

manage its credit exposures to its clearing members by better aligning each clearing member's contributions to the credit risk it poses to OCC, thereby allowing OCC to better manage its credit exposures to its participants.

Accordingly, based on the foregoing, the Commission believes that the proposed changes pertaining to the sizing, monitoring, and allocation of clearing fund requirements are consistent with Exchange Act Rule 17Ad-22(e)(4).¹³⁷

C. Consistency With Rule 17Ad-22(e)(1) Under the Exchange Act

Rule 17Ad-22(e)(1) under the Exchange Act requires that OCC establish, implement, maintain, and enforce written policies and procedures reasonably designed to provide for a well-founded, clear, transparent, and enforceable legal basis for each aspect of its activities in all relevant jurisdictions.¹³⁸ The Commission has stated that, in establishing and maintaining policies and procedures to address legal risk, a covered clearing agency generally should consider whether its rules, policies and procedures, and contracts are clear, understandable, and consistent with relevant laws and regulations.¹³⁹

The Commission believes that the proposed consolidation and reorganization of OCC's Rules described above would improve readability by locating all rules related to the clearing fund in one place, thereby enhancing the clarity, transparency, consistency, and understandability of OCC's Rules related to the clearing fund. Additionally, by amending the Rules to accurately reflect OCC's current margin practices, the Commission believes OCC's Rules will be more transparent and understandable.

Accordingly, the Commission believes that the proposed textual reorganization and clarifications are consistent with Rule 17Ad-22(e)(1).¹⁴⁰

V. Conclusion

It is therefore noticed, pursuant to Section 806(e)(1)(I) of the Payment Supervision Act, that the Commission *does not object* to Advance Notice (SR-OCC-2018-803) and that OCC is *authorized* to implement the proposed change.

By the Commission.
Robert W. Errett,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-83723; File No. SR-BatsBZX-2016-30]

Self-Regulatory Organizations; Bats BZX Exchange, Inc.; Order Setting Aside Action by Delegated Authority and Disapproving a Proposed Rule Change, as Modified by Amendments No. 1 and 2, To List and Trade Shares of the Winklevoss Bitcoin Trust

July 26, 2018.

I. Introduction

On June 30, 2016, Bats BZX Exchange, Inc. ("BZX") filed a proposed rule change with the Commission, seeking to list and trade shares of the Winklevoss Bitcoin Trust.¹ The Commission, acting through authority delegated to the Division of Trading and Markets,² disapproved the proposed rule change on March 10, 2017,³ and BZX then filed a timely petition seeking Commission review of the disapproval by delegated authority.⁴ The Commission granted

¹ BZX made this filing under Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1) ("Exchange Act") and Rule 19b-4 thereunder, 17 CFR 240.19b-4. The Commission published notice of the proposed rule change in the **Federal Register** on July 14, 2016. See Exchange Act Release No. 78262 (July 8, 2016), 81 FR 45554 (July 14, 2016) (SR-BatsBZX-2016-30). On August 23, 2016, the Commission designated a longer period within which to act on the proposed rule change. See Exchange Act Release No. 78653 (Aug. 23, 2016), 81 FR 59256 (Aug. 29, 2016). On October 12, 2016, the Commission instituted proceedings under Section 19(b)(2)(B) of the Exchange Act, 15 U.S.C. 78s(b)(2)(B), to determine whether to approve or disapprove the proposed rule change. See Exchange Act Release No. 79084 (Oct. 12, 2016), 81 FR 71778 (Oct. 18, 2016). On October 20, 2016, BZX filed Amendment No. 1 to the proposed rule change, replacing the original filing in its entirety, and Amendment No. 1 was published for comment in the **Federal Register** on November 3, 2016. See Exchange Act Release No. 79183 (Oct. 28, 2016), 81 FR 76650 (Nov. 3, 2016) ("Amendment No. 1"). On January 4, 2017, the Commission designated a longer period for Commission action on the proposed rule change. See Exchange Act Release No. 79725 (Jan. 4, 2017), 82 FR 2425 (Jan. 9, 2017). On February 22, 2017, BZX filed Amendment No. 2 to the proposed rule change ("Amendment No. 2"). Amendment No. 2 is available on the Commission's website at <https://www.sec.gov/comments/sr-batsbzx-2016-30/batsbzx201630-1594698-132357.pdf>.

² See 17 CFR 200.30-3(a)(12).

³ See Exchange Act Release No. 80206 (Mar. 10, 2017), 82 FR 14076 (Mar. 16, 2017) ("March Disapproval Order").

⁴ On March 17, 2017, pursuant to Rule 430 of the Rules of Practice, see 17 CFR 201.430(b)(1), BZX

BZX's Petition for Review, seeking public comments in support of or in opposition to the March Disapproval Order.⁵ Today's order sets aside the March Disapproval Order, and, for the reasons discussed below, disapproves BZX's proposed rule change.⁶

In response to BZX's Petition for Review, the Commission has conducted a *de novo* review of BZX's proposal⁷—giving careful consideration to the entire record, including BZX's amended proposal and Petition for Review and all comments and statements submitted by BZX and other persons—to determine whether the proposal is consistent with the requirements of the Exchange Act and the rules and regulations issued thereunder that are applicable to a national securities exchange.⁸ Specifically, the Commission has considered whether the BZX proposal is consistent with Exchange Act Section 6(b)(5), which requires, in relevant part, that the rules of a national securities exchange be designed "to prevent fraudulent and manipulative acts and practices" and "to protect investors and the public interest."⁹

Under the Commission's Rules of Practice, the "burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued

submitted a Notice of Intention to Petition for Review of Order Disapproving a Proposed Rule Change, and on March 24, 2017, BZX submitted its Petition for Review ("Petition for Review"). BZX's Notice of Intention to Petition for Review is available on the Commission's website at: <https://www.sec.gov/rules/sro/batsbzx/2017/batsbzx-petitionforreview.pdf>. BZX's Petition for Review is available on the Commission's website at: <https://www.sec.gov/rules/sro/batsbzx/2017/petition-for-review-sr-batsbzx-2016-30.pdf>.

⁵ On April 24, 2017, pursuant to Rule 431 of the Rules of Practice, see 17 CFR 201.431, the Commission issued an order granting the Petition for Review, see Exchange Act Release No. 80511 (Apr. 24, 2017), 82 FR 19770 (Apr. 28, 2017) ("Review Order"), and designated May 15, 2017, as the date by which any party to the action or any other person could file a written statement in support of or in opposition to the March Disapproval Order. See *id.*

⁶ Commissioner Peirce dissents from the Commission's disapproval of this proposal, and her written dissent can be found on the Commission's website, <https://www.sec.gov>.

⁷ Pursuant to Rule 431(a) of the Commission's Rules of Practice, the Commission may affirm, reverse, modify, set aside, or remand for further proceedings, in whole or in part, an action made pursuant to delegated authority. 17 CFR 201.431(a).

⁸ Section 19(b)(2)(C) of the Exchange Act directs the Commission to approve a proposed rule change of an SRO, such as a national securities exchange, if the Commission finds that the proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to the SRO and directs the Commission to disapprove the proposed rule change if it is unable to make such a finding. See 15 U.S.C. 78s(b)(2)(C).

⁹ 15 U.S.C. 78f(b)(5).

¹³⁷ *Id.*

¹³⁸ 17 CFR 240.17Ad-22(e)(1).

¹³⁹ Covered Clearing Agency Standards at 70802.

¹⁴⁰ 17 CFR 240.17Ad-22(e)(1).

thereunder . . . is on the self-regulatory organization [“SRO”] that proposed the rule change.”¹⁰ The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,¹¹ and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.¹²

BZX argues, among other things, that its proposal is consistent with Exchange Act Section 6(b)(5) on the grounds that the “geographically diverse and continuous nature of bitcoin trading makes it difficult and prohibitively costly to manipulate the price of bitcoin”¹³—and that therefore the bitcoin market “generally is less susceptible to manipulation than the equity, fixed income, and commodity futures markets”¹⁴—and because “novel systems intrinsic to this new market provide unique additional protections that are unavailable in traditional commodity markets.”¹⁵ BZX also asserts that the March Disapproval Order failed to appreciate that the proposal provides “traditional means of identifying and deterring fraud and manipulation,”¹⁶ and that the proposal meets the criteria that the Commission has utilized in approving other commodity-trust ETPs as it relates to the ability to monitor for, detect, and deter fraud and manipulation and violations of exchange rules and applicable federal securities laws and rules.¹⁷ BZX also claims that the March Disapproval Order overstates the extent to which surveillance and regulation of the underlying market have been present in prior commodity-trust ETP approval orders and the extent to which the Commission has relied on the existence of surveillance-sharing agreements between an ETP listing market and markets related to the underlying assets.¹⁸

The Commission addresses each of these arguments below. In Section III.B, the Commission addresses BZX’s assertion that bitcoin and bitcoin markets, including the Gemini Exchange, are uniquely resistant to manipulation and finds that the record before the Commission does not support such a conclusion. In Section III.C, the Commission addresses whether what BZX describes as “traditional means” of identifying and deterring fraud and manipulation are sufficient to meet the requirements of Exchange Act Section 6(b)(5) and also finds that the record does not support such a conclusion.

Then, in Sections III.D and III.E, respectively, the Commission addresses the use and importance of surveillance-sharing agreements to detect and deter fraud and manipulation, and whether BZX has entered into a comprehensive surveillance-sharing agreement with a regulated market of significant size related to bitcoin.¹⁹ Although surveillance-sharing agreements are not the *exclusive* means by which an ETP listing exchange can meet its obligations under Exchange Act Section 6(b)(5), such agreements are a widely used means for exchanges that list ETPs to meet their obligations, and the Commission has historically recognized their importance.²⁰ And where, as here, a listing exchange fails to establish that other means to prevent fraudulent and manipulative acts and practices will be sufficient, the listing exchange must enter into a surveillance-sharing agreement with a regulated market of significant size because “[s]uch agreements provide a necessary deterrent to manipulation because they facilitate the availability of information needed to fully investigate a manipulation if it were to occur.”²¹ Based on the record before it, the Commission concludes that—unlike the listing exchanges for previously approved commodity-trust ETPs—BZX has not established that it has entered into, or currently could enter into, a surveillance-sharing agreement with a regulated market of significant size related to bitcoin.

Finally, in Section III.F, the Commission addresses arguments raised

regarding the protection of investors and the public interest, and, in Section III.G, the Commission discusses additional factors supporting disapproval of the BZX proposal.

Although the Commission is disapproving this proposed rule change, the Commission emphasizes that its disapproval does not rest on an evaluation of whether bitcoin, or blockchain technology more generally, has utility or value as an innovation or an investment. Rather, the Commission is disapproving this proposed rule change because, as discussed in detail below, BZX has not met its burden under the Exchange Act and the Commission’s Rules of Practice to demonstrate that its proposal is consistent with the requirements of the Exchange Act Section 6(b)(5), in particular the requirement that its rules be designed to prevent fraudulent and manipulative acts and practices.

While the record before the Commission indicates that a substantial majority of bitcoin trading occurs on unregulated venues overseas that are relatively new and that, generally, appear to trade only digital assets,²² and while the record does not support a conclusion that bitcoin derivatives markets have attained significant size,²³ the Commission notes that regulated bitcoin-related markets are in the early stages of their development. Over time, regulated bitcoin-related markets may continue to grow and develop. For example, existing or newly created bitcoin futures markets may achieve significant size, and an ETP listing exchange may be able to demonstrate in a proposed rule change that it will be able to address the risk of fraud and manipulation by sharing surveillance information with a regulated market of significant size related to bitcoin, as well as, where appropriate, with the spot markets underlying relevant bitcoin derivatives. Should these circumstances develop, or conditions otherwise change in a manner that affects the Exchange Act analysis, the Commission would then have the opportunity to consider whether a bitcoin ETP would be consistent with the requirements of the Exchange Act.

²² For example, the Registration Statement for the Winklevoss Bitcoin Trust discloses that “[t]he Bitcoin Exchanges on which bitcoin trades are new and, in most cases, largely unregulated.” *See* Registration Statement on Form S–1, as amended, dated February 8, 2017, at 22 (File No. 333–189752) (“Registration Statement”). *See also* Sections III.E.1 and III.E.2, *infra* (discussing the distribution of bitcoin trading and the state of regulation of bitcoin spot markets).

²³ *See infra* notes 312–316 and accompanying text.

II. Description of the Proposal

BZX proposes to list and trade shares (“Shares”) of the Winklevoss Bitcoin Trust (“Trust”) as Commodity-Based Trust Shares under BZX Rule 14.11(e)(4).²⁴ The Trust would hold only bitcoins as an asset,²⁵ and the bitcoins would be in the custody of, and secured by, the Trust’s custodian, Gemini Trust Company LLC (“Custodian”), which is a limited-liability trust company chartered by the State of New York and supervised by the New York State Department of Financial Services (“NYDFS”).²⁶ Gemini Trust Company is also an affiliate of Digital Asset Services LLC, the sponsor of the Trust (“Sponsor”).²⁷ The Trust would issue and redeem the Shares only in “Baskets” of 100,000 Shares and only to “Authorized Participants,” and these transactions would be conducted “in-kind” for bitcoin only.²⁸

The investment objective of the Trust would be for the Shares to track the price of bitcoin on the Gemini Exchange, which is a digital-asset exchange owned and operated by the Gemini Trust Company.²⁹ The Net Asset Value (“NAV”) of the Trust would be calculated each business day, based on the clearing price of that day’s 4:00 p.m. Eastern Time (“ET”) Gemini Exchange bitcoin auction, a two-sided auction open to all Gemini Exchange customers (“Gemini Auction”).³⁰ The Intraday

²⁴ BZX Rule 14.11(e)(4)(C) permits the listing and trading of “Commodity-Based Trust Shares,” which are defined as a security (a) that is issued by a trust that holds a specified commodity deposited with the trust; (b) that is issued by the trust in a specified aggregate minimum number in return for a deposit of a quantity of the underlying commodity; and (c) that, when aggregated in the same specified minimum number, may be redeemed at a holder’s request by the trust, which will deliver to the redeeming holder the quantity of the underlying commodity.

²⁵ Bitcoins are digital assets that are issued and transferred via a decentralized, open-source protocol used by a peer-to-peer computer network through which transactions are recorded on a public transaction ledger known as the “Bitcoin Blockchain.” The Bitcoin protocol governs the creation of new bitcoins and the cryptographic system that secures and verifies bitcoin transactions. See Amendment No. 1, *supra* note 1, 81 FR at 76652. The proposed rule change describes the ETP’s underlying bitcoin asset as a “digital asset” and as a “commodity,” see *id.* at 76652 & n.21, and describes the ETP as a Commodity-Based Trust. For the purpose of considering this proposal, this order describes a bitcoin as a “digital asset” and a “commodity.”

²⁶ See *id.* at 76651–52.

²⁷ See *id.* at 76651.

²⁸ See *id.* at 76664–65. See also Amendment No. 2, *supra* note 1.

²⁹ See Amendment No. 1, *supra* note 1, 81 FR at 76652.

³⁰ See *id.* at 76652, 76664. In the event that the Sponsor determines that the Gemini Auction price, because of extraordinary circumstances, is “not an

Indicative Value (“IV”) of the Trust would be calculated and disseminated by the Sponsor, every 15 seconds during BZX’s regular trading session, based on the most recent Gemini Auction price.³¹

BZX represents that it has entered into a comprehensive surveillance-sharing agreement with the Gemini Exchange.³² Further details regarding the proposal and the Trust can be found in Amendments No. 1 and 2 to the proposal,³³ and in the registration statement for the Trust.³⁴

III. Discussion

A. Overview

The comment period for the proposed rule change filed by BZX ended November 25, 2016. The Commission, as of March 10, 2017, received 66 comment letters on the proposed rule change.³⁵ Additionally, in response to

appropriate basis for evaluation of the Trust’s bitcoin on a given Business Day,” BZX’s proposal provides that the Sponsor may use other specified criteria to value the holdings of the Trust. See *id.* at 76664.

³¹ See *id.* at 76666.

³² See *id.* at 76668.

³³ See Amendments No. 1 and 2, *supra* note 1.

³⁴ See Registration Statement, *supra* note 22. BZX represents in the proposed rule change that the Registration Statement will be effective as of the date of any offer and sale pursuant to the Registration Statement. See Amendment No. 1, *supra* note 1, 81 FR at 76651.

the effect that Commission approval of the BZX proposal could have on bitcoin and the bitcoin markets.⁴³

BZX's primary argument is that the standard set forth in the March Disapproval Order—the need for a surveillance sharing agreement between the ETP listing exchange and significant, regulated markets related to the underlying asset⁴⁴—is not the only way that a listing exchange can satisfy Section 6(b)(5)'s requirement that its rules be designed to prevent fraudulent and manipulative acts and practices with respect to listing an ETP.⁴⁵ BZX argues that, in the case of a bitcoin commodity-trust ETP, traditional measures to detect and deter manipulation are sufficient.⁴⁶ BZX and certain commenters further argue that the March Disapproval Order misconstrued Section 6(b)(5) to mean that a bitcoin ETP can be listed and traded only if bitcoin “cannot be manipulated.”⁴⁷ They argue that such a standard is inconsistent with the “not readily susceptible to manipulation” standard applied to other commodities that underlie ETPs.⁴⁸

These arguments do not accurately reflect the nature of the Commission's inquiry and past practice. The Commission agrees that, if BZX had demonstrated that bitcoin and bitcoin markets are inherently resistant to fraud and manipulation, comprehensive surveillance-sharing agreements with significant, regulated markets would not be required, as the function of such agreements is to detect and deter fraud and manipulation. But because the underlying commodities market for this proposed commodity-trust ETP is not demonstrably resistant to manipulation, BZX, as the ETP listing exchange, must enter into surveillance-sharing agreements with, or hold Intermarket Surveillance Group membership in common with, at least one significant, regulated market relating to bitcoin.

Moreover, the Commission is not applying a “cannot be manipulated” standard to this proposal. Instead, the Commission is examining whether the proposal meets the requirements of the Exchange Act and, pursuant to its Rules of Practice,⁴⁹ is placing the burden on BZX to demonstrate the validity of its contention that the “novel systems

intrinsic to this new market provide unique additional protections that are unavailable in traditional commodity markets,”⁵⁰ and to establish that the requirements of the Exchange Act have been met.

Finding that BZX has not demonstrated that bitcoin and bitcoin markets are inherently resistant to manipulation, the Commission subjects the proposal to the analysis it has historically used to analyze commodity-trust ETPs, focusing particularly on whether there are comprehensive surveillance-sharing agreements with significant, regulated markets. Because adequate surveillance-sharing agreements are not in place—and any current surveillance-sharing agreements are with bitcoin-related markets that are either not significant, not regulated, or both—the Commission concludes that the proposal is inconsistent with Exchange Act Section 6(b)(5).

Accordingly, the Commission will examine whether the proposed rule change is consistent with Section 6(b)(5) by first addressing the arguments by BZX and certain commenters that bitcoin and bitcoin markets are inherently resistant to manipulation. The Commission will then address BZX's argument that what it describes as “traditional means” of identifying and deterring fraud and manipulation would be sufficient to comply with Exchange Act Section 6(b)(5), which requires that BZX's rules be designed to “prevent fraudulent and manipulative acts and practices” and “to protect investors and the public interest.”⁵¹ Finding these arguments unpersuasive, the Commission concludes that the proposal is inconsistent with previously approved commodity-trust ETPs, which have universally relied on surveillance-sharing agreements with significant, regulated markets relating to the underlying commodity in order to prevent fraud and manipulation and to protect investors and the public interest. Finally, the Commission addresses and rejects additional factors that BZX contends support approval.

