

FEDERAL REGISTER

Vol. 83 Friday,
No. 145 July 27, 2018

Book 1 of 2 Books
Pages 35537–35702

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 83 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Rules and Regulations

Federal Register

Vol. 83, No. 145

Friday, July 27, 2018

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5

[Docket No. DHS–2018–0039]

Privacy Act of 1974: Implementation of Exemptions; Department of Homeland Security/ALL–039 Foreign Access Management System of Records

AGENCY: Department of Homeland Security.

ACTION: Final rule.

SUMMARY: The Department of Homeland Security (DHS) is issuing a final rule to amend its regulations to exempt portions of an updated and reissued system of records titled, “Department of Homeland Security/ALL–039 Foreign Access Management System of Records” from certain provisions of the Privacy Act. Specifically, the Department exempts portions of the “Department of Homeland Security/ALL–039 Foreign Access Management System of Records” from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: This final rule is effective July 27, 2018.

FOR FURTHER INFORMATION CONTACT: For general and privacy-related questions please contact: Philip S. Kaplan, Privacy@hq.dhs.gov, (202) 343–1717, Chief Privacy Officer, Privacy Office, Department of Homeland Security, Washington, DC 20528.

SUPPLEMENTARY INFORMATION:

Background

DHS published a notice of proposed rulemaking (NPRM) in the **Federal Register** (83 FR 19020, May 1, 2018) proposing to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative

enforcement requirements. The system of records is the DHS/ALL–039 Foreign Access Management System of Records. The DHS/ALL–039 Foreign Access Management System of Records system of records notice (SORN) was published in the **Federal Register** (83 FR 19078, May 1, 2018) and comments were invited on both the NPRM and SORN.

Public Comments

DHS received no comments on the NPRM and no comments on the SORN. After consideration of the lack of public comments, the Department will implement the rulemaking as proposed.

List of Subjects in 6 CFR Part 5

Freedom of information, Privacy.

For the reasons stated in the preamble, DHS amends Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

■ 1. The authority citation for part 5 is revised to read as follows:

Authority: 6 U.S.C. 101 *et seq.*; Pub. L. 107–296, 116 Stat. 2135; 5 U.S.C. 301. Subpart A also issued under 5 U.S.C. 552. Subpart B also issued under 5 U.S.C. 552a.

■ 2. Add paragraph 78 to appendix C to part 5 to read as follows:

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

* * * * *

78. The DHS/ALL–039 Foreign Access Management System of Records consists of electronic and paper records and will be used by DHS and its components. The DHS/ALL–039 Foreign Access Management System of Records is a repository of information held by DHS in connection with its several and varied missions and functions, including, but not limited to the enforcement of civil and criminal laws; investigations, inquiries, and proceedings there under; and national security and intelligence activities. The DHS/ALL–039 Foreign Access Management System of Records contains information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other federal, state, local, tribal, foreign, or international government agencies. The Secretary of Homeland Security, pursuant to 5 U.S.C. 552a(k)(1), (k)(2), and (k)(5), has exempted this system from the following provisions of the Privacy Act: 5 U.S.C. 552a(c)(3); (d); (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I); and (f). When a record received from

another system has been exempted in that source system under 5 U.S.C. 552a(j)(2), DHS will claim the same exemptions for those records that are claimed for the original primary systems of records from which they originated and claims any additional exemptions set forth here. Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS as well as the recipient agency. Disclosure of the accounting would therefore present a serious impediment to law enforcement efforts and efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process. When an investigation has been completed, information on disclosures made may continue to be exempted if the fact that an investigation occurred remains sensitive after completion.

(b) From subsection (d) (Access and Amendment to Records) because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an unreasonable administrative burden by requiring investigations to be continually reinvestigated. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of federal law, the accuracy of information obtained or introduced occasionally may be unclear, or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsections (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements) and (f)

(Agency Rules), because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

Philip S. Kaplan,

Chief Privacy Officer, Department of Homeland Security.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2018-0286; Product Identifier 2018-CE-008-AD; Amendment 39-19340; AD 2018-15-08]

RIN 2120-AA64

Airworthiness Directives; Pacific Aerospace Limited Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for Pacific Aerospace Limited Model 750XL airplanes. This AD results from mandatory continuing airworthiness information (MCAI) issued by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as airplane sound insulation materials attached to the aft face of the firewall not complying with the applicable burn testing criteria for materials on the cabin side of the firewall. We are issuing this AD to require actions to address the unsafe condition on these products.

DATES: This AD is effective August 31, 2018.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in the AD as of August 31, 2018.

ADDRESSES: You may examine the AD docket on the internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA-2018-0286; or in person at Docket Operations, U.S. Department of Transportation,

Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

For service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; phone: +64 7843 6144; fax: +64 843 6134; email: pacific@aerospace.co.nz; internet: www.aerospace.co.nz. You may view this referenced service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148. It is also available on the internet at <http://www.regulations.gov> by searching for Docket No. FAA-2018-0286.

FOR FURTHER INFORMATION CONTACT: Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4144; fax: (816) 329-4090; email: mike.kiesov@faa.gov.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to Pacific Aerospace Limited Model 750XL airplanes. The NPRM was published in the **Federal Register** on April 11, 2018 (83 FR 15517). The NPRM proposed to correct an unsafe condition for the specified products and was based on mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country. The MCAI states:

The sound insulation material on the aft face of the firewall must comply with the applicable burn test criteria specified in FAR [14 CFR] 23.853(f). [As of August 30, 2017, § 23.853 was replaced by § 23.2325 (81 FR 96572, December 30, 2016).]

Inspect the aft face of the firewall and determine if sound insulation material is installed per the instructions in Pacific Aerospace Mandatory Service Bulletin (MSB) PACSB/XL/095 issue 1, dated 21 December 2017, or later approved revision.

If a layer of black foam insulating material is found covering the firewall, then remove the material per the instructions in MSB PACSB/XL/095 before further flight.

The MCAI can be found in the AD docket on the internet at: <https://www.regulations.gov/document?D=FAA-2018-0286-0002>.

Comments

We gave the public the opportunity to participate in developing this AD. We received no comments on the NPRM or

on the determination of the cost to the public.

Conclusion

We reviewed the relevant data and determined that air safety and the public interest require adopting the AD as proposed.

Related Service Information Under 1 CFR Part 51

We reviewed Pacific Aerospace Service Bulletin PACSB/XL/095, Issue 1, dated December 21, 2017. The service information describes procedures for inspection of the airplane sound insulation attached to the aft face of the firewall and removal if necessary. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

We estimate that this AD will affect 22 products of U.S. registry. We also estimate that it would take about 1 work-hour per product to comply with the basic requirements of this AD. The average labor rate is \$85 per work-hour.

Based on these figures, we estimate the cost of this AD on U.S. operators to be \$1,870, or \$85 per product.

In addition, we estimate that any necessary follow-on actions would take about 8 work-hours, for a cost of \$680 per product. We have no way of determining the number of products that may need these actions.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. "Subtitle VII: Aviation Programs," describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in "Subtitle VII, Part A, Subpart III, Section 44701: General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C.

In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to small airplanes, gliders, balloons, airships, domestic business jet transport airplanes, and associated appliances to the Director of the Policy and Innovation Division.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this AD:

(1) Is not a “significant regulatory action” under Executive Order 12866,

(2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),

(3) Will not affect intrastate aviation in Alaska, and

(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Examining the AD Docket

You may examine the AD docket on the internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA–2018–0286; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains the NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations (telephone (800) 647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

2018–15–08 Pacific Aerospace Limited:
Amendment 39–19340; Docket No. FAA–2018–0286; Product Identifier 2018–CE–008–AD.

(a) Effective Date

This AD becomes effective August 31, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Pacific Aerospace Limited Model 750XL airplanes, all serial numbers up to and including 215, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 54: Nacelles/Pylons.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and address an unsafe condition on an aviation product. The MCAI describes the unsafe condition as airplane sound insulation materials attached to the aft face of the firewall not complying with the applicable burn testing criteria for materials on the cabin side of the firewall. We are issuing this AD to prevent the spread of fire into the cabin in case of an engine fire.

(f) Actions and Compliance

Unless already done, do the following actions in paragraphs (f)(1) and (2) of this AD:

(1) Within 90 days after August 31, 2018 (the effective date of this AD), inspect the aft face of the firewall not complying with the sound insulation material is installed per the Inspection Instructions in Pacific Aerospace Service Bulletin PACSB/XL/095, Issue 1, dated December 21, 2017.

(2) If a layer of black foam insulating material is found covering the firewall during the inspection required in paragraph (f)(1) of this AD, before further flight, remove the material per the Accomplishment Instructions in Pacific Aerospace Service Bulletin PACSB/XL/095, Issue 1, dated December 21, 2017.

(g) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, Small Airplane Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19.

Send information to ATTN: Mike Kiesov, Aerospace Engineer, FAA, Small Airplane Standards Branch, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4144; fax: (816) 329–4090; email: mike.kiesov@faa.gov. Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, Small Airplane Standards Branch, FAA; or the Civil Aviation Authority of New Zealand (CAA).

(h) Related Information

Refer to MCAI CAA AD DCA/750XL/27A, dated March 1, 2018, for related information. You may examine the MCAI on the internet at: <https://www.regulations.gov/document?D=FAA-2018-0286-0002>.

(i) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Pacific Aerospace Service Bulletin PACSB/XL/095, Issue 1, dated December 21, 2017.

(ii) Reserved.

(3) For Pacific Aerospace Limited service information identified in this AD, contact Pacific Aerospace Limited, Airport Road, Hamilton, Private Bag 3027, Hamilton 3240, New Zealand; phone: +64 7843 6144; fax: +64 843 6134; email: pacific@aerospace.co.nz; internet: www.aerospace.co.nz.

(4) You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148. In addition, you can access this service information on the internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA–2018–0286.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: <http://www.archives.gov/federal-register/cfr/ibr-locations.html>.

Issued in Kansas City, Missouri, on July 20, 2018.

Pat Mullen,

Aircraft Certification Service, Acting Deputy Director, Policy & Innovation Division, AIR–601.

[Docket No. FAA-2018-0291; Airspace
Docket No. 18-AGL-10]

RIN 2120-AA66

Amendment of Class E Airspace; Ionia, MI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class E airspace extending upward from 700 feet above the surface at Ionia County Airport, Ionia, MI. This action as the result of an airspace review due to the decommissioning of the Lansing VHF omnidirectional range (VOR) navigation aid as part of the VOR Minimum Operational Network (MON) Program. The geographic coordinates of the airport are also updated to coincide with the FAA's aeronautical database.

DATES: Effective 0901 UTC, November 8, 2018. The Director of the Federal Register approves this incorporation by reference action under Title 1 Code of Federal Regulations part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741-6030, or go to <https://www.archives.gov/federal-register/cfr/ibr-locations.html>.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222-5711.

SUPPLEMENTARY INFORMATION:**Authority for This Rulemaking**

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace extending upward from 700 feet above the surface at Ionia County Airport, Ionia, MI, to support instrument flight rule operations.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (83 FR 18763; April 30, 2018) for Docket No. FAA-2018-0291 to amend Class E airspace extending upward from 700 feet above the surface at Ionia County Airport, Ionia, MI. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 modifies Class E airspace extending upward from 700 feet above the surface to within a 6.5-mile radius (decreased from a 7.4-mile radius) at Ionia County Airport, Ionia, MI. The geographic coordinates of the airport are also

updated to coincide with the FAA's aeronautical database.

This action is necessary due to an airspace review caused by the decommissioning of the Lansing VOR as part of the VOR MON Program.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," paragraph 5-6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959-1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B,

Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL MI E5 Ionia, MI [Amended]

Ionia County Airport, MI
(Lat. 42°56'17" N, long. 85°03'38" W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Ionia County Airport.

Issued in Fort Worth, Texas, on July 19, 2018.

Walter Tweedy,

*Acting Manager, Operations Support Group,
ATO Central Service Center.*

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it supports the removal of Class E airspace extending upward from 700 feet above the surface at Clarendon Municipal Airport, Clarendon, TX.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (83 FR 18765; April 30, 2018) for Docket No. FAA-2018-0310 to remove Class E airspace extending upward from 700 feet above the surface at Clarendon Municipal Airport, Clarendon, TX. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in paragraphs 6005 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and

Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 removes the Class E airspace extending upward from 700 feet above the surface at Clarendon Municipal Airport, Clarendon, TX.

This action due to the cancellation of the instrument procedures at the airport making the airspace no longer necessary.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," paragraph 5-6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

[Docket No. FAA–2017–1083; Airspace Docket No. 17–ACE–13]

RIN 2120–AA66

Amendment of Class D and E Airspace; Kansas City, MO; and Revocation of Class E Airspace; Kansas City, MO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action modifies Class D airspace at Charles B. Wheeler Downtown Airport, Kansas City, MO; removes Class E airspace designated as an extension to Class D airspace at Charles B. Wheeler Downtown Airport; and modifies Class E airspace extending upward from 700 feet above the surface at Kansas City International Airport, Kansas City, MO, and Charles B. Wheeler Downtown Airport. This action is required due to the decommissioning of the Riverside VHF omnidirectional range (VOR) facility, which provided navigation guidance for the instrument procedures to Charles B. Wheeler Downtown Airport. The VOR has been

decommissioned as part of the VOR Minimum Operational Network (MON) Program. Additionally, the geographic coordinates and airport name are being updated to coincide with the FAA's aeronautical database. This action is necessary for the safety and management of instrument flight rules (IFR) operations at these airports.

DATES: Effective 0901 UTC, November 8, 2018. The Director of the Federal Register approves this incorporation by reference action under Title 1 Code of Federal Regulations part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would support IFR operations at Charles B. Wheeler Downtown Airport, and Kansas

City International Airport, Kansas City, MO.

History

The FAA published a notice of proposed rulemaking in the **Federal Register** (83 FR 4611; February 1, 2018) for Docket No. FAA–2017–1083 to modify Class D airspace at Charles B. Wheeler Downtown Airport, Kansas City, MO; remove Class E airspace designated as an extension to Class D airspace at Charles B. Wheeler Downtown Airport; and modify Class E airspace extending upward from 700 feet above the surface at Kansas City International Airport, Kansas City, MO, and Charles B. Wheeler Downtown Airport. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. One comment was received from the Aircraft Owners and Pilots Association (AOPA). In their comment, AOPA stated that the NPRM did not comply with FAA guidance in FAA Order 7400.2L, Procedures for Handling Airspace Matters, because a graphic was not included in the docket. Additionally, AOPA encouraged the FAA to follow their guidance in the Order by making the action effective date coincidental to the sectional chart publication date.

The FAA has determined AOPA's comments raised no substantive issues with respect to the proposed changes to the airspace addressed in the NPRM. To the extent the FAA failed to follow its policy guidance reference publishing graphics in the docket and establishing the Class D airspace effective date to match the sectional chart date, we note the following.

With respect to AOPA's comment addressing graphics, FAA Order 7400.2L, paragraph 2–3–3.c. requires the official docket to include available graphics. For this airspace action, no graphics were deemed necessary or produced in the review or development of the proposed airspace amendments noted in the NPRM; therefore, no graphics were available to include in the docket.

Specific to AOPA's comment regarding the FAA already creating a graphical depiction of new or modified airspace overlaid on a Sectional Chart for quality assurance purposes, this is not correct nor required in all cases. During the airspace reviews, airspace graphics may be created, if deemed necessary, to determine if there are any terrain issues, or if cases are considered complex. However, in many cases when developing an airspace amendment proposal, a graphic is not required. It was unclear if the graphic AOPA argued

was already created with a sectional chart background was actually the airspace graphic created by the Aeronautical Informational Services office in preparation of publishing the sectional charts. However, that graphic is normally created after the rulemaking determination is published.

With respect to AOPA's comment addressing effective dates, FAA Order 7400.2L, paragraph 2–3–7.a.4. states that, to the extent practicable, Class D airspace area and restricted area rules should become effective on a sectional chart date and that consideration should be given to selecting a sectional chart date that matches a 56-day en route chart cycle date. The FAA does consider publishing Class D airspace amendment effective dates to coincide with the publication of sectional charts, to the extent practicable; however, this consideration is accomplished after the NPRM comment period ends in the final rule. Substantive comments received to NPRMs, flight safety concerns, management of IFR operations at affected airports, and immediacy of required proposed airspace amendments are some of the factors that must be taken into consideration when selecting the appropriate effective date. After considering all factors, the FAA may determine that selecting an effective date that conforms to a 56-day en route chart cycle date that is not coincidental to sectional chart dates is better for the National Airspace System and its users than awaiting the next sectional chart date.

Class D and E airspace designations are published in paragraph 5000, 6004, and 6005, respectively, of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class D and E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This amendment to title 14, Code of Federal Regulations (14 CFR) part 71:

Amends the Class D airspace at Charles B. Wheeler Downtown Airport by updating the header of the airspace legal description to Kansas City, MO, (from Kansas City Charles B. Wheeler Downtown Airport, MO) to comply with FAA Order 7400.2L; adds an extension 1.0 mile each side of the 012° bearing from the Charles B. Wheeler Downtown RWY 19 LOC from the 4.2-mile radius to 4.4 miles from the airport; adds an extension 1.0 mile each side of the 013° bearing from the airport from the 4.2-mile radius to 4.3 miles north of the airport; adds an extension 1.0 mile each side of the 215° bearing from the Charles B. Wheeler Downtown RWY 03 LOC from the 4.2-mile radius to 4.5 miles northeast of the airport; adds an extension 1.0 mile each side of the 218° bearing from the airport from the 4.2-mile radius to 5.0 miles south of the airport; and updates the geographic coordinates of the airport to coincide with the FAA's aeronautical database;

Removes the Class E airspace designated as an extension to Class D airspace at Charles B. Wheeler Downtown Airport as the airspace is no longer required; and

Amends Class E airspace extending upward from 700 feet above the surface at Kansas City, MO, by updating the header of the airspace legal description to Kansas City, MO, (from Kansas City International Airport, MO) to comply with FAA Order 7400.2L; updates the name and geographic coordinates of Charles B. Wheeler Downtown Airport (formerly Kansas City Downtown Airport) and the geographic coordinates of Sherman Army Airfield (AAF), KS, to coincide with the FAA's aeronautical database; removes the Kansas City VORTAC, DOTTE LOM, Riverside VOR/DME ILS RWY 19R localizer, ILS RWY 19 localizer, ILS RWY 1L localizer, and ILS RWY 1R localizer from the airspace description; removes all current extensions at Kansas City International Airport and Charles B. Wheeler Downtown Airport; and adds an extension 2.0 miles each side of the 215° bearing from the Charles B. Wheeler Downtown RWY 03 LOC from the 6.7-mile radius to 8.7 miles south of Charles B. Wheeler Downtown Airport.

Airspace reconfiguration is necessary due to the decommissioning of the Riverside VOR as part of the VOR MON Program and for the safety and management of IFR operations at these airports.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are

necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," paragraph 5–6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 5000 Class D Airspace.

* * * * *

ACE MO D Kansas City, MO [Amended]

Charles B. Wheeler Downtown Airport, MO
(Lat. 39°07'23" N, long. 94°35'34" W)
Charles B. Wheeler Downtown RWY 19 LOC
(Lat. 39°06'50" N, long. 94°35'44" W)

Charles B. Wheeler Downtown RWY 03 LOC
(Lat. 39°07'40" N, long. 94°35'17" W)

That airspace extending upward from the surface to and including 3,300 feet MSL within a 4.2-mile radius of Charles B. Wheeler Downtown Airport, excluding that airspace within the Kansas City, MO Class B airspace area; and within 1.0 mile each side of the 012° bearing from the Charles B. Wheeler Downtown RWY 19 LOC, extending from the 4.2-mile radius to 4.4 miles north of the airport; and within 1.0 mile each side of the 013° bearing from the airport, extending from the 4.2-mile radius to 4.3 miles north of the airport; and within 1.0 mile each side of the 215° bearing from the Charles B. Wheeler Downtown RWY 03 LOC, extending from the 4.2-mile radius to 4.5 miles south of the airport; and within 1.0 mile each side of the 218° bearing from the airport, extending from the 4.2-mile radius to 5.0 miles south of the airport.

Paragraph 6004 Class E Airspace Areas Designated as an Extension to a Class D or Class E Surface Area.

* * * * *

ACE MO E4 Kansas City Charles B. Wheeler Downtown Airport, MO [Removed]

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ACE MO E5 Kansas City, MO [Amended]

Kansas City International Airport, MO
(Lat. 39°17'51" N, long. 94°42'50" W)
Charles B. Wheeler Downtown Airport, MO
(Lat. 39°07'23" N, long. 94°35'34" W)
Charles B. Wheeler Downtown RWY 03 LOC
(Lat. 39°07'40" N, long. 94°35'17" W)
Sherman Army Airfield (AAF), KS
(Lat. 39°22'03" N, long. 94°54'52" W)

That airspace extending upward from 700 feet above the surface within a 7.6-mile radius of Kansas City International Airport; and within a 6.7-mile radius of Charles B. Wheeler Downtown Airport; and within 2.0 miles each side of the 215° bearing from the Charles B. Wheeler Downtown RWY 03 LOC, extending from the 6.7-mile radius to 8.7 miles south of Charles B. Wheeler Downtown Airport; and within a 6.5-mile radius of Sherman AAF.

Issued in Fort Worth, Texas, on July 16, 2018.

Walter Tweedy,

*Acting Manager, Operations Support Group,
ATO Central Service Center.*

BILLING CODE 4910-13-P

MILLENNIUM CHALLENGE CORPORATION

22 CFR Part 1304

Freedom of Information Act Regulations

AGENCY: Millennium Challenge Corporation.

ACTION: Final rule.

SUMMARY: This rule amends the Agency's regulations under the Freedom of Information Act (FOIA). The regulation has been revised to update and implement the relevant provisions of the Freedom of Information Act as required under that statute. This document will assist interested parties in obtaining access to Millennium Challenge Corporation public records.

DATES: This rule is effective July 27, 2018.

FOR FURTHER INFORMATION CONTACT: Tamiko N.W. Watkins, Chief FOIA Officer, 202-521-3730.

SUPPLEMENTARY INFORMATION: The Millennium Challenge Act (MCA) of 2003 established a new federal agency called the Millennium Challenge Corporation. Congress enacted the Freedom of Information Act (FOIA) in 1966 and last modified it with the FOIA Improvement Act of 2016. This rule addresses electronically available documents, procedures for making requests, agency handling of requests, records not disclosed, changes in fees, and public reading rooms, as well as, other related provisions.

Discussion of Final Rule and Response to Comments and Other Changes From Proposed Rule

MCC reviewed all public comments and made the necessary revisions in order to ensure that this rule complies with the Freedom of Information Act and FOIA Improvement Act of 2016. These revisions include updating definitions to reflect the definitions identified in the Department of Justice Template for Agency FOIA Regulations.

Lists of Subjects in 22 CFR Part 1304

Freedom of Information Act procedures.

■ For the reasons set forth in the preamble, the Millennium Challenge Corporation amends chapter XIII of title 22 by revising part 1304 to read as follows:

PART 1304—PRODUCTION OR DISCLOSURE OF INFORMATION

Subpart A—Procedures for Requests for Disclosure of Records Under the Freedom of Information Act

Sec.

- 1304.1 General provisions.
- 1304.2 Definitions.
- 1304.3 Proactive disclosure of MCC records.
- 1304.4 Requirements for making requests.
- 1304.5 Responsibility for acknowledgment and initial determinations.
- 1304.6 Timing of responses to requests.

- 1304.7 Responses to requests.
- 1304.8 Confidential commercial information.
- 1304.9 Administrative appeals.
- 1304.10 Preservation of records.
- 1304.11 Fees.
- 1304.12 Other rights and services.

Subpart B—[Reserved]

Authority: 5 U.S.C. 552, as amended.

§ 1304.1 General provisions.

This part contains the rules that the Millennium Challenge Corporation ("MCC") follows in processing requests for records under the Freedom of Information Act ("FOIA") (5 U.S.C. 552). The rules in this part should be read in conjunction with the text of the FOIA and the Uniform Freedom of Information Act Fee Schedule and Guidelines published by the Office of Management and Budget ("OMB Fee Guidelines"). In addition, the MCC FOIA web page contains information about the specific procedures particular to MCC with respect to making FOIA requests. This resource is available at www.mcc.gov/resources/foia.

§ 1304.2 Definitions.

Administrative appeal. An independent review of the initial determination made in response to a FOIA request.

Agency. Any executive department, military department, government corporation, government controlled corporation, or other establishment in the executive branch of the Federal Government or any independent regulatory agency.

Business day or work day. A day of the week, excluding Saturday, Sunday, or legal public holidays.

Calendar days. Every day within a month, including Saturday, Sunday, and legal public holidays. Unless identified as a "business day" or "work day," all timeframes and days noted in this part shall be calculated in calendar days.

Chief FOIA Officer. A designated MCC employee who is a senior official, at the Assistant Secretary or equivalent level who, subject to the authority of the head of the agency, shall have agency wide responsibility for efficient and appropriate compliance with the FOIA. In addition, the Chief FOIA Officer shall monitor implementation of the FOIA throughout MCC and keep the head of the agency, the chief legal officer of the agency, and the Attorney General appropriately informed of the agency's performance in implementing the FOIA; recommend to the head of the agency such adjustments to MCC's practices, policies, personnel, and funding as may

be necessary to improve its implementation of the FOIA; facilitate public understanding of the purposes of the statutory exemptions of the FOIA; offer training to MCC staff regarding their responsibilities under the FOIA, serve as the primary agency liaison with the Office of Government Information Services and the Office of Information policy; and designate one (1) or more FOIA Public Liaisons. The Chief FOIA Officer shall review, not less frequently than annually, all aspects of the administration of the FOIA by MCC to ensure compliance with the requirements of the FOIA, including—agency regulations; disclosure of records; assessment of fees and determination of eligibility for fee waivers; timely processing of requests for information; the use of exemptions; and dispute resolution services with the assistance of the Office of Government Information Services or the FOIA Public Liaison.

Commercial requester. Any person making a request for information for a use or purpose that furthers a commercial, trade, or profit interest, which can include furthering those interests through litigation.

Complex request. A FOIA request that MCC anticipates will involve a voluminous amount of material to review or will be time-consuming to process.

Confidential commercial information. Records provided to the government that contain material exempt from disclosure under Exemption 4 of the FOIA and disclosure of such records could reasonably be expected to cause substantial competitive harm.

Consultation. When MCC locates a record that contains information of interest to another agency, MCC shall ask the interested agency for their views on disclosing the records before any final determination is made.

Direct costs. Expenditures actually incurred by MCC for searching, duplicating, and in the case of commercial use requests, reviewing records in order to respond to a FOIA request.

Discretionary disclosure. The release of or portions of records to a FOIA requester that could be withheld by MCC under one or more of the FOIA exemptions.

Duplication. The process of making a copy of a record in order to respond to a FOIA request, including but not limited to paper copies, microfilm, audio-video materials, and computer diskettes or other electronic copies.

Duplication fees. The estimated direct costs of making a copy of a record in order to respond to a FOIA request.

Educational institution. Any school or institution that operates a program of scholarly research. A requester in this category must show that the request is made in connection with his or her role at the educational institution.

Educational requester. A student who makes a request in furtherance of their coursework or other school-sponsored activities and provides a copy of a course syllabus or other reasonable documentation to indicate the research purpose for the request, would qualify as part of this fee category.

Exemptions. Certain categories of information that are not required to be released in response to a FOIA request because release would be harmful to governmental or private interests.

Fee waiver. The waiver or reduction of processing fees if a requester can demonstrate that certain statutory standards are satisfied including that the information is in the public interest and is not requested for a commercial interest.

FOIA Appeals Officer. The MCC employee who is responsible for conducting an independent review of the initial determination of the FOIA request after the requester has requested an administrative appeal.

FOIA Public Liaison. The MCC employee who is responsible for assisting in the resolution of disputes in response to FOIA requests.

FOIA Program Officer. The MCC employee who receives and processes requests within the MCC FOIA Office.

Non-commercial scientific institution. An institution that does not operate on a commercial basis, but operates solely for the purpose of conducting scientific research and the results of the scientific research are not intended to promote any particular product or industry.

Record. Any item, collection, or grouping of information maintained by MCC in any form or format, including an electronic copy. A “record” can potentially constitute an entire document, a single page of a multipage document, an individual paragraph of a document, or an email within an email chain.

Referral. When an agency locates a record that originated with, or is of otherwise primary interest to another agency, it will forward that record to the other agency to process the record and to provide the final determination directly to the requester.

Representative of the news media. Any person or entity that gathers information of potential interest to a segment of the public, uses its editorial skills to turn the raw materials into a distinct work, and distributes that work to an audience. The term “news” means

information that is about current events or that would be of current interest to the public. Examples of news media entities include television or radio stations that broadcast “news” to the public at large and publishers of periodicals that disseminate “news” and make their products available through a variety of means to the general public, including news organizations that disseminate solely on the internet. A request for records supporting the news-dissemination function of the requester will not be considered to be for a commercial use. “Freelance” journalists who demonstrate a solid basis for expecting publication through a news media entity will be considered as a representative of the news media. A publishing contract would provide the clearest evidence that publication is expected; however, agencies can also consider a requester’s past publication record in making this determination.

Review. The process of examining a record to determine whether all or part of the record may be released or withheld, and includes redacting or otherwise processing the record for disclosure to a requester. The review process does not include time spent resolving legal or policy issues regarding the application of exemptions to a record. The review process also does not include time spent reviewing records at the administrative appeal level unless, MCC determines that the exemption under which it withheld records does not apply and the records are reviewed again to determine whether a different exemption may apply.

Requester category. One of the three categories that agencies place requesters in for the purpose of determining whether a requester will be charged fees for search, review and duplication, including commercial requesters; non-commercial scientific or educational institutions or news media requesters, and all other requesters.

Search. The time spent locating records that may be responsive to a request, manually or by electronic means, including page-by-page or line-by-line identification of responsive material within a record.

Search fees. Estimated direct costs of the time spent locating records by either manual or electronic means.

Submitter. Any person or entity who provides information directly or indirectly to MCC. The term includes, but is not limited to, corporations, state governments, and foreign governments.

§ 1304.3 Proactive disclosure of MCC records.

Records that are required by the FOIA to be made available for public inspection in an electronic format may be accessed through the MCC website. MCC is responsible for determining which of its records are required to be made publicly available, identifying additional records in the interest of the public that are appropriate for public disclosure, and posting such records. MCC shall ensure that its website of posted records is reviewed and updated on an ongoing basis. The FOIA Program Officer may assist individuals in locating records on the MCC website and FOIA reading room.

§ 1304.4 Requirements for making requests.

(a) Requests for access to, or copies of, MCC records other than those identified in § 1304.3, shall be in writing and addressed to the MCC Chief FOIA Officer at 1099 14th St. NW, Washington, DC 20005 or FOIA@mcc.gov. All requests for records shall be deemed to have been made pursuant to the FOIA, regardless of whether the request specifically mentions the Freedom of Information Act. To facilitate processing, the requester should place the phrase "FOIA REQUEST" in capital letters on the front of the envelope or subject line of the email.

(b) Each request shall include the following:

(1) A description of the record(s) that provides sufficient detail to enable MCC to locate the record(s) with a reasonable amount of effort; such as the date, title or name, author, recipient, subject matter of the record, case number, file designation, or reference number. Before submitting their requests, requesters may contact the MCC FOIA Program Officer to discuss the records they are seeking and receive assistance in describing the records;

(2) The preferred format of the records;

(3) The requestor's full name, mailing address or email address, and telephone number where the requester can be reached during business hours; and

(4) If applicable, the maximum amount the requester is willing to pay or dollar limit on the fees MCC may incur to respond to the request for records. When this information is specified, MCC shall not exceed such limit.

(c) If a request does not meet all of the requirements of paragraph (b) of this section, the FOIA Program Officer may advise the requester that additional information is needed. Requesters who

are attempting to reformulate or modify a request may engage with the MCC Program Officer to clarify their request.

§ 1304.5 Responsibility for acknowledgment and initial determinations.

(a) Upon receipt of a request for records, the FOIA Program Officer will acknowledge receipt of the request in writing within ten (10) business days. In responding to a request for records, MCC shall make reasonable efforts to search for the records in electronic format, except when such efforts would significantly interfere with the operation of the agency's automated information system.

(b) The Chief FOIA Officer shall make an initial determination, within twenty (20) business days, to either grant or deny, in whole or in part, a request for records. If the Chief FOIA Officer shall notify the requester making such a request of the following information:

(1) The determination whether grant or deny the request and reasons for the determination;

(2) The right of the requester to seek assistance from the FOIA Public Liaison; and in the case of an adverse determination;

(3) The right of the requester to seek dispute resolution services via the Office of Government Information Services of the National Archives and Records Administration (OGIS); and

(4) The right to file an administrative appeal to the FOIA Appeals Officer within 90 calendar days after the date of the adverse determination.

§ 1304.6 Timing of responses to requests.

(a) *General information.* The twenty (20) business day period identified in § 1304.5(b) shall commence on the date that the request is first received by the MCC FOIA office and an acknowledgment of the request shall be sent no later than ten (10) business days after receipt of the request. The twenty (20) business day period shall not be tolled except that MCC may make one request to the requester for information and toll the twenty (20) business day period while it is awaiting receipt of the information, or the twenty (20) business day period may be tolled if it is necessary to clarify issues regarding fees with the requester.

(b) *Unusual circumstances.* If MCC cannot meet the statutory time limit for processing a request because of "unusual circumstances" as defined in the FOIA and MCC extends the time limit on that basis, MCC will, before expiration of the twenty (20) business day period, notify the requester in writing of the unusual circumstances involved and of the date by which MCC

estimates processing of the request will be completed. Where the extension exceeds ten (10) business days, MCC will provide the requester with an opportunity to modify the request or arrange an alternative time period for processing the original or modified request. MCC must make its designated FOIA Program Officer or FOIA Public Liaison available for this purpose. To aid the requester, the MCC FOIA Public Liaison shall assist in the resolution of any disputes between the requester and MCC, and notify the requester of the right to seek dispute resolution services from the Office of Government Information Services.

(c) *Aggregating requests.* MCC may aggregate requests where it reasonably appears that multiple requests, submitted either by a requester or by a group of requesters acting in concert, constitute a single request that would otherwise involve unusual circumstances. Requests that involve unrelated matters shall not be aggregated.

(d) *Multitrack processing.* MCC may use multitrack processing in responding to requests. This process entails separating simple requests that require rather limited review from more lengthy and complex requests. Requests in each track are then processed in their respective track. The FOIA Program Officer may provide requesters in the slower track an opportunity to limit the scope of their requests in order to decrease the processing time required. The FOIA Program Officer may provide the opportunity to limit the scope of the request by contacting the requester by letter, email, or telephone.

(e) *Expedited processing of requests.* The FOIA Program Officer must determine whether to grant a request for expedited processing within ten (10) calendar days of its receipt. Requests will receive expedited processing if one of the following criteria are met:

(1) The requester can establish that failure to receive the records quickly could reasonably be expected to pose an imminent threat to the life or physical safety of an individual;

(2) The requester is primarily engaged in disseminating information and can demonstrate that an urgency to inform the public concerning actual or alleged Federal Government activity exists; or

(3) As determined by the Chief FOIA Officer.

(f) *Written expedited requests.* A requester who seeks expedited processing must submit a written statement explaining in detail the basis for making the request for expedited processing. This statement must be certified to be true and correct. The

MCC Chief FOIA Officer may waive the formal certification requirement.

§ 1304.7 Responses to requests.

(a) *General information.* MCC, to the extent practicable, will communicate with requesters who have access to the internet via email or web portal.

(b) *Acknowledgment of requests.* MCC shall acknowledge the request in writing and assign a tracking number for processing purposes.

(c) *Estimated dates of completion and interim responses.* Upon request, MCC shall provide an estimated response date. If a request involves a voluminous amount of material or searches in multiple locations, MCC shall provide interim responses by releasing the records on a rolling basis.

(d) *Granting requests.* MCC will notify the requestor in writing if it determines that it will grant a request in full or in part. MCC shall inform the requester of any fees charged and shall disclose the requested records to the requester promptly upon payment of any applicable fees.

(e) *Partial grant of requests.* MCC shall consider whether partial disclosure of information is possible whenever the agency determines that a full disclosure of a requested record is not possible. MCC shall take reasonable steps necessary to segregate and release nonexempt information.

(f) *Denial or adverse determination of requests.* Except as otherwise provided in this part, MCC shall withhold information only if—

(1) It reasonably foresees that disclosure would harm an interest protected by an exemption under the FOIA or disclosure is prohibited by law;

(2) The request does not reasonably describe the records sought;

(3) The information sought is not a record subject to the FOIA;

(4) The information sought does not exist, cannot be located, or has been destroyed; or

(5) The records are not in the readily producible form or format sought by the requester.

(g) *Markings on released documents.* Records disclosed in part shall be marked clearly to show the amount of information deleted and the exemption under which the deletion was made unless doing so would harm an interest protected by an applicable exemption.

§ 1304.8 Confidential commercial information.

(a) *Designation of confidential commercial information.* A submitter of confidential commercial information must use good faith efforts to designate by appropriate markings, either at the

time of the submission or within a reasonable time thereafter, any portion of its submission that it considers to be protected from disclosure under Exemption 4 of the FOIA. These designations shall expire ten (10) years after the date of submission unless the submitter requests and provides justification for a longer designation period.

(b) *Required notice.* Written notice shall be provided to a submitter of confidential commercial information whenever records containing such information are requested under the FOIA if, after reviewing the request, the responsive records, and any appeal by the requester, it is determined that MCC may be required to disclose the records, provided:

(1) The requested information has been designated in good faith by the submitter as information considered protected from disclosure under Exemption 4 of the FOIA; or

(2) MCC has reason to believe that the requested information may be protected from disclosure under Exemption 4 of the FOIA, but has not yet determined whether the information is protected from disclosure under that exemption or any other applicable exemption.

(c) *Information.* The notices shall either describe the commercial information requested or include a copy of the requested records or portions of records containing information. In cases involving a voluminous number of submitters, notice may be made by posting or publishing the notice in a place or manner reasonably likely to accomplish it.

(d) *Exceptions to notice requirements.* The notices requirements of this section shall not apply if:

(1) The Chief FOIA Officer determines that the information is exempt under the FOIA;

(2) The information has been lawfully published or has officially been made available to the public;

(3) Disclosure of the information is required by a statute other than the FOIA or by a regulation issued in accordance with the requirements of Executive Order 12600 of June 23, 1987; or

(4) The designation made by the submitter under paragraph (b) of this section appears obviously frivolous, except that, in such a case, the component shall give the submitter written notice of any final decision to disclose the information and must provide that notice within a reasonable number of days prior to the disclosure date.

(e) *Opportunity to object to disclosure.* A submitter may provide the Chief

FOIA Officer with a detailed written statement of any objection to disclosure within ten (10) days of notification. The statement shall specify all grounds for withholding any of the information under any exemption of the FOIA, and if Exemption 4 applies, shall demonstrate the reasons the submitter believes the information to be confidential commercial information that is exempt from disclosure. Whenever possible, the submitter's claim of confidentiality shall be supported by a statement or certification by an officer or authorized representative of the submitter. In the event a submitter fails to respond to the notice in the time specified, the submitter will be considered to have no objection to the disclosure of the information. Information provided by the submitter that is received after the disclosure decision has been made will not be considered. Information provided by a submitter pursuant to this paragraph may itself be subject to disclosure under the FOIA.

(f) *Notice of intent to disclose.* The Chief FOIA Officer shall consider a submitter's objections and specific grounds for nondisclosure prior to determining whether to disclose the information requested. Whenever the Chief FOIA Officer determines that disclosure is appropriate, the Chief FOIA Officer shall, within a reasonable number of days prior to disclosure, provide the submitter with written notice of the intent to disclose which shall include a statement of the reasons for which the submitter's objections were overruled, a description of the information to be disclosed, and a specific disclosure date. The Chief FOIA Officer shall also notify the requester that the requested records will be made available.

(g) *Notice of lawsuit.* If the requester files a lawsuit seeking to compel disclosure of confidential commercial information, MCC shall promptly notify the submitter of this action. If a submitter files a lawsuit seeking to prevent disclosure of confidential commercial information, MCC shall promptly notify the requester.

§ 1304.9 Administrative appeals.

(a) *Requirements for appealing an adverse determination.* A requester may appeal any adverse determination to MCC. The requester must submit a written notice of appeal and it must be postmarked or, in the case of electronic submissions, transmitted within ninety (90) calendar days after the date of the response. The appeal should clearly identify the determination that is being appealed and the assigned tracking

number. To facilitate handling, the requester should mark both the appeal letter and envelope, or subject line of the electronic transmission, "Freedom of Information Act Appeal."

