such species or stocks for taking for subsistence purposes.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 et seq.) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (i.e., the issuance of an incidental harassment authorization) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in CE B4 of the Companion Manual for NOAA Administrative Order 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS determined that the issuance of this Authorization was categorically excluded from further NEPA review.

Endangered Species Act (ESA)

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA; 16 U.S.C. 1531 et seq.) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat.

No incidental take of ESA-listed species is authorized or expected to result from this activity. Therefore, NMFS has determined that consultation under Section 7 of the ESA is not required for this action.

Authorization

NMFS has issued an IHA to the Navy for the harassment of small numbers of bottlenose dolphins incidental to the Bravo Wharf recapitalization project in NSM, Jacksonville, FL, provided the previously mentioned mitigation, monitoring, and reporting requirements.

Dated: February 27, 2018.

Donna Wieting,
Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
RIN 0648–XG057
Endangered Species; File No. 21366

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that Margaret Lamont, Ph.D., U.S. Geological Survey, 7320 NW 71st St., Gainesville, FL 32653, has applied in due form for a permit to take green (Chelonia mydas), Kemp’s ridley (Lepidochelys kempii), loggerhead (Caretta caretta) and hawksbill (Eretmochelys imbricata) sea turtles for purposes of scientific research.

DATES: Written, telefaxed, or email comments must be received on or before April 4, 2018.

ADDRESSES: The application and related documents are available for review by selecting “Records Open for Public Comment” from the “Features” box on the Applications and Permits for Protected Species (APPS) home page, https://apps.nmfs.noaa.gov, and then selecting File No. 21366 from the list of available applications.

These documents are also available upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427–8401; fax (301) 713–0376.

Written comments on this application should be submitted to the Chief, Permits and Conservation Division, at the address listed above. Comments may also be submitted by facsimile to (301) 713–0376, or by email to NMFS.Pr1Comments@noaa.gov. Please include the File No. in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits and Conservation Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Amy Hapeman or Erin Markin, (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 et seq.) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

Dr. Lamont proposes to study green, Kemp’s ridley, loggerhead, and hawksbill sea turtles in the northern Gulf of Mexico. The objectives of the work are to (1) assess spatial habitat use by sea turtles, (2) define vital rates for juvenile turtles, and (3) examine impacts of cold stunning on turtle ecology. Up to 60 loggerhead, 210 green, 200 Kemp’s ridley and 10 hawksbill sea turtles annually would be captured by hand, dip net, tangle net, or strike net. Upon capture, researchers would examine, temporarily mark, measure, and biologically sample sea turtles before release. A subset of turtles would also receive up to two transmitters prior to release and may be manually tracked after release. The permit would be valid for up to 10 years from the date of issuance.

Dated: February 27, 2018.

Julia Harrison,
Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

RIN 0648–XF960

Determination of Overfishing or an Overfished Condition

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: This action serves as a notice that NMFS, on behalf of the Secretary of Commerce (Secretary), has found that the following stocks are subject to overfishing, overfished, or approaching an overfished condition. Gulf of Mexico gray triggerfish is now subject to overfishing. The southern Georges Bank/Mid-Atlantic stock of red hake and North Atlantic shortfin mako shark are now both subject to overfishing and overfished. Annually, up to 65 green sea turtles would be measured, weighed, and photographed and released. Annually, up to 65 green sea turtles also would be tagged (passive integrated transponder [PIT] and flipper), and biologically sampled (blood and tissue) and a subset would receive a transmitter (drill carapace or epoxy attachment) or undergo lavage prior to release. Loggerhead sea turtles would be tagged (PIT and flipper), biologically sampled (blood and tissue), photographed, measured, and weighed prior to release.

FOR FURTHER INFORMATION CONTACT: Erin Markin or Amy Hapeman, (301) 427–8401.

SUPPLEMENTARY INFORMATION:
The subject permit is requested under the authority of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 et seq.) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226).

Karen Holloway-Adkins proposes to continue to characterize the population of green and loggerhead sea turtles in nearshore reefs in Brevard County, Florida to determine: (1) Spatial and temporal distribution, (2) mean size, (3) foraging habitats, (4) body conditions and fibropapillomatosis ratios, (5) genetic origin, and (6) home-range, site fidelity, and residency times. Up to 80 green and six loggerhead sea turtles would be captured by hand or using dip or tangle nets, annually. All captured green sea turtles would be measured, weighed, and photographed and released. Annually, up to 65 green sea turtles also would be tagged (passive integrated transponder [PIT] and flipper), and biologically sampled (blood and tissue) and a subset would receive a transmitter (drill carapace or epoxy attachment) or undergo lavage prior to release. Loggerhead sea turtles would be tagged (PIT and flipper), biologically sampled (blood and tissue), photographed, measured, and weighed prior to release.
