

quantity (RQ) limit. The RQs for the hazardous substance can be found in Table 302.4 of 40 CFR 302.4.

Section 311 of the Clean Water Act (CWA), as amended, requires the person in charge of a vessel to immediately notify the NRC of an oil spill into U.S. navigable waters if the spill causes a sheen, violates applicable water quality standards, or causes a sludge or emulsion to be deposited beneath the surface of the water or upon adjoining shorelines.

The reporting of a hazardous substance release that is at or above the substance's RQ allows the Federal government to determine whether a Federal response action is required to control or mitigate any potential adverse effects to public health or welfare or the environment. Likewise, the reporting of oil spills allows the Federal government to determine whether cleaning up the oil spill is necessary to mitigate or prevent damage to public health or welfare or the environment. The hazardous substance and oil release information collected under CERCLA section 103(a) and CWA section 311 also is available to EPA program offices and other Federal agencies that use the information to evaluate the potential need for additional regulations, new permitting requirements for specific substances or sources, or improved emergency response planning. Release notification information, which is stored in the national Emergency Response Notification System (ERNS) data base, is available to state and local government authorities as well as the general public. State and local government authorities and the regulated community use release information for purposes of local emergency response planning. Members of the general public, who have access to release information through the Freedom of Information Act, may request release information for purposes of maintaining an awareness of what types of releases are occurring in different localities and what actions, if any, are being taken to protect public health and welfare and the environment. ERNS fact sheets, which provide summary and statistical information about hazardous substance and oil release notifications, also are available to the public. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9.

Form numbers: None.

Respondents/affected entities: Facilities and vessels that may have

releases of any hazardous substance or oil at or above its RQ.

Respondent's obligation to respond: Mandatory under CERCLA section 103(a).

Estimated number of respondents: 18,447

Frequency of response: As releases occur from a facility or a vessel.

Total estimated burden: Hours (per year). 75,633 hours per year.

Estimated total annual costs: \$3,951,938. This cost includes an estimated labor cost of \$3,951,938 and an estimated cost of \$0 for capital investment or maintenance and operational costs.

Changes in estimates: There is a decrease of 22,209 hours per year in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB. This decrease reflects EPA's expected decrease in the projected number of release notifications per year.

Dated: April 4, 2018.

Reggie Cheatham,

Director, Office of Emergency Management.
