

EPA invites the public to provide additional comment and information that would be useful in conducting the risk evaluation for each of the 10 chemical substances.

B. The Application of Systematic Review in TSCA Risk Evaluations

The *Application of Systematic Review in TSCA Risk Evaluations* document is a supplemental publication which sets out general principles to guide EPA's application of systematic review in the risk evaluation process for the first 10 chemical substances that EPA initiated on December 19, 2016, as well as future assessments. It also provides the intended strategy for assessing the quality of information that the Agency plans to use for the TSCA risk evaluations.

The Agency intends to implement a structured process of identifying, evaluating and integrating evidence for both the hazard and exposure assessments developed during the TSCA risk evaluation process. As needed, EPA will develop new approaches and methods to address specific assessment needs for the relatively large and diverse chemical space under TSCA. Hence, the Agency will document the progress of implementing systematic review in the draft risk evaluations and through revisions of this document and publication of supplemental documents. The systematic review document provides the *general expectations* for evidence integration. Further additional information will be published with the publication of the draft TSCA risk evaluations.

Ultimately, the goal is to establish a pragmatic systematic review process that generates high quality, fit-for-purpose risk evaluations that rely on the best available science and the weight of the scientific evidence within the context of TSCA.

This document is a living document which may be revised periodically. EPA welcomes public input on this document at any time.