B. The Susceptibility of Bitcoin and Bitcoin Markets to Manipulation

BZX asserts that intrinsic properties of bitcoin and bitcoin markets, including the Gemini Exchange, provide resistance to manipulation. But BZX has failed to carry its burden to demonstrate that its assertion is correct.

1. The Structure of the Spot Market for Bitcoin

(a) Summary of Comments Received

BZX argues that intrinsic properties of bitcoin and bitcoin markets make manipulation “difficult and prohibitively costly.”⁵² BZX argues that “novel systems intrinsic to this new market provide unique additional protections that are unavailable in traditional commodity markets.”⁵³ BZX asserts that the increasing strength and resilience of the global bitcoin marketplace serve to reduce the likelihood of price manipulation and that arbitrage opportunities across globally diverse marketplaces allow market participants to ensure approximately equivalent pricing worldwide. But BZX concedes that less liquid markets, such as the market for bitcoin, may be more susceptible to manipulation.⁵⁴

BZX asserts that a number of new bitcoin market participants have emerged, changing the once concentrated and non-regulated landscape of the global bitcoin exchange marketplace, and that the emergence of these new market participants, who are chiefly arbitrageurs, causes global bitcoin exchange prices to converge.⁵⁵ BZX adds that arbitrageurs must have funds distributed across multiple bitcoin exchanges to take advantage of temporary price dislocations, and that this distribution of funds discourages concentration of funds on any one particular bitcoin exchange and mitigates the potential for manipulation on a bitcoin exchange because doing so would require overcoming the liquidity supply of arbitrageurs that are actively eliminating any cross-market pricing differences.⁵⁶

BZX also asserts that the bitcoin spot market generally is less susceptible to manipulation than the equity, fixed income, and commodity futures markets, in part, because: (a) A substantial over-the-counter (“OTC”) market provides liquidity and shock absorbing capacity; (b) the “24/7/365” trading of bitcoin provides constant arbitrage opportunities across all trading venues and means that there is no single market-close for investors to attempt to manipulate; and (c) it is unlikely that any one actor could obtain a dominant

market share.⁵⁷ BZX also claims that the transparency that the Trust will provide with respect to its bitcoin holdings, and the dissemination of the IIV and NAV of the Trust, will reduce the ability of market participants to manipulate the price of bitcoin or the price of the Shares.⁵⁸

The Overdahl Letter, submitted in support of the BZX proposal,⁵⁹ asserts that the fungibility of bitcoin across bitcoin exchanges facilitates arbitrage and helps keep prices within the bounds of arbitrage, constraining the possibility of price manipulation on any one bitcoin trading venue.⁶⁰ Because of this linkage, the Overdahl Letter contends, manipulation of the bitcoin price on any one venue would require manipulation of the global bitcoin price to be effective, which would be prohibitively costly and is therefore unlikely. But the Overdahl Letter concedes that any market can potentially be manipulated.⁶¹

The Overdahl Letter further claims that, to the extent that “spoofing conduct”⁶² is present in bitcoin markets, it is unlikely to have a material impact on the value of the Shares. According to the Overdahl Letter, this is because successful spoofing causes price oscillations of extremely small magnitudes (such as within the bid/ask spread) and does not result in a material change in the bitcoin price. This commenter also claims that spoofing victims are unlikely to be holders of the Shares, but rather market makers in the spot market, and concludes that the likelihood of spoofing in the bitcoin spot market is low.⁶³

The Overdahl Letter further claims that even a “dominant” exchange (by trading volume) cannot dictate the global price of bitcoin because an exchange does not coordinate trading across its membership to influence the market price. This commenter argues that the existence of a dominant exchange in terms of trading volume does not imply that there is a dominant actor on the dominant exchange with the ability to attain a dominant market share to manipulate the price of bitcoin. Rather, this commenter argues, the larger the market share of an exchange,

the harder it would be for a dominant actor to obtain a dominant market share of the dominant exchange’s trading volume.⁶⁴

Another analysis—the Lewis Letter⁶⁵—argues that, as a general matter, the underlying market for bitcoin is inherently resistant to manipulation.⁶⁶ The Lewis Letter posits that the underlying bitcoin market is not susceptible to manipulation because: (a) There is no inside information related to bitcoin, such as earnings announcements; (b) the asset is not subject to the dissemination of false or misleading information; (c) each bitcoin market is an independent entity, so that a demand for liquidity does not necessarily propagate across other exchanges; (d) a substantial OTC market provides additional liquidity and absorption of shocks; (e) there is no market-close pricing event to manipulate; (f) the market is not subject to “spoofing” or other high-frequency-trading tactics; (g) order books on exchanges worldwide are publicly visible and available through APIs (application program interfaces); and (h) it is unlikely that any one person could obtain a dominant market share because of the existence of in-kind creations and redemptions, arbitrage across bitcoin markets, and the enhanced transparency that a bitcoin ETP would bring to bitcoin markets.⁶⁷ The Lewis Letter acknowledges the risk that a single investor or a small group acting in collusion could own a dominant share of the available bitcoin, but argues that the structure of the spot bitcoin market and the arbitrage mechanism reduce that risk.⁶⁸

One commenter observes that the bitcoin/Chinese Yuan (BTC/CNY) quote is apt to trade at a significant premium

to the bitcoin/U.S. dollar (BTC/USD) quote and points out that large arbitrage opportunities would not exist for long in efficient markets, but they do persist in bitcoin markets.⁶⁹ Another commenter claims that, because trade is now sparse on regulated U.S. exchanges, including Gemini, arbitrage will not occur efficiently or proportionally to mitigate manipulation from the dominant unregulated bitcoin exchanges.⁷⁰

One commenter asserts that, in January 2017, major Chinese bitcoin exchanges OKCoin, Huobi, and BTCC implemented changes requested by the People’s Bank of China to halt margin lending and to institute transaction fees. This commenter claims that these changes were put in place to discourage price manipulation, to drive down “fake” trading volume, and to dampen bitcoin volatility, and further claims that these changes have had profound and beneficial effects on bitcoin spot markets worldwide.⁷¹

One commenter states that the market for bitcoin, by trade volume, is very shallow. This commenter states that the majority of bitcoin is hoarded by a few owners or is out of circulation. The commenter also states that ownership concentration is high, with 50 percent of bitcoin in the hands of fewer than 1,000 people, and that this high ownership concentration creates greater market liquidity risk, as large blocks of bitcoin are difficult to sell in a timely and market efficient manner. This commenter claims that daily trade volume is only a small fraction of total bitcoin mined.⁷²

One commenter asserts that the number of spot bitcoin exchanges worldwide far exceeds the number of venues for many commodity futures, some of which are underlying assets of existing commodity-trust ETPs. The commenter argues that, therefore, widespread global bitcoin liquidity makes bitcoin less susceptible to manipulation via trading activity conducted on a single exchange, as compared to less-liquid commodity futures that trade on a few exchanges.⁷³

One commenter states that bitcoin trades on a number of exchanges around the world and that most of these exchanges can be considered isolated liquidity pools, which are more vulnerable to manipulation or security breach than the broader market.⁷⁴

Finally, both BZX and the Overdahl Letter argue that the Commodity Futures Trading Commission's ("CFTC") granting of registration to bitcoin swap-execution facilities ("SEFs") means that the CFTC has addressed the issue of manipulation and determined that the underlying spot markets for bitcoin are not susceptible to manipulation.⁷⁵

(b) Discussion

BZX has not demonstrated that the structure of the spot market for bitcoin is uniquely resistant to manipulation.

(i) Bitcoin Market Structure & Arbitrage

While two commenters questioned the effectiveness of arbitrage across bitcoin markets,⁷⁶ BZX, the Overdahl Letter, and the Lewis Letter argue that the structure of the bitcoin spot market and the availability of arbitrage will help keep worldwide bitcoin prices aligned, hindering manipulation.⁷⁷ The Overdahl Letter and Lewis Letter claim that economic analysis demonstrates that bitcoin markets are resistant to manipulation. But, as discussed below, the arguments submitted in support of this claim are incomplete and inconsistent, and are unsupported or contradicted by data.

BZX, the Overdahl Letter, and the Lewis Letter offer broad assertions that the increasing strength and resilience of the non-stop global bitcoin market place, the emergence of new market participants, and the transparency of the market have facilitated arbitrage that has caused global bitcoin exchange prices to converge.⁷⁸ But BZX, the Overdahl Letter, and the Lewis Letter offer no data or analysis regarding the actual effectiveness of arbitrage in the bitcoin spot market, either in terms of how closely prices are aligned across different bitcoin trading venues or how quickly price disparities are arbitrated away.⁷⁹ Similarly, the commenter who asserts that regulatory actions by the People's Bank of China were designed to discourage price manipulation, and have had profound and beneficial effects on bitcoin spot markets worldwide, has provided no empirical

evidence to substantiate this claim.⁸⁰ In addition, the Commission notes that one commenter asserts that large arbitrage opportunities persist in bitcoin markets.⁸¹

While BZX cites a comment letter relating to a different proposed rule change for the proposition that price discrepancies across four selected USD-denominated bitcoin markets are generally arbitrated away in under a minute,⁸² even if that limited factual assertion is true, BZX has not explained why it is relevant to the Commission's consideration of the proposal, given that (a) the worldwide spot market for bitcoin is not limited to trading against the USD, (b) market participants could engage in creation or redemption transactions with the Trust using bitcoins sourced from any trading venue or from OTC transactions, and (c) the Gemini Exchange is not among the four bitcoin trading venues observed by the commenter. Thus, this argument does not support BZX's broad assertion about the effectiveness of arbitrage across the worldwide bitcoin market.

BZX also argues that manipulation in the bitcoin market is unlikely because would-be manipulators would have to overcome the liquidity supplied by arbitrageurs, who must have funds distributed across multiple bitcoin markets to engage in arbitrage,⁸³ and the Overdahl Letter asserts that the manipulation of bitcoin is prohibitively expensive because manipulating the price of bitcoin on any given venue would require manipulation of the entire global bitcoin market to be effective.⁸⁴ These theoretical arguments depend on effective arbitrage existing across bitcoin markets, but, as noted above, the Commission concludes that BZX has not provided a factual basis in the record to conclude that arbitrage across bitcoin exchanges is effective.

Moreover, these arguments are inconsistent: If, in fact, market participants must disperse their capital across multiple trading venues to engage in effective arbitrage, then a market participant may be able to manipulate trading on a single trading venue by concentrating its capital and trading activity there. The Overdahl Letter's argument that manipulation of one bitcoin trading venue would require overcoming liquidity on all bitcoin

venues is also inconsistent with the assertion by the Lewis Letter and another commenter that each bitcoin market is an independent entity and that, therefore, demand for liquidity does not necessarily propagate across other exchanges.⁸⁵ In addition, BZX, the Overdahl Letter, and the Lewis Letter do not adequately take into account that a market participant with a dominant ownership position would not find it prohibitively expensive to overcome the liquidity supplied by arbitrageurs and could use dominant market share to engage in manipulation.⁸⁶ And their arguments that substantial liquidity provided by the OTC market can absorb liquidity shocks and help resist manipulative activity are not supported by any data in the record on which the Commission could base a conclusion that OTC activity contributes to preventing manipulation.

BZX also argues that bitcoin markets are uniquely resistant to manipulation because the 24/7/365 trading of bitcoin means that there is no single market-close for investors to attempt to manipulate.⁸⁷ Similarly, a commenter asserts that the large number of bitcoin trading venues makes bitcoin less susceptible to manipulation than an asset, such as a commodity, trading on a single exchange or just a few exchanges.⁸⁸ In the context of the Trust, however, there is a single market and a single market-close event that an investor may have incentive to manipulate: The Gemini Auction, which the Trust would use to calculate NAV.⁸⁹ And the argument by BZX and a commenter that the transparency of a bitcoin commodity-trust ETP regarding its bitcoin holdings, as well as its dissemination of the IIV and NAV, would reduce the ability of market participants to manipulate the price of bitcoin is unpersuasive because: (a) There is no comprehensive and accurate regulatory data source reflecting bitcoin pricing or trading; (b) there is no basis to conclude that the Trust's IIV would be considered an authoritative price when several other spot prices for bitcoin are already disseminated and often differ from one another;⁹⁰ and (c)

⁷⁵ See BZX Letter II, *supra* note 13, at 17; Overdahl Letter, *supra* note 36, at 12. The Overdahl Letter also notes that the CFTC-regulated CME Group recently created a standardized bitcoin reference rate and a bitcoin spot price index. Overdahl Letter, *supra* note 36, at 12.

⁷⁶ See *supra* notes 69–70 and accompanying text.

⁷⁷ See *supra* notes 52–68 and accompanying text.

⁷⁸ See *supra* notes 52–68 and accompanying text.

⁷⁹ While the Overdahl Letter compares the Gemini Exchange bitcoin price to the median price and the volume-weighted average price of a group of USD-denominated bitcoin markets, such an analysis does not demonstrate whether the range of prices across those other markets is broad or narrow.

⁸⁰ See *supra* note 71 and accompanying text.

⁸¹ See *supra* note 69 and accompanying text.

⁸² See BZX Letter II, *supra* note 13, at 15 n.28 (citing Letter from Daniel H. Gallancy, SolidX Partners, Inc., to Brent J. Fields, Secretary, Commission (Mar. 15, 2017) (SR-NYSEArca-2016-101)).

⁸³ See *supra* note 56 and accompanying text.

⁸⁴ See *supra* notes 60–61 and accompanying text.

⁸⁵ See *supra* notes 67, 74 and accompanying text.

⁸⁶ See Section III.B.1(b)(ii), *infra* (discussing the potential for market domination).

⁸⁷ See *supra* note 57 and accompanying text.

⁸⁸ See *supra* note 73 and accompanying text.

⁸⁹ See Section III.E.1, *infra*. While the Lewis Letter makes a similar argument about the lack of a single market close, see *supra* note 67 and accompanying text, it does so in the context of a bitcoin ETP proposal that would not base its price on a single market auction.

⁹⁰ For example, the website <https://data.bitcoinity.org/markets/arbitrage/USD> tracks

the Trust's NAV would differ from the Gemini Auction price only if the auction price, which is publicly disseminated itself, is determined not to reflect a fair price for bitcoin.

Both the Overdahl Letter and the Lewis Letter contend that bitcoin markets are not subject to "spoofing," a manipulative quoting strategy.⁹¹ Neither letter, however, presents any data or analysis to support its claim, and there is no basis in the record to conclude whether bitcoin spot markets are subject to spoofing or other deceptive quoting practices. As a general matter, the manipulation of asset prices can occur simply through trading activity that creates a false impression of supply or demand, whether in the context of a closing auction or in the course of continuous trading, and does not require formal linkages among markets (such as consolidated quotations or routing requirements) or the complex quoting behavior associated with high-frequency trading.⁹² The Commission also notes that, in contrast to the theoretical arguments in the Overdahl Letter and the Lewis Letter, TeraExchange (a market for swaps on bitcoin) arranged for participants to make manipulative "wash" transactions.⁹³

Finally, BZX's, the Lewis Letter's, and the Overdahl Letter's discussions of the possible sources of manipulation are incomplete and do not form a basis to find that bitcoin is uniquely resistant to manipulation—or to find, by implication, that there is no need for a surveillance-sharing between an exchange listing shares of a bitcoin-based ETP and significant markets trading bitcoin or bitcoin derivatives. For example, assuming there is no inside information related to the

price differences between last trades on 13 bitcoin markets.

⁹¹ See *supra* notes 62–63, 67 and accompanying text.

⁹² Even if transparent order books and transaction reports on bitcoin markets would include the quoting or trading activity of a person or group attempting to manipulate the market, along with the activity of all other market participants, such information could not, by itself, definitively establish in real time which activity represented bona fide trading interest and which did not.

⁹³ See *In re TeraExchange LLC*, CFTC Docket No. 15–33, 2015 WL 5658082 (CFTC Sept. 24, 2015) (Order Instituting Proceedings Pursuant to Sections 6(c) and 6(d) of the Commodity Exchange Act Making Findings and Imposing Remedial Sanctions ("TeraExchange Settlement Order")), available at <http://www.cftc.gov/ido/groups/public/@lrenforcementactions/documents/legalpleading/enferexchangeorder92415.pdf>. See also Kevin Dowd & Martin Hutchinson, *Bitcoin Will Bite the Dust*, 35 *Cato J.* 357, 374 n.13 (2015) (Bitcoin markets are subject to the "usual market manipulation tactics."), available at <https://object.cato.org/sites/cato.org/files/serials/files/cato-journal/2015/5/cj-v35n2-12.pdf>.

earnings or revenue of bitcoin, there may be material nonpublic information related to: The actions of regulators with respect to bitcoin; order flow, such as plans of market participants to significantly increase or decrease their holdings in bitcoin; new sources of demand, such as new ETPs that would hold bitcoin; or the decision of a bitcoin-based ETP, a bitcoin trading venue, or a bitcoin wallet service provider with respect to how it would respond to a "fork" in the blockchain, which would create two different, non-interchangeable types of bitcoin.⁹⁴ Moreover, bitcoin is susceptible to the dissemination of false or misleading information regarding the types of material, nonpublic information just discussed. The Commission also notes a recent academic paper finding empirical evidence of trading in bitcoin markets based on material nonpublic information.⁹⁵

Two additional risks that the Trust's Registration Statement acknowledges—(1) hacking and (2) malicious control of the Bitcoin Network—further undermine BZX's argument that bitcoin and bitcoin markets are inherently resistant to fraud and manipulation. The Trust's Registration Statement recognizes that bitcoin trading venues can be and have been attacked by hackers, which can affect liquidity and result in volatile prices.⁹⁶ Profit-motivated hackers can launch such attacks to manipulate bitcoin and achieve their "intended effect of artificially raising or lowering prices."⁹⁷

⁹⁴ For example, as described in the Trust's Registration Statement, *supra* note 22, in the event the Bitcoin Network undergoes a "hard fork" into two blockchains, the Custodian and the Sponsor will determine which of the resulting blockchains to use as the basis for the assets of the Trust and, under certain circumstances, will have discretion to determine which blockchain is "most likely to be supported by a majority of users or miners." *Id.* at 113. See also Lee Letter, *supra* note 35; Johnson Letter, *supra* note 35; Schulte Letter, *supra* note 35; Anonymous Letter V, *supra* note 35; Anonymous Letter VI, *supra* note 35. The decision of the Custodian and Sponsor to support one resulting blockchain over another could have a material effect on the relative value of the bitcoins in each of the blockchains. A fork between bitcoin and "Bitcoin Cash" occurred on August 1, 2017, and a fork between bitcoin and "Bitcoin Gold" occurred on October 24, 2017.

⁹⁵ See Wenjun Feng, Yiming Wang & Zhengjun Zhang, *Informed Trading in the Bitcoin Market*, *Fin. Res. Letters*, Dec. 2, 2017, available at <https://www.sciencedirect.com/science/article/pii/S1544612317306992>.

⁹⁶ Registration Statement, *supra* note 22, at 21–23, 29, 60–61.

⁹⁷ Amir Feder, Neil Gandal, J.T. Hamrick, and Tyler Moore, *The Impact of DDoS and Other Security Shocks on Bitcoin Currency Exchanges: Evidence From Mt. Gox*, *Journal of Cybersecurity* (Jan. 31, 2018), at 137 (explaining that a profit-motivated hacker can manipulate bitcoin prices up or down by hacking larger trading venues while

The Trust's Registration Statement also recognizes the risk of a "malicious actor" obtaining control of the processing power dedicated to mining on the Bitcoin Network and thus "exerting authority" over the Bitcoin Network.⁹⁸ Such control can be used to manipulate bitcoin pricing.⁹⁹ And there may be material nonpublic information related to hacking plans or attempts to gain control of the Bitcoin Network, and such information could be exploited through fraudulent trading.