(b) *Appeals address.* Requesters can submit appeals by mail by addressing it to Millennium Challenge Corporation, Attn.: FOIA Appeals Officer, 1099 14th St. NW, Washington, DC 20005 or online at FOIA@mcc.gov.

(c) *Adjudication of appeals.* The MCC FOIA Appeals Officer will adjudicate the appeal within twenty (20) business days after the receipt of such appeal. An appeal ordinarily will not be adjudicated if the request becomes a matter of the subject of litigation. On receipt of any appeal involving classified information, the MCC FOIA Appeals Officer must take appropriate action to ensure compliance with applicable classification rules.

(d) *Final agency determinations.* The FOIA Appeals Officer shall issue a final written determination, stating the basis for the decision, within twenty (20) business days after receipt of a notice of appeal. Any decision that upholds MCC's determination in whole or in part must contain a statement that identifies the reason(s) for the decision, including any FOIA exemptions applied. The decision will provide the requester with notification of the statutory right to file a lawsuit and will inform the requester of the dispute resolution services offered by the OGIS of the National Archives and Records Administration as a non-exclusive alternative to litigation. If the Chief FOIA Officer's decision is remanded or modified on appeal, the FOIA Appeals Officer will notify the requester of the determination in writing. MCC will then further process the request in accordance with the appeal determination and will respond directly to the requester.

(e) *Engaging in dispute resolution services provided by OGIS.* Dispute resolution is a voluntary process. If MCC agrees to participate in the dispute resolution services provided by OGIS, MCC will actively engage as a partner to the process in an attempt to resolve the dispute.

(f) *When an appeal is required.* Before seeking review by a court of MCC's adverse determination, a requester generally must first submit a timely administrative appeal.

§ 1304.10 Preservation of records.

MCC shall preserve all correspondence pertaining to the requests that it receives under this part, as well as copies of all requested records, until disposition or destruction is authorized pursuant to Title 44 of the

United States Code or the General Records Schedule 4.2 of the National Archives and Records Administration. MCC shall not dispose of or destroy records while they are the subject of a pending request, appeal, or lawsuit under the FOIA.

§ 1304.11 Fees.

(a) *General information.* (1) MCC's fee provisions are governed by the FOIA and by the Office of Management and Budget's Uniform FOIA Fee Schedule and Guidelines. For purposes of assessing fees, the FOIA establishes the following categories of requesters:

- (i) Commercial use;
- (ii) Non-commercial scientific or educational institutions;
- (iii) Representative of the news media; and
- (iv) All other requesters.

(2) Fees will be assessed pursuant to the category of requester and detailed in paragraph (b) of this section. Requesters may seek a fee waiver. To resolve any fee issues that arise under this section, MCC may contact a requester for additional information. MCC will ensure that searches, review, and duplication are conducted in the most efficient and the least expensive manner. MCC ordinarily will collect all applicable fees before sending copies of records to a requester. Requesters must pay fees to the Treasury of the United States. All fee information is available at www.mcc.gov/resources/foia.

(b) *Charging fees.* Because the fee amounts provided already account for the direct costs associated with the given fee type, MCC will not add any additional costs to charges calculated under this section. In responding to FOIA requests, MCC shall charge fees for the following unless a waiver or reduction of fees has been granted:

(1) *Search time fees.* Search time includes page-by-page or line-by-line identification of information within records and the reasonable efforts expended to locate and retrieve information from electronic records.

(i) Requests made by education institutions, non-commercial scientific institutions, or representatives of the news media are not subject to search time fees. Search time fees shall be charged for all other requesters, subject to the restrictions identified in this section. MCC may properly charge for time spent searching even if no responsive records are located if it is determined that the records are entirely exempt from disclosure.

(ii) Requesters shall be charged the direct costs associated with conducting any searches that require the creation of a new computer program to locate the

requested records. Requesters shall be notified of the costs associated with creating such a program and must agree to pay the associated costs before the costs may be incurred.

(iii) For requests that require the retrieval of records stored by an agency at the Federal Records Centers operated by the National Archives and Records Administration (NARA), additional costs shall be charged in accordance with the Transactional Billing Range Schedule established by NARA.

(2) *Duplication fees.* Duplication fees shall be charged to all requesters, subject to the restrictions in this section. MCC shall honor a requester's preference for receiving a record in a particular form or format where it is readily reproducible by MCC in the form or format requested. Where photocopies are supplied, MCC shall provide one copy per request and charge fees calculated per page. For copies of records produced on tapes, disks, or other media, MCC shall charge the direct costs of producing the copy, including operator time. Where paper documents must be scanned in order to comply with a requester's preference to receive the records in an electronic format, the requester shall be charged direct costs associated with scanning those materials. For other forms of duplication, MCC shall charge the direct costs.

(3) *Review.* Review fees shall be charged to requesters who make commercial use requests. Review fees shall be assessed in connection with the initial review of the record. No charge will be made for review at the administrative appeal state of exemptions applied at the initial review stage. If a particular exemption is deemed to no longer apply, any costs associated with MCC's subsequent review following the administrative appeal of the records in order to consider the use of other exemptions may be assessed as review fees.

(c) *Restrictions on charging fees.* The following restrictions shall apply to MCC FOIA requests:

(1) If MCC fails to comply with the FOIA's time limits to respond to a request, MCC may not charge fees, except as described in paragraphs (c)(3) through (5) of this section;

(2) If MCC has determined that unusual circumstances as defined by the FOIA apply and the agency provided timely written notice to the requester in accordance with the FOIA, a failure to comply with the time limit shall be excused for an additional ten (10) calendar days;

(3) If MCC has determined that unusual circumstances as defined by the

FOIA apply, and more than five-thousand (5,000) pages are necessary to respond to the request, MCC may charge search time fees or duplication fees where applicable, if MCC has provided timely written notice of the unusual circumstances to the requester in accordance with the FOIA and has discussed with the requester via written mail, email, or telephone (or made a minimum of three (3) good-faith attempts to do so) how the requester could effectively limit the scope of the request;

(4) If a court has determined that exceptional circumstances exist as defined by the FOIA, a failure to comply with the time limits shall be excused for the length of time provided by the court order; and

(5) No search time or review fees will be charged for a quarter-hour period unless more than half of that period is required for search or review.

(d) *Fee exceptions.* Except for requesters seeking records for commercial use, MCC shall provide without charge:

(1) The first one-hundred (100) pages of duplication (or the cost equivalent for other media); and

(2) The first two (2) hours of search time. When, after deducting the first one-hundred (100) free pages (or its cost equivalent) and the first two (2) hours of search time, a total fee calculated under this section is \$25.00 or less for any request, no fee will be charged.

(e) *Notice of anticipated fees in excess of \$25.00.* (1) When MCC determines that the fees to be assessed will exceed \$25.00, the requester shall be notified of the actual or estimated amount of the fees, including the breakdown of the fees for search time, review or duplication, unless the requester has indicated a willingness to pay fees as high as those anticipated. If only a portion of the fee can be estimated readily, MCC shall advise the requester accordingly. If the requester is not a commercial use requester, the notice shall specify that the requester is entitled to the statutory requirements of one-hundred (100) pages of duplication at no charge and, if the requester is charged search time fees, two (2) hours of search time at no charge, and shall advise the requester whether those entitlements have been provided.

(2) In cases in which a requester has been notified that the actual or estimated fees are in excess of \$25.00, the request shall not be considered received and further work will not be completed until the requester commits, in writing, to pay the actual or estimated total fee, or designates some amount of fees the requester is willing to pay, or

in the case of a requester who is not a commercial use requester who has not yet been provided with the requester's statutory entitlements, designates that the requester seeks only that which can be provided by the statutory entitlements. The requester must provide the commitment or designation in writing, and must, when applicable designate an exact dollar amount the requester is willing to pay. MCC is not required to accept payments in installments.

(3) If the requester has indicated a willingness to pay some designated amount of fees, and MCC estimates that the total fee will exceed that amount, MCC shall toll the processing of the request when it notifies the requester of the estimated fees in excess of the amount the requester has indicated a willingness to pay. MCC shall inquire whether the requester wishes to revise the amount of fees the requester is willing to pay or modify the request. Once the requester responds, the time to respond will resume from where it was at the date of the notification.

(4) The FOIA Program Officer will assist any requester in reformulating a request to meet the requester's needs at a lower cost.

(f) *Waiver or reduction of fees.* Documents shall be furnished without charge or at a charge below that listed in this section based upon information provided by a requester or otherwise made known to the Chief FOIA Officer that disclosure of the requested information is in the public interest. Disclosure is in the public interest if it is likely to contribute significantly to public understanding of government operations and is not primarily for commercial purposes. Requests for a waiver or reduction of fees shall be considered on a case by case basis. Where only some of the records to be released satisfy the requirements for waiver of fees, a waiver shall be granted to those records. In order to determine whether the fee waiver requirement is met, the Chief FOIA Officer shall consider the following factors:

(1) The subject of the request. Whether the subject of the requested records concerns the operations or activities of the government;

(2) The informative value of the information to be disclosed; and

(3) The significance of the contribution to public understanding.

(g) *Fees pending a waiver request.* Requests for a waiver or reduction of fees should be made when the request is first submitted to the agency and should address the criteria referenced in this section. A requester may submit a fee waiver request at a later time so long

as the underlying record request is pending or on administrative appeal. When a requester who has committed to pay fees subsequently asks for a waiver of those fees and that waiver is denied, the requester must pay any costs incurred up to the date the fee waiver request was received.

(h) *Types of requesters.* There are four categories of FOIA requesters: Commercial use requesters, educational and non-commercial scientific institutional requesters; representatives of the news media; and all other requesters. The following specific levels of fees are prescribed for each of these categories:

(1) Commercial requesters shall be charged the full direct costs of searching for, reviewing, and duplicating requested records;

(2) Educational and non-commercial scientific institution requesters shall be charged for document duplication only and the first one-hundred (100) pages of paper copies shall be provided without charge;

(3) Representative of the news media requesters shall be charged for document duplication costs only, except that the first one-hundred (100) pages of paper copies shall be provided without charge; and

(4) All other requesters who do not fall into any of the categories in paragraphs (h)(1) through (3) of this section shall be charged fees which recover the full reasonable direct costs incurred for searching for and reproducing records if that total costs exceeds \$25.00, except that the first one-hundred (100) pages of duplication and the first two hours of manual search time shall not be charged.

(i) *Charges for unsuccessful searches.* If the requester has been notified of the estimated cost of the search time and has been advised specifically that the requested records may not exist or may be withheld as exempt, fees may be charged.

(j) *Charges for other services.* Although MCC is not required to provide special services, if it chooses to do so as a matter of administrative discretion, the direct costs of providing the service shall be charged. Examples of such services include certifying that records are true copies, providing multiple copies of the same document, or sending records by means other than first class mail.

(k) *Charging interest.* MCC may charge interest on any unpaid bill starting on the 31st day following the date of billing the requester. Interest charges shall be assessed at the rate provided in 31 U.S.C. 3717 and will accrue from the billing date until payment is received.

MCC shall follow the provisions of the Debt Collection Act of 1982, as amended, and its administrative procedures, including the use consumer reporting agencies, collection agencies, and offset.

(l) *Aggregating requests.* The requester or a group of requesters may not submit multiple requests at the same time, each seeking portions of a document or documents solely in order to avoid payment of fees. When the FOIA Program Officer reasonably believes that a requester is attempting to divide a request into a series of requests to evade an assessment of fees, the FOIA Program Officer may aggregate such requests and charge accordingly. MCC may presume that multiple requests of this type made within a thirty (30) calendar day period have been made in order to avoid fees. For requests separated by a longer period, MCC will aggregate them only where there is a reasonable basis for determining that aggregation is warranted in view of all the circumstances involved. Multiple requests involving unrelated matters cannot be aggregated.

(m) *Advance payment of fees.* (1) MCC may require an advanced payment of fees if the requestor previously failed to pay fees or if the FOIA Program Officer determines the total fee will exceed \$250.00. When payment is required in advance of the processing of a request, the time limits prescribed in § 1304.5 shall not be deemed to begin until the requester has paid the assessed fees.

(2) In cases in which MCC requires advance payment, the request will not be considered received and further work will not be completed until the required payment is received. If the requester does not pay the advance payment within thirty (30) calendar days after the date of the fee determination, the request will be closed. Where it is anticipated that the cost of providing the requested record will exceed \$25.00 but falls below \$250.00 after the free duplication and search time has been calculated, MCC may, in its discretion may require either an advance deposit of the entire estimated charges or written confirmation of the requester's willingness to pay such charges.

(3) Where the requester has previously failed to pay a properly charged FOIA fee within thirty (30) calendar days of the billing date, MCC may require the requester to pay the full amount due plus any applicable interest on that prior request, and/or require that the requester make an advance payment of the full amount of the anticipated fee before MCC begins a new request or

continues to process a pending request or any pending appeal. If MCC has a reasonable basis to believe that a requester has misrepresented the requester's identity in order to avoid paying outstanding fees, MCC may require that the requester provide proof of identity.

§ 1304.12 Other rights and services.

Nothing in this part shall be construed to entitle any person a right to any service or to the disclosure of any record to which such person is not entitled under the FOIA.

Dated: July 17, 2018.

Tamiko N.W. Watkins,

Chief FOIA Officer, Millennium Challenge Corporation.

[FR Doc. 2018-15950 Filed 7-26-18; 8:45 am]

BILLING CODE 9211-03-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2018-0660]

Drawbridge Operation Regulation; Jamaica Bay, Queens, NY

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Marine Parkway (Gil Hodges Memorial) bridge across Jamaica Bay (Rockaway Inlet), mile 3.0, at Queens, NY. The deviation is necessary to complete rehabilitation work on the bridge. This deviation allows the bridge owner to require two hours advance notice before opening the bridge.

DATES: This deviation is effective from 8 a.m. on July 30, 2018, to 4 p.m. on November 30, 2018.

ADDRESSES: The docket for this deviation, USCG-2018-0660 is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH". Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Judy Leung-Yee, Bridge Management Specialist, First District Bridge Branch, U.S. Coast Guard; telephone 212-514-4336, email Judy.K.Leung-Yee@uscg.mil.

SUPPLEMENTARY INFORMATION: The owner of the bridge, Metropolitan Transportation Authority Bridges and Tunnels, requested a temporary deviation from the normal operating schedule in order to complete rehabilitation work associated with the replacement of lift span machinery. The Marine Parkway (Gil Hodges Memorial) Bridge across Jamaica Bay (Rockaway Inlet), mile 3.0 at Queens, New York has a vertical clearance of 55 feet at mean high water and 59 feet at mean low water in the closed position. The existing drawbridge operating regulations are listed at 33 CFR 117.795(a).

The temporary deviation will allow the owner of the Marine Parkway (Gil Hodges Memorial) bridge to require vessels seeking an opening of the draw to provide a minimum of two hours of advance notice on weekdays (Monday through Friday) between the hours of 8 a.m. and 4 p.m. from July 30, 2018 to November 30, 2018 by submitting a request for the opening of the draw. Requiring a minimum of two hours of advance notice before opening the draw allows for sufficient time to alert all affected personnel engaged in bridge rehabilitation work to vacate the lift span and all machinery areas along with removing and/or securing materials and equipment prior to lifting the bridge.

The waterway is transited by seasonal recreational traffic as well as commercial vessels, largely tug and barge combinations. The 55 foot vertical clearance while the bridge is in the closed position offers the bulk of commercial traffic sufficient room to transit under the bridge in the closed position. Vessels that can pass under the bridge without an opening may do so at all times. The bridge will be able to open for emergencies. There is no immediate alternate route for vessels unable to pass through the bridge when in the closed position.

The Coast Guard will inform users of the waterway through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessel operators can arrange their transits to minimize any impact caused by this temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: July 23, 2018.

C.J. Bisignano,

*Supervisory Bridge Management Specialist,
First Coast Guard District.*

[FR Doc. 2018-16026 Filed 7-26-18; 8:45 am]

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2018-0701]

Drawbridge Operation Regulation; Willamette River at Portland, OR

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs two Multnomah County bridges: Morrison Bridge, mile 12.8, and Hawthorne Bridge, mile 13.1 crossing the Willamette River at Portland, OR. This deviation is necessary to accommodate the annual Providence Bridge Pedal event. The deviation allows the bridges to remain in the closed-to-navigation position.

DATES: This deviation is effective from 6 a.m. to 11 a.m. on August 12, 2018.

ADDRESSES: The docket for this deviation, USCG-2018-0701 is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this deviation.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Steven Fischer, Bridge Administrator, Thirteenth Coast Guard District; telephone 206-220-7282, email d13-pf-d13bridges@uscg.mil.

SUPPLEMENTARY INFORMATION:

Multnomah County, the bridge owner, has requested a temporary deviation from the operating schedule for the Morrison Bridge, mile 12.8, and Hawthorne Bridge, mile 13.1, both crossing the Willamette River at Portland, OR. The requested deviation will accommodate the Providence Bridge Pedal event, an annual cycling and walking event across several Willamette River crossings. The vertical clearances for these bridges in the closed-to-navigation position are 69 feet for the Morrison Bridge and 49 feet for the Hawthorne Bridge respectively, as measured against the vertical clearance above Columbia River Datum 0.0. The

normal operating schedule for the subject bridges is 33 CFR 117.897. This deviation allows the Morrison Bridge and Hawthorne Bridge to remain in the closed-to-navigation position, from 6 a.m. to 11 a.m. on August 12, 2018.

Waterway usage on this part of the Willamette River includes vessels ranging from commercial tug and barge to small pleasure craft. Vessels able to pass through the subject bridges in the closed-to-navigation position may do so at any time. The bridges will be able to open for emergencies, and there is no immediate alternate route for vessels to pass. The Coast Guard has conducted public outreach regarding this temporary deviation to known mariners that transit this part of the river. The Coast Guard has not received any objections to this temporary deviation from the operating schedule. The Coast Guard will inform the users of the waterway, through our Local and Broadcast Notices to Mariners, of the change in operating schedule for the bridges so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridges must return to their regular operating schedules immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: July 23, 2018.

Steven M. Fischer,

Bridge Administrator, Thirteenth Coast Guard District.

[FR Doc. 2018-16068 Filed 7-26-18; 8:45 am]

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2018-0708]

RIN 1625-AA00

Safety Zone; Lower Mississippi River, Natchez, MS

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain navigable waters of the Lower Mississippi River upriver of the Bienville Trace Scenic Byway/US-425 Bridge in Natchez, MS. This action is necessary to provide for the safety of persons, vessels, and the marine environment during a fireworks display.

Entry of persons or vessels into this zone is prohibited unless authorized by the Captain of the Port Sector Lower Mississippi River or a designated representative.

DATES: This rule is effective from 9 p.m. through 10 p.m. on July 27, 2018.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type USCG-2018-0708 in the "SEARCH" box and click "SEARCH." Click on "Open Docket Folder" on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions about this rulemaking, call or email Petty Officer Todd Manow, Waterways Management, Sector Lower Mississippi River, U.S. Coast Guard; telephone 901-521-4813, email Todd.M.Manow@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Lower Mississippi River
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency, for good cause, finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(3)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this safety zone by July 27, 2018, and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule. The NPRM process would delay the establishment of the safety zone until after the date of the event and compromise public safety.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to public interest because immediate action is necessary to protect

persons and property from the potential hazards associated with the fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority in 33 U.S.C. 1231. The Captain of the Port Sector Lower Mississippi River (COTP) has determined that potential hazards associated with the barge-based fireworks display located at mile marker (MM) 365.0 on the Lower Mississippi River and scheduled for 9:30 p.m. on July 27, 2018, would be a safety concern for all persons and vessels on the Lower Mississippi River between MM 364.5 and MM 365.5 from 9 p.m. through 10 p.m. on July 27, 2018. Hazards associated with the firework displays include accidental discharge of fireworks, dangerous projectiles, and falling hot embers or other debris. This rule is necessary to ensure the safety of persons, vessels, and the marine environment on these navigable waters before, during, and after the fireworks.

IV. Discussion of the Rule

This rule establishes a temporary safety zone from 9 p.m. through 10 p.m. on July 27, 2018. The safety zone will cover all navigable waters of the Lower Mississippi River from MM 364.5 to MM 365.5, upriver of the Bienville Trace Scenic Byway/US-425 Bridge, in Natchez, MS. The duration of this safety zone is intended to ensure the safety of waterway users on these navigable waters before, during, and after the scheduled fireworks display.

Entry of persons or vessels into this safety zone is prohibited unless authorized by the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Lower Mississippi River. Persons or vessels seeking to enter the safety zones must request permission from the COTP or a designated representative on VHF-FM channel 16 or by telephone at 901-521-4822. If permission is granted, all persons and vessels shall comply with the instructions of the COTP or designated representative. The COTP or a designated representative will inform the public of the enforcement times and date for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs) as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and

Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a "significant regulatory action," under Executive Order 12866. Accordingly, it has not been reviewed by the Office of Management and Budget, and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. Vessel traffic will be prohibited from entering this safety zone, which will impact a one-mile stretch of lower Mississippi River for one hour on one evening. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF-FM marine channel 16 about the safety zone, and the rule allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601-612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the temporary safety zone may be small entities, for the reasons stated in section V.A. above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104-121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person

listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule

will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321-4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry on a one-mile stretch of the Lower Mississippi River for one hour on one evening. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023-01-001-01, Rev. 01. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05-1; 6.04-1, 6.04-6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08-0708 to read as follows:

§ 165.T08-0708 Safety Zone; Lower Mississippi River, Natchez, LA.

(a) *Location.* The following area is a safety zone: All navigable waters of the Lower Mississippi River from mile marker 364.5 to mile marker 365.5,

upriver of the Bienville Trace Scenic Byway/US-425 Bridge, Natchez, MS.

(b) *Effective date.* This section is effective from 9 p.m. through 10 p.m. on July 27, 2018.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.23 of this part, entry into this zone is prohibited unless specifically authorized by the Captain of the Port Sector Lower Mississippi River (COTP) or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Lower Mississippi River.

(2) Persons or vessels seeking to enter the safety zone must request permission from the COTP or a designated representative on VHF-FM channel 16 or by telephone at 901-521-4822.

(3) If permission is granted, all persons and vessels shall comply with the instructions of the COTP or designated representative.

(d) *Information broadcasts.* The COTP or a designated representative will inform the public of the enforcement times and date for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs) as appropriate.

Dated: July 20, 2018.

R. Tamez,

Captain, U.S. Coast Guard, Captain of the Port Sector Lower Mississippi River.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2018-0686]

RIN 1625-AA00

Safety Zone; Kanawha River, Nitro, WV

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for all navigable waters of the Kanawha River from mile marker 43.1 to mile marker 44.2. This temporary safety zone is necessary to protect persons, vessels, and the marine environment from potential hazards associated with the Riverfest fireworks display. Entry into this safety zone is prohibited unless specifically authorized by the Captain of

the Port Sector Ohio Valley or a designated representative.

DATES: This rule is effective from 8:45 p.m. through 10:15 p.m. on August 4, 2018.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type USCG-2018-0686 in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Caitlin Furman, Marine Safety Unit Huntington, U.S. Coast Guard; telephone 304-733-0198, email caitlin.c.furman@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Ohio Valley
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(3)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. It is impracticable to publish an NPRM because we must establish this safety zone by August 4, 2018, and we lack sufficient time to provide reasonable comment period and then consider those comments before issuing the rule. The NPRM process would delay the establishment of the safety zone until after the date of the event and compromise public safety.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to public interest because immediate action is necessary to protect persons, vessels, and the marine

environment from the potential hazards associated with the fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with a fireworks display taking place over this section of the Kanawha River will be a safety concern for anyone within a one-mile stretch of the waterway. This rule is needed to protect persons, vessels, and the marine environment in the navigable waters within the safety zone before, during, and after the scheduled fireworks display.

IV. Discussion of the Rule

This rule establishes a temporary safety zone for the Riverfest fireworks display from 8:45 p.m. until 10:15 p.m. on August 4, 2018. The safety zone covers all navigable waters of the Kanawha River from mile marker (MM) 43.1 to MM 44.2, in Nitro, WV. The duration of this safety zone is intended to protect persons, vessels, and the marine environment in these navigable waters during the fireworks display.

No vessel or person is permitted to enter this safety zone without obtaining permission from the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Ohio Valley. To seek permission to enter, contact the COTP or designated representative via radio on channel 16 or by telephone at 1-800-253-7465. If permission is granted, all persons and vessels shall transit at their slowest safe speed and comply with the instructions of the COTP or designated representative. The COTP or a designated representative will inform the public of any changes in the date and times of enforcement through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Safety Marine Information Broadcasts (SMIBs), as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory

alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a “significant regulatory action,” under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, and duration of the temporary safety zone. This rule involves a temporary safety zone lasting only one hour and thirty minutes that will prohibit entry on a one-mile stretch of the Kanawha River on one evening. Moreover, the Coast Guard will issue a BNMs via VHF-FM marine channel 16 about the safety zone, and the rule allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the temporary safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business

Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01 and Commandant

Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting only one hour and thirty minutes that will prohibit entry on a one-mile stretch of the Kanawha River on one evening. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 01. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0686 to read as follows:

§ 165.T08–0686 Safety Zone; Kanawha River, Nitro, WV.

(a) *Location.* The following area is a safety zone: All navigable waters of the Kanawha River from mile marker (MM) 43.1 to MM 44.2.

(b) *Effective period.* This section is effective from 8:45 p.m. through 10:15 p.m. on August 4, 2018.

(c) *Regulations.* (1) Under the general regulations in § 165.23 of this part, entry into this zone is prohibited unless authorized by the Captain of the Port Sector Ohio Valley (COTP) or a designated representative. A designated

representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Ohio Valley.

(2) To seek permission to enter, contact the COTP or designated representative via radio on channel 16 or by telephone at 1–800–253–7465.

(3) If permission is granted, all persons and vessels shall transit at their slowest safe speed and comply with the instructions of the COTP or designated representative.

(d) *Information broadcasts.* The COTP or a designated representative will inform the public of any changes in the date and times of enforcement through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Safety Marine Information Broadcasts (SMIBs), as appropriate.

Dated: July 18, 2018.

M.B. Zamperini,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[EPA–HQ–SFUND–2008–0084; FRL–9981–36—Region 6]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Deletion of the Old Esco Manufacturing Superfund Site

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) Region 6 is publishing a direct final Notice of Deletion of the Old Esco Manufacturing, Superfund Site (Site), located in Greenville, Texas, from the National Priorities List (NPL). The NPL, promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). This direct final deletion is being published by EPA with the concurrence of the State of Texas, through the Texas Commission on Environmental Quality (TCEQ), because EPA has determined that all appropriate response actions under CERCLA, have been completed.

However, this deletion does not preclude future actions under Superfund.

DATES: This direct final deletion is effective September 10, 2018 unless EPA receives adverse comments by August 27, 2018. If adverse comments are received, EPA will publish a timely withdrawal of the direct final deletion in the **Federal Register** informing the public that the deletion will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID no. EPA–HQ–SFUND–2008–0084, by one of the following methods:

- <http://www.regulations.gov>. Follow on-line instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

- *Email:* mueller.brian@epa.gov.

- *Mail:* Brian W. Mueller; U.S.

Environmental Protection Agency, Region 6; Superfund Division (6SF–RL); 1445 Ross Avenue, Suite 1200, Dallas, Texas 75202–2733.

- *Hand delivery:* U.S. Environmental Protection Agency, Region 6, 1445 Ross Avenue, Suite 700, Dallas, Texas 75202–2733; Contact: Brian W. Mueller (214) 665–7167. Such deliveries are only accepted during the Docket’s normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–SFUND–2008–0084. The <http://www.regulations.gov> website is an “anonymous access” system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without

going through <http://www.regulations.gov>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in the hard copy. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy at:

City of Greenville Municipal Bldg., 2821 Washington Street, Greenville, TX 75401, Telephone Number: (903) 457-3130, Hours of Operation: Monday thru Friday 8:00 a.m. to 5:00 p.m.

U.S. Environmental Protection Agency, Region 6, 1445 Ross Avenue, Suite 1200, Dallas, TX 75202-2733, Telephone number: (800) 533-3508, Contact: Brian W. Mueller: (214) 665-7167, Hours of operation: Monday thru Friday, 9:00 a.m. to 12:00 p.m. and 1:00 p.m. to 4:00 p.m.

FOR FURTHER INFORMATION CONTACT: Brian W. Mueller, Remedial Project Manager, U.S. Environmental Protection Agency, Region 6, 6SF-RL 1445 Ross Avenue, Suite 1200, Dallas, Texas 75202-2733, (214) 665-7167, email mueller.brian@epa.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. NPL Deletion Criteria
- III. Deletion Procedures
- IV. Basis for Site Deletion

V. Deletion Action

I. Introduction

EPA Region 6 is publishing this direct final Notice of Deletion of the Old Esco Manufacturing (Site), from the National Priorities List (NPL). The NPL constitutes Appendix B of 40 CFR part 300, which is the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which EPA promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, as amended. EPA maintains the NPL as the list of sites that appear to present a significant risk to public health, welfare, or the environment. Sites on the NPL may be the subject of remedial actions financed by the Hazardous Substance Superfund (Fund). As described in § 300.425(e)(3) of the NCP, sites deleted from the NPL remain eligible for Fund-financed remedial actions if future conditions warrant such actions.

Section II of this document explains the criteria for deleting sites from the NPL. Section III discusses procedures that EPA is using for this action. Section IV discusses the Old Esco Manufacturing Superfund Site and demonstrates how it meets the deletion criteria. Section V discusses EPA's action to delete the Site from the NPL unless adverse comments are received during the public comment period.

II. NPL Deletion Criteria

The NCP establishes the criteria that EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. In making such a determination pursuant to 40 CFR 300.425(e), EPA will consider, in consultation with the state, whether any of the following criteria have been met:

- i. Responsible parties or other persons have implemented all appropriate response actions required;
- ii. all appropriate Fund-financed response under CERCLA has been implemented, and no further response action by responsible parties is appropriate; or
- iii. the remedial investigation has shown that the release poses no significant threat to public health or the environment and, therefore, the taking of remedial measures is not appropriate.

III. Deletion Procedures

The following procedures apply to deletion of the Site:

- (1) EPA consulted with the State of Texas prior to developing this direct final Notice of Deletion and the Notice

of Intent to Delete co-published today in the "Proposed Rules" section of the **Federal Register**.

(2) EPA has provided the state 30 working days for review of this notice and the parallel Notice of Intent to Delete prior to their publication today, and the state, through the Texas Commission on Environmental Quality, has concurred on the deletion of the Site from the NPL.

(3) Concurrently with the publication of this direct final Notice of Deletion, a notice of the availability of the parallel Notice of Intent to Delete is being published in a major local newspaper, Greenville Herald Banner. The newspaper notice announces the 30-day public comment period concerning the Notice of Intent to Delete the Site from the NPL.

(4) The EPA placed copies of documents supporting the proposed deletion in the deletion docket and made these items available for public inspection and copying at the Site information repositories identified above.

(5) If adverse comments are received within the 30-day public comment period on this deletion action, EPA will publish a timely notice of withdrawal of this direct final Notice of Deletion before its effective date and will prepare a response to comments and continue with the deletion process on the basis of the Notice of Intent to Delete and the comments already received.

Deletion of a site from the NPL does not itself create, alter, or revoke any individual's rights or obligations. Deletion of a site from the NPL does not in any way alter EPA's right to take enforcement actions, as appropriate. The NPL is designed primarily for informational purposes and to assist EPA management. Section 300.425(e)(3) of the NCP states that the deletion of a site from the NPL does not preclude eligibility for future response actions, should future conditions warrant such actions.

IV. Basis for Site Deletion

The following information provides EPA's rationale for deleting the Site from the NPL:

Site Background and History

The Old Esco Manufacturing ("Old Esco" or "site") Superfund Site (CERCLIS ID TXD980573808) is located at 500 Forrester Street, Greenville, Hunt County, Texas. The geographic coordinates of the Site are Latitude 33.138732° N and Longitude -96.075961° W. The facility, which is currently abandoned, is situated on a

4.7-acre tract of land owned by the City of Greenville.

The boundaries of the Site are surrounded by fencing. The Site is bordered to the north by Forrester Street, to the east by a residential area and vacant lot, to the south by the frontage road of Interstate 30 and a drainage pathway to Horse Creek and the Cowleech Fork of the Sabine River, and to the west by a private lake. The Site consisted of several attached buildings that form one main building (125 by 500 feet), a small shed (15 by 20 feet), and vacant land. A former soil and gravel parking lot is located on the north and west sides of the building.

Esco began operations at the Site in the late 1940s, leasing the property and building, until approximately 1970, when the company relocated to another property in Greenville, Texas. In 1983, Esco purchased the Site and owned it until it defaulted for non-payment of taxes in 2001. Esco manufactured electrical transformers and high voltage switchgear for electrical distribution at the Site. Other manufacturing operations at the Site included metal fabrication, welding, grinding, sandblasting, silver electroplating, and painting. Completed transformers from the facility were either shipped dry (*i.e.*, empty of coolant) or were filled with polychlorinated biphenyl (PCB) dielectric oil, depending on the requirements of the purchaser.

PCBs are mixtures of synthetic organic chemicals that were commonly used for various applications from approximately 1929 until 1979. PCBs were regulated under a series of EPA actions culminating with a ban in 1979 on manufacturing, processing, distribution, and use of PCBs under the Toxic Substances Control Act (TSCA). Items such as transformers and hydraulic fluids were identified as high-risk sources and were targeted for accelerated phase-out.

In July 1980, the Texas Department of Water Resources (TDWR) received a complaint about the historic disposal of transformer oil by Esco on the property. The investigation by TDWR revealed the presence of PCBs at concentrations of 760, 8,400, and 85,000 milligrams per kilogram (mg/kg) in the soils. In April 1981, the TDWR recommended that Esco conduct an extent-of-contamination survey within 180 days and develop a removal plan that would eliminate the PCB-contaminated soil from the Site. In 1990, Esco filed for Chapter 11 Bankruptcy without conducting the cleanup. In 1991, the Chapter 11 bankruptcy was converted to a Chapter 7 bankruptcy. In 2003, the (TCEQ) conducted a Phase I & II

Environmental Site Assessment, and installed one new monitoring well and collected 23 surface and subsurface soil samples. Chemical analysis of the surface soil samples indicated the presence of the PCB, Aroclor-1260 in concentrations ranging from 0.338 to 2,390 mg/kg. Chemical analysis of the subsurface soil samples indicated the presence of Aroclor-1260 at a concentration of 12.2 mg/kg. Ground water was encountered at approximately 10 to 15 feet below ground surface (bgs). Chemical analysis of the ground water samples collected from two monitoring wells indicated the presence of Aroclor-1260.

In 2004, the TCEQ formally referred the Site to EPA Region 6 for assistance. From 2005 through 2007, EPA's removal program conducted numerous field sampling and assessment activities at the Site and adjacent properties to determine the extent of contamination and for National Priorities List (NPL) Hazard Ranking System scoring purposes. The Site was proposed to the NPL on March 19, 2008, (73 FR 14742). The Site was added to the NPL as final on September 3, 2008, (73 FR 51368).

History of EPA CERCLA Removal Actions

EPA conducted two Time Critical Removal Actions which began in August 2008 and September 2009, respectively. The purpose of these Removal Actions was to investigate the PCB-contaminated soils in the residential and other adjacent areas of the Site; and to eliminate the imminent threat and substantial endangerment to public health or welfare, or to the environment, posed by site-related contamination associated with the Old Esco Manufacturing Site. Based on removal assessment activities conducted by EPA, the Old Esco Manufacturing Site and surrounding residential properties were found to contain elevated levels of PCBs above the EPA Toxic Substances Control Act (TSCA) screening level of 1 milligram per kilogram (mg/kg).

First Removal Action

The first of these two Removal Actions was completed in January 2009. This Removal Action included:

- Removal of PCB-contaminated soils with a concentration greater than 1.0 mg/kg from six adjacent residential properties and the adjacent Texas Department of Transportation road right-of-way drainage ditches located directly east of the Site.
- Restoration of the six residential properties and roadside ditches.

- Transportation and disposal of 922 tons of soils in the CSC Landfill in Avalon, Texas with concentrations of PCBs equal to or greater than 50.0 mg/kg (TSCA soils) and 4,221 tons of soils in the Maloy Landfill near Campbell, Texas with concentrations of PCBs less than 50.0 mg/kg (Non-TSCA soils).

- On-site consolidation and storage of approximately 4,000 cubic yards (yd³) of TSCA soils in the building.

- Fencing of the perimeter of the Esco property.

- Removal and disposal of 120 yd³ of asbestos-containing materials from the on-site building in the Maloy Landfill.

- Placement of ripple dams/storm water controls in drainage pathways between residential properties and the Site to reduce the potential for contaminated soil backflow onto clean areas during flooding situations.

- Placement of ripple dams at several locations on the Esco drainage system to reduce off-site soil migration.

Second Removal Action

The second Removal Action was completed in December 2009. This Removal Action included:

- Removal of soils with concentrations of PCBs greater than 1.0 mg/kg from three residential properties and portions of the road side drainage ditches along Fannin and Forrester Streets.

- Restoration of the three residential properties and the road side drainage ditches.

- Transportation and disposal of approximately 3,194 tons of soils in the Maloy Landfill with concentrations of PCBs less than 50.0 mg/kg (Non-TSCA soils).

Remedial Investigation and Feasibility Study (RI/FS)

In 2009, EPA's remedial program started and completed the off-site Remedial Investigation (RI) and extent of contamination study by collecting soil samples for PCB analysis from an additional 52 residential properties, and from Texas Department of Transportation highway median and road right-of-way drainage ditches that had not been previously sampled. The RI also included the collection of twelve co-located water and sediment samples from Horse Creek and the Cowleech Fork of the Sabine River, and the collection of ground water samples for PCB analyses.

In 2010, EPA's remedial program completed the full RI/FS. Surface and subsurface soil samples were collected from the on-site areas of the Site to determine the nature and extent of contamination. Sampling results

showed that soils as deep as 10.0 feet below ground surface were impacted by PCBs and required remediation. TSCA PCB regulations applied to the Site because surface and subsurface soils were contaminated by PCBs. The concentrations of PCBs required that the contaminated soils be managed as non-TSCA (*i.e.*, concentration less than 50.0 mg/l total PCBs) or TSCA wastes (*i.e.*, concentration equal to or greater than 50.0 mg/kg total PCBs).

Ground water samples were collected from the on-site monitoring wells to determine the nature and extent of contamination in the ground water underlying the Site. The primary ground water contaminants were PCBs and the extent of ground water impact was limited. A total of nine monitoring wells were installed on the Site. Five were installed and sampled prior to the Site being listed on the NPL. In 2003 the wells were sampled and the results indicated that the PCB Aroclor-1260 was present in the ground water in two monitoring wells at concentrations ranging from 9.26 to 0.379 micrograms per liter ($\mu\text{g/L}$). In 2009 the wells were resampled and the same two wells reported PCB results of 1.1 and 1.5 $\mu\text{g/L}$, both above the Maximum Contaminant Level (MCL) of 0.5 $\mu\text{g/L}$.

In 2010, four additional wells were installed by EPA's contractor. Nine ground water samples were collected for PCB analysis in 2010. The ground water chemical analytical data collected indicated that only Aroclor-1260 was detected in four wells ranging from 0.04 to 0.46 $\mu\text{g/L}$, which were below the MCL of 0.5 $\mu\text{g/L}$.

Surface water samples were collected from Horse Creek and the Cowleech Fork of the Sabine River to determine the nature and extent of surface water contamination. No Aroclors were detected at the appropriate detection limits and no further action was recommended for surface water.

Sediment data were collected from Horse Creek and the Cowleech Fork of the Sabine River to determine the nature and extent of sediment contamination. Although the maximum sediment concentrations for Aroclor-1268 and Aroclor-1260 were above the screening benchmark for sediments, the screening level ecological risk assessment findings indicated that no further action was required for sediments.

Remedial Action Objectives

The Remedial Action Objectives to be achieved by the Site Remedy were:

- Prevent direct dermal contact, incidental ingestion and inhalation of fugitive dust from PCB-contaminated soils,

- Prevent off-site migration of PCB-contaminated soils to Horse Creek or the Cowleech Fork of the Sabine River,

- Prevent exposure to Site soils that may pose a risk to ecological receptors, and

- Ensure that current and future receptors were not exposed to ground water that could possibly be contaminated with PCBs above the federal MCL of 0.5 $\mu\text{g/L}$.

Remedial Action Goals

The excavation, on-site treatment, and off-site disposal of the soils with a concentration of total PCBs greater than 1.0 mg/kg would allow the Site to be developed for reuse (*i.e.*, residential and/or recreational and commercial and/or industrial land use). The remediation goal for total PCBs for the Site was 1.0 mg/kg.

