Spire STL Pipeline, LLC; Notice Granting Late Interventions

On February 6, 2017, in Docket No. CP17-40-000, the Commission issued public notice of Spire STL Pipeline, LLC's (Spire) application requesting approval to construct and operate a pipeline project, which would include: (i) The construction of approximately 59 miles of a new greenfield, 24-inch diameter pipeline; (ii) the acquisition of approximately seven miles of existing

Line 880, currently owned by Spire Missouri Inc. (Spire Missouri);¹ and (iii) minor modifications to Line 880 after it is acquired. This notice set February 27, 2017, as the deadline for motions to intervene.

On May 1, 2017, in Docket No. CP17–40–001, the Commission issued public notice of Spire’s amendment to its application to propose a route alternative. Instead of acquiring and refurbishing Spire Missouri’s Line 880, Spire’s amended application proposes to construct a new six-mile, 24-inch diameter pipeline for the final segment of its proposal (referred to as the North County Extension). This notice set May 22, 2017, as the deadline for motions to intervene.

Multiple motions to intervene out of time were filed between the intervention deadlines and December 19, 2017. Here, because the deadline for filing a timely intervention passed before the Commission announced its new policy governing late interventions in *Tennessee Gas Pipeline Company, L.L.C.*,² the late motions to intervene are granted.³

Dated: April 19, 2018.

Kimberly D. Bose,
Secretary.

SUPPLEMENTARY INFORMATION:

Title: FERC–725X, Mandatory Reliability Standards: Voltage and Reactive (VAR) Standards.

OMB Control No.: 1902–0278.

Type of Request: Three-year extension of the FERC–725X information collection requirements with no changes to the reporting requirements.

Abstract: Pursuant to Section 215 of the Federal Power Act (FPA), NERC established the Voltage and Reactive (VAR) group of Reliability Standards, which consists of two continent-wide Reliability Standards, VAR–001–4 and VAR–002–3.¹ These two standards were designed to maintain voltage stability on the Bulk-Power System, protect transmission, generation, distribution, and customer equipment, and support the reliable operation of the Bulk-Power System. Voltage stability is the ability of a power system to maintain acceptable voltage levels throughout the system under normal operating conditions and following a disturbance. Failure to maintain acceptable voltage levels (*i.e.*, voltage levels become too high or too low) may cause violations of System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs), resulting in damage to Bulk-Power System equipment, and thereby threaten the reliable operation of the Bulk-Power System.

Reliability Standard VAR–001–4²

Reliability Standard VAR–001–4 contains the following requirements:

- Specify a system-wide voltage schedule (which is either a range or a target value with an associated tolerance band) as part of its plan to operate within SOLs and IROLs, and to provide the voltage schedule to its Reliability Coordinator and adjacent Transmission Operators upon request (Requirement R1);

¹ FERC approved these standards in the Order in Docket No. RD14–11–000 (issued on 8/1/2014).

² Applies to generation operators only.