Based on the analysis above, the Commission concludes that there is an insufficient basis in the record before it to decide that the bitcoin spot markets are inherently resistant to manipulation. This conclusion, again, is bolstered by the Trust's Registration Statement, which explains:

Over the past four (4) years, a number of Bitcoin Exchanges have been closed due to fraud, failure or security breaches. In many of these instances, the customers of such Bitcoin Exchanges were not compensated or made whole for the partial or complete losses of their account balances in such Bitcoin Exchanges. . . . Further, the collapse of the largest Bitcoin Exchange in 2014 suggests that the failure of one component of the overall Bitcoin ecosystem can have consequences for both users of a Bitcoin Exchange and the Bitcoin industry as a whole.¹⁰⁰

Additionally, the Commission notes that recent academic papers suggest that the price of bitcoin can be, and has been, manipulated through activity on

trading on smaller trading venues, and thereby "create[] an unfair financial advantage for the perpetrator at the expense of ordinary participants", available at <https://academic.oup.com/cybersecurity/article/3/2/137/4831474>; see also David Groshoff, *Kickstarter My Heart: Extraordinary Popular Delusions and the Madness of Crowdfunding Constraints and Bitcoin Bubbles*, 5 *Wm. Mary Bus. L. Rev.* 489, 519 (2014).

⁹⁸ Registration Statement, *supra* note 22, at 17, 56. The Registration Statement notes that obtaining control in excess of 50% of the processing power on the Bitcoin network is sufficient, and that "there are some academics and market participants who believe the applicable threshold required to exert authority over the Bitcoin Network could be less than fifty (50) percent, which would increase the chances of a malicious actor exerting authority over the Bitcoin Network." *Id.* at 17.

L. & Tech.* 106, 107–08 (2015), available at <http://ijlt.in/wp-content/uploads/2015/09/Sanya-Samtani-and-Varun-Baliga-5.pdf> (malicious actor could achieve "devaluation" of bitcoin).

¹⁰⁰ Registration Statement, *supra* note 22, at 23.

bitcoin trading venues. One recent academic paper examined whether the growth of the circulating supply of Tether (a cryptocurrency that claims to be backed by the U.S. dollar) through new issuances “is primarily driven by investor demand, or is supplied to investors as a scheme to profit from pushing cryptocurrency prices up.”¹⁰¹ Through statistical analysis of the blockchains of bitcoin and Tether, the authors conclude that entities associated with a specific cryptocurrency trading venue—which the authors link to Tether’s founders—“use Tether to purchase bitcoin when prices are falling”; that “[s]uch price supporting activities are successful, as Bitcoin prices rise after the period of intervention,” with “substantial aggregate price effects” across bitcoin trading platforms; and that this activity “occurs more aggressively right below salient round-number price thresholds where the price support might be most effective.”¹⁰² The paper finds that the periods of strongest Tether flows are “associated with 50% of Bitcoin compounded return” from March 1, 2017, to March 31, 2018.¹⁰³ Overall, the authors conclude that their findings “provide substantial support for the view that price manipulation may be behind substantial distortive effects in cryptocurrencies” and “suggest that external capital market surveillance and monitoring may be necessary to obtain a market that is truly free.”¹⁰⁴ The Commission also notes another recent academic paper, which concludes that there was fraudulent and manipulative activity on a single bitcoin trading venue.¹⁰⁵

¹⁰¹ Griffin, John M. and Amin Shams, *Is Bitcoin Really Un-Tethered* (June 13, 2018) (manuscript at 33) (“Griffin-Shams Paper”), available at https://ssrn.com/abstract_id=3195066.

¹⁰⁴ *Id.* at 33; see also *id.* at 1 (“[P]urchases with Tether are timed following market downturns and result in sizable increases in Bitcoin prices,” thus “Tether is used to provide price support and manipulate cryptocurrency prices.”); *id.* at 2 (Bitcoin exchanges “largely operate outside the purview of financial regulators” and “[t]rading on unregulated exchanges . . . could leave cryptocurrencies vulnerable to gaming and manipulation.”); *id.* at 3 (“[T]he coordinated supply of Tether creates an opportunity to manipulate cryptocurrencies.”); *id.* at 6 (“Tether seems to be used both to stabilize and manipulate Bitcoin prices.”).

¹⁰⁵ See Neil Gandal, J.T. Hamrick, Tyler Moore & Tali Oberman, *Price Manipulation in the Bitcoin Ecosystem*, *J. Monetary Econ.*, Jan. 2, 2018, available at <https://doi.org/10.1016/j.jmoneco.2017.12.004>. According to the authors of this paper, the fraudulent and manipulative activity led to an average of approximately a four to five percent rise in the bitcoin/USD exchange rate in 2013 on days when that activity occurred,

These studies supplement the Commission’s conclusion that there is an insufficient basis in the record before it to decide that the bitcoin spot markets are inherently resistant to manipulation.¹⁰⁶ Even without these studies, however, the Commission would still find that BZX has not demonstrated that the structure of the spot market for bitcoin is uniquely resistant to manipulation. Moreover, even if the record supported the proposition that some features of bitcoin and bitcoin markets mitigate some types of manipulation to some degree, the Commission concludes that such mitigation is insufficient to justify dispensing with the detection and deterrence of fraud and manipulation provided by surveillance-sharing agreements with significant, regulated markets.¹⁰⁷

(ii) Market Domination

While BZX argues that it is unlikely that any one actor could obtain a

compared to a slight decline on days without such activity. *Id.* at 2.

¹⁰⁶ While another recent academic paper examines the relationship between bitcoin and Tether and claims “not [to] find any evidence suggesting that Tether issuances cause subsequent increases in Bitcoin returns,” W.C. Wei, *The Impact of Tether Grants on Bitcoin* (May 9, 2018) (manuscript at 6) (“Wei Paper”), available at <https://ssrn.com/abstract=3175876>, the Commission believes that this paper’s analysis reflects significant limitations in the study design and is not as persuasive as the empirical papers cited herein that conclude there has been fraud and manipulative activity in bitcoin markets, including the Griffin-Shams Paper. First, the paper uses only daily traded price and aggregate trading volume, whereas the Griffin-Shams Paper, *supra* note 101, performs a more granular statistical analysis of blockchain transactions and finds that the largest effects of Tether issuances on bitcoin prices occur between three and twelve hours after a Tether issuance. Second, the paper uses a single vector autoregression specification with 52 coefficients, but without any robustness checks. And third, while the paper concludes that Tether issuances increase bitcoin trading volume but do not affect bitcoin returns, the paper does not include any discussion of or control for collinearity between changes in bitcoin trading volume and prices. Thus, the Commission does not believe that the Wei Paper supports a conclusion that bitcoin is inherently resistant to manipulation.

¹⁰⁷ Even if BZX’s argument is that bitcoin and bitcoin markets are “not readily susceptible to manipulation,” BZX has not demonstrated that contention. Indeed, the Commission concludes, consistent with its past practice, that surveillance-sharing agreements with significant, regulated markets ensure that commodity-trust ETPs are “less readily susceptible to manipulation.” Exchange Act Release No. 35518 (Mar. 21, 1995), 60 FR 15804, 15807 (Mar. 27, 1995) (SR-Amex-94-30); accord Exchange Act Release No. 82538 (Jan. 19, 2018), 83 FR 3807, 3810 (Jan. 26, 2018) (SR-ChoeBZX-2018-005) (“The Exchange has in place a surveillance program for transactions in ETPs to ensure the availability of information necessary to detect and deter potential manipulations and other trading abuses, thereby making the Shares less readily susceptible to manipulation.”).

dominant market share,¹⁰⁸ BZX does not address the risk of pre-existing dominant positions, a risk that the Lewis Letter acknowledges.¹⁰⁹ Similarly, while the Overdahl Letter maintains that the existence of a dominant bitcoin exchange would not imply the existence of a dominant ownership position, and that the existence of a market with a large share of trading volume would make it more difficult for a market participant to obtain a dominant ownership position,¹¹⁰ the Overdahl Letter does not address the risk of pre-existing dominant positions in bitcoin. The Lewis Letter, however, specifically acknowledges this risk, noting: “One of the risks associated with bitcoin is the possibility that a single investor or a small group acting in collusion could own a dominant share of the available bitcoin.”¹¹¹ The Lewis Letter goes on to explain that “[i]t is possible, and in fact, reasonably likely that a small group of early bitcoin adopters hold a significant proportion of the bitcoin that has thus far been created.”¹¹² Additionally, another commenter contends that the majority of bitcoin is held by a few owners, estimating that 50% of bitcoins are held by fewer than 1,000 people.¹¹³

The Lewis Letter argues that the nature of the spot bitcoin market and the arbitrage mechanism should reduce the risk of manipulation through ownership of a dominant market share,¹¹⁴ but this argument addresses whether market participants might acquire a dominant share of bitcoin ownership by trading in bitcoin markets

¹⁰⁸ See *supra* note 57 and accompanying text.

¹¹⁰ See *supra* note 64 and accompanying text.

¹¹¹ Lewis Letter I, *supra* note 65, at 6. The Lewis Letter states that there is “no compelling evidence” to suggest that any single investor or group has acquired a dominant position in bitcoin, but its recognition that “there is no registry showing which individuals or entities own bitcoin or the quantity owned,” and its citation of “media estimates” regarding the holdings of certain individuals, demonstrates that there is some risk of a person or group holding or acquiring a significant proportion of bitcoins and that this risk should not be dismissed. *Id.* at 6 & n.7.

¹¹² Lewis Letter I, *supra* note 65, at 6 (citing Amendment No. 4 to Form S-1 of SolidX Bitcoin Trust at 16). A recent letter from Commission staff notes such concerns of “potential manipulation in the underlying cryptocurrency markets.” *Engaging on Fund Innovation & Cryptocurrency-Related Holdings*, 2018 WL 480851, at *1–2 (SEC No Action Letter Jan. 18, 2018) (citing David Z. Morris, *Could Bitcoin’s ‘Whales’ Manipulate the Market?*, *Fortune* (Dec. 10, 2017)). See also Olga Kharif, *The Bitcoin Whales: 1,000 People Who Own 40 Percent of the Market*, *Bloomberg Businessweek* (Dec. 8, 2017), available at <https://www.bloomberg.com/news/articles/2017-12-08/the-bitcoin-whales-1-000-people-who-own-40-percent-of-the-market>.

¹¹³ See *supra* note 72 and accompanying text.

¹¹⁴ See *supra* note 68 and accompanying text.

and does not address the potential market effect of large bitcoin positions held by early adopters. Multiple academic studies have found the existence of concentrated holdings in an asset presents a meaningful risk of manipulation.¹¹⁵ Whether a dominant position came from being an early adopter of bitcoin or from trading activity would not alter the Commission's view that a person or group with a dominant position may be capable of engaging in manipulative activity. The Commission thus cannot, on the record before it, conclude that bitcoin markets are uniquely resistant to manipulation.

(iii) Prior Regulatory Actions Regarding Bitcoin

Although commenters suggest that the CFTC has conclusively determined that bitcoin markets are not susceptible to manipulation because it has permitted the registration of bitcoin swap execution facilities as consistent with the Commodity Exchange Act ("CEA"),¹¹⁶ the CFTC has made no such sweeping finding as to bitcoin or bitcoin spot markets either in permitting the registration of those swap execution facilities or in more recently permitting the self-certification by Chicago Mercantile Exchange Inc. ("CME") and Cboe Futures Exchange, LLC ("CFE") of bitcoin futures contracts. The Commission notes that CFTC Chairman Giancarlo has described "heightened review" of the CME and CFE self-certifications as addressing the narrower question of whether the particular bitcoin futures products and cash-settlement processes—under the specific terms proposed by those two futures exchanges—were "readily susceptible to manipulation."¹¹⁷ And the CFTC stated that the self-certification process for bitcoin futures contracts "does NOT provide for . . . value judgments about the underlying spot market," and U.S. law "does not provide for direct, comprehensive

¹¹⁵ See, e.g., Craig Pirrong, *The Economics of Commodity Market Manipulation: A Survey*, J. Commodity Mkt., Mar. 2017, at 1 (describing manipulation in commodities markets); Franklin Allen, Lubomir P. Litov & Jianping Mei, *Large Investors, Price Manipulation, and Limits to Arbitrage: An Anatomy of Market Corners*, 10 Rev. Finance 645 (2006) (describing manipulation in equity and commodities markets).

¹¹⁶ See *supra* note 75.

¹¹⁷ See Written Testimony of J. Christopher Giancarlo, Chairman, Commodity Futures Trading Commission, Before the Senate Banking Committee at text accompanying n.17 (Feb. 6, 2018) ("Giancarlo Testimony"), available at <https://cftc.gov/PressRoom/SpeechesTestimony/opagiancarlo37>. See also *infra* notes 285–288 (discussing role of CFTC with respect to underlying bitcoin spot markets).

Federal oversight of underlying Bitcoin or virtual currency spot markets."¹¹⁸

Moreover, the CFTC's statutory authority to review new derivative products differs substantially from the Commission's authority, under Section 19(b) of the Exchange Act,¹¹⁹ with respect to the review of proposed rule changes by SROs. While there are "limited grounds" for the CFTC to take affirmative action to stay new product self-certifications,¹²⁰ the Commission must, to approve a proposed rule change, make an affirmative finding that the proposed rule change is consistent with the Exchange Act, with the burden of demonstrating consistency with the Exchange Act resting with the SRO proposing the rule change.¹²¹ The Commission is also mindful that the primarily institutional markets that the CFTC supervises are materially different from the securities markets in which many retail investors participate directly. The CFTC acknowledges that "[m]ost participants in the futures markets are commercial or institutional commodities producers or consumers" and "[t]rading commodity futures and options is a volatile, complex and risky venture that is rarely suitable for individual investors or 'retail customers.'" ¹²²

Accordingly, the Commission cannot conclude that actions taken to date by the CFTC determine whether the proposed bitcoin ETP is consistent with the applicable requirements of the Exchange Act, and the Commission must reach its own decision, under its own statutory mandate, to determine whether the proposal is designed to "protect investors and the public interest."¹²³

2. Manipulation of the Gemini Exchange and the Gemini Auction

(a) Summary of Comments Received

BZX acknowledges in its comment letter that less-liquid markets, such as the market for bitcoin, may be more

¹²³ 15 U.S.C. 78f(b)(5).

easily manipulated, but claims that these concerns are mitigated with respect to the Shares and the trading on the Gemini Exchange. BZX asserts that the Gemini Auction price is based on an extremely similar mechanism to the one leveraged for BZX's own Opening and Closing Auctions and allows full and transparent participation from all Gemini Exchange participants in the price discovery process. BZX states that the auction process leverages mechanics that have proven over the years to be robust and effective on BZX and other national listing exchanges in both liquid and illiquid securities alike. BZX argues that, because the time of the Gemini Auction coincides with BZX's Closing Auction, efficient real-time arbitrage between the closing price of the Trust and the Gemini Auction price will be prevalent and will lead to resilient and effective pricing of both the Trust and the underlying bitcoin asset, leading to convergence between the Trust's closing price and its NAV.¹²⁴ BZX asserts that the Gemini Auction price typically deviates very little from the prevailing price on other bitcoin exchanges, and BZX presents statistics purporting to show that this price is consistent with the prices of other U.S.-based exchanges.¹²⁵

BZX asserts that the Gemini Auction price is uniquely resistant to manipulation and that it more accurately reflects the bitcoin price than any other individual event or cross-market snapshot, because the largest bitcoin transactions each day usually occur via the Gemini Auction. BZX also claims that volumes transacted in the Gemini Auction are generally more than 50% larger than the second-largest trade in the world, drawing an average daily volume of 1,200 bitcoins compared to approximately 800 bitcoins.¹²⁶

In addition, BZX asserts that the Gemini Auction occurs at a scheduled time each day to maximize participation and price formation, while other liquidity events are often unpredictable and irregular.¹²⁷ Another commenter claims that the Gemini Auction also concentrates liquidity and trading volume at a single moment each day.¹²⁸ BZX further asserts that, from its launch through May 12, 2017, the Gemini Auction price on business days has deviated from the Gemini midpoint price (the midrange of the highest bid

¹²⁴ See BZX Letter I, *supra* note 35, at 8; BZX Letter II, *supra* note 13, 10–11. See also SIG Letter, *supra* note 36, at 2–6; C&C Letter, *supra* note 36, at 1.

¹²⁸ See Overdahl Letter, *supra* note 36, at 11.

and lowest offer prices) by 0.22% on average and 0.71% at most, that it has deviated from the median price of all U.S.-based bitcoin exchanges by 0.52% on average, and that it has deviated from the median price of all global USD-denominated bitcoin exchanges by 0.70% on average.¹²⁹ BZX also claims that the Gemini Exchange is regularly near the top of bitcoin exchanges in terms of market-quality metrics for overall trading.¹³⁰

The Overdahl Letter asserts that the Gemini Auction price is reliable in that it generally reflects bitcoin traded at other U.S.-based bitcoin exchanges and bitcoin traded at USD-based exchanges globally and that, when noticeable discrepancies appear, arbitrage mechanisms quickly force prices back into alignment.¹³¹ The Overdahl Letter provides some update to the statistics provided by BZX and states that, from September 21, 2016 (the launch of the Gemini Auction), to March 1, 2017, the average daily deviation of the Gemini Auction price from the median 4:00 p.m. price of all U.S.-based bitcoin exchanges was 0.0058 percent and the average absolute deviation (that is, the average absolute value of deviations) was 0.1804 percent. The Overdahl Letter also states that, during the same period, the average daily deviation of the Gemini Auction price from the median 4:00 p.m. price of all global USD-denominated bitcoin exchanges was 0.0489 percent with an average absolute deviation of 0.2398 percent.¹³²

The Overdahl Letter also contends that the surveillance agreement between the Gemini Exchange and BZX allows for continuous monitoring of trading activity to detect and deter manipulation of the Gemini Auction price and that BZX's rules are reasonably designed to prevent fraudulent and manipulative acts and practices with respect to determining the NAV of the Trust Shares.¹³³ The Overdahl Letter further claims that the Gemini Auction is designed to not be readily susceptible to manipulation because it includes pre-trading transparency, which allows for full and transparent participation by all participants, uses a mechanism similar to that used by other exchanges in setting opening and closing prices, and

concentrates liquidity and trading volume in a single moment each day.¹³⁴ Regarding the calculation of NAV, the Overdahl Letter also argues that the Trust's valuation procedures greatly reduce the risk that a malicious actor could influence the NAV of the Trust by manipulating the Gemini Auction, because alternative means can be used to value the Trust's bitcoin if the Trust sponsor determines that the Gemini Auction price does not reflect the fair value of bitcoin.¹³⁵

Several commenters claim that the Gemini Exchange has low trading volumes,¹³⁶ and one commenter claims that, of all the exchanges, Gemini has the worst pricing.¹³⁷ Another commenter asserts that the Gemini Exchange has relatively low liquidity and trade volume and that there is a significant risk that the nominal ETP share price will be manipulated by relatively small trades that manipulate the bitcoin price at that exchange.¹³⁸ This commenter states that, while U.S.-based bitcoin exchanges are subjected to stricter regulations and auditing for the holding of client accounts, the trading itself seems to occur in a regulatory vacuum and seems impossible to audit effectively.¹³⁹ This commenter expresses concerns regarding the Gemini Exchange Spot Price, noting that the nominal price of the Shares under the proposal is supposed to be tied to the market price of bitcoins at the Gemini Exchange, which is closely tied to the ETP proponents.¹⁴⁰

One commenter claims that most daily trading volume is conducted on poorly capitalized, unregulated exchanges located outside the United States and that these non-U.S. exchanges and their practices significantly influence the price discovery process.¹⁴¹ Another commenter states that the biggest and most influential bitcoin exchange is located outside U.S. jurisdiction.¹⁴² One commenter states that, since 2013, the price of bitcoin has been

defined mostly by the major Chinese exchanges, whose volumes dwarf those of exchanges outside China, and that the price of bitcoin is defined entirely by speculation, without any ties to fundamentals.¹⁴³ Another commenter observes that Chinese markets drive much of the volume in the bitcoin markets.¹⁴⁴

One commenter states that it makes sense to value the proposed ETP based on the Gemini Auction because doing so would guarantee sufficient liquidity and because other bitcoin trading venues are not subject to the same level of oversight as the Gemini Exchange.¹⁴⁵ Another commenter asserts that the Gemini Auction is not a robust mechanism for price discovery because Gemini's fee structure would make self-trading or collusive wash trades between accounts profitable, which would artificially inflate the volume of the Gemini Auction.¹⁴⁶

One commenter states that the Gemini Auction could be an improvement over other bitcoin pricing mechanisms, but asserts that the Gemini Auction has not improved volume.¹⁴⁷ The commenter observes that the Gemini Auction data show that traders in the auction are taking advantage of the discounted auction price. The commenter states that the daily two-sided Gemini Auction process was designed to maximize price discovery and reduce price volatility that could be the result of momentum pricing, but asks what measures have been put in place to address traders who take advantage of the discounted auction price. The commenter also states that, while other financial products sometimes have auctions to determine price, an auction on a stock exchange does not require money to be deposited in advance with the exchange to be in the auction. The commenter states that, by contrast, the Gemini Exchange requires dollars or bitcoin to be deposited before participation. The commenter believes that this is a problem because the Gemini Auction is limited and has failed on at least two occasions.¹⁴⁸

Other commenters believe that the Gemini Exchange conducts sufficient volume to support the Winklevoss Bitcoin Trust. One commenter states that trading volume on the Gemini Exchange is sufficient and that

¹³¹ See Overdahl Letter, *supra* note 36, at 1.

