A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may neither conduct nor sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before November 13, 2018.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Primary Copper Smelters (40 CFR part 63, subpart QQQ) apply to each existing and new copper concentrate dryer, smelting furnace, slag cleaning vessel, copper converter department, and the entire group of fugitive emission sources located at a primary copper smelter facility that is a major source of hazardous air pollutant (HAP) emissions. Major sources of HAP emissions are sites that emit, or have the potential to emit, any single HAP at a rate of 9.07 megagrams (10 tons) or more per year or any combination of HAPs at a rate of 22.68 megagrams (25 tons) or more per year. New facilities include those that commenced construction or reconstruction after the date of proposal.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities:

Primary copper smelters.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart QQQ).

Estimated number of respondents: 3 (total).

Frequency of response: Initially and semiannually.

Total estimated burden: 9,440 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$999,000 (per year), which includes \$8,220 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the total estimated burden and cost as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes. The change in the respondent labor hour estimates occurred because of a change in assumption. This ICR assumes all existing respondents will have to familiarize with the regulatory requirements each year. There is also a decrease of 3 responses due to a correction in the number of sources that submit initial compliance determination reports.

Courtney Kerwin,

Director, Regulatory Support Division.

Abstract: Water quality standards (WQS) are provisions of state, tribal, or federal law which consist of designated uses for waters of the United States, water quality criteria to protect those uses, and antidegradation requirements. WQS are established to protect public health or welfare, protect and enhance the quality of water, and serve the purposes of the Clean Water Act (CWA). Such standards serve the dual purposes of establishing the water quality goals for water bodies and serving as a regulatory basis for establishing water quality-based treatment controls and strategies beyond technology-based treatment required by CWA sections 301 and 306. The WQS regulation establishes the framework for states and authorized tribes to adopt standards, and for the EPA to review and approve or disapprove them. For the purposes of this ICR, the WQS regulation (or "regulation") consists of 40 CFR part 131 (Water Quality Standards), and the portions of 40 CFR part 132 (Water Quality Guidance for the Great Lakes System) that are related to WQS. This ICR is for information collections needed to implement the WQS regulation, required to obtain or retain benefits (e.g., relaxed regulatory requirements) under the regulation, and to collect voluntary program information useful in administering WQS programs effectively and efficiently.

This ICR renews the WQS Regulation ICR, OMB Control Number 2040-0049, and consolidates the burden and costs associated with activities previously reported in the following two related ICRs: the WQS Regulatory Revisions ICR (OMB Control Number 2040-0286) and the Revised Interpretation of Clean Water Act Tribal Provision ICR (OMB Control Number 2040-0289) so that all WQS-related burden is covered by one ICR. Upon OMB approval, the remaining ICRs will be discontinued.

This ICR renewal and consolidation describes the estimated burden for states, authorized tribes and certain Great Lakes dischargers associated with the information collections related to: Implementation of the requirements of 40 CFR part 131 (WQS); implementation of the WQS portions of the 40 CFR part 132 (Water Quality Guidance for the Great Lakes System); tribal applications to be treated in a similar manner as a state (TAS) under CWA section 518(e);
