SUPPLEMENTARY INFORMATION:

Title: Field Study of Newer Generation Heavy Vehicle Automatic Emergency Braking (AEB) Systems.

OMB Control Number: Not assigned.

Type of Request: New Information Collection.

Abstract: The National Highway Traffic Safety Administration (NHTSA) is assessing the benefits of crash avoidance technologies for heavy trucks that include Automatic Emergency Braking (AEB) to prevent fatalities, injuries, and property damage in crashes involving heavy vehicles. Previous studies have investigated crash problem size, economic cost, and preliminary safety benefits concerning these systems. The underlying methods of these studies have included test track evaluations, objective test procedures, technology field demonstrations, and “naturalistic” studies. As both of the major AEB system suppliers have released new products in the second half of 2017, NHTSA is interested in the real world performance of these new systems, which are designed to address the shortcomings of the previous generation of AEB systems. These systems have been designed to offer improved threat detection and new features such as stationary object braking. Additionally, a new product called Detroit Assurance™ was released in 2016 for Freightliner trucks by Detroit Diesel Corporation. This system shares many features with the OnGuard and Wingman® products including advanced emergency braking (AEB), forward collision warnings (FCW), and adaptive cruise control (ACC).

Affected Public: Commercial vehicle drivers who are assigned a single, specific commercial vehicle that is equipped with the eligible technologies. Trucking fleets (approximately 7–10) will be contacted first to see if they have trucks equipped with the technologies and would be willing to have their drivers participate in the study.

Estimated Number of Respondents: 175, after compensating for potential drop-outs.

Frequency: Twice at the start of participation (demographic and initial CAS technology surveys), once at the

completion of participation approximately 3 months later.

Number of Responses: Full participation in the study will include 3 responses for a total of 92 questions

per participant, plus a consent form that will be reviewed prior to participation.

Estimated Total Annual Burden Hours: 110 minutes per respondent, including consent (204 hours total).

Estimated Total Annual Burden Cost:

TABLE 1—ESTIMATED TOTAL ANNUAL BURDEN COST

Instrument	Number of respondents ¹	Frequency of responses	Number of questions	Estimated individual burden (minutes)	Total estimated burden hours (hours)	Total annualize cost to respondents ²
Informed Consent Form	175	1	N/A	10	29	\$584.64
Demographic questionnaire	175	1	14	10	29	584.64
Initial CAS Technology Survey	175	1	33	25	73	1471.68
Final CAS Technology Survey	150	1	34	25	62.5	1260.00
TOTAL					193.5	\$ 3900.96

¹ The number of respondents in this table includes drop-out rates.

² Estimated based on the mean hourly rate nationwide for Heavy and Tractor-Trailer Truck Drivers of \$20.16 as reported in the May 2014 Occupational Employment and Wage Estimates, Bureau of Labor Statistics. http://www.bls.gov/oes/current/oes_nat.htm#35-0000.