¹³² See *id.* at 4.

¹³³ See *id.* at 2. Specifically, according to the Overdahl Letter, the type of potential manipulation most relevant for determining the NAV of the Trust's Shares would be a malicious actor attempting to use the Gemini Auction price to influence the NAV of the Trust. See *id.* at 11.

manipulation of these Shares, while possible, would equally be possible for other exchange-traded funds.¹⁴⁹ Another commenter asserts that trading volume in the recent Gemini bitcoin daily auctions seemed “to be of reasonable size.”¹⁵⁰

One commenter claims that there are more robust ways to value the Trust’s holdings than using the spot price of a single exchange, such as the Gemini Exchange.¹⁵¹ The commenter also states that the Gemini Exchange typically processes less than 10% of the total volume in the bitcoin/USD pair and states that an index of the most reliable exchanges should be constructed to value the Trust’s holdings. The commenter questions whether using only the Gemini Exchange’s spot price could serve to incentivize Authorized Participants and other market participants to direct traffic and flow to Gemini, at the expense of best execution.¹⁵²

Another commenter takes a different view on the merits of single- versus multiple-price sources. This commenter observes that bitcoin spot prices diverge across exchanges due to various factors and that some exchanges may suffer from lack of oversight and a lack of transparency or fairness. The commenter claims that these facts strengthen the case for an investment product that does not rely on the spot price of less-credible exchanges to value its holdings and instead relies on the spot price on the Gemini Exchange, which is subject to substantive regulation of its exchange activity and custody of assets by the NYSDFS. This commenter also states that, while leveraged trading on some other exchanges has historically sparked excessive price volatility and instability, Gemini does not offer such products and would be able to serve as a trusted, regulated spot exchange for institutional market participants driving the arbitrage mechanism that ensures efficient pricing between the spot price and the Shares. The commenter claims that the Gemini Exchange has the potential for more-robust price discovery as liquidity is concentrated on that exchange.¹⁵³

One commenter states that there is an inherent trade-off to using one exchange versus an average of several exchanges, some of which may be less scrupulous. The commenter acknowledges that manipulation is a legitimate concern, but notes that it is not uncommon to see

a very small number of physical trades determine the base price for a much larger paper market.¹⁵⁴

Other commenters view the risk of manipulation as more significant. One commenter states that it would be surprising if manipulative practices that would be illegal in other financial markets did not occur on certain bitcoin exchanges that experience lack of regulations and oversight, since these practices would be easy to implement, impossible to detect, perfectly legal under the rules applicable to those bitcoin exchanges, and extremely lucrative.¹⁵⁵ This commenter also states that the Gemini Auction closing volumes have been low and have shown a slight decreasing trend since the inception of the Gemini Auction. The commenter states that, with low volumes, it seems possible to manipulate the NAV by entering suitable bids or asks in the Gemini Auction.¹⁵⁶ Another commenter agrees that bitcoin traders can manipulate trading on the Gemini Exchange because of its low trading volumes and notes that the Trust’s documentation states that momentum pricing of bitcoin has resulted, and may continue to result, in speculation regarding future appreciation in the value of bitcoin, making the price of bitcoin more volatile.¹⁵⁷ The commenter states that the value of bitcoin may therefore be more likely to fluctuate due to changing investor confidence in future appreciation in the Gemini Auction price, which could adversely affect an investment in the Shares.¹⁵⁸ According to another commenter, in this unregulated environment, price manipulation and front-running of large buy or sell orders can happen and well-connected customers can gain preferential treatment in order execution.¹⁵⁹

(b) Discussion

For the reasons discussed below, the Commission concludes that BZX has not demonstrated that the Gemini Exchange and the Gemini Auction are resistant to manipulation. Commenters disagree about whether the Gemini Exchange and the Gemini Auction are susceptible to manipulation. BZX promotes the Gemini Exchange as one of the top three bitcoin exchanges in the United States,¹⁶⁰ and some commenters believe

that the Gemini Exchange conducts sufficient volume to support the Winklevoss Bitcoin Trust.¹⁶¹ Other commenters, however, question these assertions, some noting that the majority of bitcoin trading, including trading denominated in USD, occurs on unregulated exchanges outside the United States,¹⁶² and one suggesting that the low liquidity and trading volume on the Gemini Exchange create a significant risk that the ETP share price could be manipulated by relatively small trades.¹⁶³

While BZX claims in its May 2017 comment letter that the average volume of the Gemini Auction is 1,200 bitcoins,¹⁶⁴ calculations based on public data from the Gemini Exchange website show that more recent Gemini Auction volume has been significantly lower. As of March 31, 2018, the average number of bitcoins traded in the Gemini Auction on a business day was just 178.07 bitcoins over the previous month, 122.20 bitcoins over the previous three months, and 138.46 bitcoins over the previous six months. Median volume figures for the same periods are even lower: 146.51 bitcoins, 85.09 bitcoins, and 90.42 bitcoins, respectively. Although the Gemini Exchange conducts the Gemini Auction on each calendar day, to better represent auction volume for days on which creations or redemptions might occur in the Shares, these calculations of average and median auction volume exclude auctions that occurred on weekends and days on which the U.S. equities markets were closed. Days on which no Gemini Auction price was reached were also excluded to avoid skewing data.

The volume of the Gemini Auction is of particular relevance to BZX’s proposal, and to the susceptibility of the ETP shares to manipulation, because the Gemini Auction price is used to determine the NAV of the Trust, which is publicly disseminated and which is the price used for creation and redemption transactions. Taking into account the recent low auction volume calculated above, which is a small fraction of the 1,000 bitcoins in a creation or redemption basket,¹⁶⁵ the Commission concludes that there is a substantial risk that either (1) any creation and redemption activity in the

Trust would have a substantial effect on the Trust's pricing or (2) Authorized Participants would be forced to source bitcoins on other venues where prices may or may not be aligned with that of the Gemini Auction, limiting the purported effectiveness of arbitrage.

Additionally, given the current disparity between the Gemini Auction volume and the trading volume that would equal a creation unit—and the resulting likelihood that creation or redemption activity would substantially affect the Gemini Auction price—BZX has not shown that the ability of the Trust's bitcoins in “extraordinary circumstances”¹⁶⁶ adequately addresses the risk that creations and redemptions, or manipulative activity such as front running, may affect the Gemini Auction price on an ordinary day. In light of the risks that creation and redemption activity may substantially affect the Gemini Auction price—and that the use of other valuation criteria may fail to address the effects of creation and redemption activity or of manipulative activity—the Commission cannot conclude that the bitcoin pricing mechanism of the Trust is uniquely resistant to manipulation.

Further, given that recent Gemini Auction volumes are inadequate to support creation or redemption activity, BZX has not sufficiently supported its claim that the design and mechanisms of the Gemini Auction would allow for efficient arbitrage between the Shares and the underlying bitcoin. Similarly, the statistics offered by BZX and the Overdahl Letter to argue that the Gemini Auction creates a price closely aligned with U.S.-based and global USD-denominated bitcoin exchanges do not establish that bitcoin trading on the Gemini Exchange is uniquely resistant to manipulation because these statistics do not reflect, and cannot predict, the dynamics of trading on the Gemini Exchange if the Gemini Auction were used as the basis to calculate NAV for the Trust. Given the small size of the Gemini Auction relative to the size of a creation unit, the launch of the proposed ETP would be likely to fundamentally affect supply and demand in the Gemini Auction, and the use of the Gemini Auction price to calculate NAV would introduce a significant incentive to manipulate the Gemini Auction that does not currently exist. The Commission cannot therefore conclude that arbitrage would render the Shares uniquely resistant to manipulation.

The Trust's Registration Statement acknowledges that the reliance on a single bitcoin exchange has risks to shareholders in the Trust: “Trading on a single Bitcoin Exchange may result in less favorable prices and decreased liquidity for the Trust and, therefore, could have an adverse effect on the Trust and Shareholders.”¹⁶⁷ Moreover, although commenters have suggested that approval of the proposal would naturally lead to greater activity in the Gemini Auction,¹⁶⁸ such speculation does not provide an adequate basis to decide that future Gemini Auction volume would be sufficient to prevent manipulation of the Gemini Auction from affecting the NAV of the Trust, and BZX has not explained how the favorable market quality metrics it attributes to the Gemini Exchange would be affected if trading interest at the Gemini Auction were dominated by creation and redemption activity.¹⁶⁹ Therefore, again, the Commission cannot conclude that the pricing mechanism of the Trust would render the Shares uniquely resistant to manipulation.

C. The Availability of “Traditional Means” To Detect and Deter Fraud and Manipulation

BZX has not demonstrated, given the current absence of a surveillance-sharing agreement with a regulated bitcoin market of significant size, that the alternative surveillance procedures BZX purports to identify—including BZX's assertion that it would be able to obtain certain information regarding trading in the Shares and in the underlying bitcoin or any bitcoin derivative—would be sufficient to satisfy the requirement of Exchange Act Section 6(b)(5) that an exchange's rules be designed to prevent fraudulent and manipulative acts and practices.

1. Summary of Comments Received

BZX asserts that the March Disapproval Order failed to appreciate that the proposal provides “traditional means of identifying and deterring fraud and manipulation” that meet the criteria that the Commission has utilized in approving other commodity-trust ETPs.¹⁷⁰ BZX states that a particular area of surveillance focus for the Commission in prior commodity-trust ETP approval orders was the implementation of exchange rules requiring market makers in the

commodity-trust ETP shares to disclose their dealings in the underlying commodities. BZX contends that analogous requirements are included in this proposal, with BZX Rule 14.11(e)(4) mandating that market makers in the Shares disclose all of their commodity trading accounts, disclose all trading in bitcoin or bitcoin derivatives, and make available all related books and records.¹⁷¹ BZX also contends that, in the prior commodity-trust ETP approval orders, the Commission also reviewed the adequacy of the ETP listing exchange's rules and procedures for surveillance of trading activity in the ETP shares. According to BZX, similar surveillance rules and procedures are in place at BZX regarding the proposed bitcoin ETP, as the listing exchange can obtain information regarding trading in Shares from Intermarket Surveillance Group members and affiliate members, as well as trading information available on the blockchain and information available through a surveillance-sharing agreement with the Gemini Exchange.¹⁷²

The Overdahl Letter also contends that BZX's rules are reasonably designed to prevent fraudulent and manipulative acts and practices with respect to determining the NAV of the Trust Shares.¹⁷³ Specifically, according to the Overdahl Letter, the type of potential manipulation most relevant for determining the NAV of the Trust's Shares would be a malicious actor attempting to use the Gemini Auction price to influence the NAV of the Trust. The Overdahl Letter also asserts that, in addition to BZX's surveillance procedures and anti-manipulation rules, penalties for engaging in manipulative conduct serve as a deterrent against manipulation of the Gemini Auction price and the resulting Trust's NAV. The Overdahl Letter states that, although a penalty is applied after a manipulation occurs or is attempted, penalties are nonetheless a useful tool for deterring, and therefore preventing, manipulation.¹⁷⁴

Finally, one commenter claims that the March Disapproval Order reflects the Commission's “unspoken but obvious concern” with bitcoin, and argues that this issue can be cured by having the bitcoin exchange sign a memorandum of understanding with the Commission to share information.¹⁷⁵

¹⁷¹ See *id.* at 23.

¹⁶⁹ See *supra* note 130 and accompanying text.

¹⁷⁰ See BZX Letter II, *supra* note 13, at 22, 26.

2. Discussion

The Commission concludes that BZX has not demonstrated—given the current absence of a surveillance-sharing agreement with a regulated bitcoin market of significant size—that the alternative surveillance procedures discussed above would, by themselves, be sufficient to satisfy the requirement of Exchange Act Section 6(b)(5) that an exchange's rules be designed to prevent fraudulent and manipulative acts and practices.¹⁷⁶

While BZX would, pursuant to its listing rules, be able to obtain certain information regarding trading in the Shares and in the underlying bitcoin or any bitcoin derivative through registered market makers,¹⁷⁷ this trade information would be limited to the activities of members who were registered with BZX as market makers in the Shares and would not encompass all BZX market participants.¹⁷⁸ Furthermore, neither BZX's ability to surveil trading in the Shares nor its ability to share surveillance information with other securities exchanges trading the Shares would give BZX insight into the activity and identity of market participants trading in the underlying bitcoin in the OTC market or on other bitcoin trading venues.

Additionally, while BZX represents that it can obtain information about bitcoin trading made publicly available through the bitcoin blockchain,¹⁷⁹ the blockchain identifies parties to a transaction only by a pseudonymous public-key address, and it does not distinguish bitcoin trading activity from other transfers of bitcoin (e.g., for remittances, purchases of goods or services, or other purposes). Therefore, the public blockchain ledger, even in combination with the other monitoring abilities BZX identifies, does not provide comprehensive customer trading or identity information, which is particularly important here because pseudonymous bitcoin account holding means, among other things, that the number of accounts or number of trades would not reveal whether a person or group has a dominant ownership position in bitcoin, or is using or attempting to use a dominant ownership position to manipulate bitcoin pricing.¹⁸⁰

One commenter asserts that existing “penalties for engaging in manipulative

conduct” can serve to deter manipulation of the Gemini Auction price and, therefore, the Trust's NAV.¹⁸¹ However, the Commission concludes that, based on the facts and circumstances of this proposal, the ability of relevant authorities to potentially sanction manipulative activity after the fact—if it is discovered—is insufficient, by itself, to meet BZX's obligation to have rules “designed to prevent fraudulent and manipulative acts and practices.”¹⁸² Before penalties can be imposed for engaging in manipulative conduct, such conduct must be detected and investigated; as discussed below, that is the necessary function of comprehensive surveillance-sharing agreements.¹⁸³ Moreover, as discussed below, a substantial majority of bitcoin trading occurs outside the United States,¹⁸⁴ and even within the United States, there is no comprehensive federal oversight of bitcoin spot markets.¹⁸⁵

Another commenter suggests that the Commission sign a Memorandum of Understanding (“MOU”) with the Gemini Exchange to address what the commenter claims is the Commission's unspoken but obvious concern with bitcoin.¹⁸⁶ While the Commission is a party to several MOUs, these are generally arrangements with other foreign or domestic regulators.¹⁸⁷ MOUs are tools to assist the Commission in performing its regulatory functions, not a mechanism for the Commission to assume an SRO's obligations under the Exchange Act.

D. The Use of Surveillance-Sharing Agreements To Detect and Deter Fraudulent and Manipulative Acts and Practices With Respect to Commodity-Trust ETPs

The Commission has historically recognized the importance of comprehensive surveillance-sharing agreements to detect and deter fraudulent and manipulative activity. Because BZX has not demonstrated that bitcoin and bitcoin markets are uniquely resistant to manipulation—or that alternative means of detecting and deterring fraud and manipulation are sufficient in the absence of a surveillance-sharing agreement with a significant, regulated market related to bitcoin—the absence of such an agreement compels the Commission to conclude that the proposed rule change must be disapproved.

1. Summary of Comments Received

BZX claims that the March Disapproval Order overstates the extent to which surveillance and regulation of the underlying market have been present in prior commodity-trust ETP approval orders, asserting that none of these orders “offers even a cursory analysis about whether the regulated markets for trading futures on the underlying commodity are ‘well-established’ or ‘significant.’”¹⁸⁸ In particular, BZX argues that the Commission orders approving the ETFS Platinum Trust ETP (“Platinum Order”) and the ETFS Palladium Trust ETP (“Palladium Order”),¹⁸⁹ along with their exchange filings, discuss neither whether the New York Mercantile Exchange (“NYMEX”) and the Tokyo Commodity Exchange (“TOCOM”) are well-established or significant, nor the relevance of NYMEX being the largest exchange in the world for trading palladium and platinum derivatives.¹⁹⁰ BZX claims that—because the exchange filings regarding the platinum and palladium ETPs note that TOCOM is not a member of the Intermarket Surveillance Group and that the respective listing exchange did not have a comprehensive surveillance-sharing agreement with TOCOM—those approval orders did not require the existence of an information-sharing agreement with the underlying

¹⁷⁹ See Amendment No. 1, *supra* note 1, 81 FR at 76668.

