Promoting Price Transparency

Through the Executive Order Promoting Healthcare Choice and Competition Across the United States (E.O. 13813, 82 FR 48385 (Oct. 12, 2017)), the President prioritized changing the rate of growth of healthcare spending to foster competition in healthcare markets, resulting in the American people receiving better value for their investment in healthcare. To support these goals, we are helping patients control their health data and make it easier to take their data with them as they move in and out of the healthcare system. This will let patients make informed choices about their care, leading to more competition and lower costs.

b. Summary of the Major Provisions

(1) Quality Payment Program Year 3

We believe the third year of the Quality Payment Program should build upon the foundation that has been established in the first 2 years, which provides a trajectory for clinicians moving to a performance-based payment system. This trajectory provides clinicians the ability to participate in the program through two pathways: MIPS and Advanced APMs.

(2) Payment Adjustments

As discussed in section VII.F.8. of this proposed rule, for the 2021 MIPS payment year and based on Advanced APM participation during the 2019 MIPS performance period, we estimate that between 160,000 and 215,000 clinicians will become Qualifying APM Participants (QP). As a QP, an eligible clinician is exempt from the MIPS reporting requirements and payment adjustment, and qualifies for a lump sum incentive payment based on 5 percent of their aggregate payment amounts for covered professional services for the prior year. We estimate that the total lump sum APM incentive payments will be approximately \$600–800 million for the 2021 Quality Payment Program payment year.

For MIPS, we have posted a blog that provides preliminary participation information for the first year of MIPS.¹⁴ However, due to time constraints, we are unable to incorporate and analyze the performance and participation data from the first year of MIPS for the estimates in this proposed rule. Therefore, under the policies proposed in this proposed rule, we based our estimates for the 2019 MIPS

performance period/2021 MIPS payment year on historical 2016 PQRS and Medicare and Medicaid EHR Incentive Program data. We estimate that approximately 650,000 clinicians would be MIPS eligible clinicians in the 2019 MIPS performance period. This number will depend on a number of factors, including the number of eligible clinicians excluded from MIPS based on their status as QPs or Partial QPs, the number that report as groups, and the number that elect to opt-in to MIPS. In the 2021 MIPS payment year, MIPS payment adjustments, which only apply to covered professional services, will be applied based on MIPS eligible clinicians' performance on specified measures and activities within four integrated performance categories. We estimate that MIPS payment adjustments will be approximately equally distributed between negative MIPS payment adjustments (\$372 million) and positive MIPS payment adjustments (\$372 million) to MIPS eligible clinicians, as required by the statute to ensure budget neutrality. Positive MIPS payment adjustments will also include up to an additional \$500 million for exceptional performance to MIPS eligible clinicians whose final score meets or exceeds the proposed additional performance threshold of 80 points. However, the distribution will change based on the final population of MIPS eligible clinicians for the 2021 MIPS payment year and the distribution of final scores under the program. We anticipate that we will be able to update these estimates with the data from the first year of MIPS in the CY 2019 Quality Payment Program final rule.

2. Definitions

At § 414.1305, subpart O—

- We define the following terms:
 - ++ Ambulatory Surgical Center (ASC)-based MIPS eligible clinician.
 - ++ Collection type.
 - ++ Health IT vendor.
 - ++ MIPS determination period.
 - ++ Submission type.
 - ++ Submitter type.
 - ++ Third party intermediary.
- We revise the definitions of the following terms:
 - ++ High priority measure.
 - ++ Hospital-based MIPS eligible clinician
 - ++ Low-volume threshold.
 - ++ MIPS eligible clinician.
 - ++ Non-patient facing MIPS eligible clinician.
 - ++ Qualified Clinical Data Registry (QCDR).
 - ++ Qualifying APM Participant (QP).
 - ++ Small practices.

These terms and definitions are discussed in detail in relevant sections of this proposed rule.

3. MIPS Program Details

a. MIPS Eligible Clinicians

Under § 414.1305, a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, is defined as any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); and a group that includes such clinicians. Section 1848(q)(1)(C)(II) of the Act provides the Secretary with discretion, beginning with the 2021 MIPS payment year, to specify additional eligible clinicians (as defined in section 1848(k)(3)(B) of the Act) as MIPS eligible clinicians. Such clinicians may include physical therapists, occupational therapists, or qualified speech-language pathologists; qualified audiologists (as defined in section 1861(ll)(3)(B) of the Act); certified nurse-midwives (as defined in section 1861(gg)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); clinical psychologists (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitians or nutrition professionals.

We received feedback from non-physician associations representing each type of additional eligible clinician through listening sessions and meetings with various stakeholder entities and through public comments discussed in the CY 2017 Quality Payment Program final rule (81 FR 77038). Commenters generally supported the specification of such clinicians as MIPS eligible clinicians beginning with the 2021 MIPS payment year.

To assess whether these additional eligible clinicians could successfully participate in MIPS, we evaluated whether there would be sufficient measures and activities applicable and available for each of the additional eligible clinician types. We focused our analysis on the quality and improvement activities performance categories because these performance categories require submission of data. We did not focus on the Promoting Interoperability performance category because there is extensive analysis regarding who can participate under the current exclusion criteria. In addition,

¹⁴ <https://blog.cms.gov/2018/05/31/quality-payment-program-exceeds-year-1-participation-goal/>.

in section III.H.3.i.(2)(b) of this proposed rule, we are proposing to automatically assign a zero percent weighting for the Promoting Interoperability performance category for these new types of MIPS eligible clinicians. In addition, we did not focus on the cost performance category because we are only able to assess cost performance for a subset of eligible clinicians—those who are currently eligible as a result of not meeting any of the current exclusion criteria. So the impact of the cost performance category for these additional eligible clinicians will continue to be considered but is currently not a decisive factor. From our analysis, we found that improvement activities would generally be applicable and available for each of the additional eligible clinician types. However, for the quality performance category, we found that not all of the additional eligible clinician types would have sufficient MIPS quality measures applicable and available. As discussed in section III.H.3.h.(2)(b)(iii) of this proposed rule, for the quality performance category, we are proposing to remove several MIPS quality measures. If those measures are finalized for removal, we anticipate that qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or nutrition professionals would each have less than 6 MIPS quality measures applicable and available to them. However, if the quality measures are not finalized for removal, we will reassess whether these eligible clinicians would have an adequate amount of MIPS quality measures available to them. If we find that these additional clinicians do have at least 6 MIPS quality measures available to them, then we propose to include them in the MIPS eligible clinician definition. We are focusing on the quality performance category because as discussed above, the quality and improvement activities performance categories require submission of data. We believe there would generally be applicable and available improvement activities for each of the additional eligible clinician types, but that not all of the additional eligible clinician types would have sufficient MIPS quality measures applicable and available if the proposed MIPS quality measures are removed from the program. We did find QCDR measures approved for the CY 2018 performance period that are either high priority and/or outcome measures that, if approved for the CY 2019 performance period, may be applicable to these additional eligible clinicians. However, this would necessitate that

they utilize a QCDR in order to be successful in MIPS.

Further, we have heard some concerns from the non-physician associations, through written correspondence, that since their clinicians would be joining the program 2 years after its inception, we should consider several ramp-up policies in order to facilitate an efficient integration of these clinicians into MIPS. We note that the MIPS program is still ramping up, and we will continue to increase the performance threshold to ensure a gradual and incremental transition to the performance threshold until Quality Payment Program Year 6. Therefore, if specified as MIPS eligible clinicians beginning with the 2021 MIPS payment year, the additional eligible clinicians would have 4 years in the program in order to ramp up. Conversely, if specified as MIPS eligible clinicians beginning in a future year, they would be afforded less time to ramp up the closer the program gets to Quality Payment Program Year 6.

Therefore, we request comments on our proposal to amend § 414.1305 to modify the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, clinical social worker (as defined in section 1861(hh)(1) of the Act), and clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and a group that includes such clinicians. Alternatively, we propose that if the quality measures proposed for removal are not finalized, then we would include additional eligible clinician types in the definition of a MIPS eligible clinician beginning with the 2021 MIPS payment year (specifically, qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or nutrition professionals), provided that we determine that each applicable eligible clinician type would have at least 6 MIPS quality measures available to them. In addition, we are requesting comments on: (1) Specifying qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or

nutrition professionals as MIPS eligible clinicians beginning with the 2021 MIPS payment year; and (2) delaying the specification of one or more additional eligible clinician types as MIPS eligible clinicians until a future MIPS payment year.

b. MIPS Determination Period

Currently, MIPS uses various determination periods to identify certain MIPS eligible clinicians for consideration for certain applicable policies. For example, the low-volume threshold, non-patient facing, small practice, hospital-based, and ambulatory surgical center (ASC)-based determinations are on the same timeline with slight differences in the claims run-out policies, whereas the facility-based determinations has a slightly different determination period. The virtual group eligibility determination requires a separate election process. We are proposing in this rule to add a virtual group eligibility determination period beginning in CY 2020 as discussed in section III.H.3.f.(2)(a) of this proposed rule. In addition, the rural and health professional shortage area (HPSA) determinations do not utilize a determination period.

Under § 414.1305, the low-volume threshold determination period is described as a 24-month assessment period consisting of an initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period, and a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2020 MIPS payment year and future years, each segment of the low-volume threshold determination period includes a 30-day claims run out.

Under § 414.1305, the non-patient facing determination period is described as a 24-month assessment period consisting of an initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period and a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance

period through the first 8 months of the calendar year performance period. An individual eligible MIPS clinician, group, or virtual group that is identified as non-patient facing during the initial 12-month segment will continue to be considered non-patient facing for the applicable year regardless of the results of the second 12-month segment analysis. For the 2020 MIPS payment year and future years, each segment of the non-patient facing determination period includes a 30-day claims run out.

In the CY 2018 Quality Payment Program final rule (82 FR 53581), we finalized that for the small practice size determination period, we would utilize a 12-month assessment period, which consists of an analysis of claims data that spans from the last 4 months of a calendar year 2 years prior to the performance period followed by the first 8 months of the next calendar year and includes a 30-day claims run out.

In the CY 2017 Quality Payment Program final rule (81 FR 77238 through 77240), we finalized that to identify a MIPS eligible clinician as hospital-based we would use claims with dates of service between September 1 of the calendar year 2 years preceding the performance period through August 31 of the calendar year preceding the performance period, but in the event it is not operationally feasible to use claims from this time period, we would use a 12-month period as close as practicable to this time period.

In the CY 2018 Quality Payment Program final rule (82 FR 53684 through 53685), we finalized that to identify a MIPS eligible clinician as ASC-based, we would use claims with dates of service between September 1 of the calendar year 2 years preceding the performance period through August 31 of the calendar year preceding the performance period, but in the event it is not operationally feasible to use claims from this time period, we would use a 12-month period as close as practicable to this time period.

In the CY 2018 Quality Payment Program final rule (82 FR 53760), we discussed, but did not finalize, our proposal or the alternative option for how an individual clinician or group would elect to use and be identified as using facility-based measurement for the MIPS program. Because we were not offering facility-based measurement until the 2019 MIPS performance period, we did not need to finalize either of these for the 2018 MIPS performance period. However, in section III.H.3.i.(1)(d) of this proposed rule, we are proposing to amend § 414.1380(e)(2)(i)(A) to specify a criterion for a clinician to be eligible for

facility-based measurement. Specifically, that is, the clinician furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, or emergency room setting based on claims for a 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period with a 30-days claims run out. We are not proposing to utilize the MIPS determination period for purposes of the facility-based determination because for the facility-based determination, we are only using the first segment of the MIPS determination period. We are using the first segment because the performance period for measures in the hospital value-based purchasing program overlapped in part with that determination period. If we were to use the second segment, we could not be assured that the clinician actually worked in the hospital on which their MIPS score would be based during that time. We believe this approach provides clarity and is a cleaner than providing a special exception for the facility-based determination in the MIPS determination period for the second segment. We refer readers to section III.H.3.i.(1)(d) for further details on the facility-based determinations and the time periods that are applicable to those determinations.

In the CY 2018 Quality Payment Program final rule (82 FR 53602 through 53604), we finalized that for the virtual group eligibility determination period, we would utilize an analysis of claims data during an assessment period of up to 5 months that would begin on July 1 and end as late as November 30 of the calendar year prior to the applicable performance period and include a 30-day claims run out. To capture a real-time representation of TIN size, we finalized that we would analyze up to 5 months of claims data on a rolling basis, in which virtual group eligibility determinations for each TIN would be updated and made available monthly. We noted that an eligibility determination regarding TIN size is based on a relative point in time within the 5-month virtual group eligibility determination period, and not made at the end of such 5-month determination period. Beginning with the 2019 performance period, we are proposing to amend § 414.1315(c)(1) to establish a

virtual group eligibility determination period to align with the first segment of the MIPS determination period, which includes an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. We refer readers to section III.H.3.f.(2)(a) for further details on this proposal.

In addition, we have established other special status determinations, including rural area and HPSA. Rural area is defined at § 414.1305 as a ZIP code designated as rural, using the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data set available. HPSAs are defined at § 414.1305 as areas designated under section 332(a)(1)(A) of the Public Health Service Act.

We understand that the current use of various MIPS determination periods is complex and causes confusion. Therefore, beginning with the 2021 MIPS payment year, we propose to consolidate several of these policies into a single MIPS determination period that would be used for purposes of the low-volume threshold and to identify MIPS eligible clinicians as non-patient facing, a small practice, hospital-based, and ASC-based, as applicable. We are not proposing to include the facility-based or virtual group eligibility determination periods or the rural and HPSA determinations in the MIPS determination period, as they each require a different process or timeline that does not align with the other determination periods, or do not utilize determination periods. We invite public comments on the possibility of incorporating these determinations into the MIPS determination period in the future.

There are several reasons we believe a single MIPS determination period for most of the eligibility criteria is the most appropriate. First, it would simplify the program by aligning most of the MIPS eligibility determination periods. Second, it would continue to allow us to provide eligibility determinations as close to the beginning of the performance period as feasible. Third, we believe a timeframe that aligns with the fiscal year is easier to communicate and more straightforward to understand compared to the current determination periods. Finally, it would allow us to extend our data analysis an additional 30 days.

It is important to note that during the final 3 months of the calendar year in

which the performance period occurs, in general, we do not believe it would be feasible for many MIPS eligible clinicians who join an existing practice (existing TIN) or join a newly formed practice (new TIN) to participate in MIPS as individuals. We refer readers to section III.H.3.i.(2)(b) of this proposed rule for more information on the proposed reweighting policies for MIPS eligible clinicians who join an existing practice or who join a newly formed practice during this timeframe.

We request comments on our proposal that beginning with the 2021 MIPS payment year, the MIPS determination period would be a 24-month assessment period including a two-segment analysis of claims data consisting of: (1) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period; and (2) a second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs. The first segment would include a 30-day claims run out. The second segment would not include a claims run out, but would include quarterly snapshots for informational use only, if technically feasible. For example, a clinician could use the quarterly snapshots to understand their eligibility status between segments. Specifically, we believe the quarterly snapshots would be helpful for new TIN/NPIs and TINs created between the first segment and the second segment allowing them to see their preliminary eligibility status sooner. Without the quarterly snapshots, these clinicians would not have any indication of their eligibility status until just before the submission period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold, or a MIPS eligible clinician that is identified as non-patient facing, a small practice, hospital-based, or ASC-based, as applicable, during the first segment would continue to be identified as such for the applicable MIPS payment year regardless of the second segment. For example, for the 2021 MIPS payment year, the first segment would be October 1, 2017 through September 30, 2018, and the second segment would be October 1, 2018 through September 30, 2019. However, based on our experience with the Quality Payment Program, we believe that some eligible clinicians, whose TIN or TIN/NPIs are identified as

eligible during the first segment and do not exist in the second segment, are no longer utilizing these same TIN or TIN/NPI combinations. Therefore, because those TIN or TIN/NPIs would not exceed the low-volume threshold in the second segment, they would no longer be eligible for MIPS. For example, in the 2019 performance period a clinician exceeded the low-volume threshold during the first segment of the determination period (data from the end of CY 2017 to early 2018) under one TIN; then in CY 2019 the clinician switches practices under a new TIN and during segment two of the determination period. Therefore, it is determined that the clinician is not eligible (based on CY 2019 data) under either TIN. This clinician would not be eligible to participate in MIPS based on either segment of the determination period because the TIN that was assessed for the first segment of the determination period no longer exists. So there are no charges or services that would be available to assess in the second segment for that TIN and the new TIN assessed during the second segment was not eligible. In this scenario, though the clinician exceeded the low-volume threshold criteria initially, the clinician is not required to submit any data based on TIN eligibility determinations. However, it is important to note that if a TIN or TIN/NPI did not exist in the first segment but does exist in the second segment, these eligible clinicians could be eligible for MIPS. For example, the eligible clinician may not find their TIN or TIN/NPI in the Quality Payment Program lookup tool but may still be eligible if they exceed the low-volume threshold in the second segment. We proposed to incorporate this policy into our proposed definition of MIPS determination period at § 414.1305. We also request comments on our proposals to define MIPS determination period at § 414.1305 and modify the definitions of low-volume threshold, non-patient facing, a small practice, hospital-based, and ASC-based at § 414.1305 to incorporate references to the MIPS determination period.

c. Low-Volume Threshold

(1) Overview

Section 1848(q)(1)(C)(iv) of the Act, as amended by section 51003(a)(1)(A)(ii) of the Bipartisan Budget Act of 2018, provides that, for performance periods beginning on or after January 1, 2018, the low-volume threshold selected by the Secretary may include one or more or a combination of the following (as determined by the Secretary): (1) The

minimum number of part B-enrolled individuals who are furnished covered professional services (as defined in section 1848(k)(3)(A) of the Act) by the eligible clinician for the performance period involved; (2) the minimum number of covered professional services furnished to part B-enrolled individuals by such clinician for such performance period; and (3) the minimum amount of allowed charges for covered professional services billed by such clinician for such performance period.

Under § 414.1310(b)(1)(iii), for a year, eligible clinicians who do not exceed the low-volume threshold for the performance period with respect to a year are excluded from MIPS. Under § 414.1305, the low-volume threshold is defined as, for the 2019 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume threshold determination period, has Medicare Part B allowed charges less than or equal to \$30,000 or provides care for 100 or fewer Part B-enrolled Medicare beneficiaries. In addition, for the 2020 MIPS payment year and future years, the low-volume threshold is defined as the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume threshold determination period, has Medicare Part B allowed charges less than or equal to \$90,000 or provides care for 200 or fewer Part B-enrolled Medicare beneficiaries. The low-volume threshold determination period is a 24-month assessment period consisting of: (1) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period; and (2) a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the low-volume threshold determination period includes a 60-day claims run out. For the 2020 MIPS payment year, each segment of the low-volume threshold determination period includes a 30-day claims run out.

(2) Proposed Amendments To Comply With the Bipartisan Budget Act of 2018

In this proposed rule, we are proposing to amend § 414.1305 to modify the definition of low-volume threshold in accordance with section 1848(q)(1)(C)(iv) of the Act, as amended by section 51003(a)(1)(A)(ii) of the Bipartisan Budget Act of 2018. Specifically, we request comments on our proposals that for the 2020 MIPS payment year, we will utilize the minimum number (200 patients) of Part B-enrolled individuals who are furnished covered professional services by the eligible clinician or group during the low-volume threshold determination period or the minimum amount (\$90,000) of allowed charges for covered professional services to Part B-enrolled individuals by the eligible clinician or group during the low-volume threshold determination period.

(3) MIPS Program Details

We request comments on our proposal to modify § 414.1310 to specify in paragraph (a), Program Implementation, that except as specified in paragraph (b), MIPS applies to payments for covered professional services furnished by MIPS eligible clinicians on or after January 1, 2019. We also request comments on our proposal to revise § 414.1310(b)(1)(ii) to specify that for a year, a MIPS eligible clinician does not include an eligible clinician that is a Partial Qualifying APM Participant (as defined in § 414.1305) and does not elect, as discussed in section III.H.4.e. of this proposed rule, to report on applicable measures and activities under MIPS. Finally, we request comments on our proposal to revise § 414.1310(d) to specify that, in no case will a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) apply to payments for covered professional services furnished during a year by eligible clinicians (including those described in paragraphs (b) and (c) of this section) who are not MIPS eligible clinicians, including those who voluntarily report on applicable measures and activities under MIPS.

(4) Proposed Addition of Low-Volume Threshold Criterion Based on Number of Covered Professional Services

In the CY 2018 Quality Payment Program final rule (82 FR 53591), we received several comments in response to the proposed rule regarding adding a third criterion of “items and services” for defining the low-volume threshold. We refer readers to that rule for further details.

For the 2021 MIPS payment year and future years, we are proposing to add one additional criterion to the low-volume threshold determination—the minimum number of covered professional services furnished to Part B-enrolled individuals by the clinician. Specifically, we request comments on our proposal, for the 2021 MIPS payment year and future years, that eligible clinicians or groups who meet at least one of the following three criteria during the MIPS determination period would not exceed the low-volume threshold: (1) Those who have allowed charges for covered professional services less than or equal to \$90,000; (2) those who provide covered professional services to 200 or fewer Part B-enrolled individuals; or (3) those who provide 200 or fewer covered professional services to Part B-enrolled individuals.

For the third criterion, we are proposing to set the threshold at 200 or fewer covered professional services furnished to Part B-enrolled individuals for several reasons. First, in the CY 2018 Quality Payment Program final rule (82 FR 53589 through 53590), while we received positive feedback from stakeholders on the increased low-volume threshold, we also heard from some stakeholders that they would like to participate in the program. Second, setting the third criterion at 200 or fewer covered professional services allows us to ensure that a significant number of eligible clinicians have the ability to opt-in if they wish to participate in MIPS. Finally, when we were considering where to set the low-volume threshold for covered professional services, we examined two options: 100 or 200 covered professional services. For 100 covered professional services, there is some historical precedent. In the CY 2017 Quality Payment Program final rule (81 FR 77062), we finalized a low-volume threshold that excluded individual eligible clinicians or groups that have Medicare Part B allowed charges less than \$30,000 or that provide care for 100 or fewer Part B-enrolled Medicare beneficiaries; we believe the latter criterion is comparable to 100 covered professional services. Conversely for 200 covered professional services, in the CY 2018 Quality Payment Program final rule comment period (82 FR 53588), we discussed that based on our data analysis, excluding individual eligible clinicians or groups that have Medicare Part B allowed charges less than or equal to \$90,000 or that provide care for 200 or fewer Part B-enrolled Medicare beneficiaries decreased the percentage

of MIPS eligible clinicians that come from small practices. In addition, in the CY 2018 Quality Payment final rule (82 FR 53955), we codified at § 414.1380(b)(1)(iv) a minimum case requirements for quality measures are 20 cases which both services threshold considerations (100 or 200) exceed and at § 414.1380(b)(1)(v) a minimum case requirements for the all-cause hospital readmission measure is 200 cases, which only the 200 services threshold consideration exceeds. We believe that setting a threshold of 200 services for the third criterion strikes the appropriate balance between allowing a significant number of eligible clinicians the ability to opt-in (as described below) to MIPS and consistency with the previously established low-volume threshold criteria. In section VII.F.8.b. of this proposed rule, we estimate no additional clinicians would be excluded if we add the third criterion because a clinician that cares for at least 200 beneficiaries would have at least 100 or 200 services; however, we estimate 42,025 clinicians would opt-in with the low-volume threshold at 200 services, as compared to 19,621 clinicians if we did not add the third criterion. If we set the third criterion at 100 services, then we estimate 50,260 clinicians would opt-in.

(5) Low-Volume Threshold Opt-In

In the CY 2018 Quality Payment Program final rule (82 FR 53589), we proposed the option to opt-in to MIPS participation if clinicians might otherwise be excluded under the low-volume threshold. We received general support from comments received in the CY 2018 Quality Payment Program final rule (82 FR 53589). However, we did not finalize the proposal for the 2019 MIPS performance period. We were concerned that we would not be able to operationalize this policy in a low-burden manner to MIPS eligible clinicians as it was proposed.

After consideration of operational and user experience implications of an opt-in policy, we are proposing an approach we believe can be implemented in a way that provides the least burden to clinicians. We are proposing to modify § 414.1310(b)(1)(iii) to provide that beginning with the 2021 MIPS payment year, if an eligible clinician or group meets or exceeds at least one, but not all, of the low-volume threshold determinations, including as defined by dollar amount (less than or equal to \$90,000) or number of beneficiaries (200 or fewer), or number of covered professional services (200 or fewer), then such eligible individual or group may choose to opt-in to MIPS.

This policy would apply to individual eligible clinicians and groups who exceed at least one, but not all, of the low-volume threshold criteria and would otherwise be excluded from MIPS participation as a result of the low-volume threshold. We believe that it would be beneficial to provide, to the extent feasible, such individual eligible clinicians and groups with the ability to opt-in to MIPS. Conversely, this policy would not apply to individual eligible clinicians and groups who exceed all of the low-volume threshold criteria, who unless otherwise excluded, are required to participate in MIPS. In addition, this policy would not apply to individual eligible clinicians and groups who do not exceed any of the low-volume threshold criteria, who would be excluded from MIPS participation without the ability to opt-in to MIPS. While we believe we are proposing the appropriate balance for the low-volume threshold elements, we request comments on other low-volume threshold criteria and supporting justification for the recommended criteria.

Under the proposed policies, we estimate clinician eligibility based on the following (we refer readers to the regulatory impact analysis in section VII.F.8.b. of this proposed rule for further details on our assumptions): (1) Eligible because they exceed all three criteria of the low-volume threshold and are not otherwise excluded (estimated 608,000 based on our assumptions of who did individual and group reporting); (2) eligible because they exceed at least one, but not all, of the low-volume threshold criteria and elect to opt-in (estimated 42,000 for a total MIPS eligible clinician population of approximately 650,000); (3) potentially eligible if they either did group reporting or elected to opt-in¹⁵ (estimated 483,000); (4) excluded because they do not exceed any of the low-volume threshold criteria (estimated 88,000); and (5) excluded due to non-eligible specialty, newly

enrolled, or QP status (estimated 302,000).

We are proposing that applicable eligible clinicians who meet one or two, but not all, of the criteria to opt-in and are interested in participating in MIPS would be required to make a definitive choice to either opt-in to participate in MIPS or choose to voluntarily report before data submission. If they did not want to participate in MIPS, they would not be required to do anything and would be excluded from MIPS under the low-volume threshold. For those who did want to participate in MIPS, we considered the option of allowing the submission of data to signal that the clinician is choosing to participate in MIPS. However, we anticipated that some clinicians who utilize the quality data code (QDC) claims submission type may have their systems coded to automatically append QDCs on claims for eligible patients. We were concerned that they could submit a QDC code and inadvertently opt-in when that was not their intention.

For individual eligible clinicians and groups to make an election to opt-in or voluntarily report to MIPS, they would make an election via the Quality Payment Program portal by logging into their account and simply selecting either the option to opt-in (positive, neutral, or negative MIPS adjustment) or to remain excluded and voluntarily report (no MIPS adjustment). Once the eligible clinician has elected to participate in MIPS, the decision to opt-in to MIPS would be irrevocable and could not be changed for the applicable performance period. Clinicians who opt-in would be subject to the MIPS payment adjustment during the applicable MIPS payment year. Clinicians who do not decide to opt-in to MIPS would remain excluded and may choose to voluntarily report. Such clinicians would not receive a MIPS payment adjustment factor. To assist commenters in providing pertinent comments, we have developed a website that provides design examples of the

different approaches to MIPS participation in CY 2019. The website uses wireframe (schematic) drawings to illustrate the three different approaches to MIPS participation: Voluntary reporting to MIPS, opt-in reporting to MIPS, and required to participate in MIPS. We refer readers to the Quality Payment Program at qpp.cms.gov/design-examples to review these wireframe drawings. The website will provide specific matrices illustrating potential stakeholder experiences when opting-in or voluntarily reporting.

It should be noted that the option to opt-in to participate in the MIPS as a result of an individual eligible clinician or group exceeding at least one, but not all, of the low-volume threshold elements differs from the option to voluntarily report to the MIPS as established at § 414.1310(b)(2) and (d). Individual eligible clinicians and groups opting-in to participate in MIPS would be considered MIPS eligible clinicians, and therefore subject to the MIPS payment adjustment factor; whereas, individual eligible clinicians and groups voluntarily reporting measures and activities for the MIPS are not considered MIPS eligible clinicians, and therefore not subject to the MIPS payment adjustment factor. MIPS eligible clinicians and groups that made an election to opt-in would be able to participate in MIPS at the individual, group, or virtual group level for that performance period. Eligible clinicians and groups that are excluded from MIPS, but voluntarily report, are able to report measures and activities at the individual or group level; however, such eligible clinicians and groups are not able to voluntarily report for MIPS at the virtual group level.

In Table 28, we are providing possible scenarios regarding which eligible clinicians may be able to opt-in to MIPS depending upon their beneficiary count, dollars, and covered professional services if the proposed opt-in policy was finalized.

TABLE 28—LOW-VOLUME THRESHOLD DETERMINATION OPT-IN SCENARIOS

Beneficiaries	Dollars	Covered professional services	Eligible for opt-in
≤200	≤90K	≤200	Excluded not eligible to Opt-in.
≤200	≤90K	>200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
≤200	>90K	≤200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
>200	≤90K	>200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
>200	>90K	>200	Not eligible to Opt-in, Required to Participate.

¹⁵ A clinician may be in a group that we estimated would not elect group reporting, however, the group would exceed the low-volume threshold on all three criteria if the group elected group

reporting. Similarly, an individual or group may exceed at least one but not all of the low-volume threshold criteria, but we estimated the clinician or group would not elect to opt-in to MIPS. In both

cases, these clinicians could be eligible for MIPS if the group or individual makes choices that differ from our assumptions.

We recognize that the low-volume threshold opt-in option may expand MIPS participation at the individual, group, and virtual group levels. For solo practitioners and groups with 10 or fewer eligible clinicians (including at least one MIPS eligible clinician) that exceed at least one, but not all, of the elements of the low-volume threshold and are interested in participating in MIPS via the opt-in and doing so as part of a virtual group, such solo practitioners and groups would need to make an election to opt-in to participate in the MIPS. Therefore, beginning with the 2021 MIPS payment year, we are proposing that a virtual group election would constitute a low-volume threshold opt-in for any prospective member of the virtual group (solo practitioner or group) that exceeds at least one, but not all, of the low-volume threshold criteria. As a result of the virtual group election, any such solo practitioner or group would be treated as a MIPS eligible clinician for the applicable MIPS payment year.

During the virtual group election process, the official virtual group representative of a virtual group submits an election to participate in the MIPS as a virtual group to CMS prior to the start of a performance period (82 FR 53601 through 53604). The submission of a virtual group election includes TIN and NPI information, which is the identification of TINs composing the virtual group and each member of the virtual group. As part of a virtual group election, the virtual group representative is required to confirm through acknowledgement that a formal written agreement is in place between each member of the virtual group (82 FR 53604). A virtual group may not include a solo practitioner or group as part of a virtual group unless an authorized person of the TIN has executed a formal written agreement.

For a solo practitioner or group that exceeds only one or two elements of the low-volume threshold, an election to opt-in to participate in the MIPS as part of a virtual group would be represented by being identified as a TIN that is included in the submission of a virtual group election. Such solo practitioners and groups opting-in to participate in the MIPS as part of a virtual group would not need to independently make a separate election to opt-in to participate in the MIPS. It should be noted that being identified as a TIN in a submitted virtual group election, any such TIN (represented as a solo practitioner or group) that exceeds at least one, but not all, of the low-volume threshold elements during the MIPS determination period is signifying an

election to opt-in to participate in MIPS as part of a virtual group and recognizing that a MIPS payment adjustment factor would be applied to any such TIN based on the final score of the virtual group. For a virtual group election that includes a TIN determined to exceed at least one, but not all, of the low-volume threshold elements during the MIPS determination period, such election would have a precedence over the eligibility determination made during the MIPS determination period pertaining to the low-volume threshold and as a result, any such TIN would be considered MIPS eligible and subject to a MIPS payment adjustment factor due the virtual group election. Furthermore, we note that a virtual group election would constitute an election to opt-in to participate in MIPS and any low-volume threshold determinations that result from segment 2 data analysis of the MIPS determination period would not have any bearing on the virtual group election. Thus, a TIN included as part of a virtual group election that submitted prior to the start of the applicable performance period and does not exceed at least one element of the low-volume threshold during segment 2 of the MIPS determination period, such TIN would be considered MIPS eligible and a virtual group participant by virtue of the virtual group's election to participate in MIPS as a virtual group that was made prior to the applicable performance period. For virtual groups with a composition that may only consist of solo practitioners and groups that exceed at least one, but not all of the low-volume threshold elements, such virtual groups are encouraged to form a virtual group that would include a sufficient number of TINs to ensure that such virtual groups are able to meet program requirements such as case minimum criteria that would allow measures to be scored. For example, if a virtual group does not have a sufficient number of cases to report for quality measures (minimum of 20 cases per episode-based measures), a virtual group would not be scored on such measures (81 FR 77175).

We further note that for APM Entities in MIPS APMs, which meet one or two, but not all, of the low-volume threshold elements to opt-in and are interested in participating in MIPS under the APM scoring standard, would be required to make a definitive choice at the APM Entity level to opt-in to participate in MIPS. For such APM Entities to make an election to opt-in to MIPS, they would make an election via a similar process that individual eligible clinicians and groups will use to make

an election to opt-in. Once the APM Entity has elected to participate in MIPS, the decision to opt-in to MIPS is irrevocable and cannot be changed for the performance period in which the data was submitted. Eligible clinicians in APM Entities in MIPS APMs that opt-in would be subject to the MIPS payment adjustment factor. APM Entities in MIPS APMs that do not decide to opt-in to MIPS cannot voluntarily report.

Additionally, we are proposing for applicable eligible clinicians participating in a MIPS APM, whose APM Entity meets one or two, but not all, of the low-volume threshold elements rendering the option to opt-in and does not decide to opt-in to MIPS, that if their TIN or virtual group does elect to opt-in, it does not mean that the eligible clinician is opting-in on his/her own behalf, or on behalf of the APM Entity, but that the eligible clinician is still excluded from MIPS participation as part of the APM Entity even though such eligible clinician is part of a TIN or virtual group. This is necessary because low-volume threshold determinations are currently conducted at the APM Entity level for all applicable eligible clinicians in MIPS APMs, and therefore, the low-volume threshold opt-in option should similarly be executed at the APM Entity level rather than at the individual eligible clinician, TIN, or virtual group level. Thus, in order for an APM Entity to opt-in to participate in MIPS at the APM Entity level and for eligible clinicians within such APM Entity to be subject to the MIPS payment adjustment factor, an election would need to be made at the APM Entity level in a similar process that individual eligible clinicians and groups would use to make an election to opt-in to participate in MIPS.

We request comments on our proposals: (1) To modify § 414.1305 for the low-volume threshold definition at (3) to specify that, beginning with the 2021 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals; (2) that a clinician who is eligible to opt-in would be required to make an affirmative election to opt-in to participate in MIPS, elect to be a voluntary reporter, or by not submitting any data the clinician is choosing to not report; and (3) to modify

§ 414.1310(b)(1)(iii) under Applicability to specify exclusions as follows: Beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to report on applicable measures and activities under MIPS, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For APM Entity groups in MIPS APMs, only the APM Entity group election can result in the APM Entity group being treated as MIPS eligible clinicians for the applicable payment year.

(6) Part B Services Subject to MIPS Payment Adjustment

Section 1848(q)(6)(E) of the Act, as amended by section 51003(a)(1)(E) of the Bipartisan Budget Act of 2018, provides that the MIPS adjustment factor and, as applicable, the additional MIPS adjustment factor, apply to the amount otherwise paid under Part B with respect to covered professional services (as defined in subsection (k)(3)(A) of the Act) furnished by a MIPS eligible clinician during a year (beginning with 2019) and with respect to the MIPS eligible clinician for such year.

In this proposed rule, we are requesting comments on our proposal to amend § 414.1405(e) to modify the application of both the MIPS adjustment factor and, if applicable, the additional MIPS adjustment factor so that beginning with the 2019 MIPS payment year, these adjustment factors will apply to Part B payments for covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by the MIPS eligible clinician during the year. We are making this change beginning with the first MIPS payment year and note that these adjustment factors will not apply to Part B drugs and other items furnished by a MIPS eligible clinician, but will apply to covered professional services furnished by a MIPS eligible clinician. We refer readers to section III.H.3.j. of this proposed rule for further details on this modification.

d. Partial QPs

(1) Partial QP Elections Within Virtual Groups

In the CY 2017 Quality Payment Program final rule, we finalized that following a determination that eligible clinicians in an APM Entity group in an Advanced APM are Partial QPs for a year, the APM Entity will make an

election whether to report on applicable measures and activities as required under MIPS. If the APM Entity elects to report to MIPS, all eligible clinicians in the APM Entity would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the APM Entity elects not to report, all eligible clinicians in the APM Entity group will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year (81 FR 77449).

We also finalized that in cases where the Partial QP determination is made at the individual eligible clinician level, if the individual eligible clinician is determined to be a Partial QP, the eligible clinician will make the election whether to report on applicable measures and activities as required under MIPS and, as a result, be subject to the MIPS reporting requirements and payment adjustments (81 FR 77449). If the individual eligible clinician elects to report to MIPS, he or she would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the individual eligible elects not to report to MIPS, he or she will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year. We also clarified how we consider the absence of an explicit election to report to MIPS or to be excluded from MIPS. We finalized that for situations in which the APM Entity is responsible for making the decision on behalf of all eligible clinicians in the APM Entity group, the group of Partial QPs will not be considered MIPS eligible clinicians unless the APM Entity opts the group into MIPS participation, so that no actions other than the APM Entity's election for the group to participate in MIPS would result in MIPS participation (81 FR 77449). For eligible clinicians who are determined to be Partial QPs individually, we finalized that we will use the eligible clinician's actual MIPS reporting activity to determine whether to exclude the Partial QP from MIPS in the absence of an explicit election. Therefore, if an eligible clinician who is individually determined to be a Partial QP submits information to MIPS (not including information automatically populated or calculated by CMS on the Partial QP's behalf), we will consider the Partial QP to have reported, and thus to be participating in MIPS. Likewise, if such an individual does not take any action to submit information to MIPS, we will consider the Partial QP to have elected to be excluded from MIPS (81 FR 77449).

In the CY 2018 Quality Payment Program final rule, we clarified that in the case of an eligible clinician participating in both a virtual group and an Advanced APM who has achieved Partial QP status, that the eligible clinician would be excluded from the MIPS payment adjustment unless the eligible clinician elects to report under MIPS (82 FR 53615). However, we incorrectly stated that affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period would constitute an explicit election to report under MIPS for all Partial QPs. As such, we also incorrectly stated that all eligible clinicians who participate in a virtual group and achieve Partial QP status would remain subject to the MIPS payment adjustment due to their virtual group election to report under MIPS, regardless of their Partial QP election. We note that an election made prior to the start of an applicable performance period to participate in MIPS as part of a virtual group is separate from an election made during the performance period that is warranted as a result of an individual eligible clinician or APM Entity achieving Partial QP status during the applicable performance period. A virtual group election does not equate to an individual eligible clinician or APM Entity with a Partial QP status explicitly electing to participate in MIPS. In order for an individual eligible clinician or APM Entity with a Partial QP status to explicitly elect to participate in MIPS and be subject to the MIPS payment adjustment factor, such individual eligible clinician or APM Entity would make such election during the applicable performance period as a Partial QP status becomes applicable and such option for election is warranted. Thus, we are restating that affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period does not constitute an explicit election to report under MIPS as it pertains to making an explicit election to either report to MIPS or be excluded from MIPS for individual eligible clinicians or APM Entities that have Partial QP status.

Related to this clarification, we have proposed in section III.H.4.e.(3) of this proposed rule to clarify that beginning with the 2021 MIPS payment year, when an eligible clinician is determined to be a Partial QP for a year at the individual eligible clinician level, the individual eligible clinician will make an election whether to report to MIPS. If the eligible clinician elects to report

to MIPS, he or she will be subject to MIPS reporting requirements and payment adjustments. If the eligible clinician elects to not report to MIPS, he or she will not be subject to MIPS reporting requirements and payment adjustments. If the eligible clinician does not make any affirmative election to report to MIPS, he or she will not be subject to MIPS reporting requirements and payment adjustments. As a result, beginning with the 2021 MIPS payment year, for eligible clinicians who are determined to be Partial QPs individually, we will not use the eligible clinician's actual MIPS reporting activity to determine whether to exclude the Partial QP from MIPS in the absence of an explicit election.

Therefore, the proposed policy in section III.H.4.e.(3) of this proposed rule eliminates the scenario in which affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period would constitute an explicit election to report under MIPS for eligible clinicians who are determined to be Partial QPs individually and make no explicit election to either report to MIPS or be excluded from MIPS. We believe this change is necessary because QP status and Partial QP status, achieved at the APM Entity level or eligible clinician level, is applied to an individual and all of his or her TIN/NPI combinations, whereas virtual group participation is determined at the TIN level. Therefore, we do not believe that it is appropriate that the actions of the TIN in joining the virtual group should deprive the eligible clinician who is a Partial QP, whether that status was achieved at APM Entity level or eligible clinician level, of the opportunity to elect whether or not to opt-in to MIPS.

e. Group Reporting

We refer readers to § 414.1310(e) and the CY 2018 Quality Payment Program final rule (82 FR 53592 through 53593) for a description of our previously established policies regarding group reporting.

In the CY 2018 Quality Payment Program final rule (82 FR 53593), we clarified that we consider a group to be either an entire single TIN or portion of a TIN that: (1) Is participating in MIPS according to the generally applicable scoring criteria while the remaining portion of the TIN is participating in a MIPS APM or an Advanced APM according to the MIPS APM scoring standard; and (2) chooses to participate in MIPS at the group level. We would like to further clarify that we consider a group to be an entire single TIN that chooses to participate in MIPS at the

group level. However, individual eligible clinicians (TIN/NPIs) within that group may receive a MIPS payment adjustment based on the APM scoring standard if they are on the participant list of a MIPS APM. We are proposing to amend §§ 414.1310(e) and 414.1370(f)(2) to codify this policy and more fully reflect the scoring hierarchy as discussed in section III.H.3.h.(6) of this proposed rule.

As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53593), one of the overarching themes we have heard from stakeholders is that we make an option available to groups that would allow a portion of a group to report as a separate sub-group on measures and activities that are more applicable to the sub-group and be assessed and scored accordingly based on the performance of the sub-group. We stated that in future rulemaking, we intend to explore the feasibility of establishing group-related policies that would permit participation in MIPS at a sub-group level and create such functionality through a new identifier. In the CY 2018 Quality Payment Program proposed rule (82 FR 30027), we solicited public comments on the ways in which participation in MIPS at the sub-group level could be established. In addition, in the CY 2018 Quality Payment Program final rule (82 FR 53593), we sought comment on additional ways to define a group, not solely based on a TIN. Because there are several operational challenges with implementing a sub-group option, we are not proposing any such changes to our established reporting policies in this proposed rule. Rather, we are considering facilitating the use of a sub-group identifier in the Quality Payment Program Year 4 through future rulemaking, as necessary. In addition, it has come to our attention that providing a sub-group option may provide potential gaming opportunities. For example, a group could manipulate scoring by creating sub-groups that are comprised of only the high performing clinicians in the group. Therefore, we are requesting comment on implementing sub-group level reporting through a separate sub-group sub-identifier in the Quality Payment Program Year 4 and possibly future years of the program. We are specifically requesting comments on the following: (1) Whether and how a sub-group should be treated as a separate group from the primary group: For example, if there is 1 sub-group within a group, how would we assess eligibility, performance, scoring, and application of the MIPS payment adjustment at the

sub-group level; (2) whether all of the sub-group's MIPS performance data should be aggregated with that of the primary group or should be treated as a distinct entity for determining the sub-group's final score, MIPS payment adjustments, and public reporting, and eligibility be determined at the whole group level; (3) possible low burden solutions for identification of sub-groups: For example, whether we should require registration similar to the CMS Web Interface or a similar mechanism to the low-volume threshold opt-in that we are proposing in section III.H.3.c.(5) of this proposed rule; and (4) and potential issues or solutions needed for sub-groups utilizing submission mechanisms, measures, or activities, such as APM participation, that are different than the primary group. We also welcome comments on other approaches for sub-group reporting that we should consider.

f. Virtual Groups

(1) Background

We refer readers to § 414.1315 and the CY 2018 Quality Payment Program final rule (82 FR 53593 through 53617) for our previously established policies regarding virtual groups.

(2) Virtual Group Election Process

We refer readers to § 414.1315(c) and the CY 2018 Quality Payment Program final rule (82 FR 53601 through 53604) for our previously established policies regarding the virtual group election process.

We are proposing to amend § 414.1315(c) to continue to apply the previously established policies regarding the virtual group election process for the 2022 MIPS payment year and future years, with the exception of the proposed policy modification discussed below.

Under § 414.1315(c)(2)(ii), an official designated virtual group representative must submit an election on behalf of the virtual group by December 31 of the calendar year prior to the start of the applicable performance period. In the CY 2018 Quality Payment Program final rule (82 FR 53603), we stated that such election will occur via email to the Quality Payment Program Service Center using the following email address for the 2018 and 2019 performance periods: MIPS_VirtualGroups@cms.hhs.gov. Beginning with the 2022 MIPS payment year, we propose to amend § 414.1315(c)(2)(ii) to provide that the election would occur in a manner specified by CMS. We anticipate that a virtual group representative would make an election

on behalf of a virtual group by registering to participate in MIPS as a virtual group via a web-based system developed by CMS. We believe that a web-based system would be less burdensome for virtual groups given that the interactions stakeholders would have with the Quality Payment Program are already conducted via the Quality Payment Program portal, and would provide stakeholders with a seamless user experience. Stakeholders would be able to make a virtual group election in a similar manner to all other interactions with the Quality Payment Program portal and would no longer need to separately identify the appropriate email address to submit such an election and email an election outside of the Quality Payment Program portal. The Quality Payment Program portal is the gateway and source for interaction with MIPS that contains a range of information on topics including eligibility, data submission, and performance reports. We believe that using the same web-based platform to make a virtual group election would enhance the one-stop MIPS interactive experience and eliminate the potential for stakeholders to be unable to identify or erroneously enter the email address.

We solicit public comment on this proposal, which would provide for an election to occur in a manner specified by CMS such as a web-based system developed by CMS.

(a) Virtual Group Eligibility Determinations

For purposes of determining TIN size for virtual group participation eligibility for the CY 2018 and 2019 performance periods, we coined the term “virtual group eligibility determination period” and defined it to mean an analysis of claims data during an assessment period of up to 5 months that would begin on July 1 and end as late as November 30 of the calendar year prior to the applicable performance period and includes a 30-day claims run out (82 FR 53602). We are proposing to modify the virtual group eligibility determination period beginning with the 2019 performance period. We propose to amend § 414.1315(c)(1) to establish a virtual group eligibility determination period to mean an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. The virtual group eligibility determination period aligns with the first segment of data analysis

under the MIPS eligibility determination period. As part of the virtual group eligibility determination period, TINs would be able to inquire about their TIN size prior to making an election during a 5-month timeframe, which would begin on August 1 and end on December 31 of a calendar year prior to the applicable performance period. TIN size inquiries would be made through the Quality Payment Program Service Center. For TINs that inquire about their TIN size during such 5-month timeframe, it should be noted that any TIN size information provided is only for informational purposes and may be subject to change; official eligibility regarding TIN size and all other eligibility pertaining to virtual groups would be determined in accordance with the MIPS determination period and other applicable special status eligibility determination periods. The proposed modification would provide stakeholders with real-time information regarding TIN size for informational purposes instead of TIN size eligibility determinations on an ongoing basis (between July 1 and November 30 of the calendar year prior to the applicable performance period) due to technical limitations.

For the 2018 and 2019 performance periods, TINs could determine their status by contacting their designated TA representative as provided at § 414.1315(c)(1); otherwise, the TIN’s status would be determined at the time that the TIN’s virtual group election is submitted. We propose to amend § 414.1315(c)(1) to remove this provision since the inquiry about TIN size would be for informational purposes only and may be subject to change.

We believe that the utilization of the Quality Payment Program Service Center, versus the utilization of designated TA representatives, as the means for stakeholders to obtain information regarding TIN size provides continuity and a seamless experience for stakeholders. We note that the TA resources already available to stakeholders would continue to be available. The following describes the experience a stakeholder would encounter when interacting with the Quality Payment Program Service Center to obtain information pertaining to TIN size. For example, the applicable performance period for the 2022 MIPS payment year would be CY 2020. If a group contacted the Quality Payment Program Service Center on September 20, 2019, the claims data analysis would include the months of October of 2018 through August of 2019. If another

group contacted the Quality Payment Program Service Center on November 20, 2019, the claims data analysis would include the months of October of 2018 through September of 2019 with a 30-day claims run out.

We believe this virtual group eligibility determination period provides a real-time representation of TIN size for purposes of determining virtual group eligibility and allows solo practitioners and groups to know their real-time virtual group eligibility status and plan accordingly for virtual group implementation. Beginning with the 2022 MIPS payment year, it is anticipated that starting in August of each calendar year prior to the applicable performance period, solo practitioners and groups would be able to contact the Quality Payment Program Service Center and inquire about their TIN size. TIN size determinations would be based on the number of NPIs associated with a TIN, which may include clinicians (NPIs) who do not meet the definition of a MIPS eligible clinician at § 414.1305 or who are excluded from MIPS under § 414.1310(b) or (c).

We are proposing to continue to apply the aforementioned previously established virtual group policies for the 2022 MIPS payment year and future years, with the exception of the following proposed policy modifications:

- The virtual group eligibility determination period would align with the first segment of the MIPS determination period, which includes an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. As part of the virtual group eligibility determination period, TINs would be able to inquire about their TIN size prior to making an election during a 5-month timeframe, which would begin on August 1 and end on December 31 of a calendar year prior to the applicable performance period.

- MIPS eligible clinicians would be able to contact their designated technical assistance representative or, beginning with the 2022 MIPS payment year, the Quality Payment Program Service Center, as applicable, to inquire about their TIN size for informational purposes in order to assist MIPS eligible clinicians in determining whether or not to participate in MIPS as part of a virtual group. We anticipate that starting in August of each calendar year prior to

the applicable performance period, solo practitioners and groups would be able to contact the Quality Payment Program Service Center and inquire about virtual group participation eligibility.

- A virtual group representative would make an election on behalf of a virtual group by registering to participate in MIPS as a virtual group in a form and manner specified by CMS. We anticipate that a virtual group representative would make the election via a web-based system developed by CMS.

We are also proposing updates to § 414.1315 in an effort to more clearly and concisely capture previously established policies. These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text.

g. MIPS Performance Period

In the CY 2018 Quality Payment Program final rule (82 FR 53617 through 53619), we finalized at § 414.1320(c)(1) that for purposes of the 2021 MIPS payment year, the performance period for the quality and cost performance categories is CY 2019 (January 1, 2019 through December 31, 2019). We did not finalize the performance period for the quality and cost performance categories for purposes of the 2022 MIPS payment year or future years. We also redesignated § 414.1320(d)(1) and finalized at § 414.1320(c)(2) that for purposes of the 2021 MIPS payment year, the performance period for the Promoting Interoperability and improvement activities performance categories is a minimum of a continuous 90-day period within CY 2019, up to and including the full CY 2019 (January 1, 2019 through December 31, 2019).

As noted in the CY 2018 Quality Payment Program final rule, we received comments that were not supportive of a full calendar year performance period for the quality and cost performance categories. However, we continue to believe that a full calendar year performance period for the quality and cost performance categories will be less confusing for MIPS eligible clinicians. Further, a longer performance period for the quality and cost performance categories will likely include more patient encounters, which will increase the denominator of the quality and cost measures. Statistically, larger sample sizes provide more accurate and actionable information. Additionally, a full calendar year performance period is consistent with how many of the measures used in our program were designed to be performed and reported. We also note that the Bipartisan Budget Act of 2018 (Pub. L. 115–119, enacted

on February 9, 2018) has provided further flexibility to the third, fourth, and fifth years to which MIPS applies to help continue the gradual transition to MIPS.

Regarding the Promoting Interoperability performance category, we have heard from stakeholders through public comments, letters, and listening sessions that they oppose a full year performance period, indicating that it is very challenging and may add administrative burdens. Some stated that a 90-day performance period is necessary in order to enable clinicians to have a greater focus on the objectives and measures that promote patient safety, support clinical effectiveness, and drive toward advanced use of health IT. They also noted that as this category requires the use of CEHRT, a 90-day performance period will help relieve pressure on clinicians to quickly implement changes and updates from their CEHRT vendors and developers so that patient care is not compromised. Others cited the challenges associated with reporting on a full calendar year for clinicians newly employed by a health system or practice during the course of a program year, switching CEHRT, vendor issues, system downtime, cyber-attacks, difficulty getting data from old places of employment, and office relocation. Most stakeholders stated that the performance period should be 90 days in perpetuity, as this would greatly reduce the reporting burden.

In an effort to provide as much transparency as possible so that MIPS eligible clinicians and groups can plan for participation in the program, we request comments on our proposals at § 414.1320(d)(1) that for purposes of the 2022 MIPS payment year and future years, the performance period for the quality and cost performance categories would be the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. For example, for the 2022 MIPS payment year, the performance period would be 2020 (January 1, 2020 through December 31, 2020), and for the 2023 MIPS payment year, the performance period would be CY 2021 (January 1, 2021 through December 31, 2021).

We request comments on our proposal at § 414.1320(d)(2) that for purposes of the 2022 MIPS payment year and future years, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar

year. For example, for the 2022 MIPS payment year, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020). For the 2023 MIPS payment year, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within CY 2021, up to and including the full CY 2021 (January 1, 2021 through December 31, 2021) that occurs 2 years before the MIPS payment year.

In addition, we request comments on our proposal to add § 414.1320(e)(1) that for purposes of the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020).

h. MIPS Performance Category Measures and Activities

(1) Performance Category Measures and Reporting

(a) Background

We refer readers to § 414.1325 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77087 through 77095, and 82 FR 53619 through 53626, respectively) for our previously established policies regarding data submission requirements.

(b) Collection Types, Submission Types and Submitter Types

It has come to our attention that the way we have previously described data submission by MIPS eligible clinicians, groups and third party intermediaries does not precisely reflect the experience users have when submitting data to us. To clarify, we have previously used the term “submission mechanisms” to refer not only to the mechanism by which data is submitted, but also to certain types of measures and activities on which data are submitted (for example, electronic clinical quality measures (eCQMs) reported via EHR) and to the entities submitting such data (for example, third party intermediaries on behalf of MIPS eligible clinicians and groups). To ensure clarity and precision

for all users, we are proposing to revise existing and define additional terminology to more precisely reflect the experience users have when submitting data to the Quality Payment Program.

At § 414.1305, we propose to define the following terms:

- Collection type as a set of quality measures with comparable specifications and data completeness criteria, including, as applicable: eCQMs; MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. The term MIPS CQMs would replace what was formerly referred to as registry measures since entities other than registries may submit data on these measures. These new terms are referenced in the collection type field for the following measure tables of the appendices in this proposed rule: Table Group A: Proposed New Quality Measures for Inclusion in MIPS for the 2021 MIPS Payment Year and Future Years; Table Group B: Proposed New and Modified MIPS Specialty Measure Sets for the 2021 MIPS Payment Year and Future Years; Table C: Quality Measures Proposed for Removal from the Merit-Based Incentive Payment System Program for the 2019 Performance Period and Future Years; and Table Group D: Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year and Future Years.

- Submitter type as the MIPS eligible clinician, group, or third party intermediary acting on behalf of a MIPS eligible clinician or group, as applicable, that submits data on measures and activities under MIPS.

- Submission type as the mechanism by which a submitter type submits data to CMS, including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims and the CMS Web Interface. The direct submission type allows users to transmit data through a computer-to-computer interaction, such as an API. The log in and upload submission type allows users to upload and submit data in the form and manner specified by CMS with a set of authenticated credentials. The log in and attest submission type allows users to manually attest that certain measures and activities were performed in the form and manner specified by CMS with a set of authenticated credentials. We note that there is no submission type for the administrative claims collection type because we calculate measures for this collection type based on administrative claims data available to us.

We solicit additional feedback and alternative suggestions on terminology that appropriately reflects the concepts described in the proposed definitions of collection type, submitter type and submission type, as well as the term MIPS CQMs to replace the formerly used term of registry measures.

We previously finalized at § 414.1325(a) and (e), respectively, that MIPS eligible clinicians and groups must submit measures, objectives, and activities for the quality, improvement activities, and advancing care information performance categories and that there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category; CMS will calculate performance on these measures using administrative claims data. We propose to amend § 414.1325(a) to incorporate § 414.1325(e), as they both address which performance categories require data submission; § 414.1325(f) would be redesignated as § 414.1325(e). We also propose at § 414.1325(a)(2)(ii) that there is no data submission requirement for the quality or cost performance category, as applicable, for MIPS eligible clinicians and groups that are scored under the facility-based measurement scoring methodology described in § 414.1380(e). We also recognize the need to clarify to users how they submit data to us. There are five basic submission types that we are proposing to define in MIPS: Direct; log in and upload; log in and attest; Medicare Part B claims; and the CMS Web Interface. We are proposing to reorganize § 414.1325(b) and (c) by performance category. We are proposing to clarify at § 414.1325(b)(1) that an individual MIPS eligible clinician may submit their MIPS data for the quality performance category using the direct, log in and upload, and Medicare Part B claims submission types. Similarly, we are proposing to clarify at § 414.1325(b)(2) that an individual MIPS eligible clinician may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, log in and upload, or log in and attest submission types. As for groups, we propose to clarify at § 414.1325(c)(1) that groups may submit their MIPS data for the quality performance category using the direct, log in and upload, and CMS Web Interface (for groups consisting of 25 or more eligible clinicians) submission types. Lastly, we propose to clarify at § 414.1325(c)(2) that groups may submit their MIPS data for the improvement

activities or Promoting Interoperability performance categories using the direct, log in and upload, or log in and attest submission types. We believe that these clarifications will enhance the submission experience for clinicians and other stakeholders. As technology continues to evolve, we will continue to look for new ways that we can offer further technical flexibilities on submitting data to the Quality Payment Program. We request comment on these proposals. To assist commenters in providing pertinent comments, we have developed a website that uses wireframe (schematic) drawings to illustrate a subset of the different submission types available for MIPS participation. Specifically, the wireframe drawings describe the direct, log in and attest, and log in and upload submission types. We refer readers to the Quality Payment Program at qpp.cms.gov/design-examples to review these wireframe drawings. The website will provide specific matrices illustrating potential stakeholder experiences when choosing to submit data under MIPS.

As previously expressed in the 2017 Quality Payment Program final rule (81 FR 77090), we want to move away from claims reporting, since approximately 69 percent of the Medicare Part B claims measures are topped out. While we would like to move towards the utilization of electronic reporting by all clinicians and groups, we realize that small practices face additional challenges, and this requirement may limit their ability to participate. For this reason, we believe that Medicare Part B claims measures should be available to small practices, regardless of whether they are reporting an individual MIPS eligible clinician or as groups. Therefore, we propose amending § 414.1325(c)(1) to make the Medicare Part B claims collection type available to MIPS eligible clinicians in small practices beginning with the 2021 MIPS payment year. While this would limit the current availability of Medicare Part B claims measures for individual MIPS eligible clinicians, it would expand the availability of such measures for groups, which currently do not have any claims-based reporting option.

Under § 414.1325(c)(4), we previously finalized that groups may submit their MIPS data using the CMS Web Interface (for groups consisting of 25 or more eligible clinicians) for the quality, improvement activities, and promoting interoperability performance categories. We are proposing that the CMS Web Interface submission type would no longer be available for groups to use to submit data for the improvement activities and Promoting Interoperability

performance categories at § 414.1325(c)(2). The CMS Web Interface has been designed based on user feedback as a method for quality submissions only; however, groups that elect to utilize the CMS Web Interface can still submit improvement activities or promoting interoperability data via direct, log in and attest or log in and upload submission types. We also recognize that certain groups that have elected to use the CMS Web Interface may prefer to have their data submitted on their behalf by a third party intermediary described at § 414.1400(a). We recognize the benefit and burden reduction in such a flexibility and therefore propose to allow third party intermediaries to submit data to the CMS Web Interface in addition to groups. Specifically, we propose to redesignate § 414.1325(c)(4) as § 414.1325(c)(1) and amend § 414.1325(c)(1) to allow third party intermediaries to submit data using the CMS Web Interface on behalf of groups.

To further our efforts to provide flexibility in reporting to the Quality Payment Program, we are soliciting comment on expanding the CMS Web Interface submission type to groups consisting of 16 or more eligible clinicians to inform our future rulemaking. We previously finalized at § 414.1325(e) that there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category and that CMS will calculate performance on these measures using administrative claims data. We also finalized at § 414.1325(f)(2), (which, as noted, we are proposing to redesignate as § 414.1325(e)(2)) that for Medicare Part B claims, data must be submitted on claims with dates of service during the performance period that must be processed no later than 60 days following the close of the performance period. We neglected to codify this

requirement at § 414.1325(e) (which, as noted, we are proposing to consolidate with § 414.1325(a)) for administrative claims data used to assess performance in the cost performance category and for administrative claims-based quality measures. Therefore, we propose to amend § 414.1325(a)(2)(i) to reflect that claims included in the measures are those submitted with dates of service during the performance period that are processed no later than 60 days following the close of the performance period. A summary of these proposed changes is included in Tables 29 and 30. For reference, Table 29 summarizes the data submission types for individual MIPS eligible clinicians that we are proposing at § 414.1325(b) and (e). Table 30 summarizes the data submission types for groups that we are proposing at § 414.1325(c) and (e). We request comment on these proposals.

TABLE 29—DATA SUBMISSION TYPES FOR MIPS ELIGIBLE CLINICIANS REPORTING AS INDIVIDUALS

Performance category/submission combinations accepted	Submission type	Submitter type	Collection type
Quality	Direct Log in and upload	Individual or Third Party Intermediary ² .	eCQMs. MIPS CQMs. QCDR measures. Medicare Part B claims measures (small practices).
Cost	Medicare Part B claims (small practices) ¹ . No data submission required ²	Individual	
Promoting Interoperability	Direct Log in and upload. Log in and attest.	Individual or Third Party Intermediary.	
Improvement Activities	Direct Log in and upload. Log in and attest.	Individual or Third Party Intermediary.	

¹ Third party intermediary does not apply to Medicare Part B claims submission type.

² Requires no separate data submission to CMS: Measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare claims.

Note: As used in this proposed rule, the term "Medicare Part B claims" differs from "administrative claims" in that "Medicare Part B claims" require MIPS eligible clinicians to append certain billing codes to denominator-eligible claims to indicate the required quality action or exclusion occurred.

TABLE 30—DATA SUBMISSION TYPES FOR MIPS ELIGIBLE CLINICIANS REPORTING AS GROUPS

Performance category/submission combinations accepted	Submission types	Submitter type	Collection type
Quality	Direct Log in and upload CMS Web Interface (groups of 25 or more eligible clinicians) Medicare Part B claims (small practices) ¹ .	Group or Third Party Intermediary	eCQMs. MIPS CQMs. QCDR measures. CMS Web Interface measures. Medicare Part B claims measures (small practices). CMS approved survey vendor measure. Administrative claims measures.
Cost	No data submission required ^{1 2} ...	Group.	
Promoting Interoperability	Direct Log in and upload. Log in and attest.	Group or Third Party Intermediary.	

TABLE 30—DATA SUBMISSION TYPES FOR MIPS ELIGIBLE CLINICIANS REPORTING AS GROUPS—Continued

Performance category/submission combinations accepted	Submission types	Submitter type	Collection type
Improvement Activities	Direct Log in and upload. Log in and attest.	Group or Third Party Intermediary.	

¹ Third party intermediary does not apply to Medicare Part B claims submission type.

² Requires no separate data submission to CMS: Measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare claims. **Note:** As used in this proposed rule, the term "Medicare Part B claims" differs from "administrative claims" in that "Medicare Part B claims" require MIPS eligible clinicians to append certain billing codes to denominator-eligible claims to indicate the required quality action or exclusion occurred.

(c) Submission Deadlines

We previously finalized data submission deadlines in the CY 2017 Quality Payment Program final rule (81 FR 77095 through 77097) at § 414.1325(f), which outlined data submission deadlines for all submission mechanisms for individual eligible clinicians and groups for all performance categories. As discussed in section III.H.3.h.(1) of this proposed rule, the term submission mechanism, that includes submission via the qualified registry, QCDR, EHR, Medicare Part B claims, the CMS Web Interface and attestation, does not align with the existing process of data submission to the Quality Payment Program. We are proposing to revise regulatory text language at § 414.1325(f), which, as noted, we are proposing to redesignate as § 414.1325(e), to outline data submission deadlines for all submission types for individual eligible clinicians and groups for all performance categories. We also propose to revise § 414.1325(e)(1) to allow flexibility for CMS to alter submission deadlines for the direct, login and upload, the CMS Web Interface, and login and attest submission types. We anticipate that in scenarios where the March 31st deadline falls on a weekend or holiday, we would extend the submission period to the next business day (that is, Monday). There also may be instances where due to unforeseen technical issues, the submission system may be inaccessible for a period of time. If this scenario were to occur, we anticipate that we would extend the submission period to account for this lost time, to the extent feasible. We note that this revision would also revise the previously finalized policy at § 414.1325(e)(3) stating that data must be submitted during an 8-week period following the close of the performance period, and that the period must begin no earlier than January 2 and end no later than March 31 for the CMS Web Interface. We are proposing to align the deadline for the CMS Web Interface submission type with all other

submission type deadlines at § 414.1325(e)(1), while we are also proposing to remove the previously finalized policy at § 414.1325(e)(3) because it is no longer needed to mandate a different submission deadline for the CMS Web Interface submission type.

We are also proposing a number of other technical revisions to § 414.1325 to more clearly and concisely reflect previously established policies.

(2) Quality Performance Category

(a) Background

We refer readers to §§ 414.1330 through 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

(i) Assessing Performance on the Quality Performance Category

Under § 414.1330(a), for purposes of assessing performance of MIPS eligible clinicians on the quality performance category, we will use: Quality measures included in the MIPS final list of quality measures and quality measures used by QCDRs. We are proposing to amend § 414.1330(a) to account for facility-based measurement and the APM scoring standard. For that reason, we are proposing § 414.1330(a) to specify, for a MIPS payment year, we use the following quality measures, as applicable, to assess performance in the quality performance category: Measures included in the MIPS final list of quality measures established by us through rulemaking; QCDR measures approved by us under § 414.1440; facility-based measures as described under § 414.1380; and MIPS APM measures as described at § 414.1370.

(ii) Contribution to Final Score

Under § 414.1330(b)(2) and (3), performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year and 30 percent of a MIPS eligible clinician's

final score for each MIPS payment year thereafter. Section 1848(q)(5)(E)(i)(I) of the Act, as amended by section 51003(a)(1)(C)(i) of the Bipartisan Budget Act of 2018, provides that 30 percent of the final score shall be based on performance with respect to the quality performance category, but that for each of the first through fifth years for which MIPS applies to payments, the quality performance category performance percentage shall be increased so that the total percentage points of the increase equals the total number of percentage points by which the cost performance category performance percentage is less than 30 percent for the respective year. As discussed in section III.H.3.i.(c) of this proposed rule, we are proposing to weight the cost performance category at 15 percent for the 2021 MIPS payment year. Accordingly, we are proposing to amend § 414.1330(b)(2) to provide that performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year, and propose at § 414.1330(b)(3) that the quality performance category comprises 45 percent of a MIPS eligible clinician's final score for the 2021 MIPS payment year.

(iii) Quality Data Submission Criteria

(A) Submission Criteria

(aa) Submission Criteria for Groups Reporting Quality Measures, Excluding CMS Web Interface Measures and the CAHPS for MIPS Survey Measure

We refer readers to § 414.1335(a)(1) for our previously established submission criteria for quality measures submitted via claims, registry, QCDR, or EHR. In section III.H.3.h. of this proposed rule, we propose revisions to existing and additional terminology to clarify the data submission processes available for MIPS eligible clinicians, groups and third party intermediaries, to align with the way users actually submit data to the Quality Payment Program. For that reason, we are proposing to revise § 414.1335(a)(1) to

state that data would be collected for the following collection types: Medicare Part B claims measures; MIPS CQMs; eCQMs, or QCDR measures. Codified at § 414.1335(a)(1)(i), MIPS eligible clinicians and groups must submit data on at least six measures including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician or group, report on each measure that is applicable. Furthermore, we are proposing beginning with the 2021 MIPS payment year to revise § 414.1335(a)(1)(ii) to indicate that MIPS eligible clinicians and groups that report on a specialty or subspecialty measure set, must submit data on at least six measures within that set, provided the set contain at least six measures. If the set contains fewer than six measures or if fewer than six measures apply to the MIPS eligible clinician or group, report on each measure that is applicable.

As previously expressed in the 2017 Quality Payment Program final rule (81 FR 77090), we want to move away from claims reporting, since approximately 69 percent of the Medicare Part B claims measures are topped out. As discussed in section III.H.3.h. of this proposed rule, we are proposing to limit the Medicare Part B claims submission type, and therefore, the Medicare Part B claims measures, to MIPS eligible clinicians in small practices. We refer readers to section III.H.3.h of this proposed rule for discussion of this proposal.

(bb) Submission Criteria for Groups Reporting CMS Web Interface Measures

While we are not proposing any changes to the established submission criteria for CMS Web Interface measures at § 414.1335(a)(2), beginning with the 2021 MIPS payment year, we are proposing to revise the terminology in which CMS Web Interface measures are referenced-to align with the updated submission terminology as discussed in section III.H.3.h of this proposed rule. Therefore, we propose to revise § 414.1335(a)(2) from via the CMS Web Interface-for groups consisting of 25 or more eligible clinicians only, to for CMS Web Interface measures.

In order to ensure that the collection of information is valuable to clinicians and worth the cost and burden of collecting information, and address the

challenge of fragmented reporting for multiple measures and submission options, we seek comment on expanding the CMS Web Interface option to groups with 16 or more eligible clinicians. Preliminary analysis has indicated that expanding the CMS Web Interface option to groups of 16 or more eligible clinicians will likely result in many of these new groups not being able fully satisfy measure case minimums on multiple CMS Web Interface measures. However, we can possibly mitigate this issue if we require smaller groups (with 16–24 eligible clinicians) to report on only a subset of the CMS Web Interface measures, such as the preventive care measures. We are interested in stakeholder feedback on the issue of expanding the CMS Web interface to groups of 16 or more, as well as other factors we should consider with such expansion.

As discussed in section III.F.1.c. of the Medicare Shared Savings Program portion of this proposed rule, changes proposed and finalized through rulemaking to the CMS Web Interface measures for MIPS would be applicable to ACO quality reporting under the Shared Savings Program. In Table Group D: Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year and Future Years of the measures appendix, we are proposing to remove 6 measures from the CMS Web Interface in MIPS. If finalized, groups reporting CMS Web Interface measures for MIPS would not be responsible for reporting those removed measures. We refer readers to the quality measure appendix for additional details on the proposals related to changes in CMS Web Interface measures.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77116), the CMS Web Interface has a two-step attribution process that associates beneficiaries with TINs during the period in which performance is assessed (adopted from the Physician Value-based Payment Modifier (VM) program). The CAHPS for MIPS survey utilizes the same two-step attribution process as the CMS Web Interface. The CY 2017 Quality Payment Program final rule (81 FR 77116) noted that attribution would be conducted using the different identifiers in MIPS. For purposes of the CMS Web Interface and the CAHPS for MIPS survey, we clarify that attribution would be conducted at the TIN level.

(cc) Submission Criteria for Groups Electing To Report Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey

While we are not proposing any changes to the established submission criteria for the CAHPS for MIPS Survey at § 414.1335(a)(3), beginning with the 2021 MIPS payment year, we are proposing to revise § 414.1335(a)(3) to clarify that for the CAHPS for MIPS survey, for the 12-month performance period, a group that wishes to voluntarily elect to participate in the CAHPS for MIPS survey measure must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measure data to us.

(B) Summary of Data Submission Criteria

We are not proposing any changes to the quality data submission criteria for the 2021 MIPS payment year in this proposed rule; however, as discussed in section III.H.3.h. of this proposed rule, we are proposing changes to existing and additional submission related terminology. Similarly, while we are not proposing changes to the data completeness criteria at § 414.1340, we are proposing to changes to existing and additional submission related terminology. For that reason, we are proposing to revise § 414.1340 to specify that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or the eCQMs must submit data on at least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2021; MIPS eligible clinicians and groups submitting quality measure data on the Medicare Part B claims measures must submit data on at least 60 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for the 2021 MIPS payment year; and groups submitting quality measures data on CMS Web Interface measures or the CAHPS for MIPS survey measure, must meet the data submission requirement on the sample of the Medicare Part B patients CMS provides. Below, we have included Tables 31 and 32 to clearly capture the data completeness requirements and submission criteria by collection type for individual clinicians and groups.

TABLE 31—SUMMARY OF DATA COMPLETENESS REQUIREMENTS AND PERFORMANCE PERIOD BY COLLECTION TYPE FOR THE 2020 AND 2021 MIPS PAYMENT YEARS

Collection type	Performance period	Data completeness
Medicare Part B claims measures ..	Jan 1–Dec 31 (or 90 days for selected measures).	60 percent of individual MIPS eligible clinician’s, or group’s (beginning with the 2021 MIPS payment year) Medicare Part B patients for the performance period.
Administrative claims measures	Jan 1–Dec 31	100 percent of individual MIPS eligible clinician’s Medicare Part B patients for the performance period.
QCDR measures, MIPS CQMs, and eCQMs.	Jan 1–Dec 31 (or 90 days for selected measures).	60 percent of individual MIPS eligible clinician’s, or group’s patients across all payers for the performance period.
CMS Web Interface measures	Jan 1–Dec 31	Sampling requirements for the group’s Medicare Part B patients: Populate data fields for the first 248 consecutively ranked and assigned Medicare beneficiaries in the order in which they appear in the group’s sample for each module/measure. If the pool of eligible assigned beneficiaries is less than 248, then the group would report on 100 percent of assigned beneficiaries.
CAHPS for MIPS survey	Jan 1–Dec 31	Sampling requirements for the group’s Medicare Part B patients.

TABLE 32—SUMMARY OF QUALITY DATA SUBMISSION CRITERIA FOR MIPS PAYMENT YEAR 2021 FOR INDIVIDUAL CLINICIANS AND GROUPS

Clinician type	Submission criteria	Measure collection types (or measure sets) available
Individual Clinicians	Report at least six measures including one outcome measure, or if an outcome measure is not available report another high priority measure; if less than six measures apply then report on each measure that is applicable. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Individual MIPS eligible clinicians select their measures from the following collection types: Medicare Part B claims measures (individual clinicians in small practices only), MIPS CQMs, QCDR measures, eCQMs, or reports on one of the specialty measure sets if applicable.
Groups (non-CMS Web Interface).	Report at least six measures including one outcome measure, or if an outcome measure is not available report another high priority measure; if less than six measures apply then report on each measure that is applicable. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Groups select their measures from the following collection types: Medicare Part B claims measures (small practices only), MIPS CQMs, QCDR measures, eCQMs, or the CAHPS for MIPS survey—or reports on one of the specialty measure sets if applicable. Groups of 16 or more clinicians who meet the case minimum of 200 will also be automatically scored on the administrative claims based all-cause hospital re-admission measure.
Groups (CMS Web Interface for group of at least 25 clinicians).	Report on all measures included in the CMS Web Interface collection type and optionally the CAHPS for MIPS survey. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Groups report on all measures included in the CMS Web Interface measures collection type and optionally the CAHPS for MIPS survey. Groups of 16 or more clinicians who meet the case minimum of 200 will also be automatically scored on the administrative claims based all-cause hospital re-admission measure.

(iv) Application of Facility-Based Measures

According to section 1848(q)(2)(C)(ii) of the Act, the Secretary may use measures for payment systems other than for physicians, such as measures used for inpatient hospitals, for purposes of the quality and cost performance categories. However, the Secretary may not use measures for hospital outpatient departments, except in the case of items and services furnished by emergency physicians, radiologists, and anesthesiologists. We refer readers to section III.H.3.i.(1)(d) of this proposed rule, Facility-Based Measures Scoring Option for the 2021 MIPS Payment Year for the Quality and Cost Performance Categories, for full discussion of facility-based measures

and scoring for the 2021 MIPS payment year.

(b) Selection of MIPS Quality Measures for Individual MIPS Eligible Clinicians and Groups Under the Annual List of Quality Measures Available for MIPS Assessment

(i) Background and Policies for the Call for Measures and Measure Selection Process

In the CY 2017 Quality Payment Program final rule (81 FR 77153), we established that we would categorize measures into the six NQS domains (patient safety, person-and caregiver-centered experience and outcomes, communication and care coordination, effective clinical care, community/population health, and efficiency and cost reduction). To streamline quality

measures, reduce regulatory burden, and promote innovation, we have developed and announced our Meaningful Measures Initiative.¹⁶ By identifying the highest priority areas for quality measurement and quality improvement, the Meaning Measures Initiative, identifies the core quality of care issues that advances our work to improve patient outcomes. Through subregulatory guidance, we will categorize quality measures by the 19 Meaningful Measure areas as identified on the Meaningful Measures Initiative website at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient>

¹⁶ Link to Meaningful Measures web page on CMS site to be provided at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html>.

Assessment-Instruments/Quality InitiativesGenInfo/MMF/General-info-Sub-Page.html. The categorization of quality measures by Meaningful Measure area would provide MIPS eligible clinicians and groups with guidance as to how each measure fits into the framework of the Meaningful Measure Initiative.

Furthermore, under § 414.1305, a high priority measure is defined as an outcome, appropriate use, patient safety, efficiency, patient experience or care coordination quality measure. Due to the immense impact of the opioid epidemic across the United States, we believe it is imperative to promote the measurement of opioid use and overuse, risks, monitoring, and education through quality reporting. For that reason, beginning with the 2019 performance period, we are proposing at § 414.1305 to amend the definition of a high priority measure, to include quality measures that relate to opioids and to further clarify the types of outcome measures that are considered high priority. Beginning with the 2021 MIPS payment year, we are proposing to define at § 414.1305 a high priority measure to mean an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Outcome measures would include intermediate-outcome and patient-reported outcome measures. We request comment on this proposal, specifically if stakeholders have suggestions on what aspects of opioids should be measured. For example, should we focus solely on opioid overuse?

Previously finalized MIPS quality measures can be found in the CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174) and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). The new MIPS quality measures proposed for inclusion in MIPS for the 2019 performance period and future years are found in Table A of Appendix 1: Proposed MIPS Quality Measures of this proposed rule. The current specialty measure sets can be found in the CY 2018 Quality Payment Program final rule (82 FR 53976 through 54146). The proposed new and modified quality measure specialty sets can be found in Table B of Appendix 1: Proposed MIPS Quality Measures of this proposed rule, and include new proposed measures, previously finalized measures with proposed modifications, and previously finalized measures with no proposed modifications.

We note that modifications made to the specialty sets may include the

removal of certain previously finalized quality measures. Certain MIPS specialty sets have further defined subspecialty sets, each of which constitutes a separate specialty set. In instances where an individual MIPS eligible clinician or group reports on a specialty or subspecialty set, if the set has less than six measures, that is all the clinician is required to report. MIPS eligible clinicians are not required to report on the specialty measure sets, but they are suggested measures for specific specialties. Please note that the proposed specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 9, 2018,¹⁷ we announced that we would be accepting recommendations for potential new specialty measure sets for Year 3 of MIPS under the Quality Payment Program. These recommendations were based on the MIPS quality measures finalized in the CY 2018 Quality Payment Program final rule, and includes recommendations to add or remove the current MIPS quality measures from the specialty measure sets. All specialty measure set recommendations submitted for consideration were assessed to ensure that they meet the needs of the Quality Payment Program.

In the CY 2017 Quality Payment Program final rule (81 FR 77137), we finalized that substantive changes to MIPS quality measures, to include but are not limited to, measures that have had measure specification changes, measure title changes, or domain changes. MIPS quality measures with proposed substantive changes can be found in Table D of Appendix 1: Proposed MIPS Quality Measures of this proposed rule.

With regards to eCQMs, in the 2015 EHR Incentive Program final rule, CMS required eligible clinicians, eligible hospitals, and critical access hospitals (CAHs) to use the most recent version of an eCQM for electronic reporting beginning in 2017 (80 FR 62893). We are proposing this policy for the end-to-end electronic reporting bonus under MIPS and encourage MIPS eligible clinicians to work with their EHR vendors to ensure they have the most recent version of the eCQM. CMS will not accept an older version of an eCQM as a submission for the MIPS program for

the quality performance category or the end-to-end electronic reporting bonus within that category. MIPS eligible clinicians and groups reporting on the quality performance category are required to use the most recent version of the eCQM specifications. The annual updates to the eCQM specifications and any applicable addenda are available on the electronic quality improvement (eCQI) Resource Center website at <https://ecqi.healthit.gov> for the applicable performance period. Furthermore, as discussed in section III.E. of this proposed rule, the Medicaid Promoting Interoperability Program intends to utilize eCQM measures as they are available in MIPS. We refer readers to section III.E. of this proposed rule for additional details and criteria on the Medicaid Promoting Interoperability Program.

In MIPS, there are a limited number of CMS Web Interface measures, we seek comment on building upon the CMS Web Interface submission type by expanding the core set of measures available for that submission type to include other specialty specific measures (such as surgery).

To provide clinicians with a more cohesive reporting experience, where they may focus on activities and measures that are meaningful to their scope of practice, we discuss the development of public health priority measurement sets that would include measures and activities across the quality, Promoting Interoperability, and improvement activities performance categories, focused on public health priorities such as fighting the opioid epidemic, in section III.H.3.h.(5), Promoting Interoperability. We refer readers to section III.H.3.h.(5) of this proposed rule for additional details on this concept.

(ii) Topped Out Measures

In the CY 2018 Quality Payment Program final rule (82 FR 53637 through 53640), we finalized the 4-year timeline to identify topped out measures, after which we may propose to remove the measures through future rulemaking. After a measure has been identified as topped out for 3 consecutive years through the benchmarks, we may propose to remove the measure through notice and comment rulemaking. Therefore, in the 4th year, if finalized through rulemaking, the measure would be removed and would no longer be available for reporting during the performance period. We refer readers to the 2018 MIPS Quality Benchmarks' file, that is located on the Quality Payment Program resource library (<https://www.cms.gov/Medicare/>

¹⁷ Listserv messaging was distributed through the Quality Payment Program listserv on January 9th, 2018, titled: "CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2019 Program Year of Merit-based Incentive Payment System (MIPS)."

Quality-Payment-Program/Resource-Library/Resource-library.html) to determine which measure benchmarks are topped out for 2018 and would be subject to the cap if they are also topped out in the 2019 MIPS Quality Benchmarks' file. It should be noted that the final determination of which measure benchmarks are subject to the topped out cap would not be available until the 2019 MIPS Quality Benchmarks' file is released in late 2018.

We are proposing that once a measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors. We are concerned that topped out non-high priority process measures require data collection burden without added value for eligible clinicians and groups participating in MIPS. It is important to remove these types of measures, so that available measures provide meaningful value to clinicians collecting data, beneficiaries, and the program. However, we would also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to the Agency).

Since QCDR measures are not approved or removed from MIPS through the rulemaking timeline or cycle, we are proposing to exclude QCDR measures from the topped out timeline that was finalized in the CY 2018 Quality Payment Program final rule (82 FR 53640). When a QCDR measure reaches topped out status, as determined during the QCDR measure approval process, it may not be approved as a QCDR measure for the applicable performance period. Because QCDRs have more flexibility to develop innovative measures, we believe there is limited value in maintaining topped out QCDR measures in MIPS.

(iii) Removal of Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we discussed removal criteria for quality measures, including that a quality measure may be considered for removal if the Secretary determines that

the measure is no longer meaningful, such as measures that are topped out. Furthermore, if a measure steward is no longer able to maintain the quality measure, it would also be considered for removal.

We have previously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 Quality Payment Program final rule (81 FR 77101), we explained that we believe that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality of care patients receive. In the CY 2018 Quality Payment Program quality measure set, 102 of the 275 quality measures are process measures that are not considered high priority. As discussed above, beginning with the 2021 MIPS payment year, we are proposing to define at § 414.1305 a high priority measure to mean an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Because the removal of all non-high priority process measures would impact most specialty sets, nearly 94 percent, we believe incrementally removing non-high priority process measures through notice and comment rulemaking is appropriate.

Beginning with the 2019 performance period, we propose to implement an approach to incrementally remove process measures where prior to removal, considerations will be given to, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan: <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development.html>.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- Whether the measure has reached a topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, as described in the proposal in the above topped out measures section.

(iv) Categorizing Measures by Value

In outlining the various types of MIPS quality and QCDR measures available for reporting in the quality performance category, such as outcome, high-priority, composite, and process measures, we acknowledge that not all measures are created equal. For example, the value or information gained by reporting on certain process measures does not equate that which is collected on outcome measures. We seek to ensure that the collection and submission of data is valuable to clinicians and worth the cost and burden of collecting the information.

Based on this, we seek comment on implementing a system where measures are classified as a particular value (gold, silver or bronze) and points are awarded based on the value of the measure. For example, higher value measures that are considered "gold" standard, which could include outcome measures, composite measures, or measures that address agency priorities (such as opioids). The CAHPS for MIPS survey, which collects patient experience data, may also be considered a high value measure. Measures that are considered second tier, or at a "silver" standard would be measures that are considered process measures that are directly related to outcomes and have a good gap in performance (there is no high, unwavering performance) and demonstrate room for improvement; or topped out outcome measures. Lower value measures, such as standard of care process measures or topped out process measures would be considered "bronze" measures. We refer readers to section III.H.3.i. (1)(b)(xi) of this proposed rule for discussion on the assignment of value and scoring based on measure value.

(3) Cost Performance Category

For a description of the statutory basis and our existing policies for the cost performance category, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rule (81 FR 77162 through 77177, and 82 FR 53641 through 53648, respectively).

(a) Weight in the Final Score

In the CY 2018 Quality Payment Program final rule, we established that the weight of the cost performance category would be 10 percent of the final score for the 2020 MIPS payment year (82 FR 53643). We had previously finalized in the CY 2017 Quality Payment Program final rule at § 414.1350(b)(3) that beginning with the 2021 MIPS payment year, the cost performance category would be 30

percent of the final score, as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act (81 FR 77166). Section 51003(a)(1)(C) of the Bipartisan Budget Act of 2018, enacted on February 9, 2018, amended section 1848(q)(5)(E)(i)(II)(bb) of the Act such that for each of the second, third, fourth, and fifth years for which the MIPS applies to payments, not less than 10 percent and not more than 30 percent of the MIPS final score shall be based on the cost performance category score. Additionally, this provision shall not be construed as preventing the Secretary from adopting a 30 percent weight if the Secretary determines, based on information posted under section 1848(r)(2)(I) of the Act, that sufficient cost measures are ready for adoption for use under the cost performance category for the relevant performance period. Section 51003(a)(2) of the Bipartisan Budget Act of 2018 amended section 1848(r)(2) of the Act to add a new paragraph (I), which we discuss in section III.H.3.h.(3)(b)(i) of this proposed rule.

In light of these amendments, we propose at § 414.1350(d)(3) the cost performance category would make up 15 percent of a MIPS eligible clinician's final score for the 2021 MIPS payment year. As discussed in section III.H.3.h.(3)(b)(iv) of this proposed rule, we are proposing to codify the existing policies for the attribution of cost measures, which would result in redesignating § 414.1350(b) as § 414.1350(d). We propose to delete the existing text under § 414.1350(b)(3) and address the weight of the cost performance category for the MIPS payment years following 2021 in future rulemaking. We also propose a technical change to the text at § 414.1350(b) (redesignated as § 414.1350(d)) to state that the cost performance category weight will be as specified under redesignated § 414.1350(d), unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act.

We believe that measuring cost is an integral part of measuring value, and we believe that clinicians have a significant impact on the costs of patient care. However, we are proposing to only modestly increase the weight of the cost performance category for the 2021 MIPS payment year from the 2020 MIPS payment year because we recognize that cost measures are still relatively early in the process of development and that clinicians do not have the level of familiarity or understanding of cost measures that they do of comparable quality measures. As described in section III.H.3.h.(3)(b)(ii) of this proposed rule, we are proposing to add

8 episode-based measures to the cost performance category beginning with the 2019 MIPS performance period. This is a first step in developing a more robust and clinician-focused measurement of cost performance. We will continue to work on developing additional episode-based measures that we may consider proposing for the cost performance category in future years. Introducing more measures over time would allow for more clinicians to be measured in this performance category. It would also allow time for more outreach to clinicians to better educate them on the cost measures. We considered maintaining the weight of the cost performance category at 10 percent for the 2021 MIPS payment year as we recognize that clinicians are still learning about the cost performance category and being introduced to new measures. We invite comment on whether we should consider an alternative weight for the 2021 MIPS payment year.

In accordance with section 1848(q)(5)(E)(i)(II)(bb) of the Act, we will continue to evaluate whether sufficient cost measures are ready for adoption under the cost performance category and move towards the goal of increasing the weight to 30 percent of the final score. To provide for a smooth transition, we anticipate that we would increase the weight of the cost performance category by 5 percentage points each year until we reach the required 30 percent weight for the 2024 MIPS payment year. We invite comments on this approach to the weight of the cost performance category for the 2022 and 2023 MIPS payment years, considering our flexibility in setting the weight between 10 percent and 30 percent of the final score, the availability of cost measures, and our desire to ensure a smooth transition to a 30 percent weight for the cost performance category.

(b) Cost Criteria

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. In the CY 2018 Quality Payment Program final rule, we established two cost measures (total per capita cost measure and Medicare spending per beneficiary (MSPB) measure) for the 2018 MIPS performance period and future performance periods (82 FR 53644). These measures were previously established for the 2017 MIPS performance period (81 FR 77168). We

will continue to evaluate cost measures that are included in MIPS on a regular basis and anticipate that measures could be added or removed through rulemaking as measure development continues. In general, we expect to evaluate cost measures according to the measure reevaluation and maintenance processes outlined in the "Blueprint for the CMS Measures Management System" (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint-130.pdf>). As described in section 2 of the Blueprint for the CMS Measures Management System Version 13.0, we will conduct annual evaluations to review the continued accuracy of the measure specifications. Annual updates ensure that the procedure, diagnostic, and other codes used in the measure account for updates to coding systems over time. To the extent that these updates would constitute a substantive change to a measure, we would ensure the changes are proposed for adoption through rulemaking. We will also comprehensively reevaluate the measures every 3 years to ensure that they continue to meet measure priorities. As a part of this comprehensive reevaluation, we will gather information through environmental scans and literature reviews of recent studies and new clinical guidelines that may inform potential refinements. We will also analyze measure performance rates and re-assess the reliability and validity of the measures. Throughout these reevaluation efforts, we will summarize and consider all stakeholder feedback received on the measure specifications during the implementation process, and may seek input through public comment periods. In addition, the measure development contractor may acquire individual input on measures by convening Technical Expert Panels (TEPs) and clinical subcommittees. Aside from these regular measure reevaluations, there may be ad-hoc reviews of the measures if new evidence comes to light which indicates that significant revisions may be required.

We will also continue to update the specifications to address changes in coding, risk adjustment, and other factors. The process for updating measure specifications will take place through ongoing maintenance and evaluation, during which we expect to continue seeking stakeholder input. As we noted above, any substantive changes to a measure would be proposed for adoption in future years through notice and comment

rulemaking. We appreciate the feedback that we have received so far throughout the measure development process and believe that stakeholders will continue to provide feedback to the measure development contractor on episode-based cost measures by submitting written comments during public comment opportunities, by participating in the clinical subcommittees convened by the measure development contractor, or by attending education and outreach events. We will take all comments and feedback into consideration as part of the ongoing measure evaluation process.

As we noted in the CY 2017 Quality Payment Program final rule (81 FR 77137) regarding quality measures, which we believe would also apply for cost measures, some updates may incorporate changes that would not substantively change the intent of the measure. Examples of such changes may include updated diagnosis or procedure codes or changes to exclusions to the patient population or definitions. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. As described in section 3 of the Blueprint for the CMS Measures Management System Version 13.0, if substantive changes to these measures become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the Measure Applications Partnership (MAP). The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are attributable and applicable to clinicians. The MAP also reviews measures for clinician level feasibility, reliability, and validity. They also consider whether the measures are scientifically acceptable, and reflect current clinical guidelines.

Section 51003(a)(2) of the Bipartisan Budget Act of 2018 amended section 1848(r)(2) of the Act to add a new paragraph (I) requiring the Secretary to post on the CMS website information on cost measures in use under MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of stakeholder engagement, and the percent of expenditures under Medicare Part A and Part B that are covered by cost measures. This information shall be posted no later than December 31 of each year

beginning with 2018. We expect this posting will provide a list of the cost measures established for the cost performance category for the current performance period (for example, the posting in 2018 would include a list of the measures for the 2018 MIPS performance period), as well as a list of any cost measures that may be proposed for a future performance period through rulemaking. We will provide hyperlinks to the measure specifications documents, and include the percent of Medicare Part A and Part B expenditures that are covered by these cost measures. The posting will also include a list and description of the measures under development at that time. We intend to summarize the timeline for measure development, including the stakeholder engagement activities undertaken, which may include a TEP, clinical subcommittees, field testing, and education and outreach activities, such as national provider calls and listening sessions. Finally, the posting will provide an overview of potential future topics in cost measure development, such as any clinical areas in which measures may be developed in the future.

(ii) Episode-Based Measures Proposed for the 2019 and Future Performance Periods

Episode-based measures differ from the total per capita cost measure and MSPB measure because episode-based measure specifications only include items and services that are related to the episode of care for a clinical condition or procedure (as defined by procedure and diagnosis codes), as opposed to including all services that are provided to a patient over a given timeframe.

We discussed our progress in the development of episode-based measures in the CY 2018 Quality Payment Program proposed rule (82 FR 30049 through 30050) and received significant positive feedback on the process used to develop the measures as well as the measures' clinical focus that was informed by expert opinion (82 FR 53644 through 53646). The specific measures selected for the initial round of field testing were included based on the volume of beneficiaries impacted by the condition or procedure, the share of cost to Medicare impacted by the condition or procedure, the number of clinicians/clinician groups attributed, and the potential for alignment with existing quality measures.

We have developed episode-based measures to represent the cost to Medicare for the items and services furnished to a patient during an episode of care ("episode"). Episode-based

measures are developed to let attributed clinicians know the cost of the care clinically related to their initial treatment of a patient and provided during the episode's timeframe. Specifically, we define cost based on the allowed amounts on Medicare claims, which include both Medicare payments and beneficiary deductible and coinsurance amounts. Episode-based measures are calculated using Medicare Parts A and B fee-for-service claims data and are based on episode groups.

Episode groups:

- Represent a clinically cohesive set of medical services rendered to treat a given medical condition.
- Aggregate all items and services provided for a defined patient cohort to assess the total cost of care.
- Are defined around treatment for a condition (acute or chronic) or performance of a procedure.

Items and services in the episode group could be treatment services, diagnostic services, and ancillary items and services directly related to treatment (such as anesthesia for a surgical procedure). They could also be items and services that occur after the initial treatment period that may be furnished to patients as follow-up care or to treat complications resulting from the treatment. An episode is a specific instance of an episode group for a specific patient and clinician. For example, in a given year, a clinician might be attributed 20 episodes (instances of the episode group) from the episode group for heart failure. In section III.H.3.h.(3)(b)(iv) of this proposed rule, we discuss the attribution rules for cost measures.

After episodes are attributed to one or more clinicians, items and services may be included in the episode costs if they are furnished within a patient's episode window. Items and services will be included if they are the trigger event for the episode or if a service assignment rule identifies them as a clinically related item or service during the episode. The detailed specifications for these measures, which include information about the service assignment rule, can be reviewed at qpp.cms.gov.

To ensure a more accurate comparison of cost across clinicians, episode costs are payment standardized and risk adjusted. Payment standardization adjusts the allowed amount for an item or service to facilitate cost comparisons and limit observed differences in costs to those that may result from health care delivery choices. Payment standardized costs remove any Medicare payment differences due to adjustments for

geographic differences in wage levels or policy-driven payment adjustments such as those for teaching hospitals. Risk adjustment accounts for patient characteristics that can influence spending and are outside of clinician control. For example, for the elective outpatient PCI episode-based measure, the risk adjustment model may account for a patient's history of heart failure.

The measure development contractor has continued to seek extensive stakeholder feedback on the development of episode-based measures, building on the processes outlined in the CY 2018 Quality Payment Program final rule (82 FR 53644). These processes included convening a TEP and clinical subcommittees to solicit expert and clinical input for measure development, conducting national field testing on the episode-based cost measures developed, and seeking input from clinicians and stakeholders through engagement activities. Seven clinical subcommittees were convened through an open call for nominations between March 17, 2017 and April 24, 2017, composed of nearly 150 clinicians affiliated with almost 100 specialty societies. These subcommittees met at an in-person meeting and through webinars from May 2017 to January 2018 to select an episode group or groups to develop and provide detailed clinical input on each component of episode-based cost measures. These components included episode triggers and windows, item and service assignment, exclusions, attribution methodology, and risk adjustment variables.

As described in the CY 2018 Quality Payment Program final rule (82 FR 53645), we provided an initial opportunity for clinicians to review their performance based on the new episode-based measures developed by the clinical subcommittees in the fall of 2017 through national field testing. During the period of October 16, 2017

to November 20, 2017, solo practitioners and clinician groups were able to access field test reports about their cost measure performance on the CMS Enterprise Portal if they were attributed at least 10 episodes for at least one of these eight measures during the measurement period of June 1, 2016 to May 31, 2017. In addition to the field test reports, stakeholders could review a range of materials about the new episode-based cost measures, including a fact sheet, frequently asked questions (FAQ) document, a mock field test report, and draft measure specifications for each of the 8 new episode-based measures (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Episode-based-cost-measures-field-test-files.zip>).

During field testing, we sought feedback from stakeholders on the draft measure specifications, feedback report format, and supplemental documentation through an online form. We received over 200 responses, including 53 comment letters, during the field test feedback period. We shared the feedback on the draft measure specifications with the clinical subcommittees who considered it in providing input on measure refinements after the end of field testing. A field testing feedback summary report is publicly available at qpp.cms.gov.

To engage clinicians and stakeholders, we conducted extensive outreach activities including hosting National Provider Calls (NPCs) to provide information about the measure development process and field test reports, and to give stakeholders the opportunity to ask questions.

The new episode-based measures developed by the clinical subcommittees were considered by the NQF-convened MAP, and were all conditionally supported by the MAP, with the recommendation of obtaining

NQF endorsement. We intend to submit these episode-based measures to NQF for endorsement in the future. The MAP provides an opportunity for an interdisciplinary group of stakeholders to provide input on whether the measures under consideration are attributable and applicable to clinicians. The MAP also reviews measures for clinician level feasibility, reliability, and validity. Following the successful field testing and review through the MAP process, we propose to add 8 episode-based measures listed in Table 33 as cost measures for the 2019 MIPS performance period and future performance periods.

The attribution methodology for these measures is discussed in section III.H.3.h.(3)(b)(iv)(B) of this proposed rule. The detailed specifications for these measures can be reviewed at qpp.cms.gov. These specifications documents consist of (i) a methods document that outlines the methodology for constructing the measures, and (ii) a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides a high-level overview of the measure development process, including discussion of the detailed clinical input obtained at each step, and details about the components of episode-based cost measures: Defining an episode group; assigning costs to the episode group; attributing the episode group; risk adjusting episode group costs; and aligning cost with quality. The methods document also contains the detailed measure methodology that describes each logic step involved in constructing the episode groups and calculating the cost measure. Second, the measure codes list file contains the codes used in the specifications, including the episode triggers, exclusions, episode sub-groups, assigned items and services, and risk adjusters.

TABLE 33—EPISODE-BASED MEASURES PROPOSED FOR THE 2019 MIPS PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS

Measure topic	Measure type
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural.
Knee Arthroplasty	Procedural.
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural.
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural.
Screening/Surveillance Colonoscopy	Procedural.
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition.
Simple Pneumonia with Hospitalization	Acute inpatient medical condition.
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition.

(iii) Reliability

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77170), we finalized a reliability threshold of 0.4 for measures in the cost performance category. We seek to ensure that MIPS eligible clinicians are measured reliably. In the CY 2017 Quality Payment Program final rule, we finalized a case minimum of 20 for the episode-based measures specified for the 2017 MIPS performance period (81 FR 77175). We examined the reliability of the proposed 8 episode-based measures listed in Table 33 at various case minimums and found that all of these measures meet the reliability

threshold of 0.4 for the majority of clinicians and groups at a case minimum of 10 episodes for procedural episode-based measures and 20 episodes for acute inpatient medical condition episode-based measures. Furthermore, these case minimums would balance the goal of increased reliability with the goal of adopting cost measures that are applicable to a larger set of clinicians and clinician groups. Our analysis indicated that the case minimum for procedural episode-based measures could be lower than that of acute inpatient medical condition episode-based measures while still ensuring reliable measures.

Table 34 presents the percentage of TINs and TIN/NPIs with 0.4 or higher reliability, as well as the mean reliability for the subset of TINs and TIN/NPIs who met the proposed case minimums of 10 episodes for procedural episode-based measures and 20 episodes for acute inpatient medical condition episode-based measures for each of the proposed episode-based measures. Each row in this table provides the percentage of TINs and TIN/NPIs who had reliability of 0.4 or higher among all the TINs and TIN/NPIs who met the case minimum for that measure during the study period (6/1/2016 to 5/31/2017).

TABLE 34—PERCENTAGE OF TINs AND TIN/NPIs WITH 0.4 OR HIGHER RELIABILITY FROM JUNE 1, 2016 TO MAY 31, 2017 AT PROPOSED CASE MINIMUMS

Measure name	Percentage TINs with 0.4 or higher reliability	Mean reliability for TINs	Percentage TIN/NPIs with 0.4 or higher reliability	Mean reliability for TIN/NPIs
Elective Outpatient Percutaneous Coronary Intervention (PCI)	100.0	0.73	84.1	0.53
Knee Arthroplasty	100.0	0.87	100.0	0.81
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	100.0	0.74	100.0	0.64
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	100.0	0.95	100.0	0.94
Screening/Surveillance Colonoscopy	100.0	0.96	100.0	0.93
Intracranial Hemorrhage or Cerebral Infarction	100.0	0.70	74.9	0.48
Simple Pneumonia with Hospitalization	100.0	0.64	31.8	0.40
ST-Elevation Myocardial Infarction (STEMI) with PCI	100.0	0.59	100.0	0.59

Based on this analysis, we propose at § 414.1350(c)(4) and (5) a case minimum of 10 episodes for the procedural episode-based measures and 20 episodes for the acute inpatient medical condition episode-based measures that we have proposed beginning with the 2019 MIPS performance period. These case minimums would ensure that the measures meet the reliability threshold for groups and individual clinicians. We believe that the proposed case minimums for these procedural and acute inpatient medical condition episode-based measures would achieve a balance between several important considerations. In order to help clinicians become familiar with the episode-based measures as a robust and clinician-focused form of cost measurement, we want to provide as many clinicians as possible the opportunity to receive information about their performance on reliable measures. This is consistent with the stakeholder feedback that we have received throughout the measure development process. We believe that calculating episode-based measures with these case minimums would accurately and reliably measure the performance of a large number of clinicians and clinician group practices.

We recognize that the percentage of TIN/NPIs with 0.4 or greater reliability for the Simple Pneumonia with Hospitalization measure, while still meeting our reliability threshold, is somewhat lower than that of the other proposed acute inpatient medical condition episode-based measures, as well as all of the proposed procedural episode-based measures. For this reason, we considered an alternative case minimum of 30 for both TIN/NPIs and TINs for this measure. At this case minimum, 100 percent of TIN/NPIs would have 0.4 or greater reliability and the mean reliability would increase to 0.49 for TIN/NPIs and 0.70 for TINs. However, the number of TINs and TIN/NPIs that would meet the case minimum for this important measure would decrease by 29 percent for TINs and by 84 percent for TIN/NPIs. We invite comments on this alternative case minimum for TIN/NPIs and TINs for the Simple Pneumonia with Hospitalization episode-based measure.

We previously finalized a case minimum of 35 for the MSPB measure (81 FR 77171), 20 for the total per capita cost measure (81 FR 77170), and 20 for the episode-based measures specified for the 2017 MIPS performance period

(81 FR 77175). We propose to codify these final policies under § 414.1350(c).

In general, higher case minimums increase reliability, but also decrease the number of clinicians who are measured. We aim to measure as many clinicians as possible in the cost performance category. Some clinicians or smaller groups may never see enough patients in a single year to meet the case minimum for a specific episode-based measure. For this reason, we seek comment on whether we should consider expanding the performance period for the cost performance category measures from a single year to 2 or more years in future rulemaking. We believe this would allow us to more reliably measure a larger number of clinicians. However, we are also concerned that expanding the performance period would increase the time between the measurement of performance and the application of the MIPS payment adjustment. In addition, it would take a longer period of time for us to introduce new cost measures as we would expect to adopt them through rulemaking prior to the beginning of the performance period.

(iv) Attribution

(A) Attribution Methodology for Cost Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169; 77174 through 77176), we adopted final policies concerning the attribution methodologies for the total per capita cost measure, the MSPB measure, and the episode-based measures specified for the 2017 MIPS performance period in addition to an attribution methodology for individual clinicians and groups. We propose to codify these final policies under § 414.1350(b).

(B) Attribution Rules for the Proposed Episode-Based Measures

In section III.H.3.h.(3)(b)(ii) of this proposed rule, we propose to add 8 episode-based measures as cost measures for the 2019 MIPS performance period and future performance periods, which can be categorized into two types of episode groups: Acute inpatient medical condition episode groups, and procedural episode groups. These measures only include items and services that are related to the episode of care for a clinical condition or procedure (as defined by procedure and diagnosis codes), as opposed to including all services that are provided to a patient over a given period of time. The attribution methodology would be the same for all of the measures within each type of episode groups—acute inpatient medical condition episode groups and procedural episode groups. Our proposed approach to attribution would ensure that the episode-based measures reflect the roles of the individuals and groups in providing care to patients.

For acute inpatient medical condition episode groups specified beginning in the 2019 performance period, we propose at § 414.1350(b)(6) to attribute episodes to each MIPS eligible clinician who bills inpatient evaluation and management (E&M) claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E&M claim lines in that hospitalization. A trigger inpatient hospitalization is a hospitalization with a particular MS-DRG identifying the episode group. These MS-DRGs, and any supplementary trigger rules, are identified in the measure specifications posted at qpp.cms.gov. The measure score for an individual clinician (TIN/NPI) is based on all of the episodes attributed to the individual. The measure score for a group (TIN) is based on all of the episodes attributed to a

TIN/NPI in the given TIN. If a single episode is attributed to multiple TIN/NPIs in a single TIN, the episode is only counted once in the TIN's measure score. We believe that establishing a 30 percent threshold for the TIN would ensure that the clinician group is collectively measured across all of its clinicians who are likely responsible for the oversight of care for the patient during the trigger hospitalization.

This proposed attribution approach differs from the attribution approach previously established for episode-based measures for acute inpatient medical conditions specified for the 2017 performance period in the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77175). The previous approach attributed episodes to TIN/NPIs who individually exceed the 30 percent E&M threshold, while excluding all episodes where no TIN/NPI exceeds the 30 percent threshold. Throughout the measure development process, stakeholders have discussed the team-based nature of acute care, in which multiple clinicians share management of a patient during a hospital stay. The previous approach outlined in the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77175) does not capture patients' episodes when a group collaborates to manage a patient but no individual clinician exceeds the 30 percent threshold. Based upon stakeholder feedback, our proposed approach emphasizes team-based care and expands the measures' coverage of clinicians, patients, and cost.

To illustrate the proposed attribution rules for acute inpatient medical condition episode groups, we are providing an example where 3 MIPS eligible clinicians are part of the same TIN. The TIN bills 50 percent of total inpatient E&M claim lines during an inpatient hospitalization. Clinician A and B each bill 3 inpatient E&M claim lines under the TIN, and Clinician C bills none under the TIN. If MIPS eligible clinicians under this TIN are scored as individual TIN/NPIs, this episode would be attributed to Clinicians A and B, but not Clinician C. The episode would be used to calculate Clinician A's measure score and Clinician B's measure score, but not Clinician C's. The episode would count towards the individual 20 episode case minimums for both Clinicians A and B. If this TIN is instead scored as a group, the episode would be included in the calculation of the TIN's measure score because it has exceeded the 30 percent inpatient E&M threshold. This episode would count towards the TIN's 20 episode case minimum. We note that this episode would only be counted

once towards the TIN's score, even though 2 clinicians under the TIN exceeded the 30 percent threshold. The previous attribution approach outlined in the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77175) would discard this episode altogether. Specifically, it would not attribute this episode to Clinician A, B, or C, in the above example and the episode would not be included in these clinicians' measures or their TIN's measure.

For procedural episode groups specified beginning in the 2019 MIPS performance period, we propose at § 414.1350(b)(7) to attribute episodes to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes. These trigger services are identified in the measure specifications posted at qpp.cms.gov. The measure score for an individual clinician (TIN/NPI) is based on all of the episodes attributed to the individual. The measure score for a group (TIN) is based on all of the episodes attributed to a TIN/NPI in the given TIN. If a single episode is attributed to multiple TIN/NPIs in a single TIN, the episode is only counted once in the TIN's measure score. We believe this approach best identifies the clinician(s) responsible for the patient's care. This attribution method is similar to that used for procedural episode-based measures in the 2017 MIPS performance period but more clearly defines that the services must be provided during the episode and how we would address instances in which two NPIs in the same TIN provided a trigger service.

(4) Improvement Activities Performance Category

(a) Background

In CY 2017 Quality Payment Program final rule (81 FR 77179 through 77180), we codified at § 414.1355 that the improvement activities performance category would account for 15 percent of the final score. We refer readers to section III.H.3.i.(1)(e) of this proposed rule where we are proposing to modify § 414.1355 to provide further technical clarifications. In addition, in the CY 2018 Quality Payment Program final rule (82 FR 53649), we codified at § 414.1380(b)(3)(iv) that the term "recognized" be accepted as equivalent to the term "certified" when referring to the requirements for a patient-centered medical home to receive full credit for the improvement activities performance category for MIPS. We also finalized at § 414.1380(b)(3)(x) that for the 2020 MIPS payment year and future years, to

receive full credit as a certified or recognized patient-centered medical home or comparable specialty practice, at least 50 percent of the practice sites within the TIN must be recognized as a patient-centered medical home or comparable specialty practice (82 FR 53655). We refer readers to section III.H.3.i.(1)(e)(i)(E) of this proposed rule for details on our proposals regarding patient-centered medical homes.

In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes. Further, in that final rule (81 FR 77190), we codified at § 414.1365 that the improvement activities performance category would include the subcategories of activities provided at section 1848(q)(2)(B)(iii) of the Act. We also codified subcategories for improvement activities at § 414.1365 (81 FR 77190).

We also previously codified in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77180 and 82 FR 53651, respectively) data submission criteria for the improvement activities performance category at § 414.1360(a)(1). In addition, we established exceptions for: Small practices; practices located in rural areas; practices located in geographic HPSAs; non-patient facing individual MIPS eligible clinicians or groups; and individual MIPS eligible clinicians and groups that participate in a MIPS APM or a patient-centered medical home submitting in MIPS (81 FR 77185, 77188). Specifically, we codified at § 414.1380(b)(3)(vii) that non-patient facing MIPS eligible clinicians and groups, small practices, and practices located in rural areas and geographic HPSAs receive full credit for the improvement activities performance category by selecting one high-weighted improvement activity or two medium-weighted improvement activities; such practices receive half credit for the improvement activities performance category by selecting one medium-weighted improvement activity (81 FR 77185). We refer readers to section III.H.3.i.(1)(e)(i)(B) of this proposed rule for our proposals related to that provision. In addition, we specified at § 414.1305 that rural areas refers to ZIP codes designated as rural, using the most recent HRSA Area Health Resource File data set available (81 FR 77188, 82

FR 53582). Lastly, we finalized the meaning of Health Professional Shortage Areas (HPSA) at § 414.1305 to mean areas as designated under section 332(a)(1)(A) of the Public Health Service Act (81 FR 77188). In the CY 2018 Quality Payment Program final rule (82 FR 53581), we modified the definition of small practices at § 414.1305 to mean practices consisting of 15 or fewer eligible clinicians.

In this proposed rule, we request comments on our proposals to: (1) Revise § 414.1360(a)(1) to more accurately describe the data submission criteria; (2) delete § 414.1365 and move improvement activities subcategories to § 414.1355(c); (3) update the criteria considered for nominating new improvement activities; (4) modify the Annual Call for Activities timeline for the CY 2019 performance period and future years; (5) add 6 new improvement activities for the CY 2019 performance period and future years; (6) modify 5 existing improvement activities for the CY 2019 performance period and future years; and (7) remove 1 existing improvement activity for the CY 2019 performance period and future years. In addition, we also request comments on our proposals with respect to the CMS Study on Factors Associated with Reporting Quality Measures for the CY 2019 performance period and future years the following proposals: (1) Change the title of the study to “CMS Study on Factors Associated with Reporting Quality Measures;” (2) increase the sample size to a minimum of 200 participants; (3) limit the focus group requirement to a subset of the 200 participants; and (4) require that at least one of the minimum of three required measures be a high priority measure. We are also making clarifications to: (1) Considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities.

These topics are discussed in more detail below.

(b) Submission Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77181) for submission mechanism policies we finalized and codified for the transition year of MIPS. In the CY 2018 Quality Payment Program final rule (82 FR 53651), we continued these policies for future years. Specifically, we finalized that for MIPS Year 2 and future years, MIPS eligible clinicians or groups must submit data on MIPS improvement activities in one of the following manners: Qualified registries; EHR submission mechanisms; QCDR;

CMS Web Interface; or attestation. Additionally, we finalized that for activities that are performed for at least a continuous 90-days during the performance period, MIPS eligible clinicians must submit a yes response for activities within the improvement activities inventory. In addition, in the case where an individual MIPS eligible clinician or group is using a health IT vendor, QCDR, or qualified registry for their data submission, we finalized that the MIPS eligible clinician or group must certify all improvement activities were performed and the health IT vendor, QCDR, or qualified registry would submit on their behalf (82 FR 53650 through 53651). We also updated § 414.1360 to reflect those changes (82 FR 53651).

We refer readers to section III.H.3.h.(1) of this proposed rule, MIPS Performance Category Measures and Activities, where we discuss our proposals to update the data submission process for MIPS eligible clinicians, groups and third party intermediaries, by updating our terminology. We also refer readers to proposed changes to § 414.1325 for Data submission requirements. We are proposing those changes to more closely align with the actual submission experience users have. In alignment with those proposals, we are requesting comments on our proposal to revise § 414.1360(a)(1) to more accurately reflect the data submission process for the improvement activities performance category. In particular, we are proposing that instead of “via qualified registries; EHR submission mechanisms; QCDR, CMS Web Interface; or attestation,” as currently stated, we are revising the first sentence to state that data would be submitted “via direct, login and upload, and login and attest” as discussed in section III.H.3.h.(1)(b) of this proposed rule.

In addition, we are proposing to add further additions to § 414.1360(a)(1) to include paragraph (i). In § 414.1360(a)(1), we are proposing to specify, submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period.

(c) Subcategories

In the CY 2017 Quality Payment Program final rule (81 FR 77190), we finalized at § 414.1365 that the improvement activities performance category includes the subcategories of activities provided at section 1848(q)(2)(B)(iii) of the Act. It has since come to our attention that it is unnecessary to have a separate

regulation text included under § 414.1365 since the subcategories are not a component of the scoring calculations. Therefore, we are proposing to delete § 414.1365 and move the same improvement activities subcategories to § 414.1355(c). We reiterate that we are not proposing any changes to the subcategories themselves. These subcategories are:

- Expanded practice access, such as same day appointments for urgent needs and after-hours access to clinician advice.

- Population management, such as monitoring health conditions of individuals to provide timely health care interventions or participation in a QCDR.

- Care coordination, such as timely communication of test results, timely exchange of clinical information to patients or other clinicians, and use of remote monitoring or telehealth.

- Beneficiary engagement, such as the establishment of care plans for individuals with complex care needs, beneficiary self-management assessment and training, and using shared decision making mechanisms.

- Patient safety and practice assessment, such as through the use of clinical or surgical checklists and practice assessments related to maintaining certification.

- Participation in an APM.

- Achieving health equity, such as for MIPS eligible clinicians that achieve high quality for underserved populations, including persons with behavioral health conditions, racial and ethnic minorities, sexual and gender minorities, people with disabilities, people living in rural areas, and people in geographic HPSAs.

- Emergency preparedness and response, such as measuring MIPS eligible clinician participation in the Medical Reserve Corps, measuring registration in the Emergency System for Advance Registration of Volunteer Health Professionals, measuring relevant reserve and active duty uniformed services MIPS eligible clinician activities, and measuring MIPS eligible clinician volunteer participation in domestic or international humanitarian medical relief work.

- Integrated behavioral and mental health, such as measuring or evaluating such practices as: Co-location of behavioral health and primary care services; shared/integrated behavioral health and primary care records; cross training of MIPS eligible clinicians, and integrating behavioral health with primary care to address substance use disorders or other behavioral health

conditions, as well as integrating mental health with primary care.

(d) Improvement Activities Inventory

In this section of this proposed rule, we are proposing to: (1) Adopt one new criterion and remove one existing criterion for nominating new improvement activities beginning with the CY 2019 performance period and future years; (2) modify the timeframe for the Annual Call for Activities; (3) add 6 new improvement activities for the CY 2019 performance period and future years; (4) modify 5 existing improvement activities for the CY 2019 performance period and future years; and (5) remove 1 existing improvement activity for the CY 2019 performance period and future years. We are also making clarifications to: (1) Considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities.

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial Improvement Activities Inventory and took several steps to ensure it was inclusive of activities in line with statutory and program requirements. For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive Improvement Activities Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the Improvement Activities Inventory, including information required to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). It is important to note that in order to submit a request for a new activity or a modification to an existing improvement activity the stakeholder must submit a nomination form found at www.qpp.cms.gov during the Annual Call for Improvement Activities.

(A) Criteria for Nominating New Improvement Activities

In this proposed rule, we are proposing to add one new criterion and remove a previously adopted criterion from the improvement activities nomination criteria. We are also clarifying our considerations in selecting improvement activities.

(aa) Currently Adopted Criteria

In the CY 2017 Quality Payment final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule, we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria; stakeholders would apply one or more of the below criteria when submitting nominations for improvement activities (82 FR 53660):

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);

- Importance of an activity toward achieving improved beneficiary health outcome;

- Importance of an activity that could lead to improvement in practice to reduce health care disparities;

- Aligned with patient-centered medical homes;

- Focus on meaningful actions from the person and family's point of view;

- Support the patient's family or personal caregiver;

- Activities that may be considered for an advancing care information bonus;

- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);

- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;

- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes; or

- CMS is able to validate the activity.

(bb) Proposed New Criteria

We believe it is important to place attention on public health emergencies, such as the opioid epidemic, when considering improvement activities for inclusion in the Inventory, because their inclusion raises awareness for clinicians about the urgency of the situation and to promote clinician adoption of best practices to combat those public health emergencies. A list of the public health emergency declarations is available at

<https://www.phe.gov/Preparedness/legal/Pages/phedeclaration.aspx>.

Therefore, in this proposed rule, we are proposing to adopt an additional criterion entitled “Include a public health emergency as determined by the Secretary” to the criteria for nominating new improvement activities beginning with the CY 2019 performance period and future years. We invite public comment on our proposal.

(cc) Proposed Removal of One Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77202 through 77209), we adopted a policy to award a bonus to the Promoting Interoperability performance category score for MIPS eligible clinicians who use CEHRT to complete certain activities in the improvement activities performance category. We included a designation column in the Improvement Activities Inventory at Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77817) that indicated which activities qualified for the Promoting Interoperability (formerly Advancing Care Information) bonus codified at § 414.1380(b)(4)(i)(D).

In section III.H.3.h.(5)(d)(ii) of this proposed rule, under the Promoting Interoperability performance category, we are proposing a new approach for scoring that moves away from the base, performance, and bonus score methodology currently established. This new approach would remove the availability of a bonus score for attesting to completing one or more specified improvement activities using CEHRT beginning with the CY 2019 performance period and future years. If this policy is finalized, then we do not believe the criterion for selecting improvement activities for inclusion in the program entitled “Activities that may be considered for an advancing care information bonus” remains relevant. Therefore, we are proposing to remove the criterion for selecting improvement activities for inclusion in the program entitled “Activities that may be considered for an advancing care information bonus” beginning with the CY 2019 performance period and future years. We note that this proposal is being made in alignment with and contingent upon those in section III.H.3.h.(5)(d)(ii) of the proposed rule. If those proposals are not finalized, this proposal would also not be finalized.

If our proposals to add one criterion and remove one criterion are adopted as proposed, the new list of criteria for nominating new improvement activities for the CY 2019 performance period and future years would be as follows:

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcome;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family’s point of view;
- Support the patient’s family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include a public health emergency as determined by the Secretary; or
- CMS is able to validate the activity.

(B) Considerations in Selecting Improvement Activities

As noted in the CY 2017 Quality Payment final rule, we intend to use the criteria for nominating new improvement activities in selecting improvement activities for inclusion in the program (82 FR 53659). However, we clarify here that those criteria are but one factor in determining which improvement activities we ultimately propose. For example, we also generally take into consideration other factors, such as whether the nominated improvement activity uses publically available products or techniques (that is, does not contain proprietary products or information limiting an activity) or whether the nominated improvement activity duplicates any currently adopted activity.

(C) Weighting of Improvement Activities

Given stakeholder feedback requesting additional transparency regarding the weighting of improvement activities (82 FR 53657), in this proposed rule, we are summarizing considerations we have previously used to assign weights to improvement activities included in the Improvement Activities Inventory (see Appendix 2: Improvement Activities, Tables A and B). We are also making a few clarifications and seeking comment for future weighting considerations. These topics are discussed in more detail below.

(aa) Summary of Past Considerations

In the CY 2017 Quality Payment Program final rule (81 FR 77191), we explained that to define the criteria and establish weighting for each activity, we engage multiple stakeholder groups, including the Centers for Disease Control, Health Resources and Services Administration, Office of the National Coordinator for Health Information Technology, SAMHSA, Agency for Healthcare Research and Quality, Food and Drug Administration, the Department of Veterans Affairs, and several clinical specialty groups, small and rural practices and non-patient facing clinicians. Activities were proposed to be weighted as high based on the extent to which they align with activities that support the patient-centered medical home, since that is the standard under section 1848(q)(5)(C)(i) of the Act for achieving the highest potential score for the improvement activities performance category, as well as with our priorities for transforming clinical practice (81 FR 77191). Activities that require performance of multiple actions, such as participation in the Transforming Clinical Practice Initiative (TCPI), participation in a MIPS eligible clinician’s state Medicaid program, or an activity identified as a public health priority (such as emphasis on anticoagulation management or utilization of prescription drug monitoring programs) were also proposed to be weighted as high (81 FR 77191). We also stated that we believe that high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being (81 FR 77194). In the past, we have given certain improvement activities high weighting due to the intensity of the activity; for example, one improvement activity was changed to high weighting because it often involves travel and work under challenging physical and clinical circumstances (81 FR 77194). Also, we note that successful participation in the CMS Study on Factors Associated with Reporting Quality Measures as discussed in section III.H.3.h.(4)(e) of this proposed rule would result in full credit for the improvement activities performance category of 40 points; if participants do not meet the study guidelines, they will need to follow the current improvement activities guidelines (81 FR 77197).

(bb) Clarifications

In this proposed rule, we are clarifying: (a) Our consideration of giving high-weighting due to activity

intensity; and (b) differences between high- and medium-weighting.

(AA) High-Weighting Due to Activity Intensity

As stated above, we have given certain improvement activities high weighting due to the intensity of the activity (81 FR 77194). To elaborate, we believe that an activity that requires significant investment of time and resources should be high-weighted. For example, we finalized the CAHPS for MIPS survey as high-weighted (81 FR 77827), because it requires a significant investment of time and resources. As part of the requirements of this activity, MIPS eligible clinicians: (1) Must register for the CAHPS for MIPS survey; (2) must select and authorize a CMS-approved survey vendor to collect and report survey data using the survey and specifications provided by us; and (3) are responsible for vendor's costs to collect and report the survey (ranges from approximately \$4,000 to \$7,000 depending on services requested).

In contrast, we believe medium-weighted improvement activities are simpler to complete and require less time and resources as compared to high-weighted improvement activities. For example, we finalized the Cost Display for Laboratory and Radiographic Orders improvement activity as medium-weighted (82 FR 54188), because the information required to be used is readily available (<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/index.html>) at no cost through the Medicare clinical laboratory fee schedule and can be distributed in a variety of manners with very little investment (for example, it may be displayed in the clinic, provided to patients through hardcopies, or incorporated in the electronic health record).

(BB) High- Versus Medium-Weighting

We recognize that we did not previously explicitly state separate considerations for medium-weighted activities specifically. This is because an improvement activity is only either high or medium-weighted. In this proposed rule, we are clarifying that an improvement activity is by default medium-weight unless it meets considerations for high-weighting as discussed above.

(cc) Request for Comments

We intend to more thoroughly revisit our improvement activity weighting policies in next year's rulemaking. We invite public comment on the need for

additional transparency and guidance on the weighting of improvement activities as we work to refine the Annual Call for Activities process for future years. Furthermore, in light of the proposed policy to remove bonus points for improvement activities that may be applicable to the Promoting Interoperability performance category as discussed in sections III.H.3.h.(4)(d)(i)(A)(cc) and III.H.3.h.(5)(d)(ii), we recognize the need to continue incentives for CEHRT. Therefore, for future consideration, we are seeking comment on potentially applying high-weighting for any improvement activity employing CEHRT. We also invite public comment on any other additional considerations for high- or medium-weighting.

(D) Timeframe for the Annual Call for Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would accept submissions for prospective improvement activities and modifications to existing improvement activities at any time during the performance period to be added to the Improvement Activities Under Review (IAUR) list, for the applicable performance period, which would be displayed on a CMS website following the close of the Call for Activities. In addition, we finalized that for the Annual Call for Activities, only nominations and modifications submitted by March 1st would be considered for inclusion in the IAUR list and Improvement Activities Inventory for the performance period occurring in the following calendar year (82 FR 53660). For example, for the CY 2018 Call for Activities, we received nominations for new and modified improvement activities from February 1st through March 1st. Currently, an improvement activity nomination submitted during the CY 2018 Annual Call for Activities would be vetted in CY 2018, and after review, if accepted by CMS, would be proposed during the CY 2018 rulemaking cycle for possible implementation in the CY 2019 performance period and future years.

However, the previously established timeline, which includes prospective new and modified improvement activities submission period, review, and publication of proposed improvement activities for implementation in the next performance period, has become operationally challenging. Based on our experience over the past 2 years, we have found that processing and reviewing the

volume of improvement activities nominations requires more time than originally thought. In addition, preparations and drafting for annual rulemaking begin around the time of the close date for the current Call for Activities (that is, March 1st), leaving incorporation into the proposed rule challenging. Therefore, in this proposed rule, beginning with the CY 2019 performance period and future years, we are proposing to: (1) Delay the year for which nominations of prospective new and modified improvement activities would apply; and (2) expand the submission timeframe/due date for nominations.

Beginning with the CY 2019 performance period and for future years, we are proposing to change the performance year for which the nominations of prospective new and modified improvement activities would apply, such that improvement activities nominations received in a particular year will be vetted and considered for the next year's rulemaking cycle for possible implementation in a future year. This timeframe parallels the Promoting Interoperability performance category Annual Call for EHR Measures timeframe found at <https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/CallForMeasures.html>. For example, an improvement activity nomination submitted during the CY 2020 Annual Call for Activities would be vetted, and if accepted by CMS, would be proposed during the CY 2021 rulemaking cycle for possible implementation starting in CY 2022. We believe this change will give us adequate time to thoroughly vet improvement activity nominations prior to rulemaking.

Second, beginning with the CY 2019 performance period, we are proposing to change the submission timeframe for the Call for Activities from February 1st through March 1st to February 1st through June 30th, providing approximately 4 additional months for stakeholders to submit nominations. We believe this change will assist stakeholders by providing additional time to submit improvement activities nominations. Consistent with previous policy, nominations for prospective new and modified improvement activities would be accepted during the Call for Activities time period only and would be included in the IAUR displayed on a CMS website following the close of the Annual Call for Activities.

(ii) Proposed New Improvement Activities and Modifications to and Removal of Existing Improvement Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would add new improvement activities to the Improvement Activities Inventory through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199) and Table F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229) for our previously finalized Improvement Activities Inventory. In this proposed rule, for CY 2019 performance period and future years, we are proposing 6 new improvement activities; we are also proposing to: (1) Modify 5 existing activities; and (2) remove 1 existing activity. We refer readers to the Improvement Activities Inventory in Tables A and B of Appendix 2 of this proposed rule for further details. We are also proposing changes to our CMS Study on Factors Associated with Reporting Quality Measures in section III.H.3.h.(4)(e) of this proposed rule.

We invite public comments on the proposed new activities and modifications to and removal of existing activities listed in the Improvement Activities Inventory for the CY 2019 performance period and future years.

(e) CMS Study on Factors Associated With Reporting Quality Measures

(i) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77195), we created the Study on Improvement Activities and Measurement. In CMS' quest to create a culture of improvement using evidence based medicine on a consistent basis, fully understanding the strengths and limitations of the current processes is crucial to better understand the current processes. We proposed to conduct a study on clinical improvement activities and measurement to examine clinical quality workflows and data capture using a simpler approach to quality measures (81 FR 77196). The lessons learned in this study on practice improvement and measurement may influence changes to future MIPS data submission requirements. The goals of the study are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians (81 FR 77196). This study shall inform us on the root causes of

clinicians' performance measure data collection and submission burdens, as well as challenges that hinder accurate and timely quality measurement activities. Our goals are to use high quality, low cost measures that are meaningful, easy to understand, operable, reliable, and valid. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77195) the CMS Study on Burden Associated with Quality Reporting goals are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians desiring:

- A more data driven approach to quality measurement.
- Measure selection unconstrained by a CEHRT program or system.
- Improving data quality submitted to CMS.
- Enabling CMS to get data more frequently and provide feedback more often.

This study evolved into "CMS Study on Burdens Associated with Reporting Quality Measures" in the CY 2018 Quality Payment Program final rule (82 FR 53662).

This study is ongoing, participants are recruited on a yearly basis for a minimum period of 3 years, and current participants can opt-in or out when the study year ends (81 FR 77195). Successful participation in the study would result in full credit for the improvement activities performance category of 40 points; if participants do not meet the study guidelines, they will need to follow the current improvement activities requirements (81 FR 77197). To meet the study requirements, study participants must partake in two web-based survey questionnaires, submit data for at least three MIPS clinician quality measures to CMS during the CY 2019 performance period, and be available for selection and participation in at least one focus group meeting (82 FR 53662).

While we are not proposing any changes to the study purpose, aim, eligibility, or credit, we are proposing, for the CY 2019 performance period and future years, changes to the: (1) Title of the study; (2) sample size to allow enough statistical power for rigorous analysis within some categories, (3) focus group and survey requirements; and (4) measure requirements. These proposals are discussed in more detail below.

(ii) Title

Beginning with the CY 2019 performance period, we are proposing to change the title of the study from "CMS

Study on Burdens Associated with Reporting Quality Measures" to "CMS Study on Factors Associated with Reporting Quality Measures" to more accurately reflect the study's intent and purpose. To assess the root causes of clinician burden associated with the collection and submission of clinician quality measures for MIPS, as depicted in CY 2017 Quality Payment Program final rule (81 FR 77195), replacing "Burden" with "Factors" in the title will eliminate possible response or recall bias that may occur with data collection. Having "burden" in the study title may elicit the tendency of survey participants reporting more on their perception of burden and challenges, and/or suppressing other factors that are associated with their quality measure data collection and submission, that may be relevant to examining the root cause of burden.

(iii) Sample Size

(A) Current Policy

In the CY 2017 Quality Payment Program final rule (81 FR 77196), we initially finalized a sample size of 42 participants (comprising of groups and individual MIPS eligible facilities). In the CY 2018 Quality Payment Program final rule (82 FR 53661), we increased that number and finalized a sample size of a minimum of 102 individual and group participants for performance periods occurring in CY 2018 for the following categories:

- 20 urban individuals or groups of <3 eligible clinicians—(broken down into 10 individuals & 10 groups).
- 20 rural individuals or groups of <3 eligible clinicians—(broken down into 10 individuals & 10 groups).
- 10 groups of 3–8 eligible clinicians.
- 10 groups of 8–20 eligible clinicians.
- 10 groups of 20–100 eligible clinicians.
- 10 groups of 100 or greater eligible clinicians.
- 6 groups of >20 eligible clinicians reporting as individuals—(broken down into 3 urban & 3 rural).
- 6 specialty groups—(broken down into 3 reporting individually & 3 reporting as a group).
- Up to 10 non-MIPS eligible clinicians reporting as a group or individual (any number of individuals and any group size).

(B) Proposed New Sample Size

In this proposed rule, we are proposing to again increase the sample size for the CY 2019 performance period and future years from a minimum of 102 to a minimum of 200 MIPS eligible

clinicians, which will enable us to more rigorously analyze the statistical difference between the burden and factors associated within the categories listed above. This proposed increase in sample size would provide the minimum sample needed to get a significant result with adequate statistical power to determine whether there are any statistically significant differences in quality measurement data submission associated with: (1) The size of practice or facility; (2) clinician specialty of practice; (3) region of practice; (4) individual or group reporting; and (5) clinician quality measure type. This rigorous statistical analysis is important, because it facilitates tracing the root causes of measurement burdens and data submission errors that may be associated with various sub-groups of clinician practices using quantitative analytical methods. We believe that a larger sample size would also account for any attrition (drop out of study participants before the study ends). Therefore, we are proposing that the new sample size distribution would be:

- 40 urban individuals or groups of <3 eligible clinicians—(broken down into 20 individuals & 20 groups).
- 40 rural individuals or groups of <3 eligible clinicians—(broken down into 20 individuals & 20 groups).
- 20 groups of 3–8 eligible clinicians.
- 20 groups of 8–20 eligible clinicians.
- 20 groups of 20–100 eligible clinicians.
- 20 groups of 100 or greater eligible clinicians.
- Up to 6 groups of >20 eligible clinicians reporting as individuals—(broken down into 3 urban & 3 rural).
- Up to 6 specialty groups—(broken down into 3 reporting individually & 3 reporting as a group).
- Up to 10 non-MIPS eligible clinicians reporting as a group or individual (any number of individuals and any group size).

(iv) Focus Group

(A) Current Policies

We previously finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195) that for the transition year of MIPS, study participants were required to attend a monthly focus group to share lessons learned in submitting quality data along with providing survey feedback to monitor effectiveness. The focus group includes providing visual displays of data, workflows, and best practices to share amongst the participants to obtain feedback and make further

improvements (81 FR 77196). The focus groups are used to learn from the practices about how to be more agile as we test new ways of measure recording and workflow (81 FR 77196). In the CY 2018 Quality Payment Program final rule (82 FR 53662), for Year 2 and future years, we reduced that requirement and finalized that study participants would be required to complete at least two web-based survey questionnaire and attend up to 4 focus group sessions throughout the year, but certain study participants would be able to attend less frequently. Each study participant is required to complete a survey prior to submitting MIPS data and another survey after submitting MIPS data (82 FR 53662). The purpose of reducing focus group attendance and survey participation was to ease requirements for MIPS eligible clinicians or group of clinicians who may have nothing new to contribute, without compromising the minimum sample needed for focus groups. For example, if a MIPS eligible clinician submitted all 6 measures after collecting 90 days of data and attended the first available focus group and/or survey, the clinician may have nothing new or relevant to discuss with the research team on subsequent focus groups and/or surveys.

(B) Proposed New Requirements for Focus Group and Survey Participation

Although we are proposing in the section above to increase the sample size of the study to a minimum of 200 MIPS eligible clinicians, we do not believe we need focus groups for the entirety of that population. We believe that requiring focus groups for all proposed minimum of 200 MIPS eligible clinicians would only result in bringing the data to a saturation point, a situation whereby the same themes and information are recurring, and no new insights are given by additional sources of data from focus groups.

Instead, we believe that selecting a subset of clinicians, purposively, to participate in focus groups would be a more appropriate approach because that would allow us to understand the experience of select clinicians without imposing undue burden on all. This study is voluntary as clinicians nominate themselves to participate and we select a cohort from among these volunteers. Therefore, we are proposing to make the focus group participation a requirement only for a selected subset of the study participants, using purposive sampling and random sampling methods, beginning with the CY 2019 performance period and future years. Those who are selected would be required to participate, in at least one

focus group meeting and complete survey requirements, in addition to all the other study requirements. As previously established, each study participant is required to complete a survey prior to submitting MIPS data and another survey after submitting MIPS data. This requirement would continue to apply for each selected subset participating in a focus group.

(v) Measure Requirements

(A) Current Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77196), we finalized that for CY 2017, the participating MIPS eligible clinicians or groups would submit their data and workflows for a minimum of three MIPS clinician quality measures that are relevant and prioritized by their practice. One of the measures must be an outcome measure, and one must be a patient experience measure (81 FR 77196). We also finalized that for future years, participating MIPS eligible clinicians or groups would select three of the measures for which they have baseline data from the 2017 performance period to compare against later performance years. We note that participating MIPS eligible clinicians could elect to report on more measures originally as this would provide more options from which to select in subsequent years for purposes of measuring improvement. In the CY 2018 Quality Payment Program final rule, we finalized for the Quality Payment Program Year 2 and future years, that study participants could submit all their quality measures data at once, as it is done in the MIPS program, (qpp.cms.gov) (82 FR 53662).

(B) Proposed Measure Requirements

In this proposed rule, we are proposing to continue the previously required minimum number of measures. That is, for the CY 2019 performance period and future years: Participants must submit data and workflows for a minimum of three MIPS quality measures for which they have baseline data. However, instead of requiring one outcome measure and one patient experience measure as previously finalized, we are proposing that, for the CY 2019 performance period and future years, at least one of the minimum of three measures must be a high priority measure as defined at § 414.1305. As defined there and discussed in section III.H.3.h.(2) of this proposed rule, a high priority measure means an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality

measure. Outcome measures includes intermediate-outcome and patient-reported outcome measures. We believe that focusing on high priority measures, rather than patient experience measures, is important at this time, because it better aligns with the MIPS quality measures data submission criteria. We invite public comment on our proposal.

We note that although the aforementioned activities (that is, the CMS Study on Factors Associated with Reporting Quality Measures) constitute an information collection request as defined in the implementing regulations of the Paperwork Reduction Act of 1995 (5 CFR part 1320), the associated burden is exempt from application of the Paperwork Reduction Act. Specifically, section 1848(s) (7) of the Act, as added by section 102 of MACRA (Pub. L. 114–10) states that Chapter 35 of title 44, United States Code, shall not apply to the collection of information for the development of quality measures.

(5) Promoting Interoperability (PI)
(Previously Known as the Advancing Care Information Performance Category)

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of CEHRT as a performance category under the MIPS. In prior rulemaking, we referred to this performance category as the advancing care information performance category, and it is reported by MIPS eligible clinicians as part of the overall MIPS program. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the advancing care information performance category.

(b) Renaming the Advancing Care Information Performance Category

In this proposed rule, we are proposing several scoring and measurement policies that would bring the performance category to a new phase of EHR measurement with an increased focus on interoperability and improving patient access to health information. To better reflect this focus, we renamed the advancing care information performance category to the Promoting Interoperability (PI) performance category. We believe this change will help highlight the enhanced goals of this performance category. We are proposing revisions to the regulation text under 42 CFR part 414, subpart O, to reflect the new name.

(c) Certification Requirements
Beginning in 2019

Under the definition of CEHRT under § 414.1305, for the performance periods in 2017 and 2018, MIPS eligible clinicians had flexibility to use EHR technology certified to either the 2014 or 2015 Edition certification criteria, or a combination of the two Editions, to meet the objectives and measures specified for the Promoting Interoperability performance category (82 FR 53671 through 53672). However, beginning with the performance period in 2019, MIPS eligible clinicians must use EHR technology certified to the 2015 Edition certification criteria as specified at § 414.1305. As discussed in this section, we continue to believe it is appropriate to require the use of 2015 Edition CEHRT beginning in CY 2019. In reviewing the state of health information technology, it is clear the 2014 Edition certification criterion are out of date and insufficient for clinician needs in the evolving health information technology (IT) industry. It would be beneficial to health IT developers and health care providers to move to more up-to-date standards and functions that better support interoperable exchange of health information and improve clinical workflows.

