we solicited public comments on our packaging policies, as discussed under section II.A.3.d. of this final rule with comment period.

We did not receive any public comments on our analysis of packaging of pathology services.

d. Summary of Public Comments and Our Responses Regarding Packaging of Items and Services Under the OPPS

As previously noted, packaging is an inherent principle of a prospective

payment system. The OPPS, like other prospective payment systems, relies on the concept of averaging, where the payment may be more or less than the estimated costs of providing a service or package of services for a particular patient, but with the exception of outlier cases, is adequate to ensure access to appropriate care. Packaging and bundling payments for multiple unrelated services into a single payment create incentives for providers to furnish services in the most efficient way by enabling hospitals to manage their resources with maximum flexibility, thereby encouraging long-term cost containment. Decisions about packaging and bundling payment involve a balance between ensuring some separate payment for individual services or items while establishing incentives for efficiency through larger units of payment.

As the OPPS continues to move toward prospectively determined encounter-based payments and away from separate fee schedule-like payments, we continue to hear concerns from stakeholders that our packaging policies may be hampering patient access or resulting in other undesirable consequences. However, we have not observed significant fluctuations in our data that show a sharp decline of the volume of packaged items and services, nor have we heard from Medicare beneficiaries specifically about access issues or other concerns with packaged items and services. However, given that aggregate spending and utilization continue to increase for covered hospital outpatient services, it is unclear what, if any, adverse effect packaging has on beneficiary access to care. Specifically, in the CY 2018 OPPS/ASC proposed rule (82 FR 33588), within the framework of existing packaging categories, such as drugs that function as supplies in a surgical procedure or diagnostic test or procedure, we expressed interest in stakeholder feedback on common clinical scenarios involving currently packaged HCPCS codes for which stakeholders believe packaged payment is not appropriate under the OPPS. Likewise, outside the framework of existing packaging categories, we expressed interest in stakeholder feedback on common clinical scenarios involving separately payable HCPCS codes for which payment would be most appropriately packaged under the OPPS. In the proposed rule, we solicited public comments from a broad cross-section of stakeholders, including beneficiaries, patient advocates, hospital providers,

clinicians, manufacturers, and other interested parties.

Comment: Commenters expressed a variety of views on packaging under the OPPS. The comments ranged from requests to unpackage most items and services that are either conditionally or unconditionally packaged under the OPPS, including drugs and devices, to specific requests to unpackage a specific drug or device.

Response: We appreciate the comments received and will review them as we continue to explore and evaluate packaging policies that apply under the OPPS and take them into consideration for future rulemaking.

4. Calculation of OPPS Scaled Payment Weights

We established a policy in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68283) of using geometric mean-based APC costs to calculate relative payment weights under the OPPS. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79594 through 79595), we applied this policy and calculated the relative payment weights for each APC for CY 2017 that were shown in Addenda A and B to that final rule with comment period (which were made available via the Internet on the CMS Web site) using the APC costs discussed in sections II.A.1. and II.A.2. of that final rule with comment period. For CY 2018, as we did for CY 2017, we proposed to continue to apply the policy established in CY 2013 and calculate relative payment weights for each APC for CY 2018 using geometric mean-based APC costs (82 FR 33588).

For CY 2012 and CY 2013, outpatient clinic visits were assigned to one of five levels of clinic visit APCs, with APC 0606 representing a mid-level clinic visit. In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75036 through 75043), we finalized a policy that created alphanumeric HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), representing any and all clinic visits under the OPPS. HCPCS code G0463 was assigned to APC 0634 (Hospital Clinic Visits). We also finalized a policy to use CY 2012 claims data to develop the CY 2014 OPPS payment rates for HCPCS code G0463 based on the total geometric mean cost of the levels one through five CPT E/M codes for clinic visits previously recognized under the OPPS (CPT codes 99201 through 99205 and 99211 through 99215). In addition, we finalized a policy to no longer recognize a distinction between new and established patient clinic visits.

For CY 2016, we deleted APC 0634 and reassigned the outpatient clinic visit HCPCS code G0463 to APC 5012 (Level 2 Examinations and Related Services) (80 FR 70351). In the CY 2018 OPPS/ASC proposed rule (82 FR 33588), for CY 2018, as we did for CY 2017, we proposed to continue to standardize all of the relative payment weights to APC 5012. We stated that we believe that standardizing relative payment weights to the geometric mean of the APC to which HCPCS code G0463 is assigned maintains consistency in calculating unscalded weights that represent the cost of some of the most frequently provided OPPS services. For CY 2018, as we did for CY 2017, we proposed to assign APC 5012 a relative payment weight of 1.00 and to divide the geometric mean cost of each APC by the geometric mean cost for APC 5012 to derive the unscalded relative payment weight for each APC. The choice of the APC on which to standardize the relative payment weights does not affect payments made under the OPPS because we scale the weights for budget neutrality.

We did not receive any public comments on our proposal to use the geometric mean cost of APC 5012 to standardize relative payment weights for CY 2018. Therefore, we are finalizing our proposal and assigning APC 5012 the relative payment weight of 1.00, and using the relative payment weight for APC 5012 to derive the unscalded relative payment weight for each APC for CY 2018.

Section 1833(t)(9)(B) of the Act requires that APC reclassification and recalibration changes, wage index changes, and other adjustments be made in a budget neutral manner. Budget neutrality ensures that the estimated aggregate weight under the OPPS for CY 2018 is neither greater than nor less than the estimated aggregate weight that would have been made without the changes. To comply with this requirement concerning the APC changes, in the CY 2018 OPPS/ASC proposed rule (82 FR 33588), we proposed to compare the estimated aggregate weight using the CY 2017 scaled relative payment weights to the estimated aggregate weight using the proposed CY 2018 unscalded relative payment weights.

For CY 2017, we multiplied the CY 2017 scaled APC relative payment weight applicable to a service paid under the OPPS by the volume of that service from CY 2016 claims to calculate the total relative payment weight for each service. We then added together the total relative payment weight for each of these services in order to calculate an estimated aggregate weight

for the year. For CY 2018, we proposed to apply the same process using the estimated CY 2018 unscalded relative payment weights rather than scaled relative payment weights. We proposed to calculate the weight scalar by dividing the CY 2017 estimated aggregate weight by the unscalded CY 2018 estimated aggregate weight.

For a detailed discussion of the weight scalar calculation, we refer readers to the OPPS claims accounting document available on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>. Click on the CY 2018 OPPS final rule link and open the claims accounting document link at the bottom of the page.

We proposed to compare the estimated unscalded relative payment weights in CY 2018 to the estimated total relative payment weights in CY 2017 using CY 2016 claims data, holding all other components of the payment system constant to isolate changes in total weight. Based on this comparison, we proposed to adjust the calculated CY 2018 unscalded relative payment weights for purposes of budget neutrality. We proposed to adjust the estimated CY 2018 unscalded relative payment weights by multiplying them by a proposed weight scalar of 1.328 to ensure that the proposed CY 2018 relative payment weights are scaled to be budget neutral. The proposed CY 2018 relative payment weights listed in Addenda A and B to the proposed rule (which are available via the Internet on the CMS Web site) were scaled and incorporated the recalibration adjustments discussed in sections II.A.1. and II.A.2. of the proposed rule.

The final CY 2018 relative payment weights listed in Addenda A and B to the final rule with comment period (which are available via the Internet on the CMS Web site) were scaled and incorporate the recalibration adjustments discussed in sections II.A.1. and II.A.2. of this final rule with comment period.

Section 1833(t)(14) of the Act provides the payment rates for certain SCODs. Section 1833(t)(14)(H) of the Act provides that additional expenditures resulting from this paragraph shall not be taken into account in establishing the conversion factor, weighting, and other adjustment factors for 2004 and 2005 under paragraph (9), but shall be taken into account for subsequent years. Therefore, the cost of those SCODs (as discussed in section V.B.2. of this final rule with comment period) is included in the budget neutrality calculations for the CY 2018 OPPS.

We did not receive any public comments on the proposed weight scalar calculation. Therefore, we are finalizing our proposal to use the calculation process described in the proposed rule, without modification, for CY 2018. Using updated final rule claims data, we are updating the estimated CY 2018 unscalded relative payment weights by multiplying them by a weight scalar of 1.4457 to ensure that the final CY 2018 relative payment weights are scaled to be budget neutral.

B. Conversion Factor Update

Section 1833(t)(3)(C)(ii) of the Act requires the Secretary to update the conversion factor used to determine the payment rates under the OPPS on an annual basis by applying the OPD fee schedule increase factor. For purposes of section 1833(t)(3)(C)(iv) of the Act, subject to sections 1833(t)(17) and 1833(t)(3)(F) of the Act, the OPD fee schedule increase factor is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act. As stated in the CY 2018 OPPS/ASC proposed rule, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19931), consistent with current law, based on IHS Global, Inc.'s fourth quarter 2016 forecast of the FY 2018 market basket increase, the proposed FY 2018 IPPS market basket update was 2.9 percent. However, sections 1833(t)(3)(F) and 1833(t)(3)(G)(v) of the Act, as added by section 3401(i) of the Patient Protection and Affordable Care Act of 2010 (Pub. L. 111–148) and as amended by section 10319(g) of that law and further amended by section 1105(e) of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), provide adjustments to the OPD fee schedule increase factor for CY 2018.

Specifically, section 1833(t)(3)(F)(i) of the Act requires that, for 2012 and subsequent years, the OPD fee schedule increase factor under subparagraph (C)(iv) be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment as equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the “MFP adjustment”). In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51689 through 51692), we finalized our methodology for calculating and applying the MFP adjustment, and then

revised this methodology as discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49509). In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19931 through 19932), the proposed MFP adjustment for FY 2018 was 0.4 percentage point.

In the CY 2018 OPPS/ASC proposed rule, we proposed that if more recent data became subsequently available after the publication of the proposed rule (for example, a more recent estimate of the market basket increase and the MFP adjustment), we would use such updated data, if appropriate, to determine the CY 2018 market basket update and the MFP adjustment, which are components in calculating the OPD fee schedule increase factor under sections 1833(t)(3)(C)(iv) and 1833(t)(3)(F) of the Act, in this CY 2018 OPPS/ASC final rule with comment period. Consistent with that proposal, and the FY 2018 IPPS/LTCH PPS final rule (82 FR 38177), we applied the final FY 2018 market basket percentage increase (2.7 percent) and the final FY 2018 MFP adjustment (0.6 percent) to the OPD fee schedule increase factor for the CY 2018 OPPS.

In addition, section 1833(t)(3)(F)(ii) of the Act requires that, for each of years 2010 through 2019, the OPD fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act be reduced by the adjustment described in section 1833(t)(3)(G) of the Act. For CY 2018, section 1833(t)(3)(G)(v) of the Act provides a 0.75 percentage point reduction to the OPD fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act. Therefore, in accordance with sections 1833(t)(3)(F)(ii) and 1833(t)(3)(G)(v) of the Act, in the CY 2018 OPPS/ASC proposed rule, we proposed to apply a 0.75 percentage point reduction to the OPD fee schedule increase factor for CY 2018.

We note that section 1833(t)(3)(F) of the Act provides that application of this subparagraph may result in the OPD fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act being less than 0.0 percent for a year, and may result in OPPS payment rates being less than rates for the preceding year. As described in further detail below, we are applying an OPD fee schedule increase factor of 1.35 percent for the CY 2018 OPPS (which is 2.7 percent, the final estimate of the hospital inpatient market basket percentage increase, less the final 0.6 percentage point MFP adjustment, and less the 0.75 percentage point additional adjustment).

Hospitals that fail to meet the Hospital OQR Program reporting requirements are subject to an

additional reduction of 2.0 percentage points from the OPD fee schedule increase factor adjustment to the conversion factor that would be used to calculate the OPPS payment rates for their services, as required by section 1833(t)(17) of the Act. For further discussion of the Hospital OQR Program, we refer readers to section XIII. of this final rule with comment period.

In the CY 2018 OPPS/ASC proposed rule, we proposed to amend 42 CFR 419.32(b)(1)(iv)(B) by adding a new paragraph (9) to reflect the requirement in section 1833(t)(3)(F)(i) of the Act that, for CY 2018, we reduce the OPD fee schedule increase factor by the MFP adjustment as determined by CMS, and to reflect the requirement in section 1833(t)(3)(G)(v) of the Act, as required by section 1833(t)(3)(F)(ii) of the Act, that we reduce the OPD fee schedule increase factor by an additional 0.75 percentage point for CY 2018.

We did not receive any public comments on our proposal. Therefore, we are implementing our proposal without modification.

To set the OPPS conversion factor for the CY 2018 OPPS/ASC proposed rule, we proposed to increase the CY 2017 conversion factor of \$75.001 by 1.75 percent (82 FR 33589). In accordance with section 1833(t)(9)(B) of the Act, we proposed further to adjust the conversion factor for CY 2018 to ensure that any revisions made to the wage index and rural adjustment were made on a budget neutral basis. We proposed to calculate an overall budget neutrality factor of 0.9999 for wage index changes by comparing proposed total estimated payments from our simulation model using the proposed FY 2018 IPPS wage indexes to those payments using the FY 2017 IPPS wage indexes, as adopted on a calendar year basis for the OPPS.

For the CY 2018 OPPS/ASC proposed rule, we proposed to maintain the current rural adjustment policy, as discussed in section II.E. of this final rule with comment period. Therefore, the proposed budget neutrality factor for the rural adjustment was 1.0000.

For the CY 2018 OPPS/ASC proposed rule, we proposed to continue previously established policies for implementing the cancer hospital payment adjustment described in section 1833(t)(18) of the Act, as discussed in section II.F. of this final rule with comment period. We proposed to calculate a CY 2018 budget neutrality adjustment factor for the cancer hospital payment adjustment by comparing estimated total CY 2018 payments under section 1833(t) of the Act, including the proposed CY 2018 cancer hospital

payment adjustment, to estimated CY 2018 total payments using the CY 2017 final cancer hospital payment adjustment as required under section 1833(t)(18)(B) of the Act. The CY 2018 proposed estimated payments applying the proposed CY 2018 cancer hospital payment adjustment were less than estimated payments applying the CY 2017 final cancer hospital payment adjustment. Therefore, we proposed to apply a budget neutrality adjustment factor of 1.0003 to the conversion factor for the cancer hospital payment adjustment. In accordance with section 16002(b) of the 21st Century Cures Act, we stated in the proposed rule that we are applying a budget neutrality factor calculated as if the proposed cancer hospital adjustment target payment-to-cost ratio was 0.90, not the 0.89 target payment-to-cost ratio we are applying as stated in section II.F. of the proposed rule.

For the CY 2018 OPPS/ASC proposed rule, we estimated that proposed pass-through spending for drugs, biologicals, and devices for CY 2018 would equal approximately \$26.2 million, which represented 0.04 percent of total projected CY 2018 OPPS spending. Therefore, the proposed conversion factor would be adjusted by the difference between the 0.26 percent estimate of pass-through spending for CY 2017 and the 0.04 percent estimate of proposed pass-through spending for CY 2018, resulting in a proposed adjustment for CY 2018 of 0.22 percent. Proposed estimated payments for outliers would remain at 1.0 percent of total OPPS payments for CY 2018. We estimated for the proposed rule that outlier payments would be 1.04 percent of total OPPS payments in CY 2017; the 1.0 percent for proposed outlier payments in CY 2018 would constitute a 0.04 percent decrease in payment in CY 2018 relative to CY 2017.

For the CY 2018 OPPS/ASC proposed rule, we also proposed that hospitals that fail to meet the reporting requirements of the Hospital OQR Program would continue to be subject to a further reduction of 2.0 percentage points to the OPD fee schedule increase factor. For hospitals that fail to meet the requirements of the Hospital OQR Program, we proposed to make all other adjustments discussed above, but use a reduced OPD fee schedule update factor of -0.25 percent (that is, the proposed OPD fee schedule increase factor of 1.75 percent further reduced by 2.0 percentage points). This would result in a proposed reduced conversion factor for CY 2018 of \$74.953 for hospitals that fail to meet the Hospital OQR Program requirements (a difference of -1.530 in

the conversion factor relative to hospitals that met the requirements).

In summary, for CY 2018, we proposed to amend § 419.32(b)(1)(iv)(B) by adding a new paragraph (9) to reflect the reductions to the OPD fee schedule increase factor that are required for CY 2018 to satisfy the statutory requirements of sections 1833(t)(3)(F) and (t)(3)(G)(v) of the Act. We proposed to use a reduced conversion factor of \$74.953 in the calculation of payments for hospitals that fail to meet the Hospital OQR Program requirements (a difference of -1.530 in the conversion factor relative to hospitals that met the requirements).

For CY 2018, we proposed to use a conversion factor of \$76.483 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the proposed OPD fee schedule increase factor of 1.75 percent for CY 2018, the required proposed wage index budget neutrality adjustment of approximately 0.9999, the proposed cancer hospital payment adjustment of 1.0003, and the proposed adjustment of 0.22 percentage point of projected OPPS spending for the difference in the pass-through spending and outlier payments that resulted in a proposed conversion factor for CY 2018 of \$76.483.

We invited public comments on these proposals. However, we did not receive any public comments. Therefore, we are finalizing these proposals without modification, as discussed below.

For CY 2018, we proposed to continue previously established policies for implementing the cancer hospital payment adjustment described in section 1833(t)(18) of the Act, as discussed in section II.F. of this final rule with comment period. Based on the updated claims data for this final rule with comment period used in calculating the cancer hospital payment adjustment in section II.F. of this final rule with comment period, the target PCR for the cancer hospital payment adjustment, which was 0.91 for CY 2017, is 0.88 for CY 2018. Because we budget neutralize using the target PCR ratio prior to implementation of section 16002 (b) of the 21st Century Cures Act, we are applying a budget neutrality adjustment factor of 1.0008 to the conversion factor for the cancer hospital payment adjustment for CY 2018.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33712), we estimated a 1.4 percent adjustment to nondrug OPSS payment rates as a result of the proposed payment adjustment to separately payable nonpass-through drugs purchased under the 340B

Program. As part of that proposed policy, we noted that our adjustment in the final rule could potentially change as a result of changes such as updated data, modifications to the estimate methodology, and other factors. Applying the final payment policy for drugs purchased under the 340B Program, as described in section V.B.7. of this final rule with comment period, results in an estimated reduction of approximately \$1.6 billion in separately paid OPSS drug payments. To ensure budget neutrality under the OPSS after applying this alternative payment methodology for drugs purchased under the 340B Program, we applied an offset of approximately \$1.6 billion into the OPSS conversion factor, which results in a final adjustment of 1.0319 to the OPSS conversion factor.

As a result of these finalized policies, the OPD fee schedule increase factor for the CY 2018 OPSS is 1.35 percent (which is 2.7 percent, the estimate of the hospital inpatient market basket percentage increase, less the 0.6 percentage point MFP adjustment, and less the 0.75 percentage point additional adjustment). For CY 2018, we are using a conversion factor of \$78.636 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the OPD fee schedule increase factor of 1.35 percent for CY 2018, the required wage index budget neutrality adjustment of approximately 0.9997, the cancer hospital payment adjustment of 1.0008, the adjustment for drugs purchased under the 340B Program of 1.0319, and the adjustment of 0.2 percentage point of projected OPSS spending for the difference in the pass-through spending and outlier payments that result in a conversion factor for CY 2018 of \$78.636.

C. Wage Index Changes

Section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner (codified at 42 CFR 419.43(a)). This portion of the OPSS payment rate is called the OPSS labor-related share. Budget neutrality is discussed in section II.B. of this final rule with comment period.

The OPSS labor-related share is 60 percent of the national OPSS payment. This labor-related share is based on a regression analysis that determined that, for all hospitals, approximately 60 percent of the costs of services paid

under the OPSS were attributable to wage costs. We confirmed that this labor-related share for outpatient services is appropriate during our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPSS final rule with comment period (70 FR 68553). In the CY 2018 OPSS/ASC proposed rule (82 FR 33590), we proposed to continue this policy for the CY 2018 OPSS. We refer readers to section II.H. of this final rule with comment period for a description and an example of how the wage index for a particular hospital is used to determine payment for the hospital. We did not receive any public comments on this proposal. Therefore, for the reasons discussed above and in the CY 2018 OPSS/ASC proposed rule (82 FR 33590), we are finalizing our proposal to continue this policy as discussed above for the CY 2018 OPSS without modification.

As discussed in the claims accounting narrative included with the supporting documentation for this final rule with comment period (which is available via the Internet on the CMS Web site), for estimating APC costs, we standardize 60 percent of estimated claims costs for geographic area wage variation using the same FY 2018 pre-reclassified wage index that the IPPS uses to standardize costs. This standardization process removes the effects of differences in area wage levels from the determination of a national unadjusted OPSS payment rate and copayment amount.

Under 42 CFR 419.41(c)(1) and 419.43(c) (published in the OPSS April 7, 2000 final rule with comment period (65 FR 18495 and 18545)), the OPSS adopted the final fiscal year IPPS post-reclassified wage index as the calendar year wage index for adjusting the OPSS standard payment amounts for labor market differences. Therefore, the wage index that applies to a particular acute care, short-stay hospital under the IPPS also applies to that hospital under the OPSS. As initially explained in the September 8, 1998 OPSS proposed rule (63 FR 47576), we believe that using the IPPS wage index as the source of an adjustment factor for the OPSS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In accordance with section 1886(d)(3)(E) of the Act, the IPPS wage index is updated annually.

The Affordable Care Act contained several provisions affecting the wage index. These provisions were discussed in the CY 2012 OPSS/ASC final rule with comment period (76 FR 74191). Section 10324 of the Affordable Care Act added section 1886(d)(3)(E)(iii)(II)

to the Act, which defines a frontier State and amended section 1833(t) of the Act to add paragraph (19), which requires a frontier State wage index floor of 1.00 in certain cases, and states that the frontier State floor shall not be applied in a budget neutral manner. We codified these requirements at § 419.43(c)(2) and (3) of our regulations. For the CY 2018 OPPS, we proposed to implement this provision in the same manner as we have since CY 2011 (82 FR 33591). Under this policy, the frontier State hospitals would receive a wage index of 1.00 if the otherwise applicable wage index (including reclassification, the rural floor, and rural floor budget neutrality) is less than 1.00 (as discussed below and in the CY 2018 OPPS/ASC proposed rule (82 FR 33591 through 33592)), we proposed not to extend the imputed floor under the OPPS for CY 2018 and subsequent years, consistent with our proposal in the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 19904 through 19905) not to extend the imputed floor under the IPPS for FY 2018 and subsequent fiscal years). Because the HOPD receives a wage index based on the geographic location of the specific inpatient hospital with which it is associated, we stated that the frontier State wage index adjustment applicable for the inpatient hospital also would apply for any associated HOPD. In the proposed rule (82 FR 33591), we referred readers to the FY 2011 through FY 2017 IPPS/LTCH PPS final rules for discussions regarding this provision, including our methodology for identifying which areas meet the definition of “frontier States” as provided for in section 1886(d)(3)(E)(iii)(II) of the Act. We invited public comments on this proposal.

We did not receive any public comments on this proposal. Therefore, for the reasons discussed above and in the CY 2018 OPPS/ASC proposed rule (82 FR 33591), we are finalizing our proposal to implement the frontier State floor under the OPPS in the same manner as we have since CY 2011. We note that, after we made our proposal in the FY 2018 IPPS/LTCH PPS proposed rule not to extend the imputed floor under the IPPS for FY 2018 and subsequent fiscal years (82 FR 19904 through 19905), and our proposal in the CY 2018 OPPS/ASC proposed rule not to extend the imputed floor under the OPPS for CY 2018 and subsequent years (82 FR 33592), we decided in the FY 2018 IPPS/LTCH PPS final rule not to finalize our proposal to discontinue the imputed floor under the IPPS (82 FR 38138 through 38142). As discussed

below, consistent with the FY 2018 IPPS/LTCH PPS final rule, we are not finalizing our proposal to discontinue application of the imputed floor under the OPPS. This means that the applicable wage index, which can be superseded by the frontier State wage index if the applicable criteria are met, could also be affected by the imputed floor. We discuss our policy on the extension of the imputed floor under the IPPS as finalized in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38142), and under the OPPS as finalized in this rule, in more detail later in this section.

In addition to the changes required by the Affordable Care Act, we note that the FY 2018 IPPS wage indexes continue to reflect a number of adjustments implemented over the past few years, including, but not limited to, reclassification of hospitals to different geographic areas, the rural floor provisions, an adjustment for occupational mix, and an adjustment to the wage index based on commuting patterns of employees (the out-migration adjustment). In the CY 2018 OPPS/ASC proposed rule, we referred readers to the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19898 through 19915) for a detailed discussion of all proposed changes to the FY 2018 IPPS wage indexes. We note that, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19905), we proposed not to apply the imputed floor to the IPPS wage index computations for FY 2018 and subsequent fiscal years. Consistent with this, we proposed in the CY 2018 OPPS/ASC proposed rule (82 FR 33592) not to extend the imputed floor policy under the OPPS beyond December 31, 2017 (the date the imputed floor policy is set to expire under the OPPS). However, in the FY 2018 IPPS/LTCH PPS final rule, we did not finalize our proposal to discontinue the imputed floor under the IPPS, and instead decided to temporarily extend the imputed floor for an additional year through FY 2018, while we continue to assess the effects of this policy and whether to continue or discontinue the imputed floor for the long term. As discussed below, consistent with the FY 2018 IPPS/LTCH PPS final rule, we are not finalizing our proposal to discontinue application of the imputed floor under the OPPS, but are instead continuing the imputed floor policy under the OPPS for an additional year, through December 31, 2018. We refer readers to the FY 2018 IPPS/LTCH PPS proposed and final rules (82 FR 19898 through 19915 and 82 FR 38129 through 38157, respectively) for a detailed discussion of all proposed and final changes to the FY 2018 IPPS wage

indexes (including our proposed and final policy regarding the imputed floor for FY 2018 and subsequent fiscal years). In addition, we refer readers to the CY 2005 OPPS final rule with comment period (69 FR 65842 through 65844) and subsequent OPPS rules for a detailed discussion of the history of these wage index adjustments as applied under the OPPS.

Summarized below are comments we received regarding the application of the rural and imputed floor policies under the OPPS, along with our responses.

Comment: One commenter opposed applying budget neutrality for the rural floor under the OPPS on a national basis. The commenter believed applying budget neutrality on a national basis disadvantages hospitals in most States while benefiting hospitals in a few States that have taken advantage of the system where a rural hospital has a wage index higher than most or all urban hospitals in a State. The commenter stated that rural floor budget neutrality currently requires all wage indexes for hospitals throughout the nation to be reduced. However, hospitals in those States that have higher wage indexes because of the rural floor are not substantially affected by the wage index reductions. Therefore, the commenter supported calculating rural floor budget neutrality under the OPPS for each individual State.

Response: We appreciate this comment. We acknowledge that the application of the wage index and applicable wage index adjustments to OPPS payment rates may create distributional payment variations, especially within a budget neutral system. However, we continue to believe it is reasonable and appropriate to continue the current policy of applying budget neutrality for the rural floor under the OPPS on a national basis, consistent with the IPPS. We believe that hospital inpatient and outpatient departments are subject to the same labor cost environment, and therefore, the wage index and any applicable wage index adjustments (including the rural floor and rural floor budget neutrality) should be applied in the same manner under the IPPS and OPPS. Furthermore, we believe that applying the rural floor and rural floor budget neutrality in the same manner under the IPPS and OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In addition, we believe the application of different wage indexes and wage index adjustments under the IPPS and OPPS would add a level of administrative complexity that is overly burdensome and unnecessary.

Therefore, we are continuing the current policy of applying budget neutrality for the rural floor under the OPPS on a national basis, consistent with the IPPS.

Comment: One commenter supported the proposal to not apply the imputed floor to the IPPS wage index computations for FY 2018 and subsequent fiscal years when calculating the hospital wage indexes for the OPPS.

Response: In the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19905), we proposed not to apply the imputed floor to the IPPS wage index computations for FY 2018 and subsequent fiscal years. Consistent with this proposal, we proposed in the CY 2018 OPPS/ASC proposed rule (82 FR 33592) not to extend the imputed floor policy under the OPPS beyond December 31, 2017 (the date the imputed floor policy is set to expire under the OPPS). As discussed in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38138 through 38142), after consideration of the many comments we received both in support of and against our proposal to discontinue the imputed floor under the IPPS, we decided to temporarily extend the imputed floor for an additional year under the IPPS through FY 2018, while we continue to assess the effects of this policy and whether to continue or discontinue the imputed floor for the long term. Therefore, in the FY 2018 IPPS/LTCH PPS final rule, we extended the imputed floor policy under both the original methodology and the alternative methodology for an additional year, through September 30, 2018. We refer readers to the FY 2018 IPPS/LTCH PPS final rule (82 FR 38138 through 38142) for a detailed discussion of our final policy and rationale regarding application of the imputed floor under the IPPS for FY 2018. Given the inseparable, subordinate status of the HOPD within the hospital overall, we believe that using the IPPS wage index and wage index adjustments, including the imputed floor, as the source of an adjustment factor for the OPPS is reasonable and logical. Furthermore, as we previously stated, we believe that hospital inpatient and outpatient departments are subject to the same labor cost environment and, therefore, the wage index and any applicable wage index adjustments (including the imputed floor) should be applied in the same manner under the IPPS and OPPS. In addition, as discussed above, we believe the application of different wage index adjustments under the IPPS and OPPS would add a level of administrative complexity that is overly burdensome and unnecessary. Thus, as discussed further below, consistent with

the FY 2018 IPPS/LTCH PPS final rule, we are not finalizing our proposal to discontinue application of the imputed floor under the OPPS, and instead are temporarily extending the imputed floor policy under the OPPS for an additional year.

After consideration of the public comments we received and for the reasons discussed above, consistent with the FY 2018 IPPS/LTCH PPS final rule, we have decided to extend the imputed floor policy under the OPPS for an additional year, through December 31, 2018, while we continue to assess the effects of this policy and whether to continue or discontinue the imputed floor for the long term. Therefore, we are not finalizing our proposal to discontinue the imputed floor policy under the OPPS. We continue to believe that using the final fiscal year IPPS post-reclassified wage index, inclusive of any adjustments (including the imputed floor), as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment standardized amount is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall.

As discussed in the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963), the FY 2016 IPPS/LTCH PPS final rule (80 FR 49488 through 49489 and 49494 through 49496), and the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913), the Office of Management and Budget (OMB) issued revisions to the labor market area delineations on February 28, 2013 (based on 2010 Decennial Census data), that included a number of significant changes such as new Core Based Statistical Areas (CBSAs), urban counties that became rural, rural counties that became urban, and existing CBSAs that were split apart (OMB Bulletin 13–01). This bulletin can be found at: <https://obama.whitehouse.archives.gov/sites/default/files/omb/bulletins/2013/b13-01.pdf>. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49950 through 49985), we adopted the use of the OMB labor market area delineations contained in OMB Bulletin No. 13–01, effective October 1, 2014. In the FY 2017 IPPS/LTCH PPS final rule (81 FR 56913), we adopted revisions to statistical areas contained in OMB Bulletin No. 15–01, issued on July 15, 2015, which provided updates to and superseded OMB Bulletin No. 13–01 that was issued on February 28, 2013. We believe that it is important for the OPPS to use the latest labor market area delineations available as soon as is reasonably possible in order to maintain a more accurate and

up-to-date payment system that reflects the reality of population shifts and labor market conditions. Therefore, for purposes of the OPPS, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79598), we adopted the revisions to the OMB statistical area delineations contained in OMB Bulletin No. 15–01, effective January 1, 2017, beginning with the CY 2017 OPPS wage indexes.

CBSAs are made up of one or more constituent counties. Each CBSA and constituent county has its own unique identifying codes. The FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19898 through 19899) and final rule (82 FR 38130) discuss the two different lists of codes to identify counties: Social Security Administration (SSA) codes and Federal Information Processing Standard (FIPS) codes. Historically, CMS has listed and used SSA and FIPS county codes to identify and crosswalk counties to CBSA codes for purposes of the IPPS and OPPS wage indexes. However, the SSA county codes are no longer being maintained and updated, although the FIPS codes continue to be maintained by the U.S. Census Bureau. The Census Bureau's most current statistical area information is derived from ongoing census data received since 2010; the most recent data are from 2015. In the FY 2018 IPPS/LTCH PPS proposed rule (81 FR 19898), for purposes of crosswalking counties to CBSAs for the IPPS wage index, we proposed to discontinue the use of the SSA county codes and begin using only the FIPS county codes. (We note that we finalized the proposal to discontinue use of SSA county codes and begin using only the FIPS county codes for purposes of crosswalking counties to CBSAs in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38130)). Similarly, for the purposes of crosswalking counties to CBSAs for the OPPS wage index, in the CY 2018 OPPS/ASC proposed rule (82 FR 33591), we proposed to discontinue the use of SSA county codes and begin using only the FIPS county codes. We invited public comments on this proposal. We did not receive any public comments on this proposal. Thus, for the reasons discussed above and in the CY 2018 OPPS/ASC proposed rule (82 FR 33591), we are finalizing, without modification, our proposal to discontinue the use of SSA county codes and begin using only the FIPS county codes for the purposes of crosswalking counties to CBSAs for the OPPS wage index.

The Census Bureau maintains a complete list of changes to counties or county equivalent entities on the Web site at: <https://www.census.gov/geo/>

reference/county-changes.html. In our proposed transition to using only FIPS codes for counties for the IPPS wage index, in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19899), we proposed to update the FIPS codes used for crosswalking counties to CBSAs for the IPPS wage index effective October 1, 2017, to incorporate changes to the counties or county equivalent entities included in the Census Bureau's most recent list. We proposed to include these updates to calculate the area wage indexes in a manner that is generally consistent with the CBSA-based methodologies finalized in the FY 2005 IPPS final rule and the FY 2015 IPPS/LTCH PPS final rule. Based on information included in the Census Bureau's Web site, since 2010, the Census Bureau has made the following updates to the FIPS codes for counties or county equivalent entities:

- Petersburg Borough, AK (FIPS State County Code 02–195), CBSA 02, was created from part of former Petersburg Census Area (02–195) and part of Hoonah-Angoon Census Area (02–105). The CBSA code remains 02.
- The name of La Salle Parish, LA (FIPS State County Code 22–059), CBSA 14, is now LaSalle Parish, LA (FIPS State County Code 22–059). The CBSA code remains as 14.
- The name of Shannon County, SD (FIPS State County Code 46–113), CBSA 43, is now Oglala Lakota County, SD (FIPS State County Code 46–102). The CBSA code remains as 43.

In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38130), for the IPPS, we finalized our proposal to implement these FIPS code updates, effective October 1, 2017, beginning with the FY 2018 wage indexes. We note that while the county update changes listed earlier changed the county names, the CBSAs to which these counties map did not change from the prior counties. Therefore, there is no impact or change to hospitals in these counties; they continue to be considered rural for the IPPS wage index under these changes. Consistent with the FY 2018 IPPS/LTCH PPS proposed rule, in the CY 2018 OPPS/ASC proposed rule (82 FR 33592), we proposed to implement these revisions for purposes of the OPPS, effective January 1, 2018, beginning with the CY 2018 OPPS wage indexes. We stated that we believe it is important to use the latest counties or county equivalent entities in order to properly crosswalk hospitals from a county to a CBSA for purposes of the OPPS wage index. In addition, we stated we believe that using the latest FIPS codes will allow us to maintain a more accurate and up-to-date payment system that

reflects the reality of population shifts and labor market conditions. We invited public comments on this proposal.

We did not receive any public comments on this proposal. Therefore, for the reasons discussed above and in the CY 2018 OPPS/ASC proposed rule (82 FR 33591 through 33592), we are finalizing our proposal, without modification, to implement the FIPS code updates described above, effective January 1, 2018, beginning with the CY 2018 OPPS wage indexes. Tables 2 and 3 associated with the FY 2018 IPPS/LTCH PPS final rule and the County to CBSA Crosswalk File and Urban CBSAs and Constituent Counties for Acute Care Hospitals File posted on the CMS Web site reflect these county changes.

In the CY 2018 OPPS/ASC proposed rule (82 FR 33592), we proposed to use the FY 2018 hospital IPPS post-reclassified wage index for urban and rural areas as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment standardized amount for CY 2018. Therefore, we stated in the proposed rule that any adjustments for the FY 2018 IPPS post-reclassified wage index would be reflected in the final CY 2018 OPPS wage index. (We refer readers to the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 19898 through 19915) and final rule (82 FR 38129 through 38157), and the proposed and final FY 2018 hospital wage index files posted on the CMS Web site.) We invited public comments on this proposal. As discussed above, we received public comments regarding the application of the rural and imputed floors under the OPPS. We refer readers to our earlier discussion of these comments and our responses. After consideration of these comments, for the reasons discussed above and in the CY 2018 OPPS/ASC proposed rule (82 FR 33592), we are finalizing this proposal without modification. As stated earlier, we continue to believe that using the final fiscal year IPPS post-reclassified wage index, inclusive of any adjustments, as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment standardized amount is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall.

Hospitals that are paid under the OPPS, but not under the IPPS, do not have an assigned hospital wage index under the IPPS. Therefore, for non-IPPS hospitals paid under the OPPS, it is our longstanding policy to assign the wage index that would be applicable if the hospital were paid under the IPPS, based on its geographic location and any

applicable wage index adjustments. In the CY 2018 OPPS/ASC proposed rule, we proposed to continue this policy for CY 2018, and included a brief summary of the major proposed FY 2018 IPPS wage index policies and adjustments that we proposed to apply to these hospitals under the OPPS for CY 2018. These proposals are summarized below. We invited public comments on these proposals.

It has been our longstanding policy to allow non-IPPS hospitals paid under the OPPS to qualify for the out-migration adjustment if they are located in a section 505 out-migration county (section 505 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA)). Applying this adjustment is consistent with our policy of adopting IPPS wage index policies for hospitals paid under the OPPS. We note that, because non-IPPS hospitals cannot reclassify, they are eligible for the out-migration wage adjustment if they are located in a section 505 out-migration county. This is the same out-migration adjustment policy that applies if the hospital were paid under the IPPS. For CY 2018, we proposed to continue our policy of allowing non-IPPS hospitals paid under the OPPS to qualify for the out-migration adjustment if they are located in a section 505 out-migration county (section 505 of the MMA). We did not receive any public comments on this proposal. Therefore, for the reasons discussed above and in the CY 2018 OPPS/ASC proposed rule (82 FR 33592), we are finalizing this proposal without modification.

As stated earlier, in the FY 2015 IPPS/LTCH PPS final rule, we adopted the OMB labor market area delineations issued by OMB in OMB Bulletin No. 13–01 on February 28, 2013, based on standards published on June 28, 2010 (75 FR 37246 through 37252) and the 2010 Census data to delineate labor market areas for purposes of the IPPS wage index. For IPPS wage index purposes, for hospitals that were located in urban CBSAs in FY 2014 but were designated as rural under these revised OMB labor market area delineations, we generally assigned them the urban wage index value of the CBSA in which they were physically located for FY 2014 for a period of 3 fiscal years (79 FR 49957 through 49960). To be consistent, we applied the same policy to hospitals paid under the OPPS but not under the IPPS so that such hospitals will maintain the wage index of the CBSA in which they were physically located for FY 2014 for 3 calendar years (until December 31, 2017). Because this 3-year transition will end at the end of CY

2017, it will no longer be applied in CY 2018.

In addition, under the IPPS, the imputed floor policy was set to expire effective October 1, 2017. However, as discussed above and in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38138 through 38142), we did not finalize our proposal not to extend the imputed floor policy under the IPPS for FY 2018 and subsequent fiscal years (82 FR 38132), and instead decided to extend the imputed floor policy for one additional year, through FY 2018. For purposes of the CY 2018 OPPS, we proposed not to extend the imputed floor policy beyond December 31, 2017. However, consistent with the FY 2018 IPPS/LTCH PPS final rule, as discussed above, we are extending the imputed floor policy under the OPPS for one additional year, through December 31, 2018. Therefore, for CY 2018, for hospitals paid under the OPPS but not under the IPPS, the imputed floor policy will continue to apply through December 31, 2018.

For CMHCs, for CY 2018, we proposed to continue to calculate the wage index by using the post-reclassification IPPS wage index based on the CBSA where the CMHC is located. As with OPPS hospitals and for the same reasons, for CMHCs previously located in urban CBSAs that were designated as rural under the revised OMB labor market area delineations in OMB Bulletin No. 13-01, we finalized a policy to maintain the urban wage index value of the CBSA in which they were physically located for CY 2014 for 3 calendar years (until December 31, 2017). Because this 3-year transition will end at the end of CY 2017, it will not be applied in CY 2018. Furthermore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33592), we proposed that the wage index that applies to CMHCs would include the rural floor adjustment, but not the imputed floor adjustment, given that we had proposed not to extend the imputed floor policy under the OPPS beyond December 31, 2017 (the expiration date for the imputed floor under the OPPS). We also proposed that the wage index that applies to CMHCs would not include

the out-migration adjustment because that adjustment only applies to hospitals. We did not receive any public comments regarding these proposals, and are finalizing these proposals with the following modification. Because, as discussed above, we are extending the application of the imputed floor under the OPPS for an additional year, through December 31, 2018, the wage index that applies to CMHCs will continue to include the imputed floor adjustment through December 31, 2018.

Table 2 associated with the FY 2018 IPPS/LTCH PPS final rule (available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>) identifies counties eligible for the out-migration adjustment and IPPS hospitals that will receive the adjustment for FY 2018. We are including the out-migration adjustment information from Table 2 associated with the FY 2018 IPPS/LTCH PPS final rule as Addendum L to this final rule with comment period with the addition of non-IPPS hospitals that will receive the section 505 out-migration adjustment under the CY 2018 OPPS. Addendum L is available via the Internet on the CMS Web site. We refer readers to the CMS Web site for the OPPS at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>. At this link, readers will find a link to the final FY 2018 IPPS wage index tables and Addendum L.

D. Statewide Average Default CCRs

In addition to using CCRs to estimate costs from charges on claims for ratesetting, CMS uses overall hospital-specific CCRs calculated from the hospital's most recent cost report to determine outlier payments, payments for pass-through devices, and monthly interim transitional corridor payments under the OPPS during the PPS year. MACs cannot calculate a CCR for some hospitals because there is no cost report available. For these hospitals, CMS uses the statewide average default CCRs to determine the payments mentioned

earlier until a hospital's MAC is able to calculate the hospital's actual CCR from its most recently submitted Medicare cost report. These hospitals include, but are not limited to, hospitals that are new, hospitals that have not accepted assignment of an existing hospital's provider agreement, and hospitals that have not yet submitted a cost report. CMS also uses the statewide average default CCRs to determine payments for hospitals that appear to have a biased CCR (that is, the CCR falls outside the predetermined ceiling threshold for a valid CCR) or for hospitals in which the most recent cost report reflects an all-inclusive rate status (Medicare Claims Processing Manual (Pub. 100-04), Chapter 4, Section 10.11).