¹⁸⁰ See also Section III.B.1(b)(ii), *supra* (discussing market domination).

exchange.¹⁹¹ BZX further asserts that the Platinum Order and Palladium Order discuss only whether the listing exchange (1) can obtain information from market makers relating to their trading in the applicable commodity or related derivatives; (2) has a rule preventing market makers from using material, nonpublic information regarding trading in the underlying commodity or its derivatives; and (3) can obtain trading information via the Intermarket Surveillance Group from other Intermarket Surveillance Group member exchanges.¹⁹²

BZX further asserts that, while the potential avenues for manipulation noted in the March Disapproval Order are a risk, these potential avenues of manipulation of the bitcoin market also exist in the context of other commodity-trust ETPs.¹⁹³ BZX asserts that, in the Commission order approving the listing and trading of shares of iShares Copper Trust (“Copper Order”),¹⁹⁴ the Commission found that demand from new investors would broaden the investor base in copper and thereby reduce the risk of collusion among copper market participants. BZX also argues that the Commission “took comfort” in approving the iShares Copper Trust because trading of the shares would be subject to the oversight of the listing exchange and the Commission, and because the manipulation of physical copper would be subject to CFTC jurisdiction. BZX asserts that the Trust is nearly identically situated to the iShares Copper Trust.¹⁹⁵ Similarly, the Lewis Letter asserts that many features of a similar bitcoin commodity-trust ETP proposal—features that purportedly ameliorate the risk of price manipulation through a dominant market share—are also factors that were used as a basis for the Commission’s approval of another copper commodity-trust ETP.¹⁹⁶

BZX contends that previous ETP approvals demonstrate that the factors used to determine whether currency-derivative products are consistent with

the Exchange Act should also apply to commodity-trust ETPs. BZX argues that the Commission order approving the listing and trading of the streetTRACKS Gold Shares (“Gold Order”)¹⁹⁷—the first commodity-trust ETP—was based on an assumption that the currency market and the spot gold market were largely unregulated, but found that certain factors mitigated the concerns arising from the unregulated underlying markets.¹⁹⁸ BZX claims that, in determining whether a commodity-trust ETP is consistent with the Exchange Act, the Commission’s approval orders have included an analysis of previously approved derivative products for which the underlying reference assets (1) are traded OTC; (2) are largely unregulated; and (3) are traded on markets with which the ETP listing exchange could not enter into a surveillance sharing agreement.¹⁹⁹ While BZX concedes that the Commission has not approved a commodity-trust ETP when there were no derivatives markets related to the underlying commodity, BZX points out that the Commission has approved a number of currency-trust ETPs and asserts that the Commission approved the listing and trading of the CurrencyShares Hong Kong Dollar Trust and the CurrencyShares Singapore Dollar Trust based largely on the same factors that the Commission has considered in approving commodity-trust ETPs, despite a statement in the approval order for the CurrencyShares Hong Kong Dollar Trust and the CurrencyShares Singapore Dollar Trust that futures or options are not traded on the Hong Kong Dollar or Singapore Dollar.²⁰⁰ Similarly, one commenter argues that there are several commodity-based and other ETPs where the underlying market is either unregulated or lightly regulated, such as foreign-exchange linked or related ETPs, or commodity-based ETPs that hold the underlying and not the derivative product.²⁰¹

2. Discussion

(a) The History and Importance of Surveillance-Sharing Agreements Relating to Derivative Securities Products

Although BZX claims to have described “traditional means” of identifying and deterring fraud and manipulation, it overlooks the fact that the Commission has long recognized the importance of comprehensive surveillance-sharing agreements to detect and deter fraudulent and manipulative activity.²⁰² The hallmarks

of such an agreement are that the agreement provides for the sharing of information about market trading activity, clearing activity, and customer identity; that the parties to the agreement have reasonable ability to obtain access to and produce requested information; and that no existing rules, laws, or practices would impede one party to the agreement from obtaining this information from, or producing it to, the other party.²⁰³

Since at least 1990, the Commission has explained that the ability of a national securities exchange to enter into surveillance-sharing agreements “further the protection of investors and the public interest because it will enable the [e]xchange to conduct prompt investigations into possible trading violations and other regulatory improprieties.”²⁰⁴ The Commission has also long taken the position that surveillance-sharing agreements are important in the context of exchange listing of derivative security products, such as equity options. In 1994, the Commission stated:

As a general matter, the Commission believes that the existence of a surveillance sharing agreement that effectively permits the sharing of information between an exchange proposing to list an equity option and the exchange trading the stock underlying the equity option is necessary to detect and deter market manipulation and other trading abuses. In particular, the Commission notes that surveillance sharing agreements provide an important deterrent to manipulation because they facilitate the availability of information needed to fully investigate a potential manipulation if it were to occur. These agreements are especially important in the context of derivative products based on foreign securities because they facilitate the collection of necessary regulatory, surveillance and other information from foreign jurisdictions.²⁰⁵

respect to transactions occurring on COMEX pursuant to CME and NYMEX’s membership, or from exchanges “with which [NYSE Arca] has in place a comprehensive surveillance sharing agreement,” Exchange Act Release No. 71038 (Dec. 11, 2013), 78 FR 76367, 76369, 76374 (Dec. 17, 2013)); Long Dollar Gold Trust, Exchange Act Release No. 79518 (Dec. 9, 2016), 81 FR 90876, 90881, 90886, 90888 (Dec. 15, 2016) (SR–NYSEArca–2016–84).

²⁰⁴ See Exchange Act Release No. 27877 (Apr. 4, 1990), 55 FR 13344, 13345 (Apr. 10, 1990) (SR–NYSE–90–14).

²⁰⁵ Exchange Act Release No. 33555 (Jan. 31, 1994), 59 FR 5619, 5621 (Feb. 7, 1994) (SR–Amex–93–28) (order approving listing of options on American Depositary Receipts). The Commission further stated that it “generally believes that having a comprehensive surveillance sharing agreement in place, between the exchange where the ADR option

With respect to ETPs, when approving in 1995 the listing and trading of one of the first commodity-linked ETPs—a commodity-linked exchange-traded note—on a national securities exchange, the Commission continued to emphasize the importance of surveillance-sharing agreements, noting that the listing exchange had entered into surveillance-sharing agreements with each of the futures markets on which pricing of the ETP would be based and stating that “[t]hese agreements should help to ensure the availability of information necessary to detect and deter potential manipulations and other trading abuses, thereby making [the commodity-linked notes] less readily susceptible to manipulation.”²⁰⁶

trades and the exchange where the foreign security underlying the ADR primarily trades, will ensure the integrity of the marketplace. The Commission further believes that the ability to obtain relevant surveillance information, including, among other things, the identity of the ultimate purchasers and sellers of securities, is an essential and necessary component of a comprehensive surveillance sharing agreement.” *Id.*

²⁰⁶ See Exchange Act Release No. 35518 (Mar. 21, 1995), 60 FR 15804, 15807 (Mar. 27, 1995) (SR–Amex–94–30). In that matter, the Commission noted that the listing exchange had comprehensive surveillance-sharing agreements with all of the exchanges upon which the futures contracts underlying the notes traded and was able to obtain market surveillance information, including customer identity information, for transactions occurring on NYMEX and other futures exchanges. See *id.* at 15807 n.21; see also Exchange Act Release No. 36885 (Feb. 26, 1996), 61 FR 8315, 8319 n.17 (Mar. 4, 1996) (SR–Amex–95–50) (approving the exchange listing and trading of Commodity Indexed Securities, and noting: (a) That through the comprehensive surveillance-sharing agreements, the listing exchange was able to obtain market surveillance information, including customer identity information, for transactions occurring on NYMEX and COMEX and that, through the Intermarket Surveillance Group information-sharing agreement, the listing exchange was able to obtain, upon request, surveillance information with respect to trades effected on the London Metal Exchange, including client identity information and (b) that, if a different market were utilized for purposes of calculating the value of a designated futures contract, the listing exchange had represented that it would ensure that it entered into a surveillance-sharing agreement with respect to the new relevant market). The Commission has made similar statements about surveillance-sharing agreements with respect to the listing and trading of stock-index, currency, and currency-index warrants. See, e.g., Exchange Act Release No. 36166 (Aug. 29, 1995), 60 FR 46660 (Sept. 7, 1995) (SR–PSE–94–28) (approving a proposal to adopt uniform listing and trading guidelines for stock-index, currency, and currency-index warrants). Specifically, the Commission noted that “a surveillance sharing agreement should provide the parties with the ability to obtain information necessary to detect and deter market manipulation and other trading abuses” and stated that the Commission “generally requires that a surveillance sharing agreement require that the parties to the agreement provide each other, upon request, information about market trading activity, clearing activity, and the identity of the ultimate purchasers for securities.” *Id.* at

Continued

In 1998, in adopting Exchange Act Rule 19b-4(e)²⁰⁷ to permit the generic listing and trading of certain new derivatives securities products—including ETPs—the Commission again emphasized the importance of the listing exchange’s ability to obtain from underlying markets, through surveillance-sharing agreements (called information-sharing agreements or “ISAs” in the release), the information necessary to detect and deter manipulative activity. Specifically, in adopting rules governing the generic listing of new derivatives securities products, the Commission stated that the Rule 19b-4(e) procedures would “enable the Commission to continue to effectively protect investors and promote the public interest” and stated that:

It is essential that the SRO have the ability to obtain the information necessary to detect and deter market manipulation, illegal trading and other abuses involving the new derivative securities product. Specifically, there should be a comprehensive ISA [information-sharing agreement] that covers trading in the new derivative securities product and its underlying securities in place between the SRO listing or trading a derivative product and the markets trading the securities underlying the new derivative securities product. Such agreements provide a necessary deterrent to manipulation because they facilitate the availability of information needed to fully investigate a manipulation if it were to occur.²⁰⁸

Consistent with this principle, for the commodity-trust ETPs approved to date for listing and trading, there has been in every case at least one significant, regulated market for trading futures on the underlying commodity—whether gold, silver, platinum, palladium, or copper—and the ETP listing exchange has entered into surveillance-sharing agreements with, or held Intermarket Surveillance Group membership in common with, that market.²⁰⁹

In light of the history and purpose of looking to surveillance-sharing agreements, with respect to markets for assets underlying an ETP or for derivatives on those assets, the Commission interprets the terms “significant market” and “market of significant size” to include a market (or group of markets) as to which (a) there is a reasonable likelihood that a person

attempting to manipulate the ETP would also have to trade on that market to successfully manipulate the ETP, so that a surveillance-sharing agreement would assist the ETP listing market in detecting and deterring misconduct, and (b) it is unlikely that trading in the ETP would be the predominant influence on prices in that market. This definition is illustrative and not exclusive. There could be other types of “significant markets” and “markets of significant size,” but this definition is an example that will provide guidance to market participants.

(b) Response to Comments Regarding Surveillance-Sharing Agreements and Prior Commodity-Trust ETP Approvals

Prior ETP approval orders are consistent with the standards the Commission is applying to the BZX proposal. However, more recent approval orders for the well-established model of a precious-metal trust—for example, the Platinum Order and the Palladium Order—found it unnecessary to perform the exhaustive analysis of underlying markets and surveillance sharing provided by the first approval order for a precious metal commodity-trust ETP, the Gold Order, especially since the proposed rule change for platinum and palladium ETPs discussed surveillance-sharing agreements with significant, regulated platinum and palladium markets.²¹⁰

BZX argues that even the Gold Order relied on alternative factors—primarily the depth and liquidity of the spot gold market—to mitigate Commission concerns about approving a commodity-trust ETP based on an asset that traded in unregulated, over-the-counter markets with which no surveillance sharing agreement could be executed.²¹¹ The Gold Order does note the depth and liquidity of the gold market, likening the spot gold market to the “extremely large, diverse market” for OTC foreign exchange trading.²¹² Significantly, however, the Gold Order demonstrates that the Commission did take into account the availability of surveillance-sharing agreements in approving the first commodity-trust ETP.

The Gold Order states that “[i]nformation sharing agreements with markets trading securities underlying a

derivative are an important part of a self-regulatory organization’s ability to monitor for trading abuses in derivative products.”²¹³ And, while the Gold Order observes that that it is “not possible . . . to enter into an information sharing agreement with the OTC gold market,” the order continues: “Nevertheless, the Commission believes that the unique liquidity and depth of the gold market, *together with the MOU [Memorandum of Understanding] with NYMEX (of which COMEX is a Division)* and NYSE Rules 1300(b) and 1301, create the basis for the [ETP listing exchange] to monitor for fraudulent and manipulative practices in the trading of the Shares.”²¹⁴ Thus, even though the Commission found that the over-the-counter market for gold was “extremely deep and liquid,”²¹⁵ the Commission’s approval of the first precious metal ETP expressly relied on an agreement to share surveillance information between the listing exchange and a significant, regulated market for gold futures.²¹⁶

In the years after the approval of the first precious-metal commodity-trust ETP, several other, virtually identical, commodity-trust ETPs have been approved.²¹⁷ Among the approval orders were the Platinum Order and the Palladium Order, which BZX cites as examples of the Commission approving a commodity-trust ETP without requiring that there be a surveillance-sharing agreement with a significant, regulated market for an underlying exchange. While neither the Platinum Order nor the Palladium Order expressly discusses such agreements, the record before the Commission at the time it issued those orders (including the notices of the proposed rule changes) shows that the ETP listing exchange was able to share surveillance information with the “largest exchange in the world for trading precious metal futures and options,” which had been trading both platinum futures and palladium futures for approximately 35 years at the time the Commission

²¹¹ See *supra* notes 197–199 and accompanying text. Another commenter also asserts that the Commission has approved several commodity-based ETPs where the underlying market is either unregulated or lightly regulated. See *supra* note 201 and accompanying text.

²¹² Gold Order, *supra* note 197, 69 FR at 64619.

approved commodity-trust ETPs holding those metals.²¹⁸

Consistent with the discussion of “significant market” described above,²¹⁹ the Commission has not previously, and does not now, require that an ETP listing exchange be able to enter into a surveillance-sharing agreement with each regulated spot or derivatives market relating to an underlying asset, provided that the market or markets with which there is such an agreement constitute a “significant market.”

While BZX and the Overdahl Letter assert that the potential avenues for manipulation of the bitcoin market also exist in the context of other commodity-trust ETPs, this argument merely reinforces the Commission’s view that similar market structures—namely, surveillance-sharing agreements with significant, regulated markets—should be in place for a bitcoin-trust ETP just as they are for commodity-trust ETPs.²²⁰ BZX also argues that the proposal should be approved because it is “nearly identically situated” to the iShares Copper Trust. In particular, BZX asserts that the Commission approved the iShares Copper Trust because the Commission believed that approval of the ETP could reduce the risk of manipulation in the underlying spot market and that the Commission could rely on surveillance by the listing exchange and CFTC jurisdiction to address concerns about manipulation—factors it argues support approval here.²²¹ The Copper Order, however,

²¹⁸ See Exchange Act Release No. 60971 (Nov. 9, 2009), 74 FR 59283, 59285–86, 59291 (Nov. 17, 2009) (SR–NYSEArca–2009–94) (notice of proposed rule change for ETFs Palladium Trust includes NYSE Arca’s representation that “NYMEX is the largest exchange in the world for trading precious metals futures and options and has been trading palladium since 1974,” and that NYSE Arca “may obtain trading information via the Intermarket Surveillance Group,” of which NYMEX is a member); Exchange Act Release No. 60970 (Nov. 9, 2009), 74 FR 59319, 59321, 59327 (Nov. 17, 2009) (SR–NYSEArca–2009–95) (notice of proposed rule change for ETFs Platinum Trust includes NYSE Arca’s representation that “NYMEX is the largest exchange in the world for trading precious metals futures and options and has been trading platinum since 1974,” and that NYSE Arca “may obtain trading information via the Intermarket Surveillance Group,” of which NYMEX is a member). See also *supra* note 189 and accompanying text.

²¹⁹ See Section III.D.2(a), *supra*.

²²⁰ The proposal does not involve an ETP that is based on an index of commodities where the component commodities are subject to surveillance-sharing agreements with significant, regulated markets. See, e.g., Exchange Act Release No. 53105 (Jan. 11, 2006), 71 FR 3129, 3136 (Jan. 19, 2006) (SR–Amex–2005–059) (approving DB Commodity Index Tracking Fund based on an index that tracks the performance of futures contracts on crude oil, heating oil, aluminum, gold, corn, and wheat).

²²¹ See *supra* notes 194–195 and accompanying text. The Lewis Letter makes a similar argument. See *supra* note 196 and accompanying text.

specifically noted the existence of surveillance-sharing agreements not only between the ETP listing market and copper futures markets, but also between the ETP listing market and a significant copper spot market, the London Metal Exchange.²²² And the Copper Order’s analysis of the underlying physical market for copper does not reflect a determination that these factors could serve as an adequate alternative to a surveillance-sharing agreement, but was instead a response to certain commenters’ arguments that approving the iShares Copper Trust would affirmatively disrupt the physical copper market.²²³

BZX argues that the Commission should approve the proposal because it has previously approved currency-trust ETPs—the CurrencyShares Hong Kong Dollar Trust and the CurrencyShares Singapore Dollar Trust—without requiring the existence of a surveillance-sharing agreement with underlying markets.²²⁴ However, BZX has proposed to list and trade the Shares as a commodity-based ETP, not a currency-based ETP,²²⁵ and the Commission as well as other agencies have distinguished bitcoin from currency.²²⁶

²²² See Copper Order, *supra* note 194, 78 FR at 13727 n.7, and 13730.

²²³ See *id.* at 13731–33.

²²⁴ See *supra* note 200 and accompanying text. Another commenter also asserts that the Commission has approved several foreign exchange-linked ETPs where the underlying market is either unregulated or lightly regulated. See Converge Letter, *supra* note 36, at 2.

²²⁵ See Amendment No. 1, *supra* note 1, 81 FR at 76651.

²²⁶ See *In re Bitcoin Inv. Tr.*, Exchange Act Release No. 78282, 2016 WL 4363462, at *1 n.1 (July 11, 2016); *In re Btc Trading, Corp.*, Securities Act Release No. 9685, Exchange Act Release No. 73783, 2014 WL 6872955, at *1 n.1 (Dec. 8, 2014); *In re Voorhees*, Securities Act Release No. 9592, 2014 WL 2465620, at *1 n.1 (June 3, 2014). The CFTC has concluded that Bitcoin is a virtual currency that is a commodity, “distinct from ‘real’ currencies, which are the coin and paper money of the United States or another country that are designated as legal tender, circulate, and are customarily used and accepted as a medium of exchange in the country of issuance.” *In re Coinflip, Inc.*, CFTC No. 15–29, 2015 WL 5535736, at *1 n.2 (Sept. 17, 2015). The Treasury Department’s Financial Crimes Enforcement Network has noted: “In contrast to real currency, ‘virtual’ currency is a medium of exchange that operates like a currency in some environments, but does not have all the attributes of real currency. In particular, virtual currency does not have legal tender status in any jurisdiction.” Guidance: Application of FinCEN’s Regulations to Persons Administering, Exchanging, or Using Virtual Currencies (Mar. 18, 2013) (discussing 31 CFR 1010.100(m)), available at <https://www.fincen.gov/resources/statutes-regulations/guidance/application-fincens-regulations-persons-administering>. The IRS has concluded that “virtual currency is not treated as currency” for purposes of federal tax laws. *IRS Virtual Currency Guidance*, I.R.S. Notice 2014–21, 2014–16 I.R.B. 938, 2014 WL 1224474 (Apr. 14, 2014).

Even if the Commission were to apply the approach it took in approving currency-trust ETPs, the Commission would still conclude that the proposal is not consistent with the Exchange Act, because the deep, liquid, and longstanding markets for currencies, which are dominated by regulated entities, bear little resemblance to the current state of bitcoin markets. Foreign currency derivatives traded on national securities exchanges for decades before the Commission approved currency-trust ETPs. And when it approved the first foreign currency derivatives in 1982—options on the British pound, the German mark, the Swiss franc, the Canadian dollar, and the Japanese yen, each the sovereign currency of a developed nation—the Commission explained that “[t]he magnitude of the related foreign currency markets would appear to militate against a successful manipulation through inter-market trading activity.”²²⁷ Similarly, when approving the listing and trading of additional foreign currency derivatives in 1992, the Commission recognized the “developed markets for the component foreign currencies” and observed that “the interbank foreign currency spot market is an extremely large, diverse market comprised of banks and other financial institutions worldwide.”²²⁸

The Gold Order echoed this view of the currency markets.²²⁹ And the approval order for the CurrencyShares products that BZX cites includes the following representations by the listing exchange regarding the foreign currency markets:

Most trading in the global over-the-counter (“OTC”) foreign currency markets is conducted by regulated financial institutions such as banks and broker-dealers. In addition, in the United States, the Foreign Exchange Committee of the New York Federal Reserve Bank has issued Guidelines for Foreign Exchange Trading, and central-bank sponsored committees in Japan and Singapore have published similar best practice guidelines. In the United Kingdom, the Bank of England has published the Non-Investment Products Code, which covers foreign currency trading. The Financial Markets Association, whose members include major international banking organizations, has also established best practices guidelines called the Model Code. Participants in the U.S. OTC market for

²²⁷ Exchange Act Release No. 19133 (Oct. 14, 1982), 47 FR 46946, 1982 WL 521987, at *5 (Oct. 21, 1982) (SR–Phlx–81–4).

²²⁸ Exchange Act Release No. 31627 (Dec. 21, 1992), 57 FR 62399, 1992 WL 394554, at *4–5 (Dec. 30, 1992) (SR–Amex–92–36).