The 2014 Edition certification criteria, which were first issued in regulations in 2012, now includes standards that are significantly out of date, which can impose limits on interoperability and the access, exchange, and use of health information. Moving from certifying to the 2014 Edition to certifying to the 2015 Edition would also eliminate the inconsistencies that are inherent with maintaining and implementing two separate certification programs. In the last calendar year, the number of new and unique 2014 Edition products have been declining, showing that the market acknowledges the shift towards newer and more effective technologies. The vast majority of 2014 Edition certifications are for inherited certified status. The resulting legacy systems, while certified to the 2014 Edition, are not the most up-to-date and detract from health information technology's goal of increasing interoperability and increasing the access, exchange, and use of health data.

Prolonging backwards compatibility of newer products to legacy systems causes market fragmentation. Health IT stakeholders noted the impact of system fragmentation on the cost to develop and maintain health IT connectivity to support data exchange, develop products to support specialty clinical

care, and integrate software supporting administrative and clinical processes. As previously stated, a large proportion of the sector is ready to use only the 2015 Edition of CEHRT; allowing use of both certification editions contributes to market fragmentation, which heightens implementation costs for health IT developers, clinicians, and other health care providers. Developers and consumers that maintain two different certification editions spend large amounts of money on the recertification of older products, which diverts resources from the development, maintenance, and implementation of more advanced technologies, including 2015 Edition CEHRT.

In addition to the monetary savings resulting from a move to the 2015 Edition, there will also be reduced burden across many settings. MIPS eligible clinicians will see a reduction in burden through the relief from certifying to a legacy system and can use 2015 Edition CEHRT to better streamline workflows and utilize more comprehensive functions to meet patient safety goals and improve care coordination across the continuum. Maintaining only one edition of certification requirements would also reduce the burden for health IT developers, as well as Office of the National Coordinator for Health Information Technology (ONC)-Authorized Testing Laboratories and ONC-Authorized Certification Bodies because they would no longer have to support two, increasingly distant sets of requirements.

One of the major improvements of the 2015 Edition is the Application Programming Interface (API) functionality. The API functionality supports health care providers and patient electronic access to health information. These functions allow for patient data to move between systems and assist patients with making key decisions about their health care. These functions also contribute to quality improvement and greater interoperability between systems. The API has the ability to complement a specific health care provider branded patient portal or could also potentially make one unnecessary if patients are able to use software applications designed to interact with an API that could support their ability to view, download, and transmit their health information to a third party (80 FR 62842). Furthermore, the API allows for third-party application usage with more flexibility and smoother workflow from various systems than what is often found in many current patient portals.

The 2015 Edition also includes certification criterion specifying a core set of data that health care providers have noted are critical to interoperable exchange and can be exchanged across a wide variety of other settings and use cases, known as the Common Clinical Data Set (CCDS) (80 FR 62603). The US Core Data for Interoperability (USCDI) builds off the CCDS definition adopted for the 2015 Edition of certified health IT for instance as the data which must be included in a summary care record. The USCDI aims to support the goals set forth in the 21st Century Cures Act by specifying a common set of data classes that are required for interoperable exchange and identifying a predictable, transparent, and collaborative process for achieving those goals. The USCDI is referenced by the Draft Trusted Exchange Framework (<https://www.healthit.gov/sites/default/files/draft-trusted-exchange-framework.pdf>), which is intended to enable Healthcare Information Networks (HINs) and Qualified HINs to securely exchange electronic health information in support of a range permitted purposes, including treatment, payment, operations, individual access, public health, and benefits determination.

The 2015 Edition also includes a requirement that products must be able to export data from one patient, a set of patients, or a subset of patients, which is responsive to health care provider feedback that their data is unable to carry over from a previous EHR. The 2014 Edition did not include a requirement that the vendor allow the MIPS eligible clinician to export the data themselves. In the 2015 Edition, the health care provider has the autonomy to export data themselves without intervention by their vendor, resulting in increased interoperability and data exchange in the 2015 Edition.

In efforts to track certification readiness for the 2015 Edition, ONC considers the number of health care providers likely to be served by the

developers seeking certification under the ONC Health IT Certification Program in real time as the testing and certification process progresses. The ONC considers trends within the industry when projecting for 2015 Edition readiness. In working with ONC, we are able to identify the percentage of MIPS eligible clinicians that have a 2015 Edition of CEHRT available to them based on vendor readiness and information. As of the beginning of the first quarter of CY 2018, ONC confirmed that at least 66 percent of MIPS eligible clinicians have 2015 Edition CEHRT available based on previous Medicare and Medicaid EHR Incentive Programs attestation data. Based on these data, and as compared to the transition from 2011 Edition to 2014 Edition, it appears that the transition from the 2014 Edition to the 2015 Edition is on schedule for the performance period in CY 2019.

This information is current as of the beginning of CY 2018, and based on historical data, we expect readiness to continue to improve as developers and health care providers prepare for program participation using the 2015 Edition in CY 2019.

We continue to recognize there is a burden associated with development and deployment of new technology, but we believe requiring use of the most recent version of CEHRT is important in ensuring health care providers will use technology that has improved interoperability features and up-to-date standards to collect and exchange relevant patient health information. The 2015 Edition includes key updates to functions and standards that support improved interoperability and clinical effectiveness through the use of health IT.

(d) Scoring Methodology

(i) Scoring Methodology for 2017 and 2018 Performance Periods

Section 1848(q)(5)(E)(i)(IV) of the Act states that 25 percent of the MIPS final

score shall be based on performance for the Promoting Interoperability performance category. Accordingly, under § 414.1375(a), the Promoting Interoperability performance category comprises 25 percent of a MIPS eligible clinician’s final score for the 2019 MIPS payment year and each MIPS payment year thereafter, unless we assign a different scoring weight. We are proposing to revise § 414.1375(a) to specify the various sections of the statute (sections 1848(o)(2)(D), 1848(q)(5)(E)(ii), and 1848(q)(5)(F) of the Act) under which a different scoring weight may be assigned for the Promoting Interoperability performance category. We established the reporting criteria to earn a performance category score for the Promoting Interoperability performance category under § 414.1375(b). We are proposing to revise § 414.1375(b)(2)(i) to replace the reference to “each required measure” with “each base score measure” to improve the precision of the text. Under § 414.1380(b)(4), the Promoting Interoperability performance category score is comprised of a score for participation and reporting, known as the “base score,” and a score for performance at varying levels above the base score requirements, known as the “performance score,” as well as any applicable bonus scores. We are proposing several editorial changes to § 414.1380(b)(4) in an effort to more clearly and concisely capture the previously established policies. For further explanation of our scoring policies for performance periods in 2017 and 2018 for the Promoting Interoperability performance category, we refer readers to 81 FR 77216 through 77227 and 82 FR 53663 through 53664.

A general summary overview of the scoring methodology for the performance period in 2018 is provided in the Table 35.

TABLE 35—2018 PERFORMANCE PERIOD PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY SCORING METHODOLOGY PROMOTING INTEROPERABILITY OBJECTIVES AND MEASURES

2018 Promoting interoperability objective	2018 Promoting interoperability measure	Required/not required for base score (50%)	Performance score (up to 90%)	Reporting requirement
Protect Patient Health Information ..	Security Risk Analysis	Required	0	Yes/No Statement.
	e-Prescribing **	Required	0	Numerator/Denominator.
Patient Electronic Access	Provide Patient Access	Required	Up to 10	Numerator/Denominator.
	Patient-Specific Education	Not Required	Up to 10	Numerator/Denominator.
Coordination of Care Through Patient Engagement.	View, Download, or Transmit (VDT)	Not Required	Up to 10	Numerator/Denominator.
	Secure Messaging	Not Required	Up to 10	Numerator/Denominator.
	Patient-Generated Health Data	Not Required	Up to 10	Numerator/Denominator.
Health Information Exchange	Send a Summary of Care **	Required	Up to 10	Numerator/Denominator.

TABLE 35—2018 PERFORMANCE PERIOD PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY SCORING METHODOLOGY PROMOTING INTEROPERABILITY OBJECTIVES AND MEASURES—Continued

2018 Promoting interoperability objective	2018 Promoting interoperability measure	Required/not required for base score (50%)	Performance score (up to 90%)	Reporting requirement
Public Health and Clinical Data Registry Reporting.	Request/Accept Care**.	Required	Up to 10	Numerator/Denominator.
	Clinical Information Reconciliation ..	Not Required	Up to 10	Numerator/Denominator.
	Immunization Registry Reporting	Not Required	0 or 10*	Yes/No Statement.
	Syndromic Surveillance Reporting ..	Not Required	0 or 10*	Yes/No Statement.
	Electronic Case Reporting	Not Required	0 or 10*	Yes/No Statement.
	Public Health Registry Reporting	Not Required	0 or 10*	Yes/No Statement.
	Clinical Data Registry Reporting	Not Required	0 or 10*	Yes/No Statement.
Bonus (up to 25%)				
Report to one or more additional public health agencies or clinical data registries beyond the one identified for the performance score.			5% bonus	Yes/No Statement.
Report improvement activities using CEHRT			10% bonus	Yes/No Statement.
Report using only 2015 Edition CEHRT			10% bonus	Based on measures submitted.

* A MIPS eligible clinician may earn 10 percent for each public health agency or clinical data registry to which the clinician reports, up to a maximum of 10 percent under the performance score.
 ** Exclusions are available for these measures.

We heard from many stakeholders that the current scoring methodology is complicated and difficult to understand. In fact, we have received hundreds of questions requesting clarification of various aspects of the scoring methodology. For example, many clinicians asked how many performance score measures they should submit. By providing flexibility and offering clinicians multiple measures to choose from within the performance score, it appears some clinicians may have been confused by the options. Other MIPS eligible clinicians have indicated that they dislike the base score because it is a required set of measures and provides no flexibility because the scoring is all or nothing. If a MIPS eligible clinician cannot fulfill the base score, they cannot earn a performance and/or bonus score. We have also received feedback from clinicians and specialty societies that the current requirements detract from their ability to provide care to their patients. In addition, stakeholders have indicated that the requirements of the Promoting Interoperability performance category for clinicians do not align with the requirements of the Medicare Promoting Interoperability Program for eligible hospitals and critical access hospitals (CAHs) and that this creates a burden for the medical staff who are tasked with overseeing the participation of both clinicians and hospitals in these programs.

Based on the concerns expressed by stakeholders, we are proposing a new scoring methodology and moving away

from the base, performance and bonus score methodology that we currently use. We believe this change would provide a simpler, more flexible, less burdensome structure, allowing MIPS eligible clinicians to put their focus back on patients. The introduction of this new scoring methodology would continue to encourage MIPS eligible clinicians to push themselves on measures that are most applicable to how they deliver care to patients, instead of focusing on measures that may not be as applicable to them. Our goal is to provide increased flexibility to MIPS eligible clinicians and enable them to focus more on patient care and health data exchange through interoperability. Additionally, we want to align the requirements of the Promoting Interoperability performance category with the requirements of the Medicare Promoting Interoperability Program for eligible hospitals and CAHs as we have proposed in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20518 through 20537). As the distinction between ambulatory and inpatient CEHRT has diminished and more clinicians are sharing hospitals' CEHRT, we believe that aligning the requirements between programs would lessen the burden on health care providers and facilitate their participation in both programs.

(ii) Proposed Scoring Methodology Beginning With the MIPS Performance Period in 2019

We are proposing a new scoring methodology, beginning with the performance period in 2019, to include a combination of new measures, as well as the existing Promoting Interoperability performance category measures, broken into a smaller set of four objectives and scored based on performance. We believe this is an overhaul of the existing program requirements as it eliminates the concept of base and performance scores. The smaller set of objectives would include e-Prescribing, Health Information Exchange, Provider to Patient Exchange, and Public Health and Clinical Data Exchange. We are proposing these objectives to promote specific HHS priorities and satisfy the requirements of section 1848(o)(2) of the Act. We include the e-Prescribing and Health Information Exchange objectives in part to capture what we believe are core goals for the 2015 Edition of CEHRT and also to satisfy the statutory requirements. These core goals promote interoperability between health care providers and health IT systems to support safer, more coordinated care. The Provider to Patient Exchange objective promotes patient awareness and involvement in their health care through the use of APIs, and ensures patients have access to their medical data. Finally, the Public Health and Clinical Data Exchange objective supports the ongoing systematic

collection, analysis, and interpretation of data that may be used in the prevention and controlling of disease through the estimation of health status and behavior. The integration of health IT systems into the national network of health data tracking and promotion improves the efficiency, timeliness, and effectiveness of public health surveillance. We believe it is important to keep these core goals, primarily because these objectives promote interoperability between health care providers and health IT systems to support safer, more coordinated care while ensuring patients have access to their medical data.

Under the proposed scoring methodology, MIPS eligible clinicians would be required to report certain measures from each of the four objectives, with performance-based scoring occurring at the individual measure-level. Each measure would be scored based on the MIPS eligible clinician's performance for that measure, based on the submission of a numerator and denominator, except for the measures associated with the Public Health and Clinical Data Exchange objective, which require "yes or no" submissions. Each measure would contribute to the MIPS eligible clinician's total Promoting Interoperability performance category score. The scores for each of the individual measures would be added together to calculate the Promoting Interoperability performance category score of up to 100 possible points for each MIPS eligible clinician. In general, the Promoting Interoperability performance category score makes up 25 percent of the MIPS final score. If a MIPS eligible clinician fails to report on a required measure or claim an exclusion for a required measure if applicable, the clinician would receive a total score of zero for the Promoting Interoperability performance category.

We also considered an alternative approach in which scoring would occur at the objective level, instead of the individual measure level, and MIPS eligible clinicians would be required to report on only one measure from each objective to earn a score for that objective. Under this scoring methodology, instead of six required measures, the MIPS eligible clinician total Promoting Interoperability performance category score would be based on only four measures, one measure from each objective. Each objective would be weighted similarly to how the objectives are weighted in our proposed methodology, and bonus points would be awarded for reporting any additional measures beyond the

required four. We are seeking public comment on this alternative approach, and whether additional flexibilities should be considered, such as allowing MIPS eligible clinicians to select which measures to report on within an objective and how those objectives should be weighted, as well as whether additional scoring approaches or methodologies should be considered.

In our proposed scoring methodology, the e-Prescribing objective would contain three measures each weighted differently to reflect their potential availability and applicability to the clinician community. In addition to the existing e-Prescribing measure, we are proposing to add two new measures to the e-Prescribing objective: Query of Prescription Drug Monitoring Program (PDMP); and Verify Opioid Treatment Agreement. For more information about these two proposed measures, we refer readers to section III.H.3.h.(5)(f) of this proposed rule. The e-Prescribing measure would be required for reporting and weighted at 10 points because we believe it would be applicable to most MIPS eligible clinicians. In the event that a MIPS eligible clinician meets the criteria and claims the exclusion for the e-Prescribing measure in 2019, the 10 points available for that measure would be redistributed equally among the two measures under the Health Information Exchange objective:

- Support Electronic Referral Loops By Sending Health Information Measure (25 points)
- Support Electronic Referral Loops By Receiving and Incorporating Health Information (25 points)

We are seeking public comment on whether this redistribution is appropriate for 2019, or whether the points should be distributed differently.

The Query of PDMP and Verify Opioid Treatment Agreement measures would be optional for the MIPS performance period in 2019. These new measures may not be available to all MIPS eligible clinicians for the MIPS performance period in 2019 as they may not have been fully developed by their health IT vendor, or not fully implemented in time for data capture and reporting. Therefore, we are not proposing to require these two new measures in 2019, although MIPS eligible clinicians may choose to report them and earn up to 5 bonus points for each measure. We are proposing to require these measures beginning with the MIPS performance period in 2020, and we are seeking public comment on this proposal. Due to varying State requirements, not all MIPS eligible clinicians would be able to e-prescribe controlled substances, and thus, these

measures would not be available to them. For these reasons, we are proposing an exclusion for these two measures beginning with the MIPS performance period in 2020. The exclusion would provide that any MIPS eligible clinician who is unable to report the measure in accordance with applicable law would be excluded from reporting the measure, and the 5 points assigned to that measure would be redistributed to the e-Prescribing measure.

As the two new opioid measures become more broadly available in CEHRT, we are proposing each of the three measures within the e-Prescribing objective would be worth 5 points beginning with the MIPS performance period in 2020. Requiring these two measures would add 10 points to the maximum total score for the Promoting Interoperability performance category as these measures would no longer be eligible for optional bonus points. To maintain a maximum total score of 100 points, beginning with the MIPS performance period in 2020, we are proposing to reweight the e-Prescribing measure from 10 points down to 5 points, and reweight the Provide Patients Electronic Access to Their Health Information measure from 40 points down to 35 points as illustrated in Table 36. We are proposing that if the MIPS eligible clinician qualifies for the e-Prescribing exclusion and is excluded from reporting all three of the measures associated with the e-Prescribing objective as described in section III.H.3.h.(5)(f) of this proposed rule, the 15 points for the e-Prescribing objective would be redistributed evenly among the two measures associated with the Health Information Exchange objective and the Provide Patients Electronic Access to their Health Information measure by adding 5 points to each measure.

For the Health Information Exchange objective, we are proposing to change the name of the existing Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information, and proposing a new measure which combines the functionality of the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures into a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information. For more information about the proposed measure and measure changes, we refer readers to section III.H.3.h.(5)(f) of this proposed rule. MIPS eligible clinicians would be required to report both of these measures, each worth 20 points toward their total Promoting

Interoperability performance category score. These measures are weighted heavily to emphasize the importance of sharing health information through interoperable exchange in an effort to promote care coordination and better patient outcomes. Similar to the two new measures in the e-Prescribing objective, the new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure may not be available to all MIPS eligible clinicians as it may not have been fully developed by their health IT vendor, or not fully implemented in time for a MIPS performance period in 2019. For these reasons, we are proposing an exclusion for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure: Any MIPS eligible clinician who is unable to implement the measure for a MIPS performance period in 2019 would be excluded from having to report this measure.

In the event that a MIPS eligible clinician claims an exclusion for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, the 20 points would be redistributed to the Support Electronic Referral Loops by Sending Health Information measure, and that measure would then be worth 40 points. We are seeking public comment on whether this redistribution is appropriate, or whether the points should be redistributed to other measures instead.

We are proposing to weight the one measure in the Provider to Patient Exchange objective, Provide Patients Electronic Access to Their Health Information, at 40 points toward the total Promoting Interoperability performance category score in 2019 and 35 points beginning in 2020. We are proposing that this measure would be weighted at 35 points beginning in 2020 to account for the two new opioid measures, which would be worth 5 points each beginning in 2020 as proposed above. We believe this objective and its associated measure get to the core of improved access and exchange of patient data in Promoting Interoperability and are the crux of the Promoting Interoperability performance category. This exchange of data between health care provider and patient is imperative in order to continue to improve interoperability, data exchange and improved health outcomes. We believe that it is important for patients to have control over their own health information, and through this highly weighted objective we are aiming to show our dedication to this effort.

The measures under the Public Health and Clinical Data Exchange objective are reported using “yes or no” responses and thus we are proposing to score those measures on a pass/fail basis in which the MIPS eligible clinician would receive the full 10 points for reporting two “yes” responses, or for submitting a “yes” for one measure and claiming an exclusion for another. If there are no “yes” responses and two exclusions are claimed, the 10 points would be redistributed to the Provide Patients Electronic Access to Their Health Information measure. A MIPS eligible clinician would receive zero points for reporting “no” responses for the measures in this objective if they do not submit a “yes” or claim an exclusion for at least two measures under this objective. We are proposing that for this objective, the MIPS eligible clinician would be required to report on two measures of their choice from the following list of measures: Immunization Registry Reporting, Electronic Case Reporting, Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting. To account for the possibility that not all of the measures under the Public Health and Clinical Data Exchange objective may be applicable to all MIPS eligible clinicians, we are proposing to establish exclusions for these measures as described in section III.H.3.h.(5)(f) of this proposed rule. If a MIPS eligible clinician claims two exclusions, the 10 points for this objective would be redistributed to the Provide Patients Electronic Access to their Health Information measure under the Provider to Patient Exchange objective, making that measure worth 50 points in 2019 and 45 points beginning in 2020. Reporting more than two measures for this objective would not earn the MIPS eligible clinician any additional points. We refer readers to section III.H.3.h.(5)(f) of this proposed rule in regard to the proposals for the Public Health and Clinical Data Exchange objective and its associated measures.

We propose that the Protect Patient Health Information objective and its associated measure, Security Risk Analysis, would remain part of the requirements for the Promoting Interoperability performance category, but would no longer be scored as a measure and would not contribute to the MIPS eligible clinician’s Promoting Interoperability performance category score. To earn any score in the Promoting Interoperability performance category, we are proposing a MIPS eligible clinician would have to report

that they completed the actions included in the Security Risk Analysis measure at some point during the calendar year in which the performance period occurs. We believe the Security Risk Analysis measure involves critical tasks and note that the HIPAA Security Rule requires covered entities to conduct a risk assessment of their healthcare organization. This risk assessment will help MIPS eligible clinicians comply with HIPAA’s administrative, physical, and technical safeguards. Therefore, we believe that every MIPS eligible clinician should already be meeting the requirements for this objective and measure as it is a requirement of HIPAA. We still believe this objective and its associated measure are imperative in ensuring the safe delivery of patient health data. As a result, we would maintain the Security Risk Analysis measure as part of the Promoting Interoperability performance category, but we would not score the measure.

Similar to how MIPS eligible clinicians currently submit data, the MIPS eligible clinician would submit their numerator and denominator data for each measure, and a “yes or no” response for each of the two reported measures under the Public Health and Clinical Data Exchange objective. The numerator and denominator for each measure would then translate to a performance rate for that measure and would be applied to the total possible points for that measure. For example, the e-Prescribing measure is worth 10 points. A numerator of 200 and denominator of 250 would yield a performance rate of $(200/250) = 80$ percent. This 80 percent would be applied to the 10 total points available for the e-Prescribing measure to determine the measure score. A performance rate of 80 percent for the e-Prescribing measure would equate to a measure score of 8 points (performance rate * total possible measure points = points awarded toward the total Promoting Interoperability performance category score; $80 \text{ percent} * 10 = 8$ points). To calculate the Promoting Interoperability performance category score, the measure scores would be added together, and the total sum would be divided by the total possible points (100). The total sum cannot exceed the total possible points. This calculation results in a fraction from zero to 1, which can be formatted as a percent. For example, using the numerical values in Table 38, a total score of 83 points would be converted to a performance category score of 83 percent (total score/total possible score for the Promoting

Interoperability performance category = 83 points/100 points). The Promoting Interoperability performance category score would be multiplied by the performance category weight (which is ultimately multiplied by 100) to get 20.75 points toward the final score ((83 percent * 25 percent * 100) = 20.75 points toward the final score.) These calculations and application to the total Promoting Interoperability performance category score, as well as an example of how they would apply, are set out in Tables 36, 37, and 38.

When calculating the performance rates, measure and objective scores, and Promoting Interoperability performance category score, we would generally round to the nearest whole number. For

example if a MIPS eligible clinician received a score of 8.53 the nearest whole number would be 9. Similarly, if the MIPS eligible clinician received a score of 8.33 the nearest whole number would be 8. In the event that the MIPS eligible clinician receives a performance rate or measure score of less than 0.5, as long as the MIPS eligible clinician reported on at least one patient for a given measure, a score of 1 would be awarded for that measure. We believe this is the best method for the issues that might arise with the decimal points and is the easiest for computations.

In order to meet statutory requirements and HHS priorities, the MIPS eligible clinician would need to report on all of the required measures

across all objectives in order to earn any score at all for the Promoting Interoperability performance category. Failure to report any required measure, or reporting a “no” response on a “yes or no” response measure, unless an exclusion applies would result in a score of zero. We are seeking public comment on the proposed requirement to report on all required measures, or whether reporting on a smaller subset of optional measures would be appropriate.

Tables 36, 37, and 38 illustrate our proposal for the new scoring methodology and an example of application of the proposed scoring methodology.

TABLE 36—PROPOSED SCORING METHODOLOGY FOR THE MIPS PERFORMANCE PERIOD IN 2019

Objectives	Measures	Maximum points
e-Prescribing	e-Prescribing <i>Bonus:</i> Query of Prescription Drug Monitoring Program (PDMP) <i>Bonus:</i> Verify Opioid Treatment Agreement	10 points. 5 points bonus. 5 points bonus.
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information Support Electronic Referral Loops by Receiving and Incorporating Health Information.	20 points. 20 points.
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points.
Public Health and Clinical Data Exchange	<i>Choose two of the following:</i> Immunization Registry Reporting. Electronic Case Reporting. Public Health Registry Reporting. Clinical Data Registry Reporting. Syndromic Surveillance Reporting.	10 points.

TABLE 37—PROPOSED SCORING METHODOLOGY BEGINNING WITH MIPS PERFORMANCE PERIOD IN 2020

Objectives	Measures	Maximum points
e-Prescribing	e-Prescribing Query of Prescription Drug Monitoring Program (PDMP) Verify Opioid Treatment Agreement	5 points. 5 points. 5 points.
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information Support Electronic Referral Loops by Receiving and Incorporating Health Information.	20 points. 20 points.
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	35 points.
Public Health and Clinical Data Exchange	<i>Choose two of the following:</i> Immunization Registry Reporting. Electronic Case Reporting. Public Health Registry Reporting. Clinical Data Registry Reporting. Syndromic Surveillance Reporting.	10 points.

We are seeking public comment on whether these measures are weighted appropriately, or whether a different weighting distribution, such as equal

distribution across all measures would be better suited to this program and this proposed scoring methodology. We are also seeking public comment on other

scoring methodologies such as the alternative we considered and outlined earlier in this section.

TABLE 38—PROPOSED SCORING METHODOLOGY FOR THE MIPS PERFORMANCE PERIOD IN 2019 EXAMPLE

Objective	Measures	Maximum points	Numerator/denominator	Performance rate (%)	Score
e-Prescribing	e-Prescribing	10	200/250	80	10 * 0.8 = 8 points.
	Query of Prescription Drug Monitoring Program	5	150/175	86	5 bonus points.
	Verify Opioid Treatment Agreement	5	N/A	N/A	0 points.

TABLE 38—PROPOSED SCORING METHODOLOGY FOR THE MIPS PERFORMANCE PERIOD IN 2019 EXAMPLE—Continued

Objective	Measures	Maximum points	Numerator/denominator	Performance rate (%)	Score
Health Information Exchange.	Support Electronic Referral Loops by Sending Health Information.	20	135/185	73	20 * 0.73 = 15 points.
	Support Electronic Referral Loops by Receiving and Incorporating Health Information.	20	145/175	83	20 * 0.83 = 17 points.
Provider to Patient Exchange.	Provide Patients Electronic Access to Their Health Information.	40	350/500	70	40 * 0.70 = 28 points.
Public Health and Clinical Data Exchange.	Immunization Registry Reporting	10	Yes	N/A	10 points.
	Public Health Registry Reporting	Yes	N/A	10 points.
Total Score	83 points.

If we do not finalize a new scoring methodology, we propose to maintain for the performance period in 2019 the current Promoting Interoperability performance category scoring methodology with the same objectives, measures and requirements as established for the performance period in 2018, except that we would discontinue the 2018 Promoting Interoperability Transition Objectives and Measures (82 FR 53677). We would discontinue the use of the transition measures because they are associated with 2014 Edition CEHRT and we are requiring the use of 2015 Edition CEHRT solely beginning with the performance period in 2019. For more information, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53680). In addition, we propose to include the 2 new opioid measures, if finalized. We refer readers to section III.H.3.h.(5)(f) of this proposed rule for a discussion of the measure proposals.

We also are seeking public comment on the feasibility of the proposed new scoring methodology in 2019 and whether MIPS eligible clinicians would be able to implement the new measures and reporting requirements under this scoring methodology. In addition, in section III.H.3.h.(5) of this proposed rule, we are seeking public comment on how the Promoting Interoperability performance category should evolve in future years regarding the new scoring methodology and related aspects of the program.

We are proposing to codify the proposed new scoring methodology in new paragraphs (b)(4)(ii) and (iii) under § 414.1380.

(e) Promoting Interoperability/ Advancing Care Information Objectives and Measures Specifications for the 2018 Performance Period

The Advancing Care Information (now Promoting Interoperability)

performance category Objectives and Measures for the 2018 performance period are as follows. For more information, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77227 through 77229, and 82 FR 53674 through 53680, respectively).

Objective: Protect Patient Health Information.

Objective: Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.

Security Risk Analysis Measure: Conduct or review a security risk analysis in accordance with the requirements in 45 CFR 164.308(a)(1), including addressing the security (to include encryption) of ePHI data created or maintained by CEHRT in accordance with requirements in 45 CFR 164.312(a)(2)(iv) and 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the MIPS eligible clinician’s risk management process.

Objective: Electronic Prescribing. *Objective:* Generate and transmit permissible prescriptions electronically.

e-Prescribing Measure: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.

Denominator: Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.

Numerator: The number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.

Exclusion: Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.

Objective: Patient Electronic Access.

Objective: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information and patient-specific education.

Patient Access Measure: For at least one unique patient seen by the MIPS eligible clinician: (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) The MIPS eligible clinician ensures the patient’s health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician’s CEHRT.

Denominator: The number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician’s CEHRT.

Patient-Specific Education Measure: The MIPS eligible clinician must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to at least one unique patient seen by the MIPS eligible clinician.

Denominator: The number of unique patients seen by the MIPS eligible

clinician during the performance period.

Numerator: The number of patients in the denominator who were provided electronic access to patient-specific educational resources using clinically relevant information identified from CEHRT during the performance period.

Objective: Coordination of Care Through Patient Engagement.

Objective: Use CEHRT to engage with patients or their authorized representatives about the patient's care.

View, Download, Transmit (VDT)

Measure: During the performance period, at least one unique patient (or patient-authorized representatives) seen by the MIPS eligible clinician actively engages with the EHR made accessible by the MIPS eligible clinician by either: (1) Viewing, downloading or transmitting to a third party their health information; or (2) accessing their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the MIPS eligible clinician's CEHRT; or (3) a combination of (1) and (2).

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of unique patients (or their authorized representatives) in the denominator who have viewed online, downloaded, or transmitted to a third party the patient's health information during the performance period and the number of unique patients (or their authorized representatives) in the denominator who have accessed their health information through the use of an API during the performance period.

Secure Messaging Measure: For at least one unique patient seen by the MIPS eligible clinician during the performance period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient-authorized representative), or in response to a secure message sent by the patient (or the patient-authorized representative).

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator for whom a secure electronic message is sent to the patient (or patient-authorized representative) or in response to a secure message sent by the patient (or patient-authorized representative), during the performance period.

Patient-Generated Health Data

Measure: Patient-generated health data or data from a non-clinical setting is

incorporated into the CEHRT for at least one unique patient seen by the MIPS eligible clinician during the performance period.

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator for whom data from non-clinical settings, which may include patient-generated health data, is captured through the CEHRT into the patient record during the performance period.

Objective: Health Information Exchange.

Objective: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other health care providers into their EHR using the functions of CEHRT.

Send a Summary of Care Measure: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care record using CEHRT; and (2) electronically exchanges the summary of care record.

Denominator: Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician.

Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created using CEHRT and exchanged electronically.

Exclusion: Any MIPS eligible clinician who transfers a patient to another setting or refers a patient is fewer than 100 times during the performance period.

Request/Accept Summary of Care Measure: For at least one transition of care or referral received or patient encounter in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician receives or retrieves and incorporates into the patient's record an electronic summary of care document.

Denominator: Number of patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition or referral or has never before encountered the patient and for which

an electronic summary of care record is available.

Numerator: Number of patient encounters in the denominator where an electronic summary of care record received is incorporated by the clinician into the CEHRT.

Exclusion: Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.

Clinical Information Reconciliation Measure: For at least one transition of care or referral received or patient encounter in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician performs clinical information reconciliation. The MIPS eligible clinician must implement clinical information reconciliation for the following three clinical information sets: (1) Medication. Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy. Review of the patient's known medication allergies; and (3) Current Problem list. Review of the patient's current and active diagnoses.

Denominator: Number of transitions of care or referrals during the performance period for which the MIPS eligible clinician was the recipient of the transition or referral or has never before encountered the patient.

Numerator: The number of transitions of care or referrals in the denominator where the following three clinical information reconciliations were performed: Medication list; medication allergy list; and current problem list.

Objective: Public Health and Clinical Data Registry Reporting.

Objective: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

Immunization Registry Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

Syndromic Surveillance Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.

Electronic Case Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to electronically submit case reporting of reportable conditions.

Public Health Registry Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit data to public health registries.

Clinical Data Registry Reporting Measure: The MIPS eligible clinician is in active engagement to submit data to a clinical data registry.

(f) Promoting Interoperability Performance Category Measure Proposals for MIPS Eligible Clinicians

(i) Measure Proposal Summary Overview

We are proposing to adopt beginning with the performance period in 2019 the existing Promoting Interoperability objectives and measures as finalized in the CY 2018 Quality Payment Program final rule (82 FR 53674 through 53680) with several proposed changes as discussed herein, including the addition of new measures, removal of some of the existing measures, and modifications to the specifications of some of the existing measures. We are not proposing to continue the Promoting Interoperability transition objectives and measures (see 82 FR 53674 through 53676) beyond the 2018 MIPS performance period because the 2015 Edition of CEHRT will be required beginning with the MIPS performance period in 2019. Our intent for these proposed changes is to ensure the measures better focus on the effective use of health IT, particularly for interoperability, and to address concerns stakeholders have raised through public forums and in public comments related to the perceived burden associated with the current measures in the program. As stated in the CY 2017 Quality Payment Program final rule (81 FR 77216) our priority is to finalize reporting requirements for the Promoting Interoperability performance category that incentivizes performance and reporting with minimal complexity and reporting burden. In addition, we acknowledged that while we believe all of the measures of the Promoting Interoperability performance category are important, we must also balance the need for these data with data collection and reporting burden (81 FR 77221).

In CY 2017, we initiated an informal process outside of rulemaking for submission of new Promoting Interoperability performance category measures for potential inclusion in the Year 3 Quality Payment Program

proposed rule. We prioritized measures that build on interoperability and health information exchange, the advanced use of CEHRT using 2015 Edition Standards and Certification Criteria, improve program efficiency and flexibility, measure patient outcomes, emphasize patient safety, and support improvement activities and quality performance categories of MIPS. In addition, and as we indicated in the CY 2018 Quality Payment Program proposed rule (82 FR 30079), we sought new measures that may be more broadly applicable to MIPS eligible clinicians who are Nurse Practitioners (NPs), Physician Assistants (PAs), Certified Registered Nurse Anesthetists (CRNAs) and Clinical Nurse Specialists (CNSs).

During this initial submission period, various MIPS eligible clinicians, stakeholders and health IT developers submitted new measures for consideration via an application posted on the CMS website, now hosted at <https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/CallForMeasures.html>. Through our review process, which included representation from the ONC, as well as various stakeholder listening sessions, we identified measure submissions that met our criteria and aligned with the Promoting Interoperability performance category goals and priorities, as well as broader HHS initiatives related to the opioid crisis.¹⁸ As a result of this process, we are proposing two measures, Query of PDMP and Verify Opioid Treatment Agreement.

We are proposing to remove six measures from the Promoting Interoperability objectives and measures beginning with the performance period in 2019. Two of the measures we are proposing to remove—Request/Accept Summary of Care and Clinical Information Reconciliation—would be replaced by the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, which combines the functionalities and goals of the two measures it is replacing. Four of the measures—Patient-Specific Education; Secure Messaging; View, Download, or Transmit; and Patient-Generated Health Data—would be removed because they have proven burdensome to MIPS eligible clinicians in ways that were unintended and may detract from clinicians' progress on current program priorities. While the measures proposed for removal would no longer need to be

submitted if we finalize the proposal to remove them, MIPS eligible clinicians may still continue to use the standards and functions of those measures based on the preferences of their patients and their practice needs. We believe that this burden reduction would enable MIPS eligible clinicians to focus on new measures that further interoperability, advances of innovation in the use of CEHRT and the exchange of health care information.

As discussed in the proposed scoring methodology in section III.H.3.h.(5)(f) of this proposed rule, we are proposing to add three new measures to the Promoting Interoperability objectives and measures beginning with the performance period in 2019. For the e-Prescribing objective, we are proposing the two new measures referenced above, Query of PDMP and Verify Opioid Treatment Agreement, both of which support HHS initiatives related to the treatment of opioid and substance use disorders by helping health care providers avoid inappropriate prescriptions, improving coordination of prescribing amongst health care providers and focusing on the advanced use of CEHRT. For the Health Information Exchange objective, we are proposing a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information, which builds upon and replaces the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures, while furthering interoperability and the exchange of health information.

We are also proposing to modify some of the existing Promoting Interoperability objectives and measures beginning with the performance period in 2019. We are proposing to rename the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information. In addition, we are proposing to rename the Patient Electronic Access objective to Provider to Patient Exchange, and proposing to rename the remaining measure, Provide Patient Access to Provide Patients Electronic Access to Their Health Information. We are proposing to eliminate the Coordination of Care Through Patient Engagement objective and all of its associated measures as described above. Finally, we are proposing to rename the Public Health and Clinical Data Registry Reporting objective to Public Health and Clinical Data Exchange and require reporting on at least two measures of the MIPS eligible clinician's choice from the following: Immunization Registry Reporting; Syndromic Surveillance Reporting; Electronic Case Reporting;

¹⁸ <https://www.hhs.gov/opioids/about-the-epidemic/index.html>; <https://www.healthit.gov/opioids>.

Public Health Registry Reporting; and Clinical Data Registry Reporting. In addition, we are proposing exclusion criteria for each of these measures.

Finally, we are seeking comment on a potential new measure Health Information Exchange Across the Care Continuum under the Health

Information Exchange objective in which a MIPS eligible clinician would send an electronic summary of care record, or receive and incorporate an electronic summary of care record, for transitions of care and referrals with a health care provider other than a MIPS eligible clinician. The measure would

include health care providers in care settings including but not limited to long term care facilities and post-acute care providers such as skilled nursing facilities, home health, and behavioral health settings.

Table 39 provides a summary of these measures proposals.

New measures	

* Security Risk Analysis is retained, but not included as a measure under the proposed scoring methodology.

We understand from previous listening sessions that EHR vendors and developers would need time to develop, test and implement new measures, and MIPS eligible clinicians would need time to implement as well as establish and test their processes and workflows. As indicated above and in the discussion of the proposed scoring methodology in section III.H.3.h.(5)(d) of this proposed rule, we are proposing three new measures (Query of PDMP, Verify Opioid Treatment Agreement, and Support Electronic Referral Loops by Receiving and Incorporating Health Information). We are proposing that the Query of PDMP and Verify Opioid Treatment Agreement measures would be optional for the performance period in 2019 and bonus points may be earned for reporting on them. We are proposing that the Support Electronic Referral Loops by Receiving and Incorporating Health Information would be required beginning with the performance period in 2019 with an exclusion available. We are proposing to require the Query of PDMP and Verify Opioid Treatment Agreement measures beginning with the performance period in 2020, and we are seeking public comment on this proposal. The proposals under the Health Information Exchange objective

require only consolidation of existing workflows and actions, while certification criteria and standards remain the same as in the CY 2018 Quality Payment Program final rule (82 FR 53677 through 53678). Therefore, we believe MIPS eligible clinicians could potentially implement this new measure for the performance period in 2019.

(ii) Measure Proposals for the e-Prescribing Objective

Based on our review of the submissions we received through the informal measure submission process described in the preceding section, and considerations of overall agency priorities as discussed below, we are proposing two new measures under the e-Prescribing objective. In the CY 2017 Quality Payment Program final rule, we stated that MIPS eligible clinicians would have the option to include or not include controlled substances in the definition of “permissible prescriptions” at their discretion where feasible and allowable by law in the jurisdiction where they provide care (81 FR 77227). We believe it is important to consider other requirements specific to electronic prescribing of controlled substances for health care providers to take into account and how this may

interact with the proposals under this rulemaking. CMS is committed to combatting the opioid epidemic by making it a top priority for the agency and aligning its efforts with the HHS opioid initiative to combat misuse and promote programs that support treatment and recovery support services. The HHS five-point Opioid Strategy aims to:

- *Improve access to prevention, treatment, and recovery support services* to prevent the health, social, and economic consequences associated with opioid addiction and to enable individuals to achieve long-term recovery;
- *Target the availability and distribution of overdose-reversing drugs* to ensure the provision of these drugs to people likely to experience or respond to an overdose, with a particular focus on targeting high-risk populations;
- *Strengthen public health data reporting and collection* to improve the timeliness and specificity of data and to inform a real-time public health response;
- *Support cutting-edge research* that advances our understanding of pain and addiction, leads to the development of new treatments, and identifies effective

public health interventions to reduce opioid-related health harms; and

- *Advance the practice of pain management* to enable access to high-quality, evidence-based pain care that reduces the burden of pain for individuals, families, and society while also reducing the inappropriate use of opioids and opioid-related harms.

CMS' strategy includes reducing the risk of opioid use disorders, overdoses, inappropriate prescribing practices and drug diversion. We have identified two new measures which align with the broader HHS efforts to increase the use of PDMPs to reduce inappropriate prescriptions, improve patient outcomes and promote more informed prescribing practices.

We are proposing to add two new measures to the e-Prescribing objective that are based on electronic prescriptions for controlled substances (EPCS): Query of PDMP; and Verify Opioid Treatment Agreement. These measures build upon the meaningful use of CEHRT as well as the security of electronic prescribing of Schedule II controlled substances while preventing diversion. For both measures, we are proposing to define opioids as Schedule II controlled substances under 21 CFR 1308.12, as they are recognized as having a high potential for abuse with potential for severe psychological or physical dependence. We are also proposing to apply the same policies for the existing e-Prescribing measure to both the Query of PDMP and Verify Opioid Treatment Agreement measures, including the requirement to use CEHRT as the sole means of creating the prescription and for transmission to the pharmacy. MIPS eligible clinicians have the option to include or exclude controlled substances in the e-Prescribing measure denominator as long as they are treated uniformly across patients and all available schedules and in accordance with applicable law (81 FR 77227). However, because the intent of these two new measures is to improve prescribing practices for controlled substances, MIPS eligible clinicians would have to include Schedule II opioid prescriptions in the numerator and denominator or claim the applicable exclusion. Additionally, the intent of the proposed measures is not to dissuade the prescribing or use of opioids for patients with medical diagnoses or conditions that benefit from their use, such as patients diagnosed with cancer or those receiving hospice. We seek comment on the impact that implementing this measure could have on patients who receive opioids due to medical diagnoses such as cancer or receiving

hospice care as well as treatment of patients under a program involving substance abuse education, treatment, or prevention under 42 CFR part 2. Additionally, we seek comment on the federal and state statutory and regulatory requirements that may impact implementation of the Query of PDMP and Verify Opioid Treatment Agreement measures.

In the event we finalize the new scoring methodology that we are proposing in section III.H.3.h.(5)(d) of this proposed rule, MIPS eligible clinicians who claim the exclusion under the existing e-Prescribing measure would automatically receive an exclusion for all three of the measures under the e-Prescribing objective; they would not have to also claim exclusions for the other two measures, Query of PDMP and Verify Opioid Treatment Agreement.

In the event we do not finalize the new scoring methodology proposed in section III.H.3.h.(5)(d) of this proposed rule, but we do finalize the proposed measures of Query of PDMP and Verify Opioid Treatment Agreement under the e-Prescribing objective, we propose to include them under the bonus score with each measure being worth 5 percentage points, but we would not include exclusion criteria as reporting would be optional under the scoring methodology finalized in previous rulemaking (81 FR 77216 through 77227 and 82 FR 53663 through 53664). We believe these measures should be part of the bonus score because not all MIPS eligible clinicians are able to prescribe controlled substances, and therefore these measures may not be applicable to them. Additionally, in the event we do not finalize the proposed scoring methodology, we would retain the existing e-Prescribing measure (with its exclusion) as a base score requirement.

(A) Proposed Measure: Query of Prescription Drug Monitoring Program (PDMP)

A PDMP is an electronic database that tracks prescriptions of controlled substances at the State level. PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. Querying the PDMP is important for tracking the prescribed controlled substances and improving prescribing practices. The ONC, Centers for Disease Control and Prevention (CDC), Department of Justice (DOJ) and Substance Abuse and Mental Health Services Administration (SAMHSA) have had integral roles in the integration

and expansion of PMDPs with health information technology systems. For example, the ONC and SAMHSA collaboratively led the "Enhancing Access" project to improve health care provider access to PDMP data utilizing health IT.¹⁹ Likewise, the CDC conducted a process and outcome evaluation of the PDMP EHR Integration and Interoperability Expansion (PEHRIIE) program funded by SAMHSA for nine states between FY 2012 and 2016. The PEHRIIE program goals were to integrate PDMPs into health IT and improve the comprehensiveness of PDMPs through initiating and/or improving interstate data exchange.²⁰ In addition, the Bureau of Justice Assistance's Harold Rogers Prescription Monitoring Program supports Prescription Drug Monitoring Program Information Exchange (PMIX) through funding, the goal of PMIX is to help states implement a cost-effective solution to facilitate interstate data sharing among PDMPs.²¹ Integration of the PDMP with health information technology systems supports improves access to PDMP data, minimizes changes to current workflow and overall burden and optimizes prescribing practices. The intent of the Query of the PDMP measure is to build upon the current PDMP initiatives from Federal partners focusing on prescriptions generated and dispensing of opioids.

Proposed Measure Description: For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a Prescription Drug Monitoring Program (PDMP) for prescription drug history, except where prohibited and in accordance with applicable law.

CMS recognizes both the utility and value of addressing PDMP EHR integration and further recognizes the majority of states mandate use of State prescription monitoring programs (PMPs) requiring prescribers/dispensers to access PMP.²² According to the CDC, State-level policies that enhance PDMPs or regulate pain clinics helped several states drive down opioid prescriptions and overdose deaths.²³ We are also further aware of the varying integration

¹⁹ <https://www.healthit.gov/PDMP> and https://www.healthit.gov/sites/default/files/work_group_document_integrated_paper_final_0.pdf.

²⁰ https://www.cdc.gov/drugoverdose/pdf/pehriie_report-a.pdf.

²¹ <https://www.bja.gov/funding/Category-5-awards.pdf>.

²² <http://www.namsdl.org/library/14D3122C-96F5-F53E-E8F23E906B4DE09D/>.

²³ <https://www.cdc.gov/drugoverdose/policy/successes.html>.

approaches underway including efforts to integrate a state PDMP into a health information exchange or EHR or other efforts to enhance a user interface of some type, such as risk assessment tools or red flags. We note federal evaluation resources available to inform integration efforts²⁴ and believe integration is critical for enhancing health care provider workflow, access to critical PDMP data, and improving clinical care including prescription management.

We are proposing that the query of the PDMP for prescription drug history must be conducted prior to the electronic transmission of the Schedule II opioid prescription. MIPS eligible clinicians would have flexibility to query the PDMP using CEHRT in any manner allowed under their State law.

Although the query of the PDMP may currently be burdensome for some MIPS eligible clinicians as part of their current workflow practice, we believe querying the PDMP is beneficial to optimal prescribing practices and foresee progression toward fully automated queries of the PDMP building upon the current initiatives at the State level.

We are proposing to include in this measure all permissible prescriptions and dispensing of Schedule II opioids regardless of the amount prescribed during an encounter in order for MIPS eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, prescribing rates and controlled substances prescribed in high quantities. We request comment on these policy proposals, including whether additional queries should be performed and under which circumstances. In addition we seek comment on whether the query should have additional constraints concerning when it should be performed.

Denominator: Number of Schedule II opioids electronically prescribed using CEHRT by the MIPS eligible clinician during the performance period.

Numerator: The number of Schedule II opioid prescriptions in the denominator for which data from CEHRT is used to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law. A numerator of at least one is required to fulfill this measure.

Exclusion (beginning in 2020): Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period. We

propose that the exclusion criteria would be limited to prescriptions of Schedule II opioids as the measure action is limited to prescriptions of Schedule II opioids only and does not include any other types of electronic prescriptions. We are also requesting comment on the proposed exclusion criteria and whether there are circumstances which may justify other exclusions for the Query of PDMP measure and what those circumstances might be including medical diagnoses such as cancer or patients under care of hospice.

We also understand that PDMP integration is not currently in widespread use for CEHRT, and many MIPS eligible clinicians may require additional time and workflow changes at the point of care before they can meet this measure without experiencing significant burden. For instance, many MIPS eligible clinicians will likely need to manually enter the data into CEHRT to document the completion of the query of the PDMP action. In addition, some MIPS eligible clinicians may also need to conduct manual calculation of the measure. Even for those MIPS eligible clinicians that have achieved successful integration of a PDMP with their EHR, this measure may not be machine calculable, for instance, in cases where the MIPS eligible clinician follows a link within the EHR to a separate PDMP system. For the purposes of meeting this measure, we also understand that there is no existing certification criteria for the query of a PDMP. However, we believe that the use of structured data captured in the CEHRT can support querying a PDMP through the broader use of health IT. We seek public comment on whether ONC should consider adopting standards and certification criteria to support the query of a PDMP, and if such criteria were to be adopted, on what timeline should CMS require their use to meet this measure.

The NCPDP SCRIPT 2017071 standard for e-prescribing is now available and can help to support PDMP and EHR integration. We are seeking public comment, especially from health care providers and health IT developers on whether they believe use of this standard can support MIPS eligible clinicians seeking to report on this measure, and whether HHS should encourage use of this standard through separate rulemaking.

We seek comment on the challenges associated with querying the PDMP with and without CEHRT integration and whether this proposed measure should require certain standards,

methods or functionalities to minimize burden.

In including EPCS as a component of the measure as proposed, we acknowledge and seek input on perceived and real technological barriers as part of its effective implementation including but not limited to input on two-factor authentication and on the effective and appropriate uses of technology, including the use of telehealth modalities to support established patient and health care provider relationships subsequent to in-person visit(s) and for prescribing purposes.

In the event we do not finalize the proposed scoring methodology, we are proposing MIPS eligible clinicians must report at least one prescription in the numerator to report on this new measure and earn points towards the bonus score. We believe a threshold of at least one prescription is appropriate because varying State laws related to integration of the PDMP into CEHRT can lead to differing standards for querying.

We are also proposing that in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at 45 CFR 170.315(a)(10)(ii) and (b)(3).

(B) Proposed Measure: Verify Opioid Treatment Agreement

The intent of this measure is for MIPS eligible clinicians to identify whether there is an existing opioid treatment agreement when they electronically prescribe a Schedule II opioid using CEHRT if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days. We believe seeking to identify an opioid treatment agreement will further efforts to coordinate care between health care providers and foster a more informed review of patient therapy. The intent of the treatment agreement is to clearly outline the responsibilities of both patient and MIPS eligible clinician in the treatment plan. Such a treatment plan can be integrated into care coordination and care plan activities and documents as discussed and agreed upon by the patient and MIPS eligible clinician. An opioid treatment agreement is intended to support and to enable further coordination and the sharing of substance use disorder (SUD) data with consent, as may be required of the individual.

According to the American Journal of Psychiatry article *Prescription Opioid Misuse, Abuse, and Treatment in the*

²⁴ https://www.cdc.gov/drugoverdose/pdf/pehriie_report-a.pdf.

United States: An Update,²⁵ patient and health care provider treatment agreements are part of the recommendations to enhance efforts to prevent opioid abuse per the Office of the National Drug Control Policy's National Drug Control Strategy.²⁶ The article further indicates that the treatment agreement can be beneficial as it provides clear information for the agreed upon pain management plan, preventing misconceptions.

An article in *Pain Medicine*, *Universal Precautions in Pain Medicine: A Rational Approach to the Treatment of Chronic Pain* also includes treatment agreements as part of the "Ten Steps of Universal Precautions in Pain Medicine" which are stated to be recommended starting points for discussion in the treatment of chronic pain.²⁷

We also understand from stakeholder feedback during listening sessions that there are varied opinions regarding opioid treatment agreements amongst health care providers. Some are supportive of their use, indicating that treatment agreements are an important part of the prescription of opioids for pain management, and help patients understand their role and responsibilities for maintaining compliance with terms of the treatment. Other health care providers object to their use citing ethical concerns, and creation of division and trust issues in the health care provider-patient relationship. Other concerns stem from possible disconnect between the language and terminology used in the agreement and the level of comprehension on the part of the patient. Because of the debate among practitioners, we request comment on the challenges this proposed measure may create for MIPS eligible clinicians, how those challenges might be mitigated, and whether this measure should be included as part of the Promoting Interoperability performance category. We also acknowledge challenges related to prescribing practices and multiple State laws which may present barriers to the uniform

implementation of this proposed measure. We are seeking public comment on the challenges and concerns associated with opioid treatment agreements and how they could impact the feasibility of the proposal.

Proposed Measure Description: For at least one unique patient for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period, if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days within a 6-month look-back period, the MIPS eligible clinician seeks to identify the existence of a signed opioid treatment agreement and incorporates it into the patient's electronic health record using CEHRT.

We are proposing this measure would include all Schedule II opioids prescribed for a patient electronically using CEHRT by the MIPS eligible clinician during the performance period, as well as any Schedule II opioid prescriptions identified in the patient's medication history request and response transactions during a 6-month look-back period, where the total number of days for which a Schedule II opioid was prescribed for the patient is at least 30 days.

There also may be MIPS eligible clinician burdens specific to identifying the existence of a treatment agreement which could require additional time and changes to existing workflows, determining what constitutes a treatment agreement due to a lack of a definition, standard or electronic format and manual calculation of the measure. In addition, limitations in the completeness of care team information may limit the ability of a MIPS eligible clinician to identify all potential sources for querying and obtaining information on a treatment agreement for a specific patient. There are currently pilots in development focused on increasing connectivity and data exchange among health care providers to better integrate behavioral health information, for instance, pilots taking place as part of the federal Demonstration Program for Certified Community Behavioral Health Clinics (CCBHC)²⁸ includes criteria on how CCBHCs should use health IT to coordinate services and track data on quality measures. Participants in such pilots would potentially have the means necessary to leverage health IT connectivity to query behavioral health data resources and health providers within their region to identify the existence of an opioid treatment

agreement and to successfully integrate patient information from the hospital stay into the care plan for the patient. We seek comment on other similar pathways to facilitate the identification and exchange of treatment agreements and opioid abuse treatment planning.

We are proposing the 6-month look-back period would begin on the date on which the MIPS eligible clinician electronically transmits their Schedule II opioid prescription using CEHRT. For example, all of the following prescriptions would be counted for this measure: A Schedule II opioid electronically prescribed for a patient for a duration of five days by the MIPS eligible clinician using CEHRT during the performance period, and four prior prescriptions for any Schedule II opioid prescribed by another health care provider (each for a duration of seven days) as identified in the patient's medication history request and response transactions during the 6-month period preceding the date on which the MIPS eligible clinician electronically transmits their Schedule II opioid prescription using CEHRT. In this example, the total number of days for which a Schedule II opioid was prescribed for the patient would equal 33 cumulative days.

We are proposing a 6-month look-back period to identify more egregious cases of potential overutilization of opioids and to cover timeframes for use outside the performance period. In addition, we are proposing that the 6-month look-back period would utilize at a minimum the industry standard NCDICP SCRIPT v10.6 medication history request and response transactions codified at § 170.205(b)(2)). As ONC has stated (80 FR 62642), adoption of the requirements for NCDICP SCRIPT v10.6 does not preclude developers from incorporating and using technology standards or services not required by regulation in their health IT products.

We are not proposing to define an opioid treatment agreement as a standardized electronic document; nor are we proposing to define the data elements, content structure, or clinical purpose for a specific document to be considered a "treatment agreement." For this measure, we are seeking comment on what characteristics should be part of an opioid treatment agreement including data, content and clinical purpose into CEHRT, including which functionalities could be utilized to accomplish this. We note that a variety of standards available in CEHRT might support the electronic exchange of opioid abuse related treatment data, such as use of the Consolidated Clinical

²⁵ Brady, K.T., McCauley, J.L., Back, S.E. Prescription Opioid Misuse, Abuse, and Treatment in the United States: An Update, *American Journal of Psychiatry*, Volume 173, Issue 1, January 01, 2016, pp. 18–26. Available at <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4782928/>.

²⁶ <https://obamawhitehouse.archives.gov/ondcp/policy-and-research/ndcs>.

²⁷ Gourlay, D.L., Heit, H.A., Almahrezi, A. "Universal Precautions in Pain Medicine: A Rational Approach to the Treatment of Chronic Pain." *Pain Medicine*, Volume 6, Issue 2, 1 March 2005, pp. 107–112. Available at <https://academic.oup.com/painmedicine/article/6/2/107/1819946>.

²⁸ <https://www.samhsa.gov/section-223>.

Document Architecture (CCDA) care plan template that is currently optional in CEHRT. We are also seeking comment on methods or processes for incorporation of the treatment agreement into CEHRT, including which functionalities could be utilized to accomplish this task. We seek comment on whether there are specific data elements that are currently standardized that should be incorporated via reconciliation and if the “patient health data capture” functionality (45 CFR 170.315(e)(3)) could be used to incorporate a treatment plan that is not a structured document with structured data elements.

Denominator: Number of unique patients for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period and the total duration of Schedule II opioid prescriptions is at least 30 cumulative days as identified in the patient’s medication history request and response transactions during a 6-month look-back period.

Numerator: The number of unique patients in the denominator for whom the MIPS eligible clinician seeks to identify a signed opioid treatment agreement and, if identified, incorporates the agreement in CEHRT. A numerator of at least one is required to fulfill this measure.

Exclusion (beginning in 2020): Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period.

We propose that the exclusion criteria would be limited to prescriptions of Schedule II opioids as the measure action is limited to electronic prescriptions of Schedule II opioids only and does not include any other types of electronic prescriptions.

We are requesting comment on the proposed exclusion criteria and whether there are additional circumstances that should be added to the exclusion criteria and what those circumstances might be including medical diagnoses such as cancer or patients under care of hospice.

We are seeking comment on whether these types of agreements could create a burden on clinicians and patients, particularly clinicians who serve patients with cancer or those practicing in hospice, as well as the patients they serve.

In the event we do not finalize the proposed scoring methodology, we are proposing MIPS eligible clinicians must report at least one unique patient in the numerator to report on this new measure and earn points towards the

bonus score. We believe a threshold of at least one unique patient is appropriate to account for the varying support for the use of opioid treatment agreements and acknowledging that not all patients who receive at least 30 cumulative days of Schedule II opioids would have a treatment agreement in place. We also note there are medical diagnoses and conditions that could necessitate prescribing Schedule II opioids for a cumulative period of more than 30 days including medical diagnoses such as cancer or care under hospice.

We also are proposing that, in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at §§ 170.315(a)(10) and (b)(3) and 170.205(b)(2).

As discussed above, we recognize that many health care providers are only beginning to adopt electronic prescriptions for controlled substances (EPCS) at this time. While we have proposed two new measures which combine EPCS with other actions, we request comment on whether stakeholders would be interested in a measure focused only on the number of Schedule II opioids prescribed and the successful use of EPCS for permissible prescriptions electronically prescribed. We seek comment about the feasibility of such a measure, and whether stakeholders believe this would help to encourage broader adoption of EPCS.

(iii) Measure Proposals for the Health Information Exchange Objective

The Health Information Exchange measures for MIPS eligible clinicians hold particular importance because of the role they play within the care continuum. In addition, these measures encourage and leverage interoperability on a broader scale and promote health IT-based care coordination. However, through our review of the existing measures, we determined that we could potentially improve the measures to further reduce burden and better focus the measures on interoperability in health care provider to health care provider exchange. Such modifications would address a number of concerns raised by stakeholders including:

- Supporting the implementation of effective health IT supported workflows based on a specific organization’s needs;
- Reducing complexity and burden associated with the manual tracking of workflows to support health IT measures; and
- Emphasizing within these measures the importance of using health IT to support closing the referral loop to improve care coordination.

We believe we can potentially improve the existing Health Information Exchange measures to streamline measurement, remove redundancy, reduce complexity and burden, and address stakeholders’ concerns about the focus and impact of the measures on the interoperable use of health IT.

We are proposing several changes to the current measures under the Health Information Exchange objective. First, we propose to change the name of the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information. We also propose to remove the Clinical Information Reconciliation measure and combine it with the Request/Accept Summary of Care measure to create a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information. This proposed new measure would include actions from both the Request/Accept Summary of Care measure and Clinical Information Reconciliation measure.

In the event we do not finalize a new scoring methodology as proposed in section III.H.3. h.(5)(d) of this proposed rule, we would maintain the existing Health Information Exchange objective, measures and reporting requirements as finalized in the CY 2018 Quality Payment Program final rule at 82 FR 53674 through 53680.

(A) Proposed Modifications to the Send a Summary of Care Measure

We are proposing to change the name of the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information measure, to better reflect the emphasis on completing the referral loop and improving care coordination.

Through public comment and stakeholder correspondence, we have become aware that in the health care industry there is some misunderstanding of the scope of transitions and referrals which must be included in the denominator of this measure. In the event that a MIPS eligible clinician is the recipient of a transition of care or referral, and subsequent to providing care the MIPS eligible clinician transitions or refers the patient back to the referring provider of care, this transition of care should be included in the denominator of the measure for the MIPS eligible clinician. We expect this will help build upon the current provider to provider communication via electronic exchange of summary of care records created by CEHRT required under this measure, further promote interoperability and care coordination with additional health

care providers, and prevent redundancy in creation of a separate measure.

In the past, stakeholders have raised concerns that the summary care records shared according to the CCDA standard included excessive information not relevant to immediate care needs, which increased burden on health care providers. Under the ONC Health IT Certification Program 2015 Edition, CEHRT must have the capability to exchange all of the information in the CCDS as part of a summary care record structured according to the CCDA standard. We previously finalized in the final rule titled “Medicare and Medicaid Programs Electronic Health Record Incentive Program—Stage 2: Health Information Technology, Standards Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology” (hereafter referred to as the “Stage 2 final rule”) (77 FR 53991 through 53993) that health care providers must transmit all of the CCDS information as part of this summary care record, if known, and that health care providers must always transmit information about the problem list, medications, and medication allergies, or validate that this information is not known.

As finalized in the “Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017; Final Rule” (hereafter referred to as the “2015 EHR Incentive Programs final rule”) (80 FR 62852 through 62861), our policy allows health care providers to constrain the information in the summary care record to support transitions of care. For instance, we encouraged health care providers to send a list of items that he or she believes to be pertinent and relevant to the patient’s care, rather than a list of all problems, whether active or resolved, that have ever populated the problem list. While a current problem list must always be included, the health care provider can use his or her judgment in deciding which items historically present on the problem list, medical history list (if it exists in CEHRT), or surgical history list are relevant given the clinical circumstances.

We also wish to encourage MIPS eligible clinicians to use the document template available within the CCDA which contains the most clinically relevant information required by the receiver. Accordingly, we are proposing that MIPS eligible clinicians may use any document template within the

CCDA standard for purposes of the measures under the Health Information Exchange objective. While a MIPS eligible clinician’s CEHRT must be capable of sending the full CCDA upon request, we believe this additional flexibility will help support clinicians’ efforts to ensure the information supporting a transition is relevant.

For instance, when the MIPS eligible clinician is referring to another health care provider the recommended document is the “Referral Note” which is designed to communicate pertinent information from a MIPS eligible clinician who is requesting services of another health care provider of clinical or non-clinical services. When the receiving health care provider sends back the information, the most relevant CCDA document template may be the “Consultation Note,” which is generated by a request from a clinician for an opinion or advice from another clinician. While the 2015 Edition transition of care certification criterion only requires testing to the Continuity of Care Document and Referral Note document templates, we are proposing to allow MIPS eligible clinicians the flexibility to use additional CCDA templates most appropriate to their clinical workflows. Clinicians would need to work with their health IT developer to determine appropriate technical workflows and implementation. For more information about the CCDA and associated templates, see http://www.hl7.org/documentcenter/public/standards/dstu/CDAR2_IG_CCDA_CLINNOTES_R1_DSTUR2.1_2015AUG.zip.

In the event we do not finalize a new scoring methodology as proposed in section III.H.3.h.(5)(d), we would maintain the current Promoting Interoperability performance category objectives, measures and reporting requirements as finalized in previous rulemaking. MIPS eligible clinicians would be required to report the Send a Summary of Care measure as part of the base score as finalized in previous rulemaking (82 FR 53674 through 53680).

(B) Proposed Removal of the Request/Accept Summary of Care Measure

We are proposing to remove the Request/Accept Summary of Care measure based on our analysis of the existing measure and in response to stakeholder input.

Through review of implementation practices based on stakeholder feedback, we believe that the existing Request/Accept Summary of Care measure is not feasible for machine calculation in the majority of cases. The intent of the

measure is to identify when MIPS eligible clinicians are engaging with other providers of care or care team members to obtain up-to-date patient health information and to subsequently incorporate relevant data into the patient record. However, stakeholders have noted the measure specification does not effectively further this purpose. Specifically, the existing measure specification results in unintended consequences where health care providers implement either:

(1) A burdensome workflow to document the manual action to request or obtain an electronic record, for example, clicking a check box to document each phone call or similar manual administrative task, or

(2) A workflow which is limited to only querying internal resources for the existence of an electronic document.

Neither of these two implementation options is desirable when the intent of the measure is to incentivize and encourage health care providers to implement effective workflows to identify, receive, and incorporate patient health information from other health care providers into the patient record.

In addition, our analysis identified that the definition of incorporate within the Request/Accept Summary of Care measure is insufficient to ensure an interoperable result. When this measure was initially finalized in the 2015 EHR Incentive Programs final rule at 80 FR 62860, we did not define “incorporate” as we believed it would vary amongst health care provider’s workflows, patient population and the referring health care provider. In addition, we noted that the information could be included as an attachment, as a link within the EHR, as imported structured data or reconciled within the record and not exclusively performed through use of CEHRT. Further, stakeholder feedback highlights the fact that the requirement to incorporate data is insufficiently clear regarding what data must be incorporated.

Our intention was that “incorporate” would relate to the workflows undertaken in the process of clinical information reconciliation further defined in the Clinical Information Reconciliation measure (80 FR 62852 through 62862). Taken together, the three measures under the Health Information Exchange objective were intended to support the referral loop through sending, receiving, and incorporating patient health data into the patient record. However, stakeholder feedback on the measures suggests that the separation between receiving and reconciling patient health

information is not reflective of clinical and care coordination workflows. Further, stakeholders noted, that when approached separately, the incorporate portion of the Request/Accept Summary of Care measure is both inconsistent with and redundant to the Clinical Information Reconciliation measure which causes unnecessary burden and duplicative measure calculation.

(C) Proposed Removal of the Clinical Information Reconciliation Measure

We are proposing to remove the Clinical Information Reconciliation measure to reduce redundancy, complexity, and MIPS eligible clinician burden.

We believe the Clinical Information Reconciliation measure is redundant in regard to the requirement to “incorporate” electronic summaries of care in light of the requirements of the Request/Accept Summary of Care measure. In addition, the measure is not fully health IT based as the exchange of health care information is not required to complete the measure action and the measure specification is not limited to only the reconciliation of electronic information in health IT supported workflows. We stated in the 2015 EHR Incentive Programs final rule at 80 FR 62861 that the clinical information reconciliation process could involve both automated and manual reconciliation to allow the receiving health care provider to work with both electronic data received as well as the patient to reconcile their health information. Further, stakeholder feedback from hospitals, clinicians, and health IT developers indicates that because the measure is not fully based on the use of health IT to meet the measurement requirements, health care providers must engage in burdensome tracking of manual workflows. While the overall activity of clinical information reconciliation supports quality patient care and should be a part of effective clinical workflows, the process to record and track each individual action places unnecessary burden on MIPS eligible clinicians.

(D) Proposed New Measure: Support Electronic Referral Loops by Receiving and Incorporating Health Information

We are proposing to add the following new measure for inclusion in the Health Information Exchange objective: Support Electronic Referral Loops by Receiving and Incorporating Health Information. This measure would build upon and replace the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures.

Proposed name of measure and description: Support Electronic Referral Loops by Receiving and Incorporating Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.

We are proposing to combine two existing measures, the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure, in this new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to focus on the exchange of health care information as the current Clinical Information Reconciliation measure is not reliant on the exchange of health care information to complete the measure action. We are not proposing to change the actions associated with the existing measures; rather, we are proposing to combine the two measures to focus on the exchange of the health care information, reduce administrative burden, and streamline and simplify reporting.

CMS and ONC worked together to define the following for this measure:

Denominator: Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.

Numerator: The number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient’s medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient’s known medication allergies; and (3) Current Problem List—Review of the patient’s current and active diagnoses.

Exclusion: Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period.

We are requesting comment on the proposed exclusion criteria and whether there are additional circumstances that should be added to the exclusion criteria and what those circumstances might be.

For the proposed measure, the denominator would increment on the receipt of an electronic summary of care record after the MIPS eligible clinician engages in workflows to obtain an electronic summary of care record for a transition, referral or patient encounter in which the MIPS eligible clinician has never before encountered the patient. The numerator would increment upon completion of clinical information reconciliation of the electronic summary of care record for medications, medication allergies, and current problems. The MIPS eligible clinician would no longer be required to manually count each individual non-health-IT-related action taken to engage with other providers of care and care team members to identify and obtain the electronic summary of care record. Instead, the proposed measure would focus on the result of these actions when an electronic summary of care record is successfully identified, received, and reconciled with the patient record. We believe this approach would allow MIPS eligible clinicians to determine and implement appropriate workflows supporting efforts to receive the electronic summary of care record consistent with the implementation of effective health IT information exchange at an organizational level.

Finally, we are proposing to apply our existing policy for cases in which the MIPS eligible clinician determines no update or modification is necessary within the patient record based on the electronic clinical information received, and the MIPS eligible clinician may count the reconciliation in the numerator without completing a redundant or duplicate update to the record. We welcome public comment on methods by which this specific action could potentially be electronically measured by the MIPS eligible clinician’s health IT system—such as incrementing on electronic signature or approval by an authorized health care provider—to mitigate the risk of burden associated with manual tracking of the action, such as having to click check boxes.

We welcome public comment on these proposals. We are seeking comment on methods and approaches to quantify the reduction in burden for MIPS eligible clinicians implementing streamlined workflows for this proposed health IT-based measure. We also are seeking comment on the impact these

proposed modifications may have for health IT developers in updating, testing, and implementing new measure calculations related to these proposed changes. Specifically, we seek comment on whether ONC should require developers to recertify their EHR technology as a result of the changes proposed, or whether they should be able to make the changes and engage in testing without recertification, and on the appropriate timeline for such requirements factoring in the proposed continuous 90 day performance period within the calendar year for clinicians. Finally, we are seeking comment on whether this proposed new measure that combines the Request/Accept Summary of Care and Clinical Information Reconciliation measures should be adopted, or whether either or both of the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures should be retained in lieu of this proposed new measure.

In the event we finalize the new scoring methodology we are proposing in section III.H.3.h.(5)(d) of this proposed rule, an exclusion would be available for MIPS eligible clinicians who could not implement the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure for a performance period in CY 2019.

In the event we do not finalize the proposed scoring methodology, we would maintain the current Promoting Interoperability performance category objectives, measures and reporting requirements as finalized in previous rulemaking. MIPS eligible clinicians would be required to report the Request/Accept Summary of Care measure as part of the base score and the Clinical Information Reconciliation measure would remain as part of the performance score as finalized in previous rulemaking (82 FR 53674 through 53680).

We also are proposing that, in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at § 170.315(b)(1) and (2).

(iv) Measure Proposals for the Provider to Patient Exchange Objective

The Provider to Patient Exchange objective for MIPS eligible clinicians builds upon the goal of improved access and exchange of patient data, patient centered communication and coordination of care using CEHRT. We are proposing a new scoring methodology in section III.H.3.h.(5)(d) of this proposed rule, under which we are proposing to rename the Patient

Electronic Access objective to Provider to Patient Exchange, remove the Patient-Specific Education measure and rename the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information. In addition, we are proposing to remove the Coordination of Care through Patient Engagement objective and all associated measures. The existing Promoting Interoperability performance category Patient Electronic Access objective includes two measures and the existing Coordination of Care through Patient Engagement objective includes three measures.

We reviewed the Promoting Interoperability performance category requirements and determined that these proposals could reduce program complexity and burden and better focus on leveraging the most current health IT functions and standards for patient flexibility of access and exchange of information.

We are proposing the Provider to Patient Exchange objective would include one measure, the existing Provide Patient Access measure, which are proposing to rename to Provide Patients Electronic Access to Their Health Information.

In the event we do not finalize the proposed scoring methodology in III.H.3.(5)(c), we would maintain the current Promoting Interoperability performance category objectives, measures and reporting requirements as finalized in previous rulemaking. MIPS eligible clinicians would be required to report the Provide Patient Access measure as part of the base score under the Patient Electronic Access objective, and the Patient-Specific Education measure would remain as part of the performance score as finalized in previous rulemaking (82 FR 53674 through 53680). The Coordination of Care Through Patient Engagement objective and its associated measures (VDT, Secure Messaging, and Patient-Generated Health Data) would remain as part of the performance score as finalized in previous rulemaking (82 FR 53674 through 53680).

(A) Proposed Modification To Provide Patient Access Measure

We are proposing to change the name of the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information measure to better reflect the emphasis on patient engagement in their health care and patient's electronic access of their health information through use of APIs.

We propose to change the measure name to emphasize electronic access of patient health information as opposed to

use of paper based actions and limit the focus to only health IT solutions to encourage adoption and innovation in use of CEHRT (80 FR 62783 through 62784). In addition, we are committed to promoting patient engagement with their healthcare information and ensuring access in an electronic format.

(B) Proposed Removal of the Patient-Generated Health Data Measure

We are proposing to remove the Patient-Generated Health Data (PGHD) measure to reduce complexity and focus on the goal of using advanced EHR technology and functionalities to advance interoperability and health information exchange.

As finalized in the 2015 EHR Incentive Programs final rule at 80 FR 62851, the measure is not fully health IT based as we did not specify the manner in which health care providers would incorporate the data received. Instead, we finalized that health care providers could work with their EHR developers to establish the methods and processes that work best for their practice and needs. We indicated that this could include incorporation of the information using a structured format (such as an existing field in the EHR or maintaining an isolation between the data and the patient record such as incorporation as an attachment, link or text reference which would not require the advanced use of CEHRT). While we continue to believe that incorporating this data is valuable, we are prioritizing only those actions which are completed electronically using certified health IT.

(C) Proposed Removal of the Patient-Specific Education Measure

We are proposing to remove the Patient-Specific Education measure as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from their progress on current program priorities.

The Patient-Specific Education measure was finalized as a performance score measure for MIPS eligible clinicians in the CY 2017 Quality Payment Program final rule with the intent of improving patient health, increasing transparency and engaging patients in their care (81 FR 77228 through 77237).

We believe that the Patient-Specific Education measure does not align with the current emphasis of the Promoting Interoperability performance category to increase interoperability, or reduce burden for MIPS eligible clinicians. In addition to not including interoperability as a core focus, stakeholders have indicated that this measure does not capture many of the

innovative activities around providing patient education, for instance new approaches to integrating patient education within clinical decision support modules. As a result of this lack of alignment, this measure could potentially increase clinician burden.

(D) Proposed Removal of the Secure Messaging Measure

We are proposing to remove the Secure Messaging measure as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from MIPS eligible clinicians' progress on current program priorities.

The Secure Messaging measure was finalized in the CY 2017 Quality Payment Program final rule with the intent to build upon the policy goals of Stage 2 under the EHR Incentive Programs of using CEHRT for health care provider-patient communication (81 FR 77227 through 77236). As outlined above, we believe that the Secure Messaging measure does not align with the current emphasis of the Promoting Interoperability performance category to increase interoperability or reduce burden for MIPS eligible clinicians. In addition, we believe there is burden associated with tracking secure messages, including the unintended consequences of workflows designed for the measure rather than for clinical and administrative effectiveness.

(E) Proposed Removal of the View, Download or Transmit Measure

We are proposing to remove the View, Download or Transmit measure as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from their progress on current program priorities.

We received MIPS eligible clinician and stakeholder feedback through correspondence, public forums, and listening sessions indicating there is ongoing concern with measures which require patient action for successful submission. We have noted that data analysis on the patient action measures supports stakeholder concerns that barriers exist which impact a clinician's ability to meet them. Stakeholders have indicated that successful submission of the measure is reliant upon the patient, who may face barriers to access which are outside a clinician's control.

After additional review, we note that successful performance predicated solely on a patient's action has inadvertently created burdens to MIPS eligible clinicians and detracts from progress on Promoting Interoperability measure goals of focusing on patient

care, interoperability and leveraging advanced use of health IT. Therefore, we propose to remove the View, Download or Transmit measure.

(v) Proposed Modifications to the Public Health and Clinical Data Registry Reporting Objective and Measures

In connection with the scoring methodology proposed in section III.H.3.h.(5)(d) of this proposed rule, we are proposing changes to the Public Health and Clinical Data Registry Reporting objective and five associated measures.

We believe that public health reporting through EHRs will extend the use of electronic reporting solutions to additional events and care processes, increase timeliness and efficiency of reporting and replace manual data entry.

We are proposing to change the name of the objective to Public Health and Clinical Data Exchange and are proposing exclusions for each of the associated measures.

Under the new scoring methodology proposed in section III.H.3.h.(5)(d) of this proposed rule, we are proposing that a MIPS eligible clinician would be required to submit two of the measures of the clinician's choice from the five measures associated with the objective: Immunization Registry Reporting, Syndromic Surveillance Reporting, Electronic Case Reporting, Public Health Registry Reporting, and Clinical Data Registry Reporting.

In prior rulemaking, we recognized the goal of increasing interoperability through public health registry exchange of data (80 FR 62771). We continue to believe that public health reporting is valuable in terms of health information exchange between MIPS eligible clinicians and public health and clinical data registries. For example, when immunization information is directly exchanged between EHRs and registries, patient information may be accessed by all of a patient's health care providers for improved continuity of care and reduced health care provider burden, as well as supporting population health monitoring.

We are also proposing exclusion criteria for each of the Public Health and Clinical Data Exchange measures beginning with the performance period in 2019. Under the scoring methodology for the Promoting Interoperability performance category for the performance period in 2018 (82 FR 53676 through 53677), the measures associated with the Public Health and Clinical Data Registry Reporting objective are not required for the base score, and thus we did not establish

exclusion criteria for them. However, we understand that some MIPS eligible clinicians may not be able to report to public health agencies or clinical data registries due to their scope of practice. For example, we noted in the CY 2018 Quality Payment Program final rule (82 FR 53663) that there are MIPS eligible clinicians who lack access to immunization registries or do not administer immunizations. Also, we noted in the 2017 Quality Payment Program final rule (81 FR 77236) few jurisdictions accept syndromic surveillance from non-urgent care EPs. Therefore, we are proposing the following measure exclusions based on the exclusions finalized in previous rulemaking under the EHR Incentive Programs (80 FR 62862 through 62871).

Measure: Immunization Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Immunization Registry Reporting measure if the MIPS eligible clinician:

1. Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period.
2. Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.

Measure: Syndromic Surveillance Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Syndromic Surveillance Reporting measure if the MIPS eligible clinician:

1. Is not in a category of health care providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system.
2. Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the performance period.
3. Operates in a jurisdiction where no public health agency has declared

readiness to receive syndromic surveillance data from MIPS eligible clinicians as of 6 months prior to the start of the performance period.

Measure: Electronic Case Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Electronic Case Reporting measure if the MIPS eligible clinician:

1. Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction’s reportable disease system during the performance period.
2. Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period.
3. Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period.

Measure: Public Health Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Public Health Reporting measure if the MIPS eligible clinician:

1. Does not diagnose or directly treat any disease or condition associated with a public health registry in the MIPS eligible clinician’s jurisdiction during the performance period.
2. Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the performance period.
3. Operates in a jurisdiction where no public health registry for which the MIPS eligible clinician is eligible has declared readiness to receive electronic

registry transactions as of 6 months prior to the start of the performance period.

Measure: Clinical Data Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Clinical Data Registry Reporting measure if the MIPS eligible clinician:

1. Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the performance period.
2. Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the performance period.
3. Operates in a jurisdiction where no clinical data registry for which the MIPS eligible clinician is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the performance period.

We seek comment on the proposed exclusions and whether there are circumstances that would require additional exclusion criteria for the measures.

In addition, we intend to propose in future rulemaking to remove the Public Health and Clinical Data Exchange objective and measures no later than CY 2022, and are seeking public comment on whether MIPS eligible clinicians will continue to share such data with public health entities once the Public Health and Clinical Data Exchange objective is removed, as well as other policy levers outside of the Promoting Interoperability performance category that could be adopted for continued reporting to public health and clinical data registries, if necessary. As noted

above, while we believe that these registries provide the necessary monitoring of public health nationally and contribute to the overall health of the nation, we are also focusing on reducing burden and identifying other appropriate venues in which reporting to public health and clinical data registries could be reported. We are seeking public comment on the role that each of the public health and clinical data registries should have in the future of the Promoting Interoperability performance category and whether the submission of this data should still be required.

Lastly, we are seeking public comment on whether the Promoting Interoperability performance category is the best means for promoting sharing of clinical data with public health entities.

In the event we do not finalize the new scoring methodology we are proposing in section III.H.3.h.(5)(d) of this proposed rule, current Promoting Interoperability performance category objectives, measures and reporting requirements would be maintained as finalized in previous rulemaking. Therefore, all Public Health and Clinical Data Registry Reporting measures would be part of the performance and bonus score as finalized in previous rulemaking (82 FR 53674 through 53680).

To assist readers in identifying the requirements of CEHRT for the Promoting Interoperability Objectives and Measures under the scoring methodology proposed in section III.H.3.h.(5)(d) of this proposed rule, we are including Table 40, which includes the 2015 Edition certification criteria required to meet the objectives and measures.

TABLE 40—PROMOTING INTEROPERABILITY OBJECTIVES AND MEASURES AND CERTIFICATION CRITERIA FOR THE 2015 EDITION

Objective	Measure	2015 Edition
Protect Patient Health Information. e-Prescribing	Security Risk Analysis	The requirements are a part of CEHRT specific to each certification criterion.
	e-Prescribing	§ 170.315(b)(3) (Electronic Prescribing). § 170.315(a)(10) (Drug-Formulary and Preferred Drug List checks).
	Query of PDMP	§ 170.315(a)(10) (Drug-Formulary and Preferred Drug List checks) and (b)(3) (Electronic Prescribing).
	Verify Opioid Treatment Agreement	§ 170.315(a)(10) (Drug-Formulary and Preferred Drug List checks) (b)(3) (Electronic Prescribing), and § 170.205(b)(2) (Electronic Prescribing Standard).
Health Information Exchange ...	Support Electronic Referral Loops by Sending Health Information.	§ 170.315(b)(1) (Transitions of Care).
	Support Electronic Referral Loops by Receiving and Incorporating Health Information.	§ 170.315(b)(1) (Transitions of Care). § 170.315(b)(2) (Clinical Information Reconciliation and Incorporation).

TABLE 40—PROMOTING INTEROPERABILITY OBJECTIVES AND MEASURES AND CERTIFICATION CRITERIA FOR THE 2015 EDITION—Continued

Objective	Measure	2015 Edition
Provider to Patient Exchange ...	Provide Patients Electronic Access to Their Health Information.	§ 170.315(e)(1) (View, Download, and Transmit to 3rd Party). § 170.315(g)(7) (Application Access—Patient Selection). § 170.315(g)(8) (Application Access—Data Category Request). § 170.315(g)(9) (Application Access—All Data Request). The three criteria combined are the “API” certification criteria.
Public Health and Clinical Data Exchange.	Immunization Registry Reporting	§ 170.315(f)(1) (Transmission to Immunization Registries).
	Syndromic Surveillance Reporting	§ 170.315(f)(2) (Transmission to Public Health Agencies—Syndromic Surveillance) Urgent Care Setting Only.
	Electronic Case Reporting	§ 170.315(f)(5) (Transmission to Public Health Agencies—Electronic Case Reporting).
	Public Health Registry Reporting	EPs may choose one or more of the following: § 170.315(f)(4) (Transmission to Cancer Registries).
		§ 170.315(f)(7) (Transmission to Public Health Agencies—Health Care Surveys).
	Clinical Data Registry Reporting	No 2015 Edition health IT certification criteria at this time.

(vi) Request for Comment—Potential New Measures Health Information Exchange Across the Care Continuum

We are working to introduce additional flexibility to allow MIPS eligible clinicians a wider range of options in selecting measures that are most appropriate to their setting, patient population, and clinical practice improvement goals. For this reason, we are seeking comment on a potential concept for future rulemaking to add two additional measure options related to health information exchange for MIPS eligible clinicians.

The Promoting Interoperability performance category requirements for health information exchange primarily focused on the exchange between and among health care providers. While these use cases represent a significant portion of the health care industry, the care continuum is much broader and includes a wide range of health care providers and settings of care that have adopted and implemented health IT systems to support patient care and electronic information exchange. Specifically, health care providers in long-term care and post-acute care settings, skilled nursing facilities, and behavioral health settings have made significant advancements in the adoption and use of health IT. Many MIPS eligible clinicians are now engaged in bi-directional exchange of patient health information with these health care providers and settings of care and many more are seeking to incorporate these workflows as part of efforts to improve care team coordination or to support alternative payment models.

For these reasons, we are seeking comment on two potential new measures for inclusion in the program to

enable MIPS eligible clinicians to exchange health information through health IT supported care coordination across a wide range of settings.

New Measure Description for Support Electronic Referral Loops by Sending Health Information Across the Care Continuum: For at least one transition of care or referral to a provider of care other than a MIPS eligible clinician, the MIPS eligible clinician creates a summary of care record using CEHRT; and electronically exchanges the summary of care record.

New Measure Denominator: Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transitioning or referring health care provider to a provider of care other than a MIPS eligible clinician.

New Measure Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created and exchanged electronically using CEHRT.

New Measure Description for Support Electronic Referral Loops by Receiving and Incorporating Health Information Across the Care Continuum: For at least one electronic summary of care record received by a MIPS eligible clinician from a transition of care or referral from a provider of care other than a MIPS eligible clinician, the MIPS eligible clinician conducts clinical information reconciliation for medications, medication allergies, and problem list.

New Measure Denominator: The number of electronic summary of care records received for a patient encounter during the performance period for which a MIPS eligible clinician was the recipient of a transition of care or referral from a provider of care other than a MIPS eligible clinician.

New Measure Numerator: The number of electronic summary of care records received for which clinical information reconciliation was completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient’s medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient’s known medication allergies; and (3) Current Problem List—Review of the patient’s current and active diagnoses.

We are seeking comment on whether these two measures should be combined into one measure so that a MIPS eligible clinician who is engaged in exchanging health information across the care continuum may include any such exchange in a single measure. We seek comment on whether the denominators should be combined to a single measure including both transitions of care to and from a MIPS eligible clinician. We further seek comment on whether the numerators should be combined to a single measure including both the sending and receiving of electronic patient health information. We are seeking comment on whether the potential new measures should be considered for inclusion in a future program year or whether stakeholders believe there is sufficient readiness and interest in the measures to implement them as early as CY 2019.

For the purposes of focusing the denominator, we are seeking comment regarding whether the potential new measures should be limited to transitions of care to and/or from referrals involving long-term and post-acute care, skilled nursing care, and behavioral health care. We also are seeking comment on whether additional settings of care should be considered for

inclusion in the denominators and whether a MIPS eligible clinician should be allowed to limit the denominators to a specific type of care setting based on their organizational needs, clinical improvement goals, or participation in an alternative payment model. We also are interested in comments regarding the feasibility of these measures in instances where a MIPS eligible clinician receives information from a non-MIPS eligible clinician that is not using CEHRT. Finally, we are seeking comment on the impact the potential new measures may have for health IT developers to develop, test, and implement a new measure calculation for a future program year.

(g) Improvement Activities Bonus Score Under the Promoting Interoperability Performance Category and Future Reporting Considerations

In the CY 2017 Quality Payment Program final rule (81 FR 77202), we discussed our approach to the measurement of the use of CEHRT to allow MIPS eligible clinicians and groups the flexibility to implement CEHRT in a way that supports their clinical needs. Toward that end, we adopted a policy for the 2017 and 2018 performance periods (81 FR 77202–77209 and 82 FR 53664–53670) and codified it at § 414.1380(b)(4)(i)(C)(2) to award a bonus score to MIPS eligible clinicians who use CEHRT to complete certain activities in the improvement activities performance category based on our belief that the use of CEHRT in carrying out these activities could further the outcomes of clinical practice improvement.

In section III.H.3.h.(5)(d) of this proposed rule, we have proposed significant changes to the scoring methodology and measures beginning with the performance period in 2019. In connection with these changes, we are not proposing to continue the bonus for completing certain improvement activities using CEHRT for the performance period in 2019 and subsequent performance periods. As discussed in section III.H.3.h.(5)(b) of this proposed rule, we are shifting the focus of this performance category to put a greater emphasis on interoperability and patient access to health information, and we do not believe awarding a bonus for performing an improvement activity using CEHRT would directly support those goals. While we continue to believe that the use of CEHRT in completing improvement activities is extremely valuable and vital to the role of CEHRT in practice improvement, we do not

believe that awarding a bonus in the Promoting Interoperability performance category would be appropriate in light of the new direction we want to take, and we seek comment on other ways to promote the use of CEHRT.

We invite comments on our decision not to propose to continue the bonus for completing certain improvement activities using CEHRT for the performance period in 2019 and subsequent performance periods.

We acknowledge that the omission of this bonus could be viewed as increasing burden, and seek to counteract that concern by evaluating other methods to reduce burden to offset this potential increase. We have also considered various ways to align and streamline the different performance categories under the MIPS. In lieu of the improvement activities bonus score, we have looked extensively at ways to link three of the performance categories—quality, improvement activities and Promoting Interoperability—to reduce burden and create a more cohesive and closely linked MIPS program. One possibility we have identified is to establish several sets of new multi-category measures that would cut across the different performance categories and allow MIPS eligible clinicians to report once for credit in all three performance categories. For example, one possible combined measure would bring together the elements of the proposed Promoting Interoperability measure, Support Electronic Referral Loops by Sending Health Information, the improvement activity, implementation of use of specialist reports back to referring clinician or group to close referral loop, and the quality measure, Closing the Referral Loop: Receipt of Specialist Report. Our goal would be to establish several of these combined measures so MIPS eligible clinicians could report once for credit across all three performance categories. At the present time, we are only seeking comment on this concept, as we are still evaluating the appropriate measure combinations and feasibility of a multi-category model. We believe that as we further develop the new focus and goals of the Promoting Interoperability performance category, we may be able to identify additional measure links that could make this concept a reality and overcome some of the challenges we currently face in implementing this concept. For example, one challenge we have identified is the lack of measures and activities that share identical and aligned requirements across the three performance categories. We seek comment on this reporting model, as well as measure and activity suggestions

to enhance the link between the three performance categories.

Furthermore, to promote measurement that provides clinicians with measures that are meaningful to their practices, we intend to consider proposing in future rulemaking MIPS public health priority sets across the four performance categories (quality, improvement activities, Promoting Interoperability, and cost). We believe that adopting such sets would provide clinicians with a cohesive reporting experience, by allowing them to focus on activities and measures that fit within their workflow, address their patient population needs, and encourage increased participation in MIPS. Furthermore, it would drive participation and continued improvement across performance categories. Consistent with the goals of the Meaningful Measures Initiative, the public health priority sets would seek to provide clinicians with sets of measures and activities that are most meaningful to them, with an emphasis on improving quality of life and outcomes for patients. The construction of public health priority sets could also identify where there are measurement gaps, and what areas measure development should focus on, such as the lack of sufficient measures for certain specialists.

The public health priority sets would be built across performance categories and decrease the burden of having to report for separate performance categories as relevant measures and activities are bundled. In developing the first few public health priority sets, we intend to focus on areas that address the opioid epidemic impacting the nation, as well as other patient wellness priorities that are attributable to more complex diseases or clinical conditions. We intend to develop the first few public health priority sets around: Opioids; blood pressure; diabetes; and general health (healthy habits). In this proposed rule, we are seeking comments on additional public health priority areas that should be considered, and whether these public health priority sets should be more specialty focused versus condition specific. We are also seeking comment on how CMS could implement public health priority sets in ways that further minimize burden for health care providers, for instance, by offering sets which emphasize use of common health IT functionalities. Finally, we are seeking comment on how CMS could encourage or incentivize health care providers to consider using these public health priority sets.

(h) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

In prior rulemaking (82 FR 30079), we discussed our belief that certain types of MIPS eligible clinicians (NPs, PAs, CNSs, and CRNAs) may lack experience with the adoption and use of CEHRT. Because many of these non-physician clinicians were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we stated that we have little evidence as to whether there are sufficient measures applicable and available to these types of MIPS eligible clinicians under the advancing care information performance category. We established a policy for the performance periods in 2017 and 2018 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the advancing care information performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the advancing care information performance category, but if they choose to report, they will be scored on the advancing care information performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act. We stated our intention to use data from the first performance period (2017) to further evaluate the participation of these MIPS eligible clinicians in the advancing care information performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. As we have not yet analyzed the data for the first MIPS performance period, it would be premature to propose to alter our treatment of these MIPS eligible clinicians in year 3.

We are proposing to continue this policy for the performance period in 2019 and to codify the policy at § 414.1380(c)(2)(i)(A)(5). We request public comments on this proposal.

(ii) Physical Therapists, Occupational Therapists, Clinical Social Workers, and Clinical Psychologists

As discussed in section III.H.3.a. of this proposed rule, in accordance with section 1848(q)(1)(C)(i)(II) of the Act, we are proposing to add the following clinician types to the definition of a MIPS eligible clinician, beginning with

the performance period in 2019: Physical therapists, occupational therapists, clinical social workers, and clinical psychologists. For the reasons discussed in prior rulemaking and in the preceding section III.H.3.h.(5)(f), we are proposing to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs for the performance periods in 2017 and 2018 to these new types of MIPS eligible clinicians for the performance period in 2019. Because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. Thus, we are proposing to rely on section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category if there are not sufficient measures applicable and available to these new types of MIPS eligible clinicians (physical therapists, occupational therapists, clinical social workers, and clinical psychologists). We encourage all of these new types of MIPS eligible clinicians to report on these measures to the extent they are applicable and available; however, we understand that some of them may choose to accept a weight of zero for this performance category if they are unable to fully report the Promoting Interoperability measures. We believe this approach is appropriate for their first performance period (in 2019) based on the payment consequences associated with reporting, the fact that many of these types of MIPS eligible clinicians may lack experience with EHR use, and our current uncertainty as to whether we have proposed sufficient measures that are applicable and available to these types of MIPS eligible clinicians. We would use their first performance period to further evaluate the participation of these MIPS eligible clinicians in the Promoting Interoperability performance category and would consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians.

These MIPS eligible clinicians may choose to submit Promoting Interoperability measures if they determine that these measures are applicable and available to them; however, if they choose to report, they would be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category would be

given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score.

We are proposing to codify this policy at § 414.1380(c)(2)(i)(A)(4).

(6) APM Scoring Standard for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

As codified at § 414.1370, MIPS eligible clinicians, including those participating in MIPS APMs, are subject to MIPS reporting requirements and payment adjustments, unless excluded on another basis.

In the CY 2017 Quality Payment Program rule, we finalized the APM scoring standard, which is designed to reduce reporting burden for participants in certain APMs by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and the MIPS.

We established at § 414.1370(c) that the MIPS performance period under § 414.1320 applies for the APM scoring standard. We finalized under § 414.1370(f) that, under the APM scoring standard, MIPS eligible clinicians will be scored at the APM entity group level and each MIPS eligible clinician will receive the APM Entity's final MIPS score. We propose to amend § 414.1370(f)(2) to state that if the APM Entity group is excluded from MIPS, all eligible clinicians within that APM Entity group are also excluded from MIPS.

The MIPS final score under the APM scoring standard is comprised of the four MIPS performance categories as finalized at § 414.1370(g): Quality; cost; improvement activities; and advancing care information. In 2018, these performance categories are scored at 50 percent, 0 percent, 30 percent, and 20 percent, respectively.

In this proposed rule for the APM scoring standard, we propose to: (1) Revise § 414.1370(b)(3) to clarify the requirement for MIPS APMs to assess performance on quality measures and cost/utilization, modify the Shared Savings Program quality reporting requirements by extending the reporting exception to solo practitioners; (2) remove the Promoting Interoperability (formerly advancing care information) full-TIN reporting requirement for participants in the Shared Savings Program to allow individual TIN/NPIs to report for the Promoting Interoperability performance category; and (3) update the MIPS APM measure

sets that apply for purposes of the APM scoring standard. In addition, we explain how performance feedback may be accessed by ACO participant TINs in the Shared Savings Program.

(b) MIPS APM Criteria

In the CY 2017 Quality Payment Program final rule, we established at § 414.1370(b) that for an APM to be considered a MIPS APM, it must satisfy the following criteria: (1) APM Entities participate in the APM under an agreement with CMS or by law or regulation; (2) the APM requires that APM Entities include at least one MIPS eligible clinician on a participation list; (3) the APM bases payment incentives on performance (either at the APM entity or eligible clinician level) on cost/utilization and quality measures; and (4) the APM is neither a new APM for which the first performance period begins after the first day of the MIPS performance year, nor an APM in the final year of operation for which the APM scoring standard is impracticable.

It has come to our attention that there may be some ambiguity in the third criterion at § 414.1370(b)(3). We have received questions as to whether the criterion requires MIPS APMs to base payment incentives on performance on cost/utilization “measures,” or whether it requires more generally that MIPS APMs base payment incentives on “cost/utilization.” Because we did not address this exact point in prior rulemaking and our intended policy is not strictly clear from the regulation text, we are clarifying here that we intended the word “measures” at § 414.1370(b)(3) to modify only “quality” and not “cost/utilization.” To make this criterion clearer, we are proposing to modify the regulation to specify that a MIPS APM must be designed in such a way that participating APM Entities are incented to reduce costs of care or utilization of services, or both. This proposed change to § 414.1370(b)(3) would make it clear that a MIPS APM could take into account performance in terms of cost/utilization using model design features other than the direct use of cost/utilization measures. Specifically, we are proposing to change the order in which the requirements in the third criterion are listed to state that the APM bases payment incentives on performance (either at the APM entity or eligible clinician level) on quality measures and cost/utilization.

We further would like to clarify that we will consider each distinct track of an APM and whether it meets the above criteria in order to be a MIPS APM, and that it is possible for an APM to have

tracks that are MIPS APMs and tracks that are not MIPS APMs. We would not, however, further consider whether the individual APM Entities or MIPS eligible clinicians participating within a given track each satisfy all of the above MIPS APM criteria.

For purposes of this proposal, we understand the term “track” to refer to a distinct arrangement through which an APM Entity participates in the APM, and that such participation is mutually exclusive of the APM Entity’s participation in another “track” within the same APM. For example, we would consider the two risk arrangements under OCM to be two separate “tracks.”

We also would like to clarify our interpretation of the rule at § 414.1370(b)(4)(i) for APMs that begin after the first day of the MIPS performance period for the year (currently January 1), but require participants to report quality data for quality measures tied to payment for the full MIPS performance period, beginning January 1. Under these circumstances where quality measures tied to payment must be reported for purposes of the APM from the first day of the MIPS performance period, we believe it would be counter to the purpose of the APM scoring standard to require duplicative reporting of quality measures for both the APM and MIPS, and to create potentially conflicting incentives between the quality scoring requirements and payment incentive structures under the APM and MIPS. Therefore, for the purposes of MIPS APM determinations, we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM.

Based on the MIPS APM criteria, for the 2019 MIPS performance year, we expect that ten APMs likely will satisfy the requirements to be MIPS APMs: Comprehensive ESRD Care Model (all Tracks), Comprehensive Primary Care Plus Model (all Tracks), Next Generation ACO Model, Oncology Care Model (all Tracks), Medicare Shared Savings Program (all Tracks), Medicare ACO Track 1+ Model, Bundled Payments for Care Improvement, Advanced, Independence at Home Demonstration (if extended), Maryland Total Cost of Care Model (Maryland Primary Care Program), and Vermont Medicare ACO Initiative.

(c) Calculating MIPS APM Performance Category Scores

(i) Quality Performance Category

For the quality performance category, MIPS eligible clinicians in APM Entities will continue to be scored only on the quality measures that are required under the terms of their respective APMs, and available for scoring as specified in § 414.1370(g)(1) and explained in the CY 2017 Quality Payment Program final rule (82 FR 53698, 53692).

(A) Web Interface Reporters

In the CY 2018 Quality Payment Program final, we discussed, the requirements for MIPS eligible clinicians participating in a MIPS APM that requires use of the CMS Web Interface for quality reporting, subsequently referred to as “Web Interface Reporters” (82 FR 53954). In that rule we finalized a policy to use quality measure data that participating APM Entities submit using the CMS Web Interface and CAHPS surveys as required under the terms of the APM, and to use MIPS benchmarks for these measures when APM benchmarks are not available, in order to score quality for MIPS eligible clinicians at the APM Entity level under the APM scoring standard (82 FR 53568, 53692). We also codified at § 414.1370(f)(1) a policy under which, in the event a Shared Savings Program ACO does not report quality measures as required by the Shared Savings Program under § 425.508, each ACO participant TIN will be treated as a unique APM entity for purposes of the APM scoring standard, and may report data for the MIPS quality performance category according to the MIPS submission and reporting requirements.

For the 2019 MIPS performance year, we anticipate that there will be four Web Interface Reporter APMs: The Shared Savings Program; the Track 1+ Model; Next Generation ACO Model; and the Vermont ACO Medicare Initiative.

(aa) Complete Reporting Requirement

Under § 414.1370(f)(1), if a Shared Savings Program ACO does not report data on quality measures as required by the Shared Savings Program under § 425.508, each ACO participant TIN will be treated as a unique APM Entity for purposes of the APM scoring standard and the ACO participant TINs may report data for the MIPS quality performance category according to the MIPS submission and reporting requirements. We would like to clarify that any “partial” reporting through the CMS Web Interface that does not satisfy

the requirements of the Shared Savings Program will be considered a failure to report. Should a Shared Savings Program ACO fail to report, the exception under § 414.1370(f)(1) is triggered. In this scenario, each ACO participant TIN has the opportunity to report quality data to MIPS according to MIPS group reporting requirements in order to avoid a score of zero for the quality performance category (81 FR 77256).

We recognize that, under this policy, successfully reporting to MIPS according to group reporting requirements may be difficult for solo practitioners, for whom case thresholds and other requirements may make many group reporting measures unavailable. Therefore, we are modifying the exception such that beginning in 2019, in the case of a Shared Savings Program ACO's failure to report quality measures as required by the Shared Saving Program we would also allow a solo practitioner (a MIPS eligible clinician who has only one NPI billing through their TIN), to report on any available MIPS measures, including individual measures, in the event that their ACO fails to complete reporting for all Web Interface measures.

We are also proposing that, beginning with the 2019 performance period, the complete reporting requirement for Web Interface reporters be modified to specify that if an APM Entity (in this case, an ACO) fails to complete reporting for Web Interface measures but successfully reports the CAHPS for ACOs survey, we will score the CAHPS for ACOs survey and apply it towards the APM Entity's quality performance category score. In this scenario the Shared Savings Program TIN-level reporting exception would not be triggered and all MIPS eligible clinicians within the ACO would receive the APM Entity score.

We seek comment on this proposal.

(B) Other MIPS APMs

Under § 414.1370(g)(1)(ii), the MIPS quality performance category score for a MIPS performance period is calculated for the APM Entity using the data submitted by the APM Entity based on measures specified by us through notice and comment rulemaking and available for scoring for each Other MIPS APM from among those used under the terms of the Other MIPS APM.

In the 2019 MIPS performance year, we anticipate that there will be up to six Other MIPS APMs for which we will use this scoring methodology, based on their respective measure sets and reporting requirements: The Oncology Care Model; Comprehensive ESRD Care Model; Comprehensive Primary Care Plus Model; the Bundled Payments for Care Improvement Advanced; Maryland Primary Care Program; and Independence at Home Demonstration (in the event of an extension).

(ii) Promoting Interoperability Performance Category

In the CY 2017 Quality Payment Program final rule (81 FR 77262 through 77264; 81 FR 77266 through 77269), we established a policy at § 414.1370(g)(4)(ii) for MIPS APMs other than the Shared Savings Program, under which we attribute one Promoting Interoperability performance category score to each MIPS eligible clinician in an APM Entity group based on either individual or group-level data submitted for the MIPS eligible clinician and using the highest available score. We will then use these scores to create an APM Entity group score equal to the average of the highest scores available for each MIPS eligible clinician in the APM Entity group.

For the Shared Savings Program, we also finalized at § 414.1370(g)(4)(i) that ACO participant TINs are required to report on the Promoting Interoperability performance category, and we will weight and aggregate the ACO participant TIN scores to determine an

APM Entity group score (81 FR 77258 through 77260). This policy was meant to align requirements between the MIPS Promoting Interoperability measures and the Shared Savings Program ACO-11 measure, which is used to assess Shared Savings Program ACOs based on the MIPS Promoting Interoperability measures. However, we have found that limiting reporting to the ACO participant TIN creates unnecessary confusion, and restricts Promoting Interoperability reporting options for MIPS eligible clinicians who participate in the Shared Savings Program. Therefore, beginning in the 2019 MIPS performance period, we are proposing to no longer apply the requirement as finalized at § 414.1370(g)(4)(i) and instead to apply the existing policy at § 414.1370(g)(4)(ii) to MIPS eligible clinicians who participate in the Shared Savings Program so that they may report on the Promoting Interoperability performance category at either the individual or group level like all other MIPS eligible clinicians under the APM scoring standard.

We seek comment on this proposal.

(d) MIPS APM Performance Feedback

As we discussed in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77270, and 82 FR 53704 through 53705, respectively), MIPS eligible clinicians who are scored under the APM scoring standard will receive performance feedback under section 1848(q)(12) of the Act.

Regarding access to performance feedback, we should note that whereas split-TIN APM Entities and their participants can only access their performance feedback at the APM Entity or individual MIPS eligible clinician level, MIPS eligible clinicians participating in the Shared Savings Program, which only includes full-TIN ACOs, will be able to access their performance feedback at the ACO participant TIN level.

(e) Measure Sets

TABLE 41—MIPS APM MEASURE LIST—COMPREHENSIVE ESRD CARE

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
Diabetes Care: Eye Exam.	0055	Effective Clinical Care	Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period.	NCQA.

TABLE 41—MIPS APM MEASURE LIST—COMPREHENSIVE ESRD CARE—Continued

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
Diabetes Care: Foot Exam.	0056	Effective Clinical Care	Percentage of patients 18–75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the previous measurement year.	NCQA.
Advance Care Plan	0326	Communication and Care Coordination.	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	NCQA.
Medication Reconciliation Post-Discharge.	0554	Communication and Care Coordination.	The percentage of discharges from any inpatient facility (e.g., hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following the discharge in the office by the physicians, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record. National Committee for Quality Assurance. This measure is reported as three rates stratified by age group: <ul style="list-style-type: none"> • Reporting Criteria 1: 18–64 years of age. • Reporting Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and Older. 	NCQA.
Influenza Immunization for the ESRD Population.	Not Endorsed	N/A	Percentage of patients aged 6 months and older seen for a visit between July 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	KCQA.
Pneumococcal Vaccination Status.	0043	Community/Population Health.	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA.
Screening for Clinical Depression and Follow-Up Plan.	0418	Community/Population Health.	Percentage of patients aged 12 and older screened for depression on the date of the encounter and using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	CMS.
Tobacco Use: Screening and Cessation Intervention.	0028	Community/Population Health.	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	PCPI Foundation.
Falls: Screening, Risk Assessment, and Plan of Care to Prevent Future Falls.	0101	Patient Safety	(A) Screening for Future Fall Risk: Patients who were screened for future fall risk at last once within 12 months. (B) Multifactorial Falls Risk Assessment: Patients at risk of future fall who had a multifactorial risk assessment for falls completed within 12 months. (C) Plan of Care to Prevent Future Falls: Patients at risk of future fall with a plan of care or falls prevention documented within 12 months.	NCQA.
ICH CAHPS: Nephrologists' Communication and Caring.	0258	N/A	Summary/Survey Measures may include: <ul style="list-style-type: none"> • Getting timely care, appointments, and information. • How well providers communicate. • Patients' rating of provider. • Access to specialists. • Health promotion and education. • Shared Decision-making. 	CMS.

TABLE 41—MIPS APM MEASURE LIST—COMPREHENSIVE ESRD CARE—Continued

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
ICH CAHPS: Quality of Dialysis Center Care and Operations.	0258	N/A	<ul style="list-style-type: none"> • Health status and functional status. • Courteous and helpful office staff. • Care coordination. • Between visit communication. • Helping you to take medications as directed, and • Stewardship of patient resources. Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS.
ICH CAHPS: Providing Information to Patients.	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS.
ICH CAHPS: Rating of the Nephrologist.	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS.
ICH CAHPS: Rating of Dialysis Center Staff.	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS.
ICH CAHPS: Rating of the Dialysis Facility.	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS.
Standardized Mortality Ratio.	0369	N/A	This measure is calculated as a ratio but expressed as a rate.	CMS.
Standardized First Kidney Transplant Waitlist Ratio for Incident Dialysis Patients (SWR).	Not Endorsed	N/A	The standardized ratio of the observed to expected number of incident patients under age 75 listed on the kidney or kidney-pancreas transplant waitlist or who received a living donor transplant within the first year of initiating dialysis based on the national rate.	CMS.
Percentage of Prevalent Patients Waitlisted (PPPW).	Not Endorsed	N/A	The percentage of patients who were on the kidney or kidney-pancreas transplant waitlist.	CMS.

TABLE 42—MIPS APM MEASURE LIST—COMPREHENSIVE PRIMARY CARE PLUS (CPC+) MODEL

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measures steward
Controlling High Blood Pressure.	0018	Effective Treatment/ Clinical Care.	Percentage of patients 18–85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.	National Committee for Quality Assurance.
Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%).	0059	Effective Treatment/ Clinical Care.	Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c >9.0% during the measurement period.	National Committee for Quality Assurance.
Dementia: Cognitive Assessment.	2872	Effective Treatment/ Clinical Care.	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.	PCPI Foundation.
Falls: Screening for Future Fall Risk.	0101	Patient Safety	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance.
Initiation and Engagement of Alcohol and Other Drug Dependence Treatment.	0004	Effective Treatment/ Clinical Care.	Percentage of patients 13 years of age and older with a new episode of alcohol and other drug (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment within 14 days of the diagnosis. b. Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.	National Committee for Quality Assurance.
Closing the Referral Loop: Receipt of Specialist Report.	Not Endorsed	Communication and Care Coordination.	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	CMS.
Cervical Cancer Screening.	0032	Effective Treatment/ Clinical Care.	Percentage of women 21–64 years of age, who were screened for cervical cancer using either of the following criteria. • Women age 21–64 who had cervical cytology performed every 3 years. • Women age 30–64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years.	National Committee for Quality Assurance.
Colorectal Cancer Screening.	0034	Effective Treatment/ Clinical Care.	Percentage of patients, 50–75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance.
Diabetes: Eye Exam	0055	Effective Treatment/ Clinical Care.	Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period.	National Committee for Quality Assurance.
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.	0028	Community/Population Health.	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months and who received cessation counseling intervention if identified as a tobacco user.	PCPI Foundation.
Breast Cancer Screening.	2372	Effective Treatment/ Clinical Care.	Percentage of women 50–74 years of age who had a mammogram to screen for breast cancer.	National Committee for Quality Assurance.
CG—CAHPS Survey 3.0—modified for CPC+.	Not Endorsed	Person and Caregiver-Centered Experience and Outcomes.	CG—CAHPS Survey 3.0	AHRQ.
Inpatient Hospital Utilization.	Not Endorsed	Communication and Care Coordination.	For members 18 years of age and older, the risk-adjusted ratio of observed to expected acute inpatient discharges during the measurement year reported by Surgery, Medicine, and Total.	National Committee for Quality Assurance.
Emergency Department Utilization.	Not Endorsed	Communication and Care Coordination.	For members 18 years of age and older, the risk-adjusted ratio of observed to expected emergency department (ED) visits during the measurement year.	National Committee for Quality Assurance.

TABLE 42—MIPS APM MEASURE LIST—COMPREHENSIVE PRIMARY CARE PLUS (CPC+) MODEL—Continued

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measures steward
Diabetes: Medical Attention for Nephropathy.	0062	Effective Treatment/ Clinical Care.	The percentage of patients 18–75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee for Quality Assurance.
Preventive Care and Screening: Depression and Follow-Up Plan.	0418	Community/Population Health.	Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	PCPI Foundation.
Depression Utilization of the PHQ–9 Tool.	0712	Effective Treatment/ Clinical Care.	The percentage of patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ–9 during each applicable 4 month period in which there was a qualifying visit.	MN Community Measurement.
Preventive Care and Screening: Influenza Immunization.	0041	Community/Population Health.	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	American Medical Association-convened Physician Consortium for Performance Improvement(R) (AMA–PCPI).
Pneumococcal Vaccination Status for Older Adults.	Not Endorsed	Community/Population Health.	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance.
Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet.	0068	Effective Treatment/ Clinical Care.	Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance.
Statin Therapy for the Prevention and Treatment of Cardiovascular Disease.	Not Endorsed	Effective Treatment/ Clinical Care.	Percentage of the following patients—all considered at high risk of cardiovascular events—who were prescribed or were on statin therapy during the measurement period: <ul style="list-style-type: none"> • Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL–C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40–75 years with a diagnosis of diabetes with a fasting or direct LDL–C level of 70–189 mg/dL. 	CMS.
Use of High-Risk Medications in the Elderly.	0022	Patient Safety	Percentage of patients 65 years of age and older who were ordered high-risk medications.	National Committee for Quality Assurance.
Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.	Not Endorsed	Community/Population Health.	Percentage of patients aged 18 years and older seen during the reporting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.	CMS.
Documentation of Current Medications in the Medical Record.	0419	Patient Safety	Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	CMS.

TABLE 42—MIPS APM MEASURE LIST—COMPREHENSIVE PRIMARY CARE PLUS (CPC+) MODEL—Continued

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measures steward
Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan.	0421	Community/Population Health.	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter.	CMS.
Diabetes: Foot Exam	0056	Effective Treatment/ Clinical Care.	Percentage of patients 18–75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the previous measurement year.	National Committee for Quality Assurance.
Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD).	0081	Effective Treatment/ Clinical Care.	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) <40% who were prescribed ACE inhibitor or ARB therapy either within a 12 month period when seen in the outpatient setting OR at each hospital discharge.	PCPI Foundation.
Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD).	0083	Effective Treatment/ Clinical Care.	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) <40% who were prescribed beta-blocker therapy either within a 12 month period when seen in the outpatient setting OR at each hospital discharge.	PCPI Foundation.
Coronary Artery Disease (CAD): Beta-Blocker Therapy-Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF <40%).	0070	Effective Treatment/ Clinical Care.	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12 month period who also have a prior MI or a current or prior LVEF <40% who were prescribed beta-blocker therapy.	PCPI Foundation.
Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture.	Not Endorsed	Effective Treatment/ Clinical Care.	Percentage of female patients aged 50 to 64 without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	CMS.
HIV Screening	Not Endorsed	Community/Population Health.	Percentage of patients 15–65 years of age who have ever been tested for human immunodeficiency virus (HIV).	Centers for Disease Control and Prevention (CDC).
Total Resource Use Population-based PMPM Index (RUI).	1598	N/A	This measure is used to assess the total resource use index population-based per member per month (PMPM). The Resource Use Index (RUI) is a risk adjusted measure of the frequency and intensity of services utilized to manage a provider group's patients. Resource use includes all resources associated with treating members including professional, facility inpatient and outpatient, pharmacy, lab, radiology, ancillary and behavioral health services.	Minneapolis (MN): Health Partners.

TABLE 43—MIPS APM MEASURE LIST—ONCOLOGY CARE MODEL

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
Adjuvant chemotherapy is recommended or administered within 4 months (120 days) of diagnosis to patients under the age of 80 with AJCC III (lymph node positive) colon cancer.	0223	Communication and Care Coordination.	Percentage of patients under the age of 80 with AJCC III (lymph node positive) colon cancer for whom adjuvant chemotherapy is recommended and not received or administered within 4 months (120 days) of diagnosis.	Commission on Cancer, American College of Surgeons.
Breast Cancer: Hormonal Therapy for Stage I (T1b)–IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer.	0387	Communication and Care Coordination.	Percentage of female patients aged 18 years and older with Stage I (T1b) through IIIC, ER or PR positive breast cancer who were prescribed tamoxifen or aromatase inhibitor (AI) during the 12-month reporting period.	AMA-convened Physician Consortium for Performance Improvement.
Oncology: Medical and Radiation—Plan of Care for Pain.	0384	Person and Caregiver-Centered Experience and Outcomes.	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	American Society of Clinical Oncology.
Combination chemotherapy is recommended or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1cN0M0, or Stage IB–III hormone receptor negative breast cancer.	0559	Communication and Care Coordination.	Percentage of female patients, age >18 at diagnosis, who have their first diagnosis of breast cancer (epithelial malignancy), at AJCC stage T1cN0M0 (tumor greater than 1 cm), or Stage IB–III, whose primary tumor is progesterone and estrogen receptor negative recommended for multiagent chemotherapy (recommended or administered) within 4 months (120 days) of diagnosis.	Commission on Cancer, American College of Surgeons.
Documentation of Current Medications in the Medical Record.	0419	Patient Safety	Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over the counters, herbals, and vitamin/mineral/dietary AND must contain the medications' name, dosage, frequency and route of administration.	CMS.
Oncology: Medical and Radiation—Pain Intensity Quantified.	0383	Person and Caregiver Centered Experience.	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	Physician Consortium for Performance Improvement Foundation.
Patient-Reported Experience of Care.	N/A	Person and Caregiver-Centered Experience and Outcomes.	Summary/Survey Measures may include: <ul style="list-style-type: none"> • Overall measure of patient experience. • Exchanging Information with Patients. • Access. • Shared Decision Making. • Enabling Self-Management. • Affective Communication. 	CMS.
Preventive Care and Screening: Screening for Depression and Follow-Up Plan.	0418	Community/Population Health.	Percentage of patients aged 12 and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool and if positive, a follow-up plan is documented on the date of the positive screen.	CMS.
Proportion of patients who died who were admitted to hospice for 3 days or more.	N/A	N/A	Percentage of OCM-attributed FFS beneficiaries who died and spent at least 3 days in hospice during the measurement time period.	CMS.
Risk-adjusted proportion of patients with all-cause ED visits that did not result in a hospital admission within the 6-month episode.	N/A	N/A	Percentage of OCM-attributed FFS beneficiaries who had an ER visit that did not result in a hospital stay during the measurement period.	CMS.

Risk-adjusted proportion of patients with all-cause hospital admissions within the 6-month episode.	N/A	N/A	Percentage of OCM-attributed FFS beneficiaries who were had an acute-care hospital stay during the measurement period.	CMS.
Trastuzumab administered to patients with AJCC stage I (T1c)–III and human epidermal growth factor receptor 2 (HER2) positive breast cancer who receive adjuvant chemotherapy.	1858	Efficiency and Cost reduction.	Proportion of female patients (aged 18 years and older) with AJCC stage I (T1c)–III, human epidermal growth factor receptor 2 (HER2) positive breast cancer receiving adjuvant Chemotherapy.	American Society of Clinical Oncology.

TABLE 44—MIPS APM MEASURE LIST—BUNDLED PAYMENTS FOR CARE IMPROVEMENT ADVANCED

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
All-Cause Hospital Re-admission.	1789	Communication and Care Coordination.	This measure estimates a hospital-level risk-standardized readmission rate (RSRR) of unplanned, all cause readmission after admission for any eligible condition within 30 days of hospital discharge.	CMS.
Advanced Care Plan	0326	Communication and Care Coordination.	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	NCQA.
Perioperative Care: Selection of Prophylactic Antibiotic: First or Second Generation Cephalosporin.	0268	Patient Safety	Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second generation cephalosporin prophylactic antibiotic who had an order for first OR second generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons.
Hospital-Level Risk-Standardized Mortality Rate Following Elective Coronary Artery Bypass Graft Surgery.	2558	Patient Safety	The measure estimates a hospital-level, risk-standardized mortality rate (RSMR) for patients 18 years and older discharged from the hospital following a qualifying isolated CABG procedure. Mortality is defined as death from any cause within 30 days of the procedure date of an index CABG admission. The measure was developed using Medicare Fee-for-Service (FFS) patients 65 years and older and was tested in all-payer patients 18 years and older. An index admission is the hospitalization for a qualifying isolated CABG procedure considered for the mortality outcome.	CMS.

TABLE 44—MIPS APM MEASURE LIST—BUNDLED PAYMENTS FOR CARE IMPROVEMENT ADVANCED—Continued

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
Excess Days in Acute Care After Hospitalization for Acute Myocardial Infarction.	2881	Patient Safety	This measure assesses days spent in acute care within 30 days of discharge from an inpatient hospitalization for acute myocardial infarction (AMI) to provide a patient-centered assessment of the post-discharge period. This measure is intended to capture the quality of care transitions provided to discharged patients hospitalized with AMI by collectively measuring a set of adverse acute care outcomes that can occur post-discharge: Emergency department (ED) visits, observation stays, and unplanned readmissions at any time during the 30 days post-discharge. In order to aggregate all three events, we measure each in terms of days. In 2016, CMS will begin annual reporting of the measure for patients who are 65 years or older, are enrolled in fee-for-service (FFS) Medicare, and are hospitalized in non-federal hospitals.	CMS.
AHRQ Patient Safety Measures.	0531	Patient Safety	The modified PSI-90 Composite measure (name changed to Patient Safety and Adverse Events Composite) consists of ten component indicators: PSI-3 Pressure ulcer rate; PSI-6 Iatrogenic pneumothorax rate; PSI-8 Postoperative hip fracture rate; PSI-09 Perioperative hemorrhage or hematoma rate; PSI-10 Physiologic and metabolic derangement rate; PSI-11 postoperative respiratory failure rate; PSI-12 Perioperative pulmonary embolism or Deep vein thrombosis rate; PSI-13 Postoperative sepsis rate; PSI-14 Postoperative wound dehiscence rate; and PSI-15 Accidental puncture or laceration rate.	AHRQ.
Hospital-Level Risk-Standardized Complication Rate Following Elective Primary Total Hip Arthroplasty and/or Total Knee Arthroplasty.	1550	Patient Safety	The measure estimates a hospital-level risk-standardized complication rate (RSCR) associated with elective primary THA and TKA in Medicare Fee-For-Service beneficiaries who are 65 years and older. The outcome (complication) is defined as any one of the specified complications occurring from the date of index admission to 90 days post date of the index admission (the admission included in the measure cohort).	CMS.

TABLE 45—MIPS APM MEASURE LIST—MARYLAND TOTAL COST OF CARE MODEL

Falls: Screening for Future Fall Risk.	0101	Patient Safety/Safety ..	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance.
Initiation and Engagement of Alcohol and Other Drug Dependence Treatment.	004	Effective Treatment/ Clinical Care.	Percentage of patients 13 years of age and older with a new episode of alcohol and other drug (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment within 14 days of the diagnosis. b. Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.	National Committee for Quality Assurance.
Closing the Referral Loop: Receipt of Specialist Report.	N/A	Communication and Coordination/Care Coordination.	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	CMS.
Cervical Cancer Screening.	0032	Effective Treatment/ Clinical Care.	Percentage of women 21–64 years of age, who were screened for cervical cancer using either of the following criteria. • Women age 21–64 who had cervical cytology performed every 3 years. • Women age 30–64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every.	National Committee for Quality Assurance.
Colorectal Cancer Screening.	0034	Effective Treatment/ Clinical Care.	Percentage of patients, 50–75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance.
Diabetes: Eye Exam	0055	Effective Treatment/ Clinical Care.	Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period.	National Committee for Quality Assurance.
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.	0028	Healthy Living/Population Health and Prevention.	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months and who received cessation counseling intervention if identified as a tobacco user.	American Medical Association-convened Physician Consortium for Performance Improvement(R) (AMA–PCPI).
Breast Cancer Screening.	2372	Effective Treatment/ Clinical Care.	Percentage of women 50–74 years of age who had a mammogram to screen for breast cancer.	National Committee for Quality Assurance.
CG–CAHPS Survey 3.0—modified for CPC+.	Not Endorsed	Person and Family Engagement/Patient and Caregiver Experience.	CG–CAHPS Survey 3.0	AHRQ.
Inpatient Hospital Utilization.	Not Endorsed	Communication and Care Coordination.	For members 18 years of age and older, the risk-adjusted ratio of observed to expected acute inpatient discharges during the measurement year reported by Surgery, Medicine, and Total.	National Committee for Quality Assurance.
Emergency Department Utilization.	Not Endorsed	Communication and Care Coordination.	For members 18 years of age and older, the risk-adjusted ratio of observed to expected emergency department (ED) visits during the measurement year.	National Committee for Quality Assurance.
Diabetes: Medical Attention for Nephropathy.	0062	Effective Treatment/ Clinical Care.	The percentage of patients 18–75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee for Quality Assurance.
Preventive Care and Screening: Depression and Follow-Up Plan.	0418	Community/Population Health.	Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	CMS.

Measure name	NQF/Quality ID No.	National quality strategy domain	Measure description	Primary measure steward
Depression Utilization of the PHQ-9 Tool.	0712	Effective Treatment/ Clinical Care.	The percentage of patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying visit.	MN Community Measurement.
Preventive Care and Screening: Influenza Immunization.	0041	Healthy Living/Population Health and Prevention.	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	American Medical Association-convened Physician Consortium for Performance Improvement(R) (AMA-PCPI).
Pneumococcal Vaccination Status for Older Adults.	0043	Healthy Living/Population Health and Prevention.	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance.
Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet.	0068	Effective Treatment/ Clinical Care.	Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance.
Statin Therapy for the Prevention and Treatment of Cardiovascular Disease.	Not Endorsed	Effective Treatment/ Clinical Care.	Percentage of the following patients—all considered at high risk of cardiovascular events—who were prescribed or were on statin therapy during the measurement period: <ul style="list-style-type: none"> • Adults aged >=21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged >=21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level >=190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL. 	CMS.
Use of High-Risk Medications in the Elderly.	0022	Patient Safety/Safety ..	Percentage of patients 65 years of age and older who were ordered high-risk medications.	National Committee for Quality Assurance.

Contact with beneficiaries within 48 hours upon admission to the hospital and discharge from the hospital and/or ED.	Not Endorsed	N/A	Percent of hospital admissions, hospital discharges, and emergency department (ED) visits for beneficiaries enrolled in IAH with a follow-up contact within 48 hours.	CMS.
Medication reconciliation in the home.	Not Endorsed	N/A	Percent of hospital discharges and emergency department (ED) visits for beneficiaries enrolled in IAH with medication reconciliation in the home within 48 hours.	CMS.
Percentage with Documented Patient Preferences.	Not Endorsed	N/A	Percent of beneficiaries enrolled in IAH with patient preferences documented in the medical record for a demonstration year.	CMS.

i. MIPS Final Score Methodology

(1) Converting Measures and Activities Into Performance Category Scores

(a) Background

For the 2021 MIPS payment year, we intend to build on the scoring methodology we finalized for the transition years, which allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. The rationale for our scoring methodology continues to be grounded in the understanding that the MIPS scoring system has many components and various moving parts.

As we continue to move forward in implementing the MIPS program, we strive to balance the statutory requirements and programmatic goals with the ease of use, stability, and meaningfulness for MIPS eligible clinicians. We do so while also emphasizing simplicity and the continued development of a scoring methodology that is understandable for MIPS eligible clinicians.

In the CY 2017 Quality Payment Program final rule, we finalized a unified scoring system to determine a final score across the 4 performance categories (81 FR 77273 through 77276). For the 2019 MIPS performance period, we propose to build on the scoring methodology we previously finalized, focusing on encouraging MIPS eligible clinicians to meet data completeness requirements. For the quality performance category scoring, we propose to extend some of the transition year policies to the 2019 MIPS performance period, and we are also proposing several modifications to existing policies. In the CY 2018 Quality Payment Program final rule (82 FR 53712 through 53714), we established a methodology for scoring improvement in the cost performance category. However, as required by section

51003(a)(1)(B) of the Bipartisan Budget Act of 2018, we propose that the cost performance category score would not take into account improvement until the 2024 MIPS payment year. In the CY 2018 Quality Payment Program final rule (82 FR 53753 through 53767), we finalized the availability of a facility-based measurement option for clinicians who met certain requirements, beginning with the 2019 MIPS performance period; in section III.H.3.i.(1)(d) of this proposed rule, we propose to change the determination of facility-based measurement to include consideration of presence in the on-campus outpatient hospital. The policies for scoring the 4 performance categories are described in detail in section III.H.3.i.(1) of this proposed rule.

These sets of proposed policies will help eligible clinicians as they participate in the 2019 MIPS performance period/2021 MIPS payment year, and as we move beyond the transition years of the program. Section 51003 of the Bipartisan Budget Act of 2018 provides flexibility to continue the gradual ramp up of the Quality Payment Program and enables us to extend some of the transition year policies to the 2019 performance period.

Unless otherwise noted, for purposes of this section III.H.3.i. of this proposed rule on scoring, the term “MIPS eligible clinician” will refer to MIPS eligible clinicians who collect and submit data and are scored at either the individual or group level, including virtual groups; it will not refer to MIPS eligible clinicians who are scored by facility-based measurement, as discussed in section III.H.3.i.(1)(d) of this proposed rule. We also note that the APM scoring standard applies to MIPS eligible clinicians in APM Entities in MIPS APMs, and those policies take precedence where applicable. Where those policies do not apply, scoring for MIPS eligible clinicians as described in

section III.H.3.h.(6) of this proposed rule will apply. We refer readers to section III.H.4. of this proposed rule for additional information about the APM scoring standard.

(b) Scoring the Quality Performance Category for the Following Collection Types: Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, CMS Web Interface Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

Although we do not propose changing the basic scoring system that we finalized in the CY 2018 Quality Payment Program final rule for the 2021 MIPS payment year (82 FR 53712 through 53748), we are proposing several modifications to scoring the quality performance category, including removing high-priority measure bonus points for CMS Web Interface measures and extending the bonus point caps, and adding a small practice bonus to the quality performance category score. The following section describes these previously finalized policies and our new proposals.

We are also proposing updates to § 414.1380(b)(1) in an effort to more clearly and concisely capture previously established policies. These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We will make note of the updated regulatory citations in their relevant sections below.

(i) Scoring Terminology

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 through 77831, and 82 FR 53568 through 54229, respectively), we used the term “submission mechanisms” in reference to the various ways in which a MIPS eligible clinician or group can submit data to CMS. As discussed in section III.H.3.h.(1)(b) of this proposed

rule, it has come to our attention that the way we have described the various ways in which MIPS eligible clinicians, groups and third-party intermediaries can submit data to our systems does not accurately reflect the experience users have when submitting data to us. We refer readers to section III.H.3.h.(1)(b) of this proposed rule for further discussion on our proposed changes to the scoring terminology related to measure specification and data collection and submission. For additional discussion on the impact of the proposed terminology change on our benchmarking methodology, validation process, and end-to-end reporting bonus, we refer readers to sections III.H.3.i.(1)(b)(ii), (v), and (x) of this proposed rule.

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77282, and 82 FR 53718, respectively) for our previously established benchmarking policies. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(a)(i) of this proposed rule, our previously established benchmarking policies at § 414.1380(b)(1)(i) through (iii) would now be referenced at § 414.1380(b)(1)(i) through (ii).

In the CY 2018 Quality Payment Program final rule, we solicited comments on how we could improve our method of benchmarking quality measures (82 FR 53718 through 53719). Several commenters provided suggestions on improving our benchmarking methodology including reconciling the differences between the MIPS and Physician Compare benchmarking methodologies. Several other commenters expressed concerns that the methodology may not reflect performance because, among other reasons, commenters believed that the benchmarks use data from a small number of clinicians, are based on various legacy programs, and create ranging point variances based on collection type.

When we developed the quality measure benchmarks, we sought to develop a system that enables MIPS eligible clinicians, beneficiaries, and other stakeholders to understand what is required for a strong performance in MIPS while being consistent with statutory requirements (81 FR 28249 through 28250). The feedback we have received thus far from stakeholders on our benchmarks is helping to inform our approach to the benchmarking methodology, especially as we look for possible ways of aligning with

Physician Compare benchmarks. As described in section III.H.3.i.(1)(b)(xii) of this proposed rule, we are seeking comment on potential future approaches to scoring the quality performance category to continue to promote value and improved outcomes. We anticipate changes in scoring would be paired with potential modifications to measure selection and criteria discussed in section III.H.3.h.(2)(b) of this proposed rule. We are looking for opportunities to further reduce confusion about our benchmarking methodology described in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77278), which includes further clarification of our benchmarking process and potential areas of alignment between the MIPS and Physician Compare benchmarking methodologies. We will take commenters' suggestions into consideration in future rulemaking.

(A) Revised Terminology for MIPS Benchmarks

We previously established at § 414.1380(b)(1)(iii) separate benchmarks for the following submission mechanisms: EHR; QCDR/registry, claims; CMS Web Interface; CMS-approved survey vendor; and administrative claims. We are not proposing to change our basic approach to our benchmarking methodology; however, we are proposing to amend § 414.1380(b)(1)(ii) consistent with the proposed data submission terminology changes discussed in section III.H.3.h.(1)(b) of this proposed rule. Specifically, beginning with the 2021 MIPS payment year, we propose to establish separate benchmarks for the following collection types: eCQMs; QCDR measures (as described at § 414.1400(e)); MIPS CQMs; Medicare Part B claims measures; CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. We would apply benchmarks based on collection type rather than submission mechanism. For example, for an eCQM, we would apply the eCQM benchmark regardless of submitter type (MIPS eligible clinician, group, third party intermediary). In addition, we would establish separate benchmarks for QCDR measures and MIPS CQMs since these measures do not have comparable specifications. In addition, we note that our proposed benchmarking policy allows for the addition of future collection types as the universe of measures continues to evolve and as new technology is introduced. Specifically, we propose to amend § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will

be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

(iii) Assigning Points Based on Achievement

In the CY 2017 Quality Payment Program final rule, we established the policies for scoring quality measures performance (81 FR 77286). We refer readers to § 414.1380(b)(1) for more on these policies.

(A) Floor for Scored Quality Measures

For the 2019 and 2020 MIPS payment years, we finalized at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as for the hospital readmission measure (if applicable). In this way, MIPS eligible clinicians would receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements (81 FR 77286 through 77287; 82 FR 53719). For measures with a benchmark based on the performance period (rather than on the baseline period), we stated that we would continue to assign between 3 and 10 measure achievement points for performance periods after the first transition year (81 FR 77282, 77287; 82 FR 53719). For measures with benchmarks based on the baseline period, we stated that the 3-point floor was for the transition year and that we would revisit the 3-point floor in future years (81 FR 77286 through 77287; 82 FR 53719).

For the 2021 MIPS payment year, we propose to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period, and to amend § 414.1380(b)(1)(i) accordingly. We will revisit the 3-point floor for such measures again in future rulemaking.

(B) Additional Policies for the CAHPS for MIPS Measure Score

While participating in the CAHPS for MIPS survey is optional for all groups, some groups will be unable to participate in the CAHPS for MIPS survey because they do not meet the minimum beneficiary sampling requirements. CMS has sampling requirements for groups of 100 or more eligible clinicians, 25 to 99 eligible clinicians, and 2 to 24 eligible clinicians to ensure an adequate number of survey responses and the ability to reliably report data. Our sampling timeframes (82 FR 53630 through 53632) necessitate notifying groups of their inability to

meet the sampling requirements late in the performance period (see 82 FR 53630 through 53632). As a result, we are concerned that some groups that expect and plan to meet the quality performance category requirements using the CAHPS for MIPS survey may find out late in the performance period that they are unable to meet the sampling requirements and, therefore, are unable to have their performance assessed on this measure. These groups may need to report on another measure to meet the requirements of the quality performance category.

We want to encourage the reporting of the CAHPS for MIPS survey and do not want the uncertainty regarding sampling requirements to be a barrier to selecting the CAHPS for MIPS survey. To mitigate this concern, beginning with the 2021 MIPS payment year, we are proposing to reduce the denominator (that is, the total available measure achievement points) for the quality performance category by 10 points for groups that register for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirements. By reducing the denominator instead of only assigning the group a score of zero measure achievement points (because the group would be unable to submit any CAHPS for MIPS survey data), we are effectively removing the impact of the group's inability to submit the CAHPS for MIPS survey. We believe this reduction in denominator would remove any need for groups to find another measure if they are unable to submit the CAHPS for MIPS survey. Therefore, we propose to amend § 414.1380 to add paragraph (b)(1)(vii)(B) to state that we will reduce the total available measure achievement points for the quality performance category by 10 points for groups that registered for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirements.

We do not want groups to register for the CAHPS for MIPS survey if they know in advance that they are unlikely to be able to meet the sampling requirement, so we seek comment on whether we should limit this proposed policy to groups for only one MIPS performance period. For example, for the performance period following the application of this proposed policy, a

notice could be provided to groups during registration indicating that if the sampling requirement is not met for a second consecutive performance period, the proposed policy will not be applied. This would provide notice to the group that they may not meet the sampling requirement needed for the CAHPS for MIPS survey and may need to look for alternate measures, but does not preclude the group from registering for the CAHPS for MIPS survey if they expect to meet the minimum beneficiary sampling requirements in the second MIPS performance period.

(iv) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to CY 2017 Quality Payment Program final rule (82 FR 53721 through 53727) for our established policies for scoring topped out measures.

Under § 414.1380(b)(1)(xiii)(A), for the 2020 MIPS payment year, six measures will receive a maximum of 7 measure achievement points, provided that the applicable measure benchmarks are identified as topped out again in the benchmarks published for the 2018 MIPS performance period. Under § 414.1380(b)(1)(xiii)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727). As part of our technical updates to § 414.1380(b)(1) outlined in section III.H.3.i.(1)(b) of this proposed rule, our finalized topped out scoring policies are now referenced at § 414.1380(b)(1)(iv).

We refer readers to the 2018 MIPS Quality Benchmarks' file, that is located on the Quality Payment Program resource library (<https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html>) to determine which measure benchmarks are topped out for 2018 and would be subject to the cap if they are also topped out in the 2019 MIPS Quality Benchmarks' file. We note that the final determination of which measure benchmarks are subject to the topped out cap will not be available

until the 2019 MIPS Quality Benchmarks' file is released in late 2018.

We did not propose to apply our previously finalized topped out scoring policy to the CAHPS for MIPS survey (82 FR 53726). Because the CAHPS for MIPS survey was revised in 2018 (82 FR 53632), we do not have historical benchmarks for the 2018 performance period, so the topped out policy would not be applied for the 2019 performance period. Last year, we received limited feedback when we sought comment on how the topped out scoring policy should be applied to CAHPS for MIPS survey. In this proposed rule, we are seeking feedback on potential ways we can score CAHPS for MIPS Summary Survey Measures (SSM). For example, we could score all SSMs, which means there would effectively be no topped out scoring for CAHPS for MIPS SSMs, or we could cap the SSMs that are topped out and score all other SSMs. We seek comment on these approaches and additional approaches to the topped out scoring policy for CAHPS for MIPS SSMs. We note that we would like to encourage groups to report the CAHPS for MIPS survey as it incorporates beneficiary feedback.

(v) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmarks Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77288 through 77289), we established scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previous scoring policies are now referenced at § 414.1380(b)(1)(i)(A) and (B).

A summary of the current and proposed policies is provided in Table 47. For more of the statutory background and details on current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77288 through 77289 and 82 FR 53727 through 53730, respectively).

TABLE 47—QUALITY PERFORMANCE CATEGORY: SCORING MEASURES

Measure type	Description	Scoring rules
Class 1	For the 2018 and 2019 MIPS performance period: Measures that can be scored based on performance Measures that were submitted or calculated that met the following criteria:	For the 2018 and 2019 MIPS performance period: 3 to 10 points based on performance compared to the benchmark.

TABLE 47—QUALITY PERFORMANCE CATEGORY: SCORING MEASURES—Continued

Measure type	Description	Scoring rules
Class 2	(1) Has a benchmark; (2) Has at least 20 cases; and (3) Meets the data completeness standard (generally 60 percent). For the 2018 and 2019 MIPS performance period: Measures that were submitted and meet data completeness, but do not have both of the following: (1) a benchmark. (2) at least 20 cases.	For the 2018 and 2019 MIPS performance period: 3 points. * This Class 2 measure policy does not apply to CMS Web Interface measures and administrative claims based measures.
Class 3**	For the 2018 and 2019 MIPS performance period: Measures that were submitted, but do not meet data completeness criteria, regardless of whether they have a benchmark or meet the case minimum.	For the 2018 and 2019 MIPS performance period: 1 point except for small practices, which would receive 3 measure achievement points. Beginning with the 2020 MIPS performance period: MIPS eligible clinicians other than small practices will receive zero measure achievement points. Small practices will continue to receive 3 points. * This Class 3 measure policy would not apply to CMS Web Interface measures and administrative claims based measures.