Selected Remedy

The selected remedy for the Site, as described in the original 2010 Record of Decision (ROD), was Soil Excavation and Treatment with Off-site Disposal for Residential and/or Recreational Land Use, and included the following major components:

- Soil Excavation, Treatment, and Disposal Components: Approximately 5,200 and 16,250 yd^3 of TSCA and non-TSCA soils, respectively, with a concentration of total PCBs greater than 1.0 milligrams per kilogram (mg/kg) were to be excavated and transported off-site to a permitted waste disposal facility. Soils were to be excavated to a maximum depth of 15.0 bgs, consistent with the State's requirements. Soils with a concentration of total PCBs equal to or greater than 50.0 mg/kg were to be disposed of at a TSCA-permitted landfill. Soils with a concentration of total PCBs greater than 1.0 mg/kg and less than 50.0 mg/kg were to be disposed of at a non-TSCA landfill. Approximately 1,850 yd^3 of soils with a concentration of total PCBs greater than 100.0 mg/kg, constituting principal threat wastes, were to be treated on-site by solidification or stabilization techniques prior to disposal. Approximately 4,000 yd^3 of TSCA soils, with a concentration of total PCBs less than 100.0 mg/kg, staged in the existing building from EPA's first removal action, were also to be transported off-site for disposal. Excavated areas were to be backfilled with clean off-site soils and the Site was to be graded to drain and not pond water. The existing building and its foundation were to be demolished and also transported off-site for disposal.

- Institutional Controls Component—Institutional Controls (ICs), in the form

of deed restrictions, were to be implemented to prevent exposure of human receptors to contaminated ground water.

- Ground Water Monitoring Component—Ground water monitoring was to be conducted annually for a minimum period of five years to evaluate the protectiveness of the Selected Remedy. Ground water monitoring was to be discontinued if the concentration of total PCBs in the ground water did not exceed the federal MCL of 0.5 $\mu\text{g/L}$ for three consecutive monitoring periods. The additional data collected during the annual monitoring events was to be used to confirm previous PCB data and further evaluate trends over time. The additional monitoring data was to also allow decisions to be made in the future regarding ground water impacts and evaluation of risks to human health, the need for additional monitoring, whether to continue maintaining ICs, and whether any additional actions would be needed to protect human health and the environment. These decisions were to be made during the first five-year review report for the Site.

- Operations and Maintenance Component—Operations and maintenance was to involve the ground water component of the remedy to ensure that the remedy performed as intended.

- Five-Year Review Component—Because this alternative would result in hazardous substances (*i.e.*, PCBs) remaining on-site in the ground water, possibly above levels that allow for unlimited use and unrestricted exposure, a statutory review was to be conducted no less often than every five years after initiation of the RA to ensure that the remedy was, or will continue to be, protective of human health and the environment. Five-year reviews were to be discontinued if the ground water monitoring data indicate that the concentration of total PCBs did not exceed the federal MCL of 0.5 $\mu\text{g/L}$ for three consecutive monitoring periods.

Third Removal Action

On May 4, 2011, EPA signed a Third Action Memorandum, which documented the continuation of the Time Critical Removal Action and approval of the Consistency Exemption for the Site. The Consistency Exemption documented that the continued response actions were appropriate and consistent with the 2010 ROD selected remedy and remedial actions.

The Third Removal Action was completed with issuance of the final Pollution Report #10 on September 30, 2011. Between May 24 and September

12, 2011, all PCB-contaminated soils were excavated and transported off-site to permitted disposal facilities, and the existing building and foundation was demolished and also transported off-site for disposal. A total of 28,288 tons of Non-TSCA soils, 24,137 tons of TSCA PCB-contaminated soils, 343 tons of construction debris, and 1,455 tons of non-TSCA PCB-contaminated Class II concrete were transported off-site for disposal. The TSCA soils were disposed of at the CSC Landfill and the non-TSCA soils, construction debris, and non-TSCA PCB Class II concrete were disposed of at the Maloy Landfill. Following confirmation that all PCB-contaminated had been removed, excavated areas were backfilled with approximately 60,000 yd³ of clean off-site soils and the Site was graded so that it would drain and prevent the formation of standing water.

No Further Action Is Necessary Record of Decision Amendment and Explanation of Significant Differences (2011)

The No Further Action is Necessary Record of Decision Amendment and Explanation of Significant Differences (ROD Amendment) was signed on September 28, 2011. The ROD Amendment was prepared to document EPA's implementation and completion of the post-ROD Third Removal Action for the PCB-contaminated soils at the Site. The completion of the soil clean up, which utilized the selected remedy in the original 2010 ROD, eliminated the need to conduct further soil remedial actions at the Site. The Explanation of Significant Differences (ESD) portion of the ROD Amendment presented the details of non-significant or minor changes to the July 2011 Proposed Plan. After the 2011 Proposed Plan was proposed to the public, but before the ROD Amendment was finalized, EPA received the 2011 annual ground water monitoring data, which showed that all concentrations for total PCBs did not exceed the federal MCL of 0.5 µg/L. As a result, EPA determined that changes to the 2011 Proposed Plan were necessary, and the ESD documented those changes. The changes would not have a significant impact on the scope, performance or cost of the remedy.

- The 2011 Proposed Plan stated that ground water monitoring was to be conducted annually for a minimum of five years to evaluate the protectiveness of the proposed remedy. Ground water monitoring was to be discontinued if the concentration of total PCBs in ground water did not exceed the federal MCL of 0.5 µg/l for three consecutive monitoring periods. The ESD added to

the Ground Water Monitoring Component that PCB concentrations had already been below the MCL for two (2010 and 2011) consecutive monitoring periods and that if the PCB levels were below the MCL in the third round of ground water sampling scheduled for 2012, ground water monitoring would be discontinued.

- Institutional controls in the form of deed restrictions were to be implemented to prevent exposure of human receptors to contaminated ground water. The ESD stated that these institutional controls would not be implemented at the Site because the 2010 and 2011 monitoring results for PCBs were below the MCL.

- The ESD eliminated the Operations and Maintenance of the ground water component of the remedy after ground water monitoring was to be discontinued.

- Five-Year Reviews would be discontinued if the ground water data indicated that the concentration of total PCBs did not exceed the federal MCL of 0.5 µg/L.

Cleanup Levels

Soils

As stated above, during the Third Removal Action all PCB-contaminated soils were excavated and transported off-site to permitted disposal facilities. The Removal Action was completed by September 2011. After the Removal Action was completed, EPA collected post-construction confirmation soil samples from the bottom of the 52 excavated grids to verify that all PCB-contaminated soils above the total PCB cleanup level of 1.00 mg/kg had been removed. All soil samples were reported below the 1.00 mg/kg cleanup level.

Ground Water

EPA conducted three consecutive annual (2010, 2011, and 2012) ground water sampling events, and all laboratory total PCB results were below the MCL level of 0.5 µg/L. Ground water monitoring has been discontinued and the nine ground water monitoring wells were plugged and properly abandoned in 2012. Although a requirement for Five-Year Reviews was included in the decision documents, Five-Year Reviews were not conducted and are no longer required because the ground water data indicated that the concentration of total PCBs did not exceed the federal MCL of 0.5 µg/L and the Site met unlimited use/unrestricted exposure criteria for the soils and groundwater.

Quality Assurance and Quality Control (QA/QC)

The QA/QC program for the Third Removal Action was conducted in accordance with the Site Removal QA/QC Work Plan prepared by the EPA Superfund Technical Assessment and Response Team (START) contractor and the EPA Emergency and Rapid Response Services (ERRS) contractor. The START contractor was responsible for post-excavation confirmation, soil sample collection, and coordination of sample analyses performed by either the EPA Houston Laboratory or a commercial laboratory selected by the START contractor. All sample results were either validated by the EPA Houston Laboratory or by a START representative.

The cleanup activities met all QA/QC requirements for the Site. The EPA Remedial Project Manager (RPM) conducted daily oversight throughout the Removal Action activities. During the Removal Action the TCEQ Project Manager conducted routine inspections and was in regular contact with the RPM. The TCEQ Project Manager conducted two site visits to verify that construction was complete.

Community Involvement

Public participation activities have satisfied the requirements of CERCLA Section 113(k), 42 U.S.C. 9613(k) and CERCLA Section 117, 42 U.S.C. 9617. Throughout the Site's history, the community has been interested and involved with Site activities. EPA has kept the community and other interested parties updated on Site activities through informational meetings, fact sheets, and public meetings. Documents in the deletion docket which EPA relied on for recommendation for the deletion from the NPL are available to the public in the information repositories, and a notice of availability of the Notice of Intent for Deletion has been published in the Greenville Herald Banner.

Determination That the Site Meets the Criteria for Deletion in the NCP

The implemented remedy achieves the degree of cleanup specified in the ROD and ROD Amendment for all pathways of exposure. All selected remedial action objectives and clean-up goals are consistent with agency policy and guidance. No further Superfund responses are needed to protect human health and the environment at the Site.

In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

V. Deletion Action

The EPA, with concurrence of the State of Texas through the Texas Commission on Environment Quality, has determined that all appropriate response actions under CERCLA, have been completed. Therefore, EPA is deleting the Site from the NPL.

Because EPA considers this action to be noncontroversial and routine, EPA is taking it without prior publication. This action will be effective September 10, 2018 unless EPA receives adverse comments by August 27, 2018. If adverse comments are received within the 30-day public comment period, EPA will publish a timely withdrawal of this direct final notice of deletion before the effective date of the deletion, and it will not take effect. EPA will prepare a response to comments and continue with the deletion process on the basis of the notice of intent to delete and the comments already received. There will be no additional opportunity to comment.

List of Subjects in 40 CFR Part 300

Environmental protection, Air pollution control, Chemicals, Hazardous waste, Hazardous substances, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Superfund, Water pollution control, Water supply.

Dated: July 19, 2018.

Arturo Blanco,

Acting Regional Administrator, Region 6.

For the reasons set out in this document, 40 CFR part 300 is amended as follows:

PART 300—NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN

■ 1. The authority citation for part 300 continues to read as follows:

Authority: 33 U.S.C. 1321(d); 42 U.S.C. 9601–9657; E.O. 13626, 77 FR 56749, 3 CFR, 2013 Comp., p. 306; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; E.O. 12580, 52 FR 2923, 3 CFR, 1987 Comp., p. 193.

40 CFR Part 300

[EPA–HQ–SFUND–2003–0010; FRL–9981–26—Region 5]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Partial Deletion of the Peters Cartridge Factory Superfund Site

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) Region 5 is publishing a direct final Notice of Partial Deletion of the Former Process Area (FPA) portion of the Peters Cartridge Factory Superfund Site in Kings Mills, Ohio from the National Priorities List (NPL). The NPL, promulgated pursuant to Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). This direct final Notice of Partial Deletion is being published by EPA with the concurrence of the State of Ohio, through the Ohio Environmental Protection Agency (OEPA), because EPA has determined that all appropriate response actions in the FPA under CERCLA, other than maintenance, monitoring and five-year reviews, have been completed. However, this partial deletion does not preclude future actions under Superfund.

DATES: This direct final partial deletion is effective September 25, 2018 unless EPA receives adverse comments by August 27, 2018. If adverse comments are received, EPA will publish a timely withdrawal of the direct final partial deletion in the **Federal Register** (FR) informing the public that the partial deletion will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–SFUND–2003–0010 at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Comments may also be submitted by email or mail to Randolph Cano, NPL Deletion Coordinator, U.S. Environmental Protection Agency Region 5 (SR–6J), 77 West Jackson Boulevard, Chicago, IL 60604, Phone: (312) 886–6036, email address: cano.randolph@epa.gov or *hand deliver:* Superfund Records Center, U.S. Environmental Protection Agency,

Region 5, 77 West Jackson Boulevard, 7th Floor South, Chicago, IL 60604, Phone: (312) 886–0900. Such deliveries are only accepted during the Docket’s normal hours of operation, and special arrangements should be made for deliveries of boxed information. The normal business hours are Monday through Friday, 8 a.m. to 4 p.m., excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA–HQ–SFUND–2003–0010. EPA’s policy is that all comments received will be included in the public docket without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through <http://www.regulations.gov> or email. The <http://www.regulations.gov> website is an “anonymous access” system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through <http://www.regulations.gov>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically at <http://www.regulations.gov> or electronically or in hard copy at:

U.S. Environmental Protection Agency, Region 5, Superfund Records Center, 77 West Jackson Boulevard, 7th Floor South, Chicago, IL 60604, Phone:

(312) 886-0900, Hours: Monday through Friday, 8 a.m. to 4 p.m., excluding Federal holidays.

Salem Township Library, 535 West Pike Street, Morrow, OH 45152, Phone: (513) 899-2588. Hours: Monday and Tuesday, 10:00 a.m. to 8:00 p.m. Wednesday and Thursday, 10:00 a.m. to 6:00 p.m. Friday, 10:00 a.m. to 5:00 p.m. Saturday, 10:00 a.m. to 2:00 p.m.

Warren County Administration Building, 406 Justice Drive, Lebanon, OH 45036, Phone: (513) 695-1000. Hours: Monday through Friday 8:00 a.m. to 5:00 p.m.

FOR FURTHER INFORMATION CONTACT: Randolph Cano, NPL Deletion Coordinator, U.S. Environmental Protection Agency, Region 5 (SR-6J), 77 West Jackson Boulevard, Chicago, IL 60604, Phone: (312) 886-6036, or via email at cano.randolph@epa.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. NPL Deletion Criteria
- III. Partial Deletion Procedures
- IV. Basis for Site Partial Deletion
- V. Partial Deletion Action

I. Introduction

EPA Region 5 is publishing this direct final Notice of Partial Deletion for the Peters Cartridge Factory Site (Peters Cartridge Site), from the National Priorities List (NPL). This partial deletion pertains to the Former Process Area (FPA) portion of the Site, property identification numbers (PINs) 16-12-453-004, 16-12-453-005 and 16-12-400-012. The NPL constitutes Appendix B of the NCP, which EPA promulgated pursuant to CERCLA. EPA maintains the NPL as the list of sites that appear to present a significant risk to public health, welfare, or the environment. Sites on the NPL may be the subject of remedial actions (RA) financed by the Hazardous Substance Superfund (Fund). This partial deletion of the Peters Cartridge Site is proposed in accordance with 40 CFR 300.425(e) and is consistent with the Notice of Policy Change: Partial Deletion of Sites Listed on the National Priorities List. 60 FR 55466 (Nov. 1, 1995). As described in section 300.425(e)(3) of the NCP, a portion of a site deleted from the NPL remains eligible for Fund-financed RAs if future conditions warrant such actions.

Section II of this document explains the criteria for deleting sites from the NPL. Section III discusses procedures that EPA is using for this action. Section IV discusses the FPA of the Peters Cartridge Site and demonstrates how it meets the deletion criteria. Section V

discusses EPA's action to partially delete the FPA from the NPL unless adverse comments are received during the public comment period.

II. NPL Deletion Criteria

The NCP establishes the criteria that EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites, or portions thereof, may be deleted from the NPL where no further response is appropriate. In making such a determination pursuant to 40 CFR 300.425(e), EPA will consider, in consultation with the state, whether any of the following criteria have been met:

- i. Responsible parties or other persons have implemented all appropriate response actions required;
- ii. all appropriate Fund-financed response under CERCLA has been implemented, and no further response action by responsible parties is appropriate; or
- iii. the remedial investigation (RI) has shown that the release poses no significant threat to public health or the environment and, therefore, the taking of remedial measures is not appropriate.

Pursuant to Section 121(c) of CERCLA, 42 U.S.C. 9621 and the NCP, EPA conducts five-year reviews to ensure the continued protectiveness of RAs where hazardous substances, pollutants, or contaminants remain at a site above levels that allow for unlimited use and unrestricted exposure. EPA conducts such five-year reviews even if a site or a portion of a site is deleted from the NPL. EPA may initiate further action to ensure continued protectiveness at a deleted site if new information becomes available that indicates it is appropriate. Whenever there is a significant release from a site deleted from the NPL, the deleted site may be restored to the NPL without application of the hazard ranking system.

III. Partial Deletion Procedures

The following procedures apply to the deletion of the FPA of the Peters Cartridge Site:

(1) EPA has consulted with the State of Ohio prior to developing this direct final Notice of Partial Deletion and the Notice of Intent for Partial Deletion copublished in the "Proposed Rules" section of the FR.

(2) EPA has provided the State 30 working days for review of this notice and the parallel Notice of Intent for Partial Deletion prior to their publication today, and the State, through the OEPA, has concurred on the partial deletion of the Site from the NPL.

(3) Concurrent with the publication of this direct final Notice of Partial Deletion, an announcement of the availability of the parallel Notice of Intent for Partial Deletion is being published in a major local newspaper, The Cincinnati Enquirer. The newspaper notice announces the 30-day public comment period concerning the Notice of Intent for Partial Deletion of the Site from the NPL.

(4) EPA placed copies of documents supporting the partial deletion in the deletion docket and made these items available for public inspection and copying at the Site information repositories identified above.

(5) If adverse comments are received within the 30-calendar day public comment period on this partial deletion action, EPA will publish a timely notice of withdrawal of this direct final Notice of Partial Deletion before its effective date and will prepare a response to comments and continue with the deletion process on the basis of the Notice of Intent for Partial Deletion and the comments already received.

Deletion of a portion of a site from the NPL does not itself create, alter, or revoke any individual's rights or obligations. Deletion of a portion of a site from the NPL does not in any way alter EPA's right to take enforcement actions, as appropriate. The NPL is designed primarily for informational purposes and to assist EPA management. Section 300.425(e)(3) of the NCP states that the deletion of a site from the NPL does not preclude eligibility for further response actions, should future conditions warrant such actions.

IV. Basis for Site Partial Deletion

The following information provides EPA's rationale for deleting the FPA of the Peters Cartridge Site from the NPL:

Site Background and History

The Peters Cartridge Site (CERCLIS ID: OHD 987051083) is an approximately 71-acre parcel of land located along the south bank of the Little Miami River, in Warren County, Ohio. The Peters Cartridge Site is located at 1415 Grandin Road, Kings Mills, 45034, Hamilton Township, Ohio. Approximately one acre of the Site is located east of Grandin Road.

The Peters Cartridge Factory produced ordnance and shot shell ammunition at the Site from 1887 to 1934. The Remington Arms Company, Inc. (Remington) purchased the Peters Cartridge Factory in 1934 and continued the production of shot shell and cartridge ammunition at the facility. During the Second World War,

Remington produced .30 and .45-caliber carbine ammunition for the U.S. Government, until 1944, after which Remington discontinued operations at the facility.

The Peters Cartridge Site was subsequently divided into multiple land parcels that have been owned and occupied by various non-ammunition making entities since 1944. None of these companies are responsible for the contamination that is being addressed at the Site.

OEPA noted the release of possible hazardous substances at the Site in 1992. OEPA conducted a preliminary assessment in 1993 and brought the Site to the attention of EPA. OEPA conducted several screening investigations and evaluations at the Site between 1994 and 1999. During these investigations, OEPA collected soil, sediment, and groundwater samples. OEPA analyzed the samples for volatile organic compounds, semivolatile organic compounds (SVOCs), pesticides, and metals.

OEPA's investigations concluded that the Site was impacted by copper, lead, and mercury. These metals are associated with the former munitions manufacturing operations. The impacts appeared to be generally confined to surface soils in the former manufacturing and storage areas in the FPA. OEPA detected some SVOCs and pesticides in sediment samples from the Little Miami River, but these compounds were not found in soil or sediment samples from the Site and are not Site-related.

EPA proposed the Peters Cartridge Site to the NPL on April 30, 2003 (68 FR 23094). EPA finalized the Peters Cartridge Site on the NPL on September 18, 2012 after negotiations with potentially responsible parties (PRPs) to implement the cleanup remedy in EPA's 2009 Record of Decision (ROD) for the Site failed (77 FR 57495). The effective date of the final rule was October 18, 2012.

The Peters Cartridge Site is a single operable unit consisting of three areas: The FPA, which is the portion of the Site EPA is deleting from the NPL, and the Hamilton Township Property (HTP) and Lowland Area (LA) which are not being deleted and will remain on the NPL.

The FPA is the production portion of the Site where most of the Peters Cartridge manufacturing processes took place. The FPA is comprised of three parcels of developed land that total 14.29 acres and contain six buildings.

Most of the FPA is relatively flat and covered by buildings, concrete or asphalt paving, and small landscaped

areas. Discontinuous areas of ash-like fill were present around the buildings. Portions of the FPA are used by commercial or industrial businesses.

The HTP is a 56-acre parcel of unimproved wooded land south and southwest of the FPA. The HTP was primarily used to store the finished munitions manufactured at the Site. The HTP consists of steeply-sloping bedrock ridges and rolling topography with dense vegetation. The HTP contains bunkers, concrete supports, foundations, conveyance structures, and other facilities historically used by the Peters Cartridge Company.

The HTP contains a former salvage area in the northwestern portion of the property that is unpaved and is surrounded by a steel fence and mature woody and herbaceous vegetation. The former salvage area features buildings original to the former salvage yard and also contains discontinuous areas of ash-like fill. Hamilton Township plans to retain the HTP as open space.

The LA is located at the northern edge of the Site within the Little Miami River floodplain. The LA is differentiated from the rest of the Site by steel fencing, thick vegetation, and steep topography along the southern border of the Little Miami River Scenic Trail. The trail was a historical railroad right-of-way that was redeveloped as a bike and walking path.

North of the trail, the LA includes some historical manufacturing areas characterized by the presence of ash-like fill, concrete foundations, masonry structures, and concrete culverts/outfalls that drain surface water from the upland portions of the Site. Future land use in the LA is expected to remain recreational/open space.

This partial deletion pertains to all media within the FPA portion of the Peters Cartridge Site (see Current Site Layout in Docket Document ID EPA-HQ-SFUND-2003-0010-1954 in the Docket). The remaining areas of the Site, including the HTP and LA, will remain on the NPL and are not being considered for deletion as part of this action.

Remedial Investigation (RI) and Feasibility Study (FS)

The PRPs conducted a remedial investigation (RI) and feasibility study (FS) at the Site under a 2004 Administrative Order on Consent with EPA. The RI investigated the contamination at the Site and the FS evaluated potential cleanup alternatives to address the unacceptable Site risks identified in the human health and ecological risk assessments.

The PRPs conducted the RI in multiple phases from 2005 to 2009. The PRPs collected surface (zero to two feet below ground surface) and subsurface (greater than two feet below ground surface) soil samples from 112 soil boring locations in the FPA, 199 soil borings in the HTP, and 69 soil borings in the LA. The PRPs also collected samples of surface swale-soil from 29 locations in the HTP area, sediment samples from seven on-Site locations near the discharge points of the on-Site drainage features near the Little Miami River, 22 surface water sampling locations, and groundwater samples from eleven groundwater monitoring wells. The PRPs did not collect swale-soil samples from the FPA or LA because swale-soil was not present in these areas.

The results of the PRPs' human health risk assessment indicate that surface soil in the FPA posed an unacceptable risk to current commercial/industrial workers, utility workers and trespassers, and to future construction workers and residents. The risks were due to the concentrations of arsenic, benzo(a)pyrene, naphthalene and lead detected in the surface soil. The surface soil in the HTP posed an unacceptable risk to current trespassers and utility workers, and to future construction workers, residents and recreational users in the HTP. These risks were due to arsenic, benz(a)pyrene, lead and antimony detected in the HTP. The concentrations of lead in the LA surface soil posed an unacceptable risk to current utility workers, and to recreational users in off-trail areas.

The risk assessment determined that shallow, on-Site groundwater would pose an unacceptable cancer risk to potential future residents if the groundwater was used as a residential water supply. This risk is due to arsenic detected in the groundwater, but at concentrations below the Maximum Contaminant Level (MCL) for arsenic established under the Safe Drinking Water Act.

The current potential for human exposure to on-Site groundwater is limited, since the Site is used for commercial and industrial purposes and on-Site groundwater is not used for potable or any other uses, including irrigation. Potable water at the Site is currently supplied by the Warren County Water District. The groundwater is also at a depth where direct contact during intrusive activities is unlikely to occur.

The PRPs' ecological risk assessment indicated that surface soil in the terrestrial habits at the Site posed an unacceptable risk to ecological

receptors. The risks were due to the concentrations of antimony, arsenic, cadmium, copper, lead, mercury, nickel, selenium, thallium and zinc detected at the Site. The ecological risk assessment also identified potential ecological risks at the Site based on exposure to erosional material and surface water in the concrete-lined culverts at the Site, and to sediment and surface water in culvert outfalls along the shoreline of the Little Miami River.

OEPA conducted additional studies of the Little Miami River in 1999 and 2007. These studies indicated that Site-related contaminants were not impacting ecological receptors in the River. On-Site drainage features, however, had the potential to transport Site-related contaminants to surface water and river sediment.

The PRPs completed an FS in 2009. The FS developed and evaluated four cleanup alternatives to address the unacceptable risks at the Site. The FS evaluated soil remediation technologies to clean up the surface soil/swale contaminants in the FPA, HTP and LA, and in the upper six inches of shoreline sediment at culvert outfalls.

The FS determined that focusing the cleanup on the lead-impacted soil at the Site would result in the remediation of the other contaminants detected at the Site since the primary Site risk was due to exposure to lead-impacted soil. The FS also assumed that institutional controls (ICs) would be used to prevent residential land use and groundwater use at the Site.

Selected Remedy

EPA developed remedial action objectives (RAOs) to address the unacceptable risks to human health and the environment identified for exposure to on-Site soil/swale contaminants, the shoreline sediments in the Little Miami River, and groundwater.

EPA's RAOs for on-Site soil are to: Prevent human exposure to surface/swale soil having chemical concentrations resulting in a cumulative excess lifetime cancer risk greater than 1×10^{-4} or a non-cancer hazard index greater than 1; prevent human exposure to surface and subsurface soil with lead concentrations greater than EPA's residential standard (*i.e.*, 400 mg/kg) or, if an IC restricts residential development, prevent human exposure to surface/swale soil with lead concentrations greater than EPA's commercial standard (*i.e.*, 800 mg/kg); and prevent ecological receptor exposures to on-Site surface soil/swale soil with copper, lead, and mercury concentrations creating unacceptable levels of risk.

EPA's RAO for shoreline sediments is to prevent the exposure of aquatic receptors to contaminants of ecological concern in the Little Miami River by limiting the migration of Site-related contaminants in depositional material in the channelized outfalls and deltas bordering the river. This will be done by removing on-Site sources that contribute to elevated concentrations in the surface water discharged from the site.

EPA's RAO for groundwater is to prevent future residents from ingesting groundwater having an arsenic concentration that exceeds its MCL. This will be done as a limited RA using ICs to restrict groundwater use at the Site.

EPA selected a cleanup remedy for the Site in a Record of Decision (ROD) on September 28, 2009. The major components of the selected remedy detailed in the ROD are:

(1) Excavate surface soil in the FPA to a depth of at least two feet below ground surface (bgs) in areas that exceed the EPA commercial standard for lead of 800 milligrams per kilogram (mg/kg), and excavate surface soil in the HTP and LA to a depth of at least two feet bgs in areas that exceed the EPA residential standard for lead of 400 mg/kg. The actual areas to be excavated and depths will be determined and evaluated during the Remedial Design (RD). The excavated areas will be backfilled with clean fill material to the existing grade.

(2) Clean out and remove debris and erosional material at drainage culvert and outfall areas. Excavate three identified shoreline sediment areas to a depth of approximately six inches and backfill the shoreline sediment areas with clean fill material.

(3) Consolidate impacted soil, sediment, and erosional material in an on-Site consolidation cell. The cell will be constructed with an impermeable composite liner and cap system developed to be consistent with State regulations. A flexible membrane liner with a geotextile cushion will be installed as the main component of the cell liner system.

(4) Cap the consolidation cell with a composite cap system consisting of a six-inch-thick vegetative support layer, a two-foot-thick layer of compacted low-permeability clay, a geocomposite drainage layer, a flexible geomembrane, and a low-permeability clay layer beneath the geomembrane. The final cap design will be developed to be compliant with State regulations during the RD phase of the project. During the RD phase it will be determined whether an access restriction will be required based on future use of the area.

(5) Monitor groundwater to ensure that there is no migration of contaminants from the consolidation cell.

(6) ICs in the form of deed restrictions will be required to accomplish the following: Restrict land use to nonresidential purposes; limit future Site activities to prevent intrusive activities that could compromise the consolidation cell; and restrict on-Site groundwater from being used as a residential water supply.

(7) A review will be conducted within five years after the initiation of the RA and every five years thereafter to ensure that the selected remedy is still protective of human health and the environment, and will include a determination of whether land use changes have occurred or are likely to occur.

EPA issued a Unilateral Administrative Order to the lead PRP for the Site, E.I. Du Pont de Nemours and Company (DuPont), to conduct the RD and RA work required by the ROD on March 30, 2012, after negotiations with DuPont and the other PRPs failed. DuPont conducted a Pre-Design Investigation (PDI) in 2012–2013. During the PDI, DuPont further delineated the extent of soil with lead concentrations above cleanup standards that would require excavation.

DuPont's PDI found that approximately 10,300 cubic yards of soil within the excavation areas outlined in the ROD was characteristically hazardous for lead based on the results of toxicity characteristic leaching procedure (TCLP) testing. The PDI also found that some of the characteristically hazardous lead-contaminated soil was located in some areas of the Site at depths greater than two feet bgs.

EPA issued an Explanation of Significant Differences (ESD) modifying the ROD based on the PDI in June 2015. The modified remedy required the excavation of all characteristically hazardous soils at the Site, regardless of depth. All soils with concentrations of lead considered to be characteristic hazardous waste were required to be stabilized to render them nonhazardous before being placed in the on-Site consolidation cell. Based on the PDI, the deepest excavation was estimated to be four feet bgs.

The ESD also made it clear that an Institutional Control Implementation and Assurance Plan (ICIAP) was required as part of the selected remedy. The ESD also explained EPA and OEPA's determination that a 2.0 percent final slope for the composite cap system over the on-Site consolidation cell was acceptable and provided a waiver of the

5.0 percent final slope requirements in Ohio Administrative Code 3745–29–08(C)(4)(c).

Response Actions

DuPont's contractor, Parsons, began RA construction activities at the Site in March 2015. Parsons excavated surface soil in the FPA with lead concentrations above EPA's commercial cleanup level for lead of 800 mg/kg from a depth of zero to two feet bgs; and surface/swale soil in the HTP and LA with concentrations above EPA's residential cleanup level for lead of 400 mg/kg from a depth of zero to two feet bgs.

Parsons additionally excavated all surface/swale and subsurface soil in the FPA, HTP and LA that exceeded EPA's hazardous waste TCLP concentration for lead of 5.0 milligrams/liter (mg/l), regardless of depth (zero to four feet).

Parsons consolidated the excavated soil in an on-Site consolidation cell Parsons constructed in the HTP at the southern end of the Site. Parsons treated the soil with TCLP concentrations above EPA's hazardous waste criteria with a proprietary in-situ stabilizing mixture that rendered the material nonhazardous prior to excavation and consolidation in the on-Site cell.

The excavated areas included: Most of the area sampled adjacent to and between the buildings in the FPA, and isolated areas on hill slopes behind the buildings; the HTP adjacent to the western portion of the FPA and LA; three small, isolated areas in the HTP upland areas; most of the portion of the LA between the Little Miami River Scenic Trail and the FPA; and isolated areas in the LA in the floodplain terrace along the Little Miami River and adjacent to Grandin Road. Four areas within the FPA and LA required excavation to four feet bgs to remove soil exceeding the regulatory level for TCLP lead.

Parsons backfilled the excavated areas with clean soil covered by six inches of clean topsoil to existing grade.

Parsons excavated the sediments from the on-Site drainage channels, concrete culverts and outfalls and consolidated these materials in the consolidation cell with the excavated soil. Parsons excavated and disposed of trash located in one area of the Site, including hazardous and nonhazardous soil and a small amount of asbestos-containing material, at appropriate off-Site disposal facilities.

The consolidation cell has a vegetated surface with a stone access road across the top of cap. The road provides access to the leachate sump and monitoring wells located on the north side of the cell.

Parsons submitted a Construction Completion Report documenting the completion of the RA construction activities to EPA and OEPA on June 7, 2017. EPA issued a letter approving DuPont's Construction Completion Report on June 26, 2017.

Cleanup Levels

The cleanup levels for the Site are: EPA's commercial cleanup level for lead of 800 mg/kg for surface soil in the FPA; EPA's residential cleanup level for lead of 400 mg/kg for surface soil in the HTP and LA; and EPA's TCLP hazardous waste leaching criteria of 5 mg/l for lead in all soil, regardless of depth. The ROD also requires groundwater use restrictions for on-Site groundwater with arsenic concentrations above the MCL of 10 micrograms/liter, and the excavation of debris and erosional material in on-Site culverts and outfalls, and of shoreline sediment in the Little Miami River.

Parsons determined the limits of the soil and sediment excavations, and the limits of soil stabilization required to meet the cleanup criteria in the ROD and ESD during the RD based on the results of the PDI. Parsons verified that all impacted soil was excavated to required limits by conducting surveys of the excavated areas before and after excavation for a point-by-point comparison. Parsons confirmed that all hazardous soil was properly treated prior to excavation by testing the stabilized soil in each grid for TCLP lead, arsenic, and mercury to confirm the soil was nonhazardous. All post-treatment samples passed the TCLP values for these compounds prior to excavation and consolidation in the on-Site cell except for one area which required a second round of treatment.

Parsons, EPA and OEPA verified that the sediment, debris and eroded materials were removed from the on-Site culverts, outfalls and the river shoreline through visual inspections conducted prior to and during an August 16, 2016 pre-final Site inspection.

Operation and Maintenance

DuPont is responsible for conducting operation and maintenance (O&M) at the Peters Cartridge Site consistent with a January 2017 O&M and ICIAP. The only O&M required for the FPA is to maintain, monitor and enforce the ROD-required IC, which is in the form of an Environmental Covenant (EC), and to conduct groundwater sampling, as needed.

The current owner of the FPA, Peters Cartridge Factory, LLC (PCF), filed the EC required by the ROD pursuant to

Ohio Revised Code §§ 5301.80 to 5301.92, on the FPA portion of the Peters Cartridge Site. PCF filed the EC with the Warren County Recorder's Office on January 30, 2018, Instrument 2018–003019. A copy of the recorded EC is in Docket Document ID EPA–HQ–SFUND–2003–0010–1942 in the Docket.

PCF's EC: (1) Restricts land use in the FPA to commercial and/or industrial use, and prohibits residential use of the property unless and until additional cleanup activities are performed and the EC is amended or terminated; (2) prohibits the extraction or use of groundwater beneath the FPA for any purpose, potable or otherwise, unless approved by EPA and for the purposes of investigation, monitoring, groundwater remediation or for a response activity; and (3) requires all excavation, digging, grading or disturbance of the ground surface in the FPA to be conducted in accordance with the September 2017 Soil Management Plan developed for the Site.

Five-Year Reviews

EPA is required to conduct statutory five-year reviews at the Peters Cartridge Site because hazardous substances, pollutants, or contaminants remain at the Site above levels that allow for unlimited use and unrestricted exposure. EPA must complete the first five-year review of the Site by December 12, 2019.

Community Involvement

EPA satisfied public participation activities for the Peters Cartridge Site required in Sections 113(k) and 117 of CERCLA, 42 U.S.C. 9613(k) and 9617. EPA developed a Community Involvement Plan for the Site in 2009. EPA made the RI/FS Report and Proposed Plan for the Site available to the public in June 2009. EPA placed copies of the RI/FS Report and Proposed Plan in the administrative record file maintained at the EPA Region 5 Records Center in Chicago, Illinois, and in the local information repositories for the Site at the Salem Township Library, 535 W Pike Street, Morrow, Ohio 45152 and the Warren County Administration Building, 406 Justice Drive, Lebanon, Ohio 45036. EPA also posted the RI/FS and Proposed Plan to the EPA Region 5 website at: <http://www.epa.gov/region5/sites/peterscartridge/index.htm>.

EPA published notices advertising the availability of the RI/FS Report and EPA's Proposed Plan for the Site in the Pulse-Journal, Little Miami/Kings Mills Edition and the Western Star, in Lebanon, Ohio on July 2, 2009.

EPA held a public comment period on its proposed cleanup plan for the Site

from July 6, 2009 through August 6, 2009. EPA also held a public meeting to present its Proposed Plan for the Site to a broader community audience on July 15, 2009. At the meeting, representatives from EPA and OEPA answered questions about the contamination at the Site and the cleanup alternatives that were considered.

EPA also used the meeting to solicit a wider cross-section of community input on the reasonably anticipated future land uses of the Site. Approximately 20 people attended the meeting, including representatives from the Little Miami River Group and Hamilton Township.

EPA considered the public comments received during the public meeting and public comment period prior to selecting a final remedy for the Site in the ROD. EPA's responses to the comments received are included in a Responsiveness Summary, which is part of the ROD.

EPA provided additional opportunities for public participation when issuing the ESD. Although there are no requirements to hold a public meeting or formal public comment period when an ESD is issued, EPA and OEPA voluntarily decided to conduct a public availability session to inform the local community of the changes in the original remedy and answer questions. EPA and OEPA chose to involve the local community because of the community's interest in the Site, and held an availability session on February 12, 2015. Approximately 40 people from the surrounding area attended the meeting.

EPA made the ESD available to the public by placing it in the administrative record with other documents supporting the ESD, in the information repositories. EPA also coordinated with OEPA to ensure that a notice summarizing the ESD and explaining EPA's reasons for the remedy changes was published in a local newspaper after the ESD was approved.

EPA published a notice announcing this direct final Notice of Partial Deletion in the Cincinnati Enquirer prior to publishing this deletion in the **Federal Register**. Documents in the deletion docket which EPA relied on to support the deletion of the FPA from the NPL are available to the public in the information repositories and at <http://www.regulations.gov>.

Determination That the Criteria for Partial Deletion Have Been Met

The FPA portion of the Peters Cartridge Site meets all of the site completion requirements specified in Office of Solid Waste and Emergency Response (OSWER) Directive 9320.22, Close-Out Procedures for National Priorities List Sites. All cleanup actions and RAOs for the FPA set forth in the 2009 ROD and 2015 ESD have been implemented for all pathways of exposure in the FPA. The selected RAs, RAOs, and associated cleanup levels for the FPA are consistent with EPA policy and guidance. No further Superfund response is necessary to protect human health or the environment in the FPA.

Section 300.425(e) of the NCP states that a Superfund site or a portion of a site may be deleted from the NPL when no further response action is appropriate. EPA, in consultation with the State of Ohio, has determined that all required response actions have been implemented at the FPA portion of the Peters Cartridge Site and that no further response action by the responsible parties is appropriate on this property.

V. Partial Deletion Action

EPA, with concurrence of the State of Ohio through the OEPA, has determined that all appropriate response actions under CERCLA, other than maintenance, monitoring and five-year reviews, have been completed at the FPA. Therefore, EPA is deleting the FPA portion of the Peters Cartridge Site, PINs 16-12-453-004, 16-12-453-005 and 16-12-400-012, from the NPL.

Because EPA considers this action to be noncontroversial and routine, EPA is

taking it without prior publication. This action will be effective September 25, 2018 unless EPA receives adverse comments by August 27, 2018. If adverse comments are received within the 30-day public comment period, EPA will publish a timely notice of withdrawal of this direct final Notice of Partial Deletion before its effective date and the partial deletion will not take effect. EPA will prepare a response to comments and continue with the deletion process on the basis of the notice of intent to partially delete and the comments already received. There will be no additional opportunity to comment.

List of Subjects in 40 CFR Part 300

Environmental protection, Air pollution control, Chemicals, Hazardous waste, Hazardous substances, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Superfund, Water pollution control, Water supply.

Dated: July 17, 2018.

Cathy Stepp,

Regional Administrator, Region 5.

For the reasons set out in this document, 40 CFR part 300 is amended as follows:

PART 300—NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN

■ 1. The authority citation for part 300 continues to read as follows:

Authority: 33 U.S.C. 1321(d); 42 U.S.C. 9601-9657; E.O. 13626, 77 FR 56749, 3 CFR, 2013 Comp., p. 306; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; E.O. 12580, 52 FR 2923, 3 CFR, 1987 Comp., p. 193.

Appendix B to Part 300—[Amended]

■ 2. Table 1 of Appendix B to part 300 is amended by revising the listing under Ohio for "Peters Cartridge Factory" to read as follows:

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 300**

[EPA-HQ-SFUND-2003-0010; FRL-9981-21—Region 8]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Deletion of the Davenport and Flagstaff Smelters Superfund Site**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA) Region 8 announces the deletion of the Davenport and Flagstaff Smelters Superfund Site (Site) located in Sandy City, Salt Lake County, Utah, from the National Priorities List (NPL). The NPL, promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). The EPA and the State of Utah, through the Utah Department of Environmental Quality (UDEQ), have determined that all appropriate response actions under CERCLA, other than operation and maintenance, and five-year reviews, have been completed. However, this deletion does not preclude future actions under Superfund.

