History and Description of the Remains

In 1956–57, human remains representing, at minimum, one individual were removed from the Riverside Cemetery site (20ME1), in Menominee County, MI, during excavations conducted by UMMAA archeologist, A.C. Spaulding. Riverside Cemetery is a multi-component site that has evidence of occupation dating from the Late Archaic (2550–300 B.C.) and Late Woodland Periods (A.D. 500–1100). Carbon 14 analysis of a burial feature excavated from the site produced a date of A.D. 650 +/- 200 years for these human remains. The burial included one adult of indeterminate sex. No known individuals were identified. The one associated funerary object is a copper fragment of irregular shape.

The human remains have been determined to be Native American based on dental traits. A relationship of shared group identity can be reasonably traced between the Native American human remains from this site and the Menominee Indian Tribe of Wisconsin, based on the site’s location within the lands traditionally occupied by the Menominee. Moreover, the Menominee were most likely the predominant tribe in the vicinity of the site during the date range for this burial, according to oral tradition and historical accounts.