As the MIPS program continues to mature, we are looking to find ways to improve our policies, including what to do with measures that do not meet the case minimum. While many MIPS eligible clinicians can meet the 20-case minimum requirement, we recognize that small practices and individual MIPS eligible clinicians may have difficulty meeting this standard. While we process data from the CY 2017 MIPS performance period to determine how often submitted measures do not meet case minimums, we invite public comment on ways we can improve our case-minimum policy. In determining future improvements to our case minimum policy, our goal is to balance the concerns of MIPS eligible clinicians who are unable to meet the case minimum requirement and for whom we cannot capture enough data to reliably measure performance, while not creating incentives for MIPS eligible clinicians to choose measures that do not meet case minimum even though other more relevant measures are available.

We propose to maintain the policies finalized for the CY 2018 MIPS performance period regarding measures that do not meet the case-minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria for the CY 2019 MIPS performance period, and to amend § 414.1380(b)(1)(i) accordingly.

We also propose to assign zero points for measures that do not meet data completeness starting with the CY 2020 MIPS performance period and to amend § 414.1380(b)(1)(i)(B)(1) accordingly. This policy is part of our effort to move toward complete and accurate reporting that reflects meaningful effort to

improve the quality of care that patients receive. Measures submitted by small practices would continue to receive 3 points for all future CY MIPS performance periods, although we may revisit this policy through future rulemaking.

(vi) Scoring Flexibility for Measures With Clinical Guideline Changes During the Performance Period

In the CY 2018 Quality Payment Program final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD–10 updates based only on the first 9 months of the 12-month performance period (for example, January 1, 2018, through September 30, 2018, for the 2018 MIPS performance period). We noted that performance on measures that are not significantly impacted by changes to ICD–10 codes would continue to be assessed on the full 12-month performance period (January 1 through December 31). Lastly, we finalized that we will publish the list of measures requiring a 9-month assessment process on the CMS website by October 1st of the performance period if technically feasible, but by no later than the beginning of the data submission period (for example, January 2, 2019, for the 2018 MIPS performance period). As part of our technical updates to § 414.1380(b)(1) outlined in section III.H.3.i.(1)(b) of this proposed rule, these policies are now referenced at § 414.1380(b)(1)(viii).

We remain concerned about instances where clinical guideline changes or other changes to evidence supporting a measure occur during the performance

period that may significantly impact a measure. Clinical guidelines and protocols developed by clinical experts and specialty medical societies often underpin quality measures. At times, measure stewards must amend quality measures to reflect new research and changed clinical guidelines, and sometimes, as a result of the change in these guidelines, adherence to guidelines in the existing measures could result in patient harm or otherwise provide misleading results as to good quality care. We sought comment in the CY 2018 Quality Payment Program final rule regarding whether we should apply scoring flexibility to measures significantly impacted by clinical guideline changes (82 FR 53716).

A few commenters made suggestions. One commenter supported using an approach similar to the one used for measures impacted by ICD–10 changes. One commenter also recommended that the process be evaluated periodically. A few commenters did not support CMS scoring measures with less than 12 months of data because the commenters believed this may result in unsuccessful reporting and could affect the measure logic. One commenter recommended engaging measure developers and/or stewards and measure implementers who may have novel approaches for accounting for ICD–10 and other significant changes, such as releasing new measure guidance or suspending updates to the measure until the following performance period. The commenter also recommended that, for each measure with a significant change, CMS post the proposed approach for scoring the measure on the Quality

Payment Program website for a 30-day public comment period.

We remain concerned that findings of evidence-based research, providing the basis for sound clinical practice guidelines and recommendations that are the foundation of a quality measure, may change outside of the rulemaking cycle. As the clinical evidence and guidelines change, approved measures may no longer reflect the most up-to-date clinical evidence and could be contrary to patient well-being. There may be instances in which changes to clinical guidelines are so significant, that an expedited review is needed outside of the rulemaking cycle because measures may result in a practice that is harmful to patients. To further align with policies adopted within other value based programs such as the Hospital VBP Program (83 FR 20409), we are proposing to suppress a measure without rulemaking, if during the performance period a measure is significantly impacted by clinical guideline changes or other changes that CMS believes may pose patient safety concerns. CMS would rely on measure stewards for notification in changes to clinical guidelines. We will publish on the CMS website suppressed measures whenever technically feasible, but by no later than the beginning of the data submission period.

We propose policies to provide scoring flexibility in the event that we need to suppress a measure during a performance period. Scoring for a suppressed measure would result in a zero achievement points for the measure and a reduction of the total available measure achievement points by 10 points. We believe that this approach effectively removes the impact of the eligible clinician's inability to receive measure achievement points for the measure, if a submitted measure is later suppressed.

We propose to add a new paragraph at § 414.1380(b)(1)(vii) that beginning with the 2019 MIPS performance period, CMS will reduce the total available measure achievement points for the quality performance category by 10 points for MIPS eligible clinicians that submit a measure significantly impacted by clinical guideline changes or other changes that CMS believes may pose patient safety concerns.

(vii) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2021 MIPS payment year, we will validate the availability and applicability of quality

measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the validation process for the 2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

As discussed in section III.H.3.h.(1)(b) of this proposed rule, we are proposing to revise our terminology regarding data submission. This updated terminology will more accurately reflect our current submissions and validation policies. We propose to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy would not apply to eCQMs even if they are submitted by a registry.

We note that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician's score according to the reweighting policies described in sections III.H.3.i.(2)(b)(ii) and III.H.3.i.(2)(b)(iii) of this proposed rule.

(viii) Small Practice Bonus

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1380(c)(4) to add a small practice bonus of 5 points to the final score for the 2020 MIPS payment year for MIPS eligible clinicians, groups, APM Entities, and virtual groups that meet the definition of a small practice as defined at § 414.1305 and submit data on at least one performance category in the 2018 MIPS performance period.

We continue to believe an adjustment for small practices is generally appropriate due to the unique challenges small practices experience related to financial and other resources, as well as the performance gap we have observed (based on historical PQRS data) for small practices in comparison to larger practices. We believe a small practice bonus specific to the quality performance category is preferable for the 2021 MIPS payment year and future years. We believe it is appropriate to apply a small practice bonus points to the quality performance category based on observations using historical data,

which indicates that small practices are less likely to submit quality performance data, less likely to report as a group and use the CMS Web Interface, and more likely to have lower performance rates in the quality performance category than other practices. We want the final score to reflect performance, rather than the ability and infrastructure to support submitting quality performance category data.

We considered whether we should continue to apply the small practice bonus through bonus points in all four performance categories, but believe the need for doing so is less compelling. The improvement activities performance category already includes special scoring for small practices (please refer to § 414.1380(b)(3) and see section III.H.3.i.(1)(e) of this proposed rule for more information). In addition, for the Promoting Interoperability performance category, small practices can apply for a significant hardship exception if they have issues acquiring an EHR (see section III.H.3.h.(5) of this proposed rule). Finally, the cost performance category does not require submission of any data; therefore, there is less concern about a small practice being burdened by those requirements. For these reasons, we are proposing to transition the small practice bonus to the quality performance category.

Starting with the 2021 MIPS payment year, we propose at § 414.1380(b)(1)(v)(C) to add a small practice bonus of 3 points in the numerator of the quality performance category for MIPS eligible clinicians in small practices if the MIPS eligible clinician submits data to MIPS on at least 1 quality measure. Because MIPS eligible clinicians in small practices are not measured on the readmission measure and are not able to participate in the CMS Web Interface, they generally have a quality performance category denominator of 60 total possible measure achievement points. Thus, our proposal of 3 measure bonus points generally represents 5 percent of the quality performance category score. As described in section III.H.3.i.(2)(b)(iii) of this proposed rule, for clinicians in many small practices, the quality performance category weight may be up to 85 percent of the final score. (For example, if a small practice applies for the Promoting Interoperability significant hardship application and does not meet the sufficient case minimum for cost measures then the weights of Promoting Interoperability and cost performance categories are redistributed to quality

and the quality performance category weight would be 85 percent.)

With a weight of 85 percent, a small practice bonus of 3 points added to the quality performance category will result in 4.25 bonus points added to the final score for clinicians in small practices.²⁹ We believe this is appropriate because it is similar to the impact of the small practice bonus we finalized for the 2020 MIPS payment year (5 points added to the final score). While we recognize that the impact of the small practice bonus for MIPS eligible clinicians in small practices who do not receive reweighting for the cost and/or Promoting Interoperability performance categories will be less than 4.25 points added to the final score, we believe a consistent approach is preferable for simplicity, and we do not believe that a larger bonus is appropriate as that could potentially inflate the quality performance category score and the final score and mask poor performance.

(ix) Incentives To Report High-Priority Measures

In the CY 2017 Quality Payment Program final rule, we established a cap on high-priority measure bonus points for the first 2 years of MIPS at 10 percent of the denominator (total possible measure achievement points the MIPS eligible clinician could receive in the quality performance category) of the quality performance category (81 FR 77294). As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previously established policy on incentives to report high-priority measures is now referenced at § 414.1380(b)(1)(v)(A). We are proposing to maintain the cap on measure bonus points for reporting high-priority measures for the 2021 MIPS payment year, and to amend § 414.1380(b)(1)(v)(A)(1)(ii), accordingly.

We established the scoring policies for high-priority measure bonus points in the CY 2017 Quality Payment Program final rule (81 FR 77293). We noted that, in addition to the required measures, CMS Web Interface reporters may also report the CAHPS for MIPS survey and receive measure bonus points for submitting that measure (81 FR 77293). We refer readers to § 414.1380(b)(1)(v)(A) for more details on the high-priority measure bonus points scoring policies.

For the 2021 MIPS payment year, we propose to modify the policies finalized

in the CY 2017 Quality Payment Program final rule (and amend § 414.1380(b)(1)(v)(A) accordingly) to discontinue awarding measure bonus points to CMS Web Interface reporters for reporting high-priority measures. As we continue to move forward in implementing the MIPS program, we no longer believe that it is appropriate to award CMS Web Interface reporters measure bonus points to be consistent with other policies regarding selection of measures. Based on additional data analyses since the first-year policy was implemented, we have found that practices that elect to report via CMS Web Interface generally perform better than other practices that select other collection types. Therefore, the benefit of the bonus points is limited and instead we believe will create higher than normal scores. Bonus points were created as transition policies which were not meant to continue through the life of the program. Measure bonus points are also used to encourage the selection of additional high-priority measures. As the program matures, we have established other policies related to measures selection, such as applying a cap of 7 measure achievement points if a clinician selects and submits a measure that has been topped out for 2 or more years; however, we have excluded CMS Web Interface reporters from the topped out policies because reporters have no choice in measures. By the same logic, since CMS Web Interface reporters have no choice in measures, we do not believe it is appropriate to continue to provide additional high-priority measure bonuses for reporting CMS Web Interface measures. We note the CMS Web Interface users may still elect to report the CAHPS for MIPS survey in addition to the CMS Web Interface, and if they do, they would receive the high priority bonus points for reporting the survey.

As part of our move towards fully implementing the high value measures as discussed in section III.H.3.h.(2)(b)(iv) of this proposed rule, we believe that bonus points for high priority measures for all collection types may no longer be needed, and as a result, we intend to consider in future rulemaking whether to modify our scoring policy to no longer offer high priority bonus points after the 2021 MIPS payment year.

(x) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on

applicable quality measures through the use of CEHRT. Under § 414.1380(b)(1)(xv), 1 bonus point is available for each quality measure submitted with end-to-end electronic reporting, under certain criteria. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previously established electronic end-to-end reporting bonus point scoring policy is now referenced at § 414.1380(b)(1)(v)(B).

We are proposing to maintain the cap on measure bonus points for reporting high-priority measures for the 2021 MIPS payment year. We also propose to continue to assign bonus points for end-to-end electronic reporting for the 2021 MIPS payment year, as we have seen that this policy encourages electronic reporting. We propose to amend § 414.1380(b)(1)(v)(B) accordingly.

We also are proposing to modify our end-to-end reporting bonus point scoring policy based on the proposed changes to the submission terminology discussed in section III.H.3.h.(1)(b) of this proposed rule. We propose that the end-to-end reporting bonus can only apply to the subset of data submitted by direct, log in and upload, and CMS Web Interface that meet the criteria finalized in the CY 2017 Quality Payment Program final rule (81 FR 77297 through 77298). However, the end-to-end reporting bonus would not be applied to the claims submission type because it does not meet the criteria discussed above. This is not a policy change but rather a clarification of our current process in light of the proposed terminology changes.

As discussed in section III.H.3.i.(1)(b)(x) of this proposed rule, we believe that in the future bonus points for end-to-end reporting for all submission types will no longer be needed as we move towards fully implementing the program, and as a result we intend to consider in future rulemaking modifying our scoring policy to no longer offer end-to-end reporting bonus points after the 2021 MIPS payment year. Consistent with the section 1848(q)(5)(B)(ii) of the Act, which requires the Secretary to encourage the use of CEHRT for quality reporting, we will continue to be committed to ways that we can incentivize and encourage these reporting methods. We invite comment on other ways that we can encourage the use of CEHRT for quality reporting.

²⁹ We get 4.25 points using the following calculation: (3 measure bonus point/60 total measure points) * 85 percent * 100 = 4.25.

(xi) Calculating Total Measure Achievement and Measure Bonus Points
(A) Calculating Total Measure Achievement and Measure Bonus Points for Non-CMS Web Interface Reporters

In the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77300, and 82 FR 53733 through 53736, respectively), we established the policy for calculating total measure achievement and measure bonus points for Non-CMS Web Interface reporters. We refer readers to § 414.1380(b)(1) for more details on these policies.

We are not proposing any changes to the policy for scoring submitted measures collected across multiple

collection types; however, we provide a summary of how this policy will be scored using our new terminology. We note that CMS Web Interface and facility-based measurement each have a comprehensive set of measures that meet the proposed MIPS category requirements. As a result, we did not combine CMS Web Interface measures or facility-based measurement with other ways groups can be scored for data submitted for MIPS (other than CAHPS for MIPS, which can be submitted in conjunction with the CMS Web Interface). We refer readers to section III.H.3.i.(1)(d) of this proposed rule for a description of our policies on facility-based measurement.

Although we have established a policy to account for scoring in circumstances when the same measure is collected via multiple collection types, we anticipate that this will be a rare circumstance and do not encourage clinicians to submit the same measure collected via multiple collection types. Table 48 is included in this proposed rule for illustrative purposes and clarity due to the changes in terminology discussed in section III.H.3.h.(1)(b) of this proposed rule. For further discussion of this example, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53734).

BILLING CODE 4120-01-P

TABLE 48: Example Assigning Total Measure Achievement and Bonus Points for an Individual MIPS Eligible Clinician Who Submits Measures Collected Across Multiple Collection Types

	Measure Achievement Points	Six Scored Measures	High-Priority Measure Bonus Points	Incentive for CEHRT Measure Bonus Points
<i>MIPS CQMs</i>				
Measure A (Outcome)	7.1	7.1 (Outcome measure with highest achievement points)	(required outcome measure does not receive bonus points)	
Measure B	6.2 (points not considered because it is lower than the 8.2 points for the same claims measure)			
Measure C (high priority patient safety measure that meets requirements for additional bonus points)	5.1 (points not considered because it is lower than the 6.0 points for the same claims measure)		1	
<i>Claims</i>				
Measure A (Outcome)	4.1 (points not considered because it is lower than the 7.1 points for the same MIPS CQM)		No bonus points because the MIPS CQM of the same measure satisfies requirement for outcome measure.	
Measure B	8.2	8.2		
Measure C (High priority patient safety measure that meets requirements for additional bonus points)	6.0	6.0	No bonus (Bonus applied to the MIPS CQMs)	
Measure D (outcome measure <50% of data submitted)	1.0		(no high priority bonus points because below data completeness)	
<i>EHR (direct submission using end-to-end)</i>				
Measure E	5.1	5.1		1
Measure F	5.0	5.0		1
Measure G	4.1			1
Measure H	4.2	4.2		1

	Measure Achievement Points	Six Scored Measures	High-Priority Measure Bonus Points	Incentive for CEHRT Measure Bonus Points
Measure I (high priority patient safety measure that is below case minimum)	3.0		(no high priority bonus points because below case minimum)	1
		35.6	1 (below 10% cap ¹)	5 (below 10% cap)
Quality Performance Category Percent Score Prior to Improvement Scoring		$(35.6 + 1 + 5) / 60 = 69.33\%$		

¹ In this example, the cap would be 6 points, which is 10 percent of the total available measure achievement points of 60.

BILLING CODE 4120-01-C

We do not propose any changes to our policy regarding scoring measure achievement points and bonus points when using multiple collection types for non-Web Interface MIPS eligible clinicians in the quality performance category for the 2019 MIPS performance period.

(B) Calculating Total Measure Achievement and Measure Bonus Points for CMS Web Interface Reporters

In the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77302 through 77306, and 82 FR 53736 through 53737, respectively), we finalized the scoring policies for CMS Web Interface reporters. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previously established policies for CMS Web Interface reporters are now referenced at § 414.1380(b)(1)(i)(A)(2)(i) and (b)(1)(v)(A).

(xii) Future Approaches to Scoring the Quality Performance Category

As we discuss in section III.H.3.h.(2)(b)(iv) of this proposed rule, we anticipate making changes to the quality performance category to reduce burden and increase the value of the measures we are collecting. We discussed that existing measures have differing levels of value and our approaches for implementing a system where points are awarded based on the value of the measure. Should we adopt these approaches, we anticipate needing to modify our scoring approaches accordingly. In addition, we have received stakeholder feedback asking us to simplify scoring for the quality performance category. Therefore, we are seeking comment on the following approaches to scoring that we may

consider in future rulemaking and whether these approaches move the clinicians towards reporting high value measures and more accurate performance measurement.

One option for simplification is restructuring the quality requirements with a pre-determined denominator, for example, 50 points, but no specific requirements regarding the number of measures that must be submitted. Further, we would categorize MIPS and QCDR measures by value, because we recognize that not all measures are created equal. We seek to ensure that the collection and submission of data is valuable to clinicians and worth the cost and burden of collection of information. A system to classify measures as a particular value (for example, gold, silver, or bronze) is discussed in section III.H.3.h.(2)(b)(iv) of this proposed rule. In this approach, the highest tier would include measures that are considered “gold” standard, such as outcome measures, composite measure, or measures that address agency priorities (such as opioids). The CAHPS for MIPS survey, which collects patient experience data, may also be considered a high-value measure. Measures considered in the second tier, or at a “silver” standard, would be process measures that are directly related to outcomes and have a good gap in performance (there is no high, unwavering performance) and demonstrate room for improvement, or topped out outcome measures. Lower value measures, such as standard of care process measures or topped out process measures, would have scoring caps in place that would reflect the measure’s status as a “bronze measure.” In this scenario, we could envision awarding points for achievement as follows: up to 15 to 20 points in the top tier; up to 10 points in the next tier; and up to 5

points in the lowest tier. Similar to the structure of the improvement activities performance category, a clinician that chooses a top-tier measure would not have to submit as many measures to MIPS. We would still want to ensure the submission of high value measures and might include requirements that restrict the number of lower tier measures that could be submitted; alternatively, we could add a requirement that a certain number of higher tier measures would need to be submitted. With this approach, we could still incentivize reporting on high-priority measures by classifying them as “gold” standard measures which would be eligible for up to 15 to 20 achievement points.

Alternatively, we could keep our current approach for the quality performance category requiring 6 measures including one outcome measure, with every measure worth up to 10 measure achievement points in the denominator, but change the minimum number of measure achievement points available to vary by the measure tier. For example, high-tier measures could qualify for high priority bonus and/or have a higher potential floor (for example, 5 measure achievement points instead of the floor of 3 measure achievement points for “gold” standard measures, which would be eligible for up to 10 measure achievement points.); whereas low-tier measures could have a lower floor (for example, 1 measure achievement point instead of the floor of 3 measure achievement points for “bronze standard” measures).

Taking into consideration the potential future quality performance category change, we also believe that removing the validation process to determine whether the eligible clinician has measures that are available and applicable would simplify the quality performance category significantly.

Several stakeholders expressed their confusion with the validation process. A move to sets of measures in the quality performance category, potentially with some criteria to define the clinicians for whom these measures are applicable, would eliminate the need for a validation process for measures that are available and applicable. Moving to sets of measures would also enable us to develop more robust benchmarks. We also believe that in the next few years, we could remove the validation process for measures that are available and applicable if we set the denominator at a pre-determined level (as outlined in the example above at 50 points) and let clinicians determine the best method to achieve 50 points.

For the 2019 and 2020 MIPS payment years, MIPS eligible clinicians and groups who report on QCDR measures that do not have an available benchmark based on the baseline or performance period but meet data completeness are assigned a score of 3 measure achievement points (small practices receive 3 points regardless of whether they meet data completeness). Through stakeholder engagement, particularly feedback provided by QCDRs who have developed their own measures, we have heard that MIPS eligible clinicians are hesitant to report QCDR measures without established benchmarks. Eligible clinicians have voiced concern on reporting on QCDR measures without benchmarks because they are not certain that a benchmark could be calculated and established for the MIPS performance period, and they would therefore be limited to a 3-point score for that QCDR measure. In addition, QCDRs have inquired about the possibility of creating QCDR benchmarks. To encourage reporting of QCDR measures, we seek comment on an approach to develop QCDR measure benchmarks based off historical measure data. This may require QCDRs to submit historical data in a form and manner that meets benchmarking needs as required by CMS. We anticipate that the historical QCDR measure data would need to be submitted at the time of self-nomination of the QCDR measure, during the self-nomination period. Detailed discussion of the self-nomination period timeline and requirements can be found in section III.H.3.k of this proposed rule. Our concern with utilizing historical data provided by QCDRs to develop benchmarks is whether QCDRs have the capability to filter through their historical measure data to extract only data from MIPS eligible clinicians and groups prior to submitting the historical

data to CMS for QCDR measure benchmarking consideration. Furthermore, once the historical data is submitted by the QCDR, CMS would analyze the data to ensure that it met benchmarking standards prior to it being accepted to form a benchmark. However, to perform this analysis CMS may need additional data elements such as the sources of the data, data completeness, and the collection period. In addition to seeking comment on developing QCDR measure benchmarks from historical data, we also seek comment as to how our aforementioned concerns may be addressed for future rulemaking.

We also recognize that improving the electronic capture, calculation, and reporting of quality measures is also an important component of reducing provider burden. We invite comment on how we can incorporate incentives for the use of electronic clinical quality measurement into the future approaches described under this section, as well as other ways to encourage more efficient technology-enabled measurement approaches.

We seek comment on these approaches and other approaches to simplify scoring, provide incentives to submit more impactful measures that assess outcomes rather than processes, and develop data that can show differences in performance and determine clinicians that provide high value care.

(xiii) Improvement Scoring for the MIPS Quality Performance Category Percent Score

Section 1848(q)(5)(D)(i) of the Act stipulates that, beginning with the second year to which the MIPS applies, if data sufficient to measure improvement is available, the improvement of the quality performance category score for eligible clinicians should be measured. To measure improvement we require a direct comparison of data from one Quality Payment Program year to another (82 FR 52740). For more descriptions of our current policies, we refer readers to the CY 2018 Quality Payment Program proposed and final rule (82 FR 53737 to 53747). As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previously established improvement scoring policies are now referenced at § 414.1380(b)(1)(vi).

In the CY 2018 Quality Payment Program final rule, we adopted a policy that MIPS eligible clinicians must fully participate to receive a quality performance category improvement

percent score greater than zero (82 FR 53743 through 53745). In § 414.1380(b)(1)(vi)(F), we determined “participation” to mean compliance with § 414.1330 and § 414.1340 in the current performance period. We issued a technical correction for the CY 2018 Quality Payment Year final rule, replacing § 414.1330 with § 414.1335 since § 414.1335 is more specific because it discusses the quality performance category requirements.

We finalized at § 414.1380(b)(1)(vi)(C)(4) that we would compare the 2018 performance to an assumed 2017 quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year (82 FR 53744 through 53745). We propose to continue this policy for the 2019 MIPS performance period and amend § 414.1380(b)(1)(vi)(C)(4), accordingly. We propose to compare the 2019 performance to an assumed 2018 quality performance category achievement percent score of 30 percent.

(xiv) Calculating the Quality Performance Category Percent Score Including Achievement and Improvement Points

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77300 and 82 FR 53747 through 53748, respectively), we finalized the policies on incorporating the improvement percent score into the quality performance category percent score. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.H.3.i.(1)(b) of this proposed rule, our previously established policies are now referenced at § 414.1380(b)(1)(vii).

(c) Scoring the Cost Performance Category

(i) Scoring Achievement in the Cost Performance Category

For a description of the statutory basis and our existing policies for scoring achievement in the cost performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311) and the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53749). In the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309), we established that we will determine cost measure benchmarks based on cost measure performance during the performance period. We also established that at least 20 MIPS eligible clinicians or groups must meet the minimum case volume that we specify

for a cost measure in order for a benchmark to be determined for the measure, and that if a benchmark is not determined for a cost measure, the measure will not be scored. We propose to codify these final policies at § 414.1380(b)(2)(i).

(ii) Scoring Improvement in the Cost Performance Category

For a description of the statutory basis and our existing policies for scoring improvement in the cost performance category, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53749 through 53752). Section 51003(a)(1)(B) of the Bipartisan Budget Act of 2018 modified section 1848(q)(5)(D) of the Act such that the cost performance category score shall not take into account the improvement of the MIPS eligible clinician for each of the second, third, fourth, and fifth years for which the MIPS applies to payments. We do not believe this change requires us to remove our existing methodology for scoring improvement in the cost performance category (see 82 FR 53749 through 53752), but it does prohibit us from including an improvement component in the cost performance category percent score for each of the 2020 through 2023 MIPS payment years. Therefore, we propose to revise § 414.1380(b)(2)(iv)(E) to provide that the maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points. Under our existing policy (82 FR 53751 through 53752), the maximum cost improvement score for the 2020 MIPS payment year is 1 percentage point, but due to the statutory changes and under our proposal, the maximum cost improvement score for the 2020 MIPS payment year would be zero percentage points. We are also proposing at § 414.1380(a)(1)(ii) to modify the performance standards to reflect that the cost performance category percent score will not take into account improvement until the 2024 MIPS payment year.

(d) Facility-Based Measures Scoring Option for the 2021 MIPS Payment Year for the Quality and Cost Performance Categories

(i) Background

In the CY 2018 Quality Payment Program final rule, we established a facility-based measurement scoring option for clinicians that meet certain criteria beginning with the 2019 MIPS performance period/2021 MIPS payment year (82 FR 53752 through 53767). We originally proposed a facility-based measurement scoring

option for the 2018 MIPS performance period. We did not finalize the policy because we were concerned that we would not have the operational ability to inform clinicians early enough in the 2018 MIPS performance period to allow them to consider the consequences and benefits of participation (82 FR 53755).

(ii) Facility-Based Measurement Applicability

(A) General

In the CY 2018 Quality Payment Program final rule, we limited facility-based reporting to the inpatient hospital in the first year for several reasons, including that a more diverse group of clinicians (and specialty types) provide services in an inpatient setting than in other settings, and that the Hospital Value-Based Purchasing (VBP) Program adjusts payment to hospitals in connection with both increases and decreases in performance (82 FR 53753 through 53755). We also limited measures applicable for facility-based measurement to those used in the Hospital VBP Program because the Hospital VBP Program compares hospitals on a series of different measures intended to capture the breadth of inpatient care in the facility (82 FR 53753). We noted that we were open to the consideration of additional facility types in the future but recognized that adding a facility type would be dependent upon the status of the VBP program applicable to that facility, the applicability of measures, and the ability to appropriately attribute a clinician to a facility (82 FR 53754). We do not propose to add additional facility types for facility-based measurement in this proposed rule, but we are interested in potentially expanding to other settings in future rulemaking. Therefore, in section III.H.3.i.(1)(d)(vii), we outline several issues that would need to be resolved in order to expand this option to a wider group of facility-based clinicians.

(B) Facility-Based Measurement by Individual Clinicians

In the CY 2018 Quality Payment Program final rule, we established individual eligibility criteria for facility-based measurement at § 414.1380(e)(2)(i). We established that a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital or emergency room based on claims for a period prior to the performance period as specified by CMS (82 FR 53756 through 53757) is eligible

as an individual for facility-based measurement. We had noted, as a part of our proposal summary, that we would use the definition of professional services in section 1848(k)(3)(A) of the Act in applying this standard (82 FR 53756). For purposes of determining eligibility for facility-based measurement, we discussed CMS using data from the period between September 1 of the calendar year, 2 years preceding the MIPS performance period, through August 31 of the calendar year preceding the MIPS performance period, with a 30-day claims run out but did not finalize that as part of the applicable regulation (82 FR 53756 through 53757). Because we are using the quality measures associated with the inpatient hospital to determine the MIPS quality and cost performance category score, we wanted to ensure that eligible clinicians contributed to care in that setting during that time period.

We indicated that CMS will use POS code 21 (inpatient) and POS code 23 (emergency department) for this purpose (82 FR 53756). Commenters on our proposal (as summarized in the CY 2018 Quality Payment Program final rule (82 FR 53756 through 53757)) expressed concern that adopting the definition that we did for facility-based clinicians would limit the number of clinicians who would be eligible. In particular, commenters were concerned about the omission of the on-campus outpatient hospital POS code (POS code 22) for observation services, which are similar to and often take place in the same physical location as inpatient services. In the CY 2018 Quality Payment Program final rule, we sought comment on ways to identify clinicians who have a significant presence within the inpatient setting, and how to address concerns about including POS code 22 in this definition (82 FR 53757). A few commenters that responded again suggested that CMS add POS code 22. In addition, a few commenters suggested that several other POS can be included, including ambulatory surgical centers, IRFs, and SNFs.

We are proposing to modify our determination of a facility-based individual at § 414.1380(e)(2)(i) in four ways. First, we propose to add on-campus outpatient hospital (as identified in the POS code in the HIPAA standard transaction, that is, POS code 22) to the settings that determine whether a clinician is facility-based. Second, we propose that a clinician must have at least a single service billed with the POS code used for the inpatient hospital or emergency room. Third, we propose that, if we are unable to identify a facility with a VBP score

to attribute a clinician's performance, that clinician is not eligible for facility-based measurement. Fourth, we propose to align the time period for determining eligibility for facility-based measurement with changes to the dates used to determine MIPS eligibility and special status detailed in section III.H.3.b. of this rule. We explain these four proposals below. We believe that these proposals will further expand the opportunity for facility-based measurement and eliminate issues associated with the provision of observation services while still restricting eligibility to those who work in an inpatient setting.

First, we propose to add the on-campus outpatient hospital (POS code 22) to the list of sites of service used to determine eligibility for facility-based measurement. We agree with commenters that limiting the eligibility to our current definition may prevent some clinicians who are largely hospital-based from being eligible. However, expanding eligibility without taking into account the relationship between the clinician and the facility and facility's performance could result in unfairly attributing to a clinician performance for which the clinician is not responsible or has little to no role in improving. We do believe that a significant provision of services in the on-campus outpatient hospital are reflected in the quality captured by the Hospital VBP Program. For example, patients in observation status are typically treated by the same staff and clinicians as those who meet the requirements for inpatient status. While there are some clinical differences that may result in a patient having observation status, we believe that the quality of care provided to these patients in this same setting would be comparable, reflecting the overall healthcare system at that particular location. Therefore, we are convinced that a sufficient nexus exists for attributing the hospital's VBP performance to clinicians that provide services in on-campus outpatient hospital settings.

Second, we propose to require that clinicians bill at least a single service with the POS codes for inpatient hospital or the emergency room in order to be eligible for facility-based measurement. While we generally believe that clinicians who provide services in the outpatient hospital can affect the quality of care for inpatients, we believe that a clinician who is to be measured according to the performance of a hospital should at least have a minimal presence in the inpatient or emergency room setting. We remain

concerned about including clinicians who provide at least 75 percent of their services at on-campus outpatient hospitals (with POS code 22) when such clinicians exclusively provide outpatient services that are unrelated to inpatient hospital service. For example, a dermatologist who provides office-based services in a hospital-owned clinic but who never admits or treats patient within the inpatient or emergency room setting does not meaningfully contribute to the quality of care for patients measured under the Hospital VBP Program.

We considered different ways to best identify those who contribute to the quality of care in the inpatient setting while keeping the facility-based scoring option as simple as possible. We considered separately measuring the HCPCS codes for observation services, but believe that such a measurement may not fairly consider services provided by clinicians for whom observations services may be embedded in a global code for a procedure rather than billed as a separate observation service. We also considered requiring a clinician to provide a certain percentage of services with the inpatient hospital POS. However, we have not identified a threshold (other than the one claim threshold we proposed here) that would more meaningfully differentiate clinicians who provide services with the outpatient hospital POS code but do not contribute to the services that would be measured under the Hospital VBP Program. We believe it is important to ensure that the program rules are clear and easily applied to clinicians, so as to both avoid confusion on program participation requirements and to meet overall agency goals to increase transparency in the agency's activities. We believe that using a single service as the threshold provides a simple, bright-line to differentiate those who never provide inpatient services from clinicians that do provide inpatient services, as well as outpatient services. We also believe this will limit the opportunity for clinicians who exclusively practice in the outpatient setting to be measured on the VBP performance of an unrelated hospital. We recognize this requirement of one service with the inpatient or emergency department POS may not demonstrate a significant presence in a particular facility, and we seek comment on whether a better threshold could be used to identify those who are contributing to the quality of care for patients in the inpatient setting without creating barriers to eligibility for facility-based measurement.

Our rationale and reasoning for these first two proposals is based in large part on our analysis of the previously finalized policy for eligibility for the facility-based measurement scoring option. Using claims data, we identified all clinicians that would be MIPS eligible as either an individual or group, and identified the POS codes submitted for physician fee schedule services provided by those clinicians. We then modeled the existing final policy based on inpatient and ER services. We determined that while almost all ER physicians would be scored under facility-based measurement, a relatively small percentage of clinicians in other specialties, even those which we would expect to have significant presence in the hospital, would be eligible for the facility-based measurement scoring option. For example, only 13.45 percent of anesthesiologists would be eligible for the facility-based measurement scoring option under our existing policy. Adding the on-campus outpatient hospital POS code substantially increases eligibility for the facility-based measurement scoring option, even after we adjust for requiring one service with the inpatient or emergency department POS. By adopting our newly proposed policy, 72.55 percent of anesthesiologists would be eligible. However, this proposed new policy would not substantially increase the number of clinicians eligible for the facility-based measurement scoring option who, based on specialty identification, may not have a significant presence in the hospital. For example, our newly proposed policy would increase the percentage of family physicians eligible for the facility-based measurement scoring option from 11.34 percent to 13.86 percent, which is still a very small percentage of those clinicians.

Our third proposal is to add a new criterion (To be codified at § 414.1380(e)(2)(i)(C)): To be eligible for facility-based measurement, we must be able to attribute a clinician to a particular facility that has a VBP score. For facility-based measurement to be applicable, we must be able to attribute a clinician to a facility with a VBP score. Based on our definition of facility-based measurement, this means a clinician must be associated with a hospital with a Hospital VBP Program Total Performance Score. We are concerned that our proposed expansion of eligibility for facility-based measurement could increase the number of clinicians who are eligible for facility-based measurement but whom we are unable to attribute to a particular facility

that has a VBP score. In the CY 2018 Quality Payment Program final rule, we noted that some hospitals do not have a Hospital VBP Program Total Performance Score that could be used to determine a MIPS quality and cost performance category score, such as hospitals in the state of Maryland (82 FR 53766). Hence, clinicians associated with those hospitals would not be able to use facility-based measurement but could report quality measures through another method and have cost measures calculated if applicable. We believe a similar result should apply if we cannot attribute a clinician identified as facility-based to a specific facility. We believe that such a situation would be relatively rare. Those clinicians who are identified as facility-based but for whom we are unable to attribute to a hospital must participate in MIPS quality reporting through another method, or they will receive a score of zero in the quality performance category. We therefore propose to add the requirement to § 414.1380(e)(2)(i) that a clinician must be able to be attributed to a particular facility with a VBP score under the methodology specified in § 414.1380(e)(5) to meet eligibility for facility-based measurement. The cross-reference to paragraph (e)(5) is to the methodology for determining the applicable facility score that would be used. Our proposed new regulatory text at § 414.1380(e)(2)(i)(C) addresses both attribution to a facility and the need for that facility to have a VBP score by conditioning eligibility for facility-based scoring for an individual clinician on the clinician being attributed under the methodology in paragraph (e)(5) to a facility with a VBP score.

Fourth, we propose to change the dates of determining eligibility for facility-based measurement. In section III.M.3.b. of this rule, we propose to modify the dates of the MIPS determination period that would provide eligibility determination for small practice size, non-patient facing, low-volume threshold, ASC, hospital-based, and facility-based determination periods. To align this regulation with these other determination periods, we propose that CMS will use data from the initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period with a 30-day claims run out in determining eligibility for facility-based measurement.

(C) Facility-Based Measurement by Group

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1380(e)(2)(ii) that a MIPS eligible clinician is eligible for facility-based measurement under MIPS if they are determined to be facility-based as part of a group (82 FR 53757). We established at § 414.1380(e)(2)(ii) that a facility-based group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements at § 414.1380(e)(2)(i) (82 FR 53758). We do not propose any changes to the determination of a facility-based group but acknowledge that our proposal to change how individual clinicians are determined to be eligible for facility-based measurement will necessarily have a practical impact for practice groups. For more of the statutory background and descriptions of our current policies on determining a facility-based group, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53757 through 53758).

(iii) Facility Attribution for Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we finalized at § 414.1380(e)(5) a method to identify the hospital whose scores would be associated with a MIPS eligible clinician or group that elects facility-based measurement scoring (82 FR 53759). Although we did not specifically address the issue of how facility-based groups would be assigned to a facility (for purposes of attributing facility performance to the group) in the preamble of the CY 2018 Quality Payment Program proposed rule, our proposed regulation at § 414.380(e)(5) did apply the same standard to individuals and groups. We believe that this provided sufficient notice of the policy; nevertheless, we indicated we would address this issue as part of the next Quality Payment Program rulemaking cycle (82 FR 53759). Therefore, we are revisiting facility-based attribution for individuals and groups in this proposed rule.

Under the current regulation text § 414.1380(e)(5), a facility-based clinician or group receives a score under the facility-based measurement scoring standard derived from the VBP score for the facility at which the clinician or group provided services to the most Medicare beneficiaries during the year claims are drawn (that is, the 12-month period described in paragraph (e)(2)). If an equal number of Medicare beneficiaries are treated at more than

one facility, then we will use the VBP score for the highest-scoring facility (82 FR 53759 through 53760). For more of the statutory background and descriptions of our current policies for attributing a facility to a MIPS eligible clinician, we refer readers to the CY 2018 Quality Payment Program final (82 FR 53759 through 53760).

In considering the issue of facility attribution for a facility-based group, we believe that a change to facility-based attribution is appropriate to better align the policy with the determination of a facility-based group at § 414.1380(e)(2)(ii). A facility-based group is one in which 75 percent or more of the eligible clinician NPIs billing under the group's TIN are eligible for facility-based measurement as individuals. Additionally, under the current regulation, the VBP score for the highest scoring facility would be used in the case of a tie among the number of facilities at which the group provided services to Medicare beneficiaries. We propose to revise § 414.1380(e)(5) to differentiate how a facility-based clinician or group receives a score based on whether they participate as a clinician or a group.

We propose to remove "or group" from § 414.1380(e)(5) and redesignate that paragraph as (e)(5)(i) so that it only applies to individual MIPS eligible clinicians. Under our proposal, newly redesignated paragraph (e)(5)(i) retains the rule for facility attribution for an individual MIPS eligible clinician as finalized in the CY 2018 Quality Payment Program final rule; we are also proposing a few minor edits to the paragraph for grammar and to improve the sentence flow. We also propose to add a new paragraph (e)(5)(ii) to provide that a facility-based group receives a score under the facility-based measurement scoring standard derived from the VBP score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under the methodology described in § 414.1380(e)(5)(i) if the clinicians had been scored under facility-based measurement as individuals. We make this proposal because we wish to emphasize the connection between an individual clinician and a facility. We believe that using the plurality of clinicians reinforces the connection between an individual clinician and facility and is more easily understandable for larger groups.

(iv) No Election of Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we did not finalize

our proposal for how individual MIPS eligible clinicians or groups who wish to have their quality and cost performance category scores determined based on a facility's performance would elect to do so through an attestation (82 FR 53760). We did finalize, and reflect in the introductory text at § 414.1380(e), that an individual clinician or group would elect to use a facility-based score. The proposal had specified that such clinicians or groups would be required to submit their election during the data submission period through the attestation submission mechanism established for the improvement activities and the Promoting Interoperability performance categories (82 FR 53760). An alternative approach, which likewise was not finalized, did not require an election process, but instead would have automatically applied a facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement, if such an application were technically feasible (82 FR 53760). We noted in the CY 2018 Quality Payment Program final rule that we would examine both the attestation process we proposed and the alternative opt-out process, and work with stakeholders to identify a new proposal in future rulemaking (82 FR 53760). We indicated our interest in a process that would impose less burden on clinicians than an attestation requirement.

In the CY 2018 Quality Payment Program final rule, we requested further comment on the propriety of automatically assigning a clinician or group a score under facility-based measurement, but where CMS would notify and give the clinician the opportunity to opt-out of facility-based measurement (82 FR 53760). We subsequently received comments both in favor of and opposed to an opt-out approach. A few commenters supported the opt-out approach because it would reduce administrative burden on behalf of the clinician. A few commenters expressed concern that an opt-out process could result in clinicians unintentionally being measured on the basis of a facility. A few commenters expressed concern that an automatic assignment of a score would provide an unfair advantage for facility-based clinicians.

After further considering the advantages and disadvantages of an opt-in or an opt-out process, we are proposing a modified policy that does not require an election process. Instead, we propose to automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement

and who would benefit by having a higher combined quality and cost performance category score. That is, if the MIPS eligible clinician or group is eligible for facility-based measurement, we would calculate a combined quality and cost performance category score. We propose to use the facility-based score to determine the MIPS quality and cost performance category scores, unless we receive another submission of quality data for or on behalf of that clinician or group and the combined quality and cost performance category score for the other submission results in a higher combined quality and cost performance score. If the other submission has a higher combined quality and cost performance score, then we would not apply the facility-based performance scores for either the quality or cost performance categories. Under our proposal, the combined score for the quality and cost performance categories would determine the scores to be used for both the quality and cost performance categories, for both individual clinicians and for groups that meet the requirements of paragraph (e)(2). We do not propose to adopt a formal opt-out process because, under our proposal, the higher of the quality and cost performance scores available or possible for the clinician or clinician group would be used, which would only benefit the clinician or group. We have a strong commitment to reducing burden as part of the Quality Payment Program, and we believe that requiring a clinician or group to elect a measurement process (or to opt-out of a measurement process) based on facility performance would add unnecessary burden.

In MIPS, we score clinicians as individuals unless they submit data as a group. We believe that same policy should apply to facility-based measurement, even though there are no submission requirements for the quality performance category for individuals under facility-based measurement. Therefore, we propose to revise § 414.1380(e)(4) to state that there are no submission requirements for individual clinicians in facility-based measurement but a group must submit data in the improvement activities or Promoting Interoperability performance categories in order to be measured as a group under facility-based measurement. If a group does not submit improvement activities or Promoting Interoperability measures, then we would apply facility-based measurement to the individual clinicians and such clinicians would not be scored as a group. In the case of virtual groups, MIPS eligible clinicians

would have formed virtual groups prior to the MIPS performance period; as a result, virtual groups eligible for facility-based measurement would always be measured as a virtual group. While we could calculate a score for a TIN without the submission of data by the TIN, we would be uncertain if the clinicians within that group wished to be measured as a group without an active submission (in other words, if the group did not submit data as a group). Submission of data on the improvement activities or Promoting Interoperability measures indicates an intent and desire to be scored as a group. Hence, we believe that using the choice to submit data as a group to identify a group in the context of facility-based scoring will preserve choices made by clinicians and groups while avoiding the burden of an election process to be scored as a group solely for the purpose of facility-based scoring. We solicit comment specifically on this proposal and other means to achieve the same ends.

In the CY 2018 Quality Payment Program final rule, we established that if a clinician or group elects facility-based measurement but also submits MIPS quality data, then the clinician or group would be measured on the method that results in the higher quality score (82 FR 53767). We propose to adopt this same scoring principle in conjunction with our proposal not to use (or require) an election process. Therefore, we propose at § 414.1380(e)(6)(vi) that the MIPS quality and cost score for clinicians and groups eligible for facility-based measurement will be based on the facility-based measurement scoring methodology described in § 414.1380(e)(6) unless the clinician or group receives a higher combined score for the MIPS quality and cost performance categories through data submitted to CMS for MIPS. Because § 414.1380(d) states that MIPS eligible clinicians in MIPS APMs are scored under the MIPS APM scoring standard described at § 414.1370, those clinicians would not be scored using facility-based measurement.

We also propose conforming changes in two other sections of regulatory text. We propose to revise the introductory text at § 414.1380(e) to remove "elect to," and therefore, reflect that clinicians and groups who are determined to be facility-based will receive MIPS quality and cost performance categories under the methodology in paragraph (e). We note that because we do not require clinicians to opt-in into facility-based measurement, there may be clinicians that will continue to submit data via other methods. Hence, these clinicians

and groups are not prohibited from submitting quality measures to CMS for purposes of MIPS; if higher combined quality and cost scores are achieved using data submitted to CMS for purposes of MIPS, then we will use that result. We also propose to revise § 414.1380(e)(4) and (e)(6)(v)(A) to reflect that facility-based measurement does not require election and to replace the phrase “clinicians that elect facility-based measurement” with “clinicians and groups scored under facility-based measurement.”

(v) Facility-Based Measures

(A) Background

Section 1848(q)(2)(C)(ii) of the Act provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories. However, the Secretary may not use measures for hospital outpatient departments, except in the case of items and services furnished by emergency physicians, radiologists, and anesthesiologists. In the CY 2018 Quality Payment Program proposed rule, we proposed to include for the 2020 MIPS payment year all the measures adopted for the FY 2019 Hospital VBP Program on the MIPS list of quality measures and cost measures for purposes of facility based measurement (82 FR 30125). We noted how these measures meet the definition of additional system-based measures provided in section 1848(q)(2)(C)(ii) of the Act (82 FR 30125). In the CY 2018 Quality Payment Program final rule, we did not finalize our proposal that the facility-based measures available for the 2018 MIPS performance period would be the measures adopted for the FY 2019 Hospital VBP Program; nor did we finalize our proposal that, for the 2020 MIPS payment year, facility-based individual MIPS eligible clinicians or groups that were attributed to a facility would be scored on all measures on which the facility is scored via the Hospital VBP Program’s Total Performance Score methodology (82 FR 53762).

We did finalize a facility-based measurement scoring standard but not the specific instance of using the FY 2019 Hospital VBP Program Total Performance Score methodology (82 FR 53755). We expressed our belief that the policy approach of using all measures from the Hospital VBP program is appropriate; nevertheless, because we did not finalize the facility-based measurement scoring option for the 2018 MIPS performance period/2021

MIPS payment year, it was not appropriate to adopt these policies at that time (82 FR 53762 through 53763). We noted that we intended to propose measures that would be available for facility-based measurement for the 2019 MIPS performance period/2021 MIPS payment year in future rulemaking (82 FR 53763).

For a detailed description of the policies proposed and finalized, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53761 through 53763).

(B) Measures in Facility-Based Scoring

We continue to believe it is appropriate to adopt all the measures for the Hospital VBP Program into MIPS for purposes of facility-based scoring; these Hospital VBP Program measures meet the definition of additional system-based measures provided in section 1848(q)(2)(C)(ii) of the Act. We also believe it is appropriate to adopt the performance periods for the measures, which generally are consistent with the dates that we use to determine eligibility for facility-based measurement.

Therefore, beginning with the 2019 MIPS performance period, we propose at § 414.1380(e)(1)(i) to adopt for facility-based measurement, the measure set that we finalize for the fiscal year Hospital VBP program for which payment begins during the applicable MIPS performance period. For example, for the 2019 MIPS performance period, which runs on the 2019 calendar year, we propose to adopt the FY 2020 Hospital VBP Program measure set, for which payment begins on October 1, 2019. The performance period for these measures varies but performance ends in 2018 for all measures.

We also propose at § 414.1380(e)(1)(ii) that, starting with the 2021 MIPS payment year, the scoring methodology applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program, for the fiscal year for which payment begins during the applicable MIPS performance period. Therefore, for the 2021 MIPS payment year, the Total Performance Score methodology for 2019 would apply for facility-based scoring. We note that this approach of adopting all the measures in the Hospital VBP program can be applied to other VBP programs in the future, should we decide to expand facility-based measurement to settings other than hospitals in the future.

In the CY 2018 Quality Payment Program final rule we also established at

§ 414.1380(e)(6)(i) that the available quality and cost measures for facility-based measurement are those adopted under the VBP program of the facility for the year specified. We established at § 414.1380(e)(6)(ii) that we will use the benchmarks adopted under the VBP program of the facility program for the year specified (82 FR 53763 through 53764). We noted that we would determine the particular VBP program to be used for facility-based measurement in future rulemaking but would routinely use the benchmarks associated with that program (82 FR 53764). Likewise, at § 414.1380(e)(6)(iii), we established that the performance period for facility-based measurement is the performance period for the measures adopted under the VBP program of the facility program for the year specified (82 FR 53755). We noted that these provisions referred to the general parameters of our method of facility-based measurement and that we would address specific programs and years in future rulemaking (82 FR 53763). We now propose regulation for these three provisions to specify that the measures, performance period, and benchmark period for facility-based measurement are the measures, performance period, and benchmark period established for the VBP program used to determine the score as described in § 414.1380(e)(1). As an example, for the 2019 MIPS performance period and 2021 MIPS payment year, the measures used would be those for the FY 2019 Hospital VBP program along with the associated benchmarks and performance periods.

(C) Measures for MIPS 2019 Performance Period/2021 MIPS Payment Year

For informational purposes, we are providing a list of measures included in the FY 2020 Hospital VBP Program measures in determining the quality and cost performance category scores for the 2019 MIPS performance period/2021 MIPS payment year. The FY 2020 Hospital VBP Program has adopted 12 measures covering 4 domains (83 FR 20412 through 13). The performance period for measures in the Hospital VBP Program varies depending on the measure, and some measures include multi-year performance periods. We include the FY 2020 Hospital VBP Program measures in Table 49. We note that these measures are determined through separate rulemaking (82 FR 38244). As noted in section III.H.3.i.(1)(d)(v) of this proposed rule, we would adopt these measures, benchmarks, and performance periods for the purposes of facility-based measurement.

TABLE 49—FY 2020 HOSPITAL VBP PROGRAM MEASURES

Short name	Domain/measure name	NQF No.	Performance period
Person and Community Engagement Domain			
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) (including Care Transition Measure).	0166 (0228)	January 1, 2018–December 31, 2018.
Clinical Outcomes Domain *			
MORT–30–AMI	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (AMI) Hospitalization.	0230	July 1, 2015–June 30, 2018.
MORT–30–HF	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Heart Failure (HF) Hospitalization.	0229	July 1, 2015–June 30, 2018.
MORT–30–PN	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Pneumonia Hospitalization.	0468	July 1, 2015–June 30, 2018.
THA/TKA	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA).	1550	July 1, 2015–June 30, 2018.
Safety Domain **			
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	0138	January 1, 2018–December 31, 2018.
CLABSI	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure.	0139	January 1, 2018–December 31, 2018.
Colon and Abdominal Hysterectomy SSI.	American College of Surgeons—Centers for Disease Control and Prevention (ACS–CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753	January 1, 2018–December 31, 2018.
MRSA Bacteremia	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure.	1716	January 1, 2018–December 31, 2018.
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure.	1717	January 1, 2018–December 31, 2018.
PC–01	Elective Delivery	0469	January 1, 2018–December 31, 2018.
Efficiency and Cost Reduction Domain			
MSPB	Payment-Standardized Medicare Spending Per Beneficiary (MSPB).	2158	January 1, 2018–December 31, 2018.

(vi) Scoring Facility-Based Measurement

(A) Scoring Achievement in Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we adopted certain scoring policies for clinicians and groups in facility-based measurement. We established at § 414.1380(e)(6)(iv) and (v) that the quality and cost performance category percent scores would be established by determining the percentile performance of the facility in the VBP purchasing program for the specified year, then awarding scores associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not scored using facility-based measurement for the MIPS payment year (82 FR 53764). We also finalized at § 414.1380(e)(6)(v)(A) that clinicians scored under facility-based

measurement would not be scored on other cost measures (82 FR 53767).

For detailed descriptions of the current policies related to scoring achievement in facility-based measurement, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53763). Because we propose in section III.H.3.i.(1)(d)(iv) of this rule to not require or allow an opt-in process for facility-based measurement, we propose a change to the determination of the quality and cost performance category scores. We propose that the quality and cost performance category percent scores would be established by determining the percentile performance of the facility in the Hospital VBP Program for the specified year, then awarding a score associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not eligible to be scored under facility-based

measurement for the MIPS payment year. This proposed change allows for the determination of percentile performance independent of those clinicians who would not have their quality or cost scores determined until we made the determination of their status under facility-based measurement.

(B) Scoring Improvement in Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we finalized that we would not give a clinician or group participating in facility-based measurement the opportunity to earn improvement points based on prior performance in the MIPS quality and cost performance categories; we noted that the Hospital VBP Program already takes improvement into account in determining the score (82 FR 53764 through 53765). We propose to add this

previously finalized policy to regulatory text at § 414.1380(e)(6)(iv) and (v).

However, we did not address a policy for a clinician or group who participates in facility-based measurement for one performance period, and then does not participate in facility-based measurement in a subsequent performance period (for example, a clinician who is scored using facility-based measurement in the 2019 MIPS performance period and is not eligible for facility-based measurement in the 2020 MIPS performance period).

After further considering the issue, we do not believe it is possible to assess improvement in the quality performance category for those who are measured under facility-based measurement in 1 year and then through another method in the following year. Our method of assessing and rewarding improvement in the MIPS quality performance category separates points awarded for measure performance from those received for bonus points (82 FR 53745). Our method of determining the quality performance category score using facility-based measurement does not allow for the separation of achievement from bonus points. For this reason, we propose at § 414.1380(b)(1)(xi)(A)(4) to not assess improvement for MIPS-eligible clinicians who are scored in MIPS through facility-based measurement in 1 year but through another method in the following year.

(vii) Expansion of Facility-Based Measurement To Use in Other Settings

We initiated the process of facility-based measurement focusing on the inpatient hospital setting but noted that we wished to consider opportunities to expand the concept into other facilities and programs and future years (82 FR 53754). We are particularly interested in the opportunity to expand facility-based measurement into post-acute care (PAC) and the end-stage renal disease (ESRD) settings and seek comment on how we may do so.

PAC is a significant sector in the spectrum of healthcare services, providing services to over 6.9 million Medicare beneficiaries annually through Long-Term Care Hospitals (LTCHs), Inpatient Rehabilitation Facilities (IRFs), Skilled Nursing Facilities (SNFs), Home Health Agencies (HHAs), and Hospice.³⁰ Recent legislative efforts have focused on improving patient outcomes for PAC through the use of standardized patient assessment data to

enable information sharing and cross-setting quality assessment intended to improve outcomes in specified clinical domains. For example, section 2(a) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act, Pub. L. 113–185 enacted on October 6, 2014) added a new section 1899B to the Act, which requires, among other things, that LTCHs, IRFs, SNFs, and HHAs submit standardized patient assessment data on the quality measures specified under section 1899B(c) of the Act. These cross-setting quality measures, which must be calculated, at least in part, using these standardized patient assessment data, allow for the comparability of patient outcomes across PAC settings. Section 1899B(i) of the Act requires the Secretary to promulgate regulations and interpretive guidelines applicable to LTCHs, HHAs, SNFs and IRFs, hospitals and critical access hospitals that require those providers to take into account data on measures submitted by LTCHs, HHAs, SNFs and IRFs in the discharge planning process.

In response to previous rulemakings, commenters have requested the opportunity for clinicians who furnish care in PAC settings and bill Medicare Part B to be measured similarly to hospital-based clinicians. Commenters suggested that this would limit administrative burden on clinicians by avoiding clinician reporting of measures which may be similar or duplicative to those already reported for facility-based programs such as QRPs for certain PAC settings (82 FR 53754).

In light of the importance of PAC services, PAC legislative changes, and the interest of the stakeholder community, we wish to explore the opportunity to further align quality and cost measurement from the PAC QRPs with the clinicians who provide care in those settings. We need to consider alternative ways in which we may use measures from the PAC QRPs to measure clinicians in MIPS through facility-based measurement.

Therefore, we are seeking comment on how we may attribute the quality and cost of care for patients in PAC settings to clinicians. For the facility-based measurement for MIPS program, clinicians receive a score that is based on the VBP score of a particular hospital at which the clinician or group provides services to patients. We specifically solicit comment on whether a similar approach could work for PAC given the number and variation of PAC settings and clinicians. We are particularly interested to learn what level of influence MIPS-eligible clinicians have in determining performance on quality

measures for individual settings and programs in the PAC setting.

In addition, we invite comments on which PAC QRP measures may be best utilized to measure clinician performance. Under our current approach for facility-based measurement (that is, the regulations finalized previously and the proposals in this rule), all measures in the Hospital VBP Program are used to determine the MIPS score. The measures used in determining the VBP score reflect the breadth of performance in the hospital program and as such would reflect the quality of care provided by a clinician.

We also request comments on methods to identify the appropriate measures for scoring, and what measures would be most influenced by clinicians. Specifically, we solicit comment on whether all measures that are reported as part of the PAC QRPs should be included or whether we should identify a subset of measures. The 2020 LTCH QRP includes 19 measures, of which 3 are proposed to be removed as explained in the FY 2019 IPPS/LTCH proposed rule (83 FR 20512 through 20515). The 2020 IRF QRP includes 18 measures, of which 1 is proposed for removal beginning FY 2020 and 1 is proposed for removal beginning FY 2021, as explained in the FY 2019 IRF proposed rule (83 FR 21001 through 21002). The measures adopted for the 2020 SNF QRP can be found at 82 FR 36570 through 36594, and none are currently proposed for removal. The measures adopted for the 2020 HH QRP can be found at 82 FR 51717 through 51730. The measures used in the FY 2019 Hospice program can be found at 82 FR 36655 through 36656; no measures have been proposed for removal for FY 2020 in the FY 2019 Hospice Wage Index proposed rule (83 FR 20956 through 20957).

Finally, considering the attribution challenges of using measures reported by a facility to measure clinicians, we solicit comment on whether we should limit facility-based measurement to specific PAC settings and programs such as the IRF QRP or LTCH QRP, or whether we should consider all PAC settings in the facility-based measurement discussion.

In addition to our consideration of PAC settings, we also solicit comment on opportunities to consider facility-based measurement for patients with ESRD. Dialysis facilities treat patients with ESRD and acute kidney injury. The ESRD Quality Incentive Program (QIP) was the first VBP program that tied Medicare payment to a facility's performance on quality measures, and

³⁰ MedPAC. Report to the Congress: Medicare Payment Policy. 2018. Report to the Congress: Medicare Payment Policy, www.medpac.gov/docs/default-source/reports/mar18_medpac_entirereport_sec.pdf?sfvrsn=0.

payment reductions under that program began with renal dialysis services furnished on or after January 1, 2012. Like the Hospital VBP program and MIPS, this program determines scores and rewards performance based on a set of measures. However, this program only allows ESRD facilities that meet a certain threshold to avoid a negative payment adjustment and does not allow for a positive payment adjustment. We generally believe the scoring methodology associated with the ESRD QIP could be integrated into our current approach but recognize that the structure is different from the Hospital VBP Program. The Payment Year 2020 ESRD QIP measures along with a description of our scoring methodology for that payment year can be reviewed at 81 FR 77896 through 77931 and 82 FR 50760 through 50767.

Additionally, we believe MIPS eligible clinicians' roles in dialysis centers differ from their roles in hospitals. However, we believe that these clinicians have a significant impact on the quality of care for patients, even if they cannot control all aspects of their care. We seek comment on the extent to which the quality measures of dialysis centers reflect clinician performance. Additionally, we seek comments on whether we might be able to attribute the performance of a specific facility to an individual clinician. We reviewed the attribution methodology utilized for the Comprehensive ESRD Care (CEC) Model. CMS currently uses the "first touch" approach—where the beneficiary's first visit to a CEC Model participating dialysis center will prospectively match the beneficiary to the dialysis facility. While this approach ties a patient to an ESRD facility, it does not tie a clinician to an ESRD facility. We also seek comment on whether another approach, similar to our consideration of the PAC measures, might be more appropriate in this setting.

(e) Scoring the Improvement Activities Performance Category

For our previously established policies regarding scoring the improvement activities performance category, we refer readers to § 414.1380(b)(3) and the CY 2018 Quality Payment Program final rule (82 FR 53767 through 53769). We also refer readers to § 414.1355 and the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53662) and CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199) for previously established policies regarding the

improvement activities performance category generally.

(i) Regulatory Text Updates

In this proposed rule, we are proposing updates to both §§ 414.1380(b)(3) and 414.1355 to more clearly and concisely capture previously established policies. We are also proposing one substantive change with respect to Patient Centered Medical Homes and comparable specialty practices. These are discussed in more detail below.

(A) Improvement Activities Performance Category Score and Total Required Points

In an effort to more clearly and concisely capture previously established policies, we are proposing updates to § 414.1380(b)(3) and refer readers to section VIII for more details.

We also are clarifying here that the improvement activities performance category score cannot exceed 100 percent.

(B) Weighting of Improvement Activities

In an effort to more clearly and concisely capture previously established policies, we are proposing updates to § 414.1380(b)(3) and refer readers to section VIII for more details.

(C) APM Improvement Activities Performance Category Score

In an effort to more clearly and concisely capture previously established policies, we are proposing updates to § 414.1380(b)(3)(i) and refer readers to section VIII for more details.

(D) Patient-Centered Medical Homes and Comparable Specialty Practices

In this proposed rule, we are proposing to modify our regulations at § 414.1380(b)(3)(ii) to more clearly and concisely capture our previously established policies for patient-centered medical homes and comparable specialty practices and refer readers to section VIII for more details.

In addition, it has come to our attention that in the preamble of the CY 2017 Quality Payment Program final rule (81 FR 77186 and 77179), the terminology "automatic" was used in reference to patient-centered medical home or comparable specialty practice improvement activities scoring credit. In that rule, in response to one comment, we stated, ". . . any MIPS eligible clinician or group that does not qualify by October 1st of the performance year as a certified patient-centered medical home or comparable specialty practice cannot receive automatic credit as such for the improvement activities

performance category." (81 FR 77186). In response to another comment in that rule, we stated, "Other certifications that are not for patient-centered medical homes or comparable specialty practices would also not qualify automatically for the highest score." (81 FR 77179).

While we used the term "automatic" then, we have since come to believe it is inaccurate because an eligible clinician or group must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive full credit for the improvement activities performance category. In the CY 2018 Quality Performance Payment final rule (82 FR 53649) in response to comments we received regarding patient-centered medical homes or comparable specialty practices receiving full credit for the improvement activities performance category for MIPS; we stated that we would like to make clear that credit is not automatically granted; MIPS eligible clinicians and groups must attest in order to receive the credit.

Therefore, in this proposed rule, we are codifying at § 414.1380(b)(3)(ii) to require that an eligible clinician or group must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive this credit. Specifically, MIPS eligible clinicians who wish to claim this status for purposes of receiving full credit in the improvement activities performance category must attest to their status as a patient-centered medical home or comparable specialty practice for a continuous 90-day minimum during the performance period.

(E) Improvement Activities Performance Category Weighting for Final Scoring

In this proposed rule, in an effort to more clearly and concisely capture previously established policies, we are proposing to make technical changes to § 414.1355(b) to state that unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act, performance in the improvement activities performance category comprises 15 percent of a MIPS eligible clinician's final score for the 2019 MIPS payment year and for each MIPS payment year thereafter. We believe these changes would better align the regulation text with the text of the statute.

(ii) CEHRT Bonus

In the CY 2017 Quality Payment Program final rule (81 FR 77202 through 77209) and the CY 2018 Quality Payment Program final rule (82 FR 53664 through 53670), we established

that certain activities in the improvement activities performance category will qualify for a bonus under the Promoting Interoperability performance category if they are completed using CEHRT. This bonus is applied under the Promoting Interoperability performance category and not under the improvement activities performance category. In section III.H.3.h.(5) of this proposed rule, we are proposing a new approach for scoring the Promoting Interoperability performance category that is aligned with our MIPS program goals of flexibility and simplicity. We refer readers to section III.H.3.h.(5)(g) of this proposed rule for more details on this proposal.

We invite public comment on these proposals.

(f) Scoring the Promoting Interoperability Performance Category

We refer readers to section III.H.3.h.(5) of this proposed rule, where we discuss our proposals for scoring the Promoting Interoperability performance category.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for MIPS eligible clinicians, we refer readers to § 414.1380(c), the discussion in the CY 2017 Quality Payment Program final rule (81 FR 77319 through 77329), and the discussion in the CY 2018 Quality Payment Program final rule (82 FR 53769 through 53785). In this proposed rule, we propose to continue the complex patient bonus for the 2021 MIPS payment year, propose a modification to the final score calculation for the 2021 MIPS payment year, and propose refinements to reweighting policies.

(a) Accounting for Risk Factors

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on individuals' health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care

Transformation Act of 2014 (IMPACT Act) and, as appropriate, other information, including information collected before completion of such studies and recommendations.

In this section, we summarize our efforts related to social risk and the relevant studies conducted under section 2(d) of the IMPACT Act. We also propose to adjust the final score by continuing a bonus to address patient complexity for the 2021 MIPS payment year.

(i) Considerations for Social Risk

In the CY 2018 Quality Payment Program final rule (82 FR 53770), we discussed the importance of improving beneficiary outcomes including reducing health disparities. We also discussed our commitment to ensuring that medically complex patients, as well as those with social risk factors, receive excellent care. We discussed how studies show that social risk factors, such as being near or below the poverty level as determined by HHS, belonging to a racial or ethnic minority group, or living with a disability, can be associated with poor health outcomes, and how some of this disparity is related to the quality of health care.³¹ Among our core objectives, we aim to improve health outcomes, attain health equity for all beneficiaries, and ensure that complex patients as well as those with social risk factors receive excellent care. Within this context, reports by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) and the National Academy of Medicine have examined the influence of social risk factors in our value-based purchasing programs.³² As we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38428 through 38429), ASPE's Report to Congress, found that, in the context of value-based purchasing programs, dual eligibility was the most powerful predictor of poor health care outcomes among those social risk factors that they examined and tested. In addition, as noted in the FY 2018 IPPS/LTCH PPS

³² Department of Health and Human Services Office of the Assistant Secretary for Planning and Evaluation (ASPE), "Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs." December 2016. Available at <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

final rule (82 FR 38428), the National Quality Forum (NQF) undertook a 2-year trial period in which certain new measures and measures undergoing maintenance review have been assessed to determine if risk adjustment for social risk factors is appropriate for these measures.³³ The trial period ended in April 2017 and a final report is available at http://www.qualityforum.org/SES_Trial_Period.aspx. The trial concluded that "measures with a conceptual basis for adjustment generally did not demonstrate an empirical relationship" between social risk factors and the outcomes measured. This discrepancy may be explained in part by the methods used for adjustment and the limited availability of robust data on social risk factors. NQF has extended the socioeconomic status (SES) trial,³⁴ allowing further examination of social risk factors in outcome measures.

In the CY 2018 Quality Payment Program proposed rule, we solicited feedback on which social risk factors provide the most valuable information to stakeholders and the methodology for illuminating differences in outcomes rates among patient groups seen by a MIPS eligible clinician that would also allow for a comparison of those differences, or disparities, across MIPS eligible clinicians (82 FR 30134). We received feedback encouraging CMS to explore whether additional factors should be used to stratify or risk adjust the individual quality and cost measures and to consider any additional factors that might be appropriate. We intend to explore options for adjustment of individual quality measures used in MIPS in future years. We also intend to explore additional approaches to account for patient risk factors through adjustments to the performance category scores or the final score. However, as described in section III.H.3.i.(2)(a)(ii), we believe it is appropriate to maintain the complex patient bonus for the 2021 MIPS payment year.

We plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify policy solutions that achieve the goals of attaining health equity for all beneficiaries and minimizing unintended consequences.

(ii) Complex Patient Bonus for the 2021 MIPS Payment Year

In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we

³³ Available at http://www.qualityforum.org/SES_Trial_Period.aspx.

³⁴ Available at <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=86357>.

finalized at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. Our overall goal for the complex patient bonus was two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We noted that we would assess on an annual basis whether to continue the bonus and how the bonus should be structured (82 FR 53771). For a detailed description of the complex patient bonus finalized for the 2020 MIPS payment year, please refer to the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776).

For the 2019 MIPS performance period/2021 MIPS payment year, we propose to continue the complex patient bonus as finalized for the 2018 MIPS performance period/2020 MIPS payment year and to revise § 414.1380(c)(3) to reflect this policy. Although we intend to maintain the complex patient bonus as a short-term solution, we do not believe we have sufficient information available at this time to develop a long-term solution to account for patient risk factors in MIPS such that we would be able to include a different approach in this proposed rule. An updated ASPE report is expected in October 2019 which will build on the analyses included in the initial reports and may provide additional input for a long-term solution to addressing risk factors in MIPS. At this time, we do not believe additional data sources are available that would be feasible to use as the basis for a different approach to account for patient risk factors in MIPS. We intend to analyze data when feasible from the 2017 MIPS

performance period which will be available following the data submission deadline on March 31, 2018 to identify differences in performance that are consistent across performance categories and may, in the future, shift the complex patient bonus to specific performance categories. However, in the absence of data analysis from the first year of MIPS, we do not believe that this change is appropriate at this time. Therefore, while we work with stakeholders to identify a long-term approach to account for patient risk factors in MIPS, we believe it would be appropriate to continue the complex patient bonus for another year to support MIPS eligible clinicians who treat patients with risk factors, as well as to maintain consistency with the 2020 MIPS payment year and minimize confusion. We have received significant feedback from MIPS eligible clinicians that consistency in the MIPS program over time is valued when possible in order to minimize confusion and to help MIPS eligible clinicians predict how they will be scored under MIPS. Therefore, we believe it is appropriate to maintain consistent policies for the complex patient bonus in the 2021 MIPS payment year until we have sufficient evidence and new data sources that support an updated approach to account for patient risk factors.

Although we are not proposing changes to the complex patient bonus for the 2021 MIPS payment year, the dates used in the calculation of the complex patient bonus may change as a result of other proposals we are making in this proposed rule. For the 2020 MIPS payment year, we finalized that we would use the second 12-month segment of the eligibility determination period to calculate average HCC risk scores and the proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians (82 FR 53771 through 53772). As discussed in section III.H.3.a. of this proposed rule, we are proposing to change the dates of the eligibility determination period (now referred to as

the MIPS determination period) beginning with the 2021 MIPS payment year. Specifically, the second 12-month segment would begin on October 1 of the calendar year preceding the applicable performance period and end on September 30 of the calendar year in which the applicable performance period occurs. If this proposed change to the MIPS determination period is finalized, then beginning with the 2021 MIPS payment year, the second 12-month segment of the MIPS determination period (beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs) would be used when calculating average HCC risk scores and proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category (formerly the advancing care information performance category); and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77320 and 82 FR 53779, respectively). Under the proposals we are making in sections III.H.3.h.(3)(a) and III.H.3.h.(2)(a) of this proposed rule, for the 2021 MIPS payment year, the cost performance category would make up 15 percent and the quality performance category would make up 45 percent of a MIPS eligible clinician's final score. Table 50 summarizes the weights specified for each performance category.

TABLE 50—FINALIZED AND PROPOSED WEIGHTS BY MIPS PERFORMANCE CATEGORY AND MIPS PAYMENT YEAR

Performance category	Transition year (previously finalized) (percent)	2020 MIPS payment year (previously finalized) (percent)	2021 MIPS payment year (proposed) (percent)
Quality	60	50	45
Cost	0	10	15
Improvement Activities	15	15	15
Promoting Interoperability	25	25	25

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved. Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Assigning a scoring weight of zero percent and redistributing the weight to the other performance categories differs from the scenario of a MIPS eligible clinician failing to report on an applicable measure or activity that is required to be reported.

(A) Scenarios Where the Quality, Cost, Improvement Activities, and Promoting Interoperability Performance Categories Would Be Reweighted

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77322 through 77325 and 82 FR 53779 through 53780, respectively), we explained our interpretation of what it means for there to be sufficient measures applicable and available for the quality and cost performance categories, and we finalized policies for the 2019 and 2020 MIPS payment years under which we would assign a scoring weight of zero percent to the quality or cost performance category and redistribute its weight to the other performance categories in the event there are not sufficient measures applicable and available, as authorized by section 1848(q)(5)(F) of the Act. For the quality performance category, we stated that having sufficient measures applicable and available means that we can calculate a quality performance category percent score for the MIPS eligible clinician because at least one quality measure is applicable and available to the clinician (82 FR 53780).

For the cost performance category, we stated that having sufficient measures applicable and available means that we can reliably calculate a score for the cost measures that adequately captures and reflects the performance of a MIPS eligible clinician (82 FR 53780). We established that if a MIPS eligible clinician is not attributed enough cases for a measure (in other words, has not met the required case minimum for the measure), or if a measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated that if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score (82 FR 53780).

We are proposing to codify these policies for the quality and cost performance categories at § 414.1380(c)(2)(i)(A)(1) and (2), respectively, and to continue them for the 2021 MIPS payment year and each subsequent MIPS payment year.

For the Promoting Interoperability performance category, in the CY 2017 Quality Payment Program final rule (81 FR 77238 through 77245) and the CY 2018 Quality Payment Program final rule (82 FR 53680 through 53687), we established policies for assigning a scoring weight of zero percent to the Promoting Interoperability performance category and redistributing its weight to the other performance categories in the final score. We are proposing to codify those policies under § 414.1380(c)(2)(i) and (iii).

For the improvement activities performance category, we continue to believe that all MIPS eligible clinicians will have sufficient activities applicable and available, except for limited extreme and uncontrollable circumstances, such as natural disasters, where a clinician is unable to report improvement activities, and circumstances where a MIPS eligible clinician joins a practice in the final 3 months of the performance period as discussed in section III.H.3.i.(2)(b)(ii)(C) of this proposed rule. Barring these circumstances, we believe that all MIPS eligible clinicians will have sufficient improvement activities applicable and available (82 FR 53780).

(B) Reweighting the Quality, Cost, and Improvement Activities Performance Categories for Extreme and Uncontrollable Circumstances

For a summary of the final policy we adopted beginning with the 2018 MIPS performance period/2020 MIPS payment year to reweight the quality, cost, and improvement activities

performance categories based on a request submitted by a MIPS eligible clinician, group, or virtual group that was subject to extreme and uncontrollable circumstances, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53780 through 53783). We are proposing to codify this policy at § 414.1380(c)(2)(i)(A)(5).

We sought comment in the CY 2018 Quality Payment Program final rule on two topics related to our extreme and uncontrollable policies (82 FR 53782 through 52783). First, in response to a public comment on the CY 2018 Quality Payment Program proposed rule in which the commenter requested that we include improvement scoring for those who are affected by extreme and uncontrollable circumstances, we sought comment on ways we could modify our improvement scoring policies to account for clinicians who have been affected by extreme and uncontrollable circumstances. In response, we received one comment expressing support for an improvement score without providing any additional details. At this time, we are not proposing modifications to our improvement scoring; therefore, MIPS eligible clinicians who receive a zero percent weighting for the quality or cost performance categories due to extreme and uncontrollable circumstances would not be eligible for improvement scoring because data sufficient to measure improvement would not be available from the performance period in which the quality or cost performance categories are weighted at zero percent.

We also sought comment on alternatives to the finalized policies, such as using a shortened performance period, which may allow us to measure performance, rather than reweighting the performance categories to zero percent. Many commenters generally supported the extreme and uncontrollable circumstances policy as finalized. One commenter requested that we reconsider our policy to not include issues third party intermediaries might have submitting information to CMS on behalf of a MIPS eligible clinician. We considered updating our policy to include third party intermediaries; however, we continue to believe that inclusion of third party intermediaries is not necessary because MIPS eligible clinicians may identify multiple ways to submit data and participate in MIPS. We seek comments on the specific circumstances under which the extreme and uncontrollable circumstances policy should be made applicable to third party intermediary issues. One

commenter recommended that CMS require MIPS eligible clinicians to submit data before an extreme and uncontrollable event and within a reasonable timeframe after the event to incentivize quality improvement while allowing for flexibility. Although we considered this alternative approach, in order to provide maximum flexibility, we continue to believe that MIPS eligible clinicians who demonstrate (through a reweighting application) that an extreme and uncontrollable event impacted their ability to report for a given performance category should have reweighting for that performance category for the performance period. However, we may consider modifying our policies in future years which we would propose through future rulemaking.

We are proposing a few minor modifications to our extreme and uncontrollable circumstances policy. First, beginning with the 2019 MIPS performance period/2021 MIPS payment year, we are proposing at § 414.1380(c)(2)(i)(A)(5) that, if a MIPS eligible clinician submits an application for reweighting based on extreme and uncontrollable circumstances, but also submits data on the measures or activities specified for the quality or improvement activities performance categories in accordance with § 414.1325, he or she would be scored on the submitted data like all other MIPS eligible clinicians, and the categories would not be reweighted. We are proposing this modification to align with a similar policy for the Promoting Interoperability performance category (82 FR 53680 through 53682). If a MIPS eligible clinician reports on measures or activities specified for the quality or improvement activities performance categories, then we assume the clinician believes there are sufficient measures or activities applicable and available to the clinician.

For most quality measures and improvement activities, the data submission occurs after the end of the MIPS performance period, so clinicians would know about the extreme and uncontrollable circumstance prior to submission. However, for the quality performance category, measures submitted via the Part B claims submission type are submitted by adding quality data codes to a claim. As a result, it is possible that a MIPS eligible clinician could have submitted some Part B claims data prior to the submission of a reweighting application for extreme and uncontrollable events. Under our proposal, we would score the quality performance category because we have received data. However, we

previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77320 through 77321 and 82 FR 53778 through 53779). If a clinician experiences an extreme and uncontrollable event that affects all of the performance categories, then under our proposal the clinician would only be scored on the quality performance category if they submit data for only that category. The clinician would also have to submit data for the improvement activities or the Promoting Interoperability performance categories in order to be scored on two or more performance categories and receive a final score different than the performance threshold.

This proposal does not include administrative claims data that we receive through the claims submission process and use to calculate the cost measures and certain quality measures. As we propose to codify under § 414.1325(a)(2)(i), there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category. We calculate performance on these measures using administrative claims data, and clinicians are not required to submit any additional data for these measures. Therefore, we do not believe that it would be appropriate to void a reweighting application based on administrative claims data we receive for measures that do not require data submission for purposes of MIPS.

We also propose to apply the policy we finalized for virtual groups in the CY 2018 Quality Payment Program final rule (82 FR 53782 through 53783) to groups submitting reweighting applications for the quality, cost, or improvement activities performance categories based on extreme and uncontrollable circumstances. For groups, we would evaluate whether sufficient measures and activities are applicable and available to MIPS eligible clinicians in the group on a case-by-case basis and determine whether to reweight a performance category based on the information provided for the individual clinicians and practice location(s) affected by extreme and uncontrollable circumstances and the nature of those circumstances. While we did not specifically propose to apply this policy to groups in the CY 2018 Quality Payment Program proposed rule, our intention was to apply the same policy for groups and virtual groups, and thus if we adopt this proposal, we would

apply the policy to groups beginning with the 2018 performance period/2020 MIPS payment year.

(C) Reweighting the Quality, Cost, Improvement Activities, and Promoting Interoperability Performance Categories for MIPS Eligible Clinicians Who Join a Practice in the Final 3 Months of the Performance Period Year

Beginning with the 2019 MIPS performance period, we are proposing that a MIPS eligible clinician who joins an existing practice (existing TIN) during the final 3 months of the calendar year in which the MIPS performance period occurs (the performance period year) that is not participating in MIPS as a group would not have sufficient measures applicable and available. We are also proposing that a MIPS eligible clinician who joins a practice that is newly formed (new TIN) during the final 3 months of the performance period year would not have sufficient measures applicable and available, regardless of whether the clinicians in the practice report for purposes of MIPS as individuals or as a group. In each of these scenarios, we are proposing to reweight all four of the performance categories to zero percent for the MIPS eligible clinician and, because he or she would be scored on fewer than two performance categories, the MIPS eligible clinician would receive a final score equal to the performance threshold and a neutral MIPS payment adjustment under the policy at § 414.1380(c). We propose to codify these policies at § 414.1380(c)(2)(i)(A)(3).

We are proposing this policy because we are not currently able to identify these MIPS eligible clinicians (or groups if the group is formed in the final 3 months of the performance period year) at the start of the MIPS submission period. When we designed our systems, we incorporated user feedback that requested eligibility information be connected to the submission process. In order to submit data, an individual TIN/NPI or the group TIN must be in the files generated from the MIPS eligibility determination periods. As discussed in section III.H.3.a., we have two 12-month determination periods for eligibility. We are proposing that the second 12-month segment of the MIPS eligibility determination period would end on September 30 of the calendar year in which the applicable MIPS performance period occurs; therefore, we would have no eligibility information about clinicians who join a practice after September 30 of the performance period year. MIPS eligible clinicians who join an existing practice (existing TIN) in the

final 3 months of the performance period year that is not participating in MIPS as a group would not be identified by our systems, and we would not have the ability to inform them that they are eligible or to receive MIPS data from them. Similarly, practices that form (new TIN) in the final 3 months of the performance period year would not be in the MIPS determination files.

Accordingly, the measures and activities would not be available because any data from these MIPS eligible clinicians would not be accessible to us.

If a MIPS eligible clinician joins a practice (existing TIN) in the final 3 months of the performance period year, and the practice is not newly formed and is reporting as a group for the performance period, the MIPS eligible clinician would be able to report as part of that group. In this case, we are able to accept data for the group because the TIN would be in our MIPS eligibility determination files. Therefore, we believe the measures and activities would be available in this scenario, and reweighting would not be necessary for the MIPS eligible clinician. We note that, if a MIPS eligible clinician's TIN/NPI combination was not part of the group practice during the MIPS determination period, the TIN/NPI combination would not be identified in our system at the start of the MIPS data submission period; however, if the MIPS eligible clinician qualifies to receive the group final score under our proposal, we would apply the group final score to the MIPS eligible clinician's TIN/NPI combination as soon as the information becomes available. Please see section III.H.3.j.(1) of this proposed rule for more information about assigning group scores to MIPS eligible clinicians.

(D) Proposed Automatic Extreme and Uncontrollable Circumstances Policy Beginning With the 2020 MIPS Payment Year

In conjunction with the CY 2018 Quality Payment Program final rule, and due to the impact of Hurricanes Harvey, Irma, and Maria, we issued an interim final rule with comment period (IFC) in which we adopted on an interim final basis a policy for automatically reweighting the quality, improvement activities, and advancing care information (now referred to as Promoting Interoperability) performance categories for the transition year of MIPS (the 2017 performance period/2019 MIPS payment year) for MIPS eligible clinicians who are affected by extreme and uncontrollable circumstances affecting entire regions or locales (82 FR 53895 through 53900).

We propose to codify this policy for the quality and improvement activities performance categories at § 414.1380(c)(2)(i)(A)(6) and for the advancing care information (now Promoting Interoperability) performance category at § 414.1380(c)(2)(i)(C)(3).

We believe that a similar automatic extreme and uncontrollable circumstances policy would be appropriate for any year of the MIPS program to account for natural disasters and other extreme and uncontrollable circumstances that impact an entire region or locale. As we discussed in the interim final rule (82 FR 53897), we believe such a policy would reduce burden on clinicians who have been affected by widespread catastrophes and would align with existing policies for other Medicare programs. We propose at § 414.1380(c)(2)(i)(A)(7) and (c)(2)(i)(C)(3) to apply the automatic extreme and uncontrollable circumstances policy we adopted for the transition year to subsequent years of the MIPS program, beginning with the 2018 MIPS performance period and the 2020 MIPS payment year, with a few additions to address the cost performance category. For a description of the policy we adopted for the MIPS transition year, we refer readers to the discussion in the interim final rule (82 FR 53895 through 53900).

In the interim final rule (82 FR 53897), we stated that we were not including the cost performance category in the automatic extreme and uncontrollable circumstances policy for the transition year because the cost performance category is weighted at zero percent in the final score for the 2017 MIPS performance period/2019 MIPS payment year. We finalized a 10 percent weight for the cost performance category for the 2018 MIPS performance period/2020 MIPS payment year (82 FR 53643) and are proposing a 15 percent weight for the 2019 performance period/2021 MIPS payment year (see section III.H.3.h.(3)(a) of this proposed rule). For the reasons discussed in the CY 2018 Quality Payment Program final rule (82 FR 53781), we believe a MIPS eligible clinician's performance on measures calculated based on administrative claims data, such as the measures specified for the cost performance category, could be adversely affected by a natural disaster or other extreme and uncontrollable circumstance, and that the cost measures may not be applicable to that MIPS eligible clinician. Therefore, we are proposing to include the cost performance category in the automatic extreme and uncontrollable circumstances policy beginning with the

2018 MIPS performance period/2020 MIPS payment year. Under our policy for the transition year, if a MIPS eligible clinician in an affected area submits data for any of the MIPS performance categories by the applicable submission deadline for the 2017 MIPS performance period, he or she will be scored on each performance category for which he or she submits data, and the performance category will not be reweighted to zero percent in the final score (82 FR 53898). Our policy for the transition year did not include measures that are calculated based on administrative claims data (82 FR 53898). As discussed in the preceding section III.H.3.h.(3)(b), under § 414.1325(e), there are no data submission requirements for the cost performance category, and we will calculate performance on the measures specified for the cost performance category using administrative claims data. We are proposing for the cost performance category, if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that would enable us to calculate the cost measures for that clinician.

In the interim final rule (82 FR 53897), we did not include an automatic extreme and uncontrollable circumstances policy for groups or virtual groups, and we continue to believe such a policy is not necessary. Unless we receive data from a TIN indicating that the TIN would like to be scored as a group for MIPS, performance by default is assessed at the individual MIPS eligible clinician level. Similarly, performance is not assessed at the virtual group level unless the member TINs submit an application in accordance with § 414.1315. If we receive data from a group or virtual group, we would score that data, even if individual MIPS eligible clinicians within the group or virtual group are impacted by an event that would be included in our automatic extreme and uncontrollable circumstances policy. Regardless of whether we receive data from a group or virtual group, we would have no mechanism to determine whether the group or virtual group did not submit data, or submitted data and performed poorly, because it had been affected by an extreme and uncontrollable event unless the group notifies us of its circumstances. Instead of establishing a threshold for groups or virtual groups to receive automatic reweighting based on the number of

clinicians in the group or virtual group impacted by extreme and uncontrollable events, we believe it is preferable that these groups and virtual groups submit an application for reweighting based on extreme and uncontrollable circumstances under our existing policy (82 FR 53780 through 53783) where they may be eligible for reweighting if they establish that the group or virtual group was sufficiently impacted by the extreme and uncontrollable event. For example, if less than 100 percent of the clinicians in the group or virtual group were impacted, but the practice location that was responsible for data submission was among those impacted and thus impeded successful reporting for all clinicians in the group or virtual group, we believe reweighting may be appropriate.

(iii) Redistributing Performance Category Weights

In the CY 2017 and CY 2018 Quality Payment Program final rules, we established policies for redistributing the weights of performance categories for the 2019 and 2020 MIPS payment years in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories (81 FR 77325 through 77329; 82 FR 53783 through 53785, 53895 through 53900). We are proposing to codify these policies under § 414.1380(c)(2)(ii).

For the 2021 MIPS payment year, we propose at § 414.1380(c)(2)(ii)(B) to apply similar reweighting policies as finalized for the 2020 MIPS payment year (82 FR 53783 through 53785). In general, we would redistribute the weight of a performance category or categories to the quality performance category. We continue to believe redistributing weight to the quality

performance category is appropriate because of the experience MIPS eligible clinicians have had reporting on quality measures under other CMS programs. We propose to continue to redistribute the weight of the quality performance category to the improvement activities and Promoting Interoperability performance categories. However, for the 2021 MIPS payment year, with our proposal to weight cost at 15 percent, we propose to reweight the Promoting Interoperability performance category to 45 percent and the improvement activities performance category to 40 percent when the quality performance category is weighted at zero percent. We chose to weight Promoting Interoperability higher in order to align with goals of interoperability and for simplicity because we generally have avoided assigning partial percentage points to performance category weights. Reweighting scenarios under this proposal are presented in Table 51.

TABLE 51—PERFORMANCE CATEGORY REDISTRIBUTION POLICIES PROPOSED FOR THE 2021 MIPS PAYMENT YEAR

Reweighting scenario	Quality (percent)	Cost (percent)	Improvement activities (percent)	Promoting Interoperability (percent)
No Reweighting Needed:				
—Scores for all four performance categories	45	15	15	25
Reweight One Performance Category:				
—No Cost	60	0	15	25
—No Promoting Interoperability	70	15	15	0
—No Quality	0	15	40	45
—No Improvement Activities	60	15	0	25
Reweight Two Performance Categories:				
—No Cost and no Promoting Interoperability	85	0	15	0
—No Cost and no Quality	0	0	50	50
—No Cost and no Improvement Activities	75	0	0	25
—No Promoting Interoperability and no Quality	0	15	85	0
—No Promoting Interoperability and no Improvement Activities	85	15	0	0
—No Quality and no Improvement Activities	0	15	0	85

We have heard from stakeholders in previous years that our reweighting policies place undue weight on the quality performance category, and, although we continue to believe the policies are appropriate, we seek comment on alternative redistribution policies in which we would also redistribute weight to the improvement activities performance category (see Table 52). Under the alternative redistribution policy we considered, we

would redistribute the weight of the Promoting Interoperability performance category to the quality and improvement activities performance categories. We would redistribute 15 percent of the Promoting Interoperability performance category weight to the quality performance category, and 10 percent to the improvement activities performance category. We believe redistributing more of the weight of the Promoting Interoperability performance category to

the quality performance category is appropriate because MIPS eligible clinicians have had more experience reporting on quality measures under other CMS programs than reporting on improvement activities. We would redistribute the cost performance category weight equally to the quality and improvement activities performance categories (5 percent to each) under this alternative policy.

TABLE 52—ALTERNATIVE PERFORMANCE CATEGORY REDISTRIBUTION POLICIES CONSIDERED FOR THE 2021 MIPS PAYMENT YEAR

Reweighting scenario	Alternative redistribution policy: Reweight promoting interoperability and cost to quality and improvement activities			
	Quality	Cost	Improvement activities	Promoting interoperability
No Reweighting Needed:				
—Scores for all four performance categories	45	15	15	25
Reweight One Performance Category:				
—No Promoting Interoperability	60	15	25	0
—No Cost	55	0	20	25
—No Quality	0	15	40	45
—No Improvement Activities	60	15	0	25
Reweight Two Performance Categories:				
—No Cost and No Promoting Interoperability	70	0	30	0
—No Cost and no Quality	0	0	50	50
—No Cost and no Improvement Activities	75	0	0	25
—No Promoting Interoperability and no Quality	0	15	85	0
—No Promoting Interoperability and no Improvement Activities	85	15	0	0
—No Quality and no Improvement Activities	0	15	0	85

Because the cost performance category was zero percent of a MIPS eligible clinician’s final score for the 2017 MIPS performance period, we did not believe it is appropriate to redistribute weight to the cost performance category for the 2019 MIPS performance period because MIPS eligible clinicians have limited experience being scored on cost measures for purposes of MIPS. In addition, we are concerned that there would be limited measures in the cost performance category under our proposal for the 2019 MIPS performance period discussed in section III.H.3.h.(3)(b) of this proposed rule, and believe it may be appropriate to delay shifting additional weight to the cost performance category until additional measures are developed. However, we also believe that cost is a critical component of the Quality Payment Program and believe placing additional emphasis on the cost performance category in future years may be appropriate. Therefore, we seek comment on redistributing weight to the cost performance category in future years.

(c) Final Score Calculation

We are proposing to revise the formula at § 414.1380(c) for calculating the final score. As discussed in section III.H.3.i.(1)(b)(vii), we are not proposing to continue to add the small practice bonus to the final score for the 2021 MIPS payment year and are proposing to add a small practice bonus to the quality performance category score instead starting with the 2021 MIPS payment year. Therefore, we are proposing to revise the formula to omit

the small practice bonus from the final score calculation beginning with the 2021 MIPS payment year. We request public comments on this proposal.

In the CY 2018 Quality Payment Program final rule (82 FR 53779), we requested public comment on approaches to display scores and provide feedback to MIPS eligible clinicians in a way that MIPS eligible clinicians can easily understand how their scores are calculated, including how performance category scores are translated to a final score. We also sought comment on how to simplify the scoring system while still recognizing differences in clinician practices.

A few commenters suggested that we make performance category scores equal to the number of points they will represent in the final score to minimize confusion. For example, the quality performance category score would be out of 50 total possible points, when the quality performance category weight is 50 percent. A few commenters provided suggestions for tools that may help MIPS eligible clinicians to understand scoring better. For example, a few commenters suggested that we create an interactive online tool for clinicians to calculate their own scores. A few commenters suggested that we should not compare MIPS eligible clinicians to benchmarks because they do not believe the benchmarks actually represent high quality care. One commenter suggested that we could simplify scoring by awarding points for multiple performance categories for performance on one measure or activity. Another commenter requested that we simplify scoring because the commenter believes that clinicians may view the program as

unfair and be subject to negative payment adjustments due to confusion rather than performance.

We thank the commenters for their suggestions, and we will take them into consideration in future rulemaking.

In response to commenters requesting that the total number of points available for a performance category should be equivalent to the performance category’s weight in the final score, we note that various reweighting scenarios could mean that the weight of the performance categories for each MIPS eligible clinician may vary (for example, if the weight of one or more performance categories is redistributed to other performance categories), which makes it impossible for all MIPS eligible clinicians to have the same total number of points available for a performance category. In addition, the total points possible for the quality and cost performance categories may vary—for example, if a group is scored on the readmission measure they will have a maximum of 70 points for the 6 measures they are required to submit and the readmission measure instead of 60 points for 6 measures for individuals and groups who are not scored via Web Interface and who do not have the readmission measure. However, we continue to value simplicity in our scoring for MIPS and intend to explore approaches to simplify our scoring whenever possible in future years. We seek comments on approaches to simplify calculation of the final score that take into consideration these limitations described above.

j. MIPS Payment Adjustments

(1) Final Score Used in Payment Adjustment Calculation

For our previously established policies regarding the final score used in payment adjustment calculation, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77330 through 77332) and the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787). Under our policies, for groups submitting data using the TIN identifier, we will apply the group final score to all the TIN/NPI combinations that bill under that TIN during the performance period (82 FR 53785). We are proposing to modify this policy for the application of the group final score, beginning with the 2019 performance period/2021 MIPS payment year. We are proposing a 15-month window that starts with the second 12-month determination period (October 1 prior to the MIPS performance period through September of the MIPS performance period) and also includes the final 3 months of the performance period year (October 1 through December 31 of the performance period year). We are proposing for groups submitting data using the TIN identifier, we would apply the group final score to all of the TIN/NPI combinations that bill under that TIN during the proposed 15-month window. We believe that partially aligning with the second 12-month determination period creates consistency with our eligibility policies that informs a group or eligible clinician of who is eligible. We refer readers to section III.H.3.b. of this proposed rule where we discuss our proposals related to MIPS determination periods.

We note that, if a MIPS eligible clinician's TIN/NPI combination was not part of the group practice during the MIPS determination period, the TIN/NPI combination would not be identified in our system at the start of the MIPS data submission period; however, if the MIPS eligible clinician qualifies to receive the group final score under our proposal, we would apply the group final score to the MIPS eligible clinician's TIN/NPI combination as soon as the information becomes available.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a

year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

To determine a performance threshold to propose for the third year of MIPS (2021 MIPS payment year), we again relied upon the special rule in section 1848(q)(6)(D)(iii) of the Act, as amended by 51003(a)(1)(D) of the Bipartisan Budget Act of 2018. As required by section 1848(q)(6)(D)(iii) of the Act, we considered data available from a prior period with respect to performance on measures and activities that may be used under the MIPS performance categories. In accordance with newly

added clause (iv) of section 1848(q)(6)(D) of the Act, we also considered which data could be used to estimate the performance threshold for the 2024 MIPS payment year to ensure a gradual and incremental transition from the performance threshold we would establish for the 2021 MIPS payment year. We considered using the final scores for the 2017 MIPS performance period/2019 MIPS payment year; however, the data used to calculate the final scores was submitted through the first quarter of 2018, and final scores for MIPS eligible clinicians were not available in time for us to use in our analyses for purposes of this proposed rule. If technically feasible, we would consider using the actual data used to determine the final scores for the 2019 MIPS payment year to estimate a performance threshold for the 2024 MIPS payment year in the final rule.

Because the final scores for MIPS eligible clinicians are not yet available to us, we reviewed the data relied upon for the CY 2017 Quality Payment Program final rule regulatory impact analysis (81 FR 77514 through 77536) and believe it is the best data currently available to us to estimate the actual data for the 2017 MIPS performance period/2019 MIPS payment year.

Specifically, we used data from claims, MIPS eligibility data, 2015 PQRS data, 2014 PQRS Experience Report, 2014 VM data, National Plan and Provider Enumeration System Data, APM participation lists, and initial analyses for QP determination to model the estimated MIPS eligible clinicians, final scores, and the economic impact of MIPS final score. In these models, we assumed that historic PQRS participation assumptions would significantly overestimate the impact on clinicians, particularly on clinicians in practices with 1 to 15 clinicians, which have traditionally had lower participation rates. To assess the sensitivity of the impact to the participation rate, we prepared two sets of analyses. The first analysis relies on the assumption that a minimum 90 percent of MIPS eligible clinicians will participate in submitting quality performance category data to MIPS, regardless of practice size. The second analysis relies on the assumption that a minimum 80 percent of MIPS eligible clinicians will participate in submitting quality performance category data to MIPS, regardless of practice size (81 FR 77522 through 77523). We also reviewed the available data based on actual participation in PQRS (81 FR 77522 through 77523) without applying any participation assumptions.

In accordance with section 1848(q)(6)(D)(i) of the Act, the performance threshold for the 2024 MIPS payment year would be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary. When we analyzed the estimated final scores for the 2019 MIPS payment year, the mean final score was between 63.50 and 68.98 points and the median was between 77.83 and 82.5 points based on the different participation assumptions. For purposes of estimating the performance threshold for the 2024 MIPS payment year, we are using the mean final score based on data used for the CY 2017 Quality Payment Program final rule regulatory impact analysis (81 FR 77514 through 77536), which would result in an estimated performance threshold between 63.50 and 68.98 points for the 2024 MIPS payment year. We note that this is only an estimation we are providing in accordance with section 1848(q)(6)(D)(iv) of the Act, and we will propose the actual performance threshold for the 2024 MIPS payment year in future rulemaking.

We propose a performance threshold of 30 points for the 2021 MIPS payment year to be codified at § 414.1405(b)(6). A performance threshold of 30 points would be a modest increase over the performance threshold for the 2020 MIPS payment year (15 points), and we believe it would provide a gradual and incremental transition to the performance threshold we would establish for the 2024 MIPS payment year, which we have estimated would be between 63.50 and 68.98 points.

We want to encourage continued participation and the collection of meaningful data by MIPS eligible clinicians. A higher performance threshold would help MIPS eligible clinicians strive to achieve more complete reporting and better performance and prepare MIPS eligible clinicians for the 2024 MIPS payment year. However, a performance threshold set too high could also create a performance barrier, particularly for MIPS eligible clinicians who did not previously participate in PQRS or the EHR Incentive Programs. Additionally, we believe a modest increase from the performance threshold for the 2020 MIPS payment year would be particularly important to reduce the burden for MIPS eligible clinicians in small or solo practices. We believe that active participation of MIPS eligible clinicians in MIPS will improve the overall quality, cost, and care coordination of services provided to Medicare beneficiaries.

We have heard from stakeholders requesting that we continue a low performance threshold and from stakeholders requesting that we ramp up the performance threshold to help MIPS eligible clinicians prepare for a future performance threshold of the mean or median of final scores and to meaningfully incentivize higher performance. We have also heard from stakeholders who believe a higher performance threshold may incentivize higher performance by MIPS eligible clinicians through higher positive MIPS payment adjustments for those who exceed the performance threshold. We believe that a performance threshold of 30 points for the 2021 MIPS payment year would provide a gradual and incremental increase from the performance threshold of 15 points for the 2020 MIPS payment year and could incentivize higher performance by MIPS eligible clinicians.

We also believe that a performance threshold of 30 points represents a meaningful increase compared to 15 points, while maintaining flexibility for MIPS eligible clinicians in the pathways available to achieve this performance threshold. For example, generally a MIPS eligible clinician that is reporting individually and is not in a small practice could meet the performance threshold of 30 points by earning 40 measure achievement points out of 60 total possible measure achievement points that could be achieved through performing at the highest level of performance for 2 measures and earning 5 measure achievement points for each of the 4 other measures submitted for a total of 6 required measures submitted in the quality performance category (assuming an outcome measure is submitted).³⁵ Alternatively, a performance threshold of 30 points could be met by performance at 50 percent for the Promoting Interoperability performance category (receiving a 50 percent performance category score with a performance category weight of 25 percent of the final score is 12.5 points), receiving a 50 percent performance category score for the cost performance category (receiving a 50 percent performance category score with a performance category weight of 15 percent of the final score is 7.5

³⁵ The score for the quality performance category would be (10 measure achievement points × 2 measures plus 5 measure achievement points × 4 measures)/60 total possible achievement points or 66.67 percent. That score could be higher if the clinician qualifies for bonuses in the quality performance category. The 66.67 percent quality performance category percent score is weighted at 45 percent of the final score which is multiplied by 100 and equals 30 points towards the final score.

points), and also earning the maximum number of points for the improvement activities performance category (which is worth 15 points towards the final score), which collectively would produce a final score of at least 35 points (15 points for improvement activities + 7.5 points for cost + 12.5 points for Promoting Interoperability).

We refer readers to section III.H.3.j.(4)(e) of this proposed rule for additional examples of how a MIPS eligible clinician can meet or exceed the performance threshold. We invite public comment on the proposal to set the performance threshold for the 2021 MIPS payment year at 30 points. Alternatively, we considered whether the performance threshold should be set at a higher or lower number, for example, 25 points or 35 points, and also seek comment on alternative numerical values for the performance threshold for the 2021 MIPS payment year.

We also seek comment on our approach to estimating the performance threshold for the 2024 MIPS payment year, which above we based on the estimated mean final score for the 2019 MIPS payment year. We are particularly interested in whether we should use the median, instead of the mean, and whether in the future we should estimate the mean or median based on the final scores for another MIPS payment year. In our model estimates, we have seen that the mean scores are lower than the median and would expect a larger proportion of clinicians estimated to have final scores above the mean, rather than the median, because the mean is lower than the median with those who do not submit the required data getting the lowest possible score. That in turn could lower the scaling factor compared to a performance threshold based on the median. We also seek comment on whether establishing a path forward to a performance threshold for the 2024 MIPS payment year that provides certainty to clinicians and ensures a gradual and incremental increase from the performance threshold for the 2021 MIPS payment year to the estimated performance threshold for the 2024 MIPS payment year would be beneficial. For example, we could consider setting a performance threshold of 30 points for the 2021 MIPS payment year, 50 points for the 2022 MIPS payment year, and 70 points for the 2023 MIPS payment year as gradual and incremental increases toward the estimated performance threshold for the 2024 MIPS payment year based on our estimated median final scores discussed above; or we could have slightly lower values if we were to continue to

estimate the performance threshold for the 2024 MIPS payment year based on our estimated mean final scores. We believe there may be value to MIPS eligible clinicians in knowing in advance the performance threshold for the 2022 and 2023 MIPS payment years to encourage and facilitate increased clinician engagement and prepare clinicians for meeting the performance threshold for the 2024 MIPS payment year. Alternatively, we also believe that our estimates for the 2024 MIPS payment year performance threshold may change as we analyze actual MIPS data and, therefore, it may be appropriate to propose the performance threshold annually as we better understand the mean and median final scores.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS, an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold:

(1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or

(2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold for the prior period described in section 1848(q)(6)(D)(i) of the Act.

Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the \$500,000,000 of funding available for the year under section 1848(q)(6)(F)(iv) of the Act.

As we discussed in section III.H.3.j.(2) of this proposed rule, we are relying on the special rule under section 1848(q)(6)(D)(iii) of the Act, as amended by section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018, to propose a performance threshold of 30 points for the 2021 MIPS payment year. The special rule under section 1848(q)(6)(D)(iii) of the Act also applies for purposes of establishing an additional performance threshold for a year. For the 2021 MIPS payment year, we are proposing to again decouple the

additional performance threshold from the performance threshold.

Because we do not have actual MIPS final scores for a prior performance period, if we do not decouple the additional performance threshold from the performance threshold, then we would have to set the additional performance threshold at the 25th percentile of possible final scores above the performance threshold. With a performance threshold set at 30 points, the range of total possible points above the performance threshold is 30.01 to 100 points and the 25th percentile of that range is 47.5, which is less than one-half of the possible 100 points in the MIPS final score. We do not believe it would be appropriate to lower the additional performance threshold to 47.5 points because we do not believe a final score of 47.5 points demonstrates exceptional performance by a MIPS eligible clinician. We believe these additional incentives should only be available to those clinicians with very high performance on the MIPS measures and activities. Therefore, we are relying on the special rule under section 1848(q)(6)(D)(iii) of the Act and propose at § 414.1405(d)(5) to set the additional performance threshold at 80 points for the 2021 MIPS payment year, which is higher than the 25th percentile of the range of the possible final scores above the performance threshold.

As required by section 1848(q)(6)(D)(iii) of the Act, we took into account the data available and the modeling described in section VII. of this proposed rule to estimate final scores for the 2021 MIPS payment year. We believe 80 points is appropriate because it is vital to incentivize clinicians who have made greater strides to meaningfully participate in the MIPS program to perform at even higher levels. An additional performance threshold of 80 points requires a MIPS eligible clinician to perform well on at least two performance categories. Generally, a MIPS eligible clinician could receive a maximum score of 45 points for the quality performance category, which is below the 80-point additional performance threshold. In addition, 80 points is at a high enough level that MIPS eligible clinicians must submit data for the quality performance category to achieve this target. For example, if a MIPS eligible clinician gets a perfect score for the improvement activities, the cost, and Promoting Interoperability performance categories, but does not submit quality measures data, then the MIPS eligible clinician would only receive 55 points (0 points for quality + 15 points for the cost

performance category + 15 points for improvement activities + 25 points for Promoting Interoperability performance category), which is below the additional performance threshold. We believe the additional performance threshold at 80 points increases the incentive for excellent performance while keeping the focus on quality performance.

We also believe this increase would encourage increased engagement and further incentivize clinicians whose performance meets or exceeds the additional performance threshold, recognizing that a fixed amount is available for a year under section 1848(q)(6)(F)(iv) of the Act to fund the additional MIPS payment adjustments and that the more clinicians who receive an additional MIPS payment adjustment, the lower the average clinician's additional MIPS payment adjustment will be.

For future years, we may consider additional increases to the additional performance threshold.

(4) Application of the MIPS Payment Adjustment Factors

(a) Application to the Medicare Paid Amount for Covered Professional Services

In the CY 2018 Quality Payment Program final rule, we finalized the application of the MIPS payment adjustment factor, and if applicable, the additional MIPS payment adjustment factor, to the Medicare paid amount for items and services paid under Part B and furnished by the MIPS eligible clinician during the year (82 FR 53795). Sections 51003(a)(1)(A)(i) and 51003(a)(1)(E) of the Bipartisan Budget Act of 2018 amended sections 1848(q)(1)(B) and 1848(q)(6)(E) of the Act, respectively, by replacing the references to "items and services" with "covered professional services" (as defined in section 1848(k)(3)(A) of the Act). Covered professional services as defined in section 1848(k)(3)(A) of the Act are those services for which payment is made under, or is based on, the Medicare Physician Fee Schedule and which are furnished by an eligible professional. As a result of these changes, the MIPS payment adjustment factor determined under section 1848(q)(6)(A), and as applicable, the additional MIPS payment adjustment factor determined under section 1848(q)(6)(C) of the Act, will be applied to Part B payments for covered professional services furnished by a MIPS eligible clinician during a year beginning with the 2019 MIPS payment year and not to Part B payments for other items and services.

To conform with these amendments to the statute, we are proposing to revise § 414.1405(e) to apply the MIPS payment adjustment factor and, if applicable, the additional MIPS payment adjustment factor, to the Medicare Part B paid amount for covered professional services furnished by a MIPS eligible clinician during a MIPS payment year (beginning with 2019). We are also proposing to revise § 414.1405(e) to specify the formula for applying these adjustment factors in a manner that more closely tracks the statutory formula under section 1848(q)(6)(E) of the Act. Specifically, we are proposing the following formula: In the case of covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by a MIPS eligible clinician during a MIPS payment year beginning with 2019, the amount otherwise paid under Part B with respect to such covered professional services and MIPS eligible clinician for such year, is multiplied by 1, plus the sum of: The MIPS payment adjustment factor divided by 100, and as applicable, the additional MIPS payment adjustment factor divided by 100. We also refer readers to section III.H.3.a. of this proposed rule where we discuss the covered professional services to which the MIPS payment adjustment could be applied.

(b) Application for Non-Assigned Claims for Non-Participating Clinicians

In the CY 2018 Quality Payment Program final rule, we did not address the application of the MIPS payment adjustment for non-assigned claims for non-participating clinicians. In the CY 2018 Quality Payment Program final rule, we responded to a comment requesting guidance on how the MIPS payment adjustment and the calculation of the Medicare limiting charge amount would be applied for non-participating clinicians, and we stated our intention to address these issues in future rulemaking (82 FR 53795). Beginning with the 2019 MIPS payment year, we are proposing that the MIPS payment adjustment does not apply for non-assigned claims for non-participating clinicians. This approach is consistent with the policy for application of the value modifier that was finalized in the CY 2015 Physician Fee Schedule final rule (79 FR 67950 through 67951). Sections 1848(q)(6)(A) and 1848(q)(6)(C) of the Act require that we specify a MIPS payment adjustment factor, and if applicable, an additional MIPS payment adjustment factor for each MIPS eligible clinician, and section 1848(q)(6)(E) of the Act (as amended by section 51003(a)(1)(E) of the Bipartisan Budget

Act of 2018) requires that these payment adjustment factor(s) be applied to adjust the amount otherwise paid under Part B for covered professional services furnished by the MIPS eligible clinician during the MIPS payment year. When non-participating clinicians choose not to accept assignment for a claim, Medicare makes payment directly to the beneficiary, and the physician collects payment from the beneficiary. This is referred to as a non-assigned claim. Application of the MIPS payment adjustment to these non-assigned claims would not affect payment to the MIPS eligible clinician. Rather, it would only affect Medicare payment to the beneficiary. If the MIPS payment adjustment were to be applied to non-assigned services, then the Medicare payment to a beneficiary would be increased when the MIPS payment adjustment is positive and decreased when the MIPS payment adjustment is negative. Although the statute does not directly address this situation, it does suggest that the MIPS payment adjustment is directed toward payment to the MIPS eligible clinician and the covered professional services they furnish. We continue to believe that it is important that beneficiary liability not be affected by the MIPS payment adjustment and that the MIPS payment adjustment should be applied to the amount that Medicare pays to MIPS eligible clinicians.

On that basis, we propose to apply the MIPS payment adjustment to claims that are billed and paid on an assignment-related basis, and not to any non-assigned claims, beginning with the 2019 MIPS payment year. We do not expect this proposal, that the MIPS payment adjustment would not apply to non-assigned claims, would be likely to affect a clinician's decision to participate in Medicare or to otherwise accept assignment for a particular claim, but we seek comment on whether stakeholders and others believe clinician behavior would change as a result of this policy.

(c) Waiver of the Requirement To Apply the MIPS Payment Adjustment Factors to Certain Payments in Models Tested Under Section 1115A of the Social Security Act

CMS tests models under section 1115A of the Act that may include model-specific payments made only to model participants under the terms of the model and not to any other providers of services or suppliers. Some of these model-specific payments may be considered payments for covered professional services furnished by a MIPS eligible clinician, meaning that

the MIPS payment adjustment factor, and, as applicable, the additional MIPS payment adjustment factor (collectively referred to as the MIPS payment adjustment factors) applied under § 414.1405(e) of our regulations would normally apply to those payments. Section 1115A(d)(1) of the Act authorizes the Secretary to waive requirements of Title XVIII of the Act (and certain other requirements) as may be necessary solely for the purposes of testing models under section 1115A. We believe it is necessary to waive the requirement to apply the MIPS payment adjustment factors to a model-specific payment or payments (to the extent such a payment or payments are subject to the requirement to apply the MIPS payment adjustment factors) for purposes of testing a section 1115A model under which such model-specific payment or payments are made in a specified payment amount (for example, \$160 per-beneficiary, per-month); or paid according to a methodology for calculating a model-specific payment that is applied in a consistent manner to all model participants. In both cases, applying the MIPS payment adjustment factors to these model-specific payments would introduce variation in the amounts of model-specific payments paid across model participants, which could compromise the model test and the evaluation thereof.

We propose to amend § 414.1405 to add a new paragraph (f) to specify that the MIPS payment adjustment factors applied under § 414.1405(e) would not apply to certain model-specific payments as described above for the duration of a section 1115A model's testing, beginning in the 2019 MIPS payment year. We are proposing to use the authority under section 1115A(d)(1) of the Act to waive the requirement to apply the MIPS payment adjustment factors under section 1848(q)(6)(E) of the Act and § 414.1405(e) specifically for these types of payments because the waiver is necessary solely for purposes of testing models that involve such payments.

We believe this policy is appropriate because it would enable us to effectively test and evaluate the payment and savings impacts of such model-specific payments made under section 1115A models during model testing, which may not be possible if the requirement to apply the MIPS payment adjustment factors was not waived. This waiver would not apply to payments made outside of a section 1115A model with respect to both MIPS eligible clinicians that are participating in and MIPS eligible clinicians that are not participating in a section 1115A model.

To illustrate how this waiver would apply, one model-specific payment to which this proposed rule would apply is the Monthly Enhanced Oncology Services (MEOS) payment in the Oncology Care Model (OCM). The duration of this waiver would begin with the 2019 MIPS payment year and continue for the duration of OCM. Application of our proposed regulation to the MEOS payment illustrates why the waiver is necessary for some payments under section 1115A models. OCM incorporates two model-specific payments for participating practices, creating incentives to improve the quality of care at a lower cost and furnish enhanced services for beneficiaries who undergo chemotherapy treatment for a cancer diagnosis. There is a per-beneficiary per-month MEOS payment for the duration of each 6-month episode of chemotherapy care attributed to the practice, and there is the potential for a performance-based payment for such episodes.

MEOS payments are for Enhanced Services furnished to the OCM practices' beneficiary population for attributed episodes of care (that is, 24/7 access, patient navigation, care planning, and using therapies consistent with nationally recognized clinical guidelines); while some beneficiaries attributed to an OCM Practice will require more support than others, all beneficiaries in episodes of care attributed to an OCM practice have access to the OCM Enhanced Services throughout their 6-month episode. The MEOS payment is set at \$160 per beneficiary per month for all OCM Practitioners. Because the MEOS payments are made for services for which payment is made under, or based on the PFS and which are furnished by an eligible clinician, they are considered covered professional services as defined in section 1848(k)(3)(A) of the Act. Accordingly, beginning in 2019 (the first MIPS payment year), the MEOS payments would be subject to the MIPS payment adjustments (positive, neutral, or negative) that are applicable for each OCM Practitioner who is a MIPS eligible clinician (at the TIN/NPI level) unless the requirement to apply the MIPS payment adjustment factors to the MEOS payments is waived pursuant to section 1115A(d)(1) of the Act.

We believe it is necessary to waive the requirement to apply the MIPS payment adjustment factors to the MEOS payments solely for purposes of testing OCM because we established the \$160 per beneficiary per month MEOS payment rate after careful study and consideration, and we are specifically

testing the impact and appropriateness of \$160 as the per beneficiary per month MEOS payment amount to OCM Practitioners. Though some payment adjustments such as sequestration apply to MEOS payments, we do not apply others that would result in differential payments across OCM Practitioners, such as the Geographic Pricing Cost Index adjustment and Value-Based Payment Modifier for CY 2018. If the MEOS payments were subject to the MIPS payment adjustment, the MEOS payment amount would not be consistent for all OCM Practitioners across the OCM. We are concerned that the resulting differential MEOS payment amounts would increase the complexity of the model evaluation. Specifically, if OCM practices receive differential MEOS payment amounts, they would therefore receive different levels of payment from OCM per attributed beneficiary, which could provide differential incentives for OCM practices to invest in care coordination and other practice transformation activities. This would substantially increase the complexity of evaluating the impact of the model, as it would be challenging to evaluate how these differential payment amounts influence outcomes, potentially lessening our ability to accurately discern whether \$160 per beneficiary per month is the appropriate payment amount. These differential payment amounts may also potentially distort CMS's intent to incentivize the provision of enhanced oncology care by OCM Practitioners via a standardized per-beneficiary per-month payment for such services.

We propose to provide the public with notice that this proposed new regulation applies to model-specific payments that the Innovation Center elects to test in the future in two ways: First, we will update the Quality Payment Program website (www.qpp.cms.gov) when new model-specific payments subject to this proposed waiver are announced, and second, we will provide a notice in the **Federal Register** to update the public on any new model-specific payments to which this waiver will apply.

(d) CY 2018 Exclusion of MIPS Eligible Clinicians Participating in the Medicare Advantage Qualifying Payment Arrangement Incentive (MAQI) Demonstration

In conjunction with releasing this proposed rule, CMS is announcing the MAQI Demonstration, authorized under section 402 of the Social Security Amendments of 1968 (as amended). The MAQI Demonstration is designed to test whether excluding MIPS eligible

clinicians who participate to a sufficient degree in certain payment arrangements with Medicare Advantage Organizations (MAOs) from the MIPS reporting requirements and payment adjustment will increase or maintain participation in payment arrangements similar to Advanced APMs with MAOs and change the manner in which clinicians deliver care.

If the waivers proposed below are finalized, the MAQI Demonstration will allow certain participating clinicians to be excluded from the MIPS reporting requirements and payment adjustment (if the clinicians participate to a sufficient degree in a combination of Qualifying Payment Arrangements with MAOs and Advanced APMs with Medicare FFS during the performance period for that year) without meeting the criteria to be QPs or otherwise meeting a MIPS exclusion criterion under the Quality Payment Program. For example, eligible clinicians that did not meet the criteria to be a QP for a given year, or were not otherwise eligible to be excluded from MIPS (that is, were not newly enrolled in Medicare or did not fall below the low volume threshold for Medicare FFS patients or payments) could be excluded from the MIPS reporting requirements and payment adjustment through the Demonstration. For purposes of the MAQI Demonstration, we would apply requirements for Qualifying Payment Arrangements that are consistent with the criteria for Other Payer Advanced APMs under the Quality Payment Program as set forth in § 414.1420. In addition, we are proposing that the combined thresholds for Medicare payments or patients through Qualifying Payment Arrangements with MAOs and Advanced APMs that a participating clinician must meet in order to attain waivers of the MIPS reporting requirements and payment adjustment through the MAQI Demonstration matches the thresholds for participation in Advanced APMs under the Medicare Option of the Quality Payment Program. In 2018, those thresholds are 25 percent for the payment amount threshold and 20 percent for the patient count threshold. Under the MAQI Demonstration, aggregate participation in Advanced APMs and Qualifying Payment Arrangements will be used, without applying a specific minimum threshold to participation in either type of payment arrangement.

Section 402(b) of the Social Security Amendments of 1968 (as amended) authorizes the Secretary to waive requirements of Title XVIII that relate to payment and reimbursement in order to carry out demonstrations under section

402(a). We propose to use the authority in section 402(b) of the Social Security Amendments of 1968 (as amended) to waive requirements of section 1848(q)(6)(E) of the Act and the regulations implementing it, to waive the payment consequences (positive, negative or neutral adjustments) of the MIPS and to waive the associated MIPS reporting requirements in 42 CFR part 414 adopted to implement the payment consequences, subject to conditions outlined in the Demonstration. As a practical matter, the waiver would have the effect of acting as another exclusion from MIPS for eligible clinicians who participate in the MAQI Demonstration and meet the performance thresholds set in the demonstration. To qualify for these waivers, a participating clinician must participate to a sufficient degree in Qualifying Payment Arrangements with MAOs and Advanced APMs in FFS Medicare during the performance period for that year, without meeting the criteria to be QPs or Partial QPs, or otherwise meeting the MIPS exclusion criteria of the Quality Payment Program. The threshold to qualify for the waivers using participation in these specific payment arrangements could be met in one of two ways: A certain percentage of payments or patients is tied to participation in a combination of Advanced APMs and Qualifying Payment Arrangements. These thresholds will match the thresholds under the Medicare Option of the Quality Payment Program. We propose to begin the MAQI Demonstration in Calendar 2018, with the 2018 Performance Period, and operate the project for a total of 5 years.

The Demonstration will also waive the provision in section 1848(q)(1)(A) of the Act that the Secretary shall permit any eligible clinician to report on applicable measures and activities, so that the Demonstration will prohibit reporting under the MIPS by eligible clinicians who participate in the Demonstration and meet the thresholds to receive the waivers from the MIPS reporting requirements and payment adjustment for a given year. This waiver is necessary to prevent the potential gaming opportunity wherein participating clinicians could intentionally report artificially poor performance under the MIPS for years in which they receive waivers from MIPS payment consequences, then receive artificially inflated quality improvement points under MIPS in later years when they do not receive waivers from MIPS payment consequences. We believe this waiver is necessary under the Demonstration because the

Demonstration creates a scenario in which participating clinicians could report to MIPS, not be subject to the MIPS payment adjustment for that year, but have that year's data used in the calculation of quality improvement points in future years. Clinicians who are excluded from the MIPS reporting requirements and payment adjustment through participation in the Demonstration would not be permitted to report to MIPS. Clinicians who participate in the Demonstration but are not excluded from MIPS (whether through participation in the Demonstration or otherwise) would continue to be MIPS eligible clinicians who are subject to the MIPS reporting requirements and payment adjustment as usual.

Because of the requirement to ensure budget neutrality with regard to the MIPS payment adjustments under section 1848(q)(6)(F)(ii) of the Act, removing MIPS eligible clinicians from the population across which positive and negative payment adjustments are calculated under MIPS may affect the payment adjustments for other MIPS eligible clinicians. Specifically, the Demonstration would exclude certain clinicians from the pool of MIPS eligible clinicians for which the MIPS payment adjustments are calculated, thereby decreasing the aggregate allowed charges resulting from the application of MIPS adjustment factors included in the budget neutrality determination. The application of waivers to MIPS eligible clinicians participating to a sufficient degree in the MAQI Demonstration may have the effect of changing the aggregate amount of MIPS payment adjustments received by MIPS eligible clinicians to whom the waivers do not apply. The Demonstration is contingent on the finalization of these waivers through rulemaking due to its effect on MIPS payment adjustments for other clinicians.

We invite comment on this proposal.

(e) Example of Adjustment Factors

We provide a figure and several tables as illustrative examples of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2021 MIPS payment year.

Figure A (below) provides an example of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on proposed policies for the 2021 MIPS payment year. In Figure A, the

performance threshold is 30 points. The applicable percentage is 7 percent for the 2021 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 7 percent for the 2021 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 7.5 points based on the performance threshold of 30 points for the 2021 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 7 percent for the 2021 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 7 percent. If the scaling factor is above 1.0, but less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be higher than 7 percent.

Only those MIPS eligible clinicians with a final score equal to 30 points (which is the performance threshold in this example) would receive a neutral MIPS payment adjustment. Because the performance threshold is 30 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points would be less than 7 percent.

Figure A illustrates an example of the slope of the line for the linear adjustments and has been updated from prior rules, but it could change considerably as new information becomes available. In this example, the scaling factor for the MIPS payment adjustment factor is 0.229. In this example, MIPS eligible clinicians with a final score equal to 100 would have a MIPS payment adjustment factor of 1.60 percent (7 percent \times 0.229).

The additional performance threshold is 80 points. An additional MIPS payment adjustment factor of 0.5

percent starts at the additional performance threshold and increases on a linear sliding scale up to 10 percent. This linear sliding scale line is also multiplied by a scaling factor that is greater than zero and less than or equal to 1.0. The scaling factor will be determined so that the estimated aggregate increase in payments

associated with the application of the additional MIPS payment adjustment factors is equal to \$500,000,000. In Figure A, the example scaling factor for the additional MIPS payment adjustment factor is 0.407. Therefore, MIPS eligible clinicians with a final score of 100 would have an additional MIPS payment adjustment factor of 4.07

percent (10 percent \times 0.407). The total adjustment for a MIPS eligible clinician with a final score equal to 100 would be $1 + 0.0106 + 0.0407 = 1.0567$, for a total positive MIPS payment adjustment of 5.67 percent.

BILLING CODE 4120-01-P

FIGURE A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2021 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 7 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. The additional adjustment factor is also illustrative. The additional adjustment factor starts at 0.5 percent and cannot exceed 10 percent and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

BILLING CODE 4120-01-C

The final MIPS payment adjustments will be determined by the distribution of final scores across MIPS eligible clinicians and the performance threshold. More MIPS eligible clinicians

above the performance threshold means the scaling factors would decrease because more MIPS eligible clinicians receive a positive MIPS payment adjustment factor. More MIPS eligible clinicians below the performance

threshold means the scaling factors would increase because more MIPS eligible clinicians would receive a negative MIPS payment adjustment factor and relatively fewer MIPS eligible

clinicians would receive a positive MIPS payment adjustment factor. Table 53 illustrates the changes in payment adjustments based on the final

policies from the 2019 MIPS payment year and the 2020 MIPS payment year, and on the proposed policies for the 2021 MIPS payment year, as well as the

statutorily required increase in the applicable percent as required by section 1848(q)(6)(B) of the Act.

TABLE 53—ILLUSTRATION OF POINT SYSTEM AND ASSOCIATED ADJUSTMENTS COMPARISON BETWEEN TRANSITION YEAR AND THE 2020 MIPS PAYMENT YEAR AND 2021 MIPS PAYMENT YEAR

Transition year		2020 MIPS payment year		2021 MIPS payment year	
Final score points	MIPS adjustment	Final score points	MIPS adjustment	Final score points	MIPS adjustment
0.0–0.75	Negative 4%	0.0–3.75	Negative 5%	0.0–7.5	Negative 7%.
0.76–2.99	Negative MIPS payment adjustment greater than negative 4% and less than 0% on a linear sliding scale.	3.76–14.99	Negative MIPS payment adjustment greater than negative 5% and less than 0% on a linear sliding scale.	7.51–29.99	Negative MIPS payment adjustment greater than negative 7% and less than 0% on a linear sliding scale.
3.00	0% adjustment	15.0	0% adjustment	30.0	0% adjustment.
3.01–69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 4% for scores from 3.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	15.01–69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	30.01–79.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.
70.0–100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 4% for scores from 3.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS. An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 70.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.	70.0–100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS. An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 70.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.	80.0–100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS. An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 80.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.

We have provided updated examples below for the 2021 MIPS payment year to demonstrate scenarios in which MIPS eligible clinicians can achieve a final score at or above the performance threshold of 30 points for the 2021 MIPS payment year.

Example 1: MIPS Eligible Clinician in Small Practice Submits 1 Quality Measure and 1 Improvement Activity

In the example illustrated in Table 54, a MIPS eligible clinician in a small practice reporting individually exceeds the performance threshold by reporting 1 quality measure via claims and performing at the highest level on the measure, for which the MIPS eligible

clinician receives 10 measure achievement points, and reporting one medium-weight improvement activity. The practice does not submit data for the Promoting Interoperability performance category but does submit a significant hardship exception application which is approved; therefore, the weight for the Promoting Interoperability performance category is

redistributed to the quality performance category under the reweighting policies discussed in this proposed rule at section III.H.3.i.(2)(b). We note that this example is only intended to illustrate that small practices may be later adopters of CEHRT and that during the transition period there are opportunities to succeed while practices work towards CEHRT adoption and interoperability. We also assumed the small practice has a cost performance category percent score of 50 percent. Finally, we assumed a complex patient bonus of 3 points. There are several special scoring rules which affect MIPS eligible clinicians in a small practice:

- 10 measure achievement points for the 1 quality measure submitted at the highest level of performance. We refer readers to this policy at § 414.1380(b)(1).

Because the measure is submitted via claims, it does not qualify for the end-to-end electronic reporting bonus, nor would it qualify for the high-priority bonus because it is the only measure submitted. Because the MIPS eligible clinician does not meet full participation requirements, the MIPS eligible clinician does not qualify for improvement scoring. However, because the clinician did submit a measure, the clinician is able to receive 3 measure bonus points for the small practice bonus. Therefore, the quality performance category is (10 measure achievement points + 3 measure bonus points)/60 total available measure points + zero improvement percent score which is 21.67 percent.

- The Promoting Interoperability performance category weight is

redistributed to the quality performance category so that the quality performance category score is worth 70 percent of the final score. We refer readers to section III.H.3.i.(2)(b) of this proposed rule for a discussion of reweighting policies.

- MIPS eligible clinicians in small practices qualify for special scoring for improvement activities so a medium weighted activity is worth 20 points (instead of 10 points for MIPS eligible clinicians generally) out of a total of 40 possible points for the improvement activities performance category. We refer readers to § 414.1380(b)(3) for this policy.

- This MIPS eligible clinician exceeds the performance threshold of 30 points (but does not exceed the additional performance threshold). This score is summarized in Table 54.

TABLE 54—SCORING EXAMPLE 1, MIPS ELIGIBLE CLINICIAN IN A SMALL PRACTICE

[A] Performance category	[B] Performance score	[C] Category weight	[D] Earned points ([B] * [C] * 100)
Quality	21.67%	70%	15.17
Cost	50%	15%	7.5
Improvement Activities	20 out of 40 points—50%	15%	7.5
Promoting Interoperability	N/A	0% (reweighted to quality)	0
Subtotal (Before Bonus)	30.17
Complex Patient Bonus	3
Final Score (not to exceed 100).	33.17

Example 2: Group Submission Not in a Small Practice

In the example illustrated in Table 55, a MIPS eligible clinician in a medium size practice participating in MIPS as a group receives performance category scores of 85 percent for the quality performance category, 50 percent for the cost performance category, 75 percent

for the Promoting Interoperability, and 100 percent for the improvement activities performance categories. There are many paths for a practice to receive an 85 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated at this amount. The final score is calculated to be 82.5, and both the performance threshold of 30 and the

additional performance threshold of 80 are exceeded. Again, for simplicity, we assume a complex patient bonus of 3 points. In this example, the group practice does not qualify for any special scoring, yet is able to exceed the additional performance threshold and will receive the additional MIPS payment adjustment factor.

TABLE 55—SCORING EXAMPLE 2, MIPS ELIGIBLE CLINICIAN IN A MEDIUM PRACTICE

[A] Performance category	[B] Performance score	[C] Category weight	[D] Earned points ([B] * [C] * 100)
Quality	85%	45%	38.25
Cost	50%	15%	7.5
Improvement Activities	40 out of 40 points—100%	15%	15
Promoting Interoperability	75%	25%	18.75
Subtotal (Before Bonus)	79.5
Complex Patient Bonus	3
Final Score (not to exceed 100)	82.5

Example 3: Non-Patient Facing MIPS Eligible Clinician

In the example illustrated in Table 56, an individual MIPS eligible clinician that is non-patient facing and not in a small practice receives performance category scores of 50 percent for the quality performance category, 50 percent for the cost performance category, and 50 percent for 1 medium-weighted improvement activity. Again,

there are many paths for a practice to receive a 50 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated. Because the MIPS eligible clinician is non-patient facing, they qualify for special scoring for improvement activities and receive 20 points (out of 40 possible points) for each medium weighted activity. Also, this individual did not submit Promoting Interoperability performance

category measures and qualifies for the automatic redistribution of the Promoting Interoperability performance category weight to the quality performance category. Again, for simplicity, we assume a complex patient bonus of 3 points.

In this example, the final score is 53 and the performance threshold of 30 is exceeded while the additional performance threshold of 80 is not.

TABLE 56—SCORING EXAMPLE 3, NON-PATIENT FACING MIPS ELIGIBLE CLINICIAN

[A] Performance category	[B] Performance score	[C] Category weight	[D] Earned points ([B] * [C] * 100)
Quality	50%	70%	35
Cost	50%	15%	7.5
Improvement Activities	20 out of 40 points for 1 medium weight activity—50%.	15%	7.5
Promoting Interoperability	0%	0% (reweighted to quality)	0
Subtotal (Before Bonus)	50
Complex Patient Bonus	3
Final Score (not to exceed 100).	53

We note that these examples are not intended to be exhaustive of the types of participants nor the opportunities for reaching and exceeding the performance threshold.

k. Third Party Intermediaries

We refer readers to § 414.1400 and the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819) for our previously established policies regarding third party intermediaries.

In this proposed rule, we are proposing to: (1) Define third party intermediary and require third party intermediaries to be based in the U.S.; (2) update certification requirements for data submission; (3) update the definition of Qualified Clinical Data Registry (QCDR); revise the self-nomination period for QCDRs; update of information required for QCDRs at the time of self-nomination; update consideration criteria for approval of QCDR measures; define the topped out timeline for QCDR measures; (4) revise the self-nomination period for qualified registries; (5) define health IT vendor; (6) update the definition, criteria, and requirements for CMS-approved survey vendor; auditing criteria; and (7) revising probation and disqualification criteria. As we continue our efforts to provide flexible and meaningful reporting options for MIPS eligible clinicians and groups, we will expound

on the requirements and functions of a third party intermediary.

(1) Third Party Intermediaries Definition

At § 414.1305, we are proposing a new definition to define a third party intermediary as an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. A QCDR, qualified registry, health IT vendor, or CMS-approved survey vendor are considered third party intermediaries. We are also proposing to change the section heading at § 414.1400 from “Third party data submissions” to “Third party intermediaries” to elucidate the definition and function of a third party intermediary.

We have received inquiries from stakeholders regarding the ability of a non-U.S. based third party intermediary to participate in MIPS. CMS IT systems are required to adhere to multiple agency and federal security standards and policy. CMS policy prohibits non-U.S. citizens from accessing CMS IT systems, and also requires all CMS program data to be retained in accordance with U.S. Federal policy, specifically National Institute of Standards and Technology (NIST) Special Publication (SP) 800–63, which

outlines enrollment and identity proofing requirements (levels of assurance) for federal IT system access. Access to the Quality Payment Program would necessitate passing a remote or in-person Federated Identity Proofing process (that is, Equifax or equivalent). A non-U.S. based third party intermediary’s potential lack of a SSN, TIN, U.S. based address, and other elements required for identity proofing and identity verification would impact their ability to pass the necessary background checks. An inability to pass identity proofing may limit or fully deny access to the Quality Payment Program if the intent is to interact with the Quality Payment Program outside of the U.S. for the purposes of reporting and storing data.

We would like to emphasize that these requirements are all tied to existing federal policy which is applicable to all HHS/CMS FISMA systems and assets and are not Quality Payment Program specific. More information on these policies is available here: HHS Information Security and Privacy Policy (IS2P) (<https://www.hhs.gov/about/agencies/asa/ocio/cybersecurity/index.html>); CMS Information Systems Security and Privacy Policy (IS2P2) (

Information-Systems-Security-and-Privacy-Policy-IS2P2.html); OMB Memorandum 04–04, E-Authentication Guidance for Federal Agencies (<https://georgewbush-whitehouse.archives.gov/omb/memoranda/fy04/m04-04.pdf>); and NIST SP 800–63 Digital Identity Guidelines (<https://pages.nist.gov/800-63-3/>). Therefore, we propose to amend previously finalized policies at § 414.1400(a)(4) to indicate that a third party intermediary's principle place of business and retention of associated CMS data must be within the U.S.

We would like to note that third party intermediaries that are authorized by us to submit data on behalf of MIPS eligible clinicians, groups or virtual groups have not otherwise been evaluated for the capabilities, quality, or any other features or its products. The United States Government and CMS do not endorse or recommend any third party intermediary or its products. Prior to selecting or using any third party intermediary or its products, MIPS eligible clinicians, groups or virtual groups should perform their own due diligence on the entity and its products, including contacting the entity directly to learn more about its products.

(2) Certification

We previously finalized in the CY 2018 Quality Payment Program final rule (82 FR 53807) at § 414.1400(a)(5), that all data submitted to us by a third party intermediary on behalf of a MIPS eligible clinician, group or virtual group must be certified by the third party intermediary to the best of its knowledge as true, accurate, and complete; and that this certification must occur at the time of the submission and accompany the submission. We have discovered it is not operationally feasible to require certification at the time of submission, or to require that the certification accompany the submission, for submission types by third party intermediaries, including data via direct, login and upload, login and attest, CMS Web Interface or Medicare Part B claims. We refer readers to section III.H.3.h of this proposed rule for our proposed modifications to the previously established data submission terminology. In order to address these various submission types that are currently available, we are proposing to amend § 414.1400(a)(5) to state that all data submitted to CMS by a third party intermediary must be certified as true, accurate, and complete to the best of its knowledge and that such certification must be made in a form and manner and at such time as specified by CMS.

(3) Qualified Clinical Data Registries (QCDRs)

We refer readers to § 414.1400 and the CY 2018 Quality Payment Program final rule (82 FR 53807 through 53815) for our previously finalized policies regarding QCDRs. In this proposed rule, we are proposing to update: The definition of QCDR, the self-nomination period for QCDRs, information required for QCDRs at the time of self-nomination, and consideration of criteria for approval of QCDR measures.

(a) Proposed Update to the Definition of a QCDR

At § 414.1305 and in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), we finalized the definition of a QCDR to be a CMS-approved entity that has self-nominated and successfully completed a qualification process to determine whether the entity may collect medical or clinical data for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients.

We want to ensure that QCDRs that participate in MIPS have access to clinical expertise in quality measurement and are able to provide and demonstrate an understanding of the clinical medicine, evidence-based gaps in care, and opportunities for improvement in the quality of care delivered to patients and priorities that are important to MIPS eligible clinicians. From our experiences with QCDRs to date, we have discovered that certain entities that have a predominantly technical background with limited understanding of medical quality metrics or the process for developing quality measures are seeking approval as a QCDR. We recognize the importance of these organizations' expertise within the Quality Payment Program; however, we do not believe that these types of entities, in the absence of clinical expertise in quality measurement, meet the intent of QCDRs. Specifically, we are concerned that the QCDR measures submitted by such entities for approval have not undergone the same consensus development, scientific rigor, and clinical assessment that is needed for developing measures, compared to those QCDR measures that are developed by specialty societies and other entities with clinical expertise.

We refer readers to the CMS Quality Measure Development Plan at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Final-MDP.pdf> for more information regarding

the measure development process. While we have encouraged the participation of entities as QCDRs, during the past two iterations of the self-nomination period, a large number of entities that do not have the necessary clinical expertise to foster quality improvement have self-nominated or indicated their interest in becoming QCDRs. In reviewing previous QCDR measure submissions during the self-nomination and QCDR measure review and approval cycles in MIPS, we have observed that some entities were developing QCDR measures without a complete understanding of measure constructs (such as what is required of a composite measure or what it means to risk-adjust), and in some instances, QCDRs were developing QCDR measures in clinical areas in which they did not have expertise. We believe that with the increasing interest in QCDR development, it is important to ensure that QCDRs that participate in MIPS are first and foremost in business to improve the quality of care clinicians provide to their patients through quality measurement and/or disease tracking. An added benefit for QCDR participants is providing reliable quality reporting options for quality reporting programs for clinicians and specialists. Therefore, beginning with the 2022 MIPS payment year, we propose to amend § 414.1305 to modify the definition of a QCDR to state that the approved entity must have clinical expertise in medicine and quality measure development. As a part of the self-nomination process, we would look for entities that have quality improvement expertise and a clinical background. We would also follow up with the entity via, for example, email or teleconference, should we question whether or not our standards are met. Specifically, a QCDR would be defined as an entity with clinical expertise in medicine and in quality measurement development that collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. In addition, under § 414.1400(b)(2)(ii), an entity that uses an external organization for purposes of data collection, calculation, or transmission may meet the definition of a QCDR as long as the entity has a signed, written agreement that specifically details the relationship and responsibilities of the entity with the external organization effective as of September 1 the year prior to the year for which the entity seeks to become a QCDR. Thus, we expect entities without clinical expertise in medicine and

quality measure development that want to become QCDRs would collaborate or align with entities with such expertise in accordance with § 414.1400(b)(2)(ii). However, such entities may seek to qualify as another type of third party intermediary, such as a qualified registry. Becoming a registry does not require the level of measure development expertise that is needed to be a QCDR that develops measures.