DATES: This action is effective July 27, 2018.**ADDRESSES:**

Docket: EPA has established a docket for this action under Docket Identification No. EPA-HQ-SFUND-2003-0010. All documents in the docket are listed on the <http://www.regulations.gov> website. Although listed in the index, some information is not publicly available, *i.e.*, Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through <http://www.regulations.gov> or in hard copy at the site information repositories.

Locations, contacts, phone numbers and viewing hours are: Utah Department

of Environmental Quality, Salt Lake City, UT 84047; Phone: (801-944-7641); Hours: M–Th: 9 a.m.–9 p.m.; Fri–Sat: 9:00 a.m.–5:30 p.m.

FOR FURTHER INFORMATION CONTACT: Erna Waterman, Remedial Project Manager, U.S. Environmental Protection Agency, Region 8, EPA-SR, Denver, CO 80202, (303) 312-6762, email: waterman.erna@epa.gov.

SUPPLEMENTARY INFORMATION: The site to be deleted from the NPL is: Davenport and Flagstaff Smelters Superfund Site, Sandy City, Salt Lake County, Utah. A Notice of Intent to Delete for this Site was published in the **Federal Register** (83 FR 25635-25638) on June 4, 2018.

The closing date for comments on the Notice of Intent to Delete was July 5, 2018. No public comments were received.

EPA maintains the NPL as the list of sites that appear to present a significant risk to public health, welfare, or the environment. Deletion from the NPL does not preclude further remedial action. Whenever there is a significant release from a site deleted from the NPL, the deleted site may be restored to the NPL without application of the hazard ranking system. Deletion of a site from the NPL does not affect responsible party liability in the unlikely event that future conditions warrant further actions.

List of Subjects in 40 CFR Part 300

Environmental protection, Air pollution control, Chemicals, Hazardous substances, Hazardous waste, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Superfund, Water pollution control, Water supply.

Dated: July 16, 2018.

Douglas H. Benevento,*Regional Administrator, Region 8.*

For reasons set out in the preamble, 40 CFR part 300 is amended as follows:

PART 300—NATIONAL OIL AND HAZARDOUS SUBSTANCES POLLUTION CONTINGENCY PLAN

- 1. The authority citation for part 300 continues to read as follows:

Authority: 33 U.S.C. 1321(d); 42 U.S.C. 9601-9657; E.O. 13626, 77 FR 56749, 3 CFR, 2013 Comp., p. 306; E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; E.O. 12580, 52 FR 2923, 3 CFR, 1987 Comp., p. 193.

Appendix B to Part 300—[Amended]C

- 2. Table 1 of appendix B to part 300 is amended in the table by removing the

entry for “UT, Davenport and Flagstaff Smelters, Sandy City, P”.

BILLING CODE 6560-50-P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration****50 CFR Part 635**

[Docket No. 150121066-5717-02]

RIN 0648-XG327

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure of Angling category northern area trophy fishery.

SUMMARY: NMFS closes the northern area Angling category fishery for large medium and giant (“trophy” (*i.e.*, measuring 73 inches curved fork length or greater)) Atlantic bluefin tuna (BFT). This action is being taken to prevent further overharvest of the Angling category northern area trophy BFT subquota.

DATES: Effective 11:30 p.m., local time, July 26, 2018, through December 31, 2018.

FOR FURTHER INFORMATION CONTACT: Sarah McLaughlin or Tom Warren, (978) 281-9260.

SUPPLEMENTARY INFORMATION:

Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) governing the harvest of BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR part 635. Section 635.27 subdivides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) among the various domestic fishing categories, per the allocations established in the 2006 Consolidated Atlantic Highly Migratory Species Fishery Management Plan (2006 Consolidated HMS FMP) (71 FR 58058, October 2, 2006) and amendments.

NMFS is required, under § 635.28(a)(1), to file a closure notice with the Office of the Federal Register for publication when a BFT quota is reached or is projected to be reached.

On and after the effective date and time of such notification, for the remainder of the fishing year or for a specified period as indicated in the notification, retaining, possessing, or landing BFT under that quota category is prohibited until the opening of the subsequent quota period or until such date as specified in the notice.

Angling Category Large Medium and Giant Northern "Trophy" Fishery Closure

The 2018 BFT fishing year, which is managed on a calendar-year basis and subject to an annual calendar-year quota, began January 1, 2018. The Angling category season opened January 1, 2018, and continues through December 31, 2018. The currently codified Angling category quota is 195.2 mt, of which 4.5 mt is allocated for the harvest of large medium and giant (trophy) BFT by vessels fishing under the Angling category quota, with 1.5 mt allocated for each of the following areas: North of 39°18' N lat. (off Great Egg Inlet, NJ) (the "northern area"); south of 39°18' N lat. and outside the Gulf of Mexico (the "southern area"); and in the Gulf of Mexico. Trophy BFT measure 73 inches (185 cm) curved fork length or greater.

Based on reported landings from the NMFS Automated Catch Reporting System, NMFS has determined that the codified Angling category northern area trophy BFT subquota has been reached and exceeded and that a closure of the northern area trophy BFT fishery is warranted. Therefore, retaining, possessing, or landing large medium or giant BFT north of 39°18' N lat. by persons aboard vessels permitted in the HMS Angling category and the HMS Charter/Headboat category (when fishing recreationally) must cease at 11:30 p.m. local time on July 26, 2018. This closure will remain effective through December 31, 2018. This action is intended to prevent further overharvest of the Angling category northern area trophy BFT subquota, and

is taken consistent with the regulations at § 635.28(a)(1). NMFS previously closed the 2018 trophy BFT fishery in the southern area on March 17, 2018 (83 FR 12141, March 20, 2018) and in the Gulf of Mexico on May 13, 2018 (83 FR 22602, May 16, 2018). Therefore, with this closure of the northern area trophy BFT fishery as of July 26, 2018, the Angling category trophy BFT fishery will be closed in all areas for 2018.

If needed, subsequent Angling category adjustments will be published in the **Federal Register**. Information regarding the Angling category fishery for Atlantic tunas, including daily retention limits for BFT measuring 27 inches (68.5 cm) to less than 73 inches and any further Angling category adjustments, is available at hmspermits.noaa.gov or by calling (978) 281-9260. HMS Angling and HMS Charter/Headboat category permit holders may catch and release (or tag and release) BFT of all sizes, subject to the requirements of the catch-and-release and tag-and-release programs at § 635.26. Anglers are also reminded that all BFT that are released must be handled in a manner that will maximize survival, and without removing the fish from the water, consistent with requirements at § 635.21(a)(1). For additional information on safe handling, see the "Careful Catch and Release" brochure available at <https://www.fisheries.noaa.gov/resource/outreach-and-education/careful-catch-and-release-brochure>.

HMS Charter/Headboat and Angling category vessel owners are required to report the catch of all BFT retained or discarded dead, within 24 hours of the landing(s) or end of each trip, by accessing hmspermits.noaa.gov or by using the HMS Catch Reporting App.

Classification

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an

opportunity for public comment on, this action for the following reasons:

The regulations implementing the 2006 Consolidated HMS FMP and amendments provide for inseason retention limit adjustments and fishery closures to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. The closure of the northern area Angling category trophy fishery is necessary to prevent any further overharvest of the northern area trophy fishery subquota. NMFS provides notification of closures by publishing the notice in the **Federal Register**, emailing individuals who have subscribed to the Atlantic HMS News electronic newsletter, and updating the information posted on the Atlantic Tunas Information Line at (978) 281-9260 and on hmspermits.noaa.gov.

These fisheries are currently underway and delaying this action would be contrary to the public interest as it could result in excessive trophy BFT landings that may result in future potential quota reductions for the Angling category, depending on the magnitude of a potential Angling category overharvest. NMFS must close the northern area trophy BFT fishery before additional landings of these sizes of BFT occur. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For all of the above reasons, there is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness.

This action is being taken under 50 CFR 635.28(a)(1), and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 971 *et seq.* and 1801 *et seq.*

Dated: July 23, 2018.

Jennifer M. Wallace,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register

Vol. 83, No. 145

Friday, July 27, 2018

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2018-0689; Product Identifier 2018-CE-016-AD]

RIN 2120-AA64

Airworthiness Directives; Gulfstream Aerospace Corporation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Gulfstream Aerospace Corporation (Gulfstream) Models G-IV and GIV-X airplanes. This proposed AD was prompted by reports of disbonding and surface cracking of the composite aft pressure bulkhead. This proposed AD would require inspections of the forward and aft surfaces of the pressure bulkhead composite panels for damage and repair of any damage found. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by September 10, 2018.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Gulfstream

Aerospace Corporation, P.O. Box 2206, Savannah, Georgia 31402-2206; telephone: (800) 810-4853; fax 912-965-3520; email: pubs@gulfstream.com; internet: http://www.gulfstream.com/product_support/technical_pubs/pubs/index.htm. You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Examining the AD Docket

You may examine the AD docket on the internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA-2018-0689; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations (phone: 800-647-5527) is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

William O. Herderich, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474-5547; fax: (404) 474-5605; email: william.o.herderich@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2018-0689; Product Identifier 2018-CE-016-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this NPRM. We will consider all comments received by the closing date and may amend this NPRM because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this NPRM.

Discussion

We received reports of disbonding and accompanying surface cracking of the composite aft pressure bulkhead on Gulfstream Model G-IV airplanes. Gulfstream Model GIV-X airplanes have the same type design. During scheduled maintenance, areas with disbonding and accompanying surface cracks were found. Operational pressure loads by-passing the disbonded facesheet caused wrinkling or compression failure and led to the surface cracking. This condition, if not addressed, could result in structural failure of the bulkhead and loss of cabin pressure.

Airplanes maintained under Gulfstream's Maintenance Steering Group (MSG-3) maintenance program do not have a scheduled tap test inspection of the aft pressure bulkhead. Model G-IV airplanes with a serial number (S/N) 1400 through 1535, and Model GIV-X airplanes with a S/N 4001 through 4004 adopted the MSG-3 maintenance program in production. Airplanes produced earlier may change to the MSG-3 program by following the instructions in Aircraft Service Change (ASC) No. 416A, dated September 29, 2000.

Related Service Information Under 14 CFR Part 51

We reviewed Gulfstream G300 Customer Bulletin Number 243; Gulfstream G350 Customer Bulletin Number 198; Gulfstream G400 Customer Bulletin Number 243; Gulfstream G450 Customer Bulletin Number 198; and Gulfstream IV Customer Bulletin Number 243; all dated January 25, 2018. For the applicable airplanes, the service information describes procedures for inspecting the composite panels of the forward and aft pressure bulkhead for damage and repairing any damage found. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Other Related Service Information

We also reviewed ASC No. 416A, dated September 29, 2000, which contains instructions for changing the maintenance program for Model G-IV airplanes from the airplane's existing program to the MSG-3 maintenance program.

FAA’s Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously.

Costs of Compliance

We estimate that this proposed AD affects 709 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspection	18 work-hours × \$85 per hour = \$1,530	Not applicable	\$1,530	\$1,084,770

The extent of damage found during the proposed inspection may vary from airplane to airplane. We have no way of determining the number of airplanes that might need repairs or the cost of such repairs for each airplane.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to small airplanes, gliders, balloons, airships, domestic business jet transport airplanes, and associated appliances to the Director of the Policy and Innovation Division.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on

the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
- (3) Will not affect intrastate aviation in Alaska, and
- (4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Gulfstream Aerospace Corporation: Docket No. FAA–2018–0689; Product Identifier 2018–CE–016–AD.

(a) Comments Due Date

We must receive comments by September 10, 2018.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the following Gulfstream Aerospace Corporation airplanes, certificated in any category:

- (1) Model G–IV: Serial numbers (S/Ns) 1000 through 1399 that are maintained in accordance with the Maintenance Steering Group (MSG–3) maintenance program by complying with Aircraft Service Change (ASC) 416A; and S/Ns 1400 through 1535.
- (2) Model GIV–X: S/Ns 4001 through 4004.

Note 1 to paragraph (c) of this AD: Model G–IV airplanes are also referred to by the marketing designations G300 and G400. Model GIV–X airplanes are also referred to by the marketing designations G350 and G450.

(d) Subject

Joint Aircraft System Component (JASC)/ Air Transport Association (ATA) of America Code 53; fuselage.

(e) Unsafe Condition

This AD was prompted by reports of disbonding and surface cracking of the composite aft pressure bulkhead. We are issuing this AD to detect and address damage of the composite forward and aft pressure bulkhead. The unsafe condition, if not addressed, could result in structural failure of the bulkhead and loss of cabin pressure.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection

Within 12 months after the effective date of this AD, visually and tap inspect the forward and aft surfaces of the pressure bulkhead composite panels following the Accomplishment Instructions of the service information listed in paragraphs (g)(1) through (5) of this AD, as applicable to your model airplane.

- (1) Gulfstream G300 Customer Bulletin Number 243, dated January 25, 2018;
- (2) Gulfstream G350 Customer Bulletin Number 198, dated January 25, 2018;
- (3) Gulfstream G400 Customer Bulletin Number 243, dated January 25, 2018;
- (4) Gulfstream G450 Customer Bulletin Number 198, dated January 25, 2018;
- (5) Gulfstream IV Customer Bulletin Number 243, dated January 25, 2018.

(h) Repairs

If any damage is found during the inspections required by this AD, before further flight, replace or repair the pressure bulkhead composite panels in accordance with FAA-approved procedures.

(i) Special Flight Permit

A special flight permit may be issued per 14 CFR 21.197 and 21.199 to operate the airplane to a facility to perform the inspection required by paragraph (g) of this AD. If damage is found during the inspection required by paragraph (g) of this AD, a special flight permit may be issued per 14 CFR 21.197 and 21.199 to operate the airplane to a location for repair, provided the aircraft is unpressurized.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Atlanta ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in paragraph (k)(1) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(3) For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (j)(3)(i) and (ii) of this AD apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(k) Related Information

(1) For more information about this AD, contact William O. Herderich, Aerospace Engineer, Atlanta ACO Branch, FAA, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474-5547; fax: (404) 474-5605; email: william.o.herderich@faa.gov.

(2) For service information identified in this AD, contact Gulfstream Aerospace Corporation, P.O. Box 2206, Savannah, Georgia 31402-2206; telephone: (800) 810-4853; fax 912-965-3520; email: pubs@gulfstream.com; internet: http://www.gulfstream.com/product_support/technical_pubs/pubs/index.htm. You may view this service information at the FAA, Policy and Innovation Division, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Issued in Kansas City, Missouri, on July 20, 2018.

Pat Mullen,

Aircraft Certification Service, Acting Deputy Director, Policy & Innovation Division, AIR-601.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 71**

[Docket No. FAA-2018-0370; Airspace Docket No. 18-AGL-11]

RIN 2120-AA66

Proposed Amendment of Class E Airspace; Wooster, OH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend the Class E airspace extending upward from 700 feet above the surface at Wayne County Airport, Wooster, OH. The FAA is proposing this action as a result of an airspace review caused by the decommissioning of the Tiverton VHF omnidirectional range (VOR) navigation aid as part of the VOR Minimum Operational Network (MON) Program. The geographic coordinates of the airport would also be updated to coincide with the FAA's aeronautical database.

DATES: Comments must be received on or before September 10, 2018.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590; telephone (202) 366-9826, or (800) 647-5527. You must identify FAA Docket No. FAA-2018-0370; Airspace Docket No. 18-AGL-11, at the beginning of your comments. You may also submit comments through the internet at <http://www.regulations.gov>. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

FAA Order 7400.11B, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at http://www.faa.gov/air_traffic/publications/. For further information, you can contact the Airspace Policy Group, Federal Aviation

Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11B at NARA, call (202) 741-6030, or go to <http://www.archives.gov/federal-register/cfr/ibr-locations.html>.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

FOR FURTHER INFORMATION CONTACT: Jeffrey Claypool, Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222-5711.

SUPPLEMENTARY INFORMATION:**Authority for This Rulemaking**

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would amend Class E airspace extending upward from 700 feet above the surface at Wayne County Airport, Wooster, OH, to support instrument flight rule operations at this airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped

postcard on which the following statement is made: "Comments to Docket No. FAA-2018-0370/Airspace Docket No. 18-AGL-11." The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at <http://www.regulations.gov>. Recently published rulemaking documents can also be accessed through the FAA's web page at http://www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the **ADDRESSES** section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Federal Aviation Administration, Air Traffic Organization, Central Service Center, Operations Support Group, 10101 Hillwood Parkway, Fort Worth, TX 76177.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017. FAA Order 7400.11B is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11B lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 by amending the Class E airspace extending upward from 700 feet above the surface at Wayne County Airport, Wooster, OH, by removing the extension to the east associated with the Smith non-directional radio beacon. The geographic coordinates of the airport would also be updated to coincide with the FAA's aeronautical database.

Exclusionary language would be removed as it is no longer required. Also, the name of the city associated with the airport in the airspace description would be removed to comply with a change to FAA Order 7400.2L, Procedures for Handling Airspace Matters.

This action is necessary due to an airspace review caused by the decommissioning of the Tiverton VOR as part of the VOR MON Program.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.11B, dated August 3, 2017, and effective September 15, 2017, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures" prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959-1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11B, Airspace Designations and Reporting Points, dated August 3, 2017, and effective September 15, 2017, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL OH E5 Wooster, OH [Amended]

Wayne County Airport, OH
(Lat. 40°52'29" N, long. 81°53'18" W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Wayne County Airport.

Issued in Fort Worth, Texas, on July 16, 2018.

Walter Tweedy,

*Acting Manager, Operations Support Group,
ATO Central Service Center.*

BILLING CODE 4910-13-P

DEPARTMENT OF EDUCATION

34 CFR Chapter II

[Docket ID ED-2018-OII-0062]

RIN 1855-AA14

Proposed Priorities, Requirements, Definitions, and Selection Criteria—Expanding Opportunity Through Quality Charter Schools Program; Grants to Charter Management Organizations for the Replication and Expansion of High-Quality Charter Schools

AGENCY: Office of Innovation and Improvement, Department of Education.

ACTION: Proposed priorities, requirements, definitions, and selection criteria.

SUMMARY: The Acting Assistant Deputy Secretary for Innovation and Improvement proposes priorities, requirements, definitions, and selection criteria for Grants to Charter Management Organizations for the Replication and Expansion of High-Quality Charter Schools (CMO grants) under the Expanding Opportunity

Through Quality Charter Schools Program (CSP), Catalog of Federal Domestic Assistance (CFDA) number 84.282M. The Acting Assistant Deputy Secretary for Innovation and Improvement may use one or more of these priorities, requirements, definitions, and selection criteria for competitions in fiscal year (FY) 2019 and later years. We take this action to support the replication and expansion of high-quality charter schools by charter management organizations (CMOs) throughout the Nation, particularly those that serve Educationally Disadvantaged Students,¹ such as students who are Individuals from Low-income Families, and students who traditionally have been underserved by charter schools, such as students who are Indians and students in Rural Communities.

DATES: We must receive your comments on or before August 27, 2018.

ADDRESSES: Submit your comments through the Federal eRulemaking Portal or via postal mail, commercial delivery, or hand delivery. We will not accept comments submitted by fax or by email or those submitted after the comment period. To ensure that we do not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

- *Federal eRulemaking Portal:* Go to www.regulations.gov to submit your comments electronically. Information on using Regulations.gov, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under "Help."

- *Postal Mail, Commercial Delivery, or Hand Delivery:* If you mail or deliver your comments, address them to Allison Holte, U.S. Department of Education, 400 Maryland Avenue SW, Room 5W106, Washington, DC 20202-5970.

Privacy Note: The Department's policy is to make all comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at www.regulations.gov. Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

FOR FURTHER INFORMATION CONTACT:

Allison Holte, U.S. Department of Education, 400 Maryland Avenue SW, Room 5W106, Washington, DC 20202-5970. Telephone: (202) 205-7726. Email: charterschools@ed.gov.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

Executive Summary

Purpose of This Regulatory Action: The Acting Assistant Deputy Secretary for Innovation and Improvement proposes priorities, requirements, definitions, and selection criteria for CMO grants. The Acting Assistant Deputy Secretary for Innovation and Improvement may use one or more of these priorities, requirements, definitions, and selection criteria for future competitions, following publication of a notice of final priorities, requirements, definitions, and selection criteria in the **Federal Register**. We take this action in order to support the effective and efficient use of CSP funds in the replication and expansion of high-quality charter schools throughout the Nation, particularly those that serve Educationally Disadvantaged Students, such as students who are Individuals from Low-income Families, and students who traditionally have been underserved by charter schools, such as students who are Indians and students in Rural Communities.

Summary of the Major Provisions of This Regulatory Action: The Acting Assistant Deputy Secretary for Innovation and Improvement proposes this regulatory action to achieve two main goals.

First, we seek to continue to use funds under this program to support high-quality applications from highly qualified applicants. To that end, this document includes proposed priorities, requirements, definitions, and selection criteria that would encourage or require applicants to describe, for example: Past successes working with Academically Poor-performing Public Schools; experience operating or managing multiple charter schools; plans to expand their reach into new and diverse communities; logical connections between their proposed projects and intended outcomes for the students they propose to serve; and plans to evaluate the extent to which their proposed projects, if funded, yield intended outcomes.

Second, these proposed priorities, requirements, definitions, and selection criteria are designed to increase the likelihood that CMO grants support expanded high-quality educational opportunities for Educationally Disadvantaged Students, including students who are Individuals from Low-

income Families, children with disabilities, and English learners, as well as students who traditionally have been underserved by charter schools, such as students who are Indians and students in Rural Communities. Specifically, we propose priorities for applicants that would: Replicate or expand high-quality charter schools with an intentional focus on recruiting students from racially and socioeconomically diverse backgrounds, and maintaining racially and socially diverse student bodies; demonstrate that a meaningful proportion of the students served by the applicant are Individuals from Low-income Families; and replicate or expand high-quality charter schools that serve high school students, students in Rural Communities, or students who are Indians. Further, we propose requirements for CMO applicants to describe how the schools they intend to replicate or expand would recruit and enroll Educationally Disadvantaged Students and support such students in mastering State academic standards.

In addition to the proposed priorities, requirements, definitions, and selection criteria, we include in an Appendix the priorities, key requirements, definitions, and selection criteria from the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (ESEA), and Federal regulations that are relevant to the CMO program and to the proposed priorities, requirements, definitions, and selection criteria. The priorities, requirements, definitions, and selection criteria in the Appendix are included for reference.

Costs and Benefits: The Department believes that the benefits of this regulatory action outweigh any associated costs, which we believe would be minimal. While this action would impose cost-bearing requirements on participating CMOs, we expect that CMO applicants would include requests for funds to cover such costs in their proposed project budgets. We believe this regulatory action would strengthen accountability for the use of Federal funds by helping to ensure that the Department awards CSP grants to CMOs that are most capable of expanding the number of high-quality charter schools available to our Nation's students. Please refer to the *Regulatory Impact Analysis* in this document for a more detailed discussion of costs and benefits.

Invitation to Comment: We invite you to submit comments regarding the proposed priorities, requirements, definitions, and selection criteria. To ensure that your comments have

¹ Throughout this document, terms for which we are proposing definitions are denoted by initial capitals.

maximum effect in developing the notice of final priorities, requirements, definitions, and selection criteria, we urge you to identify clearly the proposed priority, requirement, definition, or selection criterion that each comment addresses.

We invite you to assist us in complying with the specific requirements of Executive Orders 12866, 13563, and 13771 and their overall requirement of reducing regulatory burden that might result from these proposed priorities, requirements, definitions, and selection criteria. Please let us know of any further ways we could reduce potential costs or increase potential benefits while preserving the effective and efficient administration of this program.

During and after the comment period, you may inspect all public comments about the proposed priorities, requirements, definitions, and selection criteria in 400 Maryland Avenue SW, Room 4W228, Washington, DC, between the hours of 8:30 a.m. and 4:00 p.m., Washington, DC time, Monday through Friday of each week except Federal holidays.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request, we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for the proposed priorities, requirements, definitions, and selection criteria. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Purpose of Program: The major purposes of the CSP are to: Expand opportunities for all students, particularly students facing educational disadvantages and students who traditionally have been underserved by charter schools, to attend high-quality charter schools and meet challenging State academic standards; provide financial assistance for the planning, program design, and initial implementation of public charter schools; increase the number of high-quality charter schools available to students across the United States; evaluate the impact of charter schools on student achievement, families, and communities; share best practices between charter schools and other public schools; encourage States to provide facilities support to charter schools; and support efforts to strengthen the charter school authorizing process. Through the CMO

grant program, the Department provides funds to CMOs on a competitive basis to enable them to replicate or expand one or more high-quality charter schools. More specifically, grant funds may be used to expand the enrollment of one or more existing high-quality charter schools, or to open one or more high-quality charter schools by replicating an existing high-quality charter school model.

Program Authority: Section 4305(b) of the ESEA.

Proposed Priorities:

This document contains seven proposed priorities.

Proposed Priority 1—Promoting Diversity.

Background: The CSP authorizing statute includes a priority under the CMO grant program for eligible entities that plan to operate or manage high-quality charter schools with racially and socioeconomically diverse student bodies. The proposed priority is based on the statutory priority, but would specify that the schools must have an intentional focus on racial and socioeconomic diversity. Accordingly, the proposed priority would help ensure that the Department targets for funding those CMOs taking active steps to promote racial and economic diversity in their schools, which we believe is consistent with the intent of the statutory priority.

A similar priority was included as a competitive preference priority in the FY 2017 notice inviting applications for this program (82 FR 4322) (FY 2017 NIA).

Proposed Priority: Under this priority, applicants must propose to replicate or expand high-quality charter schools that have an intentional focus on recruiting students from racially and socioeconomically diverse backgrounds and maintaining racially and socioeconomically diverse student bodies.

Proposed Priority 2—School Improvement through Restart Efforts.

Background: The CSP authorizing statute includes a priority under the CMO grant program for eligible entities that demonstrate success in working with schools identified by the State for comprehensive support and improvement under section 1111(c)(4)(D)(i) of the ESEA. States must identify schools for comprehensive support and improvement at the beginning of the 2018–19 school year. This proposed priority incorporates the statutory priority but, in order to meet the priority, the applicant also would be required to use CMO grant funds to support school improvement efforts by

restarting an Academically Poor-performing Public School. We believe that the restart model (*i.e.*, reopening a low-performing traditional public school under the management of a charter school developer or CMO, or reopening a low-performing public charter school under the management of a different charter school developer or CMO) holds great promise as a school improvement strategy, but data suggest that it has been under-utilized thus far.² Accordingly, the proposed priority is intended to help increase the frequency of implementation of the restart model. The proposed priority also would allow applicants to demonstrate past success through work with persistently-lowest achieving schools or priority schools (*i.e.*, schools identified for interventions under the former School Improvement Grant program or in States that exercised “ESEA flexibility,” respectively, under the Elementary and Secondary Education Act of 1965, as amended by the No Child Left Behind Act of 2001).

In future CMO competitions that include this priority, we would encourage applicants to review CSP technical assistance materials pertaining to how an applicant may design an admissions lottery for an Academically Poor-performing Public School that the applicant is proposing to restart. Under the most recent version of the CSP nonregulatory guidance, for example, a charter school receiving CSP funds could, if permissible under applicable State law, exempt from its lottery students who are enrolled in the Academically Poor-performing Public School at the time it is restarted.

A similar priority was included as a competitive preference priority in the FY 2017 NIA.

Proposed Priority: Under this priority, the Secretary considers the extent to which applications—

(a) Demonstrate past success working with one or more Academically Poor-performing Public Schools or schools that previously were designated as persistently lowest-achieving schools or priority schools under the former School Improvement Grant program or in States that exercised ESEA flexibility, respectively, under the ESEA, as amended by NCLB; and

(b) Propose to use grant funds under this program to restart one or more Academically Poor-performing Public

² Hurlburt, S., Therriault, S.B., and Le Floch, K.C. (2012). School Improvement Grants: Analyses of State Applications and Eligible and Awarded Schools (NCEE 2012–4060). Washington, DC: National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences, U.S. Department of Education.

Schools as charter schools during the project period by—

(i) Replicating one or more high-quality charter schools based on a successful charter school model for which the applicant has provided evidence of success; and

(ii) Targeting a demographically similar student population in the replicated charter schools as was served by the Academically Poor-performing Public Schools.

Proposed Priority 3—High School Students.

Background: Section 4305(b)(5)(C) of the ESEA authorizes the Secretary to give priority to applicants that propose to expand or replicate high-quality charter schools that serve high school students. In addition, section 4310(2)(M) of the ESEA authorizes charter schools that serve postsecondary students to receive CSP funds. The proposed priority incorporates the language of the statutory priority but, in order to meet the priority, applicants also would be required to replicate or expand charter high schools that offer programs and activities designed to prepare high school students for enrollment in a two- or four-year institution of higher education and, drawing from the authority provided in section 4310(2)(M), support such students after high school graduation in persisting in college and attaining degrees. The Department believes the proposed priority would complement broader efforts to promote a culture of lifelong learning and increase postsecondary participation, attendance, persistence, and degree attainment among our Nation's high school graduates.

Proposed Priority: Under this priority, applicants must propose to—

(i) Expand or replicate high-quality charter schools to serve high school students;

(ii) Prepare students in those schools for enrollment in a two- or four-year institution of higher education through programs and activities such as, but not limited to, accelerated learning programs (including Advanced Placement and International Baccalaureate courses and programs, dual or concurrent enrollment programs, and early college high schools), college counseling, career counseling, internships, work-based learning programs (such as apprenticeships), assisting students in the college admissions and financial aid application processes, and preparing students to take standardized college admissions tests;

(iii) Provide support for students who graduate from those schools and enroll

in a two- or four-year institution of higher education in persisting in, and attaining a degree from, such institutions, through programs and activities such as, but not limited to, mentorships, ongoing assistance with the financial aid application process, and establishing or strengthening peer support systems for such students attending the same institution; and

(iv) Propose one or more project-specific performance measures, including aligned leading indicators or other interim milestones, that will provide valid and reliable information about the applicant's progress in preparing students for enrolling in an institution of higher education and in supporting those students in persisting in and attaining a degree from such institutions. An applicant addressing this priority and receiving a grant under this program must provide data that are responsive to the measure(s), including performance targets, in its annual performance reports to the Department.

Proposed Priority 4—Low-Income Demographic.

Background: The proposed priority is for applicants with experience serving concentrations of students who are Individuals from Low-income Families and is intended to support efforts to increase the number of high-quality educational options available to such students, particularly in the Nation's high-poverty areas. We propose three subparts to this proposed priority, each of which would require that the schools the applicant operates or manages serve a specific minimum percentage of students who are Individuals from Low-income Families over the course of the CMO grant project period. The Secretary would have flexibility to choose one or more of the subparts of this priority in a given competition. We believe such flexibility is necessary to enable the Secretary to accommodate the range of eligible applicants and schools that may need support in a given year. The Department has included a similar priority in prior CMO competitions.

The Department expects that the charter schools proposed to be replicated or expanded by an applicant meeting this proposed priority would serve, for the duration of the grant period, a percentage of students who are Individuals from Low-income Families that is comparable to the minimum percentage of such students established under the priority for a given year.

Proposed Priority: Under this priority, applicants must demonstrate one of the following—

(i) That at least 40 percent of the students across all of the charter schools

the applicant operates or manages are Individuals from Low-income Families;

(ii) That at least 50 percent of the students across all of the charter schools the applicant operates or manages are Individuals from Low-income Families; or

(iii) That at least 60 percent of the students across all of the charter schools the applicant operates or manages are Individuals from Low-income Families.

Proposed Priority 5—Number of Charter Schools Operated or Managed by the Eligible Applicant.

Background: We propose this priority to enable the Department to distinguish applicants based on the number of charter schools they currently operate or manage. We propose three subparts for this priority, each of which would require that the applicant currently operate or manage a different number of schools. The Secretary would have the flexibility to choose one or more of the subparts of this priority in a given competition. This priority would give the Department flexibility to respond to changing funding needs in the charter school sector by, for example, targeting support toward smaller CMOs (*i.e.*, CMOs that currently operate or manage no more than five charter schools) as they begin to expand, or toward larger, more established CMOs that seek to serve new communities. In addition, given that the CSP statute, as reauthorized under the ESEA, now also allows State entities to award subgrants for the replication and expansion of high-quality charter schools, this priority would enable the Department to focus its grant-making, as appropriate, based on new and evolving support for the replication and expansion of charter schools at the State level.

Proposed Priority: Under this priority, applicants must demonstrate one of the following—

(i) That they currently operate or manage two to five charter schools;

(ii) That they currently operate or manage six to 20 charter schools; or

(iii) That they currently operate or manage 21 or more charter schools.

Proposed Priority 6—Geographic Location of Charter Schools Proposed to Be Replicated or Expanded.

Background: We propose this priority to enable the Department to provide incentives for applicants to propose to replicate or expand high-quality charter schools in Rural Communities. There is too often a relative dearth of high-quality educational options for students in Rural Communities, and our experience implementing this and other discretionary grant programs has taught us that these communities often face unique obstacles to educational success.

This proposed priority would allow the Department flexibility to provide an incentive for applicants proposing to replicate or expand high-quality charter schools in Rural Communities, including by evaluating such applications separately from applications proposing to replicate or expand high-quality charter schools in non-rural communities, thereby allowing for an “apples-to-apples” comparison. Accordingly, this proposed priority would help ensure that students in Rural Communities have access to a range of educational options similar to that available to their peers in suburban and urban areas, and from which parents can select an option that best meets their child’s needs.

Proposed Priority: Under this priority, applicants must propose to replicate or expand one or more high-quality charter schools in a:

- (i) Rural Community; or
- (ii) Community that is not a Rural Community.

Proposed Priority 7—Replicating or Expanding High-quality Charter Schools to Serve Students who are Indians.

Background: We propose this priority to enable the Department to provide an incentive for applicants that propose to replicate or expand high-quality charter schools by conducting targeted outreach and recruitment in order to serve a High Proportion of students who are Indians. We propose to define “High Proportion” in a way that would enable the Department to determine whether a replicated or expanded charter school serves a High Proportion of students who are Indians on a case-by-case basis, taking into consideration the unique factual circumstances of that school.

In order to meet the priority, an applicant would be required to provide a letter of support from one or more Indian Tribes or Indian Organizations located within the area to be served by the replicated or expanded charter school, and to demonstrate a commitment to meaningfully collaborate with the Indian Tribes or Indian Organizations in a timely, active, and ongoing manner. In addition, the applicant would have to demonstrate that the replicated or expanded charter school’s mission and educational program will address the unique educational needs of students who are Indians, and that such school’s governing board will have a substantial percentage of members who are members of Indian Tribes or Indian Organizations located within the area to be served by the charter school.

Priority: Under this priority, applicants must—

(i) Propose to replicate or expand one or more high-quality charter schools that—

(I) Utilize targeted outreach and recruitment in order to serve a High Proportion of students who are Indians;

(II) Have a mission and academic program that will address the unique educational needs of students who are Indians, including through the use of instructional programs and teaching methods that reflect and preserve Indian language, culture, and history; and

(III) Have a governing board with a substantial percentage of members who are members of Indian Tribes or Indian Organizations located within the area to be served by the replicated or expanded charter school;

(ii) Submit a letter of support, from at least one Indian Tribe or Indian Organization located within the area to be served by the replicated or expanded charter school; and

(iii) Demonstrate a commitment to meaningfully collaborate with the Indian Tribe(s) or Indian Organization(s) from which the applicant has received a letter of support in a timely, active, and ongoing manner with respect to the development and implementation of the educational program at the charter school.

Types of Priorities:

When inviting applications for a competition using one or more priorities, we designate the type of each priority as absolute, competitive preference, or invitational through a notice in the **Federal Register**. The effect of each type of priority follows:

Absolute priority: Under an absolute priority, we consider only applications that meet the priority (34 CFR 75.105(c)(3)).

Competitive preference priority: Under a competitive preference priority, we give competitive preference to an application by (1) awarding additional points, depending on the extent to which the application meets the priority (34 CFR 75.105(c)(2)(i)); or (2) selecting an application that meets the priority over an application of comparable merit that does not meet the priority (34 CFR 75.105(c)(2)(ii)).

Invitational priority: Under an invitational priority, we are particularly interested in applications that meet the priority. However, we do not give an application that meets the priority a preference over other applications (34 CFR 75.105(c)(1)).

Proposed Requirements:

Background: The ESEA includes several requirements for applications submitted under this program. We have listed the statutory application requirements in the Appendix for

reference. In addition to the specific statutory requirements, section 4305(c) of the ESEA requires grants awarded to CMOs to have the “same terms and conditions as grants awarded to State entities under section 4303.” We propose some requirements for this program that apply to State entity grants under section 4303(f). We have included in the Appendix to this document other requirements in section 4303(f) that we intend to apply to CMO grants but that do not require rulemaking. In applying the latter requirements to CMO grants, references to “State entity” and “State entity program” must be read as references to “charter management organization” and “grant award,” respectively.

In general, the Department believes, based on past experience administering this program, that these proposed requirements are necessary for the proper consideration of applications for CMO grants and would increase the likelihood of success of applicants’ proposed projects, thereby contributing to the efficient use of taxpayer dollars in expanding the high-quality educational options available to our Nation’s students. In accordance with section 4305(c), these proposed requirements would not preclude the Department from applying other terms and conditions applicable to State entity grants to CMO grants in FY 2019 or future years.

Proposed Requirements: The Acting Assistant Deputy Secretary for Innovation and Improvement proposes the following requirements for this program. We would apply one or more of these requirements in any year in which this program is in effect.

Applicants for funds under this program must meet one or more of the following requirements—

(a) Demonstrate that the applicant currently operates or manages more than one charter school. For purposes of this program, multiple charter schools are considered to be separate schools if each school—

(i) Meets each element of the definition of “charter school” under section 4310(2) of the ESEA; and

(ii) Is treated as a separate school by its authorized public chartering agency and the State in which the charter school is located, including for purposes of accountability and reporting under title I, part A of the ESEA.

(b) Provide information regarding any compliance issues and how they were resolved, for any charter schools operated or managed by the applicant that have—

(i) Closed;

(ii) Had their charter(s) revoked due to problems with statutory or regulatory compliance, including compliance with sections 4310(2)(G) and (J) of the ESEA; or

(iii) Had their affiliation with the applicant revoked or terminated, including through voluntary disaffiliation.

(c) Provide a complete logic model (as defined in 34 CFR 77.1) for the grant project. The logic model must include the applicant's objectives for replicating or expanding one or more high-quality charter schools with funding under this program, including the number of high-quality charter schools the applicant proposes to replicate or expand.

(d) If the applicant currently operates, or is proposing to replicate or expand, a single-sex charter school or coeducational charter school that provides a single-sex class or extracurricular activity (collectively referred to as a "single-sex educational program"), demonstrate that the existing or proposed single-sex educational program is in compliance with Title IX of the Education Amendments of 1972 (20 U.S.C. 1681, *et seq.*) (Title IX) and its implementing regulations, including 34 CFR 106.34.

(e) Describe how the applicant currently operates or manages the high-quality charter schools for which it has presented evidence of success and how the proposed replicated or expanded charter schools will be operated or managed, including the legal relationship between the applicant and its schools. If a legal entity other than the applicant has entered or will enter into a performance contract with an authorized public chartering agency to operate one or more of the applicant's schools, the applicant must also describe its relationship with that entity.

(f) Describe how the applicant will solicit and consider input from parents and other members of the community on the implementation and operation of each replicated or expanded charter school, including in the area of school governance.

(g) Describe the lottery and enrollment procedures that will be used for each replicated or expanded charter school if more students apply for admission than can be accommodated, including how any proposed weighted lottery complies with section 4303(c)(3)(A) of the ESEA.

(h) Describe how the applicant will ensure that all eligible students with disabilities receive a free appropriate public education in accordance with part B of the Individuals with Disabilities Education Act.

(i) Describe how the proposed project will assist Educationally Disadvantaged Students in mastering challenging State academic standards.

(j) Provide a budget narrative, aligned with the activities, target grant project outputs, and outcomes described in the logic model, that outlines how Federal grant funds will be expended to carry out planned activities.

(k) Provide the applicant's most recent independently audited financial statements prepared in accordance with generally accepted accounting principles.

(l) Describe the applicant's policies and procedures to assist students enrolled in a charter school that closes or loses its charter to attend other high-quality schools.