In the CY 2018 OPPS/ASC proposed rule (82 FR 33593), we proposed to update the default ratios for CY 2018 using the most recent cost report data. We discussed our policy for using default CCRs, including setting the ceiling threshold for a valid CCR, in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599) in the context of our adoption of an outlier reconciliation policy for cost reports beginning on or after January 1, 2009. For detail on our process for calculating the statewide average CCRs, we referred readers to the CY 2018 OPPS proposed rule Claims Accounting Narrative that is posted on the CMS Web site. Table 10 published in the proposed rule (82 FR 33593 through 33594) listed the proposed statewide average default CCRs for OPPS services furnished on or after January 1, 2018, based on proposed rule data.

We did not receive any public comments on our proposal to use statewide average default CCRs if a MAC cannot calculate a CCR for a hospital and to use these CCRs to adjust charges to costs on claims data for setting the final CY 2018 OPPS relative payment weights. Therefore, we are finalizing our proposal without modification.

Table 9 below lists the statewide average default CCRs for OPPS services furnished on or after January 1, 2018, based on final rule data.

E. Adjustment for Rural Sole Community Hospitals (SCHs) and Essential Access Community Hospitals (EACHs) Under Section 1833(t)(13)(B) of the Act for CY 2018

In the CY 2006 OPSS final rule with comment period (70 FR 68556), we finalized a payment increase for rural sole community hospitals (SCHs) of 7.1 percent for all services and procedures paid under the OPSS, excluding drugs, biologicals, brachytherapy sources, and devices paid under the pass-through payment policy in accordance with section 1833(t)(13)(B) of the Act, as added by section 411 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173). Section 1833(t)(13) of the Act provided the Secretary the authority to make an adjustment to OPSS payments for rural hospitals, effective January 1, 2006, if justified by a study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas. Our analysis showed a difference in costs for rural SCHs. Therefore, for the CY 2006 OPSS, we finalized a payment adjustment for rural SCHs of 7.1 percent for all services and procedures paid under the OPSS, excluding separately payable drugs and biologicals, brachytherapy sources, and devices paid under the pass-through

payment policy, in accordance with section 1833(t)(13)(B) of the Act.

In the CY 2007 OPSS/ASC final rule with comment period (71 FR 68010 and 68227), for purposes of receiving this rural adjustment, we revised § 419.43(g) of the regulations to clarify that essential access community hospitals (EACHs) also are eligible to receive the rural SCH adjustment, assuming these entities otherwise meet the rural adjustment criteria. Currently, two hospitals are classified as EACHs, and as of CY 1998, under section 4201(c) of Public Law 105–33, a hospital can no longer become newly classified as an EACH.

This adjustment for rural SCHs is budget neutral and applied before calculating outlier payments and copayments. We stated in the CY 2006 OPSS final rule with comment period (70 FR 68560) that we would not reestablish the adjustment amount on an annual basis, but we may review the adjustment in the future and, if appropriate, would revise the adjustment. We provided the same 7.1 percent adjustment to rural SCHs, including EACHs, again in CYs 2008 through 2017. Further, in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68590), we updated the regulations at § 419.43(g)(4) to specify, in general terms, that items paid at

charges adjusted to costs by application of a hospital-specific CCR are excluded from the 7.1 percent payment adjustment.

In the CY 2018 OPSS/ASC proposed rule (82 FR 33594 through 33595), for the CY 2018 OPSS, we proposed to continue our policy of a 7.1 percent payment adjustment that is done in a budget neutral manner for rural SCHs, including EACHs, for all services and procedures paid under the OPSS, excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to costs.

Comment: Commenters supported the proposed payment adjustment for rural SCHs and EACHs, and stated that this adjustment would support access to care in rural areas and provide additional resources for rural SCHs and EACHs.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing the proposal for CY 2017 to continue our policy of a 7.1 percent payment adjustment that is done in a budget neutral manner for rural SCHs, including EACHs, for all services and procedures paid under the OPSS, excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to costs.

F. Payment Adjustment for Certain Cancer Hospitals for CY 2018

1. Background

Since the inception of the OPSS, which was authorized by the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), Medicare has paid the 11 hospitals that meet the criteria for cancer hospitals identified in section 1886(d)(1)(B)(v) of the Act under the OPSS for covered outpatient hospital services. These cancer hospitals are exempted from payment under the IPPS. With the Medicare, Medicaid and SCHIP Balanced Budget Refinement Act of 1999 (Pub. L. 106–113), Congress established section 1833(t)(7) of the Act, “Transitional Adjustment to Limit Decline in Payment,” to determine OPSS payments to cancer and children’s hospitals based on their pre-BBA payment amount (often referred to as “held harmless”).

As required under section 1833(t)(7)(D)(ii) of the Act, a cancer hospital receives the full amount of the difference between payments for covered outpatient services under the OPSS and a “pre-BBA amount.” That is, cancer hospitals are permanently held harmless to their “pre-BBA amount,” and they receive transitional outpatient payments (TOPs) or hold harmless payments to ensure that they do not receive a payment that is lower in amount under the OPSS than the payment amount they would have received before implementation of the OPSS, as set forth in section 1833(t)(7)(F) of the Act. The “pre-BBA amount” is the product of the hospital’s reasonable costs for covered outpatient services occurring in the current year and the base payment-to-cost ratio (PCR) for the hospital defined in section 1833(t)(7)(F)(ii) of the Act. The “pre-BBA amount” and the determination of the base PCR are defined at 42 CFR 419.70(f). TOPs are calculated on Worksheet E, Part B, of the Hospital Cost Report or the Hospital Health Care Complex Cost Report (Form CMS–2552–96 or Form CMS–2552–10, respectively) as applicable each year. Section 1833(t)(7)(I) of the Act exempts TOPs from budget neutrality calculations.

Section 3138 of the Affordable Care Act amended section 1833(t) of the Act by adding a new paragraph (18), which instructs the Secretary to conduct a study to determine if, under the OPSS, outpatient costs incurred by cancer hospitals described in section 1886(d)(1)(B)(v) of the Act with respect to APC groups exceed outpatient costs incurred by other hospitals furnishing services under section 1833(t) of the Act, as determined appropriate by the

Secretary. Section 1833(t)(18)(A) of the Act requires the Secretary to take into consideration the cost of drugs and biologicals incurred by cancer hospitals and other hospitals. Section 1833(t)(18)(B) of the Act provides that, if the Secretary determines that cancer hospitals’ costs are higher than those of other hospitals, the Secretary shall provide an appropriate adjustment under section 1833(t)(2)(E) of the Act to reflect these higher costs. In 2011, after conducting the study required by section 1833(t)(18)(A) of the Act, we determined that outpatient costs incurred by the 11 specified cancer hospitals were greater than the costs incurred by other OPSS hospitals. For a complete discussion regarding the cancer hospital cost study, we refer readers to the CY 2012 OPSS/ASC final rule with comment period (76 FR 74200 through 74201).

Based on these findings, we finalized a policy to provide a payment adjustment to the 11 specified cancer hospitals that reflects their higher outpatient costs as discussed in the CY 2012 OPSS/ASC final rule with comment period (76 FR 74202 through 74206). Specifically, we adopted a policy to provide additional payments to the cancer hospitals so that each cancer hospital’s final PCR for services provided in a given calendar year is equal to the weighted average PCR (which we refer to as the “target PCR”) for other hospitals paid under the OPSS. The target PCR is set in advance of the calendar year and is calculated using the most recently submitted or settled cost report data that are available at the time of final rulemaking for the calendar year. The amount of the payment adjustment is made on an aggregate basis at cost report settlement. We note that the changes made by section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs are assessed as usual after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period. For CYs 2012 and 2013, the target PCR for purposes of the cancer hospital payment adjustment was 0.91. For CY 2014, the target PCR for purposes of the cancer hospital payment adjustment was 0.89. For CY 2015, the target PCR was 0.90. For CY 2016, the target PCR was 0.92, as discussed in the CY 2016 OPSS/ASC final rule with comment period (80 FR 70362 through 70363). For CY 2017, the target PCR was 0.91, as discussed in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79603 through 79604).

2. Proposed and Finalized Policy for CY 2018

Section 16002(b) of the 21st Century Cures Act (Pub. L. 114–255) amended section 1833(t)(18) of the Act by adding subparagraph (C), which requires that in applying 42 CFR 419.43(i), that is, the payment adjustment for certain cancer hospitals, for services furnished on or after January 1, 2018, the target PCR adjustment be reduced by 1.0 percentage point less than what would otherwise apply. Section 16002(b) also provides that, in addition to the percentage reduction, the Secretary may consider making an additional percentage point reduction to the target PCR that takes into account payment rates for applicable items and services described under section 1833(t)(21)(C) of the Act for hospitals that are not cancer hospitals described under section 1886(d)(1)(B)(v) of the Act. Further, in making any budget neutrality adjustment under section 1833(t) of the Act, the Secretary shall not take into account the reduced expenditures that result from application of section 1833(t)(18)(C) of the Act. In the CY 2018 OPSS/ASC proposed rule (82 FR 33595), for CY 2018, we proposed to provide additional payments to the 11 specified cancer hospitals so that each cancer hospital’s final PCR is equal to the weighted average PCR (or “target PCR”) for the other OPSS hospitals using the most recent submitted or settled cost report data that were available at the time of the development of the proposed rule, reduced by 1.0 percentage point to comply with section 16002(b) of the 21st Century Cures Act. We did not propose an additional reduction beyond the 1.0 percentage point reduction required by section 16002(b) for CY 2018. To calculate the proposed CY 2018 target PCR, we used the same extract of cost report data from HCRIS, as discussed in section II.A. of the proposed rule, used to estimate costs for the CY 2018 OPSS. Using these cost report data, we included data from Worksheet E, Part B, for each hospital, using data from each hospital’s most recent cost report, whether as submitted or settled.

We then limited the dataset to the hospitals with CY 2016 claims data that we used to model the impact of the proposed CY 2018 APC relative payment weights (3,701 hospitals) because it is appropriate to use the same set of hospitals that we are using to calibrate the modeled CY 2018 OPSS. The cost report data for the hospitals in this dataset were from cost report periods with fiscal year ends ranging

from 2013 to 2016. We then removed the cost report data of the 49 hospitals located in Puerto Rico from our dataset because we do not believe that their cost structure reflects the costs of most hospitals paid under the OPSS and, therefore, their inclusion may bias the calculation of hospital-weighted statistics. We also removed the cost report data of 16 hospitals because these hospitals had cost report data that were not complete (missing aggregate OPSS payments, missing aggregate cost data, or missing both), so that all cost reports in the study would have both the payment and cost data necessary to calculate a PCR for each hospital, leading to a proposed analytic file of 3,636 hospitals with cost report data.

Using this smaller dataset of cost report data, we estimated that, on average, the OPSS payments to other hospitals furnishing services under the OPSS were approximately 90 percent of reasonable cost (weighted average PCR of 0.90). Therefore, after applying the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act, we proposed that the payment amount associated with the cancer hospital payment adjustment to be determined at cost report settlement would be the additional payment needed to result in a proposed target PCR equal to 0.89 for each cancer hospital.

Table 11 of the proposed rule indicated the proposed estimated percentage increase in OPSS payments to each cancer hospital for CY 2018 due to the cancer hospital payment adjustment policy. We stated in the

proposed rule that the actual amount of the CY 2018 cancer hospital payment adjustment for each cancer hospital will be determined at cost report settlement and will depend on each hospital's CY 2018 payments and costs. We noted that the requirements contained in section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs will be assessed as usual after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period.

Comment: Several commenters supported the proposed cancer hospital payment adjustment for CY 2018.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our cancer hospital payment adjustment methodology as proposed. For this final rule with comment period, we are using the most recent cost report data through June 30, 2017 to update the adjustment. This update yields a target PCR of 0.88. We limited the dataset to the hospitals with CY 2016 claims data that we used to model the impact of the CY 2018 APC relative payment weights (3,724 hospitals) because it is appropriate to use the same set of hospitals that we are using to calibrate the modeled CY 2018 OPSS. The cost report data for the hospitals in this dataset were from cost report periods with fiscal year ends ranging from 2012 to 2017. We then removed the cost report data of the 49 hospitals located in Puerto Rico from our dataset because we do not believe that their cost structure

reflects the costs of most hospitals paid under the OPSS and, therefore, their inclusion may bias the calculation of hospital-weighted statistics. We also removed the cost report data of 14 hospitals because these hospitals had cost report data that were not complete (missing aggregate OPSS payments, missing aggregate cost data, or missing both), so that all cost reports in the study would have both the payment and cost data necessary to calculate a PCR for each hospital, leading to an analytic file of 3,661 hospitals with cost report data.

Using this smaller dataset of cost report data, we estimated a target PCR of 0.89. Therefore, after applying the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act, we are finalizing that the payment amount associated with the cancer hospital payment adjustment to be determined at cost report settlement will be the additional payment needed to result in a PCR equal to 0.88 for each cancer hospital. Table 10 below indicates the estimated percentage increase in OPSS payments to each cancer hospital for CY 2018 due to the cancer hospital payment adjustment policy. We note that the requirements contained in section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs will be assessed as usual after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period.

TABLE 10—ESTIMATED CY 2018 HOSPITAL-SPECIFIC PAYMENT ADJUSTMENT FOR CANCER HOSPITALS TO BE PROVIDED AT COST REPORT SETTLEMENT

Provider No.	Hospital name	Estimated percentage increase in OPSS payments for CY 2018 due to payment adjustment
050146	City of Hope Comprehensive Cancer Center	31.5
050660	USC Norris Cancer Hospital	16.4
100079	Sylvester Comprehensive Cancer Center	22.9
100271	H. Lee Moffitt Cancer Center & Research Institute	21.7
220162	Dana-Farber Cancer Institute	44.2
330154	Memorial Sloan-Kettering Cancer Center	46.9
330354	Roswell Park Cancer Institute	20.0
360242	James Cancer Hospital & Solove Research Institute	27.5
390196	Fox Chase Cancer Center	7.6
450076	M.D. Anderson Cancer Center	74.9
500138	Seattle Cancer Care Alliance	52.2

G. Hospital Outpatient Outlier Payments

1. Background

The OPSS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. As explained in the CY 2015 OPSS/ASC final rule with comment period (79 FR 66832 through 66834), we set our projected target for aggregate outlier payments at 1.0 percent of the estimated aggregate total payments under the OPSS for the prospective year. Outlier payments are provided on a service-by-service basis when the cost of a service exceeds the APC payment amount multiplier threshold (the APC payment amount multiplied by a certain amount) as well as the APC payment amount plus a fixed-dollar amount threshold (the APC payment plus a certain amount of dollars). In CY 2017, the outlier threshold was met when the hospital's cost of furnishing a service exceeded 1.75 times (the multiplier threshold) the APC payment amount and exceeded the APC payment amount plus \$3,825 (the fixed-dollar amount threshold) (81 FR 79604 through 79606). If the cost of a service exceeds both the multiplier threshold and the fixed-dollar threshold, the outlier payment is calculated as 50 percent of the amount by which the cost of furnishing the service exceeds 1.75 times the APC payment amount. Beginning with CY 2009 payments, outlier payments are subject to a reconciliation process similar to the IPPS outlier reconciliation process for cost reports, as discussed in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68594 through 68599).

It has been our policy to report the actual amount of outlier payments as a percent of total spending in the claims being used to model the OPSS. Our estimate of total outlier payments as a percent of total CY 2016 OPSS payments, using CY 2016 claims available for this proposed rule, is approximately 1.0 percent of the total aggregated OPSS payments. Therefore, for CY 2016, we estimate that we paid the outlier target of 1.0 percent of total aggregated OPSS payments.

As stated in the proposed rule, using CY 2016 claims data and CY 2017 payment rates, we estimated that the aggregate outlier payments for CY 2017 would be approximately 1.0 percent of the total CY 2017 OPSS payments. Using an updated claims dataset and OPSS ancillary CCRs, we estimate that we paid approximately 1.11 percent of

the total CY 2017 OPSS payments, in OPSS outliers. We provided estimated CY 2018 outlier payments for hospitals and CMHCs with claims included in the claims data that we used to model impacts in the Hospital-Specific Impacts—Provider-Specific Data file on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>.

2. Outlier Calculation for CY 2018

In the CY 2018 OPSS/ASC proposed rule (82 FR 33596), for CY 2018, we proposed to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPSS. We proposed that a portion of that 1.0 percent, an amount equal to less than 0.01 percent of outlier payments (or 0.0001 percent of total OPSS payments) would be allocated to CMHCs for PHP outlier payments. This is the amount of estimated outlier payments that would result from the proposed CMHC outlier threshold as a proportion of total estimated OPSS outlier payments. As discussed in section VIII.C. of the proposed rule, we proposed to continue our longstanding policy that if a CMHC's cost for partial hospitalization services, paid under APC 5853 (Partial Hospitalization for CMHCs), exceeds 3.40 times the payment rate for proposed APC 5853, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the proposed APC 5853 payment rate. For further discussion of CMHC outlier payments, we refer readers to section VIII.D. of the proposed rule.

To ensure that the estimated CY 2018 aggregate outlier payments would equal 1.0 percent of estimated aggregate total payments under the OPSS, we proposed that the hospital outlier threshold be set so that outlier payments would be triggered when a hospital's cost of furnishing a service exceeds 1.75 times the APC payment amount and exceeds the APC payment amount plus \$4,325.

We calculated the proposed fixed-dollar threshold of \$4,325 using the standard methodology most recently used for CY 2017 (81 FR 79604 through 79605). For purposes of estimating outlier payments for the proposed rule, we used the hospital-specific overall ancillary CCRs available in the April 2017 update to the Outpatient Provider-Specific File (OPSF). The OPSF contains provider-specific data, such as the most current CCRs, which are maintained by the MACs and used by the OPSS Pricer to pay claims. The

claims that we use to model each OPSS update lag by 2 years.

In order to estimate the CY 2018 hospital outlier payments for the proposed rule, we inflated the charges on the CY 2016 claims using the same inflation factor of 1.104055 that we used to estimate the IPPS fixed-dollar outlier threshold for the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20173). We used an inflation factor of 1.05074 to estimate CY 2017 charges from the CY 2016 charges reported on CY 2016 claims. The methodology for determining this charge inflation factor is discussed in the FY 2017 IPPS/LTCH PPS final rule (81 FR 57286). As we stated in the CY 2005 OPSS final rule with comment period (69 FR 65845), we believe that the use of these charge inflation factors are appropriate for the OPSS because, with the exception of the inpatient routine service cost centers, hospitals use the same ancillary and outpatient cost centers to capture costs and charges for inpatient and outpatient services.

As noted in the CY 2007 OPSS/ASC final rule with comment period (71 FR 68011), we are concerned that we could systematically overestimate the OPSS hospital outlier threshold if we did not apply a CCR inflation adjustment factor. Therefore, we proposed to apply the same CCR inflation adjustment factor that we proposed to apply for the FY 2018 IPPS outlier calculation to the CCRs used to simulate the proposed CY 2018 OPSS outlier payments to determine the fixed-dollar threshold. Specifically, for CY 2018, we proposed to apply an adjustment factor of 0.979187 to the CCRs that were in the April 2017 OPSF to trend them forward from CY 2017 to CY 2018. The methodology for calculating this proposed adjustment was discussed in the FY 2018 IPPS/LTCH PPS proposed rule (82 FR 20173).

To model hospital outlier payments for the proposed rule, we applied the overall CCRs from the April 2017 OPSF after adjustment (using the proposed CCR inflation adjustment factor of 0.979187 to approximate CY 2018 CCRs) to charges on CY 2016 claims that were adjusted (using the proposed charge inflation factor of 1.104055 to approximate CY 2018 charges). We simulated aggregated CY 2018 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiplier threshold constant and assuming that outlier payments would continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payments

equaled 1.0 percent of aggregated estimated total CY 2018 OPSS payments. We estimated that a proposed fixed-dollar threshold of \$4,325, combined with the proposed multiplier threshold of 1.75 times the APC payment rate, would allocate 1.0 percent of aggregated total OPSS payments to outlier payments. For CMHCs, we proposed that, if a CMHC's cost for partial hospitalization services, paid under APC 5853, exceeds 3.40 times the payment rate for APC 5853, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC 5853 payment rate.

Section 1833(t)(17)(A) of the Act, which applies to hospitals as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to report data required for the quality measures selected by the Secretary, in the form and manner required by the Secretary under section 1833(t)(17)(B) of the Act, incur a 2.0 percentage point reduction to their OPD fee schedule increase factor; that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that will apply to certain outpatient items and services furnished by hospitals that are required to report outpatient quality data and that fail to meet the Hospital OQR Program requirements. For hospitals that fail to meet the Hospital OQR Program requirements, we proposed to continue the policy that we implemented in CY 2010 that the hospitals' costs will be compared to the reduced payments for purposes of outlier eligibility and payment calculation. For more information on the Hospital OQR Program, we referred readers to section XIII. of the proposed rule.

We did not receive any public comments on our hospital outpatient outlier payment methodology. Therefore, we are finalizing our proposal to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPSS and to use our established methodology to set the OPSS outlier fixed-dollar loss threshold for CY 2018.

3. Final Outlier Calculation

Consistent with historical practice, we used updated data for this final rule with comment period for outlier calculations. For CY 2018, we are applying the overall CCRs from the July 2017 OPSF file after adjustment (using the CCR inflation adjustment factor of 0.9856 to approximate CY 2018 CCRs) to

charges on CY 2016 claims that were adjusted using a charge inflation factor of 1.0936 to approximate CY 2018 charges. These are the same CCR adjustment and charge inflation factors that were used to set the IPPS fixed-dollar thresholds for the FY 2018 IPPS/LTCH PPS final rule (82 FR 38527). We simulated aggregated CY 2018 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiple threshold constant and assuming that outlier payments will continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payment equaled 1.0 percent of aggregated estimated total CY 2018 OPSS payments. We estimate that a fixed-dollar threshold of \$4,150, combined with the multiple threshold of 1.75 times the APC payment rate, will allocate 1.0 percent of aggregated total OPSS payments to outlier payments. We note that the difference in our calculation of the final fixed-dollar threshold of \$4,150 and the proposed fixed-dollar threshold of \$4,350 is largely attributed to finalized proposals related to reducing payments for drugs purchased under the 340B drug program for CY 2018, as discussed in section V.B.7. of this final rule with comment period.

For CMHCs, if a CMHC's cost for partial hospitalization services, paid under APC 5853, exceeds 3.40 times the payment rate, the outlier payment will be calculated as 50 percent of the amount by which the cost exceeds 3.40 times APC 5853.

H. Calculation of an Adjusted Medicare Payment From the National Unadjusted Medicare Payment

The basic methodology for determining prospective payment rates for HOPD services under the OPSS is set forth in existing regulations at 42 CFR part 419, subparts C and D. For this CY 2018 OPSS/ASC final rule with comment period, the payment rate for most services and procedures for which payment is made under the OPSS is the product of the conversion factor calculated in accordance with section II.B. of this final rule with comment period and the relative payment weight determined under section II.A. of this final rule with comment period. Therefore, the national unadjusted payment rate for most APCs contained in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site) and for most HCPCS codes to which separate payment under the OPSS has been assigned in Addendum B to this final

rule with comment period (which is available via the Internet on the CMS Web site) was calculated by multiplying the CY 2018 scaled weight for the APC by the CY 2018 conversion factor. We note that this is the same methodology proposed in the CY 2018 OPSS/ASC proposed rule (82 FR 33598), on which we did not receive any public comments.

We note that section 1833(t)(17) of the Act, which applies to hospitals as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to submit data required to be submitted on quality measures selected by the Secretary, in the form and manner and at a time specified by the Secretary, incur a reduction of 2.0 percentage points to their OPD fee schedule increase factor, that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data and that fail to meet the Hospital OQR Program (formerly referred to as the Hospital Outpatient Quality Data Reporting Program (HOP QDRP)) requirements. For further discussion of the payment reduction for hospitals that fail to meet the requirements of the Hospital OQR Program, we refer readers to section XIII. of this final rule with comment period.

We demonstrate below the steps on how to determine the APC payments that will be made in a calendar year under the OPSS to a hospital that fulfills the Hospital OQR Program requirements and to a hospital that fails to meet the Hospital OQR Program requirements for a service that has any of the following status indicator assignments: "J1", "J2", "P", "Q1", "Q2", "Q3", "Q4", "R", "S", "T", "U", or "V" (as defined in Addendum D1 to this final rule with comment period, which is available via the Internet on the CMS Web site), in a circumstance in which the multiple procedure discount does not apply, the procedure is not bilateral, and conditionally packaged services (status indicator of "Q1" and "Q2") qualify for separate payment. We note that, although blood and blood products with status indicator "R" and brachytherapy sources with status indicator "U" are not subject to wage adjustment, they are subject to reduced payments when a hospital fails to meet the Hospital OQR Program requirements.

Individual providers interested in calculating the payment amount that they will receive for a specific service from the national unadjusted payment

rates presented in Addenda A and B to this final rule with comment period (which are available via the Internet on the CMS Web site) should follow the formulas presented in the following steps. For purposes of the payment calculations below, we refer to the national unadjusted payment rate for hospitals that meet the requirements of the Hospital OQR Program as the “full” national unadjusted payment rate. We refer to the national unadjusted payment rate for hospitals that fail to meet the requirements of the Hospital OQR Program as the “reduced” national unadjusted payment rate. The reduced national unadjusted payment rate is calculated by multiplying the reporting ratio of 0.980 times the “full” national unadjusted payment rate. The national unadjusted payment rate used in the calculations below is either the full national unadjusted payment rate or the reduced national unadjusted payment rate, depending on whether the hospital met its Hospital OQR Program requirements in order to receive the full CY 2018 OPSS fee schedule increase factor.

Step 1. Calculate 60 percent (the labor-related portion) of the national unadjusted payment rate. Since the initial implementation of the OPSS, we have used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. We refer readers to the April 7, 2000 OPSS final rule with comment period (65 FR 18496 through 18497) for a detailed discussion of how we derived this percentage. During our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPSS final rule with comment period (70 FR 68553), we confirmed that this labor-related share for hospital outpatient services is appropriate.

The formula below is a mathematical representation of Step 1 and identifies the labor-related portion of a specific payment rate for a specific service.

X is the labor-related portion of the national unadjusted payment rate.
 $X = .60 * (\text{national unadjusted payment rate}).$

Step 2. Determine the wage index area in which the hospital is located and identify the wage index level that applies to the specific hospital. We note that, under the CY 2018 OPSS policy for continuing to use the OMB labor market area delineations based on the 2010 Decennial Census data for the wage indexes used under the IPPS, a hold harmless policy for the wage index may apply, as discussed in section II.C. of this final rule with comment period. The wage index values assigned to each

area reflect the geographic statistical areas (which are based upon OMB standards) to which hospitals are assigned for FY 2018 under the IPPS, reclassifications through the Metropolitan Geographic Classification Review Board (MGCRB), section 1886(d)(8)(B) “Lugar” hospitals, reclassifications under section 1886(d)(8)(E) of the Act, as defined in § 412.103 of the regulations, and hospitals designated as urban under section 601(g) of Public Law 98–21. For further discussion of the changes to the FY 2018 IPPS wage indexes, as applied to the CY 2018 OPSS, we refer readers to section II.C. of this final rule with comment period. We are continuing to apply a wage index floor of 1.00 to frontier States, in accordance with section 10324 of the Affordable Care Act of 2010.

Step 3. Adjust the wage index of hospitals located in certain qualifying counties that have a relatively high percentage of hospital employees who reside in the county, but who work in a different county with a higher wage index, in accordance with section 505 of Public Law 108–173. Addendum L to this final rule with comment period (which is available via the Internet on the CMS Web site) contains the qualifying counties and the associated wage index increase developed for the FY 2018 IPPS, which are listed in Table 2 in the FY 2018 IPPS/LTCH PPS final rule available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. (Click on the link on the left side of the screen titled “FY 2018 IPPS Final Rule Home Page” and select “FY 2018 Final Rule Tables.”) This step is to be followed only if the hospital is not reclassified or redesignated under section 1886(d)(8) or section 1886(d)(10) of the Act.

Step 4. Multiply the applicable wage index determined under Steps 2 and 3 by the amount determined under Step 1 that represents the labor-related portion of the national unadjusted payment rate.

The formula below is a mathematical representation of Step 4 and adjusts the labor-related portion of the national unadjusted payment rate for the specific service by the wage index.

X_a is the labor-related portion of the national unadjusted payment rate (wage adjusted).
 $X_a = .60 * (\text{national unadjusted payment rate}) * \text{applicable wage index}.$

Step 5. Calculate 40 percent (the nonlabor-related portion) of the national unadjusted payment rate and add that amount to the resulting product of Step

4. The result is the wage index adjusted payment rate for the relevant wage index area.

The formula below is a mathematical representation of Step 5 and calculates the remaining portion of the national payment rate, the amount not attributable to labor, and the adjusted payment for the specific service.

Y is the nonlabor-related portion of the national unadjusted payment rate.
 $Y = .40 * (\text{national unadjusted payment rate}).$

Adjusted Medicare Payment = $Y + X_a$.

Step 6. If a provider is an SCH, as set forth in the regulations at § 412.92, or an EACH, which is considered to be an SCH under section 1886(d)(5)(D)(iii)(III) of the Act, and located in a rural area, as defined in § 412.64(b), or is treated as being located in a rural area under § 412.103, multiply the wage index adjusted payment rate by 1.071 to calculate the total payment.

The formula below is a mathematical representation of Step 6 and applies the rural adjustment for rural SCHs.

Adjusted Medicare Payment (SCH or EACH) = Adjusted Medicare Payment * 1.071.

We are providing examples below of the calculation of both the full and reduced national unadjusted payment rates that will apply to certain outpatient items and services performed by hospitals that meet and that fail to meet the Hospital OQR Program requirements, using the steps outlined above. For purposes of this example, we used a provider that is located in Brooklyn, New York that is assigned to CBSA 35614. This provider bills one service that is assigned to APC 5071 (Level 1 Excision/Biopsy/Incision and Drainage). The CY 2018 full national unadjusted payment rate for APC 5071 is approximately \$572.81. The reduced national unadjusted payment rate for APC 5071 for a hospital that fails to meet the Hospital OQR Program requirements is approximately \$561.35. This reduced rate is calculated by multiplying the reporting ratio of 0.980 by the full unadjusted payment rate for APC 5071.

The FY 2018 wage index for a provider located in CBSA 35614 in New York is 1.2876. The labor-related portion of the full national unadjusted payment is approximately \$442.53 (.60 * \$572.81 * 1.2876). The labor-related portion of the reduced national unadjusted payment is approximately \$433.68 (.60 * \$561.35 * 1.2876). The nonlabor-related portion of the full national unadjusted payment is approximately \$229.12 (.40 * \$572.81). The nonlabor-related portion of the

reduced national unadjusted payment is approximately \$224.54 (.40 * \$561.35). The sum of the labor-related and nonlabor-related portions of the full national adjusted payment is approximately \$671.65 (\$442.53 + \$229.12). The sum of the portions of the reduced national adjusted payment is approximately \$658.22 (\$433.68 + \$224.54).

I. Beneficiary Copayments

1. Background

Section 1833(t)(3)(B) of the Act requires the Secretary to set rules for determining the unadjusted copayment amounts to be paid by beneficiaries for covered OPD services. Section 1833(t)(8)(C)(ii) of the Act specifies that the Secretary must reduce the national unadjusted copayment amount for a covered OPD service (or group of such services) furnished in a year in a manner so that the effective copayment rate (determined on a national unadjusted basis) for that service in the year does not exceed a specified percentage. As specified in section 1833(t)(8)(C)(ii)(V) of the Act, the effective copayment rate for a covered OPD service paid under the OPSS in CY 2006, and in calendar years thereafter, shall not exceed 40 percent of the APC payment rate.

Section 1833(t)(3)(B)(ii) of the Act provides that, for a covered OPD service (or group of such services) furnished in a year, the national unadjusted copayment amount cannot be less than 20 percent of the OPD fee schedule amount. However, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure performed in a year to the amount of the inpatient hospital deductible for that year.

Section 4104 of the Affordable Care Act eliminated the Medicare Part B coinsurance for preventive services furnished on and after January 1, 2011, that meet certain requirements, including flexible sigmoidoscopies and screening colonoscopies, and waived the Part B deductible for screening colonoscopies that become diagnostic during the procedure. Our discussion of the changes made by the Affordable Care Act with regard to copayments for preventive services furnished on and after January 1, 2011, may be found in section XII.B. of the CY 2011 OPSS/ASC final rule with comment period (75 FR 72013).

2. OPSS Copayment Policy

In the CY 2018 OPSS/ASC proposed rule (82 FR 33599), for CY 2018, we

proposed to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. (We refer readers to the November 7, 2003 OPSS final rule with comment period (68 FR 63458).) In addition, we proposed to use the same standard rounding principles that we have historically used in instances where the application of our standard copayment methodology would result in a copayment amount that is less than 20 percent and cannot be rounded, under standard rounding principles, to 20 percent. (We refer readers to the CY 2008 OPSS/ASC final rule with comment period (72 FR 66687) in which we discuss our rationale for applying these rounding principles.) The proposed national unadjusted copayment amounts for services payable under the OPSS that would be effective January 1, 2018 were included in Addenda A and B to the proposed rule (which are available via the Internet on the CMS Web site).

We did not receive any public comments on the proposed copayment amounts for new and revised APCs using the same methodology we implemented beginning in CY 2004 or the standard rounding principles we apply to our copayment amounts. Therefore, we are finalizing our proposed copayment policies, without modification.

As discussed in section XIII.E. of this final rule with comment period, for CY 2018, the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies will equal the product of the reporting ratio and the national unadjusted copayment, or the product of the reporting ratio and the minimum unadjusted copayment, respectively, for the service.

We note that OPSS copayments may increase or decrease each year based on changes in the calculated APC payment rates due to updated cost report and claims data, and any changes to the OPSS cost modeling process. However, as described in the CY 2004 OPSS final rule with comment period, the development of the copayment methodology generally moves beneficiary copayments closer to 20 percent of OPSS APC payments (68 FR 63458 through 63459).

In the CY 2004 OPSS final rule with comment period (68 FR 63459), we adopted a new methodology to calculate unadjusted copayment amounts in situations including reorganizing APCs, and we finalized the following rules to

determine copayment amounts in CY 2004 and subsequent years.

- When an APC group consists solely of HCPCS codes that were not paid under the OPSS the prior year because they were packaged or excluded or are new codes, the unadjusted copayment amount would be 20 percent of the APC payment rate.

- If a new APC that did not exist during the prior year is created and consists of HCPCS codes previously assigned to other APCs, the copayment amount is calculated as the product of the APC payment rate and the lowest coinsurance percentage of the codes comprising the new APC.

- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is equal to or *greater than* the prior year's rate, the copayment amount remains constant (unless the resulting coinsurance percentage is less than 20 percent).

- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is *less than* the prior year's rate, the copayment amount is calculated as the product of the new payment rate and the prior year's coinsurance percentage.

- If HCPCS codes are added to or deleted from an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in a decrease in the coinsurance percentage for the reconfigured APC, the copayment amount would not change (unless retaining the copayment amount would result in a coinsurance rate less than 20 percent).

- If HCPCS codes are added to an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in an increase in the coinsurance percentage for the reconfigured APC, the copayment amount would be calculated as the product of the payment rate of the reconfigured APC and the lowest coinsurance percentage of the codes being added to the reconfigured APC.

We noted in the CY 2004 OPSS final rule with comment period that we would seek to lower the copayment percentage for a service in an APC from the prior year if the copayment percentage was greater than 20 percent. We noted that this principle was consistent with section 1833(t)(8)(C)(ii) of the Act, which accelerates the reduction in the national unadjusted coinsurance rate so that beneficiary liability will eventually equal 20 percent of the OPSS payment rate for all OPSS services to which a copayment

applies, and with section 1833(t)(3)(B) of the Act, which achieves a 20-percent copayment percentage when fully phased in and gives the Secretary the authority to set rules for determining copayment amounts for new services. We further noted that the use of this methodology would, in general, reduce the beneficiary coinsurance rate and copayment amount for APCs for which the payment rate changes as the result of the reconfiguration of APCs and/or recalibration of relative payment weights (68 FR 63459).

3. Calculation of an Adjusted Copayment Amount for an APC Group

As we stated in the CY 2018 OPPTS/ASC proposed rule (82 FR 33600), individuals interested in calculating the national copayment liability for a Medicare beneficiary for a given service provided by a hospital that met or failed to meet its Hospital OQR Program requirements should follow the formulas presented in the following steps.

Step 1. Calculate the beneficiary payment percentage for the APC by dividing the APC's national unadjusted copayment by its payment rate. For example, using APC 5071, \$114.57 is approximately 20 percent of the full national unadjusted payment rate of \$572.81. For APCs with only a minimum unadjusted copayment in Addenda A and B to this final rule with comment period rule (which are available via the Internet on the CMS Web site), the beneficiary payment percentage is 20 percent.

The formula below is a mathematical representation of Step 1 and calculates the national copayment as a percentage of national payment for a given service. *B* is the beneficiary payment percentage. *B* = National unadjusted copayment for APC/national unadjusted payment rate for APC.

Step 2. Calculate the appropriate wage-adjusted payment rate for the APC for the provider in question, as indicated in Steps 2 through 4 under section II.H. of this final rule with comment period. Calculate the rural adjustment for eligible providers as indicated in Step 6 under section II.H. of this final rule with comment period.

Step 3. Multiply the percentage calculated in Step 1 by the payment rate calculated in Step 2. The result is the

wage-adjusted copayment amount for the APC.

The formula below is a mathematical representation of Step 3 and applies the beneficiary payment percentage to the adjusted payment rate for a service calculated under section II.H. of this final rule with comment period, with and without the rural adjustment, to calculate the adjusted beneficiary copayment for a given service.

Wage-adjusted copayment amount for the APC = Adjusted Medicare Payment * *B*.

Wage-adjusted copayment amount for the APC (SCH or EACH) = (Adjusted Medicare Payment * 1.071) * *B*.

Step 4. For a hospital that failed to meet its Hospital OQR Program requirements, multiply the copayment calculated in Step 3 by the reporting ratio of 0.980.

The unadjusted copayments for services payable under the OPPTS that will be effective January 1, 2018, are shown in Addenda A and B to this final rule with comment period (which are available via the Internet on the CMS Web site). We note that the national unadjusted payment rates and copayment rates shown in Addenda A and B to this final rule with comment period reflect the CY 2018 OPD fee schedule increase factor discussed in section II.B. of this final rule with comment period.

In addition, as noted earlier, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure performed in a year to the amount of the inpatient hospital deductible for that year.

III. OPPTS Ambulatory Payment Classification (APC) Group Policies

A. OPPTS Treatment of New CPT and Level II HCPCS Codes

CPT and Level II HCPCS codes are used to report procedures, services, items, and supplies under the hospital OPPTS. Specifically, CMS recognizes the following codes on OPPTS claims:

- Category I CPT codes, which describe surgical procedures and medical services;
- Category III CPT codes, which describe new and emerging

technologies, services, and procedures; and

- Level II HCPCS codes, which are used primarily to identify products, supplies, temporary procedures, and services not described by CPT codes.

CPT codes are established by the American Medical Association (AMA) and the Level II HCPCS codes are established by the CMS HCPCS Workgroup. These codes are updated and changed throughout the year. CPT and HCPCS code changes that affect the OPPTS are published both through the annual rulemaking cycle and through the OPPTS quarterly update Change Requests (CRs). CMS releases new Level II HCPCS codes to the public or recognizes the release of new CPT codes by the AMA and makes these codes effective (that is, the codes can be reported on Medicare claims) outside of the formal rulemaking process via OPPTS quarterly update CRs. Based on our review, we assign the new CPT and Level II HCPCS codes to interim status indicators (SIs) and APCs. These interim assignments are finalized in the OPPTS/ASC final rules. This quarterly process offers hospitals access to codes that may more accurately describe items or services furnished and provides payment or more accurate payment for these items or services in a timelier manner than if we waited for the annual rulemaking process. We solicit public comments on these new codes and finalize our proposals related to these codes through our annual rulemaking process.

We note that, under the OPPTS, the APC assignment determines the payment rate for an item, procedure, or service. Those items, procedures, or services not paid separately under the hospital OPPTS are assigned to appropriate status indicators. Certain payment status indicators provide separate payment, while other payment status indicators do not. Section XI. of this final rule with comment period discusses the various status indicators used under the OPPTS.

As we did in the CY 2018 OPPTS/ASC proposed rule, in Table 11 below, we summarize our current process for updating codes through our OPPTS quarterly update CRs, seeking public comments, and finalizing the treatment of these new codes under the OPPTS.

TABLE 11—COMMENT TIMEFRAME FOR NEW OR REVISED HCPCS CODES

OPPTS quarterly update CR	Type of code	Effective date	Comments sought	When finalized
April 1, 2017	Level II HCPCS Codes	April 1, 2017	CY 2018 OPPTS/ASC proposed rule.	CY 2018 OPPTS/ASC final rule with comment period.

TABLE 11—COMMENT TIMEFRAME FOR NEW OR REVISED HCPCS CODES—Continued

OPPS quarterly update CR	Type of code	Effective date	Comments sought	When finalized
July 1, 2017	Level II HCPCS Codes	July 1, 2017	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.
	Category I (certain vaccine codes) and III CPT codes.	July 1, 2017	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.
October 1, 2017	Level II HCPCS Codes	October 1, 2017	CY 2018 OPPS/ASC final rule with comment period.	CY 2019 OPPS/ASC final rule with comment period.
January 1, 2018	Level II HCPCS Codes	January 1, 2018	CY 2018 OPPS/ASC final rule with comment period.	CY 2019 OPPS/ASC final rule with comment period.
	Category I and III CPT Codes.	January 1, 2018	CY 2018 OPPS/ASC proposed rule.	CY 2018 OPPS/ASC final rule with comment period.

1. Treatment of New HCPCS Codes That Were Effective April 1, 2017 for Which We Solicited Public Comments in the CY 2018 OPPS/ASC Proposed Rule

Through the April 2017 OPPS quarterly update CR (Transmittal 3728, Change Request 10005, dated March 3, 2017), we made effective five new Level II HCPCS codes for separate payment

under the OPPS. In the CY 2018 OPPS/ASC proposed rule (82 FR 33601), we solicited public comments on the proposed APC and status indicator assignments for these Level II HCPCS codes, which were displayed in Table 13 of the proposed rule and are now listed in Table 12 of this final rule with comment period. Specifically, we solicited public comments on HCPCS

codes C9484, C9485, C9486, C9487, and C9488. We note that HCPCS code C9487 was deleted on June 30, 2017, and replaced with HCPCS code Q9989, effective July 1, 2017. We indicated that the proposed payment rates for these codes were included in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site).

