Abstract: The New Source Performance Standards (NSPS) for Bulk Gasoline Terminals apply to affected facilities at bulk gasoline terminals that have a throughput greater than 75,700 liters per day, delivering liquid product into gasoline tank trucks. Affected facilities include the loading arms, pumps, meters, shutoff valves, relief valves, and other piping and valves necessary to fill delivery tank trucks. These standards set initial notification, initial performance test, and ongoing recordkeeping requirements. Additionally, required monthly leak detection records are used to determine periods of excess emissions, identify problems at the facility, verify operation/maintenance procedures and for compliance determinations. This information is being collected to assure compliance with 40 CFR part 60, subpart XX.

Form Numbers: None.

Respondents/affected entities: Bulk gasoline terminals.

Respondent's obligation to respond: Mandatory (40 CFR part 60, subpart XX).

Estimated number of respondents: 40 (total).

Frequency of response: Initially.

Total estimated burden: 13,200 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$1,390,000 (per year), which includes \$0 both annualized capital startup and/or operation & maintenance costs.

Changes in the Estimates: The increase in burden from the most recently approved ICR is due to an adjustment. This ICR assumes all existing affected sources will spend one hour per year to re-familiarize with the regulations. In addition, this ICR rounds the total estimated labor hours to three significant digits. These adjustments resulted in a small increase since the last renewal.

Director, Regulatory Support Division.