(m) Provide—

(A) A request and justification for waivers of any Federal statutory or regulatory provisions that the eligible entity believes are necessary for the successful operation of the charter schools to be replicated or expanded; and

(B) A description of any State or local rules, generally applicable to public schools, that will be waived, or otherwise not apply to such schools.

Proposed Definitions:

The Acting Assistant Deputy Secretary for Innovation and Improvement proposes the following definitions for this program. We may apply one or more of these definitions in any year in which this program is in effect.

Background: In order to ensure common understanding of the proposed priorities, requirements, and selection criteria, we propose nine definitions of terms that are critical to the policy and statutory purposes of the CMO grant program. We propose these definitions in order to clarify expectations for eligible entities applying for CMO grants and to ensure that the review process for applications for CMO grants remains as transparent as possible. The proposed definition for Educationally Disadvantaged Students is based on section 1115(c)(2) of the ESEA, the proposed definition for Indian is taken from section 6151(3) of the ESEA, the proposed definition for Indian Organization is from 34 CFR 263.3, and the proposed definition for Indian Tribe is from section 6132(b)(2) of the ESEA.

Academically poor-performing public school means:

(a) A school identified by the State for comprehensive support and improvement under section 1111(c)(4)(D)(i) of the ESEA; or

(b) A public school otherwise identified by the State, or in the case of

a charter school, its authorized public chartering agency, as similarly academically poor-performing.

Educationally disadvantaged student means a student in one or more of the categories described in section 1115(c)(2) of the ESEA, which include children who are economically disadvantaged, students with disabilities, migrant students, English learners, neglected or delinquent students, homeless students, and students who are in foster care.

High proportion, when used to refer to students who are Indians, is a fact-specific, case-by-case determination based upon the unique circumstances of a particular charter school or proposed charter school. The Secretary considers "high proportion" to include a majority of students who are Indians. In addition, the Secretary may determine that less than a majority of students who are Indians constitutes a "high proportion" based on the unique circumstances of a particular charter school or proposed charter school, as described in the application for funds.

Indian means an individual who is—

(A) A member of an Indian tribe or band, as membership is defined by the tribe or band, including—

(i) Any tribe or band terminated since 1940; and

(ii) Any tribe or band recognized by the State in which the tribe or band resides;

(B) A descendant, in the first or second degree, of an individual described in subparagraph (A);

(C) Considered by the Secretary of the Interior to be an Indian for any purpose;

(D) An Eskimo, Aleut, or other Alaska Native; or

(E) A member of an organized Indian group that received a grant under the Indian Education Act of 1988 as in effect the day preceding the date of enactment of the Improving America's Schools Act of 1994.

Indian organization means an organization that—

(1) Is legally established—

(i) By tribal or inter-tribal charter or in accordance with State or tribal law; and

(ii) With appropriate constitution, by-laws, or articles of incorporation;

(2) Includes in its purposes the promotion of the education of Indians;

(3) Is controlled by a governing board, the majority of which is Indian;

(4) If located on an Indian reservation, operates with the sanction or by charter of the governing body of that reservation;

(5) Is neither an organization or subdivision of, nor under the direct control of, any institution of higher education; and

(6) Is not an agency of State or local government.

Indian tribe means a federally-recognized or a State-recognized tribe.

Individual from a low-income family means an individual who is determined by a State educational agency or local educational agency to be a child from a low-income family on the basis of (a) data used by the Secretary to determine allocations under section 1124 of the ESEA, (b) data on children eligible for free or reduced-price lunches under the Richard B. Russell National School Lunch Act, (c) data on children in families receiving assistance under part A of title IV of the Social Security Act, (d) data on children eligible to receive medical assistance under the Medicaid program under Title XIX of the Social Security Act, or (e) an alternate method that combines or extrapolates from the data in items (a) through (d) of this definition.

Rural community means a community that is served by a local educational agency that is eligible to apply for funds under the Small Rural School Achievement (SRSA) program or the Rural and Low-Income School (RLIS) program authorized under title V, part B of the ESEA. Applicants may determine whether a particular local educational agency is eligible for these programs by referring to information on the following Department websites. For the SRSA program: www2.ed.gov/programs/reapsrsa/eligible16/index.html. For the RLIS program: www2.ed.gov/programs/reaprlisp/eligibility.html.

Proposed Selection Criteria:

Background: The ESEA includes three selection criteria for the CMO grant program, which are included in the Appendix for reference. We propose a criterion that would expand upon those included in the authorizing statute, as well as three other criteria. Based on past experience implementing the CMO grant program, we believe that these additional criteria will be valuable tools for peer reviewers to evaluate the quality of CMO applications in future years.

Specifically, proposed selection criterion (a) "Quality of the Eligible Applicant" derives from the ESEA selection criteria for this program, under which the Department considers the degree to which an applicant has demonstrated success in increasing student academic achievement and whether charter schools operated or managed by the applicant have been closed or have encountered statutory or regulatory compliance issues. The proposed criterion would expand on the statutory criteria by examining the extent to which academic achievement

results for Educationally Disadvantaged Students attending an applicant's schools have exceeded State averages for such students in the State. Further, we propose to incorporate into this criterion language from the ESEA definition of "high-quality charter school" that would enable reviewers also to consider any significant issues that an applicant's charter schools have encountered in the areas of financial or operational management and student safety. The Department believes that these proposed selection factors would align with the intent of the authorizing statute and would bolster our ability to select high-quality CMO applicants.

Proposed selection criterion (b) "Contribution in assisting Educationally Disadvantaged Students" would focus on the contribution the proposed project would make in expanding educational opportunities for Educationally Disadvantaged Students and enabling those students to meet challenging State academic standards. This proposed criterion would allow the Department to assess the extent to which each proposed project aligns with a major statutory purpose of the CSP: To expand opportunities for Educationally Disadvantaged Students. This criterion would encourage applicants to discuss (1) their current capacity to serve Educationally Disadvantaged Students, including students with disabilities and English learners, and to compare that capacity to that of surrounding public schools, and (2) their plans for replicating or expanding high-quality charter schools that will recruit and enroll Educationally Disadvantaged Students.

Proposed selection criterion (c) "Quality of the evaluation plan for the proposed project" would examine how applicants would evaluate their proposed projects. It is crucial that the Department invest its limited discretionary funding in projects that are based on a reasoned theory and that are likely to yield information that can be used to continue to expand high-quality educational options for students. This criterion would allow the Department to assess the extent to which each CMO applicant: Has based its proposed project on a logic model (as defined in 34 CFR 77.1) that links the planned inputs and outputs to clearly defined intended outcomes of the project; will use objective performance measures to ensure that the project remains on track to meet stated objectives; and will be able to produce qualitative and quantitative data by the end of the grant period.

Finally, proposed selection criterion (d) "Quality of the management plan

and personnel" would allow applicants to highlight the management plan for their proposed project, the qualifications of key project personnel, and the potential for sustaining the charter schools included in the proposed project after the grant has expired. While similar selection factors exist in the general selection criteria in 34 CFR 75.210, our intent for this proposed selection criterion is to focus on the extent to which the applicant could demonstrate its specific experience with, and proposed management plan for, replicating or expanding high-quality charter schools. We believe, based on past experience implementing this program, that the proposed criterion is appropriate to ascertain the likelihood of an applicant's success.

Proposed Selection Criteria: The Acting Assistant Deputy Secretary for Innovation and Improvement proposes the following selection criteria for evaluating an application under this program. We may apply one or more of these criteria in any year in which this program is in effect. In the NIA, we will announce the maximum possible points assigned to each criterion.

The Secretary will select eligible entities to receive grants under this program on the basis of the quality of such applications, after taking into consideration one or more of the following selection criteria:

(a) *Quality of the eligible applicant.* In determining the quality of the eligible applicant, the Secretary considers one or more of the following factors:

(i) The extent to which the academic achievement results (including annual student performance on statewide assessments and annual student attendance and retention rates, and where applicable and available, student academic growth, high school graduation rates, college attendance rates, and college persistence rates) for Educationally Disadvantaged Students served by the charter schools operated or managed by the applicant have exceeded the average academic achievement results for such students in the State.

(ii) The extent to which one or more charter schools operated or managed by the applicant have closed; have had a charter revoked due to noncompliance with statutory or regulatory requirements; or have had their affiliation with the applicant revoked or terminated, including through voluntary disaffiliation.

(iii) The extent to which one or more charter schools operated or managed by the applicant have had any significant issues in the area of financial or

operational management or student safety or have otherwise experienced significant problems with statutory or regulatory compliance that could lead to revocation of the school's charter.

(b) *Contribution in assisting Educationally Disadvantaged Students.*

The significance of the contribution the proposed project will make in expanding educational opportunities for Educationally Disadvantaged Students and enabling those students to meet challenging State academic standards. In determining the significance of the contribution the proposed project will make, the Secretary considers one or more of the following factors:

(i) The extent to which charter schools currently operated or managed by the applicant serve Educationally Disadvantaged Students, including students with disabilities and English learners, at rates comparable to surrounding public schools or, in the case of virtual charter schools, at rates comparable to public schools in the State.

(ii) The quality of the plan to ensure that the charter schools the applicant proposes to replicate or expand will recruit and enroll Educationally Disadvantaged Students.

(c) *Quality of the evaluation plan for the proposed project.*

In determining the quality of the evaluation plan for the proposed project, the Secretary considers the extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the proposed project, as articulated in the applicant's logic model (as defined in 34 CFR 77.1), and that will produce quantitative and qualitative data by the end of the grant period.

(d) *Quality of the management plan.*

In determining the quality of the applicant's management plan, the Secretary considers the ability of the applicant to sustain the operation of the replicated or expanded charter schools after the grant has ended, as demonstrated by the multi-year financial and operating model required under section 4305(b)(3)(B)(iii) of the ESEA.

Final Priorities, Requirements, Definitions, and Selection Criteria:

We will announce the final priorities, requirements, definitions, and selection criteria in a document in the **Federal Register**. We will determine the final priorities, requirements, definitions, and selection criteria after considering public comments and other information available to the Department. This document does not preclude us from proposing additional priorities,

requirements, definitions, or selection criteria, subject to meeting applicable rulemaking requirements.

Note: This document does *not* solicit applications. In any year in which we choose to use one or more of these priorities, requirements, definitions, and selection criteria, we invite applications through a notice in the **Federal Register**.

Executive Orders 12866, 13563, and 13771

Regulatory Impact Analysis

Under Executive Order 12866, the Secretary must determine whether this regulatory action is "significant" and, therefore, subject to the requirements of the Executive order and subject to review by the Office of Management and Budget (OMB). Section 3(f) of Executive Order 12866 defines a "significant regulatory action" as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of \$100 million or more, or adversely affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities in a material way (also referred to as an "economically significant" rule);

(2) Create serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles stated in the Executive order.

This proposed regulatory action is not a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866.

We have also reviewed this proposed regulatory action under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those

approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency "to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible." The Office of Information and Regulatory Affairs of OMB has emphasized that these techniques may include "identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes."

We are issuing these proposed priorities, requirements, definitions, and selection criteria only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that would maximize net benefits. Based on the analysis that follows, the Department believes that this regulatory action is consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and Tribal governments in the exercise of their governmental functions.

In accordance with both Executive orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs are those resulting from statutory requirements and those we have determined as necessary for administering the Department's programs and activities.

Discussion of Potential Costs and Benefits

The Department believes that this regulatory action would not impose significant costs on eligible entities, whose participation in this program is voluntary. While this action would impose some requirements on participating CMOs that are cost-bearing, the Department expects that applicants for this program would include in their proposed budgets a request for funds to support compliance

with such cost-bearing requirements. Therefore, costs associated with meeting these requirements are, in the Department's estimation, minimal.

This regulatory action would strengthen accountability for the use of Federal funds by helping to ensure that the Department selects for CSP grants the CMOs that are most capable of expanding the number of high-quality charter schools available to our Nation's students, consistent with a major purpose of the CSP as described in section 4301(3) of the ESEA. The Department believes that these benefits to the Federal government and to SEAs outweigh the costs associated with this action.

Regulatory Alternatives Considered

The Department believes that the proposed priorities, requirements,

definitions, and selection criteria are needed to administer the program effectively. As an alternative to promulgating the proposed selection criteria, the Department could choose from among the selection criteria authorized for CSP grants to CMOs in section 4305(b) of the ESEA (20 U.S.C. 7221c) and the general selection criteria in 34 CFR 75.210. We do not believe that these criteria provide a sufficient basis on which to evaluate the quality of applications. In particular, the criteria would not sufficiently enable the Department to assess an applicant's past performance with respect to the operation of high-quality charter schools or with respect to compliance issues that the applicant has encountered.

We note that several of the proposed priorities, requirements, definitions, and

selection criteria are based on priorities, requirements, definitions, selection criteria, and other provisions in the authorizing statute for this program.

Accounting Statement

As required by OMB Circular A-4 (available at www.whitehouse.gov/sites/default/files/omb/assets/omb/circulars/a004/a-4.pdf), in the following table we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this regulatory action. This table provides our best estimate of the changes in annual monetized transfers as a result of this regulatory action. Expenditures are classified as transfers from the Federal Government to SEAs.

ACCOUNTING STATEMENT CLASSIFICATION OF ESTIMATED EXPENDITURES
[In millions]

Category	Transfers
Annualized Monetized Transfers	\$90.
From Whom To Whom?	From the Federal Government to CMOs.

Under Executive Order 13771, for each new regulation that the Department proposes for notice and comment or otherwise promulgates that is a significant regulatory action under Executive Order 12866 and that imposes total costs greater than zero, it must identify two deregulatory actions. For Fiscal Year 2018, any new incremental costs associated with a new regulation must be fully offset by the elimination of existing costs through deregulatory actions. However, Executive Order 13771 does not apply to "transfer rules" that cause only income transfers between taxpayers and program beneficiaries, such as those regarding discretionary grant programs. These proposed priorities, requirements, definitions, and selection criteria would be utilized in connection with a discretionary grant program and, therefore, Executive Order 13771 is not applicable.

Paperwork Reduction Act of 1995

The proposed priorities, requirements, and selection criteria contain information collection requirements that are approved by OMB under OMB control number 1894-0006; the proposed priorities, requirements, and selection criteria do not affect the currently approved data collection.

Intergovernmental Review: This program is subject to Executive Order 12372 and the regulations in 34 CFR

part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov.

Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Dated: July 23, 2018.

James C. Blew,
Acting Assistant Deputy Secretary for Innovation and Improvement.

Appendix

This Appendix includes priorities, requirements, definitions, and selection criteria from sections 4303(f), 4305(b), 4305(c), and 8101 of the ESEA and 34 CFR 77.1 for reference.

Priorities: The following priorities are from section 4305(b)(5) of the ESEA:

(5) Priority.—In awarding grants under this section, the Secretary shall give priority to eligible entities that—

(A) Plan to operate or manage high-quality charter schools with racially and socioeconomically diverse student bodies;

(B) Demonstrate success in working with schools identified by the State for comprehensive support and improvement under section 1111(c)(4)(D)(i);

(C) Propose to use funds—
(i) To expand high-quality charter schools to serve high school students; or

(ii) To replicate high-quality charter schools to serve high school students; or
(D) Propose to operate or manage high-quality charter schools that focus on dropout recovery and academic re-entry.

Requirements and Assurances: The following requirements and assurances are from sections 4303(f) and 4305(b)(3), respectively, of the ESEA. In accordance with section 4305(c), we include in this Appendix

key statutory provisions in section 4303(f) that apply to State entity grants that we intend to apply to CMO grants. In applying the requirements in section 4303(f) to CMO grants, references to “State entity” and “State entity program” must be read as references to “charter management organization” and “grant award,” respectively.

4303(f) Applications.—A State entity desiring to receive a grant under this section shall submit an application to the Secretary at such time and in such manner as the Secretary may require. The application shall include the following:

(1) Description of program.—A description of the State entity’s objectives in running a quality charter school program under this section and how the program will be carried out, including—

(A) A description of how the State entity will—

(x) Ensure that charter schools receiving funds under the State entity’s program meet the educational needs of their students, including children with disabilities and English learners; and

(xiii)(E) A description of how the State entity will ensure that each charter school receiving funds under the State entity’s program has considered and planned for the transportation needs of the school’s students.

(2) Assurances.—Assurances that—

(B) The State entity will support charter schools in meeting the educational needs of their students, as described in paragraph (1)(A)(x); and

(C) The State entity will ensure that each charter school receiving funds under the State entity’s program makes publicly available, consistent with the dissemination requirements of the annual State report card under section 1111(h), including on the website of the school, information to help parents make informed decisions about the education options available to their children, including—

(i) Information on the educational program;

(ii) Student support services;

(iii) Parent contract requirements (as applicable), including any financial obligations or fees;

(iv) Enrollment criteria (as applicable); and

(v) Annual performance and enrollment data for each of the subgroups of students, as defined in section 1111(c)(2), except that such disaggregation of performance and enrollment data shall not be required in a case in which the number of students in a group is insufficient to yield statically reliable information or the results would reveal personally identifiable information about an individual student.

4305(b)(3) Application Requirements.—An eligible entity desiring to receive a grant under this subsection shall submit an application to the Secretary at such time and in such manner as the Secretary may require. The application shall include the following:

(A) Existing Charter School Data.—For each charter school currently operated or managed by the eligible entity—

(i) Student assessment results for all students and for each subgroup of students described in section 1111(c)(2);

(ii) Attendance and student retention rates for the most recently completed school year

and, if applicable, the most recent available four-year adjusted cohort graduation rates and extended-year adjusted cohort graduation rates; and

(iii) Information on any significant compliance and management issues encountered within the last three school years by any school operated or managed by the eligible entity, including in the areas of student safety and finance.

(B) Descriptions.—A description of—

(i) The eligible entity’s objectives for implementing a high-quality charter school program with funding under this subsection, including a description of the proposed number of high-quality charter schools the eligible entity proposes to open as a result of the replication of a high-quality charter school or to expand with funding under this subsection;

(ii) The educational program that the eligible entity will implement in such charter schools, including—

(I) Information on how the program will enable all students to meet the challenging State academic standards;

(II) The grade levels or ages of students who will be served; and

(III) The instructional practices that will be used;

(iii) How the operation of such charter schools will be sustained after the grant under this subsection has ended, which shall include a multi-year financial and operating model for the eligible entity;

(iv) How the eligible entity will ensure that such charter schools will recruit and enroll students, including children with disabilities, English learners, and other educationally disadvantaged students; and

(v) Any request and justification for any waivers of Federal statutory or regulatory requirements that the eligible entity believes are necessary for the successful operation of such charter schools.

(C) Assurance.—An assurance that the eligible entity has sufficient procedures in effect to ensure timely closure of low-performing or financially mismanaged charter schools and clear plans and procedures in effect for the students in such schools to attend other high-quality schools.

Definitions: The following definitions are from the ESEA or Department regulations. The specific source of each definition is noted in parentheses following each definition.

Authorized public chartering agency means a State educational agency, local educational agency, or other public entity that has the authority pursuant to State law and approved by the Secretary to authorize or approve a charter school. (Section 4310(1) of the ESEA)

Charter school means a public school that—

(A) In accordance with a specific State statute authorizing the granting of charters to schools, is exempt from significant State or local rules that inhibit the flexible operation and management of public schools, but not from any rules relating to the other requirements of this paragraph;

(B) Is created by a developer as a public school, or is adapted by a developer from an existing public school, and is operated under public supervision and direction;

(C) Operates in pursuit of a specific set of educational objectives determined by the school’s developer and agreed to by the authorized public chartering agency;

(D) Provides a program of elementary or secondary education, or both;

(E) Is nonsectarian in its programs, admissions policies, employment practices, and all other operations, and is not affiliated with a sectarian school or religious institution;

(F) Does not charge tuition;

(G) Complies with the Age Discrimination Act of 1975, title VI of the Civil Rights Act of 1964, title IX of the Education Amendments of 1972, section 504 of the Rehabilitation Act of 1973, the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*), section 444 of the General Education Provisions Act (20 U.S.C. 1232g) (commonly referred to as the “Family Educational Rights and Privacy Act of 1974”), and part B of the Individuals with Disabilities Education Act;

(H) Is a school to which parents choose to send their children, and that—

(i) Admits students on the basis of a lottery, consistent with section 4303(c)(3)(A), if more students apply for admission than can be accommodated; or

(ii) In the case of a school that has an affiliated charter school (such as a school that is part of the same network of schools), automatically enrolls students who are enrolled in the immediate prior grade level of the affiliated charter school and, for any additional student openings or student openings created through regular attrition in student enrollment in the affiliated charter school and the enrolling school, admits students on the basis of a lottery as described in clause (i);

(I) Agrees to comply with the same Federal and State audit requirements as do other elementary schools and secondary schools in the State, unless such State audit requirements are waived by the State;

(J) Meets all applicable Federal, State, and local health and safety requirements;

(K) Operates in accordance with State law;

(L) Has a written performance contract with the authorized public chartering agency in the State that includes a description of how student performance will be measured in charter schools pursuant to State assessments that are required of other schools and pursuant to any other assessments mutually agreeable to the authorizing public chartering agency and the charter school; and

(M) May serve students in early childhood education programs or postsecondary students. (Section 4310(2) of the ESEA)

Charter management organization means a nonprofit organization that operates or manages a network of charter schools linked by centralized support, operations, and oversight. (Section 4310(3) of the ESEA)

Developer means an individual or group of individuals (including a public or private nonprofit organization), which may include teachers, administrators and other school staff, parents, or other members of the local community in which a charter school project will be carried out. (Section 4310(5) of the ESEA)

Dual or concurrent enrollment program means a program offered by a partnership

between at least one institution of higher education and at least one local educational agency through which a secondary school student who has not graduated from high school with a regular high school diploma is able to enroll in one or more postsecondary courses and earn postsecondary credit that—

(A) Is transferable to the institutions of higher education in the partnership; and
(B) Applies toward completion of a degree or recognized educational credential as described in the Higher Education Act of 1965 (20 U.S.C. 1001 *et seq.*). (Section 8101(15) of the ESEA)

Early college high school means a partnership between at least one local educational agency and at least one institution of higher education that allows participants to simultaneously complete requirements toward earning a regular high school diploma and earn not less than 12 credits that are transferable to the institutions of higher education in the partnership as part of an organized course of study toward a postsecondary degree or credential at no cost to the participant or participant's family. (Section 8101(17) of the ESEA)

Expand, when used with respect to a high-quality charter school, means to significantly increase enrollment or add one or more grades to the high-quality charter school. (Section 4310(7) of the ESEA)

High-quality charter school means a charter school that—

(a) Shows evidence of strong academic results, which may include strong student academic growth, as determined by a State;

(b) Has no significant issues in the areas of student safety, financial and operational management, or statutory or regulatory compliance;

(c) Has demonstrated success in significantly increasing student academic achievement, including graduation rates where applicable, for all students served by the charter school; and

(d) Has demonstrated success in increasing student academic achievement, including graduation rates where applicable, for each of the subgroups of students, as defined in section 1111(c)(2), except that such demonstration is not required in a case in which the number of students in a group is insufficient to yield statistically reliable information or the results would reveal personally identifiable information about an individual student. (Section 4310(8) of the ESEA)

Logic model (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.*, the active “ingredients” that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes. (34 CFR 77.1)

Replicate, when used with respect to a high-quality charter school, means to open a new charter school, or a new campus of a high-quality charter school, based on the educational model of an existing high-quality charter school, under an existing charter or an additional charter, if permitted or required by State law. (Section 4310(9) of the ESEA)

Selection Criteria: The following selection criteria are from section 4305(b)(4) of the ESEA.

(4) Selection Criteria.—The Secretary shall select eligible entities to receive grants under this subsection, on the basis of the quality of the applications submitted under paragraph (3), after taking into consideration such factors as—

(A) The degree to which the eligible entity has demonstrated success in increasing academic achievement for all students and for each of the subgroups of students described in section 1111(c)(2) attending the charter schools the eligible entity operates or manages;

(B) A determination that the eligible entity has not operated or managed a significant proportion of charter schools that—

(i) Have been closed;

(ii) Have had the school's charter revoked due to problems with statutory or regulatory compliance; or

(iii) Have had the school's affiliation with the eligible entity revoked or terminated, including through voluntary disaffiliation; and

(C) A determination that the eligible entity has not experienced significant problems with statutory or regulatory compliance that could lead to the revocation of a school's charter.

Terms and Conditions: The following terms and conditions are from section 4305(c) of the ESEA.

(c) Terms and Conditions.—Except as otherwise provided, grants awarded under paragraphs (1) and (2) of subsection (a) shall have the same terms and conditions as grants awarded to State entities under section 4303.

BILLING CODE 4000–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[EPA–HQ–SFUND–2008–0084; FRL–9981–38—Region 6]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Deletion of the Old Esco Manufacturing Superfund Site

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; notice of intent.

SUMMARY: The Environmental Protection Agency (EPA) Region 6 is issuing a Notice of Intent to Delete the Old Esco Manufacturing Superfund Site (Site) located in Greenville, Texas, from the National Priorities List (NPL) and requests public comments on this proposed action. The NPL, promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is

an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). The EPA and the State of Texas, through the Texas Commission on Environmental Quality, have determined that all appropriate response actions under CERCLA, have been completed. However, this deletion does not preclude future actions under Superfund.

DATES: Comments must be received by August 27, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–SFUND–2008–0084, by mail to Brian W. Mueller; U.S. Environmental Protection Agency, Region 6, Superfund Division (6SF–RL), 1445 Ross Avenue, Suite 1200; Dallas, Texas 75202–2733. Comments may also be submitted electronically or through hand delivery/courier by following the detailed instructions in the **ADDRESSES** section of the direct final rule located in the rules section of this issue of the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Brian W. Mueller, Remedial Project Manager, U.S. Environmental Protection Agency, Region 6, Superfund Division (6SF–RL), 1445 Ross Avenue, Suite 1200, Dallas, Texas 75202–2733, (214) 665–7167, email: mueller.brian@epa.gov.

SUPPLEMENTARY INFORMATION: In the “Rules and Regulations” section of this issue of the **Federal Register**, we are publishing a direct final Notice of Deletion of Old Esco Manufacturing Superfund Site without prior Notice of Intent to Delete because we view this as a noncontroversial revision and anticipate no adverse comment. We have explained our reasons for this deletion in the preamble to the direct final Notice of Deletion, and those reasons are incorporated herein. If we receive no adverse comment(s) on this deletion action, we will not take further action on this Notice of Intent to Delete. If we receive adverse comment(s), we will withdraw the direct final Notice of Deletion, and it will not take effect. We will, as appropriate, address all public comments in a subsequent final Notice of Deletion based on this Notice of Intent to Delete. We will not institute a second comment period on this Notice of Intent to Delete. Any parties interested in commenting must do so at this time.

For additional information, see the direct final Notice of Deletion which is located in the *Rules* section of this issue of the **Federal Register**.

[EPA–HQ–SFUND–2003–0010; FRL–9981–25–Region 5]

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List: Partial Deletion of the Peters Cartridge Factory Superfund Site

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; notification of intent.

SUMMARY: The Environmental Protection Agency (EPA) Region 5 is issuing a Notice of Intent for Partial Deletion of the Former Process Area (FPA) of the Peters Cartridge Factory Superfund Site (Peters Cartridge Site) located in Kings Mills, Ohio from the National Priorities List (NPL) and requests public comments on this proposed action. The NPL, promulgated pursuant to Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended, is an appendix of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). The EPA and the State of Ohio, through the Ohio Environmental Protection Agency (OEPA), have determined that all appropriate response actions at the FPA under CERCLA, other than maintenance, monitoring and five-year reviews, have been completed. However, this deletion does not preclude future actions under Superfund.

DATES: Comments must be received by August 27, 2018.

ADDRESSES: Submit your comments, identified by Docket ID no. EPA–HQ–SFUND–2003–0010, by mail to Randolph Cano, NPL Deletion Coordinator, U.S. Environmental Protection Agency Region 5 (SR–6)], 77 West Jackson Boulevard, Chicago, IL 60604. Comments may also be submitted electronically or through hand delivery/courier by following the detailed instructions in the **ADDRESSES** section of the direct final rule located in the “Rules and Regulations” section of this **Federal Register**.

FEDERAL COMMUNICATIONS COMMISSION**47 CFR Part 36**

[WC Docket No. 80–286; FCC 18–99]

Jurisdictional Separations and Referral to the Federal-State Joint Board

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Commission proposes to extend the freeze of jurisdictional separations category relationships and cost allocation factors for 15 years. The Commission also proposes to provide rate-of-return carriers who elected to freeze their category relationships a time limited opportunity to opt out of that freeze. The Commission invites comment on these proposals, on whether it should modify any other aspects of the separations freeze, and on whether it should alter the scope of its referral to the Federal State Joint Board on Jurisdictional Separations (Joint Board) regarding comprehensive separations reform.

DATES: Comments are due on or before August 27, 2018. Reply comments are due on or before September 10, 2018.

ADDRESSES: You may submit comments identified by WC Docket 80–286, by any of the following methods:

- *Federal Communications Commission’s Website:* <http://apps.fcc.gov/ecfs/>. Follow the instructions for submitting comments.
- *People with Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: FCC504@fcc.gov or phone: (202) 418–0530 or TTY: 888–835–5322.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Marvin Sacks, Wireline Competition Bureau, Pricing Policy Division at (202) 418–2017 or via email at marvin.sacks@fcc.gov.

SUPPLEMENTARY INFORMATION: This is summary of the Commission's Further Notice of Proposed Rulemaking (Further Notice), FCC 18–99, released July 18, 2018. A full-text version of the document can be obtained at the following internet address: <https://www.fcc.gov/document/fcc-proposes-extend-jurisdictional-separations-freeze>.

I. Background

A. The Jurisdictional Separations Process

1. Rate-of-return incumbent local exchange carriers (LECs) use their networks and other resources to provide both interstate and intrastate services. To help prevent the recovery of the same costs from both the interstate and intrastate jurisdictions, the Commission's rules require that rate-of-return incumbent LECs divide their costs and revenues between the respective jurisdictions. These "jurisdictional separations" rules were designed to ensure that rate-of-return incumbent LECs apportion the costs of their regulated services between the interstate or intrastate jurisdictions in a manner that reflects the relative use of their networks to provide interstate or intrastate services.

2. Jurisdictional separations is the third step in a four-step regulatory process. First, a rate-of-return carrier records its costs and revenues in various accounts using the Uniform System of Accounts prescribed by the Commission's part 32 rules. Second, the carrier divides the costs and revenues in these accounts between regulated and nonregulated activities in accordance with the Commission's part 64 rules, a step that helps ensure that the costs of nonregulated activities will not be recovered through regulated interstate rates. Third, the carrier separates the regulated costs and revenues between the interstate and intrastate jurisdictions using the Commission's part 36 jurisdictional separations rules. Finally, the carrier apportions the interstate regulated costs among the interexchange services and the rate elements that form the cost basis for its exchange access tariffs. Carriers subject to rate-of-return regulation perform this apportionment in accordance with the Commission's part 69 rules.

3. Rate-of-return incumbent LECs perform annual cost studies that include jurisdictional separations. The jurisdictional separations analysis begins with the categorization of the incumbent LEC's regulated costs and expenses, requiring the incumbent LEC to assign the regulated costs and revenues recorded in its part 32

accounts to various investment, expense, and revenue categories. The incumbent LEC then allocates the costs or revenues in each category between the interstate and intrastate jurisdictions. Amounts in categories that are used exclusively for interstate or intrastate communications are directly assigned to the appropriate jurisdiction. Amounts in categories that support both interstate and intrastate services are allocated between the jurisdictions using relative use factors or fixed allocators.

4. The vast majority of the jurisdictional separations rules were last updated more than 30 years ago and reflect the mix of services and the marketplace circumstances of that time. In 1997, the Commission initiated a proceeding to comprehensively reform those rules to ensure that they reflected the statutory, technological, and marketplace changes that had affected the telecommunications industry. In the *2001 Separations Freeze Order*, the Commission, pursuant to a Joint Board recommendation, froze the part 36 separations rules for a five-year period beginning July 1, 2001, or until the Commission completed comprehensive separations reform, whichever came first ("the separations freeze").

5. More specifically, the Commission adopted a freeze of all part 36 category relationships and allocation factors for price cap carriers, and a freeze of all allocation factors for rate-of-return carriers. It also gave rate-of-return carriers a one-time option to freeze their category relationships, enabling each of these carriers to determine whether such a freeze would be beneficial "based on its own circumstances and investment plans." The election deadline to opt into the category relationships freeze was June 30, 2001.

6. In adopting the separations freeze, the Commission concluded that several issues, including the separations treatment of internet traffic, should be addressed in the context of comprehensive separations reform. The Commission further concluded that the freeze would provide stability and regulatory certainty for incumbent LECs by minimizing any impacts on separations results that might occur due to circumstances not contemplated by the Commission's part 36 rules, such as growth in local competition and the adoption of new technologies. The Commission also found that a freeze of the separations process would reduce regulatory burdens on incumbent LECs during the transition from a regulated monopoly to a deregulated, competitive environment in the local telecommunications marketplace.

7. The Commission has since granted price cap carriers forbearance from the part 36 jurisdictional separations rules. As a result, the separations freeze applies only to rate-of-return carriers, all of whom have frozen allocation factors. Those rate-of-return carriers that chose to freeze their category relationships in 2001 assign investment and expenses within their part 32 accounts to categories using their separations category relationships from 2000, and allocate their categorized costs between the interstate and intrastate jurisdictions using their allocation factors from 2000. This use of "frozen" category relationships and allocation factors frees carriers from conducting separations studies for the duration of the freeze.

B. Declining Applicability of Jurisdictional Separations Results

8. Over the years, the Commission has undertaken initiatives that reduce the role a carrier's costs play in the regulation of rates and in the distribution of high-cost universal service support. Consequently, the significance of jurisdictional separations results has declined. The first of these initiatives was the application of price cap regulation to the largest local exchange carriers, a step that eventually severed the link between separations results and interstate rates for those carriers. Subsequently, as noted above, the Commission forbore from application of the jurisdictional separations rules to price cap incumbent LECs, leaving rate-of-return incumbent LECs as the only carriers required to comply with the separations rules. More recent Commission reforms have eliminated the need for cost data for large portions of rate-of-return carriers' operations as well. Specifically, in 2011, as part of comprehensive reform and modernization of the universal service and intercarrier compensation systems, the Commission adopted rate caps (including a transition to bill-and-keep for certain rate elements) for switched access services for rate-of-return carriers, thereby severing the relationship between cost and switched access rates. In addition, in 2016, the Commission gave rate-of-return carriers the option of receiving high-cost universal service support based on the Alternative-Connect America Cost Model (A–CAM). More than 200 carriers opted to receive A–CAM support, which eliminated the need for those carriers to perform cost studies that required jurisdictional separations to quantify the amount of high-cost support for their common line offerings.

9. As a result of these reforms, rate-of-return carriers now use separations

cost results only for the following limited purposes: (a) Establishing their business data services (special access) rates; (b) calculating interstate common line support for those carriers that have not elected A-CAM support; and (c) calculating subscriber line charge (SLC) levels for the minority of carriers whose SLCs are below the maximum level. The Universal Service Administrative Company (USAC) uses categorization results for calculating high-cost loop support, but without applying jurisdictional allocations. States also use separations results to determine the amount of intrastate universal service support and to calculate regulatory fees, and some states perform rate-of-return ratemaking using intrastate costs.

10. The Commission expects that the use of jurisdictional separations will continue to decline. For example, earlier this year, the Commission adopted a Notice of Proposed Rulemaking that seeks comment on migrating additional rate-of-return carriers to model-based support. In a more recent Notice of Proposed Rulemaking, the Commission proposed to allow A-CAM carriers to transition their business data services offerings from rate-of-return to incentive-based regulation.

C. Procedural History

11. The Commission has extended the separations freeze seven times, with the most recent extension set to expire on December 31, 2018. In adopting and extending the freeze, the Commission has reasoned that the freeze would stabilize and simplify the separations process while the Joint Board and the Commission continued to work on separations reform. In its most recent freeze extension order, the Commission also explained that an extension until December 31, 2018, would provide the Joint Board with sufficient time to consider what effects the Commission's most recent reforms to the high-cost universal service program and intercarrier compensation should have on the separations rules.

12. Since the Commission initiated this proceeding in 1997, the Joint Board—comprised of both state and federal members—has been attempting to develop recommendations for comprehensive reform. In response to the Commission's initial referral, the State Members of the Joint Board filed a report identifying issues they believed should be addressed. Over the years, the State Members filed policy papers setting out options for reform, the Commission or the Joint Board sought comment, and the Joint Board held hearings and meetings to consider the various proposals. Nevertheless, despite

the Commission's repeated extensions of the separations freeze to provide the Joint Board with additional time to issue a Recommended Decision, the Joint Board has not recommended comprehensive reforms.

13. The Commission has twice waived the category relationships freeze to allow individual carriers to adjust the amounts assigned to separations categories to reflect network upgrades. In 2010, the Commission waived that freeze to allow Gila River Telecommunications, Inc., a tribally owned carrier that had upgraded its local loop plant in order to increase the telephone penetration rate in its extremely high-cost service territory, to increase the high-cost loop support it received from the Universal Service Fund (USF) consistent with prior waivers of other universal service rules for carriers serving tribal lands. In 2012, the Wireline Competition Bureau (Bureau) also waived the category relationships freeze to allow Eastex Telephone Cooperative, Inc. (Eastex), a rural cooperative that had upgraded its network with soft switches and fiber to improve its broadband services, to increase its settlements from the National Exchange Carrier Association, Inc. (NECA) special access pool, reducing Eastex's reliance on the USF.

II. Discussion

14. The Commission views jurisdictional separations reform, and the question of whether to extend the separations freeze, in light of its ongoing efforts to transition from rate-of-return to incentive regulation and to eliminate or avoid imposing any unnecessary burdens on carriers. After weighing the likely benefits of extending the freeze against the likely costs of allowing it to end on December 31, 2018, the Commission proposes to extend the separations freeze for 15 years and to provide a time-limited opportunity for carriers that elected the category relationships freeze to opt out of that freeze. The Commission invites comment on these proposals and on the proposed rule changes set forth in Appendix A. The Commission also invites comment on whether it should modify any other aspects of the separations freeze if it adopts the proposal to extend it.

A. Further Extending the Separations Freeze

15. Completion of comprehensive separations reform by the expiration of the freeze on December 31, 2018 is highly unlikely. Most fundamentally, the Commission would prefer not to move forward on separations reform

without a Joint Board recommendation on an approach to such reform, and the Board is not close to reaching a recommendation. As Commissioner Michael O'Rielly, Chairman of the Joint Board, recently observed, "the viewpoints" within the Joint Board "are so vastly different on this complex issue that finding commonality is not going to [be] possible in the near term." Moreover, even if the Joint Board were to offer a recommendation for the Commission's consideration, the Commission would then likely seek comment on that recommendation before issuing an order revising the separations rules. Therefore, as a practical matter, the Commission must choose between extending the separations freeze and allowing long-unused separations rules to take effect on January 1, 2019.

16. The Commission has previously found that letting the freeze expire and allowing largely outmoded separations rules to be reinstated would impose significant burdens on rate-of-return carriers and create undue instability. In extending the freeze in 2017, the Commission explained that reinstating the separations rules would require substantial training and investment by rural incumbent LECs, and could cause significant disruptions in regulated rates, cost recovery, and other operating conditions. The Commission found that the "clear benefits that will result from granting a further extension" of the freeze outweighed any possible harms. It concluded that requiring carriers to reinstate their separations systems "would be unduly burdensome when there is a significant likelihood that there would be no lasting benefit to doing so."

17. The Commission finds its prior analysis compelling and, similarly, that the benefits of an additional extension of the freeze likely would far outweigh any potential harms. The Commission therefore proposes to extend the separations freeze and to direct rate-of-return incumbent LECs to continue to use the same frozen jurisdictional allocation factors. The Commission invites comment on this proposal and on the relative costs and benefits of continuing the separations freeze.

18. In view of these circumstances, the Commission proposes to extend the freeze for 15 years and invites comment on this proposal. The Commission also invites comment on whether a shorter extension would be preferable. The Commission asks that commenters discuss the advantages and disadvantages of a long or short extension period, and provide specific reasons in support of their

recommended timeframes. What effect, if any, would particular extension periods have on ratepayers? Is the Commission's choice of an extension period likely to distort rate levels? Commenters supporting relatively short extension periods should also take into account the time necessary for the Commission and the industry to implement any separations decisions and rule changes.

19. In this regard, the Commission recognizes that the issues before the Joint Board are extremely complex, and the Federal and State members of the Joint Board have not issued a Recommended Decision on comprehensive separations reform in the two decades since the Commission originally proposed such reform. As such, how likely is it that the Joint Board will issue a Recommended Decision on comprehensive separations reform within a relatively short extension period? If consensus within that timeframe is unlikely, should the Commission adopt a relatively long extension? Or should the Commission permanently extend the separations freeze, as USTelecom suggests? Would a relatively long or permanent extension be inconsistent with section 201(b) of the Act's prohibition on unjust and unreasonable charges?