(b) Establishment of an Entity Seeking To Qualify as a QCDR

In the CY 2017 Quality Payment Program final rule (81 FR 77364), we require at § 414.1400 (c)(2) that the QCDR must have at least 25 participants by January 1 of the performance period. These participants do not need to use the QCDR to report MIPS data to us; rather, they need to submit data to the QCDR for quality improvement. We realize that a QCDR's lack of preparedness to accept data from MIPS eligible clinicians and groups beginning on January 1 of the performance period may negatively impact a clinician's ability to use a QCDR to report, monitor the quality of care they provide to their patients (and act on these results) and may inadvertently increase clinician burden. For these reasons, we are proposing to redesignate § 414.1400 (c)(2) as § 414.1400(b)(2)(i) to state that beginning with the 2022 MIPS Payment Year, the QCDR must have at least 25 participants by January 1 of the year prior to the performance period. These participants do not need to use the QCDR to report MIPS data to us; rather, they need to submit data to the QCDR for quality improvement.

(c) Self-Nomination Process

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53808 through 53813) for our previously established policies regarding the simplified self-nomination process for existing QCDRs in MIPS that are in good standing and web-based submission of self-nomination forms. We are not proposing any changes to those policies in this proposed rule; however, we are proposing to update: (1) The self-nomination period; and (2) information required at the time of self-nomination.

(i) Self-Nomination Period

Under § 414.1400(b), QCDRs must self-nominate from September 1 of the year prior to the applicable performance period until November 1 of the same year and must, among other things, provide all information requested by us at the time of self-nomination. As indicated in the CY 2017 Quality

Payment Program final rule (81 FR 77366), our goal has been to publish the list of approved QCDRs along with their approved QCDR measures prior to the beginning of the applicable performance period.

We have received feedback from entities that have self-nominated to be a QCDR about the need for additional time to respond to requests for information during the review process, particularly with respect to QCDR measures that the entity intends to submit to us for the applicable performance period. In addition, based on our observations of the previous two self-nomination cycles, we anticipate an increase in the number of QCDR measure submissions for our review and consideration. For the transition year of MIPS, we received over 1,000 QCDR measure submissions for review, and for the CY 2018 performance period, we received over 1,400 QCDR measure submissions. In order for us to process, review, and approve the QCDR measure submissions and provide QCDRs with sufficient time to respond to requests for information during the review process, while still meeting our goal to publish the list of approved QCDRs along with their approved QCDR measures prior to the start of the applicable performance period, we believe that an earlier self-nomination period is needed.

Therefore, we are proposing to update the self-nomination period from September 1 of the year prior to the applicable performance period until November 1 to July 1 of the calendar year prior to the applicable performance period until September 1. Therefore, we are also proposing to amend § 414.1400(b)(1) to provide that, beginning with the 2022 MIPS payment year, entities seeking to qualify as QCDRs must self-nominate during a 60-day period beginning on July 1 of the calendar year prior to the applicable performance period and ending on September 1 of the same year; must provide all information required by us at the time of self-nomination; and must provide any additional information requested by us during the review process. For example, for the 2022 MIPS payment year, the applicable performance period would be CY 2020, as discussed in section III.H.3.g. of this proposed rule. Therefore for the CY 2020 performance period, the self-nomination period would begin on July 1st, 2019 and end on September 1st, 2019, and we will make QCDRs aware of this through our normal communication channels. We believe that updating the self-nomination period would allow for additional

review time and measure discussions with QCDRs.

(ii) Information Required at the Time of Self-Nomination

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53814), where we finalized that as a part of the self-nomination review and approval process for the CY 2018 performance period and future years, we will assign QCDR measure IDs to approved QCDR measures, and the same measure ID must be used by any other QCDRs that have received permission to also report the measure. We have received some questions from stakeholders as to whether the QCDR measure ID must be utilized or whether it is optional. As stated in the CY 2018 Quality Payment Program final rule, QCDRs, including any other QCDRs that have received permission to also report the measure, must use the CMS-assigned QCDR measure ID. It is important that the CMS-assigned QCDR measure ID is posted and used accordingly, because without this ID we are not able to accurately identify and calculate the QCDR measures according to their specifications. Therefore, we propose to update § 414.1400(b)(3)(iii) to state that QCDRs must include their CMS-assigned QCDR measure ID number when posting their approved QCDR measure specifications, and also when submitting data on the QCDR measures to us.

(d) QCDR Measure Requirements

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) for where we previously finalized standards and criteria used for selecting and approving QCDR measures. We finalized that QCDR measures must: Provide specifications for each measure, activity, or objective the QCDR intends to submit to CMS; and provide CMS descriptions and narrative specifications for each measure, activity, or objective no later than November 1 of the applicable performance period for which the QCDR wishes to submit quality measures or other performance category (improvement activities and Promoting Interoperability) data starting with the 2018 performance period and in future program years. We are proposing to consolidate our previously finalized standards and criteria used for selecting and approving QCDR measures at § 414.1400(e) and (f) at § 414.1400(b)(3). In this proposed rule, we are proposing to apply certain criteria used under the Call for Quality Measures Process when considering QCDR measures for possible

inclusion in MIPS beginning with the MIPS 2021 payment year.

In the CY 2018 Quality Payment Program final rule (82 FR 53814), we noted our interest in elevating the standards for which QCDR measures are selected and approved for use and sought comment on whether the standards and criteria used for selecting and approving QCDR measures should be more closely aligned with those used for the Call for Quality Measures process described in the CY 2017 Quality Payment Program final rule (81 FR 77151). Some commenters expressed concern with this alignment, stating that the Call for Measures process is cumbersome, and would increase burden. Other commenters expressed the belief that the Call for Measures process does not recognize the uniqueness of QCDRs, and is not agile. We would like to clarify that our intention with any future alignment is to work towards consistent standards and evaluation criteria that would be applicable to all MIPS quality measures, including QCDR measures. We understand that some of the criteria under the Call for Measures process may be difficult for QCDRs to meet prior to submitting a particular measure for approval; however, we believe that the criteria under the Call for Measures process helps ensure that any new measures are reliable and valid for use in the program. Having a greater alignment in measure standards helps ensure that MIPS eligible clinicians and groups are able to select from an array of measures that are considered to be higher quality and provide meaningful measurement. As such, we believe that as we gain additional experience with QCDRs in MIPS, it would be appropriate to further align these criteria for QCDR measures with those of MIPS quality measures in future program years.

Therefore, in addition to the QCDR measure criteria previously finalized at § 414.1400(f), we are proposing to apply select criteria used under the Call for Measures Process, as described in the CY 2018 Quality Payment Program final rule (82 FR 53636). Specifically, in addition to the QCDR measure criteria at proposed § 414.1400(b)(3), we propose to apply the following criteria beginning with the 2021 MIPS payment year when considering QCDR measures for possible inclusion in MIPS:

- Measures that are beyond the measure concept phase of development.
- Preference given to measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.

- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that address the domain for care coordination.
- Measures that address the domain for patient and caregiver experience.
- Measures that address efficiency, cost and resource use.
- Measures that address significant variation in performance.

We believe that as we gain additional experience with QCDRs in MIPS, it would be appropriate to further align these criteria for QCDR measures with those of MIPS quality measures in future program years.

(e) QCDRs Seeking Permission From Another QCDR To Use an Existing, Approved QCDR Measure

In the CY 2018 Quality Payment Program final rule (82 FR 53813), we finalized that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. We intended for this policy to help reduce the number of QCDR measures that are similar in concept or clinical topic, or duplicative of other QCDR measures that are being approved. Furthermore, having multiple QCDRs report on the same QCDR measure allows for a larger cohort of clinicians to report on the measure, which helps establish more reliable benchmarks and may give some eligible clinicians or group a better chance of obtaining a higher score on a particular measure. However, we have experienced that this policy has created unintended financial burden for QCDRs requesting permission from other QCDRs who own QCDR measures, as some QCDRs charge a fee for the use of their QCDR measures. MIPS quality measures, while stewarded by specific specialty societies or organizations, are generally available for third party intermediaries, MIPS eligible clinicians, and groups to report on for purposes of MIPS without a fee for use. Similarly, we believe, that once a QCDR measure is approved for reporting in MIPS, it should be generally available for other QCDRs to report on for purposes of MIPS without a fee for use. We propose at § 414.1400 (b)(3)(ii)(C) that beginning with the 2021 MIPS payment year, as a condition of a QCDR measure's approval for purposes of MIPS, the QCDR measure owner would be required to agree to enter into a license agreement with CMS permitting any approved QCDR to submit data on the QCDR measure (without modification) for purposes of MIPS and each applicable MIPS payment year. We also propose at

§ 414.1400(b)(3)(iii) that other QCDRs would be required to use the same CMS-assigned QCDR measure ID. If a QCDR refuses to enter into such a license agreement, the QCDR measure would be rejected and another QCDR measure of similar clinical concept or topic may be approved in its place.

(4) Qualified Registries

We refer readers to § 414.1400 and the CY 2018 Quality Payment Program final rule (82 FR 53815 through 53818) for our previously finalized policies regarding qualified registries. In this rule, we are proposing to update: Information required for qualified registries at the time of self-nomination and the self-nomination period for qualified registries. This is discussed in more detail below.

(a) Establishment of an Entity Seeking To Qualify as a Qualified Registry

In the CY 2017 Quality Payment Program final rule (81 FR 77383), we state at § 414.1400(h)(2) that the qualified registry must have at least 25 participants by January 1 of the performance period. These participants do not need to use the qualified registry to report MIPS data to us; rather, they need to submit data to the qualified registry for quality improvement. We realize that a qualified registry's lack of preparedness to accept data from MIPS eligible clinicians and groups beginning on January 1 of the performance period may negatively impact a clinician's ability to use a Qualified Registry to report, monitor the quality of care they provide to their patients (and act on these results) and may inadvertently increase clinician burden. For these reasons, we are proposing to redesignate § 414.1400(h)(2) as § 414.1400(c)(2) to state that beginning with the 2022 MIPS Payment Year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period. These participants do not need to use the qualified registry to report MIPS data to us; rather, they need to submit data to the qualified registry for quality improvement.

(b) Self-Nomination Process

We refer readers to § 414.1400(g), the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77383 and 82 FR 53815, respectively) for our previously established policies regarding the self-nomination process for qualified registries. We are not proposing any changes to this policy.

(c) Self-Nomination Period

Under the previously finalized policy at § 414.1400(g), qualified registries must self-nominate from September 1 of the year prior to the applicable performance period until November 1 of the same year and must, among other things, provide all information requested by us at the time of self-nomination. To maintain alignment with the timelines proposed for QCDR self-nomination, as discussed in section III.H.3.k.(3)(c) above, we are also proposing to update the self-nomination period from September 1 of the year prior to the applicable performance period until November 1 to July 1 of the calendar year prior to the applicable performance period until September 1. Specifically, we are proposing at § 414.1400(c)(1) that, beginning with the 2022 MIPS payment year, entities seeking to qualify as qualified registries must self-nominate during a 60-day period beginning on July 1 of the calendar year prior to the applicable performance period and ending on September 1 of the same year; must provide all information required by us at the time of self-nomination; and must provide any additional information requested by us during the review process. For example, for the 2022 MIPS payment year, the applicable performance period would be CY 2020, as discussed in section III.H.3.g. of this proposed rule. Therefore, the self-nomination period for qualified registries would begin on July 1, 2019 and end on September 1, 2019.

(5) Health IT Vendors or Other Authorized Third Parties That Obtain Data From MIPS Eligible Clinicians' Certified EHR Technology (CEHRT)

We refer readers to § 414.1400 and the CY 2017 Quality Payment Program final rule (81 FR 77377 through 77382) for our previously finalized policies regarding health IT vendors or other authorized third parties that obtain data from MIPS eligible clinicians. We finalized that health IT vendors that obtain data from a MIPS eligible clinician, like other third party intermediaries, would have to meet all criteria designated by us as a condition of their qualification or approval to participate in MIPS as a third party intermediary. This includes submitting data in the form and manner specified by us. We propose to codify these policies at § 414.1400(d). Although we specified criteria for a health IT vendor in the CY 2017 Quality Payment Program final rule, we failed to codify the definition of a health IT vendor. Therefore, in this proposed rule, we are

proposing to define at § 414.1305, that health IT vendor means an entity that supports the health IT requirements on behalf of a MIPS eligible clinician (including obtaining data from a MIPS eligible clinician's CEHRT).

As indicated in footnote 1 of the CY 2017 Quality Payment Program final rule (81 FR 77014 through 77015), the term "health IT vendor" encompasses many types of entities that support the health IT requirements on behalf of a MIPS eligible clinician. A "health IT vendor" may or may not also be a "health IT developer" for the purposes of the ONC Health IT Certification Program (Program), and, in some cases, the developer and the vendor of a single product may be different entities. Under the Program, a health IT developer constitutes a vendor, self-developer, or other entity that presents health IT for certification or has health IT certified under the Program. Other health IT vendors may maintain a range of data transmission, aggregation, and calculation services or functions, such as organizations which facilitate health information exchange.

(6) CMS-Approved Survey Vendors

In the CY 2017 Quality Payment Program final rule (81 FR 77386), we finalized the criteria, required forms, and vendor business requirements needed to participate in MIPS as a CMS-approved survey vendor. In this proposed rule, we are proposing at § 414.1400(e) to codify these previously finalized criteria and requirements. Accordingly, we propose that § 414.1400(e) would state that entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. We propose that a CMS-approved survey vendor must meet several criteria. First, an entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

- At least 3 years of experience administering mixed-mode surveys (surveys that employ multiple modes to collect data) that include mail survey administration followed by survey administration via Computer Assisted Telephone Interview (CATI);
- At least 3 years of experience administering surveys to a Medicare population;

- At least 3 years of experience administering CAHPS surveys within the past 5 years;

- Experience administering surveys in English and one of the following languages: Cantonese, Korean, Mandarin, Russian, or Vietnamese;

- Use of equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers, collect data via CATI, electronically administer the survey and schedule callbacks to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

- Employ a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

Furthermore, we propose that to be a CMS-approved survey vendor, the entity must also meet the following criteria: It must have certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data; the entity must have successfully completed, and required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors; the entity must have submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts; the entity must have agreed to participate and cooperate, and have required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors; and the entity must have sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

We also refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53818 through 53819) for our previously established policies regarding the updated survey vendor application deadline.

(7) Auditing of Third Party Intermediaries Submitting MIPS Data

In the CY 2018 Quality Payment Program final rule (82 FR 53819), we established policies regarding auditing of third party intermediaries submitting MIPS data. In this proposed rule, we are not proposing any changes to these policies.

(8) Remedial Action and Termination of Third Party Intermediaries

In the CY 2017 Quality Payment Program final rule (81 FR 77548), we finalized the criteria for probation and disqualification for third party intermediaries at § 414.1400(k). In this proposed rule, we are proposing to revise the numbering of this section and the title to more accurately describe the policies in this section. Thus, we propose to renumber this section as § 414.1400(f) and to rename it as “remedial action and termination of third party intermediaries.” Additionally, we are proposing changes to § 414.1400(f) to amend, clarify, and streamline our policies related to remedial action and termination.

Our intent with these policies is to identify noncompliance with the applicable third party intermediary criteria, as well as identify issues that may impact the accuracy of or our ability to use the data submitted by third party intermediaries. Accordingly, we propose to amend § 414.1400(f)(1) to state that we may take remedial action for noncompliance with applicable third party intermediary criteria for approval (a deficiency) or for the submission of inaccurate, unusable, or otherwise compromised data. In the CY 2017 Quality Payment Program final rule, we finalized our policy regarding data inaccuracies at § 414.1400(k)(4). We are proposing at § 414.1400(f)(3) to expand data inaccuracies to include a determination by us that data is inaccurate, unusable, or otherwise compromised. However, we are not proposing to change the factors we may consider to make such a determination. We also propose to move the notification requirement at § 414.1400(k)(6) to § 414.1400(f)(1) and to apply the requirement to all deficiencies and data errors.

Based on our early experience with third party intermediaries under MIPS and the challenges for both third party intermediaries and us in regards to timing and trying to resolve deficiencies and data errors within the various reporting and performance periods, we propose to amend the timeframes by which a third party intermediary must submit a Corrective Action Plan (CAP) to us or come into compliance. Specifically, we propose § 414.1400(f)(2), which requires third party intermediaries to submit a CAP or correct the deficiencies or data errors by the date specified by us.

Additionally, we propose to consolidate the grounds by which we can take remedial action against a third party intermediary found at

§ 414.1400(k)(1) and (4) into § 414.1400(f)(1), as well as the grounds by which we can terminate a third party intermediary found at § 414.1400(k)(3), (5) and (7) into § 414.1400(f)(2). Therefore, we propose at § 414.1400(f)(1) that if at any time we determine that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, or has submitted data that is inaccurate, unusable, or otherwise compromised, we may take certain remedial actions (for example, request a Corrective Action Plan (CAP)). In addition, we propose at § 414.1400(f)(2) that we may terminate, immediately or with advance notice, the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons: We have grounds to impose remedial action, we have not received a CAP within the specified time period or the CAP is not accepted by us, or the third party intermediary fails to correct the deficiencies or data errors by the date specified by us.

Finally, we propose to consolidate the actions we may take if we identify a deficiency or data error that are set forth at § 414.1400(k)(3) and (7) into § 414.1400(f)(1). Thus, we propose at § 414.1400(f)(1) that if we determine a third party intermediary has ceased to meet one or more of the applicable criteria for approval, or has submitted data that is inaccurate, unusable, or otherwise compromised, we may require the third party intermediary to submit a CAP to us to address the identified deficiencies or data issue, including the actions it will take to prevent the deficiencies or data issues from recurring. The CAP must be submitted to CMS by a date specified by CMS. We propose that CMS may determine that submitted data is inaccurate, unusable, or otherwise compromised if the submitted data: (1) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies; and (2) affects more than three percent (but less than 5 percent) of the total number of MIPS eligible clinicians or group for which data was submitted by the third party intermediary. In addition, we propose that if the third party intermediary has a data error rate of 3 percent or more, we will publicly disclose the entity’s data error rate on the CMS website until the data error rate falls below 3 percent.

We also propose to amend § 414.1400(k) by removing our probation policy. Therefore, we propose to remove the definition of probation at

§ 414.1400(k)(2) and references to probation in § 414.1400(k)(1), (3) and (5).

1. Public Reporting on Physician Compare

This section contains our proposed policies for public reporting on Physician Compare for year 3 of the Quality Payment Program (2019 data available for public reporting in late 2020) and future years, including MIPS, APMs, and other information as required by the MACRA and building on our previously finalized public reporting policies (see 82 FR 53819 through 53832).

Physician Compare (<http://www.medicare.gov/physiciancompare>) draws its operating authority from section 10331(a)(1) of the Affordable Care Act. Consistent with section 10331(a)(2) of the Affordable Care Act, Physician Compare initiated a phased approach to publicly reporting performance scores that provide comparable information on quality and patient experience measures. A complete history of public reporting on Physician Compare is detailed in the CY 2016 PFS final rule (80 FR 71117 through 71122). More information about Physician Compare, including the history of public reporting and regular updates about what information is currently available, can also be accessed on the Physician Compare Initiative website at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/physician-compare-initiative/>.

As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53820), Physician Compare has continued to pursue a phased approach to public reporting under the MACRA in accordance with section 1848(q)(9) of the Act. Generally, all data available for public reporting on Physician Compare must meet our established public reporting standards under § 414.1395(b). In addition, for each program year, CMS provides a 30-day preview period for any clinician or group with Quality Payment Program data before the data are publicly reported on Physician Compare under § 414.1395(d). All data available for public reporting—measure rates, scores, and attestations, objectives, etc.—are available for review and correction during the targeted review process. See the CY 2018 Quality Payment Program final rule for details on this process (82 FR 53820).

Lastly, section 104(e) of the MACRA requires the Secretary to make publicly available, on an annual basis, in an easily understandable format, information for physicians and, as

appropriate, other eligible clinicians related to items and services furnished to Medicare beneficiaries under Title XVIII of the Act. In accordance with section 104(e) of the MACRA, we finalized a policy in the CY 2016 PFS final rule (80 FR 71131) to add utilization data to the Physician Compare downloadable database.

We believe section 10331 of the Affordable Care Act supports the overarching goals of the MACRA by providing the public with performance information that will help them make informed decisions about their health care, while encouraging clinicians to improve the quality of care they provide to their patients. In accordance with section 10331 of the Affordable Care Act, section 1848(q)(9) of the Act, and section 104(e) of the MACRA, we plan to continue to publicly report performance information on Physician Compare. As such, the following sections discuss the information previously finalized for inclusion on Physician Compare for all program years, as well as our proposed policies for public reporting on Physician Compare for year 3 of the Quality Payment Program (2019 data available for public reporting in late 2020) and future years.

(1) Final Score, Performance Categories, and Aggregate Information

In the CY 2018 Quality Payment Program final rule (82 FR 53823), we finalized a policy to publicly report on Physician Compare, either on profile pages or in the downloadable database, the final score for each MIPS eligible clinician and the performance of each MIPS eligible clinician for each performance category, and to periodically post aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of performance of all the MIPS eligible clinicians for each performance category, as technically feasible, for all future years. We will use statistical testing and user testing, as well as consultation with the Physician Compare Technical Expert Panel convened by our contractor, to determine how and where these data are best reported on Physician Compare.

A summary of the previously finalized policies related to each performance category of MIPS data, as well as proposed policies for year 3 and future years, follows. It is important to note just because performance information is available for public reporting, it does not mean all data under all performance categories will be included on either public-facing profile pages or the downloadable database.

These data must meet the public reporting standards, first. And, second, we are careful to ensure that we do not include too much information on public-facing profile pages in an effort not to overwhelm website users. Although all information submitted under MIPS is technically available for public reporting, we will continue our phased approach to making this information public.

(2) Quality

In the CY 2018 Quality Payment Program final rule (82 FR 53824), we finalized a policy to make all measures under the MIPS quality performance category available for public reporting on Physician Compare, either on profile pages or in the downloadable database, as technically feasible. This includes all available measures across all collection types for both MIPS eligible clinicians and groups, for all future years. We will use statistical testing and website user testing to determine how and where measures are reported on Physician Compare. We will not publicly report first year quality measures, meaning any measure in its first year of use in the quality performance category, under § 414.1395(c). We will also include the total number of patients reported on for each measure included in the downloadable database (82 FR 53824).

We propose to modify § 414.1395(b) to reference “collection types” instead of “submission mechanisms” to accurately update the terminology. We also propose to revise § 414.1395(c) to indicate that we will not publicly report first year quality measures for the first 2 years a measure is in use in the quality performance category. We propose this change to encourage clinicians and groups to report new measures, get feedback on those measures, and learn from the early years of reporting measures before measure are made public. We request comment on these proposals.

(3) Cost

In the CY 2018 Quality Payment Program final rule (82 FR 53825), we finalized a policy to include on Physician Compare a subset of cost measures that meet the public reporting standards at § 414.1395(b), either on profile pages or in the downloadable database, if technically feasible, for all future years. This includes all available cost measures, and applies to both MIPS eligible clinicians and groups. We will use statistical testing and website user testing to determine how and where measures are reported on Physician Compare. We previously finalized that we will not publicly report first year

cost measures, meaning any measure in its first year of use in the cost performance category, under § 414.1395(c). Consistent with our proposal for first year quality measures, we propose to revise § 414.1395(c) to indicate that we will not publicly report first year cost measures for the first 2 years a measure is in use in the cost performance category. We propose this change to help clinicians and groups get feedback on these measures and learn from the early years of these new measures being calculated before measure are made public. We request comment on this proposal.

(4) Improvement Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53826), we finalized a policy to include a subset of improvement activities information on Physician Compare, either on the profile pages or in the downloadable database, if technically feasible, for all future years. This includes all available activities reported via all available collection types, and applies to both MIPS eligible clinicians and groups. For those eligible clinicians and groups that successfully meet the improvement activities performance category requirements, this information will be posted on Physician Compare as an indicator. We also finalized for all future years to publicly report first year activities if all other public reporting criteria are satisfied.

(5) Promoting Interoperability (PI)

In the CY 2018 Quality Payment Program final rule (82 FR 53827), we finalized a policy to include an indicator on Physician Compare for any eligible clinician or group who successfully meets the Promoting Interoperability performance category, as technically feasible, for all future years. “Successful” performance is defined as obtaining the base score of 50 percent (82 FR 53826). We also finalized a policy to include on Physician Compare, either on the profile pages or in the downloadable database, as technically feasible, additional information, including, but not limited to, objectives, activities, or measures specified in the CY 2018 Quality Payment Program final rule (82 FR 53827; see 82 FR 53663 through 53688). This includes all available objectives, activities, or measures reported via all available collection types, and applies to both MIPS eligible clinicians and groups (82 FR 53827). We will use statistical testing and website user testing to determine how and where objectives, activities, and measures are reported on Physician Compare. We also

finalized for all future years to publicly report first year Promoting Interoperability objectives, activities, and measures if all other public reporting criteria are satisfied.

In addition, we finalized that we will indicate “high” performance, as technically feasible and appropriate, in year 2 of the Quality Payment Program (2018 data available for public reporting in late 2019). “High” performance is defined as obtaining a score of 100 percent (82 FR 53826 through 53827).

As the Quality Payment Program progresses into year 3, and consistent with our work to simplify the requirements under the Promoting Interoperability performance category of MIPS, we are proposing not to include the indicator of “high” performance and to maintain only an indicator for “successful” performance in the Promoting Interoperability performance category beginning with year 2 of the Quality Payment Program (2018 data available for public reporting in late 2019). Not including the “high” performance indicator while maintaining the “successful” performance indicator continues to provide useful information to patients and caregivers without burdening website users with the additional complexity of accurately differentiating between “successful” and “high” performance, as this proved difficult for users in testing. User testing to date shows that website users value this information overall, however, as they appreciate knowing clinicians and groups are effectively using EHR technology to improve care quality.

We request comment on our proposal not to include the indicator for “high” performance in the Promoting Interoperability performance category beginning with year 2 of the Quality Payment Program (2018 data available for public reporting in late 2019).

We are also seeking comment only on the type of EHR utilization performance information stakeholders would like CMS to consider adding to Physician Compare. This information would be considered for possible future inclusion on the website.

(6) Achievable Benchmark of Care (ABC™)

Benchmarks are important to ensuring that the quality data published on Physician Compare are accurately understood. A benchmark allows website users to more easily evaluate the information published by providing a point of comparison between groups and between clinicians. In the CY 2018 Quality Payment Program final rule (82 FR 53829), we finalized a policy to use

the Achievable Benchmark of Care (ABC™) methodology to determine a benchmark for the quality, cost, improvement activities, and Promoting Interoperability data, as feasible and appropriate, by measure and collection type for each year of the Quality Payment Program based on the most recently available data each year. We also finalized a policy to use this benchmark as the basis of a 5-star rating for each available measure, as feasible and appropriate. For a detailed discussion of the ABC™ methodology, and more information about how this benchmark together with the equal ranges method is currently used to determine the 5-star rating system for Physician Compare, see the CY 2018 Quality Payment Program final rule (82 FR 53827 through 53829). Additional information, including the Benchmark and Star Rating Fact Sheet, can be found on the Physician Compare Initiative website (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/physician-compare-initiative/index.html>).

(a) Historical Data-Based Benchmarks

Benchmarks, and the resulting star rating, are valuable tools for patients and caregivers to use to best understand the performance information included on Physician Compare. Benchmarks can also help the clinicians and groups reporting performance information understand their performance relative to their peers, and therefore, help foster continuous quality improvement. In the initial years of the Quality Payment Program, we anticipated year-to-year changes in the measures available. As noted, we previously finalized a policy to determine the benchmark using the most recently available data (82 FR 53829). This ensured that a benchmark could be calculated despite potential year-to-year measure changes, but it also meant that the benchmark was not known to clinicians and groups prior to the performance period.

By year 3 of the Quality Payment Program (2019 data available for public reporting in late 2020), we expect enough year-to-year stability in the measures available for reporting across all MIPS performance categories to use historical data to produce a reliable and statistically sound benchmark for most measures, by measure and collection type. Therefore, we are proposing to modify our existing policy to use the ABC™ methodology to determine benchmarks for the quality, cost, improvement activities, and Promoting Interoperability performance categories based on historical data, as feasible and appropriate, by measure and collection

type beginning with year 3 of the Quality Payment Program (2019 data available for public reporting in late 2020). Specifically, benchmarks would be based on performance data from a baseline period or, if such data is not available, performance data from the performance period. The baseline period would be the 12-month calendar year that is 2 years prior to the applicable performance period. The benchmarks would be published prior to the start of the performance period, as technically feasible. For example, for the CY 2019 performance period, the benchmark developed using the ABC™ methodology would be calculated using CY 2017 performance period data and would be published by the start of CY 2019, as feasible and appropriate. If historical data is not available for a particular measure, we would indicate that and calculate the benchmark using performance data from the performance period. In this example, we would use CY 2019 performance period data to calculate the benchmark for CY 2019 performance period measures, as needed. This approach of utilizing historical data would be consistent with how the MIPS benchmarks are calculated for purposes of scoring the quality performance category. But, most importantly, this approach would provide eligible clinicians and groups with valuable information about the benchmark to meet to receive a 5-star rating on Physician Compare before data collection starts for the performance period. We request comment on this proposal.

(b) QCDR Measure Benchmarks

Currently, only MIPS measures are star rated on Physician Compare. QCDR measures, as that term is used in § 414.1400(e), are publicly reported as percent performance rates. As more QCDR measure data is available for public reporting, and appreciating the value of star rating the measures presented to website users, we believe star rating the QCDR measures will greatly benefit patients and caregivers as they work to make informed health care decisions. Particularly in the quality performance category, we believe that reporting all measure data in the same way will ease the burden of interpretation placed on site users and make the data more useful to them. Therefore, we are proposing to further modify our existing policy to extend the use of the ABC™ methodology and equal ranges method to determine, by measure and collection type, a benchmark and 5-star rating for QCDR measures, as that term is used in proposed § 414.1400(b)(3), as feasible

and appropriate, using current performance period data in year 2 of the Quality Payment Program (2018 data available for public reporting in late 2019), and using historical benchmark data when possible as proposed above, beginning with year 3 of the Quality Payment Program (2019 data available for public reporting in late 2020). We request comment on this proposal.

(7) Voluntary Reporting

In the CY 2018 Quality Payment Program final rule (82 FR 53830), we finalized a policy to make available for public reporting all data submitted voluntarily across all MIPS performance categories, regardless of collection type, by eligible clinicians and groups that are not subject to the MIPS payment adjustments, as technically feasible, for all future years. If an eligible clinician or group that is not subject to the MIPS payment adjustment chooses to submit data on quality, cost (if applicable), improvement activities, or Promoting Interoperability, these data are available for public reporting. We also finalized that during the 30-day preview period, these eligible clinicians and groups may opt out of having their data publicly reported on Physician Compare (82 FR 53830). If these eligible clinicians and groups do not opt out during the 30-day preview period, their data will be available for inclusion on Physician Compare if the data meet all public reporting standards at § 414.1395(b).

(8) APM Data

In the CY 2018 Quality Payment Program final rule (82 FR 53830), we finalized a policy to publicly report the names of eligible clinicians in Advanced APMs and the names and performance of Advanced APMs and APMs that are not considered Advanced APMs related to the Quality Payment Program, such as Track 1 Shared Savings Program Accountable Care Organizations (ACOs), as technically feasible, for all future years. We also finalized a policy to link clinicians and groups and the APMs they participate in on Physician Compare, as technically feasible.

4. Overview of the APM Incentive

a. Overview

Section 1833(z) of the Act requires that an incentive payment be made to QPs for achieving threshold levels of participation in Advanced APMs. In the CY 2017 Quality Payment Program final rule (81 FR 77399 through 77491), we finalized the following policies:

- Beginning in 2019, if an eligible clinician participated sufficiently in an Advanced APM during the QP

Performance Period, that eligible clinician may become a QP for the year. Eligible clinicians who are QPs are excluded from the MIPS reporting requirements for the performance year and payment adjustment for the payment year.

- For years from 2019 through 2024, QPs receive a lump sum incentive payment equal to 5 percent of their prior year's estimated aggregate payments for Part B covered professional services. Beginning in 2026, QPs receive a higher update under the PFS for the year than non-QPs.

- For payment years 2019 and 2020, eligible clinicians may become QPs only through participation in Advanced APMs.

- For payment years 2021 and later, eligible clinicians may become QPs through a combination of participation in Advanced APMs and Other Payer Advanced APMs (which we refer to as the All-Payer Combination Option).

In this proposed rule, we discuss proposals for clarifications and modifications to some of the policies that we previously finalized pertaining to Advanced APMs and the All-Payer Combination Option.

b. Terms and Definitions

As we continue to develop the Quality Payment Program, we have identified the need to propose changes to some of the previously finalized definitions. A complete list of the original definitions is available in the CY 2017 Quality Payment Program final rule (81 FR 77537 through 77540).

In the CY 2018 Quality Payment Program final rule, in order to consolidate our regulations and avoid unnecessarily defining a term, we finalized removal of the defined term for "Advanced APM Entity" in § 414.1305 and replaced instances of that term throughout the regulation with "APM Entity." Similarly, we finalized replacing "Advanced APM Entity group" with "APM Entity group" where it appears throughout our regulations (82 FR 53833). We noted that these changes were technical and had no substantive effect on our policies.

To further consolidate our regulations and to clarify any potential ambiguity, we propose to modify the definition of Qualifying APM Participant (QP) at § 414.1305 to provide that a QP is an eligible clinician determined by CMS to have met or exceeded the relevant QP payment amount or QP patient count threshold for the year based on participation in or with an APM Entity that is participating in an Advanced APM. The current definition of QP is based on an eligible clinician's

participation in an Advanced APM Entity, which no longer is a defined term. Simply replacing the term "Advanced APM Entity" with the term "APM Entity" as finalized in the CY 2018 Quality Payment Program final rule does not fully convey the definition of QP because, as previously noted at 82 FR 53833, an APM Entity can participate in an APM that is, or is not, an Advanced APM; and QP status is attainable only through participation in an Advanced APM. Again we note that this proposed change is technical and would not have a substantive effect on our policies.

d. Advanced APMs

(1) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77408), we finalized the criteria that define an Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that:

- Requires its participants to use certified EHR technology (CEHRT) (81 FR 77409 through 77414);
- Provides for payment for covered professional services based on quality measures comparable to measures under the quality performance category under MIPS (81 FR 77414 through 77418); and
- Either requires its participating APM Entities to bear financial risk for monetary losses that are in excess of a nominal amount, or is a Medical Home Model expanded under section 1115A(c) of the Act (81 FR 77418 through 77431). We refer to this criterion as the financial risk criterion.

(2) Use of CEHRT

(a) Overview

In the CY 2017 Quality Payment Program final rule, we finalized that an Advanced APM must require at least 50 percent of eligible clinicians in each APM Entity to use CEHRT as defined at § 414.1305 to document and communicate clinical care with patients and other health care professionals. Further, we proposed but did not finalize an increase to the requirement wherein Advanced APMs must require 75 percent CEHRT use in the subsequent year. Instead we maintained the 50 percent CEHRT use requirement for the second performance year and beyond and indicated that we would consider making any potential changes through future rulemaking (81 FR 77412).

As we move into the third year of the Quality Payment Program, we have prioritized interoperability which we consider to be health information

technology that enables the secure exchange of electronic health information with, and use of electronic health information from, other health information technology without special effort on the part of the user; allows for complete access, exchange, and use of all electronically accessible health information for authorized use under applicable law; and does not constitute information blocking as also defined by the 21st Century Cures Act. As such, we are committed to working with the ONC on implementation of the interoperability provisions of the 21st Century Cures Act. We also are exploring opportunities to incorporate these goals into the design of alternative payment models, wherever feasible and appropriate, to further promote the seamless and secure exchange of health information for clinicians and patients.

(b) Increasing the CEHRT Use Criterion for Advanced APMs

We are now proposing that, beginning for CY 2019, in order to be an Advanced APM, the APM must require at least 75 percent of eligible clinicians in each APM Entity use CEHRT as defined at § 414.1305 to document and communicate clinical care with patients and other health care professionals.

According to data collected by ONC, since the CY 2017 Quality Payment Program final rule was published, EHR adoption has been widespread and we want to encourage continued adoption. Additionally, in response to the CY 2017 Quality Payment Program proposed rule stakeholders encouraged us to raise the CEHRT use criterion to 75 percent (see 81 FR 77411). We believe that this proposed change aligns with the increased adoption of CEHRT among providers and suppliers that is already happening, and will encourage further CEHRT adoption. We further believe that most existing Advanced APMs already include provisions that would require participants to adhere to the level of CEHRT use specified in our regulations, and therefore this increase will not negatively impact the Advanced APM status of those APMs.

We seek comment on this proposal.

(3) MIPS Comparable Quality Measures

(a) Overview

In the CY 2017 Quality Payment Program final rule, we explained that one of the criteria for an APM to be an Advanced APM is that it must provide for payment for covered professional services based on quality measures comparable to measures under the performance category described in section 1848(q)(2)(A) of the Act, which

is the MIPS quality performance category. We generally refer to these measures in the remainder of this discussion as “MIPS-comparable quality measures.” We also explained that we interpret this criterion to require the APM to incorporate quality measure results as a factor when determining payment to participants under the terms of the APM (81 FR 77414).

In the CY 2017 Quality Payment Program proposed rule, we proposed that to be an Advanced APM, an APM must base payment on quality measures that are evidence-based, reliable, and valid; and that at least one measure must be an outcome measure unless there is not an applicable outcome measure on the MIPS quality list at the time the APM is developed. The required outcome measure does not have to be one of those on the MIPS quality measure list. We did not specify that the outcome measure is required to be evidence-based, reliable, and valid. (81 FR 28302). We finalized these policies in the CY 2017 Quality Payment Program final rule and codified at § 414.1415(b).

(b) General Quality Measures: Evidence-Based, Reliable, and Valid

We considered a number of ways to implement the Advanced APM criterion that payment must be based on MIPS-comparable quality measures, as well as how to define which measures would reflect the statutory requirements to be “comparable” to MIPS quality measures. We explored options for defining MIPS-comparable quality measures, including: (1) Limiting comparable measures to those from the annual MIPS list of measures; and (2) including measures that have an evidence-based focus and are found to be reliable and valid through measure testing. We concluded that while these potential approaches have merit, they may be overly restrictive for the variety of APMs, which are intended to have the flexibility to test new ways of paying for and delivering care (81 FR 28301 through 28302).

In light of this, we finalized a framework for identifying MIPS-comparable quality measures that was intended to reflect a few key principles: Specifically, that the measure framework would require measures with an evidence-based focus that are reliable and valid, while not being so restrictive as to limit the APMs from using new or innovative measures (81 FR 28302).

Specifically, in the CY 2017 Quality Payment Program final rule, we codified at § 414.1415(b)(2) that at least one of the quality measures upon which an Advanced APM bases the payment must

have an evidence-based focus, be reliable, and valid, and meet at least one of the following criteria: Used in the MIPS quality performance category as described in § 414.1330; endorsed by a consensus-based entity; developed under section 1848(s) of the Act; Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid.

It has come to our attention that some have interpreted § 414.1415(b)(2) to mean that measures on the MIPS final list or submitted in response to the MIPS Call for Quality Measures necessarily are MIPS-comparable quality measures, even if they are not evidence-based, reliable, and valid. We did not intend to imply that any measure that was merely submitted in response to the annual call for quality measures or developed using Quality Payment Program funding would automatically qualify as MIPS-comparable even if the measure was never endorsed by a consensus-based entity, adopted under MIPS, or otherwise determined to be evidence-based, reliable, and valid. While we believe such measures may be evidence-based, reliable, and valid, we did not intend to consider them so for purposes of § 414.1415(b)(2) without independent verification by a consensus-based entity, or based on our own assessment and determination, that they are evidence-based, reliable, and valid. We further believe the same principle applies to Qualified Clinical Data Registry (QCDR) measures. If QCDR measures are endorsed by a consensus-based entity they are presumptively considered MIPS-comparable quality measures for purposes of § 414.1415(b)(2); otherwise we would have needed independent verification, or to make our own assessment and determination, that the measures are evidence-based, reliable, and valid before considering them to be MIPS-comparable quality measures (see 81 FR 77415 through 77417).

Because of the potential ambiguity in the existing definition and out of an abundance of caution in order to avoid any adverse impact on APM entities, eligible clinicians, or other stakeholders, we have used the more permissive interpretation of the regulation text, wherein measures developed under section 1848(s) of the Act and submitted in response to the MIPS Call for Quality Measures will meet the quality criterion in implementing the program thus far, and intend to use this interpretation for the 2019 QP Performance Period until our new proposal described below is

effective on January 1, 2020. Recognizing that APMs and other payer payment arrangements that we might consider for Advanced APM and Other Payer Advanced APM determinations are well into development for 2019, we are proposing to amend our regulation at § 414.1415(b)(2) to be effective as of January 1, 2020. Specifically, we propose that at least one of the quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must be finalized on the MIPS final list of measures, as described in § 414.1330; be endorsed by a consensus-based entity; or otherwise determined by CMS to be evidenced-based, reliable, and valid.

That is, for QP Performance Period 2020 and all future QP Performance Periods, we will treat any measure that is either included in the MIPS final list of measures or has been endorsed by a consensus-based entity as presumptively evidence-based, reliable, and valid. All other measures would need to be independently determined by CMS to be evidence-based, reliable, and valid, in order to be considered MIPS-comparable quality measures.

We believe this revised regulation would better articulate our interpretation of the statute and reflect the MIPS-comparable quality measure standards that are currently met by all Advanced APMs in operation, and that we anticipate would be met by those under development. Additionally, this clarification is intended to align with our parallel proposal for the Other Payer Advanced APM criteria, and maintain consistency between the Advanced APM and Other Payer Advanced APM criteria. We believe this proposal will better align our regulations and inform stakeholders, particularly eligible clinicians or APM Entities who may be participating in both Advanced APMs and Other Payer Advanced APMs in CY 2019, of the applicable quality measure requirements, while also helping non-Medicare payers to continue developing payment arrangements that meet the quality measure criterion to be an Other Payer Advanced APM as discussed at 82 FR 53847.

We seek comment on this proposal.

(c) Outcome Measures: Evidence-Based, Reliable, and Valid

In § 414.1415(b)(3), we generally require that the measures upon which an Advanced APM bases payment must include at least one outcome measure, but specify that this requirement does not apply if CMS determines that there are no available or applicable outcome measures in the MIPS quality measure lists for the Advanced APM's first QP

Performance Period. We note that the current regulation does not require that the outcome measure be evidence-based, reliable, and valid. While it was our general expectation when crafting the CY 2017 Quality Payment Program final rule that outcome measures would meet this standard, we did not explicitly include this requirement.

We are proposing to modify § 414.1415(b)(3) to explicitly require that an outcome measure must be evidence-based, reliable, and valid (unless, as specified in the current regulation, there is no available or applicable outcome measure). This proposal would have an effective date of January 1, 2020, and would specifically require that at least one outcome measure for which measure results are included as a factor when determining payment to participants under the terms of the APM for purposes of paragraph (b)(1) must also be a MIPS-comparable quality measure. This is intended to align with our parallel proposal for the Other Payer Advanced APM criteria. We believe this proposal will better align our regulations and inform stakeholders, particularly eligible clinicians or APM Entities who may be participating in both Advanced APMs and Other Payer Advanced APMs in CY 2019, of the originally intended applicable outcomes measure requirements for APMs to be deemed Advanced APMs and for payment arrangements to be deemed Other Payer Advanced APMs, while also helping non-Medicare payers to continue developing payment arrangements that meet the outcomes measure requirement to be an Other Payer Advanced APM.

As such, we propose to modify § 414.1415(b)(3) (as similarly proposed in the General Quality Measures: Evidence-Based, Reliable, and Valid section III.H.4.d.(3)(b) of this proposed rule), so that at least one outcome measure used for purposes of § 414.1415(b)(1) must also be:

- Finalized on the MIPS final list of measures, as described in § 414.1330;
- Endorsed by a consensus-based entity; or
- Determined by CMS to be evidence-based, reliable, and valid.

As for the proposed requirement for an evidence-based, reliable, and valid quality measure, as we discuss in section III.H.4.d.(3)(b) of this proposed rule, we propose to treat any measure that is either included in the MIPS final list of measures or has been endorsed by a consensus-based entity as presumptively evidence-based, reliable, and valid. All other measures would need to be determined by CMS to be evidence-based, reliable, and valid.

We believe this modification to our regulation would increase the likelihood that the inclusion of quality measures in Advanced APMs will lead to improvements in the quality of care and resulting patient outcomes. Because an Advanced APM is required to base payment on an outcome measure, (unless an applicable outcome measure is not available), participants in Advanced APMs may have powerful financial incentives to modify their behaviors to improve their performance on this measure. Outcome measures that are not evidence-based, reliable, and valid may encourage adverse patient selection, or create other unintended or perverse incentives for model participants. As such, we believe it is important that the outcome measures on which results are included as a factor when determining payment under the APM must be evidence-based, reliable, and valid. We note that these proposed changes would not change the status of any APMs in our current portfolio of Advanced APMs.

We seek comment on this proposal.

(4) Bearing Financial Risk for Monetary Losses

(a) Overview

In the CY 2017 Quality Payment Program final rule, we finalized the amount of the generally applicable revenue-based nominal amount standard at 8 percent for the first two QP Performance Periods only, and we sought comment on what the revenue-based nominal amount standard should be for the third and subsequent QP Performance Periods. Specifically, we sought comment on: (1) Setting the revenue-based standard for 2019 and later at up to 15 percent of revenue; or (2) setting the revenue-based standard at 10 percent so long as risk is at least equal to 1.5 percent of expected expenditures for which an APM Entity is responsible under an APM (81 FR 77427).

In the CY 2018 Quality Payment Program final rule, we finalized our proposal to maintain the generally applicable revenue-based nominal amount standard at 8 percent for the 2019 and 2020 QP Performance Periods at § 414.1415(c)(3)(i)(A). We also specified that the standard is based on the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities. We stated that we would address the nominal amount standard for QP Performance Periods after 2020 in future rulemaking (82 FR 53838).

(b) Generally Applicable Nominal Amount Standard

We propose to amend our regulation at § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

We continue to believe that 8 percent of Medicare Parts A and B revenues of all providers and suppliers in participating APM Entities generally represents an appropriate standard for more than a nominal amount of financial risk at this time. We also believe that maintaining a consistent standard for several more years will help APM Entities to plan for multi-year Advanced APM participation. We further believe that maintaining a consistent standard will allow us to evaluate how APM Entities succeed within these parameters over the applicable timeframe.

We seek comment on the proposal to maintain the 8 percent nominal amount standard for QP Performance Periods through 2024.

We also seek comment on whether, as APM entities and participating eligible clinicians grow more comfortable with assuming risk, we should consider increasing the nominal amount standard. Specifically, we request comments on whether we should consider raising the revenue-based nominal amount standard to 10 percent, and the expenditure-based nominal amount standard to 4 percent starting for QP Performance Periods in 2025 and later.

(5) Summary of Proposals

In this section, we are proposing the following policies:

- *Use of CEHRT:*

++ We are proposing to revise our regulation at § 414.1415(a)(i) to specify that an Advanced APM must require at least 75 percent of eligible clinicians in each APM Entity use CEHRT as defined at § 414.1305 to document and communicate clinical care with patients and other health care professionals.

- *MIPS-Comparable Quality Measures*

++ We are proposing to revise our regulation to clarify at § 414.1415(b)(2), effective January 1, 2020, that at least one of the quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must either be finalized on the MIPS final list of measures, as described in § 414.1330; endorsed by a consensus-based entity;

or determined by CMS to be evidenced-based, reliable, and valid.

++ We are also proposing to revise our regulation at § 414.1415(b)(3), effective January 1, 2020, to provide that at least one outcome measure, for which measure results are included as a factor when determining payment to participants under the terms of the APM must either be finalized on the MIPS final list of measures as described in § 414.1330, endorsed by a consensus-based entity; or determined by CMS to be evidence-based, reliable, and valid.

- *Bearing Financial Risk for Monetary Losses:* We propose to amend our regulation at § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

e. Qualifying APM Participant (QP) and Partial QP Determinations

(1) Overview

We finalized policies relating to QP and Partial QP determinations in the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77450).

(2) QP Performance Period

In the CY 2017 Quality Payment Program final rule, we finalized for the timing of QP determinations that a QP Performance Period runs from January 1 through August 31 of the calendar year that is 2 years prior to the payment year (81 FR 77446–77447). During that QP Performance Period, we will make QP determinations at three separate snapshot dates (March 31, June 30, and August 31), each of which would be a final determination for the eligible clinicians who are determined to be QPs. The QP Performance Period and the three separate QP determinations apply similarly for both the group of eligible clinicians on a Participation List and the individual eligible clinicians on an Affiliated Practitioner List.

We also finalized that for each of the three QP determinations, we will allow for claims run-out for 3 months, or 90 days, before calculating the Threshold Scores so that QP determinations will be completed approximately 4 months after each snapshot date. As a result, the last of these three QP determinations is complete on or around January 1 of the subsequent calendar year, which is the year immediately prior to the MIPS payment year. For most MIPS data submission types, January 1 of the subsequent calendar year is also the beginning of the MIPS data submission

period. This way, eligible clinicians know of their QP status prior to or near the beginning of the MIPS data submission period and know whether they should report any performance period data to MIPS for the applicable MIPS payment year.

Upon further consideration and based on our experience implementing the program to date, we believe providing eligible clinicians notification of their QP status more quickly after each of the three QP determination snapshot dates, and prior to the beginning of the MIPS data submission period after the last determination, will potentially reduce burden for eligible clinicians and APM Entities while improving their overall experience participating in the program.

Therefore, we propose that for each of the three QP determination dates, we will allow for claims run-out for 60 days (approximately 2 months), before calculating the Threshold Scores so that the three QP determinations will be completed approximately 3 months after the end of that determination time period. We note that this proposal does not affect the QP Performance Period per se, but rather the date by which claims for services furnished during the QP Performance Period would need to be processed in order for those services to be included in calculating the Threshold Scores. To the extent that claims are used for calculating the Threshold Scores, such claims would have to be processed by no later than 60 days after each of the three QP determination dates, in order for information on the claims to be included in our calculations. Based on our analysis of Medicare Part B claims for 2014, we found that there is only a 0.5 percent difference in claims processing completeness when using 60 days rather than 90 days.

We seek comment on this proposal.

(3) Partial QP Election To Report to MIPS

(a) Overview

Section 1848(q)(1)(C)(ii)(II) of the Act excludes from the definition of MIPS eligible clinician an eligible clinician who is a Partial QP for a year and who does not report on applicable measures and activities as required under MIPS for the year. However, under section 1848(q)(1)(C)(vii) of the Act, an eligible clinician who is a Partial QP for a year and reports on applicable measures and activities as required under the MIPS is considered to be a MIPS eligible clinician for the year.

In the CY 2017 Quality Payment Program final rule, we finalized that following a determination that eligible

clinicians in an APM Entity group in an Advanced APM are Partial QPs for a year, the APM Entity will make an election whether to report on applicable measures and activities as required under MIPS. If the APM Entity elects to report to MIPS, all eligible clinicians in the APM Entity would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the APM Entity elects not to report, all eligible clinicians in the APM Entity group will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year (81 FR 77449).

We also finalized that in cases where the Partial QP determination is made at the individual eligible clinician level, if the individual eligible clinician is determined to be a Partial QP, the eligible clinician will make the election whether to report on applicable measures and activities as required under MIPS and, as a result, be subject to the MIPS reporting requirements and payment adjustment (81 FR 77449). If the individual eligible clinician elects to report to MIPS, he or she would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the individual eligible elects not to report to MIPS, he or she will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year. We note that QP determinations are made at the individual eligible clinician level when the clinician is identified as participating in an Advanced APM on an Affiliated Practitioner List rather than a Participation List, or when an eligible clinician is in more than one APM Entity group in one or more Advanced APMs, and does not achieve QP status as part of any single APM Entity group (see § 414.1425(b)(2) and (c)(4) our regulations).

We also clarified how we consider the absence of an explicit election to report to MIPS or to be excluded from MIPS. We finalized that for situations in which the APM Entity is responsible for making the decision on behalf of all eligible clinicians in the APM Entity group, the group of Partial QPs will not be considered MIPS eligible clinicians unless the APM Entity opts the group into MIPS participation, so that no actions other than the APM Entity's election for the group to participate in MIPS would result in MIPS participation (81 FR 77449).

For eligible clinicians who are determined to be Partial QPs individually, we finalized that we will use the eligible clinician's actual MIPS reporting activity to determine whether to exclude the Partial QP from MIPS in

the absence of an explicit election. Therefore, if an eligible clinician who is individually determined to be a Partial QP submits information to MIPS (not including information automatically populated or calculated by CMS on the Partial QP's behalf), we will consider the Partial QP to have reported, and thus to be participating in MIPS. Likewise, if such an individual does not take any action to submit information to MIPS, we will consider the Partial QP to have elected to be excluded from MIPS (81 FR 77449).

(b) Alignment of Partial QP Election Policies

Upon further consideration and based on our experience implementing the program to date, we believe there is value in aligning our Partial QP election policies across all eligible clinicians, whether they achieved Partial QP status as a part of an APM Entity or as an individual. We believe this approach will allow for greater simplicity and clarity for stakeholders.

Therefore, we propose that when an eligible clinician is determined to be a Partial QP for a year at the individual eligible clinician level, the individual eligible clinician will make an election whether to report to MIPS. If the eligible clinician elects to report to MIPS, they will be subject to MIPS reporting requirements and payment adjustments. If the eligible clinician elects to not report to MIPS, they will not be subject to the MIPS reporting requirements and payment adjustment. If the eligible clinician does not make any election, they will not be subject to the MIPS reporting requirements and payment adjustment.

We believe that this default minimizes the possibility of unexpected participation in MIPS. Currently, eligible clinicians who are determined to be Partial QPs individually could inadvertently be subject to the MIPS reporting requirements and payment adjustment based on reporting behavior that is not fully within their control. We also believe this approach will minimize the risk that an individual eligible clinician, particularly one whose NPI is associated with multiple billing TINs, inadvertently will be subject to MIPS when that was not that clinician's preference or expectation. We believe it is important that we act in accordance with the preference of an eligible clinician who is individually determined to be a Partial QP with regards to whether they wish to be excluded from MIPS based on the QP status they were able to achieve, regardless of the MIPS reporting election decisions of other TINs with

which that Partial QP's NPI is associated.

Furthermore, this proposal creates alignment in the implementation of our Partial QP election policy for eligible clinicians who are determined to be Partial QPs individually and for eligible clinicians who are determined to be Partial QPs at the APM Entity level. Currently, for eligible clinicians who are determined to be Partial QPs at the APM Entity level, that group of Partial QPs will not be considered MIPS eligible clinicians in the absence of an explicit election to report to MIPS or to be excluded from MIPS by their APM Entity (81 FR 77449). This proposal would establish the same default in the absence of an explicit election to report to MIPS or to be excluded from MIPS for eligible clinicians who are determined to be Partial QPs individually, so that no actions other than the individual Partial QP's affirmative election to participate in MIPS would result in MIPS participation.

We note that this policy change would only affect situations where the Partial QP makes no election to either report to MIPS or to be excluded from the MIPS reporting requirements and payment adjustment. Under our proposed policy, all Partial QPs retain the full right to affirmatively decide through the election process whether or not to be subject to the MIPS reporting requirements and payment adjustment; whereas, if the Partial QP does not make any election, they will not be subject to the MIPS reporting requirements and payment adjustment.

We seek comment on this proposal.

(4) Summary of Proposals

In this section, we are proposing the following policies:

We propose that for each of the three QP determinations, we will allow for claims run-out for 60 days (approximately 2 months), before calculating the Threshold Scores so that the three QP determinations will be completed approximately 3 months after the end of that determination time period.

We also propose that when an eligible clinician is determined to be a Partial QP for a year at the individual eligible clinician level, the individual eligible clinician will make an election whether to report to MIPS. If the eligible clinician elects to report to MIPS, they will be subject to the MIPS reporting requirements and payment adjustment. If the eligible clinician elects not to report, they will be excluded from the MIPS reporting requirements and payment adjustment. In the absence of an explicit election to report to MIPS,

the eligible clinician will be excluded from the MIPS reporting requirements and payment adjustment. This means that no actions other than the eligible clinician’s affirmative election to participate in MIPS would result in that eligible clinician becoming subject to the MIPS reporting requirements and payment adjustment.

g. All-Payer Combination Option

(1) Overview

Section 1833(z)(2)(B)(ii) of the Act requires that beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the Combination All-Payer and Medicare Payment Threshold Option, which we refer to as the All-Payer Combination Option. In the CY 2017 Quality Payment Program final rule, we finalized our overall approach to the All-Payer Combination Option (81

FR 77459). The Medicare Option focuses on participation in Advanced APMs, and we make QP determinations under this option based on Medicare Part B covered professional services attributable to services furnished through an APM Entity. The All-Payer Combination Option does not replace or supersede the Medicare Option; instead, it will allow eligible clinicians to become QPs by meeting the QP thresholds through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through Other Payer Advanced APMs. We finalized that beginning in payment year 2021, we will conduct QP determinations sequentially so that the Medicare Option is applied before the All-Payer Combination Option (81 FR 77438). The All-Payer Combination

Option encourages eligible clinicians to participate in payment arrangements with payers other than Medicare that have payment designs that satisfy the Other Payer Advanced APM criteria. It also encourages sustained participation in Advanced APMs across multiple payers.

We finalized that the QP determinations under the All-Payer Combination Option are based on payment amounts or patient counts as illustrated in Tables 36 and 37, and Figures 1 and 2 of the CY 2017 Quality Payment Program final rule (81 FR 77460 through 77461). We also finalized that, in making QP determinations with respect to an eligible clinician, we will use the Threshold Score that is most advantageous to the eligible clinician toward achieving QP status, or if QP status is not achieved, Partial QP status, for the year (81 FR 77475).

TABLE 57—QP PAYMENT AMOUNT THRESHOLDS—ALL-PAYER COMBINATION OPTION

Payment year	2019	2020	2021 (%)	2022 (%)	2023 and later (%)
QP Payment Amount Threshold:

FIGURE 2: QP Determination Tree, Payment Years 2023 and Later

BILLING CODE 4120-01-C

Unlike the Medicare Option, where we have access to all of the information necessary to determine whether an APM meets the criteria to be an Advanced APM, we cannot determine whether an other payer arrangement meets the criteria to be an Other Payer Advanced APM without receiving information about the payment arrangement from an external source. Similarly, we do not have the necessary payment amount and patient count information to determine under the All-Payer Combination Option whether an eligible clinician meets the payment amount or patient

count threshold to be a QP without receiving certain information from an external source.

In the CY 2018 Quality Payment Program final rule, we established additional policies to implement the All-Payer Combination Option and finalized certain modifications to our previously finalized policies (82 FR 53844 through 53890). A detailed summary of those policies can be found at 82 FR 53874 through 53876 and 53890 through 53891. In relevant part, we finalized the following:

Payer Initiated Process

- We finalized at § 414.1445(a) and (b)(1) that certain other payers, including payers with payment arrangements authorized under Title XIX (the Medicaid statute), Medicare Health Plan payment arrangements, and payers with payment arrangements aligned with a CMS Multi-Payer Model, can request that we determine whether their other payer arrangements are Other Payer Advanced APMs starting prior to the 2019 QP Performance Period and each year thereafter. We finalized that remaining other payers, including

commercial and other private payers, could request that we determine whether other payer arrangements are Other Payer Advanced APMs starting in 2019 prior to the 2020 QP Performance Period, and annually each year thereafter. We generally refer to this process as the Payer Initiated Other Payer Advanced APM Determination Process (Payer Initiated Process), and we finalized that the Payer Initiated Process would generally involve the same steps for each payer type for each QP Performance Period. If a payer uses the same other payer arrangement in other commercial lines of business, we finalized our proposal to allow the payer to concurrently request that we determine whether those other payer arrangements are Other Payer Advanced APMs as well. This policy is relevant only to the initial year of Payer Initiated Other Payer Advanced APM determinations for which these submissions can be made only by payers with arrangements under Title XIX, Medicare Health Plans, or arrangements aligned with CMS multi-payer models.

Eligible Clinician Initiated Process

- We finalized at § 414.1445(a) and (b)(2) that, through the Eligible Clinician Initiated Process, APM Entities and eligible clinicians participating in other payer arrangements would have an opportunity to request that we determine for the year whether those other payer arrangements are Other Payer Advanced APMs. The Eligible Clinician Initiated Process can be used to submit requests for determinations before the beginning of a QP Performance Period for other payer arrangements authorized under Title XIX. The Eligible Clinician Initiated Process is available for the 2019 QP Performance Period and each year thereafter.

Submission of Information for Other Payer Advanced APM Determinations

- We finalized that, for each other payer arrangement for which a payer requests us to make an Other Payer Advanced APM determination, the payer must complete and submit the Payer Initiated Submission Form by the relevant Submission Deadline.
- We finalized that, for each other payer arrangement for which an APM Entity or eligible clinician requests us to make an Other Payer Advanced APM determination, the APM Entity or eligible clinician must complete and submit the Eligible Clinician Initiated Submission Form by the relevant Submission Deadline.
- We removed the requirement, previously established at

§ 414.1445(b)(3), that payers must attest to the accuracy of information submitted by eligible clinicians, and we also removed the related attestation requirement at § 414.1460(c). Instead, we finalized an additional requirement at § 414.1445(d) that an APM Entity or eligible clinician that submits information under § 414.1445(c) must certify that, to the best of its knowledge, the information it submits to us is true, accurate, and complete.

QP Determinations Under the All-Payer Combination Option

- We finalized at § 414.1440(e) that eligible clinicians may request that we make QP determinations at the individual eligible clinician level and that APM Entities may request that we make QP determinations at the APM Entity level.
- We finalized at § 414.1440(d)(1) that we will make QP determinations under the All-Payer Combination Option based on eligible clinicians' participation in Advanced APMs and Other Payer Advanced APMs for three time periods of the QP Performance Period: January 1 through March 31; January 1 through June 30; and January 1 through August 31. We finalized that we will use patient or payment data for the same time periods to calculate both the Medicare and the other payer portion of the Threshold Score calculation under the All-Payer Combination Option.
- We finalized at § 414.1440(e)(4) that, to request a QP determination under the All-Payer Combination Option, APM Entities or eligible clinicians must submit all of the payment amount and patient count information sufficient for us to make QP determinations by December 1 of the calendar year that is 2 years prior to the payment year, which we refer to as the QP Determination Submission Deadline.

In this section of the proposed rule, we address policies within the following topics: Other Payer Advanced APM Criteria; Other Payer Advanced APM determinations; and Calculation of the All-Payer Combination Option Threshold Scores and QP Determinations.

(2) Other Payer Advanced APM Criteria

(a) Overview

In general, our goal is to align the Advanced APM criteria under the Medicare Option and the Other Payer Advanced APM criteria under the All-Payer Combination Option as permitted by statute and as feasible and appropriate. We believe this alignment would help simplify the Quality

Payment Program and encourage participation in Other Payer Advanced APMs (82 FR 53847).

(b) Investment Payments

Some stakeholders have requested that we take into account "business risk" costs such as IT, personnel, and other administrative costs associated with APM Entities' participation in Other Payer Advanced APMs when implementing the financial risk standard. We are not proposing to modify our financial risk standard in response to this suggestion, and note that financial risk in the context of Other Payer Advanced APMs is defined both in the Act (at section 1833(z)(2)(B)(iii)(II)(cc) for payment years 2021 and 2022, and section 1833(z)(3)(B)(iii)(II)(cc) for subsequent years) and our regulations at § 414.1420(d) so as to require that APM Entities in the payment arrangement must assume financial risk when actual expenditures exceed expected expenditures. However, we note that a payment arrangement with an other payer, like some APMs, can be structured so that the APM provides an investment payment to the participating APM Entities to assist with the practice transformation that may be required for participation in the payment arrangement. This investment payment could be structured in various ways; for example, it could be structured similarly to the Medicare ACO Investment model under, which expected shared savings payment were pre-paid to encourage new ACOs to form in rural and underserved areas and to assist existing ACOs in meeting certain criteria; or it could be structured so that the payment is made specifically to encourage participating APM Entities to continue to make staffing, infrastructure, and operations investments as a means of practice transformation; or it could have a different structure entirely.

(c) Use of CEHRT

(i) Overview

In the CY 2017 Quality Payment Program final rule, we finalized that to be an Other Payer Advanced APM, the other payer arrangement must require at least 50 percent of participating eligible clinicians in each APM Entity, or each hospital if hospitals are the APM Entities, to use CEHRT to document and communicate clinical care (81 FR 77465). This CEHRT use criterion directly paralleled the criterion established for Advanced APMs in § 414.1415(a)(1)(i).

In the CY 2018 Quality Payment Program final rule, we finalized that we would presume that an other payer arrangement meets the 50 percent CEHRT use criterion if we receive information and documentation from the eligible clinician through the Eligible Clinician Initiated Process showing that the other payer arrangement requires the requesting eligible clinician to use CEHRT to document and communicate clinical care (see § 414.1445(c)(2)). We sought comment on whether we should consider revising the 50 percent CEHRT use requirement in future years, and if so what standard we should use in its place (82 FR 53874).

(ii) Increasing the CEHRT Use Criterion for Other Payer Advanced APMs

We are proposing to change the current CEHRT use criterion for Other Payer Advanced APMs so that in order to qualify as an Other Payer Advanced APM as of January 1, 2020, the other payer arrangement must require at least 75 percent of participating eligible clinicians in each APM Entity to use CEHRT.

According to data collected by ONC, since the CY 2017 Quality Payment Program final rule was published, EHR adoption has been widespread, and we want to encourage continued adoption. Additionally, in response to the CY 2017 Quality Payment Program proposed rule stakeholders encouraged us to raise the CEHRT threshold to 75 percent in previous comment solicitations (see 81 FR 77411). We believe that this proposed change aligns with our proposed change in the Advanced APM section, wherein we also propose raising the CEHRT use criterion to 75 percent. We believe that this proposed change aligns with the increased adoption of CEHRT among providers and suppliers that is already happening, and would encourage further CEHRT adoption. Further, we believe the January 1, 2020, adoption date would give stakeholders sufficient time to make the necessary changes for the adoption of this requirement; specifically, this will allow other payers additional time to address the proposed increase to the CEHRT use criterion.

We seek comment on this proposal.

(iii) Evidence of CEHRT Use

In the CY 2017 Quality Payment Program final rule, we adopted a CEHRT use criterion for Other Payer Advanced APMs that directly paralleled the CEHRT use criterion for Advanced APMs wherein Other Payer Advanced APMs must require at least 50 percent of eligible clinicians in each

participating APM Entity, or each hospital if hospitals are the APM Entities, to use CEHRT to document and communicate clinical care.

We have since heard from payers and other stakeholders that CEHRT is often used under other payer arrangements even if it is not expressly required under the payment arrangement. Because CEHRT use is increasingly common among eligible clinicians, payers may not believe it is necessary to specifically require the use of CEHRT under the terms of an Other Payer payment arrangement.

We also note that the statutory CEHRT use requirement for Other Payer Advanced APMs differs from the comparable standard for Advanced APMs. The statutory CEHRT use criterion for Advanced APMs under section 1833(z)(3)(D)(i)(I) of the Act specifies that the APM must require participants in such model to use CEHRT. This differs from section 1833(z)(2)(B)(iii)(II)(bb) of the Act (for payment years 2021 and 2022) and section 1833(z)(2)(C)(iii)(II)(bb) of the Act (for payment years beginning in 2023), which specify that Other Payer Advanced APMs are payment arrangements in which “CEHRT is used.”

Given this, we believe our current policy may needlessly exclude certain existing payment arrangements that could meet the statutory requirements for Other Payer Advanced APMs—including some where the majority of eligible clinicians use CEHRT, even if they are not explicitly required to do so under the terms of their payment arrangements. Accordingly, we are proposing to modify our current policy to offer additional flexibility that we believe would match more closely with both the statute and current practices among other payers.

We are proposing that a payer or eligible clinician must provide documentation to CMS that CEHRT is used to document and communicate clinical care under the payment arrangement by at least 50 percent of eligible clinicians in 2019, and 75 percent of the eligible clinicians in 2020 and beyond, whether or not such CEHRT use is explicitly required under the terms of the payment arrangement. We are specifically proposing to modify the regulation at § 414.1420(b) to specify that to be an Other Payer Advanced APM, CEHRT must be used by at least 50 percent of eligible clinicians participating in the arrangement in 2019 (or, beginning in 2020, 75 percent) of such eligible clinicians).

While a payer that requests an Other Payer Advanced APM determination for

a payment arrangement could continue to meet the proposed CEHRT use requirement by demonstrating that CEHRT use is required of at least 50 percent of eligible clinicians in 2019, (or, beginning in 2020, of at least 75 percent of eligible clinicians), under the terms of the payment arrangement, the payer and eligible clinicians also could meet the criterion by documenting CEHRT use among participating APM entities. Documentation could come from a variety of sources. For example, the level of CEHRT use in a particular State Medicaid program could be demonstrated by presenting data from the ONC showing the CEHRT adoption rate for all physicians in that state along with state data on the percentage of physicians that participate in the State Medicaid program. Similarly, commercial payers could document that CEHRT adoption rates within their networks meet or exceed the relevant CEHRT use percentage for the year. This is not an exhaustive list of ways that other payers could document CEHRT use under their payment arrangements, but suggests some of the possible ways to do so. With regard to submissions from eligible clinicians, similar sources of information on CEHRT adoption could be used, such as data from the State Medicaid Agency or the local health information exchange. To determine whether the CEHRT use criterion is met, we are willing to consider data from a payer or eligible clinician. Based on our conversations with other payers regarding their payment arrangements, including States with regard to their Medicaid payer arrangements, Medicare Advantage Organizations with regard to their Medicare Advantage arrangements, and commercial payers, we believe this modification would offer additional flexibility and potentially match more closely with the current commercial payer landscape, as CEHRT is likely often used under other payer arrangements even if it is not expressly required in the agreement.

We seek comment on this proposal.

(d) MIPS Comparable Quality Measures

(i) Overview

In the CY 2017 Quality Payment Program final rule, we explained that one of the criteria for a payment arrangement to be an Other Payer Advanced APM is that it must apply quality measures comparable to those under the MIPS quality performance category (81 FR 77465).

In the CY 2017 Quality Payment Program proposed rule, we proposed that to be an Other Payer Advanced

APM, a payment arrangement must have quality measures that are evidence-based, reliable, and valid; and that at least one measure must be an outcome measure if there is an applicable outcome measure on the MIPS quality measure list. We generally refer to these measures in the remainder of this discussion as “MIPS-comparable quality measures.” We did not specify that the outcome measure is required to be evidence-based, reliable, and valid (81 FR 77466). We finalized these policies in the CY 2017 Quality Payment Program final rule and codified them in the regulation at § 414.1420(c).

(ii) General Quality Measures: Evidence-Based, Reliable, and Valid

In the CY 2017 Quality Payment Program final rule, we codified at § 414.1420(c)(2) that at least one of the quality measures used in the payment arrangement with an APM Entity must have an evidence-based focus, be reliable, and valid, and meet at least one of the following criteria:

- Used in the MIPS quality performance category as described in § 414.1330;
- Endorsed by a consensus-based entity;
- Developed under section 1848(s) of the Act;
- Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or
- Any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid.

It has come to our attention that, as with the comparable policy for Advanced APMs as discussed at 81 FR 28302, some have read the regulation at § 414.1420(c)(2) to mean that measures on the MIPS final list or submitted in response to the MIPS Call for Quality Measures necessarily are MIPS-comparable quality measures, even if they have not been determined to be evidence-based, reliable, and valid. We did not intend to imply that any measure that was merely submitted in response to the annual call for quality measures or developed using Quality Payment Program funding would automatically qualify as MIPS-comparable even if the measure was never endorsed by a consensus-based entity, adopted under MIPS, or otherwise determined to be evidence-based, reliable, and valid. While we believe such measures may be evidence-based, reliable, and valid, we did not intend consider them so for purposes of § 414.1420(c)(2) without independent verification by a consensus-based entity, or based on our own assessment and determination, that they are evidence-

based, reliable, and valid. We further believe the same principle applies to QCDR measures. If QCDR measures are endorsed by a consensus-based entity they are presumptively considered MIPS-comparable quality measures for purposes of § 414.1420(c)(2); otherwise we would have needed independent verification, or to make our own assessment and determination, that the measures are evidence-based, reliable, and valid before considering them to be MIPS-comparable (see 81 FR 77415 through 77417).

Because of the potential ambiguity in the existing definition and out of an abundance of caution in order to avoid any adverse impact on APM entities, eligible clinicians or other stakeholders, we have used the more permissive interpretation of the text, wherein measures developed under section 1848(s) of the Act and submitted in response to the MIPS Call for Quality Measures will meet the quality criterion in implementing the program thus far, and intend to use this interpretation for the 2019 QP Performance Period. Recognizing that APMs and other payer arrangements that we might consider for Advanced APM and Other Payer Advanced APM determinations are well into development for 2019, we would use this interpretation until our new proposal described below is effective on January 1, 2020.

Therefore, at § 414.1420(c)(2), we are proposing, effective as of January 1, 2020, that at least one of the quality measures used in the payment arrangement with an APM Entity must meet at least one of the following criteria:

- Finalized on the MIPS final list of measures, as described in § 414.1330;
- Endorsed by a consensus-based entity; or
- Otherwise determined by CMS to be evidence-based, reliable, and valid.

That is, for QP Performance Period 2020 and all future QP Performance Periods, we would treat any measure that is either included in the MIPS final list of measures or has been endorsed by a consensus-based entity as presumptively evidence-based, reliable, and valid. All other measures would need to be independently determined by CMS to be evidence-based, reliable, and valid, in order to be considered MIPS-comparable quality measures.

We believe this revised regulation would better articulate our interpretation of the statute and reflect the MIPS-comparable quality measure standards that are currently met by all Advanced APMs in operation and that we anticipate would be met by those under development. Additionally, this

clarification is intended to align with our parallel proposal for the Advanced APM criteria, and maintain consistency between the Advanced APM and Other Payer Advanced APM criteria. We believe this clarification will better align our regulations and inform stakeholders, particularly eligible clinicians or APM Entities who may be participating in both Advanced APMs and Other Payer Advanced APMs in CY 2019, of the applicable quality measure requirements, while also helping non-Medicare payers to continue developing payment arrangements that meet the quality measure criterion to be an Other Payer Advanced APM as discussed at 82 FR 53847.

(iii) Outcome Measures: Evidence-Based, Reliable, and Valid

In § 414.1420(c)(3), we generally require that, to be an Other Payer Advanced APM, the payment arrangement must use an outcome measure if there is an applicable outcome measure on the MIPS quality measure list. We note that the current regulation does not require that the outcome measure be evidence-based, reliable, and valid.

We are proposing to revise § 414.1420(c)(3), to explicitly require that, unless there is no applicable outcome measure on the MIPS quality measure list, at least one outcome measure that applies in the payment arrangement must be evidence-based, reliable, and valid. This proposal would have an effective date of January 1, 2020, and would specifically require that an outcome measure must also be MIPS-comparable. This proposal aligns with the similar proposal for Other Payer Advanced APMs discussed at section III.H.4.d.(2)(d)(ii) of this proposed rule, so that an outcome measure used in the payment arrangement must also be:

- Finalized on the MIPS final list of measures, as described in § 414.1330;
- Endorsed by a consensus-based entity; or
- Determined by CMS to be evidence-based, reliable, and valid.

As with the general requirement for an evidence-based, reliable, and valid quality measure, as we propose to clarify at section III.H.4.d.(2)(d)(ii) of this proposed rule, we would treat any measure that is either included in the MIPS final list of measures or has been endorsed by a consensus-based entity as presumptively evidence-based, reliable, and valid. All other measures would need to be determined by CMS to be evidence-based, reliable, and valid.

We believe this modification to our regulation would increase the likelihood

that Other Payer Advanced APMs use quality measures that will lead to improvements in the quality of care and resulting patient outcomes. Because an Other Payer Advanced APM is required to use an outcome measure unless no one is available, participants in Other Payer Advanced APMs may have powerful financial incentives to modify their behaviors to improve their performance on this measure. Outcome measures that are not evidence-based, reliable, and valid may encourage adverse patient selection, or create other unintended and perverse incentives for model participants. As such, we believe it is important that the outcome measure be evidence-based, reliable, and valid.

We propose to make this change to our regulation effective January 1, 2020. This proposed effective date is intended to provide stakeholders sufficient notice of, and opportunity to respond to, this change in our regulation because the current regulation does not explicitly require that an outcomes measures must be evidence-based, reliable, and valid and, as a result some Other Payer Advanced APMs that were submitted for determination in CY 2018 for the CY 2019 performance year may not include outcomes measures that are evidence-based, reliable, and valid.

We also propose that, for such payment arrangements that are determined to be Other Payer Advanced APMs for the 2019 performance year and did not include an outcome measure that is evidence-based, reliable, and valid, and that are resubmitted for an Other Payer Advanced APM determination for the 2020 performance year (whether for a single year, or for a multi-year determination as proposed in section III.H.4.g.(3)(b) of this proposed rule), we would continue to apply the current regulation for purposes of those determinations. Additionally, payment arrangements in existence prior to the 2020 performance year that are submitted for determination to be Other Payer Advanced APMs for the 2020 performance year and later, will be assessed under the rules of the current regulation meaning they do not need to include an outcome measure that is evidence-based, reliable, and valid to be an Other Payer Advanced APM. For all other payment arrangements the proposed revised regulation would apply beginning in CY 2020.

We believe this is necessary because there may be some Other Payer Advanced APMs that currently do not include outcomes measures that are evidence-based, reliable, and valid because the current regulation does not explicitly require it. In order to provide for an even application of our current

policy and an even transition to the proposed policy, and to avoid any adverse impact on APM entities, eligible clinicians or other stakeholders, we believe it is appropriate to apply the revision to § 414.1420(c)(3) beginning with determinations that occur after 2020 with respect to those payment arrangements noted above. We also note that this exception would apply for only one year for single-year determinations, and only through the earlier of the end of the payment arrangement or 5 years for determinations under multi-year determination process proposed in section III.H.4.g.(3)(b) of this proposed rule. For all payment arrangements starting in 2020, or those initially submitted for Other Payer Advanced APM determinations for the 2021 performance year and later, the payment arrangement would need to use an outcome measure that is evidence-based, reliable, and valid unless there is no applicable outcome measure on the MIPS final quality measure list.

We note that these proposed changes to our regulations would not change the status of any payment arrangements that we have determined to be Other Payer Advanced APMs for 2019, or for the basis for our determinations of Other Payer Advanced APMs in 2019 for 2020.

We believe a January 1, 2020, effective date would give stakeholders sufficient notice of, and opportunity to respond to, this change in our regulation.

(e) Financial Risk for Monetary Losses
(i) Overview

In the CY 2018 Quality Payment Program final rule, we finalized our proposal to add a revenue-based nominal amount standard to the generally applicable nominal amount standard for Other Payer Advanced APMs that is parallel to the generally applicable revenue-based nominal amount standard for Advanced APMs. Specifically, we finalized that an other payer arrangement would meet the total risk component of the proposed nominal risk standard if, under the terms of the other payer arrangement, the total amount that an APM Entity potentially owes the payer or foregoes is equal to at least: For the 2019 and 2020 QP Performance Periods, 8 percent of the total combined revenues from the payer of providers and suppliers in participating APM Entities. This standard is in addition to the previously finalized expenditure-based standard. We explained that a payment arrangement would only need to meet one of the two standards. We would use this standard only for other payer arrangements where financial risk is

expressly defined in terms of revenue in the payment arrangement.

(ii) Generally Applicable Nominal Amount Standard

We propose to amend our regulation at § 414.1420(d)(3)(i) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the total combined revenues from the payer of providers and suppliers in participating APM Entities for QP Performance Periods 2019 through 2024.

We continue to believe that 8 percent the total combined revenues from the payer of providers and suppliers in participating APM Entities generally represents an appropriate standard for more than a nominal amount of financial risk at this time. We further believe that maintaining a consistent standard between Advanced APMs and Other Payer Advanced APMs will allow us to evaluate how APM Entities succeed within these parameters across payers over the applicable timeframe.

We seek comment on the proposal to maintain the 8 percent nominal amount standard for Other Payer Advanced APMs for QP Performance Periods through 2024.

(3) Determination of Other Payer Advanced APMs

(a) Overview

In the CY 2017 Quality Payment Program final rule, we specified that an APM Entity or eligible clinician must submit, by a date and in a manner determined by us, information necessary to identify whether a given payment arrangement satisfies the Other Payer Advanced APM criteria (81 FR 77480).

In the CY 2018 Quality Payment Program final rule, we codified at § 414.1445 the Payer Initiated Other Payer Advanced APM Determination Process and the Eligible Clinician Initiated Other Payer Advanced APM Determination Process pertaining to the determination of Other Payer Advanced APMs, as well as specifying the information required for Other Payer Advanced APM determinations (82 FR 53814 through 53873).

(b) Multi-Year Other Payer Advanced APM Determinations

In the CY 2018 Quality Payment Program final rule, we finalized that Other Payer Advanced APM determinations made in response to requests submitted either through the Payer Initiated Other Payer Advanced APM Determination Process (Payer Initiated Process) or the Eligible Clinician Initiated Other Payer Advanced APM Determination Process

(Eligible Clinician Initiated Process) would be in effect for only one year at a time. We sought additional comment regarding the current duration of payment arrangements and whether creating a multi-year determination process would encourage the creation of more multi-year payment arrangements as opposed to payment arrangements that are for one year only. We also sought comment on what kind of information should be submitted annually after the first year to update an Other Payer Advanced APM determination (82 FR 53869 through 53870).

In response to our request for comments, we received several comments asking that we allow Other Payer Advanced APM determinations to be in effect for more than one year at a time. These commenters suggested that requiring annual determinations is burdensome, particularly because payment arrangements for other payers are often implemented through multi-year contracts.

After consideration of this feedback, we are proposing to maintain the annual submission process with the modifications outlined below for both the Payer Initiated Process and the Eligible Clinician Initiated Process. We propose that beginning with the 2019 and 2020 submission periods for Other Payer Advanced APM determinations for performance year 2020, after the first year that a payer, APM Entity, or eligible clinician (which we refer to as the “requester” in the remainder of this discussion) submits a multi-year payment arrangement that we determine to be an Other Payer Advanced APM for that year, the requester would need to submit information only on any changes to the payment arrangement that are relevant to the Other Payer Advanced APM criteria for each successive year for the remaining duration of the payment arrangement. In the initial submission, the requester would certify as usual that the information provided about the payment arrangement using the Payer Initiated Process or Eligible Clinician Initiated Process, as applicable, is true, accurate, and complete; would authorize CMS to verify the information; and would certify that they would submit revised information in the event of a material change to the payment arrangement. For multi-year payment arrangements, we propose to require as part of the submission that the certifying official for the requester must agree to review the submission at least once annually, to assess whether there have been any changes to the information since it was submitted, and to submit updated

information notifying us of any changes to the payment arrangement that would be relevant to the Other Payer Advanced APM criteria and, thus, to our determination of the arrangement to be an Other Payer Advanced APM, for each successive year of the arrangement. Absent the submission by the requester of updated information to reflect changes to the payment arrangement, we would continue to apply the original Other Payer Advanced APM determination for each successive year through the earlier of the end of that multi-year payment arrangement or 5 years.

We believe this proposal aligns with the multi-year payment arrangements between other payers and eligible clinicians. In many cases, details of the payment arrangements may not change over the full duration of the payment arrangement. In other multi-year arrangements, we understand based on public comments that only certain aspects of the arrangement may change over the multi-year agreement, while most elements of the arrangement remain in place throughout the multi-year term of the agreement. However, because we understand that payment arrangements between payers and eligible clinicians can be renewed for multiple multi-year periods, we propose that the multi-year Other Payer Advanced APM determination would remain in effect until the arrangement is terminated or expires, but in no event longer than 5 years. Although we believe multi-year determinations would appropriately take into account multi-year payment arrangements, thereby reducing burden for requesters, we also believe that requiring a periodic full submission of information about a payment arrangement would be prudent, and that a 5-year interval is a reasonable time frame to require such a full submission using the Payer Initiated Process or Eligible Clinician Initiated Process (or other equivalent submission process that is in place at that time).

We believe that our proposal will more accurately reflect the manner and timeline on which payers make changes to payment arrangements. The current policy requiring payers and eligible clinicians to resubmit a comprehensive description of payment arrangements each year even after an Other Payer Advanced APM determination has been made in the previous year, and when the payment arrangements have a term of multiple years and do not change significantly from year to year, may be overly burdensome and unnecessary as it may require the duplicative resubmission of a substantial amount of information each year. Our proposal

would require, for the shorter of the term of the payment arrangement or five years, the submission of information only in the event there are changes in the information the requestor has submitted, and only when those changes are relevant to the Other Payer Advanced APM criteria and our Other Payer Advanced APM determination. We believe that while this would allow us to continue to conduct regular reviews of the payment arrangements to ensure the criteria for Other Payer Advanced APMs are being met, it would greatly reduce the burden on the payers, APM Entities, and eligible clinicians that submit requests for Other Payer Advanced APM determinations for multi-year payment arrangements.

Further, we believe this proposal would simplify the Other Payer Advanced APM determination process and would likely result in more Other Payer Advanced APMs in general, specifically more Other Payer Advanced APMs that are identified for multiple successive years. This, in turn, would make the Quality Payment Program simpler, as well as increase year-to-year consistency, and reliability for clinicians.

We seek comment on this proposal.

(c) Payer Initiated Other Payer Advanced APM Determination Process (Payer Initiated Process)—Remaining Other Payers

In the CY 2018 Quality Payment Program final rule, we finalized that we will allow certain other payers, including payers with payment arrangements authorized under Title XIX, Medicare Health Plan payment arrangements, and payers with payment arrangements aligned with a CMS Multi-Payer Model to use the Payer Initiated Process to request that we determine whether their other payer arrangements are Other Payer Advanced APMs starting prior to the 2019 QP Performance Period and each year thereafter (82 FR 53854). We codified this policy at § 414.1445(b)(1).

We also finalized that the remaining other payers, including commercial and other private payers, may request that we determine whether other payer arrangements are Other Payer Advanced APMs starting prior to the 2020 QP Performance Period and each year thereafter (82 FR 53867).

In this section, we are proposing details regarding the Payer Initiated Process for the remaining other payers that were not among those other payers permitted to use the Payer Initiated Process to submit their arrangements for Other Payer Advanced APM Determinations in 2018 (Remaining

Other Payers). To the extent possible, we are aligning the Payer Initiated Process for remaining other payers with the previously finalized Payer Initiated Process for Medicaid, Medicare Health Plans, and CMS Multi-Payer Models.

In the CY 2018 Quality Payment Program final rule, we finalized that the Payer Initiated Process will be voluntary for all payers (82 FR 53855). We note that the Payer Initiated Process will be similarly voluntary for payers that were permitted to submit payment arrangements in 2018 and for remaining other payers starting in 2019.

Guidance and Submission Form: As we have for the other payers included in the Payer Initiated Process (82 FR 53874), we intend to make guidance available regarding the Payer Initiated Process for Remaining Other Payers prior to their first Submission Period, which would occur during 2019. We intend to modify the submission form (which we refer to as the Payer Initiated Submission Form) for use by remaining other payers to request Other Payer

Advanced APM determinations, and to make this Payer Initiated Submission Form available to remaining other payers prior to the first Submission Period. We propose that a Remaining Other Payer would be required to use the Payer Initiated Submission Form to request that we make an Other Payer Advanced APM determination. We intend for the Payer Initiated Submission Form to include questions that are applicable to all payment arrangements and some questions that are specific to a particular type of payment arrangement, and we intend for it to include a way for payers to attach supporting documentation. We propose that remaining other payers may submit requests for review of multiple other payer arrangements through the Payer Initiated Process, though we would make separate determinations as to each other payer arrangement and a payer would be required to use a separate Payer Initiated Submission Form for each other payer arrangement. Remaining

other payers may submit other payer arrangements with different tracks within that arrangement as one request along with information specific to each track.

Submission Period: We propose that the Submission Period for the Payer Initiated Process for use by remaining other payers to request Other Payer Advanced APM determinations would open on January 1 of the calendar year prior to the relevant QP Performance Period for which we would make Other Payer Advanced APM determinations. We proposed that the Submission Deadline is June 1 of the year prior to the QP Performance Period for which we would make the determination.

The proposed timeline for the Payer Initiated Process for Remaining Other Payers as well as the finalized timeline for the Payer Initiated Process for Medicaid and Medicare Health Plans, is summarized in Table 59 alongside the final timeline for the Eligible Clinician Initiated Process.

TABLE 59—PROPOSED OTHER PAYER ADVANCED APM DETERMINATION PROCESS FOR MEDICAID, MEDICARE HEALTH PLANS, AND REMAINING OTHER PAYERS FOR QP PERFORMANCE PERIOD 2020

	Payer initiated process	Date	Eligible clinician (EC) initiated process*	Date
Medicaid	Guidance sent to states, then Submission Period Opens.	January 2019	Guidance made available to ECs, then Submission Period Opens.	September 2019.
	Submission Period Closes CMS contacts states and posts Other Payer Advanced APM List.	April 2019 September 2019	Submission Period Closes CMS contacts ECs and states and posts Other Payer Advanced APM List.	November 2019. December 2019.
Medicare Health Plans	Guidance made available to Medicare Health Plans, then Submission Period Opens.	April 2019	Guidance made available to ECs, then Submission Period Opens.	September 2020.
	Submission Period Closes CMS contacts Medicare Health Plans and posts Other Payer Advanced APM List.	June 2019 September 2019	Submission Period Closes CMS contacts ECs and Medicare Health Plans and posts Other Payer Advanced APM List.	November 2020. December 2020.
Remaining Other Payers	Guidance made available to Remaining Other Payers, then Submission Period Opens.	January 2019	Guidance made available to ECs, then Submission Period Opens.	September 2020.
	Submission Period Closes CMS contacts Remaining Other Payers and posts Other Payer Advanced APM List.	June 2019 September 2019	Submission Period Closes CMS contacts ECs and Remaining Other Payers and posts Other Payer Advanced APM List.	November 2020. December 2020.

* Note that APM Entities or eligible clinicians may use the Eligible Clinician Initiated Process.

CMS Determination: Upon the timely receipt of a Payer Initiated Submission Form, we would use the information submitted to determine whether the other payer arrangement meets the Other Payer Advanced APM criteria. We propose that if we find that the Remaining Other Payer has submitted incomplete or inadequate information, we would inform the payer and allow

them to submit additional information no later than 15 business days from the date we inform the payer of the need for additional information. For each other payer arrangement for which the Remaining Other Payer does not submit sufficient information in a timely fashion, we would not make a determination in response to that request submitted via the Payer Initiated

Submission Form. As a result, the other payer arrangement would not be considered an Other Payer Advanced APM for the year. These determinations are final and not subject to reconsideration.

CMS Notification: We intend to notify Remaining Other Payers of our determination for each request as soon as practicable after the relevant

Submission Deadline. We note that Remaining Other Payers may submit information regarding an other payer arrangement for a subsequent QP Performance Period even if we have determined that the other payer arrangement is not an Other Payer Advanced APM for a prior year.

CMS Posting of Other Payer Advanced APMs: We intend to post on the CMS website a list (which we refer to as the Other Payer Advanced APM List) of all other payer arrangements that we determine to be Other Payer Advanced APMs. Prior to the start of the relevant QP Performance Period, we intend to post the Other Payer Advanced APMs that we determine through the Payer Initiated Process and Other Payer Advanced APMs under Title XIX that we determine through the Eligible Clinician Initiated Process. After the QP Performance Period, we would update this list to include Other Payer Advanced APMs that we determine based on other requests through the Eligible Clinician Initiated Process. We intend to post the list of other payer arrangements that we determine to be Other Payer Advanced APMs through the Payer Initiated Process prior to the start of the relevant QP Performance Period, and then to update the list to include Other Payer Advanced APMs that we determine based on requests received through the Eligible Clinician Initiated Process.

(d) Payer Initiated Process—CMS Multi-Payer Models

In the CY 2018 Quality Payment Program final rule, we finalized that beginning for the first QP Performance Period under the All-Payer Combination Option, payers with a payment arrangement aligned with a CMS Multi-Payer Model may request that we determine whether that aligned payment arrangement is an Other Payer Advanced APM.

We are proposing to eliminate the Payer Initiated Process and submission form that are specifically for CMS Multi-Payer Models. We believe that payers aligned with CMS Multi-Payer Models can submit their arrangements through the Payer Initiated Process for Remaining Other Payers we have proposed in section III.H.4.g.(3)(c) of this proposed rule, or through the existing Medicaid or Medicare Health Plan payment arrangement submission process, as applicable.

In the first year of implementing the Payer Initiated Process, we intentionally limited the types of payers that could use the process to Medicaid, Medicare Health Plans, and CMS Multi-Payer Models. We limited the types of other

payers that could use the Payer Initiated Process so as to limit the volume of submissions in our first year of implementation, and chose to include payers that already have a programmatic or contractual relationship with CMS. Payers in the category of CMS Multi-Payer Models may be Medicaid, Medicare Health Plans, or commercial payers who have partnered with CMS in the development of some of our Advanced APMs.

In eliminating the Payer Initiated Process and submission form specifically for CMS Multi-Payer Models, we are not prohibiting any of these payers from submitting payment arrangements to request that CMS make Other Payer Advanced APM determinations. Rather, we are providing a process for them within larger categories of the Payer Initiated Process, whether as commercial payers, or as arrangements under Medicaid or Medicare Health Plans. We note that the policies proposed for the Payer Initiated Process for Remaining Other Payers, including the timeframe, deadlines, and submission form are substantially similar or identical to those policies finalized for Payer Initiated Process for payment arrangements under Medicaid and Medicare Health Plans.

(4) Calculation of All-Payer Combination Option Threshold Scores and QP Determinations

(a) Overview

In the CY 2017 Quality Payment Program final rule, we finalized our overall approach to the All-Payer Combination Option (81 FR 77463). Beginning in 2021, in addition to the Medicare Option, an eligible clinician may alternatively become a QP through the All-Payer Combination Option, and an eligible clinician need only meet the QP threshold under one of the two options to be a QP for the payment year (81 FR 77459). We finalized that we will conduct the QP determination sequentially so that the Medicare Option is applied before the All-Payer Combination Option (81 FR 77459).

In the CY 2017 Quality Payment Program final rule, we finalized that we will calculate Threshold Scores under the Medicare Option through both the payment amount and the patient count methods, compare each Threshold Score to the relevant QP and Partial QP Thresholds, and use the most advantageous scores to make QP determinations (81 FR 77457). We finalized the same approach for the All-Payer Combination Option wherein we will use the most advantageous method

for QP determinations with the data that has been provided (81 FR 77475).

(b) QP Determinations Under the All-Payer Combination Option

In the CY 2018 Quality Payment Program final rule, we finalized that an eligible clinician may request a QP determination at the eligible clinician level, and that an APM Entity may request a QP determination at the APM Entity Level (82 FR 53880 through 53881). In the event that we receive a request for QP determination from an individual eligible clinician and also separately from that individual eligible clinician's APM Entity, we would make a determination at both levels. The eligible clinician could become a QP on the basis of either of the two determinations (82 FR 53881).

We sought comment on whether in future rulemaking we should add a third alternative to allow QP determinations at the TIN level when all clinicians who have reassigned billing rights to the TIN are included in a single APM Entity. In particular, we sought comment on whether submitting information to request QP determinations under the All-Payer Combination Option at the TIN level would more closely align with eligible clinicians' existing billing and recordkeeping practices, and thereby be less burdensome (82 FR 53881).

We received several comments asking that we add a third alternative to allow requests for QP determinations at the TIN level. These commenters remarked that TIN-level requests and determinations would align with how payers often contract with practices (that is, at the TIN level), as well as encourage alignment between TIN-level Medicare and Other Payer Advanced APMs, minimize data reporting burden, and promote team-based care.

After considering these comments, and in the interest of increasing flexibility under the All-Payer Combination Option, we are proposing to add a third alternative to allow requests for QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights under the TIN participate in a single APM Entity. This option would therefore be available to all TINs participating in Full TIN APMs, such as the Medicare Shared Savings Program. It would also be available to any other TIN for which all clinicians who have reassigned their billing rights to the TIN are participating in a single APM Entity.

We are proposing that, similar to our existing policies for individual and APM Entity requests for QP determinations under the All-Payer Combination Option, we would assess

QP status based on the most advantageous result for each individual eligible clinician. That is, if we receive any combination of QP determination requests (at the TIN-level, APM Entity level, or individual level) we would make QP assessments at all requested levels and determine QP status on the basis of the QP assessment that is most advantageous to the eligible clinician.

We are proposing to revise our regulations at § 414.1440(d), to add this third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights to the TIN participate in a single APM Entity, and to assess QP status based on the most advantageous result for each eligible clinician.

We are further proposing to allow TIN level requests for QP determinations only in instances where the entire TIN has met the Medicare threshold for the All-Payer Combination Option based on their participation in Advanced APMs, by virtue of their participation in a single Advanced APM entity. This is by definition not the case in scenarios where an eligible clinician meets the Medicare threshold for the All-Payer Combination Option individually, and therefore we would not allow TIN level request for QP determinations in such scenarios.

We believe that adding the third alternative as proposed would provide more flexibility for eligible clinicians to attain QP status and go further toward reflecting the way that payers typically contract with eligible clinicians. We believe that having three possible levels for QP determinations would likely increase the opportunities of eligible clinicians to attain QP status. Further, we believe this proposal would reduce burdens on eligible clinicians who frequently contract, bill, and report data at the TIN level. This reduction in burden may encourage increased participation in Other Payer Advanced APMs.

(c) Use of Individual or APM Entity Group Information for Medicare Payment Amount and Patient Count Calculation Under the All-Payer Combination Option

(i) Flexibility in the Medicare Option and All-Payer Combination Option Threshold Methods

In the CY 2018 Quality Payment Program final rule, we finalized that when we make QP determinations at the individual eligible clinician level, we would use the individual eligible clinician payment amounts and patient counts for the Medicare calculations in

the All-Payer Combination Option. When we make QP determinations at the APM Entity level, we will use APM Entity level payment amounts and patient counts for the Medicare calculations in QP determinations under the All-Payer Combination Option. Eligible clinicians assessed at the individual eligible clinician level under the Medicare Option at § 414.1425(b)(2) will be assessed at the individual eligible clinician level only under the All-Payer Combination Option. We codified these policies at § 414.1440(d)(2) (82 FR 53881).

Based on comments from stakeholders, we believe there may be some remaining confusion on the relationship between the payment amount and patient count thresholds in the context of the All Payer Combination Option. Therefore, we are reiterating our policy that the minimum Medicare threshold needed to qualify for a QP determination for the All-Payer Combination Option may be calculated based on either payment amounts or patient counts (whichever is more favorable to the clinician); and that the All-Payer threshold, which includes Medicare data, may then be calculated based on either payment amounts or patient counts, regardless of which method was used for the initial Medicare threshold calculation and that we would similarly use whichever is more favorable to the clinician. Some have read our regulation at § 414.1440(d)(2) to suggest that consistency is required across the two thresholds requiring eligible clinicians or APM Entities to meet the minimum Medicare threshold needed to qualify for the All-Payer Combination Option and the All-Payer threshold using the same method—either payment amounts or patient counts. Although we did not directly address this specific question in our current regulation or in prior rulemaking, we are clarifying that eligible clinicians or APM Entities can meet the minimum Medicare threshold for the All-Payer Combination Option using one method (whichever is most favorable), and the All-Payer threshold for the All-Payer Combination Option using either the same, or the other method. All data submitted to us for Other Payer Advanced APM determinations and, when applicable, QP determinations using the All-Payer Combination Option will be considered and evaluated; and eligible clinicians (or APM Entities or TINs, as appropriate) may submit all data relating to both the payment amount and patient count methods.

To avoid any potential ambiguity for the future, we are proposing a change to

our regulation at § 414.1440(d) to codify this clarification. We propose to add a new § 414.1440(d)(4) to expressly allow eligible clinicians or APM Entities to meet the minimum Medicare threshold using the most favorable of the payment amount or patient count method, and then to meet the All-Payer threshold using either the same method or the other method.

We believe this clarification will encourage the submission of more complete data with All-Payer Combination Option QP determination requests, maximize the number of QPs, and thereby encourage participation by eligible clinicians in Advanced APMs and Other Payer Advanced APMs by always using the calculation method most favorable to the clinician. Further, we believe the codification of this clarification in our regulation would maximize flexibility while reducing potential uncertainty.

(ii) Extending the Medicare Threshold Score Weighting Methodology to TIN Level All-Payer Combination Option Threshold Score Calculations

In the CY 2018 Quality Payment Program final rule, we explained that we recognize that in many cases an individual eligible clinician's Medicare Threshold Scores would likely differ from the corresponding Threshold Scores calculated at the APM Entity group level, which would benefit those eligible clinicians whose individual Threshold Scores would be higher than the group Threshold Scores and disadvantage those eligible clinicians whose individual Threshold Scores are equal to or lower than the group Threshold Scores (82 FR 53881–53882). In situations where eligible clinicians are assessed under the Medicare Option as an APM Entity group, and receive a Medicare Threshold Score at the APM Entity group level, we believe that the Medicare portion of their All-Payer calculation under the All-Payer Combination Option should not be lower than the Medicare Threshold Score that they received by participating in an APM Entity group.

To accomplish this outcome, we finalized a modified weighting methodology. We finalized that when the eligible clinician's Medicare Threshold Score calculated at the individual level would be lower than the one calculated at the APM Entity group level, we would apply a weighting methodology to calculate the Threshold Score for the eligible clinician. This methodology allows us to apply the APM Entity group level Medicare Threshold Score (if higher than the individual eligible clinician

level Medicare Threshold Score), to the eligible clinician, under either the payment amount or patient count method, but weighted to reflect the

individual eligible clinician’s Medicare volume. We multiply the eligible clinician’s APM Entity group Medicare Threshold Score by the total Medicare

payments or patients made to that eligible clinician as follows:

$$\frac{[APM \text{ Entity Medicare Threshold Score} \times \text{Clinician Medicare Payments or Patients}] + \text{Individual Other Payer Advanced APM Payments or Patients}}{\text{Individual Payments or Patients (All Payers except those excluded)}}$$

We propose to extend the same weighting methodology to TIN level Medicare Threshold Scores in situations where a TIN is assessed under the Medicare Option as part of an APM Entity group, and receives a Medicare Threshold Score at the APM Entity group level. In this scenario, we believe that the Medicare portion of the TIN’s

All-Payer Combination Option Threshold Score should not be lower than the Medicare Threshold Score that they received by participating in an APM Entity group (82 FR 53881–53882). We note this extension of the weighting methodology would only apply to a TIN when that TIN represents a subset of the eligible clinicians in the APM Entity,

because when the TIN and the APM Entity are the same there is no need for this weighted methodology. We would multiply the TIN’s APM Entity group Medicare Threshold Score by the total Medicare payments or patients for that TIN as follows:

$$\frac{[APM \text{ Entity Medicare Threshold Score} \times \text{TIN Medicare Payments or Patients}] + \text{TIN Other Payer Advanced APM Payments or Patients}}{\text{TIN Payment or Patients (All Payers except those excluded)}}$$

As an example of how this weighting methodology would apply under the payment amount method for payment

year 2021, consider the following APM Entity group with two TINs, one of which participates in Other Payer

Advanced APMs and one which does not.

TABLE 60—WEIGHTING METHODOLOGY EXAMPLE—PAYMENT AMOUNT METHOD

	Medicare—advanced APM payments	Medicare—total payments	Other payer—Advanced APM payments	Other payer—total payments
TIN A	\$150	\$200	\$0	\$500
TIN B	150	800	760	1,200
APM Entity	300	1,000		

In this example, the APM Entity group Medicare Threshold Score is \$300/\$1,000, or 30 percent. Eligible Clinicians in TIN A and B would not be QPs under the Medicare Option, but TIN B could request that we make a QP

determination under the All-Payer Combination Option since the APM Entity group exceeded the 25 percent minimum Medicare payment amount threshold under that option.

If we calculate the TIN’s payments on its own without the proposed weighting policy, we would calculate the Threshold Score as follows:

$$\frac{\$150 + \$760}{\$800 + \$1200} = 46\%$$

Because TIN B’s Threshold Score is less than the 50 percent QP Payment Amount Threshold, TIN B would not

meet the QP Threshold based on this result. However, if we apply the weighting methodology, we would

calculate the Threshold Score as follows:

$$\frac{\left(\frac{\$300}{\$1000} \times \$800\right) + \$760}{\$800 + \$1,200} = 50\%$$

Based upon this Threshold Score, TIN B would meet the QP Threshold under the All-Payer Combination Option.

We propose to calculate the TIN’s Threshold Scores both on its own and with this weighted methodology, and

then use the most advantageous score when making a QP determination. We believe that, as it does for QP determinations made at the APM Entity level, this approach promotes consistency between the Medicare

Option and the All-Payer Combination Option to the extent possible. Additionally, the proposed application of this weighting approach in the case of a TIN level QP determination would

be consistent with our established policy.

(5) Summary of Proposals

In this section, we propose the following policies:

Other Payer Advanced APM Criteria

- We are proposing to change the CEHRT use criterion so that in order to qualify as an Other Payer Advanced APM as of January 1, 2020, the percentage of eligible clinicians participating in the other payer arrangement who are using CEHRT must be 75 percent.

- We are proposing to allow payers and eligible clinicians to submit evidence as part of their request for an Other Payer Advanced APM determination that CEHRT is used by the requisite percentage of eligible clinicians participating in the payment arrangement (50 percent for 2019, and 75 percent for 2020 and beyond) to document and communicate clinical care, whether or not CEHRT use is explicitly required under the terms of the payment arrangement.

- We are proposing the following clarification to § 414.1420(c)(2), effective January 1, 2020, to provide that at least one of the quality measures used in the payment arrangement in paragraph (c)(1) of this regulation must be:

++ Finalized on the MIPS final list of measures, as described in § 414.1330;

++ Endorsed by a consensus-based entity; or

++ Determined by CMS to be evidence-based, reliable, and valid.

- We are proposing to revise § 414.1420(c)(3) to require that, effective January 1, 2020, unless there is no applicable outcome measure on the MIPS quality measure list, an Other Payer Advanced APM must use an outcome measure, that meets the proposed criteria in paragraph (c)(2) of this regulation.

- We are also proposing at § 414.1420(c)(3)(i) that, for payment arrangements determined to be Other Payer Advanced APMs for the 2019 performance year which did not include an outcome measure that is evidence-based, reliable, and valid, that are resubmitted for an Other Payer Advanced APM determination for the 2020 performance year (whether for a single year, or for a multi-year determination as proposed in section III.H.4.g.(3)(b) of this proposed rule), we would continue to apply the current regulation for purposes of those determinations. This proposed revision also applies to payment arrangements in existence prior to the 2020 performance

year that are submitted for determination to be Other Payer Advanced APMs for the 2020 performance year and later.

Determination of Other Payer Advanced APMs

- We are proposing details regarding the Payer Initiated Process for remaining other payers. To the extent possible, we are aligning the Payer Initiated Process for remaining other payers with the previously finalized Payer Initiated Process for Medicaid, Medicare Health Plans, and CMS Multi-Payer Models.

- We are proposing to eliminate the Payer Initiated Process that is specifically for CMS Multi-Payer Models. We believe that payers aligned with CMS Multi-Payer Models can submit their arrangements through the Payer Initiated Process for Remaining Other Payers proposed in section III.H.4.g.(3)(c) of this proposed rule, or through the Medicaid or Medicare Health Plan payment arrangement submission processes.

Calculation of All-Payer Combination Option Threshold Scores and QP Determinations

- We propose to add a third alternative to allow requests for QP determinations at the TIN level in instances where all clinicians who reassigned billing rights under the TIN participate in a single APM Entity. We propose to modify our regulation at § 414.1440(d), by adding this third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing under the TIN participate in a single APM Entity, as well as to assess QP status at the most advantageous level for each eligible clinician.

- We are also clarifying that, in making QP determinations using the All-Payer Combination Option, eligible clinicians may meet the minimum Medicare threshold using one method, and the All-Payer threshold using the same or a different method. We are proposing to codify this clarification by adding § 414.1440(d)(4).

- We propose to extend the weighting methodology that is used to ensure that an eligible clinician does not receive a lower score on the Medicare portion of their all-payer calculation under the All-Payer Combination Option than the Medicare Threshold Score they received at the APM Entity level in order to apply a similar policy to the proposed TIN level Medicare Threshold Scores. We would use this methodology only in situations where a TIN is assessed under the Medicare Option as part of an APM Entity group, and receives a Medicare

Threshold Score at the APM Entity group level.

5. Quality Payment Program Technical Correction: Regulation Text Changes

We are proposing certain technical revisions to our regulations in order to correct several technical errors and to reconcile the text of several of our regulations with the final policies we adopted through notice and comment rulemaking.

We are proposing a technical revision to § 414.1415(b)(1) of our regulations to specify that an Advanced APM must require quality measure performance as a factor when determining payment to participants for covered professional services under the terms of the APM. The addition of the word “quality” better aligns with section 1833(z)(3)(D) of the Act and with the policy that was finalized in the CY 2017 Quality Payment Program final rule (81 FR 77406), and corrects a clerical error we made in the course of revising the text of § 414.1415(b)(1) for inclusion in the CY 2017 QPP final rule. This proposed revision would not change our current policy for this Advanced APM criterion.

We are also proposing technical revisions to the regulation at § 414.1420(d)(3)(ii)(B). These changes align with the generally applicable nominal amount standard for Other Payer Advanced APMs that was finalized in the CY 2017 Quality Payment Program final rule, and the change to the generally applicable nominal amount standard in the CY 2018 Quality Payment Program final rule where we established a revenue-based nominal amount standard as part of the Other Payer Advanced APM criteria (82 FR 53849–53850). We finalized that a payment arrangement must require APM Entities to bear financial risk for at least 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement, and that a payment arrangement’s level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures, and the maximum allowable minimum loss rate must be 4 percent (81 FR 77471). Due to a clerical oversight, we inadvertently published two conflicting provisions in regulation text; at § 414.1420(d)(3)(i), we correctly finalized that a payment arrangement must require APM Entities to bear financial risk for at least 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement, and at § 414.1420(d)(3)(ii)(B) we incorrectly finalized that the risk arrangement must have a total potential risk of at least 4

percent of expected expenditures. We are effectuating this change by removing the Other Payer Advanced APM Criteria, Financial Risk, Generally Applicable Nominal Amount Standard provision at § 414.1420(d)(3)(ii)(B) and consolidating § 414.1420(d)(3)(ii)(A) into § 414.1420(d)(3)(ii).

We are proposing to revise the regulations at §§ 414.1415(c) and 414.1420(d). In the CY 2017 Quality Payment Program final rule, we finalized a capitation standard for the financial risk criterion under the Advanced APM Criteria and the Other Payer Advanced APM Criteria, respectively. We finalized that full capitation arrangements would meet the Advanced APM financial risk criterion and Other Payer Advanced APM financial risk criterion, and would not separately need to meet the generally applicable financial risk standard and generally applicable nominal amount standard in order to satisfy the financial risk criterion for Advanced APMs and Other Payer Advanced APMs (81 FR 77431; 77472). We believe the application of the capitation standard as described by this regulation could be made clearer by revising §§ 414.1415(c) and 414.1420(d) to refer to the full capitation exception that is expressed in paragraphs (c)(6) and (d)(7), respectively.

We are also proposing to revise §§ 414.1415(c)(6) and 414.1420(d)(7). In finalizing §§ 414.1415(c)(6) and 414.1420(d)(7), we specified that a capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed to reconcile or share losses incurred or savings earned by the APM Entity. This language does not completely reflect our definition of capitation risk arrangements as discussed in preamble at 81 FR 77430 where we state that, “capitation risk arrangements, as defined here, involve full risk for the population of beneficiaries covered by the arrangement, recognizing that it might require no services whatsoever or could require exponentially more services than were expected in calculating the capitation rate. . . . [a] capitation risk arrangement adheres to the idea of a global budget for all items and services to a population of beneficiaries during a fixed period of time.” We propose to revise these regulations to align the Advanced APM Criteria, Financial Risk, Capitation provision at § 414.1415(c)(6), and the Other Payer Advanced APM

Criteria, Financial Risk, Capitation provision at § 414.1420(d)(7) with the definition of capitation risk arrangements that we expressed in the preamble of the CY 2017 Quality Payment Program final rule at 81 FR 77430–77431.

We are also proposing a technical correction to remove the “; or” and replace it with a “.” at § 414.1420(d)(3)(i) because the paragraph that follows that section does not specify a standard that is necessarily an alternative to the standard under § 414.1420(d)(3)(i), but rather expresses a standard that is independent of the standard under § 414.1420(d)(3)(i). As indicated in the CY 2018 Quality Payment Program final rule at 82 FR 53849–53850, where we established a revenue-based nominal amount standard for Other Payer Advanced APMs, in order to meet the generally applicable nominal amount standard under the Other Payer Advanced APM criteria, the total amount that an APM Entity potentially owes the payer or foregoes under a payment arrangement must be equal to at least: for the 2019 and 2020 QP Performance Periods, 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement; or, 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement.

We are also proposing to amend the regulation at § 414.1440(d)(3) to correct a typographical error by replacing the “are” with “is” in the third clause of the second sentence.

IV. Requests for Information

This section addresses two requests for information (RFIs). Upon reviewing the RFIs, respondents are encouraged to provide complete but concise responses. These RFIs are issued solely for information and planning purposes; neither RFI constitutes a Request for Proposal (RFP), application, proposal abstract, or quotation. The RFIs do not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through these RFIs and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to these RFIs; all costs associated with responding to these RFIs will be solely at the interested party’s expense. Failing to respond to either RFI will not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor each

RFI announcement for additional information pertaining to the request. Please note that CMS will not respond to questions about the policy issues raised in these RFIs. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to these RFIs are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of these RFIs may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. These RFIs should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publically post the comments received, or a summary thereof.

A. Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange Through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers

Currently, Medicare- and Medicaid-participating providers and suppliers are at varying stages of adoption of health information technology (health IT). Many hospitals have adopted electronic health records (EHRs), and CMS has provided incentive payments to eligible hospitals, critical access hospitals (CAHs), and eligible professionals who have demonstrated meaningful use of certified EHR technology (CEHRT) under the Medicare EHR Incentive Program. As of 2015, 96 percent of Medicare- and Medicaid-participating non-Federal acute care hospitals had adopted certified EHRs with the capability to electronically export a summary of clinical care.³⁶ While both adoption of EHRs and electronic exchange of information have grown substantially among hospitals, significant obstacles to exchanging electronic health information across the continuum of care persist. Routine electronic transfer of information post-discharge has not been achieved by providers and suppliers in many

³⁶ These statistics can be accessed at <https://dashboard.healthit.gov/quickstats/pages/FIG-Hospital-EHR-Adoption.php>.

localities and regions throughout the Nation.

CMS is firmly committed to the use of certified health IT and interoperable EHR systems for electronic healthcare information exchange to effectively help hospitals and other Medicare- and Medicaid-participating providers and suppliers improve internal care delivery practices, support the exchange of important information across care team members during transitions of care, and enable reporting of electronically specified clinical quality measures (eCQMs). The Office of the National Coordinator for Health Information Technology (ONC) acts as the principal Federal entity charged with coordination of nationwide efforts to implement and use health information technology and the electronic exchange of health information on behalf of the Department of Health and Human Services.

In 2015, ONC finalized the 2015 Edition health IT certification criteria (2015 Edition), the most recent criteria for health IT to be certified to under the ONC Health IT Certification Program. The 2015 Edition facilitates greater interoperability for several clinical health information purposes and enables health information exchange through new and enhanced certification criteria, standards, and implementation specifications. CMS requires eligible hospitals and CAHs in the Medicare and Medicaid EHR Incentive Programs and eligible clinicians in the Quality Payment Program (QPP) to use EHR technology certified to the 2015 Edition beginning in CY 2019.

In addition, several important initiatives will be implemented over the next several years to provide hospitals and other participating providers and suppliers with access to robust infrastructure that will enable routine electronic exchange of health information. Section 4003 of the 21st Century Cures Act (Pub. L. 114–255), enacted in 2016, and amending section 3000 of the Public Health Service Act (42 U.S.C. 300jj), requires HHS to take steps to advance the electronic exchange of health information and interoperability for participating providers and suppliers in various settings across the care continuum. Specifically, Congress directed that ONC “. . . for the purpose of ensuring full network-to-network exchange of health information, convene public-private and public-public partnerships to build consensus and develop or support a trusted exchange framework, including a common agreement among health information networks nationally.” In January 2018, ONC

released a draft version of its proposal for the Trusted Exchange Framework and Common Agreement,³⁷ which outlines principles and minimum terms and conditions for trusted exchange to enable interoperability across disparate health information networks (HINs). The Trusted Exchange Framework (TEF) is focused on achieving the following four important outcomes in the long-term:

- Professional care providers, who deliver care across the continuum, can access health information about their patients, regardless of where the patient received care.
- Patients can find all of their health information from across the care continuum, even if they do not remember the name of the professional care provider they saw.
- Professional care providers and health systems, as well as public and private health care organizations and public and private payer organizations accountable for managing benefits and the health of populations, can receive necessary and appropriate information on groups of individuals without having to access one record at a time, allowing them to analyze population health trends, outcomes, and costs; identify at-risk populations; and track progress on quality improvement initiatives.
- The health IT community has open and accessible application programming interfaces (APIs) to encourage entrepreneurial, user-focused innovation that will make health information more accessible and improve EHR usability.

ONC will revise the draft TEF based on public comment and ultimately release a final version of the TEF that will subsequently be available for adoption by HINs and their participants seeking to participate in nationwide health information exchange. The goal for stakeholders that participate in, or serve as, a HIN is to ensure that participants will have the ability to seamlessly share and receive a core set of data from other network participants in accordance with a set of permitted purposes and applicable privacy and security requirements. Broad adoption of this framework and its associated exchange standards is intended to both achieve the outcomes described above while creating an environment more conducive to innovation.

In light of the widespread adoption of EHRs along with the increasing availability of health information

exchange infrastructure predominantly among hospitals, we are interested in hearing from stakeholders on how we could use the CMS health and safety standards that are required for providers and suppliers participating in the Medicare and Medicaid programs (that is, the Conditions of Participation (CoPs), Conditions for Coverage (CfCs), and Requirements for Participation (RfPs) for Long-Term Care (LTC) Facilities) to further advance electronic exchange of information that supports safe, effective transitions of care between hospitals and community providers. Specifically, CMS might consider revisions to the current CMS CoPs for hospitals, such as: Requiring that hospitals transferring medically necessary information to another facility upon a patient transfer or discharge do so electronically; requiring that hospitals electronically send required discharge information to a community provider via electronic means if possible and if a community provider can be identified; and requiring that hospitals make certain information available to patients or a specified third-party application (for example, required discharge instructions) via electronic means if requested.

On November 3, 2015, we published a proposed rule (80 FR 68126) to implement the provisions of the Improving Medicare Post-Acute Care Transformation Act of 2014 (the IMPACT Act) (Pub. L. 113–185) and to revise the discharge planning CoP requirements that hospitals (including short-term acute care hospitals, long-term care hospitals (LTCHs), rehabilitation hospitals, psychiatric hospitals, children’s hospitals, and cancer hospitals), critical access hospitals (CAHs), and home health agencies (HHAs) would need to meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. However, several of the proposed requirements directly address the issue of communication between providers and between providers and patients, as well as the issue of interoperability:

- Hospitals and CAHs would be required to transfer certain necessary medical information and a copy of the discharge instructions and discharge summary to the patient’s practitioner, if the practitioner is known and has been clearly identified;
- Hospitals and CAHs would be required to send certain necessary medical information to the receiving facility/post-acute care providers, at the time of discharge; and
- Hospitals, CAHs, and HHAs would need to comply with the IMPACT Act

³⁷ The draft version of the trusted Exchange Framework may be accessed at <https://beta.healthit.gov/topic/interoperability/trusted-exchange-framework-and-common-agreement>.

requirements that would require hospitals, CAHs, and certain post-acute care providers to use data on quality measures and data on resource use measures to assist patients during the discharge planning process, while taking into account the patient's goals of care and treatment preferences.

We published another proposed rule (81 FR 39448) on June 16, 2016, that updated a number of CoP requirements that hospitals and CAHs would need to meet in order to participate in the Medicare and Medicaid programs. This proposed rule has not been finalized yet. One of the proposed hospital CoP revisions in that rule directly addresses the issues of communication between providers and patients, patient access to their medical records, and interoperability. We proposed that patients have the right to access their medical records, upon an oral or written request, in the form and format requested by such patients, if it is readily producible in such form and format (including in an electronic form or format when such medical records are maintained electronically); or, if not, in a readable hard copy form or such other form and format as agreed to by the facility and the individual, including current medical records, within a reasonable timeframe. The hospital must not frustrate the legitimate efforts of individuals to gain access to their own medical records and must actively seek to meet these requests as quickly as its recordkeeping system permits.

We also published a final rule (81 FR 68688) on October 4, 2016, that revised the requirements that LTC facilities must meet to participate in the Medicare and Medicaid programs. In this rule, we made a number of revisions based on the importance of effective communication between providers during transitions of care, such as transfers and discharges of residents to other facilities or providers, or to home. Among these revisions was a requirement that the transferring LTC facility must provide all necessary information to the resident's receiving provider, whether it is an acute care hospital, an LTCH, a psychiatric facility, another LTC facility, a hospice, a home health agency, or another community-based provider or practitioner (42 CFR 483.15(c)(2)(iii)). We specified that necessary information must include the following:

- Contact information of the practitioner responsible for the care of the resident;
- Resident representative information including contact information;
- Advance directive information;

- Special instructions or precautions for ongoing care;
- The resident's comprehensive care plan goals; and
- All other necessary information, including a copy of the resident's discharge or transfer summary and any other documentation to ensure a safe and effective transition of care.

We note that the discharge summary mentioned above must include reconciliation of the resident's medications, as well as a recapitulation of the resident's stay, a final summary of the resident's status, and the post-discharge plan of care. In addition, in the preamble to the rule, we encouraged LTC facilities to electronically exchange this information if possible and to identify opportunities to streamline the collection and exchange of resident information by using information that the facility is already capturing electronically.

Additionally, we specifically invite stakeholder feedback on the following questions regarding possible new or revised CoPs/CfCs/RfPs for interoperability and electronic exchange of health information:

- If CMS were to propose a new CoP/CfC/RfP standard to require electronic exchange of medically necessary information, would this help to reduce information blocking as defined in section 4004 of the 21st Century Cures Act?
- Should CMS propose new CoPs/CfCs/RfPs for hospitals and other participating providers and suppliers to ensure a patient's or resident's (or his or her caregiver's or representative's) right and ability to electronically access his or her health information without undue burden? Would existing portals or other electronic means currently in use by many hospitals satisfy such a requirement regarding patient/resident access as well as interoperability?
- Are new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information necessary to ensure patients/residents and their treating providers routinely receive relevant electronic health information from hospitals on a timely basis or will this be achieved in the next few years through existing Medicare and Medicaid policies, the implementing regulations related to the privacy and security standards of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–91), and implementation of relevant policies in the 21st Century Cures Act?
- What would be a reasonable implementation timeframe for compliance with new or revised CMS

CoPs/CfCs/RfPs for interoperability and electronic exchange of health information if CMS were to propose and finalize such requirements? Should these requirements have delayed implementation dates for specific participating providers and suppliers, or types of participating providers and suppliers (for example, participating providers and suppliers that are not eligible for the Medicare and Medicaid EHR Incentive Programs)?

• Do stakeholders believe that new or revised CMS CoPs/CfCs/RfPs for interoperability and electronic exchange of health information would help improve routine electronic transfer of health information as well as overall patient/resident care and safety?

• Under new or revised CoPs/CfCs/RfPs, should non-electronic forms of sharing medically necessary information (for example, printed copies of patient/resident discharge/transfer summaries shared directly with the patient/resident or with the receiving provider or supplier, either directly transferred with the patient/resident or by mail or fax to the receiving provider or supplier) be permitted to continue if the receiving provider, supplier, or patient/resident cannot receive the information electronically?

• Are there any other operational or legal considerations (for example, implementing regulations related to the HIPAA privacy and security standards), obstacles, or barriers that hospitals and other providers and suppliers would face in implementing changes to meet new or revised interoperability and health information exchange requirements under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future?

• What types of exceptions, if any, to meeting new or revised interoperability and health information exchange requirements should be allowed under new or revised CMS CoPs/CfCs/RfPs if they are proposed and finalized in the future? Should exceptions under the QPP, including CEHRT hardship or small practices, be extended to new requirements? Would extending such exceptions impact the effectiveness of these requirements?

We would also like to directly address the issue of communication between hospitals (as well as the other providers and suppliers across the continuum of patient care) and their patients and caregivers. MyHealthEData is a government-wide initiative aimed at breaking down barriers that contribute to preventing patients from being able to access and control their medical records. Privacy and security of patient data will be at the center of all CMS

efforts in this area. CMS must protect the confidentiality of patient data, and CMS is completely aligned with the Department of Veterans Affairs (VA), the National Institutes of Health (NIH), ONC, and the rest of the Federal Government, on this objective.

While some Medicare beneficiaries have had, for quite some time, the ability to download their Medicare claims information, in pdf or Excel formats, through the CMS Blue Button platform, the information was provided without any context or other information that would help beneficiaries understand what the data were really telling them. For beneficiaries, their claims information is useless if it is either too hard to obtain or, as was the case with the information provided through previous versions of Blue Button, hard to understand. In an effort to fully contribute to the Federal Government's MyHealthEData initiative, CMS developed and launched the new Blue Button 2.0, which represents a major step toward giving patients meaningful control of their health information in an easy-to-access and understandable way. Blue Button 2.0 is a developer-friendly, standards-based application programming interface (API) that enables Medicare beneficiaries to connect their claims data to secure applications, services, and research programs they trust. The possibilities for better care through Blue Button 2.0 data are exciting, and might include enabling the creation of health dashboards for Medicare beneficiaries to view their health information in a single portal, or allowing beneficiaries to share complete medication lists with their doctors to prevent dangerous drug interactions.

To fully understand all of these health IT interoperability issues, initiatives, and innovations through the lens of its regulatory authority, CMS invites members of the public to submit their ideas on how best to accomplish the goal of fully interoperable health IT and EHR systems for Medicare- and Medicaid-participating providers and suppliers, as well as how best to further contribute to and advance the MyHealthEData initiative for patients. We are particularly interested in identifying fundamental barriers to interoperability and health information exchange, including those specific barriers that prevent patients from being able to access and control their medical records. We also welcome the public's ideas and innovative thoughts on addressing these barriers and ultimately removing or reducing them in an effective way, specifically through revisions to the current CMS CoPs, CfCs, and RfPs for hospitals and other

participating providers and suppliers. We have received stakeholder input through recent CMS Listening Sessions on the need to address health IT adoption and interoperability among providers that were not eligible for the Medicare and Medicaid EHR Incentives program, including long-term and post-acute care providers, behavioral health providers, clinical laboratories and social service providers, and we would also welcome specific input on how to encourage adoption of certified health IT and interoperability among these types of providers and suppliers as well.

B. Request for Information on Price Transparency: Improving Beneficiary Access to Provider and Supplier Charge Information

In the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20548 and 20549) and the FY 2015 IPPS/LTCH PPS proposed and final rules (79 FR 28169 and 79 FR 50146, respectively), we stated that we intend to continue to review and post relevant charge data in a consumer-friendly way, as we previously have done by posting hospital and physician charge information on the CMS website.³⁸ In the FY 2019 IPPS/LTCH PPS proposed rule, we also continued our discussion of the implementation of section 2718(e) of the Public Health Service Act, which aims to improve the transparency of hospital charges. This discussion in the FY 2019 IPPS/LTCH PPS proposed rule continued a discussion we began in the FY 2015 IPPS/LTCH PPS proposed rule and final rule (79 FR 28169 and 79 FR 50146, respectively). In all of these rules, we noted that section 2718(e) of the Public Health Service Act requires that each hospital operating within the United States, for each year, establish (and update) and make public (in accordance with guidelines developed by the Secretary) a list of the hospital's standard charges for items and services provided by the hospital, including for diagnosis-related groups (DRGs) established under section 1886(d)(4) of the Act. In the FY 2015 IPPS/LTCH PPS proposed and final rules, we reminded hospitals of their obligation to comply with the provisions of section 2718(e) of the Public Health Service Act and provided guidelines for its implementation. We stated that hospitals are required to either make public a list of their standard charges (whether that be the chargemaster itself or in another form of their choice) or

³⁸ See, for example, Medicare Provider Utilization and Payment Data, available at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Medicare-Provider-Charge-Data/index.html>.

their policies for allowing the public to view a list of those charges in response to an inquiry. In the FY 2019 IPPS/LTCH PPS proposed rule, we took one step to further improve the public accessibility of charge information. Specifically, effective January 1, 2019, we are updating our guidelines to require hospitals to make available a list of their current standard charges via the internet in a machine readable format and to update this information at least annually, or more often as appropriate.

In general, we encourage all providers and suppliers to undertake efforts to engage in consumer-friendly communication of their charges to help patients understand what their potential financial liability might be for services they obtain, and to enable patients to compare charges for similar services. We encourage providers and suppliers to update this information at least annually, or more often as appropriate, to reflect current charges.

We are concerned that challenges continue to exist for patients due to insufficient price transparency. Such challenges include patients being surprised by out-of-network bills for physicians, such as anesthesiologists and radiologists, who provide services at in-network hospitals and in other settings, and patients being surprised by facility fees, physician fees for emergency department visits, or by fees for providers and suppliers that are part of an episode of care but that were not furnished by the hospital. We also are concerned that, for providers and suppliers that maintain a list of standard charges, the charge data may not be helpful to patients for determining what they are likely to pay for a particular service or facility encounter. In order to promote greater price transparency for patients, we are considering ways to improve the accessibility and usability of current charge information.

We also are considering potential actions that would be appropriate to further our objective of having providers and suppliers undertake efforts to engage in consumer-friendly communication of their charges to help patients understand what their potential financial liability might be for services they obtain from the provider or supplier, and to enable patients to compare charges for similar services across providers and suppliers, including services that could be offered in more than one setting. Therefore, we are seeking public comment from all providers and suppliers on the following:

- How should we define "standard charges" in various provider and supplier settings? Is there one definition

for those settings that maintain chargemasters, and potentially a different definition for those settings that do not maintain chargemasters? Should “standard charges” be defined to mean: Average or median rates for the items on a chargemaster or other price list or charge list; average or median rates for groups of items and/or services commonly billed together, as determined by the provider or supplier based on its billing patterns; or the average discount off the chargemaster, price list or charge list amount across all payers, either for each separately enumerated item or for groups of services commonly billed together? Should “standard charges” be defined and reported for both some measure of the average contracted rate and the chargemaster, price list or charge list? Or is the best measure of a provider’s or supplier’s standard charges its chargemaster, price list or charge list?

- What types of information would be most beneficial to patients, how can providers and suppliers best enable patients to use charge and cost information in their decision-making, and how can CMS and providers and suppliers help third parties create patient-friendly interfaces with these data?

- Should providers and suppliers be required to inform patients how much their out-of-pocket costs for a service will be before those patients are furnished that service? How can information on out-of-pocket costs be provided to better support patients’ choice and decision-making? What changes would be needed to support greater transparency around patient obligations for their out-of-pocket costs? How can CMS help beneficiaries to better understand how co-pays and co-insurance are applied to each service

covered by Medicare? What can be done to better inform patients of their financial obligations? Should providers and suppliers of healthcare services play any role in helping to inform patients of what their out-of-pocket obligations will be?

- Can we require providers and suppliers to provide patients with information on what Medicare pays for a particular service performed by that provider or supplier? If so, what changes would need to be made by providers and suppliers? What burden would be added as a result of such a requirement?

In addition, we are seeking public comment on improving a Medigap patient’s understanding of his or her out-of-pocket costs prior to receiving services, especially with respect to the following particular questions:

- How does Medigap coverage affect patients’ understanding of their out-of-pocket costs before they receive care? What challenges do providers and suppliers face in providing information about out-of-pocket costs to patients with Medigap? What changes can Medicare make to support providers and suppliers that share out-of-pocket cost information with patients that reflects the patient’s Medigap coverage? Who is best situated to provide patients with clear Medigap coverage information on their out-of-pocket costs prior to receipt of care? What role can Medigap plans play in providing information to patients on their expected out-of-pocket costs for a service? What state-specific requirements or programs help educate Medigap patients about their out-of-pocket costs prior to receipt of care?

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. chapter 35), we

are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval.

To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the section 3506(c)(2)(A) required issues for the following information collection requirements (ICRs).

A. Wages

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2017 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 61 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

Private Sector Wages: The adjusted hourly wage is used to calculate the labor costs associated with our proposed requirements.

TABLE 61—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead costs (\$/hr)	Adjusted hourly wage (\$/hr)
All Occupations (for Individuals’ Wages)	00–0000	\$24.34	n/a	n/a
Billing and Posting Clerks	43–3021	18.49	\$18.49	\$36.98
Computer Systems Analysts	15–1121	44.59	44.59	89.18
Family and General Practitioner	29–1062	100.27	100.27	200.54
Legal Support Workers, All Other	23–2099	32.67	32.67	65.34
Licensed Practical Nurse (LPN)	29–2061	21.98	21.98	43.96
Medical Secretary	43–6013	17.25	17.25	34.50
Physicians	29–1060	103.22	103.22	206.44
Practice Administrator (Medical and Health Services Managers)	11–9111	53.69	53.69	107.38
Registered Nurse	29–1141	35.36	35.36	70.72

As indicated, we are adjusting our employee hourly wage estimates by a

factor of 100 percent. This is necessarily a rough adjustment, both because fringe

benefits and overhead costs vary significantly from employer to

employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, there is no practical alternative and we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

Wages for Individuals: For beneficiaries who elect to complete the CAHPS for MIPS survey, we believe that the burden will be addressed under All Occupations (BLS occupation code 00–0000) at \$24.34/hr since the group of individual respondents varies widely from working and nonworking individuals and by respondent age, location, years of employment, and educational attainment, etc. Unlike our private sector adjustment to the respondent hourly wage, we are not adjusting this figure for fringe benefits and overhead since the individuals' activities would occur outside the scope of their employment.

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Regarding the Clinical Laboratory Fee Schedule (CLFS) (Section III.A. of This Proposed Rule)

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. The CLFS final rule titled, Medicare Clinical Diagnostic Laboratory Tests Payment System final rule (CLFS final rule), published in the **Federal Register** on June 23, 2016, implemented section 1834A of the Act. Under the CLFS final rule (81 FR 41036), “reporting entities” must report to CMS during a “data reporting period” “applicable information” (that is, certain private payor data) collected during a “data collection period” for their component “applicable laboratories.” In general, the payment amount for each clinical diagnostic laboratory test (CDLT) on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the 6-month data collection period and reported to us during the 3-month data reporting period, and is equal to the weighted median of the private payor rates for the CDLT.

An applicable laboratory is defined at § 414.502, in part, as an entity that is a laboratory (as defined under the Clinical Laboratory Improvement Amendments (CLIA) definition at § 493.2) that bills Medicare Part B under its own National Provider Identifier (NPI). In addition, an applicable laboratory is an entity that receives more than 50 percent of its

Medicare revenues during a data collection period from the CLFS and/or the Physician Fee Schedule. We refer to this component of the applicable laboratory definition as the “majority of Medicare revenues threshold.” The definition of applicable laboratory also includes a “low expenditure threshold” component, which requires an entity to receive at least \$12,500 of its Medicare revenues from the CLFS during a data collection period for its CDLTs that are not advanced diagnostic laboratory tests (ADLTs).

In determining payment rates under the private payor rate-based CLFS, one of our objectives is to obtain as much applicable information as possible from the broadest possible representation of the national laboratory market on which to base CLFS payment amounts, for example, from independent laboratories, hospital outreach laboratories, and physician office laboratories, without imposing undue burden on those entities. We believe it is important to achieve a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a CDLT, and minimizing the reporting burden for entities. In response to stakeholder feedback and in the interest of facilitating our goal, we are proposing to revise the majority of Medicare revenues threshold component of the definition of applicable laboratory at § 414.502(3) to exclude Medicare Advantage (MA) payments under Medicare Part C from the definition of total Medicare revenues (that is, the denominator of the majority of Medicare threshold equation). Specifically, the proposed change could allow additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C to meet the majority of Medicare revenues threshold and potentially qualify as applicable laboratories (if they also meet the low expenditure threshold) and report data to us.

As such, we believe this proposal may result in more data being reported, which we would use to set CLFS payment rates. However, with regard to the CLFS-related requirements and burden, we note that section 1834A(h)(2) of the Act provides that the Paperwork Reduction Act in chapter 35 of title 44 of the U.S.C. shall *not* apply to information collected under section 1834A of the Act (which is the new private payor rate-based CLFS).

For a complete discussion of our proposal to revise the majority of Medicare revenues threshold component of the definition of applicable laboratory under the

Medicare CLFS, we refer readers to section III.A of this proposed rule.

2. ICRs Regarding Appropriate Use Criteria (AUC) for Advanced Diagnostic Imaging Services (§ 414.94 and Section III.D. of This Proposed Rule)

Consultations: In this rule we propose to revise the regulation at § 414.94(j) to allow the AUC consultation, when not performed personally by the ordering professional, to be performed by auxiliary personnel (as defined in § 410.26(a)(1)) under the direction of, and incident to, the ordering professional's services. The consultation requirements and burden will be submitted to OMB for approval under control number 0938–1345 (CMS–10654).

General practitioners make up a large group of practitioners who order applicable imaging services and would be required to consult AUC under this program so we use “family and general practitioner” from the list of BLS occupation titles (see Table O1) to calculate the following cost estimates. As our proposal would modify the AUC consultation requirement to allow auxiliary personnel, working under the direction of the ordering professional, to interact with the CDSM for AUC consultation, we also use the “registered nurse” occupation to calculate our revised cost estimates.

To derive the burden associated with the proposed provision in § 414.94(j) that would take effect January 1, 2020, we estimate it would take 2 minutes (0.033 hr) at \$70.72/hr for auxiliary personnel in the form of a registered nurse to consult with a qualified CDSM. The Medicare Benefit Policy Manual (Pub. 100–02), Chapter 15, Section 60.2 IOM 100–02, Chapter 15, Section 60.2 requires that an incidental service performed by the nonphysician practitioner must have followed from a direct, personal, professional service furnished by the physician. Therefore, to estimate the percentage of consultations available to be performed incident to, we analyzed 2014 Medicare Part B claims comparing evaluation and management visits for new (CPT codes 99201, 99202, 99203, 99204, and 99205) relative to established (CPT codes 99211, 99212, 99213, 99214, 99215) patients with place of service codes 11 (physician's office). We found that approximately 10 percent of all claims incurred were for new patients. Therefore, we also estimate that 90-percent or 38,863,636 of the total consultations (43,181,818 total consultations × 0.90) could be performed by such auxiliary personnel, with the remaining 10 percent

(43,181,818 × 0.10) performed by the ordering professional. In aggregate, we estimate an annual burden of 1,282,500 hours (38,863,636.2 consultations × 0.033 hr/consultation) at a cost of \$90,698,400 (1,282,500 hr × \$70.72/hr) or \$2.33 per consultation. If this provision is finalized, we would continue to monitor our burden estimates and, if necessary, adjust those estimates for more precision once the program begins.

Additionally, the CY 2018 Physician Fee Schedule final rule (82 FR 52976) explicitly discussed and provided a voluntary period for ordering professionals to begin to familiarize themselves with qualified CDSMs. During the current 18-month voluntary participation period, we estimated there would be 10,230,000 consultations based on market research from current applicants for the qualification of their CDSMs for advanced diagnostic imaging services. Based on feedback from CDSMs with experience in AUC consultation, as well as standards recommended by the Office of the National Coordinator (ONC)³⁹ and the Healthcare Information Management Systems Society (HIMSS)⁴⁰, we estimated it would take 2 minutes (0.033 hr) at \$200.54/hr for a family and general practitioner or 2 minutes at \$70.72/hr for a registered nurse to use a qualified CDSM to consult specified applicable AUC. As mentioned above, we estimate that as many as 90-percent of practices would use auxiliary personnel working under the direction of the ordering professional to interact with the CDSM for AUC consultation. Consequently, we estimate a total burden of 337,590 hours (10,230,000 consultations × 0.033 hr) at a cost of \$28,256,958 [(337,590 hr × 0.10 × \$200.54/hr) + [337,590 hr × 0.90 × \$70.72/hr)]. Annually, we estimate 112,530 hours (337,590 hr/3 yr) at a cost of \$9,418,986 (\$28,256,958/3 yr). We are annualizing the one-time burden (by dividing our estimates by OMB's 3-year approval period) since we do not anticipate any additional burden after the 18-month voluntary participation period ends.

Beginning January 1, 2020, we anticipate 43,181,818 responses in the form of consultations based on the aforementioned market research, as well as Medicare claims data for advanced diagnostic imaging services. As noted above, we estimate it would take 2 minutes (0.033 hr) at \$200.54/hr for a

family and general practitioner or 2 minutes at \$70.72/hr for a registered nurse to use a qualified CDSM to consult specified applicable AUC. In aggregate, we estimate an annual burden of 1,425,000 hours (43,181,818 consultations × 0.033 hr/consultation) at a cost of \$119,275,350 [(0.1 × 1,425,000 hr × \$200.54/hr) + [0.9 × 1,425,000 hr × \$70.72/hr)].