TABLE 12—NEW LEVEL II HCPCS CODES EFFECTIVE APRIL 1, 2017

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	Final CY 2018 SI	Final CY 2018 APC
C9484	J1428	Injection, eteplirsen, 10 mg	G	9484
C9485	J9285	Injection, olaratumab, 10 mg	G	9485
C9486	J1627	Injection, granisetron, extended-release, 0.1 mg	G	9486
C9487 *	J3358	Ustekinumab, for intravenous injection, 1 mg	G	9487
C9488	C9488	Injection, conivaptan hydrochloride, 1 mg	G	9488

* HCPCS code C9487, which was effective April 1, 2017, was deleted June 30, 2017 and replaced with HCPCS code Q9989 (Ustekinumab, for intravenous injection, 1 mg) effective July 1, 2017.

We did not receive any public comments on the proposed APC and status indicator assignments for the new Level II HCPCS codes implemented in April 2017. Therefore, we are finalizing the proposed APC and status indicator assignments for these codes, as indicated in Table 12 above. We note that several of the HCPCS C-codes have been replaced with HCPCS J-codes effective January 1, 2018. Their replacement codes are listed in Table 12 above. The final payment rates for these codes can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site). In addition, the status indicator meanings can be found in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site).

2. Treatment of New HCPCS Codes That Were Effective July 1, 2017 for Which We Solicited Public Comments in the CY 2018 OPPS/ASC Proposed Rule

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33602), through the July 2017 OPPS quarterly update CR (Transmittal 3783, Change Request 10122, dated May 26, 2017), we made 10 new Category III CPT codes and 13 Level II HCPCS codes effective July 1, 2017, and assigned them to appropriate interim OPPS status indicators and APCs. In the CY 2018 OPPS/ASC proposed rule, we solicited public comments on the proposed APC and status indicator assignments for CY 2018 for the CPT and Level II HCPCS codes implemented on July 1, 2017, all of which were displayed in Table 14 of the proposed rule, and are now listed in Table 13 of this final rule with comment period. We note that three of the new HCPCS codes effective July 1, 2017

replaced four existing HCPCS codes. Specifically, HCPCS code Q9986 replaced HCPCS code J1725 (Injection, hydroxyprogesterone caproate, 1 mg), HCPCS codes Q9987 and Q9988 replaced HCPCS code P9072 (Platelets, pheresis, pathogen reduced or rapid bacterial tested, each unit), and HCPCS code Q9989 replaced HCPCS code C9487 (Ustekinumab, for intravenous injection, 1 mg). With the establishment of HCPCS codes Q9986, Q9987, and Q9988, we made their predecessor HCPCS codes J1725 and P9072 inactive for reporting and revised the status indicators for both codes to “E1” (Not Payable by Medicare) effective July 1, 2017. In addition, because HCPCS code Q9989 describes the same drug as HCPCS code C9487, in the CY 2018 OPPS/ASC proposed rule, we proposed to continue the drug’s pass-through payment status and to assign HCPCS code Q9989 to the same APC and status indicator as its predecessor HCPCS code

C9487, as shown in Table 14 of the proposed rule. The proposed payment rates and status indicators for these codes, where applicable, were included in Addendum B to the proposed rule (which is available via the Internet on the CMS Web site).

We did not receive any public comments on the proposed APC and status indicator assignments for the new

Category III CPT codes and Level II HCPCS codes implemented in July 2017. Therefore, we are finalizing the proposed APC and status indicator assignments for these codes, as indicated in Table 13 below. We note that several of the HCPCS C and Q-codes have been replaced with HCPCS J-codes effective January 1, 2018. Their replacement codes are listed in Table 13

below. The final payment rates for these codes can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site). In addition, the status indicator meanings can be found in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site).

TABLE 13—NEW CATEGORY III CPT AND LEVEL II HCPCS CODES EFFECTIVE JULY 1, 2017

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	Final CY 2018 SI	Final CY 2018 APC
C9489	J2326	Injection, nusinersen, 0.1 mg	G	9489
C9490	J0565	Injection, bezlotoxumab, 10 mg	G	9490
C9745	C9745	Nasal endoscopy, surgical; balloon dilation of eustachian tube	J1	5165
C9746	C9746	Transperineal implantation of permanent adjustable balloon continence device, with cystourethroscopy, when performed and/or fluoroscopy, when performed.	J1	5377
C9747	C9747	Ablation of prostate, transrectal, high intensity focused ultrasound (HIFU), including imaging guidance.	J1	5376
K0553	K0553	Supply allowance for therapeutic continuous glucose monitor (CGM), includes all supplies and accessories, 1 month supply = 1 Unit Of Service.	Y	N/A
K0554	K0554	Receiver (monitor), dedicated, for use with therapeutic glucose continuous monitor system.	Y	N/A
Q9984	J7296	Levonorgestrel-releasing intrauterine contraceptive system (Kyleena), 19.5 mg.	E1	N/A
Q9985	J1729	Injection, hydroxyprogesterone caproate, not otherwise specified, 10 mg	N	N/A
Q9986	J1726	Injection, hydroxyprogesterone caproate (Makena), 10 mg	K	9074
Q9987	P9100	Pathogen(s) test for platelets	S	1493
Q9988	P9073	Platelets, pheresis, pathogen reduced, each unit	R	9536
Q9989	J3358	Ustekinumab, for intravenous injection, 1 mg	G	9487
0469T	0469T	Retinal polarization scan, ocular screening with on-site automated results, bilateral.	E1	N/A
0470T	0470T	Optical coherence tomography (OCT) for microstructural and morphological imaging of skin, image acquisition, interpretation, and report; first lesion.	M	N/A
0471T	0471T	Optical coherence tomography (OCT) for microstructural and morphological imaging of skin, image acquisition, interpretation, and report; each additional lesion (List separately in addition to code for primary procedure).	N	N/A
0472T	0472T	Device evaluation, interrogation, and initial programming of intra-ocular retinal electrode array (eg, retinal prosthesis), in person, with iterative adjustment of the implantable device to test functionality, select optimal permanent programmed values with analysis, including visual training, with review and report by a qualified health care professional.	Q1	5743
0473T	0473T	Device evaluation and interrogation of intra-ocular retinal electrode array (eg, retinal prosthesis), in person, including reprogramming and visual training, when performed, with review and report by a qualified health care professional.	Q1	5742
0474T	0474T	Insertion of anterior segment aqueous drainage device, with creation of intraocular reservoir, internal approach, into the supraciliary space.	J1	5492
0475T	0475T	Recording of fetal magnetic cardiac signal using at least 3 channels; patient recording and storage, data scanning with signal extraction, technical analysis and result, as well as supervision, review, and interpretation of report by a physician or other qualified health care professional.	M	N/A
0476T	0476T	Recording of fetal magnetic cardiac signal using at least 3 channels; patient recording, data scanning, with raw electronic signal transfer of data and storage.	Q1	5734
0477T	0477T	Recording of fetal magnetic cardiac signal using at least 3 channels; signal extraction, technical analysis, and result.	Q1	5734
0478T	0478T	Recording of fetal magnetic cardiac signal using at least 3 channels; review, interpretation, report by physician or other qualified health care professional.	M	N/A

3. Process for New Level II HCPCS Codes That Became Effective October 1, 2017 and New Level II HCPCS Codes That Will Be Effective January 1, 2018 for Which We Are Soliciting Public Comments in This CY 2018 OPPS/ASC Final Rule With Comment Period

As has been our practice in the past, we incorporate those new Level II HCPCS codes that are effective October 1 and January 1 in the final rule with comment period, thereby updating the OPPS for the following calendar year, as displayed in Table 11 of this final rule with comment period. These codes are released to the public through the October and January OPPS quarterly update CRs and via the CMS HCPCS Web site (for Level II HCPCS codes). For CY 2018, these codes are flagged with comment indicator “NI” in Addendum B to this OPPS/ASC final rule with comment period to indicate that we are assigning them an interim payment status which is subject to public comment. Specifically, the status indicators and the APC assignments for codes flagged with comment indicator “NI” are open to public comment in this final rule with comment period, and we will respond to these public comments in the OPPS/ASC final rule with comment period for the next year’s OPPS/ASC update. In the CY 2018 OPPS/ASC proposed rule (82 FR 33603), we proposed to continue this process for CY 2018. Specifically, for CY 2018, we proposed to include in Addendum B to the CY 2018 OPPS/ASC final rule with comment period the following new HCPCS codes:

- New Level II HCPCS codes effective October 1, 2017, that would be incorporated in the October 2017 OPPS quarterly update CR; and
- New Level II HCPCS codes effective January 1, 2018, that would be incorporated in the January 2018 OPPS quarterly update CR.

As stated above, the October 1, 2017 and January 1, 2018 codes are flagged with comment indicator “NI” in Addendum B to this CY 2018 OPPS/ASC final rule with comment period to indicate that we have assigned these codes an interim OPPS payment status for CY 2018. We are inviting public comments on the interim status indicator and APC assignments for these codes, if applicable, that will be finalized in the CY 2019 OPPS/ASC final rule with comment period.

4. Treatment of New and Revised Category I and III CPT Codes That Will Be Effective January 1, 2018 for Which We Solicited Public Comments in the CY 2018 OPPS/ASC Proposed Rule

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66841 through 66844), we finalized a revised process of assigning APC and status indicators for new and revised Category I and III CPT codes that would be effective January 1. Specifically, for the new/revised CPT codes that we receive in a timely manner from the AMA’s CPT Editorial Panel, we finalized our proposal to include the codes that would be effective January 1 in the OPPS/ASC proposed rules, along with proposed APC and status indicator assignments for them, and to finalize the APC and status indicator assignments in the OPPS/ASC final rules beginning with the CY 2016 OPPS update. For those new/revised CPT codes that were received too late for inclusion in the OPPS/ASC proposed rule, we finalized our proposal to establish and use HCPCS G-codes that mirror the predecessor CPT codes and retain the current APC and status indicator assignments for a year until we can propose APC and status indicator assignments in the following year’s rulemaking cycle. We note that even if we find that we need to create HCPCS G-codes in place of certain CPT codes for the MPFS proposed rule, we do not anticipate that these HCPCS G-codes will always be necessary for OPPS purposes. We will make every effort to include proposed APC and status indicator assignments for all new and revised CPT codes that the AMA makes publicly available in time for us to include them in the proposed rule, and to avoid the resort to HCPCS G-codes and the resulting delay in utilization of the most current CPT codes. Also, we finalized our proposal to make interim APC and status indicator assignments for CPT codes that are not available in time for the proposed rule and that describe wholly new services (such as new technologies or new surgical procedures), solicit public comments, and finalize the specific APC and status indicator assignments for those codes in the following year’s final rule.

For the CY 2018 OPPS update, we received the CY 2018 CPT codes from AMA in time for inclusion in the CY 2018 OPPS/ASC proposed rule. The new, revised, and deleted CY 2018 Category I and III CPT codes were included in Addendum B to the CY 2018 OPPS/ASC proposed rule (which is available via the Internet on the CMS Web site). We noted in the proposed

rule that the new and revised codes are assigned to new comment indicator “NP” to indicate that the code is new for the next calendar year or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to the current calendar year with a proposed APC assignment, and that comments will be accepted on the proposed APC assignment and status indicator.

Further, in the CY 2018 OPPS/ASC proposed rule, we reminded readers that the CPT code descriptors that appear in Addendum B are short descriptors and do not fully describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors for the new and revised CY 2018 CPT codes in Addendum O to the proposed rule (which is available via the Internet on the CMS Web site) so that the public could adequately comment on our proposed APCs and status indicator assignments. We indicated that the 5-digit placeholder codes were included in Addendum O, specifically under the column labeled “CY 2018 OPPS/ASC Proposed Rule 5-Digit AMA Placeholder Code,” to the proposed rule. We stated that the final CPT code numbers will be included in the CY 2018 OPPS/ASC final rule with comment period. We noted that not every code listed in Addendum O is subject to comment. For the new and revised Category I and III CPT codes, we requested comments on only those codes that are assigned to comment indicator “NP”. We indicated that public comments would not be accepted for new Category I CPT laboratory codes that were not assigned to the “NP” comment indicator in Addendum O to the proposed rule. We stated that comments to these codes must be submitted at the Clinical Laboratory Fee Schedule (CLFS) Public Meeting, which was scheduled on July 31–August 1, 2017.

In summary, we solicited public comments on the proposed APC and status indicator assignments for the new and revised Category I and III CPT codes that will be effective January 1, 2018. The CPT codes were listed in Addendum B to the proposed rule with short descriptors only. We listed them again in Addendum O to the proposed rule with long descriptors. We also proposed to finalize the status indicator and APC assignments for these codes (with their final CPT code numbers) in the CY 2018 OPPS/ASC final rule with comment period.

Commenters addressed several of the new CPT codes that were assigned to comment indicator “NP” in Addendum

B to the CY 2018 OPSS/ASC proposed rule. We have responded to those public comments in sections II.A.2.b. (Comprehensive APCs), III.D. (OPSS APC-Specific Policies), V. (OPSS Payment Changes for Drugs, Biologicals, and Radiopharmaceuticals), and XII. (Updates to the ASC Payment System) of this CY 2018 OPSS/ASC final rule with comment period.

The final status indicators, APC assignments, and payment rates for the new CPT codes that are effective January 1, 2018 can be found in Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site). In addition, the status indicator meanings can be found in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site).

B. OPSS Changes—Variations Within APCs

1. Background

Section 1833(t)(2)(A) of the Act requires the Secretary to develop a classification system for covered hospital outpatient department services. Section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered OPD services within this classification system, so that services classified within each group are comparable clinically and with respect to the use of resources. In accordance with these provisions, we developed a grouping classification system, referred to as Ambulatory Payment Classifications (APCs), as set forth in § 419.31 of the regulations. We use Level I and Level II HCPCS codes to identify and group the services within each APC. The APCs are organized such that each group is homogeneous both clinically and in terms of resource use. Using this classification system, we have established distinct groups of similar services. We also have developed separate APC groups for certain medical devices, drugs, biologicals, therapeutic radiopharmaceuticals, and brachytherapy devices that are not packaged into the payment for the procedure.

We have packaged into the payment for each procedure or service within an APC group the costs associated with those items and services that are typically ancillary and supportive to a primary diagnostic or therapeutic modality and, in those cases, are an integral part of the primary service they support. Therefore, we do not make separate payment for these packaged items or services. In general, packaged

items and services include, but are not limited to, the items and services listed in § 419.2(b) of the regulations. A further discussion of packaged services is included in section II.A.3. of this final rule with comment period.

Under the OPSS, we generally pay for covered hospital outpatient services on a rate-per-service basis, where the service may be reported with one or more HCPCS codes. Payment varies according to the APC group to which the independent service or combination of services is assigned. In the CY 2018 OPSS/ASC proposed rule (82 FR 33604), for CY 2018, we proposed that each APC relative payment weight represents the hospital cost of the services included in that APC, relative to the hospital cost of the services included in APC 5012 (Clinic Visits and Related Services). The APC relative payment weights are scaled to APC 5012 because it is the hospital clinic visit APC and clinic visits are among the most frequently furnished services in the hospital outpatient setting.

2. Application of the 2 Times Rule

Section 1833(t)(9)(A) of the Act requires the Secretary to review, not less often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments described in paragraph (2) to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act also requires the Secretary to consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to review (and advise the Secretary concerning) the clinical integrity of the APC groups and the relative payment weights. We note that the HOP Panel recommendations for specific services for the CY 2018 OPSS and our responses to them are discussed in the relevant specific sections throughout this final rule with comment period.

In addition, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest cost for an item or service in the group is more than 2 times greater than the lowest cost for an item or service within the same group (referred to as the “2 times rule”). The statute authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as low-volume items and services (but the Secretary may not make such an exception in the case of a drug or

biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act).

Therefore, in accordance with section 1833(t)(2) of the Act and § 419.31 of the regulations, we annually review the items and services within an APC group to determine if there are any APC violations of the 2 times rule and whether there are any appropriate revisions to APC assignments that may be necessary or exceptions to be made. In determining the APCs with a 2 times rule violation, we consider only those HCPCS codes that are significant based on the number of claims. We note that, for purposes of identifying significant procedure codes for examination under the 2 times rule, we consider procedure codes that have more than 1,000 single major claims or procedure codes that have both greater than 99 single major claims and contribute at least 2 percent of the single major claims used to establish the APC cost to be significant (75 FR 71832). This longstanding definition of when a procedure code is significant for purposes of the 2 times rule was selected because we believe that a subset of 1,000 claims (or less than 1,000 claims) is negligible within the set of approximately 100 million single procedure or single session claims we use for establishing costs. Similarly, a procedure code for which there are fewer than 99 single claims and which comprises less than 2 percent of the single major claims within an APC will have a negligible impact on the APC cost. In the CY 2018 OPSS/ASC proposed rule (81 FR 33604 through 33605), we proposed to make exceptions to this limit on the variation of costs within each APC group in unusual cases, such as low-volume items and services.

For the CY 2018 OPSS update, we identified the APCs with violations of the 2 times rule, and we proposed changes to the procedure codes assigned to these APCs in Addendum B to the CY 2018 OPSS/ASC proposed rule. We noted that Addendum B did not appear in the printed version of the **Federal Register** as part of the CY 2018 OPSS/ASC proposed rule. Rather, it was published and made available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html>. In these cases, to eliminate a violation of the 2 times rule or to improve clinical and resource homogeneity, in the CY 2018 OPSS/ASC proposed rule (81 FR 33604 through 33605), we proposed to reassign these procedure codes to new APCs that contain services that are similar with regard to both their clinical and

resource characteristics. In many cases, the proposed procedure code reassignments and associated APC reconfigurations for CY 2018 included in the proposed rule are related to changes in costs of services that were observed in the CY 2016 claims data newly available for CY 2018 ratesetting. We also proposed changes to the status indicators for some procedure codes that were not specifically and separately discussed in the proposed rule. In these cases, we proposed to change the status indicators for these procedure codes because we believe that another status indicator would more accurately describe their payment status from an OPPS perspective based on the policies that we proposed for CY 2018. Addendum B to the CY 2018 OPPS/ASC proposed rule identified with the comment indicator "CH" those procedure codes for which we proposed a change to the APC assignment or status indicator, or both, that were initially assigned in the July 1, 2017 OPPS Addendum B update (available via the Internet on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Addendum-A-and-Addendum-B-Updates.html>). Addendum B to this final rule with comment period (available via the Internet on the CMS Web site) identifies with the "CH" comment indicator the final CY 2018 changes compared to the HCPCS codes' status as reflected in the October 2017 Addendum B update.

3. APC Exceptions to the 2 Times Rule

Taking into account the APC changes that we proposed for CY 2018, we reviewed all of the APCs to determine which APCs would not meet the requirements of the 2 times rule. We used the following criteria to evaluate whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity;
- Clinical homogeneity;
- Hospital outpatient setting utilization;
- Frequency of service (volume); and
- Opportunity for upcoding and code fragments.

Based on the CY 2016 claims data available for the CY 2018 proposed rule, we found 12 APCs with violations of the 2 times rule. We applied the criteria as described above to identify the APCs for which we proposed to make exceptions under the 2 times rule for CY 2018, and found that all of the 12 APCs we identified met the criteria for an exception to the 2 times rule based on the CY 2016 claims data available for the proposed rule. We did not include in that determination those APCs where

a 2 times rule violation was not a relevant concept, such as APC 5401 (Dialysis), which only has two HCPCS codes assigned to it that have similar geometric mean costs and do not create a 2 times rule violation. Therefore, we have only identified those APCs, including those with criteria-based costs, such as device-dependent CPT/HCPCS codes, with 2 times rule violations.

We note that, for cases in which a recommendation by the HOP Panel appears to result in or allow a violation of the 2 times rule, we may accept the HOP Panel's recommendation because those recommendations are based on explicit consideration (that is, a review of the latest OPPS claims data and group discussion of the issue) of resource use, clinical homogeneity, site of service, and the quality of the claims data used to determine the APC payment rates.

Table 16 of the proposed rule listed the 12 APCs for which we proposed to make exceptions under the 2 times rule for CY 2018 based on the criteria cited above and claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. We indicated that, for the final rule with comment period, we intended to use claims data for dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017, and updated CCRs, if available.

Based on the updated final rule CY 2016 claims data used for this CY 2018 final rule with comment period, we were able to remedy 6 APC violations out of the 12 APCs that appeared in Table 16 of the CY 2018 OPPS/ASC proposed rule. Specifically, we found that the following 6 APCs no longer met the criteria for exception to the 2 times rule in this final rule with comment period:

- APC 5161 (Level 1 ENT Procedures);
- APC 5311 (Level 1 Lower GI Procedures);
- APC 5461 (Level 1 Neurostimulator and Related Procedures);
- APC 5573 (Level 3 Imaging with Contrast);
- APC 5611 (Level 1 Therapeutic Radiation Treatment Preparation); and
- APC 5735 (Level 5 Minor Procedures).

Secondly, based on our analysis of the final rule claims data, we found a total of 11 APCs with violations of the 2 times rule. Of these 11 total APCs, 6 were identified in the proposed rule and 5 are newly identified APCs. Specifically, we found the following 6 APCs from the proposed rule continued

to have violations of the 2 times rule for this final rule with comment period:

- APC 5112 (Level 2 Musculoskeletal Procedures);
- APC 5521 (Level 1 Imaging without Contrast);
- APC 5691 (Level 1 Drug Administration);
- APC 5731 (Level 1 Minor Procedures);
- APC 5771 (Cardiac Rehabilitation); and
- APC 5823 (Level 3 Health and Behavior Services).

In addition, we found that the following 5 additional APCs violated the 2 times rule using the final rule with comment period claims data:

- APC 5522 (Level 2 Imaging without Contrast);
- APC 5524 (Level 4 Imaging without Contrast);
- APC 5571 (Level 1 Imaging with Contrast);
- APC 5721 (Level 1 Diagnostic Tests and Related Services); and
- APC 5732 (Level 2 Minor Procedures).

Comment: Some commenters requested that CMS not adopt the exception to C-APCs, including C-APC 5112 (Level 2 Musculoskeletal Procedures), because they believed it would result in lowering the payments for the procedures assigned to C-APCs. According to the commenters, because C-APCs involve complex combinations of items and services where appropriate valuation is critical, CMS should not adopt exceptions that have the result of lowering the overall payment rate for associated procedures. Instead, as one commenter suggested, CMS should establish additional APC levels to avoid any exceptions to the 2 times rule.

Response: We do not agree that we should establish a new APC for every group that violates the 2 times rule. We believe that excepting certain APCs from the 2 times rule is necessary, especially for procedures assigned to the same APC based on clinical homogeneity. As we have seen throughout the years since the implementation of the OPPS on August 1, 2000, APCs excepted in one year are usually resolved the following year based on our analysis of the latest claims data used for ratesetting. For example, we listed C-APC 5165 (Level 5 ENT Procedures) in Table 19 of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70374) as one of the APCs that violated the 2 times rule for CY 2016. However, this same APC no longer appeared in Table 9 of the CY 2017 OPPS/ASC final rule with comment period (81 FR 79614) as excepted from the 2 times rule. We

believe that the anomalies seen in one year but not the next year for a given APC are the result of more accurate coding and charge master identification by HOPDs.

After considering the public comments we received on APC assignments and our analysis of the CY 2016 costs from hospital claims and cost report data available for this CY 2018 final rule with comment period, we are finalizing our proposals with some modifications. Specifically, we are finalizing our proposal to except 6 of the 12 proposed APCs from the 2 times rule for CY 2018 (APCs 5112, 5521, 5691, 5731, 5771, and 5823), and also excepting 5 additional APCs (APCs 5522, 5524, 5571, 5721, and 5732). As noted above, we were able to remedy the other 6 of the proposed rule 2 time violations in this final rule with comment period.

Table 14 below lists the 11 APCs that we are excepting from the 2 times rule for CY 2018 based on the criteria described earlier and a review of updated claims data for dates of service between January 1, 2016 and December 31, 2016, that were processed on or before June 30, 2017, and updated CCRs, if available. We note that, for cases in which a recommendation by the HOP Panel appears to result in or allow a violation of the 2 times rule, we generally accept the HOP Panel's recommendation because those recommendations are based on explicit consideration of resource use, clinical homogeneity, site of service, and the quality of the claims data used to determine the APC payment rates. The geometric mean costs for hospital outpatient services for these and all other APCs that were used in the development of this final rule with comment period can be found on the CMS Web site at: <http://www.cms.gov>.

5823	Level 3 Health and Behavior Services.

C. New Technology APCs

1. Background

In the November 30, 2001 final rule (66 FR 59903), we finalized changes to the time period in which a service can be eligible for payment under a New Technology APC. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected.

For CY 2017, there are 51 New Technology APC levels, ranging from the lowest cost band assigned to APC 1491 (New Technology—Level 1A (\$0–\$10)) through the highest cost band assigned to APC 1906 (New Technology—Level 51 (\$140,001–\$160,000)). In the CY 2004 OPSS final rule with comment period (68 FR 63416), we restructured the New Technology APCs to make the cost intervals more consistent across payment levels and refined the cost bands for these APCs to retain two parallel sets of New Technology APCs, one set with a status indicator of “S” (Significant Procedures, Not Discounted when Multiple. Paid under OPSS; separate APC payment) and the other set with a status indicator of “T” (Significant Procedure, Multiple Reduction Applies. Paid under OPSS; separate APC payment). These current New Technology APC configurations allow us to price new technology services more appropriately and consistently.

We note that the cost bands for the New Technology APCs, specifically, APCs 1491 through 1599 and 1901 through 1906, vary with increments ranging from \$10 to \$19,999. These cost bands identify the APCs to which new technology procedures and services with estimated service costs that fall within those cost bands are assigned under the OPSS. Payment for each APC is made at the mid-point of the APC's assigned cost band. For example, payment for New Technology APC 1507 (New Technology—Level 7 (\$501–\$600)) is made at \$550.50.

Every year, we receive several requests for higher payment amounts under the New Technology APCs for specific procedures paid under the OPSS because they require the use of expensive equipment. As we did in the CY 2018 OPSS/ASC proposed rule, we

are taking this opportunity to reiterate our response, in general, to the issue of hospitals' capital expenditures as they relate to the OPSS and Medicare, as specified in the CY 2016 OPSS/ASC final rule with comment period (80 FR 70374).

Under the OPSS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPSS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital inpatient market basket increase. We believe that our payment rates generally reflect the costs that are associated with providing care to Medicare beneficiaries. Furthermore, we believe that our payment rates are adequate to ensure access to services (80 FR 70374).

For many emerging technologies, there is a transitional period during which utilization may be low, often because providers are first learning about the techniques and their clinical utility. Quite often, parties request that Medicare make higher payment amounts under the New Technology APCs for new procedures in that transitional phase. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. For the OPSS, we rely on hospitals to make informed business decisions regarding the acquisition of high-cost capital equipment, taking into consideration their knowledge about their entire patient base (Medicare beneficiaries included) and an understanding of Medicare's and other payers' payment policies. (We refer readers to the CY 2013 OPSS/ASC final rule with comment period (77 FR 68314) for further discussion regarding this payment policy.)

We note that, in a budget neutral environment, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its

initial payment rates, including those made through New Technology APCs, for new services that lack hospital claims data based on realistic utilization projections for all such services delivered in cost-efficient hospital outpatient settings. As the OPSS acquires claims data regarding hospital costs associated with new procedures, we regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPSS payments remain appropriate for procedures as they transition into

mainstream medical practice (77 FR 68314).

2. Revised and Additional New Technology APC Groups

As stated earlier, for CY 2017, there are currently 51 levels of New Technology APCs. To improve our ability to have payments for services over \$100,000 more closely match the cost of the service, in the CY 2018 OPSS/ASC proposed rule (82 FR 33606), for CY 2018, we proposed to narrow the increments for New Technology APCs 1901–1906 from \$19,999 cost bands to \$14,999 cost bands. We also proposed to add New Technology APCs 1907 and

1908 (New Technology Level 52 (\$145,001–\$160,000), which would allow for an appropriate payment of retinal prosthesis implantation procedures, which is discussed later in this section. Table 17 of the proposed rule included the complete list of the proposed modified and additional New Technology APC groups for CY 2018.

We did not receive any public comments on our proposal. Therefore, we are finalizing the proposal, without modification. Table 15 below includes the complete list of the final modified and additional New Technology APC groups for CY 2018.

TABLE 15—CY 2018 ADDITIONAL NEW TECHNOLOGY APC GROUPS

CY 2018 APC	CY 2018 APC title	CY 2018 SI	Updated or new APC
1901	New Technology—Level 49 (\$100,001–\$115,000)	S	Updated.
1902	New Technology—Level 49 (\$100,001–\$115,000)	T	Updated.
1903	New Technology—Level 50 (\$115,001–\$130,000)	S	Updated.
1904	New Technology—Level 50 (\$115,001–\$130,000)	T	Updated.
1905	New Technology—Level 51 (\$130,001–\$145,000)	S	Updated.
1906	New Technology—Level 51 (\$130,001–\$145,000)	T	Updated.
1907	New Technology—Level 52 (\$145,001–\$160,000)	S	New.
1908	New Technology—Level 52 (\$145,001–\$160,000)	T	New.

The final payment rates for New Technology APCs 1901 through 1908 are included in Addendum A to this final rule with comment period (which is available via the Internet on the CMS Web site).

3. Procedures Assigned to New Technology APC Groups for CY 2018

As we explained in the CY 2002 OPSS final rule with comment period (66 FR 59902), we generally retain a procedure in the New Technology APC to which it is initially assigned until we have obtained sufficient claims data to justify reassignment of the procedure to a clinically appropriate APC.

In addition, in cases where we find that our initial New Technology APC assignment was based on inaccurate or inadequate information (although it was the best information available at the time), where we obtain new information that was not available at the time of our initial New Technology APC assignment, or where the New Technology APCs are restructured, we may, based on more recent resource utilization information (including claims data) or the availability of refined New Technology APC cost bands, reassign the procedure or service to a different New Technology APC that more appropriately reflects its cost (66 FR 59903).

Consistent with our current policy, for CY 2018, in the CY 2018 OPSS/ASC proposed rule (82 FR 33606), we

proposed to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment of the service to a clinically appropriate APC. The flexibility associated with this policy allows us to reassign a service from a New Technology APC in less than 2 years if sufficient claims data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient claims data upon which to base a decision for reassignment have not been obtained (66 FR 59902).

a. Magnetic Resonance-Guided Focused Ultrasound Surgery (MRgFUS) (APCs 1537, 5114, and 5414)

As discussed in the CY 2018 OPSS/ASC proposed rule (82 FR 33607), currently, there are four CPT/HCPCS codes that describe magnetic resonance image guided high intensity focused ultrasound (MRgFUS) procedures, three of which we proposed to continue to assign to standard APCs and one of which we proposed to continue to assign to a New Technology APC for CY 2018. These codes include CPT codes 0071T, 0072T, and 0398T, and HCPCS code C9734. CPT codes 0071T and 0072T are used for the treatment of uterine fibroids, CPT code 0398T is used for the treatment of essential tremor, and HCPCS code C9734 is used

for pain palliation for metastatic bone cancer.

As shown in Table 18 of the proposed rule, and as listed in Addendum B of the CY 2018 OPSS/ASC proposed rule, we proposed to continue to assign CPT codes 0071T and 0072T to APC 5414 (Level 4 Gynecologic Procedures), with a proposed payment rate of approximately \$2,189 for CY 2018. We also proposed to continue to assign the APC to status indicator “J1” (Hospital Part B services paid through a comprehensive APC) to indicate that all covered Part B services on the claim are packaged with the payment for the primary “J1” service for the claim, except for services assigned to OPSS status indicator “F”, “G”, “H”, “L”, and “U”; ambulance services; diagnostic and screening mammography; all preventive services; and certain Part B inpatient services. In addition, we proposed to continue to assign HCPCS code C9734 (Focused ultrasound ablation/therapeutic intervention, other than uterine leiomyomata, with magnetic resonance (mr) guidance) to APC 5114 (Level 4 Musculoskeletal Procedures), with a proposed payment rate of approximately \$5,385 for CY 2018. We also proposed to continue to assign HCPCS code C9734 to status indicator “J1”.

Further, we proposed to continue to assign CPT code 0398T to APC 1537 (New Technology—Level 37 (\$9,501–

\$10,000)), with a proposed payment rate of \$9,750.50 for CY 2018. At the time the proposed rule was developed, there was only one claim for CPT code 0398T with a geometric mean cost of \$27,516. We referred readers to Addendum B to the proposed rule for the proposed payment rates for all codes reportable under the OPPIs. Addendum B is available via the Internet on the CMS Web site.

Comment: Several commenters stated that the proposed payment rate for CPT code 0398T is too low and recommended that CPT code 0398T be assigned to either New Technology APC 1578 (New Technology—Level 41 (\$25,001–\$30,000)) or APC 5464 (Level 4 Neurostimulator and Related Procedures), which have payment rates closer to the reported cost of the procedure of \$27,500 based on the one claim available at the time of the development of the proposed rule. Commenters also noted that the resources required for the procedure described by CPT code 0398T are substantially more than the resources required for the procedure described by CPT code C9734, which had been used by CMS to attempt to model the cost of the procedure described by CPT code 0398T.

Response: We appreciate the concerns of the commenters and, for the reasons set forth below, agree that the proposed payment rate for CPT code 0398T may be too low and the procedure should be reassigned to a different APC. The proposed payment rate for CPT code 0398T was based on the payment rate for HCPCS code C9734 because the

MRgFUS equipment used in the performance of the procedure described by CPT code 0398T is very similar to the MRgFUS equipment used in the performance of the procedure described by HCPCS code C9734. Both machines are made by the same manufacturer (81 FR 79642). However, based on information from the manufacturer, resources involved for the procedure described by CPT code 0398T appear to be higher than those involved for the procedure described by HCPCS code C9734. In addition, we still have concerns that the costs reported from the one claim for the procedure described by CPT code 0398T may not accurately reflect the geometric mean costs of the procedure. However, the geometric mean cost of \$29,254 for the one claim means the cost of CPT code 0398T is substantially higher than the proposed payment rate of \$9,750.50. We note that, for CY 2017, the manufacturer indicated that an appropriate payment for the procedure described by CPT code 0398T would be approximately \$18,000 and that either a New Technology APC paying that amount or assignment to clinical APC 5463 (Level 3 Neurostimulator and Related Procedures) would be appropriate. Based on the presence of only one claim along with the reported costs associated with the procedure described by CPT code 0398T presented to us last year by the manufacturer, we believe that it is appropriate to assign the procedure described by CPT code 0398T to APC 1576 (New Technology—Level 39 (\$15,001–\$20,000)), with a payment rate of \$17,500.50 for CY 2018. The

continued New Technology APC assignment will allow time to collect more claims data before assigning CPT code 0398T to a clinical APC.

Comment: One commenter supported the proposal to assign CPT code C9734 to APC 5114.

Response: We appreciate the commenter’s support.

In summary, after consideration of the public comments we received, we are modifying our proposal for the APC assignment of CPT code 0398T. Instead of continuing to assign this code to New Technology APC 1537 (New Technology—Level 37 (\$9,501–\$10,000)), with a payment rate of \$9,750.50, for CY 2018, we are reassigning CPT code 0398T to New Technology APC 1576 (New Technology—Level 39 (\$15,001–\$20,000)), with a payment rate of \$17,500.50. In addition, we are finalizing our proposal, without modification, to reassign HCPCS code C9734 to APC 5114. We did not receive any public comments related to our proposal for CPT codes 0071T and 0072T. Therefore, we are finalizing our proposal to continue to assign these CPT codes to APC 5414 without modification. Table 16 below lists the final CY 2018 status indicator and APC assignments for the magnetic resonance image guided high intensity focused ultrasound (MRgFUS) procedures. We refer readers to Addendum B of this final rule with comment period for the final payment rates for all codes reportable under the OPPIs. Addendum B is available via the Internet on the CMS Web site.

TABLE 16—CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR THE MAGNETIC RESONANCE IMAGE GUIDED HIGH INTENSITY FOCUSED ULTRASOUND (MRgFUS) PROCEDURES

CPT/HCPCS code	Long descriptor	CY 2017 OPPIs SI	CY 2017 OPPIs APC	CY 2017 OPPIs payment rate	CY 2018 OPPIs SI	CY 2018 OPPIs APC	CY 2018 OPPIs payment rate
0071T	Focused ultrasound ablation of uterine leiomyomata, including mr guidance; total leiomyomata volume less than 200 cc of tissue.	J1	5414	\$2,084.59	J1	5414	Refer to OPPIs Addendum B.
0072T	Focused ultrasound ablation of uterine leiomyomata, including mr guidance; total leiomyomata volume greater or equal to 200 cc of tissue.	J1	5414	2,084.59	J1	5414	Refer to OPPIs Addendum B.

c. Retinal Prosthesis Implant Procedure

CPT code 0100T (Placement of a subconjunctival retinal prosthesis receiver and pulse generator, and implantation of intra-ocular retinal electrode array, with vitrectomy) describes the implantation of a retinal prosthesis, specifically, a procedure involving the use of the Argus® II Retinal Prosthesis System. This first retinal prosthesis was approved by the FDA in 2013 for adult patients diagnosed with advanced retinitis pigmentosa. Pass-through payment status was granted for the Argus® II device under HCPCS code C1841 (Retinal prosthesis, includes all internal and external components) beginning October 1, 2013, and this status expired on December 31, 2015. We note that after pass-through payment status expires for a medical device, the payment for the device is packaged into the payment for the associated surgical procedure. Consequently, for CY 2016, the device described by HCPCS code C1841 was assigned to OPPTS status indicator “N” to indicate that payment for the device is packaged and included in the payment rate for the surgical procedure described by CPT code 0100T. For CY 2016, CPT code 0100T was assigned to New Technology APC 1599 with a payment rate of \$95,000, which was the highest paying New Technology APC for that year. This payment includes both the surgical procedure (CPT code 0100T) and the use of the Argus® II device (HCPCS code C1841). However, stakeholders (including the device manufacturer and hospitals) believed that the CY 2016 payment rate for the procedure involving the Argus® II System was insufficient to cover the hospital cost of performing the procedure, which includes the cost of the retinal prosthesis with a retail price of approximately \$145,000.

For CY 2017, analysis of the CY 2015 OPPTS claims data used for the CY 2017 final rule with comment period showed 9 single claims (out of 13 total claims) for CPT code 0100T, with a geometric

mean cost of approximately \$142,003 based on claims submitted between January 1, 2015, through December 31, 2015, and processed through June 30, 2016. Based on the CY 2015 OPPTS claims data available for the final rule with comment period and our understanding of the Argus® II procedure, we reassigned CPT code 0100T from New Technology APC 1599 to New Technology APC 1906, with a final payment rate of \$150,000.50 for CY 2017. We noted that this payment rate included the cost of both the surgical procedure (CPT code 0100T) and the retinal prosthesis device (HCPCS code C1841).

As discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33607 through 33608), for the CY 2018 update, analysis of the CY 2016 OPPTS claims data used for the CY 2018 proposed rule showed 3 single claims (out of 3 total claims) for CPT code 0100T, with a geometric mean cost of approximately \$116,239 based on the claims submitted between January 1, 2016 through December 31, 2016, and processed through December 31, 2016. We stated in the proposed rule that, for the CY 2018 OPPTS/ASC final rule with comment period, the final payment rate would be based on claims submitted between January 1, 2016 and December 31, 2016, and processed through June 30, 2017.

In the proposed rule, based on the CY 2016 OPPTS claims data available, which showed a geometric mean cost of approximately \$116,239, we proposed to reassign the Argus® II procedure to a New Technology APC with a payment band that covers the geometric mean cost of the procedure. Therefore, we proposed to reassign CPT code 0100T to APC 1904 (New Technology—Level 50 (\$115,001–\$130,000)), with a proposed payment of \$122,500.50 for CY 2018. We invited public comments on this proposal.

Comment: One commenter, the manufacturer, opposed the proposal to reassign CPT code 0100T to APC 1904, with a proposed payment of

\$122,500.50 for CY 2018. Instead, the commenter requested that CMS reassign CPT code 0100T to a New Technology APC that would establish a payment rate near the CY 2017 payment rate of \$150,000.50. The commenter stated that the estimated cost of the service generated from 3 claims reported in CY 2016 is much lower than the actual cost of the procedure. The commenter believed the lower cost of the procedure described by CPT code 0100T is a result of CMS’ decision to set the payment rate of the procedure at \$95,000 for CY 2016 based on 2 claims, for which the submitting hospital stated the charges reported were mistakenly low. The commenter asserted that the lower payment rate forced the manufacturer of the Argus® II to provide a substantial discount for the device, which is reflected in the lower reported cost for the Argus® II procedure in CY 2016. This commenter and a second commenter were concerned with the high level of variation in payment for a low volume service like the Argus® II procedure from year to year. The commenters requested payment of approximately \$150,000 for CPT code 0100T in CY 2018 to break the cycle of extremely volatile year-to-year shifts of the payment for the procedure described by this CPT code and noted its expectation that claims for CY 2017 (which would be used for the CY 2019 rulemaking) would reflect a significantly higher average cost than those for CY 2016.

Response: We understand the concerns of the commenters. The reported cost of the Argus® II procedure based on the updated CY 2016 hospital outpatient claims data, which include additional claims received after issuance of the CY 2018 proposed rule and finalized as of June 30, 2017, is approximately \$94,455, which is more than \$55,000 less than the payment rate for the procedure in CY 2017. We note that the costs of the Argus® II procedure are extraordinarily high compared to many other procedures paid under the OPPTS. In addition, the number of claims

submitted has, to date, been very low and has not exceeded 10 claims. We believe it is important to mitigate significant payment differences, especially shifts of several tens of thousands of dollars, while also basing payment rates on available costs information and claims data. In CY 2016, the payment rate for the Argus® II procedure was \$95,000.50. The payment rate increased to \$150,000.50 in CY 2017. For CY 2018, we proposed a payment rate of \$122,500.50 based on the most recent claims data available at the time of the development of the proposed rule. However, if we were to assign the payment rate based on updated final rule claims data, the payment rate would decrease, to \$95,000.50 for CY 2018, a decrease of \$55,000 relative to CY 2017. We are concerned that these large changes in payment could potentially create an access to care issue for the Argus® II procedure. While we believe that the proposed payment rate of \$122,500.50 is a significant decrease, we believe that it would be appropriate to finalize the proposed rate to mitigate a much sharper decline in payment from one year to the next (as well as from the proposed rule to the final rule).

In accordance with section 1833(t)(2)(B) of the Act, we must establish that services classified within each APC are comparable clinically and with respect to the use of resources. Accordingly, we are using our equitable adjustment authority under section 1833(t)(2)(E) of the Act, which states that the Secretary shall establish, in a budget neutral manner, other adjustments as determined to be necessary to ensure equitable payments, to maintain the proposed rate for this procedure, despite the lower geometric mean costs available in the claims data used for this final rule with comment period. As stated earlier, we believe that

this situation is unique, given the high cost and very limited number of claims for the procedure. Therefore, for CY 2018, we are reassigning the Argus® II procedure to APC 1904 (New Technology—Level 50 (\$115,001–\$130,000)). This APC assignment will establish a payment rate for the Argus® II procedure of \$122,500.50, which is the arithmetic mean of the payment rates for the service for CY 2016 and CY 2017. As we do each year, we acquire claims data regarding hospital costs associated with new procedures. We regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPPI payments remain appropriate for procedures like the Argus® II procedure as they transition into mainstream medical practice (77 FR 68314).

