9. The estimated number of hours needed annually to comply with the information collection requirement or request: 75 hours.

10. Abstract: The Debt Collection Improvement Act of 1996 requires that agencies collect TINs from individuals who do business with the Government, including contractors and recipients of credit, licenses, permits, and benefits. The TIN will be used to process all electronic payments (refunds) made to licensees by electronic funds transfer by the Department of the Treasury. The Department of the Treasury will use the TIN to determine whether the refund can be used to administratively offset any delinquent debts reported to the Treasury by other government agencies. In addition, the TIN will be used to collect and report to the Department of the Treasury any delinquent indebtedness arising out of the licensee’s or applicant’s relationship with the NRC.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
2. Is the estimate of the burden of the information collection accurate?
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

II. Discussion

Since 1988, NRC licensees have been required to provide decommissioning financial assurance. The NRC published its “Decommissioning Planning Rule” in the Federal Register on June 17, 2011 (76 FR 35512). The rule became effective on December 17, 2012. The rule’s purpose is to minimize the likelihood of new “legacy sites,” those sites owned or controlled by licensees with insufficient resources to complete decommissioning. Successful completion of decommissioning is a prerequisite to the NRC terminating the license.

The NRC’s Regulatory Guide (RG) 4.22, “Decommissioning Planning During Operations” (ADAMS Accession No. ML12158A361), provides guidance to licensees for use during licensed operations to minimize radiological contamination, including radiological subsurface contamination, and to properly retain survey results. For those licensees having or likely to have significant residual radioactivity, RG 4.22 provides guidance on arranging for sufficient funding to complete decommissioning, thereby allowing the NRC to terminate the license.

The purpose of this ISG is to provide NRC staff and industry with guidance based on developments and lessons learned in financial assurance since the last update to NUREG–1757, Vol. 3. The ISG covers decommissioning cost estimates describing current facility conditions, evaluating events since the last DFP approval, and updates for certain financial instruments.