Annual Reporting: Consistent with section 1834(q)(4)(B) of the Act, in the CY 2018 PFS final rule (82 FR 52976) we estimated the burden of implementing the one-time voluntary reporting period beginning in July 2018, and will be implementing the mandatory annual reporting requirement beginning January 1, 2020. Specifically, the regulation at § 414.94(k) requires that Medicare claims for advanced diagnostic imaging services, paid for under an applicable payment system (as defined in § 414.94(b)) and ordered on or after January 1, 2020, report the following information: (1) Identify which qualified CDSM was consulted by the ordering professional; (2) identify whether the service ordered would adhere to specified applicable AUC, would not adhere to specified applicable AUC, or whether specified applicable AUC was not applicable to the service ordered; and (3) identify the NPI of the ordering professional (if different from the furnishing professional). The reporting requirement will not have any impact on any Medicare claim forms because the forms' currently approved data fields, instructions, and burden are not expected to change. Consequently, there is no need for review by OMB under the authority of the PRA, however, we have assessed the impact and include an analysis to this effect in the regulatory impact section of this proposed rule.

Significant Hardship Exception: We propose to revise the regulation at § 414.94(i)(3) that provides for a significant hardship exception for ordering professionals who experience a significant hardship affecting their consultation of AUC when ordering an advanced diagnostic imaging service. The proposed revision would establish a process whereby all ordering professionals can self-attest that they are experiencing a significant hardship at the time of placing an advanced diagnostic imaging order. While this is not a certification being used as a substitute for a collection of AUC consultation information because no consultation is required by statute to take place, the significant hardship exception process would involve appending to the order for an applicable imaging service the significant hardship

information for inclusion on the Medicare claim in lieu of the AUC consultation information. This imposes no burden beyond the provision of identifying information and attesting to the applicable information. In this regard, the use of this process is not "information" as defined under 5 CFR 1320.3(h), and therefore, is exempt from requirements of the PRA.

Recordkeeping: Section 1834(q)(4)(C) of the Act provides for certain exceptions to these reporting requirements, therefore we believe that some claims for advanced diagnostic imaging services will not contain AUC consultation information, such as in the case of an ordering professional with a significant hardship. However, ordering professionals would store documentation supporting the self-attestation of a significant hardship. Storage of this information could involve the use of automated, electronic, or other forms of information technology at the discretion of the ordering professional. CMS estimates that the average time for office clerical activities associated with this storage of information to be 10 minutes (0.167 hr) at \$17.25/hr for a medical secretary to perform 6,699 recordkeeping actions, since consultation will not take place in the year when a hardship is incurred and 2016 data from the Medicare EHR Incentive Program and the first 2019 payment year MIPS eligibility and special status file suggests this estimate of those seeking hardship (control number 0938–1314). In aggregate we estimate an annual burden of 1,119 hours (6,699 recordkeeping activities × 0.167 hr) at a cost of \$19,303 (1,119 hr × \$17.25/hr). We seek comments to inform these burden estimates.

3. ICRs Regarding the Medicare Shared Savings Program (Part 425 and Section III.F. of This Proposed Rule)

Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the Shared Savings Program.

4. ICRs Regarding the Physician Self-Referral Law (42 CFR Part 411 and Section III.G. of This Proposed Rule)

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain designated health services (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing

³⁹ https://ecqi.healthit.gov/cds#quicktabs-tabs_cds3.

⁴⁰ <http://www.himss.org/improving-outcomes-cds-practical-pearls-new-himss-guidebook>.

another individual, entity, or third party payer) for those referred services. The statute establishes a number of specific exceptions, and grants the Secretary the authority to create regulatory exceptions for financial relationships that pose no risk of program or patient abuse. Additionally, the statute mandates refunding any amount collected under a bill for an item or service furnished under a prohibited referral. Finally, the statute imposes reporting requirements and provides for sanctions, including civil monetary penalty provisions.

As discussed in section III.G. of this rule, we are proposing regulatory updates to implement section 50404 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted February 9, 2018), which added provisions to section 1877(h)(1) of the Act pertaining to the writing and signature requirements in certain compensation arrangement exceptions to the physician self-referral law's referral and billing prohibitions. Although we believe that the newly enacted provisions in section 1877(h)(1) of the Act are principally intended merely to codify in statute existing CMS policy and regulations with respect to compliance with the writing and signature requirements, we are proposing revisions to our regulations at 42 CFR 411.354(e) and 411.353(g) to address any actual or perceived difference between the statutory and regulatory language, to codify in regulation our longstanding policy regarding satisfaction of the writing requirement found in many of the exceptions to the physician self-referral law, and to make the Bipartisan Budget Act of 2018 policies applicable to compensation arrangement exceptions issued using the Secretary's authority in section 1877(b)(4) of the Act. The burden associated with the writing and signature requirements would be the time and effort necessary to prepare written documents and obtain signatures of the parties.

While the writing and signature requirements are subject to the PRA, we believe the associated burden is exempt under 5 CFR 1320.3(b)(2). We believe that the time, effort, and financial resources necessary to comply with the writing and signature requirements would be incurred by persons without federal regulation during the normal course of their activities. Specifically, we believe that, for normal business operations purposes, health care providers and suppliers document their financial arrangements with physicians and others in order to identify and be able to enforce the legal obligations of the parties. Therefore, we believe that the writing and signature requirements

should be considered usual and customary business practices.

5. The Quality Payment Program (QPP) (Part 414 and Section III.H. of This Proposed Rule)

Summary: With respect to the PRA, the Quality Payment Program is comprised of a series of ICRs associated with MIPS and Advanced APMs. The MIPS ICRs consist of registration for virtual groups; qualified registry and QCDR self-nomination; CAHPS survey vendor application; Quality Payment Program Identity Management Application Process; quality performance category data submission by claims collection type, QCDR and MIPS CQM collection type, eCQM collection type, and CMS web interface submission type; CAHPS for MIPS survey beneficiary participation; group registration for CMS web interface; group registration for CAHPS for MIPS survey; call for quality measures; Promoting Interoperability reweighting applications; Promoting Interoperability performance category data submission; call for Promoting Interoperability measures; improvement activities performance category data submission; nomination of improvement activities; and opt-out of Physician Compare for voluntary participants. ICRs for Advanced APMs consist of partial qualifying APM participant (QP) election; other payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of data for All-Payer QP determinations under the All-Payer combination option.

The following ICRs reflect this proposed rule's policies, as well as policies in the CY 2017 (81 FR 77008) and CY 2018 (82 FR 53568) Quality Payment Program final. In discussing each ICR, we reference the specific policies and whether they are proposed in this CY 2019 proposed rule or finalized in the CY 2017 or CY 2018 Quality Payment Program final rules. As described below in more detail, two ICRs (Quality: CMS Web Interface Submission Type, and Promoting Interoperability Performance Category: Data Submission) show a reduction in burden due to proposed changes in policies. Most burden estimates are adjustments to reflect data available at the time of publication of this proposed rule. Finally, we added one ICR to incorporate a collection previously mentioned in the CY 2018 Quality Payment Program final rule for which collection had not yet started: Submission of Data for All-Payer QP Determinations (82 FR 53886). See section V.B.4. of this proposed rule for

a summary of the ICRs, the overall burden estimates, changes in burden due to policies in this proposed rule, and a summary of the policy and data changes affecting each ICR.

The revised requirements and burden estimates for all Quality Payment Program ICRs (except for CAHPS for MIPS and virtual groups election) will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). The proposed CAHPS for MIPS ICRs will be submitted to OMB for approval under control number 0938–1222 (CMS–10450). The Virtual Groups Election is approved by OMB control number 0938–1343 (CMS–10652).

With regard to Quality Payment Program respondents, we selected BLS occupations Billing and Postal Clerks, Computer Systems Analysts, Physicians, Practice Administrator, and Licensed Practical Nurse (see Wage Estimates in section V.A. of this proposed rule) based on a study (Casalino et al., 2016) that collected data on the staff in physician's practices involved in the quality data submission process.⁴¹ To calculate the cost for virtual groups to prepare their written formal agreements, we used wage estimates for Legal Support Workers, All Others.

Respondent estimates are modeled using similar methodology to the CY 2017 and CY 2018 Quality Payment Program final rules. For instance, we are using the eligibility file generated for the MIPS program based on the first 12-month determination period for the first year; the APM Participation List for the third snapshot date of the 2017 QP performance period to identify QP clinicians excluded from MIPS, and to identify clinicians and groups eligible for MIPS but who are not required to submit data for the Promoting Interoperability performance category; and the 2016 PQRS data and 2016 Medicare and Medicaid EHR Incentive Program data to estimate the number of respondents for the improvement activities performance category. Although the submission period for the 2017 MIPS performance period ended in April 2018, the participation and performance data were not available at the time of writing this proposed rule, with the sole exception of 286 CMS Web Interface respondents, which is based on the number of groups who submitted MIPS data via the CMS Web Interface during the 2018 MIPS performance period. We intend to update our burden

⁴¹ Lawrence P. Casalino et al., "US Physician Practices Spend More than \$15.4 Billion Annually to Report Quality Measures," *Health Affairs*, 35, no. 3 (2016): 401–406.

estimates in the final rule using actual MIPS data if technically feasible.

Our estimates assume clinicians who participated in 2016 PQRS and who are not determined to be QPs based on their participation in Advanced APMs in the 2017 performance period will continue to submit quality data in the 2019 MIPS performance period. This assumption is consistent with the CY 2017 and CY 2018 Quality Payment Program final rules where we assumed that clinicians would continue to participate as either MIPS eligible clinicians or voluntary reporters (81 FR 77501 and 82 FR 53908). As discussed in section III.H.3.a. of this proposed rule, we are proposing to revise the eligibility criteria to expand MIPS to additional clinician types. In addition, we are proposing in section III.H.3.c. of this proposed rule to revise the low-volume threshold in the following manner: If a MIPS eligible clinician meets or exceeds one, but not all, of the low-volume threshold criterion, including as defined by dollar amount (\$90,000), beneficiary count (200), or covered professional services to Part-B enrolled individuals (minimum threshold of 200) then they may elect to submit data and opt-in to MIPS. If a MIPS eligible clinician does not meet at least one of these low-volume determinations or does not elect to opt-in, they are not eligible and are excluded from MIPS. If they are excluded and submit data, they would be voluntary reporters. If these policies are finalized, it would expand the number of potential MIPS eligible clinicians, but we do not anticipate an incremental increase in the burden because the affected clinicians were assumed to be voluntary reporters in prior rules. In the CY 2018 Quality Payment Program final rule, clinicians who participated in 2016 PQRS, and who were not determined to be QPs based on their participation in Advanced APMs during CY 2017 and were not MIPS eligible, were assumed to be voluntary reporters in MIPS (82 FR 53908). Therefore, the proposed expansion in MIPS eligibility does not change the total number of respondents, but instead shifts a certain number of assumed voluntary reporters to MIPS eligible clinicians.

Additionally, we expect the act of electing to be a single click once a clinician or group has submitted data;

therefore, we do not anticipate that proposal would revise the burden hours for any of our burden estimates.

Our participation estimates are reflected in Tables 65, 66, and 67 for the quality performance category, Table 78 for the Promoting Interoperability performance category, and Table 81 for the improvement activities performance category. We also assume that previous PQRS participants who are not QPs will submit data for the improvement activities performance category, and will submit data for the Promoting Interoperability performance category unless they receive a significant hardship or other type of exception or are automatically assigned a weighting of zero percent for the Promoting Interoperability performance category.

Due to data limitations, our burden estimates may overstate the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories. This is due to two primary reasons. First, we anticipate the number of QPs to increase because of total expected growth in Advanced APM participation. The additional QPs would be excluded from MIPS and likely not report. Second, we anticipate that some portion of the clinicians that opted to participate in PQRS may elect to not participate in MIPS, and, therefore, the actual number of participants may be lower than our estimates. However, we believe our estimates are the most appropriate given the available data.

Framework for Understanding the Burden of MIPS Data Submission: Because of the wide range of information collection requirements under MIPS, Table 62 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians varies across the types of data, and whether the clinician is a MIPS eligible clinician, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 62, MIPS eligible clinicians that are not in MIPS APMs and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same requirements as groups, therefore

we will refer only to groups for the remainder of this section unless otherwise noted. Because MIPS eligible clinicians are not required to provide any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 62.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. For the 2019 MIPS performance period, the quality data submitted by Shared Savings Program ACOs, Next Generation ACOs, and other APM Entities on behalf of their participant MIPS eligible clinicians will fulfill any MIPS submission requirements for the quality performance category.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit Promoting Interoperability performance category data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we describe that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Advanced APM participants who are determined to be Partial QPs may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844), but other than the election to participate in MIPS, we do not have data to estimate that burden.

TABLE 62—CLINICIANS OR ORGANIZATIONS SUBMITTING MIPS DATA ON BEHALF OF CLINICIANS, BY TYPE OF DATA AND CATEGORY OF CLINICIAN *

Category of clinician	Type of data submitted			
	Quality performance category	Promoting interoperability performance category	Improvement activities performance category	Other data submitted on behalf of MIPS eligible clinicians
MIPS Eligible Clinicians (not in MIPS APMs) and Other Eligible Clinicians Voluntarily Submitting Data ^a .	As group or individual clinicians.	As group or individual clinicians. Clinicians who are hospital-based, ambulatory surgical center-based, non-patient facing, physician assistants, nurse practitioners, clinician nurse specialists, certified registered nurse anesthetists, physical therapists, occupational therapists, clinical social workers, and clinical psychologists are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category. Clinicians approved for significant hardship or other exceptions are also eligible for a zero percent weighting.	As group or individual clinicians.	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. Groups electing to submit via CMS Web Interface for the first time must register. Virtual groups must register via email.
Eligible Clinicians participating in the Shared Savings Program or Next Generation ACO Model (both MIPS APMs).	ACOs submit to the CMS Web Interface and CAHPS for ACOs on behalf of their participating MIPS eligible clinicians. [These submissions are not included in burden estimates for this proposed rule because quality data submission to fulfill requirements of the Shared Savings Program and for purposes of testing and evaluating the Next Generation ACO Model are not subject to the PRA.] ^b	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [Burden estimates for this proposed rule assume group TIN-level reporting.] ^c	CMS will assign the improvement activities performance category score to each APM Entity group based on the activities involved in participation in the Shared Savings Program. ^d [The burden estimates for this proposed rule assume no improvement activity reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity performance category score.]	Advanced APM Entities will make election for participating MIPS eligible clinicians.
Eligible Clinicians participating in Other MIPS APMs.	APM Entities submit to MIPS on behalf of their participating MIPS eligible clinicians. [These submissions are not included in burden estimates for this proposed rule because quality data submission for purposes of testing and evaluating Innovation Center models tested under Section 1115A of the Social Security Act (or Section 3021 of the Affordable Care Act) are not subject to the PRA.]	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this proposed rule assume group TIN-level reporting.]	CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM. [The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score.]	Advanced APM Entities will make election for participating eligible clinicians.

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

^a Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

^b Sections 1899 and 1115A of the Act state the Shared Savings Program and testing, evaluation, and expansion of Innovation Center models are not subject to the PRA (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively).

^c Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are submitted for the same APM Entity, CMS would take the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for the APM Entity score.

^d APM Entities participating in MIPS APMs do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules and proposed in this CY 2019 rule create some additional data collection requirements not listed in Table 62. These additional data collections, some of which were previously approved by OMB under the control numbers 0938–1314 (Quality Payment Program) and 0938–1222 (CAHPS for MIPS), are as follows:

Additional approved ICRs related to MIPS third-party vendors

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508 and 82 FR 53906 through 53908) (0938–1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508 and 82 FR 53906 through 53908) (0938–1314).

- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (0938–1222).

Additional ICRs related to the data submission and the quality performance category

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509 and 82 FR 53916 through 53917) (0938–1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914).

Additional ICRs related to the Promoting Interoperability performance category

- Application for Promoting Interoperability Reweighting (82 FR 53918) (0938–1314).

Additional ICRs related to call for new MIPS measures and activities

- Nomination of improvement activities (82 FR 53922) (0938–1314).
- Call for new Promoting Interoperability measures (0938–1314).
- Call for new quality measures (0938–1314).

Additional ICRs related to MIPS

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925) (0938–1314).

Additional ICRs related to APMs

- Partial QP Election (81 FR 77512 through 77513 and 82 FR 53922 through 53923) (0938–1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924) (0938–1314).
- Other Payer Advanced APM determinations: Eligible Clinician

Initiated Process (82 FR 53924) (0938–1314).

- Submission of Data for All-Payer QP Determinations (New data collection for the 2019 performance period).

6. Quality Payment Program ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938–1343 (CMS–10652). Consequently, we are not making any virtual group election changes under that control number.

7. Quality Payment Program ICRs Regarding Third-Party Reporting (§ 414.1400)

Under MIPS, quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as one quality performance category measure, can be submitted via CMS-approved survey vendors. In the CY 2018 Quality Payment Program final rule, we combined the burden for self-nomination of qualified registries and QCDRs (82 FR 53906). For this proposed rule, we determined that requirements for self-nomination for qualified registries were sufficiently different from QCDRs that it is necessary to estimate the two independently. The change would align the burden more closely to the requirements for QCDRs and qualified registries to self-nominate, not because of any change in policy in this proposed rule. Specifically, while the processes for self-nomination are similar, QCDRs have the option to submit QCDR measures for the quality performance category. Therefore, differences between QCDRs and registries self-nomination are associated with the preparation of QCDR measures for approval. The burden associated with qualified registry self-nomination, QCDR self-nomination, and the CAHPS for MIPS survey vendor applications follow:

Qualified Registry Self-Nomination:

The proposed requirements and burden

associated with qualified registry self-nomination will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Qualified registries interested in submitting MIPS data to us on their participants' behalf need to complete a self-nomination process to be considered qualified to submit on behalf of MIPS eligible clinicians or groups (82 FR 53815).

In the CY 2018 Quality Payment Program final rule, previously approved qualified registries in good standing (that are not on probation or disqualified) that wish to self-nominate using the simplified process can attest, in whole or in part, that their previously approved form is still accurate and applicable (82 FR 53815). In the same rule, qualified registries in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved qualified registry application, for CMS review during the self-nomination period, from September 1 to November 1 (82 FR 53815). This simplified self-nomination process will begin for the 2019 MIPS performance period.

The CY 2017 Quality Payment Program final rule provided the definition of a qualified registry to be a medical registry, a maintenance of certification program operated by a specialty body of the American Board of Medical Specialties or other data intermediary that, with respect to a particular performance period, has self-nominated and successfully completed a vetting process (as specified by CMS) to demonstrate its compliance with the MIPS qualification criteria specified by CMS for that performance period (81 FR 77382).

For this CY 2019 Quality Payment Program rule, we are proposing adjustments to the number of respondents (from 120 to 150) based on more recent data and a revised definition of “respondent” to account for self-nomination applications received but not approved. We are also proposing adjustments to our per respondent time estimate (from 10 hours to 3 hours) based on our review of the current burden estimates against the existing policy. Additionally, we are proposing a range of time estimates

(from 10 hours to 0.5 hours) which reflect the availability of a simplified self-nomination process for previously approved qualified registries.

For the 2017 MIPS performance period, we received 138 applications for nomination to be a qualified registry and 145 applications for the 2018 MIPS performance period. In continuance of this trend for the 2019 MIPS performance period, we estimate 150 nomination applications will be received from qualified registries desiring approval to report MIPS data, an increase of 30 respondents.

For this proposed rule, the burden associated with qualified registry self-nomination will vary depending on the number of existing qualified registries that will elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53815). The self-nomination form is submitted electronically using the web-based tool JIRA. For the CY 2018 performance period, 141 qualified registries were approved to submit MIPS data.

In the CY 2018 Quality Payment Program final rule, we estimated the burden associated with self-nomination of a qualified registry to be 10 hours, similar to PQRS (82 FR 53907). For this proposed rule, we reduce our estimate to 3 hours because registries no longer provide an XML submission, calculated measure, or measure flow as part of the self-nomination process and are not subject to a mandatory interview, which were done previously as part of the PQRS qualified registry self-nomination process, upon which the previous assumption of 10 hours was based. As described in the CY 2017 Quality Payment Program final rule, the full self-nomination process requires the submission of basic information, a

description of the process the qualified registry will use for completion of a randomized audit of a subset of data prior to submission, and the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384).

For the simplified self-nomination process, we estimate 0.5 hours per qualified registry to submit a nomination, a reduction of 9.5 hours from currently approved estimates.

As shown in Table 63, we estimate that the staff involved in the qualified registry self-nomination process will be mainly computer systems analysts or their equivalent, who have an adjusted labor cost of \$89.18/hour. Assuming that the time associated with the self-nomination process ranges from a minimum of 0.5 hours (for the simplified self-nomination process) to 3 hours (for the full self-nomination process) per qualified registry, we estimate that the annual burden will range from 97.5 hours ([141 qualified registries × 0.5 hr] + [9 qualified registries × 3 hr]) to 450 hours (150 qualified registries × 3 hr) at a cost ranging from \$8,695 (97.5 hr × \$89.18/hr) to \$40,131 (450 hr × \$89.18/hr), respectively (see Table 63).

Independent of the change to our per response time estimate, the increase in the number of respondents results in an adjustment of 300 hours and \$26,754 (30 registries × 10 hr × \$89.18/hr). Accounting for the change in the number of qualified registries, the change in time per qualified registry to self-nominate results in an adjustment of between -1,402.5 hours and -125,075 ([141 registries × -9.5 hr] + [9 registries × -7 hr]) at \$89.18/hr and -1,050 hours and -\$93,639 (150 registries × -7 hr × \$89.18/hr). When

these two adjustments are combined, the net impact ranges between -1,102.5 (-1,402.5 + 300) and -750 (-1,050 + 300) hours and -\$98,321 (-\$125,075 + \$26,754) and -\$66,885 (-\$93,639 + \$26,754).

Qualified registries must comply with requirements on the submission of MIPS data to CMS. The burden associated with the qualified registry submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the qualified registry by its participants and submitting these results, the numerator and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. These requirements are currently approved by OMB under control number 0938-1314 (CMS-10621) with no changes being proposed.

We expect that the time needed for a qualified registry to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the qualified registry and the number of applicable measures. However, we believe that qualified registries already perform many of these activities for their participants. We believe the estimates discussed above and shown in Table 63 represents the upper bound of registry burden, with the potential for less additional MIPS burden if the registry already provides similar data submission services.

Based on the assumptions previously discussed, we provide an estimate of the total annual burden associated with a qualified registry self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 63—ESTIMATED BURDEN FOR QUALIFIED REGISTRY SELF-NOMINATION

	Minimum burden	Maximum burden
Number of Qualified Registry Simplified Self-Nomination Applications submitted (a)	141	0
Number of Qualified Registry Full Self-Nomination Applications submitted (b)	9	150
Total Annual Hours Per Qualified Registry for Simplified Process (c)	0.5	0.5
Total Annual Hours Per Qualified Registry for Full Process (d)	3	3
Total Annual Hours for Qualified Registries (e) = (a) * (c) + (b) * (d)	97.5	450
Cost Per Simplified Process Per Registry (@computer systems analyst's labor rate of \$89.18/hr.) (f)	\$44.59	\$44.59
Cost Per Full Process Per Registry (@computer systems analyst's labor rate of \$89.18/hr.) (g)	\$267.54	\$267.54
Total Annual Cost for Qualified Registries (h) = (a) * (f) + (b) * (g)	\$8,695	\$40,131

Both the minimum and maximum burden shown in Table 64 will be submitted for approval to OMB under

control number 0938-1314 (CMS-10621) and reflect adjustments due to review of self-nomination process and

the number of respondents. For purposes of calculating total burden associated with the proposed rule as

shown in Table 89, only the maximum burden will be used.

*QCDR Self-Nomination:*⁴² The proposed requirements and burden associated with QCDR self-nomination will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

QCDRs interested in submitting quality, Promoting Interoperability, and improvement activities performance category data to us on their participants' behalf will need to complete a self-nomination process to be considered qualified to submit on behalf of MIPS eligible clinicians or groups.

In the CY 2018 Quality Payment Program final rule, previously approved QCDRs in good standing (that are not on probation or disqualified) that wish to self-nominate using the simplified process can attest, in whole or in part, that their previously approved form is still accurate and applicable (82 FR 53808). Existing QCDRs in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved QCDR application, for CMS review during the self-nomination period, from September 1 to November 1 (82 FR 53808). This simplified self-nomination process will begin for the 2019 MIPS performance period.

For this proposed rule, the burden associated with QCDR self-nomination will vary depending on the number of existing QCDRs that will elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53808 through 53813). The self-nomination form is submitted electronically using the web-based tool JIRA. For the CY 2018 performance period, 150 QCDRs were approved to submit MIPS data.

For this CY 2019 Quality Payment Program rule, we are proposing adjustments to the number of respondents (from 113 to 200) based on more recent data and a revised definition of "respondent" to account for self-nomination applications received but not approved. We are also proposing adjustments to the time burden estimates per respondent based on our review of the current burden estimates against the existing policy as well as proposing a range of time

burden estimates which reflect the availability of a simplified self-nomination process for previously approved QCDRs.

For the 2017 MIPS performance period, we received 138 self-nomination applications from QCDRs and for the 2018 MIPS performance period, we received 176 self-nomination applications. In continuance of this trend for the 2019 MIPS performance period, we estimate 200 self-nomination applications will be received from QCDRs desiring approval to report MIPS data, an increase of 87 respondents.

We estimate that the self-nomination process for QCDRs to submit on behalf of MIPS eligible clinicians or groups for MIPS will involve approximately 3 hours per QCDR to submit information required at the time of self-nomination as described in the CY 2017 Quality Payment Program final rule including basic information about the QCDR, describe the process it will use for completion of a randomized audit of a subset of data prior to submission, provide a data validation plan, and provide results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384). However, for the simplified self-nomination process, we estimate 0.5 hours per QCDR to submit this information. The self-nomination form is submitted electronically using the web-based tool JIRA.

In addition, QCDRs calculate their measure results. QCDRs must possess benchmarking capabilities (for QCDR measures) that compare the quality of care a MIPS eligible clinician provides with other MIPS eligible clinicians performing the same quality measures. For QCDR measures, the QCDR must provide to us, if available, data from years prior (for example, 2017 data for the 2019 MIPS performance period) before the start of the performance period. In addition, the QCDR must provide to us, if available, the entire distribution of the measure's performance broken down by deciles. As an alternative to supplying this information to us, the QCDR may post this information on their website prior to the start of the performance period, to the extent permitted by applicable privacy laws. The time it takes to perform these functions may vary depending on the sophistication of the entity, but we estimate that a QCDR will spend an additional 1 hour performing these activities per measure and assume that each QCDR will submit information for 9 QCDR measures, for a total burden of 9 hours per QCDR (1 hr per measure × 9 measures). The estimated average of

9 measures per QCDR is based on the number of QCDR measure submissions received in the 2017 and 2018 MIPS performance periods and is the same for each QCDR regardless of whether they elect to use the simplified or full self-nomination process.

In the 2017 MIPS performance period, we received over 1,000 QCDR measure submissions. In the 2018 MIPS performance period, we received over 1,400 QCDR measure submissions. For the 2019 MIPS performance period, we anticipate this trend will continue, and therefore, estimate we will receive a total of approximately 1,800 QCDR measure submissions, resulting in an average of 9 measure submissions per QCDR (1,800 measure submissions/200 QCDRs).

In the CY 2018 Quality Payment Program final rule, the burden associated with self-nomination of a QCDR was estimated to be 10 hours (82 FR 53907). For this proposed rule, we are increasing the burden associated with self-nomination to 12 hours because QCDRs are no longer required provide an XML submission and are not subject to a mandatory interview; both of which were completed as part of the PQRS QCDR self-nomination process upon which the previous assumption of 10 hours was based, while simultaneously accounting for an increase in the number of QCDR measure submissions being submitted.

As shown in Table 64, we estimate that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor cost of \$89.18/hr. Assuming that the hours per QCDR associated with the self-nomination process ranges from a minimum of 9.5 hours (for the simplified self-nomination process) to 12 hours (for the full self-nomination process), we estimate that the annual burden will range from 2,025 hours ($[150 \text{ QCDRs} \times 9.5 \text{ hr}] + [50 \text{ QCDRs} \times 12 \text{ hr}]$) to 2,400 hours ($200 \text{ QCDRs} \times 12 \text{ hr}$) at a cost ranging between \$180,590 ($2,025 \text{ hr} \times \$89.18/\text{hr}$) and \$214,032 ($2,400 \text{ hr} \times \$89.18/\text{hr}$), respectively (see Table 64).

Independent of the change to our per response time estimate, the increase in the number of respondents results in an adjustment of 870 hours and \$77,587 ($87 \text{ registries} \times 10 \text{ hr} \times \$89.18/\text{hr}$). Accounting for the change in the number of qualified registries, the change in time per QCDR to self-nominate results in an adjustment of between 25 hours and \$2,230 ($[150 \text{ registries} \times -0.5 \text{ hr}] + [50 \text{ registries} \times 2 \text{ hr}]$) at \$89.18/hr and 400 hours and \$35,672 ($200 \text{ registries} \times 2 \text{ hr} \times \$89.18/\text{hr}$).

⁴² We do not anticipate any changes in the CEHRT process for health IT vendors as we transition to MIPS. Hence, health IT vendors are not included in the burden estimates for MIPS.

hr). When these two adjustments are combined, the net impact ranges between 895 (870 + 25) hours at \$79,817 (\$77,587 + \$2,230) and 1,270 (870 + 400) hours at \$113,259 (\$77,587 + \$35,672).

QCDRs must comply with requirements on the submission of MIPS data to CMS. The burden associated with the QCDR submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the QCDR by its participants and submitting these results, the numerator

and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. These requirements are currently approved by OMB under control number 0938–1314 (CMS–10621) with no changes being proposed. We expect that the time needed for a QCDR to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the QCDR and the number of applicable measures. However, we believe that QCDRs already perform

many of these activities for their participants. We believe the estimate noted in this section represents the upper bound of QCDR burden, with the potential for less additional MIPS burden if the QCDR already provides similar data submission services.

Based on the assumptions previously discussed, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered “qualified” to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 64—ESTIMATED BURDEN FOR QCDR SELF-NOMINATION

	Minimum burden	Maximum burden
Number of QCDR Simplified Self-Nomination Applications submitted (a)	150	0
Number of QCDR Full Self-Nomination Applications submitted (b)	50	200
Total Annual Hours Per QCDR for Simplified Process (c)	9.5	9.5
Total Annual Hours Per QCDR for Full Process (d)	12	12
Total Annual Hours for QCDRs (e) = (a) * (c) + (b) * (d)	2,025	2,400
Cost Per Simplified Process Per QCDR (@computer systems analyst’s labor rate of \$89.18/hr.) (f)	\$847.21	\$847.21
Cost Per Full Process Per QCDR (@computer systems analyst’s labor rate of \$89.18/hr.) (g)	\$1,070.16	\$1,070.16
Total Annual Cost for QCDRs (h) = (a) * (f) + (b) * (g)	\$180,590	\$214,032

Both the minimum and maximum burden shown in Table 64 will be submitted for approval to OMB under control number 0938–1314 (CMS–10621) and reflect adjustments due to review of self-nomination process and the number of respondents. For purposes of calculating total burden associated with the proposed rule as shown in Table 89, only the maximum burden will be used.

CMS-Approved CAHPS for MIPS Survey Vendors: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to CMS-approved CAHPS for MIPS survey vendors. The CMS-approved CAHPS for MIPS survey vendor requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

8. Quality Payment Program ICRs Regarding Data Submission (§§ 414.1325 and 414.1335)

Under our current policies, two groups of clinicians will submit quality data under MIPS: Those who submit as MIPS eligible clinicians and other eligible clinicians who opt to submit data voluntarily but will not be subject to MIPS payment adjustments. While the proposed expansion of the

definition of a MIPS eligible clinician to new clinician types and the opt-in process for MIPS participation discussed in sections III.H.3.a and III.H.3.c.(6) of this proposed rule could affect respondent counts, all of the new potential respondents had the opportunity to participate in PQRS. Therefore, consistent with our assumptions in the CY 2017 and CY 2018 Quality Payment Program final rules that PQRS participants that are not QPs would have participated in MIPS as voluntary respondents (81 FR 77501 and 82 FR 53908, respectively), we anticipate that this rule’s proposed expansion of the definition of a MIPS eligible clinician will not have any incremental effect on any of our currently approved burden estimates. Our respondent assumptions regarding QPs have been updated using the APM Participation List for the third snapshot date of the 2017 QP performance period in place of the 2017 QP determination data used to estimate respondents in the CY 2018 Quality Payment Program final rule (82 FR 53908). With this exception, our respondent assumptions remain the same as approved in the approved PRA.

For the purpose of the following analyses, we assume that a total of 763,383 clinicians who participated in PQRS for the reporting periods occurring in 2016 and who are not QPs in Advanced APMs in the 2017 MIPS

performance period will continue to submit quality data in the 2019 MIPS performance period. This number differs from the currently approved estimate (OMB 0938–1314, CMS–10621) of 134,802 due to more QPs being identified and removed. We assume that 100 percent of APM Entities in MIPS APMs will submit quality data to CMS as required under their models.⁴³

As discussed in section III.H.3.h.(1).(b) of this proposed rule, we are proposing to replace the term “submission mechanism” with the terms “collection type” and “submission type.” “Submission mechanism” is presently used to refer not only to the mechanism by which data is submitted, but also to certain types of measures and activities on which data are submitted to the entities submitting such data in the Quality Payment Program.

Apart from clinicians that became QPs in the 2017 MIPS performance period, we assume that clinicians will continue to submit quality data for the same collection types they used under the 2016 PQRS. As discussed in the CY

⁴³ We estimate that 120,508 clinicians that participated in the 2016 PQRS will be QPs who will not be not required to submit MIPS quality performance category data under MIPS, and are not included in the numerator or denominator of our participation rate. This is a difference of 19,859 compared to the number of QPs in the CY 2018 Quality Payment Program final rule (82 FR 53908).

2018 Quality Payment Program final rule (82 FR 53905), when describing the burden for the virtual group application process, we assume that the 80 TINs that elect to form 16 virtual groups will continue to collect and submit MIPS data using the same collection and submission types as they did when reporting under the 2016 PQRS, but the submission will be at the virtual group, rather than group level. Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their models. The burden is excluded as sections 3021 and 3022 of the Affordable Care Act state the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA (42 U.S.C. 1395jj(e) and 1315a(d)(3), respectively).⁴⁴ Tables 65, 66, and 67 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 65 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the 2019 MIPS performance period. First, we estimated the number of clinicians that submit data as an individual clinician or group during the 2019 MIPS performance period using 2016 PQRS data on individuals and groups by collection type and excluded clinicians identified as QPs using the APM Participation List for the third snapshot date of the 2017 QP performance period.

For the 2019 performance period, respondents will have the option to submit quality performance category data via claims, direct, log in and upload, and CMS Web Interface submission types. For this proposed rule, participation data by submission type and user research data to inform burden assumptions are not available to estimate burden by submission type. As a result, we continue to estimate the burden for collecting data via collection type: Claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. As

we gain more experience with the program, we may revise this approach in the future.

For the claims collection type, in section III.H.3.h.(1).(b) of this rule, we propose to limit the Medicare Part B claims collection type to small practices beginning with the 2021 MIPS payment year and to allow clinicians in small practices to report claims as a group. We assume in our currently approved burden analysis that any clinician that submits quality data codes to us for the claims collection type is intending to do so for the Quality Payment Program. We made this assumption originally in the CY 2016 Quality Payment Program final rule to ensure that we fully accounted for any burden that may have resulted from our policies. In some cases, however, clinicians may be submitting quality data codes not only for claims collection type, but also for MIPS CQM and QCDR collection types. Some registries and QCDRs utilize data from claims to populate their datasets when submitting on behalf of clinicians. We are not able to separate out when a clinician submits a quality data code solely for the claim collection type or when a clinician is also submitting these codes for MIPS CQM or QCDR collection types. In addition, we see a large number of voluntary reporters for the claims collection type.

Approximately half of the 274,702 clinicians we estimate will submit quality data via claims (see Table 65) are MIPS eligible clinicians while the other half are voluntary reporters which means our burden include estimates for a large number of voluntary reporters. Approximately 60 percent of these 274,702 clinicians are in practices with more than 15 clinicians; however, over 80 percent of the number in practices larger than 15 clinicians are either voluntary reporters, group reporters, or are also reporting quality data through another collection type. Approximately 25,000 clinicians in non-small practices are both MIPS eligible and scored based only on claims data. Overall, we find that approximately 47 percent of the clinicians reporting claims in non-small practices would also qualify for facility-based reporting, and therefore, would not be required to submit quality data. It is unclear why many clinicians are submitting quality data via an alternate collection type and we currently lack data to estimate both the number of clinicians who would be impacted by this proposal and the potential behavioral response of those clinicians

who would be required to switch to another collection type. As a result, we propose to continue using the assumption that all clinicians (except QPs) who submitted data to 2016 PQRS via the claims collection type would continue to do so for MIPS in order to avoid overstating the impact of the proposed change. We intend to update this burden estimate with additional data as it becomes available. We also seek comment on potential other assumptions for capturing the claims burden.

Due to data limitations, our burden estimates for all quality collection types continue to assume that clinicians who submitted data in PQRS (except QPs) would continue to do so using the same collection types in MIPS. Using our proposed terminology, clinicians who used a QCDR or Registry would now collect measures via QCDR or MIPS CQM collection type; clinicians who used the EHR in PQRS would elect the eCQM collection type, and groups that elected the CMS Web Interface for PQRS would elect the CMS Web Interface for MIPS.

In addition, participation data for the 2017 MIPS performance period was unavailable in time for this proposed rule, with the exception of CMS Web Interface respondents. If actual participation data for the 2017 MIPS performance period is available in time to meet our final rule's publication schedule, we will use this data and revise our estimates in that rule. Based on these methods, Table 65 shows that in the 2019 MIPS performance period, an estimated 274,702 clinicians will submit data as individuals for the claims collection type; 267,736 clinicians will submit data as individuals or as part of groups for the MIPS CQM or QCDR collection types; 129,188 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 91,757 clinicians will submit as part of groups via the CMS Web Interface.

Table 65 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

⁴⁴ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their models.

TABLE 65—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE

	Claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of clinicians to collect data by collection type (as individual clinicians or groups) in Quality Payment Program Year 3 (excludes QPs) (a)	274,702	267,736	129,188	91,757	763,383
* Number of clinicians to collect data by collection type (as individual clinicians or groups) in Quality Payment Program Year 2 (excludes QPs) (b)	278,039	255,228	131,133	93,867	758,267
Difference between Year 3 and Year 2 (c) = (a) – (b)	–3,337	+12,508	–1,945	–2,110	+5,116

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

In the CY 2018 Quality Payment Program final rule (82 FR 53625 through 53626), beginning with the 2019 MIPS performance period, we allow MIPS eligible clinicians to submit data for multiple collection types for a single performance category. Therefore, we are capturing the burden of any eligible clinician that may have historically collected to PQRS via multiple collection types, as we assume they would continue to collect via multiple collection types and that our MIPS

scoring methodology will take the highest score. Hence, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive, and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types under the 2016 PQRS. Table 66 uses methods similar to those described for Table 65 to estimate the number of clinicians to submit data as individual clinicians via each

collection type in Quality Payment Program Year 3. We estimate that approximately 274,702 clinicians will submit data as individuals using the claims collection type; approximately 103,268 clinicians will submit data as individuals using MIPS CQMs or QCDR collection types; and approximately 52,028 clinicians will submit data as individuals using eCQMs collection type.

TABLE 66—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA AS INDIVIDUALS BY COLLECTION TYPE

	Claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of Clinicians to submit data as individuals in Quality Payment Program Year 3 (excludes QPs) (a)	274,702	103,268	52,028	0	429,998
* Number of Clinicians to submit data as individuals in Quality Payment Program Year 2 (excludes QPs) (b)	278,039	104,281	52,709	0	435,029
Difference between Year 3 and Year 2 (c) = (a) – (b)	–3,337	–1,013	–681	0	–5,031

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

To be consistent with the policy in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points, our columns in Table 66 are not mutually exclusive.

Table 67 provides our estimated counts of groups or virtual groups to submit quality data on behalf of clinicians for each collection type in the 2019 MIPS performance period and reflects our assumption that the formation of virtual groups will reduce burden. Except for groups comprised entirely of QPs, we assume that groups that submitted quality data as groups under the 2016 PQRS will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN

within a virtual group for the 2019 MIPS performance period. The first step was to estimate the number of groups or virtual groups to collect data via each collection type during the 2019 MIPS performance period using 2016 PQRS data on groups collecting through various collection types and excluding clinicians identified as QPs using the APM Participation List for the third snapshot date of the 2017 QP performance period. The second and third steps in Table 67 reflect our currently approved assumption that virtual groups will reduce the burden for quality data submission by reducing the number of organizations to submit quality data on behalf of clinicians. We assume that 40 groups that previously collected on behalf of clinicians via QCDR or MIPS CQM collection types will elect to form 8 virtual groups that will collect via QCDR and MIPS CQM collection types. We assume that another 40 groups that previously collected on behalf of clinicians via

eCQM collection types will elect to form another 8 virtual groups that will collect via eCQM collection types. Hence, the second step in Table 67 is to subtract out the estimated number of groups under each collection type that will elect to form virtual groups, and the third step in Table 67 is to add in the estimated number of virtual groups that will submit on behalf of clinicians for each collection type.

Specifically, we assumed that 3,788 groups and virtual groups will submit data for the QCDR or MIPS CQM collection types on behalf of 164,468 clinicians; 1,501 groups and virtual groups will submit for eCQM collection types on behalf of 77,160 eligible clinicians; and 286 groups will submit data via the CMS Web Interface on behalf of 91,757 clinicians. Groups cannot elect to collect via claims collection type.

TABLE 67—ESTIMATED NUMBER OF GROUPS AND VIRTUAL GROUPS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE ON BEHALF OF CLINICIANS

	Claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total

Difference between Year 3 and Year 2 (f) = (d) – (e)	0	852	–8	–10	834

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

The burden estimates associated with submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices’ work flows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality data codes into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician’s practice and by the collection type. Further, these burden estimates are based on historical rates of participation in the PQRS program, and the rate of participation in MIPS is expected to differ. In addition, the submission type used to submit MIPS data may also vary from these estimates due to more accurate information being unavailable at this time for this proposed rule.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimate the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our

burden estimates for the claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures.

We estimate an increase in the number of QPs from 100,649 in CY 2018 Quality Payment Program final rule to 120,508 for this proposed rule (82 FR 53908) and since they are excluded from submitting MIPS data, a decrease to our estimated number of respondents by submission and collection type relative to the estimates in the CY 2018 Quality Payment Program final rule (82 FR 53912 through 53915). As noted previously in this section, information collections associated with the Shared Savings Program and the testing, evaluation, and expansion of CMS Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.

Quality Payment Program Identity Management Application Process: The proposed requirements and burden associated with the application process will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2018 Quality Payment Program final rule, the time associated with the Identity Management Application Process was described as “Obtain Account in CMS-Specified Identity Management System” and included in the ICR for Quality Data

Submission by Clinicians and Groups: EHR Submission (82 FR 53914) for a total burden of 54,218 hours (1 hr × 54,218 respondents). After our review of the quality data submission process, we determined the burden associated with the application process (3,741 hours) should be accounted for in a separate ICR. Our per respondent burden estimate remains unchanged at 1 hour per response.

For an individual, group, or third-party to submit MIPS quality, improvement activities, or Promoting Interoperability performance category data using either the log in and upload or the log in and attest submission type or to access feedback reports, the submitter must have a CMS Enterprise Portal user account. Once the user account is created, registration is not required again for future years.

Based on the number of new TINs registered in the 2017 MIPS performance period, we estimate 3,741 eligible clinicians, groups, or third-parties will register for new accounts for the 2019 MIPS performance period. As shown in Table 68 it would take 1 hour at \$89.18/hr for a computer systems analyst (or their equivalent) to obtain an account for the CMS Enterprise Portal. In aggregate we estimate an annual burden of 3,741 hours (3,741 registrations × 1 hr/registration) at a cost of \$333,622 (3,741 hr × \$89.18/hr) or \$89.18 per registration.

Quality Data Submission by Clinicians: Claims-Based Collection Type: The proposed requirements and burden associated with clinicians' claims-based data submissions will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Table 65, based on 2016 PQRS data and 2017 MIPS eligibility data, we assume that 274,702 individual clinicians will collect and submit quality data via the claims collection type. We continue to anticipate that the claims submission process for MIPS is operationally similar to the way the claims submission process functioned under the PQRS. Specifically, clinicians will need to gather the required information, select the appropriate quality data codes (QDCs), and include the appropriate QDCs on the claims they submit for payment. Clinicians will collect QDCs as additional (optional) line items on the CMS–1500 claim form or the electronic equivalent HIPAA transaction 837–P, approved by OMB under control number 0938–1197. This rule's proposed provisions would not necessitate the revision of either form.

For this CY 2019 Quality Payment Program rule, we are proposing adjustments to the number of respondents based on more recent data and adjustments to our per respondent time estimates so that they correctly align with the number of required measures for which MIPS data must be submitted (6 measures) in comparison to the number of measures previously required under PQRS (9 measures).

The total estimated burden of claims-based submission will vary along with the volume of claims on which the

submission is based. Based on our experience with PQRS, we estimate that the burden for submission of MIPS quality data will range from 0.15 to 7.2 hours per clinician, a reduction from the range of 0.22 to 10.8 hours as set out in the CY 2018 Quality Payment Program final rule (82 FR 53912). In the same rule, the 33 percent reduction in the number of measures (from 9 to 6) was erroneously omitted from our burden calculations; it is reflected in this proposed rule's burden estimates. The wide range of estimates for the time required for a clinician to submit quality measures via claims reflects the wide variation in complexity of submission across different clinician quality measures. As shown in Table 69, we estimate that the cost of quality data submission using claims will range from \$13.38 (0.15 hr × \$89.18/hr) to \$642.10 (7.2 hr × \$89.18/hr). The burden will involve becoming familiar with MIPS data submission requirements. We believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$107.38/hr for a practice administrator, 1 hour at \$206.44/hr for a clinician, 1 hour at \$43.96/hr for an LPN/medical assistant, 1 hour at \$89.18/hr for a computer systems analyst, and 1 hour at \$36.98/hr for a billing clerk.

The estimate for reviewing and incorporating measure specifications for the claims collection type is higher than that of QCDRs/Registries or eCQM collection types due to the more manual, and therefore, more burdensome nature of claims measures.

Considering both data submission and start-up requirements, the estimated time (per clinician) ranges from a

minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual burden ranges from 1,964,119 hours (7.15 hr × 274,702 clinicians) to 3,900,768 hours (14.2 hr × 274,702 clinicians). The estimated annual cost (per clinician) ranges from \$712.08 (\$13.38 + \$322.14 + \$89.18 + \$43.96 + \$36.98 + \$206.44) to a maximum of \$1,340.80 (\$642.10 + \$322.14 + \$89.18 + \$43.96 + \$36.98 + \$206.44). The total annual burden ranges from a minimum of \$195,609,800 (274,702 clinicians × \$712.08) to a maximum of \$368,320,442 (274,702 clinicians × \$1,340.80).

Table 69 summarizes the range of total annual burden associated with clinicians submitting quality data via claims.

Independent of the change in the number of respondents, the change in estimated time per clinician results in a burden adjustment of between –20,853 hours at –\$1,860,081 (278,039 clinicians × –0.075 hr × \$89.18/hr) and –1,000,941 hours at –\$89,261,641 (278,039 clinicians × –3.6 hr × \$89.18/hr). Accounting for the change in the time burden per respondent, the decrease in number of respondents results in a total adjustment of between –23,860 hours at –\$2,376,211 (–3,337 respondents × \$712.08/respondent) and –47,385 hours at –\$4,474,249 (–3,337 respondents × \$1,340.80/respondent). When these two adjustments are combined, the net adjustment ranges between –44,713 (–20,853 – 23,860) hours at –\$4,236,292 (–\$1,860,081 – \$2,376,211) and –1,048,326 (–1,000,941 – 47,385) hours at –\$93,735,890 (–\$89,261,641 – \$4,474,249).

Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to this quality data submission. However, we are proposing adjustments to the number of respondents based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Tables 65, 66, and 67 and based on the 2016 PQRS data and 2017 MIPS eligibility data, we assume that 267,736 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. Of these, we expect 103,268 clinicians, as shown in Table 66, to submit as individuals and 3,788 groups, as shown in Table 67, are expected to submit on behalf of the remaining 164,468 clinicians. Given that the number of measures required is the same for clinicians and groups, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is

participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party vendor to submit the data to us on the clinician's or group's behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS submission requirements and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data total 9.083 hours at \$858.86. This consists of 3 hours at \$89.18/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$107.38/hr for a practice administrator, 1 hour at \$89.18/hr for a computer systems analyst, 1 hour at

\$43.96/hr for a LPN/medical assistant, 1 hour at \$36.98/hr for a billing clerk, and 1 hour at \$206.44/hr for a clinician to review measure specifications. Additionally, clinicians and groups will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) per clinician or group (respondent) for a cost of \$7.40 (0.083 hr × \$89.18/hr for a computer systems analyst).

In aggregate we estimate an annual burden of 972,390 hours (9.083 hr/response × 107,056 groups plus clinicians submitting as individuals) at a cost of \$92,738,331 (107,056 responses × \$866.26/response). The decrease in number of respondents results in a total adjustment of –1,462 hours at –\$139,467 (–161 respondents × \$866.26/respondent). Based on these assumptions, we have estimated in Table 70 the burden for these submissions.

Quality Data Submission by Clinicians and Groups: eCQM Collection Type: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to this quality data submission. However, we are proposing adjustments to the number of respondents based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

As noted in Tables 65, 66, and 67, based on 2016 PQRS data and 2017 MIPS eligibility data, we assume that 129,188 clinicians will elect to use the eCQM collection type; 52,028 clinicians are expected to submit eCQMs as individuals; and 1,501 groups are expected to submit eCQMs on behalf of 77,160 clinicians. We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

In the CY 2018 Quality Payment Program final rule, the time required for users to obtain an account for the CMS Enterprise Portal was included in this Quality Data Submission by Clinicians and Groups: eCQM Collection Type ICR (82 FR 53914). However, in this CY 2019 Quality Payment Program rule, we are proposing a separate ICR for this activity (now described as the Quality Payment Program Identity Management Application Process; see Table 68) and to reduce (by 1 hour) our per respondent

burden estimate for this ICR commensurately. We are also proposing an adjustment to the number of respondents based on more recent data.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize an eCQM data submission vendor to submit the data to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their eCQM, and submit the necessary data to the CMS-designated clinical data warehouse or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use an eCQM data submission vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their EHR and submitting the necessary data to the CMS-designated clinical data warehouse.

We continue to estimate that it will take no more than 2 hours at \$89.18/hr for a computer systems analyst to submit the actual data file. The burden

will also involve becoming familiar with MIPS submission. In this regard we estimate it would take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$107.38/hr for a practice administrator, 1 hour at \$206.44/hr for a clinician, 1 hour at \$89.18/hr for a computer systems analyst, 1 hour at \$43.96/hr for a LPN/medical assistant, and 1 hour at \$36.98/hr for a billing clerk.

In aggregate we estimate an annual burden of 428,232 hours (8 hr × 53,529 groups and clinicians submitting as individuals) at a cost of \$41,200,201 (53,529 responses × \$769.68/response) (see Table 71).

Independent of the change in the number of respondents, removing the time burden associated with completing the Quality Payment Program Identity Management Application Process results in an adjustment to the total burden of -54,218 hours and -\$4,835,161 (54,218 respondents × -1 hr × \$89.18/hr). Accounting for the change in the per respondent time estimate, the decrease in number of respondents results in a total adjustment of -5,512 hours at -\$530,309 (-689 respondents × \$769.68/respondent). When these two adjustments are combined, the net adjustment is -59,730 (-54,218 - 5,512) hours at -\$5,365,470 (-\$4,835,161 - \$530,309).

Total Cost Per Respondent (r) = (l) + (m) + (n) + (o) + (p) + (q)	\$769.68
Total Annual Cost (s) = (c) * (r)	\$41,200,201

Quality Data Submission via CMS Web Interface: The proposed requirements and burden associated with this data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As discussed in section III.H.3.h.(2)(a)(ii)(A)(bb) of this rule, we are proposing a 40 percent reduction in the number of measures (from 15 to 9 measures) for which clinicians are required to submit quality data via the CMS Web Interface. To account for the decrease in measures, we are also proposing to decrease our per respondent time estimate.

We assume that 286 groups will submit quality data via the CMS Web Interface based on the number of groups who submitted quality data via the CMS Web Interface during the 2018 MIPS performance period. This is a decrease of 10 groups from the currently approved number provided in the CY 2018 Quality Payment Program final rule (82 FR 53915) due to receipt of more current data. We anticipate that approximately 91,757 clinicians will be represented.

The burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization's

beneficiaries that is prepopulated in the CMS Web Interface. In the CY 2018 Quality Payment Program final rule, we estimated that it would take, on average, 74 hours for each group to submit quality measures data via the CMS Web Interface (82 FR 53915). Of those hours, approximately half (or 37 hr) are unaffected by the number of required measures while the other half (37 hr) are affected proportionately by the number of required measures (60 percent of 37 hr is adjusted to 22.2 hr). Accounting for the proposed reduction in required measures, our revised estimate for the time to submit data via the CMS Web Interface for the 2019 MIPS performance period is 59.2 hours (37 hr + 22.2 hr), a reduction of 14.8 hours or 40 percent of the currently approved 37 hour time estimate. Considering only the time which varies based on the number of required measures, the process of entering or uploading data requires approximately 2.5 hours of a computer systems analyst's time per measure (22.2 hr/9 measures). Our estimate for submission includes the time needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries, submit the data (we will partially pre-populate the CMS Web Interface with claims data from

their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate we estimate an annual burden of 16,931 hours (286 groups × 59.2 hr) at a cost of \$1,509,907 (16,931 hr × \$89.18/hr).

Independent of the change in the number of respondents, the decrease in total burden resulting from the decrease in required measures is –4,381 hours at –\$390,679 (296 groups × –14.8 hr × \$89.18/hr). Accounting for the decrease in total time, the decrease in number of respondents results in a total adjustment of –592 hours at –\$52,794 (–10 respondents × \$5,279/respondent). When these adjustments are combined, the net adjustment is –4,973 (–4,381 – 592) hours at –\$443,473 (–\$390,679 – \$52,794).

Based on the assumptions discussed in this section, Table 72 summarizes the burden for groups submitting to MIPS via the CMS Web Interface.

Total Annual Hours (c) = (a) * (b)	16,931
Cost Per Group to Report (@ computer systems analyst's labor rate of \$89.18/hr.) (d)	\$5,279
Total Annual Cost (e) = (a) * (d)	\$1,509,907

Beneficiary Responses to CAHPS for MIPS Survey: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the survey. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1222 (CMS–10450).

In this CY 2019 Quality Payment Program rule, we are proposing adjustments to the number of groups electing to report on the CAHPS for MIPS survey as well as the average number of beneficiaries per group based on more recent data.

Under MIPS, groups of 25 or more clinicians can elect to contract with a CMS-approved survey vendor and use the CAHPS for MIPS survey as one of their 6 required quality measures. Beneficiaries that choose to respond to the CAHPS for MIPS survey will experience burden.

The usual practice in estimating the burden on public respondents to surveys such as CAHPS is to assume that respondent time is valued, on average, at civilian wage rates. As explained in section V.A. of this proposed rule, BLS data sets out an

average hourly wage for civilians in all occupations to be \$24.34/hr. Although most Medicare beneficiaries are retired, we believe that their time value is unlikely to depart significantly from prior earnings expense, and we have used the average hourly wage to compute our cost estimate for the beneficiaries' time.

For the 2019 MIPS performance period, we assume that 241 groups will elect to report on the CAHPS for MIPS survey, which is equal to the number of groups participating in CAHPS for MIPS for the 2017 MIPS performance period and a decrease from the 461 groups currently approved by OMB. Table 73 shows the estimated annual burden for beneficiaries to participate in the CAHPS for MIPS Survey. Based on the number of complete and partially complete surveys for groups participating in CAHPS for MIPS survey administration for the 2017 MIPS performance period, we assume that an average of 273 beneficiaries will respond per group for the 2019 MIPS performance period. Therefore, the CAHPS for MIPS survey will be administered to approximately 65,793 beneficiaries per year (241 groups × an average of 273 beneficiaries per group responding). This is an adjustment to

our currently approved 132,307 beneficiary estimate.

The CAHPS for MIPS survey that will be administered in the 2019 MIPS performance period is unchanged from the survey administered in the 2018 MIPS performance period. In that regard we continue to estimate an average administration time of 12.9 minutes (or 0.215 hr) at a pace of 4.5 items per minute for the English version of the survey. For the Spanish version, we estimate an average administration time of 15.5 minutes (assuming 20 percent more words in the Spanish translation). However, since less than 1 percent of surveys were administered in Spanish for reporting year 2016, our burden estimate reflects the time for administering the English version of the survey.

Given that we expect approximately 65,793 respondents, we estimate an annual burden of 14,145 hours (65,793 respondents × 0.215 hr/respondent) at a cost of \$344,289 (14,145 hr × \$24.34/hr).

The decrease in the number of beneficiaries responding to the CAHPS for MIPS survey results in an adjustment to the total time burden of – 14,301 hours and – \$348,087 (– 66,514 beneficiaries × 0.215 hr × \$24.34/hr).

TABLE 73—ESTIMATED BURDEN FOR BENEFICIARY PARTICIPATION IN CAHPS FOR MIPS SURVEY

	Burden estimate
Number of Eligible Group Practices Administering CAHPS for MIPS (a)	241
Number of Beneficiaries Per Group Responding to Survey (b)	273
Number of Total Beneficiary Respondents (c) = (a) * (b)	65,793
Number of Hours Per Beneficiary Respondent (d)	0.215
Cost (@ labor rate of \$24.34/hr.) (e)	\$24.34/hr
Total Annual Hours (f) = (c) * (d)	14,145
Total Annual Cost for Beneficiaries Responding to CAHPS for MIPS (g) = (c) * (e)	\$344,289

Group Registration for CMS Web Interface: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the group registration. However, we are proposing adjustments to our currently approved

burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1222 (CMS–10450).

In this CY 2019 Quality Payment Program rule, we are proposing to adjust

the number of respondents based on more recent data and an adjustment to our per response time estimate based on our review of the currently approved estimates against the existing registration process.

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an on-line registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 74 we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at \$89.18/hr for a computer systems analyst (or their equivalent) to register the group. Although the registration process remains unchanged from the CY 2018 Quality Payment Program final rule, a review of the steps

required for registration warranted a reduction of 0.75 hours in estimated burden per group (82 FR 53917).

We assume that approximately 67 groups will elect to use the CMS Web Interface submission type for the first time during the 2019 MIPS performance period based on the number of new registrations received during the CY 2018 registration period; an increase of 57 compared to the number of groups currently approved by OMB under control number 0938–1314 (CMS–10621). In aggregate we estimate a burden of 16.75 hours (67 new registrations × 0.25 hr/registration) at a cost of \$1,494 (16.75 hr × \$89.18/hr).

Independent of the decrease in time burden per group, the increase in the number of groups registering to submit MIPS data via the CMS Web Interface results in an adjustment to the total time burden of 57 hours at \$5,083 (57 groups × 1 hr × \$89.18/hr). Accounting for the increase in the number of groups, the decrease in time burden per group to register results in an adjustment to the total burden of – 50.25 hours at – \$4,481 (67 groups × – 0.75 hrs × \$89.18/hr). When these adjustments are combined, the net adjustment is 6.75 hours (57 – 50.25) at \$602 (\$5,083 – \$4,481).

TABLE 74—ESTIMATED BURDEN FOR GROUP REGISTRATION FOR CMS WEB INTERFACE

	Burden estimate
Number of New Groups Registering for CMS Web Interface (a)	67
Annual Hours Per Group (b)	0.25
Total Annual Hours (c) = (a) * (b)	16.75
Labor Rate to Register for CMS Web Interface @ computer systems analyst's labor rate) (d)	\$89.18/hr
Total Annual Cost for CMS Web Interface Group Registration (e) = (a) * (d)	\$1,494

Group Registration for CAHPS for MIPS Survey: This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the group registration. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1222 (CMS–10450).

In this CY 2019 Quality Payment Program rule, we are proposing to adjust our currently approved number of respondents based on more recent data and adjust our per respondent time estimate based on our review of the current burden estimates against the existing registration process.

Under MIPS, the CAHPS for MIPS survey counts for 1 measure toward the MIPS quality performance category and, as a patient experience measure, it also fulfills the requirement to submit at least one high priority measure in the absence of an applicable outcome measure. Groups that wish to administer the CAHPS for MIPS survey must

register by June of the applicable 12-month performance period, and electronically notify CMS of which vendor they have selected to administer the survey on their behalf. For the 2019 MIPS performance period, we assume that 454 groups will enroll in the MIPS for CAHPS survey based on the number of groups which elected to register during the CY 2017 registration period; a decrease of 7 compared to the number of groups currently approved by OMB under the aforementioned control number (82 FR 53917).

As shown in Table 75, we assume that the staff involved in the group registration for CAHPS for MIPS Survey will mainly be computer systems analysts (or their equivalent) who have an average labor cost of \$89.18/hr. We assume the CAHPS for MIPS Survey registration burden consists of 0.25 hours to register for the survey as well as 0.5 hours to select the CAHPS for MIPS Survey vendor that will be used and electronically notify CMS of their selection. In this regard the total time for CAHPS for MIPS registration is 0.75 hours. Although the registration process

remains unchanged from the CY 2018 Quality Payment Program final rule, after we reviewed the steps required for registration more thoroughly, we believe that the burden was less than we had originally estimated. In that regard we propose to reduce the estimated burden from 1.5 hours to 0.75 hours per respondent

In aggregate we estimate an annual burden of 340.50 hours (454 groups × 0.75 hr per group) at a cost of \$30,366 (340.50 hr × \$89.18/hr).

Independent of the change in time per group, the decrease in the number of groups registering results in an adjustment to the total burden of – 10.5 hours at – \$936 (– 7 groups × 1.5 hrs × \$89.18/hr). Accounting for the decrease in the number of groups registering, the decrease in time per group to register results in an adjustment to the total burden of – 340.5 hours at – \$30,366 (454 groups × – 0.75 hr × \$89.18/hr). When these adjustments are combined, the net adjustment is – 351 hours (– 10.5 – 340.5) at – \$31,302 (– \$936 – \$30,366).

TABLE 75—ESTIMATED BURDEN FOR GROUP REGISTRATION FOR CAHPS FOR MIPS SURVEY

	Burden estimate
Number of Groups Registering for CAHPS (a)	454
Total Annual Hours for CAHPS Registration (b)	0.75
Total Annual Hours for CAHPS Registration (c) = (a) * (b)	340.5

TABLE 75—ESTIMATED BURDEN FOR GROUP REGISTRATION FOR CAHPS FOR MIPS SURVEY—Continued

Total Annual Cost for CAHPS Registration (e) = (a) * (d)	\$30,366

9. Quality Payment Program ICRs Regarding the Nomination of Quality Measures

This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the group registration. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. We are also proposing to account for burden associated with policies that have been finalized but whose burden were erroneously excluded from our estimates. The new and adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As discussed in section III.H.3.h.(2)(b)(i) of this proposed rule, quality measures are selected annually through a call for quality measures under consideration, with a final list of quality measures being published in the **Federal Register** by November 1 of each year. Under section 1848(q)(2)(D)(ii) of the Act, the Secretary must solicit a “Call for Quality Measures” each year. Specifically, the Secretary must request that eligible clinician organizations and other relevant stakeholders identify and submit quality measures to be considered for selection in the annual list of MIPS quality measures, as well as updates to the measures. Under section 1848(q)(2)(D)(ii) of the Act, eligible clinician organizations are professional organizations as defined by nationally recognized specialty boards of certification or equivalent certification boards.

As we described in the CY 2017 Quality Payment Program final rule (81 FR 77137), we will accept quality measures submissions at any time, but only measures submitted during the timeframe provided by us through the pre-rulemaking process of each year will

be considered for inclusion in the annual list of MIPS quality measures for the performance period beginning 2 years after the measure is submitted.

This process is consistent with the pre-rulemaking process and the annual call for measures, which are further described at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rule-Making.html>.

To identify and submit a quality measure, eligible clinician organizations and other relevant stakeholders use a one-page online form that requests information on background, gap analysis which includes evidence for the measure, reliability validity, endorsement and a summary which includes how the proposed measure relates to the Quality Payment Program and the rationale for the measure. In addition, proposed measures must be accompanied by a completed Peer Review Journal Article form.

As shown in Table 76, we estimate that approximately 140 organizations, including clinicians, CEHRT developers, and vendors, will submit measures for the Call for Quality Measures process; an increase of 100 compared to the number of organizations currently approved by OMB. In keeping with the focus on clinicians as the primary source for recommending new quality measures, we are using practice administrators and clinician time for our burden estimates. We also estimate it will take 0.5 hours per organization to submit an activity to us, consisting of 0.3 hours at \$107.38/hr for a practice administrator to make a strategic decision to nominate and submit a measure and 0.2 hours at \$206.44/hr for clinician review time.

The 0.5 hour estimate assumes that submitters will have the necessary information to complete the nomination

form readily available, which we believe is a reasonable assumption.

Additionally, some submitters familiar with the process or who are submitting multiple measures may require significantly less time, while other submitters may require more if the opposite is true; on average we believe 0.5 hours is a reasonable average across all submitters.

Consistent with the CY 2017 Quality Payment Program final rule, we also estimate it will take 4 hours at \$206.44/hr for a clinician (or equivalent) to complete the Peer Review Journal Article Form (81 FR 77153 through 77155). This assumes that measure information is available and testing is complete in order to have the necessary information to complete the form, which we believe is a reasonable assumption. While the requirement for completing the Peer Review Journal Article was previously included in the CY 2017 Quality Payment Program final rule, the time required for completing the form was erroneously excluded from our burden estimates.

As shown in Table 76, in aggregate we estimate an annual burden of 630 hours (140 organizations × 4.5 hr/response) at a cost of \$125,896 (140 × [(0.3 hr × \$107.38/hr) + (4.2 hr × \$206.44/hr)]).

Independent of the change in time per organization, the change in the number of organizations nominating new quality measures results in an adjustment of 50 hours at \$7,350 (100 organizations × [(0.3 hr × \$107.38/hr) + (0.2 hr × \$206.44/hr)]). When accounting for the change in respondents, the change in burden to nominate a quality measure results in an adjustment of 560 hours at \$115,606 (140 organizations × 4 hr × \$206.44/hr). When these adjustments are combined, the total adjustment is 610 hours (560 + 50) at \$122,956 (\$7,350 + \$115,606).

TABLE 76—ESTIMATED BURDEN FOR CALL FOR QUALITY MEASURES

	Burden estimate
Number of Organizations Nominating New Quality Measures (a)	140

Total Annual Cost (j) = (a) * (i)	\$125,896

10. Quality Payment Program ICRs Regarding Promoting Interoperability Data (§ 414.1375)

The proposed requirements and burden discussed under this section will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

For the 2019 MIPS performance period, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. We have worked to further align the Promoting Interoperability performance category with other MIPS performance categories. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category which is not available for the quality performance category, we anticipate that most organizations will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. Hence, the following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. While this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis and decisions are expected to be made for the program as a whole.

Promoting Interoperability Reweighting Applications: As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an

application requesting a zero percent weighting for the Promoting Interoperability performance category in the following circumstances: Insufficient internet connectivity, extreme and uncontrollable circumstances, lack of control over the availability of CEHRT, and decertified EHR technology (81 FR 77240 through 77243 and 82 FR 53680 through 53686).

Table 77 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception (including a significant hardship exception for small practices) or as a result of a decertification of an EHR. Participation data for the 2017 MIPS performance period was unavailable in time for this proposed rule. However, assuming that the actual participation data for the 2017 MIPS performance period is available in time to meet our final rule's publication schedule, we will use this data and revise our estimates in that rule. As a result, we assume 87,211 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship (including small practices) or EHR decertification through the Quality Payment Program based on 2016 data from the Medicare EHR Incentive Program and the first 2019 payment year MIPS eligibility and special status file. We estimate that 5,941 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. An additional 81,270 respondents will submit a request for

reweighting the Promoting Interoperability performance category to zero percent as a small practice experiencing a significant hardship. In total, this represents an increase of 46,566 from the number of respondents currently approved by OMB.

The application to request a reweighting to zero percent for the Promoting Interoperability performance category is a short online form that requires identifying the type of hardship experienced or whether decertification of an EHR has occurred and a description of how the circumstances impair the ability to submit Promoting Interoperability data, as well as some proof of circumstances beyond the clinician's control. We estimate it would take 0.25 hours at \$89.18/hr for a computer system analyst to submit the application. This is a reduction from the 0.5 hours estimated in the CY 2018 Quality Payment Program final rule due to a revised assessment of the application process (82 FR 53918). As shown in Table 77, in aggregate we estimate an annual burden of 21,803 hours (87,211 applications × 0.25 hr/application) at a cost of \$1,944,369 (21,803 hr × \$89.18/hr).

Independent of the change to the number of respondents, the decrease in the amount of time to submit a reweighting application results in an adjustment of – 10,161.25 hours at – \$906,180 (40,645 respondents × – 0.25 hr × \$89.18/hr). Accounting for the decrease in time per respondent, the increase in the number of respondents submitting reweighting applications results in an adjustment of 11,641.5 hours at \$1,038,188 (46,566 respondents × 0.25 hr × \$89.18 hr). When these adjustments are combined, the total adjustment is 1,480.25 hours (11,641.5 – 10,161.25) at \$132,008 (\$1,038,188 – \$906,180).

TABLE 77—ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY REWEIGHTING APPLICATIONS

	Burden estimate
Number of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions (a)	5,941
Number of Eligible Clinicians or Groups Applying Due to Significant Hardship as Small Practice (b)	81,270
Total Respondents Due to Hardships, Other Exceptions and Hardships for Small Practices (c)	87,211
Hours Per Applicant per application submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	21,802.75
Labor Rate for a computer systems analyst (f)	\$89.18/hr
Total Annual Cost (g) = (a) * (f)	\$1,944,369

Submitting Promoting Interoperability Data: In this CY 2019 Quality Payment Program proposed rule, we are proposing an adjustment to the number of respondents based on more recent data and a decrease to the per respondent time estimate due to our proposed net reduction of 3 measures (6 removed measures and 3 new measures) for which clinicians are required to submit data, as discussed in section III.H.3.h.(5)(f) of this proposed rule.

A variety of organizations will submit Promoting Interoperability data on behalf of clinicians. Clinicians not participating in a MIPS APM may submit data as individuals or as part of a group. In the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260, 77262 through 77264), we established that eligible clinicians in MIPS APMS other than the Shared Savings Program may submit data for the Promoting Interoperability performance category as individuals or as part of a group, whereas eligible clinicians participating in the Shared Savings Program are limited to submitting data through the ACO participant TIN. In section III.H.3.h.(6)(c)(ii) of this proposed rule, we propose to extend this flexibility to allow for both individual and group reporting by eligible clinicians participating in the Shared Savings Program.

Because group TINs in APM Entities are able to submit Promoting

Interoperability data to fulfill the requirements of submitting to MIPS, we have included MIPS APMs groups in our burden estimates for the Promoting Interoperability performance category. Consistent with the list of APMs that are MIPS APMs on the Quality Payment Program website,⁴⁵ we assume that 3 MIPS APMs that do not also qualify as Advanced APMs will operate in the 2019 MIPS performance period: Track 1 of the Shared Savings Program, CEC (one-sided risk arrangement), and the OCM (one-sided risk arrangement). Further, we assume that group TINs will submit Promoting Interoperability data on behalf of partial QPs that elect to participate in MIPS. We plan to revisit these assumptions as when we receive data submitted for the 2017 MIPS performance period.

As shown in Table 78, based on data from the 2016 Medicare and Medicaid EHR Incentive Programs, the 2016 PQRS data, and 2017 MIPS eligibility data, we estimate that 50,878 individual MIPS eligible clinicians and 2,998 groups will submit Promoting Interoperability data. These estimates reflect that under the policies in the CY 2017 Quality Payment Program final rule and in the CY 2018 Quality Payment Program final rule, certain MIPS eligible clinicians will be eligible for automatic reweighting of the Promoting Interoperability performance category to zero percent, including MIPS eligible

clinicians that are hospital-based, ambulatory surgical center-based, non-patient facing clinicians, physician assistants, nurse practitioners, clinician nurse specialists, and certified registered nurse anesthetists (81 FR 77238 through 77245 and 82 FR 53680 through 53687). As discussed in section III.H.3.h.(5)(h)(ii) of this proposed rule, starting with the 2021 MIPS payment year, we are proposing to automatically reweight the Promoting Interoperability performance category for clinician types new to MIPS: Physical therapists, occupational therapists, clinical social workers, and clinical psychologists. These estimates also account for the reweighting exceptions finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, including for MIPS eligible clinicians in small practices, as well as exceptions due to decertification of an EHR.

Further, we anticipate that the 460 Shared Savings Program Track 1 ACOs will submit data at the ACO participant TIN-level, for a total of 13,537 group TINs. We anticipate that the three APM Entities electing the one-sided track in the CEC model will submit data at the group TIN-level, for a total of 17 group TINs submitting data. And finally, we anticipate that the 192 APM Entities in the OCM (one-sided risk arrangement) will submit data at APM Entity level. The total estimated number of respondents is estimated at 67,622.

TABLE 78—ESTIMATED NUMBER OF RESPONDENTS TO SUBMIT PROMOTING INTEROPERABILITY PERFORMANCE DATA ON BEHALF OF CLINICIANS

	Number of respondents
Number of individual clinicians to submit Promoting Interoperability (a)	50,878
Number of groups to submit Promoting Interoperability (b)	2,998
Shared Savings Program ACO Group TINs (c)	13,537
CEC one-sided risk track participants ⁴⁶ (d)	17
OCM one-sided risk arrangement Group TINs (e)	192

⁴⁵ <https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Comprehensive-List-of-APMs.pdf>.

TABLE 78—ESTIMATED NUMBER OF RESPONDENTS TO SUBMIT PROMOTING INTEROPERABILITY PERFORMANCE DATA ON BEHALF OF CLINICIANS—Continued

	Number of respondents
Total (f) = (a) + (b) + (c) + (d) + (e)	67,622

While we estimate that 67,622 respondents will be submitting data under the Promoting Interoperability performance category, this reduction of 150,593 respondents from the currently approved total of 218,215 is a result of more accurate estimation of the number of hospital-based MIPS eligible clinicians, clinicians in small practices, and the number of group TINs submitting for MIPS APMs; and also accounting for respondents which may submit data via two or more submission or collection types and would thus be double-counted otherwise.

In the CY 2018 Quality Payment Program final rule we estimated it takes 3 hours for a computer system analyst to collect and submit Promoting Interoperability performance category

data (82 FR 53920). For this proposed rule, we estimate the time required to submit such data should be reduced by 20 minutes to 2.67 hours due to our proposal to reduce the number of measures for which clinicians are required to submit data, as discussed in section III.H.3.h.(5)(f) of this proposed rule. As shown in Table 79, the total time for an organization to submit data on the specified Promoting Interoperability objectives and measures is estimated to be 180,325 hours (67,622 respondents × 2.67 incremental hours for a computer analyst’s time above and beyond the clinician, practice manager, and computer system’s analyst time required to submit quality data) at a cost of \$16,081,413 (180,325 hr × \$89.18/hr).

Independent of the change in the number of respondents, the reduction in estimated time to submit Promoting Interoperability data results in a decrease in burden of –72,738.33 hours at –\$6,486,805 (218,215 respondents × –0.33 hr × \$89.18/hr). Accounting for the decreased per respondent time, the decrease in the number of respondents results in an adjustment to the total burden of –401,581.33 hours at –\$35,813,023 (–150,593 respondents × 2.67 hrs × \$89.18/hr). When these adjustments are combined, the total adjustment is –474,319.67 hours (–72,738.33 – 401,581.33) at –\$42,299,828 (–\$6,486,805 – \$35,813,023).

TABLE 79—ESTIMATED BURDEN FOR PROMOTING INTEROPERABILITY PERFORMANCE CATEGORY DATA SUBMISSION

	Burden estimate
Number of respondents submitting Promoting Interoperability data on behalf of clinicians (a)	67,622
Total Annual Hours Per Respondent (b)	2.67
Total Annual Hours (c) = (a) * (b)	180,325
Labor rate for a computer systems analyst to submit Promoting Interoperability data/hr.) (d)	\$89.18/hr
Total Annual Cost (e) = (a) * (d)	\$16,081,413

11. Quality Payment Program ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the nomination of Promoting Interoperability measures. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Consistent with our requests for stakeholder input on quality measures and improvement activities, we are also requesting potential measures for the Promoting Interoperability performance

category that measure patient outcomes, emphasize patient safety, support improvement activities and the quality performance category, and build on the advanced use of CEHRT using 2015 Edition standards and certification criteria. Promoting Interoperability measures may be submitted via a designated submission form that includes the measure description, measure type (if applicable), reporting requirement, and CEHRT functionality used (if applicable).

We estimate 47 organizations will submit Promoting Interoperability measures, based on the number of organizations submitting measures during the CY 2017 nomination period. This is an increase of 7 from the

estimate currently approved by OMB under the aforementioned control number. We estimate it will take 0.5 hours per organization to submit an activity to us, consisting of 0.3 hours at \$107.38/hr for a practice administrator to make a strategic decision to nominate that activity and submit an activity to us via email and 0.2 hours at \$206.44/hr for a clinician to review the nomination. As shown in Table 80, in aggregate we estimate an annual burden of 235 hours (47 organizations × 0.5 hr/response) at a cost of \$3,455 (47 × [(0.3 hr × \$107.38/hr) + (0.2 hr × \$206.44/hr)]. The increase in the number of respondents results in an adjustment of 3.5 hours and \$514.50 (7 respondents × 0.5 hrs × \$73.50 per respondent).

⁴⁶The 3 CEC APM Entities reflected in the burden estimate are the non-large dialysis organizations participating in the one-sided risk track.

TABLE 80—ESTIMATED BURDEN FOR CALL FOR PROMOTING INTEROPERABILITY MEASURES

	Burden estimate
Number of Organizations Nominating New Promoting Interoperability Measures (a)	47
Number of Hours Per Practice Administrator to Identify and Propose Measure (b)	0.30
Number of Hours Per Clinician to Identify Measure (c)	0.20
Annual Hours Per Respondent (d) = (b) + (c)	0.50
Total Annual Hours (e) = (a) * (d)	23.50
Cost to Identify and Submit Measure (@practice administrator's labor rate of \$107.38/hr.) (f)	\$32.21
Cost to Identify Improvement Measure (@ physician's labor rate of \$206.44/hr.) (g)	\$41.29
Total Annual Cost Per Respondent (h) = (f) + (g)	\$73.50
Total Annual Cost (i) = (a) * (h)	\$3,455

12. Quality Payment Program ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The proposed requirements and burden discussed under this section will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512) and the CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922) for our previous burden estimates for improvement activities under the Quality Payment Program.

The CY 2018 Quality Payment Program final rule provides: (1) That for activities that are performed for at least a continuous 90 days during the performance period, MIPS eligible clinicians must submit a “yes” response for activities within the Improvement Activities Inventory (82 FR 53651); (2) that the term “recognized” is accepted as equivalent to the term “certified” when referring to the requirements for a patient-centered medical home and would receive full credit for the improvement activities performance category (82 FR 53649); and (3) that for the 2020 MIPS payment year and future years, to receive full credit as a certified or recognized patient-centered medical home or comparable specialty practice, at least 50 percent of the practice sites within the TIN must be recognized as a patient-centered medical home or comparable specialty practice (82 FR 53655).

In the CY 2017 Quality Payment Program final rule, we describe how we determine MIPS APM scores (81 FR 77185). We compare the requirements of the specific MIPS APM with the list of

activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77817 through 77831). If, by our assessment, the MIPS APM does not receive the maximum improvement activities performance category score, then the APM Entity can submit additional improvement activities, although, as we noted, we anticipate that MIPS APMs in the 2019 MIPS performance period will not need to submit additional improvement activities as the models will already meet the maximum improvement activities performance category score (81 FR 77185).

A variety of organizations and in some cases, individual clinicians, will submit improvement activity performance category data. For clinicians who are not part of APMs, we assume that clinicians submitting quality data as part of a group through direct, log in and upload, and CMS Web Interface submission types will also submit improvement activities data. In the CY 2017 Quality Payment Program final rule (81 FR 77264), APM Entities only need to report improvement activities data if the CMS-assigned improvement activities score is below the maximum improvement activities score. Our CY 2018 Quality Payment Program final rule burden estimates assumed that all APM Entities will receive the maximum CMS-assigned improvement activities score (82 FR 53921 through 53922).

As represented in Table 81, we estimate that 387,347 clinicians will submit improvement activities as individuals during the 2019 MIPS performance period, 5,575 groups will submit improvement activities on behalf

of clinicians, and an additional 16 virtual groups will submit improvement activities, resulting in 392,938 total respondents.

The estimate of 387,347 individual clinicians is a distinct count by TIN/NPI of clinicians who submitted quality data under 2016 PQRS using an individual submission mechanism (claims, EHR, QCDR/Registry) and accounts for clinicians who submitted data using multiple submission mechanisms in order to increase the accuracy of our estimate of the number of individuals who will submit improvement activities. However, actual participation data for the 2017 MIPS performance period was unavailable in time for this proposed rule. Assuming actual participation data for the 2017 MIPS performance period is available in time to meet our final rule’s publication schedule, we will use that data and revise our estimates in that rule.

Our burden estimates assume there will be no improvement activities burden for MIPS APM participants. We will assign the improvement activities performance category score at the APM level. We also assume that the MIPS APM models for the 2019 MIPS performance period will qualify for the maximum improvement activities performance category score and the APM Entities will not need to submit any additional improvement activities. Again, assuming actual participation data for the 2017 MIPS performance period is available in time to meet publication schedule for the final rule, we will use that data and revise our estimates in that rule. In Table 81, we estimate that approximately 392,938 respondents will be submitting data under the improvement activities performance category.

TABLE 81—ESTIMATED NUMBERS OF ORGANIZATIONS SUBMITTING IMPROVEMENT ACTIVITIES PERFORMANCE CATEGORY DATA ON BEHALF OF CLINICIANS

	Count
Number of clinicians to participate in improvement activities data submission as individuals during the 2019 MIPS performance period (a)	387,347
Number of Groups to submit improvement activities on behalf of clinicians during the 2019 MIPS performance period (b)	5,575
Number of Virtual Groups to submit improvement activities on behalf of clinicians during the 2019 MIPS performance period (c)	16
Total Number of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (d) = (a) + (b) + (c)	392,938
Total Number of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2018 MIPS performance period (e)	439,786
Difference between 2019 MIPS performance period and 2018 MIPS performance period (f) = (d) – (e)	– 46,848

As described in section III.H.3.h.(4)(b) of this preamble, for purposes of the 2021 MIPS payment year, we are proposing to revise § 414.1360(a)(1) to more accurately reflect the data submission process for the improvement activities performance category. In particular, instead of “via qualified registries; EHR submission mechanisms; QCDR, CMS Web Interface; or attestation,” as currently stated, we are revising the first sentence to state that data would be submitted “via direct, log in and upload, and log in and attest.” The revision would more closely align with the actual submission experience users have. We propose to decrease our burden estimates since the actual submission experience of the user is such that improvement activities data is submitted as part of the process for submitting quality and Promoting Interoperability data, resulting in less additional required time to submit improvement activities data.

The CY 2018 Quality Payment Program final rule, we estimated it would take 1 hour for a computer system analyst to submit data on the specified improvement activities (82 FR 53922). As a result of our proposal, we

estimate that the per response time required per individual or group is 5 minutes at \$89.18/hr for a computer system analyst to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials. Additionally, as stated in the CY 2018 Quality Payment Program final rule, the same improvement activity may be reported across multiple performance periods so many MIPS eligible clinicians will not have any additional information to submit for the 2019 MIPS performance period (82 FR 53921).

We are also proposing to add 6 new improvement activities for CY 2019 and future years, modify 5 existing improvement activities for CY 2019 and future years, and remove 1 existing improvement activity for CY 2019 and future years. Because MIPS eligible clinicians are still required to submit the same number of activities, we do not expect these proposals to affect our collection of information burden estimates. In addition, in order for an eligible clinician or group to receive credit for being a patient-centered medical home or comparable specialty

practice, the eligible clinician or group must attest in the same manner as any other improvement activity.

As shown in Table 82, we estimate an annual burden of 32,745 hours (392,938 responses × 5 minutes/60) at a cost of \$2,920,199 (32,745 hr × \$89.18/hr). Differences from the CY 2018 Quality Payment Program rule are based on updated QP data from the 2017 MIPS performance period, specifically the APM Participation List for the third snapshot date of the 2017 QP performance period.

Independent of the change to our per response time estimate, the decrease in the number of respondents results in an adjustment of – 46,848 hours at – \$4,177,904 (– 46,848 respondents × 1 hr × \$89.18/hr). Accounting for the change in number of respondents, the decrease in the time to submit improvement activities data results in an adjustment of – 360,193 hours at – \$32,122,027 (392,938 respondents × 55 minutes/60 × \$89.18/hr). When these adjustments are combined, the total adjustment is – 407,041 hours (– 46,848 – 360,193) hours at – \$36,299,931 (– \$4,177,904 – \$32,122,027).

TABLE 82—ESTIMATED BURDEN FOR IMPROVEMENT ACTIVITIES SUBMISSION

	Burden estimate
Total Number of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (a)	392,938
Total Annual Hours Per Respondent (b)	5 minutes
Total Annual Hours (c)	32,745
Labor rate for a computer systems analyst to submit improvement activities (d)	\$89.18/hr
Total Annual Cost (e) = (a) * (d)	\$2,920,184

13. Quality Payment Program ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The proposed requirements and burden discussed under this section

will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We refer readers to the CY 2018 Quality Payment Program final rule for

our previous burden estimates for nomination of improvement activities under the Quality Payment Program (82 FR 53922). In this CY 2019 Quality Payment Program rule, we are proposing

to adjust the number of respondents based on more recent data and adjust our per response time estimate based on our review of our currently approved burden estimates against the existing process for nomination of improvement activities. We are also proposing to adopt one new criteria and remove one existing criteria for nominating new improvement activities beginning with the CY 2019 performance period and future years. Furthermore, we are making clarifications to: (1) Considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities. We believe these proposals will not affect our currently approved burden estimates since they do not substantively impact the level of effort previously estimated to nominate an Improvement Activity.

We are also proposing to change the performance year for which the nominations would apply, such that improvement activities nominations received in a particular year will be vetted and considered for the next year's rulemaking cycle for possible implementation in the following year. Additionally, we are modifying the Improvement Activity submission form by adding a data field to allow submitters to clearly denote submission of a modification. This is to clarify the process for submitting modifications of existing Improvement Activities as discussed in the CY 2018 Quality Payment Program final rule (82 FR 53656). Finally, we are proposing to

change the submission timeframe for the Call for Activities from February 1st through March 1st to February 1st through June 30th providing approximately four additional months for stakeholders to submit nominations. We believe these proposals will not affect our our currently approved burden estimates since we believe that the number of nominations is unlikely to change, but the quality of the nominations is likely to increase given the additional time provided.

For the 2018 MIPS performance period, we provided opportunity for stakeholders to propose new activities formally via the Annual Call for Activities nomination form that was posted on the CMS website (82 FR 53657). The 2018 Annual Call for Activities lasted from March 2, 2017 through March 1, 2018 for which we received 72 nominations consisting of a total of 125 activities which were evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2019 Improvement Activities Inventory. Based on the number of activities being evaluated during the 2018 Annual Call for Activities (125 activities), we estimate that the total number of nominations we will receive for the 2019 Annual Call for Activities would continue to be 125, unchanged from the number of activities evaluated in CY 2018, which is a decrease from the 150 nominations currently approved by OMB.

In the CY 2018 Quality Payment Program final rule, we estimated that it

takes 0.5 hours to nominate an improvement activity (82 FR 53922). As shown in Table 83, due to a review of the nomination process including the criteria required to nominate an improvement activity, we now estimate it would take 2 hours (per organization) to submit an activity to us. Of those hours, we estimate it would take 1.2 hours at \$107.38/hr for a practice administrator or equivalent to make a strategic decision to nominate and submit that activity and 0.8 hours at \$206.44/hr for a clinician's review. In aggregate we estimate an annual burden of 250 hours (125 nominations × 2 hr/nomination) at a cost of \$36,751 (125 × [(1.2 hr × \$107.38/hr) + (0.8 hr × \$206.44/hr)]).

The percentage of practice administrator and clinician labor in relation to the total is unchanged from the CY 2018 Quality Payment Program final rule (82 FR 53922).

Independent of the change to our per response time estimate, the decrease in the number of nominations results in an adjustment of -12.5 hours and -\$1,837 (-25 activities × [(0.3 hr × \$107.38/hr) + (0.2 hr × \$206.44/hr)]). Accounting for the decrease in the number of nominated improvement activities, the increase in time per nominated improvement activity results in an adjustment of 187.5 hours and \$27,563 (125 activities × [(0.9 hr × \$107.38/hr) + (0.6 hr × \$206.44/hr)]). When these adjustments are combined, the total adjustment is 175 hours (187.5 - 12.5) and \$25,726 (\$27,563 - \$1,837).

TABLE 83—ESTIMATED BURDEN FOR NOMINATION OF IMPROVEMENT ACTIVITIES

	Burden estimate
Number of Organizations Nominating New Improvement Activities (a)	125
Number of Hours Per Practice Administrator to Identify and Propose Activity (b)	1.2
Number of Hours Per Clinician to Identify Activity (c)	0.8
Annual Hours Per Respondent (d) = (b) + (c)	2
Total Annual Hours (e) = (a) * (d)	250
Cost to Identify and Submit Activity (@ practice administrator's labor rate of \$107.38/hr.) (f)	\$128.86
Cost to Identify Improvement Activity (@ physician's labor rate of \$206.44/hr.) (g)	\$165.15
Total Annual Cost Per Respondent (h) = (f) + (g)	\$294.01
Total Annual Cost (i) = (a) * (h)	\$36,751

14. Quality Payment Program ICRs Regarding CMS Study on Factors Associated With Reporting Quality Measures

During each performance year, eligible clinicians are recruited to participate in the CMS study on the burden associated with reporting quality measures. Eligible clinicians who are

interested in participating can sign up whereby an adequate sample size is then selected by CMS from this group of potential participants. This study is ongoing, and participants are recruited on a yearly basis. Current participants can sign up when the study year ends.

Section 1848(s)(7) of the Act, as added by section 102 of the MACRA (Pub. L. 114-10) states that Chapter 35 of title

44, United States Code, shall not apply to the collection of information for the development of quality measures. Consequently, we are not setting out such burden since the study shall inform us (and our contractors) on the root causes of clinicians' performance measure data collection and data submission burdens and challenges that hinders accurate and timely quality

measurement activities. We refer readers to the discussion of this policy in the regulatory impact analysis section (section VII.F.7) of this proposed rule.

15. Quality Payment Program ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are not required to provide any documentation by CD or hardcopy. Moreover, this rule’s proposed provisions would not necessitate the need to add or revise or delete any claims data fields. Therefore, we do not anticipate any new or additional submission requirements and/or burden for MIPS eligible clinicians.

16. Quality Payment Program ICRs Regarding Partial QP Elections (§ 414.1430)

This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to QP elections. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

APM Entities may face a data submission burden under MIPS related to Partial QP elections. Advanced APM participants will be notified about their QP or Partial QP status as soon as possible after each QP determination. Where Partial QP status is earned at the APM Entity level the burden of Partial QP election would be incurred by a representative of the participating APM Entity. Where Partial QP status is earned at the eligible clinician level, the burden

of Partial QP election would be incurred by the eligible clinician. For the purposes of this burden estimate, we assume that all MIPS eligible clinicians determined to be Partial QPs will participate in MIPS.

Based on our predictive QP analysis for the 2019 QP performance period, we estimate that 6 APM Entities and 75 eligible clinicians will make the election to participate as a Partial QP in MIPS (see Table 84), an increase of 64 from the 17 elections currently approved by OMB under the aforementioned control number. We estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate we estimate an annual burden of 20.25 hours (81 respondents × .25 hr/election) at a cost of \$1,805.90 (20.25 hours × \$89.18/hr). The increase in the number of Partial QP elections results in an adjustment of 16 hours and \$1,431 (64 elections × 0.25 hrs × \$89.18/hr).

TABLE 84—ESTIMATED BURDEN FOR PARTIAL QP ELECTION

	Burden estimate
Number of respondents making Partial QP election (6 APM Entities, 75 eligible clinicians) (a)	81
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25 hours
Total Annual Hours (c) = (a) * (b)	20.25 hours
Labor rate for computer systems analyst (d)	\$89.18/hr
Total Annual Cost (d) = (c) * (d)	\$1,805.90

17. Quality Payment Program ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1440) and Eligible Clinician Initiated Process (§ 414.1445)

As indicated below, the proposed requirements and burden discussed under this section will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Payer Initiated Process (§ 414.1440): This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the Payer Initiated Process. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

Beginning in Quality Payment Program Year 3, the All-Payer Combination Option will be an available pathway to QP status for eligible clinicians participating sufficiently in Advanced APMs and Other Payer Advanced APMs. The All-Payer Combination Option allows for eligible clinicians to achieve QP status through

their participation in both Advanced APMs and Other Payer Advanced APMs. In order to include an eligible clinician’s participation in Other Payer Advanced APMs in their QP threshold score, we will need to determine if certain payment arrangements with other payers meet the criteria to be Other Payer Advanced APMs. To provide eligible clinicians with advance notice prior to the start of a given performance period, and to allow other payers to be involved prospectively in the process, the 2018 CY Quality Payment Program final rule established a payer-initiated process for identifying payment arrangements that qualify as Other Payer Advanced APMs (82 FR 53844). The payer-initiated process for Other Payer Advanced APM determinations began in CY 2018 for Medicaid, Medicare Health Plans, and payers participating in CMS multi-payer models. Payers seeking to submit payment arrangement information for Other Payer Advanced APM determination through the payer-initiated process are required to complete a Payer Initiated Submission Form, instructions for which can be

found at <https://qpp.cms.gov/Determinations> made in 2018 are applicable for the Quality Payment Program Year 3. Also in that rule the remaining other payers, including commercial and other private payers, may request that we determine whether other payer arrangements are Other Payer Advanced APMs starting prior to the 2020 QP performance period and each performance period thereafter (82 FR 53867).

As shown in Table 85, we estimate that in 2019 for the 2020 QP performance period 165 payer-initiated requests for Other Payer Advanced APM determinations will be submitted (15 Medicaid payers, 100 Medicare Advantage Organizations, and 50 Multi-payers), a decrease of 135 from the 300 total requests currently approved by OMB under the aforementioned control number. We estimate it would take 10 hours at \$89.18/hr for a computer system analyst per arrangement submission. In aggregate we estimate an annual burden of 1,650 hours (165 submissions × 10 hr/submission) at a cost of \$147,147 (1,650 hr × \$89.18/hr). The decrease in the number of payer-

initiated requests results in an adjustment of - 1,350 hours and - \$120,393 (- 135 requests × 10 hr × \$89.18/hr).

TABLE 85—ESTIMATED BURDEN FOR OTHER PAYER ADVANCED APM IDENTIFICATION DETERMINATIONS: PAYER-INITIATED PROCESS

	Burden estimate
Number of other payer payment arrangements (15 Medicaid, 100 Medicare Advantage Organizations, 50 Multi-payers) (a)	165
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	1,650
Labor rate for a computer systems analyst (d)	\$89.18/hr
Total Annual Cost for Other Payer Advanced APM determinations (e) = (a) * (d)	\$147,147

Eligible Clinician Initiated Process (§ 414.1445): This rule does not propose any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the Eligible Clinician Initiated Process. However, we are proposing adjustments to our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Beginning in Quality Payment Program Year 3, the All-Payer Combination Option will be an available pathway to QP status for eligible clinicians participating sufficiently in Advanced APMs and Other Payer Advanced APMs. The All-Payer Combination Option allows for eligible clinicians to achieve QP status through their participation in both Advanced APMs and Other Payer Advanced APMs. In order to include an eligible clinician's participation in Other Payer Advanced APMs in their QP threshold score, we will need to determine if certain payment arrangements with other payers meet the criteria to be Other Payer Advanced APMs.

To provide eligible clinicians with advance notice prior to the start of a given performance period, and to allow other payers to be involved prospectively in the process, the CY 2018 Quality Payment Program final rule provided a payer-initiated identification process for identifying payment arrangements that qualify as

Other Payer Advanced APMs (82 FR 53854). In the same rule, under the Eligible Clinician Initiated Process, APM Entities and eligible clinicians participating in other payer arrangements would have an opportunity to request that we determine for the year whether those other payer arrangements are Other Payer Advanced APMs (82 FR 53857-53858). However, to appropriately implement the statutory requirement to exclude from the All Payer Combination Option QP threshold calculations certain Title XIX payments and patients, we determined it would be problematic to allow APM Entities and eligible clinicians to request determinations for Title XIX payment arrangements after the conclusion of the QP performance period because any late-identified Medicaid APM or Medicaid Medical Home Model that meets the Other Payer Advanced APM criteria could unexpectedly affect QP threshold calculations for every other clinician in that state (or county). Thus, the CY 2018 Quality Payment Program final rule provided that APM Entities and eligible clinicians may request determinations for any Medicaid payment arrangements in which they are participating at an earlier point, prior to the start of a given QP performance period (82 FR 53858). This would allow all clinicians in a given state or county to know before the beginning of the performance period whether their Title XIX payments and

patients would be excluded from the all-payer calculations that are used for QP determinations for the year under the All-Payer Combination Option. This Medicaid specific eligible clinician-initiated determination process for Other Payer Advanced APMs also began in CY 2018, and determinations made in 2018 are applicable for the Quality Payment Program Year 3. Eligible clinicians or APM Entities seeking submit payment arrangement information for Other Payer Advanced APM determination through the Eligible Clinician-Initiated process are required to complete an Eligible Clinician Initiated Submission Form, instructions for which can be found at <https://qpp.cms.gov/>.

As shown in Table 86, we estimate that 150 other payer arrangements will be submitted by APM Entities and eligible Other Payer Advanced APM determinations, an increase of 75 from the 75 total requests currently approved by OMB under the aforementioned control number.

We estimate it would take 10 hours at \$89.18/hr for a computer system analyst per arrangement submission. In aggregate we estimate an annual burden of 1,500 hours (150 submissions × 10 hr/submission) at a cost of \$133,770 (1,500 hr × \$89.18/hr). The increase in the number of clinician-initiated requests results in an adjustment of 750 hours and \$66,885 (75 requests × 10 hr × \$89.18/hr).

Submission of Data for QP Determinations under the All-Payer Combination Option (§ 414.1440): The following reflects the burden associated with the first year of data collection resulting from policies set out in the CY 2018 Quality Payment Program final rule. Because no collection of data was required prior to the CY 2019 performance period, the requirements and burden were not submitted to OMB for approval. However, by virtue of this proposed rulemaking the requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

The CY 2017 Quality Payment Program final rule, provided that either APM Entities or individual eligible clinicians must submit by a date and in a manner determined by us: (1) Payment arrangement information necessary to assess whether each other payer arrangement is an Other Payer Advanced APM, including information on financial risk arrangements, use of CEHRT, and payment tied to quality measures; (2) for each payment arrangement, the amounts of payments for services furnished through the arrangement, the total payments from the payer, the numbers of patients furnished any service through the arrangement (that is, patients for whom the eligible clinician is at risk if actual expenditures exceed expected expenditures), and (3) the total number of patients furnished any service through the arrangement (81 FR 77480). The rule also specified that if we do not receive sufficient information to complete our evaluation of another payer arrangement and to make QP determinations for an eligible clinician using the All-Payer Combination Option, we would not assess the eligible clinicians under the All-Payer Combination Option (81 FR 77480).

In the CY 2018 Quality Payment Program final rule, we explained that in order for us to make QP determinations under the All-Payer Combination Option using either the payment

amount or patient count method, we would need to receive all of the payment amount and patient count information: (1) Attributable to the eligible clinician or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician during the QP performance period (82 FR 53885). We also finalized that eligible clinicians and APM Entities will not need to submit Medicare payment or patient information for QP determinations under the All-Payer Combination Option (82 FR 53885).

The CY 2018 Quality Payment Program final rule noted that we will need this payment amount and patient count information for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31 (82 FR 53885). We noted that the timing may be challenging for APM Entities or eligible clinicians to submit information for the August 31 snapshot date. If we receive information for either the March 31 or June 30 snapshots, but not the August 31 snapshot, we will use that information to make QP determinations under the All-Payer Combination Option. This payment amount and patient count information is to be submitted in a way that allows us to distinguish information from January 1 through March 31, January 1 through June 30, and January 1 through August 31 so that we can make QP determinations based on the two proposed snapshot dates (82 FR 30203 through 30204).

The CY 2018 Quality Payment Program final rule specified that APM Entities or eligible clinicians must submit all of the required information about the Other Payer Advanced APMs in which they participate, including those for which there is a pending request for an Other Payer Advanced APM determination, as well as the payment amount and patient count information sufficient for us to make QP determinations by December 1 of the

calendar year that is 2 years prior to the payment year, which we refer to as the QP Determination Submission Deadline (82 FR 53886).

In section III.H.4.g.(4)(b) of this rule, we are proposing to add a third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights to the TIN participate in a single APM Entity. This option would therefore be available to all TINs participating in Full TIN APMs, such as the Medicare Shared Savings Program. It would also be available to any other TIN for which all clinicians who have reassigned billing rights to the TIN are participating in a single APM Entity. To make QP determinations under the All-Payer Combination Option at the TIN level as proposed using either the payment amount or patient count method, we would need to receive, by December 1 of the calendar year that is 2 years prior to the payment year, all of the payment amount and patient count information: (1) Attributable to the eligible clinician, TIN, or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician(s) during the QP performance period for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31 sufficient for us to make QP determinations.

As shown in Table 87, we assume that 4 APM Entities, 8 TINs, and 80 eligible clinicians will submit data for QP determinations under the All-Payer Combination Option in 2019. We estimate it will take the APM Entity representative, TIN representative, or eligible clinician 5 hours at \$107.38/hr for a practice administrator to complete this submission. In aggregate, we estimate an annual burden of 460 hours (92 respondents × 5 hr) at a cost of \$49,395 (460 hr × \$107.38/hr).

TABLE 87—ESTIMATED BURDEN FOR THE SUBMISSION OF DATA FOR ALL-PAYER QP DETERMINATIONS

Labor rate for a Practice Administrator (\$107.38) (h)	\$107.38/hr
Total Annual Cost for Submission of Data for All-Payer QP Determinations (i) = (g) * (h)	\$49,395

18. Quality Payment Program ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

The proposed requirements and burden associated with this data submission will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We estimate that 10 percent of the total clinicians and groups who will voluntarily participate in MIPS will also elect not to participate in public reporting. This results in a total of 10,433 (10 percent × 104,326 voluntary MIPS participants), a decrease of 11,967

from the total respondents currently approved by OMB under the aforementioned control number due to the reduction in voluntary participation in MIPS overall. As we discussed earlier in this section, voluntary respondents are the clinicians that submitted data to PQRS, are not QPs, and are expected to be excluded from MIPS after applying the eligibility requirements discussed in section III.H.3.a. of this rule. In implementing the proposed opt-in policy, we estimated that 33 percent of clinicians that exceed 1 of the low-volume criteria, but not all 3, would elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a

voluntary reporter. This logic was also applied in the regulatory impact analysis of this rule. Table 88 shows that for these voluntary participants, we estimate it would take 0.25 hours at \$89.18/hr for a computer system analyst to submit a request to opt-out. In aggregate we estimate an annual burden of 2,608.25 hours (10,433 requests × 0.25 hr/request) at a cost of \$232,604 (2,608.25 hr × \$89.18/hr).

The decrease in the number of respondents due to policies proposed in this rule results in a decrease of –2,991.75 hours (–11,967 respondents × 0.25 hr) and –\$266,804 (–2,991.75 hours × \$89.18/hr).

TABLE 88—ESTIMATED BURDEN FOR VOLUNTARY PARTICIPANTS TO ELECT OPT OUT OF PERFORMANCE DATA DISPLAY ON PHYSICIAN COMPARE

Labor rate for a computer systems analyst (d)	\$89.18/hr
Total Annual Cost for Opt-out Requests (e) = (a) * (d)	\$232,604

19. Summary of Annual Quality Payment Program Burden Estimates

Table 89 summarizes this proposed rule’s burden estimates for the Quality Payment Program. In order to understand the burden implications of

the policies proposed in this rule, we have also estimated a baseline burden of continuing the policies and information collections set forth in the CY 2018 Quality Payment Program final rule into the 2019 MIPS performance period. Our baseline burden estimates reflect the

recent availability of data sources to more accurately reflect the number of the organizations exempt from the Promoting Interoperability performance category and to more accurately reflect the exclusion of QPs from all MIPS performance categories.

* These two ICRs were combined in a single ICR in the CY 2018 Quality Payment Program final rule (82 FR 53906 through 53907).

Table 90 provides the reasons for our change in burden into those related Year 2 policies that reflect updated data changes in the estimated burden for to new policies and those related to and methods. information collections in this proposed changes in the baseline burden of rule. We have divided the reasons for continued Quality Payment Program

TABLE 90—REASONS FOR CHANGE IN BURDEN COMPARED TO THE CURRENTLY APPROVED CY 2018 INFORMATION COLLECTION BURDENS

Table in collection of information	Changes in burden due to finalized Year 3 policies	Changes to “baseline” of burden continued Year 2 policy (<i>italics are changes in number of respondents’ due to updated data</i>)
Table 63: Qualified Registry Self-Nomination.	None	After a review of the self-nomination process, we determined it is more accurate to separately assess the burden of Qualified Registry and QCDR self-nomination rather than aggregate them in the same ICR. Review of self-nomination process resulted in a decrease in estimated time needed to complete simplified self-nomination (- 9.5 hr. computer system analyst time) and full self-nomination (- 7 hr. computer system analyst time). <i>Increase in the number of respondents as the number of qualified registries enrolling increases and the basis for estimating the number of respondents is updated to reflect the number of self-nomination applications received in place of the number of qualified registries being approved.</i>
Table 64: QCDR Self-Nomination	None	After a review of the self-nomination process, we determined it is more accurate to separately assess the burden of Qualified Registry and QCDR self-nomination rather than aggregate them in the same ICR. Review of self-nomination process resulted in an increase in estimated time needed to complete simplified self-nomination (- 0.5 hr. computer system analyst time) and full self-nomination (+2 hr. computer system analyst time). <i>Increase in the number of respondents as the number of QCDRs enrolling increases and the basis for estimating the number of respondents is updated to reflect the number of self-nomination applications received in place of the number of QCDRs being approved.</i>

TABLE 90—REASONS FOR CHANGE IN BURDEN COMPARED TO THE CURRENTLY APPROVED CY 2018 INFORMATION COLLECTION BURDENS—Continued

Table in collection of information	Changes in burden due to finalized Year 3 policies	Changes to "baseline" of burden continued Year 2 policy (<i>italics are changes in number of respondents due to updated data</i>)
Table 68: Quality Payment Program Identity Management Application Process.	None	<i>Decreased number of respondents due to updates to the identity management system being used for data submission; only new respondents submitting quality data using the CMS Enterprise Portal need to create a new account, versus system where all respondents submitting via EHR needed to register for user account annually.</i>
Table 69: Quality Performance Category Claims Collection Type.	None	<i>Decreased number of respondents due to increase in the number of QPs excluded from submitting data.</i> Correction to estimate to account for reduced number of required measures compared to PQRS (6 in MIPS; 9 in PQRS) reduced estimated time to submit data.
Table 70: Quality Performance Category QCDR/MIPS CQM Collection Type.	None	<i>Decreased number of respondents due to increase in the number of QPs excluded from submitting data.</i>
Table 71: Quality Performance Category eCQM Collection Type.	None	<i>Decreased number of respondents due to increase in the number of QPs excluded from submitting data.</i>
Table 72: Quality Performance Category CMS Web Interface.	Decrease in number of required measures resulted in reduction in estimated time needed to submit data (–14.8 hrs computer system analyst time).	<i>Decrease in the number of respondents as fewer eligible group practices elected to submit data using the CMS Web Interface.</i>
Table 73: Beneficiary Responses to CAHPS for MIPS Survey.	None	<i>Decrease in the number of respondents as fewer eligible group practices elect to have vendors administer the CAHPS for MIPS survey and fewer beneficiaries per group respond to the survey, on average.</i>
Table 74: Registration for CMS Web Interface.	None	<i>Increase in the number of respondents as more groups register to submit data using the CMS Web Interface.</i> Review of registration process resulted in decrease in estimated time to register. (–0.75 hr. computer system analyst time).
Table 75: Registration for CAHPS for MIPS Survey.	None	<i>Decrease in the number of respondents as fewer eligible group practices elect to have vendors administer the CAHPS for MIPS survey.</i> Review of registration process resulted in decrease in estimated time to register. (–0.75 hr. computer system analyst time).
Table 76: Call for Quality Measures	None	<i>Increase in the number of new quality measures being nominated.</i> Inclusion of time required to complete Peer Review Journal Article Form resulted in increase in time to nominate a quality measure. This was a requirement in the CY 2017 Quality Payment Program final rule (81 FR 77153 through 77155), but was not included in burden estimates. (+4 hrs Physician time).
Table 77: Application for Promoting Interoperability Reweighting.	None	<i>Increase in the number of respondents as the estimated number of APM Entities with hardship approval was previously not included.</i> Review of application process resulted in decrease in estimated time to apply (–0.25 hr computer system analyst time).
Table 79: Promoting Interoperability Performance Category Data Submission.	Decrease in number of required measures resulted in reduction in estimated time needed to submit data (–.33 hr computer system analyst time).	<i>Decrease in the number of respondents due to increase in the estimate of hospital-based clinicians and clinicians in small practices, more accurate estimate of the number of TINs submitting data for MIPS APMs, and accounting for individuals which may have submitted quality data via two or more submission or collection types.</i>
Table 80: Call for Promoting Interoperability Measures.	None	<i>Increase in the number of new Promoting Interoperability measures being nominated.</i>
Table 82: Improvement Activities Submission.	None	<i>Decreased number of respondents due to increase in the number of QPs excluded from submitting data and accounting for individuals which may have submitted quality data via two or more submission or collection types.</i> Review of submission process resulted in decrease in estimated to submit (–0.92 hr computer system analyst time).
Table 83: Nomination of Improvement Activities.	None	Review of nomination process resulted in increase in estimated time to nominate a new improvement activity (+0.9 hrs Practice Administrator time; +0.6 hrs Physician time).
Table 84: Partial QP Election	None.	
Table 85: Other Payer Advanced APM Identification: Other Payer Initiated Process.	None	<i>Decrease in the number of anticipated other payer arrangements submitted for identification as Other Payer Advanced APMs.</i>
Table 86: Other Payer Advanced APM Identification: Eligible Clinician Initiated Process.	None	<i>Increase in the number of anticipated other payer arrangements submitted by APM Entities and eligible clinicians for identification as Other Payer Advanced APMs.</i>
Table 87: Submission of Data for All-Payer QP Determinations under the All-Payer Combination Option.	Reflects new policy in this proposed rule.	None.
Table 88: Voluntary Participants to Elect to Opt Out of Performance Data Display on Physician Compare.	<i>Decrease in the number of respondents as a result of fewer individuals and groups being excluded from MIPS eligibility.</i>	None.

C. Summary of Annual Burden Estimates for Proposed Requirements

TABLE 91—ANNUAL REQUIREMENTS AND BURDEN

Regulation section(s) under Title 42 of the CFR	OMB control No.***	Respondents	Responses	Burden per response (hours)	Total annual burden (hours)	Labor cost of reporting (\$/hr)	Total cost (\$)*
414.94(j) (AUC consultations)	0938–1345	586,386	43,181,818	0.033 (2 min) ...	1,425,000	varies	119,275,350
Quality Payment Program (See Subtotal Under Table 89).	0938–1314	(**)	(162,946)	varies	(1,992,782)	varies	(177,891,746)
Quality Payment Program (See Subtotal Under Table 89).	0938–1222	(66,521)	(66,521)	varies	(15,314)	varies	(394,855)
Total	1,187,338	42,952,351	varies	(583,096)	varies	(59,011,251)

*With respect to the PRA, this rule would not impose any non-labor costs.
 **We are unable to accurately calculate a total number of respondents for the Quality Payment Program. In many cases, individuals, groups, and entities have responded to multiple data collections and there is no unified way to identify unique respondents.
 ***OMB and CMS' PRA package ID numbers: OMB 0938–1345 (CMS–10654), OMB 0938–1314 (CMS–10621), and OMB 0938–1222 (CMS–10450). 0938–1222 (CMS–10450).

D. Submission of PRA-Related Comments

We have submitted a copy of this rule’s information collection and recordkeeping requirements to OMB for review and approval. These requirements are not effective until they have been approved by the OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit CMS’s website at www.cms.hhs.gov/PaperworkReductionActof1995, or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please refer to the **DATES** and **ADDRESSES** sections of this rulemaking for instructions. We will consider all ICR-related comments received by the date and time specified in the **DATES** section, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VI. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

This proposed rule makes payment and policy changes under the Medicare PFS and implements required statutory changes under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), the Achieving a Better Life Experience Act (ABLE), the Protecting Access to Medicare Act of 2014

(PAMA), section 603 of the Bipartisan Budget Act of 2015, the Consolidated Appropriations Act of 2016, and the Bipartisan Budget Act of 2018. This proposed rule also makes changes to payment policy and other related policies for Medicare Part B, Part D, and Medicare Advantage.

In addition, section 218(b) of the PAMA added section 1834(q) of the Act directing the Secretary to establish a program to promote the use of AUC. Section 1834(q)(4) of the Act requires ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system, and for the furnishing professional or facility to include on the Medicare claim information about the ordering professional’s consultation with specified applicable AUC through a qualified CDSM. This proposed rule is necessary to make policy changes under Medicare fee-for-service. Therefore, we include a detailed regulatory impact analysis to assess all costs and benefits of available regulatory alternatives and explained the selection of these regulatory approaches that we believe adhere to section 1834(q) of the Act and, to the extent feasible, maximize net benefits.

This proposed rule also makes payment and policy changes under the Medicare Physician Fee Schedule and makes required statutory changes under the MACRA, as amended by section 51003 of the Bipartisan Budget Act of 2018.

Proposed new policies for CY 2019 are detailed throughout this proposed rule. For example, the proposals associated with modernizing Medicare physician payment by recognizing communication technology-based services are described in section II.D. of this proposed rule, while the proposals associated with E/M visits are described in section II.I. of this proposed rule. Several proposals using innovative

technology that enables remote services would expand access to care and create more opportunities for patients to access more personalized care management as well as connect with their physicians more quickly. These proposals would support access to care using telecommunications technology by: Paying clinicians for virtual check-ins—brief, non-face-to-face appointments via communications technology; paying clinicians for evaluation of patient-submitted photos; and expanding Medicare-covered telehealth services to include prolonged preventive services.

Several provisions in the proposed rule would also help to free electronic health records to be powerful tools to support efficient care while giving physicians more time to spend with their patients, especially those with complex needs, rather than on paperwork. Specifically, the E/M proposal would: Simplify, streamline, and offer flexibility in documentation and coding requirements for E/M visits, which make up about 40 percent of allowed charges under the PFS and consume much of clinicians’ time; reduce unnecessary physician supervision of radiologist assistants during diagnostic services; and remove burdensome and overly complex functional reporting requirements for outpatient therapy. In addition, Section VII.H. of this Regulatory Impact Analysis details the economic effect of these proposed policies on Medicare providers and beneficiaries.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March

22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate, as discussed in this section, that the PFS provisions included in this proposed rule would redistribute more than \$100 million in 1 year. Therefore, we estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details see the SBA’s website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards.

There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

For example, the effects of changes to payment rates for practitioners, other providers, and suppliers are discussed in VII.C. of this proposed rule. Alternative options considered to the proposed payment rates are discussed generally in section VII.F of this proposed rule, while specific alternatives for individual codes are discussed throughout this rule, especially in section II.H.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. The PFS does not reimburse for services provided by rural hospitals; the PFS pays for physicians’ services, which can be furnished by physicians and non-physician practitioners in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule would not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2018, that threshold is approximately \$150 million. This proposed rule will impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this regulation does not impose any costs on

state or local governments, the requirements of Executive Order 13132 are not applicable.

Executive Order 13771, entitled Reducing Regulation and Controlling Regulatory Costs (82 FR 9339), was issued on January 30, 2017. This proposed rule is considered an E.O. 13771 regulatory action because it is expected to result in regulatory costs. The estimated impact would be \$5 million in costs in 2019, \$4.114 billion in costs in 2020, and \$44 million in cost savings in 2021 and thereafter. Annualizing these costs and cost savings in perpetuity and discounting at 7 percent back to 2016, we estimate that this rule would generate \$174 million in annualized net costs for E.O. 13771 accounting purposes. Details on the estimated costs of this rule can be found in the following analyses.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we are implementing a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and implementing statutory provisions. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compare payment rates for CY 2018 with payment rates for CY 2019 using CY 2017 Medicare utilization. The payment

impacts in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and would depend on the mix of services he or she furnishes. The average percentage change in total revenues would be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical

laboratory services that are paid under the Clinical Laboratory Fee Schedule. The annual update to the PFS conversion factor (CF) was previously calculated based on a statutory formula; for details about this formula, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67741 through 67742). Section 101(a) of the MACRA repealed the previous statutory update formula and amended section 1848(d) of the Act to specify the update adjustment factors for calendar years 2015 and beyond. The update adjustment factor for CY 2019, as required by section 53106 of the Bipartisan Budget Act of 2018, is 0.25 percent before applying other adjustments.

To calculate the proposed conversion factor for this year, we multiplied the product of the current year conversion factor and the update adjustment factor by the budget neutrality adjustment described in the preceding paragraphs. We estimate the CY 2019 PFS conversion factor to be 36.0463, which reflects the budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) and the 0.25 percent update adjustment factor specified under section 1848(d)(18) of the Act. We estimate the CY 2019 anesthesia conversion factor to be 22.2986, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 92—CALCULATION OF THE PROPOSED CY 2019 PFS CONVERSION FACTOR

CY 2018 Conversion Factor		35.9996
Statutory Update Factor	0.25 percent (1.0025)	
CY 2019 RVU Budget Neutrality Adjustment	– 0.12 percent (0.9988)	
CY 2019 Conversion Factor		36.0463

TABLE 93—CALCULATION OF THE PROPOSED CY 2019 ANESTHESIA CONVERSION FACTOR

CY 2018 National Average Anesthesia Conversion Factor		22.1887
Statutory Update Factor	0.25 percent (1.0025)	
CY 2019 RVU Budget Neutrality Adjustment	– 0.12 percent (0.9988)	
CY 2019 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	0.365 percent (1.00365)	
CY 2019 Conversion Factor		22.2986

Table 94 shows the payment impact on PFS services of the proposals contained in this proposed rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues would be different from those shown in Table 94 (CY 2019 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 94.

- *Column A (Specialty)*: Identifies the specialty for which data are shown.
- *Column B (Allowed Charges)*: The aggregate estimated PFS allowed charges for the specialty based on CY 2017 utilization and CY 2018 rates. That is, allowed charges are the PFS amounts

for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- *Column C (Impact of Work RVU Changes)*: This column shows the estimated CY 2019 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes and the proposed changes to documentation and payment for the office/outpatient E/M code set. For additional information on this proposal see section II.I. of this proposed rule.

- *Column D (Impact of PE RVU Changes)*: This column shows the estimated CY 2019 impact on total allowed charges of the changes in the PE RVUs.

- *Column E (Impact of MP RVU Changes)*: This column shows the estimated CY 2019 impact on total allowed charges of the changes in the MP RVUs, which are primarily driven by the required five-year review and update of MP RVUs.

- *Column F (Combined Impact)*: This column shows the estimated CY 2019 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

TABLE 94—CY 2019 PFS ESTIMATED IMPACT ON TOTAL ALLOWED CHARGES BY SPECIALTY

Specialty	Allowed charges (mil)	Impact of work RVU changes (%)	Impact of PE RVU changes (%)	Impact of MP RVU changes (%)	Combined impact* (%)

2. CY 2019 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the proposed RVU changes are generally related to the changes to

RVUs for specific services resulting from the Misvalued Code Initiative, including proposed RVUs for new and revised codes. Because office/outpatient E/M codes comprise a large volume of services in the PFS, much of the

specialty level impacts are being driven by our proposal to establish a single payment rate for new patients and a single PFS rate for established patients for E/M visits levels 2–5 as well as other adjustments including: The E/M

Multiple Procedure Payment Adjustment, the HCPCS G-code add-ons to recognize additional relative resources for certain kinds of visits, HCPCS G-codes to describe podiatric E/M visits, the technical adjustment to the PE methodology, and the HCPCS G-code for 30 minutes of prolonged services. For specific information on these proposals, see II.I. of this proposed rule. The estimated impacts for some specialties, including obstetrics/gynecology, urology, independent labs, and clinical psychologists, reflect increases relative to other physician specialties. These increases can largely be attributed to proposed increases in value for particular services, the proposed updates to supply and equipment pricing, and the proposed valuation of the E/M office visit codes that had a positive impact on specialties reporting a higher proportion of level 2 and level 3 office visits.

The estimated impacts for several specialties, including allergy/immunology, diagnostic testing facilities, hematology/oncology, radiation therapy centers, and podiatry, reflect decreases in payments relative to payment to other physician specialties. Allergy/immunology experiences a decrease due to a reduction in PE RVUs based on updated supply pricing for certain codes frequently billed by this specialty. For the other specialties, these decreases can largely be attributed to proposed revaluation of individual procedures, proposed decreases in relative payment as a result of proposed updates to prices for medical supplies and equipment, and the continued implementation of previously finalized code-level reductions that are being phased-in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the Clinical Laboratory Fee Schedule. As a result, the estimated 1 percent reduction for CY 2019 is only applicable to approximately 17 percent of the Medicare payment to these entities.

Additionally, specialties such as podiatry and dermatology that would experience a decrease in payments are those that bill a large portion of E/M visits on the same day as procedures, and therefore would see a reduction based on the application of the E/M MPPR adjustments. Other specialties, such as rheumatology and hematology/oncology are estimated to experience a decrease in payments due to the E/M proposals because they may tend to bill greater proportion of level 4 and 5 E/M visits and the add-on codes for inherent

visit complexity may not fully mitigate a reduction in their payments. Specialties such as OB/GYN and urology would see an increase in payments from these proposals, due to a combination of single PFS rates for E/M visit levels and the add-on codes for inherent visit complexity. For a more thorough discussion of the specialty level impacts of these proposals, see section II.I. of this proposed rule.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table, including comments received in response to the proposed rates. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentages in the table are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty.

b. Impact

Column F of Table 94 displays the estimated CY 2019 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under “downloads” on the CY 2019 PFS proposed rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

D. Effect of Changes Related to Telehealth

As discussed in section II.D. of this proposed rule, we are proposing to add two new codes, HCPCS codes G0513 and G0514, to the list of Medicare telehealth services. Although we expect these changes to have the potential to

increase access to care in rural areas, based on recent telehealth utilization of services already on the list, including services similar to the proposed additions, we estimate there will only be a negligible impact on PFS expenditures from the proposed additions. For example, for services already on the list, they are furnished via telehealth, on average, less than 0.1 percent of the time they are reported overall. This proposal is responsive to longstanding stakeholder interest in expanding Medicare payment for telehealth services. The restrictions placed on Medicare telehealth by the statute limit the magnitude of utilization; however, CMS believes there is value in allowing physicians and patients the greatest flexibility when appropriate.

E. Effect of Changes to Payment to Provider-Based Departments (PBDs) of Hospitals Paid Under the PFS

As discussed in section II.G of this proposed rule, we are proposing a PFS Relativity Adjuster of 40 percent for CY 2019, meaning that nonexcepted items and services furnished by nonexcepted off-campus PBDs would be paid under the PFS at a rate that is 40 percent of the OPPS rate. In developing our proposal to maintain the PFS Relativity Adjuster at 40 percent, we updated our analysis to include a full year of claims data. We estimated site-specific PFS rates for the technical component of a service for the entire range of HCPCS codes furnished in nonexcepted off campus PBDs. Next we compared the average, weighted by claim line volume, of the site specific rate under the PFS compared to the average rate under the OPPS, also weighted by claim line volume. This calculation resulted in a relative rate of approximately 40 percent, supporting a proposal to maintain the PFS Relativity Adjuster at 40 percent. There will be no additional savings for CY 2019 relative to CY 2018 because our proposed PFS Relativity Adjuster of 40 percent maintains the current rate which was finalized for CY 2018.

F. Other Provisions of the Proposed Regulation

1. Part B Drugs: Application of an Add-On Percentage for Certain Wholesale Acquisition Cost (WAC)-Based Payments

In section II.N. of this rule, we proposed that effective January 1, 2019, WAC based payments for Part B drugs made under section 1847A(c)(4) of the Act would utilize a 3 percent add-on in place of the 6 percent add-on that is

currently being used. If this proposal is finalized, we would also permit MACs to use an add-on percentage of up to 3 percent for WAC-based payments for new drugs.

We anticipate that the proposed reduction to the add-on payment made for a subset of Part B drugs will result in savings to the Medicare program by bringing payment amounts for newly approved drugs closer to acquisition costs. The proposed 3 percent add-on is consistent with MedPAC's analysis and recommendations as well as discounts observed by MedPAC in their June 2017 Report to the Congress. We have also considered how CMS's experience with WAC-based pricing for recently marketed new drugs and biologicals compares to MedPAC's findings. Although the number of new drugs that are priced using WAC is very limited, the average difference between WAC and ASP-based payment limits for a group of 3 recently approved drugs and biologicals that appeared on the ASP Drug Pricing Files (including one biosimilar biological product) was 9.0 percent. Excluding the biosimilar biological product results in a difference of 3.5 percent. The difference was determined by comparing a partial quarter WAC-based payment amount determined under section 1847A(c)(4) of the Act to the next quarter's ASP-based payment amount. These findings are in general agreement with MedPAC's findings.

Although we are able to provide examples of the relative differences between ASP and WAC based payment limits, and we anticipate some savings from the proposals, we cannot estimate the magnitude of savings over time because we cannot determine how many new drugs and biologicals subject to partial quarter pricing will appear on the ASP Drug Pricing files in the future or how many Part B claims for these products will be paid. This limitation also applies to contractor-priced drugs and biologicals that have HCPCS codes and are in their first quarter of sales. Finally, the claims volume for contractor-priced drugs and biologicals that are billed using miscellaneous or Not Otherwise Classified codes, such as J3490 and J3590, cannot be quantified. We would like to note that for the three drugs discussed in the preceding paragraph, Medicare Part B payments for individual doses of each drug range from approximately \$3,000 to \$10,000. The payment changes proposed in this rule would have resulted in a little less than \$100 to \$300 savings in Medicare allowed charges for each dose.

Although we cannot estimate the overall savings to the Medicare Program

or to beneficiaries, we would like to point out that this change in policy is likely to decrease copayments for individual beneficiaries who are prescribed new drugs. Given that launch prices for single doses for some new drugs may range from tens to hundreds of thousands of dollars, a 3 percentage point reduction in the total payment allowance will reduce a patient's 20 percent Medicare Part B copayment. This proposed approach can result in savings to an individual beneficiary and can help Medicare beneficiaries afford to pay for new drugs by reducing out of pocket expenses.

The 3 percent add-on is expected to reduce the difference between acquisition cost and certain WAC-based Part B drug payments, creating greater parity between the two. Based on MedPAC's June 2017 Report to Congress, we do not anticipate that this change will result in payments amounts that are below acquisition cost or that the proposals will impair providers' or patients' access to Part B drugs.

2. Proposed Changes to the Regulations Associated With the Ambulance Fee Schedule

As discussed in section III B.2. of this proposed rule, section 50203(a) of the Bipartisan Budget Act of 2018 amended section 1834(l)(12)(A) and (l)(13)(A) of the Act to extend the payment add-ons set forth in those subsections through December 31, 2022. The ambulance extender provisions are enacted through legislation that is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions or associated impact in this rule. We are proposing only to revise the dates in § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

In addition, as discussed in section III.B. 3. of this proposed rule, section 53108 of the BBA amended section 1834(l)(15) of the Act to increase the payment reduction from 10 percent to 23 percent effective for ambulance services furnished on or after October 1, 2018 consisting of non-emergency basic life support services (BLS) involving transports of an individual with end stage renal disease for renal dialysis services furnished other than on an emergency basis by a provider of services or a renal dialysis facility. The 10 percent reduction applies for such ambulance services furnished during

the period beginning on October 1, 2013 and ending on September 30, 2018.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate decrease and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions or associated impact in this rule. We are proposing to revise § 414.610(c)(8) to conform the regulations to this self-implementing statutory requirement.

3. Clinical Laboratory Fee Schedule: Proposed Change to the Majority of Medicare Revenues Threshold in Definition of Applicable Laboratory

As discussed in section III.A. of this proposed rule, section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. The CLFS final rule titled, Medicare Clinical Diagnostic Laboratory Tests Payment System final rule (CLFS final rule), published in the June 23, 2016 **Federal Register**, implemented section 1834A of the Act. Under the CLFS final rule (81 FR 41036), "reporting entities" must report to CMS during a "data reporting period" "applicable information" (that is, certain private payor data) collected during a "data collection period" for their component "applicable laboratories." In general, the payment amount for each clinical diagnostic laboratory test (CDLT) on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the 6-month data collection period and reported to us during the 3-month data reporting period, and is equal to the weighted median of the private payor rates for the CDLT.

An applicable laboratory is defined at § 414.502, in part, as an entity that is a laboratory (as defined under the Clinical Laboratory Improvement Amendments (CLIA) definition at § 493.2) that bills Medicare Part B under its own National Provider Identifier (NPI). In addition, an applicable laboratory is an entity that receives more than 50 percent of its Medicare revenues during a data collection period from the CLFS and/or the PFS. We refer to this component of the applicable laboratory definition as the "majority of Medicare revenues threshold." The definition of applicable laboratory also includes a "low expenditure threshold" component which requires an entity to receive at least \$12,500 of its Medicare revenues

from the CLFS during a data collection period, for its CDLTs that are not advanced diagnostic laboratory tests (ADLTs).

In determining payment rates under the private payor rate-based CLFS, one of our objectives is to obtain as much applicable information as possible from the broadest possible representation of the national laboratory market on which to base CLFS payment amounts, for example, from independent laboratories, hospital outreach laboratories, and physician office laboratories, without imposing undue burden on those entities. We believe it is important to achieve a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a CDLT, and minimizing the reporting burden for entities. In response to stakeholder feedback and in the interest of facilitating our goal, we are proposing to revise the majority of Medicare revenues threshold component of the definition of applicable laboratory at § 414.502(3) to exclude Medicare Advantage payments under Medicare Part C from the definition of total Medicare revenues (that is, the denominator of the majority of Medicare threshold equation). This change would permit laboratories with a significant Medicare Part C revenue component to meet the majority of Medicare revenues threshold and potentially qualify as an applicable laboratory (if it also meets the low expenditure threshold). As a result, a broader representation of the laboratory industry may report applicable information from which to determine

payment rates under the CLFS. For a complete discussion of our proposal to revise the majority of Medicare revenues threshold component of the definition of applicable laboratory under the Medicare CLFS, we refer readers to section III A. of this proposed rule.

a. Estimation of Increased Reporting

To estimate the potential impact of excluding Medicare Advantage plan payments from total Medicare revenues (that is, the denominator of the low expenditure threshold) on the number of laboratories meeting the majority of Medicare revenues threshold, using CY 2017 Medicare claims data, we compared the number of billing NPIs that would have met the majority of Medicare revenues threshold with Medicare Advantage plan revenues included in total Medicare revenues (which is the current requirement) versus the number of billing NPIs that would meet the majority of Medicare revenues threshold had Medicare Advantage plan payments been *excluded* from total Medicare revenues (which is the proposed change). We found that excluding Medicare Advantage plan payments from total Medicare revenues increased the level of laboratories meeting the majority of Medicare revenues threshold by approximately 43 percent. In other words, we estimate that excluding Medicare Advantage plan payments from total Medicare revenues (the denominator) of the majority of Medicare revenues threshold, and keeping the numerator constant (that is revenues from only the CLFS and or PFS) yields an increase of 43 percent in

the number of laboratories meeting the majority of Medicare revenues threshold.

As discussed on the CLFS website, our summary analysis of data reporting from the initial data reporting period under the Medicare CLFS private payor rate-based payment system, indicated that we received applicable information from 1,942 applicable laboratories reporting over 4.9 million records. Applying the projected 43 percent increase to the number of applicable laboratories from the first data reporting period ($1,942 \times 1.43$) yields an estimated 2,777 laboratories that would meet the majority of Medicare revenues threshold, which reflects an additional 835 laboratories. Provided all other required criteria for applicable laboratory status are met (including the low expenditure threshold of receiving at least \$12,500 in CLFS revenues during a data collection period) a laboratory would report applicable information for the next data reporting period.

To determine the estimated reporting burden for an applicable laboratory, we looked at the distribution of reported records that occurred for the first data reporting period. The average number of records reported for an applicable laboratory for the first data reporting period was 2,573. The largest amount of records reported for an applicable laboratory was 457,585 while the smallest amount reported was 1 record. A summary of the distribution of reported records from the first data collection period is illustrated in Table 95.

TABLE 95—SUMMARY OF RECORDS REPORTED FOR FIRST DATA REPORTING PERIOD

[By applicable laboratory]

Total records	Average records	Min records	Max records	Percentile distribution of records				
				10th	25th	50th	75th	90th
4,995,877	2,573	1	457,585	23	79	294	1,345	4,884

Presuming that all of the additional laboratories that are projected to meet the majority of Medicare revenues threshold, that is approximately 835, also meet all of the criteria necessary to receive applicable laboratory status, as defined at § 414.502, they would be an applicable laboratory and report applicable information for the next data reporting period, January 1, 2020 through March 31, 2020. Using the midpoint of the percentile distribution of reported records from the initial data reporting period, that is approximately 300 records reported per applicable

laboratory (50th percentile for the first data reporting period was 294), we estimate an additional 250,500 records would be reported for the next data reporting period ($835 \text{ laboratories} \times 300 \text{ records per laboratory} = 250,500$). This represents an increase in data reporting of about 5 percent over the number of records reported for the initial data reporting period ($250,500 \text{ additional records} / 4,995,877 = .05$). In other words, using the approximate mid-point of reported records for the first data reporting period, we estimate that our proposed change to the majority of

Medicare revenues threshold would increase the total amount of records reported by approximately 5 percent. As illustrated in Table 95, the number of records reported varies greatly, depending on the volume of services performed by a given laboratory. Laboratories with larger test volumes, for instance at the 90th percentile, should expect to report more records as compared to the midpoint used for this analysis. Likewise, laboratories with smaller test volume, for instance at the 10th percentile, should expect to report

less records as compared to the midpoint.

b. Minimal Impact Expected on CLFS Rates

We note that there would only be an associated Medicare cost or savings to the extent that the additional applicable laboratories are paid at a higher (or lower) private payor rate, as compared to other laboratories that reported previously *and* to the extent that the volume of services performed by these “additional” applicable laboratories is significant enough to make an impact on the weighted median of private payor rates. We have no reason to believe that increasing the level of participation would result in a measurable cost difference under the CLFS. Given that the largest laboratories with the highest test volumes, by definition, dominate the weighted median of private payor rates, and the largest laboratories reported data for the determination of CY 2018 CLFS rates and are expected to report again, we do not expect the additional reported data resulting from our proposed change to the majority of Medicare revenues threshold to have a predictable, direct impact on CLFS rates. However, we believe that this proposal responds directly to stakeholder concerns regarding the number of applicable laboratories reporting applicable information for the initial data reporting period. Therefore, in an effort to increase the number of laboratories qualifying for applicable laboratory status, we are proposing a change to the majority of Medicare revenues threshold so that laboratories furnishing tests to a significant level of Medicare Part C enrollees may qualify as applicable laboratories and report data to us.

4. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

The CY 2016 PFS final rule with comment period established an evidence-based process and transparency requirements for the development of AUC and stated that the AUC development process requirements, as well as the application process that organizations must comply with to become qualified PLEs did not impact CY 2016 physician payments under the PFS (80 FR 71362). The CY 2017 PFS final rule identified the requirements CDSMs must meet for qualification and stated that the CDSM requirements, as well as the application process that CDSM developers must comply with for their mechanisms to be specified as qualified under this program, did not impact CY 2017 physician payments under the PFS (81

FR 80546). The CY 2018 PFS rule finalized the effective date of January 1, 2020, on which the AUC consulting and reporting requirements will begin, and extended the voluntary consulting and reporting period to 18 months. Therefore, we stated these proposals did not impact CY 2018 physician payments under the PFS (82 FR 53349) and noted we would provide an impact statement when applicable in future rulemaking.

This proposed rule includes proposals to modify the Medicare AUC Program and addresses the impacts related to the actions taken by ordering professionals who order advanced diagnostic imaging services and those who furnish the professional and technical components of advanced diagnostic imaging services. The proposed rule proposes to modify the consultation requirement in § 414.94(j); therefore, this analysis estimates the impact of consultations by ordering professionals. The proposed rule proposes to clarify the reporting requirement in § 414.94(k), and this analysis estimates the impact of reporting AUC consultation information. The proposed rule also proposes to modify the significant hardship exceptions in § 414.94(i), therefore this analysis estimates the impact of a self-attestation process for ordering professionals. We also estimate the further reaching impacts of the AUC program in the detailed analysis that follows, assuming that some ordering professionals will purchase a qualified CDSM integrated within their existing EHR and others may purchase an EHR system in order to obtain an integrated qualified CDSM. We believe that in the beginning of this program due to the additional action required on the part of the ordering professional, it may take longer for a Medicare beneficiary to obtain an order for an advanced diagnostic imaging service, and therefore, we have calculated an estimated impact to Medicare beneficiaries.

This proposed rule discusses options to report the required claims-based AUC consultation information required in § 414.94(g)(1)(iv)(B) and we estimate the impact of our proposal to use existing coding methods (G-codes and HCPCS modifiers) to report that information. Finally, we measure the estimated impact on furnishing professionals and facilities of the proposed expansion of the definition of applicable setting in § 414.94(b). While the consultation and reporting requirements of this program are effective beginning January 1, 2020 with an Educational and Operations Testing Period, we attempt in this analysis to identify areas of potential

qualitative benefits to both Medicare beneficiaries and the Medicare program.

a. Impact of Consultations by Ordering Professionals

In this proposed rule, we are proposing modifications to the AUC program largely in response to public comments and recommendations as we believe these modifications are also important in minimizing burden of the AUC program on ordering professionals, furnishing professionals, and facilities. Specifically, we include a proposal regarding who, when not personally performed by the ordering professional, may consult AUC through a qualified CDSM and still meet the requirements of our regulations. In the CY 2018 PFS final rule, we estimated the consulting requirement based on the 2 minute effort of a family and general practitioner to result in an annual burden of 1,425,000 hours (43,181,818 consultations (Part B analytics 2014 claims data) × 0.033 hr/consultation) at a cost of \$275,139,000 (82 FR 53349).

An important difference from last year's analysis is that this year's analysis includes estimates for non-physician practitioners that order advanced diagnostic imaging services. For the purposes of this analysis, we assume that orders for advanced diagnostic imaging services would be placed by ordering professionals that are non-physician practitioners in the same percent as the numbers of non-physician practitioners are relative to the total number of non-institutional providers. Therefore, this analysis assumes that 40 percent of all advanced diagnostic imaging services would be ordered by non-physician practitioners. While non-physician practitioners may not order advanced diagnostic imaging services in the same proportion as their numbers, we did not have other data to use for this estimate. We specifically solicit comment and data on alternative assumptions about the number of non-physician practitioners who order advanced imaging services.

In addition, in this proposed rule we propose that auxiliary personnel may perform the AUC consultation when under the direction of, and incident to, the ordering professional's services. Due to this proposed change, we estimate that the majority, or as many as 90 percent, of practices would employ the use of auxiliary personnel, working under the direction of the ordering professional, to interact with the CDSM for AUC consultation for advanced diagnostic imaging orders. We also considered leaving the policy unchanged, and smaller modifications to that could expand who performs the

consultation to a single type of non-physician practitioner. However, we believe this proposal maximizes burden reduction effort as illustrated in the following updated estimate of consultation burden.