After consideration of the public comments we received, we are finalizing our proposal to reassign CPT code 0100T to APC 1904 through use of our equitable adjustment authority. We are reassigning CPT code 0100T from APC 1906 (New Technology—Level 51 (\$140,001–\$160,000)), which has a final payment rate of \$150,000.50 for CY 2017, to APC 1904 (New Technology—Level 50 \$115,001–\$130,000)), which has a final payment rate of \$122,500.50 for CY 2018. We note this payment includes both the surgical procedure (CPT code 0100T) and the use of the Argus® II device (HCPCS code C1841).

d. Pathogen Test for Platelets

As stated in the CY 2018 OPPI/ASC proposed rule (82 FR 33608), the CMS HCPCS Workgroup established HCPCS code Q9987 (Pathogen(s) test for platelets), effective July 1, 2017. HCPCS code Q9987 will be used to report any test used to identify bacterial or other pathogen contamination in blood platelets. Currently, there is one test

approved by the FDA that is described by HCPCS code Q9987. The test is a rapid bacterial test, and the manufacturer estimates the cost of the test to be between \$26 and \$35. HCPCS code Q9987 was established after concerns from blood and blood product stakeholders that the previous CPT code used to describe pathogen tests for platelets, CPT code P9072 (Platelets, pheresis, pathogen reduced or rapid bacterial tested, each unit), inappropriately described rapid bacterial testing by combining the test with the pathogen reduction of platelets. CPT code P9072 is inactive effective on July 1, 2017.

In the CY 2018 OPPI/ASC proposed rule, we sought more information on the actual costs of pathogen tests for platelets before assigning HCPCS code Q9987 to a clinical APC. Effective July 1, 2017, HCPCS code Q9987 is assigned to New Technology APC 1493 (New Technology—Level 1C (\$21–\$30)), with a payment rate of \$25.50. We proposed to continue to assign HCPCS code Q9987 to New Technology APC 1493, with a proposed payment rate of \$25.50, until such time as claims data are available to support the assignment to a clinical APC. We invited public comments on this proposal.

Comment: Two commenters supported the proposal to continue to provide separate payment for HCPCS code Q9987.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to continue separate payment for HCPCS code Q9987 for CY 2018, with a modification that HCPCS code Q9987 will be replaced by HCPCS code P9100 (Pathogen(s) test for platelets). Table 17 below contains more information on the coding change.

TABLE 17—REPLACEMENT CODE FOR HCPCS CODE Q9987 AS OF JANUARY 1, 2018

CY 2017 HCPCS code	CY 2018 HCPCS code	CY 2018 long descriptor	Final CY 2018 SI	Final CY 2018 APC
Q9987	P9100	Pathogen(s) test for platelets	S	1493

e. Fractional Flow Reserve Derived From Computed Tomography (FFR_{CT})

For CY 2018, the AMA CPT Editorial Panel established four new CPT codes for fractional flow reserve derived from computed tomography (FFR_{CT}). Table 18 below lists the new CPT codes along with their complete descriptors. These codes were listed in Addendum B and Addendum O to the CY 2018 OPPI/ASC

proposed rule (which is available via the Internet on the CMS Web site). Addendum B included the proposed status indicator assignments for the new codes and their assignment to comment indicator “NP” (New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year,

proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code). Addendum O included the proposed/placeholder CY 2018 CPT codes and the long descriptors.

We note that the CPT code descriptors that appeared in Addendum B were short descriptors and did not fully describe the complete procedure,

service, or item identified for the CPT codes. Therefore, we included the 5-digit placeholder codes and their long descriptors in Addendum O to the proposed rule, specifically under the column labeled “CY 2018 OPPS/ASC Proposed Rule 5-Digit AMA Placeholder Code,” so that the public could adequately comment on our proposed APC and status indicator assignments. We also indicated that the final CPT

code numbers would be included in this CY 2018 OPPS/ASC final rule with comment period. The final CPT code numbers, along with their corresponding 5-digit placeholder codes, can be found in Table 19 below. As displayed in Table 18 and in Addendum B of the CY 2018 OPPS/ASC proposed rule, we proposed to assign CPT codes 0501T and 0504T to status indicator “M” (Not paid under OPPS;

Items and Services Not Billable to the MAC) to indicate that these services are not paid under the OPPS, and to assign CPT codes 0502T and 0503T to status indicator “N” (packaged) to indicate that the payment for these services is packaged into the primary service or procedure that is reported with the codes.

TABLE 18—PROPOSED CY 2018 STATUS INDICATOR (SI) ASSIGNMENT FOR THE NEW FFR_{CT} CPT CODES EFFECTIVE JANUARY 1, 2018

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Long descriptor	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment
0501T	02X4T	Non-invasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission, analysis of fluid dynamics and simulated maximal coronary hyperemia, generation of estimated FFR model, with anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report.	M	N/A	N/A
0502T	02X5T	Non-invasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; data preparation and transmission.	N	N/A	N/A
0503T	02X6T	Non-invasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated FFR model.	N	N/A	N/A
0504T	02X7T	Non-invasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; anatomical data review in comparison with estimated FFR model to reconcile discordant data, interpretation and report.	M	N/A	N/A

According to the FDA, FFR_{CT} uses post-processing software to create “a mathematically derived quantity, computed from simulated pressure, velocity and blood flow information obtained from a 3D computer model generated from static coronary CT images.”¹ FFR_{CT} is performed outside the outpatient hospital setting by HeartFlow, which uses proprietary software to conduct the analysis. Hospital outpatient providers use industry-leading protocols and technologies at every step to ensure protection of patient data and that the CT images are securely transferred to HeartFlow.² After FFR_{CT} is performed, a

report is generated that provides fractional flow reserve values throughout the coronary blood vessels, which allows providers to determine treatment strategies based on the findings of the report while considering the patient’s medical history, symptoms, and results of other diagnostic tests. The developer of FFR_{CT} first submitted an application for the procedure to be given a temporary procedure code and assigned to a New Technology APC in March 2016. CMS denied the developer’s application because we considered the FFR_{CT} procedure to be an image guidance, processing, supervision, or interpretation service whose payment should be packaged into the payment for the related computed tomography service, in accordance with our

regulations at 42 CFR 419.2(b)(13). The developer then filed a New Technology APC reconsideration request in March 2017 asking that CMS reverse its denial of the developer’s application to have the FFR_{CT} assigned to a New Technology APC. We reviewed the reconsideration request and denied the request for the same reason as we did in March 2016. In a New Technology APC application for HeartFlow for CY 2018, the developer of the FFR_{CT} service proposed that the service be reported with CPT code 0503T (Non-invasive estimated coronary fractional flow reserve (FFR) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of

¹ Available at: https://www.accessdata.fda.gov/cdrh_docs/reviews/DEN130045.pdf, page 1.
² Available at: <http://www.heartflow.com/>.

coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated FFR model) and requested that the service be assigned to APC 1517 (New Technology—Level 17 (\$1501–\$1600)), with a payment rate of \$1,550.50. Because both the initial New Technology APC application and the reconsideration request were denied, we did not describe the associated New Technology APC application for HeartFlow in the CY 2018 OPPS/ASC proposed rule.

Comment: Several commenters, including the developer of HeartFlow and some clinicians who have experience with it, supported having a FFR_{CT} service paid as a separate service and not packaged into the payment for the coronary computed tomography angiography. The commenters stated that FFR_{CT} is performed separately from a coronary computed tomography angiography by an independent testing company that is not affiliated with any outpatient hospital provider and is performed at locations owned by the testing company. These commenters noted that the service may be performed several days or weeks after the original coronary computed tomography angiography is performed. Also, commenters noted that several physician societies involved in cardiac care recognize FFR_{CT} as a separate service from a coronary computed tomography angiography and requested that new CPT codes 0501T, 0502T, 0503T, and 0504T be established for FFR_{CT} services, effective January 1, 2018. The commenters stated that the physician societies and the AMA determined that a coronary computed tomography angiography and a FFR_{CT} service are not connected services.

Commenters asserted that a FFR_{CT} service provides information that cannot be obtained from standard analysis of a coronary computed tomography angiography image. Several commenters stated that FFR_{CT} services can improve the quality of screening for coronary artery disease (CAD) while reducing costs. That is, the commenters stated that, unlike a coronary computed tomography angiography service, which merely produces images, the FFR_{CT} service is able to directly produce FFR_{CT} values by creating a 3-D model of the patient's coronary arteries using the previously acquired image. Moreover, the commenters contended that, because the FFR_{CT} service does not produce images, it is improper to package the costs of FFR_{CT} into the payment for the associated coronary computed tomography angiography service.

Commenters stated that, many times, a coronary computed tomography angiography indicates that a beneficiary may potentially have CAD and that without FFR_{CT}, providers will often request an invasive coronary angiogram to verify the presence of CAD. In many cases, the invasive coronary angiogram finds no occurrence of CAD. FFR_{CT} services can provide analytic services not otherwise available to determine fractional flow rates in coronary arteries using the original coronary computed tomography angiography image and show whether a beneficiary has CAD without performing a coronary procedure.

The developer also stated that hospitals incur a cost charged by HeartFlow of \$1,500 to perform the FFR_{CT} analysis, and certain other modest costs (for example, overhead for interpretation and entering results into medical record). Therefore, the commenters stated that bundling the payment for FFR_{CT} with the payment for the coronary computed tomography angiography imaging service would prevent hospitals from using FFR_{CT} because the payment rate for the bundled coronary computed tomography angiography service would be less than \$300. One commenter (the developer) requested that the service be assigned to APC 1517 (New Technology—Level 17 (\$1501–\$1600)), with a payment rate of \$1,550.50.

Some commenters, including the developer, stated that CMS did not properly interpret the regulation at 42 CFR 419.2(b)(13) in its previous decisions to deny the FFR_{CT} application and reconsideration request to receive separate payment in a New Technology APC. Specifically, the FFR_{CT} developer and other commenters stated that the FFR_{CT} service was not an image guidance service because CMS stated in prior preamble language that an image guidance service must produce images. The commenters stated that a FFR_{CT} service does not produce images, but instead produces FFR values. They stated that the FFR_{CT} service is also not an image processing service because such processing services help to compile diagnostic data to create an image, and noted that, although the FFR_{CT} service analyzes image data, it is not used to construct an anatomic image. In addition, the commenters asserted that the FFR_{CT} service is not an imaging supervision or interpretation service. The commenters believed that imaging supervision and interpretation services should be performed on the same day and at the provider location as the independent imaging service; whereas the FFR_{CT} service can be

performed days or weeks after the original coronary computed tomography angiography service is performed and is performed in a specialized location outside of hospital. In addition, the commenters stated that imaging supervision and interpretation services are for radiological services that are mostly billed with the CPT radiological code set (CPT codes 70000–79999) and the FFR_{CT} service is not a radiological service and does not involve supervision or interpretation.

Response: We appreciate the comments we have received about the FFR_{CT} service. We have reviewed our image packaging regulations under 42 CFR 419.2(b)(13). This regulation states, in relevant part, that in determining the packaged costs for hospital outpatient prospective payment rates, the prospective payment system establishes a national payment rate, standardized for geographic wage differences, that includes operating and capital-related costs that are integral, ancillary, supportive, dependent, or adjunctive to performing a procedure or furnishing a service on an outpatient basis. In general, these packaged costs may include, but are not limited to, among other items and services, image guidance, processing, supervision, and interpretation services, the payment for which are packaged or conditionally packaged into the payment for the related procedures or services.

After reviewing the public comments, we agree with the commenters that the FFR_{CT} service is not image guidance or supervision because FFR_{CT} does not produce images, does not appear to be a supportive guidance service that aids in the performance of an independent procedure, and, unlike typical supervision services, is not generally reported when the initial image is acquired. However, we are concerned that it may be image processing and/or interpretation. We discuss these concerns below.

With respect to image processing, in the CY 2008 OPPS/ASC interim and final rule with comment period, we stated that an “image processing service processes and integrates diagnostic test data that were captured during another independent procedure, usually one that is separately payable under the OPPS. The image processing service is not necessarily provided on the same date of service as the independent procedure. In fact, several of the image processing services that we proposed to package for CY 2008 do not need to be provided face-to-face with the patient in the same encounter as the independent service” (72 FR 66625). In addition, we stated that we believed it was important

to package payment for supportive dependent services that accompany independent services but that may not need to be provided face-to-face with the patient in the same encounter because the supportive services utilize data that were collected during the preceding independent services and packaging their payment encourages the most efficient use of hospital resources. We noted that we were particularly concerned with any OPSS payment policies that could encourage certain inefficient and more costly service patterns. In addition, we stated that packaging encourages hospitals to establish protocols that ensure that services are furnished only when they are medically necessary and to carefully scrutinize the services ordered by practitioners to minimize unnecessary use of hospital resources (72 FR 66625).

FFRCT services necessarily require the use of the prior coronary computed tomography angiography image; the fact that the FFRCT service is done on a different date, at a different site, and by nonhospital staff does not, in and of itself, mean that the service is separate and distinct, from the CCTA. This is especially true because it is using a prior image acquired by the hospital for the patient and is used for the same purpose to diagnose CAD.

With respect to imaging interpretation, as stated in the CY 2008 OPSS/ASC final rule with comment period (72 FR 66630), we define “imaging supervision and interpretation codes” as HCPCS codes for services that are defined as “radiological supervision and interpretation” in the radiology series, codes 70000 through 79999 of the book of AMA CPT codes, with the addition of some services in other code ranges of CPT, Category III CPT tracking codes, or Level II HCPCS codes that are clinically similar or directly crosswalk to codes defined as radiological supervision and interpretation services in the CPT radiology range. The current

CPT FFRCT codes are Category III codes, and we believe they may be clinically similar to codes in the 70000 through 79999 range of the AMA book of CPT codes.

Nonetheless, we were persuaded by the commenters that the FFRCT service is a separate and distinct service from the original coronary computed tomography angiography service and should receive separate payment. Specifically, the commenters provided additional details since the denial of the new technology reconsideration request that FFRCT is not covered by the image packaging regulations under 42 CFR 419.2(b)(13). Most of the additional detail focuses on whether FFRCT is an image processing service. In particular, the FFRCT service generates data on FFR values that can only be obtained by performing the FFRCT service. Accordingly, we now believe that the FFRCT service should not be considered to be an image processing service because the diagnostic output of the FFRCT service yields functional values (that is, FFR values), which reflect the drop in pressure across a narrowing in a coronary artery as opposed to anatomic images. The CY 2008 OPSS/ASC final rule with comment period (72 FR 66625) states that image processing covers “supportive dependent services to process and integrate diagnostic test data in the development of images, indicating that an image processing service must help develop or otherwise visually enhance an image and the FFRCT service does neither. Further, we agree that the quantitative diagnostic information about the function of the coronary arteries produced by the FFRCT service is not possible to derive from examining anatomic images of the arteries. Additionally, we agree with the commenters that the FFRCT service does not support the diagnostic output of CCTA. Notably, CPT code 0503T does not mention processing, interpretation, or supervision. Further, the FDA

clearance refers to the FFRCT service as “post-processing image analysis software . . . using graphics and text [FFRCT] to aid the clinician in the assessment of coronary artery disease.”

Therefore, we conclude, based on the information available to us at this time, that the costs of the FFRCT service, as described by CPT code 0503T, should not be a packaged service under the regulation at 42 CFR 419.2(b)(13). Accordingly, we are assigning CPT code 0503T to a New Technology APC for CY 2018. We remind hospitals that, according to the Medicare statute, this service should only be furnished when reasonable and medically necessary for the purposes of diagnosis of and treatment a Medicare beneficiary.

In summary, after consideration of the public comments we received, we are finalizing our proposal for CPT codes 0501T, 0502T, and 0504T without modification. However, for CPT code 0503T, we are finalizing our proposal with modification. Specifically, we are reassigning CPT code 0503T from packaged status (status indicator “N”) to New Technology APC 1516 (New Technology—Level 16 (\$1401–\$1500)), with a payment rate of \$1,450.50 for CY 2018. We note our belief that CPT code 0503T covers payment for the majority of hospital resources involved in the HeartFlow service, and that CPT 0502T, which reflects data preparation and transmission, will be packaged under the OPSS.

Table 19 lists the final status indicator assignments for CPT codes 0501T, 0502T, 0503T, and 0504T. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and B are available via the Internet on the CMS Web site.

TABLE 19—FINAL CY 2018 STATUS INDICATOR (SI) ASSIGNMENT FOR THE NEW FFR_{CT} CPT CODES EFFECTIVE JANUARY 1, 2018

M	N/A	N/A.

D. OPSS APC-Specific Policies

1. Blood-Derived Hematopoietic Cell Harvesting

HCPCS code 38205 describes blood-derived hematopoietic progenitor cell harvesting for transplantation, per collection; allogeneic. This code represents a donor acquisition cost for an allogeneic hematopoietic stem cell transplant (HSCT). In the CY 2010 OPSS/ASC final rule with comment period (74 FR 60575), we assigned HCPCS code 38205 to status indicator “B”, which indicates that this code is not recognized by the OPSS when submitted on an outpatient hospital Part B bill (type 12x and 13x).

In CY 2017, we finalized a C-APC for HSCT (81 FR 79586 through 79587). Payment for donor acquisition services for HSCT is included in the C-APC payment for the allogeneic stem cell transplant when the transplant occurs in the hospital outpatient setting. All donor acquisition costs, including the costs for HCPCS code 38205, should be reported on the same date of service as

the transplant procedure (HCPCS code 38240 (Hematopoietic progenitor (HPC); allogeneic transplantation per donor)) in order to be appropriately packaged for payment purposes. Hospitals are instructed to identify services required to acquire stem cells from a donor for allogeneic HSCT separately in Field 42 on Form CMS-1450 (or UB-04), with revenue code 0815 when an allogeneic stem cell transplant occurs. (We refer readers to the Medicare Claims Processing Manual (Pub. 100-04), Chapter 4, Section 231.11, and Chapter 3, Section 90.3.1.)

There are other donor acquisition costs, namely those costs for the procedure described by HCPCS code 38230 (Bone marrow harvesting for transplantation; allogeneic), that are assigned to status indicator “S”. For consistency and to ensure that the donor acquisition costs are captured accurately, in the CY 2018 OPSS/ASC proposed rule (82 FR 33608), for CY 2018, we proposed to change the status indicator assignment for the procedure described by HCPCS code 38205 from

“B” to “S”, which indicates that the procedure is paid under the OPSS and receives separate payment.

The CY 2016 claims data used for the proposed rule, which included claims submitted between January 1, 2016, and December 31, 2016, and processed on or before December 31, 2016, showed a geometric mean cost of approximately \$580 for HCPCS code 38205 based on 2 single claims (out of 8 total claims). The procedure described by HCPCS code 38205 has resource and clinical similarities to procedures assigned to APC 5242 (Level 2 Blood Product Exchange and Related Services). Therefore, we proposed to assign HCPCS code 38205 to APC 5242. We invited public comments on these proposals.

Comment: Several commenters opposed the proposal to change the status indicator assignment for the procedure described by HCPCS code 38205 from “B” to “S”. The commenters stated that this procedure represents a donor acquisition cost for allogeneic hematopoietic stem cell transplants for

which Medicare does not make separate payment because hospitals may bill and receive payment only for services provided to the Medicare beneficiary who is the recipient of the stem cell transplant and whose illness is being treated with the stem cell transplant. The commenters believed that a change from status indicator “B” to “S” may indicate to providers that they can bill donors for these services and lead to potential for erroneous separate payments if this code is billed with status indicator “S”. In addition, the HOP Panel recommended that CMS retain status indicator “B” for HCPCS code 38205. The commenters also encouraged CMS to look at the entire

series of bone marrow and stem cell transplant-related CPT codes to ensure consistency in terms of coding, billing guidance, appropriate APC assignment, and payment.

Response: We appreciate the commenters’ responses. We believed that changing the status indicator assignment from “B” to “S” for HCPCS code 38205 would be consistent with other donor acquisition costs and ensure that the donor acquisition costs for allogeneic HSCT are captured accurately. However, we agree with the commenters that this change could result in erroneous billing or misinterpretations by providers.

After consideration of the public comments we received, we are not

finalizing our proposal to change the status indicator assignment for the procedure described by HCPCS code 38205 from “B” to “S” and to assign HCPCS code 38205 to APC 5242.

2. Brachytherapy Insertion Procedures (C-APCs 5341 and 5092)

a. C-APC 5341 (Abdominal/Peritoneal/Biliary and Related Procedures)

For CY 2018, as displayed in Table 20 below and in Addendum B to the CY 2018 OPPTS/ASC proposed rule, we proposed to continue to assign CPT code 55920 to C-APC 5341 (Abdominal/Peritoneal/Biliary and Related Procedures), with a proposed payment rate of \$2,788.26.

TABLE 20—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 55920

CPT code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	Proposed CY 2018 OPPTS SI	Proposed CY 2018 OPPTS APC	Proposed CY 2018 OPPTS payment rate
55920	Placement of needles or catheters into pelvic organs and/or genitalia (except prostate) for subsequent interstitial radioelement application.	J1	5341	\$2,861.53	J1	5341	\$2,788.26

Comment: Commenters disagreed with the proposed APC assignment for CPT code 55920 and recommended that this code be reassigned to an APC that includes gynecologic procedures, specifically C-APC 5415 (Level 5 Gynecologic Procedures). The commenters noted that radiation therapy is an important adjuvant treatment for gynecological malignancies and the vignette for the procedure described by CPT 55920 describes a gynecological implant with a Syed-type intracavitary applicator insertion to the vagina, cervix, or female urethra. The commenters stated that the procedure described by CPT code 55920 was similar, from a clinical and resource perspective, to procedures assigned to C-APC 5415.

Response: Our analysis of the final rule updated claims data revealed a

geometric mean cost of approximately \$4,791 for CPT code 55920 based on 134 single claims (out of 135 total claims), which is comparable to the geometric mean cost of approximately \$4,109 for C-APC 5415. The geometric mean cost for C-APC 5341 is approximately \$2,909. After reviewing the procedures assigned to C-APC 5415, we agree with the commenters that CPT code 55920 would be more appropriately reassigned to C-APC 5415 based on its clinical homogeneity and resource costs.

After consideration of the public comments we received, we are finalizing our CY 2018 proposal with modification. Specifically, we are reassigning CPT code 55920 from C-APC 5341 to C-APC 5415 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the final CY 2018 payment rates for all

codes reported under the OPPTS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPTS for CY 2018. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

b. C-APC 5092 (Level 2 Breast/Lymphatic Surgery and Related Procedures)

For CY 2018, as displayed in Table 21 below and in Addendum B to the CY 2018 OPPTS/ASC proposed rule, we proposed to continue to assign CPT code 19298 to C-APC 5092 (Level 2 Breast/Lymphatic Surgery and Related Procedures), with a proposed payment rate of \$4,616.48.

TABLE 21—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 19298

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
19298	Placement of radiotherapy afterloading brachytherapy catheters (multiple tube and button type) into breast for interstitial; radioelement application following (at the time of or subsequent to) partial mastectomy, includes image guidance).	J1	5092	\$4,417.60	J1	5092	\$4,616.48

Comment: Commenters disagreed with the proposed continued APC assignment for CPT code 19298 to C-APC 5092. These commenters stated that the CY 2018 proposed payment is inadequate and does not cover the costs associated with the surgical placement of the breast brachytherapy catheter or the brachytherapy treatment delivery and related planning and preparation codes included on the claim. The commenters also stated that, previously, both breast brachytherapy catheter placement codes 19296 (Breast interstitial radiation treatment, delayed (expandable) and 19298 have been assigned to the same APC as they are similar clinically and with regard to resource cost. The commenters requested that CPT code 19298 be assigned to the same C-APC as CPT code 19296 proposed for CY 2018; that is, C-APC 5093 (Level 3 Breast/Lymphatic Surgery and Related Procedures).

Response: Our analysis of the final rule updated claims data revealed a geometric mean cost of approximately \$5,944 for CPT code 19298 based on 68 single claims (out of 69 total claims). Based on our updated analysis, we believe that CPT code 19298 is appropriately assigned to C-APC 5092, which has a geometric mean cost of approximately \$4,809, rather than to C-APC 5093, which has a geometric mean cost of approximately \$7,383 as suggested by the commenters. In addition, our updated analysis showed that the geometric mean cost of

approximately \$5,944 for CPT code 19298 is within the range of the significant procedures assigned to C-APC 5092, which is between \$4,276 (for CPT code 19380) and \$6,134 (for CPT code 19340).

After consideration of the public comments we received and based on updated claims data, we are finalizing our proposal to continue to assign CPT code 19298 to C-APC 5092 for CY 2018.

3. Care Management Coding Changes Effective January 1, 2018 (APCs 5821 and 5822)

As noted in the CY 2018 MPFS proposed rule (82 FR 34079), we continue to be interested in the ongoing work of the medical community to refine the set of codes used to describe care management services, including chronic care management. In the CY 2018 OPPS/ASC proposed rule (82 FR 33603 and 33604), we proposed to adopt CPT replacement codes for CY 2018 for several of the care management services finalized last year and sought public comment on ways we might further reduce the burden on reporting providers, including through stronger alignment between CMS requirements and CPT guidance for existing and potential new codes. Table 15 of the CY 2018 OPP/ASC proposed rule detailed the proposed care management coding changes. We referred readers to Addendum B to the proposed rule (which is available via the Internet on the CMS Web site) for the proposed CY

2018 payment rates for the replacement codes.

Comment: Commenters supported CMS' proposed replacement codes for CY 2018 for several of the care management services finalized for CY 2017. One commenter recommended that the new chronic care management codes be removed from the financial settlement of accountable care organizations (ACOs). This commenter also recommended that CMS develop documentation and billing workflow to reduce administrative burden on providers billing transitional care management and chronic care management codes.

Response: We appreciate the commenters' support. We also appreciate the suggestion for reducing provider burden with respect to billing and documentation requirements for chronic care management and will consider these suggestions in future rulemaking. However, we note that ACOs are outside the scope of this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposal to adopt CPT replacement codes for CY 2018 for several of the care management services finalized last year. Table 22 below details the final care management coding changes. We refer readers to Addendum B to this final rule with comment period (which is available via the Internet on the CMS Web site) for the final CY 2018 payment rates for the replacement codes.

TABLE 22—CARE MANAGEMENT CODING CHANGES EFFECTIVE JANUARY 1, 2018

* The long descriptors for the final CPT codes can be found in Addendum O (New Category I and Category III CPT Codes Effective January 1, 2018) to this final rule with comment period, which is available via the Internet on the CMS Web site.

4. Cardiac Telemetry (APC 5721) 2018 OPPI/ASC proposed rule, we proposed to reassign CPT code 93229 from APC 5733 (Level 3 Minor Procedures) to APC 5734 (Level 4 Minor Procedures), with a proposed payment rate of \$94.27.

TABLE 23—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 93229

CPT Code	Long descriptor	CY 2017 OPPI SI	CY 2017 OPPI APC	CY 2017 OPPI payment rate	Proposed CY 2018 OPPI SI	Proposed CY 2018 OPPI APC	Proposed CY 2018 OPPI payment rate
93229	External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ecg data storage (retrievable with query) with ecg triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and transmission of daily and emergent data reports as prescribed by a physician or other qualified health care professional.	S	5733	\$54.55	S	5734	\$94.27

We proposed to revise the APC assignment for CPT code 93229 based on claims data used for the CY 2018 OPPI/ASC proposed rule. We note that the proposed rule data were based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. Our analysis of the claims data revealed a geometric mean cost of approximately \$156 for CPT code 93229 based on 1,518 single claims (out of 3,370 total claims). Our analysis further revealed a geometric mean cost of approximately \$98 for APC 5734. Based on the geometric mean cost, we believed that it was necessary to revise the APC assignment for CPT code 93229 from APC 5733 to APC 5734 to pay appropriately for the service.

Comment: Some commenters disagreed with the proposed reassignment of CPT code 93229 to APC 5734, and instead requested a

reassignment to APC 5722 (Level 2 Diagnostic Tests and Related Services), which had a proposed payment rate of \$242.21 and which is the same APC assignment for CPT code 93229 as in CY 2016. The commenters believed that the cost data used to set the payment rate for the CY 2017 OPPI update was based on miscoding of the service because mobile outpatient telemetry is a low-volume service in the HOPD setting that is performed by a small number of hospitals. The commenters indicated that since the publication of a 2016 coding guidance in the AHA Coding Clinic for HCPCS on the proper coding of remote cardiac monitoring services, they have noticed that the top billers of this service from prior years are no longer inappropriately reporting the service. In addition, the commenters believed that APC 5734 is an inappropriate assignment both from the clinical and resource cost perspectives.

The commenters further indicated that the service is not a minor procedure, as described by the group description for APC 5734, and added that CPT code 93229 is the only code in APC 5734 with a status indicator assignment of “S” (Procedure or Service, Not Discounted When Multiple), while all the other codes in the APC are assigned to status indicator “Q1” (conditionally packaged).

Response: Although CPT code 93229 was assigned to status indicator “S” in APC 5734, it was not the only status indicator assigned to the codes in this APC. As indicated in OPPI Addendum B that was released with the CY 2018 OPPI/ASC proposed rule, three separate status indicators were assigned to the codes in APC 5734. Specifically, CPT code 93229 was assigned to status indicator “S”, CPT codes 30903 and 30905 were assigned to status indicator “T” (Procedure or Service, Discounted

When Multiple), and the remaining codes were assigned to status indicator “Q1”. We note that a specific status indicator assignment does not preclude a code’s assignment to a specific APC.

In addition, as we have stated since the implementation of the OPSS in August 2000, section 1833(t)(9) of the Act requires that we annually review all the items and services within an APC group and revise the APC structures accordingly. Included in this review is the identification of any 2 times rule violations as provided under section 1833(t)(2) of the Act and, to the extent possible, rectification of these violations. We review the most recently available OPSS claims data every year and determine whether changes to the current APC assignment are necessary. Although CPT code 93229 was assigned to APC 5722 in CY 2016, we revised the APC assignment to APC 5733 for CY 2017 based on the latest claims data available at that time. The discussion related to this APC revision can be found in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79616 through 79617).

For this CY 2018 OPSS/ASC final rule with comment period, we again reviewed the claims data associated with CPT code 93229. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016 that were processed on or before June 30, 2017. Our analysis revealed a geometric mean cost of approximately \$160 for CPT code 93229 based on 1,750 single claims (out of 3,869 total claims). Based on our review of the four levels of Diagnostic Tests and Related Services APCs, we believe that CPT code 93229 appropriately fits in APC 5721 (Level 1 Diagnostic Tests and Related Services), which has a geometric mean cost of approximately \$136, rather than in APC 5722, which has a geometric mean cost of approximately \$249. In addition, our review shows that the geometric mean cost of approximately \$160 for CPT code 93229 is within the range of the significant procedures in APC 5721, which is between \$60 (for CPT code 93702) and \$181 (for CPT code 94727). Consequently, we believe that a

reassignment of CPT code 93229 to APC 5721 is more appropriate.

In summary, after consideration of the public comments we received, we are finalizing our CY 2018 proposal with modification. Specifically, we are revising the assignment for CPT code 93229 to APC 5721 for CY 2018 rather than the proposed APC 5734. Consistent with our policy of reviewing APC assignments annually, we will reevaluate the cost of CPT code 93229 and its APC assignment for the CY 2019 rulemaking. Table 24 below lists the final status indicator and APC assignment for CPT code 93229 for CY 2018. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addenda A and B are available via the Internet on the CMS Web site.

TABLE 24—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 93229

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	CY 2018 OPSS SI	CY 2018 OPSS APC	CY 2018 OPSS payment rate
93229	External mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ecg data storage (retrievable with query) with ecg triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and transmission of daily and emergent data reports as prescribed by a physician or other qualified health care professional.	S	5733	\$54.55	S	5721	Refer to OPSS Addendum B.

5. Collagen Cross-Linking of Cornea (C-APC 5503)

For CY 2018, as noted in Addendum B to the CY 2018 OPSS/ASC proposed rule, we proposed to continue to assign CPT code 0402T (Collagen cross-linking of cornea (including removal of the corneal epithelium and intraoperative pachymetry when performed)) to APC 5502 (Level 2 Extraocular, Repair, and Plastic Eye Procedures) for CY 2018.

Comment: One commenter requested that CMS reassign CPT code 0402T from

APC 5502 to APC 5504 (Level 4 Extraocular, Repair, and Plastic Eye Procedures). The commenter recommended reassignment to APC 5504 because it believed that assignment to that APC would more accurately reflect the level of resource utilization (particularly labor time and capital equipment) involved in the corneal collagen cross-linking procedure. In addition, the commenter provided resource information on the supplies, equipment, and labor required

to perform the procedure described by CPT code 0402T. According to the commenter, the capital equipment required for the procedure costs approximately \$90,000, and disposable supplies and at least one technician or registered nurse are also required. In addition, the commenter stated that the average procedure time can last from 1.25 to 2 hours. The commenter acknowledged that there are no Medicare claims data for CPT code

0402T because it was established on January 1, 2016.

Response: We reviewed the updated CY 2016 claims data used for this final rule with comment period. Based on our review, and with consideration of the resource information provided by the commenter, in the absence of data and based on the resources and operating expenses to perform the procedure as described by the commenter, we disagree with the commenter's recommendation that CPT code 0402T should be reassigned to APC 5504, which has a geometric mean cost of approximately \$3,000 in CY 2018. In the absence of claims data, we may use other data, such as invoices, to assign a new procedure to a clinical APC. In this case, the commenter did not provide invoices, but did supply some cost information in its comment. We note that the payment rate is not designed to pay for capital equipment costs on a per claim basis. However, taking into

account the disposable costs as well as information from the commenter about the time to perform the procedure and the hospital staff involved, we are persuaded to modify our proposal. Given the resource cost and clinical congruence of CPT code 0402T with other procedures assigned to APC 5503 (approximate geometric mean cost of \$1,800), such as CPT code 65436 (Removal of corneal epithelium; with application of chelating agent, eg., EDTA), we believe that the reassignment to APC 5503 is more appropriate for CY 2018. Therefore, we are modifying our proposal, and reassigning CPT code 0402T to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures) for CY 2018. We will consider reassignment of CPT code 0402T to APC 5504 in the CY 2019 rulemaking.

6. Cryoablation Procedure for Lung Tumors (C-APC 5361)

For CY 2018, the AMA CPT Editorial Panel deleted CPT code 0340T and

replaced the code with CPT code 32994, effective January 1, 2018. We note that CPT code 0340T was effective January 1, 2014, and deleted on December 31, 2017. Table 25 below lists the complete descriptors for the deleted and replacement code. We note that the deleted and replacement code were both listed in Addendum B and Addendum O to the CY 2018 OPPI/ASC proposed rule (which are available via the Internet on the CMS Web site). Addendum B listed the proposed status indicator assignment for the replacement code and assigned it to comment indicator "NP" (New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code), while Addendum O listed the proposed/placeholder CY 2018 CPT codes and the long descriptors.

TABLE 25—CODING CHANGES FOR CPT CODE 32994

CPT Code	CY 2018 OPPI/ASC proposed rule placeholder code	Long descriptor
0340T	Ablation, pulmonary tumor(s), including pleura or chest wall when involved by tumor extension, percutaneous, cryoablation, unilateral, includes imaging guidance.
32994	32X99	Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; cryoablation.

As noted in Table 26 below and in Addendum B to the CY 2018 OPPI/ASC proposed rule, we proposed to delete CPT code 0340T (status indicator "D") and assign its replacement code, CPT

code 32994 (placeholder code 32X99), to C-APC 5361 (Level 1 Laparoscopy and Related Services), with a proposed payment rate of \$4,340.65. As noted in Table 26, for CY 2017, CPT code 0340T

was assigned to C-APC 5361, which is the same APC assignment for CPT code 32994.

TABLE 26—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 32994

CPT code	CY 2018 OPPI/ASC proposed rule placeholder code	Short descriptor	CY 2017 OPPI SI	CY 2017 OPPI APC	CY 2017 OPPI payment rate	Proposed CY 2018 OPPI SI	Proposed CY 2018 OPPI APC	Proposed CY 2018 OPPI payment rate
0340T	Ablate pulm tumors + extnsn.	J1	5361	\$4,199.13	D	N/A	N/A
32994	32X99	Ablate pulm tumor perq crybl.	N/A	N/A	N/A	J1	5361	\$4,340.65

Comment: Commenters presented opposing recommendations on the proposed APC assignment for CPT code 32994. Some commenters supported the proposed APC assignment to C-APC 5361. One commenter stated that the APC assignment maintains clinical homogeneity for services within the

APC and addresses resource cost fluctuation and volatility, and suggested that CMS finalize the proposal. However, other commenters disagreed with the proposed APC assignment and recommended that CPT code 32994 be assigned to C-APC 5362 (Level 2 Laparoscopy and Related Services),

which had a proposed payment rate of \$7,213.53. One commenter understood why CMS proposed to assign CPT code 32994 to C-APC 5361, which is the same APC to which its predecessor code was assigned. However, the commenter believed that the cost of the procedure will only increase as hospitals gain

experience with it. Consequently, the commenter suggested that CMS assign the CPT code to C-APC 5362. Another commenter recommended that CMS assign CPT code 32994 to C-APC 5362 and further noted the importance of new codes to be priced correctly before they are subject to APC placement based on their actual cost data.

Response: Because CPT code 0340T is a predecessor code to CPT code 32994, we have historical claims data on which to base the payment rate for CPT code 32994. Review of our claims data for this final rule with comment period shows a geometric mean cost of approximately \$5,471 for CPT code 0340T based on 27 single claims (out of 27 total claims), which is more comparable to the geometric mean cost of approximately \$4,486 for C-APC

5361 than to the geometric mean cost of approximately \$7,591 for C-APC 5362. We do not agree that we should assign CPT code 32994 to C-APC 5362 because the geometric mean cost for this APC is significantly greater than that of CPT code 32994 (cross-walked from CPT code 0340T) as indicated in our claims data available for this final rule with comment period. In addition, if the cost of the procedure increases, this will be identified through our annual review of the claims data. Consistent with our policy of reviewing APC assignments annually, we will reevaluate the geometric mean cost of CPT code 32994 and its APC assignment in next year's rulemaking for the CY 2019 OPPS update.

In summary, after consideration of the public comments we received and our

analysis of the updated claims data for this final rule with comment period, we are finalizing our CY 2018 proposal without modification, and assigning CPT code 32994 to C-APC 5361. The final CY 2018 geometric mean cost for C-APC 5361 is approximately \$4,486. Table 27 below lists the final status indicator and APC assignment for CPT code 32994 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addenda A and B are available via the Internet on the CMS Web site.

TABLE 27—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 32994

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Short descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	CY 2018 OPPS SI	CY 2018 OPPS APC	CY 2018 OPPS payment rate
0340T	N/A	Ablate pulm tumors + extnsn.	J1	5361	\$4,199.13	D	N/A	N/A.
32994	32X99	Ablate pulm tumor perq crybl.	N/A	N/A	N/A	J1	5361	Refer to OPPS Addendum B.

7. Diagnostic Bone Marrow Aspiration and Biopsy (C-APC 5072)

For CY 2018, the AMA CPT Editorial Panel revised the bone marrow and aspiration CPT codes. Specifically, the descriptors for CPT codes 38220 and 38221 were revised and new CPT codes 20939 (placeholder code 2093X) and 38222 (placeholder code 382X3) were established, effective January 1, 2018. In addition, add-on HCPCS code G0364, which was effective January 1, 2005,

will be deleted on December 31, 2017 and replaced with CPT codes 38220, 38221, and 38222, effective January 1, 2018. The deleted and replacement codes were listed in Addendum B and Addendum O to the CY 2018 OPPS/ASC proposed rule. Addendum B listed the proposed status indicator assignment for revised CPT codes 38220 and 38221 and new CPT code 38222, which was assigned to comment indicator “NP” (New code for the next calendar year or

existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code), while Addendum O listed the proposed/placeholder CY 2018 CPT codes and the long descriptors.

Table 28 below lists the complete descriptors for the bone marrow aspiration and biopsy codes.

TABLE 28—CODING CHANGES FOR THE BONE MARROW ASPIRATION AND BIOPSY CODES

HCPCS code	CY 2018 OPPS/ASC proposed rule placeholder code	Long descriptor
20939	2093X	Bone marrow aspiration for bone grafting, spine surgery only, through separate skin or fascial incision (List separately in addition to code for primary procedure).
38220	N/A	Diagnostic bone marrow; aspiration.
38221	N/A	Diagnostic bone marrow; biopsy(ies).
38222	382X3	Diagnostic bone marrow; biopsy(ies) and aspiration(s).
G0364	N/A	Bone marrow aspiration performed with bone marrow biopsy through the same incision on the same date of service.

As noted in Table 29 below and in Addendum B of the CY 2018 OPPS/ASC proposed rule, we proposed to delete HCPCS code G0364 (status indicator

“D”) and assign revised CPT codes 38220 and 38221, as well as new CPT code 38222 (placeholder code 382X3) to C-APC 5072 (Level 2 Excision/Biopsy/

Incision and Drainage), with a proposed payment rate of \$1,268.53. We note that, under the OPPS, we packaged the payment for HCPCS code G0364 (status

indicator “N”) into the primary service or procedure that is reported with the code because we considered the service to be an add-on furnished as part of a comprehensive service. In addition, we

proposed to assign CPT code 20939 (placeholder 2093X) to status indicator “N” (Packaged status) because it is an add-on code. Under Medicare regulations at 42 CFR 419.2(b)(18), add-

on codes are packaged under the OPSS. Further, we proposed to continue to assign revised CPT codes 38220 and 38221 to C-APC 5072 for CY 2018.

TABLE 29—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATES FOR THE BONE MARROW ASPIRATION AND BIOPSY CODES

HCPCS Code	CY 2018 OPSS/ASC proposed rule placeholder code	Short descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	Proposed CY 2018 OPSS SI	Proposed CY 2018 OPSS APC	Proposed CY 2018 OPSS payment rate
20939	2093X	Bone marrow aspir bone grfg	N/A	N/A	N/A	N	N/A	N/A
38220	N/A	Dx bone marrow aspirations	J1	5072	\$1,236.62	J1	5072	\$1,268.53
38221	N/A	Dx bone marrow biopsies	J1	5072	\$1,236.62	J1	5072	\$1,268.53
38222	382X3	Dx bone marrow bx & aspir	N/A	N/A	N/A	J1	5072	\$1,268.53
G0364	N/A	Bone marrow aspirate & biopsy	N	N/A	N/A	D	N/A	N/A

Comment: One commenter disagreed with the proposed APC assignment of new CPT code 38222 to C-APC 5072 and recommended that the code be assigned to C-APC 5073 (Level 3 Excision/Biopsy/Incision and Drainage), which had a proposed payment rate of \$2,222.47. This commenter further noted the importance of new codes being priced correctly before they are subject to APC assignment based on their actual cost data.