²²⁹ See Gold Order, *supra* note 197, 69 FR at 64619.

foreign currencies are generally regulated by their oversight regulators.²³⁰

Neither BZX nor any of the commenters has provided data that would justify treating the markets for bitcoin similarly to the deep and liquid markets for fiat currencies. Moreover, the description of the worldwide market for bitcoin, in which both the trading venues and the participants are unregulated, bears little resemblance to the OTC markets for foreign currency, on which most trading is conducted by regulated financial institutions. Accordingly, the Commission's previous approvals of derivatives securities products based on foreign currencies are not a basis for the Commission to approve the proposal despite the absence of a surveillance-sharing agreement with a regulated market of significant size related to bitcoin.

E. Whether BZX Has Entered Into Surveillance-Sharing Agreements With Regulated Markets of Significant Size Related to Bitcoin

Although BZX asserts that it has entered into a comprehensive surveillance-sharing agreement with the Gemini Exchange with respect to bitcoin trading and that the Gemini Exchange is supervised by the NYSDFS, the record does not establish that the Gemini Exchange is a "regulated market" comparable to a national securities exchange or to the futures exchanges that are associated with the underlying assets of the commodity-trust ETPs approved to date. Even if the Gemini Exchange were "regulated," the record does not support a finding that the Gemini Exchange represents a "significant" bitcoin-related market. Accordingly, the Commission finds that the surveillance-sharing agreement between BZX and the Gemini Exchange, even in combination with alternative means of detecting and deterring fraud and manipulation, is insufficient to demonstrate that the proposed rule change is consistent with Exchange Act Section 6(b)(5). Nor has BZX demonstrated that any of the current trading venues in the worldwide bitcoin spot market is a regulated market such that a comprehensive surveillance-sharing agreement with those venues would satisfy the requirements of Section 6(b)(5). And BZX has likewise failed to carry its burden to demonstrate that there is a regulated market of significant size in derivatives related to bitcoin with which the ETP listing market has entered into a

comprehensive surveillance-sharing agreement.

1. The Gemini Exchange

(a) Summary of Comments Received

BZX asserts that it has entered into a comprehensive surveillance-sharing agreement with the Gemini Exchange through which it can obtain customer identity information about bitcoin transactions and market data.²³¹ Similarly, the Overdahl Letter claims that the surveillance-sharing agreement between the Gemini Exchange and BZX aims to detect and deter such conduct and that the agreement allows for continuous monitoring of trading activity to effectively conduct surveillance of the Gemini Auction price.²³²

BZX represents that the Gemini Exchange operates under the direct supervision and regulatory authority of the NYSDFS.²³³ This is because, BZX argues, the Gemini Exchange is a facility of the Custodian, which is a New York State-chartered limited liability trust company.²³⁴ BZX also represents that the Custodian is a fiduciary and that it must meet the capitalization, compliance, anti-money-laundering, consumer protection, and cyber security requirements set forth by the NYSDFS.²³⁵

BZX asserts that the Gemini Auction typically already transacts a volume greater than the proposed creation basket size for the Trust and that the Gemini Auction would likely support the needs of Authorized Participants to engage in basket creation or redemption.²³⁶ BZX claims that the global bitcoin marketplace has the potential to provide even more liquidity and to be a source of bitcoin for basket creation and hedging. BZX also asserts that all intraday order-book and trade information on the Gemini Exchange is publicly available through various electronic formats and is also redistributed by various online aggregators, and that, with the launch of the proposed Trust, the Sponsor must make important pricing data available in real time.²³⁷ As noted above, BZX also claims that the volume transacted in the Gemini Auction is generally more than

50% larger than the second-largest trade in the world, drawing an average daily volume of 1,200 bitcoins compared to approximately 800 bitcoins.²³⁸

One commenter claims that among USD bitcoin exchanges, Gemini has a 3% share and its liquidity measured by order book depth is significantly lower than that of several other exchanges. The commenter states that it is possible that, after the launch of an ETP, Gemini's liquidity and volume will increase, but claims that the nature of bitcoin trading that leads to the concentration of volume and liquidity outside of U.S. borders makes any significant future increase unlikely.²³⁹ This commenter also observes that while Gemini is locally regulated by the NYSDFS, the global landscape of many unregulated bitcoin exchanges exerts huge influence on the Gemini Exchange and consequently on the proposed ETP.²⁴⁰ Another commenter claims that the Gemini Exchange has the lowest liquidity of the three exchanges in the United States and is one of the least-liquid of all exchanges that trade bitcoin for USD.²⁴¹

One commenter asserts that the size and importance of the Gemini Exchange and the itBit Exchange have grown substantially and claims that, from January 23, 2017, to May 10, 2017, the combined market share of these exchanges jumped from just 0.33% to 7.14% of total worldwide bitcoin volume, equivalent to more than 10,000 bitcoins per day on average.²⁴² This commenter also asserts that the geographic distribution of bitcoin spot trading has shifted in focus from Chinese-based platforms towards U.S.-based venues, which indicates increased transparency and safer regulation in the near future. The commenter asserts that—although the Gemini Exchange and the itBit Exchange remain the only two NYSDFS-regulated bitcoin exchanges, and while a market share of 7.14% leaves much room for growth—

²³⁸ See BZX Letter II, *supra* note 13, at 19–20.

²³⁹ See Maher Letter, *supra* note 35 (noting that the market is very concentrated and is controlled by a small group of exchanges operating in China, three of which represented 96% of all bitcoin trade volume over a six-month period, and noting that the Gemini Exchange had a 0.07% share of bitcoin volume worldwide during that period, with a 3% share of USD-exchange volume).

²⁴⁰ See *id.*

²⁴¹ See Anonymous Letter III, *supra* note 35.

²⁴² See SIG Letter, *supra* note 36, at 7. The itBit Exchange is a commercial bitcoin trading venue based in New York, NY. The NYSDFS has granted a charter under New York Banking Law to itBit Trust Company, LLC. the migration of global bitcoin trading volumes since mid-January 2017 is a positive trend.²⁴³

This commenter further asserts that, alongside Gemini Exchange and itBit Exchange, two other U.S.-based exchanges, GDAX and Kraken, have become significant spot bitcoin trading venues. According to this commenter, these four exchanges—the largest U.S. bitcoin exchanges—together now represent over 29% of worldwide bitcoin volume, up from just 1.47% on January 23, 2017. The commenter claims that, with almost a third of global spot bitcoin volume now occurring on these four U.S.-based trading venues, regulatory agencies and SROs have the opportunity to develop a robust framework of regulatory oversight and transparency that would support fair and orderly markets for both spot bitcoin and listed bitcoin-based ETPs.²⁴⁴ This commenter predicts that the launch of a regulated, U.S.-listed bitcoin ETP will help drive more bitcoin trading volume onto U.S.-based exchanges, and this commenter asserts that this supplemental liquidity is likely to manifest itself mainly on U.S.-based bitcoin exchanges such as Gemini, itBit, GDAX, and Kraken, which will be the most liquid venues during U.S. trading hours.²⁴⁵

The Overdahl Letter asserts that, between September 21, 2016, and March 1, 2017, the Gemini Exchange accounted for 24.03% of bitcoin trading volume on U.S. exchanges and 7.35% of the global USD market for bitcoin.²⁴⁶ The Overdahl Letter contends that the Gemini Auction price is reliable in that it generally reflects both prices for bitcoin traded at other U.S.-based bitcoin exchanges and prices for bitcoin traded at USD-based exchanges globally. The Overdahl Letter claims that significant deviations between the Gemini price and other prices are quickly reduced to normal (small) levels and that the Gemini price does not primarily cause these deviations. In addition, the Overdahl Letter concludes that, when price deviations are observed, pricing across exchanges tends to converge.²⁴⁷ The Overdahl Letter also notes the concern expressed by some commenters that the Gemini Exchange had relatively low trading volume and that, as a result, the exchange price was less reliable than if the volumes were larger. In response to this concern, the Overdahl Letter

provides a list of ETPs approved by the Commission that, the Overdahl Letter claims, have underlying assets with lower average daily volume than the average daily volume of the Gemini Exchange.²⁴⁸

(b) Discussion

BZX represents that it has entered into a comprehensive surveillance-sharing agreement with the Gemini Exchange with respect to bitcoin trading and that the Gemini Exchange is supervised by the NYSDFS and is thereby subject to capitalization, anti-money-laundering, compliance, consumer protection, and cybersecurity requirements.²⁴⁹ The record, however, does not support a conclusion that the Gemini Exchange is a “regulated market” comparable to a national securities exchange or to the futures exchanges that are associated with the underlying assets of the commodity-trust ETPs approved to date.

The record does not establish that the Gemini Exchange’s rules, including its trading rules, are subject to regulatory review or approval or that its trading operations are subject to regulatory examination. Commission regulation of the securities markets includes the elements of NYSDFS supervision described above,²⁵⁰ but national securities exchanges are also, among other things, required to have rules that are “designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.”²⁵¹ Moreover, national securities exchanges must file proposed rules with the Commission regarding certain material aspects of their operations,²⁵² and the Commission has the authority to disapprove any such rule that is not consistent with the requirements of the Exchange Act.²⁵³

²⁴⁸ See *id.* at 13–14.

²⁴⁹ See Amendment No. 1, *supra* note 1, 81 FR at 76652, 76663, 76668; BZX Letter II, *supra* note 13, at 29–30.

²⁵⁰ See *supra* notes 233–235 and accompanying text.

²⁵¹ 15 U.S.C. 78f(b)(5).

²⁵² 17 CFR 240.19b–4(a)(6)(i).

²⁵³ Section 6 of the Exchange Act, 15 U.S.C. 78f, requires national securities exchanges to register with the Commission and requires an exchange’s registration to be approved by the Commission, and Section 19(b) of the Exchange Act, 15 U.S.C. 78s(b), requires national securities exchanges to file

Thus, national securities exchanges are subject to Commission oversight of, among other things, their governance, membership qualifications, trading rules, disciplinary procedures, recordkeeping, and fees.²⁵⁴

Even if the Gemini Exchange were “regulated,” the record would not support a conclusion that the Gemini Exchange conducts a significant volume of trading in bitcoin because there is no evidence in the record that there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on the Gemini Exchange (or any record evidence addressing how trading in the proposed ETP would or would not influence prices on the Gemini Exchange). Furthermore, there is insufficient evidence in the record to determine whether it is unlikely that trading in the ETP would be the predominant influence on prices on the Gemini Exchange. Indeed, if anything, the Gemini Auction size is currently so small that the proposed ETP could fundamentally affect supply and demand (and thus pricing) on the Gemini Exchange, not the other way around.²⁵⁵

The record thus includes at best uncertain information regarding the volume or liquidity of the Gemini Exchange, how the Gemini Exchange may influence the price of any ETP based on bitcoin, or how the existence of ETPs based on bitcoin may affect the Gemini Exchange. Commenters have provided varying estimates of the current and future volume of trading on

proposed rule changes with the Commission and provides the Commission with the authority to disapprove proposed rule changes that are not consistent with the Exchange Act. Designated Contract Markets (commonly called “futures markets”) registered with and regulated by the CFTC must comply with, among other things, a similarly comprehensive range of regulatory principles and must file rule changes with the CFTC. See, e.g., Designated Contract Markets (DCMs), CFTC, available at <http://www.cftc.gov/IndustryOversight/TradingOrganizations/DCMs/index.htm>.

²⁵⁴ The Commission notes that the NYSDFS recently issued “guidance” to supervised virtual currency business entities, including the Gemini Exchange, stating that these entities must “implement measures designed to effectively detect, prevent, and respond to fraud, attempted fraud, and similar wrongdoing.” See Maria T. Vulio, Superintendent of Financial Services, NYSDFS, *Guidance on Prevention of Market Manipulation and Other Wrongful Activity* (Feb. 7, 2018), available at <http://www.dfs.ny.gov/legal/industry/il180207.pdf>. This guidance was issued after the comment period for this proposed rule change ended, and there is nothing in the record regarding how this guidance has been implemented by the NYSDFS or by the affected entities.

²⁵⁵ See Section III.B.2(b), *supra*.

²⁴³ See SIG Letter, *supra* note 36, at 7.

²⁴⁴ See *id.* at 7–8.

²⁴⁵ See *id.* at 8.

²⁴⁶ See Overdahl Letter, *supra* note 36, at 8.

²⁴⁷ See *id.* at 1, 7.

the Gemini Exchange.²⁵⁶ Moreover, because bitcoin markets are still evolving in significant ways, and because there is no comprehensive data source reflecting bitcoin trading, it is not currently possible to state with confidence what share of volume any particular spot trading venue has captured or will capture.²⁵⁷ Bitcoin trading activity is dispersed across markets and OTC transactions worldwide, and there is no centralized, regulatory data source for bitcoin trading statistics. Accordingly, any analysis of worldwide trading activity must use unofficial sources that gather and disseminate trading data, and even these sources cannot capture OTC transactions, or transactions that take place in what the Registration Statement characterizes as “dark pools.”²⁵⁸ Further, as discussed above,²⁵⁹ recent volume in the Gemini Auction is a fraction of the size of a creation unit of the Trust, and therefore the Commission does not agree with the assertion by BZX that the Gemini Auction would support the needs of Authorized Participants to engage in basket creation or redemption.

Finally, the comparison offered by the Overdahl Letter between the average trading volume on the Gemini Exchange and the average trading volume of the underlying assets of other ETPs is inapt.²⁶⁰ The issue here is not that the Gemini Exchange has low trading volume in an absolute sense but, rather, that the Trust would value its holdings using the Gemini Auction price, even though there is no basis in the record to find that the Gemini Auction represents a significant portion of worldwide bitcoin trading.²⁶¹

Therefore, the Commission cannot conclude that the surveillance-sharing agreement between BZX and the Gemini Exchange, even in combination with the other means of detecting and deterring

²⁵⁶ See *supra* notes 237–248 and accompanying text.

²⁵⁷ See also *supra* note 239 and accompanying text.

²⁵⁸ Registration Statement, *supra* note 22, at 62. Additionally, while the Overdahl Letter asserts that, between September 21, 2016, and March 1, 2017, the Gemini Exchange accounted for 7.35% of the global USD-denominated bitcoin market, which does not include trading in bitcoin against other fiat currencies, see *supra* note 246 and accompanying text, the Overdahl Letter does not explain why the bitcoin-USD market—a subset of the global bitcoin market—is the appropriate measure when Authorized Participants in the Trust would be able to source their bitcoins through any market or OTC transaction.

²⁵⁹ See *supra* note 165 and accompanying text.

²⁶⁰ See *supra* note 248 and accompanying text.

²⁶¹ See also *infra* notes 263–268, 270 and accompanying text (summarizing commenters’ views that most bitcoin trading volume occurs outside the U.S. on unregulated exchanges).

fraud and manipulation discussed above,²⁶² is sufficient to find that the proposal is consistent with Exchange Act Section 6(b)(5).

2. Other Bitcoin Spot Markets

(a) Summary of Comments Received

Several comment letters state that the majority of bitcoin trading occurs on exchanges outside the United States. One commenter claims that most daily trading volume is conducted on poorly capitalized, unregulated exchanges located outside the United States and that these non-U.S. exchanges and their practices significantly influence the price discovery process.²⁶³ Another commenter states that the biggest and most influential bitcoin exchange is located outside U.S. jurisdiction.²⁶⁴

One commenter states that, since 2013, the price of bitcoin has been defined mostly by the major Chinese exchanges, whose volumes dwarf those of exchanges outside China. According to the commenter, the Chinese exchanges are not regulated or audited and are suspected of engaging in unethical practices such as front-running, wash trades, and trading with insufficient funds. The commenter interprets pricing data from these Chinese exchanges to mean that the price of bitcoin is defined entirely by speculation, without any ties to fundamentals.²⁶⁵

One commenter claims that a sizeable number of traders and owners of bitcoin do not desire to trade in a well-regulated environment for reasons including tax evasion, evading capital controls, and money laundering. This commenter also states that U.S. bitcoin exchanges do not offer products such as fee-free trading, margin trading, or options, which drive traffic to the top non-U.S. exchanges. This commenter also claims that several Chinese exchanges actively engage in bitcoin mining operations, creating a conflict of interest, and notes that these exchanges are unaudited and unaccountable.²⁶⁶

One commenter observes that Chinese markets drive much of the volume in the bitcoin markets.²⁶⁷ Another commenter also claims that the Chinese exchanges that account for the bulk of trading are subject to little regulatory oversight and that existing know-your-customer or identity-verification

²⁶² See Section III.C.2, *supra*.

²⁶⁷ See ARK Letter, *supra* note 35, at 5.

measures are lax and can be easily bypassed.²⁶⁸

One commenter asserts that bitcoin is more transparent than the illiquid or opaque underlying assets of some other exchange-traded funds, because a large percentage of bitcoin transactions take place on electronic exchanges with actionable quotes and relatively tight bid/ask spreads and because transferring actual bitcoin between accounts at exchanges and other storage systems is also a transparent process, as transactions are printed using blockchain technology.²⁶⁹

BZX concedes in a comment letter that only a minority of the global spot bitcoin exchanges are subject to any regulatory regime.²⁷⁰ BZX also argues that, as the bitcoin exchange market has matured, a number of new entrants, including two New York limited-purpose trust companies, have emerged and that these new entrants have markedly changed the once-concentrated and non-regulated landscape of the bitcoin exchange market.²⁷¹

BZX and the Overdahl Letter note that the CFTC has designated bitcoin as a commodity and assert that the CFTC is “broadly responsible for the integrity” of bitcoin spot markets.²⁷² BZX acknowledges that the CFTC had not yet (as of the date of BZX’s submissions) brought any enforcement actions based on the anti-manipulation provisions of the Commodity Exchange Act,²⁷³ but notes that the CFTC has issued orders against U.S. and non-U.S. bitcoin exchanges for engaging in other activity prohibited by the Commodity Exchange Act and argues that, therefore, a regulatory framework for providing oversight and deterring market manipulation currently exists in the U.S.²⁷⁴

The Overdahl Letter asserts that any market can potentially be manipulated and states that this manipulation risk is

²⁶⁸ See Maher Letter, *supra* note 35.

²⁶⁹ See C&C Letter, *supra* note 36, at 2.

²⁷⁰ See BZX Letter I, *supra* note 35, at 2–3 (noting that only a minority of global bitcoin exchanges are fully regulated for their fiduciary and custodial activities, and naming Gemini Trust Company LLC and itBit Trust Company LLC as the only two exchange operators that are subject to substantive regulation, each overseen by the NYSDFS).

²⁷¹ See BZX Letter II, *supra* note 13, at 15; see also Petition for Review, *supra* note 4, at 15.

²⁷³ See BZX Letter I, *supra* note 35, at 3. The Commission notes that the CFTC has since obtained a federal court injunction against fraudulent activity related to “virtual currency.” See *CFTC v. McDonnell*, 287 F. Supp. 3d 213 (E.D.N.Y. 2018).

²⁷⁴ See BZX Letter I, *supra* note 35, at 3; BZX Letter II, *supra* note 13, at 18.

why the CFTC and the Commission have anti-manipulation authority.²⁷⁵ The Overdahl Letter also asserts that a host of other jurisdictions, including the U.K., Australia, Hong Kong, Singapore, Indonesia, and Thailand, have established some form of “regulatory sandbox” for blockchain, the technology that underlies bitcoin. The Overdahl Letter further asserts that, in March 2016, the Japanese cabinet approved bills treating bitcoin and other digital currencies as forms of money and that, in April 2017, Japan’s parliament recognized bitcoin as an authorized method of payment. The Overdahl Letter claims that Japan regulates bitcoin as a form of prepaid payment and is approving regulated virtual-currency exchanges on which the Japanese regulator imposes capital, audit, and anti-money-laundering, and know-your-customer requirements. The Overdahl Letter concludes that, therefore, aside from the CFTC, another competent regulator with whom the Commission has a memorandum of understanding maintains a regulated bitcoin market.²⁷⁶

(b) Discussion

Based on the record before it, the Commission concludes that BZX has not shown that any of the current trading venues in the worldwide bitcoin spot market is a regulated market.