To estimate the burden of this modification, we calculated the effort of a 2-minute consultation with a qualified CDSM by a registered nurse (occupation code 29-1141) with mean hourly wage of \$35.36 and 100 percent fringe benefits to be \$2.33/consultation ($\$35.36/\text{hour} \times 2 \times 0.033 \text{ hour}$). If 90 percent of consultations (1,282,500 hours) are performed by such auxiliary personnel then annually the burden estimate would be \$90,698,400 ($1,282,500 \text{ hours} \times \$70.72/\text{hour}$) for auxiliary personnel to consult. We acknowledge that some AUC consultations will not be performed by other auxiliary personnel, therefore the remaining total annual burden we estimate is \$31,810,275 for this proposed consultation requirement. As a result of these assumptions and calculations, we estimate a reduction in consultation burden from cost of \$275,139,000 to \$122,508,675, which results in a proposed net burden reduction of \$152,630,325.

b. Impact of Significant Hardship Exceptions for Ordering Professionals

We previously identified exceptions to the requirement that ordering professionals consult specified applicable AUC when ordering applicable imaging services (81 FR 80170). Our original intention was to design the AUC hardship exception process in alignment with the EHR Incentive Program and then the MIPS ACI performance category (now promoting interoperability). However, in this proposed rule, we propose to modify the significant hardship exception criteria under § 414.94(i)(3) to be specific to the Medicare AUC program and independent of other Medicare programs both in policy and process. Specifically, we are proposing that all ordering professionals self-attest if they are experiencing a significant hardship at the time of placing an advanced diagnostic imaging order. Since the Medicare EHR Incentive Program has ended and we are unable to continue incorporating regulation that is no longer in effect, we did not consider leaving this policy unchanged. We also considered using a hardship application submission process. However, we believe that this proposed self-attestation process maximizes burden reduction effort as illustrated in the following updated estimate of

ordering professionals subject to a consultation burden.

To estimate the impact of our proposal to modify this section and create a hardship exception specific to this program we attempted to identify how many ordering professionals would be subject to this program.

Medicare non-institutional Part B claims for the first 6 months of 2014 shows that for claims for an advanced diagnostic imaging service that listed an NPI for the ordering/referring provider, up to 90-percent of claims include only 18 different provider specialties. These specialties include: Emergency Medicine; Internal Medicine; Family Practice; Cardiology; Hematology/Oncology; Orthopedic Surgery; Neurology; Urology; Physician Assistant; Nurse Practitioner; Pulmonary Disease; General Surgery; Neurosurgery; Medical Oncology; Gastroenterology; Radiation Oncology; Otolaryngology; and Diagnostic Radiology. We then used CMS data that served to create Table II.8 of the 2014 Medicare Statistics Book and were able to identify how many practitioners in each of those specialties were participating in Medicare program. Table II.8 of the 2014 Medicare Statistics Book combines many of these specialties into higher level groupings and displays the total number of practitioners participating in the Medicare program. However, we used more granular information that identifies the number of practitioners participating in the Medicare program by an individual specialty rather than higher level groupings (table available at https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/CMSProgramStatistics/2016/Downloads/PROVIDERS/2016_CPS_MDCR_PROVIDERS_6.pdf). For example, Table II.8 of the 2014 Medicare Statistics Book combines all surgeons into one category whereas we used detailed information for the individual surgical specialties of general surgery and orthopedic surgery for this estimate.

Using this more specific data for the 18 specialties, we estimate the count of practitioners that will be ordering professionals under the AUC program to be 586,386. There are limitations as we do not have data on the actual number of practitioners who order advanced diagnostic imaging services because information about the ordering professional is not required to be included on the Medicare claim form for advanced diagnostic imaging services.

In the absence of data on the breadth of professionals who would be required

to consult AUC, we assumed that professionals in the specialties listed earlier could potentially be subject to these requirements because some professionals within a specialty may order these imaging services. We specifically request comments and data on the numbers of professionals in the specialties that actually order advanced imaging services.

With respect to the hardship exception, based on 2016 data from the Medicare EHR Incentive Program and the 2019 payment year MIPS eligibility and special status file, we estimated that 6,699 respondents in the form of eligible clinicians, groups, or virtual groups will submit a request for a reweighting to zero for the advancing care information performance category due to extreme and uncontrollable circumstances or as a result of a decertification of an EHR. For the purposes of this analysis, we cautiously estimate that each of the 6,699 respondents represents a unique ordering professional and that all respondents who experience extreme and uncontrollable circumstances or have an EHR that is decertified are ordering professionals who would self-attest to a significant hardship exception under the AUC program. Nevertheless, we have used this information to update our estimate that there are 579,687 ordering professionals subject to this program.

We believe that the proposed significant hardship exception at § 414.94(i) would further reduce the burden of this program if finalized for four reasons. First, due to the availability of a significant hardship exception there will likely be fewer ordering professionals consulting specified applicable AUC. Second, the self-attestation process is a less burdensome proposal when compared to the alternative of a hardship application process that may have both regulatory impact and information collection requirements. Third, any application or case-by-case determination would necessitate immediate infrastructure development by CMS directly or through one or more Medicare Administrative Contractors (MACs), which adds burden and impact to this program. Finally, the proposed self-attestation process requires no verification on the part of the furnishing professional or facility required to report AUC consultation information on the Medicare claim, thus minimizing burden for both ordering professionals, furnishing professionals and facilities. While some of the efficiencies gained from a self-attestation process are qualitative in nature and difficult to measure, such as the streamlined

reporting, we believe that relative to other regulatory approaches this proposal uses a least burdensome approach.

We recognize that ordering professionals would store documentation supporting the self-attestation of a significant hardship. Storage of this information could involve the use of automated, electronic, or other forms of information technology at the discretion of the ordering professional. We estimate that the average time for office clerical activities associated with this task to be 10 minutes. To estimate the burden of this storage, we expect that a BLS occupation title 43-6013 Medical Secretary with a mean hourly rate of \$17.25 and 100-percent fringe benefits would result in a calculated effort of 10 minutes of clerical work to be \$5.76 (\$17.25/hour \times 2 \times 0.167 hour). If 6,699 separate ordering professionals require that a Medical Secretary perform the same clerical activity on an annual basis, then this equates to a cost of approximately \$38,596 per year. We seek comment to inform these burden estimates.

c. Impact of Consultations Beyond the Impact to Ordering Professionals

While we have already discussed the time and effort to consult specified applicable AUC through a qualified CDSM here and in previous rulemaking (81 FR 80170), we believe the impact of this program is extensive as it will apply to every advanced diagnostic imaging service (for example, magnetic resonance imaging (MRI), computed tomography (CT) or positron emission tomography (PET)) and crosses almost every medical specialty. Therefore, we also have described in this detailed analysis the impacts of AUC consultation beyond the act of consulting specified applicable AUC.

(1) Transfers From Ordering Professionals to Qualified CDSMs and EHR Systems

The first additional impact we identified is upstream in the workflow of the AUC consultation and represents the acquisition cost, training, and maintenance of a qualified CDSM. These tools may be modules within or available through certified EHR technology (as defined in section 1848(o)(4)) of the Act or private sector mechanisms independent from certified EHR technology or established by the Secretary. Currently, none are established by the Secretary. Additionally, for the purposes of this program, as required by statute, one or more of such mechanisms is available

free of charge. For this impact analysis we will assume three potential scenarios as low, medium, and higher burden assessments of this consultation requirement. First, we assume that some number of ordering professionals consults a qualified CDSM available free of charge. Second, we assume that some number purchase a qualified CDSM to integrate within an existing EHR system. Third, we assume that some do not currently have an EHR system and, as a result of the statutory requirement to consult with AUC, would purchase an EHR system with an integrated qualified CDSM to consult specified applicable AUC for the purposes of this program.

In the lowest estimate of burden, every AUC consultation would take place using a qualified CDSM available free of charge integrated into an EHR system and add no additional cost to the requirement in § 414.94(j) of this proposed rule. While we did not base this estimate on absolute behaviors by all those who have ordered advanced diagnostic imaging services, we believe it is reasonable to estimate that as many as 75 percent of an assumed annual 40,000,000 orders for advanced diagnostic imaging services could occur at no additional cost beyond the time and effort to perform the consultation.

In contrast, some ordering professionals may choose to purchase a qualified CDSM that is integrated within their EHR. To estimate how many ordering professionals may choose to purchase an integrated qualified CDSM, we consulted the 2015 National Electronic Health Records Survey⁴⁷ (NEHRS), which is conducted by the National Center for Health Statistics (NCHS) and sponsored by the Office of the National Coordinator for Health Information Technology (ONC). NEHRS is a nationally representative mixed mode survey of office-based physicians that collects information on physician and practice characteristics, including the adoption and use of EHR systems. In the United States in 2015, 86.9 percent of office-based physicians used any EHR/EMR, with significantly higher adoption by general or family practice physicians (92.7 percent, p-value <0.05), and slightly lower for medical non-primary care physicians (84.4 percent). Given that approximately 87 percent of office-based physicians have adopted EHR systems, we believe it is likely that the majority will prefer a qualified CDSM integrated with EHR. While we note that qualified CDSMs available free

of charge are also integrated within one or more EHR systems, the following exercise estimates the time and effort to purchase, install, train, and maintain a qualified CDSM integrated into an EHR system.

Again, as stated above, we do not have data on the number of clinicians who order advanced diagnostic imaging services, and we have made overarching assumptions to look at particular specialty areas that in our claims analysis order these advanced diagnostic imaging services. We assumed all individual clinicians in these specialty areas could potentially be subject to these requirements. Adding the number of clinicians in each of the specialty areas results in 586,386 ordering professionals. We also did not make a distinction between individual professionals and groups, as further explained below.

To calculate the impact of a single purchase, we believe that ordering professionals, either in groups or individually, would spend an estimated \$15,000 for a one-time purchase of an integrated qualified CDSM, including installation and training. We assume that all of these costs are based on market research and incurred over the course of 5 years. We also assume that the \$15,000 purchase would be made by each ordering professional and did not take into account the potential that a group practice might incur a discounted price per user based on the number of ordering professionals in the practice. These assumptions could significantly alter the impact estimate and we seek comment on such assumptions.

Given the difficult nature of deriving these estimates based on limited data, we solicit comment and information on the preference that physicians and practitioners might have for using an integrated qualified CDSM—a free CDSM or a CDSM that is not free but integrated within an existing EHR system. Also, if purchased, whether this would be purchased at the group practice level to be made available to all clinicians in the practice for the same cost that would be incurred by a single practitioner purchasing the same qualified CDSM, and whether the cost of purchasing a CDSM would be incurred in a single year or over multiple years.

For the purposes of estimating the transfer of costs from ordering professionals to qualified CDSM developers, of the estimated 579,687 practitioners that are likely subject to this program, we excluded 181,653 ordering professionals with specialties whose practitioners order on average fewer than 20 advanced diagnostic imaging services per year (physician

⁴⁷ Jamoom E, Yang N. Table of Electronic Health Record Adoption and Use among Office-based Physicians in the U.S., by State: 2015 National Electronic Health Records Survey. 2016.

assistant, nurse practitioner, and diagnostic radiology). The assumption is that lower volume ordering professionals would select a qualified CDSM that is free of charge. This updates the estimate to consider 398,034 ordering professionals who may purchase an integrated qualified CDSM. To this end, if we assume 346,290 (398,034 ordering professionals \times 87 percent) ordering professionals already have an EHR system and 30 percent of these ordering professionals (346,290 \times 30 percent, or 103,887) make this purchase for \$15,000 and spend \$1,000 annually to maintain their system for 5 years (initial acquisition cost in year 1 and maintenance costs in years 2–5), then the total annual cost is estimated to be \$394,770,600 ((103,887 \times \$19,000)/5 years)).

It is also reasonable to assume that some ordering professionals may not need additional training in using a qualified CDSM because the EHR Incentive Program required CDS as a core measure. In addition, the program incentivized use of computerized provider order entry (CPOE)—an electronic submission of pharmacy, laboratory, or radiology orders. To determine readiness among Medicare practitioners for these and other measures, the 2011 Meaningful Use Census⁴⁸ (RTI International, 2012) observed that those participating in the EHR Incentive Program in 2011 on average met and exceeded the established 30 percent threshold for meaningful use of CPOE in Stage 1. Analysis of the distribution of performance on these measures shows that 86 percent of eligible participants were well over the established thresholds. It is important to note that the CPOE measure had a higher threshold in Stage 2, and 60 percent of eligible participants in 2011 attested to meaningful use are already meeting this higher threshold. This report suggests that some ordering professionals may be well prepared to adopt a qualified clinical decision support mechanism, as this experience offset may yield lower costs and burden to learn to incorporate decision support into the ordering workflow through shorter training times.

Additionally, some ordering professionals may choose to purchase a certified EHR system to use a qualified CDSM already integrated within the EHR. The first estimate of capital costs for certified EHR system was identified in the first year of the EHR incentive

program as an estimated cost of approximately \$54,000 (75 FR 44518), which adjusted for inflation using the Consumer Price Index for All Urban Consumers (CPI-U) U.S. city average series for all items, not seasonally adjusted, represents \$62,050.40 in 2018. If we assume that 346,290 ordering professionals subject to this program have adopted EHR, then we will also assume that 51,744 ordering professionals (398,034 ordering professionals \times 13 percent) have not adopted an EHR system.

Most physicians who have not yet invested in the hardware, software, testing, and training to implement EHRs may continue to work outside the EHR for a number of reasons—lack of standards, lack of interoperability, limited physician acceptance among their peers, maintenance costs, and lack of capital. Adoption of EHR technology necessitates major changes in business processes and practices throughout a provider's office or facility. Business process reengineering on such a scale is not undertaken lightly. Therefore, while we cannot estimate the business decisions of all ordering professionals, we assume for the purposes of this analysis that as a result of this program some ordering professionals will purchase an EHR system in order to access a qualified CDSM that is integrated into that EHR system for the purposes of acquiring long-term process efficiencies in consulting specified applicable AUC.

We do not have data on the characteristics of physicians who have not purchased an EHR system. However, for the purpose of estimating the transfer of costs from ordering professionals to EHR systems, we will assume based on research from business advisors⁴⁹ that 30 percent, or 15,523 ordering professionals (51,744 ordering professionals \times 30 percent) will seek to purchase an EHR system at an estimated cost of \$62,050.40 for a total one-time cost of \$963,208,359.20 in EHR system and integrated qualified CDSM infrastructure. As we believe not every ordering professional in this example would purchase such infrastructure immediately, for the purposes of this estimate, we annualized this cost over 5 years to \$192,641,671.84/year. We recognize that qualified CDSMs may be modules within or available through certified EHR technology (as defined in section 1848(o)(4) of the Act) or private sector mechanisms independent from

certified EHR technology or established by the Secretary.

These estimates are highly sensitive to our assumptions of both the percent of physicians who would purchase an EHR system as a result of this program and the costs of an EHR system. We recognize that due to the limited data available to make these assumptions our estimates are likely high and we seek comment and information about these assumptions. These estimates might be viewed as an upper bound of the impact of this program beyond consultation with a free tool and note that at the time of publication there were three free tools available as indicated on the CMS website at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/CDSM.html>.

(2) Impact to Medicare Beneficiaries

Additionally, we believe that the additional 2-minute consultation will impact the Medicare beneficiary when their advanced diagnostic imaging service is ordered by the ordering professional by introducing additional time to their office visit. To estimate this annual cost, we multiplied the annual burden of 1,425,000 hours by the BLS occupation code that represents all occupations in the BLS (00–0000) as mean hourly wage plus 100 percent fringe (\$47.72/hr) for a total estimate of \$68,001,000 per year. Over time, there may be process efficiencies implemented in one or more practices similar to the benefits of deploying CDS⁵⁰ (Berner, 2009; Karsh, 2009) that decrease this estimate. For example, we will assume that every time an advanced diagnostic imaging service is ordered, it is the result of a visit by a Medicare beneficiary for evaluation and management. Then, let us assume that 50 percent of practices implemented an improvement process that streamlined the AUC consultation such that Medicare beneficiaries who visited those practices spent the same amount of time in the physician's office regardless of whether an advanced diagnostic imaging service was ordered. As a result of this improvement process in practice we could estimate such efficiency would offset the estimated burden by \$34,000,500 annually. Although we cannot at this time identify

a concrete solution, we are seeking comment on this detailed analysis to inform future rulemaking.

d. Considering the Impact of Claims-Based Reporting

In the CY 2018 PFS proposed rule (82 FR 34094), we discussed using a combination of G-codes and modifiers to report the AUC consultation information on the Medicare claim. We received numerous public comments objecting to this potential solution. In the 2018 PFS final rule, we agreed with many of the commenters that additional approaches to reporting AUC consultation information on Medicare claims should be considered, and in the opinion of some commenters, reporting unique consultation identifiers (UCIs) would be a less burdensome and preferred approach. We had the opportunity to engage some stakeholders over the last 6 months and we understand that some commenters from the previous rule continue to be in favor of a UCI. Practically examining the workflow of an order for an advanced diagnostic imaging service before and after implementation of the Medicare AUC program, we see that in general the process remains largely unchanged. Before and after the implementation of this program, an ordering professional could employ support staff to transmit an order for an advanced diagnostic imaging service from his or her office to an imaging facility, physician office, or hospital that furnishes advanced diagnostic imaging services. After implementation of this program, the ordering professionals, furnishing professionals and facilities must adapt this existing workflow to accommodate new information not previously required on orders for advanced diagnostic imaging services.

We considered leaving the policy unchanged, and we also considered writing new regulations requiring larger modifications to the form for manner by which AUC consultation information is communicated from the ordering professional to the furnishing professional or facility. However, we believe the proposal described in this proposed rule minimizes burden and maximizes efficiency by reporting through established coding methods, to include G-codes and modifiers, to report the required AUC information on Medicare claims.

(1) Impact on Transmitting Order for Advanced Diagnostic Imaging Services

We estimate that including AUC consultation information on the order to the furnishing professional or facility is estimated as the additional 5 minutes

spent by a medical secretary (43–6013), at a mean hourly rate of \$17.25 plus 100 percent fringe to transmit the order for the advanced diagnostic imaging service. We believe the estimate of 5 minutes is an estimate that accounts for different transmittal methods, such as through an integrated EHR system, by facsimile, or via telephone call directly to the office of the furnishing professional or facility. In aggregate, if we assume that 40,000,000 advanced diagnostic imaging services are ordered annually, then the total annual burden to communicate additional information in the order is estimated as \$114,540,000 ($\$17.25/\text{hr} \times 2 \times 0.083 \text{ hr} \times 40,000,000 \text{ orders}$).

(2) Impact on CDSM Developers

We believe that in considering a distinct UCI we also considered updating the requirements of a qualified CDSM in § 414.94(g)(1)(vi)(B). This would incur additional costs for the developers of these mechanisms to accommodate formatting changes if instructed by CMS. We continue to believe that participation by CDSM developers in this program is voluntary, that any considerations of proposed changes to this policy maximize benefits and minimize burden to ordering professionals and furnishing professionals and facilities. Internally, CMS has explored the possibility of using a UCI to determine feasibility, and provide a detailed estimate of costs to develop, test, and implement an update in the form and manner of the UCI generated by the CDSM.

To estimate the costs to develop, test, and implement this update, we will provide a relevant case study. In 1998, the Year 2000 Information and Readiness Disclosure Act (Pub. L. 105–271) was passed to ensure continuity of operations in the year 2000. At the time of passage, millions of information technology computer systems, software programs, and semiconductors were not capable of recognizing certain dates after December 31, 1999, and without modification would read dates in the year 2000 and thereafter as if those dates represented the year 1900 or thereafter, or would have failed to process those dates entirely. The federal government had budgeted \$8,300,000,000 to continue processing dates in 2000 and beyond (Department of Commerce, 1999). Additional estimates to repair the date in a form and manner accommodating the year 2000 varied, but one estimate⁵¹ from analysis of the

1998–99 budget bill of the state of California estimated \$241,000,000 to repair 3,000 systems, or \$80,333.33 per system, which adjusted for inflation using the CPI–U, U.S. city average series for all items, not seasonally adjusted, represents \$123,775.95 per system in 2018. If all 16 qualified CDSMs performed an update to the formatting of the UCI to appear on certification or documentation of every AUC consultation, then the one-time total cost incurred by all CDSM developers would be \$1,980,415.20. Although this does not represent a direct transfer of costs from CDSM developers to savings and efficiencies for ordering professionals, furnishing professionals and facilities, we do believe that as a result of such a policy modification that the ordering professional could directly communicate a single AUC UCI, and furnishing professionals and facilities can report UCI in place of identifying each individual CDSM qualified for the purposes of this program.

e. Impact of Expanding Applicable Setting on Furnishing Professionals and Facilities

We expect that an AUC consultation must take place for every applicable imaging service furnished in an applicable setting and paid for under an applicable payment system. In the CY 2017 PFS final rule (81 FR 80170) we codified the definition of applicable setting in § 414.94(b) to include a physician's office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other provider-led outpatient setting determined appropriate by the Secretary. In this proposed rule, we also include a proposal to add independent diagnostic testing facilities to the definition of applicable settings under this program. This proposal is based on the following factors from 2016 CMS Statistics: (1) An independent diagnostic testing facility is independent both of an attending or consulting physician's office and of a hospital; (2) diagnostic procedures when performed by an independent diagnostic testing facility are paid under the PFS; (3) independent facilities have increased 5,120 percent from 4,828 in 1990 to 252,044 in 2015; (4) of those facilities, 1,125 received total payments in excess of \$100,000 in 2015; (5) there were 37,038 radiology non-institutional providers utilized by fee-for-service Medicare beneficiaries for all Part B

⁵¹ LAO Analysis of the 1998–99 Budget Bill Information Technology Issues. Information Technology Issues Analysis of the 1998–99 Budget

Bill. The Year 2000 ("Y2K") Computer Problem. Published February 18, 1998. Accessed March 25, 2018 at http://www.lao.ca.gov/analysis_1998/info_tech_anl98.html.

non-institutional provider services in 2015, of which 14,341 received total payments in excess of \$100,000 in 2015. Taken together, we believe this proposal will result in a more even application of the Medicare AUC program.

To estimate the impact of modifications to this proposal, we assume based on data derived from the CCW's 2014 Part B non-institutional claim line file, which includes services covered by the Part B benefit that were furnished during calendar year 2014, that approximately 40,000,000 advanced diagnostic imaging services are furnished annually, but questioned whether for the purposes of this estimate we should attribute equal weight for these services furnished by each of the following places: (1) A physician's office; (2) a hospital outpatient department; (3) an ambulatory surgical center; and (4) an independent diagnostic testing facility. Therefore, we sought to determine the frequency of advanced diagnostic imaging services furnished by each setting.

For this estimation, we analyzed 2014 Medicare Part B claims data to weight the various applicable settings subject to this program. For this estimate, we analyzed a count of total services furnished for the following 7 Current Procedural Terminology (CPT) codes for advanced diagnostic imaging studies: 70450—computed tomography, head or brain, without contrast material; 74177—computed tomography, abdomen and pelvis, without contrast material; 70553—magnetic resonance (e.g., proton) imaging, brain (including brain stem), without contrast material, followed by contrast material(s) and further sequences; 72148—magnetic resonance (e.g., proton) imaging, spinal canal and contents, lumbar, without contrast material; 78452—Myocardial perfusion imaging, tomographic single-photon emission computed tomography (SPECT) including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed, multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection; 78492—myocardial imaging, positron emission tomography (PET), perfusion, multiple studies at rest and/or stress; 78803—radiopharmaceutical localization of tumor or distribution of radiopharmaceutical agent(s), tomographic SPECT; which represented 10,000,000 total services or approximately a 25 percent sample of the 40,000,000 total advanced

diagnostic imaging services furnished under Part B in 2014.

In this sample, we found the following total services and percent of total services for each of the following settings: (1) Physician's office, 2,997,460 total services, 28.5 percent; (2) hospital outpatient department, 7,465,279 total services, 70.9 percent; (3) ambulatory surgical center, 1,062 total services, 0.01 percent; (4) independent diagnostic testing facility, 58,900 total services, 0.6 percent. We also examined whether the total services furnished in 2015 for each setting increased more than 10 percent from 2014. We found the following total services and percent change from 2014 for each of the following settings: (1) Physician's office, 2,944,144 total services, 2 percent decrease; (2) hospital outpatient department, 7,854,997 total services, 5 percent increase; (3) ambulatory surgical center, 2,900 total services, 173 percent increase; (4) independent diagnostic testing facility, 65,479 total services, 11 percent increase. Taken together, we believe these estimates that attribute 70 percent of all advanced diagnostic imaging services to outpatient, 28 percent to physician's office, and 1 percent each to ambulatory surgical centers and independent diagnostic testing facilities, respectively is generalizable to the total number of visits by Medicare beneficiaries to each of those applicable settings, respectively.

We do not expect that for the purposes of this program furnishing professionals and facilities will need to create new billing practices; however, we assume that the majority of furnishing professionals and facilities will work to alter billing practices through automation processes that accommodate AUC consultation information when furnishing advanced diagnostic imaging services to Medicare beneficiaries. Therefore, we believe a transfer of costs and benefits will be made from furnishing professionals and facilities to medical billing companies to create, test, and implement changes in billing practice for all affected furnishing professionals and facilities.

As mentioned earlier, the 2016 CMS Statistics identified 37,038 radiology non-institutional providers (Table II.8), and 5,470 ambulatory surgical centers (Table II.5) as of December 31, 2015. Because the classification of independent facilities includes both diagnostic radiology and diagnostic laboratory tests, we will assume that 50 percent of the 252,044 facilities existing in 2015 according to 2016 CMS Statistics (126,022 facilities) furnish advanced diagnostic imaging services. The American Hospital Association

Hospital Statistics published in 2018 by Health Forum, an affiliate of the American Hospital Association, identifies the total number of all U.S. registered hospitals to be 5,534. Taken together, we have identified an estimated 174,064 furnishing professionals (37,038 radiologists + 5,470 ASCs + 126,022 independent diagnostic testing facilities + 5,534 hospitals). We will assume for the purposes of this calculation that every identified furnishing professional and facility will choose to update their processes for the purposes of this program in the same way by purchasing an automated solution to reporting AUC consultation information.

The effective date of January 1, 2020 provides some but not extensive time to prepare to update billing processes to accept and report AUC consultation information. Requirements at § 414.94(k) include the following additional information that must be reported: (1) The qualified CDSM consulted by the ordering professional; (2) information indicating whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; (3) the NPI of the ordering professional who consulted specified applicable AUC as required in paragraph (j) of this section, if different from the furnishing professional. Although we are not familiar with any automated billing solution currently available that accommodates this new information, we seek comment on our estimate that based on medical billing and coding for experienced professionals (<http://www.mb-guide.org/>), which provides estimates ranging from \$1,000 to \$50,000 for medical billing software, for the purposes of this calculation such a solution will cost each furnishing professional or facility an estimated \$10,000. We believe this is an estimate based on the assumption that the number of available furnishing professionals and facilities does not equal the number of professionals and facilities furnishing advanced diagnostic imaging services in the Medicare program and although we recognize that more than one furnishing professional or facility may use the same billing service, the combined effectiveness for an automated solution may decrease overall cost. However, this is not an impact on behavior that we could assess before the start of this program and we are seeking feedback on these and other estimates presented. Therefore, given these assumptions, we estimate that the

one-time update will cost \$1,740,640,000 ($174,064 \times \$10,000$).

The Congressional Budget Office estimates that section 218 of the PAMA would save approximately \$200,000,000 in benefit dollars over 10 years from FY 2014 through 2024, which could be the result of identification of outlier ordering professionals and also includes section 218(a) of the PAMA—a payment deduction for computed tomography equipment that is not up to a current technology standard. Because we have not yet proposed a mechanism or calculation for outlier ordering professional identification and prior authorization, we are unable to quantify that impact at this time.

f. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

We believe that the first 5 years of this program will be dedicated to implementation activities, from installation of the technology to training to operational and behavioral changes. Information on the benefits of adopting qualified CDSMs or automating billing practices specifically meeting the requirements in this proposed rule does not yet exist—and information on benefits overall is limited. Nonetheless, we believe there are benefits that can be obtained by ordering professionals, furnishing professionals and facilities, beneficiaries and technology infrastructure developers including qualified CDSM developers, EHR systems developers, and medical billing practices. We describe these estimated benefits in more detail in the following sections.

(1) Estimates of Savings

It has been suggested that one-third of imaging procedures are inappropriate, costing the United States between \$3 billion and \$10 billion annually⁵² (Stein, 2003). Data derived from the CCW 2014 Part B non-institutional claim line file, which includes services covered by the Part B benefit that were furnished during CY 2014, identified approximately \$3,300,000,000 in total payments for advanced diagnostic imaging services. If implementation of this program led to a 30 percent decrease in total payments, then we would expect \$990,000,000 in fewer payments annually. To address this suggestion, the insertion of a pause in the ordering workflow to introduce AUC is a potentially beneficial and cost-effective solution. Some believe⁵³ that

savings could be achieved through the reduction of inappropriate orders, and expenses associated with radiology benefit managers (Hardy, 2010). Indeed, the Institute for Clinical Systems Improvement in Bloomington, Minnesota, performed a clinical decision support pilot project⁵⁴ to (1) improve the utility of diagnostic radiology tests ordered, (2) reduce radiation exposure, (3) increase efficiency, (4) aid in shared decision making, and (5) save Minnesota \$84,000,000 in 3 years (Miliard, 2010). It is hypothesized⁵⁵ that these benefits are the result of educating ordering professionals on the appropriate test for a set of clinical symptoms, rather than just adding time and electronic obstacles between ordering physicians and advanced diagnostic imaging services (Sistrom et al., 2009) as such transfer of knowledge can alter clinical practice.

The Center for Health Care Solutions at Virginia Mason Medical Center in Seattle, Washington examined approaches to control imaging utilization, including external authorization methods and clinical decision support systems. A retrospective cohort study⁵⁶ was performed by Blackmore and colleagues in 2011 of the staged implementation of evidence-based clinical decision support for the following advanced diagnostic imaging services: Lumbar MRI; brain MRI; and sinus CT. Brain CT was included as a control. The number of patients imaged as a proportion of patients with selected clinical conditions before and after the decision support interventions were determined from billing data from a regional health plan and from institutional radiology information systems. The imaging utilization rates after the implementation of clinical decision support resulted in decreases for lumbar MRI (p-value = 0.001), head MRI (p-value = 0.05), and sinus CT (p-value = 0.003), while a decrease in control service head CT was not statistically significant (p-value = 0.88). Although there are limitations to this retrospective claims data analysis, the authors concluded that clinical decision support is associated with large decreases in the

inappropriate utilization of advanced diagnostic imaging services.

It seems reasonable from this and other studies⁵⁷ of local implementation of clinical decision support (Curry and Reed, 2011; Ip et al., 2012) to assume that there may be some savings when regulations become effective January 1, 2020; however, there are also a few hesitations to extrapolating these and other findings broadly to the Medicare population. First, ordering professionals in this program are aware that CMS will pay for advanced diagnostic imaging services that do not adhere to the specified applicable AUC consulted. This awareness may impact the level of interest or extent of behavior modification from exposing ordering professionals to a qualified CDSM. Second, the statute distinguishes between the ordering professional, furnishing professional and facility, recognizing that the professional who orders an applicable imaging service is usually not the same professional or facility reporting to Medicare for that service when furnished. As a result, some ordering professionals may believe that since they are not required to submit AUC consultation information directly to CMS, there are no direct consequences of adhering to specified applicable AUC. Third, many advanced diagnostic imaging services may not have relevant or applicable AUC. Indeed a recent study⁵⁸ implementing CDS was only able to prospectively generate a score for 26 percent and 30 percent of requests for advanced diagnostic imaging services before and after implementation of decision support, respectively (Moriarity et al., 2015). Without AUC available, there can be no decision support intervention into the workflow of the ordering professional. Fourth, even when an ordering professional identifies an advanced diagnostic imaging service recognized as adhering to specified applicable AUC from one qualified PLE, discordance between AUC from different specialty societies has been reported⁵⁹

(Winchester *et al.*, 2016), suggesting that full benefits and savings cannot be realized without standard levels of appropriateness. Taken together, these concerns will form the basis for our continued examination of the impact of this and future rulemaking to maximize the benefits of this program.

(2) Benefits to Medicare Beneficiaries

Although qualified CDSMs are not required to demonstrate that their tools provide measurable benefits, we believe that as a result of installation and use, some ordering professionals may find benefits to the patients they serve. For example, if a qualified CDSM creates a flag or alert to obsolete tests, then the patient will benefit from avoiding unnecessary testing. The same outcome would be likely if a qualified CDSM implemented algorithms that recognize advanced diagnostic imaging services that may produce inaccurate results because of medications being taken by the patient. In addition, if the CDSM provides standardized processes for advanced diagnostic imaging orders or clarification for confusing test names, then the patient benefits from a potential decrease in medical errors. Finally, we believe it is reasonable to assume that some improvements in shared decision making could result from use of a qualified CDSM, because some CDSMs could provide cost information associated with advanced diagnostic imaging services and/or identify situations of repeated testing.

5. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

In the Medicaid Promoting Interoperability Program, to keep eCQM specifications current and minimize complexity, we are proposing to align the eCQMs available for Medicaid EPs in 2019 with those available for MIPS eligible clinicians for the CY 2019 performance period. We anticipate that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant as many EPs are expected to report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on those eCQMs for 2019. We expect that this proposal would have only a minimal impact on states, by requiring minor adjustments

to state systems for 2019 to maintain current eCQM lists and specifications. State expenditures to make any systems changes required as a result of this proposal would be eligible for ninety percent enhanced Federal financial participation.

For 2019, we are proposing that Medicaid EPs would report on any six eCQMs that are relevant to the EP's scope of practice, including at least one outcome measure, or if no applicable outcome measure is available or relevant, at least one high priority measure, regardless of whether they report via attestation or electronically. This policy would generally align with the MIPS reporting requirement for providers using the eCQM collection type for the quality performance category, which is established in § 414.1335(a)(1). We are also proposing that the eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program would be a full CY in 2019 for EPs who have demonstrated meaningful use in a prior year, in order to align with the corresponding performance period for the quality performance category in MIPS. We continue to align Medicaid Promoting Interoperability Program requirements with requirements for other CMS quality programs, such as MIPS, to the extent practicable, to reduce the burden of reporting different data for separate programs.

In order to help states to make incentive payments to Medicaid EPs by December 31, 2021, consistent with section 1903(t)(4)(A)(iii) of the Act, we are proposing to amend § 495.4 to provide that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program would be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Payments on or before December 31, 2021. Similarly, we are proposing to change the eCQM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program to a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Payments on or before December 31, 2021.

We are proposing to allow states the flexibility to set alternative, earlier final deadlines for EHR or eCQM reporting periods for Medicaid EPs in CY 2021, with prior approval from CMS, through their State Medicaid HIT Plan (SMHP).

Providing states with the flexibility to set an alternative, earlier last possible date for the EHR or eCQM reporting period for Medicaid EPs in 2021 would make it easier for states to ensure that all payments are made by the December 31, 2021 deadline, especially for states whose prepayment process may take longer than the 61 days provided by an October 31, 2021 deadline. We expect that this proposal would have only a minimal impact on states, by requiring minor adjustments to state systems to meet specifications for the proposed reporting periods, especially because we are also proposing to permit states to set a different end date for all EHR and eCQM reporting periods for Medicaid EPs in 2021. As previously noted, state expenditures for any systems changes required as a result of this proposal would be eligible for 90 percent enhanced Federal financial participation.

Finally, we are proposing changes to the EP Meaningful Use Objective 6, (Coordination of care through patient engagement) Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging), and to EP Meaningful Use Objective 8, Measure 2 (Syndromic surveillance reporting). We are proposing to amend these measures in response to feedback about the burdens they create for EPs seeking to demonstrate meaningful use, and about how they may not be fully aligned with how states and public health agencies collect syndromic surveillance data. These proposed amendments are expected to reduce provider burden. Again, we expect that any changes these proposals might require to state systems would be minimal and that state expenditures to make any such changes would also be eligible for 90 percent enhanced federal financial participation.

6. Medicare Shared Savings Program

We are proposing certain modifications to our rules regarding quality measures. Specifically we are proposing: (1) A policy to add two Patient of Care Experience Survey measures, and (2) a policy to remove four claims-based outcome measures. Both of these proposed policies are generally expected to have a minimal impact on affected ACOs. We do not anticipate any overall impact for these proposed policies because potential individual ACO impacts are more likely to offset one another rather than build to a substantial total in terms of costs or savings.

7. Physician Self-Referral Law

The physician self-referral law provisions are discussed in section III.G. of this proposed rule. We are proposing regulatory updates to implement the provisions of section 50404 of the Bipartisan Budget Act of 2018 pertaining to the writing and signature requirements in certain compensation arrangement exceptions to the statute's referral and billing prohibitions. The proposed regulatory language for the writing requirement reflects current policy, so we do not anticipate that it would have an impact. We expect that the proposal regarding temporary non-compliance with signature arrangements would reduce burden by giving parties additional time to obtain all required signatures.

8. Changes Due to Updates to the Quality Payment Program

In section III.H. of this proposed rule, we included our proposals for the Quality Payment Program. In this section of the proposed rule, we present the overall and incremental impacts to the expected QPs and associated APM incentive payments. In MIPS, we analyze the total impact and incremental impact of statutory changes to eligibility from the Bipartisan Budget Act of 2018 as well as proposals to expand MIPS eligibility by expanding the MIPS eligible clinician definition and adding a third criterion for the low-volume threshold and an opt-in policy option for any clinician that exceeds at least one, but not all, of the low-volume threshold criteria. Finally, we estimate the payment impacts by practice size based on various proposals to modify the MIPS final score, proposals for the performance threshold and additional performance threshold, and as required by the Bipartisan Budget Act of 2018, the impact of applying the MIPS payment adjustments to covered professional services (services for which payment is made under, or is based on, the Physician Fee Schedule and that are furnished by an eligible clinician) rather than items and services covered under Part B.

The submission period for the first MIPS performance period ended in early 2018, however, the final data sets were not available in time to incorporate into this analysis. If technically feasible, we intend to use data from the CY 2017 MIPS performance period in the final rule.

a. Estimated Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

From 2019 through 2024, through the Medicare Option, eligible clinicians receiving a sufficient portion of Medicare Part B payments for covered professional services or seeing a sufficient number of Medicare patients through Advanced APMs as required to become QPs would receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate payment amounts for Medicare covered professional services in the preceding year. In addition, beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option will allow eligible clinicians to become QPs by meeting the QP thresholds through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through Other Payer Advanced APMs.

The APM Incentive Payment is separate from and in addition to the payment for covered professional services furnished by an eligible clinician during that year. Eligible clinicians who become QPs for a year would not need to report to MIPS and would not receive a MIPS payment adjustment to their Part B physician fee schedule payments. Eligible clinicians who do not become QPs, but meet a slightly lower threshold to become Partial QPs for the year, may elect to report to MIPS and would then be scored under MIPS and receive a MIPS payment adjustment, but do not receive the APM Incentive Payment. For the 2019 Medicare QP Performance Period, we define Partial QPs to be eligible clinicians in Advanced APMs who have at least 40 percent, but less than 50 percent, of their payments for Part B covered professional services through an Advanced APM Entity, or furnish Part B covered professional services to at least 20 percent, but less than 35 percent, of their Medicare beneficiaries through an Advanced APM Entity. If the Partial QP elects to be scored under MIPS, they would be subject to all MIPS requirements and would receive a MIPS payment adjustment. This adjustment may be positive, negative or neutral. If an eligible clinician does not meet either the QP or Partial QP standards, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment.

Beginning in 2026, payment rates for services furnished by clinicians who achieve QP status for a year would be increased each year by 0.75 percent for the year, while payment rates for services furnished by clinicians who do not achieve QP status for the year would be increased by 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B physician fee schedule services in a payment year based on performance during a prior performance period. Although MACRA amendments established overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the third payment year (2021 MIPS payment year) of the Quality Payment Program in detail.

In section III.H.4.g.(4)(b) of this proposed rule, we propose to add a third alternative to allow requests for QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights under the TIN participate in a single APM Entity. This option would therefore be available to all TINs participating in Full TIN APMs, such as the Medicare Shared Savings Program. It would also be available to any other TIN for whom all clinicians who have reassigned billing rights to the TIN are participating in a single APM Entity. We are further proposing that this third alternative will only be available to eligible clinicians who meet the Medicare threshold at the APM Entity level; it will not be available for eligible clinicians who meet the Medicare threshold individually.

In section III.H.4.g.(4)(c)(ii), we also propose to extend the same weighting methodology to TIN level Medicare Threshold Scores in situations where a TIN is assessed under the Medicare Option as part of an APM Entity group, and receives a Medicare Threshold Score at the APM Entity group level. In this scenario, we believe that the Medicare portion of the TIN's All-Payer Combination Option Threshold Score should not be lower than the Medicare Threshold Score that they received by participating in an APM Entity group (82 FR 53881 through 53882). We note this extension of the weighting methodology would only apply to a TIN when that TIN represents a subset of the eligible clinicians in the APM Entity, because when the TIN and the APM Entity are the same there is no need for this weighted methodology. We propose to calculate the TIN's QP Threshold Scores both on its own and with this weighted methodology, and then use the most advantageous score when making a QP determination. We believe that, as

it does for QP determinations made at the APM Entity level, this approach promotes consistency between the Medicare Option and the All-Payer Combination Option to the extent possible. Additionally, the proposed application of this weighting approach in the case of a TIN level QP determination would be consistent with our established policy.

These proposals affect the estimated number of QPs for the 2021 payment year. We estimate that approximately 8,100 additional eligible clinicians in 8 TINs would become QPs if these policies are finalized representing TIN level QP determinations under the All-Payer Combination Option. Therefore, they would be excluded from MIPS, and qualify for the lump sum incentive payment based on 5 percent of their Part B allowable charges for covered professional services, which are estimated to be approximately \$545 million in the 2019 performance year. We also estimate the corresponding increase of the APM incentive payment of 5 percent of Part B allowed charges for QPs would be approximately \$27 million for the 2021 payment year.

Overall, we estimate that between 160,000 and 215,000 eligible clinicians would become QPs, therefore be excluded from MIPS, and qualify for the lump sum incentive payment based on 5 percent of their Part B allowable charges for covered professional services in the preceding year, which are estimated to be between approximately \$12,000 million and \$16,000 million in total for the 2019 performance year. We estimate that the aggregate total of the APM incentive payment of 5 percent of Part B allowed charges for QPs would be between approximately \$600 and \$800 million for the 2021 payment year.

We project the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2019 QP performance period, as well as Advanced APMs anticipated to be operational during the 2019 QP performance period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs in performance year 2019, including the Next Generation ACO Model, Comprehensive Primary Care Plus (CPC+) Model, Comprehensive ESRD Care (CEC) Model (Two-Sided

Risk Arrangement), Vermont All-Payer ACO Model,⁶⁰ Comprehensive Care for Joint Replacement Payment Model (CEHRT Track), Oncology Care Model (Two-Sided Risk Arrangement), Medicare ACO Track 1+ Model, Bundled Payment for Care Improvement Advanced, Maryland Total Cost of Care Model (Maryland Care Redesign Program; Maryland Primary Care Program), and the Shared Savings Program Tracks 2 and 3. We used the APM Participant Lists (see 81 FR 77444 through 77445 for information on the APM participant lists and QP determination) on the most recent MDM provider extract for the Predictive QP determination file for 2018 QP performance period to estimate QPs for the 2019 QP performance period. We examine the extent to which Advanced APM participants would meet the QP thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the Advanced APM Entity.

b. Estimated Number of Clinicians Eligible for MIPS Eligibility

(1) Summary of Proposals Related to MIPS Eligibility and Application of MIPS Payment Adjustments

We are making three sets of proposed policy changes that would impact the number of MIPS eligible clinicians starting with CY 2019 MIPS performance period and the CY 2021 MIPS payment year. Two of the proposed changes affect the low-volume threshold and the third affects the definition of a MIPS eligible clinician. We briefly describe each of these changes later in this section.

First, in section III.H.3.c.(2) of this proposed rule, we proposed changes to our policy to comply with the Bipartisan Budget Act of 2018. Specifically, we are proposing to update the low-volume threshold starting with the 2020 MIPS payment year to be based on covered professional services (services for which payment is made under, or is based on the Physician Fee Schedule and that are furnished by an eligible clinician) rather than items and services covered under Part B, as provided in section 1848(q)(1)(B) as amended by section 51003(a)(1)(A)(i) of the Bipartisan Budget Act of 2018. This proposal may affect the previously finalized calculation for the low-volume

threshold for certain clinicians because payment for items, such as Part B drugs, which were previously considered in the low-volume determination, are now excluded. In addition, section 51003(a)(1)(E) of the Bipartisan Budget Act of 2018 revised section 1848(q)(6)(E) to apply the MIPS payment adjustments to covered professional services rather than to items and services covered under Part B. This change is effective with the 2019 MIPS payment year. Its effect on the amount of payment adjustments under MIPS is included in this analysis.

Second, in section III.H.3.a. of this proposed rule, beginning with the 2021 MIPS payment year, we are proposing to expand the definition of MIPS eligible clinicians to include physical therapists, occupational therapists, clinical social workers, and clinical psychologists. Specifically, we are proposing to define as a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, as any of the following: A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act), a physical therapist, an occupational therapist, a clinical social worker, and a clinical psychologist; and a group that includes such clinicians.

Third, as discussed in sections III.H.3.c.(4) and III.H.3.c.(5) of this proposed rule, in addition to the amendments to comply with Bipartisan Budget Act of 2018, we are proposing to modify our definition of the low-volume threshold by adding a third criterion (for “covered professional services”). If this proposal is finalized, the low-volume threshold would now include a third criterion: Set at 200 covered professional services to Part B-enrolled individuals. Taken together, if this proposal is finalized, the low-volume threshold would be as follows: (1) Those with \$90,000 or less in allowed charges for covered professional services; or (2) 200 or fewer Part B-enrolled individuals who are furnished Medicare physician fee schedule services; or (3) 200 or fewer covered professional services. The low volume threshold assessment is applied at the TIN/NPI level for individual reporting, the TIN level for group reporting, or the APM Entity Level for reporting under the APM scoring standard. We are further proposing any clinician who exceeds the low-volume threshold on at least one, but not all three, low-volume threshold criteria may elect to opt-in to MIPS to be

⁶⁰ Vermont ACOs will be participating in an Advanced APM during 2018 through a modified version of the Next Generation ACO Model. The Vermont Medicare ACO Initiative is expected to be an Advanced APM beginning in 2019.

measured on performance, thereby qualifying to receive a positive, neutral, or negative MIPS payment adjustment based on performance. The absence of of the opt-in within this cohort means they are not MIPS eligible clinicians. If a MIPS eligible clinician does not meet at least one of these low-volume criteria, they are excluded from MIPS. For purposes of this impact analysis we refer to these revisions to the low-volume threshold and its application collectively as the “opt-in policy”.

We discuss how these three proposed changes impact MIPS eligibility and payments, later in this section.

(2) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior to Low-Volume Threshold

To estimate the number of clinicians for the CY 2019 performance period, our scoring model used the CY 2019 MIPS payment year eligibility file as described in the CY 2017 Quality Payment Program Final Rule (81 FR 77069 through 77070). We included 1.5 million clinicians (see Table 96) who had Physician Fee Schedule claims from September 1, 2015 to August 31, 2016 and included a 60-day claim run-out. We used data from September 1, 2015 to August 31, 2016 to maximize the overlap with the performance data in our model.

We assessed covered professional services (services for which payment is made under, or is based on the Physician Fee Schedule and that are furnished by an eligible clinician)⁶¹ to understand the incremental impact of basing the low-volume threshold on covered professional services rather than all items and services under Part B.

Clinicians are ineligible for MIPS (and are excluded from MIPS payment adjustment) if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold. Therefore, we excluded these clinicians when calculating those clinicians eligible for MIPS. For our baseline population, we restricted to clinicians who are a physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act). For the proposed MIPS eligible

population for the CY 2021 MIPS payment year, we add in clinicians who are physical therapists, occupational therapists, clinical social workers, and clinical psychologists.

As noted previously, we excluded QPs from our scoring model, since these clinicians are not eligible for MIPS. To determine which QPs should be excluded, we used the APM Participation List for the third snapshot date of the 2017 QP performance period because these data were available by TIN and NPI and could be merged into our model. We assumed that all partial QPs would participate in MIPS and included them in our scoring model and eligibility counts. The estimated number of QPs excluded from our model is lower than the projected number of QPs (160,000 to 215,000) for the 2019 QP performance period due to the expected growth in APM participation. Due to data limitations, we cannot identify specific clinicians who may become QPs in the 2019 Medicare QP Performance Period; hence, our model may overestimate the fraction of clinicians and allowed charges for covered professional services that will remain subject to MIPS after the exclusions.

We also excluded newly enrolled Medicare clinicians from our model. To identify newly enrolled Medicare clinicians, we continued the assumption applied in the CY 2018 Quality Payment Program final rule that clinicians (NPIs) are newly enrolled if they have Physician Fee Schedule charges in the eligibility file but no Physician Fee Schedule charges in 2015. This newly enrolled modeling methodology attempts to simulate those newly enrolled, but does not exactly match the policies finalized under §§ 414.1305 and 414.1310 which uses information from the Provider Enrollment, Chain and Ownership System (PECOS and previous claims submissions).

We also excluded a small percentage of clinicians (20,411) for whom we have limited performance data. Although these clinicians may in fact be eligible for MIPS, we did not have sufficient data to estimate performance.⁶²

In section III.H.3.j.(4)(d) of the proposed rule, we propose to waive the payment consequences (positive, negative or neutral adjustments) of MIPS and to waive the associated MIPS reporting requirements adopted to

implement the payment consequences for certain participating clinicians in the MAQI Demonstration subject to conditions outlined in the Demonstration, starting with the 2020 MIPS payment period. Removing eligible clinicians from MIPS may affect the payment adjustments for other MIPS eligible clinicians in each year the waiver is offered. However, we are unable to identify the specific TIN/NPIs in our model would be affected by this proposal; therefore, we are unable to account for this proposal in the eligibility or payment adjustment tables.

(b) Assumptions Related to the Low-Volume Threshold

The low-volume threshold policy may be applied at the individual (that is, TIN/NPI) or group (that is, TIN or APM entity) levels based on how data are submitted. If no data are submitted, then the low-volume threshold is applied at the TIN/NPI level. We also propose that a clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by submitting data to MIPS and electing to opt-in, thereby getting measured on performance and receiving a MIPS payment adjustment.

For the purposes of modeling, we made assumptions on group reporting to apply the low-volume threshold. One extreme and unlikely assumption is that no practices elect group reporting and the low-volume threshold would always be applied at the individual level. Although we believe a scenario in which only these clinicians would participate as individuals is unlikely, this assumption is important because it quantifies the minimum number of MIPS eligible clinicians. For the model, we estimate there are approximately 218,000 clinicians who would be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. In Table 96, we identify clinicians under this assumption as having “required eligibility.”

Based on historic data, we anticipate that group and APM Entities will submit data to MIPS. Therefore, if we revise our model’s group reporting assumption such that all clinicians that were participating in ACOs in 2016 (including ACOs participating under the Shared Savings Program, Pioneer ACO Model, or Next Generation ACO Model) or who reported to 2016 PQRS as a group would continue to do so in MIPS, then the MIPS eligible clinician population would increase by almost 390,000 clinicians for a total MIPS eligible population of approximately 608,000. In Table 96, we identify these

⁶¹ The date range for these covered professional services is September 1, 2016 to August 31, 2017.

⁶² We excluded clinicians that submitted via measures groups under the 2016 PQRS, since that data submission mechanism was eliminated under MIPS, and we did not anticipate being able to accurately predict performance. Additionally, we also excluded clinicians in the CPC model if we did not have their quality data.

clinicians who do not meet the low-volume threshold individually but are anticipated to submit to MIPS as a group based on previous participation in legacy programs as having “group eligibility.”

TABLE 96—DESCRIPTION OF MIPS ELIGIBILITY STATUS FOR CY 2021 MIPS PAYMENT YEAR USING THE PROPOSED ASSUMPTIONS ***

Eligibility status	Predicted participation status in MIPS among clinicians *	Number of clinicians	Cumulative number of clinicians
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria).	Participate in MIPS	186,549	186,549
	Do not participate in MIPS	31,921	218,470
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group).	Submit data as a group	389,670	608,140
Opt-In eligibility (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data).	Elect to opt-in and submit data	42,025	** 650,165
Not MIPS eligible:			
Potentially MIPS eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) Meet group eligibility or (2) opt-in eligibility criteria).	Do not opt-in; or Do not submit as a group.	482,574	1,132,739
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria).	Not applicable	88,070	1,220,809
Excluded for other reasons (Non-eligible clinician type, newly-enrolled, QP).	Not applicable	302,172	1,522,981

* Participation in MIPS defined as previously submitting quality or EHR data for PQRS. Our assumptions for group reporting are based on 2016 PQRS group reporting.

** Estimated MIPS Eligible Population.

*** Facility-based eligible clinicians are not modeled separately in this table and are captured in the individual eligible category. This table does not consider the impact of the MAQI Demonstration waiver.

To model the proposed opt-in policy, we assumed that 33 percent of the clinicians who exceed at least one low-volume threshold and submitted data to 2016 PQRS would elect to opt-in to MIPS. We selected a random sample of 33 percent of clinicians without accounting for performance or investment in quality reporting. We believe this assumption of 33 percent is reasonable because some clinicians may choose not to submit data due to performance, practice size, or resources or alternatively, some may submit data, but elect to be a voluntary reporter and not be subject to a MIPS payment adjustment based on their performance. We seek comment on these assumptions, including whether modeling eligibility only among clinicians or groups who submitted at least 6 quality measures to PQRS would be more appropriate. This 33 percent participation assumption is identified in Table 96 as “Opt-In eligibility”. We estimate an additional 42,000 clinicians

would be eligible through this policy for a total MIPS eligible population of approximately 650,000.

There are approximately 482,000 clinicians who are not MIPS eligible, but could be if their practice decides to participate. We describe this group as “Potentially MIPS eligible.” This is the unlikely scenario in which all group practices elect to submit data as a group and all clinicians that could elect to opt-into MIPS do elect to opt-in. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate that the MIPS eligible clinician population could be as high as 1.1 million clinicians.

Finally, there are some clinicians who would not be MIPS eligible either because they are below the low-volume threshold on all three criteria (approximately 88,000) or because they are excluded for other reasons (approximately 302,000).

Since eligibility among some clinicians is contingent on submission to MIPS, we will not know the exact number of MIPS eligible clinicians until the submission period for the CY 2019 MIPS performance period is closed. For this impact analysis, we are using the estimated population of 650,165 MIPS eligible clinicians described above.

(3) Impact of MIPS Eligibility Proposals

We illustrate in Table 97 how each proposed policy for the CY 2021 payment year affects the estimated number of MIPS eligible clinicians. In the CY 2018 Quality Payment Program final rule, 604,006 MIPS eligible clinicians were included in our scoring model (82 FR 53930). After updating the population to exclude the additional QPs identified in the 2017 performance period final QP file, the new baseline population is 591,010. All incremental impact estimates are relative to this baseline.

TABLE 97—INCREMENTAL CHANGE TABLE FOR 2021 MIPS PAYMENT YEAR

Policy changes *	Estimated number of MIPS eligible clinicians impacted by policy change	Estimated effect of policy changes on number of MIPS eligible clinicians	Estimated % change from baseline	Estimated Part B amount paid (mil)	Estimated PFS amount paid (mil)	Estimated % change in PFS from baseline
<i>Baseline:</i> Applying previously finalized policy	N/A	591,010	N/A	54,748	45,163	N/A
<i>Policy Change 1:</i> Low-volume threshold (LVT) determination based on covered professional services (as required by Bipartisan Budget Act of 2018)	-1,173	589,837	-0.2	N/A	45,101	-0.1
<i>Policy Change 2:</i> Expansion of eligible clinician types to include physical therapists, occupational therapists, clinical social workers, and clinical psychologists based with policy change 1	18,303	608,140	2.9	N/A	45,831	1.5
<i>Policy Change 3:</i> Cumulative change of Opt-in Policy with policy changes 1 and 2	42,025	650,165	10.0	N/A	47,401	5.0

* This table does not consider the impact of the MAQI Demonstration waiver.

First, as shown in Table 97, the first row shows the effect of changing the application of the MIPS payment adjustments, as required by section 51003(a)(1)(E) of the Bipartisan Budget Act of 2018 to apply them to covered professional services (services for which payment is made under, or is based on, the Medicare Physician Fee Schedule and are furnished by an eligible clinician) rather than to items and services covered under Part B. As shown, the baseline amount paid for Part B is \$54.7 billion, compared with \$45.1 billion in covered professional services, which is a difference of almost \$10 billion. Under this change, the payment adjustments, beginning in the 2019 MIPS payment year, will only be applied to covered professional services.

In Table 97, under the first policy change, basing the low-volume threshold on covered professional services (services provided under the physician fee schedule rather than items and services covered under Part B) has minimal impact in terms of clinicians (less than half of one percent decrease).

When the second policy change, to expand the definition of MIPS eligible clinician types, was added to the first policy change, the total effect is small. The change in the potential MIPS eligible clinician population increased by less than 3 percent and the amount paid in the Physician Fee Schedule increased by 1.5 percent.

When the third policy change, which implements the opt-in policy, is added to the other two policies, the estimated number of MIPS eligible clinicians increases by 10.0 percent. The estimated

increase in the amount paid in the Physician Fee Schedule is 5.0 percent.

c. Estimated Impacts on Payments to MIPS Eligible Clinicians

(1) Summary of Approach

In sections III.H.3.h., III.H.3.i. and III.H.3.j. of this proposed rule, we are making several proposals which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these proposals in more detail in section VII.F.8.c.(2) as we describe our methodology to estimate MIPS payments for the 2021 MIPS payment year. We note that many of the MIPS policies from the CY 2018 Quality Payment Program final rule were only defined for the 2018 MIPS performance period and 2020 MIPS payment year (including the performance threshold, the additional performance threshold, the policy for redistributing the weights of the performance categories, and many scoring policies for the quality performance category) which precludes us from developing a baseline for the 2019 MIPS performance period and 2021 MIPS payment year if there were no new regulatory action. Therefore, our impact analysis looks at the total effect of the proposed MIPS policy changes on the MIPS final score and payment adjustment for CY 2019 MIPS performance period/CY 2021 MIPS payment year.

The payment impact for an eligible clinician in MIPS is based on their final score, which is a value determined by their performance in the four MIPS performance categories: Quality, cost,

improvement activities, and Promoting Interoperability.

The performance and participation data submitted for the 2017 MIPS performance period were not available in time to estimate the final score and the projected payment adjustments for MIPS eligible clinicians in this proposed rule. Therefore, as discussed in section VII.F.8. of this proposed rule, we used the most recently available data from historic programs. We will use MIPS performance data for the final rule should that data become available.

The estimated payment impacts presented in this proposed rule reflect averages by practice size based on Medicare utilization. The payment impact for a MIPS eligible clinician could vary from the average and would depend on the combination of services that the MIPS eligible clinician furnishes. The average percentage change in total revenues would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System or Medicare Advantage that would not be affected by MIPS payment adjustment factors.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2019 Quality Payment Program for this proposed rule, we used data

from the 2016 Physician Quality Reporting System (PQRS) and the Medicare and Medicaid EHR Incentive Programs. Our scoring model includes the 650,165 estimated number of MIPS eligible clinicians as described in section VII.F.8.b of this proposed rule.

To estimate the impact of MIPS on eligible clinicians, we used recently available data, including 2015 and 2016 PQRS data, 2015 and 2016 CAHPS for PQRS data, 2016 Quality and Resource Use Reports (QRUR) and 2018 Value Modifier (VM) data, 2016 Medicare and Medicaid EHR Incentive Program data, data prepared to support the 2017 performance period initial determination of clinician and special status eligibility (available via the NPI lookup on qpp.cms.gov)⁶³, the 2017 published MIPS measure benchmarks, the APM Participation List for the third snapshot date of the 2017 QP performance period to identify QP clinicians, and other available data to model the scoring provisions described in this regulation. We calculated a hypothetical final score for each MIPS eligible clinician based on quality, cost, Promoting Interoperability, and improvement activities performance categories. Because we lack detailed performance information for virtual groups, we are unable to assess performance for virtual groups as an entity.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using measures submitted to PQRS for the 2016 performance period, the 2016 CAHPS for PQRS data, and the all-cause hospital readmissions measure from the 2016 QRUR/2018 VM analytic file. For quality measures collected via claims, eCQMs, MIPS CQM, QCDR, and CMS-approved survey vendor collection types, we applied the published benchmarks developed for the 2018 MIPS performance period. For quality measures collected and submitted via the CMS Web Interface, we applied the published benchmarks developed for the 2016/2017 reporting years for the Shared Savings Program where available, and did not calculate scores for measures for which Shared Savings Program benchmarks did not exist. For the all-cause hospital readmission measure, we used available published benchmark for CY 2017 MIPS

performance period which is the most recent public benchmark available.

We assigned measure achievement points as finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77282 and 82 FR 53718) and as discussed in section III.H.3.i.(1)(b)(iii) of this proposed rule. As proposed in III.H.3.i.(1)(b)(iii)(A) of this proposed rule, we would continue to apply the 3-point floor for measures that cannot be reliably scored against a baseline benchmark in the 2019 MIPS performance period.

In section III.H.3.h.(2)(b)(iii) of this proposed rule, we propose to remove many measures that were previously able to be reported in PQRS and in previous MIPS performance periods. For our estimates, we assumed that clinicians who reported claims, eCQM, MIPS CQM and QCDR measures that are proposed to be removed would find alternate measures; therefore, we assigned points to these measures and included them in our scoring model. For CY 2019, we maintained the policies for scoring measures that do not meet the quality category requirements (case minimum, benchmark, and data completeness) as described in the CY 2018 Quality Payment Program final rule (82 FR 53727 through 53730). As finalized in the CY 2018 Quality Payment Program final rule, we also applied a 7-point cap for measures that are topped out for two or more years (82 FR 53726 through 53727).

In section III.H.3.h.(2)(a)(iii)(A)(bb) of this proposed rule, we propose to remove several Web Interface measures. For that collection type, which has a standard set of measures, we estimated performance on the measures that we propose to continue.

As proposed in sections III.H.3.i.(1)(b)(ix) and (x) of this proposed rule, we maintained the cap on bonus points for high-priority measures and end-to-end electronic bonus points at 10 percent of the denominator and, beginning with the 2019 MIPS performance period, discontinued high priority bonus points for CMS Web Interface Reporters. Because we are not able to use MIPS performance data in our models at this time, we continued our assumption in the CY 2018 Quality Payment Program final rule to assign the end-to-end electronic bonus: 1 point for every submitted eCQM and for each measure submitted via CMS Web Interface if the group indicated that they submitted using their EHR with a cap of 10 percent of the total possible measure achievement points. To be consistent with our small practice bonus proposal in section III.H.3.i.(1)(b)(viii) of this

proposed rule, we added 3 measure achievement points to the quality performance category score for small practices that had a quality performance category score greater than 0 points.

As finalized in the CY 2018 Quality Payment Program final rule (82 FR 53625 through 52626) and further discussed in III.H.3.h.(2)(a)(iii) of this proposed rule, we are allowing MIPS eligible clinicians and groups to submit data collected via multiple collection types within a performance category beginning with the 2019 performance period. The requirements for the performance categories remain the same regardless of the number of collection types used. We do not apply the validation process that is discussed in section III.H.3.i.(1)(b)(vii) of this proposed rule.

To estimate the impact of improvement for the quality performance category, we estimated a quality performance category percent score using 2015 and 2016 PQRS data, 2015 and 2016 CAHPS for PQRS data, and 2015 and 2016 QRUR data. For eligible clinicians with an estimated quality performance category score less than or equal to a 30 percent score in the previous year, we compared 2019 performance to an assumed 2018 quality score of 30 percent for their improvement score as described in III.H.3.i.(1)(b)(xiii) of this proposed rule.

Due to data limitations, we are unable to model all the policies proposed in this rule. We are not able to incorporate the policy to reduce the denominator for the quality performance category score by 10 points for groups that registered for CAHPS for MIPS but were unable to report due to insufficient sample size as discussed in section III.H.3.i.(1)(b)(iii)(B) of this proposed rule. We also did not apply the proposed scoring policy for measures that are significantly impacted by clinical guideline or other changes discussed in section III.H.3.i.(1)(b)(vi) of this proposed rule.

Our model applied the MIPS APM scoring standards proposed in section III.H.3.h.(6) of this proposed rule to quality data from MIPS eligible clinicians that participated in the Shared Savings Program, the Pioneer ACO Model, and the Next Generation ACO Model in 2016.

(b) Methodology To Estimate the Cost Performance Category Score

In section III.H.3.h.(3)(b) of this proposed rule, we propose to add 8 episode-based measures. For the episode-based measures, we used the proposed episode specifications discussed in section III.H.3.h.(3)(b) of

⁶³The time period for this eligibility file (September 1, 2015 to August 31, 2016) maximizes the overlap with the performance data in our model.

this proposed rule and claims data from June 2016 through May 2017. We estimated the cost performance category score using the total per capita cost measure (TCPC) and Medicare Spending Per Beneficiary (MSPB) measures from the value modifier (VM) program, as that is the most recently available data, and the 8 newly developed episode-cost measures prepared for MIPS. The values of the 2 VM measures are those computed for the 2018 VM using data from calendar year 2016. Cost measure scores were used only when the associated case size met or exceeded the previously finalized or newly proposed case minimum: 20 for the TCPC measure, 35 for MSPB, 10 for procedural episodes, and 20 for acute medical inpatient medical condition episodes. The VM measures are computed for the TIN; thus, each VM measure score was assigned to each MIPS eligible clinician in the TIN regardless of whether they submit as an individual or as a group. The episode-based measures are computed for both the TIN/NPI and the TIN; these measure scores were assigned to clinicians based on the clinician's submission status, which in this modeling was based on the quality domain. For clinicians participating as individuals, the TIN/NPI level score was used if available and if the minimum case size was met. For clinicians participating as groups, the TIN level score was used, if available, and if the minimum case size was met. For clinicians with no measures meeting the minimum case requirement, we did not estimate a score for the cost performance category, and the weight for the cost performance category was reassigned to the quality performance category. The raw cost measure scores were mapped to scores on the scale of 1–10, using benchmarks developed based on all measures that met the case minimum during the relevant performance period. For the episode-based cost measures, separate benchmarks were developed for TIN/NPI level scores and TIN level scores. For each clinician, a cost performance category score was computed as the average of the measure scores available for the clinician, as described previously.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

As discussed in section III.H.3.i.(1)(d) of this proposed rule, we are implementing facility-based measurement for the 2019 MIPS performance period. In facility-based measurement, we determine the eligible clinician's MIPS score based on Hospital VBP performance score for

eligible clinicians or groups who primarily furnish services within a hospital. Given that we are not requiring eligible clinicians to opt-in to facility-based measurement, it is possible that a MIPS eligible clinician or a group is eligible for facility-based measurement and participates in MIPS as an individual or a group. In these cases, we use the higher combined quality and cost performance category scores.

Data was not available to attribute specific hospital VBP performance score to MIPS eligible clinicians, hence we made the following assumptions. For MIPS eligible clinicians and groups who are eligible for facility-based measurement and who previously submitted quality data to PQRS (which we used to estimate the quality performance category score), we did not estimate a facility-based score. We instead calculated a MIPS quality and cost score based on the available quality measures and cost data. Some clinicians who previously submitted PQRS quality data may receive a higher score through facility-based measurement, but we are unable to identify those clinicians due to data limitations and therefore believe the score based on their submitted data is more likely to reflect their performance.

For MIPS eligible clinicians that did not previously submit data to PQRS and were eligible for facility-based measurement, we estimated a facility-based score by taking the median MIPS quality and cost performance score. We believe it is important to develop an estimate for this cohort because we would have otherwise assigned this group a quality performance category percent score of zero percent which we believe would have underestimated their MIPS final score. Given the data limitations in assigning a specific hospital score to a clinician, we selected the median MIPS quality and cost performance scores as that represents the quality cost performance category scores that a clinician working in a hospital with median performance would receive.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

As discussed in section III.H.3.h.(5)(d)(ii) of this proposed rule, we are proposing to modify the measures and scoring for the Promoting Interoperability performance category score. We proposed to simplify scoring by eliminating the concept of base and performance scores and focusing on a smaller set of measures which are scored on performance. We estimated Promoting Interoperability performance

category scores using data from the CY 2016 Medicare and Medicaid EHR Incentive Programs. Because the EHR Incentive Programs data are based on attestation at the NPI level, the Promoting Interoperability performance category scores are based on the individual level regardless of whether the clinician was part of a group submission or part of an APM entity. We did not calculate a group or APM score for the Promoting Interoperability performance category.

Although we had attestation information for the Medicare EHR Incentive Program, we did not have detailed attestation information for the Medicaid EHR Incentive Program. Therefore, we used incentive payments (excluding incentive payments for the adoption, implementation, and upgrade of CEHRT) as a proxy for attestation for Medicaid EHR Incentive Program participants. To proxy performance, we used the 2016 Medicare EHR Incentive Program data and estimated the median score among Medicare eligible clinicians submitting data for four Promoting Interoperability measures that had data available in the 2016 Medicare EHR Incentive Program. For the e-Prescribing objective, we used the e-Prescribing measure and did not assume any bonus points for the Query of Prescription Drug Monitoring Program (PDMP) or the Verify Opioid Treatment Agreement measures. For the Health Information Exchange objective, we used the Health Information Exchange measure to proxy performance for the two proposed measures in the objective: Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Incorporating Health Information. For the Provider to Patient Exchange objective, we used the Provide Patient Access to View, Download, or Transmit measure to estimate performance for the proposed Provide Patients Electronic Access to Their Health Information measure. For the Public Health and Clinical Data Exchange objective, we assumed that clinicians would meet the proposed reporting requirements and would receive 10 points for the objective. We combined the median scores for each measure, which led to an estimated MIPS Promoting Interoperability performance category median score of 73 points. This estimated MIPS Promoting Interoperability performance category score was applied to all eligible clinicians that attested to participating in the EHR Incentive Programs in our scoring model. The selection of a 73 point Promoting Interoperability

performance category score is lower than the maximum score of 100 percentage points. Our rationale for selecting a 73 point performance category score is that the proposed revision of the Promoting Interoperability criteria would lead to lower scores due to fewer clinicians being able to report measures and achieve maximum performance for the Health Information Exchange Promoting Interoperability Objective. We do not expect all MIPS eligible clinicians participating in MIPS to receive a score of 73 for the Promoting Interoperability performance category; however, we believe this is a reasonable approach given the unavailability of MIPS CY 2017 performance period data in time for this proposed rule. We anticipate using actual MIPS performance period data in the final rule if available in time. We expect that a large proportion of eligible clinicians who submit EHR Incentive Program data will likely achieve a Promoting Interoperability performance category score of 73 points.

For those eligible clinicians who did not attest in either the 2016 Medicare or Medicaid EHR Incentive Program, we evaluated whether the MIPS eligible clinician could have their Promoting Interoperability performance category score reweighted. As finalized in the CY 2017 (81 FR 77069 through 77070) and CY 2018 (82 FR 53625 through 52626) Quality Payment Program final rules, the Promoting Interoperability performance category weight is set equal to 0 percent, and the weight is redistributed to the quality or improvement activities performance category for non-patient facing MIPS eligible clinicians, hospital-based MIPS eligible clinicians, ASC-based MIPS eligible clinicians, or those who request and are approved for a significant hardship or other type of exception, including a significant hardship exception for small practices, or clinicians who are granted an exception based on decertified EHR technology (82 FR 53780 through 53786). We are also proposing in section III.H.3.h.(5)(h) of this proposed rule to continue automatic reweighting for NPs, PAs, CNSs and CRNAs and to add an automatic reweighting policy for physical therapists, occupational therapist, clinical social workers, and clinical psychologists, which we have incorporated into our model. We used the non-patient facing and hospital-based indicators and specialty and small practice indicators as calculated in the initial MIPS eligibility run for the 2017 MIPS performance period (81 FR 77069 through 77070). For significant hardship

exceptions, we used the 2016 final approved significant hardship file from the Medicare EHR Incentive Program. If a MIPS eligible clinician did not attest and did not qualify for a reweighting of their Promoting Interoperability performance category, the Promoting Interoperability performance category score was set to 0 percent.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

We modeled the improvement activities performance category score based on 2016 APM participation and historic participation in 2016 PQRS and 2016 Medicare and Medicaid EHR Incentive Programs. We are not proposing any policy changes that impact scoring for the improvement activities performance category. Our model identified 2016 participants in the Shared Savings Program, Next Generation ACO Model and the Pioneer ACO Model, and assigned them an improvement activity score of 100 percent, consistent with our policy to assign an improvement activities score of 100 percent to ACO participants who were not excluded due to being QPs. Due to limitations in 2016 data, our model was not able to include 2016 participants in APMs other than the Shared Savings Program, the Pioneer ACO Model, and the Next Generation ACO Model.

Clinicians and groups not participating in a MIPS APM were assigned an improvement activities performance category score based on their performance in the quality and Promoting Interoperability performance categories. MIPS eligible clinicians whose 2016 PQRS data meets all the MIPS quality submission criteria (for example, submitting 6 measures with data completeness, including one outcome or high priority measures) and had an estimated Promoting Interoperability performance category score of 73 percent (if Promoting Interoperability is applicable to them) were assigned an improvement activities performance category score of 100 percent. MIPS eligible clinicians who did not participate in 2016 PQRS or the 2016 Medicare or Medicaid EHR Incentive Program (if it was applicable), received an improvement activity performance category score of 0 percent, with the rationale that these clinicians may be less likely to participate in MIPS if they have not previously participated in other programs.

For the remaining MIPS eligible clinicians not assigned an improvement activities performance category score of 0 or 100 percent in our model, we

assigned a score that corresponds to submitting one medium-weighted improvement activity. The MIPS eligible clinicians assigned an improvement activity performance category score corresponding to a medium-weighted activity include (a) those who submitted some quality measures under the 2016 PQRS but did not meet the MIPS quality submission criteria or (b) those who did not submit any quality data under the 2016 PQRS who attested under the Medicare EHR Incentive program or received an incentive payment (excluding adopt implement and upgrade payments) from the Medicaid EHR Incentive Program. We assumed that these clinicians may be likely to partially, but not fully, participate in the improvement activities category. For non-patient facing clinicians, clinicians in a small practice (consisting of 15 or fewer professionals), clinicians in practices located in a rural area, clinicians in a geographic healthcare professional shortage area (HPSA) practice or any combination thereof, the medium weighted improvement activity was assigned one-half of the total possible improvement activities performance category score (20 out of a 40 possible points or 50 percent). The remaining MIPS eligible clinicians who were not assigned an improvement activities performance category score of 0, 50, or 100 percentage points were assigned a score corresponding to one medium-weighted activity (10 out of 40 possible points or 25 percent). The policy finalized in the CY 2018 Quality Payment Program final rule at § 414.1380(b)(3), and discussed in section III.H.3.i.(1)(e)(i)(D) of this proposed rule, states that a MIPS eligible clinician or group in a practice that is certified as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, receives full credit for performance on the improvement activities performance category. In other words, MIPS eligible clinicians in a patient centered medical home or comparable specialty societies would qualify for an improvement activities performance category score of 100 percent. However, due to lack of available data, we were not able to identify MIPS eligible clinicians in patient-centered medical homes or comparable specialty societies in our scoring model.

(f) Methodology To Estimate the Complex Patient Bonus

In sections III.H.3.i.(2)(a)(ii) of this proposed rule, we are proposing to continue the complex patient bonus. Consistent with the policy to define complex patients as those with high

medical risk or with dual eligibility, our scoring model calculated the bonus by using the average Hierarchical Condition Category (HCC) risk score, as well as the MIPS eligible clinician's patients dual eligible proportion calculated for each NPI in the 2016 Physician and Other Supplier Public Use File. The dual eligible proportion for each MIPS eligible clinician was multiplied by 5. We also generated a group average HCC risk score by weighing the scores for individual clinicians in each group by the number of beneficiaries they have seen. We generated group dual eligible proportions using the weighted average dual eligible patient ratio for all MIPS eligible clinicians in the groups, which was then multiplied by 5. The complex patient bonus was calculated by adding together the average HCC risk score and the percent of dual eligible patients multiplied by 5, with a 5-point cap.

(g) Methodology To Estimate the Final Score

As proposed in sections III.H.3.h.(2)(a)(ii), III.H.3.h.(3)(a), III.H.3.h.(4)(a), III.H.3.h.(5)(d)(i) and summarized in section III.H.3.i.(2)(b) of this proposed rule, our model assigns a final score for each TIN/NPI by multiplying each performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, and adding the complex patient bonus. After adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points equal to 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for the Promoting Interoperability due to a significant hardship or other type of exception, the weight for the Promoting Interoperability performance category was redistributed to the quality performance category. For MIPS eligible clinicians who did not have a cost performance category score, the weight for the cost performance category was redistributed to the quality performance category. In our scoring model, we did not address scenarios where a zero percent weight would be assigned to the

quality performance category or the improvement activities performance category.

(h) Methodology To Estimate the MIPS Payment Adjustment

As described in section III.H.3.j.(1) of this proposed rule, we applied a hierarchy to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available (for example if a clinician qualifies for a score for an APM entity and a group score, we select the APM entity score).

We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages and aggregate exceptional performance payment adjustment amounts (as finalized under § 414.1405), using a performance threshold of 30 points and an exceptional performance threshold of 80 points (as proposed in sections III.H.3.j.(2) and III.H.3.j.(3) of this proposed rule). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the Medicare Physician Fee Schedule paid amount. We considered other performance thresholds which are discussed in section VII.G. of this proposed rule.

In the CY 2017 (81 FR 77522) and CY 2018 (82 FR 53932) Quality Payment Program final rules, we applied a 90 percent participation assumption for clinicians in all practice sizes and an alternative of 80 percent participation because participation in legacy programs (PQRS, the VM, and Medicare/Medicaid EHR Incentive programs) may underestimate our expected participation in MIPS. Given the proposed changes in eligibility and the proposed opt-in policy in section VII.F.8.b. of this proposed rule, we believe that the percentage of eligible clinicians participating in MIPS will increase, so we did not apply a participation assumption.

(3) Impact of Payments by Practice Size

Using the assumptions provided above, our model estimates that \$372 million would be redistributed through budget neutrality and that the maximum positive payment adjustments are 5.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance.

Table 98 shows the impact of the payments by practice size and whether the clinicians submitted data to either PQRS or the Medicare or Medicaid EHR Incentive program. We continue to monitor the effects of participation, particularly for clinicians in small practices; therefore we present the summary results stratified by whether a clinician is expected to submit data to MIPS because they had submitted data to either PQRS or the Medicare or Medicaid EHR Incentive Programs, or if the clinician is facility-based. Clinicians in small practices (1–15 clinicians) that we estimate would participate in MIPS perform as well as or better than mid-size practices. Overall, clinicians in small practices participating in MIPS would receive a 1.9 percent increase in their paid amount, which is similar to the payment amount received by the total MIPS eligible clinician population. After considering the positive adjustments and subtracting the negative adjustments, eligible clinicians in small practices would have an increase in funds which is consistent with all MIPS eligible clinicians. Table 98 also shows that 96.1 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. Among those who we estimate would not submit data to MIPS, 88 percent are in small practices (28,096 out of 31,921 clinicians). To address participation concerns, we have policies targeted towards small practices including technical assistance and special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs. Again, we plan to update these numbers in the final rule when we have actual MIPS participation for the 2017 MIPS performance period.

TABLE 98—MIPS ESTIMATED PAYMENT YEAR 2021 IMPACT ON TOTAL ESTIMATED PAID AMOUNT BY PARTICIPATION STATUS AND PRACTICE SIZE *

Practice size *	Number of MIPS eligible clinicians	Percent eligible clinicians with positive or neutral payment adjustment	Percent eligible clinicians with a positive adjustment with exceptional payment adjustment	Percent eligible clinicians with negative payment adjustment	Combined impact of negative and positive adjustments and exceptional performance payment as percent of paid amount **
Among those submitting data ***					
(1) 1–15	110,284	92.5	46.4	7.5	1.9
(2) 16–24	27,798	89.1	35.5	10.9	1.3
(3) 25–99	128,988	93.2	44.2	6.8	1.5
(4) 100+	351,174	98.8	65.3	1.2	2.5
Overall	618,244	96.1	56.2	3.9	2.0
Among those not submitting data					
(1) 1–15	28,096	0.0	0.0	100.0	–6.1
(2) 16–24	1,282	0.0	0.0	100.0	–6.0
(3) 25–99	1,871	0.0	0.0	100.0	–5.9
(4) 100+	672	0.0	0.0	100.0	–6.1
Overall	31,921	0.0	0.0	100.0	–6.1

* Practice size is the total number of TIN/NPIs in a TIN.

** 2014, 2015 and 2016 data used to estimate 2019 payment adjustments. Payments estimated using 2015 and 2016 dollars.

*** Includes facility-based clinicians whose quality data is submitted through hospital programs.

d. Potential Costs of Compliance With the Promoting Interoperability and Improvement Activities Performance Categories for Eligible Clinicians

(1) Potential Costs of Compliance With Promoting Interoperability Performance Category

In section III.H.3.h.(5)(c) of this proposed rule, we discuss the requirement to use EHR technology certified to the 2015 Edition beginning with the 2019 MIPS performance period for the Promoting Interoperability performance category. As discussed in section V.B.3 of this proposed rule, we assume a slight decrease in overall information collection burden costs for the Promoting Interoperability performance category related to having fewer measures to submit.

With respect to any costs unrelated to data submission, although this proposal would require some investment in systems updates, our policy prior to this regulation as reflected in § 414.1305, is that 2015 Edition CEHRT will be required beginning with the 2019 MIPS performance period/2021 MIPS payment year (82 FR 53671). Therefore, we do not anticipate any additional costs due to this regulation.

(2) Potential Costs of Compliance With Improvement Activities Performance Category

Under the policies established in the CY 2017 Quality Payment Program final rule, the costs for complying with the improvement activities performance category requirements could have potentially led to higher expenses for MIPS eligible clinicians. Costs per full-time equivalent primary care clinician for improvement activities will vary across practices, including for some activities or certified patient-centered medical home practices, in incremental costs per encounter, and in estimated costs per (patient) member per month.

Costs for compliance with previously finalized policies may vary based on panel size (number of patients assigned to each care team) and location of practice among other variables. For example, Magill (2015) conducted a study of certified patient-centered medical home practices in two states.⁶⁴ That study found that costs associated with a full-time equivalent primary care clinician, who was associated with certified patient-centered medical home practices, varied across practices. Specifically, the study found an average cost of \$7,691 per month in Utah

practices, and an average of \$9,658 in Colorado practices. Consequently, incremental costs per encounter were \$32.71 for certified patient-centered medical home practices in Utah and \$36.68 in Colorado (Magill, 2015). The study also found that the average estimated cost per patient member, per month, for an assumed panel of 2,000 patients was \$3.85 in Utah and \$4.83 in Colorado. However, given the lack of comprehensive historical data for improvement activities, we are unable to quantify those costs in detail at this time. The findings presented in these papers have not changed. Due to the unavailability of MIPS CY 2017 performance period data in time for this proposed rule, we do not know which improvement activities clinicians have elected. As a result, it is difficult to quantify the costs, cost savings, and benefits associated implementation of improvement activities. We will report the costs and benefits of implementing the improvement activities for the final rule if the performance data are received in time.

We have considered factors that also contribute to the difficulty of identifying compliance costs for the improvement activities performance category in the CY 2018 Quality Payment Program final rule (82 FR 53845).

⁶⁴ Magill et al. “The Cost of Sustaining a Patient-Centered Medical Home: Experience from 2 States.” *Annals of Family Medicine*, 2015; 13:429–435.

Although we are unable to quantify the compliance costs of the improvement activities performance category, we do believe that because we are proposing an opt-in policy (as described in section II.C.2.c of this proposed rule), we would add approximately 87,000 additional clinicians to the MIPS eligible clinicians. In the section V.B.4 of this proposed rule, we have assumed that those who have elected to opt-in have already been voluntary reporters in MIPS and would not have additional compliance costs as a result of this regulation. Thus, we believe the overall potential cost of compliance would not increase because of this proposed rule.

Further, we anticipate that the vast majority of clinicians submitting improvement activities data to comply with existing MIPS policies could continue to submit the same activities under the policies established in this proposed rule. Previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rule-making (82 FR 54175); we are only proposing modifications to a few activities and proposing to remove one improvement activity in this proposed rule. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199) and Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229) for our previously finalized 112 improvement activities established in the Improvement Activities Inventory. In section III.H.3.h.(4)(d)(ii) of this proposed rule, we are proposing 6 new improvement activities, 5 modifications and 1 removal of an existing activity.

Similarly, we believe that third parties who submit data on behalf of clinicians who prepared to submit data in the transition year will not incur additional costs as a result of this proposed rule. We request comments that provide additional information that would enable us to quantify the costs, costs savings, and benefits associated with implementation of improvement activities in the inventory.

In section III.H.3.h.(4)(e) of this proposed rule, we discuss how eligible clinicians can participate in the CMS study on burdens associated with reporting quality measures for each MIPS performance period. Eligible clinicians who are interested in participating can sign up and an adequate sample size is then selected by CMS from these potential participants. In the CY 2018 Quality Payment Program final rule, the sample size for

the CY 2018 performance period was set at a minimum of 102 MIPS eligible clinicians (81 FR 77196). Each study participant is required to complete a survey prior to submitting MIPS data and another survey after submitting MIPS data. In section III.H.3.h.(4)(e) of this proposed rule, for the CY 2019 performance period, we are proposing an increase to the sample size to a minimum of 200 MIPS eligible clinicians. However, we are proposing to make the focus group a requirement only for a selected subset of the study participants beginning with the CY 2019 performance period and future years. Thus, out of the minimum of 200 study participants as proposed above, we would select a minimum number of 100 clinicians to participate in focus groups, this selection will be done primarily by purposive sampling, and may apply random sampling only in a situation when we have to pick between same/similar participants. Completing each survey is estimated to require approximately 15 minutes; therefore, the annual hourly burden per participant is approximately 30 minutes. The annual hourly burden associated with the increase in sample size from 102 to 200 is estimated to be 49 hours (98 clinician's \times 0.5 hours). The total estimated annual cost burden is estimated to be \$10,116 (\$206.44/hour \times 49 hours). While the sample size of the study is increasing, we are not proposing a change to the sample size of MIPS eligible clinicians participating in the focus group, so no burden is estimated for participating in that activity.

e. Assumptions & Limitations

We would like to note several limitations to our estimates of MIPS eligible clinicians' eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the 2021 MIPS payment year. We based our analyses on the data prepared to support the 2017 performance period initial determination of clinician and special status eligibility (available via the NPI lookup on qpp.cms.gov),⁶⁵ participant lists using the APM Participation List for the third snapshot date of the 2017 QP performance period and historical PQRS data, the Medicare/Medicaid EHR Incentive Programs data, including CAHPS for PQRS, and the VM. No scoring model, including the one presented in this proposed rule, can

⁶⁵ The time period for this eligibility file (September 1, 2015 to August 31, 2016) maximizes the overlap with the performance data in our model.

fully reflect MIPS eligible clinicians' behavioral responses to MIPS because there is no substitute for actual data. The scoring model assumes that quality measures or the Medicare/Medicaid EHR Incentive Programs data submitted and the distribution of scores on those measures would be similar under the Quality Payment Program in the 2021 MIPS payment year as they were under the 2016 PQRS program. We will update results with the analysis of actual MIPS performance data if it is available in time for the publication of the final rule. The scoring model does not reflect the growth in Advanced APM participation between 2018 and 2019 (Quality Payment Program Years 2 and 3) because that data is not available at the detailed level needed for our scoring analysis.

In our MIPS eligible clinician assumptions, we assumed that 33 percent of the opt-in eligible clinicians that participated in PQRS would elect to opt-in to the MIPS program. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policy.

There are additional limitations to our estimates: (1) We only estimated the potential impact of facility-based scoring for MIPS eligible clinicians that are eligible for facility-based measurement and would have a quality performance category score of zero from failure to submit quality data; (2) because we used historic data, we assumed participation in the Promoting Interoperability and Improvement Activities performance categories would be similar to prior years in other relevant programs; (3) we assumed performance for those two categories based on population norm and not individual performance; (4) we anticipate the scores for these performance categories may differ once we receive actual MIPS performance data, and (5) to the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 98. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify in detail.

G. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been

exercised, presents rationale for our proposed policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we presented the estimated impact on total allowed charges by specialty. The alternatives we considered, as discussed in the preceding preamble sections, would result in different payment rates, and therefore, result in different estimates than those shown in Table 94 (CY 2019 PFS Estimated Impact on Total Allowed Charges by Specialty).

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold and the additional performance threshold to be the critical factors affecting the distribution of payment adjustments under the Quality Payment Program, and the alternatives that we considered focus on those policies. We ran estimates with performance thresholds of 25 and 35 as an alternative to 30, so that we could estimate a more moderate increase of the performance threshold and a more aggressive increase. We also ran the models with an additional performance threshold of 70 instead of the proposed 80 points. This alternative would maintain the additional performance threshold that was in years 2 and 3. In the model with a performance threshold of 30 and an additional performance threshold of 70, we estimate that \$372 million will be redistributed through budget neutrality, and there will be a maximum payment adjustment of 4.3 percent and 8.7 percent of MIPS eligible clinicians will receive a negative payment adjustment after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In the model with a performance threshold of 25 and an additional performance threshold of 80, we estimate that \$340 million will be redistributed through budget neutrality, and there will be a maximum payment adjustment of 5.4 percent and 6.9 percent of MIPS eligible clinicians will receive a negative payment adjustment after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In the model with a performance threshold of 35 and an additional performance threshold of 80, we estimate that \$408 million will be redistributed through budget neutrality, and there will be a maximum payment adjustment of 5.8 percent and 10.9 percent of MIPS eligible clinicians will receive a negative payment adjustment after considering the MIPS payment

adjustment and the additional MIPS payment adjustment for exceptional performance.

We ran estimates on the potential change in population if we set the third low volume threshold set at 100 as an alternative to 200 covered services. We estimate that 50,260 clinicians would elect to opt-in for a total population of 658,400. We also estimated the effect of applying the opt-in policy without adding the third low-volume threshold criterion. We estimate that 19,621 clinicians would elect to opt-in for a total population of 627,761.

H. Impact on Beneficiaries

There are a number of changes in this proposed rule that would have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the PFS, would have a positive impact and improve the quality and value of care provided to Medicare providers and beneficiaries.

1. Evaluation and Management Documentation

For example, we estimate that the evaluation and management (E/M) visit documentation changes proposed in section II.I of this proposed rule may significantly reduce the amount of time practitioners spend documenting these services. While little research is available on exactly how much time physicians and non-physician practitioners spend specifically documenting E/M visits, according to one recent estimate, primary care physicians spend on average, 84 minutes or 1.4 hours per day (24 percent of the time that they spend working within an EHR) documenting progress notes.⁶⁶ Another study found that primary care physicians spend an average of 2.1 hours per day writing progress notes (both in-clinic and remote access).⁶⁷ Assuming an average of 20 patient visits per day, one E/M visit per patient, and using the higher figure of 2.1 hours per day spent documenting these visits, we estimate that documentation of an average outpatient/office E/M visit takes 6.3 minutes.⁶⁸

⁶⁶ Arndt BG, Beasley JW, Watkinson MD, et al. Tethered to the EHR: Primary care physician workload assessment using EHR event log data and time-motion observations. *Ann Fam Med*. 2017;15:427–33.

⁶⁷ Tai-Seale M, Olson CW, Li J, et al. Electronic health record logs indicate that physicians split time evenly between seeing patients and desktop medicine. *Health Aff (Millwood)*. 2017;36:655–62.

⁶⁸ 20 patient visits per day based on the average number reported in the Physicians Foundation 2016

We believe that our proposals to reduce redundancy in visit documentation, to allow auxiliary staff and the beneficiary to enter certain information in the medical record that would be verified but not required to be re-documented by the billing practitioner, to allow the choice of visit level and documentation based on MDM or time as alternatives to the current framework, and to require only minimum documentation (the amount required for a level 2 visit) for all visits except level 1 visits may reduce the documentation time by one quarter of the current time for the average office/outpatient visit. Under this assumption, these proposals would save clinicians approximately 1.6 minutes of time per office/outpatient E/M visit billed to Medicare. For a full-time practitioner whose panel of patients is 40 percent Medicare (60 percent other payers), this would translate to approximately 51 hours saved per year.⁶⁹

We note that stakeholders have emphasized to us in public comments that whatever reductions may be made to the E/M documentation guidelines for purposes of Medicare payment, physicians and non-physician practitioners will still need to document substantial information in their progress notes for clinical, legal, operational, quality reporting and other purposes, as well as potentially for other payers. Furthermore, there may be a ramp-up period for physicians and non-physician practitioners to implement the proposed documentation changes in their clinical workflow and EHR such that the effects of mitigating documentation burden may not be immediately realized. Accordingly, we believe the total amount of time practitioners spend on E/M visit documentation may remain high, despite the time savings that we estimate in this section could result from our E/M documentation proposals. These and all other improvements to payment accuracy that we are proposing for CY 2019 are described in greater detail in section II.I of this proposed rule. We welcome public comments on our assumptions for the estimated reduction in documentation burden related to these proposals.

Survey of America's Physicians, available online at https://physiciansfoundation.org/wp-content/uploads/2018/01/Biennial_Physician_Survey_2016.pdf.

⁶⁹ Forty percent of 20 total patients per day = 8 Medicare visits per day. (Eight visits per day) * (1.6 minutes per visit) * (240 days per year) = 51.2 hours.

2. Modernizing Medicare Physician Payment by Recognizing Communication Technology-Based Services

As noted in section II.D. of this proposed rule, for CY 2019, we are aiming to increase access for Medicare beneficiaries to physicians' services that are routinely furnished via communication technology by clearly recognizing a discrete set of services that are defined by and inherently involve the use of communication technology. Accordingly, we have several proposals for modernizing Medicare physician payment for communication technology-based services.

The use of communication technology-based services will provide new options for physicians to treat patients. These services could help to avoid unnecessary office visits, could consist of services that are already occurring but are not being separately paid, or could constitute new services. Medicare would pay \$14 per visit in the first year for these communication technology-based services, compared with \$92 per visit for the corresponding established patient visits.

Practitioners have a choice of when to use the communication technology-based services. Because of the low payment rate relative to that for an office visit, we are assuming that usage of these services will be relatively low. In addition, we expect that the number of new or newly billable visits and subsequent treatments will outweigh the number of times that communication technology-based services will be used instead of more costly services. As a result, we expect that the financial impact of paying for the communication technology-based services will be an increase in Medicare costs. We estimate that usage of these services will result in fewer than 1 million visits in the first year but will eventually result in more than 19 million visits per year, ultimately increasing payments under the PFS by about 0.2 percent. In order to maintain budget neutrality in setting proposed rates for CY 2019, we assumed the number of services that would result in a 0.2 percent reduction in the proposed conversion factor.

As with all estimates, and particularly those for new benefits, this outcome is highly uncertain. Because communication technology-based services is a new area for healthcare coverage, the available information on which to base estimates is limited and is usually not directly applicable, particularly to a new Medicare benefit. The cost and utilization estimates are

based on Medicare claims data together with a study published in *Health Affairs*,⁷⁰ which examined the cost and utilization of telehealth in the private sector. While this study was the most applicable for an estimate, we note that the results from this program may be different because Medicare experience may differ from private sector behavior and because the study was limited to acute respiratory infection visits. We also note that the study cites the use of direct-to-consumer telehealth companies, many of which provide access to care 24 hours per day, 7 days per week, 365 days per year, whereas the service described by HCPCS code GVC11 is limited to only established patients.

We are also proposing to make separate payment for these services when furnished by RHCs and FQHCs. A potential estimate of utilization and overall cost of these services by RHCs and FQHCs could be derived by comparing their use of chronic care management services to the same services furnished by practitioners paid under the PFS, since these care management services are also separately billable and do not take place in-person. Based on this comparison, and without considering potential variables and issues specific to these services, the impact of this proposal would be less than \$1 million in additional Medicare spending in the first year and could eventually result in up to \$20 million in spending per year in future years. These estimates are uncertain and could change after further consideration of the potential variables and issues specific to these services.

3. Outpatient Therapy Services

As noted in section II.M. of this proposed rule, we are also proposing to end functional reporting for outpatient therapy services as part of our burden reduction efforts in response to the RFI on CMS Flexibilities and Efficiencies that was issued in the CY 2018 PFS proposed rule (82 FR 34172 through 34173). Our functional reporting system currently requires therapy practitioners and providers to report, whenever functional reporting is required, non-payable HCPCS G-codes and modifiers—typically in pairs—to convey information about the beneficiary's functional limitation category and functional status throughout the PT, OT, or SLP episode of care. In addition, each time functional reporting is required on

the claim, the therapy provider must also document the functional reporting G-codes and their modifiers in the medical record. In this proposed rule, we are proposing to eliminate this requirement that therapy practitioners and providers report HCPCS G-codes and modifiers or document in the medical record to convey functional reporting status for PT, OT or SLP episode of care.

In order to quantify the amount of burden reduction, we decided to estimate the total amount of time that therapy practitioners spend doing functional reporting. To do this, we first looked at our data for CY 2017 for professional claims by the type of plan of care reported primarily by therapists in private practice (TPPs), including physical therapists, occupational therapists, and speech-language pathologists. We found that the overall utilization of the 42 functional reporting HCPCS G-codes totaled 15,456,421 single units, or 7,728,211 pairs.

We then considered the time, on average, it might take to report on the claim and document in the medical record each pair of HCPCS G-codes. We note this includes the time it takes to make the initial determination of the HCPCS G-code functional limitation category, as well as the time needed to make each initial and/or subsequent assignments for the applicable severity modifiers in order to define the patient's functional status. We then made the assumption that it would take between 1 minute and 1.5 minutes, on average, to report the HCPCS G-code and modifier pair each time functional reporting is required. Using the total utilization of G-code pairs and the range of 1 minute to 1.5 minutes, we calculated that TPPs would have saved between 128,804 and 193,206 hours (or 7,728,211 to 11,592,317 minutes) collectively in CY 2017 if the functional reporting requirements had not been in place. We believe this is a reasonable projection for the potential savings to TPPs, physicians and certain nonphysician practitioners in future years if we finalize our proposal to end functional reporting effective January 1, 2019.

Because therapy services are also furnished by providers of outpatient therapy services such as hospitals, SNFs and rehabilitation agencies that submit institutional claims, typically representing a greater amount of expenditures than practitioners submitting professional claims, we calculated additional savings for these providers using the same time assumptions of 1 to 1.5 minutes to report the HCPCS G-code and modifier

⁷⁰ Ashwood, J.S. (2017 March) Direct-To-Consumer Telehealth May Increase Access To Care But Does Not Decrease Spending. *Health Affairs*.

pair each time functional reporting is required. Our 2017 data show a total utilization of the functional reporting HCPCS G-codes is 29,053,921 single units, or 14,526,961 pairs, indicating that therapy providers would have collectively saved between 242,116 to 363,174 hours (or 14,526,961 to 21,790,442 minutes) for CY 2017 if the functional reporting requirements had not been effective during that year.

4. Physician Supervision of Diagnostic Imaging Procedures

We believe that the proposed changes to the physician supervision requirements for RAs furnishing diagnostic imaging procedures in this proposed rule as described in section II.F. of this proposed rule may significantly reduce burden for physicians. While approximately 215,000 diagnostic imaging services per year are currently performed that require personal supervision, we are not able to determine the number of these services that are performed by an RA due to limitations in the claims data. As a result, we are not able to quantify the amount of time potentially saved by physicians and practitioners under our proposal to now require direct supervision of diagnostic imaging procedures done by RAs. That said, stakeholders representing the practitioner community have indicated that changing the required supervision level for RAs will result in a redistribution of workload from radiologists to RAs, potentially resulting in improved practice efficiency and patient satisfaction. Stakeholders have stated that practitioners that utilize RAs have experienced improvements in practice efficiency, as use of RAs allows radiologists more time for professional services such as interpretation of images, and these practitioners cite greater flexibility that results in reduced wait times. Furthermore, stakeholders contend that the Medicare supervision requirements currently create disincentives to use RAs, as practitioners cannot make full use of them for Medicare patients, and this proposed change to the supervision requirement would allow RAs to be more fully utilized. For these reasons, we believe our proposal will contribute to burden reduction for physicians and practitioners providing diagnostic imaging procedures for Medicare beneficiaries.

5. Beneficiary Liability

Many proposed policy changes could result in a change in beneficiary liability as it relates to coinsurance (which is 20 percent of the fee schedule amount, if

applicable for the particular provision after the beneficiary has met the deductible). To illustrate this point, as shown in our public use file Impact on Payment for Selected Procedures available on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSchedule/>, the CY 2018 national payment amount in the nonfacility setting for CPT code 99203 (Office/outpatient visit, new) was \$109.80, which means that in CY 2018, a beneficiary would be responsible for 20 percent of this amount, or \$21.96. Based on this proposed rule, using the CY 2019 CF, the CY 2019 national payment amount in the nonfacility setting for CPT code 99203, as shown in the Impact on Payment for Selected Procedures table, is \$134.45, which means that, in CY 2019, the final beneficiary coinsurance for this service would be \$26.89.

H. Impact on Beneficiaries in the Quality Payment Program

There are several changes in this rule that would have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the Physician Fee Schedule, would have a positive impact and improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new proposed measures include patient-reported outcomes, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcomes are factors frequently of interest to patients when making decisions about treatment.⁷¹ Further, the proposed policy changes in the Promoting Interoperability performance category shifts the focus to the interoperable, seamless exchange of electronic information. With the requirement that program participants use 2015 Edition CEHRT, the interoperable exchange of patient health information should be easier because the certification criteria are designed to

facilitate information exchange. In combination with the newly proposed Promoting Interoperability measure to receive and incorporate health information, beneficiaries should begin to experience improved care coordination and care transitions because clinicians have improved access to the beneficiaries' health information across the spectrum of care.

Impact on Other Health Care Programs and Providers

We estimate that CY 2019 Quality Payment Program will not have a significant economic effect on eligible clinicians and groups and believe that MIPS policies, along with increasing participation in APMs over time may succeed in improving quality and reducing costs. This may in turn result in beneficial effects on both patients and some clinicians, and we intend to continue focusing on clinician-driven, patient-centered care.

I. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on last year's rule will be the number of reviewers of this rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the rule. For these reasons we thought that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcomed any comments on the approach in estimating the number of entities which will review this rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$107.38 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours

⁷¹ Institute of Medicine. 2013. *Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/18359>.

for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$859.04 (8.0 hours × \$107.38). Therefore, we estimated that the total cost of reviewing this regulation is \$5,105,275 (\$859.04 × 5,943 reviewers).

J. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 98 and 99 (Accounting Statements), we have

prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2018 to CY 2019 based on the FY 2019 President’s Budget baseline.

TABLE 99—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

Category	Transfers
CY 2019 Annualized Monetized Transfers From Whom To Whom?	Estimated increase in expenditures of \$0.3 billion for PFS CF update. Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 100—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

Category	Transfer
CY 2019 Annualized Monetized Transfers of beneficiary cost coinsurance. From Whom to Whom?	\$0.1 billion. Beneficiaries to Federal Government.

L. Conclusion

The proposed rule proposes to modify the consultation requirement in § 414.94(j); therefore, this analysis estimates the impact of consultations by ordering professionals. We previously estimated a total annual burden of \$275,139,000, but estimate this modification would decrease burden to an annual cost of \$122,508,675. We also estimate the broader impacts of this requirement, assuming that some ordering professionals will purchase a qualified CDSM with one-time maximum cost estimate and annual training and maintenance estimate maximum of \$394,770,600 annually for 5 years. Still, other ordering professionals who do not currently use an EHR system and are subject to this program may purchase an EHR system. For all ordering professionals subject to this program and estimated to not currently use EHR, an estimated annualized cost maximum of \$192,641,671.84 over 5 years would be incurred for all such ordering professionals to obtain an integrated qualified CDSM. We believe that in the beginning of this program, it may take longer for a Medicare beneficiary to obtain an order for an advanced diagnostic imaging service. As a result of this assumption, we have calculated an estimated impact to Medicare beneficiaries of \$68,001,000 per year with a potential offset of \$34,000,500 annually if process efficiencies are developed to integrate consultation with a qualified CDSM into the existing workflow of ordering an advanced diagnostic imaging service. This proposed rule discusses the use of

G-codes and modifiers to report AUC consultation information on claims and an alternative reporting method using a UCI. Those estimated impacts are discussed previously. We estimate the impact of transmitting such additional information on an order for an advanced diagnostic imaging service to be \$111,884,000 annually. Finally, we measure the estimated impact on furnishing professionals and facilities of the proposed expansion of the definition of applicable setting in § 414.94(b) to be the one-time update to modify billing systems at cost of \$1,740,640,000. Although the consultation and reporting requirements of this program are effective beginning January 1, 2020 with an Educational and Operations Testing Period, we attempt in this analysis to identify areas of potential qualitative benefits to both Medicare beneficiaries and the Medicare program.

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides a Regulatory Impact Analysis. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medical devices, Medicare, Reporting and

recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Health facilities, Health professions, Kidney diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Drugs, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: Secs. 205(a), 1102, 1142, 1861, 1862(a), 1869, 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

- 2. Section 405.2401 is amended in paragraph (b) by—
■ a. Revising the introductory text of the definition of “Federally qualified health center”; and
■ b. Revising the definition of “Secretary”.

The revisions read as follows:

§ 405.2401 Scope and definitions.

* * * * *

(b) * * *

Federally qualified health center (FQHC) means an entity that has entered into an agreement with CMS to meet Medicare program requirements under § 405.2434 and—

* * * * *

Secretary means the Secretary of Health and Human Services or his or her delegate.

* * * * *

- 3. Section 405.2464 is amended by—

- a. Revising paragraphs (a)(1), (b) heading, and (b)(1);
■ b. Redesignating paragraphs (c) and (d) as paragraphs (d) and (e), respectively;
■ c. Adding a new paragraph (c); and
■ d. Revising newly redesignated paragraphs (d) and (e).

The revisions and additions read as follows:

§ 405.2464 Payment rate.

(a) Payment rate for RHCs that are authorized to bill under the reasonable cost system. (1) Except as specified in paragraphs (d) and (e) of this section, an RHC that is authorized to bill under the reasonable cost system is paid an all-inclusive rate that is determined by the MAC at the beginning of the cost reporting period.

* * * * *

(b) Payment rate for FQHCs that are authorized to bill under the prospective payment system. (1) Except as specified in paragraphs (d) and (e) of this section, a per diem rate is calculated by CMS by dividing total FQHC costs by total FQHC daily encounters to establish an average per diem cost.

* * * * *

(c) Payment for FQHCs that are authorized to bill as grandfathered tribal FQHCs. Grandfathered tribal FQHCs are paid at the outpatient per visit rate for Medicare as set annually by the Indian Health Service for each beneficiary visit for covered services. There are no adjustments to this rate.

(d) Payment for care management services. For chronic care management services furnished between January 1, 2016 and December 31, 2017, payment to RHCs and FQHCs is at the physician fee schedule national non-facility payment rate. For care management services furnished on or after January 1, 2018, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for care management services.

(e) Payment for communication technology-based and remote evaluation services. For communication technology-based and remote evaluation services furnished on or after January 1, 2019, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for communication technology-based and remote evaluation services.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

- 4. The authority citation for part 410 continues to read as follows:

Authority: Secs. 1102, 1834, 1871, 1881, and 1893 of the Social Security Act (42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd).

- 5. Section 410.32 is amended by adding paragraph (b)(4) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(4) Supervision requirement for RRA or RPA. Diagnostic tests that are performed by a registered radiologist assistant (RRA) who is certified and registered by the American Registry of Radiologic Technologists or a radiology practitioner assistant (RPA) who is certified by the Certification Board for Radiology Practitioner Assistants, require only a direct level of physician supervision, as permitted by state law and state scope of practice regulations.

* * * * *

§ 410.59 [Amended]

- 6. Section 410.59 is amended by removing paragraph (a)(4).

§ 410.60 [Amended]

- 7. Section 410.60 is amended by removing paragraph (a)(4).
■ 8. Section 410.61 is amended by revising paragraph (c) to read as follows:

§ 410.61 Plan of treatment requirements for outpatient rehabilitation services.

* * * * *

(c) Content of the plan. The plan prescribes the type, amount, frequency, and duration of the physical therapy, occupational therapy, or speech-language pathology services to be furnished to the individual, and indicates the diagnosis and anticipated goals.

* * * * *

§ 410.62 [Amended]

- 9. Section 410.62 is amended by removing paragraph (a)(4).
■ 10. Section 410.78 is amended by—
■ a. Adding paragraphs (b)(3)(ix), (x), and (xi);
■ b. Revising paragraph (b)(4) introductory text, and
■ c. Adding paragraph (b)(4)(iv).

The additions and revision read as follows:

§ 410.78 Telehealth services.

* * * * *

(b) * * *

(3) * * *

(ix) A renal dialysis facility (only for purposes of the home dialysis monthly ESRD-related clinical assessment in section 1881(b)(3)(B) of the Act).

(x) The home of an individual (only for purposes of the home dialysis ESRD-related clinical assessment in section 1881(b)(3)(B) of the Act).

(xi) A mobile stroke unit (only for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke provided in accordance with section 1834(m)(6) of the Act).

(4) Except as provided in paragraph (b)(4)(iv) of this section, originating sites must be:

* * * * *

(iv) The geographic requirements specified in paragraph (b)(4) of this section do not apply to the following telehealth services:

(A) Home dialysis monthly ESRD-related clinical assessment services furnished on or after January 1, 2019, at an originating site described in paragraph (b)(3)(vi), (ix) or (x) of this section, in accordance with section 1881(b)(3)(B) of the Act; and

(B) Services furnished on or after January 1, 2019, for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke.

* * * * *

§ 410.105 [Amended]

- 11. Section 410.105 is amended—
■ a. In paragraph (c)(1)(ii) by removing the phrase “that are consistent with the patient function reporting on the claims for services”; and
■ b. By removing paragraph (d).

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 12. The authority citation for part 411 continues to read as follows:

Authority: Secs. 1102, 1860D–1 through 1860D–42, 1871, and 1877 of the Social Security Act (42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn).

■ 13. Section 411.353 is amended by—
 ■ a. Revising paragraph (g)(1); and
 ■ b. Removing and reserving paragraph (g)(2).

The revision reads as follows:

§ 411.353 Prohibition on certain referrals by physicians and limitations on billing.

* * * * *

(g) * * *

(1) An entity may submit a claim or bill and payment may be made to an entity that submits a claim or bill for a designated health service if—

(i) The compensation arrangement between the entity and the referring physician fully complies with an applicable exception in this subpart except with respect to the signature requirement of the exception; and

(ii) The parties obtain the required signature(s) within 90 consecutive calendar days immediately following the date on which the compensation arrangement became noncompliant and the compensation arrangement otherwise complies with all criteria of the applicable exception.

(2) [Reserved]

■ 14. Section 411.354 is amended by adding paragraph (e) to read as follows:

§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(e) *Special rule on compensation arrangements*—(1) *Application*. This paragraph (e) applies only to compensation arrangements as defined in section 1877 of the Act and this subpart.

(2) *Writing requirement*. In the case of any requirement in this subpart for a compensation arrangement to be in writing, such requirement may be satisfied by a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties.

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 15. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

■ 16. Section 414.65 is amended by—

■ a. Revising paragraph (a) introductory text;

■ b. Removing paragraph (a)(1);

■ c. Redesignating paragraphs (a)(2) and (3) as paragraphs (a)(1) and (2), respectively; and

■ d. Adding paragraph (b)(3).

The revision and addition reads as follows:

§ 414.65 Payment for telehealth services.

(a) *Professional service*. The Medicare payment amount for telehealth services described under § 410.78 of this chapter is equal to the current fee schedule amount applicable for the service of the physician or practitioner, subject to paragraphs (a)(1) and (2) of this section, but must be made in accordance with the following limitations:

* * * * *

(b) * * *

(3) No originating site facility fee payment is made to an originating site described in § 410.78(b)(3)(x) or (xi) of this chapter; or to an originating site for services furnished under the exception at § 410.78(b)(4)(iv)(A) or (B) of this chapter.

* * * * *

■ 17. Section 414.94 is amended:

■ a. In paragraph (b), revising the definition of “Applicable setting”; and

■ b. Revising paragraphs (i)(3), (j), and (k) introductory text.

The revisions read as follows:

§ 414.94 Appropriate use criteria for advanced diagnostic imaging services.

* * * * *

(b) * * *

Applicable setting means a physician’s office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, an independent diagnostic testing facility, and any other provider-led outpatient setting determined appropriate by the Secretary.

* * * * *

(i) * * *

(3) Significant hardships for ordering professionals who experience any of the following:

(i) Insufficient internet access.

(ii) EHR or CDSM vendor issues.

(iii) Extreme and uncontrollable circumstances.

(j) *Consulting*. (1) Ordering Professionals and, when performed as an “incident to” service, auxiliary personnel must consult specified applicable AUC through qualified CDSMs for applicable imaging services furnished in an applicable setting, paid for under an applicable payment system, and ordered on or after January 1, 2020.

(2) The AUC consultation specified in this paragraph (j) may be performed by auxiliary personnel (as defined in § 410.26(a)(1) of this chapter) under the direction of, and incident to, the ordering professional’s services.

(k) *Reporting*. The following information must be reported on Medicare claims for advanced diagnostic imaging services furnished in an applicable setting, paid for under an applicable payment system defined in paragraph (b) of this section, and ordered on or after January 1, 2020.

* * * * *

■ 18. Section 414.502 is amended in the definition of “Applicable laboratory” by revising paragraph (3) introductory text to read as follows:

§ 414.502 Definitions.

* * * * *

Applicable laboratory * * *

(3) In a data collection period, receives more than 50 percent of its Medicare revenues, which includes fee-for-service payments under Medicare Parts A and B, prescription drug payments under Medicare Part D, and any associated Medicare beneficiary deductible or coinsurance for services furnished during the data collection period from one or a combination of the following sources:

* * * * *

§ 414.610 [Amended]

■ 19. Section 414.610 is amended:

■ a. In paragraphs (c)(1)(ii) introductory text and (c)(5)(ii) by removing the date “December 31, 2017” and adding in its place the date “December 31, 2022”; and

■ b. By revising paragraph (c)(8).

The revision reads as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *

(8) *Transport of an individual with end-stage renal disease for renal dialysis services*. For ambulance services furnished during the period October 1, 2013 through September 30, 2018, consisting of non-emergency basic life support (BLS) services involving transport of an individual with end-stage renal disease for renal dialysis services (as described in section 1881(b)(14)(B)) furnished other than on an emergency basis by a provider of services or a renal dialysis facility, the fee schedule amount otherwise applicable (both base rate and mileage) is reduced by 10 percent. For such services furnished on or after October 1, 2018, the fee schedule amount

otherwise applicable (both base rate and mileage) is reduced by 23 percent.

* * * * *
§ 414.904 [Amended]

■ 20. Section 414.904 is amended in paragraph (e)(4) by removing the phrase "acquisition cost or the applicable Medicare Part B drug payment" and adding in its place the phrase "acquisition cost or the Medicare Part B drug payment".

■ 21. Section 414.1305 is amended by—

- a. Revising the definition of "Ambulatory Surgical Center (ASC)-based MIPS eligible clinician";
■ b. Adding in alphabetical order definitions for "Collection type" and "Health IT vendor";
■ c. Revising the definitions of "High priority measure", "Hospital-based MIPS eligible clinician", and "Low volume threshold";
■ d. Adding in alphabetical order a definition for "MIPS determination period";
■ e. Revising the definitions of "MIPS eligible clinician", "Non-patient facing MIPS eligible clinician", "Qualified Clinical Data Registry (QCDR)", "Qualifying APM Participant (QP)", and "Small practice"; and
■ f. Adding in alphabetical order a definition for "Submission type", "Submitter type", and "Third party intermediary".

The revisions and additions read as follows:

§ 414.1305 Definitions.

* * * * *
Ambulatory Surgical Center (ASC)-based MIPS eligible clinician means:

(1) For the 2019 and 2020 MIPS payment years, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the Place of Service (POS) codes used in the HIPAA standard transaction as an ambulatory surgical center setting based on claims for a period prior to the performance period as specified by CMS; and

(2) Beginning with the 2021 MIPS payment year, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS) codes used in the HIPAA standard transaction as an ambulatory surgical center setting based on claims for the MIPS determination period.

* * * * *
Collection type means a set of quality measures with comparable specifications and data completeness criteria, including, as applicable: Electronic clinical quality measures (eCQMs); MIPS Clinical Quality

Measures (MIPS CQMs), QCDR measures, Medicare Part B claims measures, the CMS Web Interface measures, the CAHPS for MIPS survey, and administrative claims measures.

* * * * *
Health IT vendor means an entity that supports the health IT requirements on behalf of a MIPS eligible clinician (including obtaining data from a MIPS eligible clinician's CEHRT).

* * * * *
High priority measure means:
(1) For the 2019 and 2020 MIPS payment years, an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, or care coordination quality measure.

(2) Beginning with the 2021 MIPS payment year, an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

Hospital-based MIPS eligible clinician means:

(1) For the 2019 and 2020 MIPS payment years, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the Place of Service (POS) codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus-outpatient hospital, or emergency room setting based on claims for a period prior to the performance period as specified by CMS; and

(2) Beginning with the 2021 MIPS payment year, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period.

* * * * *
Low-volume threshold means:

(1) For the 2019 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume threshold determination period described in paragraph (4) of this definition, has Medicare Part B allowed charges less than or equal to \$30,000 or provides care for 100 or fewer Medicare Part B-enrolled individuals.

(2) For the 2020 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume

threshold determination period described in paragraph (4) of this definition, has allowed charges for covered professional services less than or equal to \$90,000 or furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals.

(3) Beginning with the 2021 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals.

(4) For the 2019 and 2020 MIPS payment years, the low-volume threshold determination period is a 24-month assessment period consisting of:

(i) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding to the performance period; and

(ii) A second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the low-volume threshold determination period includes a 60-day claims run out. For the 2020 MIPS payment year, each segment of the low-volume threshold determination period includes a 30-day claims run out.

* * * * *

MIPS determination period means:
(1) Beginning with the 2021 MIPS payment year and future years, a 24-month assessment period consisting of:

(i) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, and that includes a 30-day claims run out; and

(ii) A second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs.

(2) Subject to § 414.1310(b)(1)(iii), an individual eligible clinician or group that is identified as not exceeding the low-volume threshold or as a certain type of MIPS eligible clinician during the first segment of the MIPS determination period will continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician or group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of that segment.

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (except as excluded under § 414.1310(b)):

(1) For the 2019 and 2020 MIPS payment years:

(i) A physician (as defined in section 1861(r) of the Act);

(ii) A physician assistant, a nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act);

(iii) A certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); and

(iv) A group that includes such clinicians.

(2) For the 2021 MIPS payment year and future years:

(i) A clinician described in paragraph (1) of this definition;

(ii) A physical therapist or occupational therapist;

(iii) A clinical social worker (as defined in section 1861(hh)(1) of the Act);

(iv) A clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and

(v) A group that includes such clinicians.

* * * * *

Non-patient facing MIPS eligible clinician means:

(1) For the 2019 and 2020 MIPS payment year, an individual MIPS eligible clinician who bills 100 or fewer patient facing encounters (including Medicare telehealth services defined in section 1834(m) of the Act), as described in paragraph (3) of this definition, during the non-patient facing determination period described in paragraph (4) of this definition, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition

of a non-patient facing individual MIPS eligible clinician during the non-patient facing determination period described in paragraph (4) of this definition.

(2) Beginning with the 2021 MIPS payment year, an individual MIPS eligible clinician who bills 100 or fewer patient facing encounters (including Medicare telehealth services defined in section 1834(m) of the Act), as described in paragraph (3) of this definition, during the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a non-patient facing individual MIPS eligible clinician during the MIPS determination period.

(3) For purposes of this definition, a patient-facing encounter is an instance in which the individual MIPS eligible clinician or group bills for items and services furnished such as general office visits, outpatient visits, and procedure codes under the PFS, as specified by CMS.

(4) For the 2019 and 2020 MIPS payment year, the non-patient facing determination period is a 24-month assessment period consisting of:

(i) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period; and

(ii) A second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible MIPS clinician, group, or virtual group that is identified as non-patient facing during the initial 12-month segment will continue to be considered non-patient facing for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the non-patient facing determination period includes a 60-day claims run out. For the 2020 MIPS payment year and future years, each segment of the non-patient facing determination period includes a 30-day claims run out.

* * * * *

Qualified Clinical Data Registry (QCDR) means an entity with clinical expertise in medicine and quality measurement development that collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster

improvement in the quality of care provided to patients.

* * * * *

Qualifying APM Participant (QP) means an eligible clinician determined by CMS to have met or exceeded the relevant QP payment amount or QP patient count threshold under § 414.1430(a)(1), (a)(3), (b)(1), or (b)(3) for a year based on participation in an APM Entity that is also participating in an Advanced APM.

* * * * *

Small practice means:

(1) For the 2019 MIPS payment year, a TIN consisting of 15 or fewer eligible clinicians.

(2) For the 2020 MIPS payment year, a TIN consisting of 15 or fewer eligible clinicians during a 12-month assessment period that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period and includes a 30-day claims run out.

(3) Beginning with the 2021 MIPS payment year, a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period.

* * * * *

Submission type means the mechanism by which the submitter type submits data to CMS, including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims and the CMS Web Interface.

Submitter type means the MIPS eligible clinician, group, or third party intermediary acting on behalf of a MIPS eligible clinician or group, as applicable, that submits data on measures and activities under MIPS.

Third party intermediary means an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the quality, improvement activities, and promoting interoperability performance categories.

* * * * *

■ 22. Section 414.1310 is amended by revising paragraphs (a), (b)(1)(ii) and (iii), (d), and (e)(1) and (2) to read as follows:

§ 414.1310 Applicability.

(a) *Program implementation.* Except as specified in paragraph (b) of this section, MIPS applies to payments for covered professional services furnished by MIPS eligible clinicians on or after January 1, 2019.

(b) * * *
(1) * * *

(ii) Is a Partial Qualifying APM Participant and does not elect to

participate in MIPS as a MIPS eligible clinician; or

(iii) Does not exceed the low-volume threshold. Beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to participate in MIPS as a MIPS eligible clinician, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For APM Entity groups in MIPS APMs, only the APM Entity group election can result in the APM Entity group being treated as MIPS eligible clinicians for the applicable payment year.

* * * * *

(d) *Clarification.* In no case will a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) apply to payments for items and services furnished during a year by a eligible clinician, including an eligible clinician described in paragraph (b) or (c) of this section, who is not a MIPS eligible clinician, including an eligible clinician who voluntarily reports on applicable measures and activities under MIPS.

(e) *Requirements for groups.* (1) Except as provided under § 414.1370(f)(2), each MIPS eligible clinician in the group will receive a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) based on the group's combined performance assessment.

(2) For individual MIPS eligible clinicians to participate in MIPS as a group, all of the following requirements must be met:

(i) Groups must meet the definition of a group at all times during the applicable performance period.

(ii) Individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN.

(iii) Individual eligible clinicians that elect to participate in MIPS as a group will have their performance assessed at the group level across all four MIPS performance categories.

(iv) Groups must adhere to an election process established by CMS, as applicable.

* * * * *

■ 23. Section 414.1315 is revised to read as follows:

§ 414.1315 Virtual groups.

(a) *Eligibility.* (1) For a MIPS payment year, a solo practitioner or a group of 10 or fewer eligible clinicians may elect to participate in MIPS as a virtual group

with at least one other such solo practitioner or group. The election must be made prior to the start of the applicable performance period and cannot be changed during the performance period. A solo practitioner or group may elect to be in no more than one virtual group for a performance period, and, in the case of a group, the election applies to all MIPS eligible clinicians in the group.

(2) Except as provided under § 414.1370(f)(2), each MIPS eligible clinician in the virtual group will receive a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) based on the virtual group's combined performance assessment.

(b) *Election deadline.* The election deadline is December 31 of the calendar year preceding the applicable performance period.

(c) *Election process.* For the 2020 MIPS payment year and future years, the virtual group election process is as follows:

(1) *Stage 1: Virtual group eligibility determination.* (i) For the 2020 MIPS payment year, the virtual group eligibility determination period is an assessment period of up to 5 months beginning on July 1 and ending as late as November 30 of the calendar year preceding the applicable performance period, and that includes a 30-day claims run out.

(ii) Beginning with the 2021 MIPS payment year, the virtual group eligibility determination period aligns with the first segment of the MIPS determination period, which is a 12-month assessment period beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, and that includes a 30-day claims run out.

(2) *Stage 2: Virtual group formation.* (i) Solo practitioners and groups that elect to participate in MIPS as a virtual group must establish a formal written agreement that satisfies paragraph (c)(3) of this section prior to the election.

(ii) A designated virtual group representative must submit an election, on behalf of the solo practitioners and groups that compose a virtual group, to participate in MIPS a virtual group for a performance period in a form and manner specified by CMS by the election deadline specified in paragraph (b) of this section.

(iii) The virtual group election must include each TIN and NPI associated with the virtual group and contact information for the virtual group representative.

(iv) Once an election is made, the virtual group representative must contact their designated CMS contact to update any election information that changed during a performance period at least one time prior to the start of an applicable submission period.

(3) *Virtual group agreement.* The virtual group arrangement must be set forth in a formal written agreement among the parties, consisting of each solo practitioner and group that composes a virtual group. The agreement must comply with the following requirements:

(i) Identifies each party by name, TIN, and each NPI under the TIN, and includes as parties only the solo practitioners and groups that compose the virtual group.

(ii) Is for a term of at least one performance period.

(iii) Requires each party to notify each NPI under the party's TIN regarding their participation in the MIPS as a virtual group.

(iv) Sets forth each NPI's rights and obligations in, and representation by, the virtual group, but not limited to, the reporting requirements and how participation in the MIPS as a virtual group the NPI's ability to participate in the MIPS outside of the virtual group.

(v) Describes how the opportunity to receive payment adjustments will encourage each member of the virtual group (and each NPI under each TIN in the virtual group) to adhere to quality assurance and improvement.

(vi) Requires each party to update its Medicare enrollment information, including the addition or removal of NPIs billing under its TIN, on a timely basis in accordance with Medicare program requirements and to notify the other parties of any such changes within 30 days of the change.

(vii) Requires completion of a close-out process upon termination or expiration of the agreement that requires each party to furnish all data necessary for the parties to aggregate their data across the virtual group's TINs.

(viii) Expressly requires each party to participate in the MIPS as a virtual group and comply with the requirements of the MIPS and all other applicable laws (including, but not limited to, Federal criminal law, the Federal False Claims Act, the Federal anti-kickback statute, the Federal civil monetary penalties law, the Federal physician self-referral law, and the Health Insurance Portability and Accountability Act of 1996).

(ix) Is executed on behalf of each party by an individual who is authorized to bind the party.

(d) *Virtual group reporting requirements.* For solo practitioners and groups of 10 or fewer eligible clinicians to participate in MIPS as a virtual group, all of the following requirements must be met:

(1) Virtual groups must meet the definition of a virtual group at all times during the applicable performance period.

(2) Solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group must aggregate their performance data across the virtual group's TINs.

(3) Solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group will have their performance assessed at the virtual group level across all four MIPS performance categories.

(4) Virtual groups must adhere to the election process described in paragraph (c) of this section.

■ 24. Section 414.1320 is amended by revising paragraphs (b)(2) and (c)(2) and adding paragraphs (d) and (e) to read as follows:

§ 414.1320 MIPS performance period.

* * * * *

(b) * * *

(2) Promoting Interoperability and improvement activities performance categories is a minimum of a continuous 90-day period within CY 2018, up to and including the full CY 2018 (January 1, 2018 through December 31, 2018).

(c) * * *

(2) Promoting Interoperability and improvement activities performance categories is a minimum of a continuous 90-day period within CY 2019, up to and including the full CY 2019 (January 1, 2019 through December 31, 2019).

(d) Beginning with the 2022 MIPS payment year, the performance period for:

(1) The quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year.

(2) The improvement activities performance categories is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(e) For purposes of the 2022 MIPS payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

■ 25. Section 414.1325 is revised to read as follows:

§ 414.1325 Data submission requirements.

(a) *Applicable performance categories.* (1) Except as provided in paragraph (a)(2) of this section or under § 414.1370, as applicable, individual MIPS eligible clinicians and groups must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability performance categories in accordance with this section. Except for the Medicare Part B claims submission type, the data may also be submitted on behalf of the individual MIPS eligible clinician or group by a third party intermediary described at § 414.1400.

(2) There are no data submission requirements for:

(i) The cost performance category or administrative claims-based quality measures. Performance in the cost performance category and on such measures is calculated by CMS using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period.

(ii) The quality or cost performance category, as applicable, for MIPS eligible clinicians and groups that are scored under the facility-based measurement scoring methodology described in § 414.1380(e).

(b) *Data submission types for individual MIPS eligible clinicians.* An individual MIPS eligible clinician may submit their MIPS data using:

(1) For the quality performance category, the direct, login and upload, and Medicare Part B claims (for small practices only beginning with the 2021 MIPS payment year) submission types.

(2) For the improvement activities or Promoting Interoperability performance categories, the direct, login and upload, or login and attest submission types.

(c) *Data submission types for groups.* Groups may submit their MIPS data using:

(1) For the quality performance category, the direct, login and upload, Medicare Part B claims (for small practices only beginning with the 2021 MIPS payment year), and CMS Web Interface (for groups consisting of 25 or more eligible clinicians or a third party intermediary submitting on behalf of a group) submission types.

(2) For the improvement activities or Promoting Interoperability performance categories, the direct, login and upload, or login and attest submission types.

(d) *Use of multiple data submission types.* Beginning with the 2021 MIPS payment year, MIPS eligible clinicians, groups, and virtual groups may submit their MIPS data using multiple data submission types for any performance category described in paragraph (a)(1) of this section, as applicable; provided, however, that the MIPS eligible clinician, group, or virtual group uses the same identifier for all performance categories and all data submissions.

(e) *Data submission deadlines.* The data submission deadlines are as follows:

(1) For the direct, login and upload, login and attest, and CMS Web Interface submission types, March 31 following the close of the applicable performance period or a later date as specified by CMS.

(2) For the Medicare Part B claims submission type, data must be submitted on claims with dates of service during the applicable performance period that must be processed no later than 60 days following the close of the applicable performance period.

■ 26. Section 414.1330 is revised to read as follows:

§ 414.1330 Quality performance category.

(a) For a MIPS payment year, CMS uses the following quality measures, as applicable, to assess performance in the quality performance category:

(1) Measures included in the MIPS final list of quality measures established by CMS through rulemaking;

(2) QCDR measures approved by CMS under § 414.1400;

(3) Facility-based measures described in § 414.1380; and

(4) MIPS APM measures described in § 414.1370.

(b) Unless a different scoring weight is assigned by CMS, performance in the quality performance category comprises:

(1) 60 percent of a MIPS eligible clinician's final score for MIPS payment year 2019.

(2) 50 percent of a MIPS eligible clinician's final score for MIPS payment year 2020.

(3) 45 percent of a MIPS eligible clinician's final score for MIPS payment year 2021.

■ 27. Section 414.1335 is amended by revising paragraphs (a)(1), (2), and (3) to read as follows:

§ 414.1335 Data submission criteria for the quality performance category.

(a) * * *

(1) *For Medicare Part B claims measures, MIPS CQMs, eCQMs, or QCDR measures.* (i) Subject to paragraph (a)(1)(ii) of this section,

submit data on at least six measures including at least one outcome measure. If an applicable outcome measure is not available, report one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician or group, report on each measure that is applicable.

(ii) MIPS eligible clinicians and groups that report on a specialty or subspecialty measure set, as designated in the MIPS final list of quality measures established by CMS through rulemaking, must submit data on at least six measures within that set. If the set contains fewer than six measures or if fewer than six measures within the set apply to the MIPS eligible clinician or group, report on each measure that is applicable.

(2) For CMS Web Interface measures. (i) Report on all measures included in the CMS Web Interface. The group must report on the first 248 consecutively ranked beneficiaries in the sample for each measure or module.

(ii) If the sample of eligible assigned beneficiaries is less than 248, then the group must report on 100 percent of assigned beneficiaries.

(iii) The group is required to report on at least one measure for which there is Medicare patient data.

(3) For the CAHPS for MIPS survey. (i) For the 12-month performance period, a group that wishes to voluntarily elect to participate in the CAHPS for MIPS survey must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measures data to CMS.

(ii) [Reserved]

* * * * *

■ 28. Section 414.1340 is amended by revising paragraphs (a) introductory text, (b) introductory text, and (c) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or the eCQMs must submit data on:

* * * * *

(b) MIPS eligible clinicians and groups submitting quality measure data on the Medicare Part B claims measures must submit data on:

* * * * *

(c) Groups submitting quality measures data on CMS Web Interface measures or the CAHPS for MIPS survey, must meet the data submission requirement on the sample of the Medicare Part B patients CMS provides.

■ 29. Section 414.1350 is revised to read as follows:

§ 414.1350 Cost performance category.

(a) *Specification of cost measures.* For purposes of assessing performance of MIPS eligible clinicians on the cost performance category, CMS specifies cost measures for a performance period.

(b) *Attribution.* (1) Cost measures are attributed at the TIN/NPI level.

(2) For the total per capita cost measure, beneficiaries are attributed using a method generally consistent with the method of assignment of beneficiaries under § 425.402 of this chapter.

(3) For the Medicare Spending per Beneficiary (MSPB) measure, an episode is attributed to the MIPS eligible clinician who submitted the plurality of claims (as measured by allowed charges) for Medicare Part B services rendered during an inpatient hospitalization that is an index admission for the MSPB measure during the applicable performance period.

(4) For the acute condition episode-based measures specified for the 2017 performance period, an episode is attributed to each MIPS eligible clinician who bills at least 30 percent of inpatient evaluation and management (E&M) visits during the trigger event for the episode.

(5) For the procedural episode-based measures specified for the 2017 performance period, an episode is attributed to each MIPS eligible clinician who bills a Medicare Part B claim with a trigger code during the trigger event for the episode.

(6) For the acute inpatient medical condition episode-based measures specified beginning with the 2019 performance period, an episode is attributed to each MIPS eligible clinician who bills inpatient E&M claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E&M claim lines in that hospitalization.

(7) For the procedural episode-based measures specified beginning with the 2019 performance period, an episode is attributed to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes.

(c) *Case minimums.* (1) For the total per capita cost measure, the case minimum is 20.

(2) For the Medicare spending per beneficiary measure, the case minimum is 35.

(3) For the episode-based measures specified for the 2017 performance period, the case minimum is 20.

(4) For the procedural episode-based measures specified beginning with the 2019 performance period, the case minimum is 10.

(5) For the acute inpatient medical condition episode-based measures specified beginning with the 2019 performance period, the case minimum is 20.

(d) *Scoring weight.* Unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act, performance in the cost performance category comprises:

(1) Zero percent of a MIPS eligible clinician's final score for MIPS payment year 2019.

(2) 10 percent of a MIPS eligible clinician's final score for MIPS payment year 2020.

(3) 15 percent of a MIPS eligible clinician's final score for MIPS payment year 2021.

■ 30. Section 414.1355 is amended by revising paragraphs (a), (b) introductory text, and (c) to read as follows:

§ 414.1355 Improvement activities performance category.

(a) For a MIPS payment year, CMS uses improvement activities included in the MIPS final inventory of improvement activities established by CMS through rulemaking to assess performance in the improvement activities performance category.

(b) Unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act, performance in the improvement activities performance category comprises:

* * * * *

(c) The following are the list of subcategories, of which, with the exception of Participation in an APM, include activities for selection by a MIPS eligible clinician or group:

(1) Expanded practice access, such as same day appointments for urgent needs and after-hours access to clinician advice.

(2) Population management, such as monitoring health conditions of individuals to provide timely health care interventions or participation in a QCDR.

(3) Care coordination, such as timely communication of test results, timely exchange of clinical information to patients or other clinicians, and use of remote monitoring or telehealth.

(4) Beneficiary engagement, such as the establishment of care plans for individuals with complex care needs, beneficiary self-management assessment and training, and using shared decision making mechanisms.

(5) Patient safety and practice assessment, such as through the use of clinical or surgical checklists and practice assessments related to maintaining certification.

(6) Participation in an APM.

(7) Achieving health equity, such as for MIPS eligible clinicians that achieve high quality for underserved populations, including persons with behavioral health conditions, racial and ethnic minorities, sexual and gender minorities, people with disabilities, people living in rural areas, and people in geographic HPSAs.

(8) Emergency preparedness and response, such as measuring MIPS eligible clinician participation in the Medical Reserve Corps, measuring registration in the Emergency System for Advance Registration of Volunteer Health Professionals, measuring relevant reserve and active duty uniformed services MIPS eligible clinician activities, and measuring MIPS eligible clinician volunteer participation in domestic or international humanitarian medical relief work.

(9) Integrated behavioral and mental health, such as measuring or evaluating such practices as: Co-location of behavioral health and primary care services; shared/integrated behavioral health and primary care records; cross training of MIPS eligible clinicians, and integrating behavioral health with primary care to address substance use disorders or other behavioral health conditions, as well as integrating mental health with primary care.

■ 31. Section 414.1360 is amended by revising paragraph (a)(1) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) * * *

(1) *Via direct, login and upload, and login and attest.* For the applicable performance period, submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period.

* * * * *

§ 414.1365 [Removed]

■ 32. Section 414.1365 is removed.

■ 33. Section 414.1370 is amended by revising paragraphs (b)(3), (f)(2), (g)(4), (h)(4) heading, (h)(5)(i)(A) and (B), and (h)(5)(ii) introductory text to read as follows:

§ 414.1370 APM scoring standard under MIPS.

* * * * *

(b) * * *

(3) The APM bases payment on quality measures and cost/utilization; and

* * * * *

(f) * * *

(2) MIPS eligible clinicians who participate in a group or have elected to

participate in a virtual group and who are also on a MIPS APM Participation List will be included in the assessment under MIPS for purposes of producing a group or virtual group score and under the APM scoring standard for purposes of producing an APM Entity score. The MIPS payment adjustment for these eligible clinicians is based solely on their APM Entity score; if the APM Entity group is exempt from MIPS all eligible clinicians within that APM Entity group are also exempt from MIPS.

(g) * * *

(4) Promoting Interoperability (PI). (i)

For the 2019 and 2020 MIPS payment years, each Shared Savings Program ACO participant TIN must report data on the Promoting Interoperability performance category separately from the ACO, as specified in § 414.1375(b)(2). The ACO participant TIN scores are weighted according to the number of MIPS eligible clinicians in each TIN as a proportion of the total number of MIPS eligible clinicians in the APM Entity group, and then aggregated to determine an APM Entity score for the ACI performance category.

(ii) For the 2019 and 2020 MIPS payment years, for APM Entities in MIPS APMs other than the Shared Savings Program, CMS uses one score for each MIPS eligible clinician in the APM Entity group to derive a single average APM Entity score for the Promoting Interoperability performance category. Beginning with the 2021 MIPS payment year, for APM Entities in MIPS APMs including the Shared Savings Program, CMS uses one score for each MIPS eligible clinician in the APM Entity group to derive a single average APM Entity score for the Promoting Interoperability performance category. The score for each MIPS eligible clinician is the higher of either:

(A) A group score based on the measure data for the Promoting Interoperability performance category reported by a TIN for the MIPS eligible clinician according to MIPS submission and reporting requirements for groups; or

(B) An individual score based on the measure data for the Promoting Interoperability performance category reported by the MIPS eligible clinician according to MIPS submission and reporting requirements for individuals.

(iii) In the event that a MIPS eligible clinician participating in a MIPS APM receives an exception from the Promoting Interoperability performance category reporting requirements, such eligible clinician will be assigned a null score when CMS calculates the APM Entity's Promoting Interoperability

performance category score under the APM scoring standard.

(A) If all MIPS eligible clinicians in an APM Entity have been excepted from reporting the Promoting Interoperability performance category, the performance category weight will be reweighted to zero for the APM Entity for that MIPS performance period.

(B) [Reserved]

(h) * * *

(4) *Promoting Interoperability.* * * *

(5) * * *

(i) * * *

(A) In 2017, the improvement activities performance category is reweighted to 25 percent and the Promoting Interoperability performance category is reweighted to 75 percent; and

(B) Beginning in 2018, the Promoting Interoperability performance category is reweighted to 75 percent and the improvement activities performance category is reweighted to 25 percent.

(ii) If CMS reweights the Promoting Interoperability performance category to zero percent:

* * * * *

■ 34. Section 414.1375 is amended by—
 ■ a. Revising the section heading, paragraphs (a), (b) introductory text, and (b)(2); and

■ b. Removing paragraph (b)(3).

The revisions and addition read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

(a) *Final score.* Unless a different scoring weight is assigned by CMS under sections 1848(o)(2)(D), 1848(q)(5)(E)(ii), or 1848(q)(5)(F) of the Act, performance in the Promoting Interoperability performance category comprises 25 percent of a MIPS eligible clinician's final score for each MIPS payment year.