Response: As displayed in Table 29, we proposed to make no change to the APC assignments for CPT codes 38220 and 38221. Specifically, we proposed to continue to assign both codes to C-APC 5072 for CY 2018 based on claims data used for the CY 2018 OPSS/ASC proposed rule. We note that the proposed rule data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. For CPT code 38220, our examination of the claims data revealed a geometric mean cost of approximately \$1,645 based on 5,361 single claims (out of 5,431 total claims). For CPT code 38221, our claims data showed a geometric mean cost of approximately \$1,615 based on 53,789 single claims (out of 54,335 total claims). We believe that the geometric mean costs of approximately \$1,645 for CPT code 38220 and \$1,615 for CPT code 38221 are comparable to the geometric mean

cost of approximately \$1,319 for C-APC 5072. Consequently, we proposed to maintain both codes in C-APC 5072 for CY 2018. We note that we had no claims data for HCPCS code G0364 because this is an add-on code whose payment is packaged into the primary service that is reported with the code.

For this final rule with comment period, we again analyzed updated claims data associated with the four codes. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our review of the final rule claims data revealed a similar pattern for both codes. For CPT code 38220, we found a geometric mean cost of approximately \$1,787 based on 5,908 single claims (out of 5,993 total claims), and for CPT code 38221, our claims data revealed a geometric mean cost of approximately \$1,799 based on 59,892 single claims (out of 60,467 total claims). Because the geometric mean costs of approximately \$1,787 for CPT code 38220 and \$1,799 for CPT code 38221 are similar to the geometric mean cost of approximately \$1,347 for C-APC 5072, we continue to believe that C-APC 5072 is the most appropriate APC assignment for both codes for CY 2018.

In addition, based on input from our medical advisors, we believe that C-

APC 5072 is the most appropriate APC assignment for new CPT code 38222, consistent with the APC assignment for similar diagnostic bone marrow aspiration and biopsy procedures. As noted in Table 29, CPT codes 38220 and 38221 are assigned to C-APC 5072, and we believe that the service described by new CPT code 38222 is similar to the existing bone marrow aspiration and biopsy codes. Consistent with the statutory requirement under section 1833(t)(9)(A) of the Act, we will reevaluate the APC groupings during the next rulemaking cycle.

After consideration of the public comment we received, we are finalizing our CY 2018 proposals, without modification, for the bone marrow aspiration and biopsy codes, specifically, CPT codes 20939, 38220, 38221, and 38222. Table 30 below lists the final APC and status indicator assignments for CPT codes 20939, 38220, 38221, and 38222 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

8. Discussion of Comment Solicitation in the Proposed Rule on Intraocular Procedure APCs

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33609 through 33610), as part of our CY 2018 comprehensive review of the structure of the APCs and procedure code assignments, we evaluated the intraocular procedure APCs with a particular focus on C-APC 5491 (Level 1 Intraocular Procedures) that contains cataract surgery procedures. We strive to maintain APCs that contain procedures that are relatively homogenous in resource costs and clinical characteristics. While it is impracticable and contrary to the principles of a prospective payment system to assign each procedure to its own APC, thus resulting in a cost-based, fee schedule payment system, we seek to ensure our clinical groupings appropriately group like items and services while maintaining the integrity of a prospective payment system under which bundled, encounter-based payments are essential.

For CY 2018, we considered proposing a new intraocular procedure APC that would further distinguish the resource costs and clinical characteristics between cataract surgery and complex cataract surgery. As listed in Addendum B of the CY 2018 OPPS/ASC proposed rule, we proposed to continue to assign CPT code 66984 (Cataract surgery with IOL 1 stage procedure) and CPT code 66982 (Cataract surgery complex) to C-APC 5491. However, because the 2017 AMA CPT Code manual describes a complex cataract surgery case as “requiring devices or techniques not generally used in routine cataract surgery (e.g., iris

expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis),” we stated that we believe it may be more appropriate to assign CPT code 66982 to a C-APC that is separate from the C-APC assignment for CPT code 66984. However, because this potential APC grouping would assign CPT code 66982 to a higher paying C-APC than CPT code 66984, we indicated that we would monitor claims data for changes in the distribution of coding complex cataract surgery and routine cataract surgery if we were to adopt this change. In the proposed rule, we sought public comments from stakeholders, including ophthalmologists, organizations representing ophthalmologists, beneficiaries, hospitals, and all other interested parties on whether we should create a new C-APC that includes complex cataract surgeries identified by CPT code 66982 (along with other intraocular procedures that are similar in resources) in a newly created C-APC that is separate from those identified by CPT code 66984. That is, we are considering whether to establish a new Level 2 Intraocular Procedures C-APC in between existing C-APCs 5491 and 5492.

Comment: Commenters, including several ophthalmologists and organizations representing ophthalmologists, did not support separation of complex cataract surgery identified by CPT code 66982 and simple cataract surgery identified by CPT code 66984 into separate APCs. Commenters recommended that CMS maintain the current assignment of CPT code 66982 and 66984 in the same APC (APC 5491) because the procedures are similar clinically and the modest variation in cost between the two

procedures does not warrant reassignment of CPT code 66982 into a higher payment APC. However, commenters supported CMS’ intent to monitor the data for these procedures and make future changes, if needed. In addition, one commenter indicated that variations in payment between simple and complex cataract surgery should be reflected in the physician payment rather than the facility fee.

Response: We thank the commenters for providing detailed responses to the comment solicitation on whether to separate simple and complex cataract surgery into separate APCs. Based on the points raised in response to the comment solicitation with respect to the facility resource costs and clinical similarity between simple and complex cataract surgery, it does not appear necessary to separate these procedures into separate APCs.

After consideration of the public comments we received, we are continuing the assignment of simple and complex cataract surgery procedures (described by CPT codes 66984 and 66982, respectively) to the same APC for CY 2018. We appreciate the commenters’ support of CMS’ continuing efforts to monitor both the cost and utilization of simple and complex cataract surgery to determine if an APC reassignment or other change may be needed in the future.

9. Endovascular APCs (C-APCs 5191 through 5194)

For CY 2018, we proposed to continue the existing four levels of Endovascular C-APCs (C-APCs 5191 through 5194) as displayed in Table 31 below and in Addendum B to the CY 2018 OPPS/ASC proposed rule.

TABLE 31—PROPOSED CY 2018 GEOMETRIC MEAN COST AND PAYMENT FOR ENDOVASCULAR C-APCS

C-APC	CY 2018 geometric mean cost	Proposed CY 2018 OPPS payment
5191—Level 1 Endovascular Procedures	\$2,958.89	\$2,844

TABLE 31—PROPOSED CY 2018 GEOMETRIC MEAN COST AND PAYMENT FOR ENDOVASCULAR C–APCs—Continued

C–APC	CY 2018 geometric mean cost	Proposed CY 2018 OPPS payment
5192—Level 2 Endovascular Procedures	5,199.87	4,999
5193—Level 3 Endovascular Procedures	10,627.86	10,218
5194—Level 4 Endovascular Procedures	16,197.55	15,572

Comment: Commenters disagreed with the proposal to continue the four levels of the endovascular C–APCs and requested that CMS create more levels within the endovascular C–APCs to improve resource homogeneity within these C–APCs. Specifically, the commenters requested that CMS create a six-level endovascular C–APC family by reassigning endovascular procedures with costs greater than approximately \$7,000 up one level, from the current C–

APC 5192 (Level 2 Endovascular Procedures) to a new Level 3 Endovascular Procedures C–APC (519X), and reassigning procedures with costs less than approximately \$9,000 down one level, from the current C–APC 5193 (Level 3 Endovascular Procedures) to the new requested Level 3 Endovascular Procedures C–APC. Commenters also requested that procedures with costs greater than approximately \$12,000 in the current C–

APC 5193 be moved up one level to a new Level 5 Endovascular Procedures C–APC (519Y), and those procedures with costs greater than approximately \$13,000 to be moved down one level from current C–APC 5194 (Level 4 Endovascular Procedures) to the new requested Level 5 C–APC (519Y). The commenters’ requested the C–APC structure and estimated payment amount for each C–APC as listed in Table 32 below.

TABLE 32—CY 2018 STRUCTURE FOR ENDOVASCULAR C–APCs REQUESTED BY COMMENTERS

C–APC	Estimated CY 2018 OPPS payment
5191—Level 1 Endovascular Procedures	\$2,845
5192—Level 2 Endovascular Procedures	4,875
519X—New Level 3 Endovascular Procedures	8,042
5193—Current Level 3 Endovascular Procedures/New Level 4 Endovascular Procedures	10,084
519Y—New Level 5 Endovascular Procedures	12,149
5194—Current Level 4 Endovascular Procedures/New Level 6 Endovascular Procedures	15,713

At the annual meeting for the HOP Panel held on August 21, 2017, the HOP Panel recommended that, for CY 2018, CMS examine the number of APCs for endovascular procedures. The HOP Panel also recommended that the appropriate Panel subcommittee review the APCs for endovascular procedures to determine whether more granularity (that is, more APCs) is warranted.

Other commenters opposed a reorganization of the endovascular C–APCs for CY 2018 and expressed concerns regarding changing the number of C–APCs in this family without a chance for the public to comment. These commenters

encouraged CMS to consider the impact that adding APCs for the endovascular procedures may have on other procedures in existing APCs and recommended that, if CMS plans to make a change to the endovascular APCs, it include a proposal in the CY 2019 OPSS/ASC proposed rule to allow the opportunity for the public to comment.

Response: We thank the commenters for their input. At this time, we continue to believe that the current C–APC levels for the endovascular C–APC family provide an appropriate distinction between the resource costs at each level and provide clinical

homogeneity. We will continue to review this C–APC structure, including consultation with the appropriate HOP Panel subcommittee, to determine if additional granularity is necessary for this C–APC family.

10. Esophagogastroduodenoscopy (EGD) (C–APC 5362)

For CY 2018, as displayed in Table 33 below and in Addendum B to the CY 2018 OPSS/ASC proposed rule, we proposed to continue to assign CPT code 43210 to APC 5331 (Complex GI Procedures), with a proposed payment rate of \$4,119.27.

TABLE 33—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 43210

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
43210	Esophagogastroduo-denoscopy, flexible, transoral; with esophagogastric fundoplasty, partial or complete, includes duodenoscopy when performed.	J1	5331	\$3,940.61	J1	5331	\$4,119.27

Comment: One commenter disagreed with the proposed APC assignment for CPT code 43210 and stated that the proposed payment is inadequate to cover the cost of the procedure. The commenter stated that the device associated with the procedure costs approximately \$4,100. The commenter elaborated that because of the inadequate payment for the procedure, providers are reluctant to perform the procedure, and instead are opting to perform the higher paying procedures for the treatment of gastroesophageal reflux disease (GERD). The commenter also stated that, based on the geometric mean cost of \$7,013 for CPT code 43210, the code is inappropriately assigned to APC 5331, which has a geometric mean cost of approximately \$4,284. To correct the inadequate payment for the procedure, the commenter suggested that CMS either reassign CPT code 43210 to C-APC 5362 (Level 2 Laparoscopy and Related Services), which had a proposed payment rate of \$7,214, or establish a new Level 2 Complex GI Procedures APC that contains only the surgical procedures described by the following CPT codes:

- 43210 (Esophagogastroduodenoscopy, flexible, transoral; with esophagogastric fundoplasty, partial or complete, includes duodenoscopy when performed);
- 43257 (Esophagogastroduodenoscopy, flexible, transoral; with delivery of thermal

energy to the muscle of lower esophageal sphincter and/or gastric cardia, for treatment of gastroesophageal reflux disease);

- 43280 (Laparoscopy, surgical, esophagogastric fundoplasty (e.g., nissen, toupet procedures));
- 43281 (Laparoscopy, surgical, repair of paraesophageal hernia, includes fundoplasty, when performed; without implantation of mesh);
- 43284 (Laparoscopy, surgical, esophageal sphincter augmentation procedure, placement of sphincter augmentation device (i.e., magnetic band), including cruroplasty when performed);
- 43770 (Laparoscopy, surgical, gastric restrictive procedure; placement of adjustable gastric restrictive device (e.g., gastric band and subcutaneous port components)); and
- 46762 (Sphincteroplasty, anal, for incontinence, adult; implantation artificial sphincter).

Response: For the second suggestion, we believe the grouping of procedures in the suggested APC may be inappropriate based on lack of clinical homogeneity. Specifically, CPT code 46762 describes a sphincteroplasty procedure, which is unlike that of the other GERD-related procedures in the suggested APC. However, for the first suggestion, based on our analysis of the final rule claims data, we believe that it would be appropriate to reassign CPT code 43210 to C-APC 5362. We note that, for this final rule with comment period, we used claims data with dates

of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our analysis of the final rule claims data revealed a geometric mean cost of approximately \$6,759 for CPT code 43210 based on 91 single claims (out of 92 total claims), which is comparable to the geometric mean cost of approximately \$7,591 for C-APC 5362. Compared to the geometric mean cost of approximately \$4,291 for C-APC 5331, we agree with the commenter that C-APC 5362 is the more appropriate C-APC assignment for CPT code 43210 based on its clinical homogeneity and resource costs.

In summary, after consideration of the public comment we received, we are finalizing our CY 2018 proposal with modification. Specifically, we are reassigning CPT code 43210 from C-APC 5331 to C-APC 5362 for CY 2018. As we do every year under the OPPS, we will reevaluate the cost of the procedure and its APC assignment for next year's OPPS rulemaking. Table 34 below lists the final status indicator and APC assignments for CPT code 43210. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 34—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 43210

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	CY 2018 OPPS SI	CY 2018 OPPS APC	CY 2018 OPPS payment rate
43210	Esophagogastroduo-denoscopy, flexible, transoral; with esophagogastric fundoplasty, partial or complete, includes duodenoscopy when performed.	J1	5331	\$3,940.61	J1	5362	Refer to OPPS Addendum B.

11. Hemorrhoid Treatment by Thermal Energy (APC 5312)

For CY 2018, as displayed in Table 35 below and in Addendum B to the CY

2018 OPSS/ASC proposed rule, we proposed to continue to assign CPT code 46930 to APC 5311 (Level 1 Lower

GI Procedures), with a proposed payment rate of \$690.37.

TABLE 35—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 46930

HCPCS code	Long descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	Proposed CY 2018 OPSS SI	Proposed CY 2018 OPSS APC	Proposed CY 2018 OPSS payment rate
46930	Destruction of internal hemorrhoid(s) by thermal energy (e.g., infrared coagulation, cautery, radiofrequency).	T	5311	\$667.67	T	5311	\$690.37

Comment: One commenter requested a reassignment of CPT code 46930 to APC 5312 (Level 2 Lower GI Procedures), which had a CY 2018 proposed payment rate of \$907.04. The commenter indicated that review of the geometric mean cost of approximately \$879 for CPT code 46930 from the CY 2018 proposed rule claims data is more in line with the geometric mean cost for APC 5312. Specifically, the commenter noted that the geometric mean cost for APC 5312 is approximately \$943, which is comparable to the geometric cost of \$879 for CPT code 46930, rather than the geometric mean cost of approximately \$718 for APC 5311.

Response: For this final rule with comment period, we reviewed the claims data associated with CPT codes 46930. We used claims data for this final rule with comment period with dates of service between January 1, 2016, and December 31, 2016 that were processed on or before June 30, 2017.

Our analysis of the final rule claims data revealed that a change in the APC assignment to APC 5312 for CPT code 46930 is appropriate. Specifically, we found a geometric mean cost of approximately \$858 for CPT code 46930 based on 363 single claims (out of 970 total claims), which is similar to the geometric mean cost of approximately \$936 for APC 5312 rather than the geometric mean cost of approximately \$710 for APC 5311. In addition, our analysis of the range of geometric mean costs for the significant procedures within APCs 5311 and 5312 shows that the geometric mean cost for CPT code 46930 is comparable to the costs of procedures assigned to APC 5312. Specifically, the geometric mean costs of the significant procedures assigned to APC 5311 range between approximately \$382 (for CPT code 46221) and \$750 (for CPT code 45378), while the range for procedures assigned to APC 5312 is between approximately \$824 (for CPT

code 45341) and \$1,579 (for CPT 45390). Consequently, we agree that a reassignment of CPT code 46930 to APC 5312 is more appropriate.

Therefore, after consideration of the public comment we received, we are finalizing our CY 2018 proposal with modification to the APC assignment for CPT code 46930. Specifically, we are reassigning CPT code 46930 from C-APC 5311 to C-APC 5312 for CY 2018. Table 36 below lists the final status indicator and APC assignments for CPT code 46930. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 36—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 46930

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	CY 2018 OPSS SI	CY 2018 OPSS APC	CY 2018 OPSS payment rate
46930	Destruction of internal hemorrhoid(s) by thermal energy (e.g., infrared coagulation, cautery, radiofrequency).	T	5311	\$667.67	T	5312	Refer to OPSS Addendum B.

12. Ileoscopy Through Stoma With Stent Placement (C-APC 5303)

For CY 2018, as displayed in Table 37 below and in Addendum B to the CY

2018 OPSS/ASC proposed rule, we proposed to continue to assign CPT code 44384 to C-APC 5303 (Level 3 Upper GI Procedures).

TABLE 37—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 44384

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
44384	Ileoscopy, through stoma; with placement of endoscopic stent (includes pre- and post-dilation and guide wire passage, when performed).	J1	5303	\$2,510.70	J1	5303	\$2,630.93

Comment: Several commenters opposed the proposed continued assignment of CPT code 44384 to C-APC 5303. The commenters stated that the procedure includes the use of a stent that costs approximately \$1,500, and that the resources required to perform the procedure are similar to those other small and large bowel procedures that require stent placement in C-APC 5331 (Complex GI Procedures), which had a CY 2018 proposed payment rate of \$4,119.27. The commenters further added that because C-APC 5303 is not a device-dependent designated APC, the continued assignment of CPT code 44384 to C-APC 5303 results in an ASC payment that is below the cost of performing the procedure. Consequently, the commenters urged CMS to revise the APC assignment for CPT code 44384 back to its CY 2016 APC assignment, specifically, C-APC 5331.

Response: We proposed to continue the APC assignment for CPT code 44384 based on claims data used for the CY 2018 OPPS/ASC proposed rule. We note that the proposed rule data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. For CPT code 44384, our analysis of the claims data revealed a geometric mean cost of approximately \$2,404 for the CPT code based on 25 single claims (out of 26 total claims), which is similar to the geometric mean cost of approximately \$2,736 for C-APC 5303 rather than the geometric mean cost of approximately \$4,284 for C-APC 5331. Consequently, we proposed to continue the APC assignment for CPT code 44384 to C-APC 5303 for CY 2018.

For this final rule with comment period, we again examined updated claims data associated with CPT code 44384. We note that for this final rule with comment period we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our examination of the final rule claims data revealed a similar pattern for CPT code 44384. Specifically, we found a geometric mean cost of approximately \$2,492 for CPT code 44384 based on 32 single claims (out of 33 total claims), which is similar to the geometric mean cost of approximately \$2,742 for C-APC 5303 rather than the geometric mean cost of approximately \$4,291 for C-APC 5331. Assigning CPT code 44384 to C-APC 5331 would result in an overpayment for the procedure. C-APC 5303 contains several GI-related procedures, which are similar to those procedures described by CPT code 44384, based on clinical homogeneity and resource costs.

In response to the comment related to device-dependent APCs, we note that device-dependent APCs are no longer recognized under the OPPS as of CY 2015 and that, effective January 1, 2017, device-intensive status is assigned at the HCPCS code level, not at the APC level. We note that when we implemented the C-APC policy in CY 2015, we eliminated the device-dependent APC policy and replaced it with the device-intensive policy, effective January 1, 2015. For more information on this change, we refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66793 through 66795), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70421 through 70422), and the CY 2017 OPPS/ASC final rule with comment period (81 FR 79657 through 79659). In addition, we

refer readers to section IV.B. of this final rule with comment period for the discussion related to the device-intensive policy under the OPPS. For a discussion of ASC procedures designated as device-intensive, we refer readers to section XII.C.1.c. of this final rule with comment period.

Finally, we remind readers that, as we have stated since the implementation of the OPPS in August 2000, section 1833(t)(9) of the Act requires that we annually review all the items and services within an APC group and revise the APC structures accordingly. Included in this review is the identification of any 2 times rule violations as provided under section 1833(t)(2) of the Act and, to the extent possible, rectification of these violations. We review our claims data every year and determine whether we need to make changes to the current APC assignment for the following year. Although CPT code 44384 was assigned to C-APC 5331 in CY 2016, we revised the assignment to C-APC 5303 for CY 2017 based on the latest claims data.

In summary, after consideration of the public comments we received, we are finalizing our CY 2018 proposal without modification to continue the assignment of CPT code 44384 to C-APC 5303. Table 38 below lists the final status indicator and APC assignments for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 38—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 44384

CPT code	Long descriptors	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
44384	Ileoscopy, through stoma; with placement of endoscopic stent (includes pre- and post-dilation and guide wire passage, when performed).	J1	5303	\$2,510.70	J1	5303	Refer to OPPTS Addendum B.

13. Laparoscopic Nephrectomy (C-APC 5362) 2018 OPPTS/ASC proposed rule, we proposed to reassign CPT code 50543 from C-APC 5377 (Level 7 Urology and Related Services), which had a proposed payment rate of \$15,220.83 to C-APC 5362 (Level 2 Laparoscopy and Related Services), which had a proposed payment rate of \$7,213.53.

For CY 2018, as displayed in Table 39 below and in Addendum B to the CY

TABLE 39—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 50543

CPT code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment	Proposed CY 2018 OPPTS SI	Proposed CY 2018 OPPTS APC	Proposed CY 2018 OPPTS payment
50543	Laparoscopy, surgical; partial nephrectomy.	J1	5377	\$14,363.61	J1	5362	\$7,213.53

Comment: One commenter applauded CMS’ proposal to remove CPT code 50543 from C-APC 5377. The commenter indicated that the code was inappropriately placed in C-APC 5377 because the procedure involves no implantable device, which is in contrast to the device-related procedures in C-APC 5377. The commenter believed that the addition of this CPT code to C-APC 5377 for CY 2017 was an error that disrupted the clinical homogeneity of the APC. The commenter suggested that CMS finalize the proposal to reassign CPT code 50543 from C-APC 5377 to APC 5362.

Response: We appreciate the commenter’s support. For this final rule with comment period, we again reviewed the updated claims data associated with CPT code 50543 and continue to believe that C-APC 5362 is the more appropriate assignment for the

CPT code based on its clinical coherence and resource similarity to the other procedures in the APC. Although our analysis showed a geometric mean cost of approximately \$7,591 for C-APC 5362, which is lower than the geometric mean cost of approximately \$10,247 for CPT code 50543 based on 1,008 single claims (out of 1,016 total claims), we found that the geometric mean cost for the CPT code falls within the range of costs for significant procedures assigned to C-APC 5362. Specifically, the cost range for procedures assigned to C-APC 5362 is between approximately \$5,997 (for CPT code 50593) and \$10,247 (for CPT code 50543). Based on the final rule claims data, we believe that CPT code 50543 is more appropriately assigned to C-APC 5362 based on its clinical coherence and resource similarity to the other procedures assigned to C-APC 5362.

Therefore, after consideration of the public comment we received, we are finalizing our proposal, without modification, to reassign CPT code 50543 to C-APC 5362 for CY 2018. As we do every year, we will review our claims data for the procedure for the CY 2019 OPPTS rulemaking. Table 40 below lists the final CY 2018 status indicator and APC assignments for CPT code 50543. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPTS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPTS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 40—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 50543

CPT code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
50543	Laparoscopy, surgical; partial nephrectomy.	J1	5377	\$14,363.61	J1	5362	Refer to OPPTS Addendum B.

14. Multianalyte Assays With Algorithmic Analyses (MAAA)

For CY 2018, as displayed in Table 41 below and as listed in Addendum B to

the CY 2018 OPPTS/ASC proposed rule, we proposed to continue to assign CPT codes 81490, 81503, 81535, 81536, 81538, and 81539, to status indicator

“Q4” to indicate that the codes are conditionally packaged. Specifically, as defined in Addendum D1 to the CY 2018 OPPTS/ASC proposed rule, an

assignment to status indicator “Q4” indicates that payment for the laboratory test is either packaged if billed on the same claim as a HCPCS code assigned to status indicator “J1”, “J2”, “S”, “T”, “V”, “Q1”, “Q2”, or “Q3”, or in other circumstances, is paid through the CLFS.

TABLE 41—PROPOSED CY 2018 STATUS INDICATOR (SI) FOR CPT CODES 81490, 81503, 81535, 81536, 81538, AND 81539

CPT code	Long descriptor	CY 2017 OPSS SI	Proposed CY 2018 OPSS SI
81490	Autoimmune (rheumatoid arthritis), analysis of 12 biomarkers using immunoassays, utilizing serum, prognostic algorithm reported as a disease activity score.	Q4	Q4
81503	Oncology (ovarian), biochemical assays of five proteins (ca-125, apolipoprotein a1, beta-2 microglobulin, transferrin, and pre-albumin), utilizing serum, algorithm reported as a risk score.	Q4	Q4
81535	Oncology (gynecologic), live tumor cell culture and chemotherapeutic response by dapi stain and morphology, predictive algorithm reported as a drug response score; first single drug or drug combination.	Q4	Q4
81536	Oncology (gynecologic), live tumor cell culture and chemotherapeutic response by dapi stain and morphology, predictive algorithm reported as a drug response score; each additional single drug or drug combination (list separately in addition to code for primary procedure).	Q4	Q4
81538	Oncology (lung), mass spectrometric 8-protein signature, including amyloid a, utilizing serum, prognostic and predictive algorithm reported as good versus poor overall survival.	Q4	Q4
81539	Oncology (high-grade prostate cancer), biochemical assay of four proteins (total psa, free psa, intact psa, and human kallikrein-2 [hk2]), utilizing plasma or serum, prognostic algorithm reported as a probability score.	Q4	Q4

Comment: Some commenters requested a revision to the status indicator assignment for the six MAAA codes (CPT codes 81490, 81503, 81535, 81536, 81538, and 81539) from “Q4” to “A” (Not paid under the OPSS but may be paid under a different Medicare payment system), consistent with the status indicator assignment for the DNA and RNA-based MAAA tests. The commenters stated that these tests are generally not performed in the HOPD setting. Also, the commenters indicated that all of the Category I CPT MAAA codes are already assigned to status indicator “A” except for CPT codes 81490, 81503, 81535, 81536, 81538, and 81539, which are protein-based MAAA codes. The commenters asserted that, based on the June 23, 2016 CLFS final rule entitled “Medicare Program; Medicare Clinical Diagnostic Laboratory Tests Payment System,” CMS defined an ADLT under section 1834A(d)(5)(A) of the Act to include DNA, RNA, and

protein-based tests, and, as such, the six protein-based MAAA codes should be reassigned to status indicator “A”.

Response: As we stated in the CY 2017 OPSS/ASC final rule with comment period (81 FR 79594), we will assign status indicator “A” (Separate payment under the CLFS) to ADLTs once a laboratory test is designated as an ADLT under the CLFS. Before a test can be designated as an ADLT, applicants must submit an application for successful designation as an ADLT by CMS. These 6 codes (CPT codes 81490, 81503, 81535, 81536, 81538, and 81539) have not been designated as ADLTs by CMS at this time, and therefore we do not believe they should be reassigned to status indicator “A”. However, once a code has been designated under the CLFS as an ADLT that meets the criteria of section 1834A(d)(5)(A) of the Act, we will update the OPSS payment file (Addendum B) on a quarterly basis to

reflect the appropriate status indicator assignment.

Therefore, after consideration of the public comments, we are finalizing our proposal, without modification, for CPT codes 81490, 81503, 81535, 81536, 81538, and 81539. As stated earlier, we will update the OPSS payment file (Addendum B) to appropriately reflect the status indicator assignment once a CPT code has been designated under the CLFS as an ADLT that meets the criteria of section 1834A(d)(5)(A) of the Act. Table 42 below lists the final status indicator for the CPT codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 42—FINAL CY 2018 STATUS INDICATOR (SI) FOR CPT CODES 81490, 81503, 81535, 81536, 81538, AND 81539

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2018 OPSS SI
81490	Autoimmune (rheumatoid arthritis), analysis of 12 biomarkers using immunoassays, utilizing serum, prognostic algorithm reported as a disease activity score.	Q4	Q4
81503	Oncology (ovarian), biochemical assays of five proteins (ca-125, apolipoprotein a1, beta-2 microglobulin, transferrin, and pre-albumin), utilizing serum, algorithm reported as a risk score.	Q4	Q4
81535	Oncology (gynecologic), live tumor cell culture and chemotherapeutic response by dapi stain and morphology, predictive algorithm reported as a drug response score; first single drug or drug combination.	Q4	Q4
81536	Oncology (gynecologic), live tumor cell culture and chemotherapeutic response by dapi stain and morphology, predictive algorithm reported as a drug response score; each additional single drug or drug combination (list separately in addition to code for primary procedure).	Q4	Q4
81538	Oncology (lung), mass spectrometric 8-protein signature, including amyloid a, utilizing serum, prognostic and predictive algorithm reported as good versus poor overall survival.	Q4	Q4

TABLE 42—FINAL CY 2018 STATUS INDICATOR (SI) FOR CPT CODES 81490, 81503, 81535, 81536, 81538, AND 81539—Continued

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2018 OPSS SI
81539	Oncology (high-grade prostate cancer), biochemical assay of four proteins (total psa, free psa, intact psa, and human kallikrein-2 [hk2]), utilizing plasma or serum, prognostic algorithm reported as a probability score.	Q4	Q4

15. Musculoskeletal APCs (APC 5111 Through 5116)

For CY 2018, we proposed to continue the existing C-APCs for the six levels of

musculoskeletal procedures (C-APCs 5111 through 5116), as displayed in Table 43 below and in Addendum B to the CY 2018 OPSS/ASC proposed rule.

TABLE 43—PROPOSED CY 2018 GEOMETRIC MEAN COST AND PAYMENT FOR MUSCULOSKELETAL C-APCs

C-APC	CY 2018 geometric mean cost	Proposed CY 2018 OPSS payment
5111—Level 1 Musculoskeletal Procedures	\$222.10	\$214
5112—Level 2 Musculoskeletal Procedures	1,311.47	1,261
5113—Level 3 Musculoskeletal Procedures	2,600.94	2,501
5114—Level 4 Musculoskeletal Procedures	5,602.87	5,385
5115—Level 5 Musculoskeletal Procedures	10,310.27	9,913
5116—Level 6 Musculoskeletal Procedures	15,783.57	15,175

Comment: Commenters disagreed with the proposal for six levels of the musculoskeletal C-APCs and requested that CMS create two additional levels within the musculoskeletal C-APCs. The commenters stated concerns about the range of costs of procedures assigned to Level 4, Level 5, and Level 6. The commenters believed that the gap between the musculoskeletal procedure levels and payments is too large and results in APCs that include disparate procedures in terms of clinical complexity and resource use.

Response: At this time, we continue to believe that the proposed C-APC levels for the musculoskeletal procedures C-APC family provide an appropriate distinction between the resource costs at each level and provide clinical homogeneity. We will continue to review this C-APC structure to determine if additional granularity is necessary for this C-APC family.

16. Nasal/Sinus Endoscopy Procedures (C-APC 5155)

For CY 2018, the AMA CPT Editorial Panel established several new bundled nasal/sinus endoscopy CPT codes. Table 44 below lists the complete descriptors for the new CPT codes. These codes were listed in Addendum B and Addendum O to the CY 2018 OPSS/ASC proposed rule (which is available via the Internet on the CMS Web site). Addendum B listed the proposed status indicator assignments for the new codes and assigned them to comment indicator “NP” (New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code), while Addendum O listed the proposed/placeholder CY 2018 CPT codes and the long descriptors. We note that the CPT code descriptors that appeared in the OPSS Addendum B were short descriptors and did not accurately

describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors in Addendum O to the proposed rule, specifically under the column labeled “CY 2018 OPSS/ASC Proposed Rule 5-Digit AMA Placeholder Code” so that the public could adequately comment on our proposed APC and status indicator assignments. We also indicated that the final CPT code numbers would be included in this CY 2018 OPSS/ASC final rule with comment period. The final CPT code numbers, along with their corresponding 5-digit placeholder codes, can be found in Table 45 below.

As displayed in Table 44 below and in Addendum B of the CY 2018 OPSS/ASC proposed rule, we proposed to assign CPT code 31241 to status indicator “C” to indicate that this is an inpatient only procedure, and to assign CPT codes 31253, 31257, 31259, and 31298 to C-APC 5155 (Level 5 Airway Endoscopy), with a proposed payment rate of \$4,628.89.

TABLE 44—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATES FOR THE NEW NASAL/SINUS ENDOSCOPY CPT CODES EFFECTIVE JANUARY 1, 2018

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Long descriptor	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
31241	31XX1	Nasal/sinus endoscopy, surgical; with ligation of sphenopalatine artery.	C	N/A	N/A
31253	31XX2	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including frontal sinus exploration, with removal of tissue from frontal sinus, when performed.	J1	5155	\$4,628.89
31257	31XX3	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy.	J1	5155	4,628.89
31259	31XX4	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy, with removal of tissue from the sphenoid sinus.	J1	5155	4,628.89
31298	31XX5	Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (e.g., balloon dilation).	J1	5155	4,628.89

Comment: Several commenters expressed concern with the APC placement and indicated that assignment to C-APC 5155 in the OPPS would reduce the ASC payment for the procedures by 32 percent. The commenters requested that CMS assign the new bundled codes to a higher paying APC to provide appropriate payment in the ASC setting. Some commenters clarified that, in CY 2017, these bundled procedures were reported under two separate codes that were separately payable. Because of the effect on the ASC payment, the commenters recommended that CMS establish a new APC for multiple (five or more) sinus procedures, reconfigure the airway APCs to better recognize the complexity associated with performing multiple sinus procedures in a single surgery, or create a complexity adjustment for sinus procedures billed with a device or drug HCPCS C-code or J-code.

Response: C-APC 5155 contains several endoscopic sinus procedures, including the single endoscopic sinus surgeries. Based on input from our medical advisors, we believe this APC is the most appropriate assignment for CPT codes 31253, 31257, 31259, and 31298. C-APC 5155, which has a final rule geometric mean cost of approximately \$4,861, is currently the highest paying APC within the airway endoscopy APC series. Because CPT codes 31253, 31257, 31259, and 31298 are new codes for CY 2018, we believe

that we should assign these codes to C-APC 5155 where similar endoscopic sinus procedures are assigned.

With regards to the comment recommending separate payment for the single endoscopic sinus procedures performed in 2017, because the codes describing single endoscopic sinus surgery are assigned to status indicator “J1”, HOPDs receive one payment for the multiple surgeries, regardless of the number of endoscopic sinus procedures performed in a day. The status indicator assignment of “J1” to C-APC 5155 indicates that the APC is designated as a comprehensive APC (C-APC) under the OPPS. C-APCs provide a single payment for a primary service, and payment for all adjunctive services reported on the same claim is packaged into payment for the primary service. With few exceptions, all other services reported on a hospital outpatient claim in combination with the primary service are considered to be related to the delivery of the primary service and packaged into the single payment for the primary service and, therefore, separate payment is not available. We note that C-APCs do not apply to ASCs; consequently, the procedures would not be packaged. Instead, the procedures would be separately payable in the ASC setting. As we stated in the CY 2017 OPPS/ASC final rule with comment period, we did not implement C-APCs in the ASC payment system, and consequently, procedures paid

separately through the ASC payment system are paid based on the standard ASC methodology (81 FR 79738). We refer readers to section II.A.2.b. (Comprehensive APCs) of this final rule with comment period for the discussion on the payment methodology for C-APCs and to section XII. (ASC Payment System) of this final rule with comment period for the discussion on the ASC Payment System. For the history on the establishment of C-APCs under the OPPS, we refer readers to the CY 2014 OPPS/ASC final rule (78 FR 74861-4910).

In summary, after consideration of the public comments we received, we are finalizing our proposal for CPT codes 31241, 31253, 31257, 31259, and 31298 without modification. Consistent with the statutory requirement under section 1833(t)(9)(A) of the Act, we will reevaluate the APC assignment for these codes in the next rulemaking cycle. Table 45 below lists the final status indicator and APC assignments for CPT codes 31241, 31253, 31257, 31259, and 31298 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 45—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR THE NEW NASAL/SINUS ENDOSCOPY CPT CODES EFFECTIVE JANUARY 1, 2018

CPT code	CY 2018 OPSS/ASC proposed rule placeholder code	Long descriptor	CY 2018 OPSS SI	CY 2018 OPSS APC	CY 2018 OPSS payment rate
31241	31XX1	Nasal/sinus endoscopy, surgical; with ligation of sphenopalatine artery.	C	N/A	Refer to OPSS Addendum B.
31253	31XX2	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including frontal sinus exploration, with removal of tissue from frontal sinus, when performed.	J1	5155	Refer to OPSS Addendum B.
31257	31XX3	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy.	J1	5155	Refer to OPSS Addendum B.
31259	31XX4	Nasal/sinus endoscopy, surgical with ethmoidectomy; total (anterior and posterior), including sphenoidotomy, with removal of tissue from the sphenoid sinus.	J1	5155	Refer to OPSS Addendum B.
31298	31XX5	Nasal/sinus endoscopy, surgical; with dilation of frontal and sphenoid sinus ostia (eg, balloon dilation).	J1	5155	Refer to OPSS Addendum B.

17. Nuclear Medicine Services (APCs 5592 and 5593)

For CY 2018, as illustrated in Table 46 below, we proposed to continue to

assign CPT codes 78018 and 78121 to APC 5592 (Level 2 Nuclear Medicine and Related Services) and to also continue to assign CPT codes 78110 and

78111 to APC 5593 (Level 3 Nuclear Medicine and Related Services).

TABLE 46—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODES 78018, 78110, 78111, AND 78121

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	Proposed CY 2018 OPSS SI	Proposed CY 2018 OPSS APC	Proposed CY 2018 OPSS payment Rate
78018	Thyroid carcinoma metastases imaging; whole body.	S	5592	\$429.13	S	5592	\$439.56
78110	Plasma volume, radiopharmaceutical volume-dilution technique (separate procedure); single sampling.	S	5593	1,138.94	S	5593	1,163.30
78111	Plasma volume, radiopharmaceutical volume-dilution technique (separate procedure); multiple samplings.	S	5593	1,138.94	S	5593	1,163.30
78121	Red cell volume determination (separate procedure); multiple samplings.	S	5592	429.13	S	5592	439.56

Comment: One commenter stated that CMS proposed to reassign CPT codes 78018, 78110, 78111 and 78121 to new APC groups, and recommended that CMS maintain the CPT codes in the “new APC groups” to ensure stability within the coding structure. The commenter added that CMS has moved these codes several times over the years and believed they are currently assigned to appropriate APC groups. This commenter noted that the codes are low volume with high costs, and recommended that CMS defer to the specialty societies for appropriate APC assignment.

Response: For the CY 2017 update, as indicated in the OPSS Addendum B that was released with the CY 2017 OPSS/ASC final rule with comment period, we assigned CPT codes 78018, 78110, 78111 and 78121 to comment indicator

“CH” to indicate that their APC assignments were revised. However, as displayed in Table 46, we proposed to make no change to the APC assignments for all four codes for the CY 2018 OPSS update. Specifically, we proposed to continue to assign CPT codes 78018, 78110, 78111, and 78121 to the same CY 2017 APCs for CY 2018 based on claims data used for the CY 2018 OPSS/ASC proposed rule. We note that the proposed rule data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. For CPT code 78018, our examination of the claims data revealed a geometric mean cost of approximately \$418 based on 5,604 single claims (out of 6,327 total claims). Because the geometric mean cost of \$418 is similar to the geometric mean cost of

approximately \$457 for APC 5592, we proposed to maintain the assignment of this code to APC 5592. For CPT code 78110, our claims data showed a geometric mean cost of approximately \$1,046 based on 12 single claims (out of 14 total claims). We believe that the geometric mean cost of \$1,046 for CPT code 78110 is comparable to the geometric mean cost of approximately \$1,210 for APC 5593. Consequently, we proposed to maintain the assignment of this code to APC 5593. For CPT code 78111, we had no claims data. However, based on its clinical similarity to CPT code 78110, we proposed to continue to assign the CPT code to APC 5593. For CPT code 78121, our analysis revealed a geometric mean cost of approximately \$807 based on 3 single claims (out of 3 total claims). Based on the low volume and because revising the assignment to

APC 5593, which had a proposed geometric mean cost of approximately \$1,210 would result in an overpayment for the test, we proposed to continue to assign CPT code 78121 to APC 5592, and to review the claims data for the final rule to determine whether a revision to the APC assignment would be necessary.

For this final rule with comment period, we again analyzed updated claims data associated with the four codes. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our review of the final rule claims data revealed a similar pattern for all four codes. For CPT code 78018, we found a geometric mean cost of approximately \$418 based on 6,113 single claims (out of 6,923 total claims), which is similar to the geometric mean cost of approximately \$453 for APC 5592. Consequently, we believe that it continues to be appropriate to assign CPT code 78018 to APC 5592. For CPT code 78110, our claims data revealed a geometric mean cost of approximately \$1,037 based on 12 single claims (out of 14 total claims), which is similar to the geometric mean cost of approximately \$1,202 for APC 5593.

Consequently, we are maintaining CPT code 78110 in APC 5593. For CPT

code 78111, we again had no claims data. However, because of its clinical similarity to CPT code 78110, we will maintain the assignment to APC 5593. For CPT code 78121, we found a geometric mean cost of approximately \$808 based on 3 single claims (out of 3 total claims). Based on the comment received that the APC assignment is appropriate, we will retain CPT code 78121 in APC 5592, whose geometric mean cost is approximately \$453, for CY 2018. In addition, given the low volume for the CPT code, we do not believe that we should reassign CPT code 78121 to APC 5593, whose geometric mean cost is approximately \$1,202 for CY 2018. To reassign CPT code 78121 to APC 5593 would result in an overpayment for CPT code 78121.

Further, we remind the commenter, that as we do every year, we review the latest OPSS claims data to set the payment rates for the following year. Section 1833(t)(9) of the Act requires that we annually review all the items and services within an APC group and revise the APC structures accordingly. Included in this review is the identification of any 2 times rule violations as provided under section 1833(t)(2) of the Act and, to the extent possible, rectification of these violations.