With respect to spot bitcoin trading outside the United States, BZX and commenters agree that the bulk of bitcoin trading has occurred in non-U.S. markets where there is little to no regulation governing trading,²⁷⁷ and thus no sufficient and verifiable governmental market oversight designed to detect and deter fraudulent and manipulative activity.²⁷⁸ And because no bitcoin spot market is currently a member of the Intermarket Surveillance Group, BZX is unable to use its membership in the Intermarket Surveillance Group to share surveillance information with those

markets.²⁷⁹ Further, as noted above,²⁸⁰ the Bitcoin blockchain, while freely available to the public, identifies parties to a transaction only by a pseudonymous public-key address, and it does not distinguish bitcoin trading activity from other transfers of bitcoin, limiting its usefulness as a substitute for a surveillance-sharing agreement.

One commenter asserts that substantial trading volume has recently migrated away from Chinese exchanges in response to regulatory efforts by the Chinese government. But, according to statistics provided by other commenters,²⁸¹ a substantial majority of bitcoin trading continues to occur overseas,²⁸² and BZX concedes in a comment letter that only a minority of the global spot bitcoin exchanges are subject to any regulatory regime.²⁸³ Moreover, the Registration Statement for the Winklevoss Bitcoin Trust states:

The Bitcoin Exchanges on which bitcoin trades are new and, in most cases, largely unregulated. Furthermore, many Bitcoin Exchanges (including several of the most prominent U.S. Dollar-denominated Bitcoin Exchanges) do not provide the public with significant information regarding their ownership structure, management teams, corporate practices or regulatory compliance.²⁸⁴

Nor does the CFTC’s oversight of bitcoin-derivative trading venues indicate that the CFTC is, as BZX and the Overdahl Letter argue, “broadly responsible for the integrity of the bitcoin spot market” or that the CFTC’s enforcement powers with respect to spot trading mean that a “regulatory framework for providing oversight and deterring market manipulation currently exists in the United States.”²⁸⁵ Spot bitcoin markets are not required to register with the CFTC, unless they offer leveraged, margined, or financed trading to retail customers.²⁸⁶ In all other cases,

²⁷⁹ See <https://www.isgportal.org/isgPortal/public/members.htm> (listing the current members and affiliate members of the Intermarket Surveillance Group).

²⁸⁰ See Section III.C.2, *supra*.

²⁸¹ See *supra* notes 243–244 and accompanying text.

²⁸² See, *supra* notes 244, 264–265, 267 and accompanying text.

²⁸³ See *supra* note 270 and accompanying text. While BZX asserts that the Gemini Exchange is a regulated market, as discussed above, the Commission does not agree with that assessment. See Section III.E.1(b), *supra*.

²⁸⁴ Registration Statement, *supra* note 22, at 22.

²⁸⁵ See *supra* notes 272–274 and accompanying text.

²⁸⁶ Commodity Exchange Act Section 2(c)(2)(D), 7 U.S.C. 2(c)(2)(D). See also Commodity Exchange Act Section 2(c)(2)(A)(i), 7 U.S.C. 2(c)(2)(A)(i) (defining CFTC jurisdiction to specifically cover contracts of sale of a commodity for future delivery (or options on such contracts), or an option on a commodity (other than foreign currency or a

including the Gemini Exchange, the CFTC does not set standards for, approve the rules of, examine, or otherwise regulate bitcoin spot markets.²⁸⁷ As the CFTC itself has stated, while the CFTC “has an important role to play,” U.S. law “does not provide for direct, comprehensive Federal oversight of underlying Bitcoin or virtual currency spot markets.”²⁸⁸

Additionally, establishment by foreign regulators of what one commenter called “regulatory sandboxes” for blockchain technology,²⁸⁹ or the regulation of bitcoin as a method of prepaid payment by others,²⁹⁰ is not a sufficient basis for concluding that bitcoin trades worldwide on regulated markets with which the listing exchange can enter into a surveillance-sharing agreement. There is no evidence in the record before the Commission that any “regulatory sandbox,” however defined, has created a comprehensive regulatory regime for bitcoin trading venues, and, as explained in greater detail above in the context of the Gemini Exchange,²⁹¹ a “regulated” market means a market that can detect and prevent fraud and manipulation under Exchange Act Section 6(b)(5).

3. The Derivatives Markets

(a) Summary of Comments Received

One commenter claims that the bitcoin markets are not yet efficient and attributes this inefficiency, in part, to the nascent state of the bitcoin derivatives market. This commenter states that derivatives provide investors more ways to hedge against bitcoin’s potential price movements, introduce more volume and liquidity, and generally give the markets more points of information about bitcoin’s future prospects, leading to tighter bid/ask spreads. The commenter claims that

security or a group or index of securities), that is executed or traded on an organized exchange).

²⁸⁷ The Gemini Exchange is not registered with the CFTC.

²⁸⁸ CFTC Backgrounder, *supra* note 118, at 1. The Commission also notes the testimony of CFTC Chairman Giancarlo before the Senate Banking Committee that “the CFTC does not have authority to conduct regulatory oversight over spot virtual currency platforms or other cash commodities, including imposing registration requirements, surveillance and monitoring, transaction reporting, compliance with personnel conduct standards, customer education, capital adequacy, trading system safeguards, cyber security examinations or other requirements.” Giancarlo Testimony, *supra* note 117, Section I (CFTC Authority and Oversight Over Virtual Currencies). See also Section III.B.1(b)(iii), *supra* (discussing CFTC statutory authority over bitcoin derivatives products).

²⁸⁹ See *supra* note 276 and accompanying text.

²⁹⁰ *Id.*

²⁹¹ See Section III.E.1(b), *supra*.

²⁷⁵ See Overdahl Letter, *supra* note 36, at 2, 9–10.

²⁷⁶ See *id.* at 12–13.

²⁷⁷ See *supra* notes 263–268, 270 and accompanying text. The Commission also notes more recent reporting that a large portion of bitcoin trading volume continues to take place overseas, see, e.g., Russo, et al., *This Is Where People Are Buying Bitcoin All Over the World* (Jan. 11, 2018), <https://www.bloomberg.com/graphics/2017-bitcoin-volume/>, although such reports are unnecessary to the Commission’s finding, based on the record before it, that BZX has not shown that any of the current trading venues in the worldwide bitcoin spot market is a regulated market.

²⁷⁸ See *supra* notes 263–268 and accompanying text.

most derivatives activity within the bitcoin markets is offered by entities outside of the purview of U.S. regulators.²⁹² The commenter observes that the lack of a robust and regulated derivatives market means that market participants do not have a broad basket of tools at their disposal, making hedging difficult and keeping away many market makers that provide significant liquidity to traditional capital markets. The commenter claims that, while derivative products may be in development, a full suite of investor tools that will drive market efficiency and eliminate price disparities is likely at least a couple of years away.²⁹³ The commenter also states that, without a robust derivatives market for institutional investors to short the underlying asset or otherwise hedge their positions, there likely would be little counterbalance to the new demand generated by the ETP, and Authorized Participants could then have trouble sourcing bitcoin and hedging their positions, stalling the creation process.²⁹⁴ The commenter concludes that it would be premature to launch a bitcoin ETP because bitcoin markets are not liquid enough to support an open-end fund and because an ecosystem of institutional-grade infrastructure players is not yet available to support such a product.²⁹⁵

One commenter disagrees with assertions linking inefficient bitcoin markets to nascent derivatives markets, stating that no evidence has been provided regarding the would-be effect of derivatives on the bitcoin market. The commenter claims that these assertions assume that bitcoin pricing is inefficient, which the commenter claims is not the case. The commenter also claims that these assertions assume that the lack of a derivatives market causes pricing to be inefficient, stating instead that there is direct evidence that many securities trade successfully and efficiently on U.S. and non-U.S. exchanges despite not having a direct derivatives market.²⁹⁶ The commenter also disagrees with the claim that,

absent a robust derivatives market, there would be little counterbalance to the new demand generated by the ETP, stating that it is impossible to predict the success or failure of the ETP. The commenter states that Authorized Participants may be able to source bitcoin from China.²⁹⁷

Another commenter claims that there are several bitcoin futures markets that have a significant impact on the spot price along with several OTC markets—such as the one that this commenter claims was recently launched by the Gemini Exchange—that also offer liquidity.²⁹⁸

The Lewis Letter states that one of the key differences between bitcoin and other commodities is the lack of a liquid and transparent derivatives market and that, although there have been nascent attempts to establish derivatives trading in bitcoin, bitcoin derivatives markets are not at this time sufficiently liquid to be useful to Authorized Participants and market makers who would like to use derivatives to hedge exposures.²⁹⁹ The Lewis Letter claims that, for physical commodities that are not traded on exchanges, the presence of a liquid derivatives market is a necessary condition, but claims that for digital assets like bitcoin, derivatives markets are not necessary because price discovery occurs on the OTC market and exchanges instead.³⁰⁰

(b) Discussion

One commenter and the Lewis Letter assert that the existence of bitcoin derivative markets is not a necessary condition for a bitcoin ETP.³⁰¹ The key standard the Commission is applying here, however, is not that a futures or derivatives market is required for every commodity-trust ETP, but that—when the spot market is unregulated—the requirement of preventing fraudulent and manipulative acts may possibly be satisfied by showing that the ETP listing market has entered into a surveillance-sharing agreement with a regulated market of significant size in derivatives related to the underlying asset. That is because, where a market of significant size exists with respect to derivatives on the asset underlying a commodity-trust ETP, the Commission believes that there is a reasonable likelihood that a person attempting to manipulate the ETP by manipulating the underlying spot market would also have to trade in the

derivatives market in order to succeed, since arbitrage between the derivative and spot markets would tend to counter an attempt to manipulate the spot market alone.³⁰² Thus, the Commission believes that there is a reasonable likelihood that a surveillance-sharing agreement with that derivatives market would assist the ETP listing market in detecting and deterring an attempt to manipulate the commodity-trust ETP.

As noted above, the commodity-trust ETPs previously approved by the Commission have had—in lieu of regulated spot markets of significant size—a regulated futures market of significant size associated with the underlying commodity, and the listing exchange had entered into a surveillance-sharing agreement with that futures market or was able to obtain surveillance information through membership in the Intermarket Surveillance Group.³⁰³ Based on the record before it, the Commission cannot conclude that a regulated bitcoin futures market of significant size currently exists because, similar to the Gemini Exchange, there is no evidence in the record that there is a reasonable likelihood that a person attempting to manipulate the ETP would also have to trade on the bitcoin futures market, or any record evidence addressing how trading in the proposed ETP would or would not influence prices in the futures bitcoin market.

Consistent with the view of commenters summarized above, BZX's proposal describes the current derivative markets for bitcoin as “[n]ascent.”³⁰⁴ BZX notes that certain types of options, futures, contracts for differences, and other derivative instruments are available in certain jurisdictions, but that many of them are not available in the United States and that these derivatives instruments are generally not regulated “to the degree that U.S. investors expect derivatives instruments to be regulated.”³⁰⁵ BZX notes that the CFTC has approved the registration of TeraExchange LLC as a swap execution facility (“SEF”) and that, on October 9, 2014, TeraExchange announced that it had hosted the first executed bitcoin swap traded on a CFTC-regulated platform.³⁰⁶ Further,

³⁰² See also Section III.D.2(a), *supra* (discussion of Commission interpretation of the terms “significant market” and “market of significant size”).

³⁰³ See *supra* note 209 and accompanying text.

³⁰⁴ See Amendment No. 1, *supra* note 1, 81 FR at 76661.

³⁰⁵ See *id.*

³⁰⁶ See *id.*; see also ARK Letter, *supra* note 35, at 6 (noting that TeraExchange offers bitcoin forwards).

²⁹² See ARK Letter, *supra* note 35, at 5–6.

²⁹³ See *id.* at 6. This commenter also states that, within the United States, one market offers bitcoin forwards and no one currently offers regulated bitcoin futures or options, *see id.*, but, as discussed below, *see infra* notes 310–311 and accompanying text, futures on bitcoin have begun trading on regulated U.S. designated contract markets.

²⁹⁴ See ARK Letter, *supra* note 35, at 13–14.

²⁹⁵ See *id.* at 2.

²⁹⁶ See Anonymous Letter IV, *supra* note 35. Several commenters also assert that regulation by BZX of activity in the ETP could substitute for a lack of regulation in underlying or derivatives markets. *See, e.g.*, Baird Letter, *supra* note 35; Keeler Letter, *supra* note 35; Marchionne Letter, *supra* note 35; Bang Letter, *supra* note 35.

³⁰⁰ See *id.* at 8.

³⁰¹ See *supra* note 296 and accompanying text; Lewis Letter I, *supra* note 65, at 8.

BZX's proposal notes that, in 2015, CFTC temporarily registered another SEF that would trade swaps on bitcoin.³⁰⁷

The Commission acknowledges that TeraExchange, a market for swaps on bitcoin, has registered with the CFTC, but BZX's description of trading activity on that market fails to note that the very activity it cites was the subject of an enforcement action by the CFTC. The CFTC found that TeraExchange had improperly arranged for participants to make prearranged, offsetting "wash" transactions of the same price, notional amount, and time period and had then issued a press release "to create the impression of actual trading in the Bitcoin swap."³⁰⁸ Neither BZX nor any commenter provides evidence of meaningful trading volume in bitcoin derivatives on any regulated marketplace.

The CFTC has also registered LedgerX, a venue for trading bitcoin derivatives, as a SEF and a Derivatives Clearing Organization.³⁰⁹ Additionally, on December 1, 2017, the CFE and the CME self-certified new contracts with the CFTC for bitcoin futures contracts.³¹⁰ CFE launched trading in its bitcoin futures contracts on December 10, 2017, and CME launched trading in its bitcoin futures contracts on December 17, 2017 (for a trade date of December 18, 2017).³¹¹

The record before the Commission, however, does not establish that the bitcoin derivatives markets are regulated markets of significant size. The record also does not establish how these markets may influence the price of any ETP based on bitcoin or how the existence of ETPs based on bitcoin may

affect these markets. Publicly available data show that the median daily notional trading volume, from inception through April 24, 2018, has been 9,180 bitcoins on CME and 5,440 bitcoins on CFE, and that the median daily notional value of open interest on CME and CFE during the same period has been 7,875 bitcoins and 5,787 bitcoins, respectively.³¹² For all bitcoin contracts traded on LedgerX from inception through April 24, 2018, publicly available data show that the median daily notional volume has been 55 bitcoins and that the median daily notional value of open interest has been 663 bitcoins.³¹³ But while these futures and derivative contract figures are readily available, meaningful analysis of the size of the CME, CFE, and LedgerX markets relative to the underlying bitcoin spot market is challenging, because reliable data about the spot market, including its overall size, are unavailable.³¹⁴ The Commission notes that in recent testimony CFTC Chairman Giancarlo characterized the volume of the bitcoin futures markets as "quite small."³¹⁵ The Commission also notes that the President and COO of Cboe recently acknowledged in a letter to the Commission staff that "the current bitcoin futures trading volumes on Cboe Futures Exchange and CME may not currently be sufficient to support ETPs seeking 100% long or short exposure to bitcoin."³¹⁶ These statements reinforce the Commission's conclusion that there is insufficient evidence to determine that the bitcoin derivatives markets are significant.

Thus, while LedgerX, CME, and CFE are regulated markets for bitcoin derivatives, there is no basis in the record for the Commission to conclude

that these markets are of significant size. Additionally, because bitcoin futures have been trading on CME and CFE only since December 2017, the Commission has no basis on which to predict how these markets may grow or develop over time, or whether or when they may reach significant size.

Although BZX has not demonstrated that a regulated bitcoin futures market of significant size currently exists, the Commission is not suggesting that the development of such a market would automatically require approval of a proposed rule change seeking to list and trade shares of an ETP holding bitcoins as an asset. The Commission would need to analyze the facts and circumstances of any particular proposal and examine whether any unique features of a bitcoin futures market would warrant further analysis before approval.

F. The Protection of Investors and the Public Interest

BZX contends that, if approved, its ETP would protect investors and promote the public interest, but the Commission finds that BZX has not made such a showing on the current record. The Commission must consider any potential benefits in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act. And because BZX has not demonstrated that its proposed rule change is designed to prevent fraudulent and manipulative acts and practices, the Commission must disapprove the proposal.

1. Summary of Comments Received

Several commenters asserted that access to bitcoin through an ETP would extend regulatory protections to investors. One commenter asserts that, if the U.S. were to approve an ETP and bring regulatory standards and oversight to cryptocurrencies, investors would not see major problems as they did with the Bitfinex and Mt. Gox hacks and that, if the ETP were not approved, investors would be forced to use those less-than-ideal exchanges.³¹⁷ One commenter asserts that the alternative to a regulated ETP is investors having to purchase

Kirkpatrick, Secretary, CFTC (Dec. 1, 2017), available at <http://www.cftc.gov/filings/ptc/ptc120117cfedcm001.pdf>; Letter from Christopher Bowen, Managing Director and Chief Regulatory Counsel, CME Group to Christopher J. Kirkpatrick, Office of the Secretariat, CFTC (Dec. 1, 2017), available at <http://www.cftc.gov/filings/ptc/ptc120117cmedcm001.pdf>.

³¹¹ The Commission notes that the Cantor Exchange has also self-certified bitcoin binary options, see CFTC Backgrounder, *supra* note 118, at 2, but this product has not yet begun to trade.

³¹² These futures volume figures were calculated by Commission staff using data published by CME and CFE on their websites.

³¹³ These derivative contract volume figures were calculated by Commission staff using data published by LedgerX on its website.

³¹⁴ See Section III.B.1(b)(i), *supra*.

³¹⁵ CFTC Chairman Giancarlo testified: "It is important to put the new Bitcoin futures market in perspective. It is quite small with open interest at the CME of 6,695 bitcoin and at Cboe Futures Exchange (Cboe) of 5,569 bitcoin (as of Feb. 2, 2018). At a price of approximately \$7,700 per Bitcoin, this represents a notional amount of about \$94 million. In comparison, the notional amount of the open interest in CME's WTI crude oil futures was more than one thousand times greater, about \$170 billion (2,600,000 contracts) as of Feb. 2, 2018 and the notional amount represented by the open interest of Comex gold futures was about \$74 billion (549,000 contracts)." Giancarlo Testimony, *supra* note 117, text accompanying nn.14-15.

³¹⁶ Letter from Chris Concannon, President and COO, Cboe Global Markets, to Dalia Blass, Director, Division of Investment Management, Commission, at 5 (Mar. 23, 2018), available at <https://www.sec.gov/divisions/investment/cboe-global-markets-innovation-cryptocurrency.pdf>.