(b) *Reporting for the Promoting Interoperability performance category.* To earn a performance category score for the Promoting Interoperability performance category for inclusion in the final score, a MIPS eligible clinician must:

* * * * *

(2) *Report MIPS—Promoting Interoperability objectives and measures.* Report on the objectives and associated measures as specified by CMS for the Promoting Interoperability performance category for the performance period as follows:

(i) For the 2019 and 2020 MIPS payment years: For each base score measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or claim an exclusion for each measure

that includes an option for an exclusion; and

(ii) Beginning with the 2021 MIPS payment year:

(A) Report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs; and

(B) For each required measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion.

■ 35. Section 414.1380 is revised to read as follows:

§ 414.1380 Scoring.

(a) *General.* MIPS eligible clinicians are scored under MIPS based on their performance on measures and activities in four performance categories. MIPS eligible clinicians are scored against performance standards for each performance category and receive a final score, composed of their performance category scores, and calculated according to the final score methodology.

(1) *Performance standards.* (i) For the quality performance category, measures are scored between zero and 10 measure achievement points. Performance is measured against benchmarks. Measure bonus points are available for submitting high-priority measures, submitting measures using end-to-end electronic reporting, and in small practices that submit data on at least 1 quality measure. Beginning with the 2020 MIPS payment year, improvement scoring is available in the quality performance category.

(ii) For the cost performance category, measures are scored between 1 and 10 points. Performance is measured against a benchmark. Starting with the 2024 MIPS payment year, improvement scoring is available in the cost performance category.

(iii) For the improvement activities performance category, each improvement activity is assigned a certain number of points. The points for all submitted activities are summed and scored against a total potential performance category score of 40 points.

(iv) For the Promoting Interoperability performance category, each measure is scored against a maximum number of points. The points for all submitted measures are summed and scored against a total potential performance category score of 100 points.

(2) [Reserved]

(b) *Performance categories.* MIPS eligible clinicians are scored under MIPS in four performance categories.

(1) *Quality performance category*—(i) *Measure achievement points.* For the 2019, 2020, and 2021 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(A) *Lack of benchmark or case minimum.* (1) Except as provided in paragraph (b)(1)(i)(A)(2) of this section, for the 2019, 2020, and 2021 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

(2) The following measures are excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points:

(i) Each submitted CMS Web Interface-based measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement, or is redesignated as pay-for-reporting for all Shared Savings Program accountable care organizations by the Shared Savings Program; and

(ii) Each administrative claims-based measure that does not have a benchmark or meet the case minimum requirement.

(B) *Lack of complete data.* (1) Except as provided in paragraph (b)(1)(i)(B)(2) of this section, for each submitted

measure that does not meet the data completeness requirement:

(i) For the 2019 MIPS payment year, MIPS eligible clinicians receive 3 measure achievement points;

(ii) For the 2020 and 2021 MIPS payment years, MIPS eligible clinicians other than small practices receive 1 measure achievement point, and small practices receive 3 measure achievement points; and

(iii) Beginning with the 2022 MIPS payment year, MIPS eligible clinicians other than small practices receive zero measure achievement points, and small practices receive 3 measure achievement points.

(2) MIPS eligible clinicians receive zero measure achievement points for each submitted CMS Web Interface-based measure that does not meet the data completeness requirement.

(ii) *Benchmarks.* Benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

(A) Each benchmark must have a minimum of 20 individual clinicians or groups who reported the measure meeting the case minimum requirement at paragraph (b)(1)(iii) of this section and the data completeness requirement at § 414.1340 and having a performance rate that is greater than zero.

(B) CMS Web Interface collection type uses benchmarks from the corresponding reporting year of the Shared Savings Program.

(iii) *Minimum case requirements.* Except for the all-cause hospital readmission measure, the minimum case requirement is 20 cases. For the all-cause hospital readmission measure, the minimum case requirement is 200 cases.

(iv) *Topped out measures.* CMS will identify topped out measures in the benchmarks published for each Quality Payment Program year.

(A) For the 2020 MIPS payment year, each topped out measure specified by CMS through rulemaking receives no more than 7 measure achievement points, provided that the benchmark for the applicable collection type is identified as topped out in the benchmarks published for the 2018 MIPS performance period.

(B) Beginning with the 2021 MIPS payment year, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(v) *Measure bonus points.* MIPS eligible clinicians receive measure bonus points for the following measures, except as otherwise required under § 414.1335, regardless of whether the measure is included in the MIPS eligible clinician's total measure achievement points.

(A) *High priority measures.* Subject to paragraph (b)(1)(v)(A)(1) of this section, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures.

(1) *Limitations.* (i) Each high priority measure must have a benchmark at paragraph (b)(1)(ii) of this section, meet the case minimum requirement at (b)(1)(iii) of this section, meet the data completeness requirement at § 414.1340, and have a performance rate that is greater than zero.

(ii) For the 2019, 2020, and 2021 MIPS payment years, the total measure bonus points for high priority measures cannot exceed 10 percent of the total available measure achievement points.

(iii) Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that collect data in accordance with § 414.1325 on a single measure via multiple collection types receive measure bonus points only once.

(B) *End-to-end electronic reporting.* Subject to paragraph (b)(1)(v)(B)(1) of this section, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary.

(1) *Limitations.* (i) For the 2019, 2020, and 2021 MIPS payment years, the total measure bonus points for measures submitted with end-to-end electronic reporting cannot exceed 10 percent of the total available measure achievement points.

(ii) Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that collect data in accordance with § 414.1325 on a single measure via multiple collection types receive measure bonus points only once.

(C) *Small practices.* Beginning with the 2021 MIPS payment year, MIPS eligible clinicians in small practices receive 3 measure bonus points if they submit data to MIPS on at least 1 quality measure.

(vi) *Improvement scoring.* Improvement scoring is available to MIPS eligible clinicians that

demonstrate improvement in performance in the current MIPS performance period compared to performance in the performance period immediately prior to the current MIPS performance period based on measure achievement points.

(A) Improvement scoring is available when the data sufficiency standard is met, which means when data are available and a MIPS eligible clinician has a quality performance category achievement percent score for the previous performance period and the current performance period.

(1) Data must be comparable to meet the requirement of data sufficiency which means that the quality performance category achievement percent score is available for the current performance period and the previous performance period and quality performance category achievement percent scores can be compared.

(2) Quality performance category achievement percent scores are comparable when submissions are received from the same identifier for two consecutive performance periods.

(3) If the identifier is not the same for 2 consecutive performance periods, then for individual submissions, the comparable quality performance category achievement percent score is the highest available quality performance category achievement percent score associated with the final score from the prior performance period that will be used for payment for the individual. For group, virtual group, and APM Entity submissions, the comparable quality performance category achievement percent score is the average of the quality performance category achievement percent score associated with the final score from the prior performance period that will be used for payment for each of the individuals in the group.

(4) Improvement scoring is not available for clinicians who were scored under facility-based measurement in the performance period immediately prior to the current MIPS performance period.

(B) The improvement percent score may not total more than 10 percentage points.

(C) The improvement percent score is assessed at the performance category level for the quality performance category and included in the calculation of the quality performance category percent score as described in paragraph (b)(1)(vii) of this section.

(1) The improvement percent score is awarded based on the rate of increase in the quality performance category achievement percent score of MIPS eligible clinicians from the previous

performance period to the current performance period.

(2) An improvement percent score is calculated by dividing the increase in the quality performance category achievement percent score from the prior performance period to the current performance period by the prior performance period quality performance category achievement percent score multiplied by 10 percent.

(3) An improvement percent score cannot be lower than zero percentage points.

(4) For the 2020 and 2021 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

(5) The improvement percent score is zero if the MIPS eligible clinician did not fully participate in the quality performance category for the current performance period.

(D) For the purpose of improvement scoring methodology, the term "quality performance category achievement percent score" means the total measure achievement points divided by the total available measure achievement points, without consideration of measure bonus points or improvement percent score.

(E) For the purpose of improvement scoring methodology, the term "improvement percent score" means the score that represents improvement for the purposes of calculating the quality performance category percent score as described in paragraph (b)(1)(vii) of this section.

(F) For the purpose of improvement scoring methodology, the term "fully participate" means the MIPS eligible clinician met all requirements in §§ 414.1335 and 414.1340.

(vii) *Quality performance category score.* A MIPS eligible clinician's quality performance category percent score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category percent score cannot exceed 100 percentage points.

(A) Beginning with the 2021 MIPS payment year, for MIPS eligible clinicians that submit data on a measure significantly impacted by clinical guideline changes or other changes that CMS believes may pose patient safety

concerns, the total available measure achievement points category are reduced by 10 points.

(B) Beginning with the 2021 MIPS payment year, for groups that register for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirements, the total available measure achievement points are reduced by 10 points.

(viii) *ICD-10 updates.* Beginning with the 2018 MIPS performance period, measures significantly impacted by ICD-10 updates, as determined by CMS, will be assessed based only on the first 9 months of the 12-month performance period. For purposes of this paragraph (b)(1)(viii), CMS will make a determination as to whether a measure is significantly impacted by ICD-10 coding changes during the performance period. CMS will publish on the CMS website which measures require a 9-month assessment process by October 1st of the performance period if technically feasible, but by no later than the beginning of the data submission period at § 414.1325(f)(1).

(2) *Cost performance category.* For each cost measure attributed to a MIPS eligible clinician, the clinician receives one to ten achievement points based on the clinician's performance on the measure during the performance period compared to the measure's benchmark. Achievement points are awarded based on which benchmark decile range the MIPS eligible clinician's performance on the measure is between. CMS assigns partial points based on the percentile distribution.

(i) Cost measure benchmarks are determined by CMS based on cost measure performance during the performance period. At least 20 MIPS eligible clinicians or groups must meet the minimum case volume specified under § 414.1350(c) for a cost measure in order for a benchmark to be determined for the measure. If a benchmark is not determined for a cost measure, the measure will not be scored.

(ii) A MIPS eligible clinician must meet the minimum case volume specified under § 414.1350(c) to be scored on a cost measure.

(iii) The cost performance category percent score is the sum of the following, not to exceed 100 percent:

(A) The total number of achievement points earned by the MIPS eligible clinician divided by the total number of available achievement points; and

(B) The cost improvement score, as determined under paragraph (b)(2)(iv) of this section.

(iv) The cost improvement score is determined for a MIPS eligible clinician

that demonstrates improvement in performance in the current MIPS performance period compared to their performance in the immediately preceding MIPS performance period.

(A) The cost improvement score is determined at the measure level for the cost performance category.

(B) The cost improvement score is calculated only when data sufficient to measure improvement is available. Sufficient data is available when a MIPS eligible clinician or group participates in MIPS using the same identifier in 2 consecutive performance periods and is scored on the same cost measure(s) for 2 consecutive performance periods. If the cost improvement score cannot be calculated because sufficient data is not available, then the cost improvement score is zero.

(C) The cost improvement score is determined by comparing the number of measures with a statistically significant change (improvement or decline) in performance; a change is determined to be significant based on application of a t-test. The number of cost measures with a significant decline is subtracted from the number of cost measures with a significant improvement, with the result divided by the number of cost measures for which the MIPS eligible clinician or group was scored for 2 consecutive performance periods. The resulting fraction is then multiplied by the maximum cost improvement score.

(D) The cost improvement score cannot be lower than zero percentage points.

(E) The maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points.

(v) A cost performance category percent score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

(3) *Improvement activities performance category.* Subject to paragraphs (b)(3)(i) and (ii) of this section, the improvement activities performance category score equals the total points for all submitted improvement activities divided by 40 points, multiplied by 100 percent. MIPS eligible clinicians (except for non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs) receive 10 points for each medium-

weighted improvement activity and 20 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325. Non-patient facing MIPS eligible clinicians, small practices, and practices located in rural areas and geographic HPSAs receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325.

(i) For MIPS eligible clinicians participating in APMs, the improvement activities performance category score is at least 50 percent.

(ii) For MIPS eligible clinicians in a practice that is certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, the improvement activities performance category score is 100 percent. For the 2019 MIPS payment year, at least one practice site within a group's TIN must be certified or recognized as a patient-centered medical home or comparable specialty practice. For the 2020 MIPS payment year and future years, at least 50 percent of the practice sites within a group's TIN must be recognized as a patient-centered medical home or comparable specialty practice. MIPS eligible clinicians that wish to claim this status for purposes of receiving full credit in the improvement activities performance category must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive this credit. A practice is certified or recognized as a patient-centered medical home if it meets any of the following criteria:

(A) The practice has received accreditation from one of four accreditation organizations that are nationally recognized;

(1) The Accreditation Association for Ambulatory Health Care;

(2) The National Committee for Quality Assurance (NCQA);

(3) The Joint Commission; or

(4) The Utilization Review Accreditation Commission (URAC).

(B) The practice is participating in a Medicaid Medical Home Model or Medical Home Model.

(C) The practice is a comparable specialty practice that has received the NCQA Patient-Centered Specialty Recognition.

(D) The practice has received accreditation from other certifying bodies that have certified a large number of medical organizations and meet national guidelines, as determined by the Secretary. The Secretary must

determine that these certifying bodies must have 500 or more certified member practices, and require practices to include the following:

- (1) Have a personal physician/clinician in a team-based practice.
- (2) Have a whole-person orientation.
- (3) Provide coordination or integrated care.
- (4) Focus on quality and safety.
- (5) Provide enhanced access.

(4) *Promoting Interoperability performance category.* (i) For the 2019 and 2020 MIPS payment years, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the base score, performance score, and any applicable bonus scores, not to exceed 100 percentage points. A MIPS eligible clinician cannot earn a performance score or bonus score unless they have earned a base score.

(A) A MIPS eligible clinician earns a base score by reporting for each base score measure, as applicable: The numerator (of at least one) and denominator, or a yes/no statement, or an exclusion.

(B) A MIPS eligible clinician earns a performance score by reporting on the

performance score measures specified by CMS. A MIPS eligible clinician may earn up to 10 or 20 percentage points as specified by CMS for each performance score measure reported.

(C) A MIPS eligible clinician may earn the following bonus scores:

(1) A bonus score of 5 percentage points for reporting to one or more additional public health agencies or clinical data registries.

(2) A bonus score of 10 percentage points for attesting to completing one or more improvement activities specified by CMS using CEHRT.

(3) For the 2020 MIPS payment year, a bonus score of 10 percentage points for submitting data for the measures for the base score and the performance score generated solely from CEHRT as defined in § 414.1305 for 2019 and subsequent years.

(ii) For the 2021 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required 6 measures and any applicable bonus scores, not to exceed 100 points.

(A) A MIPS eligible clinician earns a score for each measure by reporting, as applicable: The numerator (of at least one) and denominator, or a yes/no statement, or an exclusion.

(B) A MIPS eligible clinician may earn a bonus score of 5 points each for two optional measures.

(iii) Beginning with the 2022 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required 8 measures, not to exceed 100 points.

(A) A MIPS eligible clinician earns a score for each measure by reporting, as applicable: The numerator (of at least one) and denominator, or a yes/no statement, or an exclusion.

(B) [Reserved]

(c) *Final score calculation.* Each MIPS eligible clinician receives a final score of 0 to 100 points for a performance period for a MIPS payment year calculated as follows. If a MIPS eligible clinician is scored on fewer than 2 performance categories, he or she receives a final score equal to the performance threshold.

For the 2019 MIPS payment year:

Final score = [(quality performance category percent score × quality performance category weight) + (cost performance category percent score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)], not to exceed 100 points.

For the 2020 MIPS payment year:

Final score = [(quality performance category percent score × quality performance category weight) + (cost performance category percent score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + [the complex patient bonus + the small practice bonus], not to exceed 100 points.

Beginning with the 2021 MIPS payment year:

Final score = [(quality performance category percent score × quality performance category weight) + (cost performance category percent score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + the complex patient bonus, not to exceed 100 points.

(1) *Performance category weights.* The weights of the performance categories in the final score are as follows, unless a different scoring weight is assigned under paragraph (c)(2) of this section:

- (i) Quality performance category weight is defined under § 414.1330(b).
- (ii) Cost performance category weight is defined under § 414.1350(d).
- (iii) Improvement activities performance category weight is defined under § 414.1355(b).
- (iv) Promoting Interoperability performance category weight is defined under § 414.1375(a).

(2) *Reweight the performance categories.* (i) In accordance with paragraph (c)(2)(ii) of this section, a scoring weight different from the weights specified in paragraph (c)(1) of this section will be assigned to a

performance category, and its weight as specified in paragraph (c)(1) of this section will be redistributed to another performance category or categories, in the following circumstances:

(A) CMS determines based on the following circumstances that there are not sufficient measures and activities applicable and available under section 1848(q)(5)(F) of the Act.

(1) For the quality performance category, CMS cannot calculate a score for the MIPS eligible clinician because there is not at least one quality measure applicable and available to the clinician.

(2) For the cost performance category, CMS cannot reliably calculate a score for the cost measures that adequately captures and reflects the performance of the MIPS eligible clinician.

(3) Beginning with the 2021 MIPS payment year, for the quality, cost, improvement activities, and Promoting Interoperability performance categories, the MIPS eligible clinician joins an existing practice during the final 3 months of the performance period year that is not participating in MIPS as a group or joins a practice that is newly formed during the final 3 months of the performance period year.

(4) For the Promoting Interoperability performance category beginning with the 2021 MIPS payment year, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical social worker, or clinical psychologist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in

paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(5) For the Promoting Interoperability performance category for the 2019, 2020, and 2021 MIPS payment years, the MIPS eligible clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(6) Beginning with the 2020 MIPS payment year, for the quality, cost, and improvement activities performance categories, the MIPS eligible clinician demonstrates through an application submitted to CMS that they were subject to extreme and uncontrollable circumstances that prevented the clinician from collecting information that the clinician would submit for a performance category or submitting information that would be used to score a performance category for an extended period of time. Beginning with the 2021 MIPS payment year, in the event that a MIPS eligible clinician submits data for the quality, cost, or improvement activities performance categories, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(7) For the 2019 MIPS payment year, for the quality and improvement activities performance categories, the MIPS eligible clinician was located in an area affected by extreme and uncontrollable circumstances as identified by CMS. In the event that a MIPS eligible clinician submits data for a performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(8) Beginning with the 2020 MIPS payment year, for the quality, cost, and improvement activities performance categories, the MIPS eligible clinician

was located in an area affected by extreme and uncontrollable circumstances as identified by CMS. In the event that a MIPS eligible clinician submits data for the quality or improvement activities performance categories, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(B) Under section 1848(q)(5)(E)(ii) of the Act, CMS estimates that the proportion of MIPS eligible clinicians who are physicians as defined in section 1861(r) of the Act and earn a Promoting Interoperability performance category score of at least 75 percent is 75 percent or greater. The estimation is based on data from the performance period that occurs four years before the MIPS payment year and does not include physicians for whom the Promoting Interoperability performance category is weighted at zero percent.

(C) Under section 1848(o)(2)(D) of the Act, a significant hardship exception or other type of exception is granted to a MIPS eligible clinician based on the following circumstances for the Promoting Interoperability performance category. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(1) The MIPS eligible clinician demonstrates through an application submitted to CMS that they lacked sufficient internet access during the performance period, and insurmountable barriers prevented the clinician from obtaining sufficient internet access.

(2) The MIPS eligible clinician demonstrates through an application submitted to CMS that they were subject to extreme and uncontrollable circumstances that caused their CEHRT to be unavailable.

(3) The MIPS eligible clinician was located in an area affected by extreme

and uncontrollable circumstances as identified by CMS.

(4) The MIPS eligible clinician demonstrates through an application submitted to CMS that 50 percent or more of their outpatient encounters occurred in practice locations where they had no control over the availability of CEHRT.

(5) The MIPS eligible clinician is a non-patient facing MIPS eligible clinician as defined in § 414.1305.

(6) The MIPS eligible clinician is a hospital-based MIPS eligible clinician as defined in § 414.1305.

(7) The MIPS eligible clinician is an ASC-based MIPS eligible clinician as defined in § 414.1305.

(8) Beginning with the 2020 MIPS payment year, the MIPS eligible clinician demonstrates through an application submitted to CMS that their CEHRT was decertified either during the performance period for the MIPS payment year or during the calendar year preceding the performance period for the MIPS payment year, and the MIPS eligible clinician made a good faith effort to adopt and implement another CEHRT in advance of the performance period. In no case may a MIPS eligible clinician be granted this exception for more than 5 years.

(9) Beginning with the 2020 MIPS payment year, the MIPS eligible clinician demonstrates through an application submitted to CMS that they are in a small practice as defined in § 414.1305, and overwhelming barriers prevent them from complying with the requirements for the Promoting Interoperability performance category.

(ii) A scoring weight different from the weights specified in paragraph (c)(1) of this section will be assigned to a performance category, and its weight as specified in paragraph (c)(1) of this section will be redistributed to another performance category or categories, as follows:

(A) For the 2019 MIPS payment year:

Performance category	Weighting for the 2019 MIPS payment year (%)	Reweight scenario if no promoting interoperability performance category score (%)	Reweight scenario if no quality performance category percent score (%)	Reweight scenario if no improvement activities performance category score (%)
Quality	60	85	0	75
Cost	0	0	0	0
Improvement Activities	15	15	50	0
Promoting Interoperability	25	0	50	25

(B) For the 2020 MIPS payment year:

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
—Scores for all four performance categories	50	10	15	25
Reweight One Performance Category:				
—No Cost	60	0	15	25
—No Promoting Interoperability	75	10	15	0
—No Quality	0	10	45	45
—No Improvement Activities	65	10	0	25
Reweight Two Performance Categories:				
—No Cost and no Promoting Interoperability	85	0	15	0
—No Cost and no Quality	0	0	50	50
—No Cost and no Improvement Activities	75	0	0	25
—No Promoting Interoperability and no Quality	0	10	90	0
—No Promoting Interoperability and no Improvement Activities	90	10	0	0
—No Quality and no Improvement Activities	0	10	0	90

(C) For the 2021 MIPS payment year:

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed:				
—Scores for all four performance categories	45	15	15	25
Reweight One Performance Category:				
—No Cost	60	0	15	25
—No Promoting Interoperability	70	15	15	0
—No Quality	0	15	40	45
—No Improvement Activities	60	15	0	25
Reweight Two Performance Categories:				
—No Cost and no Promoting Interoperability	85	0	15	0
—No Cost and no Quality	0	0	50	50
—No Cost and no Improvement Activities	75	0	0	25
—No Promoting Interoperability and no Quality	0	15	85	0
—No Promoting Interoperability and no Improvement Activities	85	15	0	0
—No Quality and no Improvement Activities	0	15	0	85

(iii) For MIPS eligible clinicians submitting data as a group or virtual group, in order for the Promoting Interoperability performance category to be reweighted in accordance with paragraph (c)(2)(ii) of this section, all of the MIPS eligible clinicians in the group must qualify for reweighting based on the circumstances described in paragraph (c)(2)(i) of this section.

(3) *Complex patient bonus.* For the 2020 and 2021 MIPS payment years, provided that a MIPS eligible clinician, group, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as follows:

(i) For MIPS eligible clinicians and groups, the complex patient bonus is calculated as follows: [The average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by

clinicians in a group] + [the dual eligible ratio × 5].

(ii) For APM entities and virtual groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively, × 5].

(iii) The complex patient bonus cannot exceed 5.0.

(4) *Small practice bonus.* A small practice bonus of 5 points will be added to the final score for the 2020 MIPS payment year for MIPS eligible clinicians, groups, virtual groups, and APM Entities that meet the definition of a small practice as defined at § 414.1305 and participate in MIPS by submitting data on at least one performance

category in the 2018 MIPS performance period.

(d) *Scoring for APM Entities.* MIPS eligible clinicians in APM Entities that are subject to the APM scoring standard are scored using the methodology under § 414.1370.

(e) *Scoring for facility-based measurement.* For the payment in 2021 MIPS payment year and subsequent years and subject to paragraph (e)(6)(vi) of this section, a MIPS eligible clinician or group may be scored under the quality and cost performance categories using facility-based measures under the methodology described in this paragraph (e).

(1) *General.* The facility-based measurement scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified as meeting the requirements in paragraph (e)(2) of this section.

(i) The measures for facility-based measurement consist of the measure set finalized for the fiscal year VBP program for which payment begins during the applicable MIPS performance period.

(ii) Beginning with the 2021 MIPS payment year, the scoring methodology

applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program, for the fiscal year for which payment begins during the applicable MIPS performance period.

(2) *Eligibility for facility-based measurement.* MIPS eligible clinicians are eligible for facility-based measurement for a MIPS payment year if they are determined to be facility-based as an individual clinician or as part of a group, as follows:

(i) *Facility-based individual determination.* A MIPS eligible clinician is facility-based if the clinician meets all of the following criteria:

(A) Furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, or emergency room setting based on claims for a 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the performance period with a 30-day claims run out.

(B) Furnishes at least 1 covered professional service in sites of service identified by the place of service codes used in the HIPAA standard transaction as an inpatient hospital, or emergency room setting.

(C) Can be attributed, under the methodology specified in paragraph (e)(5) of this section, to a facility with a VBP score for the applicable period.

(ii) *Facility-based group determination.* A facility-based group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements under paragraph (e)(2)(i) of this section.

(3) [Reserved]

(4) *Data submission for facility-based measurement.* There are no data submission requirements for individual clinicians scored under facility-based measurement. A group must submit data in the improvement activities or Promoting Interoperability performance categories in order to be scored as a facility-based group.

(5) *Determination of applicable facility score.* (i) A facility-based clinician is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the clinician provided services to the most Medicare beneficiaries during the year the claims are drawn from in paragraph (e)(2) of this section. If there is an equal number of Medicare beneficiaries treated at

more than one facility, the value-based purchasing score for the highest scoring facility is used.

(ii) A facility-based group is scored with facility-based measurement using the score derived from the value-based purchasing score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under paragraph (e)(5)(i) of this section.

(6) *MIPS performance category scoring under the facility-based measurement scoring standard—(i) Measures.* The quality and cost measures are those adopted under the value-based purchasing program of the facility for the year described in paragraph (e)(1)(i) of this section.

(ii) *Benchmarks.* The benchmarks are those adopted under the value-based purchasing program of the facility for the year described in paragraph (e)(1)(i) of this section.

(iii) *Performance period.* The performance period for facility-based measurement is the performance period for the measures adopted under the value-based purchasing program of the facility for the year described in paragraph (e)(1)(i) of this section.

(iv) *Quality.* The quality performance category percent score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1)(i) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category percent score for those MIPS-eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. This score will not include a consideration of improvement in the MIPS quality performance category score.

(v) *Cost.* The cost performance category percent score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1)(i) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category percent score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. This score will not include a consideration of improvement in cost measures.

(A) *Other cost measures.* MIPS eligible clinicians who are scored under facility-based measurement are not scored on cost measures described in paragraph (b)(2) of this section.

(B) [Reserved]

(vi) *Use of score from facility-based measurement.* The MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology described in paragraph (e)(6) of this section unless a clinician or group receive a higher combined MIPS quality and cost performance category scores through another MIPS submission.

■ 36. Section 414.1395 is amended by revising paragraphs (b) and (c) to read as follows:

§ 414.1395 Public reporting.

* * * * *

(b) *Maintain existing public reporting standards.* With the exception of data that must be mandatorily reported on Physician Compare, for each program year, CMS relies on established public reporting standards to guide the information available for inclusion on Physician Compare. The public reporting standards require data included on Physician Compare to be statistically valid, reliable, and accurate; comparable across collection types; and meet the reliability threshold. And, to be included on the public facing profile pages, the data must also resonate with website users, as determined by CMS.

(c) *First year measures.* For each program year, CMS does not publicly report any first year measure for the first 2 years, meaning any measure in its first 2 years of use in the quality and cost performance categories. After the first 2 years, CMS reevaluates measures to determine when and if they are suitable for public reporting.

* * * * *

■ 37. Section 414.1400 is revised to read as follows:

§ 414.1400 Third party intermediaries.

(a) *General.* (1) MIPS data may be submitted on behalf of a MIPS eligible clinician, group, or virtual group by any of the following third party intermediaries:

- (i) A QCDR;
- (ii) A qualified registry;
- (iii) A health IT vendor; or
- (iv) A CMS-approved survey vendor.

(2) QCDRs, qualified registries, and health IT vendors may submit MIPS data for any of the following MIPS performance categories:

- (i) Quality, except for data on the CAHPS for MIPS survey;
- (ii) Improvement activities; or
- (iii) Promoting Interoperability, if the MIPS eligible clinician, group, or virtual group is using CEHRT.

(3) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category.

(4) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(i) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(ii) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(iii) All data must be submitted in the form and manner specified by CMS.

(5) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group or virtual group must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(b) *QCDR approval criteria*—(1) *QCDR self-nomination*. For the 2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the 2022 MIPS payment year and future years, entities seeking to qualify as a QCDR must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2021 MIPS payment year and future years, existing QCDRs that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

(2) *Establishment of a QCDR entity*. (i) Beginning with the 2022 MIPS Payment Year, the QCDR must have at least 25 participants by January 1 of the year prior to the applicable performance period.

(ii) If the entity uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

(3) *QCDR measures for the quality performance category*. (i) For purposes

of QCDRs submitting data for the MIPS quality performance category, CMS considers the following types of quality measures to be QCDR measures:

(A) Measures that are not included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year; and

(B) Measures that are included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year, but have undergone substantive changes, as determined by CMS.

(ii) For the 2020 MIPS payment year and future years, an entity seeking to become a QCDR must submit specifications for each measure, activity, and objective that the entity intends to submit to for MIPS (including the information described in paragraphs (b)(3)(ii)(A) and (B) of this section) at the time of self-nomination. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for each QCDR measure (including the CMS-assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

(A) For QCDR measures, the entity must submit the measure specifications for each QCDR measure, including: Name/title of measures, NQF number (if NQF-endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms.

(B) For MIPS quality measures, the entity must submit the MIPS measure IDs and specialty-specific measure sets, as applicable.

(C) Beginning with the 2021 MIPS payment year, as a condition of a QCDR measure's approval for purposes of MIPS, the QCDR measure owner would be required to agree to enter into a license agreement with CMS permitting any approved QCDR to submit data on the QCDR measure (without modification) for purposes of MIPS and each applicable MIPS payment year.

(iii) A QCDR must include the CMS-assigned QCDR measure ID when submitting data on any QCDR measure to CMS.

(c) *Qualified registry approval criteria*—(1) *Qualified registry self-nomination*. For the 2020 and 2021 MIPS payment years, entities seeking to qualify as a qualified registry must self-nominate from September 1 until November 1 of the CY preceding the applicable performance period. For the 2022 MIPS payment year and future years, entities seeking to qualify as a

qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2021 MIPS payment year and future years, existing qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

(2) *Establishment of a qualified registry entity*. Beginning with the 2022 MIPS Payment Year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period.

(d) *Health IT vendor approval criteria*. Health IT vendors must meet the criteria specified at § 414.1400(a)(4).

(e) *CMS-approved survey vendor approval criteria*. Entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. For an entity to be a CMS-approved survey vendor, it must meet the following criteria:

(1) The entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

(i) At least 3 years of experience administering mixed-mode surveys (that is, surveys that employ multiple modes to collect data), including mail survey administration followed by survey administration via Computer Assisted Telephone Interview (CATI);

(ii) At least 3 years of experience administering surveys to a Medicare population;

(iii) At least 3 years of experience administering CAHPS surveys within the past 5 years;

(iv) Experience administering surveys in English and one of the following languages: Cantonese, Korean, Mandarin, Russian, or Vietnamese;

(v) Use equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers,

collect data via CATI, electronically administer the survey and schedule callbacks to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

(vi) Employ a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

(2) The entity has certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data.

(3) The entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors.

(4) The entity has submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts.

(5) The entity has agreed to participate and cooperate, and has required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors.

(6) The entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(f) *Remedial action and termination of third party intermediaries.* (1) If CMS determines that a third party intermediary (that is, a QCDR, health IT vendor, qualified registry, or CMS approved survey vendor) has ceased to meet one or more of the applicable criteria for approval, or has submitted data that is inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i) Require the third party intermediary to submit a corrective action plan (CAP) to CMS to address the identified deficiencies or data issue, including the actions it will take to prevent the deficiencies or data issues from recurring. The CAP must be submitted to CMS by a date specified by CMS.

(ii) If the third party intermediary has a data error rate of 3 percent or more, publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(2) CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible

clinician, group, or virtual group for one or more of the following reasons:

(i) CMS has grounds to impose remedial action;

(ii) CMS has not received a CAP within the specified time period or the CAP is not accepted by CMS; and

(iii) The third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

(3) For purposes of paragraph (e) of this section, CMS may determine that submitted data is inaccurate, unusable, or otherwise compromised if the submitted data:

(i) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies; and

(ii) Affects more than three percent (but less than five percent) of the total number of MIPS eligible clinicians or group for which data was submitted by the third party intermediary.

■ 38. Section 414.1405 is amended by—

■ a. Adding paragraphs (b)(6) and (d)(5);

■ b. Revising paragraph (e) and;

■ c. Adding paragraphs (f) and (g).

The additions and revision read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(6) The performance threshold for the 2021 MIPS payment year is 30 points.

* * * * *

(d) * * *

(5) The additional performance threshold for the 2021 MIPS payment year is 80 points.

(e) *Application of adjustments to payments.* Except as specified in paragraph (f) of this section, in the case of covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by a MIPS eligible clinician during a MIPS payment year beginning with 2019, the amount otherwise paid under Part B with respect to such covered professional services and MIPS eligible clinician for such year, is multiplied by 1, plus the sum of the MIPS payment adjustment factor divided by 100, and as applicable, the additional MIPS payment adjustment factor divided by 100.

(f) *Exception to application of MIPS payment adjustment factors to model-specific payments under Section 1115A APMs.* The payment adjustment factors specified under paragraph (e) of this section are not applicable to payments:

(1) Made only to participants in a model tested under section 1115A of the Act;

(2) That would otherwise be subject to the requirement to apply the MIPS payment adjustment factors if the

payment is made with respect to a MIPS eligible clinician to participating in a section 1115A model; and

(3) Are model-specific payments that have a specified payment amount; or use a methodology for calculating a model-specific payment that is paid in a consistent manner to participants to which application of the MIPS payment adjustment factors would potentially interfere with CMS's ability to effectively evaluate the impact of the APM.

■ 39. Section 414.1415 is amended by revising paragraphs (a)(1)(i), (b)(1) through (3), (c) introductory text, (c)(3)(i)(A), and (c)(6) to read as follows:

§ 414.1415 Advanced APM criteria.

(a) * * *

(1) * * *

(i) Require at least 50 percent, or for QP Performance Periods beginning in 2019, 75 percent of eligible clinicians in each participating APM Entity group, or for APMs in which hospitals are the APM Entities, each hospital, to use CEHRT to document and communicate clinical care to their patients or health care providers; or

* * * * *

(b) * * *

(1) To be an Advanced APM, an APM must include quality measure performance as a factor when determining payment to participants for covered professional services under the terms of the APM.

(2) At least one of the quality measures used in the payment arrangement as specified in paragraph (c)(1) of this section must:

(i) For QP Performance Periods before January 1, 2020, have an evidence-based focus, be reliable and valid, and meet at least one of the following criteria:

(A) Used in the MIPS quality performance category, as described in § 414.1330;

(B) Endorsed by a consensus-based entity;

(C) Developed under section 1848(s) of the Act;

(D) Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or

(E) Any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid; and

(ii) For QP Performance Periods beginning on or after January 1, 2020, be:

(A) Finalized on the MIPS final list of measures, as described in § 414.1330;

(B) Endorsed by a consensus-based entity; or

(C) Determined by CMS to be evidenced-based, reliable, and valid.

(3) In addition to the quality measure described under paragraph (b)(2) of this section, the quality measures upon which an Advanced APM bases the payment in paragraph (b)(1) of this section must include at least one additional measure that is an outcome measure unless CMS determines that there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM's first QP Performance Period. Beginning January 1, 2020, the included outcome measure must satisfy the criteria in paragraph (b)(2) of this section.

(c) *Financial risk.* To be an Advanced APM, except as described in paragraph (c)(6) of this section, an APM must either meet the financial risk standard under paragraph (c)(1) or (2) of this section and the nominal amount standard under paragraph (c)(3) or (4) of this section or be an expanded Medical Home Model under section 1115A(c) of the Act.

* * * * *

(3) * * *

(i) * * *

(A) For QP Performance Periods beginning in 2017, through 2024, 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities; or

* * * * *

(6) *Capitation.* A full capitation arrangement meets this Advanced APM criterion. For purposes of this part, a full capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement is performed to reconcile or share losses incurred or savings earned by the APM Entity. Arrangements between CMS and Medicare Advantage Organizations under the Medicare Advantage program (42 U.S.C. 422) are not considered capitation arrangements for purposes of this paragraph (c)(6).

* * * * *

■ 40. Section 414.1420 is amended by revising paragraphs (b), (c)(2) and (3), (d) introductory text, (d)(3)(i), and (d)(7) to read as follows:

§ 414.1420 Other payer advanced APM criteria.

* * * * *

(b) *Use of CEHRT.* To be an Other Payer Advanced APM, CEHRT must be used by at least 50 percent, or for QP Performance Periods on or after January 1, 2020, 75 percent of participants in

each participating APM Entity group, or each hospital if hospitals are the APM Entities, in the other payer arrangement to document and communicate clinical care.

(c) * * *

(2) At least one of the quality measures used in the payment arrangement as specified in paragraph (c)(1) of this section must:

(i) For QP Performance Period before January 1, 2020, have an evidence-based focus, be reliable and valid, and meet at least one of the following criteria:

(A) Used in the MIPS quality performance category, as described in § 414.1330;

(B) Endorsed by a consensus-based entity;

(C) Developed under section 1848(s) of the Act;

(D) Submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act; or

(E) Any other quality measures that CMS determines to have an evidence-based focus and to be reliable and valid; and

(ii) For QP Performance Periods beginning on or after January 1, 2020, be:

(A) Finalized on the MIPS final list of measures, as described in § 414.1330;

(B) Endorsed by a consensus-based entity; or

(C) Determined by CMS to be evidenced-based, reliable, and valid.

(3) To meet the quality measure use criterion under paragraph (c)(1) of this section, a payment arrangement must:

(i) For QP Performance Periods before January 1, 2020, use an outcome measure if there is an applicable outcome measure on the MIPS quality measure list. This criterion also applies for payment arrangements determined to be Other Payer Advanced APMs on or before January 1, 2020, but only for the Other Payer Advanced APM determination made with respect to the arrangement for the CY 2020 QP Performance Period (regardless of whether that determination is a single- or multi-year determination).

(ii) For QP Performance Periods on or after January 1, 2020, in addition to the quality measure described under paragraph (c)(2) of this section, use at least one additional measure that is an outcome measure and meets the criteria in paragraph (c)(2)(ii) of this section if there is such an applicable outcome measure on the MIPS quality measure list.

(d) *Financial risk.* To be an Other Payer Advanced APM, except as described in paragraph (d)(7) of this section, a payment arrangement must meet either the financial risk standard

under paragraph (d)(1) or (2) of this section and the nominal amount standard under paragraph (d)(3) or (4) of this section, or be a Medicaid Medical Home Model with criteria comparable to an expanded Medical Home Model under section 1115A(c) of the Act.

* * * * *

(3) * * *

(i) For QP Performance Periods 2019 through 2024, 8 percent of the total combined revenues from the payer to providers and other entities under the payment arrangement if financial risk is expressly defined in terms of revenue; or, 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement.

* * * * *

(7) *Capitation.* A full capitation arrangement meets this Other Payer Advanced APM criterion. For purposes of paragraph (d)(3) of this section, a full capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the payment arrangement to a population of beneficiaries during a fixed period of time, and no settlement is performed for the purpose of reconciling or sharing losses incurred or savings earned by the participant. Arrangements made directly between CMS and Medicare Advantage Organizations under the Medicare Advantage program (42 U.S.C. 422) are not considered capitation arrangements for purposes of this paragraph (c)(7).

* * * * *

■ 41. Section 414.1440 is amended by revising paragraphs (d)(1) through (3) to read as follows:

§ 414.1440 Qualifying APM participant determination: All-payer combination option.

* * * * *

(d) * * *

(1) CMS performs QP determinations following the QP Performance Period using payment amount and/or patient count information submitted from January 1 through each of the respective QP determination dates: March 31, June 30, and August 31. CMS will use data for the same time periods for the Medicare and other payer portions of Threshold Score calculations under the All-Payer Combination Option. CMS will use the payment amount or patient count method, applying the more advantageous of the two for both the Medicare and other payer portions of the Threshold score calculation, regardless of the method used for the Medicare Threshold Score calculation.

(2) An APM Entity may request that CMS make QP determinations at the APM Entity level, an eligible clinician may request that CMS make QP determinations at the eligible clinician level, and an eligible clinician or an APM Entity may request that CMS makes QP determinations at the TIN-level in instances where all clinicians who reassigned billing rights to the TIN are participating in a single APM Entity. CMS makes QP determinations at either the APM Entity, eligible clinician, or TIN level. Eligible clinicians assessed at the eligible clinician level under the Medicare Option at § 414.1425(b)(2) will be assessed at the eligible clinician level only under the All-Payer Combination Option. Eligible Clinicians may meet the Medicare and the All-Payer Combination Option thresholds using the payment amount method for both thresholds, the patient account method for both thresholds, or the payment amount method for one threshold and the patient account method for the other threshold.

(3) CMS uses data at the same level for the Medicare and other payer portions of Threshold Score calculations under the All-Payer Combination Option. When QP determinations are made at the eligible clinician or, at the TIN level when all clinicians who have reassigned billing rights to the TIN are included in a single APM Entity; and if the Medicare Threshold score for the APM Entity group is higher than when calculated for the eligible clinician or TIN, CMS makes QP determinations using a weighted Medicare Threshold Score that is factored into an All-Payer Combination Option Threshold Score.

■ 42. Section 414.1445 is amended by revising paragraph (b)(1) and adding paragraphs (c)(2)(i) and (ii) to read as follows:

§ 414.1445 Determination of other payer advanced APMs.

* * * * *

(b) * * *

(1) Payer initiated Other Payer Advanced APM determination process. Beginning in 2018, and each year thereafter, at a time determined by CMS a payer with a Medicare Health Plan payment arrangement may request, in a form and manner specified by CMS, that CMS determine whether a Medicare Health Plan payment arrangement meets the Other Payer Advanced APM criteria set forth in § 414.1420. A payer with a Medicare Health Plan payment arrangement must submit its requests by the annual Medicare Advantage bid

deadline of the year prior to the relevant QP Performance Period.

* * * * *

(c) * * *

(2) * * *

(i) Based on the submission by an eligible clinician or payer of evidence that CMS determines sufficiently demonstrates that CEHRT is used as specified in § 414.1420(b) by participants in the payment arrangement, CMS will consider the CEHRT criterion in § 414.1420(b) is satisfied for that payment arrangement.

(ii) [Reserved]

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 43. The authority citation for part 415 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 44. Section 415.172 is amended by revising paragraph (b) to read as follows:

§ 415.172 Physician fee schedule payment for services of teaching physicians.

* * * * *

(b) Documentation. Except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document the teaching physician was present at the time the service is furnished. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by a physician, resident, or nurse.

* * * * *

■ 45. Section 415.174 is amended—

- a. In paragraph (a)(3)(iii) by adding “and” at the end of the paragraph;
■ b. In paragraph (a)(3)(iv) by removing “; and” and adding a period in its place;
■ c. By removing paragraph (a)(3)(v); and
■ d. By adding paragraph (a)(6).
The addition reads as follows:

§ 415.174 Exception: Evaluation and management services furnished in certain centers.

(a) * * *

(6) The medical records must document the extent of the teaching physician’s participation in the review and direction of services furnished to

each beneficiary. The extent of the teaching physician’s participation may be demonstrated by the notes in the medical records made by a physician, resident, or nurse.

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 46. The authority citation for part 495 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 47. Section 495.4 is amended in the definition of “EHR reporting period” by adding reserved paragraph (1)(iv) and adding paragraph (1)(v) to read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period. * * *

(1) * * *

(iv) [Reserved]

(v) Under the Medicaid Promoting Interoperability Program, for the CY 2021 payment year:

(A) For the EP first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within CY 2021 that ends before October 31, 2021, or that ends before an earlier date in CY 2021 that is specified by the state and approved by CMS in the State Medicaid HIT plan described at § 495.332.

(B) For the EP who has successfully demonstrated he or she is a meaningful EHR user in any prior year, any continuous 90-day period within CY 2021 that ends before October 31, 2021, or that ends before an earlier date in CY 2021 that is specified by the state and approved by CMS in the State Medicaid HIT plan described at § 495.332.

* * * * *

■ 48. Section 495.24 is amended by revising paragraphs (d)(6)(i)(B) and (d)(8)(i)(B)(2), to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

(d) * * *

(6) * * *

(i) * * *

(B) Measures. In accordance with paragraph (a)(2) of this section, an EP must satisfy 2 out of the 3 following measures in paragraphs (d)(6)(i)(B)(1) through (3) of this section except those measures for which an EP qualifies for an exclusion under paragraph (a)(3) of this section.

(1) During the EHR reporting period, more than 5 percent of all unique

patients (or their authorized representatives) seen by the EP actively engage with the electronic health record made accessible by the provider and do either of the following:

- (i) View, download or transmit to a third party their health information;
- (ii) Access their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the provider's CEHRT; or

(iii) A combination of paragraphs (d)(6)(i)(B)(1)(i) and (ii) of this section.

(2) A secure message was sent using the electronic messaging function of CEHRT to the patient (or their authorized representatives), or in response to a secure message sent by the patient, for more than 5 percent of all unique patients seen by the EP during the EHR reporting period.

(3) Patient generated health data or data from a nonclinical setting is incorporated into the CEHRT for more than 5 percent of all unique patients seen by the EP during the EHR reporting period.

* * * * *

(8) * * *

(i) * * *

(B) * * *

(2) *Syndromic surveillance reporting.*

The EP is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting, or from any other setting from which ambulatory syndromic surveillance data are collected by the state or a local public health agency.

* * * * *

■ 49. Section 495.332 is amended by adding paragraphs (f)(3), (4), and (5) to read as follows:

§ 495.332 State Medicaid health information technology (HIT) plan requirements.

* * * * *

(f) * * *

(3) An alternative date within CY 2021 by which all "EHR reporting periods" (as defined under § 495.4) for the CY 2021 payment year for Medicaid EPs demonstrating they are meaningful EHR users must end. The alternative date selected by the state must be earlier than October 31, 2021, and must not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state.

(4) An alternative date within CY 2021 by which all clinical quality measure reporting periods for the CY 2021 payment year for Medicaid EPs demonstrating they are meaningful EHR users must end. The alternative date selected by the state must be earlier than October 31, 2021, and must not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state.

(5) For the CY 2019 payment year and beyond, a state-specific listing of which clinical quality measures selected by CMS are considered to be high priority measures for purposes of Medicaid EP clinical quality measure reporting.

* * * * *

Dated: June 22, 2018.

Seema Verma,

Administrator, Centers for Medicare & Medicaid Services.

Dated: June 28, 2018.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

BILLING CODE 4120-01-P

APPENDIX 1: PROPOSED MIPS QUALITY MEASURES

NOTE: Except as otherwise proposed herein, previously finalized measures and specialty measure sets will continue to apply for the 2021 MIPS payment year and future years.

In this proposed rule, we are proposing to adopt 10 new quality measures into the MIPS Program for the 2021 MIPS payment year and future years. These measures are discussed in detail below.

TABLE Group A: Proposed New Quality Measures for Inclusion in MIPS for the 2021 MIPS Payment Year and Future Years

A.1. Continuity of Pharmacotherapy for Opioid Use Disorder

Category	Description
NOF #:	N/A
Quality #:	TBD
Description:	Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment
Measure Steward:	University of Southern California
Numerator:	Adults in the denominator who have at least 180 days of continuous pharmacotherapy with a medication prescribed for OUD without a gap of more than seven days.
Denominator:	Adults aged 18 years and older who had a diagnosis of OUD.
Exclusions:	Pharmacotherapy for OUD initiated after June 30th of performance period
Measure Type:	Process
Measure Domain:	Effective Clinical Care
High Priority Measure:	Yes (Appropriate Use and Opioid-Related)
Collection Type:	MIPS QMs Specifications
Rationale:	<p>We are proposing to adopt this measure because the opioid epidemic is immensely affecting the nation and it is imperative to measure opioid use. This clinical concept is currently not represented within MIPS. There are three existing opioid use related measures for MIPS but none cover the topic of pharmacotherapy. This measure captures patients diagnosed with opioid use disorder (OUD) who are receiving and adhering to the prescribed therapy. The performance data provided by the measure steward supports there is opportunity for improvement. Based on the measure steward research, only about a quarter to a third of individuals with commercial insurance or Medicaid coverage taking medication for OUD remained on the medication for at least 180 days without a gap of more than seven days. The MAP acknowledged the public health importance of measures that address opioid use disorder and noted the gap in this area. However, the MAP recognized that the current measure is specified and tested at the health plan and state level and recommended the measure be refined and resubmitted prior to rulemaking because the measure has not been tested or endorsed at the clinician or clinician group level. While we agree that the measure should be tested at the clinician level, we believe there is an urgent need for measures that address the opioid epidemic affecting the nation. We believe that the health plan level version of the measure can be adapted to the clinician level by revising the measure analytics to assess the proportion of patients with opioid use disorder that achieve continuity of pharmacotherapy aggregated at the clinician level.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.2. Average Change in Functional Status Following Lumbar Spine Fusion Surgery

Category	Description
NQF #:	2643
Quality #:	TBD
Description:	For patients age 18 and older undergoing lumbar spine fusion surgery, the average change from pre-operative functional status to one year (nine to fifteen months) post-operative functional status using the Oswestry Disability Index (ODI version 2.1a) patient reported outcome tool.
Measure Steward:	Minnesota Community Measurement
Numerator:	<p>The average change (preoperative to one year post-operative) in functional status for all patients in the denominator.</p> <p>There is not a traditional numerator for this measure; the measure calculating the average change in functional status score from pre-operative to post-operative functional status score. The measure is NOT aiming for a numerator target value for a post-operative ODI score.</p> <p>The average change is calculated as follows: Change is first calculated for each patient and then changed scores are summed and then an average is determined. Measure calculation takes into account those patients that have an improvement and those patients whose function decreases post-operatively. Example below:</p> <p>Patient Pre-op ODI :I Post-op ODI :I Change in ODI Patient A: I 47 :I 18 :I 29 Patient B: I 45 :I 52 :I -7 Patient C: I 56 :I 12 :I 44 Patient D: I 62 :I 25 :I 37 Patient E: I 42 :I 57 :I -15 Patient F: I 51 :I 10 :I 41 Patient G: I 62 :I 25 :I 37 Patient H: I 43 :I 20 :I 23 Patient I: I 74 :I 35 :I 39 Patient J: I 59 :I 23 :I 36 Average change in ODI one year post-op 26.4 points on a 100 point scale</p>
Denominator:	<p>Eligible Population: Patients with lumbar spine fusion procedures (Arthrodesis Value Set) occurring during a 12 month period for patients age 18 and older at the start of that period.</p> <p>Denominator: Patients within the eligible population whose functional status was measured by the Oswestry Disability Index, version 2.1a (ODI, v2.1a) within three months preoperatively AND at one year (+/- 3 months) postoperatively.</p> <p>*The measure of average change in function can only be calculated if both a pre-operative and post-operative PRO assessment are completed</p>
Exclusions:	<p>The following exclusions must be applied to the eligible population: Patient had cancer (Spine Cancer Value Set), fracture (Spine Fracture Value Set) or infection (Spine Infection Value Set) related to the spine. Patient had idiopathic or congenital scoliosis (Congenital Scoliosis Value Set)</p>
Measure Type:	Patient Reported Outcome
Measure Domain:	Person and Caregiver-Centered Experience and Outcomes
High Priority Measure:	Yes (Patient Reported Outcome)
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>We are proposing to adopt this measure because it measures an important patient reported outcome evaluating the functional status change from pre- to post-operative. Results of the measure can be used by clinicians in evaluating whether the patient's functional status has improved post-operatively. The MAP supported this measure for rulemaking and recognized that improvement in functional status is an important outcome to patients and was encouraged by the potential addition of more patient-reported outcome measures to the MIPS set.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.3. Average Change in Functional Status Following Total Knee Replacement Surgery

Category	Description
NQF #:	2653
Quality #:	TBD
Description:	For patients age 18 and older undergoing total knee replacement surgery, the average change from pre-operative functional status to one year (nine to fifteen months) post-operative functional status using the Oxford Knee Score (OKS) patient reported outcome tool.
Measure Steward:	Minnesota Community Measurement
Numerator:	<p>There is not a traditional numerator for this measure; the measure is calculating the average change in functional status score from pre-operative to post-operative functional status score. The measure is NOT aiming for a numerator target value for a post-operative OKS score.</p> <p>For example: The average change in knee function was an increase of 15.9 points one year post-operatively on a 48 point scale.</p> <p>The average change is calculated as follows: Change is first calculated for each patient and then changed scores are summed and then an average is determined. Measure calculation takes into account patients who have an improvement and patients whose function decreases post-operatively. Example below:</p> <p>Patient Pre-op OKS :I Postop OKS :I Change in OKS Patient A: I 33 :I 45 :I 12 Patient B: I 17 :I 39 :I 22 Patient C: I 16 :I 31 :I 15 Patient D: I 23 :I 40 :I 17 Patient E: I 34 :I 42 :I 8 Patient F: I 10 :I 42 :I 32 Patient G: I 14 :I 44 :I 30 Patient H: I 32 :I 44 :I 12 Patient I: I 19 :I 45 :I 26 Patient J: I 26 :I 19 :I -7 Patient K: I 24 :I 43 :I 19 Patient L: I 29 :I 34 :I 5 Patient M : I 23 :I 39 :I 16 Patient N: I 29 :I 45 :I 16 Patient O: I 29 :I 45 :I 16 Patient P: I 34 :I 41 :I 7 Patient Q: I 11 :I 14 :I 3 Patient R: I 13 :I 39 :I 26 Patient S: I 18 :I 45 :I 27 Average change in OKS one year post-op 15.9 points on a 48 point scale</p>
Denominator:	<p>Eligible Population: Patients with total knee replacement procedures (Primary TKR Value Set, Revision TKR Value Set) occurring during a 12 month period for patients age 18 and older at the start of that period.</p> <p>Denominator: Patients within the eligible population whose functional status was measured by the Oxford Knee Score within three months preoperatively AND at one year (+/- 3 months) postoperatively</p> <p>*The measure of average change in function can only be calculated if both a pre-operative and post-operative PRO assessment are completed</p>
Exclusions:	None
Measure Type:	Patient Reported Outcome
Measure Domain:	Person and Caregiver-Centered Experience and Outcomes
High Priority Measure:	Yes (Patient Reported Outcome)
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>We are proposing to adopt this measure because it measures an important patient reported outcome evaluating the functional status change from pre- to post-operative. Results can be used by clinicians in evaluating whether the patient's functional status has improved post-operatively. The MAP supported this measure for rulemaking and recognized that improvement in functional status is an important outcome to patients and was encouraged by the potential addition of more patient-reported outcome measures to the MIPS set.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.4. Average Change in Functional Status Following Lumbar Discectomy Laminotomy Surgery

Category	Description
NQF #:	Not Applicable (NA)
Quality #:	TBD
Description:	For patients age 18 and older undergoing lumbar discectomy laminotomy surgery, the average change from pre-operative functional status to three months (6 to 20 weeks) post-operative functional status using the Oswestry Disability Index (ODI version 2.1a) patient reported outcome tool.
Measure Steward:	Minnesota Community Measurement
Numerator:	<p>The average change (preoperative to three months post-operative) in functional status for all patients in the denominator.</p> <p>There is not a traditional numerator for this measure; the measure is calculating the average change in functional status score from pre-operative to post-operative functional status score. The measure is NOT aiming for a numerator target value for a post-operative ODI score.</p> <p>The average change is calculated as follows: Change is first calculated for each patient and then changed scores are summed and then an average is determined. Measure calculation takes into account those patients that have an improvement and those patients whose function decreases post-operatively. Example below:</p> <p>Patient Pre-op ODI :I Post-op ODI :I Change in ODI Patient A: I 47 :I 18 :I 29 Patient B: I 45 :I 52 :I -7 Patient C: I 56 :I 12 :I 44 Patient D: I 62 :I 25 :I 37 Patient E: I 42 :I 57 :I -15 Patient F: I 51 :I 10 :I 41 Patient G: I 62 :I 25 :I 37 Patient H: I 43 :I 20 :I 23 Patient I: I 74 :I 35 :I 39 Patient J: I 59 :I 23 :I 36 Average change in ODI three months post-op 26.4 points on a 100 point scale</p>
Denominator:	<p>Eligible Population: Patients with lumbar discectomy laminotomy procedure (Single Disc-Lami Value Set) for a diagnosis of disc herniation (Disc Herniation Value Set)) occurring during a 12 month period for patients age 18 and older at the start of that period.</p> <p>Denominator: Patients within the eligible population whose functional status was measured by the Oswestry Disability Index, version 2.1a (ODI, v2.1a) within three months preoperatively AND at three months (6 to 20 weeks) postoperatively.</p> <p>*The measure of average change in function can only be calculated if both a pre-operative and post-operative PRO assessment are completed</p>
Exclusions:	The following exclusions must be applied to the eligible population: Patient had any additional spine procedures performed on the same date as the lumbar discectomy laminotomy.
Measure Type:	Patient Reported Outcome
Measure Domain:	Person and Caregiver-Centered Experience and Outcomes
High Priority Measure:	Yes (Patient Reported Outcome)
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>We are proposing to adopt this measure because it measures an important patient reported outcome evaluating the functional status change from pre- to post-operative. The results of the measure can be used by clinicians in evaluating whether the patient's functional status has improved post-operatively. The MAP conditionally supported this measure pending NQF endorsement. While we agree with MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure is evidence-based and is an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.5. Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
NQF #:	Not Applicable (NA)
Quality #:	TBD
Description:	Percentage of female patients aged 50 to 64 without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Female patients who received an order for at least one DXA scan in the measurement period.
Denominator:	Female patients ages 50 to 64 years with an encounter during the measurement period.
Exclusions:	<p>Exclude from the denominator patients with a combination of risk factors (as determined by age) or one of the independent risk factors:</p> <ul style="list-style-type: none"> • Ages: 50-54 (>=4 combo risk factors) or 1 independent risk factor • Ages: 55-59 (>=3 combo risk factors) or 1 independent risk factor • Ages: 60-64 (>=2 combo risk factors) or 1 independent risk factor <p>Combination risk factors (The following risk factors are all combination risk factors; they are grouped by when they occur in relation to the measurement period):</p> <p>The following risk factors may occur any time in the patient's history but must be active during the measurement period:</p> <ul style="list-style-type: none"> • White (race) • BMI <= 20 kg/m2 (must be the first BMI of the measurement period) • Smoker (current during the measurement period) • Alcohol consumption (> two units per day (one unit is 12 oz. of beer, 4 oz. of wine, or 1 oz. of liquor)) <p>The following risk factor may occur any time in the patient's history and must not start during the measurement period:</p> <ul style="list-style-type: none"> • Osteopenia <p>The following risk factors may occur at any time in the patient's history or during the measurement period:</p> <ul style="list-style-type: none"> • Rheumatoid arthritis • Hyperthyroidism • Malabsorption syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption • Chronic liver disease • Chronic malnutrition <p>The following risk factors may occur any time in the patient's history and do not need to be active at the start of the measurement period:</p> <ul style="list-style-type: none"> • Documentation of history of hip fracture in parent • Osteoporotic fracture • Glucocorticoids (>= 5 mg/per day) [cumulative medication duration >= 90 days] <p>Independent risk factors (The following risk factors are all independent risk factors; they are grouped by when they occur in relation to the measurement period):</p> <p>The following risk factors may occur at any time in the patient's history and must not start during the measurement period:</p> <ul style="list-style-type: none"> • Osteoporosis <p>The following risk factors may occur at any time in the patient's history prior to the start of the measurement period, but do not need to be active during the measurement period:</p> <ul style="list-style-type: none"> • Gastric bypass • FRAX[R] 10-year probability of all major osteoporosis related fracture >= 9.3 percent • Aromatase inhibitors <p>The following risk factors may occur at any time in the patient's history or during the measurement period:</p> <ul style="list-style-type: none"> • Type I diabetes • End stage renal disease • Osteogenesis imperfecta • Ankylosing spondylitis • Psoriatic arthritis • Ehlers-Danlos syndrome • Cushings syndrome • Hyperparathyroidism • Marfan's syndrome • Lupus
Measure Type:	Process
Measure Domain:	Efficiency and Cost Reduction
High Priority	Yes (Appropriate Use)

Category	Description
measure:	
Collection Type:	eCQM Specifications
Rationale:	<p>We are proposing to adopt this measure because it will serve as a counterbalance to the existing measure of appropriate use (that is, Screening for Osteoporosis for Women Aged 65-85 Years of Age (Quality ID #039)). This measure addresses the inappropriate use of DXA scans for women age 50 – 64 years without risk factors for osteoporosis. The MAP recognized the need for early detection of osteoporosis but reiterated the importance of appropriate use of this screening technique and noted this measure could be complementary to the existing osteoporosis screening measure (Quality ID #039). The MAP recognized the potential need for a balancing measure to prevent the potential underuse of DXA scans. The MAP conditionally supported this measure pending NQF endorsement. While we agree with MAP that NQF endorsement of measures is preferred, it is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure is evidence-based and is an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.6. Average Change in Leg Pain Following Lumbar Spine Fusion Surgery

Category	Description
NQF #:	Not Applicable (NA)
Quality #:	TBD
Description:	For patients age 18 and older undergoing lumbar spine fusion surgery, the average change from pre-operative leg pain to one year (nine to fifteen months) post-operative leg pain using the Visual Analog Scale (VAS) patient reported outcome tool.
Measure Steward:	Minnesota Community Measurement
Numerator:	<p>The average change (preoperative to one year post-operative) in leg pain for all patients in the denominator.</p> <p>There is not a traditional numerator for this measure; the measure is calculating the average change in leg pain score from pre-operative to post-operative leg pain score. The measure is NOT aiming for a numerator target value for a post-operative pain score.</p> <p>The average change is calculated as follows: Change is first calculated for each patient and then changed scores are summed and then an average is determined. Measure calculation takes into account those patients that have an improvement and those patients whose pain increases post-operatively. Example below:</p> <p>Patient I: Pre-op VAS I: Post-op VAS I:(Pre-op minus Post-op) Patient A: I: 8.5 I: 3.5 I: 5.0 Patient B: I: 9.0 I: 2.5 I: 6.5 Patient C: I: 7.0 I: 0.5 I: 6.5 Patient D: I: 6.5 I: 8.0 I: -1.5 Patient E I: 8.5 I: 2.0 I: 6.5 Patient F I: 7.5 I: 1.5 I: 6.0 Patient G I: 9.0 I: 4.5 I: 4.5 Patient H I: 5.5 I: 7.5 I: -2.0 Patient I I: 9.0 I: 5.0 I: 4.0 Patient J I: 7.0 I: 2.5 I: 4.5 Average change in VAS points 4.0 Average change in leg pain one year post-op 4.0 points on a 10 point scale.</p>
Denominator:	<p>Eligible Population: Patients with lumbar spine fusion procedures (Arthrodesis Value Set) occurring during a 12 month period for patients age 18 and older at the start of that period.</p> <p>Denominator: Patients within the eligible population whose leg pain was measured by the Visual Analog Scale (VAS) within three months preoperatively AND at one year (+/- 3 months) postoperatively.</p> <p>*The measure of average change in function can only be calculated if both a pre-operative and post-operative PRO assessment are completed</p>
Exclusions:	<p>The following exclusions must be applied to the eligible population: Patient had cancer (Spine Cancer Value Set), fracture (Spine Fracture Value Set) or infection (Spine Infection Value Set) related to the spine. Patient had idiopathic or congenital scoliosis (Congenital Scoliosis Value Set)</p>
Measure Type:	Patient Reported Outcome
Measure Domain:	Person and Caregiver-Centered Experience and Outcomes
High priority measure:	Yes (Patient Reported Outcome)
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>We are proposing to adopt this measure because it evaluates the management of pain from pre- to post-operative, which represents an important patient reported outcome. The results can be used by clinicians in evaluating whether the patient's pain has reduced post-operatively. The MAP conditionally supported this measure pending NQF endorsement. While we agree with MAP that NQF endorsement of measures is preferred, it is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure is evidence-based and is an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.7. Ischemic Vascular Disease Use of Aspirin or Anti-platelet Medication

Category	Description
NQF #:	N/A
Quality #:	TBD
Description:	The percentage of patients 18-75 years of age who had a diagnosis of ischemic vascular disease (IVD) and were on daily aspirin or anti-platelet medication, unless allowed contraindications or exceptions are present.
Measure Steward:	Minnesota Community Measurement
Numerator:	Denominator patients with documentation that the patient was on daily aspirin or anti-platelet medication during the measurement period, unless allowed contraindications or exceptions are present.
Denominator:	18 years or older at the start of the measurement period AND less than 76 years at the end of the measurement period AND Patient had a diagnosis of ischemic vascular disease (Ischemic Vascular Disease Value Set) with any contact during the current or prior measurement period OR had ischemic vascular disease (Ischemic Vascular Disease Value Set) present on an active problem list at any time during the measurement period. AND At least one established patient office visit (Established Pt Diabetes & Vasc Value Set) for any reason during the measurement period
Exclusions:	The following exclusions are allowed to be applied to the eligible population: <ul style="list-style-type: none"> • Patient was a permanent nursing home resident at any time during the measurement period • Patient was in hospice or receiving palliative care at any time during the measurement period • Patient died prior to the end of the measurement period • Patient had only urgent care visits during the measurement period
Measure Type:	Process
Measure Domain:	Effective Clinical Care
High priority measure:	No
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Rationale:	We are proposing to adopt this measure because the proposed measure exclusions are more appropriate than those in the currently adopted Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic (Quality ID #204) measure. The proposed measure accounts for history of gastrointestinal bleeding, intracranial bleeding, bleeding disorder, allergy to aspirin or anti-platelets, or use of non-steroidal anti-inflammatory agents. The MAP acknowledged both that clinicians may still report Aspirin or Anti-platelet Medication measures separately from the composite to drive quality improvement. The MAP conditionally supported this measure with the condition that there are no competing measures in the program. We refer readers to Table C where we are proposing to remove Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic (Quality ID #204). Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972 .

A.8. Zoster (Shingles) Vaccination

Category	Description
NQF #:	Not Applicable (NA)
Quality #:	TBD
Description:	The percentage of patients 50 years of age and older who have a Varicella Zoster (shingles) vaccination.
Measure Steward:	PPRNet
Numerator:	Patients with a shingles vaccine ever recorded.
Denominator:	Patients 50 years of age and older.
Exclusions:	None
Measure Type:	Process
Measure Domain:	Community/Population Health
High priority measure:	No
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>We are proposing to adopt this measure because there are no measures currently in MIPS that address shingles vaccination for patients 60 years and older as recommended by the CDC. The MAP concluded that this measure would address the important topic of adult immunization. It discussed the new guidelines under development for the Zoster vaccination that could impact the amount of doses, the age of administration, and the specific vaccine that is used, but also noted that guidelines are constantly evolving and measures should be routinely updated based on changing guidelines. The MAP conditionally supported this measure pending NQF endorsement, and specifically requested evaluating the measure to ensure it has appropriate exclusions and reflects the most current CDC guidelines given the concerns about the cost of the vaccine and potential concerns about administering to immunocompromised patients. While we agree with MAP that NQF endorsement of measures is preferred, it is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure is evidence-based and is an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.9. HIV Screening

Category	Description
NQF #:	3067
Quality #:	TBD
Description:	Percentage of patients 15-65 years of age who have ever been tested for human immunodeficiency virus (HIV).
Measure Steward:	Centers for Disease Control and Prevention
Numerator:	Patients with documentation of the occurrence of an HIV test between their 15th and 66th birthdays and before the end of the measurement period.
Denominator:	Patients 15 to 65 years of age who had an outpatient visit during the measurement period.
Exclusions:	Patients diagnosed with HIV prior to the start of the measurement period.
Measure Type:	Process
Measure Domain:	Community/Population Health
High priority measure:	No
Collection Type:	eCQM Specifications
Rationale:	<p>We are proposing to adopt this measure because HIV screening is a national and global priority. While there are three currently adopted HIV measures in MIPS, they do not include screening the general population. The MAP acknowledged the importance of HIV screening from a population health perspective, but also questioned whether encouraging HIV screening through the MIPS program is the most effective strategy for improving this population health goal. It also expressed concern about how this measure under consideration identified individuals who may have a HIV screening in the community. Additionally, several MAP members expressed concern regarding the specifications requiring one time lifetime screening. The MAP conditionally supported this measure pending NQF endorsement. While we agree with MAP that NQF endorsement of measures is preferred, it is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure is evidence-based and is an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at the following link: http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=86972.</p>

A.10. Falls: Screening, Risk-Assessment, and Plan of Care to Prevent Future Falls

Category	Description
NQF #:	0101
Quality #:	TBD
Description:	<p>This is a clinical process measure that assesses falls prevention in older adults. The measure has three rates:</p> <p>Screening for Future Fall Risk: Percentage of patients aged 65 years and older who were screened for future fall risk at least once within 12 months</p> <p>Falls Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months</p> <p>Plan of Care for Falls: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months</p>
Measure Steward:	National Committee for Quality Assurance
Numerator:	<p>This measure has three rates. The numerators for the three rates are as follows:</p> <p>A) Screening for Future Fall Risk: Patients who were screened for future fall* risk** at last once within 12 months B) Falls Risk Assessment: Patients who had a risk assessment*** for falls completed within 12 months C) Plan of Care for Falls: Patients with a plan of care**** for falls documented within 12 months.</p> <p>*A fall is defined as a sudden, unintentional change in position causing an individual to land at a lower level, on an object, the floor, or the ground, other than as a consequence of a sudden onset of paralysis, epileptic seizure, or overwhelming external force.</p> <p>**Risk of future falls is defined as having had had 2 or more falls in the past year or any fall with injury in the past year.</p> <p>***Risk assessment is comprised of balance/gait assessment AND one or more of the following assessments: postural blood pressure, vision, home fall hazards, and documentation on whether medications are a contributing factor or not to falls within the past 12 months.</p> <p>****Plan of care must include consideration of vitamin D supplementation AND balance, strength and gait training.</p>
Denominator:	<p>A) Screening for Future Fall Risk: All patients aged 65 years and older seen by an eligible provider in the past year.</p> <p>B & C) Falls Risk Assessment & Plan of Care for Falls: All patients aged 65 years and older seen by an eligible provider in the past year with a history of falls (history of falls is defined as 2 or more falls in the past year or any fall with injury in the past year).</p>
Exclusions:	Patients who have documentation of medical reason(s) for not screening for future fall risk, undergoing a risk-assessment or having a plan of care (e.g., patient is not ambulatory) are excluded from this measure.
Measure Type:	Process
Measure Domain:	Patient Safety
High Priority Measure:	Yes
Collection Type:	Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Rationale:	We are proposing to adopt this measure because it is a combined version of three of the currently adopted measures 154: Falls: Risk Assessment, 155: Falls: Plan of Care and 318: Falls: Screening for Future Fall Risk. The new combined Falls measure (based on specifications in NQF 0101) is more robust and will include strata components for Future Falls Risk, Falls Risk Assessment, and Falls Risk Plan of Care which creates a more comprehensive screening measure. As noted in Table C, we are proposing to remove 154: Falls: Risk Assessment, 155: Falls: Plan of Care and 318: Falls: Screening for Future Fall Risk because they will be subsumed by this new measure. While we note that has not been put forth through the MAP for consideration in MIPS, the three individual measures have been NQF endorsed as one measure.

TABLE Group B: Proposed New and Modified MIPS Specialty Measure Sets for the 2021 MIPS Payment Year and Future Years

Note: In this proposed rule, CMS proposes to modify the specialty measure sets below based upon review of updates made to existing quality measure specifications, the proposal of adding new measures for inclusion in MIPS, and the feedback provided by specialty societies. In the first column, existing measures with substantive changes are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§) and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to fully represent the regulatory definition of high priority measures.

As discussed in section III.H.3.h.(2)(b)(i) of this proposed rule, we are proposing to amend the definition of high priority at §414.1305 to include opioid-related measures. We define high priority measure to mean an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Outcome measures include outcome, intermediate outcome, and patient reported outcome. A high priority indicator (an exclamation point (!)) in the Indicator column has been added for all opioid-related measures.

The following specialty measure sets have been excluded from this proposed rule, because we are not proposing any changes to these sets: Allergy/Immunology, Electro-Physiology Cardiac Specialist, Plastic Surgery, Interventional Radiology, and Hospitalists. Therefore, we refer readers to these finalized specialty sets in the CY 2018 Quality Payment Program final rule (82 FR 53976 through 54146).

B.1. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Anesthesiology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Anesthesiology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 426 and 427.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	0236	044	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery: Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.	Centers for Medicare & Medicaid Services
! (Patient Safety)	N/A	076	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Prevention of Central Venous Catheter (CVC)-Related Bloodstream Infections: Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.	American Society of Anesthesiologists
! (Outcome)	N/A	404	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Anesthesiology Smoking Abstinence: The percentage of current smokers who abstain from cigarettes prior to anesthesia on the day of elective surgery or procedure.	American Society of Anesthesiologists
! (Outcome)	2681	424	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Perioperative Temperature Management: Percentage of patients, regardless of age, who undergo surgical or therapeutic procedures under general or neuraxial anesthesia of 60 minutes duration or longer for whom at least one body temperature greater than or equal to 35.5 degrees Celsius (or 95.9 degrees Fahrenheit) was achieved within the 30 minutes immediately before or the 15 minutes immediately after anesthesia end time.	American Society of Anesthesiologists
! (Patient Safety)	N/A	430	N/A	MIPS CQMs Specifications	Process	Patient Safety	Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy: Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively or intraoperatively.	American Society of Anesthesiologists

B.1. Anesthesiology (continued)

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	N/A	463	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Prevention of Post-Operative Vomiting (POV) - Combination Therapy (Pediatrics): Percentage of patients aged 3 through 17 years of age, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.</p>	American Society of Anesthesiologists

B.1. Anesthesiology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	426	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Post-Anesthetic Transfer of Care Measure: Procedure Room to a Post Anesthesia Care Unit (PACU): Percentage of patients, regardless of age, who are under the care of an anesthesia practitioner and are admitted to a PACU or other non-ICU location in which a post-anesthetic formal transfer of care protocol or checklist which includes the key transfer of care elements is utilized.	American Society of Anesthesiologists	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future.”
N/A	427	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Post-Anesthetic Transfer of Care: Use of Checklist or Protocol for Direct Transfer of Care from Procedure Room to Intensive Care Unit (ICU): Percentage of patients, regardless of age, who undergo a procedure under anesthesia and are admitted to an Intensive Care Unit (ICU) directly from the anesthetizing location, who have a documented use of a checklist or protocol for the transfer of care from the responsible anesthesia practitioner to the responsible ICU team or team member.	American Society of Anesthesiologists	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”

B.2. Cardiology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Cardiology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Cardiology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 204 and 373.

MEASURES PROPOSED FOR INCLUSION

B.2. Cardiology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0068	204	164v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet: Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	373	65v7	eCQM Specifications	Intermediate Outcome	Effective Clinical Care	Hypertension: Improvement in Blood Pressure: Percentage of patients aged 18-85 years of age with a diagnosis of hypertension whose blood pressure improved during the measurement period.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.3. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Gastroenterology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Gastroenterology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measure from the specialty set: Quality ID: 185.

MEASURES PROPOSED FOR INCLUSION

Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Care Coordination)	0326	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Care Plan: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* §	0421	128	69v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. Normal Parameters: Age 18 years and older BMI => 18.5 and < 25 kg/m2.	Centers for Medicare & Medicaid Services
! (Patient Safety)	0419	130	68v7	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	Centers for Medicare & Medicaid Services

B.3. Gastroenterology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0659	185	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use: Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of a prior adenomatous polyp(s) in previous colonoscopy findings, who had an interval of 3 or more years since their last colonoscopy.	American Gastroenterological Association	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”

B.4. Dermatology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Dermatology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Dermatology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measure from the specialty set: Quality ID: 224.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0056	163	123v6	eCQM Specifications	Process	Effective Clinical Care	Comprehensive Diabetes Care: Foot Exam: The percentage of patients 18-75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the measurement year.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.5. Family Medicine (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0068	204	164v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet: Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	334	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.5. Family Medicine (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	373	65v7	eCQM Specifications	Intermediate Outcome	Effective Clinical Care	Hypertension: Improvement in Blood Pressure: Percentage of patients aged 18-85 years of age with a diagnosis of hypertension whose blood pressure improved during the measurement period.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	447	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Chlamydia Screening and Follow Up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.6. Internal Medicine

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Internal Medicine specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Internal Medicine specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 048, 154, 155, 163, 204, 276, 278, 318, 334, 373, and 447.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0056	163	123v6	eQCM Specifications	Process	Effective Clinical Care	Comprehensive Diabetes Care: Foot Exam: The percentage of patients 18-75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the measurement year.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.6. Internal Medicine (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0068	204	164v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet: Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	276	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Assessment of Sleep Symptoms: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea that includes documentation of an assessment of sleep symptoms, including presence or absence of snoring and daytime sleepiness	American Academy of Sleep Medicine	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	278	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Positive Airway Pressure Therapy Prescribed: Percentage of patients aged 18 years and older with a diagnosis of moderate or severe obstructive sleep apnea who were prescribed positive airway pressure therapy	American Academy of Sleep Medicine	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.6. Internal Medicine (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	334	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	373	65v7	eCQM Specifications	Intermediate Outcome	Effective Clinical Care	Hypertension: Improvement in Blood Pressure: Percentage of patients aged 18-85 years of age with a diagnosis of hypertension whose blood pressure improved during the measurement period.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	447	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Chlamydia Screening and Follow Up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.7. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the Emergency Medicine specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the Emergency Medicine specialty set. This measure set does not have any measures that are proposed for removal from prior years.

MEASURES PROPOSED FOR INCLUSION

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	369	158v6	eCQM Specifications	Process	Effective Clinical Care	Pregnant women that had HBsAg testing: This measure identifies pregnant women who had an HBsAg (hepatitis B) test during their pregnancy.	OptumInsight	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	447	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Chlamydia Screening and Follow Up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.9. Ophthalmology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Ophthalmology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Ophthalmology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 012, 018, and 140.

MEASURES PROPOSED FOR INCLUSION

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0086	012	143v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation: Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months.	Physician Consortium for Performance Improvement Foundation (PCPI®)	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”
0088	018	167v6	eCQM Specifications	Process	Effective Clinical Care	Diabetic Retinopathy: Documentation of Presence or Absence of Macular Edema and Level of Severity of Retinopathy: Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed which included documentation of the level of severity of retinopathy and the presence or absence of macular edema during one or more office visits within 12 months.	Physician Consortium for Performance Improvement Foundation (PCPI®)	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”
0566	140	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Age-Related Macular Degeneration (AMD): Counseling on Antioxidant Supplement: Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) or their caregiver(s) who were counseled within 12 months on the benefits and/or risks of the Age-Related Eye Disease Study (AREDS) formulation for preventing progression of AMD.	American Academy of Ophthalmology	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”

B.10. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Family Medicine specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Family Medicine specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 154, 155, and 375.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	375	66v6	eCQM Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Functional Status Assessment for Total Knee Replacement: Changes to the measure description: Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) who completed baseline and follow-up patient-reported and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.11. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Otolaryngology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Otolaryngology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 154, 155, 276, 278, 318, and 334.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	276	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Assessment of Sleep Symptoms: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea that includes documentation of an assessment of sleep symptoms, including presence or absence of snoring and daytime sleepiness	American Academy of Sleep Medicine	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.11. Otolaryngology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	278	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Positive Airway Pressure Therapy Prescribed: Percentage of patients aged 18 years and older with a diagnosis of moderate or severe obstructive sleep apnea who were prescribed positive airway pressure therapy	American Academy of Sleep Medicine	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	334	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis	American Academy of Otolaryngology- Otolaryngology- Head and Neck Surgery	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.12. Pathology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Pathology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Pathology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 099, 100, and 251.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	1854	249	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Barrett's Esophagus: Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia	College of American Pathologists
§	1853	250	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Radical Prostatectomy Pathology Reporting: Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status	College of American Pathologists
! (Care Coordination)	N/A	395	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Biopsy/ Cytology Specimens): Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary nonsmall cell lung cancer classified into specific histologic type or classified as NSCLC-NOS with an explanation included in the pathology report	College of American Pathologists
! (Care Coordination)	N/A	396	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Resection Specimens): Pathology reports based on resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer, histologic type	College of American Pathologists

This is a measure of screening in the first three years of life that includes three, age-specific indicators assessing whether children are screened by 12 months of age, by 24 months of age and by 36 months of age.	Oregon Health & Science University

B.13. Pediatrics (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	447	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	Chlamydia Screening and Follow Up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”

B.14. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Physical Medicine specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Physical Medicine specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 154, 155, and 318.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.15. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Preventive Medicine specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Preventive Medicine specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 014, 154, and 155.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward

Centers for Medicare & Medicaid Services

B.15. Preventive Medicine (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.16. Neurology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Neurology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Neurology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 154, 155, 318, and 386.

! (Efficiency) *	N/A	419	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Overuse Of Imaging For Patients With Primary Headache: Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present	American Academy of Neurology
	2152	431	N/A	MIPS CQMs Specifications	Process	Population/Community	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.	Physician Consortium for Performance Improvement Foundation (PCPI)
! (Outcome)	N/A	435	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Outcome	Effective Clinical Care	Quality Of Life Assessment For Patients With Primary Headache Disorders: Percentage of patients with a diagnosis of primary headache disorder whose health related quality of life (HRQoL) was assessed with a tool(s) during at least two visits during the 12 month measurement period AND whose health related quality of life score stayed the same or improved	American Academy of Neurology

B.16. Neurology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	Rationale for Removal: This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	386	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g. advance directives, invasive ventilation, hospice) at least once annually	American Academy of Neurology	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.17. Mental/Behavioral Health

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Mental/Behavioral Health specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Mental/Behavioral Health specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measure from the specialty set: Quality ID: 367.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Opioid)	N/A	TBD	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Continuity of Pharmacotherapy for Opioid Use Disorder: Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment	University of Southern California
	0105	009	128v6	eCQM Specifications	Process	Effective Clinical Care	Anti-Depressant Medication Management: Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on antidepressant medication treatment. Two rates are reported: a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks) b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months)	National Committee for Quality Assurance
	0104	107	161v6	eCQM Specifications	Process	Effective Clinical Care	Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) with a suicide risk assessment completed during the visit in which a new diagnosis or recurrent episode was identified.	Physician Consortium for Performance Improvement
* §	0421	128	69v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. Normal Parameters: Age 18 years and older BMI => 18.5 and < 25 kg/m2	Centers for Medicare & Medicaid Services

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	122	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Adult Kidney Disease: Blood Pressure Management: Percentage of patient visits for those patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (stage 3, 4, or 5, not receiving Renal Replacement Therapy [RRT]) with a blood pressure < 140/90 mmHg OR \geq 140/90 mmHg with a documented plan of care	Renal Physicians Association	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
N/A	327	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Pediatric Kidney Disease: Adequacy of Volume Management: Percentage of calendar months within a 12-month period during which patients aged 17 years and younger with a diagnosis of End Stage Renal Disease (ESRD) undergoing maintenance hemodialysis in an outpatient dialysis facility have an assessment of the adequacy of volume management from a nephrologist	Renal Physicians Association	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.20. General Surgery

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed General Surgery specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed General Surgery specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measure from the specialty set: Quality ID: 263.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Patient Safety)	0268	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second Generation Cephalosporin: Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second generation cephalosporin prophylactic antibiotic, who had an order for a first OR second generation cephalosporin for antimicrobial prophylaxis	American Society of Plastic Surgeons
! (Patient Safety)	0239	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients): Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low-Dose Unfractionated heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time	American Society of Plastic Surgeons
§ ! (Care Coordination) *	0097	046	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Medication Reconciliation Post-Discharge: The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record This measure is submitted as three rates stratified by age group: • Submission Criteria 1: 18-64 years of age • Submission Criteria 2: 65 years and older • Total Rate: All patients 18 years of age and older	National Committee for Quality Assurance

B.20. General Surgery (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	263	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Preoperative Diagnosis of Breast Cancer: The percent of patients undergoing breast cancer operations who obtained the diagnosis of breast cancer preoperatively by a minimally invasive biopsy method	American Society of Breast Surgeons	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.21. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Vascular Surgery specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Vascular Surgery specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 257 and 423.

The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include:</p> <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than 140/90 mm Hg -- And • Most recent tobacco status is Tobacco Free -- And • Daily Aspirin or Other Antiplatelet Unless Contraindicated • Statin Use Unless Contraindicated 	Wisconsin Collaborative for Healthcare Quality (WCHQ)

B.21. Vascular Surgery (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
1519	257	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Statin Therapy at Discharge after Lower Extremity Bypass (LEB): Percentage of patients aged 18 years and older undergoing infra-inguinal lower extremity bypass who are prescribed a statin medication at discharge	Society for Vascular Surgeons	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0465	423	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Perioperative Anti-platelet Therapy for Patients Undergoing Carotid Endarterectomy: Percentage of patients undergoing carotid endarterectomy (CEA) who are taking an anti-platelet agent within 48 hours prior to surgery and are prescribed this medication at hospital discharge following surgery	Society for Vascular Surgeons	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.22. Thoracic Surgery

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Thoracic Surgery specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Thoracic Surgery specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 043 and 236.

MEASURES PROPOSED FOR INCLUSION

B.22. Thoracic Surgery (continued)

MEASURES PROPOSED FOR REMOVAL								
<p>Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.</p>								
NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0134	043	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who received an IMA graft.</p>	Society of Thoracic Surgeons	<p>This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”</p>
0018	236	165v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	<p>Controlling High Blood Pressure: Percentage of patients 18-85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90mmHg) during the measurement period</p>	National Committee for Quality Assurance	<p>We agree with specialty society feedback to remove this measure from this specialty set because blood pressure control is managed by care team members other than the cardiothoracic surgeon. Blood pressure outcomes are more likely attributed to the primary care provider or cardiologist. These eligible clinicians are part of the core treatment team that is responsible for the ongoing hypertension therapy.</p>

B.23. Urology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Urology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Urology specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measure from the specialty set: Quality ID: 048.

B.23. Urology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.24a. Oncology

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Oncology specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Oncology specialty set. This measure set does not have any measures that are proposed for removal from prior years.

* ! (Patient Experience)	0383	144	N/A	MIPS CQMs Specifications	Process	Person and Caregiver Centered Experience and Outcome	Oncology: Medical and Radiation – Plan of Care for Pain: Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain	American Society of Clinical Oncology

B.24b. Radiation Oncology (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0382	156	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Oncology: Radiation Dose Limits to Normal Tissues: Percentage of patients, regardless of age, with a diagnosis of breast, rectal, pancreatic or lung cancer receiving 3D conformal radiation therapy who had documentation in medical record that radiation dose limits to normal tissues were established prior to the initiation of a course of 3D conformal radiation for a minimum of two tissues	American Society for Radiation Oncology	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.25. Infectious Disease

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Infectious Disease specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Infectious Disease specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 065, 066, 091, 093, 116, 128, 176, 226, 275, 331, 332, 333, 334, 337, 387, 390, 394, 400, 401, and 447.

MEASURES PROPOSED FOR INCLUSION								
Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	N/A	TBD	TBD	eCQM Specifications	Process	Community/Population Health	HIV Screening: Percentage of patients 15-65 years of age who have ever been tested for human immunodeficiency virus (HIV).	Centers for Disease Control and Prevention
	N/A	TBD	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Zoster (Shingles) Vaccination: The percentage of patients 50 years of age and older who have a Varicella Zoster (shingles) vaccination.	PPRNet
	0041	110	147v7	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Preventive Care and Screening: Influenza Immunization: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization	Physician Consortium for Performance Improvement Foundation (PCPI®)
*	0043	111	127v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	Pneumococcal Vaccination Status for Older Adults: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine	National Committee for Quality Assurance

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis	American Academy of Otolaryngology-Head and Neck Surgery	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care, otolaryngologists, or other physicians to assess appropriate treatment for patients diagnosed with acute sinusitis. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.
N/A	334	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis	American Academy of Otolaryngology-Head and Neck Surgery	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in “Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years.”

B.25. Infectious Disease (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis Patients on a Biological Immune Response Modifier: Percentage of patients whose providers are ensuring active tuberculosis prevention either through yearly negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test</p>	American Academy of Dermatology	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by dermatologists, rheumatologists, or other physicians to ensure appropriate testing prior to treatment with a biological immune response modifier. . Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.
N/A	387	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users: Percentage of patients, regardless of age, who are active injection drug users who received screening for HCV infection within the 12 month reporting period</p>	Physician Consortium for Performance Improvement	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care or other physicians as part of screening process for a high risk patient population. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.

B.25. Infectious Disease (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	390	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	<p>Hepatitis C: Discussion and Shared Decision Making Surrounding Treatment Options: Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other qualified healthcare professional reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician or other qualified healthcare professional and the patient that includes all of the following: treatment choices appropriate to genotype, risks and benefits, evidence of effectiveness, and patient preferences toward treatment.</p>	American Gastroenterological Association	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care, gastroenterologists, or other physicians to promote shared decision making with patient with hepatitis C. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.
1407	394	N/A	MIPS CQMs Specifications	Process	Community/Population Health	<p>Immunizations for Adolescents: The percentage of adolescents 13 years of age who had the recommended immunizations by their 13th birthday</p>	National Committee for Quality Assurance	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care, pediatricians, or other physicians as part of well child care for patients. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.

B.25. Infectious Disease (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	400	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk: Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection</p>	Physician Consortium for Performance Improvement Foundation (PCPI®)	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care or other physicians to assess the appropriate screening for a high-risk patient population. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.
N/A	401	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Hepatitis C: Screening for Hepatocellular Carcinoma (HCC) in Patients with Cirrhosis: Percentage of patients aged 18 years and older with a diagnosis of chronic hepatitis C cirrhosis who underwent imaging with either ultrasound, contrast enhanced CT or MRI for hepatocellular carcinoma (HCC) at least once within the 12 month reporting period</p>	American Gastroenterological Association	We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of an Infectious Disease physician. This measure applies to the outpatient setting and is reported by primary care, gastroenterologists, or other physicians to ensure appropriate screening for patients with cirrhosis. Most infectious disease physicians consult on patients in the inpatient setting. This measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice.

B.25. Infectious Disease (continued)

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	447	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Chlamydia Screening and Follow Up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.26. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Neurosurgical specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Neurosurgical specialty set. This measure set does not have any measures that are proposed for removal from prior years.

MEASURES PROPOSED FOR INCLUSION

Indicator	NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
! (Patient Experience)	2643	TBD	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Person and Caregiver-Centered Experience and Outcomes	Average Change in Functional Status Following Lumbar Spine Fusion Surgery: For patients age 18 and older undergoing lumbar spine fusion surgery, the average change from pre-operative functional status to one year (nine to fifteen months) post-operative functional status using the Oswestry Disability Index (ODI version 2.1a) patient reported outcome tool.	Minnesota Community Measurement
! B.27. Podiatry

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Podiatry specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Podiatry specialty set. In addition, as outlined at the end of this table, we are proposing to remove the following quality measures from the specialty set: Quality IDs: 154, 155, and 318.

MEASURES PROPOSED FOR REMOVAL

Note: In this proposed rule, CMS proposes the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."
0101	318	139v6	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from the 2019 program based on the detailed rationale described below for this measure in "Table C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years."

B.28. Dentistry

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the Dentistry specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the Dentistry specialty set. This measure set does not have any measures that are proposed for removal from prior years.

B.32. Urgent Care

In addition to the considerations discussed in the introductory language of Table B in this proposed rule, the proposed Urgent Care specialty set takes into consideration the following criteria, which includes, but is not limited to: the measure reflects current clinical guidelines and the coding of the measure includes the specialists. CMS may re-assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. We seek comment on the measures available in the proposed Urgent Care specialty set. This is a new specialty set for 2019; therefore, we are not proposing removal of any measures from this specialty set.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years

In this proposed rule, we are proposing to remove 34 previously finalized quality measures from the MIPS Program for the 2021 MIPS payment year and future years. These measures are discussed in detail below. As discussed in section III.H.3.h(2) of this proposed rule, please note that our measure removal criteria considers the following:

- Whether the removal of the measure impacts the number of measures available to a specific specialty
- Whether the measure addresses a priority area of the Meaningful Measures Initiative
- Whether the measure is linked closely to improved outcomes in patients

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in section III.H.3.h(2) of this proposed rule, we have made proposals this year on additional criteria that should be used for the removal of measures, such as: extreme topped out measures, which means measures that are topped-out with an average (mean) performance rate between 98-100%.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0086	012	143v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months.	Physician Consortium for Performance Improvement Foundation (PCPI®)	We are proposing to remove this measure (finalized in (81 FR 77558 through 77675)) because it is duplicative in concept and patient population as the currently adopted Measure 141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care (finalized in 81 FR 77558 through 77675). Furthermore, Measure 012 neither assesses a clinical outcome nor one of the defined MIPS high priority areas. In addition, the measure's numerator is considered standard of care as it only captures assessment completion. Although this assessment is critical to determine if the patient's current course of treatment is therapeutic, Measure 141 not only captures that information, but also is more robust since it requires a reduction of IOP or plan of care. Accurate and precise IOP readings are imperative to evaluate a patient's risk of progressive optic nerve damage.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0088	018	167v6	eQMS Specifications	Process	Effective Clinical Care	<p>Diabetic Retinopathy: Documentation of Presence or Absence of Macular Edema and Level of Severity of Retinopathy: Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed which included documentation of the level of severity of retinopathy and the presence or absence of macular edema during one or more office visits within 12 months.</p>	Physician Consortium for Performance Improvement Foundation (PCPI®)	We are proposing to remove this measure (finalized in (81 FR 77558 through 77675)) because it is duplicative both in concept and patient population as the currently adopted Measure 019: Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care (finalized in (81 FR 77558 through 77675)). Measure 019 is considered high priority because it promotes communication and care coordination with eligible clinicians managing diabetes care. The numerator of Measure 018 is considered the standard of care as it captures an assessment with no additional clinical action. Measure 018 neither assesses a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0134	043	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who received an IMA graft.	Society of Thoracic Surgeons	We are proposing to remove this measure (finalized in (81 FR 77558 through 77675)) because there is no longer variation in performance for the measure to be able to evaluate improvement in performance making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip . Therefore, we believe use of IMA has been widely accepted and implemented. The measure neither assesses a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.</p>	National Committee for Quality Assurance	<p>We propose the removal of this measure (finalized in (81 FR 77558 through 77675)) as a quality measure from the MIPS program because it is duplicative in concept and covers the same patient population as currently adopted Measure 050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older (finalized in 81 FR 77558 through 77675). Measure 048 does not require a quality action (follow up, plan of care, etc.) that links to improved outcomes. The measure does not assess a clinical outcome nor one of the defined MIPS high priority areas. Measure 050 is a more robust measure that requires a quality action (plan of care) for the appropriate patient population.</p>

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0391	099	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Breast Cancer Resection Pathology Reporting: pT Category (Primary Tumor) and pN Category (Regional Lymph Nodes) with Histologic Grade: Percentage of breast cancer resection pathology reports that include the pT category (primary tumor), the pN category (regional lymph nodes), and the histologic grade	College of American Pathologists	We propose the removal of this measure (finalized in (81 FR 77558 through 77675)) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip . In addition, the measure does not assess a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0392	100	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Colorectal Cancer Resection Pathology Reporting: pT Category (Primary Tumor) and pN Category (Regional Lymph Nodes) with Histologic Grade: Percentage of colon and rectum cancer resection pathology reports that include the pT category (primary tumor), the pN category (regional lymph nodes) and the histologic grade	College of American Pathologists	We propose the removal of this measure (finalized in (81 FR 77558 through 77675)) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99.5% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip . In addition, the measure neither assesses a clinical outcome nor one of the defined MIPS high priority areas.
N/A	122	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Adult Kidney Disease: Blood Pressure Management: Percentage of patient visits for those patients aged 18 years and older with a diagnosis of chronic kidney disease (CKD) (stage 3, 4, or 5, not receiving Renal Replacement Therapy [RRT]) with a blood pressure < 140/90 mmHg OR \geq 140/90 mmHg with a documented plan of care	Renal Physicians Association	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the measure has neither been updated nor planned to be updated by the measure steward to reflect the current clinical guidelines as indicated by the measure steward.

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0566	140	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Age-Related Macular Degeneration (AMD): Counseling on Antioxidant Supplement: Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) or their caregiver(s) who were counseled within 12 months on the benefits and/or risks of the Age-Related Eye Disease Study (AREDS) formulation for preventing progression of AMD.	American Academy of Ophthalmology	We propose the removal of this measure (finalized in (81 FR 77558 through 77675)) because the measure neither assesses a clinical outcome nor one of the defined MIPS high priority areas. The measure's quality action that only requires the provision of counseling of AREDS risk factors, but does not require discontinuation of AREDS if risks/adverse effects are identified.
0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Preventable Healthcare Harm/ Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls who had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because we are proposing a new combined Falls measure (based on specifications in NQF 0101) that will include strata components for Future Falls Risk, Falls Risk Assessment, and Falls Risk Plan of Care. We refer readers to Table A.10 where this proposal is discussed.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls who had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because we are proposing a new combined Falls measure (based on specifications in NQF 0101) that will include strata components for Future Falls Risk, Falls Risk Assessment, and Falls Risk Plan of Care. We refer readers to Table A.10 where this proposal is discussed.
0382	156	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Oncology: Radiation Dose Limits to Normal Tissues: Percentage of patients, regardless of age, with a diagnosis of breast, rectal, pancreatic or lung cancer receiving 3D conformal radiation therapy who had documentation in medical record that radiation dose limits to normal tissues were established prior to the initiation of a course of 3D conformal radiation for a minimum of two tissues	American Society for Radiation Oncology	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 97.5% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip .

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0056	163	123v6	eCQM Specifications	Process	Effective Clinical Care	<p>Comprehensive Diabetes Care: Foot Exam: The percentage of patients 18-75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the measurement year.</p>	National Committee for Quality Assurance	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative to the currently adopted Measure 126: Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation (finalized in 81 FR 77558 through 77675). However, Measure 163 is designated as a core performance measure by the Core Quality Measures Collaborative (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Core-Measures.html). Therefore, we specifically seek comments regarding the impact of removing this measure and replacing it with Measure 126. We strive to not duplicate measures in the program. We believe Measure 126 is a more appropriate measure because it targets an at-risk patient population, is clinically significant, and is in alignment with current clinical guidelines for neurological evaluation of diabetic neuropathy.</p>

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0659	185	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use: Percentage of patients aged 18 years and older receiving a surveillance colonoscopy, with a history of a prior adenomatous polyp(s) in previous colonoscopy findings, who had an interval of 3 or more years since their last colonoscopy.	American Gastroenterological Association	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 97.7% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip . This measure is designated as a core performance measure by the Core Quality Measures Collaborative (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Core-Measures.html). Therefore, we specifically seek comments regarding the impact of removing this measure.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0068	204	164v6	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet: Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.</p>	National Committee for Quality Assurance	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it would be duplicative of the new proposed measure, "Ischemic Vascular Disease: Use of Aspirin or Antiplatelet Medication". We refer readers to Table A.7 where this measure is proposed. We strive to not duplicate measures in the program. We believe the proposed measure is more appropriate because it includes more appropriate denominator exceptions that allows for a more defined measure as it accounts for history of gastrointestinal bleeding, intracranial bleeding, bleeding disorder, allergy to aspirin or antiplatelets or use of non-steroidal anti-inflammatory agents. However, Measure 204 is designated as a core performance measure by the Core Quality Measures Collaborative (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Core-Measures.html). Therefore, we specifically seek comments regarding the impact of removing this measure and replacing it with the new proposed measure, "Ischemic Vascular Disease: Use of Aspirin or Anti-platelet Medication."</p>

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0562	224	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	<p>Melanoma: Overutilization of Imaging Studies in Melanoma: Percentage of patients, regardless of age, with a current diagnosis of stage 0 through IIC melanoma or a history of melanoma of any stage, without signs or symptoms suggesting systemic spread, seen for an office visit during the one-year measurement period, for whom no diagnostic imaging studies were ordered.</p>	American Academy of Dermatology	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99.5% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip.</p>
1855	251	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Structure	Effective Clinical Care	<p>Quantitative Immunohistochemical (IHC) Evaluation of Human Epidermal Growth Factor Receptor 2 Testing (HER2) for Breast Cancer Patients: This is a measure based on whether quantitative evaluation of Human Epidermal Growth Factor Receptor 2 Testing (HER2) by immunohistochemistry (IHC) uses the system recommended in the current ASCO/CAP Guidelines for Human Epidermal Growth Factor Receptor 2 Testing in breast cancer</p>	College of American Pathologists	<p>We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip. In addition, the measure does not assess a clinical outcome or one of the defined MIPS high priority areas.</p>

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
1519	257	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Statin Therapy at Discharge after Lower Extremity Bypass (LEB): Percentage of patients aged 18 years and older undergoing infra-inguinal lower extremity bypass who are prescribed a statin medication at discharge	Society for Vascular Surgeons	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the clinical concept is captured within currently adopted Measure 438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (finalized in 81 FR 77558 through 77675). Measure 438 captures all patients that require statin therapy. Whereas Measure 257 only captures a subset of the patient population undergoing lower extremity bypass.
N/A	263	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Preoperative Diagnosis of Breast Cancer: The percent of patients undergoing breast cancer operations who obtained the diagnosis of breast cancer preoperatively by a minimally invasive biopsy method	American Society of Breast Surgeons	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 99.3% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip . In addition, the measure does not assess a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	276	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Assessment of Sleep Symptoms: Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea that includes documentation of an assessment of sleep symptoms, including presence or absence of snoring and daytime sleepiness	American Academy of Sleep Medicine	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative to the currently adopted Measure 277: Sleep Apnea: Severity Assessment at Initial Diagnosis (finalized in 81 FR 77558 through 77675). Measure 276 only represents a quality action to assess for the sleep symptoms whereas Measure 277 includes the assessment along with the severity. This measure also lacks a quality action for positive assessments and does not indicate the use of a standardized tool. Also, the measure does not assess a clinical outcome nor one of the defined MIPS high priority areas.
N/A	278	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Sleep Apnea: Positive Airway Pressure Therapy Prescribed: Percentage of patients aged 18 years and older with a diagnosis of moderate or severe obstructive sleep apnea who were prescribed positive airway pressure therapy	American Academy of Sleep Medicine	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative to currently adopted Measure 279: Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy (finalized in 81 FR 77558 through 77675). Measure 279 is more robust and requires assessment of adherence to the therapy. Measure 278 does not assess a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101	318	139v6	eCOM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	Falls: Screening for Future Fall Risk: Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because we are proposing a new combined Falls measure (based on specifications in NQF 0101) that will include strata components for Future Falls Risk, Falls Risk Assessment, and Falls Risk Plan of Care.
N/A	327	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Pediatric Kidney Disease: Adequacy of Volume Management: Percentage of calendar months within a 12-month period during which patients aged 17 years and younger with a diagnosis of End Stage Renal Disease (ESRD) undergoing maintenance hemodialysis in an outpatient dialysis facility have an assessment of the adequacy of volume management from a nephrologist	Renal Physicians Association	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes as it does not require a quality action if adequate volume management is not achieved. In addition, the measure does not assess a clinical outcome nor one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	334	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	<p>Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse): Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis.</p>	American Academy of Otolaryngology-Head and Neck Surgery	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 1.6% (inverse measure where a lower score is better performance) based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip .
N/A	359	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Optimizing Patient Exposure to Ionizing Radiation: Utilization of a Standardized Nomenclature for Computed Tomography (CT) Imaging: Percentage of computed tomography (CT) imaging reports for all patients, regardless of age, with the imaging study named according to a standardized nomenclature and the standardized nomenclature is used in institution's computer systems.</p>	American College of Radiology	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative of the currently adopted Measure 361: Optimizing Patient Exposure to Ionizing Radiation: Reporting to a Radiation Dose Index Registry (finalized in 81 FR 77558 through 77675). The use of standardized nomenclature within this measure is intended to enable reporting to Dose Index Registries to allow comparison across radiology sites. This measure does not require the submission to a Dose Index Registry as indicated in Measure 361, but merely using standard nomenclature. We will continue to maintain Measure 361 that represents a more robust quality action to submit standardized data elements to a Dose Index Registry.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	363	N/A	MIPS CQMs Specifications	Structure	Communication and Care Coordination	<p>Optimizing Patient Exposure to Ionizing Radiation: Search for Prior Computed Tomography (CT) Studies Through a Secure, Authorized, Media-Free, Shared Archive: Percentage of final reports of computed tomography (CT) studies performed for all patients, regardless of age, which document that a search for Digital Imaging and Communications in Medicine (DICOM) format images was conducted for prior patient CT imaging studies completed at non-affiliated external healthcare facilities or entities within the past 12-months and are available through a secure, authorized, media free, shared archive prior to an imaging study being performed</p>	American College of Radiology	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the quality action does not completely attribute to the radiologist submitting the measure. Often, the CT studies are ordered and completed by referring providers without opportunity to complete the quality action by the radiologist. This allows their quality performance score to be impacted by other eligible clinicians. In addition, the measure does not require a quality action that links to improved outcomes when the search is completed prior to the study (i.e. comparison).
N/A	367	169v6	eCQM Specifications	Process	Effective Clinical Care	<p>Bipolar Disorder and Major Depression: Appraisal for alcohol or chemical substance use: Percentage of patients with depression or bipolar disorder with evidence of an initial assessment that includes an appraisal for alcohol or chemical substance use</p>	Center for Quality Assessment and Improvement in Mental Health	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the measure does not require a quality action that links to improved outcomes when assessed positive for alcohol or chemical substance use. The measure does not assess a clinical outcome or one of the defined MIPS high priority areas.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	369	158v6	eCQM Specifications	Process	Effective Clinical Care	Pregnant women that had HBsAg testing: This measure identifies pregnant women who had an HBsAg (hepatitis B) test during their pregnancy.	OptumInsight	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the measure steward is no longer maintaining the measure for continued utilization. Furthermore, the measure is evaluating a standard of care as this test would be part of the routine screening for women receiving prenatal care and does not evaluate for care with positive testing results.
N/A	373	65v7	eCQM Specifications	Intermediate Outcome	Effective Clinical Care	Hypertension: Improvement in Blood Pressure: Percentage of patients aged 18-85 years of age with a diagnosis of hypertension whose blood pressure improved during the measurement period.	Centers for Medicare & Medicaid Services	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because a similar clinical concept is represented in Measure 236. It is our goal to ensure duplicate measures are not included in the program. In addition, Measure 236 may apply to a larger eligible clinician cohort and offers expanded data submission methods that are not offered by Measure 373.
N/A	375	66v6	eCQM Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Functional Status Assessment for Total Knee Replacement: Changes to the measure description: Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) who completed baseline and follow-up patient-reported and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.	Centers for Medicare & Medicaid Services	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it would be duplicative of the proposed measure, Average Change in Functional Status Following Total Knee Replacement Surgery. We refer readers to Table A.3 where this measure is proposed. The proposed measure is more robust as it measures the degree of functional improvement, rather than merely assessment completion.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	386	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences: Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g. advance directives, invasive ventilation, hospice) at least once annually	American Academy of Neurology	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative in concept and the patient population would be included within the currently adopted Measure 46: Care Plan (finalized in 81 FR 77558 through 77675). Measure 46 includes all patients seen to determine if a care plan for end of life issues is documented.
0465	423	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Perioperative Anti-platelet Therapy for Patients Undergoing Carotid Endarterectomy: Percentage of patients undergoing carotid endarterectomy (CEA) who are taking an anti-platelet agent within 48 hours prior to surgery and are prescribed this medication at hospital discharge following surgery	Society for Vascular Surgeons	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because the clinical concept is captured within our proposed measure Ischemic Vascular Disease: Use of Aspirin or Anti-platelet Medication. We refer readers to Table A.7 where this measure is proposed. The proposed measure captures all ischemic vascular disease patients that should be receiving an aspirin or anti-platelet medication. Whereas, Measure 423 only captures a subset of the patient population undergoing carotid endarterectomy.

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years (continued)

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	426	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Post-Anesthetic Transfer of Care Measure: Procedure Room to a Post Anesthesia Care Unit (PACU): Percentage of patients, regardless of age, who are under the care of an anesthesia practitioner and are admitted to a PACU or other non-ICU location in which a post-anesthetic formal transfer of care protocol or checklist which includes the key transfer of care elements is utilized.	American Society of Anesthesiologists	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h. (2) of this proposed rule. The average performance for this measure is 97.7% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip .
N/A	427	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Post-Anesthetic Transfer of Care: Use of Checklist or Protocol for Direct Transfer of Care from Procedure Room to Intensive Care Unit (ICU): Percentage of patients, regardless of age, who undergo a procedure under anesthesia and are admitted to an Intensive Care Unit (ICU) directly from the anesthetizing location, who have a documented use of a checklist or protocol for the transfer of care from the responsible anesthesia practitioner to the responsible ICU team or team member.	American Society of Anesthesiologists	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is considered a standard of care that has a limited opportunity to improve clinical outcomes since performance on this measure is extremely high and unvarying making this measure extremely topped-out as discussed in section III.H.3.h.(2) of this proposed rule. The average performance for this measure is 97.9% based on the current MIPS benchmarking data located at https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/2018-Quality-Benchmarks.zip .

TABLE C: Quality Measures Proposed for Removal in the 2021 MIPS Payment Year and Future Years

NQF #	Quality #	CMS E-Measure ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	447	N/A	MIPS CQMs Specifications	Process	Community / Population Health	Chlamydia Screening and Follow-up: The percentage of female adolescents 16 years of age who had a chlamydia screening test with proper follow-up during the measurement period.	National Committee for Quality Assurance	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) because it is duplicative of currently adopted Measure 310: Chlamydia Screening for Women (finalized in 81 FR 77558 through 77675). We strive to not duplicate in the program. This measure is designated as a core performance measure by the Core Quality Measures Collaborative (https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Core-Measures.html). Therefore, we specifically seek comments regarding the impact of removing this measure.

TABLE Group D: Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year and Future Years

D.1. Medication Reconciliation Post-Discharge

Category	Description
NQF #:	0097
Quality#:	046
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years and older of age seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record.</p> <p>This measure is reported as three rates stratified by age group:</p> <ul style="list-style-type: none"> • Submission Criteria 1: 18-64 years of age • Submission Criteria 2: 65 years and older • Total Rate: All patients 18 years of age and older
Substantive Change:	Modified collection type: Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to remove the CMS Web Interface Measure Specifications collection type. This is a process measure, which promotes care coordination when transitioning from an inpatient facility to outpatient care. Removal of this measure from the CMS Web Interface supports our effort to move towards outcome and more meaningful measures within the CMS Web Interface. In addition, since clinicians are required to report all available CMS Web Interface measures, removing this measure from the CMS Web Interface will reduce the burden of the number of measures a clinician is required to report under the CMS Web Interface. This measure is broadly applicable to eligible clinicians participating in the MIPS program using the collection types of Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications. Retaining this measure through the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types allows clinicians to choose this measure as one of the six measures clinicians are generally required to report to meet the quality performance category requirements.</p>

D.2. Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF #:	0043
Quality#:	111
CMS E-Measure ID:	CMS127v6
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine
Substantive Change:	Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the CMS Web Interface Measure Specifications collection type. This measure has lost NQF endorsement and no longer reflects the current guidelines. A new measure is under development to reflect current guidelines and may be proposed in the future. In addition, since clinicians are required to report all available CMS Web Interface measures, removing this measure from the CMS Web Interface will reduce the burden of the number of measures a clinician is required to report under the CMS Web Interface. This measure is broadly applicable to eligible clinicians participating in the MIPS program using the collection types of Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specifications. Retaining this measure through the Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specification collection types allows clinicians to choose this measure as one of the six measures clinicians are generally required to report to meet the quality performance category requirements. We encourage stakeholders to submit a replacement measure for future consideration that is in alignment with the most current clinical guidelines.

D.3. Diabetes: Eye Exam

Category	Description
NQF #:	0055
Quality #:	117
CMS E-Measure ID:	CMS131v6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period
Substantive Change:	Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the CMS Web Interface Measure Specifications collection type. This measure evaluates a process in the care for the patient. Removal of this measure from the CMS Web Interface Measure Specifications supports our effort to move towards outcome and meaningful measures. In addition, since clinicians are required to report all available CMS Web Interface measures, removing this measure from the CMS Web Interface will reduce the burden of the number of measures a clinician is required to report under the CMS Web Interface. This measure is broadly applicable to eligible clinicians participating in the MIPS program using the collection types of Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specifications. Retaining this measure through the Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specification collection types allows clinicians to choose this measure as one of the six measures clinicians are generally required to report to meet the quality performance category requirements

D.4. Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF #:	0421
Quality #:	128
CMS E-Measure ID:	CMS69v6
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. Normal Parameters: Age 18 years and older BMI => 18.5 and < 25 kg/m2.
Substantive Change:	Modified collection type: Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications Updated the denominator exception logic: for the eCQM Specifications collection type to allow medical reasons for not obtaining the BMI.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to remove the CMS Web Interface Measure Specifications collection type. This measure evaluates a process in the care for the patient. Removal of this measure from the CMS Web Interface Measure Specifications supports our effort to move towards outcome and meaningful measures. In addition, since clinicians are required to report all available CMS Web Interface measures, removing this measure from the CMS Web Interface will reduce the burden of the number of measures a clinician is required to report under the CMS Web Interface. This measure is broadly applicable to eligible clinicians participating in the MIPS program using the collection types of Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specifications. Retaining this measure through the Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications, and eCQM specification collection types allows clinicians to choose this measure as one of the six measures clinicians are generally required to report to meet the quality performance category requirements.</p> <p>We propose to update the denominator exception logic for the eCQM Specifications collection type to allow medical reasons for not obtaining the BMI. The Technical Expert Panel (TEP) convened by the measure steward recommended adding a medical reason as there could be valid medical reasons for not obtaining the BMI. We agree with the TEP to add a medical exception. There are valid medical reasons that may inhibit the eligible clinicians from obtaining a BMI. Specifically, CMS69v6 has denominator exceptions for medical reasons for not providing the follow-up plan. These exceptions are currently expressed as “Intervention, Order not done” and “Medication, Order not done”. The proposed updated measure, CMS69v7, adds an exception to remove patients from the denominator who have a medical reason for not having a BMI performed. This exception was added to account for patients for whom it may be physically difficult to conduct a BMI, such as patients who are unable to stand or for whom their weight exceeds scale limits. This update will provide eligible clinicians the opportunity to exclude patients when there is an appropriate medical reason documented.</p>

D.5. Oncology: Medical and Radiation – Plan of Care for Pain

Category	Description
NQF #:	0383
Quality #:	144
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain
Substantive Change:	<p>The new numerator is revised to read: Patients for whom a plan of care to address moderate to severe pain is documented on or before the date of the second visit with a clinician. Updated the denominator to clearly state that population for this measure would be limited to patients who had moderate to severe pain.</p> <p>The new denominator is revised to read: All patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having moderate to severe pain or All patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy.</p>
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to modify the numerator to state that the plan of care for pain management should be documented in the first 2 visits (not at any point during the performance period). The current measure requires the plan of care to be documented at any time during the performance period.</p> <p>We propose to modify the denominator to clearly state that the population for this measure would be limited to patients who had moderate to severe pain.</p> <p>Pain severity continues to remain largely unaddressed, especially in those patients who have moderate/severe pain. The edits to this measure's numerator would ensure that the oncologist documents a plan of care early, so as to ensure that patients who have moderate to severe pain know what pain management options are available to them earlier on when receiving chemotherapy and radiation, and can become engaged early on in their healthcare decisions. The update to the numerator is based on American Society of Clinical Oncology feedback on the measure by Quality Oncology Practice Initiative registry users who realize that the measure should focus on this to ensure quality of life via pain management is improved in cancer patients.</p>

D.6. Rheumatoid Arthritis (RA): Tuberculosis Screening

Category	Description
NQF #:	N/A
Quality #:	176
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 6 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD)
Substantive Change:	<p>The new description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 12 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD).</p> <p>The new numerator is revised to read: Patients for whom a TB screening was performed and results interpreted within 12 months prior to receiving a first course of therapy using a biologic DMARD.</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update to the numerator to require the TB screening 12 months prior to the first biologic treatment rather than 6 months as currently stated. The measure steward believes this measure should be more in line with the specifications found in a similar measure developed by the American College of Rheumatology (ACR) and endorsed by the National Quality Forum (NQF). In creating its version of this measure, the ACR conducted an extensive development and review process. The measure was built by a panel of rheumatology experts, in conjunction with the ACR, based on quality of care guidelines and broad reviews of relevant research. Upon completion, the measure was shared with thousands of rheumatology providers across the U.S. for public comment. Following the comment period, the measure was updated appropriately based on the feedback received, then rigorously tested to ensure reliability and validity. The proposed measure, along with the results of the testing, was submitted to the NQF for review and obtained trial endorsement. We typically prefer the use of NQF endorsed measures over measures that lack endorsement. However, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus. We believe this measure revision from tuberculosis screening from 6 months to 12 months can be supported by evidence and is an important measure to ensure proper tuberculosis screening for rheumatoid arthritis patients.</p>

D.7. Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

Category	Description
NQF #:	N/A
Quality #:	177
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease activity within 12 months.
Substantive Change:	<p>The new numerator is revised to read: Patients with disease activity assessed by an ACR-endorsed rheumatoid arthritis disease activity measurement tool classified into one of the following categories: remission, low, moderate or high, at least $\geq 50\%$ of total number of outpatient RA encounters in the measurement year.</p> <p>The new definition is revised to read: Assessment and Classification of Disease Activity – Assesses if physicians are utilizing a standardized, systematic approach for evaluating the level of disease activity for each patient at least for $\geq 50\%$ of total number of outpatient RA encounters. The scales/instruments listed are the ACR-endorsed tools that should be used to define activity level and cut-off points:</p> <ul style="list-style-type: none"> -Clinical Disease Activity Index (CDAI) -Disease Activity Score with 28-joint counts (erythrocyte sedimentation rate or C-reactive protein) (DAS-28) -Patient Activity Scale (PAS) -Patient Activity Score-II (PAS-II) -Routine Assessment of Patient Index Data with 3 measures (RAPID 3) -Simplified Disease Activity Index (SDAI) <p>A result of any kind qualifies for meeting numerator performance.</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We propose to update the numerator to change the requirement to assess disease activity from once a year to "$\geq 50\%$ of encounters in the measurement year" and to change the use of any standardized tool to only use ACR-endorsed tools. Currently, the measure is only required to be submitted once per performance period. The current measure identifies tools that are available, but allows eligible clinicians to utilize tools not listed within the specification.</p> <p>The proposed changes add a considerable degree of specificity to quality measure 177 by 1) limiting options for disease activity measures to those that have been found to be valid through a rigorous ACR process, and 2) changing the frequency of assessment to include a majority of clinical encounters for RA, since this approach would be consistent with current guidelines regarding treating to a pre-specified target.</p> <p>The ACR developed recommendations for the use of RA disease activity measures in clinical practice. And after thorough evaluation of around 63 available measures, ACR recommends the following 6 measures: CDAI, DAS28 (ESR or CRP), PAS, PAS-II, RAPID-3, and SDAI as ACR-endorsed RA disease activity measures to be used in clinical practice. Many of these tools are available free of charge. The tools were selected to ensure a comprehensive and standardized approach to assess disease activity for rheumatoid arthritis.</p> <p>Given this evidence, the measure steward believes this measure should be updated to be more in line with the specifications found in similar measures developed by ACR and endorsed by NQF. We agree with the proposed revision to promote utilization of the most current guidelines that have been developed by the panel of rheumatology experts. We typically prefer the use of NQF endorsed measures over measures that lack endorsement. Disease activity assessment is imperative to development of an appropriate treatment plan. Revising the numerator to require a more frequent assessment supports development of a more effective treatment plan. We support the use of standardized tools to assess disease activity so the score can be standardized and comparable among eligible clinicians.</p>

D.8. Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines

Category	Description
NQF #:	N/A
Quality #:	364
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of final reports for computed tomography (CT) imaging studies of the thorax for patients aged 18 years and older with documented follow-up recommendations for incidentally detected pulmonary nodules (e.g., follow-up CT imaging studies needed or that no follow-up is needed) based at a minimum on nodule size AND patient risk factors.
Substantive Change:	<p>Updated the denominator: To patients 35 years and older.</p> <p>Updated denominator exclusions: Added heavy tobacco smokers</p> <p>Updated denominator exceptions: To include medical reasons.</p> <p>Updated numerator: Includes a recommended interval and modality for follow-up.</p> <p>The new description is revised to read: Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up [(e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians)]</p>
Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We propose to update the measure description and denominator from 18 years and older to 35 years and older. We also propose to update the numerator to include a recommended interval and modality for follow-up. The revised measure assesses final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up [(e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians)]. The current measure specification does not allow a denominator exclusion for heavy smokers. A new denominator exclusion is included for heavy tobacco smokers who qualify for lung cancer screening. Furthermore, the current denominator exception does not account for the indication of a modality. A new denominator exception for medical reasons for not including a recommended interval and modality for follow-up.</p> <p>The proposed changes add specificity to this measure and ensure the appropriate patient population is being targeted for this measure by 1) updating the numerator quality action to specify a recommended interval and modality for follow-up, 2) specifying additional denominator exclusions and exceptions, and 3) changing the intended patient population (to 35 years and older) as supported by an update to clinical guidelines. We agree with the proposed revision to promote utilization of the most current guidelines. It creates a more robust measure that defines the required clinical action to the narrowed patient population. We also agree with the addition specific denominator exceptions and denominator exclusions to promote consistent data among eligible clinicians.</p>

D.9. Depression Remission at Twelve Months

Category	Description
NQF #:	0710
Quality #:	370
CMS E-Measure ID:	CMS159v6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18 years of age and older with major depression or dysthymia who reached remission 12 months (+/- 30 days) after an index visit
Substantive Change:	<p>The new description is revised to read: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.</p> <p>The new denominator is revised to read: Adolescent patients 12 to 17 years of age with a diagnosis of major depression or dysthymia and an initial PHQ-9 or PHQ-9M score greater than nine during the index event.</p> <p>The new numerator is revised to read: Adolescent patients aged 12 to 17 years of age who achieved remission at twelve months as demonstrated by a twelve month (+/- 60 days) PHQ-9 or PHQ-9M score of less than five</p>
Steward:	Minnesota Community Measurement (MNCM)
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to add adolescents to the denominator via stratification and references to the PHQ-9M, which is specific for adolescents. The patient population has been revised to include patients 12 years of age and older, when previously only included patients over the age of eighteen. The score to determine denominator eligibility was based on the PHQ-9 assessment, this was expanded to include the PHQ-9M to accommodate the expanded age with age appropriate assessment tools. The measure steward worked in collaboration with NCQA, who requested a consideration of incorporating adolescents into the existing depression measures. We agree with the expansion of the denominator to include the adolescent patient population. Depression assessment is a clinically relevant and important topic to address among adolescents. We appreciate the collaboration among the stakeholders to broaden the measure.</p>

D.10. Depression Utilization of the PHQ-9 Tool

Category	Description
NQF #:	0712
Quality #:	371
CMS E-Measure ID:	CMS160v6
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	The percentage of patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying visit
Substantive Change:	<p>The new description is revised to read: The percentage of adolescent patients (12 to 17 years of age) and adult patients (18 years of age or older) with a diagnosis of major depression or dysthymia who have a completed PHQ-9 or PHQ-9M tool during the measurement period.</p> <p>The new denominator is revised to read: Adolescent patients (12 to 17 years of age) and adult patients (18 years of age or older) with a diagnosis of major depression or dysthymia.</p> <p>The new numerator is revised to read: Adolescent patients (12 to 17 years of age) and adult patients (18 years of age or older) included in the denominator who have at least one PHQ-9 or PHQ-9M tool administered and completed during a four month measurement period.</p>
Steward:	Minnesota Community Measurement (MNCM)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add adolescents to the denominator via stratification and references to the PHQ-9M for both denominator and numerator, which is specific for adolescents. The patient population has been revised to include patients 12 years of age and older, when previously only included patients over the age of eighteen. The measure steward worked in collaboration with NCQA, who requested a consideration of incorporating adolescents into the existing depression measures. We agree with the expansion of the denominator to include the adolescent patient population. Depression assessment is a clinically relevant and important topic to address among adolescents. We appreciate the collaboration among the stakeholders to broaden the measure.

D.11. Melanoma Reporting

Category	Description
NQF #:	N/A
Quality #:	397
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness and ulceration and for pT1, mitotic rate.
Substantive Change:	The new numerator is revised to read: Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the numerator to include mitotic rate for all pT categories. The current measure specification only requires a statement the mitotic rate for pT1. The American Joint Committee on Cancer's Melanoma Expert Panel strongly recommends that mitotic rate be assessed and recorded for all primary melanomas, although it is not used for T1 staging in the eighth edition. The mitotic rate will likely be an important parameter for inclusion in the future development of prognostic models applicable to individual patients. Although it is not included in the T1 subcategory criteria, mitotic activity in T1 melanomas also has been associated with an increased risk of sentinel lymph node metastasis. We agree with the addition of mitotic rate assessment for all primary melanomas. This creates valuable clinical information to the eligible clinician in order to create an effective treatment plan specific to the melanoma.

D.12. Psoriasis: Clinical Response to Oral Systemic or Biologic Medications

Category	Description
NQF #:	N/A
Quality #:	410
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of psoriasis vulgaris patients receiving oral systemic or biologic therapy who meet minimal physician-or patient-reported disease activity levels. It is implied that establishment and maintenance of an established minimum level of disease control as measured by physician-and/or patient-reported outcomes will increase patient satisfaction with and adherence to treatment.
Substantive Change:	<p>The new description is revised to read: Percentage of psoriasis vulgaris patients receiving systemic therapy who meet minimal physician-or patient- reported disease activity levels. It is implied that establishment and maintenance of an established minimum level of disease control as measured by physician-and/or patient-reported outcomes will increase patient satisfaction with and adherence to treatment</p> <p>The new denominator is revised to read: All patients with a diagnosis of psoriasis vulgaris and treated with a systemic medication.</p> <p>The new numerator is revised to read: Patients who have a documented physician global assessment (PGA; 5-point OR 6-point scale), body surface area (BSA), psoriasis area and severity index (PASI) and/or dermatology life quality index (DLQI) that meet any one of the below specified benchmarks.</p>
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to update the measure title, description and denominator to expand the measure to include systemic medications that are administered both orally and subcutaneously. The measure still includes biologics rather than only oral and biologic medications. The patient population includes those diagnosed with psoriasis vulgaris receiving systemic medications that are administered both orally and subcutaneously or biologic therapy who meet minimal physician-or patient- reported disease activity levels. In addition, the numerator is being expanded to include the 5-point PGA scale as an additional benchmark. The current numerator allow the use of PGA; 6-point scale), body surface area (BSA), psoriasis area and severity index (PASI) and/or dermatology life quality index (DLQI) to assess clinical response.</p> <p>The measure steward believes the update to allow all systemic medications is relevant as they have deemed them to all apply to the measure. Based on recent literature, there is a strong correlation in how the 5-point scale is used like the 6-point PGA scale, resulting in comparative results. This scale is requested to be added to allow clinicians a shorter scale to choose from which would be more user-friendly in a clinical setting. We agree with the expansion of the denominator to include all systemic medications, not limited to oral systemic or biologic therapy. Including systemic medications administered subcutaneously provides an additional opportunity to assess effective outcomes this treatment option. We agree with the 5-point PGA scale to allow an additional tools to assess psoriasis outcomes.</p>

D.13. Depression Remission at Six Months

Category	Description
NQF #:	0711
Quality #:	411
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18 years of age or older with major depression or dysthymia who reached remission six months (+/- 30 days) after an index visit.
Substantive Change:	<p>The new description is revised to read: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission six months (+/- 60 days) after an index event date.</p> <p>The new denominator is revised to read: Adolescent patients 12 to 17 years of age with a diagnosis of major depression or dysthymia and an initial PHQ-9 or PHQ-9M score greater than nine during the index event.</p> <p>The new description is revised to read: Adolescent patients aged 12 to 17 years of age who achieved remission at six months as demonstrated by a six month (+/- 60 days) PHQ-9 or PHQ-9M score of less than five.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	<p>We propose to add adolescents to denominator via stratification and references to the PHQ-9M which is specific for adolescents. The patient population has been revised to include patients 12 years of age and older, when previously only included patients over the age of eighteen. The score to determine denominator eligibility was based on the PHQ-9 assessment, this was expanded to include the PHQ-9M to accommodate the expanded age with age appropriate assessment tools. The measure steward worked in collaboration with NCQA, who requested a consideration of incorporating adolescents into the existing depression measures. We agree with the expansion of the denominator to include the adolescent patient population. Depression assessment is a clinically relevant and important topic to address among adolescents. We appreciate the collaboration among the stakeholders to broaden the measure.</p>

D.14. Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older

Category	Description
NQF #:	N/A
Quality #:	415
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 18 years and older who presented within 24 hours of a minor blunt head trauma with a Glasgow Coma Scale (GCS) score of 15 and who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT
Substantive Change:	<p>Updated the measure description and denominator to remove the requirement of a patient presenting to the emergency department within 24 hours of a minor blunt head trauma, as well as remove the requirement to document a GCS of 15.</p> <p>The new description is revised to read: Percentage of emergency department visits for patients aged 18 years and older who presented within 24 hours of a minor blunt head trauma with a Glasgow Coma Scale (GCS) score of 15 and who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.</p> <p>The new denominator is revised to read: All emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider</p> <p>Updated the numerator: To indicate the GCS score less than 15 is an appropriate indication for a head CT. The new definition within the numerator is revised to include a GSC score less than 15.</p>
Steward:	American College of Emergency Physicians (ACEP)
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We propose to update to the measure description and denominator to remove the requirement of a patient presenting to the emergency department within 24 hours of a minor blunt head trauma, as well as remove the requirement to document a GCS of 15. We propose to update the numerator to indicate the GCS score less than 15 is an appropriate indication for a head CT. The new description is revised to read: Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.</p> <p>Based on feedback from the measure steward, this measure is appropriate for all minor blunt head traumas, regardless of when they occurred in relation to presentation to the ED. Additionally, in order to better align the measure with the evidence base and guidelines supporting the measure, the measure steward determined that the GCS of <15 data element would be more accurately included as an appropriate indication for ordering a head CT, so this has been relocated to the numerator definition. We agree with the recommendation and propose the revision as this promotes utilization of the most current guidelines to determine imaging requirements based on the documented GCS.</p>

D.15. Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years

Category	Description
NQF #:	N/A
Quality #:	416
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented within 24 hours of a minor blunt head trauma with a Glasgow Coma Scale (GCS) score of 15 and who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury
Substantive Change:	<p>Updated denominator: To remove the requirement of a patient presenting to the emergency department within 24 hours of a minor blunt head trauma, as well as remove the requirement to document a GCS of 15.</p> <p>The measure description is revised to read: Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.</p> <p>Updated the numerator: To indicate the GCS score less than 15 is an appropriate indication for a head CT.</p>
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We propose to update the measure description and denominator to remove the requirement of a patient presenting to the emergency department within 24 hours of a minor blunt head trauma, as well as remove the requirement to document a GCS of 15. We propose to update the numerator to indicate the GCS score less than 15 is an appropriate indication for a head CT.</p> <p>Based on feedback from the measure steward, this measure is appropriate for all minor blunt head traumas, regardless of when they occurred in relation to presentation to the ED. Additionally, in order to better align the measure with the evidence base and guidelines supporting the measure, ACEP physician leaders determined that the GCS of <15 data element would be more accurately included as an appropriate indication for ordering a head CT, so this has been relocated to the numerator definition. We agree with the proposed revision as this promotes utilization of the most current guidelines to determine imaging requirement based on the documented GCS.</p>

D.16. Functional Status Change for Patients with Knee Impairments

Category	Description
NQF #:	0422
Quality #:	217
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report measure of change in functional status for patients 14 year+ with knee impairments. The change in functional status (FS) assessed using FOTO's (knee) PROM (patient-reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.17. Functional Status Change for Patients with Hip Impairments

Category	Description
NQF #:	0423
Quality #:	218
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report measure of change in functional status (FS) for patients 14 years+ with hip impairments. The change in functional status (FS) assessed using FOTO's (hip) PROM (patient-reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.18. Functional Status Change for Patients with Foot or Ankle Impairments

Category	Description
NQF #:	0424
Quality #:	219
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report measure of change in functional status (FS) for patients 14 years+ with foot and ankle impairments. The change in functional status (FS) assessed using FOTO's (foot and ankle) PROM (patient reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.19. Functional Status Change for Patients with Lumbar Impairments

Category	Description
NQF #:	0425
Quality #:	220
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report outcome measure of change in functional status for patients 14 years+ with lumbar impairments. The change in functional status (FS) assessed using FOTO (lumbar) PROM (patient reported outcome measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level by to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.20. Functional Status Change for Patients with Shoulder Impairments

Category	Description
NQF #:	0426
Quality #:	221
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report outcome measure of change in functional status (FS) for patients 14 years+ with shoulder impairments. The change in functional status (FS) assessed using FOTO's (shoulder) PROM (patient reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.21. Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
NQF #:	0427
Quality #:	222
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report outcome measure of functional status (FS) for patients 14 years+ with elbow, wrist or hand impairments. The change in FS assessed using FOTO (elbow, wrist and hand) PROM (patient reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.22. Functional Status Change for Patients with General Orthopaedic Impairments

Category	Description
NQF #:	0428
Quality #:	223
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A self-report outcome measure of functional status (FS) for patients 14 years+ with general orthopaedic impairments (neck, cranium, mandible, thoracic spine, ribs or other general orthopaedic impairment). The change in FS assessed using FOTO (general orthopaedic) PROM (patient reported outcomes measure) is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level by to assess quality
Substantive Change:	Updated the denominator to allow coding for chiropractors and outpatient eligible clinicians. The new denominator is revised to expand to: Physician Denominator Criteria and Chiropractic Care Denominator Criteria.
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to expand the denominator to allow coding for chiropractors and outpatient eligible clinicians. The current measure only includes coding to support physical and occupational therapists. The measure steward has recommended expanding the denominator to include other types of eligible clinicians providing outpatient and chiropractic services. Physical functional status is relevant to a broad spectrum of specialties in order to assess the effectiveness of a treatment plan. We agree with the recommendation and are proposing the expansion as it allows a broader spectrum of eligible clinicians the opportunity to submit outcome measures.

D.23. Overuse Of Imaging For Patients With Primary Headache

Category	Description
NQF #:	N/A
Quality #:	419
CMS E-Measure ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with a diagnosis of primary headache disorder whom advanced brain imaging was not ordered
Substantive Change:	<p>Updated the measure analytics to be an inverse measure and remove the assessment of the appropriate use for Computed Tomography Angiography (CTA) and Magnetic Resonance Angiography (MRA).</p> <p>The new description is revised to read: Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present</p> <p>The new numerator is revised to: Patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present.</p>
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We propose to adjust the measure analytics to produce inverse performance data and update the numerator to reflect new clinical evidence regarding the diagnostic imaging modalities (removing CTA and MRA). Updating inverse measure analytics for this measure will appropriately represent the data produced by an overuse measure. The measure development workgroup, procured by AAN, reviewed available evidence and found that there are different indications for imaging with CTA and MRA compared to CT and MRI. The indications for clinical management of primary headache, (which are listed in the measure) are only appropriate for CT and MRI. The updated clinical guidelines included in the measure support this as well.

Appendix 2: Improvement Activities

For previously finalized improvement activities, we refer readers to the finalized Improvement Activities Inventory in Table F in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175) and in Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77818). Unless modified or removed in the CY 2019 Physician Fee Schedule final rule, previously finalized improvement activities continue to apply for the MIPS CY 2019 performance period and future years.

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53569) for our most recently adopted criteria for nominating new improvement activities. We refer readers to section III.H.3.h.(4)(d)(i) of this proposed rule, for information regarding our proposals to add one new criterion and remove a previously adopted criterion. In addition, we refer readers to section III.H.3.h.(4)(d)(i) of this proposed rule where we are also making clarifications to: (1) considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities. Below, we are proposing six (6) new improvement activities; we are also proposing to modify five (5) existing activities and remove one (1) existing activity for CY 2019 performance period and future years.

TABLE A: Proposed New Improvement Activities for the MIPS CY 2019 Performance Period and Future Years

Proposed Improvement Activity	
Proposed Activity ID:	IA AHE XX
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Comprehensive Eye Exams
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by providing literature and/or facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign ⁷² and/or referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America ⁷³ and the American Optometric Association’s VISION USA ⁷⁴ . This activity is intended for: (1) non-ophthalmologists / optometrist who refer patients to an ophthalmologist/optometrist; (2) ophthalmologists/optometrists caring for underserved patients at no cost; or (3) any clinician providing literature and/or resources on this topic. This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams.
Proposed Weighting:	Medium
Rationale	This activity fills a gap as the Inventory does not currently contain an activity related to ophthalmology. Furthermore, we believe promoting and educating patients about the importance of a comprehensive eye exam can improve access to this service and, in turn, improve health status particularly for traditionally underserved populations or to those who are otherwise unable to access these important services. For these reasons, we believe this activity meets the inclusion criteria of an activity that could lead to improvement in practice to reduce health care disparities. We are proposing the weighting of this activity as medium because this activity may be accomplished by providing literature and/or facilitating a conversation with a patient during a regular visit. This task may be incorporated into a patient’s

⁷² The Think About Your Eyes resource may be found at <http://thinkaboutyoureyes.com>.

⁷³ The American Academy of Ophthalmology’s EyeCare America resource may be found at <https://www.aao.org/eyecare-america>.

⁷⁴ The American Optometric Association’s VISION USA resource may be found at <http://www.aofoundation.org/vision-usa/>.

	regular visit with a relatively low investment of time or resources.
Proposed Improvement Activity	
Proposed Activity ID:	IA BE XX
Proposed Subcategory:	Beneficiary Engagement
Proposed Activity Title:	Financial Navigation Program
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must attest that their practice provides financial counseling to patients or their caregiver about costs of care and an exploration of different payment options. The MIPS eligible clinician may accomplish this by working with other members of their practice (for example, financial counselor or patient navigator) as part of a team-based care approach in which members of the patient care team collaborate to support patient-centered goals. For example, a financial counselor could provide patients with resources with further information or support options, or facilitate a conversation with a patient or caregiver that could address concerns. This activity may occur during diagnosis stage, before treatment, during treatment, and/or during survivorship planning, as appropriate.
Proposed Weighting:	Medium
Rationale:	<p>We believe there is the possibility for improved outcomes when financial navigation programs are in place, such as reducing patient anxiety about costs and improved access to care for underserved populations. For these reasons, we believe this activity meets the inclusion criteria of an activity that could lead to improvement in practice to reduce health care disparities.</p> <p>We are proposing the weighting of this activity as medium because the activity may be accomplished by providing literature and/or facilitating a conversation with a patient during a regular visit. This task may be incorporated into a patient's regular visit with a relatively low investment of time or resources.</p>
Proposed Improvement Activity	
Proposed Activity ID:	IA BMH XX
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Completion of Collaborative Care Management Training Program
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychological Association (APA) Collaborative Care Model training program available as part of the Centers for Medicare & Medicaid Services (CMS) Transforming Clinical Practice Initiative (TCPI) ⁷⁵ , available to the public ⁷⁶ , in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.
Proposed Weighting:	Medium
Rationale:	Collaborative care management approaches to integrating behavioral health into primary care practice have been associated with significant improvements in mental health symptom acuity and adherence to treatment in the short- to mid-term ^{77,78,79} . In addition, this activity meets the inclusion criteria of an activity that is likely to lead to improved beneficiary health outcomes.

⁷⁵ Centers for Medicare & Medicaid Services (CMS) Transforming Clinical Practice Initiative (TCPI) information may be found at <https://innovation.cms.gov/initiatives/Transforming-Clinical-Practices/>.

⁷⁶ American Psychological Association (APA) Collaborative Care Model training program information may be found at <https://www.psychiatry.org/psychiatrists/practice/professional-interests/integrated-care/get-trained>.

⁷⁷ Angstman, K. B., Meunier, M. R., Rohrer, J. E., Oberhelman, S. S., Maxson, J. A., & Rahman, P. A. (2014). Future complexity of care tier affected by depression outcomes. *J Prim Care Community Health*, 5(1), 30-35. doi: 10.1177/2150131913511465.

⁷⁸ Archer, J., Bower, P., Gilbody, S., Lovell, K., Richards, D., Gask, L., Coventry, P. (2012). Collaborative care for depression and anxiety problems. *Cochrane Database of Systematic Reviews*, 10.