20. The Commission also seeks comment on whether it should change the scope of the issues referred to the Joint Board. In April 2017, the Joint Board issued a public notice seeking comment to refresh the record on issues related to comprehensive, permanent separations reform. Several commenters in response to that public notice recognized the steadily diminishing role of separations results in federal and state regulation, and argued that the Commission should not undertake comprehensive separations reform at the present time because it would be premature, disruptive, and counterproductive. In view of that opposition, should the Commission find that any separations reform in the foreseeable future should be narrowly targeted and change the scope of the issues referred to the Joint Board accordingly? If so, how should the Commission modify the referral to the Joint Board?

B. Allowing Carriers That Elected the Category Relationships Freeze an Opportunity To Change Their Elections

21. The Commission proposes to provide a one-time opportunity for carriers that opted to freeze their category relationships in 2001 to opt out of that freeze, so that they can categorize their costs based on current

circumstances rather than their circumstances in 2000. Presently, rate-of-return carriers in approximately 45 study areas operate under the category relationships freeze. When the Commission granted rate-of-return carriers the opportunity to elect the category relationships freeze, it specified that the freeze would be an interim, "transitional measure" lasting no more than five years. But the freeze has now lasted 17 years, and carriers that elected it are prohibited from withdrawing from their elections. Many of these carriers have since invested in network upgrades or are considering future upgrades. As a result of the category relationships freeze, these carriers may be unable to recover the costs of those investments from the ratepayers that will benefit from those upgrades, or from the USF. Consequently, these carriers may lack incentives to improve service and deploy advanced technologies like broadband for their customers. The Commission therefore proposes and invites comment on allowing carriers to opt out of the category relationships freeze. What are the costs and benefits of this proposal?

22. In the past, commenters have urged the Commission to allow carriers that elected the category relationships freeze to unfreeze those relationships. For example, ITTA points out that the Commission originally allowed rate-of-return carriers the flexibility to decide whether or not to freeze their category relationships because those carriers' size and investment patterns vary widely. ITTA argues that the Commission should provide these carriers with the flexibility to unfreeze their category relationships for similar reasons. ITTA explains that some carriers with frozen category relationships "will embrace the opportunity to more accurately allocate their investment," while others "will find reinstating their separations systems unduly burdensome." Moss Adams, NTCA, WTA, and USTelecom argue that unfreezing category relationships will allow carriers to assign costs in a manner that reflects how they offer services today and will enable carriers to take greater advantage of universal service funds that support broadband deployment. The Commission invites commenters to elaborate on why the Commission should allow carriers to unfreeze their category relationships. The Commission also seeks input from any commenters that oppose such action. The Commission seeks input on the costs and benefits of permitting carriers to unfreeze their category relationships—

both from carriers that believe they may benefit from an unfreeze and from carriers, if applicable, that believe unfreezing category relationships would not be beneficial for them.

23. In the years since 2000, many, and perhaps all, carriers subject to the category relationships freeze have made substantial investments to modernize their networks and to improve and expand their service offerings. In at least some instances, these investments are more weighted toward business data services, and away from switched access and common line categories, than the carriers' investments were as of 2000. If that is the case, under the category relationships freeze, disproportionate percentages of those carriers' investments are currently assigned to the common line and switched access categories. Are carriers that elected the category relationships freeze consequently unable to recover the costs of network upgrades from their business data services customers and from NECA's special access pool? If so, how does that circumstance impact their switched access rates? How many carriers subject to the category relationships freeze face these conditions, and how many would benefit from opting out of that freeze?

24. The Commission asks commenters to specifically describe their current network investments compared to their investments in 2000 and to specify how their category relationships would change without a freeze. The Commission invites comment on what effect allowing carriers to opt out of the category relationships freeze would have on future investment. For example, would lifting the category relationships freeze promote greater investment in newer technologies and increased broadband deployment, and if so, how? The Commission also seeks input on what impact unfreezing category relationships would have on how carriers recover their costs. For example, if carriers are allowed to update their network cost assignments to more accurately reflect the services they provide today, how would the pricing of services—particularly business data services—be affected? Would carriers seek to better align their rates for specific services with the underlying costs of those services? Would opting out of the freeze result in more efficient pricing, and how would it affect consumers in terms of service and pricing?

25. Allowing carriers to opt out of the category relationships freeze will necessarily shift costs between jurisdictions and among access elements, and may affect the universal

service funding the carrier receives. The Commission asks parties to describe the direction of these changes and, where possible, to quantify them. More specifically, to what extent would unfreezing carriers' category relationships shift costs from the intrastate jurisdiction to the interstate jurisdiction, and from common line to special access? In the event of such shifts, what would be the effect on the carriers' receipt of CAF BLS and other universal service funding?

26. The Commission seeks comment on whether it should impose measures to prevent carriers that opt out of the category relationships freeze from double-recovering costs through end-user charges and Connect America Fund intercarrier compensation (CAF ICC) support. If so, what specific measures should it adopt? For example, in the *Eastex Waiver Order*, the Bureau addressed the concern that a rate-of-return carrier might receive an inappropriate amount of universal service funding or double-recover its costs when its category relationships were unfrozen. This situation could occur because, under the *USF/ICC Transformation Order*, a carrier can in certain situations recover its reduced intercarrier compensation revenue through CAF ICC support based on a cost recovery mechanism that is tied to a carrier's interstate switched access revenue requirement for October 1, 2010 through September 30, 2011 (FY2011). Thus, there is a risk that, as a carrier moves costs from the interstate switched access category into different categories, it could double-recover the same costs—once through CAF ICC support and again through special access rates and related NECA settlements.

27. To prevent such a double recovery, in granting a waiver of the category relationships freeze to Eastex, the Bureau required Eastex to recalculate its 2011 Rate-of-Return Carrier Base Period Revenue (BPR) using actual, unfrozen categories and to file a revised interstate switched access revenue requirement. The Bureau expected that the recalculation would reduce the interstate switched access revenue requirement included in Eastex's BPR and shift costs from interstate common line to interstate special access. The Bureau concluded that removing "an amount representative of the FY2011 interstate revenue attributable to the investment being shifted from interstate switched access to other categories" from possible recovery through CAF ICC support would protect consumers and the USF.

28. Consistent with this precedent, should the Commission require any

carrier that opts out of the category relationships freeze to recalculate its BPR using unfrozen category relationships and to file a revised interstate switched access revenue requirement with the Commission? If the Commission requires carriers that are allowed to unfreeze their category relationships to recalculate their BPRs, it proposes to use 2011 cost study data because those are the most recent data that do not reflect the effects of the *USF/ICC Transformation Order*. The Commission invites parties to comment on this approach. While some carriers may have the necessary data to perform the study, others may not. For those that do not, the Commission invites parties to propose an alternative means of estimating the BPR adjustment that should be made.

29. To the extent that a carrier's BPR is adjusted by the preceding calculations, should the Commission require that the carrier adjust its interstate switched access rate cap by a percentage amount equal to the adjustment made to the interstate projected revenue requirement component of the BPR? The carrier would then revise its rates to reflect the transitions mandated by the *USF/ICC Transformation Order* as of the date of the next annual access tariff filing. The Commission invites parties to comment on this approach and on whether it would provide a reasonable method for eliminating potential double recoveries resulting from unfreezing category relationships.

30. In the interest of simplicity, the Commission proposes to allow carriers subject to the category relationships freeze a single opportunity to unfreeze their frozen category relationships. The Commission seeks comment on that approach. If the Commission provides this one-time opportunity, should it require that carriers electing to unfreeze their category relationships make conforming changes to their tariffs effective on July 1, 2019? If so, should it require that carriers with frozen categories notify the Commission and NECA (if a carrier participates in NECA's special access pool) by March 1, 2019 of their decisions to opt out of the category relationships freeze? Would a July 1, 2019 effective date provide carriers with sufficient time to implement any changes needed to update category relationships?

31. In the alternative, should the Commission allow carriers subject to the category relationships freeze to unfreeze their category relationships at any date they choose in the future? What would be the benefits and drawbacks of such an approach? Should the Commission

allow a carrier presently subject to the category relationships freeze that opts to unfreeze its category relationships to refreeze those relationships at some future date? What would be the costs and benefits of this approach?

32. Instead of *allowing* carriers the option of unfreezing their category relationships, should the Commission *require* all rate-of-return carriers that currently operate under the category relationships freeze to unfreeze their category relationships? What would be the impact of lifting the category relationships freeze for all carriers that elected the relationships freeze in 2001? Would it significantly increase the accuracy of separations results and, if so, would any benefits from that increased accuracy outweigh any costs that a mandatory unfreeze would impose?

33. In adopting the separations freeze in 2001, the Commission anticipated that its "waiver process [would] provide a mechanism for relief when special circumstances warrant a deviation from the freeze." The Commission previously granted two petitions for waiver to allow carriers to withdraw from the category relationships freeze and have two waiver requests pending. If the Commission does not allow all affected carriers to unfreeze their category relationships in this rulemaking, would other carriers subject to this relationships freeze feel the need to seek relief of the freeze through the waiver process? Are there particular facts or circumstances that the Commission should consider in assessing whether a carrier has demonstrated sufficient "good cause" to justify a waiver under the Commission's rules that would allow a carrier to unfreeze its category relationships?

34. The Commission also seeks input on whether there is any reason to allow carriers not currently subject to the category relationships freeze to elect to freeze their categories. The Commission asks carriers to provide detailed information about any costs they encounter in categorizing their regulated costs and revenues as well as information on how their category relationships have changed over time. These carriers should address whether the benefits from eliminating those administrative costs would outweigh any loss in the accuracy of separations results that would arise from freezing their category relationships. Further, the Commission seeks input on what base period of data carriers should use for their calculations if it allows them to elect to freeze their category relationships.

35. If the Commission allows carriers not currently subject to the category relationships freeze to elect to freeze their categories, what opportunities should the Commission provide for unfreezing them going forward? What procedures should the Commission adopt if it decides to allow changes in elections? For instance, should the Commission allow carriers to change their elections on a periodic basis—for example, every three years? Finally, the Commission seeks comment on whether it should allow carriers that opt to unfreeze their category relationships the option to update those category relationships and then refreeze them immediately or at some later date. What would be the costs and benefits to the carriers and to the public of allowing carriers to unfreeze and then refreeze their category relationships?

C. Changes to Other Aspects of the Separations Freeze

36. If the Commission adopts its proposal to extend the separations freeze, are there any other aspects of the freeze it should modify? The Commission asks commenters to identify any specific problems with the freeze as well as potential solutions.

37. In the 2001 Separations Freeze Order, the Commission required that all rate-of-return incumbent LECs apportion their categorized costs using their allocation factors for the year 2000. Should the Commission allow, or require, rate-of-return LECs to reset their jurisdictional allocation factors using current data? The Commission asks commenters to describe in detail the benefits and costs of such actions. The Commission invites comment on whether the Commission should allow, or require, carriers to refreeze their jurisdictional allocation factors once they are reset. The Commission also seeks comment on how any reset of jurisdictional allocation factors should be implemented, including providing information regarding timeframes, deadlines, period of data to be used, and any other related details.

D. Effect on Small Entities

38. The Commission seeks comment on the effect that its proposals to extend the separations freeze and to allow rate-of-return carriers to opt out of the category relationships freeze would have on small entities, and whether any rules that the Commission adopts should apply differently to small entities. The Commission seeks comment on the costs and burdens of these proposals on small incumbent LECs and whether these proposals would disproportionately affect specific

types of carriers or ratepayers. The Commission also seeks input on the effect, if any, on small entities of any other aspects of the separations freeze that it inquires about in this Further Notice.

III. Procedural Matters

A. Deadlines and Filing Procedures

39. Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document in CC Docket No. 80–286. Comments may be filed using the Commission's Electronic Comment Filing System (ECFS).

- *Electronic Filers:* Comments may be filed electronically using the internet by accessing the ECFS: <http://apps.fcc.gov/ecfs/>.

- *Paper Filers:* Parties who choose to file by paper must file an original and one copy of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary: Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW, Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of *before* entering the building.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9050 Junction Drive, Annapolis Junction, MD 20701.

- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW, Washington, DC 20554.

- *People with Disabilities:* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (TTY).

40. *Ex Parte Requirements.* This proceeding shall be treated as a “permit-

but-disclose” proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with rule 1.1206(b). In proceedings governed by rule 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

B. Initial Regulatory Flexibility Analysis

41. Pursuant to the Regulatory Flexibility Act (RFA), the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities of the policies and actions considered in this Further Notice. The text of the IRFA is set forth in Appendix B of the Further Notice. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comment provided in the Further Notice. The Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, will send a copy of

this Further Notice of Proposed Rulemaking, including the IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

C. Paperwork Reduction Act

42. This document may contain proposed new or modified information collection requirements. The Commission, as part of its continuing effort to reduce paperwork burdens, invites the general public and the Office of Management and Budget to comment on the information collection requirements contained in this document, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, the Commission seeks specific comment on how it might further reduce the information collection burden for small business concerns with fewer than 25 employees.

IV. Initial Regulatory Flexibility Analysis

A. Need for, and Objectives of, the Proposed Rules

43. The vast majority of the part 36 jurisdictional separations rules were last updated more than 30 years ago. In 1997, the Commission initiated a proceeding to comprehensively reform those rules in light of the statutory, technological, and marketplace changes that had affected the telecommunications industry. In 2001, the Commission, pursuant to a recommendation by the Federal-State Joint Board on Jurisdictional Separations (Joint Board), froze the part 36 separations rules for a five-year period beginning July 1, 2001, or until the Commission completed comprehensive separations reform, whichever came first.

44. The Commission has extended the freeze seven times, with the most recent extension set to expire on December 31, 2018. The Commission would prefer not to move forward on separations reform without a Joint Board recommendation on an approach to such reform, and the Board is not close to reaching a recommendation. Therefore, as a practical matter, completion of comprehensive separations reform by the expiration of the freeze on December 31, 2018 is highly unlikely, and the Commission must choose between extending the separations freeze and allowing long-unused separations rules to take effect on January 1, 2019.

45. Because the Commission expects that the benefits of further extending the jurisdictional separations freeze likely outweigh the costs of allowing it to end,

the Commission in this Further Notice proposes to extend the freeze for 15 years, and invites comment on whether a shorter extension would be preferable. The Commission also seeks comment on whether it should alter the scope of the referral to the Joint Board regarding comprehensive separations reform. The Commission also proposes to permit rate-of-return carriers that elected to freeze their category relationships in 2001 to opt out of this freeze, and it seeks comment on that proposal.

B. Legal Basis

46. The legal basis for the Further Notice is contained in sections 1, 4(i) and (j), 205, 220, 221(c), 254, 303(r), 403, and 410 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i) and (j), 205, 220, 221(c), 254, 303(r), 403, 410, and section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. 1302.

C. Description and Estimate of the Number of Small Entities to Which Rules May Apply

47. The RFA directs agencies to provide a description of, and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. A “small business concern” is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA. Nationwide, there are 28.8 million small businesses, according to the SBA.

48. Incumbent Local Exchange Carriers. Neither the Commission nor the SBA has developed a small business size standard specifically for providers of incumbent local exchange services. The closest applicable size standard under the SBA rules is for Wired Telecommunications Carriers. Under the SBA definition, a carrier is small if it has 1,500 or fewer employees. According to the FCC’s Telephone Trends Report data, 1,307 incumbent local exchange carriers (LECs) reported that they were engaged in the provision of local exchange services. Of these 1,307 carriers, an estimated 1,006 have 1,500 or fewer employees and 301 have more than 1,500 employees. Consequently, the Commission estimates that most incumbent LECs are small entities that may be affected by

the rules and policies addressed in this Further Notice.

49. The Commission has included small incumbent LECs in this RFA analysis. As noted above, a “small business” under the RFA is one that, *inter alia*, meets the pertinent small business size standard (*e.g.*, a telephone communications business having 1,500 or fewer employees), and “is not dominant in its field of operation.” The SBA’s Office of Advocacy contends that, for RFA purposes, small incumbent LECs are not dominant in their field of operation because any such dominance is not “national” in scope. Because the Commission’s proposals concerning the Part 36 separations process will affect all rate-of-return incumbent LECs providing interstate services, some entities employing 1,500 or fewer employees may be affected by the proposals made in this Further Notice. The Commission has therefore included small incumbent LECs in this RFA analysis, although it emphasizes that this RFA action has no effect on the Commission’s analyses and determinations in other, non-RFA contexts.

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

50. If a rate-of-return carrier were allowed to opt out of the category relationships freeze, it would be able to update its Part 36 category relationships annually by doing new cost studies and then adjusting its rates. The Further Notice elicits comment on whether rates should take effect with the July 1, 2019 tariff filing. If so, as part of that filing, rate-of-return carriers will need to explain the new studies in the Description & Justification section and submit the results of these studies in their tariff review plans.

E. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

51. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance and reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from

coverage of the rule, or part thereof, for small entities.

52. The jurisdictional freeze has eliminated the need for all incumbent LECs, including incumbent LECs with 1,500 employees or fewer, to complete certain annual separations studies that otherwise would be required by the Commission's rules. Thus, an extension of this freeze would avoid increasing the administrative burden of regulatory compliance for rate-of-return incumbent LECs, including small incumbent LECs.

53. Presently, rate-of-return carriers in about 45 study areas operate under a category relationships freeze. When the Commission granted rate-of-return carriers the opportunity to elect the category relationships freeze, it specified the freeze would be an interim, "transitional measure" lasting no more than five years. But, the freeze has now lasted 17 years, and carriers that elected it are prohibited from withdrawing from that election. The Commission proposes to grant these carriers the opportunity to opt out of this freeze. The Commission recognizes that the size and investment patterns of these carriers vary widely, and implementation of this proposal would enable an individual carrier to decide for itself if the economic benefits of unfreezing its category relationships outweigh any costs.

54. The Commission seeks comment on the effect of its proposals on small entities, and whether any rules that the Commission adopts should apply differently to small entities. The Commission directs commenters to consider the costs and burdens of these proposals on small incumbent LECs and whether the proposals would disproportionately affect specific types of carriers or ratepayers.

F. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

55. None.

V. Ordering Clauses

56. Accordingly, *it is ordered*, pursuant to sections 1, 4(i) and (j), 205, 220, 221(c), 254, 303(r), 403, and 410 of the Communication Act of 1934, as amended, 47 U.S.C. 151, 154(i) and (j), 205, 220, 221(c), 254, 303(r), 403, 410, and section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. 1302, that this Further Notice of Proposed Rulemaking *is adopted*.

57. *It is further ordered*, pursuant to section 220(i) of the Communications Act, 47 U.S.C. 220(i), that notice be given to each state commission of the above rulemaking proceeding, and that

the Secretary *shall serve* a copy of this Further Notice of Proposed Rulemaking on each state commission.

58. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall send* a copy of this Further Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 36 as follows:

PART 36—JURISDICTIONAL SEPARATIONS PROCEDURES; STANDARD PROCEDURES FOR SEPARATING TELECOMMUNICATIONS PROPERTY COSTS, REVENUES, EXPENSES, TAXES AND RESERVES FOR TELECOMMUNICATIONS COMPANIES

■ 1. The authority citation for part 36 is revised to read as follows:

Authority: 47 U.S.C. 151, 154(i) and (j), 205, 220, 221(c), 254, 303(r), 403, 410, and 1302 unless otherwise noted.

■ 2. Amend § 36.3 by revising paragraph (b) to read as follows:

§ 36.3 Freezing of jurisdictional separations category relationships and/or allocation factors.

* * * * *

(b) Effective July 1, 2001, through December 31, 2033, local exchange carriers subject to price cap regulation, pursuant to § 61.41 of this chapter, shall assign costs from the part 32 accounts to the separations categories/sub-categories, as specified herein, based on the percentage relationships of the categorized/sub-categorized costs to their associated part 32 accounts for the twelve month period ending December 31, 2000. If a part 32 account for separations purposes is categorized into more than one category, the percentage relationship among the categories shall be utilized as well. Local exchange carriers that invest in types of telecommunications plant during the period July 1, 2001, through December 31, 2033, for which it had no separations category investment for the

twelve month period ending December 31, 2000, shall assign such investment to separations categories in accordance with the separations procedures in effect as of December 31, 2000. Local exchange carriers not subject to price cap regulation, pursuant to § 61.41 of this chapter, may elect to be subject to the provisions of paragraph (b) of this section. Such election must be made prior to July 1, 2001. Any local exchange carrier that elected to be subject to paragraph (b) of this section may withdraw from that election by notifying the Commission prior to March 1, 2019 of its intent to withdraw from that election, and that withdrawal will be effective as of July 1, 2019. Any local exchange carrier choosing to withdraw from its election under paragraph (b) of this section that participates in an Association tariff, pursuant to § 69.601 *et seq.*, also shall notify the Association prior to March 1, 2019, of such intent. Subject to that one exception, local exchange carriers that previously elected to become subject to paragraph (b) shall not be eligible to withdraw from such regulation for the duration of the freeze.

* * * * *

§ 36.126 [Amended]

■ 2. Amend § 36.126(b)(5) by removing the date "June 30, 2014" and adding in its place "December 31, 2033."

§§ 36.3, 36.123, 36.124, 36.125, 36.126, 36.141, 36.142, 36.152, 36.154, 36.155, 36.156, 36.157, 36.191, 36.212, 36.214, 36.372, 36.374, 36.375, 36.377, 36.378, 36.379, 36.380, 36.381, and 36.382

[Amended]

■ 3. In 47 CFR part 36, remove the date "December 31, 2018" and add in its place everywhere it appears the date "December 31, 2033" in the following places:

- a. Section 36.3(a), (c), (d) introductory text, and (e);
- b. Section 36.123(a)(5) and (6);
- c. Section 36.124(c) and (d);
- d. Section 36.125(h) and (i);
- e. Section 36.126(b)(6), (c)(4), (e)(4), and (f)(2);
- f. Section 36.141(c);
- g. Section 36.142(c);
- h. Section 36.152(d);
- i. Section 36.154(g);
- j. Section 36.155(b);
- k. Section 36.156(c);
- l. Section 36.157(b);
- m. Section 36.191(d);
- n. Section 36.212(c);
- o. Section 36.214(a);
- p. Section 36.372;
- q. Section 36.374(b) and (d);
- r. Section 36.375(b)(4) and (5);
- s. Section 36.377(a) introductory text, (a)(1)(ix), (a)(2)(vii), (a)(3)(vii), (a)(4)(vii); (a)(5)(vii), and (a)(6)(vii);

- t. Section 36.378(b)(1);
- u. Section 36.379(b)(1) and (2);
- v. Section 36.380(d) and (e);
- w. Section 36.381(c) and (d); and
- x. Section 36.382(a)

Atlantic Highly Migratory Species; Shortfin Mako Shark Management Measures; Proposed Amendment 11

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS is proposing to amend the 2006 Consolidated Atlantic Highly Migratory Species (HMS) Fishery Management Plan (FMP) based on the results of the 2017 stock assessment and a subsequent binding recommendation by the International Commission for the Conservation of Atlantic Tunas (ICCAT) for North Atlantic shortfin mako sharks. The North Atlantic shortfin mako shark stock is overfished and is experiencing overfishing. Consistent with the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and the Atlantic Tunas Convention Act (ATCA), NMFS is proposing management measures that would reduce fishing mortality on shortfin mako sharks and establish a foundation for rebuilding the shortfin mako shark population consistent with legal requirements. The proposed measures could affect U.S. commercial and recreational fishermen who target and harvest shortfin mako sharks in the Atlantic Ocean, including the Gulf of Mexico and Caribbean Sea by increasing live releases and reducing landings.

DATES: Written comments must be received by October 1, 2018. NMFS will hold six public hearings and an operator-assisted public hearing via conference call and webinar on this proposed rule for Draft Amendment 11 to the 2006 Consolidated HMS FMP (Amendment 11) in August and September 2018. For specific dates and

times see the **SUPPLEMENTARY INFORMATION** section of this document.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2018–0011, by any one of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2018-0011, click the “Comment Now” icon, complete the required fields, and enter or attach your comments.
- **Mail:** Submit written comments to Guý DuBeck, NMFS/SF1, 1315 East-West Highway, National Marine Fisheries Service, SSMC3, Silver Spring, MD 20910.

Instructions: Please include the identifier NOAA–NMFS–2018–0011 when submitting comments. Comments sent by any other method, to any other address or individual, or received after the close of the comment period, may not be considered by NMFS. All comments received are a part of the public record and generally will be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

NMFS will hold six public hearings and one operator-assisted public hearing via conference call and webinar on this proposed rule and Draft Amendment 11. NMFS will hold public hearings in Corpus Christi, TX; Linwood, NJ; Manteo, NC; Morehead City, NC; Gloucester, MA; and St. Petersburg, FL. For specific locations, see the **SUPPLEMENTARY INFORMATION** section of this document.

Copies of the supporting documents—including the draft environmental impact statement (DEIS), Regulatory Impact Review (RIR), Initial Regulatory Flexibility Analysis (IRFA), and the 2006 Consolidated Atlantic HMS FMP and amendments are available from the HMS website at <https://www.fisheries.noaa.gov/topic/atlantic-highly-migratory-species> or by contacting Guý DuBeck at (301) 427–8503.

FOR FURTHER INFORMATION CONTACT: Guý DuBeck or Karyl Brewster-Geisz at (301) 427–8503.

SUPPLEMENTARY INFORMATION:

Background

The North Atlantic shortfin mako stock is managed primarily under the authority of the Magnuson-Stevens Act and also under ATCA. The 2006 Consolidated HMS FMP and its amendments are implemented by regulations at 50 CFR part 635. A brief summary of the background of this proposed rule is provided below. Additional information regarding Atlantic shark management can be found in the DEIS accompanying this proposed rule for Amendment 11, the 2006 Consolidated HMS FMP and its amendments, the annual HMS Stock Assessment and Fishery Evaluation (SAFE) Reports, and online at <https://www.fisheries.noaa.gov/topic/atlantic-highly-migratory-species>.

North Atlantic Shortfin Mako Shark Stock Status and Emergency Interim Final Rule

The North Atlantic shortfin mako shark (*Isurus oxyrinchus*) is a highly migratory species that ranges across the entire North Atlantic Ocean and is caught by numerous countries. The stock is predominantly caught offshore in association with fisheries that primarily target tunas and tuna-like species. While these sharks are a valued component of U.S. recreational and commercial fisheries, U.S. catch represents only approximately 11 percent of the species’ total catch in the North Atlantic by all reporting countries. International measures are, therefore, critical to the species’ effective conservation and management.

In August 2017, ICCAT’s Standing Committee on Research and Statistics (SCRS) conducted a new benchmark stock assessment on the North Atlantic shortfin mako stock. At its November 2017 annual meeting, ICCAT accepted this stock assessment and determined the stock to be overfished, with overfishing occurring. On December 13, 2017, based on this assessment, NMFS issued a status determination finding the stock to be overfished and experiencing overfishing applying domestic criteria. The assessment specifically indicated that biomass (B_{2015}) is substantially less than the biomass at maximum sustainable yield (B_{MSY}) for eight of the nine models used for the assessment ($B_{2015}/B_{MSY} = 0.57 - 0.85$). In the ninth model, spawning stock fecundity (SSF) was less than SSF_{MSY} ($SSF_{2015}/SSF_{MSY} = 0.95$). Additionally, the assessment indicated that fishing mortality (F_{2015}) was greater than F_{MSY} (1.93–4.38), with a combined 90 percent probability from all models

that the population is overfished, with overfishing occurring. This was a change from the 2012 stock assessment that indicated that both the North and South Atlantic stocks of shortfin mako sharks were healthy and the probability of overfishing was low. However, the high uncertainty in past catch estimates and deficiency of some important biological parameters, particularly for the Southern stock, were still obstacles for obtaining reliable estimates of current status of the stocks.

The 2017 assessment estimated that total North Atlantic shortfin mako catches across all ICCAT parties are currently between 3,600 and 4,750 metric ton (mt) per year. The assessment further indicated that such total catches would have to be at or below 1,000 mt (72–79 percent reductions) to prevent further population declines, and total catches of 500 mt or less would be expected to stop overfishing and begin rebuilding the stock. The stock assessment projections indicated that a total allowable catch of 0 mt would produce a greater than 50 percent probability of rebuilding the stock by the year 2040, which is approximately equal to one mean generation time. The stock assessment report stated that while research indicates that post-release survival rates of Atlantic shortfin mako sharks are high (70 percent), the assessment could not determine if requiring live releases alone would reduce landings sufficiently to end overfishing and rebuild the stock. The stock assessment did not evaluate rebuilding times greater than one mean generation time, although shark stocks generally take longer than one mean generation time to rebuild given their slow reproductive biology and other factors.

Based on this information and given that the stock is primarily caught in association with ICCAT fisheries, ICCAT at its November 2017 meeting adopted new management measures for Atlantic shortfin mako in Recommendation 17–08. The measures largely focus on maximizing live releases of Atlantic shortfin mako sharks, allowing retention only in certain limited circumstances, increasing minimum size limits for retention, and improving data collection in ICCAT fisheries. ICCAT stated that the measures in the Recommendation “are expected to prevent the population from decreasing further, stop overfishing and begin to rebuild the stock” and provided for a six-month review. The Recommendation requires ICCAT parties that authorize retention to provide to ICCAT “the amount of North Atlantic shortfin mako caught and

retained on board as well as dead discards during the first six months in 2018 by one month prior to the 2018 Commission annual meeting.” The Recommendation specifies that at its annual meeting in November 2018, ICCAT will review the catches from the first six months of 2018 and decide whether these measures should be modified. In 2019, the SCRS will evaluate the effectiveness of these measures in ending overfishing and beginning to rebuild the stock. The SCRS will also provide rebuilding information that reflects rebuilding timeframes of at least two mean generation times, taking into consideration the slow reproductive biology of sharks and other factors. The Recommendation provides that in 2019, ICCAT will establish a rebuilding plan that will have a high probability of avoiding overfishing and rebuilding the stock to B_{MSY} within a timeframe that takes into account the biology of the stock.

On March 2, 2018, NMFS implemented an interim final rule using emergency authority under the Magnuson-Stevens Act, 16 U.S.C. 1855(c), to quickly implement measures in the HMS recreational and commercial fisheries consistent with Recommendation 17–08. NMFS solicited public comment on that rule through May 7, 2018. *See id.* (allowing extension of rule for not more than 186 days if public has opportunity for comment). The purpose of the emergency interim final rule was to address overfishing and to ensure that the U.S. can provide meaningful information reflective of the new measures to ICCAT for the six-month reporting requirement in the Recommendation (83 FR 8946). Management measures adopted through the interim final rule, and which remain in effect, are as follows:

- Commercial fishermen on vessels deploying pelagic longline gear, which are required to have a functional electronic monitoring system on board under current regulations, must release all live shortfin mako sharks with a minimum of harm, while giving due consideration to the safety of crew members. Commercial fishermen using pelagic longline gear can only retain a shortfin mako shark if it is dead at haulback;
- Commercial fishermen using gear other than pelagic longline commercial gear (*e.g.*, bottom longline, gillnet, handgear, etc.) must release all shortfin mako sharks, whether they are dead or alive; and
- Recreational fishermen (fishermen with HMS Angling or Charter/Headboat permits and fishermen with Atlantic Tunas General category and Swordfish General Commercial permits when participating in a registered HMS tournament) must release any shortfin

mako sharks smaller than the newly-implemented minimum size of 83 inches (210 centimeters (cm)) fork length (FL). This minimum size was an increase from the previous minimum size of 54 inches FL. This measure was different than the separate minimum size limits for males (180 cm FL) and females (210 cm FL) recommended in ICCAT Recommendation 17–08. The ICCAT stock assessment upon which the Recommendation was based had recommended an overall reduction in shortfin mako shark landings (or is it mortality?) for ICCAT parties. Consistent with this, in developing this proposed rule, NMFS analyzed minimum sizes in the context of U.S. fisheries and believes that a single minimum size limit of 83 inches (210 cm) FL is needed to address the U.S. portion of recommended mortality reduction (see **ADDRESSES** for how to get a copy of the DEIS). Furthermore, confirming the sex of a large and potentially active shortfin mako shark prior to its landing could be challenging for fishermen and may have safety implications. A single minimum size limit for the species is also simpler to implement and enforce.

The emergency measures are initially effective for 180 days (ending on August 29, 2018), and may be extended to March 3, 2019. Once finalized, this rule is intended to replace these emergency measures with long-term measures. A Notice of Intent (NOI) to prepare an EIS for Amendment 11 of the Consolidated HMS FMP was published in the **Federal Register** on March 5, 2018 (83 FR 9255).

Proposed Measures

The objectives of Draft Amendment 11 and this proposed rule are to address overfishing and establish a foundation for rebuilding the North Atlantic shortfin mako shark stock, which ICCAT will adopt in 2019 after obtaining additional scientific information, as set out in Recommendation 17–08. In a DEIS, NMFS considered alternatives to meet the objectives of the Amendment. Given the various objectives, NMFS divided alternatives into the following four broad categories for organizational clarity and to facilitate effective review: Commercial fishery, recreational fishery, monitoring, and rebuilding. As summarized below, NMFS fully considered 29 alternatives within these categories and is preferring five measures, one in the commercial fishery, two in the recreational fishery (each regarding a different regulation type), one regarding monitoring, and one regarding rebuilding the stock, to meet the objectives of the rule and achieve at least a 75 percent reduction in U.S. shortfin mako shark landings consistent with the suggested level of reduction recommended in the stock assessment. The stock assessment recommends this level of reduction throughout the stock’s range, and all

ICCAT parties are committed to take the specified measures to achieve the needed reductions. NMFS' detailed analysis of the alternatives is provided in the DEIS for Draft Amendment 11 (see **ADDRESSES** for how to get a copy of the DEIS) and a summary is provided in the IRFA below. In developing the alternatives, NMFS considered commercial retention restrictions and the 83 inch FL recreational minimum size limit now temporarily in place through the emergency interim final rule, public comments received on that rule, other conservation and management measures that have been implemented in the HMS fisheries since 2008 that have affected shark fisheries or shark bycatch in other fisheries, and public comments received on the Amendment 11 Issues and Options paper, including comments provided at the March 2018 HMS Advisory Panel meeting. In response to public comment on this proposed rule and the DEIS, NMFS may make changes in the final rule by modifying the proposed measures or adopting different or additional measures that were not preferred in this proposed rule.

This proposed rule also includes a minor change to the regulations specific to sharks to provide clarity and consistency throughout the regulations. Specifically, this rule proposes minor changes to § 635.30 (c)(4) to update the regulatory language to reference shark endorsements on permits and to clarify when non-commercial fishermen must retain the head, fins, and tails on a shark carcass.

Commercial Measures

Under this proposed rule, a commercial fisherman on a vessel with a directed or incidental shark limited access permit (LAP) could only retain shortfin mako sharks if the shark is dead at haulback, the vessel is deploying pelagic longline gear, and there is a functional electronic monitoring system on board the vessel (Alternative A2). This proposed measure is the same commercial measure instituted under the emergency interim final rule (83 FR 8946; March 2, 2018). Pelagic longline vessels would be required to promptly release in a manner that causes the least harm any shortfin mako shark that is alive at the time of haulback. Commercial fishermen using gear other than pelagic longline commercial gear (e.g., bottom longline, gillnet, handgear, etc.) would be required to release or discard all shortfin mako sharks, whether they are alive or dead at haulback.

Pelagic longline fishermen rarely target shortfin mako sharks. Instead,

fishermen usually catch shortfin mako sharks incidentally while fishing for valuable target species such as tunas and swordfish. Based on observer data, over 70 percent of the shortfin mako sharks interacted with in the pelagic longline fishery were alive at the vessel. Commercial fishermen using other gear types rarely, if ever, catch shortfin mako sharks. Since 2012, only four shortfin mako shark were observed in the bottom longline shark fishery and none were observed in the gillnet shark fishery. Combining live releases in the pelagic longline fishery and prohibiting the minimal landings from other commercial gears, NMFS expects this alternative to result in reductions in U.S. commercial landings of shortfin mako sharks by approximately 75 percent. Therefore, implementing this measure is anticipated to have direct short- and long-term minor, beneficial ecological impacts.

In addition to this preferred commercial alternative, NMFS also considered a No Action (Alternative A1) which would maintain the regulations before the emergency rule went into place (given that the emergency rule is an interim rule that will expire), along with alternatives that would modify the commercial retention restrictions (Alternative A3); use electronic monitoring and/or observers to verify the status of boarded sharks and compliance with the size limit (Alternatives A4 and A5); and prohibit commercial retention (Alternative A6). These alternatives are not preferred at this time. The No Action alternative (Alternative A1) would not implement any new management measures and thus would not reduce shortfin mako shark mortality as needed to end overfishing and begin rebuilding the stock. The alternative that allows commercial fishermen to opt in or out of an electronic monitoring program (Alternative A3) for shortfin mako sharks would be an additional burden on the fishermen that would not have any measurable conservation or management benefits. The program would also be complicated to administer and would create two separate data streams from within the fleet, as some vessels and catch would be compared and analyzed differently due to different regulatory restrictions. The alternative that would use electronic monitoring and/or observers to verify the status of boarded sharks (live or dead) or compliance with any size limit (Alternatives A4 and A5) would place more restrictive limits on fishermen, particularly pelagic longline fishermen, than allowing retention of

shortfin mako sharks that are dead at haulback under the preferred alternative, which would achieve the suggested mortality reduction without such restrictions. The alternative prohibiting commercial retention (Alternative A6) could disadvantage U.S. fishermen compared to fishermen in other ICCAT nations that implement the ICCAT recommendation verbatim. This alternative also would cause more negative economic impacts when compared to the preferred alternative, which would achieve the suggested mortality reduction.

Recreational Measures

NMFS is proposing two measures for the recreational fishery for sharks. Under the first proposed measure (Alternative B3), HMS recreational fishermen could only land shortfin mako sharks, male or female, that are at least 83 inches fork length (210 cm FL). As with the commercial alternative, this alternative matches the management measure implemented in the emergency interim final rule (83 FR 8946; March 2, 2018). According to length composition information from the Large Pelagics Survey, this recreational minimum size would reduce the number of shortfin mako sharks landed by approximately 83 percent in the HMS recreational fishery and would reduce the weight of landings by at least 68 percent. It is likely that the reductions in landings under this alternative would be significantly greater than what is estimated in this proposed rule and the DEIS, as the number of recreational trips targeting shortfin mako sharks would likely decrease substantially given the large increase in the overall size limit and the smaller minimum size limit (54 inches FL for other shark species). Therefore, implementing this measure is anticipated to have direct short- and long-term minor, beneficial ecological impacts.

The second proposed measure (Alternative B9) would require the use of non-offset, non-stainless steel circle hooks when fishing recreationally for sharks in federal waters. The current regulatory requirement for such hooks applies to shark fishing in federal waters south of 41°43' N latitude (near Chatham, Massachusetts), as implemented in Amendment 5b to the 2006 Consolidated HMS FMP. As mentioned in more detail in the DEIS, circle hooks are a bycatch mortality mitigation tool that have shown promise in a number of fisheries for various species including sharks. Most evidence suggests that circle hooks reduce shark mortality rates at-vessel and post-release without reducing catchability of target

species compared to J-hooks, although the reduction in mortality rate varies by species, gear configuration, bait, and other factors. By design, circle hooks tend to hook sharks in the jaw rather than in the throat or gut (deep-hooking), thereby reducing injury and associated mortality.

For shortfin mako sharks specifically, research shows that the use of circle hooks reduces gut-hooking and increases post-release survival. French et al. (2015) examined the effects of recreational fishing techniques, including hook type, on shortfin mako sharks and found that circle hooks were more likely to hook shortfin mako sharks in the jaw compared to J-hooks. In the study, circle hooks were most likely to hook in the jaw (83 percent of the time) while J-hooks hooked in the jaw only 20 percent of the time but in the throat or gut 60 percent of the time. Jaw-hooking is correlated with increased odds of post release survival. Therefore, implementing this measure is anticipated to have direct short- and long-term minor, beneficial ecological impacts.