With regard to the comment of deferring to specialty societies for

appropriate APC placement for designated codes, while we rely on our latest claims data to appropriately set payment rates under the OPSS, we welcome and appreciate comments from all stakeholders on our proposals. We note that every year we publish the OPSS/ASC proposed rules with requests for public comments on the OPSS and ASC payment assignments from interested parties, including hospitals, specialty societies, physicians, nurses, health care technicians, other health care professionals, interested individuals, patients, and any other stakeholders interested on commenting on our proposed payment assignments.

In summary, after consideration of the public comment we received, we are finalizing our CY 2018 proposals, without modification, for CPT codes 78018, 78110, 78111, and 78121. Table 47 below lists the final status indicator and APC assignments for the CPT codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 47—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODES 78018, 78110, 78111, AND 78121

CPT code	Long descriptors	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	CY 2018 OPSS SI	CY 2018 OPSS APC	CY 2018 OPSS payment rate
78018	Thyroid carcinoma metastases imaging; whole body.	S	5592	\$429.13	S	5592	Refer to OPSS Addendum B.
78110	Plasma volume, radiopharmaceutical volume-dilution technique (separate procedure); single sampling.	S	5593	1,138.94	S	5593	Refer to OPSS Addendum B.
78111	Plasma volume, radiopharmaceutical volume-dilution technique (separate procedure); multiple samplings.	S	5593	1,138.94	S	5593	Refer to OPSS Addendum B.
78121	Red cell volume determination (separate procedure); multiple samplings.	S	5592	429.13	S	5592	Refer to OPSS Addendum B.

18. Percutaneous Transluminal Mechanical Thrombectomy (C-APC 5192)

For CY 2018, as noted in Table 48 below and in Addendum B to the CY

2018 OPSS/ASC proposed rule, we proposed to revise the APC assignment for the percutaneous transluminal mechanical thrombectomy procedures, specifically, CPT codes 37184 and 37187. Specifically, we proposed to

reassign CPT codes 37184 and 37187 from APC 5183 (Level 3 Vascular Procedures) to APC 5184 (Level 4 Vascular Procedures), with a proposed payment rate of \$4,084.25.

TABLE 48—PROPOSED CY 2018 U (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODES 37184 AND 37187

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
37184	Primary percutaneous transluminal mechanical thrombectomy, noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); initial vessel.	T	5183	\$3,924.28	T	5184	\$4,084.25
37187	Percutaneous transluminal mechanical thrombectomy, vein(s), including intraprocedural pharmacological thrombolytic injections and fluoroscopic guidance.	T	5183	3,924.28	T	5184	4,084.25

Comment: One commenter requested that CMS revise the proposed APC assignment for CPT codes 37184 and 37187 from APC 5184 to C-APC 5192 based on their clinical and resource homogeneity to the procedures assigned to C-APC 5192 (Level 2 Endovascular Procedures). The commenter indicated that both procedures are clinically similar to other percutaneous transluminal procedures assigned to C-APC 5192, including CPT code 36904 (Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s)), which CMS proposed to assign to C-APC 5192 for CY 2018, with a proposed payment of \$4,999.36. This commenter added that the geometric mean costs associated with the procedures described by CPT codes 37184 and 37187 are similar to the geometric mean costs of other procedures currently assigned to C-APC 5192.

Response: For this final rule with comment period, we reviewed the

updated CY 2016 claims data associated with CPT codes 37184 and 37187. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our analysis of the final rule claims data revealed that a change in the APC assignment for CPT codes 37184 and 37187 to C-APC 5192 (rather than proposed APC 5184) is appropriate. Specifically, we found a geometric mean cost of approximately \$8,459 for CPT code 37184 based on 149 single claims (out of 150 total claims), and a geometric mean cost of approximately \$6,343 for CPT code 37187 based on 188 single claims (out of 190 total claims). We believe that the geometric mean costs for CPT codes 37184 and 37187 are more similar to the geometric mean costs of other procedures assigned to C-APC 5192, whose geometric mean cost is approximately \$5,082, rather than the geometric mean costs of procedures assigned to APC 5184, whose geometric mean cost is approximately \$4,262. We note that we also considered whether we should reassign CPT codes 37184 and 37187 to C-APC 5193 (Level 3 Endovascular Procedures), which has a geometric mean cost of approximately

\$10,504. However, based on our review, we believe that C-APC 5192 is more appropriate. Therefore, based on their clinical homogeneity and resource costs in relation to the other procedures assigned to C-APC 5192, we agree with the commenter that C-APC 5192 is the most appropriate APC assignment for CPT codes 37184 and 37187.

After consideration of the public comment we received, we are finalizing our CY 2018 proposal, with modification, for CPT codes 37184 and 37187. Specifically, we are reassigning CPT codes 37184 and 37187 from APC 5183 to C-APC 5192 for CY 2018. As we do every year under the OPSS, we will reevaluate the cost of CPT codes 37184, and 37187 and their APC assignment for next year's OPSS update. Table 49 below lists the final status indicator and APC assignments for both CPT codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 49—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODES 37184 AND 37187

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	CY 2018 OPPS SI	CY 2018 OPPS APC	CY 2018 OPPS payment rate
37184	Primary percutaneous transluminal mechanical thrombectomy, noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); initial vessel.	T	5183	\$3,924.28	J1	5192	Refer to OPPS Addendum B.
37187	Percutaneous transluminal mechanical thrombectomy, vein(s), including intraprocedural pharmacological thrombolytic injections and fluoroscopic guidance.	T	5183	3,924.28	J1	5192	Refer to OPPS Addendum B.

19. Peripherally Inserted Central Venous Catheter (PICC) (APC 5182) code 36569 from APC 5181 (Level 1 Vascular Procedures) to APC 5182 (Level 2 Vascular Procedures), with a proposed payment rate of \$945.33.

For CY 2018, as noted in Table 50 below, we proposed to reassign CPT

TABLE 50—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 36569

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
36569	Insertion of peripherally inserted central venous catheter (picc), without subcutaneous port or pump; age 5 years or older.	T	5181	\$684.13	T	5182	\$945.33

We proposed to revise the APC assignment for CPT code 36569 based on claims data used for the CY 2018 OPPS/ASC proposed rule. We note that the proposed rule data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. Our analysis of the proposed rule claims data revealed a geometric mean cost of approximately \$934 for CPT code 36569 based on 29,514 single claims (out of 52,035 total claims). Our analysis further revealed a geometric mean cost of approximately \$983 for APC 5182 and \$610 for APC 5181. Based on the geometric mean costs of APCs 5181 and 5182, we believed it was necessary to revise the APC assignment for CPT code 36569 from APC 5181 to APC 5182 to pay appropriately for the procedure. Consequently, we proposed to revise the APC assignment for CPT code 36569, whose geometric mean cost of approximately \$934 is comparable to

the geometric mean cost of approximately \$983 for APC 5182.

For this final rule with comment period, we again reviewed the updated claims data associated with CPT code 36569. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our analysis of the final rule claims data revealed a similar pattern for CPT code 36569. Specifically, we found a geometric mean cost of approximately \$929 for CPT code 36569 based on 31,559 single claims (out of 56,891 total claims). We also found the geometric mean cost of approximately \$982 for APC 5182 to be similar to the geometric mean cost of CPT code 36569 compared to the geometric mean cost of approximately \$612 for APC 5181.

Comment: One commenter supported the proposed APC reassignment for CPT code 36569 and stated that APC 5182

more appropriately reflects the resources to perform the procedure.

Response: We appreciate the commenter's support. Based on our latest analysis of the final rule claims data, we are finalizing our proposal to reassign CPT code 36569 from APC 5181 to APC 5182.

In summary, after consideration of the public comment we received, we are finalizing our CY 2018 proposal, without modification, to reassign CPT code 36569 to APC 5182. Table 51 below lists the final status indicator and APC assignments for CPT code 36569 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 51—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 36569

CPT code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
36569	Insertion of peripherally inserted central venous catheter (picc), without subcutaneous port or pump; age 5 years or older.	T	5181	\$684.13	T	5182	Refer to OPPTS Addendum B.

20. Pulmonary Rehabilitation Services (APCs 5732 and 5733) and Cardiac Rehabilitation Services (APC 5771)

For CY 2018, as displayed in Table 52 below, and as listed in Addendum B of the CY 2018 OPPTS/ASC proposed rule, we did not propose to make any change to the APC assignments for the pulmonary rehabilitation services and

cardiac rehabilitation services codes. Currently, there are four HCPCS codes that describe pulmonary rehabilitation services, specifically, HCPCS codes G0237, G0238, G0239, and G0424. For CY 2018, we proposed to continue to assign HCPCS codes G0237, G0238, and G0239 to APC 5732 (Level 2 Minor Procedures) and to continue to assign HCPCS code G0424 to APC 5733 (Level

3 Minor Procedures) for CY 2018. In addition, there are currently four HCPCS codes that describe the cardiac rehabilitation services, specifically, HCPCS codes 93797, 93798, G0422, and G0423. For CY 2018, we proposed to continue to assign the cardiac rehabilitation services codes to APC 5771 (Cardiac Rehabilitation) for CY 2018.

TABLE 52—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR THE PULMONARY REHABILITATION SERVICES AND CARDIAC REHABILITATION SERVICES HCPCS CODES

HCPCS code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	Proposed CY 2018 OPPTS SI	Proposed CY 2018 OPPTS APC	Proposed CY 2018 OPPTS payment rate
Pulmonary Rehabilitation Services							
G0237	Therapeutic procedures to increase strength or endurance of respiratory muscles, face to face, one on one, each 15 minutes (includes monitoring).	S	5732	\$28.38	S	5732	\$29.65
G0238	Therapeutic procedures to improve respiratory function, other than described by g0237, one on one, face to face, per 15 minutes (includes monitoring).	S	5732	28.38	S	5732	29.65
G0239	Therapeutic procedures to improve respiratory function or increase strength or endurance of respiratory muscles, two or more individuals (includes monitoring).	S	5732	28.38	S	5732	29.65
G0424	Pulmonary rehabilitation, including exercise (includes monitoring), one hour, per session, up to two sessions per day.	S	5733	54.55	S	5733	53.22
Cardiac Rehabilitation Services							
93797	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ecg monitoring (per session).	S	5771	\$110.22	S	5771	\$113.71
93798	Physician or other qualified health care professional services for outpatient cardiac rehabilitation; with continuous ecg monitoring (per session).	S	5771	110.22	S	5771	113.71
G0422	Intensive cardiac rehabilitation; with or without continuous ecg monitoring with exercise, per session.	S	5771	110.22	S	5771	113.71
G0423	Intensive cardiac rehabilitation; with or without continuous ecg monitoring; without exercise, per session.	S	5771	110.22	S	5771	113.71

Comment: Several commenters expressed concern that the payment rates for the pulmonary rehabilitation services are significantly less than those for the cardiac rehabilitation services. The commenters stated that, despite the legislative and clinical similarity between both services, CMS has taken different approaches to implementing the services, with pulmonary rehabilitation services paid less than cardiac rehabilitation services. One commenter indicated that, since 2010, the code describing pulmonary rehabilitation services has had three different status indicator assignments and payment volatility. This commenter recommended that CMS reassign the pulmonary rehabilitation HCPCS code G0464 from APC 5733 to the cardiac rehabilitation APC group, specifically, APC 5771. Another commenter recommended that CMS revisit its approach to payment for pulmonary rehabilitation services to improve access to care. One commenter recommended that both types of services be placed in one composite APC under the OPSS.

Response: The payment rates for both the pulmonary and cardiac rehabilitation services are based on claims data that are analyzed each year. As we do every year, we review the latest OPSS claims data to set the payment rates for the following year. We note that section 1833(t)(9) of the Act requires that we annually review all the items and services within an APC group and revise the APC structures accordingly. Included in this review is the identification of any 2 times rule violations as provided under section 1833(t)(2) of the Act and, to the extent possible, rectification of these violations.

For the proposed rule, we based the proposed payment rates on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. Based on our analysis, we found the costs for both types of services to be significantly different.

For the pulmonary rehabilitation services, our analysis revealed a geometric mean cost of approximately \$26 for HCPCS code G0237 (based on 19,925 single claims), \$22 for HCPCS code G0238 (based on 17,361 single claims), and \$33 for HCPCS code G0239 (based on 168,295 single claims). We note that the range of costs (between \$26 and \$33) for HCPCS codes G0237, G0238, and G0239 are similar to the geometric mean cost of approximately \$31 for APC 5732. Consequently, we proposed to continue to assign all three pulmonary rehabilitation services HCPCS codes to APC 5732 for CY 2018.

In addition, we found a geometric mean cost of approximately \$45 for HCPCS code G0424 (based on 468,571 single claims) that is comparable to the geometric mean cost of approximately \$55 for APC 5733. Therefore, we proposed to continue to assign HCPCS code G0424 to APC 5733.

For the cardiac rehabilitation services, our analysis revealed a geometric mean cost of approximately \$101 for HCPCS code 93797 (based on 129,124 single claims), \$118 for HCPCS code 93798 (based on 2,698,534 single claims), \$212 for HCPCS code G0422 (based on 38,094 single claims), and \$174 for HCPCS code G0423 (based on 18,001 single claims). Because the range of costs (between \$101 and \$212) for the cardiac rehabilitation services are comparable to the geometric mean cost of approximately \$118 for APC 5771, we proposed to continue to assign the cardiac rehabilitation HCPCS codes to APC 5771 for CY 2018.

For this final rule with comment period, we again analyzed the updated claims data associated with the pulmonary and cardiac rehabilitation services. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Similar to our proposed rule findings, we found the costs to be different for both services.

For the pulmonary rehabilitation services, our final rule claims data revealed a geometric mean cost of approximately \$25 for HCPCS code G0237 (based on 22,097 single claims), \$22 for HCPCS code G0238 (based on 18,900 single claims), and \$33 for HCPCS code G0239 (based on 187,134 single claims). Based on the range of costs (between \$22 and \$33), we believe that HCPCS codes G0237, G0238, and G0239 are appropriately assigned to APC 5732, whose geometric mean cost is approximately \$32. Similarly, we believe that the geometric mean cost of approximately \$44 (based on 514,478 single claims) for HCPCS code G0424 is comparable to the geometric mean costs of those services assigned to APC 5733, whose geometric mean cost is approximately \$56 for CY 2018.

For the cardiac rehabilitation services, our final rule claims data revealed a geometric mean cost of approximately \$224 for HCPCS code G0422 (based on 44,754 single claims), \$186 for HCPCS code G0423 (based on 22,188 single claims), \$101 for HCPCS code 93797 (based on 143,507 single claims), and \$116 for HCPCS code 93798 (based on 2,991,759 single claims). Based on the costs for the cardiac rehabilitation

HCPCS codes (between \$101 to \$224), we believe that the geometric mean cost of approximately \$117 for APC 5771 appropriately reflects the resources in providing cardiac rehabilitation services.

In addition, while the commenters believed that pulmonary and cardiac rehabilitation services are similar, our analysis of the available OPSS data reveals that their costs are significantly different. Consequently, we do not agree that we should assign both services to one APC, or even assign the pulmonary rehabilitation HCPCS code G0424 to the cardiac rehabilitation services group (APC 5771). We note that the commenters did not provide data to suggest that the hospital reported costs in our data are incorrect or that the resources (costs) incurred to furnish these two types of services are equal. Accordingly, we have no reason to believe that the data reported to us by hospitals are incorrect.

Moreover, we do not agree that we should create a composite APC for the pulmonary and cardiac rehabilitation services. Composite APCs provide a single payment for groups of services that are typically performed together during a single clinical encounter that result in the provision of a complete service. Combining payment for multiple, independent services into a single OPSS payment in this way enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves. Establishing a composite APC for these services would not be appropriate because pulmonary and cardiac rehabilitation services are generally not performed on the same day. We refer readers to the CY 2008 OPSS/ASC final rule with comment period for a full discussion of the development of the composite APC methodology (72 FR 66611 through 66614 and 66650 through 66652) and the CY 2012 OPSS/ASC final rule with comment period (76 FR 74163) for more recent background.

Comment: Some commenters stated that, despite evidence that pulmonary rehabilitation is a valuable service, few patients with chronic obstructive pulmonary disease (COPD) are able to access this treatment. The commenters further indicated that a study of Medicare beneficiaries revealed that only 3.7 percent of COPD patients received pulmonary rehabilitation in 2012, and believe this number may be higher for non-Medicare beneficiaries. The commenters noted that payment for pulmonary rehabilitation is lower than cardiac rehabilitation (a similar service) in the Medicare program, and believed

this difference is based on idiosyncratic hospital billing and OPPS rules, not based on rational policy or evidence. Specifically, the commenter indicated that, for CY 2017, payment for 1 hour of pulmonary rehabilitation is \$54.55 under the OPPS. These commenters suggested that the payment discrepancy between cardiac services and pulmonary rehabilitation services may be a contributing factor to inadequate access of the pulmonary rehabilitation services.

Response: As stated in section III.B. of this final rule with comment period, payments for OPPS services and procedures are based on our analysis of the latest claims data. Under the OPPS, we pay for covered hospital outpatient services on a rate-per-service basis, where the service may be reported with

one or more HCPCS codes. Payment varies according to the APC group to which the independent service or combination of services is assigned. Under the Medicare program, we pay separately for both cardiac and pulmonary rehabilitation services. We have not found evidence that there is an access to care issue for pulmonary rehabilitation services compared to cardiac rehabilitation services. We note that there are a variety of treatment options for patients with COPD and pulmonary rehabilitation remains a covered service for those beneficiaries for whom physicians order this service. We note that, under the Medicare program, when the service is provided in the hospital outpatient setting, we make two payments, one to the hospital outpatient department under the OPPS

and another for the professional services under the MPFS.

In addition, as illustrated in Table 52–1 below, the number of services paid by Medicare for both cardiac rehabilitation and pulmonary rehabilitation has grown in the last several years. For the CY 2018 OPPS update, our claims data reveal over 514,000 single claims for pulmonary rehabilitation services as described by HCPCS code G0424 alone. Accordingly, we do not believe that beneficiary access to pulmonary rehabilitation services is inadequate. Details pertaining to the volume of these services furnished in the physician office setting can be derived from the CY 2018 MPFS final rule and associated public use files.

TABLE 52–1—OPPS CLAIMS DATA FOR THE PULMONARY AND CARDIAC (INCLUDING INTENSIVE CARDIAC) REHABILITATION HCPCS CODES FOR THE CY 2014 THROUGH CY 2018 OPPS UPDATES

HCPCS code	Short descriptor	2014 OPPS single claims data	2015 OPPS single claims data	2016 OPPS single claims data	2017 OPPS single claims data	2018 OPPS single claims data

G0237	Therapeutic procd strg endure	15,337	43,591	47,046	19,098	22,097
G0238	Oth resp proc, indiv	14,437	22,736	23,960	18,482	18,900
G0239	Oth resp proc, group	132,475	111,755	127,425	165,799	187,134
G0424	Pulmonary rehab w exer	457,226	459,572	454,121	443,777	514,478

In summary, after consideration of the public comments we received and after our analysis of the updated claims data for this final rule with comment period, we believe that the current APC assignments for the pulmonary and cardiac rehabilitation services appropriately reflects their clinical coherence and resource costs. Consequently, we are finalizing our proposal to continue the current APC

assignment of the pulmonary and cardiac rehabilitation HCPCS codes, without modification, for CY 2018. As we do every year, we will review our claims data for these services for the CY 2019 OPPS rulemaking. Table 53 below lists the final status indicator and APC assignments for the codes for pulmonary and cardiac rehabilitation services. We refer readers to Addendum B to this final rule with comment period for the

payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

21. Radiology and Imaging Procedures and Services

a. Imaging APCs

Section 1833(t)(9)(A) of the Act requires the Secretary to review not less often than annually, and revise the APC group assignments, relative payment weights, and the wage and other adjustments to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. In addition, section 1833(t)(2)(G) of the Act requires the Secretary to create additional groups of covered OPD services that classify separately those procedures that utilize contrast agents from those procedures that do not utilize contrast agents.

In CY 2016, as a part of our comprehensive review of the structure of the APCs and procedure code assignments, we restructured the APCs that contain imaging services (80 FR

70392). The purpose of this restructuring was to more appropriately reflect the resource costs and clinical characteristics of the services classified within the imaging APCs. The restructuring of the imaging APCs resulted in broader groupings that removed the excessive granularity of grouping imaging services according to organ or physiologic system, which did not necessarily reflect either significant differences in resources or how these services are delivered in the hospital outpatient setting. In CY 2017, in response to public comments on the CY 2017 OPPS/ASC proposed rule, we further consolidated the imaging APCs from 17 APCs in CY 2016 to 7 APCs in CY 2017 (81 FR 79633). These included four imaging APCs without contrast and three imaging APCs with contrast.

As discussed in the CY 2018 OPPS/ASC proposed rule (82 FR 33608), for CY 2018, we reviewed the services assigned to the imaging without contrast APCs and imaging with contrast APCs.

Specifically, we evaluated the resource costs and clinical coherence of the procedures associated with the four levels of imaging without contrast APCs and the three levels of imaging with contrast APCs, as well as identified and corrected any 2 times rule violations as discussed in section III.B.2. of the CY 2018 OPPS/ASC proposed rule. In addition, we reviewed and considered stakeholder recommendations to make additional refinements to the structure of the APC groupings of the imaging procedures classified within the imaging APCs that would maintain clinical homogeneity while more appropriately addressing resource cost fluctuation and volatility. As a result of our analysis and review of the claims data used for CY 2018 ratesetting, we stated in the proposed rule that we believed a Level 5 Imaging without Contrast APC was needed to more appropriately group certain imaging services with higher resource costs. Specifically, we stated our belief that

the data supported splitting the current (CY 2017) Level 4 Imaging without Contrast APC into two APCs such that the Level 4 Imaging without Contrast APC would include high frequency, low-cost services and the proposed Level 5 Imaging without Contrast APC would include low frequency high-cost services. Therefore, for CY 2018, we proposed to add a fifth level within the Imaging without Contrast APCs. In Table 19 of the proposed rule, we listed the CY 2017 imaging APCs, and in Table 20 of the proposed rule, we listed the proposed CY 2018 imaging APCs with the addition of a fifth level within the Imaging without Contrast APCs. The specific APC assignments for each service grouping were listed in Addendum B to the proposed rule, which is available via the Internet on the CMS Web site. We stated that this proposal would increase the imaging APCs from 7 APCs in CY 2017 to 8 in CY 2018. The specific APC assignments for each imaging service HCPCS code were listed in Addendum B to the proposed rule, which is available via the Internet on the CMS Web site. We noted that some of the imaging procedures are assigned to APCs that are not listed in the tables (for example, the vascular procedures APCs). Also, the nuclear medicine services APCs were not included in this proposal. These imaging services were not included in this proposal because we did not propose changes to their APC structure.

We invited public comments on our proposal to add a Level 5 Imaging without Contrast APC in CY 2018.

Comment: Commenters generally disagreed with CMS' proposal to add a fifth level within the Imaging without Contrast APC series. These commenters represented various imaging specialty societies and individual practitioners who utilize various imaging modalities. Many of the commenters opposed adding a fifth level because of the proposed resultant reduction in payment to several vascular ultrasound procedures. The commenters urged CMS to not finalize the proposal because it would destabilize and drastically decrease payments for certain imaging services compared to CY 2017 rates. The commenters noted that the proposed rate for certain imaging services would cause certain providers to no longer be able to furnish these services, thereby impeding access to these important services for Medicare beneficiaries. However, some commenters recommended various alternative HCPCS code placements within the Imaging without Contrast APC series if CMS finalized its proposal to add a fifth level. Some of these same

commenters suggested that maintaining the CY 2017 APC groupings and payment rates, to the extent possible, would address their concerns.

Response: We appreciate these comments and recommendations on how to structure and assign HCPCS codes to the Imaging without Contrast APC series. We analyzed the various alternative suggestions for the various recommended HCPCS code placements, including maintaining the CY 2017 APC groupings. After consideration of the public comments and suggestions we received, we are not finalizing our proposal to add a fifth level to the Imaging without Contrast APC series. Instead, we are maintaining the CY 2017 APC structure of four levels of Imaging Without Contrast APCs and making minor reassignments to the HCPCS codes within this series to resolve or mitigate any violations of the 2 times rule or both. We understand the importance of payment stability for providers and believe that continuation of the four levels of Imaging without Contrast APCs would minimize fluctuation in payment rates from CY 2017 to CY 2018. As displayed in the "2 Times Rule" for this final rule with comment period, which is available via the Internet on the CMS Web site, the APC geometric mean costs for APCs 5521 through 5524 are consistent with the CY 2017 APC geometric mean costs for the same APCs, indicating the cost-based relative weights that are used to calculate payment are stable.

Comment: A few commenters objected to the proposed exception to the violation of the 2 times rule for APC 5573 (Level 3 Imaging With Contrast) and recommended alternative approaches to resolving the violation, such as the creation of a Level 4 Imaging With Contrast or maintaining the CY 2017 APC groupings. Commenters stated that the proposed reassignment of nine high-volume contrast magnetic resonance imaging (MRI) procedures from Level 2 (CY 2017 placement) to Level 3 (proposed CY 2018 placement) would result in a significant reduction and underpayment for contrast echocardiography procedures and would significantly lower the payment rate for contrast echocardiography procedures, which has been relatively stable for the past several years, consistent with the procedure costs. These nine high-volume contrast MRI procedures are described by the following CPT codes:

- CPT code 70543 (Magnetic resonance imaging, orbit, face, and/or neck; without contrast material(s) and further sequences);

- CPT code 70553 (Magnetic resonance imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences);

- CPT code 71552 (Magnetic resonance imaging, chest; without contrast material(s), followed by contrast material(s) and further sequences);

- CPT code 72156 (Magnetic resonance imaging, spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; cervical);

- CPT code 72157 (Magnetic resonance imaging spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; thoracic);

- CPT code 72158 (Magnetic resonance imaging spinal canal and contents, without contrast material, followed by contrast material(s) and further sequences; lumbar);

- CPT code 72197 (Magnetic resonance imaging pelvis; without contrast material(s), followed by contrast material(s) and further sequences);

- CPT code 73223 (Magnetic resonance imaging, any joint of upper extremity; without contrast material(s), followed by contrast material(s) and further sequences); and

- CPT code 74183 (Magnetic resonance imaging abdomen; without contrast material(s), followed by with contrast material(s) and further sequences).

Response: We were persuaded by the points raised by the commenters and agree that continuation of the CY 2017 groupings is appropriate to maintain payment stability for imaging services assigned to APC 5572 and APC 5573. Although the proposed grouping for APC 5573 achieved clinical similarity, based on analysis of the claims data used for this final rule with comment period, we believe we should take a deliberate approach to maintain consistency in payment assignment by not adopting the proposals to reassign the nine high-volume contrast MRI procedures from APC 5572 to APC 5573 and to allow for an exception for APC 5573 from the 2 times rule. Therefore, we are modifying our proposed grouping for APC 5573 by moving the nine high-volume contrast MRI procedures from Level 3 (Imaging with Contrast) to Level 2 (Imaging with Contrast), which is consistent with their CY 2017 APC assignment. In addition, we are making a few other code reassignments to resolve the 2 times rule violation in APC 5573.

In summary, after consideration of the public comments we received and for the reasons discussed above, we are not finalizing the proposal to create a Level

5 (Imaging without Contrast) APC or the proposal to assign nine high-volume contrast MRI procedures to Level 3 (Imaging with Contrast) for CY 2018.

Table 54 below compares the CY 2017 and 2018 APC geometric mean costs for the imaging APCs.

TABLE 54—COMPARISON OF CY 2017 AND CY 2018 GEOMETRIC MEAN COSTS FOR THE IMAGING APCS

APC	APC group title	CY 2017 APC geometric mean cost	CY 2018 APC geometric mean cost
5521	Level 1 Imaging without Contrast	\$61.53	\$62.08
5522	Level 2 Imaging without Contrast	115.88	118.68
5523	Level 3 Imaging without Contrast	232.21	245.08
5524	Level 4 Imaging without Contrast	462.23	486.38
5571	Level 1 Imaging with Contrast	272.40	252.58
5572	Level 2 Imaging with Contrast	438.42	456.08
5573	Level 3 Imaging with Contrast	675.23	681.45

The specific APC assignments for each imaging procedure grouping are listed in Addendum B to this final rule with comment period, which is available via the Internet on the CMS Web site.

b. Non-Ophthalmic Fluorescent Vascular Angiography (APC 5523)

As discussed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33609), for the CY 2018 OPPTS update, we proposed to reassign HCPCS code C9733 (Non-ophthalmic fluorescent vascular angiography) from APC 5523 (Level 3 Imaging without Contrast) to APC 5524 (Level 4 Imaging without Contrast) based on the latest claims data available for the proposed rule. We proposed to maintain the status indicator assignment of “Q2” (T-packaged) to indicate that the service is conditionally packaged when performed in conjunction with other procedures on the same day but paid separately when performed as a stand-alone service.

Our claims data used for the proposed rule, which included claims submitted between January 1, 2016, and December 31, 2016, and processed on or before December 31, 2016, showed a geometric mean cost of approximately \$236 for HCPCS code C9733 based on 216 single claims (out of 953 total claims), which is closely aligned with the geometric mean cost of approximately \$275 for APC 5524. Because HCPCS code C9733 is an imaging service which is similar to the codes assigned to APC 5524, we proposed to reassign HCPCS code C9733 from APC 5523 to APC 5524. We stated that we believe this proposed reassignment would improve the clinical homogeneity of APC 5524 and appropriately align the resource costs of HCPCS code C9733 to the resource costs of those procedures assigned to APC 5524.

As we have stated in previous OPPTS/ASC final rules, specifically, in the CY

2013 OPPTS/ASC final rule with comment period (77 FR 68345 through 68346), the CY 2014 OPPTS/ASC final rule with comment period (78 FR 74976 through 74977), and the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79632), the service described by HCPCS code C9733 is primarily an intraoperative imaging service that is performed in combination with a number of primary procedures, including facial reconstruction and reanimation, muscle flaps, trauma reconstruction, digital and limb reattachment, and breast reconstruction. Therefore, payment for the service described by HCPCS code C9733 is conditionally packaged under 42 CFR 419.2(b)(14), which contains the policies governing packaging of intraoperative items and services. Consequently, we proposed to maintain the status indicator assignment of “Q2” to indicate that the payment for the service will be packaged in the APC payment if billed on the same date of service as a HCPCS code assigned to status indicator “T”, but in all other circumstances, a separate APC payment for the service will be made. We believe that the OPPTS payments, separate or packaged, for surgical procedures with which this service is performed are more than adequate to cover the cost of the service described by HCPCS code C9733 for Medicare beneficiaries in need of this service.

Comment: Several commenters supported the proposed APC reassignment for HCPCS code C9733 to APC 5524. A few commenters also suggested assignment of HCPCS code C9733 in a higher payment APC (compared to the CY 2017 payment rate) that would cover the cost of the service, but did not recommend a specific APC. In addition, commenters requested that CMS change the status indicator assignment from “Q2” to a separately payable status indicator “S”. The

commenters noted that status indicator “Q2” indicates that payment for the procedure described by HCPCS code C9733 is conditionally packaged when provided in conjunction with other procedures assigned to status indicator “T,” which are primarily surgical procedures.

Response: Regarding the status indicator assignment of HCPCS code C9733, we have addressed this comment in prior rules (81 FR 79632). The service described by HCPCS code C9733 is primarily an intraoperative imaging service. Therefore, payment for the service is conditionally packaged under § 419.2(b)(14), which packages intraoperative items and services. When the procedure described by HCPCS code C9733 is not furnished in conjunction with a surgical procedure, the service is paid separately. We believe that the OPPTS payments, separate or packaged, for surgical procedures with which this test is performed (for example, breast reconstruction) are more than adequate to cover the cost of the service described by HCPCS code C9733 for Medicare beneficiaries in need of this service. With respect to the APC reassignment for APC 5524, because we are maintaining the CY 2017 APC group assignments for imaging services, we are not finalizing our proposal to reassign HCPCS code C9733 from APC 5523 to APC 5524. Rather, we are maintaining the assignment of the procedure described by HCPCS code C9733 to APC 5523 for CY 2018. Based on our review of the CY 2018 final rule claims data, the procedure described by HCPCS code C9733 has a geometric mean unit cost of approximately \$237 and the geometric mean cost of APC 5523 is approximately \$245 for CY 2018. Therefore, it is not necessary to reassign the procedure described by HCPCS code C9733 to APC 5524, which has a geometric mean unit cost of about \$486. It is more appropriate to maintain the assignment

of the procedure described by HCPCS code C9733 to APC 5523 because of the similarity in clinical characteristics and resource use for this procedure and other imaging procedures assigned to APC 5523.

After consideration of the public comments we received, we are not finalizing our proposal to reassign HCPCS code C9733 from APC 5523 to APC 5524 for CY 2018. Instead, for CY 2018, we are continuing to assign HCPCS code C9733 to APC 5523 and continuing to assign the code to status indicator “Q2” to indicate that the service is conditionally packaged. The final CY 2018 OPPS payment rate for HCPCS code C9733 can be found in OPPS Addendum B to this final rule with comment period, which is available via the Internet on the CMS Web site.

22. Sclerotherapy (APC 5054)

For CY 2018, the AMA CPT Editorial Panel established two new codes to

describe the injection of a noncompounded foam sclerosant for treatment of incompetent veins. Table 55 below lists the complete descriptors for the new CPT codes. These codes were listed in Addendum B and Addendum O to the CY 2018 OPPS/ASC proposed rule (which are available via the Internet on the CMS Web site). Addendum B listed the proposed status indicator assignments for the new codes and assigned them to comment indicator “NP” (New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code), while Addendum O listed the proposed/placeholder CY 2018 CPT codes and the long descriptors. We note that the CPT code descriptors that appeared in Addendum B to the CY 2018 proposed rule were short descriptors and did not

accurately describe the complete procedure, service, or item described of the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors in Addendum O to the proposed rule, specifically under the column labeled “CY 2018 OPPS/ASC Proposed Rule 5-Digit AMA Placeholder Code” so that the public could adequately comment on our proposed APC and status indicator assignments. We also indicated that the final CPT code numbers would be included in this CY 2018 OPPS/ASC final rule with comment period. The final CPT code numbers, along with their corresponding 5-digit placeholder codes, can be found in Table 55 below.

As displayed in Table 55 below and in Addendum B of the CY 2018 OPPS/ASC proposed rule, we proposed to assign CPT codes 36465 and 36466 to APC 5053 (Level 3 Skin Procedures), with a proposed payment rate of \$468.82.

TABLE 55—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATES FOR CPT CODES 36465 AND 36466

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Long descriptor	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
36465	364X5	Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; single incompetent extremity truncal vein (e.g., great saphenous vein, accessory saphenous vein).	T	5053	\$468.82
36466	364X6	Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; multiple incompetent truncal veins (e.g., great saphenous vein, accessory saphenous vein), same leg.	T	5053	468.82

Comment: Several commenters opposed the proposed assignment of new CPT codes 36465 and 36466 to APC 5053 and requested the assignment to APC 5183 (Level 3 Vascular Procedures), which had a proposed payment rate of \$2,409.72. The commenters stated that CMS inappropriately proposed to assign these codes to APC 5053 based on a comparison to CPT codes 36470 (Injection of sclerosing solution; single vein) and 36471 (Injection of sclerosing solution; multiple veins, same leg). However, the commenters indicated that CPT codes 36465 and 36466 are dissimilar to the procedures assigned to APC 5053, which describe simple skin procedures (for example, debridement, Moh’s surgery, and skin lesion destruction). They stated that the procedures assigned to APC 5053 are

not comparable to the procedures described by new CPT codes 36465 and 36466 based on complexity, staff type, staff time, and use of ultrasound guidance. The commenters further added that the two procedures are most similar to the endovenous ablative procedures that treat incompetent veins in APC 5183, specifically, the procedures described by the following CPT codes:

- CPT code 36473 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; first vein treated);
- CPT code 36474 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, mechanochemical; subsequent vein(s) treated in a single extremity, each

through separate access sites (list separately in addition to code for primary procedure));

- CPT code 36475 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein treated);
- CPT code 36476 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (list separately in addition to code for primary procedure))
- CPT code 36478 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; first vein treated); and

- CPT code 36479 (Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; subsequent vein(s) treated in a single extremity, each through separate access sites (list separately in addition to code for primary procedure)).

One commenter stated that the procedures described by CPT codes 36465 and 36466 share similar characteristics and comparable anticipated costs as the procedures assigned to APC 5183, and consequently, requested an assignment to APC 5183 for the two new CPT codes. Another commenter noted that CPT codes 36473, 36475, and 36478 are currently assigned to APC 5183, and requested that CMS also assign new CPT codes 36465 and 36466 to APC 5183. One commenter reported that, in the CY 2018 MPFS proposed rule, CMS proposed a nonfacility payment of \$1,605.17 for new CPT code 36465 and \$1,678.23 for new CPT code 36466 for CY 2018. This commenter also listed a

practice expense input price of \$1,054 for the Varithena (foam) used in the procedures.

Response: Because CPT codes 36465 and 36466 are new codes for CY 2018, we have no claims data on which to base our payment rate. However, in the absence of claims data, we reviewed the clinical characteristics of the procedures to determine whether they are similar to existing procedures. After reviewing information from the public commenters and input from our clinical advisors, we believe that new CPT codes 36465 and 36466 are clinically similar to those procedures assigned to APC 5053. However, in light of the commenter's reported supply expense of \$1,054 for the Varithena (foam), we believe that an assignment to APC 5054 is necessary. We note that the final CY 2018 geometric mean cost for APC 5054 is approximately \$1,567. Therefore, we believe that APC 5054 is a more appropriate APC assignment for the new CPT codes. Consistent with the statutory requirement under section 1833(t)(9)(A)

of the Act, we will reevaluate the APC assignment for CPT codes 36465 and 36466 in the next rulemaking cycle.

In summary, after consideration of the public comments we received, we are finalizing our proposal for the APC assignment of the procedures described by new CPT codes 36465 and 36466, with modification. Specifically, we are assigning both codes to APC 5054, instead of proposed APC 5053, for CY 2018. Table 56 below lists the final status indicator and APC assignments for CPT codes 36465 and 36466 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 56—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODES 36465 AND 36466

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Long descriptor	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	CY 2018 OPPS payment rate
36465	364X5	Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; single incompetent extremity truncal vein (e.g., great saphenous vein, accessory saphenous vein).	T	5054	Refer to OPPS Addendum B.
36466	364X6	Injection of non-compounded foam sclerosant with ultrasound compression maneuvers to guide dispersion of the injectate, inclusive of all imaging guidance and monitoring; multiple incompetent truncal veins (e.g., great saphenous vein, accessory saphenous vein), same leg.	T	5054	Refer to OPPS Addendum B.

23. Skin Substitutes (APCs 5053, 5054, and 5055)

For CY 2018, we proposed to assign skin substitute procedures to APCs 5053 through 5055 (Level 3 through 5 Skin Procedures). The cost of the procedures is affected by whether the skin substitute product is low cost or high cost, the surface area of the wound, and the location of the wound.

Comment: Commenters requested that CPT codes for large wounds be assigned to higher paying APCs. One commenter asked that HCPCS code C5277 (Application of low cost skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children) be moved from APC 5053 (Level 3 Skin

Procedures) to APC 5054 (Level 4 Skin Procedures) and that CPT code 15277 (Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children) be moved from APC 5054 (Level 4 Skin Procedures) to APC 5055 (Level 5 Skin Procedures). Another commenter focused on the payment for large venous leg ulcers that are over 100 cm². This commenter requested that the skin substitute procedures used to treat large venous leg ulcers and other large wounds be moved to a higher paying APC.

Response: We reviewed the procedures assigned to both APC 5053 and APC 5054 and continue to believe

that the procedures described by HCPCS code C5277 and CPT code 15277 are appropriately assigned to APCs 5053 and 5054, respectively. While the geometric mean cost of the procedure described by HCPCS code C5277 (\$2,187) is higher than the geometric mean cost of other procedures assigned to APC 5053 (\$488), there are fewer than 25 single claims billed for the procedure described by HCPCS code C5277. Therefore, HCPCS code C5277 is not a significant procedure code and does not create a 2 times rule violation in APC 5053. Likewise, while the geometric mean cost of the procedure described by CPT code 15277 (\$2,464) is higher than the geometric mean cost for all procedures assigned to APC 5054 (\$1,567), there are fewer than 80 single claims billed for the procedure described by CPT code 15277.

Therefore, CPT code 15277 is not a significant procedure and does not create a 2 times violation in APC 5054. Accordingly, we continue to believe that both HCPCS code C5277 and CPT code 15277 are appropriately assigned to APCs 5053 and 5054, respectively. As we do every year, we will evaluate the costs and APC assignment of both of these codes in the next annual rulemaking cycle.

After consideration of the public comments we received, we are finalizing our proposal for CY 2018 for assignment of skin substitute procedures to APCs 5053 through 5055, including the assignment of HCPCS code C5277 to APC 5053 and CPT code 15277 to APC 5054.

24. Subdermal Drug Implants for the Treatment of Opioid Addiction (APC 5735)

In the CY 2018 MPFS proposed rule (82 FR 34011 through 34012), CMS proposed to establish three G-codes to appropriately report the insertion and removal of buprenorphine hydrochloride, formulated as a 4-rod, 80 mg, long-acting subdermal drug implant for the treatment of opioid addiction (82 FR 34011 through 34012). Specifically, we proposed to establish the following HCPCS G-codes:

- Placeholder HCPCS Code GDDD1 (Insertion, non-biodegradable drug delivery implants, 4 or more);
- Placeholder HCPCS Code GDDD2 (Removal, non-biodegradable drug delivery implants, 4 or more); and

- Placeholder HCPCS code GDDD3 (Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more).

We did not make any proposal related to HCPCS codes GDDD1 through GDDD3 in the CY 2018 OPPS/ASC proposed rule because there are existing codes that can be used to report the insertion and removal of buprenorphine hydrochloride, as well as a HCPCS J-code to report use of the buprenorphine hydrochloride drug. Listed below in Table 57 are the specific CPT and HCPCS codes for the buprenorphine hydrochloride subdermal drug and its administration, and the proposed OPPS payment rates for CY 2018.

TABLE 57—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODES 11981, 11982, AND 11983 AND HCPCS CODE J0570

HCPCS code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
11981	Insertion, non-biodegradable drug delivery implant.	Q1	5734	\$100.02	Q1	5734	\$94.27
11982	Removal, non-biodegradable drug delivery implant.	Q1	5735	263.61	Q1	5735	265.20
11983	Removal with reinsertion, non-biodegradable drug delivery implant.	Q1	5735	263.61	Q1	5735	265.20
J0570	Buprenorphine implant, 74.2 mg	G	9058	* 1,260.59	G	9058	** 1,261.31

* The proposed payment rate of \$1,260.59 was based on the April 1, 2017 OPPS update.

** The payment rate of \$1,261.31 was based on the October 1, 2017 OPPS update. Payments for the HCPCS drug codes are updated on a quarterly basis, and this payment rate will be updated for the January 2018 OPPS update. Refer to the January 2018 OPPS Addendum B payment file for the payment rate.