³¹⁷ See Baird Letter, *supra* note 35. Bitfinex and Mt. Gox are bitcoin trading venues that have reportedly suffered significant losses from hacking. See Nathaniel Popper and Rachel Abrams, *Apparent Theft at Mt. Gox Shakes Bitcoin World*, The New York Times (Feb. 25, 2014), available at <https://www.nytimes.com/2014/02/25/business/apparent-theft-at-mt-gox-shakes-bitcoin-world.html>; Amie Tsang, *Bitcoin Plunges After Hacking of Exchange in Hong Kong*, The New York Times (Aug. 3, 2016), available at <https://www.nytimes.com/2016/08/04/business/dealbook/bitcoin-bitfinex-hacked.html>.

bitcoin at unregulated exchanges lacking SEC oversight.³¹⁸ One commenter asserts that disapproval of the ETP would create a more risky environment for investors, who will not have the option of investing through regulated exchanges.³¹⁹ One commenter argues that, because of the use of an auction process to determine NAV, the use of well-known and respected Authorized Participants, and the environment that allows market participants to use arbitrage techniques to hold pricing where it should be, the risk to investors who invest in the ETP may be lower than the risk borne by those who buy or sell bitcoin directly.³²⁰ And another commenter asserts that, with innovative use cases emerging for bitcoin and for the associated technology of blockchain each passing day, investors seeking exposure to bitcoin should have options similar to those currently available for physical bullion.³²¹

BZX argues that the Shares would significantly reduce or eliminate costs and inefficiencies and would expand opportunities for investors by providing an inexpensive vehicle to gain exposure to bitcoin in a secure and easily accessible product that is familiar, transparent, and meaningfully regulated.³²² BZX asserts that, for prospective investors in bitcoin, direct investment brings with it significant inconvenience, complexity, expense, and risk. As investor demand for exposure to bitcoin continues to increase, BZX asserts, these problems grow larger. BZX argues that the Shares would significantly reduce or completely remove each of these hurdles.³²³ BZX also argues that Commission should approve the proposal because Commission oversight of the trading of the ETP shares on a national securities exchange would enhance the transparency of the underlying bitcoin markets.³²⁴ BZX also asserts that the Gemini Exchange is uniquely positioned, because of its regulatory status and licensing, to be a venue on which traditional financial institutions will be comfortable transacting in bitcoin, and BZX posits that these financial institutions provide a bridge to the equities markets and other capital markets, improving price

discovery, liquidity, and transparency.³²⁵

The Overdahl Letter asserts that the approval of the proposed bitcoin ETP would facilitate a cost-effective and convenient means for investors to gain exposure to bitcoin similar to a direct investment in bitcoin, improving portfolio diversification opportunities for investors, and would help make bitcoin markets more transparent.³²⁶ The Overdahl Letter also argues that a bitcoin ETP will protect current investors in bitcoin by providing regulatory certainty.³²⁷ The Overdahl Letter predicts that the availability of a bitcoin ETP would help attract professional market makers to the spot market, as well as the market for bitcoin ETPs, and that the presence of these professional market makers would add to the resilience of the spot price on the exchange, improve liquidity and other measures of market quality, and promote trading volume at the exchange.³²⁸

The Lewis Letter asserts that bitcoin is relatively uncorrelated with other assets, enabling investors to construct more efficient portfolios.³²⁹ BZX and the Lewis Letter also assert that listing the shares on a national securities exchange and a shift from OTC trading to trading on exchanges would make the overall bitcoin market more transparent.³³⁰ Similarly, one commenter asserts that trading in the Shares and the adoption of best practices, such as IIV and NAV dissemination, will enhance the resiliency and efficiency of the market for bitcoin.³³¹

One commenter believes that lack of regulation and consumer protection also increases the chance and incentives for market price manipulation and states that approving the ETP before structural protections and controls are firmly in place would put investors at undue risk.³³² This commenter asserts that several fundamental flaws make bitcoin a dangerous asset class to force into an exchange-traded structure, including shallow trade volume, extreme hoarding, low liquidity, hyper price volatility, a global web of unregulated bucket-shop exchanges, high bankruptcy risk, and oversized exposure

to trading in countries where there is no regulatory oversight.³³³

2. Discussion

BZX, the Overdahl Letter, and other commenters assert that investment in bitcoin through a ETP would reduce the expense, complexity, and risk of bitcoin exposure.³³⁴ BZX, the Overdahl Letter, and the Lewis Letter further assert that approval of the Winklevoss Bitcoin Trust would make bitcoin markets more transparent,³³⁵ and the Overdahl Letter argues that approval of the proposal would protect investors by providing regulatory certainty.³³⁶ Additionally, the Overdahl Letter and Lewis Letter argue that approval of the proposal would improve the availability of investment and portfolio diversification opportunities for investors.³³⁷

The Commission acknowledges that each of these is a potential benefit of a bitcoin ETP. The Commission, however, must consider these potential benefits in the broader context of whether the proposal meets each of the applicable requirements of the Exchange Act. Pursuant to Section 19(b)(2) of the Exchange Act, the Commission must disapprove a proposed rule change filed by a national securities exchange if it does not find that the proposed rule change is consistent with the applicable requirements of the Exchange Act—including the requirement under Section 6(b)(5) that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices.³³⁸ Thus, even if a proposed rule change would provide certain benefits to investors and the markets, the proposed rule change may still fail to meet other requirements under the Exchange Act.³³⁹ For the reasons discussed above, BZX has not met its burden of demonstrating an adequate basis in the record for the Commission to find that the proposal is consistent with

³³³ See *id.* at 1.

³³⁴ See Section III.F.1, *supra*.

³³⁵ See *supra* notes 324–326, 330 and accompanying text.

³³² See Williams Letter, *supra* note 35, at 2–3.

Exchange Act Section 6(b)(5),³⁴⁰ and, accordingly, the Commission must disapprove the proposal.

G. Additional Factors Supporting Disapproval

As addressed in detail above, the Commission is disapproving the proposed rule change because BZX has not met its burden to demonstrate that its proposal is consistent with Exchange Act Section 6(b)(5). BZX has neither entered into surveillance-sharing agreements with regulated, bitcoin-related markets of significant size nor demonstrated that alternative means of compliance with Exchange Act Section 6(b)(5) would be sufficient. Because BZX has failed to carry its burden, the proposed rule change must be disapproved.

The Commission also notes several inconsistencies between the BZX's proposed rule change and the Trust's Registration Statement that reinforce the need to disapprove BZX's proposal. For example, in its proposal, BZX points to the following factors that, in its view, weigh in favor of approval. Those factors include "the liquidity of the market in the underlying commodity," "the trading volume in derivatives based on the underlying commodity," "listing exchange rules and procedures prohibiting use of material nonpublic information," and "listing exchange rules regarding trading halts."³⁴¹ But those factors cannot be reconciled with BZX's current proposal and thus provide independent confirmation that the proposed rule change must be disapproved.

Liquidity of bitcoin markets. The Trust's Registration Statement concedes that underlying bitcoin markets are insufficiently liquid to protect against credible threats to those markets' integrity. The Trust's Registration Statement, for example, acknowledges that "operational interruption" in large bitcoin exchanges "may limit the liquidity of bitcoin" and "result in volatile prices and a reduction in confidence" and that "[t]rading on a single Bitcoin Exchange may result in less favorable prices and decreased liquidity."³⁴² The Trust's characterizations of the bitcoin markets contrast with, for example, the over-the-counter gold market, which the Commission noted had "unique liquidity and depth."³⁴³ This factor

accordingly weighs against approval of the proposed rule change.

Trading volume in derivatives based on the underlying commodity. The Trust's Registration Statement recognizes that bitcoin derivatives markets are nascent and insufficiently developed in regulated marketplaces to serve meaningful purposes such as, for example, providing investors with credible information regarding bitcoin's future prospects.³⁴⁴ As the Trust's Registration Statement acknowledges, "[a] limited market currently exists for bitcoin-based derivatives."³⁴⁵ As explained above, the market for bitcoin-based derivatives is not yet well developed.³⁴⁶ That differs, for example, from platinum and palladium markets, where futures products on those metals had been trading for several decades before commodity-trust ETPs were launched, and where the Commission has noted that exchanges are able to adequately "obtain information regarding trading" in regulated derivatives. This factor accordingly weighs against approval of the proposed rule change.

Listing exchange rules and procedures prohibiting use of material nonpublic information. Regardless of BZX's rules and procedures regarding insider trading, many underlying bitcoin markets are, at present, opaque.³⁴⁷ According to the Trust's Registration Statement, for example, "[m]any Bitcoin Exchanges do not provide the public with significant information regarding their ownership structure, management teams, corporate practices or regulatory compliance."³⁴⁸ The Trust itself thus recognizes that there is a significant risk that material nonpublic information may be used in a manner that could affect bitcoin prices and, in turn, any ETP using bitcoin as an underlying asset. This factor weighs against approval of the proposed rule change.

Listing exchange rules regarding trading halts. Regardless of BZX's rules regarding trading halts, BZX has not explained how it will respond to disruptions in trading in underlying bitcoin markets.³⁴⁹ The Trust's Registration Statement acknowledges the unusual and severe nature of such trading halts in bitcoin, noting that "[e]ven the largest Bitcoin Exchanges have been subject to operational interruption (e.g., the temporary shutdown of Mt. Gox due to distributed

denial of service attacks ('DDoS') attacks by hackers and/or malware, and its permanent closure in February 2014)."³⁵⁰ Moreover, as one commenter noted, the Gemini Auction has failed on at least two occasions.³⁵¹ Such trading halts could result in volatile prices and reduced confidence in any ETP that uses bitcoin as an underlying asset. Accordingly, this factor weighs against approval of the proposed rule change.

H. Other Comments

Comment letters also addressed the following topics:³⁵²

- The nature and uses of bitcoin;³⁵³
- the state of development of bitcoin as a digital asset;³⁵⁴
- the use of bitcoin for illegal activities;³⁵⁵
- the inherent value of, and risks of investing in, bitcoin;³⁵⁶
- the cost of electricity required to maintain the Bitcoin network;³⁵⁷
- the desire of investors to gain access to bitcoin through an ETP;³⁵⁸

basis for the Commission's decision to disapprove BZX's proposal.³⁶⁷

I. Basis for Disapproval

As discussed above,³⁶⁸ the central factor for the Commission in its current consideration of the BZX proposal is whether it is consistent with Exchange Act Section 6(b)(5), which requires, among other things, that the rules of a national securities exchange be designed to prevent fraudulent and manipulative acts and practices and to protect investors and the public interest.³⁶⁹ Although BZX argues that its proposal can satisfy these requirements because bitcoin markets are inherently difficult to manipulate,³⁷⁰ and because alternative means of identifying fraud and manipulation would be sufficient,³⁷¹ the Commission concludes that, as discussed above, BZX has not established that these proffered means of compliance—alone or in combination—are sufficient to meet the requirements of Exchange Act Section 6(b)(5).³⁷²

Thus, the Commission believes that BZX must demonstrate with respect to this proposal that—like the listing exchanges for previously approved commodity-trust ETPs³⁷³—it can enter into a surveillance-sharing agreement with a regulated, bitcoin-related market of significant size. As discussed above, however, BZX has not shown that it can enter into such an agreement, because the proposal does not support a conclusion that the markets for bitcoin or derivatives on bitcoin are regulated markets of significant size.³⁷⁴ Therefore, BZX has not met its burden to

³⁶⁷ The Commission also received a statement from SolidX Management LLC, asserting that "[t]o the extent the Commission is inclined to reverse, modify, set aside or remand for further proceedings the BatsBZX Proposed Rule Change, then in accordance with Rule 431 and the factors set forth in Rule 411(b)(2) of the Rules of Practice, the Commission should, as a matter of equity . . . reverse, modify, set aside or remand for further proceedings its March 28, 2017 Order Disapproving a Proposed Rule Change, as Modified by Amendment No. 1, Relating to the Listing and Trading of Shares of the SolidX Bitcoin Trust under NYSE Arca Equities Rule 8.201 (Release No. 34–80319; File No. SR–NYSEArca–2016–101)." SolidX Letter, *supra* note 36, at 1. No timely petition to review the March 28, 2017, disapproval order has been received from any party and, under the Rule 431(c) of Commission's Rules of Practice, the period for the Commission to order review of the issuance of that disapproval order by delegated authority ended on April 7, 2017.

³⁶⁸ See Section I, *supra*.

³⁶⁹ 15 U.S.C. 78f(b)(5).

³⁷⁰ See Sections III.B.1(a) and III.B.2(a), *supra*.

³⁷¹ See Section III.C.1, *supra*.

³⁷² See Sections III.B.1(b), III.B.2(b), and III.C.2, *supra*.

³⁷³ See Section III.D.2, *supra*.

³⁷⁴ See Sections III.E.1(b), III.E.2(b), and III.E.3(b), *supra*.

demonstrate that the proposed rule change is consistent with Exchange Act Section 6(b)(5), and, accordingly, the Commission is disapproving the proposed rule change.³⁷⁵

While the Commission concludes that BZX must demonstrate the ability to enter into a surveillance-sharing agreement with a regulated market of significant size related to bitcoin, and while this factor strongly supports disapproval of BZX's proposed rule change, the other factors BZX asks the Commission to weigh³⁷⁶ also support the disapproval of the proposed rule change. Even considering these other factors, the Commission does not find BZX's proposed rule change to be consistent with Exchange Act Section 6(b)(5)'s requirement that the rules of a national securities exchange be designed "to prevent fraudulent and manipulative acts and practices" and "to protect investors and the public interest."³⁷⁷

IV. Conclusion

For the reasons set forth above, the Commission does not find, pursuant to Section 19(b)(2) of the Exchange Act,

³⁷⁵ In disapproving the proposed rule change, as modified by Amendments No. 1 and 2, the Commission has considered its impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f); see also *supra* notes 322–326, 329 and accompanying text. According to BZX, the Sponsor believes that the Shares will represent a cost-effective and convenient means of gaining investment exposure to bitcoin similar to a direct investment in bitcoin, allowing investors to more effectively implement strategic and tactical asset allocation strategies that use bitcoin, with lower cost than that associated with the direct purchase, storage, and safekeeping of bitcoin. See Amendment No. 1, *supra* note 1, 81 FR at 76662; see also Overdahl Letter, *supra* note 36, at 13 (asserting that approval of bitcoin ETP would improve the availability of investment and portfolio diversification opportunities for investors); Lewis Letter I, *supra* note 65, at 3, 11–16 (asserting that a bitcoin-based ETP would enable ordinary investors to construct more efficient portfolios). Regarding competition, BZX has asserted that approval of the proposed rule change "will enhance competition among market participants, to the benefit of investors and the marketplace." Amendment No. 1, *supra* note 1, 81 FR at 76669. BZX also asserts that the Shares "would facilitate capital formation in the bitcoin marketplace in a manner nearly identical to other commodity-trust exchange traded products." BZX Letter II, *supra* note 13, at 3, 30. Additionally, one commenter asserts that approval of the Proposal would allow the United States to continue its "historic technological leadership." Baird Letter, *supra* note 35, while another commenter asserts that, with the approval of the Proposal, "bitcoin might become a much larger part of the world economy at risk." Barish Letter III, *supra* note 35. The Commission recognizes that BZX and commenters assert the economic benefits described above, but, for the reasons discussed throughout, the Commission is disapproving the proposed rule change because it does not find that the proposed rule change is consistent with the Exchange Act.

³⁷⁶ See Section III.G, *supra*.

³⁷⁷ 15 U.S.C. 78f(b)(5).

that the proposed rule change, as modified by Amendments No. 1 and 2, is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to a national securities exchange, and in particular, with Section 6(b)(5) of the Exchange Act.

It is therefore ordered, pursuant to Rule 431 of the Commission's Rules of Practice, that the earlier action taken by delegated authority, Exchange Act Release No. 80206 (Mar. 10, 2017), 82 FR 14076 (Mar. 16, 2017), is set aside and, pursuant to Section 19(b)(2) of the Exchange Act, SR-BatsBZX-2016-30 is disapproved.

By the Commission.

Brent J. Fields,

Secretary.

SMALL BUSINESS ADMINISTRATION

[License No. 06/06-0346]

Stellus Capital SBIC, L.P.; Notice Seeking Exemption Under Section 312 of the Small Business Investment Act, Conflicts of Interest

Notice is hereby given that Stellus Capital SBIC, L.P., 4400 Post Oak Parkway, Suite 2200, Houston, TX 77027, a Federal Licensee under the Small Business Investment Act of 1958, as amended ("the Act"), in connection with the financing of a small concern, has sought an exemption under Section 312 of the Act and Section 107.730, Financings which Constitute Conflicts of Interest of the Small Business Administration ("SBA") Rules and Regulations (13 CFR 107.730). Stellus Capital SBIC, L.P. proposes to provide loan financing to KelleyAmerit Holdings, Inc. (d/b/a Amerit Fleet Solutions), 1331 North California Blvd., Suite 150, Walnut Creek, CA 94596.

The financing is brought within the purview of § 107.730(a)(4) of the Regulations because Stellus Capital SBIC, L.P., seeks to purchase the loan financing to KelleyAmerit Holdings, Inc. from Stellus Capital Investment Corp., an Associate of Stellus Capital SBIC, L.P. Therefore, this transaction is considered discharging an obligation of an Associate, requiring a prior SBA exemption.

Notice is hereby given that any interested person may submit written comments on this transaction within fifteen days of the date of this publication to the Associate Administrator, Office of Investment and Innovation, U.S. Small Business

Administration, 409 Third Street SW, Washington, DC 20416.

A. Joseph Shepard,

Associate Administrator for Office of Investment and Innovation.

Ironwood Mezzanine Fund IV-A, L.P.; Notice Seeking Exemption Under Section 312 of the Small Business Investment Act, Conflicts of Interest

Notice is hereby given that Ironwood Mezzanine Fund IV-A, L.P., 45 Nod Road, Suite 2, Avon, CT 06001, a Federal Licensee under the Small Business Investment Act of 1958, as amended ("the Act"), in connection with a financing of a small concern, has sought an exemption under Section 312 of the Act and Section 107.730, Financings which Constitute Conflicts of Interest of the Small Business Administration ("SBA") Rules and Regulations (13 CFR 107.730). Ironwood Mezzanine Fund IV-A, L.P. proposes to provide debt and equity financing for the purpose of purchasing a subsidiary (Capewell Intermediate Holding, LLC) from an Associate, Capewell Holding, LLC. Capewell Holding, LLC is an Associate because Ironwood Mezzanine Fund III-A L.P., an Associate of Mezzanine Fund IV-A, L.P., owns more than ten percent of Capewell Holding, LLC.

The financing is brought within the purview of § 107.730(a) of the Regulations because proceeds from the transaction will directly benefit Associates Ironwood Mezzanine Fund III, L.P. and Ironwood Mezzanine Fund III-A, L.P.

Notice is hereby given that any interested person may submit written comments on this transaction within fifteen days of the date of this publication to the Associate Administrator, Office of Investment and Innovation, U.S. Small Business Administration, 409 Third Street SW, Washington, DC 20416.

BILLING CODE P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36208]

Progressive Rail Incorporated—Continuance in Control Exemption—St. Paul & Pacific Railroad Company, LLC

Progressive Rail Incorporated (PGR), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to continue in control of St. Paul & Pacific Railroad Company, LLC (SPR), upon SPR's becoming a Class III rail carrier.

This transaction is related to a concurrently filed verified notice of exemption in *St. Paul & Pacific Railroad Company, LLC—Change in Operator Exemption—Santa Cruz and Monterey Bay Railway Company*, Docket No. FD 36207. In that proceeding, SPR seeks an exemption under 49 CFR 1150.31 to assume operations over approximately 31 miles of rail line (the Line) owned by the Santa Cruz County Regional Transportation Commission extending from milepost 0.433 at Watsonville Junction to milepost 31.39 at Davenport, Cal.

The earliest this transaction may be consummated is August 15, 2018, the effective date of the exemption (30 days after the verified notice was filed). PGR states that it intends to consummate the transaction on August 16, 2018.

PGR will continue in control of SPR upon SPR's becoming a Class III rail carrier and remains in control of Class III carriers Airlake Terminal Railway Company, LLC, Central Midland Railway Company, Iowa Traction Railway Company, Iowa Southern Railway Company, Piedmont & Northern Railroad Company, and Chicago Junction Railway Company.

PGR states that: (1) The rail line to be operated by SPR does not connect with any other railroads in the PGR corporate family; (2) the continuance in control is not part of a series of anticipated transactions that would connect this line with any other railroad in the PGR corporate family; and (3) the transaction does not involve a Class I rail carrier. Therefore, the transaction is exempt from the prior approval requirements of 49 U.S.C. 11323. *See* 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. Section 11326(c), however, does not provide for labor protection for transactions under §§ 11324 and 11325 that involve only Class III rail carriers. Accordingly, the Board may not impose labor protective conditions here because