In addition to the proposed measure, NMFS also considered No Action (Alternative B1) which would maintain the regulations before the emergency rule went into place, along with alternatives that would prohibit recreational retention of shortfin mako sharks (Alternative B10); modify the recreational size limit by sex and seasonal retention or slot limits (Alternatives B2, B4, B5, B6, and B7); and establish a recreational tagging program (Alternative B8). A number of alternatives that were considered and/or commented on during the development of this action are not preferred at this time because they would complicate the regulations for fishermen and not meet the scientific advice for shortfin mako mortality reduction as well as the preferred alternatives. The no action alternative (Alternative B1) would not implement any new management measures and not reduce the shortfin mako shark mortality as needed to end overfishing and begin rebuilding the stock. The alternatives that would modify the recreational size limit by sex and seasonal retention or slot limits (Alternatives B2, B4, B5, B6, and B7) would not meet the objectives of this action as well as the preferred alternatives, and they would add unnecessary complexity to the recreational regulations. The alternative that would establish a landings tag program (Alternative B8) could increase the potential landings of shortfin mako sharks and cause unnecessary administrative burden in managing such

a program. The alternative that considered prohibiting recreational retention entirely would be unnecessarily restrictive, have little effect on ending overfishing, and disadvantage U.S. fishermen compared to fishermen in other ICCAT nations that implement the ICCAT recommendation verbatim, which requires less restrictive measures.

Monitoring Measures

NMFS considered alternatives that would require mandatory reporting on vessel monitoring systems and mandatory reporting of recreational catches. However, after considering these alternatives, NMFS is proposing the No Action alternative (Alternative C1) in relation to monitoring measures. This preferred alternative would make no changes to the current reporting requirements applicable to shortfin mako sharks in HMS fisheries, likely resulting in direct, short- and long-term, neutral ecological impacts. HMS commercial fishermen would continue to report shortfin mako catches through vessel logbooks along with dealer reporting of landings and electronic monitoring systems would be used to verify that the shortfin mako sharks were dead at haulback. HMS recreational anglers fishing from Maine to Virginia would continue to be required to report shortfin mako shark landings and releases if intercepted by the Large Pelagic Survey, and data would continue to be collected on shortfin mako shark catches by the Access Point Angler Intercept Survey, which is part of the Marine Recreational Information Program. Thus, no additional reporting requirements would be placed on HMS Angling and HMS Charter/Headboat permit holders who land shortfin mako sharks on non-tournament trips. Tournament operators would continue to be required to report landings associated with shark tournaments if their tournaments are selected for reporting.

ICCAT's SCRS recommended that member nations strengthen their monitoring and data collection efforts to monitor the future status of this stock. Consistent with the SCRS recommendation, NMFS plans to select shark tournaments for reporting using existing regulations and authorities. The regulations at 50 CFR 635.5(d) require Atlantic HMS tournament operators to register their tournaments with NMFS, and authorize NMFS to select any HMS tournaments for reporting. Currently, NMFS only selects billfish and swordfish tournaments for reporting; however in their reports, those tournaments report catches of all HMS

including sharks. Thus some, but not all, shark catch information from selected billfish and swordfish tournaments are already being collected. The tournament registration category of "pelagic shark" (which includes shortfin mako shark) makes up 95 percent of all shark tournaments and because information from the remaining 5 percent of shark tournaments will be useful for management of non-pelagic sharks, NMFS intends to select all shark tournaments for reporting. Therefore, Alternative C1, the No Action alternative, in combination with selecting all shark tournaments for reporting (which does not require any new regulations) is anticipated to have neutral ecological impacts.

In addition to the No Action (Alternative C1), NMFS also considered alternatives that would require mandatory reporting on vessel monitoring systems (Alternative C2) and mandatory reporting of recreational catches (Alternative C3). A number of alternatives that were considered and/or commented on during the development of this action are not preferred at this time because the current reporting requirements for all HMS commercial vessels are sufficient to meet the purpose and need of this action and additional potential measures would place undue burden on recreational fishermen and potentially create enforcement issues. The alternative that would implement mandatory reporting on the vessel monitoring systems (Alternative C2) would unnecessarily increase burden to HMS commercial vessels that already report in other ways (vessel logbooks, dealer reports of landings and electronic monitoring system) that are sufficient vehicles for improving data collection for shortfin mako sharks. The alternative that would implement mandatory reporting of recreational catches (Alternative C3) would unnecessarily increase the burden on recreational fishermen and monitoring of catches and compliance by NMFS because NMFS estimates of shortfin mako sharks in the recreational fishery currently have relatively high precision, as evidenced by the low percent standard error rates in the Large Pelagic Survey.

Rebuilding Measures

Under the proposed measure (Alternative D3), NMFS would take action at the international level through ICCAT to develop a rebuilding plan for shortfin mako shark stock. As part of this, NMFS would promote Magnuson-Stevens Act's rebuilding provisions and approaches and other relevant provisions of the Act. See 16 U.S.C.

1812(c). This rebuilding plan would encompass the objectives set forth by ICCAT based on new scientific advice from the SCRS, which is currently scheduled to be available in 2019. Under this alternative, NMFS would continue to implement the new management measures adopted through this rulemaking for North Atlantic shortfin mako sharks in United States fisheries based on ICCAT Recommendation 17–08. Any future international management recommendations adopted by ICCAT for shortfin mako sharks would be implemented domestically. Currently, the United States contributes only 11 percent of the mortality for North Atlantic shortfin mako sharks and domestic reductions of shortfin mako shark mortality alone could not end overfishing of the entire North Atlantic stock or effectively rebuild the stock. Therefore, NMFS will continue to take action at the international level through ICCAT, the relevant international fishery management organizations. Through this process, all ICCAT members fishing on the stock participate in the establishment of effective conservation and management measures to end overfishing of and rebuild shortfin mako sharks. In the long-term, any management recommendations adopted at the international level to end overfishing of shortfin mako sharks and rebuild the stock could have direct, moderate beneficial ecological impacts on the North Atlantic shortfin mako shark population by reducing overall mortality of shortfin mako sharks and rebuilding the stock. As an active member of ICCAT, the United States will participate and advocate for an effective rebuilding plan and continue to work through ICCAT on implementation and enforcement of effective conservation and management measures to end overfishing.

In addition to Alternative D3, NMFS also considered No Action (Alternative D1) and alternatives that would

establish a domestic rebuilding plan without ICCAT (Alternative D2); establish a species-specific quota if established by ICCAT (Alternative D4); implement area management if established by ICCAT (Alternative D5); and bycatch caps (Alternative D6). The no action alternative would cause no rebuilding plan to be established. Alternative D2 (domestic rebuilding plan without ICCAT) would not be effective given the stock’s range and the fact that the United States catches are only a small part of catches Atlantic-wide. Thus, this alternative would allow the stock to continue to be overfished, with overfishing continuing to occur. Given that U.S. catches of shortfin mako are small, Alternative D4 considers potential impacts of a shortfin mako shark quota if established by ICCAT as opposed to a unilateral U.S. quota. Alternative D4 is not preferred at this time, because ICCAT does not have a total allowable catch for shortfin mako shark, but instead, has measures aimed at reducing mortality and a six-month review to determine if further measures are needed. Alternative D5 (area management) is also not preferred at this time, because ICCAT has not adopted, and does not have scientific information yet to support, such a measure. The current ICCAT Recommendation calls on SCRS to provide additional scientific advice in 2019 that takes into account a spatial/temporal analysis of North Atlantic shortfin mako shark catches in order to identify areas with high interactions. Alternative D6 (bycatch caps) is not preferred, because U.S. catches of shortfin mako are small thus unilateral U.S. bycatch caps will not address overfishing and rebuilding. This alternative would thus have more economic impacts than the preferred alternative without achieving the purpose and need of the action and would unfairly disadvantage U.S. fishermen, as ICCAT currently does not require bycatch caps.

Request for Comments

NMFS is requesting comments on the alternatives and analyses described in this proposed rule and contained in the DEIS, IRFA, and RIR for Draft Amendment 11. Comments may be submitted via <http://www.regulations.gov> or mail. Comments may also be submitted at a public hearing (see Public Hearings and Special Accommodations below). We solicit comments on this proposed rule by October 1, 2018 (see **DATES** and **ADDRESSES**).

Public Hearings

Comments on this proposed rule may be submitted via <http://www.regulations.gov> or mail and comments may also be submitted at a public hearing. NMFS solicits comments on this proposed rule by October 1, 2018. During the comment period, NMFS will hold six public hearings and one operator-assisted public hearing via conference call and webinar for this proposed rule and draft Amendment 11. The hearing locations will be physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Guý DuBeck at 301–427–8503, at least 7 days prior to the meeting. NMFS has also asked to present information on the proposed rule and draft Amendment 11 to the Caribbean, Gulf of Mexico, South Atlantic, Mid-Atlantic, and New England Fishery Management Councils, and the Atlantic and Gulf of Mexico States Marine Fisheries Commissions at their meetings during the public comment period. Please see their meeting notices for dates, times, and locations. In addition, NMFS will present at the HMS Advisory Panel meeting in September, to discuss this rulemaking. NMFS will announce the location and times of HMS Advisory Panel meeting in a future **Federal Register** notice.

TABLE 1—DATES, TIMES, AND LOCATIONS OF UPCOMING PUBLIC HEARINGS AND CONFERENCE CALL

Venue	Date/time	Meeting location	Location contact information
Public Hearing	August 22, 2018, 5 p.m.–8 p.m	Corpus Christi, TX	Dr. Clotilde Garcia Public Library, 5930 Brockhampton Street, Corpus Christi, TX 78414.
Public Hearing	August 23, 2018, 5 p.m.–8 p.m	Linwood, NJ	Linwood Public Library, 301 Davis Avenue, Linwood, NJ 08211.
Public Hearing	August 28, 2018, 5 p.m.–8 p.m	Manteo, NC	Commissioners Meeting Room, Dare County Administration Building, 954 Marshall C. Collins Drive, Manteo, NC 27954.
Public Hearing	August 29, 2018, 5 p.m.–8 p.m	Morehead City, NC	NCDMF Central District Office, 5285 Highway 70 West, Morehead City, NC 28557.
Public Hearing	August 30, 2018, 5 p.m.–8 p.m	Gloucester, MA	National Marine Fisheries Service, Grater Atlantic Regional Office, 55 Great Republic Drive, Gloucester, MA 01930.

TABLE 1—DATES, TIMES, AND LOCATIONS OF UPCOMING PUBLIC HEARINGS AND CONFERENCE CALL—Continued

Venue	Date/time	Meeting location	Location contact information
Public Hearing	August 30, 2018, 5 p.m.–8 p.m	St. Petersburg, FL	National Marine Fisheries Service, Southeast Regional Office, 263 13th Avenue South, St. Petersburg, FL 33701.
Conference call	September 12, 2018, 2 p.m.–4 p.m	To participate in conference call, call: (888) 831–4306, Passcode: 2693278, To participate in webinar, RSVP at: https://noaaevents2.webex.com/noaaevents2/on-stage/g.php?MTID=e64dda334375685e91c704ca0a5e9882f , A confirmation email with webinar log-in information will be sent after RSVP is registered.

The public is reminded that NMFS expects participants at the public hearings to conduct themselves appropriately. At the beginning of each public hearing, a representative of NMFS will explain the ground rules (e.g., alcohol is prohibited from the hearing room; attendees will be called to give their comments in the order in which they registered to speak; each attendee will have an equal amount of time to speak; and attendees should not interrupt one another). At the beginning of the conference call, the moderator will explain how the conference call will be conducted and how and when attendees can provide comments. The NMFS representative will attempt to structure the meeting so that all attending members of the public will be able to comment, if they so choose, regardless of the controversial nature of the subject(s). Attendees are expected to respect the ground rules, and, if they do not, they may be asked to leave the hearing or may not be allowed to speak during the conference call.

Classification

Pursuant to the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that the proposed rule is consistent with the 2006 Consolidated HMS FMP and its amendments, other provisions of the Magnuson-Stevens Act, ATCA, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

NMFS prepared a DEIS for this proposed rule that discusses the impact on the environment that would result from this rule. A copy of the DEIS is available from NMFS (see **ADDRESSES**). The Notice of Availability of the DEIS is publishing in the **Federal Register** on the same day as this proposed rule. A summary of the impacts of the alternatives considered is described above.

Regulatory Flexibility Act

An IRFA was prepared, as required by section 603 of the Regulatory Flexibility Act (RFA). The IRFA describes the economic impact this proposed rule, if adopted, would have on small entities. A summary of the analysis follows. A copy of this analysis is available from NMFS (see **ADDRESSES**).

Section 603(b)(1) requires Agencies to describe the reasons why the action is being considered. The purpose of Amendment 11 is to develop and implement management measures to address overfishing and take steps towards rebuilding the North Atlantic shortfin mako shark stock. Consistent with the provisions of the Magnuson-Stevens Act and ATCA, NMFS proposes to modify the 2006 Atlantic HMS FMP in response to the stock status determination for shortfin mako sharks and the subsequent ICCAT Recommendation (17–08).

Section 603(b)(2) of the RFA requires Agencies to state the objective of, and legal basis for the proposed action. (See Chapter 1 of the DEIS for a full description of the objectives of this action.) Consistent with the provisions of the Magnuson-Stevens Act and ATCA, NMFS proposes to amend the 2006 Atlantic HMS FMP in response to the stock status determination for shortfin mako sharks and the subsequent ICCAT Recommendation (17–08). NMFS has identified the following objectives with regard to this proposed action:

- Address overfishing of shortfin mako sharks;
- Develop and implement management measures consistent with ICCAT Recommendation 17–08; and
- Take steps towards rebuilding the shortfin mako shark stock pending planned development of the ICCAT rebuilding plan, which is necessarily to effectively address stock rebuilding across its range

Section 603(b)(3) of the RFA requires Agencies to provide an estimate of the number of small entities to which the rule would apply. The Small Business

Administration (SBA) has established size criteria for all major industry sectors in the United States, including fish harvesters. Provision is made under the SBA's regulations for an agency to develop its own industry-specific size standards after consultation with SBA Office of Advocacy and an opportunity for public comment (see 13 CFR 121.903(c)). Under this provision, NMFS may establish size standards that differ from those established by the SBA Office of Size Standards, but only for use by NMFS and only for the purpose of conducting an analysis of economic effects in fulfillment of the agency's obligations under the RFA. To utilize this provision, NMFS must publish such size standards in the **Federal Register**, which NMFS did on December 29, 2015 (80 FR 81194, December 29, 2015). In this final rule effective on July 1, 2016, NMFS established a small business size standard of \$11 million in annual gross receipts for all businesses in the commercial fishing industry (NAICS 11411) for RFA compliance purposes. NMFS considers all HMS permit holders to be small entities because they had average annual receipts of less than \$11 million for commercial fishing. The SBA has established size standards for all other major industry sectors in the U.S., including the scenic and sightseeing transportation (water) sector (NAICS code 487210, for-hire), which includes charter/party boat entities. The SBA has defined a small charter/party boat entity as one with average annual receipts (revenue) of less than \$7.5 million.

Regarding those entities that would be directly affected by the recreational management measures, HMS Angling (Recreational) category permits are typically obtained by individuals who are not considered businesses or small entities for purposes of the RFA because they are not engaged in commercial business activity. Vessels with the HMS Charter/Headboat category permit can operate as for-hire vessels. These permit holders can be regarded as small entities for RFA purposes (i.e., they are engaged

in the business of fish harvesting, are independently owned or operated, are not dominant in their field of operation, and have average annual revenues of less than \$7.5 million). Overall, the recreational alternatives would have impacts on the portion of the 3,618 HMS Charter/Headboat permit holders who fish for or retain sharks. There were also 282 registered HMS tournaments in 2017, which could be impacted by this rule. Of those registered HMS tournaments, 72 had awards or prizes for pelagic sharks.

Regarding those entities that would be directly affected by the preferred commercial alternatives, the average annual revenue per active pelagic longline vessel is estimated to be \$187,000 based on the 170 active vessels between 2006 and 2012 that produced an estimated \$31.8 million in revenue annually. The maximum annual revenue for any pelagic longline vessel between 2006 and 2016 was less than \$1.9 million, well below the NMFS small business size standard for commercial fishing businesses of \$11 million. Other non-longline HMS commercial fishing vessels typically generally earn less revenue than pelagic longline vessels. Therefore, NMFS considers all Atlantic HMS commercial permit holders to be small entities (*i.e.*, they are engaged in the business of fish harvesting, are independently owned or operated, are not dominant in their field of operation, and have combined annual receipts not in excess of \$11 million for all its affiliated operations worldwide). The preferred commercial alternatives would apply to the 280 Atlantic tunas Longline category permit holders, 221 directed shark permit holders, and 269 incidental shark permit holders. Of these 280 permit holders, 85 pelagic longline vessels were actively fishing in 2016 based on logbook records. Based on HMS logbook data, an average of 10 vessels that used gear other than pelagic longline gear interacted with shortfin mako sharks between 2012 and 2016, which is also equal to the 2016 number of vessels reporting shortfin mako sharks on non-pelagic longline gear.

NMFS has determined that the preferred alternatives would not likely directly affect any small organizations or small government jurisdictions defined under RFA, nor would there be disproportionate economic impacts between large and small entities. Furthermore, there would be no disproportionate economic impacts among the universe of vessels based on gear, home port, or vessel length. More information regarding the description of the fisheries affected, and the categories

and number of permit holders, can be found in Chapter 3 of the DEIS.

Section 603(b)(4) of the RFA requires Agencies to describe any new reporting, record-keeping and other compliance requirements. The action does not contain any new collection of information, reporting, or record-keeping requirements.

Under section 603(b)(5) of the RFA, Agencies must identify, to the extent practicable, relevant Federal rules which duplicate, overlap, or conflict with the proposed action. Fishermen, dealers, and managers in these fisheries must comply with a number of international agreements, domestic laws, and other fishery management measures. These include, but are not limited to, the Magnuson-Stevens Act, ATCA, the High Seas Fishing Compliance Act, the Marine Mammal Protection Act, the Endangered Species Act, the National Environmental Policy Act, the Paperwork Reduction Act, and the Coastal Zone Management Act. This proposed action has been determined not to duplicate, overlap, or conflict with any Federal rules.

One of the requirements of an IRFA is to describe any significant alternatives to the proposed rule which accomplish the stated objectives of applicable statutes and which minimize any significant economic impact of the proposed rule on small entities. The analysis shall discuss significant alternatives such as:

1. Establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities;
2. Clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities;
3. Use of performance rather than design standards; and
4. Exemptions from coverage of the rule, or any part thereof, for small entities.

These categories of alternatives are described at 5 U.S.C. 603(c)(1)–(4)). NMFS examined each of these categories of alternatives. Regarding the first, second, and fourth categories, NMFS cannot establish differing compliance or reporting requirements for small entities or exempt small entities from coverage of the rule or parts of it because all of the businesses impacted by this rule are considered small entities and thus the requirements are already designed for small entities. NMFS does not know of any performance or design standards that would satisfy the aforementioned objectives of this rulemaking while, concurrently, complying with the

Magnuson-Stevens Act. As described below, NMFS analyzed several different alternatives from different categories in this proposed rulemaking and provides rationales for identifying the preferred alternatives to achieve the desired objectives.

The alternatives considered and analyzed are described below. The IRFA assumes that each vessel will have similar catch and gross revenues to show the relative impact of the proposed action on vessels.

Commercial Alternatives

Alternative A1, the No Action alternative, would keep the non-emergency rule regulations for shortfin mako sharks. Once the emergency rule for shortfin mako sharks expires, management measures would revert back to those effective before March 2018 (*e.g.*, no requirement to release shortfin mako sharks that are alive at haulback). Directed and incidental shark LAP holders would continue to be allowed to land and sell shortfin mako sharks to an authorized dealer, subject to current limits, including the pelagic shark commercial quota. Short-term direct economic impacts on small entities would likely be neutral since commercial fishermen could continue to catch and retain shortfin mako sharks at a similar level and rate as the status quo.

In recent years, about 180,000 lb dressed weight (dw) of shortfin mako sharks have been landed and the commercial revenues from shortfin mako sharks have averaged approximately \$375,000 per year, which equates to approximately 1 percent of overall HMS ex-vessel revenues. Approximately 97.26 percent of shortfin mako commercial landings, based on dealer reports, were made by pelagic longline vessels. There were 85 pelagic longline vessels that were active in 2016 based on logbook reports. Therefore, the average revenue from shortfin mako shark landings per pelagic longline vessel is \$4,291 per year.

Even though pelagic longline gear is the primary commercial gear used to land shortfin mako sharks, other gear types also occasionally interact with this species. Based on HMS logbook data, an average of 10 vessels that used gear other than pelagic longline gear interacted with shortfin mako sharks between 2012 and 2016, which is also equal to the 2016 number of vessels reporting shortfin mako sharks on non-pelagic longline gear. Therefore, these vessels that used gear other than pelagic longline gear landed an average of only \$1,028 worth of shortfin mako sharks per year.

Under Alternative A2, the preferred alternative, retention of shortfin mako sharks would only be allowed if the following three criteria are met: (1) The vessel has been issued a Directed or Incidental shark LAP, (2) the shark is dead at haulback, and (3) there is a functional electronic monitoring system on board the vessel. This alternative is designed to be consistent with one of the limited provisions allowing retention of shortfin mako sharks under ICCAT Recommendation 17–08. Under the current HMS regulations, all HMS permitted vessels that fish with pelagic longline gear are already required to have a functional electronic monitoring system (79 FR 71510; December 2, 2014) and either a Directed or an Incidental shark LAP. Vessels utilizing other gear types (*i.e.*, gillnet or bottom longline) are not required to have an electronic monitoring system under current regulations but could choose to install one if the operator wishes to retain shortfin mako sharks that are dead at haulback and if the vessel holds a commercial shark LAP. Under this alternative, the electronic monitoring system would be used to verify the disposition of shortfin mako sharks at haulback to ensure that only sharks dead at haulback were retained.

This alternative would be consistent with ICCAT Recommendation 17–08 and would reduce the number of landings by pelagic longline vessels on average by 74 percent based on observer data from 2013–2016. A 74 percent reduction in shortfin mako landings would reduce revenues by an average of \$3,175 per vessel for the 85 active pelagic longline vessels and would eliminate all of the \$1,028 in landing per vessel by the 10 non-pelagic longline vessels that landing shortfin mako sharks since those vessels are unlikely to have electronic monitoring systems currently installed. Those non-pelagic longline vessels would need to pay to install electronic monitoring systems if they wish to retain shortfin mako sharks, introducing an additional expense for those vessels if it there were an economic incentive for those vessels to try to retain shortfin mako sharks under this alternative. Overall, this alternative would have minor economic costs on small entities because these measures would reduce the number of shortfin mako sharks landed and sold by these fishing vessels. However, shortfin mako sharks are rarely a target species and are worth less than other more valuable target species.

Alternative A3 is similar to Alternative A2 except that the ability to retain dead shortfin mako sharks would be limited to permit holders that opt in

to a program that would use the existing electronic monitoring systems, which are currently used in relation to the bluefin tuna IBQ program, also to verify the disposition of shortfin mako sharks at haulback. In other words, this alternative would allow for retention of shortfin mako sharks that are dead at haulback by persons with a Directed or Incidental shark LAP only if permit holders opt in to enhanced electronic monitoring coverage. If the permit holder does not opt in to the enhanced electronic monitoring coverage, they could not retain any shortfin mako sharks.

The economic impacts to small entities under this alternative are expected to be similar to those under Alternative A2. Under this alternative, a portion of the pelagic longline fleet could opt out of any retention of shortfin mako sharks, resulting in a greater reduction in overall shark ex-vessel revenue for those vessels. Overall, the socioeconomic impacts associated with these reductions in revenue are not expected to be substantial, as shortfin mako sharks comprise less than one percent of total HMS ex-vessel revenues on average. Non-pelagic longline vessels would need to pay to install electronic monitoring systems if they wish to retain shortfin mako sharks, introducing an additional expense for those vessels. Due to the low commercial value of shortfin mako sharks and the high cost of electronic monitoring it is reasonable to expect that these fisheries will not install cameras and therefore will not retain shortfin mako sharks. Overall, this alternative would have minor economic costs on small entities, because these measures would reduce the number of shortfin mako sharks landed and sold by these fishing vessels, however, shortfin mako sharks are rarely a target species and are worth less than other more valuable target species.

Alternative A4 would establish a commercial minimum size of 83 inches FL (210 cm FL) for retention of shortfin mako sharks caught incidentally during fishing for other species, whether the shark is dead or alive at haulback. Based on observer data, only six percent of shortfin mako sharks caught with pelagic longline gear greater than 83 inches FL. Thus, restricting fishermen to retaining six percent of shortfin mako sharks would represent a considerable reduction in number of shortfin mako sharks landed and in the resulting ex-vessel revenue. A 94 percent reduction in shortfin mako landings would reduce annual revenues by an average of \$4,034 per vessel for the 85 active pelagic longline vessels and would reduce

annual revenues by an average of \$966 per vessel for the 10 non-pelagic longline vessels that land shortfin mako sharks. However, the overall economic impacts associated with these reductions in revenue are not expected to be substantial, as shortfin mako sharks comprise less than one percent of total HMS ex-vessel revenues on average. Additionally, the magnitude of shortfin mako landings by other gear types (*e.g.*, bottom longline, gillnet, handgear) is very small. Overall, this alternative would have minor economic costs on small entities because these measures would reduce the number of shortfin mako sharks landed and sold by these fishing vessels, however, shortfin mako sharks are rarely a target species and are worth less than other more valuable target species.

Alternative A5 would allow fishermen to retain shortfin mako sharks caught on any commercial gear (*e.g.*, pelagic longline, bottom longline, gillnet, handgear) provided that an observer is on board that can verify that the shark was dead at haulback. Under this alternative, electronic monitoring would not be used to verify the disposition of shortfin mako sharks caught on pelagic longline gear, but instead pelagic longline vessels could only retain shortfin mako sharks when the sharks are dead at haulback and an observer is on board.

Since only 5 percent of pelagic longline gear trips are observed, this alternative would result in a 95 percent reduction in the number of shortfin mako sharks retained on pelagic longline gear. A 95 percent reduction in shortfin mako landings would reduce annual revenues by an average of \$4,076 per vessel for the 85 active pelagic longline vessels and would reduce annual revenues by an average of \$977 per vessel for the 10 non-pelagic longline vessels that land shortfin mako sharks. However, the overall economic impacts associated with these reductions in revenue are not expected to be substantial, as shortfin mako sharks comprise less than one percent of total HMS ex-vessel revenues on average. Additionally, the magnitude of shortfin mako landings by other gear types (*e.g.*, bottom longline, gillnet, handgear) is very small. Overall, this alternative would have minor economic costs on small entities because these measures would reduce the number of shortfin mako sharks landed and sold by these fishing vessels, however, shortfin mako sharks are rarely a target species and are worth less than other more valuable target species.

Alternative A6 would place shortfin mako sharks on the prohibited sharks

list to prohibit any catch or retention of shortfin mako sharks in commercial HMS fisheries. In recent years, about 180,000 lb dw of shortfin mako sharks have been landed and the commercial revenues from shortfin mako sharks have averaged approximately \$375,000 per year, which equates to approximately one percent of overall HMS ex-vessel revenues. That revenue would be eliminated under this alternative. Approximately 97.26 percent of shortfin mako commercial landings, based on dealer reports, were made by pelagic longline vessels. There were 85 pelagic longline vessels that were active in 2016 based on logbook reports. Therefore, the average loss in annual revenue from shortfin mako shark landings per pelagic longline vessel would be \$4,291 per year. The average loss in annual revenue from shortfin mako shark landings for vessel using other gear types would be \$1,028 per year. However, the overall economic impacts associated with these reductions in revenue are not expected to be substantial, as shortfin mako sharks comprise less than one percent of total HMS ex-vessel revenues on average. Additionally, the magnitude of shortfin mako landings by other gear types (*e.g.*, bottom longline, gillnet, handgear) is very small. Overall, this alternative would have minor economic costs on small entities because these measures would reduce the number of shortfin mako sharks landed and sold by these fishing vessels, however, shortfin mako sharks are rarely a target species and are worth less than other more valuable target species.

Recreational Alternatives

While HMS Angling permit holders are not considered small entities by NMFS for purposes of the Regulatory Flexibility Act, Charter/Headboat permit holders and tournament operators are considered to be small entities and could be potentially impacted by the various recreational alternatives, as described below.

Alternative B1, the no action alternative, would not implement any management measures in the recreational shark fishery to decrease mortality of shortfin mako sharks. This would result in no additional economic impacts on small entities associated with this fishery in the short-term.

Under Alternative B2, the minimum size limit for the retention of shortfin mako sharks would be increased from 54 inches FL to 71 inches FL for male and 83 inches FL for female shortfin mako sharks. This increase in the size limit is projected to reduce recreational landings by at least 64 percent in

numbers of sharks landed, and 49 percent in the weight of sharks landed. While this alternative would not establish a shortfin mako fishing season, such a significant increase in the minimum size limit would likely result in some reduction in directed fishing effort for shortfin mako sharks.

Under Alternative B3, the preferred alternative, the minimum size limit for retention of shortfin mako sharks would be increased to 83 inches FL for both males and female sharks consistent with the measure implemented in the emergency rule. Assuming no reduction in directed fishing effort, this increase in the minimum size limit would result in an 83 percent reduction in the number of sharks landed, and a 68 percent reduction in the weight of sharks landed. Such a large increase in the minimum size limit and associated reduction in landings is unlikely to have no effect on directed fishing effort. An 83 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to 6 percent. At least one tournament directed at shortfin mako sharks in the Northeast has chosen to cancel its 2018 event due to the more stringent current 83 inches FL minimum size limit. Tournaments account for over half of directed recreational trips for shortfin mako sharks, and 77 percent of them in the month of June when effort is at its highest. This could result in a significant reduction in directed fishing trips for shortfin mako sharks, thus leading to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B4, recreational HMS permit holders would only be allowed to retain male shortfin mako sharks that measure at least 71 inches FL and female shortfin mako sharks that measure at least 108 inches FL. Assuming no reduction in directed fishing effort, this increase in the minimum size limit would result in a 76 percent reduction in the number of sharks landed, and a 72 percent reduction in the weight of sharks landed. A 76 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to approximately 9 percent. This could result in a significant reduction in directed fishing trips for shortfin mako sharks, thus leading to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B5, recreational HMS permit holders would only be allowed to retain male shortfin mako sharks that measure at least 71 inches FL and female shortfin mako sharks that

measure at least 120 inches FL. Assuming no reduction in directed fishing effort, this increase in the size limit would result in a 76 percent reduction in the number of sharks landed, and a 73 percent reduction in the weight of sharks landed. A 76 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to 8.6 percent. This could result in a significant reduction in directed fishing trips for shortfin mako sharks, thus leading to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B6a, the minimum size limit for the retention of shortfin mako sharks would be increased from 54 inches FL to 71 inches FL for male and 83 inches FL for female shortfin mako sharks, and a shortfin mako fishing season would be established from May through October. The fishing season established under this alternative would have little to no effect on shortfin mako fishing activity in the Northeast, but may reduce fishing effort in the South Atlantic and Gulf of Mexico regions; however, a lack of data on targeted trips for shortfin mako sharks in this region makes any assessment of potential socioeconomic impacts difficult. However, this combination of increase in the size limit and fishing season is projected to reduce recreational landings by at least 64 percent in numbers of sharks landed, and 49 percent in the weight of sharks landed in the Northeast. A 64 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to 13 percent. This reduction on directed trips could lead to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B6b, NMFS would establish a three-month fishing season for shortfin mako sharks spanning the summer months of June through August. This season would be combined with a 71 inches FL minimum size limit for males and 100 inches FL for females. Based on estimates from the Large Pelagics Survey, on average 475 directed trips are taken for shortfin mako sharks each September and October, representing approximately 10 percent of all annual directed trips. No registered HMS tournaments held in September and October target sharks exclusively, so it is highly unlikely this alternative would result in the rescheduling of any tournaments due to the fishing season. It is much more likely that directed fishing effort would be affected by the increases in the

minimum size limits. Assuming this increase in the size limit has minimal effect on fishing effort directly towards shortfin mako sharks within the season, this combination of season and increase in the size limit should result in a 78 percent reduction in the number of sharks landed, and a 76 percent reduction in the weight of sharks landed. This reduction could result in a significant reduction in directed fishing trips for shortfin mako sharks, thus leading to moderate adverse economic impacts on some charter/headboat operators.

Under Alternative B6c, NMFS would establish a two-month fishing season for shortfin mako sharks for the months of June and July. This season would be combined with a 71 inches FL minimum size limit for males and 90 inches FL for females. Based on estimates from the Large Pelagics Survey, on average 1,264 directed trips are taken for shortfin mako sharks each August through October, representing approximately 26 percent of all annual directed trips. Only two registered HMS tournaments held in August through October target sharks exclusively, one out of New York that primarily targets thresher sharks and one out of Florida where participants fish exclusively from shore. Thus, it is highly unlikely this alternative would result in the rescheduling of any tournaments due to the fishing season. It is likely that directed fishing effort would also be affected by the increases in the minimum size limits. Assuming this increase in the size limit has minimal effect on fishing effort directly towards shortfin mako sharks within the season, this combination of season and increase in the size limit should result in a 78 percent reduction in the number of sharks landed, and a 76 percent reduction in the weight of sharks landed. Such a large increase in the size limit and associated reduction in landings is unlikely to have no effect on directed fishing effort. A 78 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to 8 percent. This reduction in directed trips could lead to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B6d, NMFS would establish a one-month fishing season for shortfin mako sharks for the month of June only. This season would be combined with a 71 inches FL minimum size limit for males and 83 inches FL for females. Based on estimates from the Large Pelagics Survey, on average 2,435 directed trips

are taken for shortfin mako sharks each July through October, representing approximately 51 percent of all annual directed trips. Additionally, there are seven registered HMS tournaments held in July through October that target sharks exclusively, including three of four tournaments held in the state of Rhode Island, and the only tournament in Massachusetts to target sharks exclusively. It is likely that directed fishing effort would also be affected by the increases in the minimum size limits. Assuming this increase in the size limit has minimal effect on fishing effort directly towards shortfin mako sharks within the season, this combination of season and increase in the size limit should result in a 79 percent reduction in the number of sharks landed, and a 78 percent reduction in the weight of sharks landed. Such a large increase in the size limit and associated reduction in landings is unlikely to have no effect on directed fishing effort. A 79 percent reduction in shortfin mako sharks harvested would thus reduce the percentage of directed trips harvesting them to 8 percent. This reduction in directed trips could lead to moderate adverse economic impacts on some charter/headboats and tournament operators.

Under Alternative B6e, NMFS would establish a process and criteria for determining season dates and minimum size limits for shortfin mako sharks on an annual basis through inseason actions. This process would be similar to how the agency sets season opens and retention limits for the shark commercial fisheries and the Atlantic Tunas General category fishery. NMFS would review data on recreational landings, catch rates, and effort levels for shortfin mako sharks in the previous years, and establish season dates and minimum size limits that would be expected to achieve the reduction targets established by ICCAT, and the objectives of the HMS fisheries management plan. This alternative would also allow NMFS to minimize adverse economic impacts to the HMS recreational fishery by allowing for adjustments to the season and size limits based on observed reductions and redistribution of fishing effort resulting from measures implemented in previous years.

Under Alternative B7, NMFS would implement a "slot limit" for shortfin mako sharks in the recreational fishery. Under a slot limit, recreational fishermen would only be allowed to retain shortfin mako sharks within a narrow size range (e.g., between 71 and 83 inches FL) with no retention above

or below that slot. Assuming no reduction in directed fishing effort, this alternative would be expected to result in similar reductions in landings as other alternatives analyzed here. While this alternative would not establish a shortfin mako fishing season, as described above in earlier alternatives, such a significant increase in the size limit would likely result in some reduction in directed fishing effort for shortfin mako sharks. This reduction in effort may be further exacerbated by the complicated nature of slot limits regulations. Similar to Alternative B2, there are two factors that might minimize reductions in fishing effort (harvested shortfin mako sharks peaks between 71 and 77 inches FL and shifting focus to other HMS species). The amount of effort reduction by recreational fishermen would depend on how much HMS anglers and tournaments are satisfied to practice catch-and-release fishing for sub-legal shortfin mako sharks or shift their fishing effort to other species.

Under Alternative B8, NMFS would establish a landings tag requirement and a yearly limit on the number of landings tags assigned to a vessel, for shortfin mako sharks over the minimum size limit. This requirement would be expected to negatively affect fishing effort. An increase in the minimum size limit and a yearly cap on landings for vessels would reduce effort drastically, while maintaining some opportunity for the recreational fleet. This effort reduction would adversely affect the charter fleet the most by limiting the number of trips that they could land shortfin mako sharks each year. This effort reduction may also affect their ability to book trips. At least one tournament directed at shortfin mako sharks in the Northeast has chosen to cancel its 2018 event due to the more stringent current 83 inches FL minimum size limit. By excluding tournaments from a landings tag requirement there may be a direct beneficial economic impact for tournaments, as this would be an additional opportunity, beyond their tags, to land shortfin mako sharks for permit holders.

Alternative B9, a preferred alternative, would expand the requirement to use non-offset, non-stainless steel circle hook by all HMS permit holders with a shark endorsement when fishing for sharks recreationally, except when fishing with flies or artificial lures, to all waters managed within HMS management division. Currently, this requirement is in place for all Federally managed waters south of 41°43' N latitude (near Chatham, Massachusetts), but this alternative would remove the

boundary line, requiring fishermen in all areas to use circle hooks. Recreational shark fishermen north of Chatham, Massachusetts would need to purchase circle hooks to comply with this requirement, although the cost is modest. Additionally, it is possible that once the circle hook requirement is expanded, fishermen in the newly impacted area could find reduced catch rates of sharks including shortfin mako sharks. If reduced catch rates are realized, effort in the recreational shark fishery, including the for-hire fleet, could be impacted by reduced number of trips or reduced demand for chartered trips.

Alternative B10 would place shortfin mako sharks on the prohibited sharks list to prohibit the retention of shortfin mako sharks in recreational HMS fisheries. HMS permit holders would be prohibited from retaining or landing shortfin mako sharks recreationally. In recreational fisheries, recreational fishermen would only be authorized to catch and release shortfin mako sharks. A prohibition on the retention of shortfin mako sharks is likely to disincentivize some portion of the recreational shark fishery, particularly those individuals that plan to target shortfin mako sharks. Businesses that rely on recreational shark fishing such as tournament operators and charter/headboats may experience a decline in demand resulting in adverse economic impacts.

Monitoring Alternatives

Alternative C1, the preferred alternative, would make no changes to the current reporting requirements applicable to shortfin mako sharks in HMS fisheries. Since there would be no changes to the reporting requirements under this alternative, NMFS would expect fishing practices to remain the same and direct economic impacts in small entities to be neutral in the short-term.

Under Alternative C2, NMFS would require vessels with a directed or incidental shark LAP to report daily the number of shortfin mako sharks retained and discarded dead, as well as fishing effort (number of sets and number of hooks) on a vessel monitoring system (VMS). A requirement to report shortfin mako shark catches on VMS for vessels with a shark LAP would be an additional reporting requirement for those vessels on their existing systems. For other commercial vessels that are currently only required to report in the HMS logbook, the requirement would mean installing VMS to report dead discards of shortfin mako and fishing effort.

If a vessel has already installed a type-approved enhanced mobile transmitting unit (E-MTU) VMS unit, the only expense would be monthly communication service fees, which they may already be paying if the vessel is participating in a Council-managed fishery. Existing regulations require all vessel operators with E-MTU VMS units to provide hail out/in declarations and provide location reports on an hourly basis at all times while they are away from port. In order to comply with these regulations, vessel owners must subscribe to a communication service plan that includes an allowance for sending similar declarations (hail out/in) describing target species, fishing gear possessed, and estimated time/location of landing using their E-MTU VMS. Given that most shortfin mako sharks are incidentally caught by pelagic longline vessels that are already required to have an E-MTU VMS system onboard, adverse economic impacts are not expected. If vessels with a shark LAP do not have an E-MTU VMS unit, direct, economic costs are expected as a result of having to pay for the E-MTU VMS unit (approximately \$4,000) and a qualified marine electrician to install the unit (\$400). VMS reporting requirements under this alternative could potentially provide undue burden to HMS commercial vessels that already report on catches, landings, and discards through vessel logbooks, dealer reports, and observer reports.

Alternative C3 would implement mandatory reporting of all recreational interactions (landed and discarded) of shortfin mako sharks in HMS fisheries. Recreational HMS permit holders would have a variety of options for reporting shortfin mako shark landings including a phone-in system, internet website, and/or a smartphone app. HMS Angling and Charter/Headboat permit holders currently use this method for required reporting of each individual landing of bluefin tuna, billfish, and swordfish within 24 hours. NMFS has also maintained a shortfin mako shark reporting app as an educational tool to encourage the practice of catch-and-release. Additionally, the potential burden associated with mandatory landings reports for shortfin mako sharks would be significantly reduced under the increased minimum size limits being considered in this rulemaking, although it would still represent an increased burden over current reporting requirements. While HMS Angling permit holders are not considered small entities by NMFS for purposes of the Regulatory Flexibility

Act, Charter/Headboat permit holders are considered to be small entities and would be potentially impacted by this alternative.