Comment: Some commenters requested that the MPFS proposal for establishment of HCPCS G-codes for insertion and removal of buprenorphine hydrochloride also apply to the OPPS and ASC payment systems. In addition, the commenters recommended that CMS assign the HCPCS G-codes to APC 5735 (Level 5 Minor Procedures), which had a proposed payment rate of \$265.20, for CY 2018.

Response: We agree with the commenters that the HCPCS G-codes GDDD1 through GDDD3 (now HCPCS codes G0516, G0517, and G0518 in this final rule with comment period) should also be recognized under the OPPS because the service associated with the insertion and removal of buprenorphine

hydrochloride can be performed in the hospital outpatient department. However, because these services are conditionally packaged under the OPPS, they will be packaged when performed in the ASC and, therefore, not separately paid. Accordingly, to adequately track and improve data collection and analysis associated with subdermal buprenorphine implants, we are recognizing these HCPCS G-codes in the OPPS.

In summary, after consideration of the public comments we received, we are establishing HCPCS G-codes G0516, G0517, and G0518 under the OPPS, effective January 1, 2018. Table 58 below lists the final status indicator and APC assignments for HCPCS G-codes

G0516, G0517, G0518, and HCPCS code J0570 for CY 2018. We remind hospitals that the HCPCS drug code for buprenorphine hydrochloride (HCPCS code J0570) should also be reported when billing for the subdermal administration of the drug. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 58—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR HCPCS CODES G0516, G0517, G0518 AND HCPCS CODE J0570

HCPCS code	CY 2018 MPFS proposed rule placeholder code	Long descriptor	CY 2018 OPSS SI	CY 2018 OPSS APC	CY 2018 OPSS payment rate
G0516	GDDD1	Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants).	Q1	5735	Refer to OPSS Addendum B.
G0517	GDDD2	Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants).	Q1	5735	Refer to OPSS Addendum B.
G0518	GDDD3	Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants).	Q1	5735	Refer to OPSS Addendum B.
J0570	N/A	Buprenorphine implant, 74.2 mg	G	9058	Refer to OPSS Addendum B.

25. Suprachoroidal Delivery of Pharmacologic Agent (APC 5694)

For CY 2018, as noted in Table 59 below, we proposed to continue to assign CPT codes 67028 and 0465T to

APC 5694 (Level 4 Drug Administration), with a proposed payment rate of \$286.62. We also proposed to continue to assign CPT code 67028 to status indicator “S”

(Procedure or Service, Not Discounted When Multiple) and to continue to assign CPT code 0465T to status indicator “T” (Procedure or Service, Multiple Procedure Reduction Applies).

TABLE 59—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODES 67028 AND 0465T

CPT code	Long descriptors	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	Proposed CY 2018 OPSS SI	Proposed CY 2018 OPSS APC	Proposed CY 2018 OPSS payment rate
67028	Intravitreal injection of a pharmacologic agent (separate procedure).	S	5694	\$279.45	S	5694	\$286.62
0465T	Suprachoroidal injection of a pharmacologic agent (does not include supply of medication).	T	5694	279.45	T	5694	286.62

Comment: Some commenters stated that the different status indicator assignment for both CPT codes 67028 and 0465T appears to be an error and contradicts CMS’ decision in the CY 2017 OPSS/ASC final rule with comment period where CMS indicated that both procedures are similar from a clinical and resource consideration (81 FR 79617). The commenters reported that the different status indicators suggest that the procedures are not similar. Consequently, the commenters requested the reassignment of CPT code 0465T from status indicator “T” to “S”.

Response: We note that while many HCPCS codes within a given APC may have the same status indicator, having an identical status indicator is not a prerequisite for APC assignment. That is, assignment of a HCPCS code to an APC is based on the resource and clinical similarity of the service described by the HCPCS code, while assignment of a status indicator is based on service-specific characteristics. Status indicator “T” is used to denote that the procedure is subject to the multiple procedure reduction under the

OPSS, while status indicator “S” describes a procedure or service that is not discounted. Within APC 5694, there are four CPT codes that are assigned to status indicator “T”. These include the following procedures:

- CPT code 0465T (Suprachoroidal injection of a pharmacologic agent (does not include supply of medication));
- CPT code 36593 (Declothing by thrombolytic agent of implanted vascular access device or catheter);
- CPT code 37195 (Thrombolysis, cerebral, by intravenous infusion); and
- CPT code 92977 (Thrombolysis, coronary; by intravenous infusion).

As stated earlier, status indicator “T” indicates that the service will be reduced by 50 percent if it is the lower priced service on the same claim with another procedure that is also assigned to a status indicator “T”. For CPT code 0465T, we expect this reduction to occur when there is a separate procedure performed on the same day as the suprachoroidal injection due to significant efficiencies in administering the pharmacologic agent. If the suprachoroidal injection is performed

by itself or with a visit, or with a service or procedure assigned to status indicator “S”, the multiple procedure reduction will not apply. We remind hospitals that, when reporting CPT code 0465T, the appropriate HCPCS drug code should also be reported on the claim.

Therefore, after consideration of the public comments we received, we are finalizing our CY 2018 proposal, without modification, to continue to assign CPT codes 67028 and 0465T to status indicator “S” and “T” respectively, and to continue to assign the CPT codes to APC 5694. Table 60 below lists the final status indicator and APC assignments for both codes for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 60—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODES 67028 AND 0465T

HCPCS code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
67028	Intravitreal injection of a pharmacologic agent (separate procedure).	S	5694	\$279.45	S	5694	Refer to OPPTS Addendum B.
0465T	Suprachoroidal injection of a pharmacologic agent (does not include supply of medication).	T	5694	279.45	T	5694	Refer to OPPTS Addendum B.

26. Transperineal Placement of Biodegradable Material (C-APC 5375)

For CY 2018, the AMA CPT Editorial Panel deleted CPT code 0438T and replaced the code with CPT code 55874, effective January 1, 2018. CPT code 0438T was effective July 1, 2016 and will be deleted on December 31, 2017. Prior to July 2016, the transperineal placement of biodegradable material procedure was described by HCPCS code C9743 (Injection/implantation of bulking or spacer material (any type)

with or without image guidance (not to be used if a more specific code applies)), which was effective October 1, 2015 and was deleted on June 30, 2016, when it was replaced with CPT code 0438T, effective July 1, 2016.

Table 61 below lists the complete descriptors for the deleted and replacement CPT codes. We note that the deleted and replacement CPT codes were both listed in Addendum B and Addendum O to the CY 2018 OPPTS/ASC proposed rule (which are available via the Internet on the CMs Web site).

Addendum B listed the proposed status indicator assignment for the replacement code and assigned it to comment indicator “NP” (New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code), while Addendum O listed the proposed/placeholder CY 2018 CPT codes and the long descriptors.

TABLE 61—CODING CHANGES FOR CPT CODE 55874

CPT code	CY 2018 OPPTS/ASC proposed rule placeholder code	Long descriptor
0438T	N/A	Transperineal placement of biodegradable material, peri-prostatic (via needle), single or multiple, includes image guidance.
55874	55X87	Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed.

As listed in Table 63 below and in Addendum B of the CY 2018 OPPTS/ASC proposed rule, we proposed to delete CPT code 0438T (status indicator “D”) and assign its replacement code, CPT code 55874 (placeholder code 55X87), to C-APC 5375 (Level 5 Urology and Related Services) with a proposed payment rate of \$3,597.65. As noted in Table 62, the predecessor code 0438T was assigned to C-APC 5374 (Level 4 Urology and Related Services), while this replacement code is proposed to be reassigned to C-APC 5375. We proposed

to revise the APC assignment for CPT code 55874 based on claims data used for the CY 2018 OPPTS/ASC proposed rule. We note that the proposed rule claims data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. For the predecessor codes HCPCS codes C9743 and 0438T that were in effect during CY 2016, our analysis of the proposed rule claims data revealed a geometric mean cost of approximately \$4,504 based on 157 single claims (out of 159 total

claims), which is similar to the geometric mean cost of approximately \$3,742 for C-APC 5375 rather than the geometric mean cost of approximately \$2,714 for C-APC 5374 or the geometric mean cost of approximately \$7,747 for C-APC 5376 (Level 6 Urology and Related Services). Based on its clinical homogeneity and resource similarity to the other procedures assigned to C-APC 5375, we proposed to reassign replacement CPT code 55874 from C-APC 5374 to C-APC 5375 for CY 2018.

TABLE 62—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR CPT CODE 55874

CPT code	CY 2018 OPPTS/ASC proposed rule placeholder code	Short descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	Proposed CY 2018 OPPTS SI	Proposed CY 2018 OPPTS APC	Proposed CY 2018 OPPTS payment rate
0438T	Tprnl plmt biodegrdabl matrl	T	5374	\$2,542.56	D	N/A	N/A
55874	55X87	Tprnl plmt biodegrdabl matrl	N/A	N/A	N/A	T	5375	\$3,597.65

Comment: One commenter supported the reassignment to C-APC 5375 for CPT code 55874 and urged CMS to finalize the proposal. The commenter further indicated that C-APC 5375 is the appropriate APC assignment for CPT code 55874 based on its clinical and resource coherence to the other procedures assigned to C-APC 5375. While supportive of the assignment to C-APC 5375, this same commenter expressed concern with the payment for the procedure under the ASC payment system. The commenter suggested that CPT code 55874 should be designated as a device-intensive procedure.

Response: We appreciate the commenter's support. For this final rule with comment period, we again reviewed the updated claims data associated with predecessor HCPCS codes C9743 and 0438T. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our analysis

of the final rule claims data shows a similar pattern for the predecessor codes. Specifically, we found a geometric mean cost of approximately \$4,452 for the predecessor codes based on 157 single claims (out of 160 total claims), which is similar to the geometric mean cost of approximately \$3,704 for C-APC 5375. In addition, our analysis of the significant procedures within C-APC 5375 shows that the geometric mean cost of \$4,452 for the predecessor codes are similar to the costs of the procedures assigned to C-APC 5375. Specifically, our analysis revealed the range of the significant procedures assigned to C-APC 5375 is between \$3,134 (for CPT code 52320) and \$5,004 (for CPT code 55875). Consequently, we believe that C-APC 5375 is the most appropriate APC assignment for CPT code 55874.

With regards to the device-intensive designation for CPT code 55874, based on our analysis of the predecessor HCPCS code C9743, this code is not eligible for device-intensive status

because it does not meet the criteria of a device offset that is greater than 40 percent. For more information on how codes are designated as device-intensive status, we refer readers to section IV.B. of this final rule with comment period.

In summary, after consideration of the public comments we received and our analysis of the updated claims data for this final rule with comment period, we are finalizing our CY 2018 proposal, without modification, and assigning CPT code 55874 to C-APC 5375. Table 63 below lists the final status indicator and APC assignments for CPT code 55874 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 63—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT CODE 55874

CPT code	CY 2018 OPPS/ASC proposed rule placeholder code	Short descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	CY 2018 OPPS SI	CY 2018 OPPS APC	CY 2018 OPPS payment rate
0438T	Tprnl plmt biodegrdabl matrl	T	5374	\$2,542.56	D	N/A	N/A.
55874	55X87	Tprnl plmt biodegrdabl matrl	N/A	N/A	N/A	T	5375	Refer to OPPS Addendum B.

27. Transcranial Magnetic Stimulation (TMS) Therapy (APCs 5721 and 5722)

For CY 2018, as listed in Table 64 below, we proposed to continue to

assign CPT code 90867 to APC 5722 (Level 2 Diagnostic Tests and Related Services) and to also continue to assign CPT code 90869 to APC 5721 (Level 1

Diagnostic Tests and Related Services). However, we proposed to reassign CPT code 90868 from APC 5722 to APC 5721.

TABLE 64—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT RATE FOR THE TRANSCRANIAL MAGNETIC STIMULATION (TMS) THERAPY CPT CODES

CPT code	Long descriptor	CY 2017 OPPS SI	CY 2017 OPPS APC	CY 2017 OPPS payment rate	Proposed CY 2018 OPPS SI	Proposed CY 2018 OPPS APC	Proposed CY 2018 OPPS payment rate
90867	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; initial, including cortical mapping, motor threshold determination, delivery and management.	S	5722	\$232.31	S	5722	\$242.21
90868	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; subsequent delivery and management, per session.	S	5722	232.31	S	5721	129.59
90869	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; subsequent motor threshold re-determination with delivery and management.	S	5721	127.10	S	5721	129.59

Comment: Several commenters disagreed with CMS' proposal to

reassign CPT code 90868 to APC 5721 and stated that the proposed payment

rate does not cover the cost of providing the service. One commenter stated that

transcranial magnetic stimulation (TMS) therapy requires the use of an expensive machine, technicians to assist with the service, staff to work on insurance approvals, and significant time with physicians. Another commenter stated that the proposed payment rate for CPT codes 90868 and 90869 is insufficient, and that the cost of providing the service exceeds the payment rate. Several commenters requested that CMS reconsider and increase the payment rates for CPT codes 90868 and 90869.

Response: We proposed to revise the APC assignment for CPT code 90868 and to continue the APC assignment for CPT code 90869 based on CY 2016 claims data used for the CY 2018 OPPTS/ASC proposed rule. We note that the proposed rule data was based on claims data submitted between January 1, 2016, and December 31, 2016, that were processed on or before December 31, 2016. For CPT code 90868, our analysis of the claims data showed a geometric mean cost of approximately \$152 for the code based on 6,433 single claims (out of 6,493 total claims), which is similar to the geometric mean cost of approximately \$135 for APC 5721 rather than the geometric mean cost of approximately \$252 for APC 5722. Consequently, we proposed to revise the APC assignment for CPT code 90868 to APC 5721 rather than continue to assign it to APC 5722. For CPT code 90869, our

claims data showed a geometric mean cost of approximately \$119 for CPT code 90869 based on 95 single claims (out of 96 total claims), which is similar to the geometric mean cost of approximately \$135 for APC 5721. Consequently, we proposed to continue to assign CPT code 90869 to APC 5721.

For this final rule with comment period, we again reviewed the updated claims data associated with CPT codes 90868 and 90869. We note that, for this final rule with comment period, we used claims data with dates of service between January 1, 2016, and December 31, 2016, that were processed on or before June 30, 2017. Our analysis of the final rule claims data revealed a similar pattern for both codes. Specifically, we found a geometric mean cost of approximately \$148 for CPT code 90868 based on 7,258 single claims (out of 7,312 total claims), which is similar to the geometric mean cost of approximately \$136 for APC 5721, rather than the geometric mean cost of approximately \$249 for APC 5722. Our analysis also revealed a geometric mean cost of approximately \$125 for CPT code 90869 based on 105 single claims (out of 106 total claims), which is comparable to the geometric mean cost of \$136 for APC 5721. Based on our analysis of the final rule claims data, we believe that APC 5721 is the appropriate APC assignment for both CPT codes

90868 and 90869 based on their clinical homogeneity and resource costs to the other procedures in APC 5721.

With regards to the comment that TMS therapy requires significant time with physicians, we remind readers that payments under the OPPTS are for services provided by hospital outpatient facilities, not physician services. We note that physician services are paid under the MPFS. Medicare payment rates for physician services can be found on the CMS Physician Fee Schedule Web site, specifically at: <https://www.cms.gov/apps/physician-fee-schedule/overview.aspx>.

In summary, after consideration of the public comments we received, we are finalizing our CY 2018 proposal, without modification, for CPT codes 90867, 90868, and 90869. Table 65 below lists the final status indicator and APC assignments for all three CPT codes. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPTS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPTS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 65—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR THE TRANSCRANIAL MAGNETIC STIMULATION (TMS) THERAPY CPT CODES

CPT code	Long descriptor	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
90867	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; initial, including cortical mapping, motor threshold determination, delivery and management.	S	5722	\$232.31	S	5722	Refer to OPPTS Addendum B.
90868	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; subsequent delivery and management, per session.	S	5722	232.31	S	5721	Refer to OPPTS Addendum B.
90869	Therapeutic repetitive transcranial magnetic stimulation (tms) treatment; subsequent motor threshold re-determination with delivery and management.	S	5721	127.10	S	5721	Refer to OPPTS Addendum B.

28. Transurethral Waterjet Ablation of the Prostate (C-APC 5375)

On June 5, 2017, the Category B Investigational Device Exemption (IDE) study associated with the “Waterjet Ablation Therapy for Endoscopic Resection of Prostate Tissue II (WATER)” met CMS’ standards for

coverage. According to the National Institutes of Health (NIH) clinicaltrials.gov Web site, the estimated completion date of this study is August 2020. Under Medicare, studies with Category A designation are approved for coverage of routine services only, while studies with the Category B designation

are approved for coverage of the Category B device and related services, and routine services. We note that the procedure associated with this study is currently described by CPT code 0421T. Based on the recent Medicare coverage of the IDE study, we revised the OPPTS status indicator assignment for CPT

code 0421T from “E1” (Not paid by Medicare when submitted on outpatient claims (any outpatient bill type)) to “J1” (Hospital Part B services paid through a comprehensive APC) and assigned the code to C-APC 5374 (Level 4 Urology and Related Services) to indicate that the procedure would be paid separately under the OPSS. We announced this

change through the October 2017 OPSS quarterly update CR (Transmittal 3864, Change Request 10236, dated September 15, 2017), and further stated in this same CR that the payment would be effective on June 5, 2017, which is the date of Medicare’s approval for coverage.

In the CY 2018 OPSS/ASC proposed rule, we solicited public comments on the proposed APC and status indicator assignments for the code. Specifically, as listed in Table 66 below, we proposed to continue to assign CPT code 0421T to C-APC 5374 for CY 2018.

TABLE 66—PROPOSED CY 2018 STATUS INDICATOR (SI), APC ASSIGNMENT, AND PAYMENT FOR CPT CODE 0421T

CPT code	Long descriptor	CY 2017 OPSS SI	CY 2017 OPSS APC	CY 2017 OPSS payment rate	Proposed CY 2018 OPSS SI	Proposed CY 2018 OPSS APC	Proposed CY 2018 OPSS payment rate
0421T	Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed).	J1	5374	\$2,542.56	J1	5374	\$2,609.60

Comment: Several commenters expressed concern over the proposed payment rate for CPT code 0421T and requested a reassignment to either C-APC 5375 (Level 5 Urology and Related Services), which had a proposed payment rate of \$3,597.65, or C-APC 5376 (Level 6 Urology and Related Services), which had a proposed payment rate of \$7,448.11 for the Aquablation procedure. The commenters stated that the proposed payment rate for C-APC 5374 does not take into account the cost of the device, the overhead costs, and the personnel costs associated with providing the Aquablation procedure. One commenter stated that the Aquablation procedure is dissimilar to the other procedures assigned to C-APC 5374, some of which require the use of reusable equipment. This same commenter reported that the level of complexity in the performing the Aquablation procedure is comparable to those procedures in C-APC 5375 and C-APC 5376. Specifically, as indicated by the commenter, the Aquablation procedure is similar to implanting brachytherapy seeds into the prostate (CPT code 55875, proposed for assignment to C-APC 5375), cryoablation of the prostate (CPT

code 55873, proposed for assignment to C-APC 5376), and high intensity focused ultrasound (HIFU) of the prostate (HCPCS code C9747, proposed for assignment to C-APC 5376). Another commenter believed the Aquablation procedure requires more effort than the traditional transurethral resection of the prostate (TURP) procedure (CPT code 52601, proposed for assignment to C-APC 5375) or the laser ablation of the prostate procedure (GreenLight Laser Therapy described by CPT code 52648, proposed for assignment to C-APC 5375), and added that the TURP and Aquablation each require general anesthesia and take approximately 1 hour to perform. Several commenters stated that the complexity of performing the Aquablation procedure is similar to the cryoablation of the prostate and HIFU procedures, of which both were proposed to be assigned to C-APC 5376. Consequently, these same commenters requested that CMS revisit the APC assignment for CPT code 0421T and consider a reassignment to C-APC 5376. *Response:* Based on our review of the procedure and input from our clinical advisors, we believe that a reassignment from C-APC 5374 to C-APC 5375 for the Aquablation is appropriate. We note

that this procedure is currently in clinical trial with an estimated study completion date of August 2020. We believe that the procedure is clinically similar to other procedures that are currently assigned to C-APC 5375. As we do every year under the OPSS, we will reevaluate the cost of the procedure described by CPT code 0421T and its APC assignment for next year’s rulemaking update. In summary, after consideration of the public comments, we are finalizing our CY 2018 proposal with modification. Specifically, we are revising the APC assignment for CPT code 0421T from proposed C-APC 5374 to C-APC 5375 for CY 2018. Table 67 below lists the final status indicator and APC assignments for CPT code 0421T for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPSS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPSS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 67—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR CPT U0421T

CPT code	Long descriptors	CY 2017 OPPTS SI	CY 2017 OPPTS APC	CY 2017 OPPTS payment rate	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
0421T	Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed).	J1	5374	\$2,542.56	J1	5375	Refer to OPPTS Addendum B.

29. Transurethral Water Vapor Thermal Therapy of the Prostate (C-APC 5373)

For CY 2018, CMS received a New Technology APC application requesting a new HCPCS code for the Rezūm therapy. The Rezūm procedure is a new treatment, and the Rezūm System associated with this procedure received a 510(k) FDA clearance on August 27, 2015. The procedure utilizes water vapor for the treatment of benign prostatic hypertrophy (BPH). The applicant maintained that there was coding confusion about whether the procedure could be described by existing CPT code 53852 (Transurethral destruction of prostate tissue; by radiofrequency thermotherapy). We note that CPT code 53852 is assigned to C-APC 5375 (Level 5 Urology and Related

Services), which has a geometric mean cost of approximately \$3,704 for CY 2018.

Based on our review of the application, the procedure, and input from our clinical advisors, we agree that CPT code 53852 does not appropriately describe the Rezūm procedure. Consequently, we are establishing HCPCS code C9748 to appropriately describe the procedure. Effective January 1, 2018, HOPDs should report HCPCS code C9748 to report the use of the Rezūm procedure for the treatment of BPH. In addition, based on cost information submitted to CMS in the application, we believe that the procedure should appropriately be assigned to C-APC 5373 (Level 3 Urology and Related Services), which

has a geometric mean cost of approximately \$1,695. We believe the Rezūm procedure shares similar resource and clinical homogeneity to the other procedures currently assigned to C-APC 5373.

Table 68 below lists the final status indicator and APC assignments for HCPCS code C9748 for CY 2018. We refer readers to Addendum B to this final rule with comment period for the payment rates for all codes reported under the OPPTS. In addition, we refer readers to Addendum A to this final rule with comment period for the status indicator meanings for all codes reported under the OPPTS. Both Addendum A and Addendum B are available via the Internet on the CMS Web site.

TABLE 68—FINAL CY 2018 STATUS INDICATOR (SI) AND APC ASSIGNMENT FOR THE TRANSURETHRAL WATER VAPOR THERMAL THERAPY OF THE PROSTATE

HCPCS code	Long descriptor	CY 2018 OPPTS SI	CY 2018 OPPTS APC	CY 2018 OPPTS payment rate
C9748	Transurethral destruction of prostate tissue; by radiofrequency water vapor (steam) thermal therapy.	J1	5373	Refer to OPPTS Addendum B.

We note that HCPCS code C9748 is assigned to comment indicator “NI” in Addendum B to this CY 2018 OPPTS/ASC final rule with comment period to indicate that we have assigned the code an interim OPPTS payment status for CY 2018. We are inviting public comments on the interim status indicator and APC assignments that will be finalized in the CY 2019 OPPTS/ASC final rule with comment period.

IV. OPPTS Payment for Devices

A. Pass-Through Payments for Devices

1. Beginning Eligibility Date for Device Pass-Through Status and Quarterly Expiration of Device Pass-Through Payments

a. Background

Under section 1833(t)(6)(B)(iii) of the Act, the period for which a device category eligible for transitional pass-through payments under the OPPTS can be in effect is at least 2 years but not more than 3 years. Prior to CY 2017, our regulation at 42 CFR 419.66(g) provided that this pass-through payment eligibility period began on the date CMS established a particular transitional pass-through category of devices, and

we based the pass-through status expiration date for a device category on the date on which pass-through payment was effective for the category. In the CY 2017 OPPTS/ASC final rule with comment period (81 FR 79654), in accordance with section 1833(t)(6)(B)(iii)(II) of the Act, we amended § 419.66(g) to provide that the pass-through eligibility period for a device category begins on the first date on which pass-through payment is made under the OPPTS for any medical device described by such category.

In addition, prior to CY 2017, our policy was to propose and finalize the dates for expiration of pass-through status for device categories as part of the OPPTS annual update. This means that device pass-through status would expire

at the end of a calendar year when at least 2 years of pass-through payments have been made, regardless of the quarter in which the device was approved. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79655), we changed our policy to allow for quarterly expiration of pass-through payment status for devices, beginning with pass-through devices approved in CY 2017 and subsequent calendar years, to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through payment devices. We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79648 through 79661) for a full discussion of the changes to the device pass-through payment policy. We also have an established policy to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates (67 FR 66763).

b. Expiration of Transitional Pass-Through Payments for Certain Devices

As stated earlier, section 1833(t)(6)(B)(iii) of the Act requires that, under the OPPS, a category of devices be eligible for transitional pass-through payments for at least 2 years, but not more than 3 years. There currently are three device categories eligible for pass-through payment: (1) HCPCS code C2623 (Catheter, transluminal angioplasty, drug-coated, non-laser), which was established effective April 1, 2015; (2) HCPCS code C2613 (Lung biopsy plug with delivery system), which was established effective July 1, 2015; and (3) HCPCS code C1822 (Generator, neurostimulator (implantable), high frequency, with rechargeable battery and charging system), which was established effective January 1, 2016. The pass-through payment status of the device categories for HCPCS codes C2623, C2613, and C1822 will end on December 31, 2017. We note that our new policy adopted in the CY 2017 OPPS/ASC final rule with comment period to allow for quarterly expiration of pass-through payment status for devices applies to devices approved in CY 2017 and subsequent years. As all the devices in these three device categories were approved prior to CY 2017, we are applying our policy to expire them at the end of the calendar year when at least 2 years of pass-through payments have been made. Therefore, in the CY 2018 OPPS/ASC proposed rule (82 FR 33610), we proposed, beginning in CY 2018, to package the costs of each of the devices described by HCPCS codes C2623,

C2613, and C1822 into the costs related to the procedure with which each device is reported in the hospital claims data.

Comment: Various stakeholders, including physicians, device manufacturers, and professional societies, opposed the proposal to package the costs of the device described by HCPCS code C2623 into the costs related to the procedure(s) with which the device is reported. The commenters specifically opposed packaging of the cost of the drug-coated balloons into the procedure described by CPT code 37224 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal angioplasty). These commenters stated concerns that the proposed payment rate for this procedure did not adequately reflect the additional costs of drug-coated balloons over non-drug-coated balloons, which could limit patient access to the technology. Several commenters described the clinical benefits provided by the drug-coated balloon in the treatment of peripheral arterial disease (PAD) and supported the continuation of the pass-through status of the device category for HCPCS code C2623 beyond December 31, 2017. At the August 21, 2017 meeting of the HOP Panel, the HOP Panel made a recommendation that CMS continue to track CPT code 37224 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal angioplasty) with HCPCS code C2623, and that the appropriate HOP Panel subcommittee review the APCs for endovascular procedures to determine whether more granularity (that is, more APCs) is warranted. One commenter supported the proposal to package the costs of the device described by HCPCS code C2623 into the costs related to the procedure(s) with which the device is reported. The commenter stated that the proposed payment rate provided under the OPPS for procedures using drug-coated balloons was appropriate. This commenter also stated concerns over a lack of scientific evidence of the effectiveness of these devices outside of clinical trials.

Response: As mentioned earlier, under section 1833(t)(6)(B)(iii) of the Act, the period for which a device category eligible for transitional pass-through payments under the OPPS can be in effect is at least 2 years but not more than 3 years. Our policy for devices approved for pass-through payment status prior to CY 2017 is to propose and finalize the dates for expiration of pass-through payment status for device categories as part of the

OPPS annual update. This means that device pass-through payment status would expire at the end of a calendar year when at least 2 years of pass-through payments had been made, regardless of the quarter in which the device was approved for pass-through payment status. According to our established policy (67 FR 66763), after this eligibility period expires, payments for the costs of the device(s) are packaged into payment for the procedures with which they are billed. The device category for HCPCS code C2623 was established effective April 1, 2015, and will have been in effect for a period of at least 2 years, but not more than 3 years, when its eligibility expires on December 31, 2017. Therefore, this category is no longer eligible for pass-through payments. In accordance with our established policy, we are finalizing our proposal to package payment for the costs of the device(s) described by this category into payment for the costs of the procedures with which they are reported. In response to the recommendation of the HOP Panel from the August 21, 2017 meeting, we will continue to track CPT code 37224 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal angioplasty) with HCPCS code C2623. We will share information on all items and services paid under the OPPS, including endovascular procedures, so that the appropriate HOP Panel subcommittee may review the APCs for endovascular procedures and advise on whether more granularity (that is, more APCs) is warranted.

Comment: Some commenters, including device manufacturers and associations, stated that the geometric mean costs of the procedure described by CPT code 37224 involving a drug-coated balloon were higher than the geometric mean costs of the same angioplasty procedure when a drug-coated balloon was not used and a plain balloon angioplasty catheter was used instead. Specifically, these commenters presented their analysis of Medicare claims data which suggested that when CPT code 37224 is billed with HCPCS code C2623, the geometric mean cost of these claims is \$8,483, while the geometric mean cost of claims including CPT code 37224 without HCPCS code C2623 is \$6,396. The commenters also noted that the total geometric mean costs for CPT code 37224, regardless of whether HCPCS code C2623 is billed with CPT code 37224, is approximately \$7,153. These commenters requested that CMS create a new procedural HCPCS C-code or G-code for hospitals to

use to differentiate procedures described by CPT code 37224 that use drug-coated balloons from procedures described by CPT code 37224 that use plain balloon angioplasty catheters, with a suggested descriptor of “Revascularization, endovascular, open percutaneous, femoral, popliteal artery(s), unilateral; with transluminal drug-coated balloon angioplasty”.

One commenter also referenced the proposal in the CY 2018 OPPI/ASC proposed rule (82 FR 33579 and 33580) to establish a HCPCS C-code to describe blue light cystoscopy (HCPCS code C9738 (Adjunctive blue light cystoscopy with fluorescent imaging agent (List separately in addition to code for primary procedure)) and to apply the C-APC complexity adjustment policy when this C-code is billed with specific white light cystoscopy codes. The commenter pointed out that, in the proposed rule, CMS stated that establishment of this C-code was appropriate because CMS believed that blue light cystoscopy is a distinguishable service in comparison to white light cystoscopy alone. CMS further stated that, with the C-APC complexity adjustment, qualifying combinations of the blue light cystoscopy C-code and white light cystoscopy codes are paid at the next higher paying C-APC when billed together on the same claim. The commenter requested that CMS take comparable steps to separately identify and pay for angioplasty procedures involving drug-coated balloons.

Finally, several commenters referenced the HOP Panel’s recommendation that CMS examine the number of APCs for endovascular procedures for CY 2018 and requested CMS create two new levels within the Endovascular C-APCs to provide higher payment for angioplasty procedures using a drug-coated balloon.

Response: We believe that procedures with which the drug-coated balloons are used, specifically the procedure described by CPT code 37224, are appropriately described by the existing procedure code and do not believe it is necessary at this time to establish a HCPCS C-code or G-code to distinguish an angioplasty procedure with a drug-coated balloon from an angioplasty procedure without a drug-coated balloon. The OPPI is a prospective payment system that relies on the principles of averaging, with some cases in an APC being more costly than others (and some cases being less costly). Although there is some evidence of higher geometric mean costs when a drug-coated balloon is used for certain angioplasty procedures versus a plain

balloon angioplasty catheter, the higher costs of the procedures involving the drug-coated balloon are reflected in the claims data. Our analysis of the final rule claims data revealed a geometric mean cost of approximately \$7,029 for CPT code 37224 based on 11,346 single claims (out of 11,437 total claims). CPT code 37224 is assigned to C-APC 5192 (Level 2 Endovascular Procedures), which has a geometric mean cost of approximately \$5,081. There is no 2 times violation in this C-APC. We also do not believe a C-APC complexity adjustment would be applicable, based on existing criteria used to assign a complexity adjustment. We do not believe that the example the commenter raised is entirely analogous because the HCPCS C-code that the commenter referenced necessarily involves an additional procedure (blue light cystoscopy) in addition to white light cystoscopy and the administration of the fluorescent imaging agent is required, which adds additional procedure time. In contrast, the use of a drug coated balloon does not involve a separate procedure.

We note that stakeholders who are interested in the establishment of a CPT procedure code to describe angioplasty procedures involving the use of drug-coated balloons may request a new procedure code from the AMA CPT Editorial Panel.

With regard to the request to create additional levels within the Vascular C-APC clinical family, this issue is discussed in greater detail in section III.D. of this final rule with comment period. As we do every year, we will review and evaluate the APC groupings based on the latest available data in the next rulemaking cycle.

Comment: Several commenters requested that HCPCS code C1822 (Generator, neurostimulator (implantable), high frequency, with rechargeable battery and charging system), otherwise known as the Senza SCS System, receive an additional year of pass-through payment status for CY 2018. Reasons stated by the commenters included: (1) A belief that CMS has the authority under current law to extend pass-through payment status for one more year, for a total of 3 years, and that, although CMS’ policy to allow devices with transitional pass-through payment status as close to 3 years as possible was effective for device approvals on or after January 1, 2017, CMS has the authority to grant the third year of pass-through payment status on a case-by-case basis for devices that were granted pass-through payment status prior to CY 2017 based on specific characteristics of the device and

procedure with which it is used; (2) the reported costs for devices described by HCPCS code C1822 in CY 2016 were lower than actual cost for the device due to hospital CCR ratios used to calculate device cost instead of implantable device CCRs, which were used for many hospitals to calculate device costs starting in CY 2017; (3) the reported costs for devices described by HCPCS C1822 in CY 2016 were lower than actual costs due to hospital cost reporting errors, billing of HCPCS code C1822 by hospitals that, according to the device manufacturer, had not purchased the device, hospitals not reporting use of the device, and other claims reporting problems; and (4) ending pass-through payment status would reduce access to the Senza SCS System. The commenters stated that the Senza SCS System helps beneficiaries manage chronic pain and reduces opioid usage among beneficiaries with the device.

Response: Historically, a device approved for pass-through payment status under the OPPI had an eligibility period of at least 2 years but no more than 3 years—with the pass-through payment period starting on the date when CMS established a particular transitional category of devices (80 FR 70415) and expiring at the end of a calendar year when at least 2 years but no more than 3 years have passed. Effective January 1, 2017, we revised our policy to allow for a quarterly expiration of pass-through payment status for devices to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through payment devices (81 FR 79655). HCPCS code C1822 was established as a pass-through payment category on January 1, 2016, and will have received 2 years of pass-through payment status on December 31, 2017, in accordance with the statutory requirement of receiving at least 2 years of pass-through payments, but not more than 3 years, and consistent with the policy in effect at the time the device pass-through payment period began for HCPCS code C1822. Accordingly, the policy adopted in CY 2017 does not apply to devices approved for pass-through payment status prior to that date. Likewise, the change in CY 2017 from using the average hospital-wide CCR to the implantable device CCR also was a prospective policy change to use the best available data in a given year to determine device pass-through payment.

With respect to comments expressing concerns that the reported costs for HCPCS code C1822 for CY 2016 were lower due to hospital cost reporting

errors, as we have stated in Section 20.5 (Clarification of HCPCS Code to Revenue Code Reporting) of Chapter 4 of the Medicare Claims Processing Manual, hospitals are responsible for reporting the correct revenue code on the claim form. Specifically, we state that we do not instruct hospitals on how to report the assignment of HCPCS codes to revenue codes for services provided under OPSS because hospitals' costs vary. Where explicit instructions are not provided, providers should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report. We note that the Medicare cost report form allows hospitals to report in a manner that is consistent with their own financial accounting systems and, therefore, should be accurate for each individual hospital. Moreover, we believe that the cost report data and their use in the OPSS cost estimation and payment rate development process, combined with potential penalties for inaccurate reporting, provide financial incentives for hospitals to report costs accurately. Furthermore, as we have stated repeatedly, beyond our standard OPSS trimming methodology that we apply to those claims that have passed various types of claims processing edits, it is not our general policy to judge the accuracy of hospital coding and charging for purposes of ratesetting. (We refer readers to the CY 2011 OPSS/ASC final rule with comment period (75 FR 71838) for further discussion.)

Commenters writing in support of extending the pass-through payment period for HCPCS code C1822 also stated that access to the service covered by HCPCS code C1822 could be reduced if pass-through payment status for HCPCS code C1822 is removed. Because reported costs for CPT code 63685 appear to be consistent with or without being reported in combination with HCPCS code C1822, we do not anticipate a significant impact to the payment amount for CPT code 63685 once HCPCS code C1822 is removed from pass-through payment status. We anticipate that hospitals will be able to adjust to any possible changes to the payment for the service.

Comment: One commenter, another device manufacturer, agreed with CMS' proposal to end pass-through payment status of HCPCS code C1822 on December 31, 2017, stating that the decision to end pass-through payment status is consistent with CMS policy and there is no need to apply the policy established in CY 2017 retroactively.

Response: We appreciate the commenter's support.

We did not receive any public comments regarding the proposal to package the payment for the costs of the device described by HCPCS code C2623 into the payment for the costs related to the procedure with which the device is reported.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to package the payment for the costs of each of the devices described by HCPCS codes C2623, C2613, and C1822 into the payment for the costs related to the procedure with which each device is reported in the hospital claims data.

2. New Device Pass-Through Applications

a. Background

Section 1833(t)(6) of the Act provides for pass-through payments for devices, and section 1833(t)(6)(B) of the Act requires CMS to use categories in determining the eligibility of devices for pass-through payments. As part of implementing the statute through regulations, we have continued to believe that it is important for hospitals to receive pass-through payments for devices that offer substantial clinical improvement in the treatment of Medicare beneficiaries to facilitate access by beneficiaries to the advantages of the new technology. Conversely, we have noted that the need for additional payments for devices that offer little or no clinical improvement over previously existing devices is less apparent. In such cases, these devices can still be used by hospitals, and hospitals will be paid for them through appropriate APC payment. Moreover, a goal is to target pass-through payments for those devices where cost considerations might be most likely to interfere with patient access (66 FR 55852; 67 FR 66782; and 70 FR 68629).

As specified in regulations at 42 CFR 419.66(b)(1) through (b)(3), to be eligible for transitional pass-through payment under the OPSS, a device must meet the following criteria: (1) If required by FDA, the device must have received FDA approval or clearance (except for a device that has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by the FDA), or another appropriate FDA exemption; and the pass-through payment application must be submitted within 3 years from the date of the initial FDA approval or clearance, if required, unless there is a documented, verifiable delay in U.S.

market availability after FDA approval or clearance is granted, in which case CMS will consider the pass-through payment application if it is submitted within 3 years from the date of market availability; (2) the device is determined to be reasonable and necessary for the diagnosis or treatment of an illness or injury or to improve the functioning of a malformed body part, as required by section 1862(a)(1)(A) of the Act; and (3) the device is an integral part of the service furnished, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted (either permanently or temporarily), or applied in or on a wound or other skin lesion. In addition, according to § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) Equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15-1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker).

Separately, we use the following criteria, as set forth under § 419.66(c), to determine whether a new category of pass-through payment devices should be established. The device to be included in the new category must—

- Not be appropriately described by an existing category or by any category previously in effect established for transitional pass-through payments, and was not being paid for as an outpatient service as of December 31, 1996;
- Have an average cost that is not “insignificant” relative to the payment amount for the procedure or service with which the device is associated as determined under § 419.66(d) by demonstrating: (1) The estimated average reasonable costs of devices in the category exceeds 25 percent of the applicable APC payment amount for the service related to the category of devices; (2) the estimated average reasonable cost of the devices in the category exceeds the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent; and (3) the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device exceeds 10 percent of the APC payment amount for the related service (with the exception of brachytherapy and temperature-monitored cryoblation, which are exempt from the cost

requirements as specified at §§ 419.66(c)(3) and (e)); and

- Demonstrate a substantial clinical improvement, that is, substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment.

Beginning in CY 2016, we changed our device pass-through evaluation and determination process. Device pass-through applications are still submitted to CMS through the quarterly subregulatory process, but the applications will be subject to notice-and-comment rulemaking in the next applicable OPPTS annual rulemaking cycle. Under this process, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPTS annual rulemaking cycle, while submitters of applications that are not approved upon quarterly review will have the option of being included in the next applicable OPPTS annual rulemaking cycle or withdrawing their application from consideration. Under this notice-and-comment process, applicants may submit new evidence, such as clinical trial results published in a peer-reviewed journal or other materials for consideration during the public comment process for the proposed rule. This process allows those applications that we are able to determine meet all the criteria for device pass-through payment under the quarterly review process to receive timely pass-through payment status, while still allowing for a transparent, public review process for all applications (80 FR 70417 through 70418).

More details on the requirements for device pass-through payment applications are included on the CMS Web site in the application form itself at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthrough_payment.html, in the “Downloads” section. In addition, CMS is amenable to meeting with applicants or potential applicants to discuss research trial design in advance of any device pass-through application or to discuss application criteria, including the substantial clinical improvement criterion.

b. Applications Received for Device Pass-Through Payment for CY 2018

We received five applications by the March 1, 2017 quarterly deadline, which was the last quarterly deadline for applications to be received in time

to be included for the CY 2018 OPPTS/ASC proposed rule. All applications were received in the second quarter of 2016. None of the five applications were approved for device pass-through payment during the quarterly review process.

Applications received for the later deadlines for the remaining 2017 quarters (June 1, September 1, and December 1), if any, will be presented in the CY 2019 OPPTS/ASC proposed rule. We note that the quarterly application process and requirements have not changed in light of the addition of rulemaking review. Detailed instructions on submission of a quarterly device pass-through payment application are included on the CMS Web site at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/catapp.pdf>. A discussion of the five applications received by the March 1, 2017 deadline is presented below, as detailed in the CY 2018 OPPTS/ASC proposed rule (82 FR 33611 through 33618).

(1) Architect® Px

Harbor MedTech, Inc. submitted an application for a new device category for transitional pass-through payment status for Architect® Px. Architect® Px is a collagen biomatrix comprised of a stabilized extracellular matrix derived from equine pericardium. The equine pericardium is stabilized to become a catalyst and scaffold for use by autologous tissue regeneration factors. Architect® Px is packaged as an individual unit in sizes ranging from 2 cm x 2 cm up to 10 cm x 15 cm and is approximately 0.75 mm thick. Architect® Px typically requires only one application. The applicant asserted that it is clinically superior to other skin substitutes that work by flooding the wound with nonautologous collagen and growth factors because Architect® Px attracts and concentrates the patient’s own autologous collagen and growth factors to support healing.

