**SUPPLEMENTARY INFORMATION:**

*Title:* Understanding Value Trade-offs Regarding Fire Hazard Reduction Programs in the Wildland-Urban Interface.

*OMB Number:* 0596-0189.

*Expiration Date of Approval:* November 30, 2018.

*Type of Request:* Renewal with revision.

*Abstract:* Forest Service and university researchers will collect information from members of the public via a brief phone questionnaire followed by the respondent's choice of a mail questionnaire or an online questionnaire to help forest and fire managers understand value trade-offs regarding fire hazard reduction programs in the wildland-urban interface. Researchers will evaluate the responses of Arizona, Colorado, New Mexico, and Texas residents to different scenarios related to fire-hazard reduction programs, determine how effective residents think the programs are, and calculate how much residents would be willing to pay to implement the alternatives presented to them. This information will help researchers provide better information to natural resource, forest, and fire managers when they are contemplating the type of fire-hazard reduction program to implement to achieve forestland management planning objectives.

A random sample of residents of Arizona, Colorado, New Mexico, and Texas will be contacted via random-digit dialed telephone calls and asked to participate in the research study. If they are willing to participate in the study, they will elect to receive an online or paper questionnaire and will provide the appropriate address. Though different forms, these questionnaires have the same set of questions. In this initial call, we will also ask those willing to participate a brief set of questions to determine pre-existing knowledge of fuels reduction treatments. After completion of the mail or online questionnaire, no further contact with the participants will occur. The in-depth phone interviews approved in the prior version of this information collection will be removed from the protocol in this renewal. Additionally, we anticipate adding several questions to the questionnaire on emerging issues, including how scenic quality impacts resident support for fire-hazard reduction programs.

A university research-survey center will collect the information for the mail and online questionnaires. A Forest Service researcher and collaborators at a cooperating university will analyze the data collected. Researchers are experienced in applied economic non-market valuation research and survey research methods.

The Forest Service, Bureau of Land Management, Bureau of Indian Affairs, National Park Service, Fish and Wildlife Service, as well as many state agencies with fire protection responsibilities will benefit from this information collection. At present, many of these agencies with fire protection responsibilities continue an ambitious and costly fuels reduction program for fire risk reduction and will benefit from public opinion on which treatments are most effective or desirable.

*Estimate of Annual Burden per Respondent:* 40 minutes.

*Type of Respondents:* Members of the public.

*Estimated Annual Number of Respondents:* 1,675.