	We are proposing the weighting of this activity as medium because participation in a training program consists of online reading, attending webinars, or other one-time or short-term activities, which, though beneficial, do not require substantial time or effort by clinicians.
Proposed Improvement Activity	
Proposed Activity ID:	IA CC XX
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Relationship-Centered Communication
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must participate in a minimum of eight hours of training on relationship-centered care ⁸⁰ tenets such as making effective open-ended inquiries; eliciting patient stories and perspectives; listening and responding with empathy; using the ART (ask, respond, tell) communication technique to engage patients, and developing a shared care plan. The training may be conducted in formats such as, but not limited to: interactive simulations practicing the skills above, or didactic instructions on how to implement improvement action plans, monitor progress, and promote stability around improved clinician communication.
Proposed Weighting:	Medium
Rationale:	There is currently not an activity in the Inventory that addresses communication between patients and clinicians; this proposed activity would help fill a gap. We believe that this proposed activity meets the inclusion criteria of an activity that is likely to lead to improved beneficiary health outcomes based on research citing the importance of relationship-centered care to patient safety ⁸¹ . We are proposing the weighting of this activity as medium because participation in an eight hour training on relationship-centered care, though beneficial, does not require substantial time or effort by clinicians
Proposed Improvement Activity	
Proposed Activity ID:	IA PSPA XX
Proposed Subcategory:	Patient Safety and Practice Assessment
Proposed Activity Title:	Patient Medication Risk Education
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must provide both written and verbal education regarding the risks of concurrent opioid and benzodiazepine use for patients who are prescribed both benzodiazepines and opioids. Education must be completed for at least 75% of qualifying patients and occur: (1) at the time of initial co-prescribing and again following greater than 6 months of co-prescribing of benzodiazepines and opioids, or (2) at least once per MIPS performance period for patients taking concurrent opioid and benzodiazepine therapy.
Proposed Weighting:	High
Rationale:	This activity addresses the Meaningful Measures priority area of Prevention and Treatment of Opioid and Substance Use Disorders ⁸² and addresses the role of clinicians in management of concurrent prescriptions, a topic that is not currently represented in the Inventory. We believe this activity meets the inclusion criteria of

⁷⁹ Recommendation from the Community Preventive Services Task Force for Use of Collaborative Care for the Management of Depressive Disorders. *Am J Prev Med* (2012), 42(5), 521-524.

⁸⁰ Nundy, S. and J. Oswald (2014). "Relationship-centered care: A new paradigm for population health management." *Healthcare* 2(4): 216-219.

⁸¹ Dingley, C., Daugherty, K., Derieg, M. K., & Persing, R. (2008). *Advances in Patient Safety: Improving Patient Safety through Provider Communication Strategy Enhancements*. In: Henriksen K, Battles JB, Keyes MA, et al., editors. *Advances in Patient Safety: New Directions and Alternative Approaches* (Vol. 3: Performance and Tools). Rockville (MD): Agency for Healthcare Research and Quality (US); 2008 Aug. Available from: <https://www.ncbi.nlm.nih.gov/books/NBK43663/>.

⁸² Meaningful Measures Framework information may be found at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html>.

	<p>an activity that is likely to lead to improved beneficiary health outcomes due to the prevalence of opioid and substance abuse disorders and the medical consequences of mismanagement of concurrent benzodiazepine and opioid prescription⁸³.</p> <p>We are proposing the weighting of this activity as high because it addresses a public health emergency⁸⁴ and may reduce preventable health conditions related to opioid abuse. High weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being, as explained in the CY 2017 Quality Payment Program final rule (81 FR 77194). We also refer readers to our clarifications regarding weighting at section III.H.3.h.(4) of this proposed rule. According to the CDC, about 63,000 people died in 2016 of a drug overdose, and well over half of them are attributed to opioids.⁸⁵ According to the 2016 National Survey on Drug Use and Health (NSDUH), 11.8 million individuals ages 12 and older misused any opioid (that is, prescription and/or illicit opioids) and 11.5 million individuals misused prescription opioids. Of those who misused opioids, 2.1 million individuals meet the criteria for an opioid use disorder.⁸⁶ Since providing education regarding the risks of concurrent opioid and benzodiazepine use directly addresses the opioid epidemic, we believe this improvement activity meets our considerations for high-weighting.</p>
Proposed Improvement Activity	
Proposed Activity ID:	IA_PSPA_XX
Proposed Subcategory:	Patient Safety and Practice Assessment
Proposed Activity Title:	Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support
Proposed Activity Description:	In order to receive credit for this activity, MIPS eligible clinicians must utilize the Centers for Disease Control (CDC) Guideline for Prescribing Opioids for Chronic Pain ⁸⁷ via clinical decision support (CDS). For CDS to be most effective, it needs to be built directly into the clinician workflow and support decision making on a specific patient at the point of care. Specific examples of how the guideline could be incorporated into a CDS workflow include, but are not limited to: electronic health record (EHR)-based prescribing prompts, order sets that require review of guidelines before prescriptions can be entered, and prompts requiring review of guidelines before a subsequent action can be taken in the record.
Proposed Weighting:	High
Rationale:	This activity addresses the Meaningful Measures priority areas of Prevention and Treatment of Opioid and Substance Use Disorders and Transfer of Health Information and Interoperability ⁸⁸ . Electronic tools like CDS can assist clinicians

⁸³ McClure, F. L., Niles, J. K., Kaufman, H. W., & Gudim, J. (2017). Concurrent Use of Opioids and Benzodiazepines: Evaluation of Prescription Drug Monitoring by a United States Laboratory. *Journal of Addiction Medicine*, 11(6), 420–426. <http://doi.org/10.1097/ADM.0000000000000354>.

	<p>in preventing adverse patient outcomes. We believe this activity meets the inclusion criteria of an activity that is likely to lead to improved beneficiary health outcomes due to the prevalence of opioid and substance abuse disorders and evidence of CDS supporting improved outcomes and patient safety⁸⁹.</p> <p>We are proposing the weighting of this activity as high because it promotes interoperability and addresses a public health emergency and may reduce preventable health conditions related to opioid abuse. High weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being, as explained in the CY 2017 Quality Payment Program final rule (81 FR 77194). We also refer readers to our clarifications regarding weighting at section III.H.3.h.(4) of this proposed rule. According to the CDC, about 63,000 people died in 2016 of a drug overdose, and well over half of them are attributed to opioids.⁹⁰ According to the 2016 National Survey on Drug Use and Health (NSDUH), 11.8 million individuals ages 12 and older misused any opioid (that is, prescription and/or illicit opioid) and 11.5 million individuals misused prescription opioids. Of those who misused opioids, 2.1 million individuals meet the criteria for an opioid use disorder.⁹¹ Since providing education regarding the risks of concurrent opioid and benzodiazepine use directly helps to address the opioid epidemic, and use of CDS addresses CMS's policy focus on promoting interoperability⁹² we believe this improvement activity meets our considerations for high-weighting.</p>
--	---

We solicit public comment on our proposals to adopt the improvement activities as discussed in Table A in the Improvement Activities Inventory for the MIPS CY 2019 performance period and future years.

TABLE B: Proposed Changes to Previously Adopted Improvement Activities for the MIPS CY 2019 Performance Period and Future Years

Current Improvement Activity	
Current Activity ID:	IA CC 10
Current Subcategory:	Care Coordination
Current Activity Title:	Care transition documentation practice improvements
Current Activity Description:	Implementation of practices/processes for care transition that include documentation of how a MIPS eligible clinician or group carried out a patient-centered action plan for first 30 days following a discharge (e.g., staff involved, phone calls conducted in support of transition, accompaniments, navigation actions, home visits, patient information access).
Current Weighting:	Medium
Proposed Changes and Rationale:	Addition of "...real time communication between PCP and consulting clinicians; PCP included on specialist follow-up or transition communications" as additional examples of how a patient-centered action plan could be documented. Primary care physicians are considered the gatekeeper of patient care. Including them in communications from specialists to patients about their follow-up of transition-of-care promotes continuity between clinicians. Adding this example to this improvement activity underscores the important role specialists play in care transition documentation practice improvement. Other language was revised for clarity.
Proposed Revised Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must document practices/processes for care transition with documentation of how a MIPS eligible clinician or group carried out an action plan for the patient with the patient's preferences in mind (that is, a "patient-centered" plan) during the first 30 days following a discharge. Examples of these practices/processes for care transition include: staff involved in the care transition; phone calls conducted in support of transition; accompaniments of patients to appointments or other navigation actions; home visits; patient information access to their medical records; real time communication between PCP and consulting clinicians; PCP included on specialist follow-up or transition communications.
Current Improvement Activity	
Current Activity ID:	IA PM 9
Current Subcategory:	Population Management
Current Activity Title:	Participation in Population Health Research
Current Activity Description:	Participation in research that identifies interventions, tools or processes that can improve a targeted patient population.
Current Weighting:	Medium
Proposed Changes and Rationale:	We are proposing to remove PM_9, because we believe PM_9 and PM_17 are duplicative and provide improvement activity credit for the same activity. In the CY 2017 Quality Payment Program final rule (81 FR 77820), we finalized PM_9: Participation in Population Health Research (activity title); Participation in research that identifies interventions, tools or processes that can improve a targeted patient population (activity description). In the CY 2018 Quality Payment Program final rule (82 FR 54481), we finalized PM_17: Participation in Population Health Research (activity title); participation in federally and/or privately funded research that identifies interventions tools, or processes that can improve a targeted patient population (activity description). We believe PM_9 and PM_17 are duplicative because they include the same subcategory and activity title, and nearly an identical description of the activity; participation in "research that identifies interventions, tools, or processes that can improve a targeted patient population." The two activities are only distinguished by the inclusion in the description for PM_17 specifying that clinicians can meet this activity through participation in federally and/or privately funded research that PM_9 does not. Therefore, we are proposing to remove PM_9 and preserve PM_17 so that we will have a consolidated activity that encompasses both improvement activities.
Proposed Revised Activity Description:	N/A
Current Improvement Activity	
Current Activity ID:	IA PM 13
Current Subcategory:	Population Management
Current Activity Title:	Chronic Care and Preventative Care Management for Empaneled Patients
Current Activity	Proactively manage chronic and preventive care for empaneled patients that could include one

Description:	<p>or more of the following:</p> <ul style="list-style-type: none"> • Provide patients annually with an opportunity for development and/or adjustment of an individualized plan of care as appropriate to age and health status, including health risk appraisal; gender, age and condition-specific preventive care services; and plan of care for chronic conditions; • Use condition-specific pathways for care of chronic conditions (e.g., hypertension, diabetes, depression, asthma and heart failure) with evidence-based protocols to guide treatment to target; such as a CDC-recognized diabetes prevention program; • Use pre-visit planning to optimize preventive care and team management of patients with chronic conditions; • Use panel support tools (registry functionality) to identify services due; • Use predictive analytical models to predict risk, onset and progression of chronic diseases; or • Use reminders and outreach (e.g., phone calls, emails, postcards, patient portals and community health workers where available) to alert and educate patients about services due; and/or routine medication reconciliation.
Current Weighting:	Medium
Proposed Changes and Rationale:	<p>Addition of examples of evidence based, condition-specific pathways for care of chronic conditions: “These might include, but are not limited to, the NCQA Diabetes Recognition Program (DRP) and the NCQA Heart/Stroke Recognition Program (HSRP).”</p> <p>These examples relating to diabetes, heart, and stroke pathways are examples of evidence based, condition-specific pathways for care of chronic conditions. These additions to this activity provide specialist-specific examples of actions that can be taken to meet the intent of this activity. We have received stakeholder feedback that additional specialty-specific activities would be welcome in the improvement activities inventory. Other language was revised for clarity.</p>
Proposed Revised Activity Description:	<p>In order to receive credit for this activity, a MIPS eligible clinician must manage chronic and preventive care for empaneled patients (that is, patients assigned to care teams for the purpose of population health management), which could include one or more of the following actions:</p> <ul style="list-style-type: none"> • Provide patients annually with an opportunity for development and/or adjustment of an individualized plan of care as appropriate to age and health status, including health risk appraisal; gender, age and condition-specific preventive care services; and plan of care for chronic conditions; • Use evidence based, condition-specific pathways for care of chronic conditions (for example, hypertension, diabetes, depression, asthma, and heart failure). These might include, but are not limited to, the NCQA Diabetes Recognition Program (DRP)⁹³ and the NCQA Heart/Stroke Recognition Program (HSRP)⁹⁴. • Use pre-visit planning, that is, preparations for conversations or actions to propose with patient before an in-office visit to optimize preventive care and team management of patients with chronic conditions; • Use panel support tools, (that is, registry functionality) or other technology that can use clinical data to identify trends or data points in patient records to identify services due; • Use predictive analytical models to predict risk, onset and progression of chronic diseases; and/or • Use reminders and outreach (e.g., phone calls, emails, postcards, patient portals, and community health workers where available) to alert and educate patients about services due; and/or routine medication reconciliation.
Current Improvement Activity	
Current Activity ID:	IA_PSPA_2

Current Activity Title:	Participation in MOC Part IV

⁹³ Diabetes Recognition Program information may be found at <http://www.ncqa.org/programs/recognition/clinicians/diabetes-recognition-program-drp>.

⁹⁴ NCQA Heart/Stroke Recognition Program information may be found at <http://www.ncqa.org/programs/recognition/clinicians/heart-stroke-recognition-program-hsrp>.

Current Activity Description:	Participation in Maintenance of Certification (MOC) Part IV, such as the American Board of Internal Medicine (ABIM) Approved Quality Improvement (AQI) Program, National Cardiovascular Data Registry (NCDR) Clinical Quality Coach, Quality Practice Initiative Certification Program, American Board of Medical Specialties Practice Performance Improvement Module or American Society of Anesthesiologists (ASA) Simulation Education Network, for improving professional practice including participation in a local, regional or national outcomes registry or quality assessment program. Performance of monthly activities across practice to regularly assess performance in practice, by reviewing outcomes addressing identified areas for improvement and evaluating the results.
Current Weighting:	Medium
Proposed Changes and Rationale:	<p>Added two examples of ways in which a MIPS eligible clinician can participate in Maintenance of Certification (MOC) Part IV: participation in “specialty-specific activities including Safety Certification in Outpatient Practice Excellence (SCOPE)⁹⁵,” and “American Psychiatric Association (APA) Performance in Practice modules⁹⁶.”</p> <p>These additions to the activity provide specialist-specific examples of actions that can be taken to meet this activity. We have received stakeholder feedback through listening sessions and meetings with various stakeholder entities that additional specialty-specific activities would be welcome in the Inventory. Specifically, adding these examples of activities in psychiatry and obstetrics and gynecology, respectively, fill a gap in the Inventory. Other language was revised for clarity.</p>
Proposed Revised Activity Description:	<p>In order to receive credit for this activity, a MIPS eligible clinician must participate in Maintenance of Certification (MOC) Part IV⁹⁷. Maintenance of Certification (MOC) Part IV requires clinicians to perform monthly activities across practice to regularly assess performance by reviewing outcomes addressing identified areas for improvement and evaluating the results.</p> <p>Some examples of activities that can be completed to receive MOC Part IV credit are: the American Board of Internal Medicine (ABIM) Approved Quality Improvement (AQI) Program,⁹⁸ National Cardiovascular Data Registry (NCDR) Clinical Quality Coach,⁹⁹ Quality Practice Initiative Certification Program,¹⁰⁰ American Board of Medical Specialties Practice Performance Improvement Module¹⁰¹ or American Society of Anesthesiologists (ASA) Simulation Education Network,¹⁰² for improving professional practice including participation</p>

	in a local, regional or national outcomes registry or quality assessment program; specialty-specific activities including Safety Certification in Outpatient Practice Excellence (SCOPE); ¹⁰³ American Psychiatric Association (APA) Performance in Practice modules. ¹⁰⁴
Current Improvement Activity	
Current Activity ID:	IA PSPA 8
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of Patient Safety Tools
Current Activity Description:	Use of tools that assist specialty practices in tracking specific measures that are meaningful to their practice, such as use of a surgical risk calculator, evidence based protocols such as Enhanced Recovery After Surgery (ERAS) protocols, the CDC Guide for Infection Prevention for Outpatient Settings, (https://www.cdc.gov/hai/settings/outpatient/outpatient-care-guidelines.html), predictive algorithms, or similar tools.
Current Weighting:	Medium
Proposed Changes and Rationale:	Addition of “opiate risk tool (ORT), or other similar tools” as an additional example/category of an action that can be undertaken to meet the requirements of this activity. This addition highlights an evidence-based tool that can be deployed to assess opiate risk and addresses the CMS Meaningful Measures area of Prevention and Treatment of Opioid and Substance Use Disorders. ¹⁰⁵ Other language was revised for clarity.
Proposed Revised Activity Description:	In order to receive credit for this activity, a MIPS eligible clinician must use tools that assist specialty practices in tracking specific measures that are meaningful to their practice. Some examples of tools that could satisfy this activity are: a surgical risk calculator; evidence based protocols, such as Enhanced Recovery After Surgery (ERAS) protocols; ¹⁰⁶ the Centers for Disease Control (CDC) Guide for Infection Prevention for Outpatient Settings ¹⁰⁷ predictive algorithms; and the opiate risk tool (ORT) ¹⁰⁸ or similar tool.
Current Improvement Activity	
Current Activity ID:	IA PSPA 17
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Implementation of analytic capabilities to manage total cost of care for practice population
Current Activity Description:	Build the analytic capability required to manage total cost of care for the practice population that could include one or more of the following: Train appropriate staff on interpretation of cost and utilization information; and/or Use available data regularly to analyze opportunities to reduce cost through improved care.
Current Weighting:	Medium
Proposed Changes and Rationale:	Added an example platform that uses available data to analyze opportunities to reduce cost through improved care: “An example of a platform with the necessary analytic capability is the American Society for Gastrointestinal (GI) Endoscopy’s GI Operations Benchmarking Platform.” ¹⁰⁹

¹⁰³ American College of Obstetricians and Gynecologists Safety Certification in Outpatient Practice Excellence for Women’s Health resource may be found at <https://www.acog.org/About-ACOG/ACOG-Departments/VRQC-and-SCOPE/SCOPE-Program-Overview>

¹⁰⁴ American Psychiatric Association Learning Center resource may be found at <https://education.psychiatry.org/Users/ProductList.aspx?TypeID=8>

¹⁰⁵ centers for Medicare & Medicaid Services “Meaningful Measures Hub” resource can be found at [https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html#Measure Areas Defined](https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html#Measure%20Areas%20Defined)

¹⁰⁶ Enhanced Recovery After Surgery (ERAS) protocols can be found at <http://aserhq.org/protocols/>.

¹⁰⁷ The Centers for Disease Control (CDC) Guide for Infection Prevention for Outpatient Settings can be found at <https://www.cdc.gov/hai/settings/outpatient/outpatient-care-guidelines.html>.

¹⁰⁸ The Opiate Risk Tool can be found at <https://www.drugabuse.gov/sites/default/files/files/OpioidRiskTool.pdf>.

¹⁰⁹ American Society for Gastrointestinal Endoscopy GI Operations Benchmarking can be found at <https://www.asge.org/home/practice-support/gi-operations-benchmarking>.

	Based on stakeholder feedback, we are proposing to add this example to clarify what type of a platform has the analytic capability to improve and manage total cost of care for the practice population described. Other language was revised for clarity.
Proposed Revised Activity Description:	<p>In order to receive credit for this activity, a MIPS eligible clinician must conduct or build the capacity to conduct analytic activities to manage total cost of care for the practice population. Examples of these activities could include:</p> <ol style="list-style-type: none"> 1.) Train appropriate staff on interpretation of cost and utilization information; 2.) Use available data regularly to analyze opportunities to reduce cost through improved care. An example of a platform with the necessary analytic capability to do this is the American Society for Gastrointestinal (GI) Endoscopy's GI Operations Benchmarking Platform.

We solicit comment on our proposals to modify or remove the improvement activities as discussed in Table B for the MIPS CY 2019 performance period and future years.

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Northwest Fisheries Science Center Fisheries Research; Final Rule

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 219**

[Docket No. 151027994–6421–02]

RIN 0648–BF47

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Northwest Fisheries Science Center Fisheries Research

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS' Office of Protected Resources (OPR), upon request of NMFS' Northwest Fisheries Science Center (NWFSC), hereby issues regulations to govern the unintentional taking of marine mammals incidental to fisheries research conducted in the Pacific Ocean over the course of five years. These regulations, which allow for the issuance of Letters of Authorization (LOA) for the incidental take of marine mammals during the described activities and specified timeframes, prescribe the permissible methods of taking and other means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, as well as requirements pertaining to the monitoring and reporting of such taking.

DATES: Effective from August 27, 2018, through August 28, 2023.

ADDRESSES: A copy of NWFSC's application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: www.fisheries.noaa.gov/action/incidental-take-authorization-noaa-fisheries-nwsc-fisheries-and-ecosystem-research. In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:**Purpose and Need for Regulatory Action**

These regulations, issued under the authority of the Marine Mammal Protection Act (MMPA) (16 U.S.C. 1361 *et seq.*), establish a framework for authorizing the take of marine mammals incidental to the NWFSC's fisheries research activities in the California Current and Pacific Northwest.

The NWFSC collects a wide array of information necessary to evaluate the status of exploited fishery resources and the marine environment. NWFSC scientists conduct fishery-independent research onboard NOAA-owned and operated vessels or on chartered vessels. A few surveys are conducted onboard commercial fishing vessels, but the NWFSC designs and executes the studies and funds vessel time.

We received an application from the NWFSC requesting five-year regulations and authorization to take multiple species of marine mammals. Take is anticipated to occur by Level B harassment incidental to the use of active acoustic devices, as well as by visual disturbance of pinnipeds, and by Level A harassment, serious injury, or mortality incidental to the use of fisheries research gear. The regulations are valid for five years from the date of issuance. Please see "Background" below for definitions of harassment.

Legal Authority for the Proposed Action

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1371(a)(5)(A)) directs the Secretary of Commerce to allow, upon request, the incidental, but not intentional taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region for up to five years if, after notice and public comment, the agency makes certain findings and issues regulations that set forth permissible methods of taking pursuant to that activity, as well as monitoring and reporting requirements. Section 101(a)(5)(A) of the MMPA and the implementing regulations at 50 CFR part 216, subpart I provide the legal basis for issuing this final rule containing five-year regulations, and a subsequent LOA. As directed by this legal authority, this final rule contains mitigation, monitoring, and reporting requirements.

Summary of Major Provisions Within the Final Rule

The following provides a summary of some of the major provisions within the rulemaking for the NWFSC fisheries research activities. We have determined that the NWFSC's adherence to the planned mitigation, monitoring, and reporting measures listed below will achieve the least practicable adverse impact on the affected marine mammals. They include:

- Required monitoring of the sampling areas to detect the presence of marine mammals before deployment of certain research gear.
- Required use of acoustic deterrent devices on surface trawl nets.

- Required implementation of the mitigation strategy known as the "move-on rule mitigation protocol" which incorporates best professional judgment, when necessary during certain research fishing operations.

Background

Paragraphs 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1371(a)(5)(A) and (D)) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined "negligible impact" in 50 CFR 216.103 as "an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival."

Except with respect to certain activities not pertinent here, the MMPA defines "harassment" as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

On August 10, 2015, we received an adequate and complete request from NWFSC for authorization to take marine mammals incidental to fisheries research activities. We received an initial draft of the request on January 2, 2015, followed by a revised draft on April 28, 2015. On August 28, 2015 (80 FR 52256), we published a notice of receipt of NWFSC's application in the **Federal Register**, requesting comments and information related to the NWFSC

request for 30 days. We received comments jointly from The Humane Society of the United States and Whale and Dolphin Conservation, which we considered in development of the notice of proposed rulemaking (81 FR 38516; June 13, 2016) and which are available online at: www.fisheries.noaa.gov/action/incidental-take-authorization-noaa-fisheries-nwfs-fisheries-and-ecosystem-research.

NWFSC plans to conduct fisheries research with trawl gear used at various levels in the water column, hook-and-line gears (including longlines with multiple hooks, rod and reel, and troll deployments), purse seine/tangle net gear, and other gear. If a marine mammal interacts with gear deployed by NWFSC, the outcome could potentially be Level A harassment, serious injury (*i.e.*, any injury that will likely result in mortality), or mortality. Therefore, NWFSC has pooled the estimated number of incidents of take that could reasonably result from gear interactions, and we have assessed the potential impacts accordingly. NWFSC also uses various active acoustic devices in the conduct of fisheries research, and use of these devices has the potential to result in Level B harassment of marine mammals. Level B harassment of pinnipeds hauled out may also occur, as a result of visual disturbance from vessels conducting NWFSC research. These regulations are valid for five years from the date of issuance.

NWFSC requests authorization to take individuals of 16 species by Level A harassment, serious injury, or mortality (hereafter referred to as M/SI) and of 34 species by Level B harassment.

Description of the Specified Activity

Overview

The NWFSC collects a wide array of information necessary to evaluate the status of exploited fishery resources and the marine environment. NWFSC scientists conduct fishery-independent research onboard NOAA-owned and operated vessels or on chartered vessels. A few surveys are conducted onboard commercial fishing vessels, but the NWFSC designs and executes the studies and funds vessel time. The NWFSC plans to administer and conduct approximately 36 survey programs over the 5-year period. The gear types used fall into several categories: Towed nets fished at various levels in the water column, longline and other hook and line gear, seine nets, traps, and other gear. Only use of trawl nets, hook and line gears, and purse seine nets are likely to result in interaction with marine mammals.

Many of these surveys also use active acoustic devices.

The Federal government has a responsibility to conserve and protect living marine resources in U.S. waters and has also entered into a number of international agreements and treaties related to the management of living marine resources in international waters outside the United States. NOAA has the primary responsibility for managing marine finfish and shellfish species and their habitats, with that responsibility delegated within NOAA to NMFS.

In order to direct and coordinate the collection of scientific information needed to make informed fishery management decisions, Congress created six regional fisheries science centers, each a distinct organizational entity and the scientific focal point within NMFS for region-based, Federal fisheries-related research. This research is aimed at monitoring fish stock recruitment, abundance, survival and biological rates, geographic distribution of species and stocks, ecosystem process changes, and marine ecological research. The NWFSC is the research arm of NMFS in the northwest region of the United States. The NWFSC conducts research and provides scientific advice to manage fisheries and conserve protected species in the geographic research area described below and provides scientific information to support the Pacific Fishery Management Council and numerous other domestic and international fisheries management organizations.

Dates and Duration

The specified activity may occur at any time during the five-year period of validity of the regulations. Dates and duration of individual surveys are inherently uncertain, based on congressional funding levels for the NWFSC, weather conditions, or ship contingencies. In addition, cooperative research is designed to provide flexibility on a yearly basis in order to address issues as they arise. Some cooperative research projects last multiple years or may continue with modifications. Other projects only last one year and are not continued. Most cooperative research projects go through an annual competitive selection process to determine which projects should be funded based on proposals developed by many independent researchers and fishing industry participants.

Specified Geographical Region

The NWFSC conducts research in the Pacific Northwest and California Current within three research areas: The California Current Research Area

(CCRA), Puget Sound Research Area (PSRA), and Lower Columbia River Research Area (LCRRA). Please see Figures 1–2 through 1–4 in the NWFSC application for maps of the three research areas. We note here that, while the NWFSC specified geographical region extends outside of the U.S. Exclusive Economic Zone (EEZ), from the Mexican EEZ (not including Mexican territorial waters) north into the Canadian EEZ (not including Canadian territorial waters), the MMPA's authority does not extend into foreign territorial waters. These areas were described in detail in our notice of proposed rulemaking (81 FR 38516; June 13, 2016); please see that document for further detail.

Detailed Description of Activities

A detailed description of NWFSC's planned activities was provided in our notice of proposed rulemaking (81 FR 38516; June 13, 2016) and is not repeated here. No changes have been made to the specified activities described therein.

Comments and Responses

We published a notice of proposed rulemaking in the **Federal Register** on June 13, 2016 (81 FR 38516; June 13, 2016), and requested comments and information from the public. During the thirty-day comment period, we received a letter from the Marine Mammal Commission (Commission). The comments and our responses are provided here, and the comments have been posted online at:

www.fisheries.noaa.gov/action/incidental-take-authorization-noaa-fisheries-nwfs-fisheries-and-ecosystem-research. Please see the comment letter for full rationale behind the recommendations we respond to below. No changes were made to the proposed rule as a result of these comments.

Comment 1: The Commission provides general recommendations—not specific to the proposed NWFSC rulemaking—that NMFS develop criteria and guidance for determining when prospective applicants should request taking by Level B harassment from the use of echosounders, other sonars, and sub-bottom profilers and that NMFS formulate a strategy for updating its generic behavioral harassment thresholds for all types of sound sources as soon as possible.

Response: We appreciate the recommendations and will consider the need for applicant guidance specific to the types of acoustic sources mentioned by the Commission. Generally speaking, there has been a lack of information and scientific consensus regarding the

potential effects of scientific sonars on marine mammals, which may differ depending on the system and species in question as well as the environment in which the system is operated. We are currently working to ensure that the use of these types of active acoustic sources is considered consistently and look forward to the Commission's advice as we proceed.

With regard to revision of existing behavioral harassment criteria, NMFS agrees that this is necessary. NMFS is continuing our examination of the effects of noise on marine mammal behavior and plans to focus our work in the coming years on developing guidance regarding the effects of anthropogenic sound on marine mammal behavior. Behavioral response is a complex question and we have determined that additional time is needed to research and address it appropriately.

Comment 2: The Commission recommends that OPR require NWFSC to estimate the numbers of marine mammals taken by Level B harassment incidental to use of active acoustic sources (e.g., echosounders) based on the 120-decibel (dB) rather than the 160-dB root mean square (rms) threshold.

Response: Please see our notice of proposed rulemaking (81 FR 38516; June 13, 2016) for discussion related to acoustic terminology and thresholds. The Commission repeats a recommendation made in prior letters and, as we have previously indicated, we disagree with the recommendation. Our previous response is repeated below.

Continuous sounds are those whose sound pressure level remains above that of the ambient sound, with negligibly small fluctuations in level (NIOSH, 1998; ANSI, 2005), while intermittent sounds are defined as sounds with interrupted levels of low or no sound (NIOSH, 1998). Thus, echosounder signals are not continuous sounds but rather intermittent sounds. Intermittent sounds can further be defined as either impulsive or non-impulsive. Impulsive sounds have been defined as sounds which are typically transient, brief (<1 sec), broadband, and consist of a high peak pressure with rapid rise time and rapid decay (ANSI, 1986; NIOSH, 1998). Echosounder signals also have durations that are typically very brief (<1 sec), with temporal characteristics that more closely resemble those of impulsive sounds than non-impulsive sounds, which typically have more gradual rise times and longer decays (ANSI, 1995; NIOSH, 1998). With regard to behavioral thresholds, we consider the temporal and spectral characteristics of

echosounder signals to more closely resemble those of an impulse sound than a continuous sound.

The Commission suggests that, for certain sources considered here, the interval between pulses would not be discernible to the animal, rendering them effectively continuous. However, echosounder pulses are emitted in a similar fashion as odontocete echolocation click trains. Research indicates that marine mammals, in general, have extremely fine auditory temporal resolution and can detect each signal separately (e.g., Au *et al.*, 1988; Dolphin *et al.*, 1995; Supin and Popov, 1995; Mooney *et al.*, 2009), especially for species with echolocation capabilities. Therefore, it is highly unlikely that marine mammals would perceive echosounder signals as being continuous.

In conclusion, echosounder signals are intermittent rather than continuous signals, and the fine temporal resolution of the marine mammal auditory system allows them to perceive these sounds as such. Further, the physical characteristics of these signals indicate a greater similarity to the way that intermittent, impulsive sounds are received. Therefore, the 160-dB threshold (typically associated with impulsive sources) is more appropriate than the 120-dB threshold (typically associated with continuous sources) for estimating takes by behavioral harassment incidental to use of such sources. This response represents the consensus opinion of acoustics experts from NMFS' Office of Protected Resources and Office of Science and Technology.

Comment 3: The Commission notes that NMFS has delineated two categories of acoustic sources, largely based on frequency, with those sources operating at frequencies greater than the known hearing ranges of any marine mammal (i.e., >180 kilohertz (kHz)) lacking the potential to cause disruption of behavioral patterns. The Commission describes the recent scientific literature on acoustic sources with frequencies above 180 kHz (i.e., Deng *et al.*, 2014; Hastie *et al.*, 2014) and recommends that we estimate numbers of takes associated with those acoustic sources (or similar acoustic sources) with frequencies above 180 kHz that have been shown to elicit behavioral responses above the 120-dB threshold.

Response: We considered the information cited by the Commission in our proposed rulemaking. NMFS's response regarding the appropriateness of the 120-dB versus 160-dB rms thresholds was provided above in the response to Comment #2. In general, the

referenced work indicates that "sub-harmonics" could be "detectable" by certain species at distances up to several hundred meters (m). However, this detectability is in reference to ambient noise, not to NMFS's established 160-dB threshold for assessing the potential for incidental take for these sources. A behavioral response to a stimulus does not necessarily indicate that Level B harassment, as defined by the MMPA, has occurred. Source levels of the secondary peaks considered in these studies—those within the hearing range of some marine mammals—range from 135–166 dB, meaning that these sub-harmonics would either be below the threshold for behavioral harassment or would attenuate to such a level within a few meters. Beyond these important study details, these high-frequency (i.e., Category 1) sources and any energy they may produce below the primary frequency that could be audible to marine mammals would be dominated by a few primary sources (e.g., EK60) that are operated near-continuously—much like other Category 2 sources considered in our assessment of potential incidental take from NWFSC's use of active acoustic sources—and the potential range above threshold would be so small as to essentially discount them.

Mitigation

In order to issue an incidental take authorization under section 101(a)(5)(A) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for subsistence uses. We provided a full description of the planned mitigation measures, including background discussion related to certain elements of the mitigation plan, in our notice of proposed rulemaking (81 FR 38516; June 13, 2016). Please see that document for more detail.

NMFS has considered many potential mitigation measures, including those the NWFSC has determined to be feasible and has implemented in recent years as a standard part of sampling protocols. These measures include the move-on rule mitigation protocol (also referred to in the preamble as the move-on rule), protected species visual watches and use of acoustic pingers on trawl gear, as well as use of a marine mammal excluder device (MMED) in Nordic 264 trawl nets.

General Measures

Coordination and communication—We require that the NWFSC take all necessary measures to coordinate and communicate in advance of each specific survey with NOAA's Office of Marine and Aviation Operations (OMAO), or other relevant parties, to ensure that all mitigation measures and monitoring requirements described herein, as well as the specific manner of implementation and relevant event-contingent decision-making processes, are clearly understood and agreed-upon. This may involve description of all required measures when submitting cruise instructions to OMAO or when completing contracts with external entities. NWFSC will coordinate and conduct briefings at the outset of each survey and as necessary between the ship's crew (commanding officer/master or designee(s), as appropriate) and scientific party in order to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures. The chief scientist (CS) will be responsible for coordination with the Officer on Deck (OOD; or equivalent on non-NOAA platforms) to ensure that requirements, procedures, and decision-making processes are understood and properly implemented.

Vessel speed—Vessel speed during active sampling rarely exceeds 5 knots (kn), with typical speeds being 2–4 kn. Transit speeds vary from 6–14 kn but average 10 kn. These low vessel speeds minimize the potential for ship strike. At any time during a survey or in transit, if a crew member standing watch or dedicated marine mammal observer sights marine mammals that may intersect with the vessel course, that individual will immediately communicate the presence of marine mammals to the bridge for appropriate course alteration or speed reduction, as possible, to avoid incidental collisions.

Other gears—The NWFSC deploys a wide variety of gear to sample the marine environment during all of their research cruises. Many of these types of gear (e.g., plankton nets, video camera and remotely-operated vehicle (ROV) deployments) are not considered to pose any risk to marine mammals and are therefore not subject to specific mitigation measures. However, at all times when the NWFSC is conducting survey operations at sea, the OOD and/or CS and crew will monitor for any unusual circumstances that may arise at a sampling site and use best professional judgment to avoid any potential risks to marine mammals during use of all research equipment.

Handling procedures—The NWFSC will implement a number of handling protocols to minimize potential harm to marine mammals that are incidentally taken during the course of fisheries research activities. In general, protocols have already been prepared for use on commercial fishing vessels. Because incidental take of marine mammals in fishing gear is similar for commercial fisheries and research surveys, NWFSC proposes to adopt these protocols, which are expected to increase post-release survival. In general, following a “common sense” approach to handling captured or entangled marine mammals will present the best chance of minimizing injury to the animal and of decreasing risks to scientists and vessel crew. Handling or disentangling marine mammals carries inherent safety risks, and using best professional judgment and ensuring human safety is paramount.

Captured live or injured marine mammals are released from research gear and returned to the water as soon as possible with no gear or as little gear remaining on the animal as possible. Animals are released without removing them from the water if possible, and data collection is conducted in such a manner as not to delay release of the animal(s) or endanger the crew. NWFSC staff will be instructed on how to identify different species, handle and bring marine mammals aboard a vessel, assess the level of consciousness, remove fishing gear, and return marine mammals to water.

Trawl Survey Visual Monitoring and Operational Protocols

Specific mitigation protocols are required for all trawl operations conducted by the NWFSC using Nordic 264 surface trawl gear, midwater trawl gear (modified Cobb, Aleutian Wing, and various commercial nets), and bottom trawl gear (double-rigged shrimp, Poly Nor'easter, modified Aberdeen, beam, and various commercial nets). Separate protocols (described below) are in place for the Kodiak surface trawl and pair trawl gear. Marine mammal watches will be conducted for at least ten minutes prior to the beginning of the planned set and throughout the tow and net retrieval, by scanning the surrounding waters with the naked eye and rangefinding binoculars (or monocular). Lookouts immediately alert the OOD and CS as to their best estimate of the species and number of animals observed and any observed animal's distance, bearing, and direction of travel relative to the ship's position. The CS must confirm with the OOD that no marine mammals have

been seen within 500 m (or as far as may be observed if less than 500 m) of the ship or appear to be approaching the ship during the pre-set watch period prior to the deployment of any trawl gear. During nighttime operations, visual observation may be conducted using the naked eye and available vessel lighting but effectiveness is limited. The visual observation period typically occurs during transit leading up to arrival at the sampling station, rather than upon arrival on station. However, in some cases it may be necessary to conduct a plankton tow or other small net cast prior to deploying trawl gear. In these cases, the visual watch will continue until trawl gear is ready to be deployed. Aside from pre-trawl monitoring, the OOD/CS and crew standing watch will visually scan for marine mammals during all daytime operations.

It is important to note that the 500 m distance is provided only as a frame of reference for marine mammal observations that would nominally be of greater concern as regards the potential for interaction with research fishing gear. The primary concern is to avoid all marine mammal interactions (regardless of the numbers of takes proposed for authorization here), and the most appropriate course of action to achieve this goal in any given instance is likely to be related more to event-specific elements than to an arbitrary distance from the vessel. Depending on unpredictable contextual elements, animals sighted at distances greater than 500 m could provoke mitigation action or, conversely, animals sighted at closer range could be determined to not be at risk of interacting with research fishing gear. The NWFSC considers 500 m to be the average effective observation distance, but the actual effective range is determined by numerous factors related to the weather, ship observations, and the species observed.

The primary purpose of conducting pre-trawl visual monitoring is to implement the move-on rule. If marine mammals are sighted within 500 m (or as far as may be observed if less than 500 m) of the vessel and are considered at risk of interacting with the vessel or research gear, or appear to be approaching the vessel and are considered at risk of interaction, NWFSC may elect to either remain onsite to see if the animals move off or may move on to another sampling location. When remaining onsite, the set is delayed (typically for at least ten minutes) and, if the animals depart or appear to no longer be at risk of interacting with the vessel or gear, a further ten minute observation period is

conducted. If no further observations are made or the animals still do not appear to be at risk of interaction, then the set may be made. If the vessel is moved to a different section of the sampling area, move-on rule mitigation protocols would begin anew. If, after moving on, marine mammals remain at risk of interaction, the CS or watch leader may decide to move again or to skip the station. Marine mammals that are sighted further than 500 m from the vessel would be monitored to determine their position and movement in relation to the vessel. If they appear to be closing on the vessel, the move-on rule protocols may be implemented even if they are initially further than 500 m from the vessel.

For surface trawl surveys (*i.e.*, those surveys deploying the Nordic 264 net), which have historically presented the greatest risk of marine mammal interaction, dedicated crew are assigned to marine mammal monitoring duty (*i.e.*, have no other tasks) and care is taken to provide some rest periods for observers to avoid fatigue. At least two pairs of binoculars are available for verification of potential sightings. As the vessel approaches the station, the OOD and at least one assigned member of the scientific party monitor for marine mammals. Within several minutes of arriving on station and finishing their sampling duties, two additional members of the scientific party are assigned to monitor for marine mammals and, for the remainder of the tow, there would be a minimum of three members of the scientific party watching for marine mammals. Depending on the situational context (*e.g.*, numbers of marine mammals seen during the station approach or expected at that particular place and season), additional crew may be assigned to stand watch as necessary to provide full monitoring coverage around the vessel. Up to eight observers in total (including ship's crew standing watch) may be on duty during active trawling. The focus on the full area around the ship continues until trawl retrieval begins, at which point observational focus turns to the stern and the trawl net itself.

For midwater and bottom trawl surveys, the pre-set watch period is conducted by the OOD and bridge crew and typically occurs during transit prior to arrival at the sampling station but may also include time on station if other types of gear or equipment (*e.g.*, bongo nets) are deployed before the trawl. For these trawls, risk of interaction during the tow is lower and monitoring effort is reduced to the bridge crew until trawl retrieval.

For all surveys, although the minimum pre-set watch period is ten minutes, the actual monitoring period is typically longer. During standard trawl operations, at least some of the trackline to be towed is typically traversed prior to setting gear in order to check for hazards. On surface trawl surveys, CTD casts and plankton/bongo net hauls are made prior to setting the trawl. These activities can take 25–35 minutes after the vessel arrives on station, depending on water depth, and monitoring for marine mammals continues throughout these activities. Midwater trawls and bottom trawls do not typically deploy other gears before deploying trawl gear, but reconnaissance of the trackline often takes ten to fifteen minutes after arriving on station. In addition, once the decision is made to deploy the trawl gear, monitoring continues while the net is unspooled, which may take about ten minutes. Before the trawl doors are deployed, the net floats closed on the surface behind the vessel, and appropriate actions can be taken if marine mammals are sighted near the ship. Therefore, the marine mammal monitoring period—which begins before the vessel arrives on station and extends continuously through gear deployment—typically extends for over thirty minutes for all trawl types.

The effectiveness of visual monitoring may be limited depending on weather and lighting conditions. The OOD, CS, or watch leader will determine the best strategy to avoid potential takes of marine mammals based on the species encountered and their numbers and behavior, position, and vector relative to the vessel, as well as any other factors. For example, a whale transiting through the sampling area in the distance may only require a short move from the designated station, whereas a pod of dolphins in close proximity to the vessel may require a longer move from the station or possibly cancellation of the planned tow if the group follows the vessel.

In general, trawl operations will be conducted immediately upon arrival on station (and on conclusion of the pre-watch period) in order to minimize the time during which marine mammals (particularly pinnipeds) may become attracted to the vessel. However, in some cases it will be necessary to conduct small net tows (*e.g.*, bongo net) prior to deploying trawl gear.

Once the trawl net is in the water, the OOD, CS, and/or crew standing watch will continue to visually monitor the surrounding waters and will maintain a lookout for marine mammal presence as far away as environmental conditions allow. If marine mammals are sighted

before the gear is fully retrieved, the most appropriate response to avoid marine mammal interaction will be determined by the professional judgment of the CS, watch leader, OOD and other experienced crew as necessary. This judgment will be based on past experience operating trawl gears around marine mammals (*i.e.*, best professional judgment) and on NWFSC training sessions that will facilitate dissemination of expertise operating in these situations (*e.g.*, factors that contribute to marine mammal gear interactions and those that aid in successfully avoiding such events). Best professional judgment takes into consideration the species, numbers, and behavior of the animals, the status of the trawl net operation (*e.g.*, net opening, depth, and distance from the stern), the time it would take to retrieve the net, and safety considerations for changing speed or course. We recognize that it is not possible to dictate in advance the exact course of action that the OOD or CS should take in any given event involving the presence of marine mammals in proximity to an ongoing trawl tow, given the sheer number of potential variables, combinations of variables that may determine the appropriate course of action, and the need to consider human safety in the operation of fishing gear at sea. Nevertheless, we require a full accounting of factors that shape both successful and unsuccessful decisions, and these details will be fed back into NWFSC training efforts and ultimately help to refine the best professional judgment that determines the course of action taken in any given scenario (see further discussion in “Monitoring and Reporting”).

If trawling operations have been suspended because of the presence of marine mammals, the vessel will resume trawl operations (when practicable) only when the animals are believed to have departed the area. This decision is at the discretion of the OOD/CS and is dependent on the situation.

Standard survey protocols that are expected to lessen the likelihood of marine mammal interactions include standardized tow durations and distances. Standard tow durations of not more than thirty minutes at the target depth will typically be implemented, excluding deployment and retrieval time (which may require an additional thirty minutes, depending on target depth), to reduce the likelihood of attracting and incidentally taking marine mammals. Short tow durations decrease the opportunity for marine mammals to find the vessel and investigate. Trawl tow distances will be

less than 3 nautical miles (nmi)—typically 1–2 nmi, depending on the specific survey and trawl speed—which is expected to reduce the likelihood of attracting and incidentally taking marine mammals. In addition, care will be taken when emptying the trawl to avoid damage to marine mammals that may be caught in the gear but are not visible upon retrieval. The gear will be emptied as quickly as possible after retrieval in order to determine whether or not marine mammals are present. The vessel's crew will clean trawl nets prior to deployment to remove prey items that might attract marine mammals. Catch volumes are typically small with every attempt made to collect all organisms caught in the trawl.

Marine mammal excluder device—Excluder devices are specialized modifications, typically used in trawl nets, which are designed to reduce bycatch by allowing non-target taxa to escape the net. These devices generally consist of a grid of bars fitted into the net that allow target species to pass through the bars into the codend while larger, unwanted taxa (e.g., turtles, sharks, mammals) strike the bars and are ejected through an opening in the net. Marine mammal excluder devices (MMED) have not been proven to be fully effective at preventing marine mammal capture in trawl nets (e.g., Chilvers, 2008) and are not expected to prevent marine mammal capture in NWFSC trawl surveys. It is difficult to effectively test such devices, in terms of effectiveness in excluding marine mammals as opposed to effects on target species catchability, because realistic field trials would necessarily involve marine mammal interactions with trawl nets. Use of artificial surrogates in field trials has not been shown to be a realistic substitute (Gibson and Isakssen, 1998). Nevertheless, we believe it reasonable to assume that use of MMEDs may reduce the likelihood of a given marine mammal interaction with trawl gear resulting in mortality. We do not infer causality, but note that annual marine mammal interactions with the Nordic 264 trawl net have been much reduced for NMFS's Southwest Fisheries Science Center (SWFSC) (relative to 2008) since their use of the MMED began.

Multiple types of midwater trawl nets are used in NWFSC trawl surveys. The Nordic 264 trawl net, used as a surface trawl by NWFSC, is generally much larger than the midwater trawls, is fished at faster speeds, and has a different shape and functionality than these nets. Very few marine mammal interactions with NWFSC pelagic trawl gear have involved nets other than the

Nordic 264 (one of 37 total incidents since 1999). Therefore, MMED use is not proposed for nets other than the Nordic 264.

The NWFSC has tested the MMED design used by the SWFSC and found that it caused a significant loss of some salmon species that were the target of their research. More recent experiments have used video cameras attached to the net opening and near the excluder device to test different configurations of the excluder device to minimize loss of target species. The experiments have looked at adding weight and stiffeners to the flap covering the escape hatch to keep it closed and flipping the MMED so the escape hatch faces down rather than up. Based on preliminary results, this downward-pointing escape hatch appears to be the best design for minimizing loss of target species. Additional research will be necessary to calibrate catch levels in tows with the excluder device compared to past tows that did not contain the excluder (i.e., to align the new catchability rates with historical data sets). During these configuration and calibration experiments some nets will be fished without the MMED in order to provide controls for catchability. Once the NWFSC completes these experiments the MMED will be used in all future trawls with the Nordic 264. Please see "Monitoring and Reporting" for additional discussion.

Acoustic deterrent devices—Acoustic deterrent devices (pingers) are underwater sound-emitting devices that have been shown to decrease the probability of interactions with certain species of marine mammals when fishing gear is fitted with the devices. Multiple studies have reported significant decreases in marine mammal interactions with fishing gear following pinger deployment, with results reported for multiple species and gears (e.g., Kraus *et al.*, 1997; Trippel *et al.*, 1999; Gearin *et al.*, 2000; Palka *et al.*, 2008; Barlow and Cameron, 2003, Carretta *et al.*, 2008; Carretta and Barlow, 2011). Pingers will be deployed during all surface trawl operations (i.e., using the Nordic 264 net), with two pairs of pingers installed near the net opening. The vessel's crew will ensure that pingers are operational prior to deployment. Pinger brands typically used by NWFSC include the Aquatec Subsea Limited model AQUAmark and Fumunda Marine models F10 and F70, with the following attributes: (1) Operational depth of 10–200 m; (2) tones range from 200–400 ms in duration, repeated every five to six seconds; (3) variable frequency of 10–

160 kHz; and (4) maximum source level of 145 dB rms re 1 μ Pa.

Kodiak surface trawl and pair trawl gear—The Kodiak surface trawl, used only in Puget Sound, has only limited potential for marine mammal interaction. This gear type is a small net towed at slow speeds (about 2 kn) as close to shore as the net can be fished, and these characteristics mean that marine mammals would likely be able to avoid the net or swim out of it if necessary. However, rules for cetaceans would be similar as for other net types (i.e., delay and/or move-on if cetaceans observed within approximately 500 m or clearly approaching from greater distance). If killer whales are observed at any distance, the net would not be deployed, and the move-on rule would be invoked.

The pair trawl is used only in the Columbia River and is fished with an open codend. Although unlikely, there is some potential for pinnipeds to become entangled in the net material. NWFSC's practice, which would be allowed under section 109(h) of the MMPA, is to deter pinnipeds from encountering the net using pyrotechnic devices and other measures. Therefore, separate mitigation is not warranted, and we do not discuss NWFSC deterrence of pinnipeds associated with pair trawl surveys further in this document. Please see the NWFSC's Programmatic Environmental Assessment (EA) for further information about this practice.

Longline and Other Hook and Line Survey Visual Monitoring and Operational Protocols

Visual monitoring requirements for all longline surveys are similar to the general protocols described above for trawl surveys. Please see that section for full details of the visual monitoring protocol and the move-on rule mitigation protocol. In summary, requirements for longline surveys are to: (1) Conduct visual monitoring during the 30-minute period prior to arrival on station; (2) implement the move-on rule if marine mammals are observed within the area around the vessel and may be at risk of interacting with the vessel or gear; (3) deploy gear as soon as possible upon arrival on station (depending on presence of marine mammals); and (4) maintain visual monitoring effort throughout deployment and retrieval of the longline gear. As was described for trawl gear, the OOD, CS, or watch leader will use best professional judgment to minimize the risk to marine mammals from potential gear interactions during deployment and retrieval of gear. If marine mammals are detected during

setting operations and are considered to be at risk, immediate retrieval or suspension of operations may be warranted. If operations have been suspended because of the presence of marine mammals, the vessel will resume setting (when practicable) only when the animals are believed to have departed the area. If marine mammals are detected during retrieval operations and are considered to be at risk, haul-back may be postponed. These decisions are at the discretion of the OOD/CS and are dependent on the situation. If killer whales are observed at any distance, the set would not occur and the move-on rule would be invoked.

Other types of hook and line surveys (e.g., rod and reel) generally use the same protocols as longline surveys. However, for hook and line surveys in Puget Sound the move-on rule is not required for pinnipeds because they are commonly abundant on shore nearby hook and line sampling locations. Use of the move-on rule in these circumstances would represent an impracticable impact on NWFSC survey operations, and we note that no marine mammals have ever been captured in NWFSC hook and line surveys. However, the NWFSC would implement the move-on rule for hook and line surveys in Puget Sound for any cetaceans that are within 500 m and may be at risk of interaction with the survey operation. If killer whales are observed at any distance, fishing would not occur.

As for trawl surveys, some standard survey protocols are expected to minimize the potential for marine mammal interactions. Soak times are typically short relative to commercial fishing operations, measured from the time the last hook is in the water to when the first hook is brought out of the water. NWFSC longline protocols specifically prohibit chumming (releasing additional bait to attract target species to the gear) and spent bait and offal is retained on the vessel until all gear has been retrieved. Some hook and line surveys use barbless hooks, which are less likely to injure a hooked animal.

Seine Survey Visual Monitoring and Operational Protocols

Visual monitoring and operational protocols for seine surveys are similar to those described previously for trawl surveys, with a focus on visual observation in the survey area and avoidance of marine mammals that may be at risk of interaction with survey vessels or gear. For purse seine operations, visual monitoring is focused on avoidance of cetaceans and aggregations of pinnipeds. Individual or

small numbers of pinnipeds may be attracted to purse seine operations, especially in Puget Sound, and are frequently observed to enter operational purse seines to depredate the catch and exit the net unharmed. Use of the move-on rule in these circumstances would represent an impracticable impact on NWFSC survey operations, and we note that no marine mammals have ever been captured in NWFSC seine surveys.

If pinnipeds are in the immediate vicinity of a purse seine survey, the set may be delayed until animals move away or the move-on rule is determined to be appropriate, but the net would not be opened if already deployed and pinnipeds enter it. However, delay would not be invoked if only few pinnipeds are present (e.g., less than five), and they do not appear to obviously be at risk.

If any dolphins or porpoises are observed within approximately 500 m of the purse seine survey location, the set would be delayed. If any dolphins or porpoises are observed in the net, the net would be immediately opened to free the animals. If killer whales or other large whales are observed at any distance the net would not be set, and the move-on rule would be invoked.

Beach seines are typically set nearshore by small boat crews, who visually survey the area prior to the set. The set would not be made within 200 m of any hauled pinnipeds. Otherwise, marine mammals are unlikely to be at risk of interaction with NWFSC beach seine operations, as the nets are relatively small and deployed and retrieved slowly. If a marine mammal is observed attempting to interact with the beach seine gear, the gear would immediately be lifted and removed from the water.

Tangle net protocols—Tangle nets are used only in the Columbia River. NWFSC attempts to avoid pinnipeds by rotating sampling locations on a daily basis and by avoiding fishing near haulout areas. However, as was described for NWFSC use of pair trawl gear in the LCRRA, NWFSC also deters pinnipeds from interacting with tangle net gear as necessary using pyrotechnic devices and visual presence, a practice allowed under section 109(h) of the MMPA. Therefore, we do not discuss NWFSC deterrence of pinnipeds associated with tangle net surveys further in this document. Please see the NWFSC's draft Programmatic EA for further information about this practice. If pinniped presence in the vicinity of tangle net surveys is so abundant as to be uncontrollable through deterrence, sampling would be discontinued for a given day.

We have carefully evaluated the NWFSC's planned mitigation measures and considered a range of other measures in the context of ensuring that we prescribed the means of effecting the least practicable adverse impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another: (1) The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals, (2) the proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and (3) the practicability of the measure for applicant implementation.

Any mitigation measure(s) we prescribe should be able to accomplish, have a reasonable likelihood of accomplishing (based on current science), or contribute to the accomplishment of one or more of the general goals listed below:

(1) Avoidance or minimization of injury or death of marine mammals wherever possible (goals 2, 3, and 4 may contribute to this goal);

(2) A reduction in the number (total number or number at biologically important time or location) of individual marine mammals exposed to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing takes by behavioral harassment only);

(3) A reduction in the number (total number or number at a biologically important time or location) of times any individual marine mammal would be exposed to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing takes by behavioral harassment only);

(4) A reduction in the intensity of exposure to stimuli expected to result in incidental take (this goal may contribute to 1, above, or to reducing the severity of behavioral harassment only);

(5) Avoidance or minimization of adverse effects to marine mammal habitat, paying particular attention to the prey base, blockage or limitation of passage to or from biologically important areas, permanent destruction of habitat, or temporary disturbance of habitat during a biologically important time; and

(6) For monitoring directly related to mitigation, an increase in the probability of detecting marine mammals, thus allowing for more effective implementation of the mitigation.

Based on our evaluation of the NWFSC's proposed measures, as well as

other measures we considered, we have determined that these mitigation measures provide the means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Description of Marine Mammals in the Area of the Specified Activity

We previously reviewed NWFSC's species descriptions—which summarize available information regarding status

and trends, distribution and habitat preferences, behavior and life history, and auditory capabilities of the potentially affected species—for accuracy and completeness and referred readers to Sections 3 and 4 of NWFSC's application, as well as to NMFS's Stock Assessment Reports (SARs; www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments). We also provided information related to all species with expected potential for occurrence in the specified geographical

region where NWFSC plans to conduct the specified activities, summarizing information related to the population or stock, including potential biological removal (PBR). Current information, as reported in the most recent final 2016 and draft 2017 SARs, is summarized in Table 1 below (Carretta *et al.*, 2017; Muto *et al.*, 2017; www.fisheries.noaa.gov/national/marine-mammal-protection/draft-marine-mammal-stock-assessment-reports).

Table 1. Marine Mammals Potentially Present in the Vicinity of NWFSC Research Activities.

Common name	Scientific name	Stock	Occurrence			ESA/MMPA status; Strategic (Y/N) ¹	Stock abundance (CV, N _{min} , most recent abundance survey) ²	PBR	Annual M/SI ³

¹Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

²NMFS marine mammal stock assessment reports at: www.nmfs.noaa.gov/pr/sars/. CV is coefficient of variation; N_{\min} is the minimum estimate of stock abundance. In some cases, CV is not applicable. For three stocks of killer whales, the abundance values represent direct counts of individually identifiable animals; therefore there is only a single abundance estimate with no associated CV. For certain stocks of pinnipeds, abundance estimates are based upon observations of animals (often pups) ashore multiplied by some correction factor derived from knowledge of the species' (or similar species') life history to arrive at a best abundance estimate; therefore, there is no associated CV. In these cases, the minimum abundance may represent actual counts of all animals ashore.

³These values, found in NMFS' SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (e.g., commercial fisheries, subsistence hunting, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value. All M/SI values are as presented in the draft 2017 SARs (www.fisheries.noaa.gov/national/marine-mammal-protection/draft-marine-mammal-stock-assessment-reports).

⁴Transient and resident killer whales are considered unnamed subspecies (Committee on Taxonomy, 2017).

⁵No information is available to estimate the population size of dwarf sperm whales off the U.S. west coast, as no sightings of this species have been documented despite numerous vessel surveys of this region (Carretta *et al.*, 2017). Dwarf and pygmy sperm whales are difficult to differentiate at sea but, based on previous sighting surveys and historical stranding data, it is thought that recent ship survey sightings were of pygmy sperm whales.

⁶The six species of Mesoplodont beaked whales occurring in the CCE are managed as a single stock due to the rarity of records and the difficulty in distinguishing these animals to species in the field. Based on bycatch and stranding records, it appears that *M. carlhubbsi* is the most commonly encountered of these species (Carretta *et al.*, 2008; Moore and Barlow, 2013). Additional managed stocks in the Pacific include *M. stejnegeri* in Alaskan waters and *M. densirostris* in Hawaiian waters.

⁷The abundance estimate for this stock includes only animals from the "inner coast" population occurring in inside waters of southeastern Alaska, British Columbia, and Washington – excluding animals from the "outer coast" subpopulation, including animals from California – and therefore should be considered a minimum count. For comparison, the previous abundance estimate for this stock, including counts of animals from California that are now considered outdated, was 354.

⁸Abundance estimates for these stocks are not considered current. PBR is therefore considered undetermined for these stocks, as there is no current minimum abundance estimate for use in calculation. We nevertheless present the most recent abundance estimates, as these represent the best available information for use in this document.

⁹These stocks are known to spend a portion of their time outside the U.S. EEZ. Therefore, the PBR presented here is the allocation for U.S. waters only and is a portion of the total. Annual M/SI presented for these species is for U.S. waters only.

¹⁰This represents annual M/SI in U.S. waters. However, the vast majority of M/SI for this stock – the level of which is unknown – would likely occur in Mexican waters.

BILLING CODE 3510-22-C

Prior to 2016, humpback whales were listed under the ESA as an endangered species worldwide. Following a 2015 global status review (Bettridge *et al.*, 2015), NMFS established 14 distinct population segments (DPS) with different listing statuses (81 FR 62259; September 8, 2016) pursuant to the ESA. The DPSs that occur in U.S. waters do

not necessarily equate to the existing stocks designated under the MMPA and shown in Table 1. Because MMPA stocks cannot be portioned, *i.e.*, parts managed as ESA-listed while other parts managed as not ESA-listed, until such time as the MMPA stock delineations are reviewed in light of the DPS designations, NMFS considers the existing humpback whale stocks under

the MMPA to be endangered and depleted for MMPA management purposes (e.g., selection of a recovery factor, stock status). Within U.S. west coast waters, three current DPSs may occur: The Hawaii DPS (not listed), Mexico DPS (threatened), and Central America DPS (endangered).

Potential Effects of the Specified Activity on Marine Mammals and Their Habitat

We provided a summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat in our notice of proposed rulemaking (81 FR 38516; June 13, 2016). Specifically, we considered potential effects to marine mammals from ship strike, physical interaction with various gear types, use of active acoustic sources, and visual disturbance of pinnipeds, as well as effects to prey species and to acoustic habitat. The information is not reprinted here.

Estimated Take by Incidental Harassment, Serious Injury, or Mortality

Except with respect to certain activities not pertinent here, the MMPA defines “harassment” as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment). Serious injury means any injury that will likely result in mortality (50 CFR 216.3).

Take of marine mammals incidental to NWFSC research activities could occur as a result of (1) injury or mortality due to gear interaction (Level A harassment, serious injury, or mortality); (2) behavioral disturbance resulting from the use of active acoustic sources (Level B harassment only); or (3) behavioral disturbance of pinnipeds resulting from incidental approach of researchers (Level B harassment only).

Estimated Take Due to Gear Interaction

Historical Interactions—In order to estimate the number of potential incidents of take that could occur by M/SI through gear interaction, we first considered NWFSC’s record of past such incidents, and then considered in addition other species that may have similar vulnerabilities to NWFSC trawl gear as those species for which we have historical interaction records. Historical interactions with NWFSC research gear were described in Table 4 of our notice of proposed rulemaking (81 FR 38516; June 13, 2016). Please see that document for more information. Available records are for the years 1999 through present. All historical interactions have taken place in the CCRA, offshore Washington and Oregon, and have occurred during use of the Nordic 264 surface trawl net, with a few exceptions. There is one historical interaction in the PSRA (also using the Nordic 264 surface trawl), and one CCRA historical interaction using the modified Cobb midwater trawl. NWFSC has no historical interactions for any bottom trawl, hook and line, or seine gear, and has no historical interactions in the LCRRA. Please see Figure 6–1 in the NWFSC request for authorization for specific locations of these incidents.

Although some historical interactions resulted in the animal(s) being released alive, no serious injury determinations (NMFS, 2012a; 2012b) were made, and it is possible that some of these animals later died. In order to use these historical interaction records in a precautionary manner as the basis for the take estimation process, and because we have no specific information to indicate whether any given future interaction might result in M/SI versus Level A harassment, we conservatively assume that all interactions equate to mortality. Over the past seventeen years, NWFSC has had only infrequent interactions with marine mammals, with 0.1–0.5 animals captured per year

for the pinniped species and 1.4 animals captured per year for the Pacific white-sided dolphin. No Steller sea lion has been captured since 2002, northern fur seals have been involved in only one incident (none since 2000), and only a few California sea lions and harbor seals have been involved in interactions with research fishing gear. However, we assume that any of these species could be captured in any year.

In order to produce the most precautionary take estimates possible, we consider all of the data available to us (*i.e.*, since 1999). In consideration of these interaction records, we assume that one individual of each species of otariid pinniped could be captured per year over the course of the five-year period of validity for these proposed regulations, that two individual harbor seals could be captured per year, and that the worst case event could happen each year for Pacific white-sided dolphins (*i.e.*, six dolphins could be captured in a single trawl in each year). Table 2 shows the projected five-year total captures of these five species for this final rule, as described above, for trawl gear only. Although more than one individual of the two sea lion species has been captured in a single tow, interactions with these species have historically occurred only infrequently, and we believe that the above assumption appropriately reflects the likely total number of individuals involved in research gear interactions over a five-year period. We assume that two total harbor seals could be captured per year in recognition of the demonstrated vulnerability to capture in the PSRA (all other species have been captured only in the CCRA). These estimates are based on the assumption that annual effort (*e.g.*, total annual trawl tow time) over the five-year authorization period will not exceed the annual effort during prior years for which we have interaction records.

TABLE 2—PROJECTED FIVE-YEAR TOTAL TAKE IN TRAWL GEAR FOR HISTORICALLY CAPTURED SPECIES

Gear	Species	CCRA average annual take (total)	PSRA average annual take (total)	Projected 5-year total ¹
Trawl	Pacific white-sided dolphin	6 (30)	30
	California sea lion	1 (5)	5
	Harbor seal	1 (5)	1 (5)	10
	Northern fur seal	1 (5)	5
	Steller sea lion	1 (5)	5

¹ Because there are no historical take records from the LCRRA, we incorporate all projected LCRRA takes in Table 3 below.

In order to estimate the total potential number of incidents of M/SI that could occur incidental to the NWFSC’s use of trawl, hook and line, and seine gear over the five-year period of validity for these

regulations (*i.e.*, takes additional to those described in Table 4 of our notice of proposed rulemaking (81 FR 38516; June 13, 2016)), we first considered whether there are additional species

that may have similar vulnerability to capture in trawl gear as the five species described above that have been taken historically and then evaluate the

potential vulnerability of these and other species to additional gears.

In order to evaluate the potential vulnerability of additional species to trawl and of all species to hook and line and seine gear, we first consulted NMFS's List of Fisheries (LOF), which classifies U.S. commercial fisheries into one of three categories according to the level of incidental marine mammal M/SI that is known to occur on an annual basis over the most recent five-year period (generally) for which data has been analyzed. We provided this information, as presented in the 2015 LOF (79 FR 77919; December 29, 2014), in Table 6 of our notice of proposed rulemaking (81 FR 38516; June 13, 2016) and do not reproduce it here.

Information related to incidental M/SI in relevant commercial fisheries is not, however, the sole determinant of whether it may be appropriate to authorize M/SI incidental to NWFSC survey operations. A number of factors (e.g., species-specific knowledge regarding animal behavior, overall abundance in the geographic region, density relative to NWFSC survey effort, feeding ecology, propensity to travel in groups commonly associated with other species historically taken) were taken into account by the NWFSC to determine whether a species may have a similar vulnerability to certain types of gear as historically taken species. In some cases, we have determined that species without documented M/SI may nevertheless be vulnerable to capture in NWFSC research gear. Similarly, we have determined that some species groups with documented M/SI are not likely to be vulnerable to capture in NWFSC gear. In these instances, we provide further explanation below. Those species with no records of historical interaction with NWFSC research gear and no documented M/SI in relevant commercial fisheries, and for which the NWFSC has not requested the authorization of incidental take, are not considered further in this section. The NWFSC believes generally that any sex or age class of those species for which take authorization is requested could be captured.

In order to estimate a number of individuals that could potentially be captured in NWFSC research gear for those species not historically captured, we first determine which species may have vulnerability to capture in a given gear. Of those species, we then determine whether any may have similar propensity to capture in a given gear as a historically captured species. These species are limited to a few delphinid species that we believe may have similar risk of capture as that

displayed by the Pacific white-sided dolphin. For these species, we assume it is possible that a worst-case scenario of take could occur while at the same time contending that, absent significant range shifts or changes in habitat usage, capture of a species not historically captured would likely be a very rare event. The former assumption also accounts for the likelihood that, for species that often travel in groups, an incident involving capture of that species is likely to involve more than one individual.

For example, we believe that the Risso's dolphin is potentially vulnerable to capture in trawl gear and may have similar propensity to capture in that gear as does the Pacific white-sided dolphin. Because the greatest number of Pacific white-sided dolphins captured in any one trawl tow was six individuals, we assume that six Risso's dolphins could also be captured in a single incident. However, in recognition of the fact that any incident involving the capture of Risso's dolphins would likely be a rare event, we propose a total take authorization over the five-year period of the number that may result from a single, worst-case incident (six dolphins). While we do not necessarily believe that six Risso's dolphins would be captured in a single incident—and that more capture incidents involving fewer individuals could occur, as opposed to a single, worst-case incident—we believe that this is a reasonable approach to estimating potential incidents of M/SI while balancing what could happen in a worst-case scenario with the potential likelihood that no incidents of capture would actually occur. The SWFSC historical capture of northern right whale dolphins in 2008 provides an instructive example of a situation where a worst-case scenario (six dolphins captured in a single trawl tow) did occur, but overall capture of this species was very rare (no other capture incidents before or since).

Separately, for those species that we believe may have a vulnerability to capture in given gear but that we do not believe may have a similar propensity to capture in that gear as a historically-captured species, we assume that capture would be a rare event such that authorization of a single take over the five-year period is likely sufficient to capture the risk of interaction. For example, from the LOF we infer vulnerability to capture in trawl gear for the Dall's porpoise but do not believe that this species has a similar propensity for interaction in trawl gear as the Pacific white-sided dolphin.

Trawl: From the LOF and SWFSC historical gear interactions, we infer vulnerability to trawl gear in the CCRA for the Risso's dolphin, short- and long-beaked common dolphins, northern right whale dolphin, Dall's porpoise, harbor porpoise, and bottlenose dolphin (offshore stock only; NWFSC research has very little overlap with the distribution of the coastal stock of bottlenose dolphin). We consider some of these species to have a similar propensity for interaction with trawl gear as that demonstrated by the Pacific white-sided dolphin (Risso's dolphin, northern right whale dolphin) and the rest to have lower risk of interaction.

Due to their likely presence in the relevant areas and inference based on historical interactions and the LOF, we assume additional vulnerability and therefore potential take for some of these species in trawl gear used in the PSRA and LCRRRA. In the PSRA, these include the harbor porpoise, Dall's porpoise, California sea lion, and Steller sea lion. In the LCRRRA these include the harbor porpoise, harbor seal, California sea lion, and Steller sea lion.

For the striped dolphin, we believe that there is a reasonable likelihood of incidental take in trawl gear although there are no records of incidental M/SI in relevant commercial fisheries. The proposed take authorization for this species was determined to be appropriate based on analogy to other similar species that have been taken either in NWFSC operations or in analogous commercial fishery operations. We believe that the striped dolphin has a similar propensity for interaction with trawl gear as that demonstrated by the Pacific white-sided dolphin.

It is also possible that a captured animal may not be able to be identified to species with certainty. Certain pinnipeds and small cetaceans are difficult to differentiate at sea, especially in low-light situations or when a quick release is necessary. For example, a captured delphinid that is struggling in the net may escape or be freed before positive identification is made. This is only likely to occur in the CCRA due to the greater diversity of pinniped and small cetacean species likely to be encountered in that area. Therefore, the NWFSC has requested the authorization of incidental M/SI for one unidentified pinniped and one unidentified small cetacean over the course of the five-year period of proposed authorization.

Hook and line: The process is the same as is described above for trawl gear. From the LOF and SWFSC historical interactions, we infer

vulnerability to hook and line gear in the CCRA for the Risso’s dolphin, bottlenose dolphin, striped dolphin, pygmy and dwarf sperm whale (*i.e.*, *Kogia* spp.), short- and long-beaked common dolphins, short-finned pilot whale, and California and Steller sea lions.

Due to their likely presence in the relevant areas and inference based on historical interactions and the LOF, we assume additional vulnerability and therefore potential take for some of these species in hook and line gear used in the PSRA (hook and line gear is not used in the LCRRA). These include the California sea lion and harbor seal.

Seine: The process is the same as is described above for trawl gear. From the LOF, we infer vulnerability to seine and tangle net gear in the CCRA and/or LCRRA for the short-beaked common dolphin, harbor seal, and California sea lion. Long-beaked common dolphin is

not included because they are much rarer in Oregon and Washington where seine surveys are conducted. Seine gear is used infrequently in the PSRA (*e.g.*, twelve purse seine sets per year) and the move-on rule applied if any small cetacean is seen within 500 m of the planned set. We do not believe that any take in seine gear is likely in the PSRA.

We also believe that there is a reasonable potential of seine gear interaction for a number of species in the CCRA and/or LCRRA for which there are no LOF records of interaction in commercial fisheries gears. These authorizations reflect the NWFSC’s expert judgment regarding the distribution of these species in relation to NWFSC use of seine gear offshore Oregon and Washington. For example, several of these species have the potential to interact with NWFSC purse seine surveys in the Columbia River plume, where there are no

corresponding commercial seine fisheries. Therefore, we would not expect the LOF to adequately reflect the risk of marine mammal interaction posed by NWFSC survey activities. Species for which we authorize take in seine gear in the CCRA and/or LCRRA with no LOF interaction records include the Dall’s porpoise, Pacific white-sided dolphin, Risso’s dolphin, northern right whale dolphin, Steller sea lion, and harbor porpoise. For the harbor porpoise, we expect that there is greater vulnerability to take in these gears (*i.e.*, we expect it could be taken in both the CCRA and LCRRA) and have increased the take authorization relative to the other species accordingly. NWFSC considers the delphinid species to be at risk because of their occurrence in coastal waters offshore Oregon and Washington, and because they often occur in mixed schools and could be caught together in purse seines.

TABLE 3—TOTAL ESTIMATED M/SI DUE TO GEAR INTERACTION, 2018–23

Species	Estimated 5-year total, trawl ¹	Estimated 5-year total, hook and line ¹	Estimated 5-year total, seine ¹	Total, all gears
<i>Kogia</i> spp. ²	1	1		1
Bottlenose dolphin ³	1	1		2
Striped dolphin	6	1		7
Short-beaked common dolphin	1	1	1	3
Long-beaked common dolphin	1	1		2
Pacific white-sided dolphin	30		1	31
Northern right whale dolphin	6		1	7
Risso’s dolphin	6	1	1	8
Short-finned pilot whale		1		1
Harbor porpoise ⁴	3 (CCRA/PSRA/LCRRA)		2 (CCRA/LCRRA)	5

California sea lion	7 (5 CCRA/PSRA/LCRRA)	2 (CCRA/PSRA)	1 (LCRRA)	10
Steller sea lion	7 (5 CCRA/PSRA/LCRRA)	1	1 (LCRRA)	9
Harbor seal ⁴	11 (5 CCRA/5 PSRA/LCRRA)	1 (PSRA)	1 (LCRRA)	13
Unidentified pinniped	1			1
Unidentified small cetacean	1			1

¹ Please see our notice of proposed rulemaking (81 FR 38516; June 13, 2016) for full detail related to derivation of these take estimates. Takes proposed for authorization are not specific to any area, but our estimates are informed by area-specific vulnerability. All takes are expected to occur in the CCRA, except where the gear-specific breakdown of expected takes per area is provided. Note that hook and line surveys are not proposed for LCRRA and only limited seine surveys are proposed for PSRA.

² We expect that only one *Kogia* spp. may be taken over the five-year timespan and that it could be either a pygmy or dwarf sperm whale.

³ Incidental take is expected only from the offshore stock.

⁴ Incidental take for these species may be of animals from any stock in California, Oregon, or Washington, but expected vulnerability may be assigned to CCE or Washington inland waters stocks according to the expected take proportions shown.

⁵ Incidental take may be of animals from either the eastern Pacific or California stock.

Estimated Take Due to Acoustic Harassment

As described in our notice of proposed rulemaking (81 FR 38516; June 13, 2016; ‘‘Potential Effects of the Specified Activity on Marine Mammals’’), we believe that NWFSC use of active acoustic sources has, at most, the potential to cause Level B harassment of marine mammals. In order to attempt to quantify the potential for Level B harassment to occur, NMFS (including the NWFSC and acoustics experts from other parts of NMFS) developed an analytical

framework considering characteristics of the active acoustic systems described in our notice of proposed rulemaking (81 FR 38516; June 13, 2016) under *Description of Active Acoustic Sound Sources*, their expected patterns of use, and characteristics of the marine mammal species that may interact with them. We believe that this quantitative assessment benefits from its simplicity and consistency with current NMFS acoustic guidance regarding Level B harassment but caution that, based on a number of deliberately precautionary assumptions, the resulting take estimates may be seen as an

overestimate of the potential for behavioral harassment to occur as a result of the operation of these systems.

In 2016, NMFS released updated ‘‘Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing’’ with revised metrics and thresholds to assess the potential for injury (*e.g.*, permanent threshold shift) from acoustic sources. While the NWFSC’s EA and our proposed rule refer to NMFS’s historic guidelines, as the documents were completed prior to the recent release of the technical guidance, the conclusions regarding the potential for injury remain

the same. Most importantly, the technical guidance now explicitly takes into account the duration of the sound through the use of the sound exposure level (SEL) metric, as opposed to the previous use of rms sound pressure level (SPL). The effect of this different metric, in particular for the very short duration sounds used for these echosounders, is to largely reduce the exposure level of sound an animal is exposed to for short duration sounds (e.g., for a 1 millisecond ping, an SPL source level is reduced by 30 dB in the SEL metric) offsetting changes in the thresholds themselves. While energy is accumulated over time using SEL, the previous conclusion that an individual would have to remain exceptionally close to a sound source for unrealistic lengths of time holds, suggesting the likelihood of injury occurring is exceedingly small and is therefore not considered further in this analysis.

The operating frequencies of active acoustic systems used by NWFSC sources only go down to 27–33 kHz for the trawl monitoring system, which is not one of the predominant sources, and to 38 kHz for the EK60 echosounder (see Tables 2 and 8 from our notice of proposed rulemaking (81 FR 38516; June 13, 2016)). These frequencies are above the hearing range of baleen whales (i.e., mysticetes); therefore, baleen whales would not be expected to perceive signals from NWFSC active acoustic sources. We would not expect

any exposures to these signals to result in behavioral harassment. Baleen whales are not considered further in this section.

The assessment paradigm for active acoustic sources used in NWFSC fisheries research is relatively straightforward and has a number of key simplifying assumptions. NMFS's current acoustic guidance requires in most cases that we assume Level B harassment occurs when a marine mammal receives an acoustic signal at or above a simple step-function threshold. For use of these active acoustic systems, the appropriate threshold is 160 dB re 1 μPa (rms). Estimating the number of exposures at the specified received level requires several determinations, each of which is described sequentially below:

- (1) A detailed characterization of the acoustic characteristics of the effective sound source or sources in operation;
- (2) The operational areas exposed to levels at or above those associated with Level B harassment when these sources are in operation;
- (3) A method for quantifying the resulting sound fields around these sources; and
- (4) An estimate of the average density for marine mammal species in each area of operation.

Quantifying the spatial and temporal dimension of the sound exposure footprint (or “swath width”) of the active acoustic devices in operation on

moving vessels and their relationship to the average density of marine mammals enables a quantitative estimate of the number of individuals for which sound levels exceed the relevant threshold for each area. The number of potential incidents of Level B harassment is ultimately estimated as the product of the volume of water ensonified at 160 dB rms or higher and the volumetric density of animals determined from simple assumptions about their vertical stratification in the water column. Specifically, reasonable assumptions based on what is known about diving behavior across different marine mammal species were made to segregate those that predominately remain in the upper 200 m of the water column versus those that regularly dive deeper during foraging and transit. We described the approach used (including methods for estimating each of the calculations described above) and the assumptions made that result in conservative estimates in significant detail in our notice of proposed rulemaking (81 FR 38516; June 13, 2016). There have been no changes made to the approach, the informational inputs, or the results. Therefore, we do not repeat the discussion here and refer the reader to the proposed rule. Summaries of the results are provided in Table 4 below. Note that NWFSC only uses active acoustic systems for data acquisition purposes in the CCRA, not in the LCRRA or PSRA.

TABLE 4—DENSITIES AND ESTIMATED SOURCE-, STRATUM-, AND SPECIES-SPECIFIC ANNUAL ESTIMATES OF LEVEL B HARASSMENT

Species	Shallow	Deep	Area density (animals/km ²) ¹	Volumetric density (animals/km ³) ²	Estimated Level B harassment, 0–200 m			Estimated Level B harassment, >200 m		Total

¹ All density estimates from Barlow and Forney (2007) unless otherwise indicated.

² Volumetric density estimates derived by dividing area density estimates by 0.2 km (for shallow species) or 0.5 km (for deep species), corresponding with defined depth strata.

³ Density estimates derived by NWFSC from SAR abundance estimates and notional study area of 1,000,000 km².

⁴ ManTech-SRS Technologies (2007) estimated a harbor porpoise density for coastal and inland waters of Washington, which is used as the best available proxy here. There are no known density estimates for harbor porpoises in NWFSC survey areas in the CCRA.

Estimated Take Due to Physical Disturbance

Estimated take due to physical disturbance could potentially happen in the PSRA and LCRRA, and would result in no greater than Level B harassment.

It is likely that some pinnipeds will move or flush from known haulouts into the water in response to the presence or sound of NWFSC vessels or researchers, as a result of unintentional approach during survey activity. Behavioral

responses may be considered according to the scale shown in Table 5 and based on the method developed by Mortenson (1996). We consider responses corresponding to Levels 2–3 to constitute Level B harassment.

TABLE 5—SEAL RESPONSE TO DISTURBANCE

Level	Type of response	Definition
1	Alert	Seal head orientation or brief movement in response to disturbance, which may include turning head towards the disturbance, craning head and neck while holding the body rigid in a u-shaped position, changing from a lying to a sitting position, or brief movement of less than twice the animal's body length.
2	Movement	Movements away from the source of disturbance, ranging from short withdrawals at least twice the animal's body length to longer retreats over the beach.
3	Flight	All retreats (flushes) to the water.

The NWFSC has estimated potential incidents of Level B harassment due to physical disturbance (Table 6) by considering the number of seals believed to potentially be present at affected haul-outs and the number of visits expected to be made by NWFSC

researchers. The number of haulouts disturbed and number of animals assumed to be on those haulouts was determined by NWFSC on the basis of anecdotal evidence from researchers. Although not all individuals on “disturbed” haulouts would necessarily

actually be disturbed, and some haulouts may experience some disturbance at distances greater than expected, we believe that this approach is a reasonable effort towards accounting for this potential source of disturbance.

TABLE 6—ESTIMATED ANNUAL LEVEL B HARASSMENT OF PINNIPEDS ASSOCIATED WITH DISTURBANCE BY RESEARCHERS

Species	Location	Estimated total number of animals on potentially disturbed haul-outs	Number of visits per year	Estimated annual Level B harassment
Harbor seal	Puget Sound	1,440	8	11,520
	Columbia River	3,000	25	75,000
California sea lion	Puget Sound	350	8	2,800

Summary of Estimated Incidental Take

Here we provide a summary of the total incidental take authorization on an annual basis, as well other information relevant to the negligible impact analysis. Table 7 shows information relevant to our negligible impact analysis concerning the total annual taking that could occur for each stock from NMFS’s scientific research activities when considering incidental take previously authorized for SWFSC (80 FR 58982; September 30, 2015) and take authorized for NWFSC. As footnoted in Table 7, the indicated level of take could occur to any species or stock for those species with multiple stocks (e.g., northern fur seal) or considered as a group (e.g., Mesoplodont beaked whales). However, the harbor porpoise and harbor seal each have multiple stocks spanning the three NWFSC research areas, and we provide further detail regarding our consideration of potential take specific to stocks that may occur in the PSRA and LCRRA. Many stocks do not occur in those research areas and, therefore, would not be vulnerable to interaction with research gear deployed in those areas.

For harbor porpoise, we authorize a total of five takes by M/SI for all stocks

combined over the five-year period of validity for these regulations. For the purposes of the negligible impact analysis, we assume that all of these takes could potentially be in the form of M/SI; PBR is not intended for assessment of the significance of harassment. These takes could occur to any stock; however, our take authorization is informed by reasonable expectation regarding species vulnerability to gear used in the three research areas. Of the five total takes, we expect that two might occur in the CCRA, one in the PSRA, and two in the LCRRA. Therefore, corresponding with the relationship between stock ranges and the location of NWFSC research activities, the likely maximum takes that could accrue to any harbor porpoise stock from California to southern Oregon would be two, while the northern Oregon/Washington coast stock could potentially accrue four takes because it is vulnerable to the takes expected in either the CCRA or LCRRA. In Table 7 below, the total take authorization column reflects the total of four takes that could occur in either the CCRA or LCRRA (and the one take expected in the PSRA, which would occur to the Washington inland waters stock). However, the estimated

maximum annual take column reflects the annualized stock-specific risk, i.e., any stock in the CA-southern OR grouping is expected to be vulnerable to a maximum of two takes over the 5-year period (0.4/year) while the northern OR/WA coast stock could be vulnerable to as many as four takes over the five years (0.8/year). This stock-specific accounting does not change our expectation that a total of five takes would occur for all stocks combined but informs our stock-specific negligible impact analysis.

Similarly, the harbor seal has separate designated stocks that may occur in all three research areas. We will authorize a total of thirteen takes by M/SI for all harbor seal stocks combined, and expect that five of these may occur in the CCRA, six in the PSRA, and two in the LCRRA. Therefore, while we would expect that a maximum of five takes could accrue to the California stock, as many as seven takes could occur for the Oregon/Washington coastal stock (which is the only stock that may occur in the LCRRA). Although NMFS has split the former Washington inland waters stock of harbor seals into three separate stocks, we do not have sufficient information to assess stock-specific risk in the PSRA. Separately,

we have estimated that 162 incidents of acoustic harassment may occur for harbor seals due to NWFSC use of active acoustic systems (in the CCRA only) and that, due to the physical presence of researchers, individual harbor seals on haulouts (as many as 3,000) may be disturbed up to 25 times per year in the LCRRA. Therefore, as shown in Table 7, the California stock of harbor seals is vulnerable to only the estimated 162 acoustic harassment takes, but the OR/WA coast stock would be vulnerable to both the acoustic harassment takes as well as the physical disturbance takes. However, note that the percent of estimated population is calculated considering the number of individuals

anticipated to be disturbed rather than the number of incidents of disturbance. We previously authorized take of marine mammals incidental to fisheries research operations conducted by the SWFSC (see 80 FR 58982 and 80 FR 68512). This take would occur to some of the same stocks for which we will authorize take incidental to NWFSC fisheries research operations. Therefore, in order to evaluate the likely impact of the take by M/SI to be authorized pursuant to this rule, we consider not only other ongoing sources of human-caused mortality but the potential mortality authorized for SWFSC. As used in this document, other ongoing sources of human-caused (anthropogenic) mortality refers to

estimates of realized or actual annual mortality reported in the SARs and does not include authorized or unknown mortality. Below, we consider the total taking by M/SI authorized for NWFSC and previously authorized for SWFSC together to produce a maximum annual M/SI take level (including take of unidentified marine mammals that could accrue to any relevant stock) and compare that value to the stock's PBR value, considering ongoing sources of anthropogenic mortality (as described in footnote 4 of Table 7 and in the following discussion). PBR and annual M/SI values considered in Table 7 reflect the most recent information available.

TABLE 7—SUMMARY INFORMATION RELATED TO NWFSC ANNUAL TAKE AUTHORIZATION, 2018–23

Species ¹	Total annual Level B harassment authorization ²	Percent of estimated population abundance	Proposed total M/SI ³ authorization, 2018–23	SWFSC total M/SI authorization, 2015–20	Estimated maximum annual M/SI ⁴	PBR minus annual M/SI (%) ⁵	Stock trend ⁶

Please see our notice of proposed rulemaking (81 FR 38516; June 13, 2016) for full details.

¹ For species with multiple stocks or for species groups (*Kogia* spp. and Mesoplodont beaked whales), indicated level of take could occur to individuals from any stock or species except as indicated in table.

² Level B harassment totals include estimated take due to acoustic harassment and, for harbor seals and California sea lions, estimated take due to physical disturbance. Active acoustic devices are not used for data acquisition in the PSRA; therefore, no takes by acoustic harassment are expected for stocks that occur entirely or largely in inland waters (e.g., resident killer whales). Takes by physical disturbance for pinniped species represent repeated takes of smaller numbers of individuals (e.g., we expect as many as 1,440 harbor seals in the PSRA to be harassed on as many as eight occasions). The "percent of estimated population" column represents this smaller number of individuals taken rather than the total number of take incidents.

³ As explained earlier in this document, gear interaction could result in mortality, serious injury, or Level A harassment. Because we do not have sufficient information to enable us to parse out these outcomes, we present such take as a pool. For purposes of this negligible impact analysis we assume the worst case scenario (that all such takes result in mortality).

⁴This column represents the total number of incidents of M/SI that could potentially accrue to the specified species or stock as a result of NMFS' fisheries research activities and is the number carried forward for evaluation in the negligible impact analysis (later in this document). To reach this total, we add one to the total for each pinniped or cetacean that may be captured in trawl gear in the CCRA. This represents the potential that the take of an unidentified pinniped or small cetacean could accrue to any given stock captured in that gear in that area. The take authorization is formulated as a five-year total; the annual average is used only for purposes of negligible impact analysis. We recognize that portions of an animal may not be taken in a given year.

⁵This value represents the calculated PBR less the average annual estimate of ongoing anthropogenic mortalities (*i.e.*, total annual human-caused M/SI, which is presented in the SARs). For the Pacific-white sided dolphin, harbor seal (California stock), northern fur seal (California stock), Steller sea lion, and California sea lion, we subtract the annual average of mortalities occurring incidental to fisheries research from the total human-caused M/SI prior to calculating this value, as we explicitly account for predicted future mortalities incidental to fisheries research via the estimated maximum annual M/SI column. In parentheses, we provide the estimated maximum annual M/SI expressed as a percentage of this value.

⁶See relevant SARs for more information regarding stock status and trends. Interannual increases may not be interpreted as evidence of a trend. Based on the most recent abundance estimates, harbor seal stocks may have reached carrying capacity and appear stable. A time series of stock-specific abundance estimates for harbor porpoise shows either increasing or stable estimates, but it is not statistically valid to infer a trend.

⁷These species have multiple stocks that may be affected. Values for "percent of estimated population" and "PBR—annual M/SI" (where relevant) calculated for the stock with the lowest population abundance and/or PBR (as appropriate). This approach assumes that all indicated takes would accrue to the stock in question, which is a very conservative assumption. Stocks in question are the offshore killer whale, Morro Bay harbor porpoise, and California northern fur seal.

⁸Calculated on the basis of relative abundance; *i.e.*, of 1,878 total estimated incidents of Level B harassment, we would expect on the basis of relative abundance in the study area that 98 percent would accrue to the Pribilof Islands/Eastern Pacific stock and two percent would accrue to the California stock.

Negligible Impact Analysis and Determination

We received no public comments or new information indicating any deficiencies in our preliminary determinations, as provided in our notice of proposed rulemaking (81 FR 38516; June 13, 2016).

Introduction—NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.*, population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be "taken" by mortality, serious injury, and Level A or Level B harassment, we consider other factors, such as the likely nature of any behavioral responses (*e.g.*, intensity, duration), the context of any such responses (*e.g.*, critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS's implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the environmental baseline (*e.g.*, as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of

human-caused mortality, and specific consideration of take by M/SI previously authorized for other NMFS research activities).

We note here that the takes from potential gear interactions enumerated below could result in non-serious injury, but their worse potential outcome (mortality) is analyzed for the purposes of the negligible impact determination. We discuss here the connection between the mechanisms for authorizing incidental take under section 101(a)(5) for activities, such as NWFSC's research activities, and for authorizing incidental take from commercial fisheries. In 1988, Congress amended the MMPA's provisions for addressing incidental take of marine mammals in commercial fishing operations. Congress directed NMFS to develop and recommend a new long-term regime to govern such incidental taking (see MMC, 1994). The need to develop a system suited to the unique circumstances of commercial fishing operations led NMFS to suggest a new conceptual means and associated regulatory framework. That concept, Potential Biological Removal (PBR), and a system for developing plans containing regulatory and voluntary measures to reduce incidental take for fisheries that exceed PBR were incorporated as sections 117 and 118 in the 1994 amendments to the MMPA.

PBR is defined in the MMPA (16 U.S.C. 1362(20)) as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population, and is a measure to be considered when evaluating the effects of M/SI on a marine mammal species or stock. Optimum sustainable population (OSP) is defined by the MMPA (16 U.S.C.

1362(9)) as the number of animals which will result in the maximum productivity of the population or the species, keeping in mind the carrying capacity of the habitat and the health of the ecosystem of which they form a constituent element. A primary goal of the MMPA is to ensure that each species or stock of marine mammal is maintained at or returned to its OSP.

PBR values are calculated by NMFS as the level of annual removal from a stock that will allow that stock to equilibrate within OSP at least 95 percent of the time, and is the product of factors relating to the minimum population estimate of the stock (N_{min}); the productivity rate of the stock at a small population size; and a recovery factor. Determination of appropriate values for these three elements incorporates significant precaution, such that application of the parameter to the management of marine mammal stocks may be reasonably certain to achieve the goals of the MMPA. For example, calculation of N_{min} incorporates the precision and variability associated with abundance information and is intended to provide reasonable assurance that the stock size is equal to or greater than the estimate (Barlow *et al.*, 1995). In general, the three factors are developed on a stock-specific basis in consideration of one another in order to produce conservative PBR values that appropriately account for both imprecision that may be estimated as well as potential bias stemming from lack of knowledge (Wade, 1998).

PBR can be used as a consideration of the effects of M/SI on a marine mammal stock but was applied specifically to work within the management framework for commercial fishing incidental take. PBR cannot be applied appropriately outside of the section 118 regulatory framework for which it was

designed without consideration of how it applies in section 118 and how other statutory management frameworks in the MMPA differ. PBR was not designed as an absolute threshold limiting commercial fisheries, but rather as a means to evaluate the relative impacts of those activities on marine mammal stocks. Even where commercial fishing is causing M/SI at levels that exceed PBR, the fishery is not suspended. When M/SI exceeds PBR, NMFS may develop a take reduction plan, usually with the assistance of a take reduction team. The take reduction plan will include measures to reduce and/or minimize the taking of marine mammals by commercial fisheries to a level below the stock's PBR. That is, where the total annual human-caused M/SI exceeds PBR, NMFS is not required to halt fishing activities contributing to total M/SI but rather utilizes the take reduction process to further mitigate the effects of fishery activities via additional bycatch reduction measures. PBR is not used to grant or deny authorization of commercial fisheries that may incidentally take marine mammals.

Similarly, to the extent consideration of PBR may be relevant to considering the impacts of incidental take from activities other than commercial fisheries, using it as the sole reason to deny incidental take authorization for those activities would be inconsistent with Congress's intent under section 101(a)(5) and the use of PBR under section 118. The standard for authorizing incidental take under section 101(a)(5) continues to be, among other things, whether the total taking will have a negligible impact on the species or stock. When Congress amended the MMPA in 1994 to add section 118 for commercial fishing, it did not alter the standards for authorizing non-commercial fishing incidental take under section 101(a)(5), acknowledging that negligible impact under section 101(a)(5) is a separate standard from PBR under section 118. In fact, in 1994 Congress also amended section 101(a)(5)(E) (a separate provision governing commercial fishing incidental take for species listed under the Endangered Species Act) to add compliance with the new section 118 but kept the requirement for a negligible impact finding, showing that the determination of negligible impact and application of PBR may share certain features but are different.

Since the introduction of PBR, NMFS has used the concept almost entirely within the context of implementing sections 117 and 118 and other commercial fisheries management-related provisions of the MMPA. The

MMPA requires that PBR be estimated in stock assessment reports and that it be used in applications related to the management of take incidental to commercial fisheries (*i.e.*, the take reduction planning process described in section 118 of the MMPA and the determination of whether a stock is "strategic" (16 U.S.C. 1362(19))), but nothing in the MMPA requires the application of PBR outside the management of commercial fisheries interactions with marine mammals.

Nonetheless, NMFS recognizes that as a quantitative metric, PBR may be useful in certain instances as a consideration when evaluating the impacts of other human-caused activities on marine mammal stocks. Outside the commercial fishing context, and in consideration of all known human-caused mortality, PBR can help inform the potential effects of M/SI caused by activities authorized under 101(a)(5)(A) on marine mammal stocks. As noted by NMFS and the USFWS in our implementation regulations for the 1986 amendments to the MMPA (54 FR 40341, September 29, 1989), the Services consider many factors, when available, in making a negligible impact determination, including, but not limited to, the status of the species or stock relative to OSP (if known), whether the recruitment rate for the species or stock is increasing, decreasing, stable, or unknown, the size and distribution of the population, and existing impacts and environmental conditions. To specifically use PBR, along with other factors, to evaluate the effects of M/SI, we first calculate a metric for each species or stock that incorporates information regarding ongoing anthropogenic M/SI into the PBR value (*i.e.*, PBR minus the total annual anthropogenic mortality/serious injury estimate), which is called "residual PBR" (Wood *et al.*, 2012). We then consider how the anticipated potential incidental M/SI from the activities being evaluated compares to residual PBR. Anticipated or potential M/SI that exceeds residual PBR is considered to have a higher likelihood of adversely affecting rates of recruitment or survival, while anticipated M/SI that is equal to or less than residual PBR has a lower likelihood (both examples given without consideration of other types of take, which also factor into a negligible impact determination). In such cases where the anticipated M/SI is near, at, or above residual PBR, consideration of other factors, including those outlined above as well as mitigation and other factors (positive or negative), is especially important to assessing

whether the M/SI will have a negligible impact on the stock. As described above, PBR is a conservative metric and is not intended to be used as a solid cap on mortality—accordingly, impacts from M/SI that exceed residual PBR may still potentially be found to be negligible in light of other factors that offset concern, especially when robust mitigation and adaptive management provisions are included.

Alternately, for a species or stock with incidental M/SI less than 10 percent of residual PBR, we consider M/SI from the specified activities to represent an insignificant incremental increase in ongoing anthropogenic M/SI that alone (*i.e.*, in the absence of any other take) cannot affect annual rates of recruitment and survival. In a prior incidental take rulemaking and in the commercial fishing context, this threshold is identified as the significance threshold, but it is more accurately an insignificance threshold outside commercial fishing because it represents the level at which there is no need to consider other factors in determining the role of M/SI in affecting rates of recruitment and survival. Assuming that any additional incidental take by harassment would not exceed the negligible impact level, the anticipated M/SI caused by the activities being evaluated would have a negligible impact on the species or stock. This 10 percent was identified as a workload simplification consideration to avoid the need to provide unnecessary additional information when the conclusion is relatively obvious, but as described above, values above 10 percent have no particular significance associated with them until and unless they approach residual PBR.

Our evaluation of the M/SI for each of the species and stocks for which mortality could occur follows. In addition, all mortality authorized for some of the same species or stocks over the next several years pursuant to our final rulemaking for the NMFS Southwest Fisheries Science Center has been incorporated into the residual PBR.

We first consider maximum potential incidental M/SI for each stock (Table 7) in consideration of NMFS's threshold for identifying insignificant M/SI take (10 percent of residual PBR (69 FR 43338; July 20, 2004)). By considering the maximum potential incidental M/SI in relation to PBR and ongoing sources of anthropogenic mortality, we begin our evaluation of whether the potential incremental addition of M/SI through NWFSC research activities may affect the species' or stock's annual rates of recruitment or survival. We also consider the interaction of those

mortalities with incidental taking of that species or stock by harassment pursuant to the specified activity.

Analysis—Please see Table 7 for information related to this analysis. The large majority of stocks that may potentially be taken by M/SI (18 of 21) fall below the insignificance threshold, while an additional four stocks do not have current PBR values and therefore are evaluated using other factors. We first consider stocks expected to be affected only by behavioral harassment and those stocks that fall below the insignificance threshold. Next, we consider those stocks above the insignificance threshold (*i.e.*, the offshore stock of bottlenose dolphin, Risso's dolphin, and short-finned pilot whale) and those without PBR values (harbor seals along the Oregon and Washington coasts and in Washington inland waters).

As described in greater depth in our notice of proposed rulemaking (81 FR 38516; June 13, 2016), we do not believe that NWFSC use of active acoustic sources has the likely potential to cause any effect exceeding Level B harassment of marine mammals. In addition, for the majority of species, the annual take by Level B harassment is very low in relation to the population abundance estimate (less than one percent). We have produced what we believe to be precautionary estimates of potential incidents of Level B harassment. The procedure for producing these estimates, described in detail in our notice of proposed rulemaking (81 FR 38516; June 13, 2016), represents NMFS's best effort towards balancing the need to quantify the potential for occurrence of Level B harassment due to production of underwater sound with a general lack of information related to the specific way that these acoustic signals, which are generally highly directional and transient, interact with the physical environment and to a meaningful understanding of marine mammal perception of these signals and occurrence in the areas where NWFSC operates. The sources considered here have moderate to high output frequencies (10 to 180 kHz), generally short ping durations, and are typically focused (highly directional) to serve their intended purpose of mapping specific objects, depths, or environmental features. In addition, some of these sources can be operated in different output modes (*e.g.*, energy can be distributed among multiple output beams) that may lessen the likelihood of perception by and potential impacts on marine mammals in comparison with the quantitative

estimates that guide our proposed take authorization.

In addition, otariid pinnipeds are less likely than other taxa to perceive acoustic signals generated by NWFSC or, given perception, to react to these signals than the quantitative estimates indicate. This group of pinnipeds has reduced functional hearing at the higher frequencies produced by active acoustic sources considered here (*e.g.*, primary operating frequencies of 40–180 kHz) and, based purely on their auditory capabilities, the potential impacts are likely much less than we have calculated as these relevant factors are not taken into account.

As described previously, there is some minimal potential for temporary effects to hearing for certain marine mammals, but most effects would likely be limited to temporary behavioral disturbance. Effects on individuals that are taken by Level B harassment will likely be limited to reactions such as increased swimming speeds, increased surfacing time, or decreased foraging (if such activity were occurring), reactions that are considered to be of low severity (*e.g.*, Ellison *et al.*, 2012). Individuals may move away from the source if disturbed, but because the source is itself moving and because of the directional nature of the sources considered here, there is unlikely to be even temporary displacement from areas of significance and any disturbance would be of short duration. Although there is no information on which to base any distinction between incidents of harassment and individuals harassed, the same factors, in conjunction with the fact that NWFSC survey effort is widely dispersed in space and time, indicate that repeated exposures of the same individuals would be very unlikely. For these reasons, we do not consider the level of take by acoustic disturbance to represent a significant additional population stressor when considered in context with the proposed level of take by M/SI for any species.

Similarly, disturbance of pinnipeds on haulouts by researchers approaching on foot or in small vessels (as is expected for harbor seals in the lower Columbia River and Puget Sound and for California sea lions in Puget Sound) are expected to be infrequent and cause only a temporary disturbance on the order of minutes. As noted previously, monitoring results from other activities involving the disturbance of pinnipeds and relevant studies of pinniped populations that experience more regular vessel disturbance indicate that individually significant or population level impacts are unlikely to occur. When considering the individual

animals likely affected by this disturbance, only a small fraction (less than fifteen percent) of the estimated population abundance of the affected stocks would be expected to experience the disturbance.

As noted above, authorized M/SI above the insignificance threshold does not necessarily indicate that the take is unsustainable or that it may constitute more than a negligible impact. Rather, we simply use this metric as a guide to indicate when further evaluation of the available information is warranted. For the offshore stock of bottlenose dolphin, Risso's dolphin, and short-finned pilot whale, maximum total potential M/SI due to NMFS's fisheries research activity (SWFSC and NWFSC combined), while above the insignificance threshold, is low relative to residual PBR (approximately 28, 10, and 12 percent, respectively).

The only known source of other anthropogenic mortality for the offshore stock of bottlenose dolphin and the Risso's dolphin is in commercial fisheries, and such take is considered to be insignificant and approaching zero mortality and serious injury. Therefore, there is no information to suggest that the incremental additional removals due to NWFSC fisheries research cause any concern with regard to annual rates of recruitment or survival for these stocks.

Similarly, commercial fisheries provide the only known cause of anthropogenic mortality for the short-finned pilot whale. However, due to the relatively low PBR value for this stock, such take cannot be considered to be insignificant and approaching zero mortality and serious injury. The only takes in commercial fisheries from 2010–14 were due to interactions with the California drift gillnet fishery, and occurred only in 2014. Therefore, it is unclear that these fishery takes will constitute an ongoing source of mortality and, regardless, any level of removals up to PBR could occur while still allowing the stock to reach or maintain its optimum sustainable population, as indicated in the definition of the PBR metric. The available information, *i.e.*, that there is only one other source of anthropogenic mortality, which has resulted in a low level of mortalities in one year and may not be an ongoing source of mortality, and that the authorized take is low compared to residual PBR (10 percent), indicates that there is no concern regarding the impacts of incremental additional removals due to NWFSC fisheries research on annual rates of recruitment or survival for this stock. Nevertheless, if bycatch in commercial fisheries increases, or other sources of

mortality are recorded for this stock, we will use the adaptive management provisions of these regulations to prescribe increased mitigation sufficient to reduce the likelihood of incidental take in NMFS fisheries research activities. No population trends are known for these three stocks.

PBR is unknown for harbor seals on the Oregon and Washington coasts and in Washington inland waters (comprised of the Hood Canal, southern Puget Sound, and Washington northern inland waters stocks). The Hood Canal, southern Puget Sound, and Washington northern inland waters stocks were formerly a single inland waters stock. Both the Oregon/Washington coast and Washington inland waters stocks of harbor seal were considered to be stable following the most recent abundance estimates (in 1999, stock abundances were estimated at 24,732 and 13,692, respectively). However, a Washington Department of Fish and Wildlife expert (S. Jeffries) stated an unofficial abundance of 32,000 harbor seals in Washington (Mapes, 2013). Therefore, it is reasonable to assume that at worst, the stocks have not declined since the last abundance estimates. Ongoing anthropogenic mortality is estimated at 10.6 harbor seals per year for the coastal stock and 13.4 for inland waters seals; therefore, we reasonably assume that the maximum potential annual M/SI incidental to NMFS's fisheries research activities (1.8 and 1.2, respectively) is a small fraction of any sustainable take level that might be calculated for either stock. For the reasons stated above, we do not consider the level of take by acoustic and physical disturbance for harbor seals to represent a significant additional population stressor when considered in context with the proposed level of take by M/SI.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the planned mitigation measures, we find that the total marine mammal take from NWFSC's fisheries research activities will have a negligible impact on the affected marine mammal species or stocks. In summary, this finding of negligible impact is founded on the following factors: (1) The possibility of injury, serious injury, or mortality from the use of active acoustic devices may reasonably be considered discountable; (2) the anticipated incidents of Level B harassment from the use of active acoustic devices and physical disturbance of pinnipeds consist of, at worst, temporary and relatively minor modifications in behavior; (3) the

predicted number of incidents of potential mortality are at insignificant levels (*i.e.*, below ten percent of residual PBR) for a majority of affected stocks; (4) consideration of additional factors for the Risso's dolphin, offshore stock of bottlenose dolphin, and short-finned pilot whale do not reveal cause for concern; (5) available information regarding two harbor seal stocks indicates that total maximum potential M/SI is sustainable; and (6) the presumed efficacy of the planned mitigation measures in reducing the effects of the specified activity to the level of least practicable adverse impact. In addition, no M/SI is authorized for any species or stock that is listed under the ESA or considered depleted under the MMPA. In combination, we believe that these factors demonstrate that the specified activity will have only short-term effects on individuals (resulting from Level B harassment) and that the total level of taking will not impact rates of recruitment or survival sufficiently to result in population-level impacts.

Small Numbers Analysis

Please see Table 7 for information relating to this small numbers analysis. The total amount of taking authorized is less than one percent for a large majority of stocks. The total amount of taking for remaining stocks ranges from four to thirteen percent.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed mitigation measures, we find that small numbers of marine mammals will be taken relative to the populations of the affected species or stocks.

Monitoring and Reporting

In order to issue an incidental take authorization for an activity, section 101(a)(5)(A) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104(a)(13) indicate that requests for incidental take authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area.

Any monitoring requirement we prescribe should improve our understanding of one or more of the following:

- Occurrence of marine mammal species in action area (*e.g.*, presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.*, source characterization, propagation, ambient noise); (2) affected species (*e.g.*, life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.*, age, calving, or feeding areas);
- Individual responses to acute stressors, or impacts of chronic exposures (behavioral or physiological);
- How anticipated responses to stressors impact either: (1) Long-term fitness and survival of an individual; or (2) population, species, or stock;
- Effects on marine mammal habitat and resultant impacts to marine mammals; and
- Mitigation and monitoring effectiveness.

NWFSC plans to make more systematic its training, operations, data collection, animal handling and sampling protocols, etc., in order to improve its ability to understand how mitigation measures influence interaction rates and ensure its research operations are conducted in an informed manner and consistent with lessons learned from those with experience operating these gears in close proximity to marine mammals. It is in this spirit that the monitoring requirements described below were crafted.

Visual Monitoring

Marine mammal watches are a standard part of conducting fisheries research activities, and are implemented as described previously in "Mitigation." Dedicated marine mammal visual monitoring occurs as described (1) for some period prior to deployment of most research gear; (2) throughout deployment and active fishing of all research gears; (3) for some period prior to retrieval of longline gear; and (4) throughout retrieval of all research gear. This visual monitoring is performed by trained NWFSC personnel with no other responsibilities during the monitoring period. Observers record the species and estimated number of animals present and their behaviors, which may be valuable information towards an understanding of whether certain species may be attracted to vessels or certain survey gears. Separately, marine mammal watches are conducted by watch-standers (those navigating the

vessel and other crew; these will typically not be NWFSC personnel) at all times when the vessel is being operated. The primary focus for this type of watch is to avoid striking marine mammals and to generally avoid navigational hazards. These watchstanders typically have other duties associated with navigation and other vessel operations and are not required to record or report to the scientific party data on marine mammal sightings, except when gear is being deployed or retrieved.

In the PSRA and LCRRRA only, the NWFSC will monitor any potential disturbance of hauled-out pinnipeds, paying particular attention to the distance at which different species of pinniped are disturbed. Disturbance will be recorded according to the three-point scale, representing increasing seal response to disturbance, shown in Table 5.

Training

NWFSC anticipates that additional information on practices to avoid marine mammal interactions can be gleaned from training sessions and more systematic data collection standards. The NWFSC will conduct annual trainings for all CSs and other personnel who may be responsible for conducting dedicated marine mammal visual observations to explain mitigation measures and monitoring and reporting requirements, mitigation and monitoring protocols, marine mammal identification, recording of count and disturbance observations, completion of datasheets, and use of equipment. Some of these topics may be familiar to NWFSC staff, who may be professional biologists. The NWFSC shall determine the agenda for these trainings and ensure that all relevant staff have necessary familiarity with these topics. The first such training will include three primary elements:

First, the course will provide an overview of the purpose and need for the authorization, including mandatory mitigation measures by gear and the purpose for each, and species that NWFSC is authorized to incidentally take.

Second, the training will provide detailed descriptions of reporting, data collection, and sampling protocols. This portion of the training will include instruction on how to complete new data collection forms such as the marine mammal watch log, the incidental take form (e.g., specific gear configuration and details relevant to an interaction with protected species), and forms used for species identification and biological sampling. The biological data collection

and sampling training module will include the same sampling and necropsy training that is used for the West Coast Regional Observer training.

Third, NWFSC will also dedicate a portion of training to discussion of best professional judgment (which is recognized as an integral component of mitigation implementation; see "Mitigation"), including use in any incidents of marine mammal interaction and instructive examples where use of best professional judgment was determined to be successful or unsuccessful. We recognize that many factors come into play regarding decision-making at sea and that it is not practicable to simplify what are inherently variable and complex situational decisions into rules that may be defined on paper. However, it is our intent that use of best professional judgment be an iterative process from year to year, in which any at-sea decision-maker (i.e., responsible for decisions regarding the avoidance of marine mammal interactions with survey gear through the application of best professional judgment) learns from the prior experience of all relevant NWFSC personnel (rather than from solely their own experience). The outcome should be increased transparency in decision-making processes where best professional judgment is appropriate and, to the extent possible, some degree of standardization across common situations, with an ultimate goal of reducing marine mammal interactions. It is the responsibility of the NWFSC to facilitate such exchange.

Handling Procedures and Data Collection

Improved standardization of handling procedures were discussed previously in "Mitigation." In addition to the benefits implementing these protocols are believed to have on the animals through increased post-release survival, NWFSC believes adopting these protocols for data collection will also increase the information on which "serious injury" (SI) determinations (NMFS, 2012a, b) are based and improve scientific knowledge about marine mammals that interact with fisheries research gears and the factors that contribute to these interactions. NWFSC personnel will be provided standard guidance and training regarding handling of marine mammals, including how to identify different species, bring an individual aboard a vessel, assess the level of consciousness, remove fishing gear, return an individual to water and log activities pertaining to the interaction.

NWFSC will record interaction information on either existing data forms created by other NMFS programs or will develop their own standardized forms. To aid in SI determinations and comply with the current NMFS Serious Injury Guidelines (NMFS, 2012a, b), researchers will also answer a series of supplemental questions on the details of marine mammal interactions.

Finally, for any marine mammals that are killed during fisheries research activities, scientists will collect data and samples pursuant to Appendix D of the NWFSC DEA, "Protected Species Handling Procedures for NWFSC Fisheries Research Vessels."

Reporting

As is normally the case, NWFSC will coordinate with the relevant stranding coordinators for any unusual marine mammal behavior and any stranding, beached live/dead, or floating marine mammals that are encountered during field research activities. The NWFSC will follow a phased approach with regard to the cessation of its activities and/or reporting of such events, as described in the proposed regulatory texts following this preamble. In addition, CSs or the cruise leader will provide reports to NWFSC leadership and to the Office of Protected Resources (OPR). As a result, when marine mammals interact with survey gear, whether killed or released alive, a report provided by the CS will fully describe any observations of the animals, the context (vessel and conditions), decisions made and rationale for decisions made in vessel and gear handling. The circumstances of these events are critical in enabling NWFSC and OPR to better evaluate the conditions under which takes are most likely occur. We believe in the long term this will allow the avoidance of these types of events in the future.

The NWFSC will submit annual summary reports to OPR including: (1) Annual line-kilometers surveyed during which the EK60, ME70, SX90 (or equivalent sources) were predominant (see "Estimated Take by Acoustic Harassment" for further discussion), specific to each region; (2) summary information regarding use of all hook and line, seine, and trawl gear, including number of sets, hook hours, tows, etc., specific to each research area and gear; (3) accounts of all incidents of marine mammal interactions, including circumstances of the event and descriptions of any mitigation procedures implemented or not implemented and why; (4) summary information related to any disturbance of pinnipeds, including event-specific

total counts of animals present, counts of reactions according to the three-point scale shown in Table 5, and distance of closest approach; and (5) a written evaluation of the effectiveness of NWFSC mitigation strategies in reducing the number of marine mammal interactions with survey gear, including best professional judgment and suggestions for changes to the mitigation strategies, if any. The period of reporting will be annually, beginning one year post-issuance of any LOA, and the report must be submitted not less than ninety days following the end of a given year. Submission of this information is in service of an adaptive management framework allowing NMFS to make appropriate modifications to mitigation and/or monitoring strategies, as necessary, during the five-year period of validity for these regulations.

NMFS has established a formal incidental take reporting system, the Protected Species Incidental Take (PSIT) database, requiring that incidental takes of protected species be reported within 48 hours of the occurrence. The PSIT generates automated messages to NMFS leadership and other relevant staff, alerting them to the event and to the fact that updated information describing the circumstances of the event has been inputted to the database. The PSIT and CS reports represent not only valuable real-time reporting and information dissemination tools but also serve as an archive of information that may be mined in the future to study why takes occur by species, gear, region, etc.

NWFSC will also collect and report all necessary data, to the extent practicable given the primacy of human safety and the well-being of captured or entangled marine mammals, to facilitate SI determinations for marine mammals that are released alive. NWFSC will require that the CS complete data forms and address supplemental questions, both of which have been developed to aid in SI determinations. NWFSC understands the critical need to provide as much relevant information as possible about marine mammal interactions to inform decisions regarding SI determinations. In addition, the NWFSC will perform all necessary reporting to ensure that any incidental M/SI is incorporated as appropriate into relevant SARs.

Adaptive Management

The regulations governing the take of marine mammals incidental to NWFSC fisheries research survey operations contain an adaptive management component. The inclusion of an adaptive management component will

be both valuable and necessary within the context of five-year regulations for activities that have been associated with marine mammal mortality.

The reporting requirements associated with this final rule are designed to provide OPR with monitoring data from the previous year to allow consideration of whether any changes are appropriate. OPR and the NWFSC will meet annually to discuss the monitoring reports and current science and whether mitigation or monitoring modifications are appropriate. The use of adaptive management allows OPR to consider new information from different sources to determine (with input from the NWFSC regarding practicability) on an annual or biennial basis if mitigation or monitoring measures should be modified (including additions or deletions). Mitigation measures could be modified if new data suggests that such modifications would have a reasonable likelihood of reducing adverse effects to marine mammals and if the measures are practicable.

The following are some of the possible sources of applicable data to be considered through the adaptive management process: (1) Results from monitoring reports, as required by MMPA authorizations; (2) results from general marine mammal and sound research; and (3) any information which reveals that marine mammals may have been taken in a manner, extent, or number not authorized by these regulations or subsequent LOAs.

Impact on Availability of Affected Species for Taking for Subsistence Uses

There are no relevant subsistence uses of marine mammals implicated by these actions. Therefore, we have determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

There are multiple marine mammal species listed under the ESA with confirmed or possible occurrence in the proposed specified geographical region. The authorization of incidental take pursuant to the NWFSC's specified activity would not affect any designated critical habitat. OPR requested initiation of consultation with NMFS's West Coast Regional Office (WCRO) under section 7 of the ESA on the promulgation of five-year regulations and the subsequent issuance of LOAs to NWFSC under section 101(a)(5)(A) of the MMPA.

On November 10, 2016, the WCRO issued a biological opinion to OPR and to the NWFSC (concerning the conduct

of the specified activities) which concluded that the issuance of the authorizations is not likely to jeopardize the continued existence of any listed species and is not likely to adversely affect any listed marine mammal species. The opinion also concluded that the issuance of the authorizations would not affect any designated critical habitat.

National Environmental Policy Act (NEPA)

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), as implemented by the regulations published by the Council on Environmental Quality (40 CFR parts 1500–1508), NWFSC prepared a Programmatic EA to consider the direct, indirect and cumulative effects to the human environment resulting from the described research activities. OPR made NWFSC's EA available to the public for review and comment, in relation to its suitability for adoption by OPR in order to assess the impacts to the human environment of issuance of regulations and subsequent LOA to NWFSC. Also in compliance with NEPA and the CEQ regulations, as well as NOAA Administrative Order 216–6, OPR relies on NWFSC's EA, which also addresses OPR's action of issuing incidental take authorizations to NWFSC, and signed a Finding of No Significant Impact (FONSI) on March 27, 2018. NWFSC's EA and OPR's FONSI for this action may be found online at www.nmfs.noaa.gov/pr/permits/incidental/research.htm.

Classification

Pursuant to the procedures established to implement Executive Order 12866, the Office of Management and Budget has determined that this rule is not significant.

Pursuant to section 605(b) of the Regulatory Flexibility Act (RFA), the Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration at the proposed rule stage that this rule will not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis is not required and none has been prepared.

Notwithstanding any other provision of law, no person is required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information (COI) subject

to the requirements of the Paperwork Reduction Act (PRA) unless that COI displays a currently valid OMB control number. This rule does not contain a COI requirement subject to the provisions of the PRA because the applicant is a Federal agency.

List of Subjects in 50 CFR Part 219

Exports, Fish, Imports, Indians, Labeling, Marine mammals, Penalties, Reporting and recordkeeping requirements, Seafood, Transportation.

Dated: July 24, 2018.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set forth in the preamble, NMFS amends 50 CFR part 219 as follows:

PART 219—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

■ 1. The authority citation for part 219 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

■ 2. Add subpart E to part 219 to read as follows:

Subpart E—Taking Marine Mammals Incidental to Northwest Fisheries Science Center Fisheries Research in the Pacific Ocean

Sec.

219.41 Specified activity and specified geographical region.

219.42 Effective dates.

219.43 Permissible methods of taking.

219.44 Prohibitions.

219.45 Mitigation requirements.

219.46 Requirements for monitoring and reporting.

219.47 Letters of Authorization.

219.48 Renewals and modifications of Letters of Authorization.

219.49 [Reserved]

219.50 [Reserved]

Subpart E—Taking Marine Mammals Incidental to Northwest Fisheries Science Center Fisheries Research in the Pacific Ocean

§ 219.41 Specified activity and specified geographical region.

(a) Regulations in this subpart apply only to the National Marine Fisheries Service's (NMFS) Northwest Fisheries Science Center (NWFSC) and those persons it authorizes or funds to conduct activities on its behalf for the taking of marine mammals that occurs in the area outlined in paragraph (b) of this section and that occurs incidental to research survey program operations.

(b) The taking of marine mammals by NWFSC may be authorized in a Letter

of Authorization (LOA) only if it occurs within the California Current Ecosystem, including Puget Sound and the Columbia River.

§ 219.42 Effective dates.

Regulations in this subpart are effective from August 27, 2018, through August 28, 2023.

§ 219.43 Permissible methods of taking.

(a) Under LOAs issued pursuant to § 216.106 of this chapter and § 219.47, the Holder of the LOA (hereinafter "NWFSC") may incidentally, but not intentionally, take marine mammals within the area described in § 219.41(b) by Level B harassment associated with use of active acoustic systems and physical or visual disturbance of hauled-out pinnipeds and by Level A harassment, serious injury, or mortality associated with use of hook and line gear, trawl gear, and seine gear, provided the activity is in compliance with all terms, conditions, and requirements of the regulations in this subpart and the applicable LOA.

§ 219.44 Prohibitions.

Notwithstanding takings contemplated in § 219.41 and authorized by a LOA issued under § 216.106 of this chapter and § 219.47, no person in connection with the activities described in § 219.41 may:

(a) Violate, or fail to comply with, the terms, conditions, and requirements of this subpart or a LOA issued under § 216.106 of this chapter and § 219.47;

(b) Take any marine mammal not specified in such LOA;

(c) Take any marine mammal specified in such LOAs in any manner other than as specified;

(d) Take a marine mammal specified in such LOA if NMFS determines such taking results in more than a negligible impact on the species or stocks of such marine mammal; or

(e) Take a marine mammal specified in such LOA if NMFS determines such taking results in an unmitigable adverse impact on the availability of such species or stock of marine mammal for taking for subsistence uses.

§ 219.45 Mitigation requirements.

When conducting the activities identified in § 219.41(a), the mitigation measures contained in any LOA issued under § 216.106 of this chapter and § 219.47 must be implemented. These mitigation measures shall include but are not limited to:

(a) General conditions:

(1) NWFSC shall take all necessary measures to coordinate and communicate in advance of each

specific survey with the National Oceanic and Atmospheric Administration's (NOAA) Office of Marine and Aviation Operations (OMAO) or other relevant parties on non-NOAA platforms to ensure that all mitigation measures and monitoring requirements described herein, as well as the specific manner of implementation and relevant event-contingent decision-making processes, are clearly understood and agreed upon;

(2) NWFSC shall coordinate and conduct briefings at the outset of each survey and as necessary between ship's crew (Commanding Officer/master or designee(s), as appropriate) and scientific party in order to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures;

(3) NWFSC shall coordinate as necessary on a daily basis during survey cruises with OMAO personnel or other relevant personnel on non-NOAA platforms to ensure that requirements, procedures, and decision-making processes are understood and properly implemented;

(4) When deploying any type of sampling gear at sea, NWFSC shall at all times monitor for any unusual circumstances that may arise at a sampling site and use best professional judgment to avoid any potential risks to marine mammals during use of all research equipment; and

(5) NWFSC shall implement handling and/or disentanglement protocols as specified in the guidance that shall be provided to NWFSC survey personnel.

(b) For all research surveys using trawl, hook and line, or seine gear in Puget Sound, the move-on rule mitigation protocol described in paragraph (c)(3) of this section shall be implemented upon observation of killer whales at any distance.

(c) Trawl survey protocols:

(1) NWFSC shall conduct trawl operations as soon as is practicable upon arrival at the sampling station;

(2) NWFSC shall initiate marine mammal watches (visual observation) a minimum of ten minutes prior to beginning of net deployment but shall also conduct monitoring during pre-set activities including trackline reconnaissance, CTD casts, and plankton or bongo net hauls. Marine mammal watches shall be conducted by scanning the surrounding waters with the naked eye and rangefinding binoculars (or monocular). During nighttime operations, visual observation shall be conducted using the naked eye and available vessel lighting;

(3) NWFSC shall implement the move-on rule mitigation protocol, as

described in this paragraph. If one or more marine mammals are observed within 500 meters (m) of the planned location in the 10 minutes before setting the trawl gear, and are considered at risk of interacting with the vessel or research gear, or appear to be approaching the vessel and are considered at risk of interaction, NWFSC shall either remain onsite or move on to another sampling location. If remaining onsite, the set shall be delayed. If the animals depart or appear to no longer be at risk of interacting with the vessel or gear, a further 10 minute observation period shall be conducted. If no further observations are made or the animals still do not appear to be at risk of interaction, then the set may be made. If the vessel is moved to a different section of the sampling area, the move-on rule mitigation protocol would begin anew. If, after moving on, marine mammals remain at risk of interaction, the NWFSC shall move again or skip the station. Marine mammals that are sighted further than 500 m from the vessel shall be monitored to determine their position and movement in relation to the vessel to determine whether the move-on rule mitigation protocol should be implemented. NWFSC may use best professional judgment in making these decisions;

(4) NWFSC shall maintain visual monitoring effort during the entire period of time that trawl gear is in the water (*i.e.*, throughout gear deployment, fishing, and retrieval). If marine mammals are sighted before the gear is fully removed from the water, NWFSC shall take the most appropriate action to avoid marine mammal interaction. NWFSC may use best professional judgment in making this decision;

(5) If trawling operations have been suspended because of the presence of marine mammals, NWFSC may resume trawl operations when practicable only when the animals are believed to have departed the area. NWFSC may use best professional judgment in making this determination;

(6) When conducting surface trawls using the Nordic 264 net, dedicated crew with no other tasks shall conduct required marine mammal monitoring. Marine mammal monitoring shall be staffed in a stepwise process, with a minimum of two observers beginning pre-set monitoring and increasing to a minimum of four observers prior to and during gear deployment. During the tow, a minimum of three observers shall conduct required monitoring;

(7) NWFSC shall implement standard survey protocols to minimize potential for marine mammal interactions, including maximum tow durations at

target depth and maximum tow distance, and shall carefully empty the trawl as quickly as possible upon retrieval. Trawl nets must be cleaned prior to deployment;

(8) NWFSC must install and use a marine mammal excluder device at all times when the Nordic 264 trawl net is used;

(9) NWFSC must install and use acoustic deterrent devices whenever the Nordic 264 trawl net is used, with two pairs of the devices installed near the net opening. NWFSC must ensure that the devices are operating properly before deploying the net;

(10) For use of the Kodiak surface trawl in Puget Sound, trawl survey protocols described in this section apply only to cetaceans; and

(11) Trawl survey protocols described in this section do not apply to use of pair trawl gear in the Columbia River.

(d) Hook and line (including longline) survey protocols:

(1) NWFSC shall deploy hook and line gear as soon as is practicable upon arrival at the sampling station;

(2) NWFSC shall initiate marine mammal watches (visual observation) no less than 30 minutes prior to both deployment and retrieval of longline gear. Marine mammal watches shall be conducted by scanning the surrounding waters with the naked eye and range-finding binoculars (or monocular). During nighttime operations, visual observation shall be conducted using the naked eye and available vessel lighting;

(3) NWFSC shall implement the move-on rule mitigation protocol, as described in this paragraph. If one or more marine mammals are observed within 500 m of the planned location in the ten minutes before gear deployment, and are considered at risk of interacting with the vessel or research gear, or appear to be approaching the vessel and are considered at risk of interaction, NWFSC shall either remain onsite or move on to another sampling location. If remaining onsite, the set shall be delayed. If the animals depart or appear to no longer be at risk of interacting with the vessel or gear, a further 10 minute observation period shall be conducted. If no further observations are made or the animals still do not appear to be at risk of interaction, then the set may be made. If the vessel is moved to a different section of the sampling area, the move-on rule mitigation protocol would begin anew. If, after moving on, marine mammals remain at risk of interaction, the NWFSC shall move again or skip the station. Marine mammals that are sighted further than 500 m from the vessel shall be

monitored to determine their position and movement in relation to the vessel to determine whether the move-on rule mitigation protocol should be implemented. NWFSC may use best professional judgment in making these decisions;

(4) NWFSC shall maintain visual monitoring effort during the entire period of gear deployment and retrieval. If marine mammals are sighted before the gear is fully deployed or retrieved, NWFSC shall take the most appropriate action to avoid marine mammal interaction. NWFSC may use best professional judgment in making this decision;

(5) If deployment or retrieval operations have been suspended because of the presence of marine mammals, NWFSC may resume such operations when practicable only when the animals are believed to have departed the area. NWFSC may use best professional judgment in making this decision;

(6) NWFSC shall implement standard survey protocols, including maximum soak durations and a prohibition on chumming; and

(7) For hook and line surveys in Puget Sound, but not including longline surveys, hook and line survey protocols described in this section apply only to cetaceans.

(e) Seine survey protocols:

(1) NWFSC shall conduct seine operations as soon as is practicable upon arrival at the sampling station;

(2) NWFSC shall conduct marine mammal watches (visual observation) prior to beginning of net deployment. Marine mammal watches shall be conducted by scanning the surrounding waters with the naked eye and range-finding binoculars (or monocular);

(3) NWFSC shall implement the move-on rule mitigation protocol, as described in this paragraph for use of purse seine gear. If one or more small cetaceans (*i.e.*, dolphin or porpoise) or five or more pinnipeds are observed within 500 m of the planned location before setting the seine gear, and are considered at risk of interacting with the vessel or research gear, or appear to be approaching the vessel and are considered at risk of interaction, NWFSC shall either remain onsite or move on to another sampling location. If remaining onsite, the set shall be delayed. If the animals depart or appear to no longer be at risk of interacting with the vessel or gear, a further ten minute observation period shall be conducted. If no further observations are made or the animals still do not appear to be at risk of interaction, then the set may be made. If the vessel is moved to

a different area, the move-on rule mitigation protocol would begin anew. If, after moving on, marine mammals remain at risk of interaction, the NWFSC shall move again or skip the station. Marine mammals that are sighted further than 500 m from the vessel shall be monitored to determine their position and movement in relation to the vessel to determine whether the move-on rule mitigation protocol should be implemented. NWFSC may use best professional judgment in making these decisions;

(4) NWFSC shall maintain visual monitoring effort during the entire period of time that seine gear is in the water (*i.e.*, throughout gear deployment, fishing, and retrieval). If marine mammals are sighted before the gear is fully removed from the water, NWFSC shall take the most appropriate action to avoid marine mammal interaction. NWFSC may use best professional judgment in making this decision;

(5) If seine operations have been suspended because of the presence of marine mammals, NWFSC may resume seine operations when practicable only when the animals are believed to have departed the area. NWFSC may use best professional judgment in making this determination;

(6) If any cetaceans are observed in a purse seine net, NWFSC shall immediately open the net and free the animals; and

(7) NWFSC shall not make beach seine sets within 200 m of any hauled-out pinniped, and shall immediately remove the gear from the water upon observation of any marine mammal attempting to interact with the gear.

§ 219.46 Requirements for monitoring and reporting.

(a) NWFSC shall designate a compliance coordinator who shall be responsible for ensuring compliance with all requirements of any LOA issued pursuant to § 216.106 of this chapter and § 219.47 and for preparing for any subsequent request(s) for incidental take authorization.

(b) Visual monitoring program:

(1) Marine mammal visual monitoring shall occur prior to deployment of trawl, seine, and hook and line gear, respectively; throughout deployment of gear and active fishing of research gears (not including longline soak time); prior to retrieval of longline gear; and throughout retrieval of all research gear;

(2) Marine mammal watches shall be conducted by watch-standers (those navigating the vessel and/or other crew) at all times when the vessel is being operated; and

(3) NWFSC shall conduct census counts of established pinniped haulouts in the Columbia River and Puget Sound that are disturbed by NWFSC research activity, and shall record disturbance of hauled-out pinnipeds due to NWFSC research activity, paying particular attention to the distance at which different species of pinniped are disturbed. Disturbance shall be recorded according to a three-point scale of response severity.

(c) Training:

(1) NWFSC must conduct annual training for all chief scientists and other personnel who may be responsible for conducting dedicated marine mammal visual observations to explain mitigation measures and monitoring and reporting requirements, mitigation and monitoring protocols, marine mammal identification, completion of datasheets, and use of equipment. NWFSC may determine the agenda for these trainings;

(2) NWFSC shall also dedicate a portion of training to discussion of best professional judgment, including use in any incidents of marine mammal interaction and instructive examples where use of best professional judgment was determined to be successful or unsuccessful; and

(3) NWFSC shall coordinate with NMFS's Southwest Fisheries Science Center (SWFSC) regarding surveys conducted in the California Current Ecosystem, such that training and guidance related to handling procedures and data collection is consistent.

(d) Handling procedures and data collection:

(1) NWFSC must develop and implement standardized marine mammal handling, disentanglement, and data collection procedures. These standard procedures will be subject to approval by NMFS's Office of Protected Resources (OPR);

(2) When practicable, for any marine mammal interaction involving the release of a live animal, NWFSC shall collect necessary data to facilitate a serious injury determination;

(3) NWFSC shall provide its relevant personnel with standard guidance and training regarding handling of marine mammals, including how to identify different species, bring an individual aboard a vessel, assess the level of consciousness, remove fishing gear, return an individual to water, and log activities pertaining to the interaction; and

(4) NWFSC shall record such data on standardized forms, which will be subject to approval by OPR. NWFSC shall also answer a standard series of supplemental questions regarding the

details of any marine mammal interaction.

(e) Reporting:

(1) NWFSC shall report all incidents of marine mammal interaction to NMFS's Protected Species Incidental Take database within 48 hours of occurrence and shall provide supplemental information to OPR upon request. Information related to marine mammal interaction (animal captured or entangled in research gear) must include details of survey effort, full descriptions of any observations of the animals, the context (vessel and conditions), decisions made, and rationale for decisions made in vessel and gear handling;

(2) Annual reporting:

(i) NWFSC shall submit an annual summary report to OPR not later than 90 days following the end of a given year. NWFSC shall provide a final report within thirty days following resolution of comments on the draft report:

(ii) These reports shall contain, at minimum, the following:

(A) Annual line-kilometers surveyed during which the EK60, ME70, SX90 (or equivalent sources) were predominant and associated pro-rated estimates of actual take;

(B) Summary information regarding use of all hook and line, seine, and trawl gear, including number of sets, hook hours, tows, etc., specific to each gear;

(C) Accounts of all incidents of marine mammal interactions, including circumstances of the event and descriptions of any mitigation procedures implemented or not implemented and why;

(D) Summary information related to disturbance of hauled-out pinnipeds, including event-specific total counts of animals present, counts of reactions according to the three-point scale, and distance of closest approach;

(E) A written evaluation of the effectiveness of NWFSC mitigation strategies in reducing the number of marine mammal interactions with survey gear, including best professional judgment and suggestions for changes to the mitigation strategies, if any;

(F) Final outcome of serious injury determinations for all incidents of marine mammal interactions where the animal(s) were released alive; and

(G) A summary of all relevant training provided by NWFSC and any coordination with SWFSC or NMFS's West Coast Regional Office.

(f) Reporting of injured or dead marine mammals:

(1) In the unanticipated event that the activity defined in § 219.41(a) clearly causes the take of a marine mammal in a prohibited manner, NWFSC personnel

engaged in the research activity shall immediately cease such activity until such time as an appropriate decision regarding activity continuation can be made by the NWFSC Director (or designee). The incident must be reported immediately to OPR and the West Coast Regional Stranding Coordinator, NMFS. OPR will review the circumstances of the prohibited take and work with NWFSC to determine what measures are necessary to minimize the likelihood of further prohibited take and ensure MMPA compliance. The immediate decision made by NWFSC regarding continuation of the specified activity is subject to OPR concurrence. The report must include the following information:

- (i) Time, date, and location (latitude/longitude) of the incident;
- (ii) Description of the incident;
- (iii) Environmental conditions (*e.g.*, wind speed and direction, Beaufort sea state, cloud cover, visibility);
- (iv) Description of all marine mammal observations in the 24 hours preceding the incident;
- (v) Species identification or description of the animal(s) involved;
- (vi) Status of all sound source use in the 24 hours preceding the incident;
- (vii) Water depth;
- (viii) Fate of the animal(s); and
- (ix) Photographs or video footage of the animal(s);

(2) In the event that NWFSC discovers an injured or dead marine mammal and determines that the cause of the injury or death is unknown and the death is relatively recent (*e.g.*, in less than a moderate state of decomposition), NWFSC shall immediately report the incident to OPR and the West Coast Regional Stranding Coordinator, NMFS. The report must include the information identified in paragraph (f)(1) of this section. Activities may continue while OPR reviews the circumstances of the incident. OPR will work with NWFSC to determine whether additional mitigation measures or modifications to the activities are appropriate;

(3) In the event that NWFSC discovers an injured or dead marine mammal and determines that the injury or death is not associated with or related to the activities defined in § 219.41(a) (*e.g.*, previously wounded animal, carcass with moderate to advanced decomposition, scavenger damage), NWFSC shall report the incident to OPR and the West Coast Regional Stranding Coordinator, NMFS, within 24 hours of the discovery. NWFSC shall provide photographs or video footage or other

documentation of the stranded animal sighting to OPR.

§ 219.47 Letters of Authorization.

(a) To incidentally take marine mammals pursuant to these regulations, NWFSC must apply for and obtain a Letter of Authorization (LOA).

(b) An LOA, unless suspended or revoked, may be effective for a period of time not to exceed the expiration date of these regulations.

(c) If an LOA expires prior to the expiration date of these regulations, NWFSC may apply for and obtain a renewal of the LOA.

(d) In the event of projected changes to the activity or to mitigation and monitoring measures required by an LOA, NWFSC must apply for and obtain a modification of the LOA as described in § 219.48 of this chapter.

(e) The LOA shall set forth:

- (1) Permissible methods of incidental taking;
- (2) Means of effecting the least practicable adverse impact (*i.e.*, mitigation) on the species, its habitat, and on the availability of the species for subsistence uses; and
- (3) Requirements for monitoring and reporting.

(f) Issuance of the LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations.

(g) Notice of issuance or denial of an LOA shall be published in the **Federal Register** within thirty days of a determination.

§ 219.48 Renewals and modifications of Letters of Authorization.

(a) An LOA issued under § 216.106 of this chapter and § 219.47 for the activity identified in § 219.41(a) shall be renewed or modified upon request by the applicant, provided that:

(1) The proposed specified activity and mitigation, monitoring, and reporting measures, as well as the anticipated impacts, are the same as those described and analyzed for these regulations (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section), and

(2) OPR determines that the mitigation, monitoring, and reporting measures required by the previous LOA under these regulations were implemented.

(b) For an LOA modification or renewal requests by the applicant that include changes to the activity or the mitigation, monitoring, or reporting

measures (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section) that do not change the findings made for the regulations or result in no more than a minor change in the total estimated number of takes (or distribution by species or years), OPR may publish a notice of proposed LOA in the **Federal Register**, including the associated analysis of the change, and solicit public comment before issuing the LOA.

(c) An LOA issued under § 216.106 of this chapter and § 219.47 for the activity identified in § 219.41(a) may be modified by OPR under the following circumstances:

(1) Adaptive Management—OPR may modify (including augment) the existing mitigation, monitoring, or reporting measures (after consulting with NWFSC regarding the practicability of the modifications) if doing so creates a reasonable likelihood of more effectively accomplishing the goals of the mitigation and monitoring set forth in the preamble for these regulations;

(i) Possible sources of data that could contribute to the decision to modify the mitigation, monitoring, or reporting measures in an LOA:

(A) Results from NWFSC's monitoring from the previous year(s);

(B) Results from other marine mammal and/or sound research or studies; and

(C) Any information that reveals marine mammals may have been taken in a manner, extent or number not authorized by these regulations or subsequent LOAs.

(ii) If, through adaptive management, the modifications to the mitigation, monitoring, or reporting measures are substantial, OPR will publish a notice of proposed LOA in the **Federal Register** and solicit public comment.

(2) Emergencies—If OPR determines that an emergency exists that poses a significant risk to the well-being of the species or stocks of marine mammals specified in LOAs issued pursuant to § 216.106 of this chapter and § 219.47, an LOA may be modified without prior notice or opportunity for public comment. Notice would be published in the **Federal Register** within thirty days of the action.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at <http://www.archives.gov/federal-register/laws>.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available on the Internet from GPO's Federal Digital System (FDsys) at <http://www.gpo.gov/fdsys>. Some laws may not yet be available.