With respect to the newness criterion at § 419.66(b)(1), the applicant received FDA clearance for Architect® Px on September 12, 2014, and its June 1, 2016 application was submitted within 3 years of FDA clearance. However, Unite BioMatrix, cleared by the FDA on June 20, 2007, is claimed as a predicate of Architect® Px. The Architect® Px application states that “. . . while packaged differently, Architect® Px and Unite BioMatrix are identical . . . they are both stabilized equine pericardium manufactured using the same processes” If the date for FDA clearance for Unite BioMatrix is used to evaluate the

newness criterion, Architect® Px may not meet the newness criterion. We invited public comments on this issue.

Comment: One commenter, the manufacturer, stated that Architect® Px is substantially different than its predicate product, Unite Biomatrix, and should be considered to meet the newness criterion for device pass-through payment. The commenter pointed out the following: Architect® Px uses a different process from Unite Biomatrix to stabilize the equine pericardium. Architect® Px is dehydrated, packaged dry in a foil pouch, and is sterilized by radiation. Unite Biomatrix is packaged wet in a jar and is not sterilized using radiation. The new process that is used to manufacture Architect® Px was found by researchers in 2016 to add key properties to the device that promote the use of endogenous collagen and growth factors to support healing. The commenter implied that Unite Biomatrix does not contain these key properties.

Response: The statements by the manufacturer about the differences in performance between Architect® Px and Unite Biomatrix appear to be different than what was stated in the device pass-through application. The application stated that, despite different packaging, the two products were identical. However, we acknowledge that the research cited by the manufacturer of substantial performance differences between Architect® Px and Unite Biomatrix is from 2016, and the findings may not have been available when the device pass-through payment application was submitted. For purposes of the device pass-through payment process, we are persuaded by this additional information and have determined that Architect® Px does meet the newness criterion based on the additional performance information supplied by the manufacturer.

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, Architect® Px is a skin substitute product that is integral to the service provided, is used for one patient only, comes in contact with human skin, and is surgically inserted into the patient. The applicant also claims Architect® Px meets the device eligibility requirements of § 419.66(b)(4) because Architect® Px is not an instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material.

The criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS

determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. We have not identified an existing pass-through category that describes Architect® Px. Harbor MedTech, Inc. suggested a new device category descriptor of “Stabilized Skin Substitute for Autologous Tissue Regeneration” for Architect® Px. We invited public comments on this issue.

We did not receive any public comments on this issue. We are confirming that there is no existing pass-through category that describes Architect® Px and have determined that Architect® Px meets this eligibility criterion.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. With regard to the substantial clinical improvement criterion, the applicant only identified two references, neither of which we believe provide evidence of substantial clinical improvement. One reference is a 2012 summary report³ of skin substitute products that can be used to treat chronic wounds that only describes characteristics of the predecessor product to Architect® Px with no efficacy or performance information. The second reference⁴ is a small observational study of 34 subjects with no comparison group. We invited public comments on whether Architect® Px meets the substantial clinical improvement criterion.

Comment: One commenter, the manufacturer, stated that the inclusion of stabilized equine pericardium is an extremely important property of Architect® Px and Unite Biomatrix, and that this property allows these products to stay on a chronic wound, resist degradation, and remain on the wound until it heals. The commenter stated that Architect® Px is a nondegrading skin substitute that constantly supports

healing and does not need to be reapplied. The commenter also stated that skin substitutes that degrade need to be reapplied multiple times and there is the risk that reapplying the skin substitute may interrupt the wound healing process which drives up the costs of medical care. The commenter believed that Architect® Px is the first skin substitute that totally aligned with the Quality and Value of Care objectives of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA). Lastly, the commenter stated that other skin substitute products have previously received pass-through payment approval by presenting similar data as have been presented for Architect® Px.

Response: The commenter has provided additional information about the potential beneficial qualities of Architect® Px. However, the commenter has provided no additional studies that demonstrate that its use results in a substantial clinical improvement relative to other skin substitute and wound healing products available on the market. The commenter mentioned that skin substitutes had previously received pass-through payment status based on the same type of information the manufacturer provided in its device pass-through payment application and in its comments on the proposed rule. However, the commenter is referring to a previous process to evaluate skin substitutes for pass-through payment eligibility (the drugs and biological pass-through payment process), which did not require evidence of a substantial clinical improvement. Since CY 2015, skin substitutes have been evaluated using the medical device pass-through payment process (79 FR 66885 through 66888), which includes the criterion for substantial clinical improvement. Applicants must demonstrate that the device under consideration for pass-through payment status will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. The commenter has not provided additional information showing substantial clinical improvement. Therefore, we determine that Architect® Px does not meet the criterion for substantial clinical improvement.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be

met. The applicant provided the following information in support of the cost significance requirements: Architect® Px would be reported with CPT codes 15271 through 15278, which cover the application of skin substitute grafts to different areas of the body for high-cost skin substitutes. To meet the cost criterion for device pass-through payment, a device must pass all three tests of the cost criteria for at least one APC. CPT codes 15271 through 15278 are assigned to either APC 5054 (Level 4 Skin Procedures), with a CY 2016 payment rate of \$1,411.21 and a device offset of \$4.52, or APC 5055 (Level 5 Skin Procedures), with a CY 2016 payment rate of \$2,137.49 and a device offset of \$25.44. According to the applicant, the cost of the substitute graft procedures when performed with Architect® Px is \$5,495.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of \$5,495 for Architect® Px exceeds the applicable APC amount for the service related to the category of devices of \$1,411.21 by 389 percent ($\$5,495/\$1,411.21 \times 100$ percent = 389 percent). Therefore, it appears that Architect® Px meets the first cost significance test.

The second cost significance test, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of \$5,495 for Architect® Px exceeds the device-related portion of the APC payment amount for the related service of \$4.52 by 121,571 percent ($\$5,495/\4.52×100 percent = 121,571 percent). Therefore, we stated in the proposed rule that it appears that Architect® Px meets the second cost significance test.

Section 419.66(d)(3), the third cost significance test, requires that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of \$5,495 for Architect® Px and the portion of the APC payment amount for the device of

³ Snyder, D.L. et al. Skin Substitutes for Treating Chronic Wounds. Technology Assessment Report. Project ID: HCPR0610. AHRQ. December 18, 2012.

⁴ Alexander JH, Yeager DA, et al. Equine Pericardium as a Biological Covering for the Treatment of Diabetic Foot Wounds; a Prospective Study. J Am Podiatric Assoc., 2012 Sep–Oct;102(5): 352–358.

\$4.52 exceeds 10 percent at 389 percent $((\$5,495 - \$4.52)/\$1,411.21) \times 100$ percent = 389 percent). Therefore, it appears that Architect® Px meets the third cost significance test. Based on the costs submitted by the applicant and the calculations noted earlier, we believe that Architect® Px meets the cost criterion at § 419.66(c)(3) for new device categories.

We invited public comments on whether Architect® Px meets the device pass-through payment criteria discussed in this section.

We did not receive any public comments relating to whether Architect® Px meets the device pass-through payment cost criterion. As stated earlier, we believe that Architect® Px meets the cost criterion at § 419.66(c)(3) for new device categories. However after consideration of the public comments we received, we are not approving device pass-through payment status for Architect® Px for CY 2018.

(2) Dermavest and Plurivest Human Placental Connective Tissue Matrix (HPCTM)

Aedicell, Inc. submitted an application for a new device category for transitional pass-through payment status for Dermavest and Plurivest human placental connective tissue matrix (HPCTM). Dermavest and Plurivest HPCTM use tissue sourced from the placental disk, amnion/chorion, and umbilical cord to replace or supplement damaged tissue. The applicant stated that Dermavest and Plurivest replace or supplement damaged or inadequate integumental tissue by providing a scaffold to entrap migrating cells for repopulation. The applicant stated that the products may be clinically indicated for the following conditions: Partial and full thickness wounds; pressure ulcers; venous ulcers; chronic vascular ulcers; diabetic ulcers; trauma wounds (abrasions, lacerations, second degree burns, and skin tears); drainage wounds; and surgical wounds (donor sites/grafts post mohs surgery, post laser surgery, and podiatric). Dermavest and Plurivest HPCTM are applied to the area of inadequate or damaged tissue, moistened if necessary and covered with a nonadherent secondary dressing. While the application does not distinguish between the Dermavest and Plurivest products, the AediCell Inc. Web site states that the two products differ by dosage. According to information on the Web site at www.aedicell.com, each product contains different tissue cell attachment proteins (CAP) and cytokine/growth factors (GF) profiles.

There is a lower cytokine/GF concentration profile in Plurivest and a higher concentration of CAP and cytokine/GF in Dermavest.

With respect to the newness criterion at § 419.66(b)(1), the applicant indicated that the product conforms to the requirements for Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps) regulated solely under section 361 of the Public Health Service (PHS) Act and 21 CFR part 1271. For these products, FDA requires, among other things, that the manufacturer register and list its HCT/Ps with the Center for Biologics Evaluation and Research (CBER) within 5 days after beginning operations and update their registrations annually. AediCell, Inc. has an FDA field establishment identifier (FEI) under the HHS-FDA-Establishment Registration and Listing for Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps) and submitted with its application the annual registration/listing for Dermavest and Plurivest dated November 9, 2015. The applicant noted that the initial registration for the manufacture of Dermavest was submitted to the CBER on October 28, 2013, and the registration of Plurivest was submitted the following year on November 14, 2014. The registration forms including these dates were not included in the application. Therefore, it is unclear if the newness criterion is met.

Comment: One commenter, the manufacturer, provided an FDA registration form for the product that indicated that there was change in information for the Dermavest product submitted on December 18, 2013. The manufacturer also submitted a document indicating that a registration form was submitted to FDA on October 20, 2014 to change the name of the product to Dermavest/Plurivest.

Response: Based on the information submitted by the manufacturer, we are unable to determine that Dermavest and Plurivest meet the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, Dermavest and Plurivest are skin substitute products that are integral to the service provided, are used for one patient only, come in contact with human skin, and are applied in or on a wound or other skin lesion. The applicant also claimed Dermavest and Plurivest meet the device eligibility requirements of § 419.66(b)(4) because they are not instruments, apparatuses, implements, or items for which depreciation and financing expenses are recovered, and they are not supplies or

materials furnished incident to a service.

The criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. We have not identified an existing pass-through payment category that describes Dermavest and Plurivest HPCTM. The applicant proposed a category descriptor for Dermavest and Plurivest of “Human placental connective tissue matrix (HPCTM), comprised of tissue sourced from the placental disk, amnion/chorion, and umbilical cord for the intention of replacing or supplementing damaged or inadequate integumental issue.” We invited public comments on this issue.

Comment: One commenter, the manufacturer, supported CMS’ statement that CMS had not identified an existing pass-through payment category that describes Dermavest and Plurivest HPCTM.

Response: At this time, we still have not identified an existing pass-through payment category that describes Dermavest and Plurivest HPCTM.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. With respect to this criterion, the applicant provided several background studies showing general evidence that placental tissue, umbilical cord, and amnion membrane products are effective in the treatment of various wounds and ulcers. However, these studies were not specific to Dermavest and Plurivest HPCTM. The applicant submitted two poster presentations describing case studies that evaluated the wound healing time and wound characteristics of patients with diabetic and venous ulcers treated with Dermavest and Plurivest HPCTM. Both studies were described as case series and, as such, lacked blinding, randomization, and control groups. The first poster,⁵ presented in 2015,

⁵ Connell et al., Human placental connective tissue matrix in the treatment of chronic wounds: A prospective multi-center case series. 2015 at

described a prospective, multi-center case series with a small number of participants (n=15). The study evaluated wound healing time and wound characteristics of patients with various etiologies. The patients were treated with up to two 6 cm² pieces of Dermavest per application on wounds up to 44 cm². Results were presented for diabetic and venous ulcer cases and showed a week 4 percent area reduction (PAR) of 71 percent for diabetic ulcers and 50 percent for venous ulcers. Eighty percent of the diabetic ulcer cases and 50 percent of the venous ulcer cases had a week 4 PAR of greater than 40 percent.

The second poster,⁶ presented in 2016, also described a case series that evaluated wound healing time and wound characteristics of patients with various etiologies (n=8). The poster stated that the patients were treated with pieces of HPCTM according to manufacturer guidelines on wounds ranging in size up to 3.8 cm². The methods presented in the poster do not specify whether the patients were treated with Dermavest or Plurivest, or both. The results presented in the poster compile Dermavest data from two case series presented at the Society for Advanced Wound Care (SAWC) annual meeting. It was unclear whether there was overlap between the patients used in the 2015 and 2016 case series included in the application. The compiled Dermavest data were compared to the 4-week PAR results for diabetic and venous ulcers from two other noncontemporaneous studies evaluating different skin replacement products. The results showed, at week 4, approximately 80 percent of the Dermavest-treated diabetic ulcer cases had a PAR of greater than 50 percent in comparison to approximately 60 percent of cases and approximately 30 percent of cases, respectively, in the comparison studies using other skin replacement products. The results also showed that, at week 4, approximately 60 percent of the Dermavest-treated venous ulcer cases had a PAR of greater than 40 percent in comparison to approximately 50 percent of cases and approximately 30 percent of cases in the comparison studies treated with other skin replacement products. There were multiple differences between the Dermavest studies included in the poster presentations and these two additional studies presented as

comparators, including the number of patients included in the studies, the number of wounds treated, and the purpose of the study. Based on the results presented in the poster, the applicant concluded that HPCTM provides an effective alternative to other skin replacement products.

In the CY 2018 OPPS/ASC proposed rule, we stated that we were concerned that the research provided did not clinically demonstrate the active ingredients of the product(s) that might distinguish the product from others, the correct dosing of the product(s), the amount of durable wound closure with the product(s) compared to standard of care in studies with rigorous trial design/implementation, and the amount of durable wound closure with the product(s) compared to other products in studies with rigorous trial design/implementation. We stated in the proposed rule that, based on the evidence submitted with the application, we were not yet convinced that the Dermavest and Plurivest HPCTM provide a substantial clinical improvement over other treatments for wound care. We invited public comments on whether the Dermavest and Plurivest HPCTM meet this criterion.

Comment: One commenter, the manufacturer, provided information regarding the active ingredients and concentrations of active ingredients of the product as compared to other skin substitutes. The comment also included personal statements from physicians who used the product and attested to its clinical benefit over the current standard of care. The physicians' statements also noted that a randomized controlled trial that compares the product to the standard of care and to other advanced human tissue products, as well as registry studies, would be helpful in proving the substantial clinical improvement provided by Dermavest/Plurivest HPCTM. The manufacturer also stated that it was endeavoring to enter into a registry study and two randomized controlled trials using other high tiered skin substitutes as comparators.

Response: We appreciate the commenters' responses on the Dermavest and Plurivest HPCTM application. However, the commenters did not provide new empirical evidence that addressed our concerns that the studies included with the application were described as case series and, as such, lacked blinding, randomization, and control groups. At this time, we have not been able to determine that Dermavest and Plurivest HPCTM represents a substantial clinical

improvement relative to existing therapies currently available for wound care.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that Dermavest and Plurivest HPCTM would be reported with CPT codes 15271, 15272, 15273, 15274, 15275, 15276, 15277, and 15278. CPT codes 15272, 15274, 15276, and 15278 are add-on codes assigned status indicator "N", which means payment is packaged under the OPPS. CPT codes 15271 and 15275 are assigned to APC 5054 (Level 4 Skin Procedures), and CPT codes 15273 and 15277 are assigned to APC 5055 (Level 5 Skin Procedures). To meet the cost criterion for device pass-through payment, a device must pass all three tests of the cost criterion for at least one APC. For our calculations, we used APC 5054 (Level 4 Skin Procedures), which had a CY 2016 payment rate of \$1,411 and a device offset amount of \$4.52 at the time the application was received. According to the applicant, the cost of a sheet of 2x3 cm Dermavest is \$550, and the cost of a sheet of 2x3 cm Plurivest is \$500.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of \$550 for Dermavest and Plurivest exceeds 39 percent of the applicable APC payment amount for the service related to the category of devices of \$1,411 ($\$550 / \$1,411 \times 100 = 39$ percent). Therefore, we stated in the proposed rule that we believe Dermavest and Plurivest meet the first cost significance test.

The second cost significance test, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of \$550 for Dermavest and Plurivest exceeds the cost of the device-related portion of the APC payment amount for the related service of \$4.52 by 12,168 percent

Society of Advanced Wound Healing (SAWC) Spring meeting.

⁶McGuire and Sebag, The use of a new placental acellular tissue product in the management of chronic wounds: A case series. 2016 at the Society of Advanced Wound Healing (SAWC) Spring meeting.

$(\$550/\$4.52) \times 100 = 12,168$ percent). Therefore, we stated in the proposed rule that we believe that Dermavest and Plurivest meet the second cost significance test.

The third cost significance test, at § 419.66(d)(3), requires that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of \$550 for Dermavest and Plurivest and the portion of the APC payment amount for the device of \$4.52 exceeds the APC payment amount for the related service of \$1,411 by 38.6 percent $(\$550 - \$4.52)/\$1,411 \times 100 = 38.6$ percent). Therefore, we stated in the proposed rule that we believe that Dermavest and Plurivest meet the third cost significance test.

We invited public comments on whether Dermavest and Plurivest meet the device pass-through payment cost criteria discussed in this section.

We did not receive any public comments on this issue. We continue to believe that Dermavest and Plurivest meet the device pass-through payment cost criteria.

After consideration of the public comments we received, we are not approving device pass-through payment status for the Dermavest and Plurivest HPCTM for CY 2018.

(3) FlōGraft®/Flōgraft Neogenesis®

Applied Biologics, LLC submitted an application for a new device category for transitional pass-through payment status for FlōGraft®/Flōgraft Neogenesis®. FlōGraft®/Flōgraft Neogenesis® is an injectable, human placental amniotic fluid. It is an allograft derived from human birth tissue recovered from a live, healthy C-section birth. The allograft is used to augment tissue to bone and tissue to tissue repairs. The allograft is implanted at the surgical site at the end of the procedure using a needle and syringe under direct visualization. The applicant claimed that the product helps drive healing towards native tissue regeneration and away from scar formation. FlōGraft® has a standardized potency of 2 million cells. FlōGraft Neogenesis® has a standardized potency of 1.5 million cells. The applicant indicated that the product may be used with several surgical procedures, including joint replacement procedures, traumatic bone and soft tissue injury, meniscal repairs, meniscal transplantation, articular cartilage

restoration, foot and ankle repairs, and chronic wounds.

With respect to the newness criterion at § 419.66(b)(1), the applicant indicated that FlōGraft® and Flōgraft Neogenesis® conform to the requirements for Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps) regulated solely under section 361 of the PHS Act and 21 CFR part 1271. For these products, FDA requires, among other things, that the manufacturer register and list their HCT/Ps with the Center for Biologics Evaluation and Research (CBER) within 5 days after beginning operations and update their registrations annually. Applied Biologics, LLC has two FDA field establishment identifiers (FEI) under the HHS-FDA-Establishment Registration and Listing for Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps). Both registration forms list the product as “FlōGraft®”. The applicant submitted an initial registration/listing for one FEI dated June 8, 2015, as well as an annual registration/listing for a different FEI dated December 1, 2014. The first date of U.S. sale for FlōGraft® was May 23, 2013. It is not clear when the initial CBER filing occurred for the FlōGraft® product. Therefore, it is unclear if the newness criterion for the FlōGraft® product is met.

Comment: One commenter, the manufacturer, supplied information indicating that the initial registration forms for FlōGraft® and Flōgraft Neogenesis® were submitted on February 24, 2015 and were validated by FDA on June 8, 2015.

Response: Based on the information submitted by the manufacturer, we believe that the product meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, FlōGraft® and Flōgraft Neogenesis® are integral to the service provided, are used for one patient only, come in contact with human skin, and are applied in or on a wound or other skin lesion. The applicant also claimed FlōGraft® and Flōgraft Neogenesis meet the device eligibility requirements of § 419.66(b)(4) because they are not instruments, apparatuses, implements, or items for which depreciation and financing expenses are recovered, and they are not supplies or materials furnished incident to a service.

The criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously

in effect, and was not being paid for as an outpatient service as of December 31, 1996. We have not identified an existing pass-through payment device category that describes FlōGraft®/Flōgraft Neogenesis®. The application suggested a payment device category for FlōGraft®/Flōgraft Neogenesis® with a category descriptor of “Injectable Amniotic Fluid Allograft”. We invited public comments on this issue.

We did not receive any public comments on this issue, and at this time, we have not identified an existing pass-through category that describes FlōGraft®/Flōgraft Neogenesis®.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. With respect to the substantial clinical improvement criterion, the applicant submitted several peer-reviewed publications that provided general evidence that amniotic fluid and amniotic membrane-based products significantly reduce recovery time. However, these studies did not include the use of the FlōGraft®/Flōgraft Neogenesis® product. The applicant did list several studies in the application that involved the use of the FlōGraft®/Flōgraft Neogenesis® product. Of these studies, five unpublished studies were available for review. The five studies submitted with the application were described as case studies, case series, or retrospective cohort studies. The studies lacked random allocation, blinding, and a comparison group. The first study⁷ described a retrospective cohort study of 30 patients. The studies showed that 93 percent of the patients (n=14) who received a FlōGraft® injection, coupled with conservative, nonsurgical treatment plan to treat their Morton’s Nerve entrapment condition, had their issue resolved compared to 20 percent of patients (n=3) who did not receive FlōGraft® injection, coupled with conservative, nonsurgical treatment plan to treat their Morton’s Nerve entrapment condition. A greater percentage of patients who did not receive a FlōGraft® injection with their conservative treatment required surgery (80 percent versus 7 percent). Patients who required surgery had a 95-percent

⁷ Bregman, Peter. (2014). Addressing Morton’s Nerve Entrapment Surgically and Non-surgically with FlōGraft.

success rate when surgery was coupled with a FlōGraft® injection.

The next study⁸ was a retrospective analysis that involved 27 patients who were treated for stalled wounds. The patients had a broad spectrum of etiologies. Over a 12-month period, the applicant indicated that 96 percent of wounds that had stalled demonstrated rapid acceleration towards closure within a 21-day period when treated with FlōGraft®. The article recommended a randomized controlled trial (RCT) to confirm the results. The applicant also submitted two case studies,^{9,10} each involving one patient, which described the use of FlōGraft® to treat distal fibula fracture and tarsal tunnel compression neuropathy. Lastly, the application included a study¹¹ which presented the results from a case study of one patient as well as a retrospective cohort of 34 patients who received a Broström-Evans procedure with the FlōGraft® product. In general, the studies submitted lacked a clear description of the outcome variable and study population, and did not include statistical analysis.

Based on the evidence submitted, we stated in the proposed rule that we believe there is insufficient data to determine whether FlōGraft®/Flōgraft Neogenesis® offers a substantial clinical improvement over other treatments for wound care. We invited public comments on whether the FlōGraft®/Flōgraft Neogenesis® meets the substantial clinical improvement criterion.

Comment: Several commenters described the clinical benefits that they have observed using the FlōGraft® product in the treatment of wounds, bone, and soft tissue repairs. Other commenters described their current, ongoing studies involving the impact of FlōGraft® on rotator cuff healing after repair. One study described a randomized single blind study (n=20). One commenter was enthusiastic about the potential impact the product could have on improving healing for patients with rotator cuff injuries, while another commenter presented a more neutral position and stated that he could not confirm that the use of the product would impact the healing, but hoped

that the study would guide the use of the product in the future. Other commenters submitted case studies of wound care patients treated with FlōGraft®. One commenter submitted several studies related to amniotic fluid and amniotic membrane-based products; however, none of these studies were specific to the FlōGraft® product.

Response: We appreciate the commenters' responses on the FlōGraft®/Flōgraft Neogenesis® product. However, the commenters did not provide new empirical evidence that addressed our concerns regarding the evidence of substantial clinical improvement that was submitted with the application. These concerns included the lack of a clear description of the outcome variable and study population and the lack of statistical analysis. The comments also did not address our concerns that the studies submitted with the application were case studies, case series, or retrospective cohort studies that lacked random allocation, blinding, and a comparison group. The commenters also discussed studies that did not include the use of FlōGraft®/Flōgraft Neogenesis® and studies that were still in progress. At this time, we have not been able to determine that FlōGraft®/Flōgraft Neogenesis® represents a substantial clinical improvement relative to existing therapies currently available for wound care.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated several CPT codes would be used to report FlōGraft®/Flōgraft Neogenesis®, including CPT codes 29826, 29827, 29828, 23473, 23420, 23412, 27605, 27650, 29891, 29888, 29889, 28008, 22551, 22856, 27179, 29861, and 29862. To meet the cost criterion for device pass-through payment, a device must pass all three tests of the cost criterion for at least one APC. These CPT codes are assigned to APCs 5121 through 5125 (Level 1 through Level 5 Musculoskeletal Procedures). For our calculations, we used APC 5121 (Level 1 Musculoskeletal Procedures), which had a CY 2016 payment rate of \$1,455 and a device offset of \$15.86 at the time the application was received. According to the applicant, the FlōGraft®/Flōgraft Neogenesis® product is available in a

variety of vial sizes, the largest size being 18 cc with a cost of \$19,925.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. We used the highest priced product for this determination. The estimated average reasonable cost of \$19,925 for FlōGraft®/Flōgraft Neogenesis® exceeds the applicable APC payment amount for the service related to the category of devices of \$1,455 by 1,369 percent ($\$19,925/\$1,455 \times 100 = 1,369$ percent). Therefore, we stated in the proposed rule that we believe FlōGraft®/Flōgraft Neogenesis® meets the first cost significance test.

The second cost significance test, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The average reasonable cost of \$19,925 for FlōGraft®/Flōgraft Neogenesis® exceeds the device-related portion of the APC payment amount of \$15.86 by 125,360 percent ($\$19,925/\$15.86 \times 100 = 125,360$ percent). Therefore, in the proposed rule, we stated that we believe that FlōGraft®/Flōgraft Neogenesis® meets the second cost significance test.

The third cost significance test, at § 419.66(d)(3), requires that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the average reasonable cost of \$19,925 for FlōGraft®/Flōgraft Neogenesis® and the portion of the APC payment amount for the device of \$15.86 exceeds the APC payment amount for the related service of \$1,455 by 1,368 percent ($(\$19,925 - \$15.86)/\$1,455 \times 100 = 1,368$ percent). Therefore, in the proposed rule, we stated that we believe FlōGraft®/Flōgraft Neogenesis® meets the third cost significance test.

We invited public comments on whether FlōGraft®/Flōgraft Neogenesis® meets the device pass-through payment cost criteria discussed in this section.

We did not receive any public comments on this issue. We continue to believe that FlōGraft®/Flōgraft Neogenesis® meets the device pass-through payment cost criteria.

⁸ Gottlieb, et al. FloGraft Rapidly Moves Stalled Wounds Into the Proliferative Phase.

⁹ Jacoby, Richard. Case Study 221: Non-surgical Resolution of Distal Fibula Fracture with Flograft Implant; 82 YO Male.

¹⁰ Jacoby, Richard. Tarsal Tunnel Compression Neuropathy Case Study Using Flograft.

¹¹ Maling, Scott. A Case Series: A retrospective analysis of 34 patients receiving modified Brinstom-Evans procedure with Flograft reduce time to full mobility by 52%.

After consideration of the public comments we received, we are not approving device pass-through payment status for the FlōGraft®/Flōgraft Neogenesis® product for CY 2018.

(4) Kerecis™ Omega3 Wound (Skin Substitute)

Kerecis, LLC submitted an application for a new device category for transitional pass-through payment status for Kerecis™ Omega3 Wound. Kerecis™ Omega3 Wound is made from acellular fish skin from wild Atlantic cod (*Gadus morhua*) caught in the North Atlantic Ocean that is used to regenerate damaged human tissue in chronic wounds. The applicant claimed that there is no disease transmission risk and noted that the fish skin is not required to undergo the viral inactivation process that the FDA dictates for tissues from farm animals. The applicant noted that the Omega3 fatty acids offer multiple health benefits, including anti-inflammation. Kerecis™ Omega3 Wound is supplied as a sterile, single-use sheet in peel-open pouches. Kerecis™ Omega3 Wound does not elicit an immune response because the major antigenic components present within cell membranes are removed in a gentle manner during processing. Unlike mammalian and human sourced products, the fish skin possesses extremely low risk of disease transmission and offers no known cultural or religious constraints for usage. The fish skin product is both halal and kosher compatible and avoids potential conflicts with Sikhism and Hinduism (Vaishnavism).

With respect to the newness criterion at § 419.66(b)(1), the applicant received FDA clearance for Kerecis™ Omega3 Wound through the premarket notification section 510(k) process on October 23, 2013 and its June 1, 2016 application was within 3 years of FDA clearance.

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, Kerecis™ Omega3 Wound is a skin substitute product that is integral to the service provided, is used for one patient only, comes in contact with human skin, and is surgically inserted into the patient. The applicant also claimed Kerecis™ Omega3 Wound meets the device eligibility requirements of § 419.66(b)(4) because it is not an instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material.

The criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at

§ 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. We have not identified an existing pass-through payment category that describes Kerecis™ Omega3 Wound. The applicant proposed a pass-through payment device category for Kerecis™ Omega3 Wound with category descriptor of “Piscine skin substitute.” We invited public comments on this issue.

We did not receive any public comments on this issue. As we stated earlier, we have not identified an existing pass-through category that describes Kerecis™ Omega3 Wound. Therefore, for the reasons discussed earlier, we believe Kerecis™ Omega3 Wound meets the eligibility criterion.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. With regard to the substantial clinical improvement criterion, the applicant stated that individuals who would normally refuse to use skin substitute products from animal sources, including pigs, cows, horses, and sheep, would use Kerecis™ Omega3 Wound because it is a fish-based skin substitute. The applicant also asserted that Kerecis™ Omega3 Wound provides several beneficial outcomes, including faster resolution of the disease process compared to similar products, decreased antibiotic use, decreased pain, and reduced amounts of device-related complications.

The applicant cited three studies in support of the application. The first study¹² was a parallel-group, double-blinded, randomized controlled trial undertaken to determine if healing time of whole thickness biopsy wounds treated with Kerecis™ Omega3 Wound is noninferior to that of wounds treated with porcine SIS ECM (Oasis). The study was an intention-to-treat study. Participants had two 4-mm full thickness punch wounds made on the

proximal anterolateral aspect of their nondominant arm. The study population was comprised of volunteers aged between 18 and 67 years with most volunteers between the ages of 18 and 30. There were 80 volunteers who received Kerecis™ Omega3 Wound and 82 volunteers who received porcine SIS ECM (Oasis).

The results showed that, at 21 days, 58 (72.5 percent) of the fish skin ADM group were healed, compared with 46 (56 percent) of the porcine SIS ECM group. At 25 days, 62 (77.5 percent) of the fish skin ADM and 53 (65 percent) of the porcine SIS ECM group had healed. At the completion of the trial (28 days), 76 of the 80 wounds treated with fish skin ADM (95 percent) and 79 of the 82 wounds treated with porcine SIS ECM (96.3 percent) were healed. The odds ratio of a fish skin ADM-treated wound being healed as compared with that treated with porcine SIS ECM at any given time point was estimated to be 4.75. The difference between the treatments was statistically significant ($P = 0.041$). The immunological part of the study was designed to detect autoimmune reactions in those individuals treated with Kerecis™ Omega3 Wound. There was no evidence of antibodies forming in the presence of Kerecis™ Omega3 Wound.

There were issues with this study that may limit its usefulness to determine substantial clinical improvement including the use of nonpatient volunteers; studying the healing of biopsy sites rather than actual wounds requiring treatment; and the use of a 1-month endpoint of care instead of a longer period, such as a 6-month endpoint of care.

The second study¹³ was a case series study of 18 patients to assess the percentage of wound closure area from baseline after 5 weekly fish-skin graft applications with at least one “hard-to-heal” criterion. Patients underwent application of the fish skin for 5 sequential weeks, followed by 3 weeks of standard care. Wound area, skin assessments, and pain were analyzed weekly.

The study results showed a 40-percent decrease in wound surface area ($P < 0.05$) and a 48-percent decrease in wound depth was seen with 5 weekly applications of the fish-skin graft and secondary dressing ($P < 0.05$). Complete closure was seen in 3 of 18 patients by

¹² Tumi Baldursson, T, MD, Ph.D. et al. Healing Rate and Autoimmune Safety of Full-Thickness Wounds Treated With Fish Skin Acellular Dermal Matrix Versus Porcine Small-Intestine Submucosa: A Noninferiority Study; *The International Journal of Lower Extremity Wounds* 2015, Vol. 14(1) 37–43.

¹³ Yang, CK et al. A Prospective, Postmarket, Compassionate Clinical Evaluation of a Novel Acellular Fish-skin Graft Which Contains Omega-3 Fatty Acids for the Closure of Hard-to-heal Lower Extremity Chronic Ulcers. *Wounds* 2016;28(4): 112–118.

the end of the study phase. This study did not use a comparator group to measure whether there is substantial clinical improvement with Kerecis™ Omega3 Wound compared to other skin substitute products.

The third study¹⁴ was a case series study of five patients with diabetes mellitus and complicated wounds in the lower limbs with exposed bone segments. The five patients had a total of seven wounds. Initial debridement occurred in the operating room, followed by application of wound matrix and covered with silicone mesh. All seven wounds healed and the patients did not have to have planned amputations on the limbs with the wounds. The mean duration of treatment to achieve full closure of the wound was 25 ± 10 weeks and ranged from 13 to 41 weeks. This study did not have a comparator group to determine if there was substantial clinical improvement with Kerecis™ Omega3 Wound compared to other skin substitute products.

There are no clinical data provided by the applicant to suggest that Kerecis™ Omega3 Wound provides a substantial clinical improvement over other similar skin substitute products. We invited public comments on whether Kerecis™ Omega3 Wound meets the substantial clinical improvement criterion.

Comment: One commenter, the manufacturer, stated that Kerecis™ Omega3 Wound significantly improves acute wound healing, nearly eliminates risk from side effects and adverse events, and provides a skin substitute option for beneficiaries who have allergic reactions or personal objections to mammalian or human sourced skin substitutes. The commenter referred to a study, believed to be the first study reviewed in the proposed rule,¹⁵ and stated that it was the largest study performed in skin substitute research and that the study showed substantial clinical improvement from Kerecis™ Omega3 Wound. The commenter believed it had submitted more comparative data than skin substitute products that had previously received pass-through payment approval.

Lastly, the commenter believed that a skin substitute product that eliminates religious objections to its use, because Kerecis™ Omega3 Wound is fish

sourced and not a mammalian or human sourced skin substitute, provides a significant benefit to beneficiaries with those objections, as they now have access to skin substitute products when previously skin substitute products may not be available to them.

Response: The commenter did not provide information to demonstrate that Kerecis™ Omega3 Wound represents a substantial clinical improvement relative to other wound care products currently available on the market. The commenter did not provide additional studies to support its claims of improvement with acute wound healing and low risk of side effects and adverse events. The commenter also did not address the concerns of the first study reviewed for this criterion, including the use of nonpatient volunteers; studying the healing of biopsy sites rather than actual wounds requiring treatment; and the use of an unrealistic 1-month endpoint of care instead of a 6-month endpoint of care. Instead, the manufacturer simply stated the study “epitomizes” substantial clinical improvement.

The commenter stated that other skin substitute products that had presented less evidence of substantial clinical improvement had previously been approved for pass-through payment status. However, we believe that the commenter may have been referring to skin substitutes approved for transitional pass-through payments before these products were subject to the transitional pass-through payment approval for medical devices. Since CY 2015, skin substitutes have been evaluated using the medical device pass-through payment process (79 FR 66885 through 66888), which includes the criterion for substantial clinical improvement. Applicants must demonstrate that the device under consideration for pass-through status will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. The commenter did not provide additional information showing substantial clinical improvement.

Finally, the commenter stated that Kerecis™ Omega3 Wound should meet the substantial clinical improvement criterion because it provides a skin substitute option for beneficiaries with allergies or personal objections to mammalian or human sourced products. However, the commenter did not provide any studies nor cite any data to show that this population would receive

a substantial clinical improvement through the use of Kerecis™ Omega3 Wound, as compared to the wound care treatments available to this group of beneficiaries. Therefore, we determine that Kerecis™ Omega3 Wound does not meet the criterion for substantial clinical improvement.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. With respect to the cost criterion, the applicant stated that Kerecis™ Omega3 Wound would be reported with CPT codes 15271 through 15278, which cover the application of skin substitute grafts to different areas of the body for high-cost skin substitutes. To meet the cost criterion for device pass-through payment, a device must pass all three tests of the cost criterion for at least one APC. CPT codes 15271 through 15278 are assigned to either APC 5054 (Level 4 Skin Procedures), with a CY 2016 payment rate of \$1,411.21 and a device offset amount of \$4.52, or APC 5055 (Level 5 Skin Procedures), with a CY 2016 payment rate of \$2,137.49 and a device offset amount of \$25.44. According to the applicant, the cost of substitute graft procedures when performed with Kerecis™ Omega3 Wound is \$2,030.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of \$2,030 for Kerecis™ Omega3 Wound exceeds the applicable APC payment amount for the service related to the category of devices of \$1,411.21 by 144 percent ($\$2,030 / \$1,411.21 \times 100$ percent = 144 percent). Therefore, we stated in the proposed rule that it appears that Kerecis™ Omega3 Wound meets the first cost significance test.

The second cost significance test, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The average reasonable cost of \$2,030 for Kerecis™

¹⁴ Trinh, TT, et al. Marine Omega3 wound matrix for: the treatment of complicated wounds; *Phlebologie* 2016; 45: 93–98.

¹⁵ Tumi Baldursson, T, MD, Ph.D. et al. Healing Rate and Autoimmune Safety of Full-Thickness Wounds Treated With Fish Skin Acellular Dermal Matrix Versus Porcine Small-Intestine Submucosa: A Noninferiority Study; *The International Journal of Lower Extremity Wounds* 2015, Vol. 14(1) 37–43.

Omega3 Wound exceeds the device-related portion of the APC payment amount of \$4.52 by 44,911 percent ($\$2,030/\4.52×100 percent = 44,911 percent). Therefore, it appears that Kerecis™ Omega3 Wound meets the second cost significance test.

The third cost significance test, at § 419.66(d)(3), requires that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the average reasonable cost of \$2,030 for Kerecis™ Omega3 Wound and the portion of the APC payment amount for the device of \$4.52 exceeds the APC payment amount for the related service of \$1,411 by 144 percent ($(\$2,030 - \$4.52)/\$1,411.21 \times 100$ percent = 144 percent). Therefore, we stated in the proposed rule that it appears that Kerecis™ Omega3 Wound meets the third cost significance test. Based on the costs submitted by the applicant and the calculations noted earlier, it appears that Kerecis™ Omega3 Wound meets the cost criterion.

We invited public comments on whether Kerecis™ Omega3 Wound meets the device pass-through payment criteria discussed in this section.

We did not receive any public comments for this section. We confirm that Kerecis™ Omega3 Wound meets the cost criteria for new device categories.

After consideration of the public comments we received, we are not approving device pass-through payment status for Kerecis™ Omega3 Wound for CY 2018.

(5) X-WRAP®

Applied Biologics, LLC submitted an application for a new device category for transitional pass-through payment status for X-WRAP®. X-WRAP® is a chorion-free, amnion membrane allograft that can be used as a biological wrap or patch at any surgical site. It is used as a treatment for surgical or traumatic injury to bone or soft tissue. It is used to minimize adhesions, reduce inflammation, and promote soft tissue healing. The X-WRAP® is made from the intermediate amniotic epithelial layer of the placenta, recovered from a Cesarean delivery of pre-screened donors. It is available in a variety of sizes and is used as a biologic augmentation to a variety of orthopedic repairs.

With respect to the newness criterion at § 419.66(b)(1), the applicant indicated that X-WRAP® conforms to the requirements for Human Cells, Tissues,

and Cellular and Tissue-Based Products (HCT/Ps) regulated solely under section 361 of the PHS Act and 21 CFR part 1271. For these products, FDA requires, among other things, that the manufacturers register and list their HCT/Ps with the Center for Biologics Evaluation and Research (CBER) within 5 days after beginning operations and update their registrations annually. Applied Biologics, LLC has a FDA field establishment identifier (FEI) under the HHS-FDA-Establishment Registration and Listing for Human Cells, Tissues, and Cellular and Tissue-Based Products (HCT/Ps). The applicant submitted an annual registration/listing dated December 30, 2015. It is not clear when the initial CBER filing occurred for the X-WRAP® product, and therefore, it is unclear if the newness criterion for X-WRAP® is met.

Comment: One commenter, the manufacturer, supplied information indicating that the initial registration form for X-WRAP® was submitted on February 24, 2015 and validated by FDA on June 8, 2015.

Response: Based on the information submitted by the manufacturer, we believe that the product meets the newness criterion at § 419.66(b)(1).

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, X-WRAP® is integral to the service provided, is used for one patient only, comes in contact with human skin, and is applied in or on a wound or other skin lesion. The applicant also claimed X-WRAP® meets the device eligibility requirements of § 419.66(b)(4) because it is not an instrument, apparatus, implement or item for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

The criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. We have not identified an existing pass-through payment device category that describes X-WRAP®. The applicant proposed a pass-through device category for X-WRAP® with a category descriptor of “Amniotic Membrane Soft Tissue Allografts”. We invited public comments on this issue.

We did not receive any public comments on this issue, and at this time, we have not identified an existing pass-through category that describes X-WRAP®.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment. With regard to the substantial clinical improvement criterion, the applicant submitted a list of studies in the application that showed general effectiveness of amniotic fluid and amniotic membrane-based products. However, these studies were not specific to the X-WRAP® product. The applicant also submitted one study¹⁶ that was a retrospective review with prospective follow-up of patients (n=8) with recurrent surgical primary cubital tunnel syndrome (CuTS) who had undergone at least two previous ulnar nerve surgeries before having an ulnar neurolysis with X-WRAP® dry amniotic membrane barrier. The results showed that the participants experienced significant improvement in VAS pain scores, QuickDASH outcome scores, and grip strength in comparison to these scores prior to the surgery. Mean VAS improved by 3.5, from 7.3 to 3.8 (P <.0001). Mean QuickDASH improved by 30, from 80 to 50 (P <.0001). Grip strength improved by 25 pounds on average (P <.0001), a mean improvement of 38 percent relative to the contralateral side compared with preoperative measurements. Also, none of the patients reported progression or worsening of their symptoms compared with preoperatively. The applicant's conclusions from the article were that using the X-WRAP® amniotic membrane with revision neurolysis was a safe and effective treatment for primary cubital syndrome. The study lacked a comparison arm and did not include group assignment or blinding of patients.

Based on the evidence submitted, we believe there are insufficient data to determine whether X-WRAP® offers a substantial clinical improvement over other treatments for wound care. We invited public comments on whether the X-WRAP® meets the substantial clinical improvement criterion.
