SUPPLEMENTARY INFORMATION:

I. Abstract

The NASA Contractor Financial Management Reporting System is the basic financial medium for contractor reporting of estimated and incurred costs, providing essential data for projecting costs and hours to ensure that contractor performance is realistically planned and supported by dollar and labor resources. The data provided by these reports is an integral part of the Agency's accrual accounting and cost based budgeting system. Respondents are reimbursed for associated cost to provide the information, per their negotiated contract price and associated terms of the contract. There are no "total capital and start-up" or "total operation and maintenance and purchase of services" costs associated since NASA policy requires that data reported is generated from the contractors' existing system. The contractors' internal management system shall be relied upon to the maximum extent possible. Comments submitted in response to this notice will be summarized and included in the request for OMB approval of this information collection. They will also become a matter of public record.

II. Methods of Collection

NASA collects this information electronically and that is the preferred manner, however information may also be collected via mail or fax.

NUCLEAR REGULATORY COMMISSION

Regulatory Guide 1.206—Applications for Nuclear Power Plants

AGENCY: Nuclear Regulatory Commission.

ACTION: Regulatory guide; issuance and withdrawal of interim staff guidance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Revision 1 to Regulatory Guide (RG), “Applications for Nuclear Power Plants.” This update of RG 1.206, “Combined License Applications for Nuclear Power Plants (LWR Edition),” dated June 2007, provides updated guidance for prospective applicants regarding the format and content of applications for new nuclear power plants. The revision reflects the lessons learned regarding the review of nuclear power plant applications since 2007. Two significant changes include: (1) The addition of new guidance to applicants for standard design certifications (DCs) and early site permits (ESPs), and (2) the removal of

detailed technical information for a combined license (COL) that was highly redundant with information in NUREG-0800, “Standard Review Plan for the Review of Safety Analysis Reports for Nuclear Power Plants: LWR Edition” (SRP). The NRC is additionally withdrawing four interim staff guidance documents due to the incorporation of their guidance into RG 1.206, Revision 1.

DATES: Revision 1 to RG 1.206 is available on October 12, 2018.

SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC is issuing a revision to an existing guide in the NRC’s “Regulatory Guide” series. This series was developed to describe and make available to the public information regarding methods that are acceptable to the NRC staff for implementing specific parts of the agency’s regulations, techniques that the NRC staff uses in evaluating specific issues or postulated events, and data that the NRC staff needs in its review of applications for permits and licenses. Revision 1 of RG 1.206 was issued with a temporary identification of Draft Regulatory Guide (DG)-1325.

RG 1.206, Revision 1, entitled “Applications for Nuclear Power Plants,” provides revised guidance for prospective applicants regarding the format and content of applications for new nuclear power plants under the provisions in part 52 of title 10 of the *Code of Federal Regulations* (10 CFR), “Licenses, Certifications, and Approvals for Nuclear Power Plants.”

RG 1.206, Revision 1, reflects changes based on lessons learned regarding the review of nuclear power plant DC, ESP, and COL applications under 10 CFR part 52, since the initial issuance of RG 1.206 in 2007. The scope of the revision has been expanded beyond COL applications to more explicitly address the current application process related to applications for DCs, ESPs, and limited work authorizations and the title has been changed accordingly. It provides more integrated guidance regarding the overall format and content for COL, DC, and ESP applications and additionally reflects the NRC staff’s position that, although the guidance therein is intended for applicability to power reactors with light-water reactor (LWR) technology, it will be generally applicable to other types of power reactors (e.g., non-LWRs).

RG 1.206, Revision 1, also satisfies the two remaining action items from the NRC’s April 2013, Lessons Learned Report (ADAMS Accession No. ML13059A240) by (1) revising RG 1.206 to reflect lessons learned and (2) incorporating DC/COL ISG11, “Finalizing Licensing Basis Information,” (ADAMS Accession No. ML092890623) in the revised RG 1.206. This revision also reflects the removal of detailed technical information on COL Safety Analysis Report content relative to the 2007 version of RG 1.206 that was highly redundant with information that is provided and maintained in the SRP. Under 10 CFR 52.17(a)(1)(xii), 10 CFR 52.47(a)(9), and 10 CFR 52.79(a)(41),
