#### SUPPLEMENTARY INFORMATION:

*Title:* FERC-917 (Electric Transmission Facilities) and FERC-918 (Standards for Business Practices and Communication Protocols for Public Utilities).

*OMB Control No.:* 1902-0233.

*Type of Request:* Three-year extension of the FERC-917 and FERC-918 information collection requirements with no changes to the current reporting requirements.

*Abstract:* On February 17, 2007, the Commission issued Order No. 890 to address and remedy opportunities for undue discrimination under the *pro forma* Open Access Transmission Tariff (OATT) adopted in 1996 by Order No. 888.<sup>1</sup> Through Order No. 890, the Commission:

(1) Adopted *pro forma* OATT provisions necessary to keep imbalance charges closely related to incremental costs;

(2) Increased nondiscriminatory access to the grid by requiring public utilities, working through the North American Electric Reliability Corporation (NERC), to develop consistent methodologies for available transfer capability (ATC) calculation and to publish those methodologies to increase transparency.

(3) Required an open, transparent, and coordinated transmission planning process thereby increasing the ability of customers to access new generating resources and promote efficient utilization of transmission.

(4) Gave the right to customers to request from transmission providers, studies addressing congestion and/or integration of new resource loads in areas of the transmission system where they have encountered transmission problems due to congestion or where they believe upgrades and other investments may be necessary to reduce congestion and to integrate new resources.

(5) Required both the transmission provider's merchant function and

network customers to include a statement with each application for network service or to designate a new network resource that attests, for each network resource identified, that the transmission customer owns or has committed to purchase the designated network resource and the designated network resource comports with the requirements for designated network resources. The network customer includes this attestation in the customer's comment section of the request when it confirms the request on the Open Access Same-Time Information System (OASIS).

(6) Required with regard to capacity reassignment that: (a) All sales or assignments of capacity be conducted through or otherwise posted on the transmission provider's OASIS on or before the date the reassigned service commences; (b) assignees of transmission capacity execute a service agreement prior to the date on which the reassigned service commences; and (c) transmission providers aggregate and summarize in an electric quarterly report the data contained in these service agreements.

(7) Adopted an operational penalties annual filing that provides information regarding the penalty revenue the transmission provider has received and distributed.

(8) Required creditworthiness information to be included in a transmission provider's OATT. Attachment L must specify the qualitative and quantitative criteria that the transmission provider uses to determine the level of secured and unsecured credit required.

The Commission required a NERC/NAESB<sup>2</sup> team to draft and review Order No. 890 reliability standards and business practices. The team was to solicit comment from each utility on developed standards and practices and utilities were to implement each, after Commission approval. Public utilities, working through NERC, were to revise reliability standards to require the exchange of data and coordination among transmission providers and, working through NAESB, were to develop complementary business practices.

Required OASIS postings included:

(1) Explanations for changes in ATC values;

(2) Capacity benefit margin (CBM) reevaluations and quarterly postings;

(3) OASIS metrics and accepted/denied requests;

<sup>2</sup> NAESB is the North American Energy Standards Board.