Rebuilding Alternatives

Under Alternative D1, NMFS would not establish a rebuilding plan for shortfin mako sharks and would maintain the current recreational and commercial shark fishing regulations that pertain to shortfin mako sharks in U.S. fisheries. There would likely be no direct short-term impact on small entities from this alternative as there would be no change in fishing effort or landings of shortfin mako sharks that would impact revenues generated from the commercial and recreational fisheries.

Under Alternative D2, NMFS would establish a domestic rebuilding plan for shortfin mako sharks unilaterally (*i.e.*, without ICCAT). While such an alternative could avoid overfishing shortfin mako sharks in the United States by changing the way that the U.S. recreational and commercial fisheries operate, such a plan could not effectively rebuild the stock, since U.S. catches are only 11 percent of the reported catch Atlantic-wide. Such an alternative would be expected to cause short- and long-term direct economic impacts.

Under Alternative D3, the preferred alternative, NMFS would take preliminary action toward rebuilding by adopting measures to end overfishing to establish a foundation for a rebuilding plan. NMFS would then take action at the international level through ICCAT to develop a rebuilding plan for shortfin mako sharks. ICCAT is planning to establish a rebuilding plan for shortfin mako sharks in 2019, and this rebuilding plan would encompass the objectives set forth by ICCAT based on scientific advice from the SCRS. This alternative would not result in any changes to the current recreational and commercial domestic regulations for shortfin mako sharks in the short-term. There would likely be no direct short-term impact on small entities from this alternative as there would be no change in fishing effort or landings of shortfin mako sharks that would impact revenues generated from the commercial and recreational fisheries. Management measures to address overfishing of shortfin mako sharks could be adopted in 2019. These measures could change the way that the U.S. recreational and commercial shortfin mako shark fishery operates, which could cause long-term direct economic impacts. Any future action to implement international

measures would be analyzed in a separate rulemaking.

Under Alternative D4, NMFS would remove shortfin mako sharks from the commercial pelagic shark management group and would implement a species-specific quota for shortfin mako sharks as established by ICCAT, which would include both commercial and recreational catches as well as dead discards. In addition, NMFS would establish a new commercial pelagic shark species quota for common thresher and oceanic whitetip sharks based on recent landings. The 2017 ICCAT stock assessment indicated that the North Atlantic population of shortfin mako sharks is overfished and experiencing overfishing. In November 2017, ICCAT adopted management measures (Recommendation 17–08) to address the overfishing determination, but did not recommend a total allowable catch (TAC) necessary to stop overfishing of shortfin mako sharks. Therefore, it is difficult at this time to determine how setting a species-specific quota for shortfin mako sharks would affect commercial and recreational fishing operations. However, this species-specific quota may provide long-term direct, minor adverse economic impacts if ICCAT established a TAC for the United States that is well below the total average harvest by the United States (*i.e.*, 379 mt whole weight (ww) or 195 mt dw) or below the current annual commercial quota for common thresher, oceanic whitetip, and shortfin mako (488 mt dw) as it could potentially limit the amount of harvest for fishermen. Short-term direct socioeconomic impacts would be neutral for Alternative D4 because initially there would be no reduction in fishing effort and practices.

Under Alternative D5, NMFS would take steps to implement area-based management measures domestically if such measures are established by ICCAT. Recommendation 17–08 calls on the SCRS to provide additional scientific advice in 2019 that takes into account a spatial/temporal analysis of North Atlantic shortfin mako shark catches in order to identify areas with high interactions. Without a specific area to analyze at this time, the precise impacts with regard to impacts on commercial and recreational fishery operations cannot be determined. Implementing area management for shortfin mako sharks, if recommended by the scientific advice, could lead to a reduction in localized fishing effort, which would likely have adverse economic impacts for small entities that land shortfin mako sharks.

Under Alternative D6, NMFS would establish bycatch caps for fisheries that interact with shortfin mako sharks. This alternative would impact the HMS pelagic longline and shark recreational fisheries similar to Alternative D4. However, this alternative could also impact non-HMS fisheries by closing those fisheries if the bycatch cap were reached. This alternative could lead to short-term adverse impacts since the bycatch caps could close fisheries if they are reached until those fishermen could modify fishing behavior to avoid shortfin mako sharks (even in fisheries where shortfin mako sharks are rarely, if ever, seen) and reduce interactions. In the long-term, this alternative would have neutral impacts as the vessels would avoid shortfin mako sharks. The impacts to small businesses are expected to be neutral in the short and long-term as their businesses would not change.

List of Subjects in 50 CFR Part 635

Fisheries, Fishing, Fishing vessels, Foreign relations, Imports, Penalties, Reporting and recordkeeping requirements, Treaties.

Dated: July 19, 2018.

Samuel D. Rauch, III,
Deputy Assistant Administrator for
Regulatory Programs, National Marine
Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 635 is proposed to be amended as follows:

PART 635—ATLANTIC HIGHLY MIGRATORY SPECIES

■ 1. The authority citation for part 635 continues to read as follows:

Authority: 16 U.S.C. 971 *et seq.*; 16 U.S.C. 1801 *et seq.*

■ 2. Revise definition for “FL (fork length)” to read as follows:

§ 635.2 Definitions.

* * * * *

FL (fork length) means the straight-line measurement of a fish from the midpoint of the anterior edge of the fish to the fork of the caudal fin. The measurement is not made along the curve of the body.

* * * * *

■ 3. In § 635.20, remove paragraph (e)(7), lift the suspension on paragraphs (e)(2) and (e)(6), and revise paragraphs (e)(2) and (e)(6) to read as follows:

§ 635.20 Size limits.

* * * * *

(e) * * *

(2) All sharks, except as otherwise specified in paragraphs (e)(1) through

(e)(6) of this section, landed under the recreational retention limits specified at § 635.22(c)(2) must be at least 54 inches (137 cm) FL.

* * * * *

(6) All North Atlantic shortfin mako sharks landed under the recreational retention limits specified at § 635.22(c)(2) must be at least 83 inches (210 cm) fork length.

* * * * *

■ 4. In § 635.21, revise paragraphs (a)(4), (c)(1)(iv), (f)(2) and (3), and (k)(1) and (2) to read as follows:

§ 635.21 Gear operation and deployment restrictions.

(a) * * *

(4) Any person on board a vessel that is issued a commercial shark permit must release all shortfin mako sharks, whether alive or dead, caught with any gear other than pelagic longline gear.

* * * * *

(c) * * *

(1) * * *

(iv) Has pelagic longline gear on board, persons aboard that vessel are required to promptly release in a manner that causes the least harm any shortfin mako shark that is alive at the time of haulback. Any shortfin mako shark that is dead at the time of haulback may be retained provided the electronic monitoring system is installed and functioning in compliance with the requirements at § 635.9.

* * * * *

(f) * * *

(2) A person on board a vessel that has been issued or is required to be issued a permit with a shark endorsement under this part and who is participating in an HMS registered tournament that bestows points, prizes, or awards for Atlantic sharks must deploy only non-offset, corrodible circle hooks when fishing for, retaining, possessing, or landing sharks, except when fishing with flies or artificial lures.

(3) A person on board a vessel that has been issued or is required to be issued an HMS Angling permit with a shark endorsement or an HMS Charter/Headboat permit with a shark endorsement must deploy only non-offset, corrodible circle hooks when fishing for, retaining, possessing, or landing sharks, except when fishing with flies or artificial lures.

* * * * *

(k) * * *

(1) A person on board a vessel that has been issued or is required to be issued a permit with a shark endorsement under this part and who is participating in an HMS registered

tournament that bestows points, prizes, or awards for Atlantic sharks must deploy only non-offset, corrodible circle hooks when fishing for, retaining, possessing, or landing sharks, except when fishing with flies or artificial lures.

(2) A person on board a vessel that has been issued or is required to be issued an HMS Angling permit with a shark endorsement or a person on board a vessel with an HMS Charter/Headboat permit with a shark endorsement must deploy only non-offset, corrodible circle hooks when fishing for, retaining, possessing, or landing, except when fishing with flies or artificial lures.

* * * * *

■ 5. In § 635.24, remove paragraphs (a)(4)(v) and (vi), lift the suspension for paragraphs (a)(4)(i) and (iii), and revise paragraphs (a)(4)(i) and (iii) to read as follows:

§ 635.24 Commercial retention limits for sharks, swordfish, and BAYS tunas.

* * * * *

(a) * * *

(4) * * *

(i) A person who owns or operates a vessel that has been issued a directed shark LAP may retain, possess, or land pelagic sharks if the pelagic shark fishery is open per §§ 635.27 and 635.28. Shortfin mako sharks may only be retained by persons using pelagic longline gear, and only if each shark is dead at the time of haulback per § 635.21 (c)(1).

* * * * *

(iii) Consistent with paragraph (a)(4)(ii) of this section, a person who owns or operates a vessel that has been issued an incidental shark LAP may retain, possess, land, or sell no more than 16 SCS and pelagic sharks, combined, per vessel per trip, if the respective fishery is open per §§ 635.27 and 635.28. Of those 16 SCS and pelagic sharks per vessel per trip, no more than 8 shall be blacknose sharks. Shortfin mako sharks may only be retained by persons using pelagic longline gear, and only if each shark is dead at the time of haulback per § 635.21(c)(1).

* * * * *

■ 6. In § 635.30, paragraph (c)(4) is revised to read as follows:

§ 635.30 Possession at sea and landing.

* * * * *

(c) * * *

(4) Persons aboard a vessel that has been issued or is required to be issued a permit with a shark endorsement must maintain a shark intact through landing and offloading with the head, tail, and all fins naturally attached. The shark

may be bled and the viscera may be removed.

* * * * *

■ 7. In § 635.71, revise paragraphs (d)(22), (23), (27), (28), and (29) to read as follows:

§ 635.71 Prohibitions.

* * * * *

(d) * * *

(22) Except when fishing only with flies or artificial lures, fish for, retain, possess, or land sharks without deploying non-offset, corrodible circle hooks when fishing at a registered recreational HMS fishing tournament that has awards or prizes for sharks, as specified in § 635.21(f) and (k).

(23) Except when fishing only with flies or artificial lures, fish for, retain, possess, or land sharks without deploying non-offset, corrodible circle hooks when issued an Atlantic HMS Angling permit or HMS Charter/Headboat permit with a shark endorsement, as specified in § 635.21(f) and (k).

* * * * *

(27) Retain, land, or possess a shortfin mako shark that was caught with gear other than pelagic longline gear as specified at § 635.21(a).

(28) Retain, land, or possess a shortfin mako shark that was caught with pelagic longline gear and was alive at haulback as specified at § 635.21(c)(1).

(29) As specified at § 635.21(c)(1), retain, land, or possess a shortfin mako shark that was caught with pelagic longline gear when the electronic monitoring system was not installed and functioning in compliance with the requirements at § 635.9.

* * * * *

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

RIN 0648-BH16

Magnuson-Stevens Fishery Conservation and Management Act Provisions; Fisheries of the Northeastern United States; Amendment 20 to the Atlantic Mackerel, Squid, and Butterfish Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Announcement of availability of fishery management plan amendment; request for comments.

SUMMARY: NMFS announces that the Mid-Atlantic Fishery Management Council has submitted Amendment 20 to the Atlantic Mackerel, Squid, and Butterfish Fishery Management Plan to the Secretary of Commerce for review and approval. We are requesting comments from the public on this amendment. This action is necessary to prevent the reactivation of latent effort in the longfin squid fishery, preserve economic opportunities for more recently active participants in the longfin squid fishery, avoid overharvest during Trimester II (May–August) of the longfin squid fishery, and reduce potential negative impacts on inshore spawning longfin squid aggregations and egg mops. The Mid-Atlantic Fishery Management Council intends that these proposed measures would promote the sustainable utilization and conservation of the squid and butterfish resources, while promoting the sustained participation of fishing communities and minimizing adverse economic impacts on such communities.

DATES: Comments must be received on or before September 25, 2018.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2017–0110, by any of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#/docketDetail;D=NOAA-NMFS-2017-0110, click the “Comment Now!” icon, complete the required fields, and enter or attach your comments.

- *Mail:* Michael Pentony, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope, “Comments on Amendment 20.”

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

The Council prepared an environmental assessment (EA) for Amendment 20 to the Atlantic Mackerel, Squid, and Butterfish Fishery Management Plan (FMP) that describes the proposed action and other alternatives considered and provides a thorough analysis of the impacts of the proposed measures and alternatives considered. Copies of Amendment 20, including the EA, the Regulatory Impact Review, and the Regulatory Flexibility Act analysis, are available from: Christopher Moore, Executive Director, Mid-Atlantic Fishery Management Council, Suite 201, 800 State Street, Dover, DE 19901. The EA and associated analysis is accessible via the internet at: <http://www.mafmc.org/s/Squid-Amendment-Draft-EA.pdf>.

FOR FURTHER INFORMATION CONTACT:
Douglas Christel, Fishery Policy Analyst, (978) 281-9141.

SUPPLEMENTARY INFORMATION:

Background

In 1995, the Mid-Atlantic Fishery Management Council (Council) adopted a limited access permit system for longfin squid and butterfish as part of Amendment 5 to the Atlantic Mackerel, Squid, and Butterfish FMP (April 2, 1996; 61 FR 14465). Under Amendment 5, NMFS issued longfin squid/butterfish moratorium permits to vessels that landed a minimum amount of either species during a specified qualification period. Since then, the number of vessels landing longfin squid has decreased, with a relatively small portion of vessels issued longfin squid/butterfish moratorium permits landing the majority of longfin squid in recent years. The Council is concerned that unused longfin squid/butterfish moratorium permits could be activated, which could lead to excessive fishing effort and bycatch of both longfin squid and non-target species. This could cause negative biological impacts to these species. In addition, this increased effort could increase the race to fish and reduce access to available longfin squid quota by vessels with a continuous history of landings in recent years. Therefore, the Council developed Amendment 20 to consider the appropriate number of vessels in the directed and incidental longfin squid fishery and design appropriate measures to prevent unanticipated increases in fishing effort. The proposed measures described below could help prevent a race to fish, frequent and disruptive fishery closures, and reduced fishing

opportunities for vessels that are more recently dependent upon longfin squid.

Longfin squid spawning occurs year round, but is most frequently observed inshore during the late spring through early fall. Spawning aggregations and associated egg masses (mops) that are attached to the bottom are vulnerable to bottom fishing activities during the summer months when longfin squid are easily accessible to the fishery in large concentrations. In 2007, the Council implemented reduced quotas during summer months (May through August, or Trimester II) as part of the trimester quota system (January 30, 2007; 71 FR 4211). The Council developed the trimester quota system to improve the monitoring and management of the longfin squid fishery and prevent allowable quotas from being exceeded. Once a trimester quota has been caught, possession limits are reduced to incidental levels for all longfin squid permits. The FMP currently includes a possession limit of 2,500 lb (1,134 kg) per trip for incidental permits and when the directed fishery has closed. However, this incidental limit has allowed vessels to continue to land large amounts of longfin squid even after the directed fishery is closed, which contributed to the Trimester II quota being exceeded by large amounts in several years. The Council is concerned that excessive fishing effort inshore during Trimester II could negatively impact the stock, interrupting spawning activity, increasing the mortality of squid eggs, and reducing future recruitment. Measures developed by the Council under this action are intended to reevaluate the management of longfin squid during Trimester II primarily to reduce impacts to spawning squid and egg mops.

The purpose of Amendment 20 is to optimize management measures in the squid fisheries by reducing latent (unused) effort in the longfin squid fishery and adjusting the management of the longfin squid fishery during Trimester II (May through August) to avoid overharvesting the longfin squid resource. Although the Council considered reducing the number of Illex squid moratorium permits in the fishery, the Council decided a reduction in the number of Illex moratorium permits was not appropriate at this time given low Illex landings and limited vessel participation in the fishery in recent years. Measures proposed under this action would promote the sustainable utilization and conservation

of the longfin squid and butterfish resources, while promoting the sustained participation of fishing communities and minimizing adverse economic impacts on such communities. If approved, Amendment 20 would:

1. Separate butterfish from the current longfin/butterfish moratorium permit to create a new butterfish moratorium permit and a separate longfin squid moratorium permit;

2. Reissue longfin squid moratorium permits to vessels that landed at least 10,000 lb (4,536 kg) of longfin squid in any year from 1997-2013;

3. Create a new longfin squid moratorium permit with a 5,000 lb (2,268 kg) possession limit for vessels that have not landed at least 10,000 lb (4,536 kg) of longfin squid in any year from 1997-2013;

4. Create a new longfin squid incidental moratorium permit to enable vessels to continue to land 2,500 lb (1,134 kg) of longfin squid per trip;

5. Allow individual entities issued multiple longfin squid moratorium permits a one-time opportunity to swap such permits among their vessels; and

6. Reduce the longfin squid possession limit from 2,500 lb (1,134 kg) to 250 lb (113 kg) for squid/butterfish incidental catch permits and for all longfin squid permits after the Trimester II longfin squid quota is landed.

NMFS seeks public comments on Amendment 20 and its incorporated documents through the end of the comment period specified in the **DATES** section of this notice of availability (NOA). Concurrent with NMFS's review of the amendment under the Magnuson-Stevens Act procedures, NMFS may publish a rule proposing to implement measures outlined in this amendment in the **Federal Register** for public comment. All comments received by the end of the comment period on the NOA, whether specifically directed to the NOA or the proposed rule, will be considered in the approval/disapproval decision. NMFS will not consider comments received after the end of the comment period for the NOA in the approval/disapproval decision of this action.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: July 23, 2018.

Jennifer M. Wallace,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Notice of Intent To Grant Exclusive License

AGENCY: Agricultural Research Service, USDA.

ACTION: Notice of intent.

SUMMARY: Notice is hereby given that the U.S. Department of Agriculture, Forest Service, intends to grant to Domtar Paper Company, LLC of Fort Mill, South Carolina, an exclusive license to U.S. Patent No. 9,540,244, "METHODS FOR SYNTHESIZING GRAPHENE FROM A LIGNIN SOURCE", issued on January 10, 2017.

DATES: Comments must be received on or before August 13, 2018.

ADDRESSES: Send comments to: Thomas Moreland, Technology Transfer Coordinator, USDA Forest Service, 1400 Independence Avenue SW, Washington, DC 20250-1118, twmoreland@fs.fed.us.

FOR FURTHER INFORMATION CONTACT: Thomas Moreland, Technology Transfer Coordinator, USDA Forest Service, 443-677-6858, twmoreland@fs.fed.us.

SUPPLEMENTARY INFORMATION: The Federal Government's patent rights in this invention are assigned to the United States of America, as represented by the Secretary of Agriculture. It is in the public interest to so license this invention as Domtar Paper Company, LLC of Fort Mill, South Carolina has submitted a complete and sufficient application for a license. The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within fifteen (15) days from the date of this published Notice, the Agricultural Research Service receives written evidence and argument which establishes that the grant of the license would not be consistent with the

requirements of 35 U.S.C. 209 and 37 CFR 404.7.

Mojdeh Bahar,
Assistant Administrator.

BILLING CODE 3410-03-P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS-2018-0049]

Notice of Request for Revision to and Extension of Approval of an Information Collection; Emergency Management Response System

ACTION: Revision to and extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with the Emergency Management Response System.

DATES: We will consider all comments that we receive on or before September 25, 2018.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0049>.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS-2018-0049, Regulatory Analysis and Development, PPD, APHIS, Station 3A-03.8, 4700 River Road Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket may be viewed at <http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0049> or in our reading room, which is located in room 1141 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799-7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on the Emergency

Management Response System, contact Dr. Fred Bourgeois, EMRS National Coordinator, PIC, NPIC, VS, APHIS, 4700 River Road Unit 41, Riverdale, MD 20737; (318) 288-4083. For more detailed information on the information collection, contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851-2483.

SUPPLEMENTARY INFORMATION:

Title: Emergency Management Response System.

OMB Control Number: 0579-0071.

Type of Request: Revision to and extension of approval of an information collection.

Abstract: Under the Animal Health Protection Act (7 U.S.C. 8301 *et seq.*), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture is authorized, among other things, to protect the health of U.S. livestock and poultry populations by preventing the introduction and interstate spread of serious diseases and pests of livestock and by eradicating such diseases from the United States when feasible.

The Emergency Management Response System (EMRS), which is a web-based system, helps APHIS manage and investigate potential incidents of foreign animal diseases in the United States. When a potential foreign animal disease incident is reported, APHIS or State animal health officials dispatch a foreign animal disease veterinary diagnostician to the premises of the reported incident to conduct an investigation. The diagnostician obtains vital epidemiologic data by conducting field investigations, including sample collection, and by interviewing the owner or manager of the premises being investigated. These important data, which are submitted electronically by the diagnostician into EMRS, include such items as the purpose of the diagnostician's visit and suspected disease, type of operation on the premises, the number and type of animals on the premises, the number of sick or dead animals on the premises, the results of physical examinations of affected animals and necropsy examinations, vaccination information on the animals in the herd or flock, biosecurity practices at the site, whether any animals were recently moved out of the herd or flock, whether any new animals were recently introduced into the herd or flock, the number and kinds

of test samples taken, and detailed geographic data concerning the premises location. EMRS allows these epidemiological and diagnostic data to be documented and transmitted more efficiently.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; e.g., permitting electronic submission of responses.

Estimate of burden: The public burden for this collection of information is estimated to average 1 hour per response.

Respondents: Owners or operators of livestock and poultry facilities and State animal health officials.

Estimated annual number of respondents: 136.

Estimated annual number of responses per respondent: 12.

Estimated annual number of responses: 1,632.

Estimated total annual burden on respondents: 1,632 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 25th day of July 2018.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

Notice of Request for Revision to and Extension of Approval of an Information Collection; Importation of Apples From China

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Revision to and extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with the regulations for the importation of apples from China.

DATES: We will consider all comments that we receive on or before September 25, 2018.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0051>.

- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS-2018-0051, Regulatory Analysis and Development, PPD, APHIS, Station 3A-03.8, 4700 River Road, Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket may be viewed at <http://www.regulations.gov/#!docketDetail;D=APHIS-2018-0051> or in our reading room, which is located in Room 1141 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799-7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on the importation of apples from China, contact Mr. Benjamin Kaczmarek, Senior Regulatory Policy Specialist, RCC, IRM, PHP, PPQ, APHIS, 4700 River Road, Unit 133, Riverdale, MD 20737; (301) 851-2127. For more detailed information on the information collection, contact Ms. Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851-2483.

SUPPLEMENTARY INFORMATION:

Title: Importation of Apples From China.

OMB Control Number: 0579-0423.

Type of Request: Revision to and extension of approval of an information collection.

Abstract: The Plant Protection Act (PPA, 7 U.S.C. 7701 *et seq.*) authorizes the Secretary of Agriculture to restrict the importation, entry, or interstate movement of plants, plant products, and other articles to prevent the introduction of plant pests into the United States or their dissemination within the United States. Regulations authorized by the PPA concerning the importation of fruits and vegetables into the United States from certain parts of the world are contained in "Subpart-Fruits and Vegetables" (7 CFR 319.56-1 through 319.56-83).

Under these regulations, apples from China may be imported into the continental United States under certain conditions, as listed in § 319.56-72, to prevent the introduction of plant pests into the United States. The regulations require information collection activities that include an operational workplan, production site and packinghouse registrations, tracking system, box labeling, phytosanitary certificates with declarations, inspections, investigation for detection, handling procedures, and emergency action notifications.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; e.g., permitting electronic submission of responses.

Estimate of burden: The public burden for this collection of information is estimated to average 0.022 hours per response.

Respondents: National plant protection organization of China,

production sites and packinghouses (businesses), and importers of apples.

Estimated annual number of respondents: 186.

Estimated annual number of responses per respondent: 275.

Estimated annual number of responses: 51,125.

Estimated total annual burden on respondents: 1,117 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 23rd day of July 2018.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

[Docket No. APHIS-2018-0050]

Notice of Request for Revision to and Extension of Approval of an Information Collection; Importation of Papayas From Peru

ACTION: Revision to and extension of approval of an information collection; comment request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Animal and Plant Health Inspection Service's intention to request a revision to and extension of approval of an information collection associated with the regulations for the importation of papayas from Peru into the continental United States.

DATES: We will consider all comments that we receive on or before September 25, 2018.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/#/docketDetail;D=APHIS-2018-0050>.

- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS-2018-0050, Regulatory Analysis and Development, PPD, APHIS, Station 3A-03.8, 4700 River Road, Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket

may be viewed at <http://www.regulations.gov/#/docketDetail;D=APHIS-2018-0050> or in our reading room, which is located in Room 1141 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799-7039 before coming.

FOR FURTHER INFORMATION CONTACT: For information on the regulations related to the importation of papayas from Peru into the continental United States, contact Ms. Claudia Ferguson, Senior Regulatory Policy Coordinator, RCC, IRM, PHP, PPQ, APHIS, 4700 River Road, Unit 133, Riverdale, MD 20737; (301) 851-2352. For more detailed information on the information collection, contact Kimberly Hardy, APHIS' Information Collection Coordinator, at (301) 851-2483.

SUPPLEMENTARY INFORMATION:

Title: Importation of Papayas From Peru.

OMB Control Number: 0579-0410.

Type of Request: Revision to and extension of approval of an information collection.

Abstract: The Plant Protection Act (PPA, 7 U.S.C. 7701 *et seq.*) authorizes the Secretary of Agriculture to restrict the importation, entry, or interstate movement of plants, plant products, and other articles to prevent the introduction of plant pests into the United States or their dissemination within the United States. As authorized by the PPA, the Animal and Plant Health Inspection Service regulates the importation of fruits and vegetables into the United States from certain parts of the world as provided in "Subpart—Fruits and Vegetables" (7 CFR 319.56-1 through 319.56-83).

In accordance with § 319.56-25, papayas from Peru may be imported into the continental United States under certain conditions to prevent the introduction of plant pests into the United States. These conditions require the use of certain information collection activities that include applications for permits; registration of growing sites; inspections of crops, insect traps, and recordkeeping; submitting notices of arrival to ports; and responding to emergency action notifications. Also, each consignment of papayas must be accompanied by a phytosanitary certificate issued by the national plant protection organization (NPPO) of Peru containing an additional declaration stating the papayas were grown, packed,

and shipped in accordance with § 319.56-25. These actions allow the importation of papayas from Peru while continuing to protect the United States against the introduction of plant pests.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities, as described, for an additional 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; *e.g.*, permitting electronic submission of responses.

Estimate of burden: The public burden for this collection of information is estimated to average 0.53 hours per response.

Respondents: Growers and importers of papayas from Peru and the NPPO of Peru.

Estimated annual number of respondents: 52.

Estimated annual number of responses per respondent: 54.

Estimated annual number of responses: 2,804.

Estimated total annual burden on respondents: 1,507 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 25th day of July 2018.

Kevin Shea,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-P

DEPARTMENT OF AGRICULTURE**Food and Nutrition Service****Food Distribution Program: Value of Donated Foods From July 1, 2018, Through June 30, 2019**

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice.

SUMMARY: This notice announces the national average value of donated foods or, where applicable, cash in lieu of donated foods, to be provided in school year 2019 (July 1, 2018, through June 30, 2019) for each lunch served by schools participating in the National School Lunch Program (NSLP), and for each lunch and supper served by institutions participating in the Child and Adult Care Food Program (CACFP).

DATES: July 1, 2018.

FOR FURTHER INFORMATION CONTACT:

Carolyn Smalkowski, Program Analyst, Policy Branch, Food Distribution Division, Food and Nutrition Service, U.S. Department of Agriculture, 3101 Park Center Drive, Alexandria, Virginia 22302-1594, or telephone (703) 305-2680.

SUPPLEMENTARY INFORMATION: These programs are located in the Assistance Listings under Nos. 10.555 and 10.558 and are subject to the provisions of Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V, and final rule related notice published at 48 FR 29114, June 24, 1983.)

This notice imposes no new reporting or recordkeeping provisions that are subject to Office of Management and Budget review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507). This action is not a rule as defined by the Regulatory Flexibility Act (5 U.S.C. 601-612) and thus is exempt from the provisions of that Act. This notice was reviewed by the Office of Management and Budget under Executive Order 12866.

National Average Minimum Value of Donated Foods for the Period July 1, 2018, Through June 30, 2019

This notice implements mandatory provisions of sections 6(c) and 17(h)(1)(B) of the Richard B. Russell National School Lunch Act (the Act) (42 U.S.C. 1755(c) and 1766(h)(1)(B)). Section 6(c)(1)(A) of the Act establishes the national average value of donated food assistance to be given to States for each lunch served in the NSLP at 11.00 cents per meal. Pursuant to section 6(c)(1)(B), this amount is subject to

annual adjustments on July 1 of each year to reflect changes in a three-month average value of the Producer Price Index for Foods Used in Schools and Institutions for March, April, and May each year (Price Index). Section 17(h)(1)(B) of the Act provides that the same value of donated foods (or cash in lieu of donated foods) for school lunches shall also be established for lunches and suppers served in the CACFP. Notice is hereby given that the national average minimum value of donated foods, or cash in lieu thereof, per lunch under the NSLP (7 CFR part 210) and per lunch and supper under the CACFP (7 CFR part 226) shall be 23.50 cents for the period July 1, 2018, through June 30, 2019.

The Price Index is computed using five major food components in the Bureau of Labor Statistics Producer Price Index (cereal and bakery products; meats, poultry, and fish; dairy; processed fruits and vegetables; and fats and oils). Each component is weighted using the relative weight as determined by the Bureau of Labor Statistics. The value of food assistance is adjusted each July 1 by the annual percentage change in a three-month average value of the Price Index for March, April, and May each year. The three-month average of the Price Index increased by 0.64 percent from 203.76 for March, April, and May of 2017, as previously published in the **Federal Register**, to 205.07 for the same three months in 2018. When computed on the basis of unrounded data and rounded to the nearest one-quarter cent, the resulting national average for the period July 1, 2018, through June 30, 2019, will be 23.50 cents per meal. This is an increase of one quarter of a cent from the school year 2018 (July 1, 2017 through June 30, 2018) rate.

Authority: Sections 6(c)(1)(A) and (B), 6(e)(1), and 17(h)(1)(B) of the Richard B. Russell National School Lunch Act (42 U.S.C. 1755(c)(1)(A) and (B) and (e)(1), and 1766(h)(1)(B)).

Dated: July 16, 2018.

Brandon Lipps,

Administrator, Food and Nutrition Service.

[FR Doc. 2018-16028 Filed 7-26-18; 8:45 am]

BILLING CODE 3410-30-P

DEPARTMENT OF AGRICULTURE**Forest Service****Notice of New Fee Sites**

AGENCY: Idaho Panhandle National Forests, USDA Forest Service.

ACTION: Notice of new fee sites.

SUMMARY: The Idaho Panhandle National Forests is proposing to charge new fees at one day-use boat launch for \$5 per vehicle; one dump stations for \$10 per use; eight campgrounds for \$10 or \$15 per night, and an additional \$5 extra vehicle fee, starting at the third vehicle; nine boat-in campgrounds for \$15 per night; one horse camp for \$10 per night; one group campsite for \$50 per night; and two cabin/lookout rentals at \$45 or \$55 per night. These new fees would align the sites with the other sites offering similar amenities and services.

These fees are only proposed and will be determined upon further analysis and public comment.

DATES: Send any comments about these fee proposals by August 27, 2018 so comments can be compiled, analyzed, and shared with the Bureau of Land Management (BLM) Coeur d'Alene Recreation Resource Advisory Committee. The proposed effective date of implementation of proposed new fees will be no earlier than six months after publication of this notice.

ADDRESSES: Jeanne Higgins, Forest Supervisor, Idaho Panhandle National Forests, 3815 Schreiber Way, Coeur d'Alene, ID 83815 or Email to jmhiggins@fs.fed.us.

FOR FURTHER INFORMATION CONTACT: Josh Jurgensen, Forest Recreation Program Manager Idaho Panhandle National Forests at 208-765-7214 or jjurgensen@fs.fed.us. Information about proposed fee changes can also be found on the Idaho Panhandle National Forests website at <http://www.fs.usda.gov/ipnf>.

SUPPLEMENTARY INFORMATION: The Federal Recreation Lands Enhancement Act (Title VII, P.L. 108-447) directed the Secretary of Agriculture to publish a six month advance notice in the **Federal Register** whenever new recreation fee areas are established.

Once public involvement is complete, these new fees will be reviewed by the BLM Coeur d'Alene Recreation Resource Advisory Committee prior to a final decision and implementation.

Specifically, the Idaho Panhandle National Forests is proposing the following new fees:

- Beaver Creek Cabin; proposed fee of \$55 per night;
- Spyglass Ground House; proposed fee of \$45 per night;
- Big Creek, Camp 3, Line Creek Stock Camp, Packsaddle, and Telichpah campgrounds; proposed fee of \$10 per night, with an additional \$5 extra vehicle fee per night for more than two vehicles;
- Conrad Crossing, Fly Flat, Mammoth Springs, and Spruce Tree campgrounds; proposed fee of \$15 per

night, with an additional \$5 extra vehicle fee per night for more than two vehicles;

- Bottle Bay, Geisinger, Navigation, Plowboy, Teacher Bay, Trapper, and Tule Bay Boat-in campgrounds on Priest Lake; proposed fee of \$15 per night;
- Green Bay and Whiskey Rock boat-in campgrounds on Pend Oreille Lake; proposed fee of \$15 per night;
- Reynolds Creek Group camp site; proposed fee of \$50 per night;
- Shadowy St. Joe Day Use Boating site; proposed fee of \$5 per vehicle, per day;
- Priest Lake Information Site (RV Dump Station); proposed fee of \$10 per use.

Additional construction is required at the Spyglass Ground House to complete the renovation project and it is anticipated that this site would be available for the public to rent in May of 2019. The Beaver Creek Cabin is currently unfurnished and would be available to rent in 2018 for \$45 per night; however, once the cabin is furnished the fee would be raised to \$55 per night.

Reasonable fees, paid by users of these sites and services, will help ensure that the Forest can continue maintaining and improving the sites for future generations. A market analysis of surrounding recreation sites with similar amenities indicates that the proposed fees are comparable and reasonable.

Advance reservations for the Beaver Creek Cabin, Lunch Peak Lookout, and Spyglass Ground House will be available through www.recreation.gov or by calling 1-877-444-6777. The reservation service charges a \$10 fee for reservations.

Dated: January 10, 2018.

Chris French,

Associate Deputy Chief, National Forest System.

Editorial Note: This document was received for publication by the Office of the Federal Register on July 23, 2018.

BILLING CODE 3411-15-P

DEPARTMENT OF AGRICULTURE

National Institute of Food and Agriculture Service

[Docket No. NIFA-2018-003]

Notice of Intent for Renewal of a Currently Approved Information Collection

AGENCY: National Institute of Food and Agriculture, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 and Office of Management and Budget (OMB) regulations, which implemented the Paperwork Reduction Act of 1995, this notice announces the National Institute of Food and Agriculture's (NIFA's) intention to request an extension for a currently approved information collection (OMB No. 0524-0026) for Form NIFA-666, "Organizational Information."

DATES: Written comments on this notice must be received by September 25, 2018 to be assured of consideration. Comments received after that date will be considered to the extent practicable.

ADDRESSES: Written comments concerning this notice and requests for copies of the information collection may be submitted to Robert Martin, Records Officer, Information Policy, Planning and Training by any of the following methods: Mail: Office of Information Technology (OIT), NIFA/USDA; Mail Stop 2216; 1400 Independence Avenue SW; Washington, DC 20250-2299; Hand Delivery/Courier: 800 9th Street SW, Waterfront Centre, Room 4206, Washington, DC 20024; or Email: rmartin@nifa.usda.gov.

FOR FURTHER INFORMATION CONTACT: Robert Martin, Records Officer, Information Policy, Planning and Training, Office of Information Technology, NIFA/USDA, Email: rmartin@nifa.usda.gov.

SUPPLEMENTARY INFORMATION:

Title of Collection: Organizational Information.

OMB Control Number: 0524-0026.

Expiration Date of Current Approval: October 30, 2018.

Type of Request: Intent to extend a currently approved information collection for three years.

Abstract: NIFA has primary responsibility for providing linkages between the Federal and State components of a broad-based, national agricultural research, extension, and education system. Focused on national issues, its purpose is to represent the Secretary of Agriculture and carry out the intent of Congress by administering capacity and grant funds appropriated for agricultural research, extension, and education. Before awards can be made, certain information is required from applicants to effectively assess the potential recipient's capacity to manage Federal funds.

Need and Use of the Information: Form NIFA-666 "Organizational Information": Enables NIFA to

determine that the applicants recommended for awards will be responsible recipients of Federal funds. The information requested from the applicant pertains to the organizational and financial management of the potential grantee. This form and the attached applicant documents provide NIFA with information such as the legal name of the organization, certification that the organization has the legal authority to accept Federal funding, identification and signatures of the key officials, the organization's policies for employee compensation and benefits, equipment insurance, policies on subcontracting with other organizations, etc., as well the financial condition of the organization and certification that the organization is not delinquent on Federal taxes. All of this information is considered prior to award, to determine the grantee is both managerially and fiscally responsible. This information is submitted to NIFA on a one-time basis and updated accordingly. If sufficient changes occur within the organization, the grantee submits revised information.

Estimate of the Burden: NIFA estimates the number of responses for the Form NIFA-666 will be 150 with an estimated response time of 6.3 hours per form, representing a total annual burden of 945 hours for this form. These estimates are based on a survey of grantees that were approved for grant awards.

They were asked to give an estimate of time it took them to complete each form. This estimate was to include such things as: (1) Reviewing the instructions; (2) searching existing data sources; (3) gathering and maintaining the data needed; and (4) actual completion of the forms. The average time it took each respondent was calculated from their responses.

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have a practical utility;

(b) the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Done at Washington, DC, this 19th day of July 2018.

Chavonda Jacobs-Young,

Acting Under Secretary for Research, Education and Economics.

BILLING CODE 3410–22–P

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

Broadband e-Connectivity Pilot Program

AGENCY: Rural Utilities Service, USDA.

ACTION: Notice of inquiry and request for comments.

SUMMARY: The Rural Utilities Service (RUS), an agency of the United States Department of Agriculture, invites comment on the implementation of certain provisions of its pilot broadband program (e-Connectivity Pilot) established on March 23, 2018, in the Consolidated Appropriations Act of 2018. The e-Connectivity Pilot was appropriated \$600 million in budget authority to be operated under the Rural Electrification Act of 1936 on an expedited basis. Loans and grants are limited to the costs of the construction, improvement, and acquisition of facilities and equipment for broadband service in eligible communities.

DATES: Comments are due on or before 5 p.m. Eastern Daylight Time on September 10, 2018.

ADDRESSES: Submit comments, identified as *e-Connectivity Pilot*, by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov> and, in the lower “Search Regulations and Federal Actions” box, select “Rural Utilities Service” from the agency drop-down menu, then click on “Submit.” In the Docket ID column, select RUS–18–TELECOM–0004 to submit or view public comments and to view supporting and related materials available electronically. Information on using *Regulations.gov*, including instructions for accessing documents, submitting comments, and viewing the docket after the close of the comment period, is available through the site’s “User Tips” link.

- *Postal Mail/Commercial Delivery:* Please send your comment addressed to Michele Brooks, Rural Development Innovation Center, Regulations Team Lead, U.S. Department of Agriculture, 1400 Independence Ave. SW, Stop 1522, Room 1562, Washington, DC

20250. Please state that your comment refers to Docket No. RUS–18–TELECOM–0004.

Other Information: Additional information about Rural Development and its programs is available on the internet at <https://www.usda.gov/topics/rural>.

SUPPLEMENTARY INFORMATION: Section 779 of the Consolidated Appropriations Act of 2018 (Pub. L. 115–141) appropriated \$600 million for a pilot broadband program (e-Connectivity Pilot) to be operated under the Rural Electrification Act (RE Act) of 1936 (7 U.S.C. 901 *et seq.*). The e-Connectivity Pilot was directed to expedite loans and grants for the costs of the construction, improvement, and acquisition of facilities and equipment for broadband service in eligible rural areas. Those areas are defined as having at least 90 percent of the households without sufficient access to broadband, defined as 10 Mbps downstream, and 1 Mbps upstream. Applications for eligible rural areas are prohibited from over-building or duplicating broadband expansion efforts made by any entity that has received a broadband loan from the Rural Utilities Service. Applications must also be evaluated by the service area assessment requirements of Section 601(d)(10) of the RE Act (7 U.S.C. 950bb(d)(10)) so that existing broadband providers may provide input on service in the proposed service area. In the absence of responses, RUS is directed to use the most current data of the National Broadband Map, or any other data regarding the availability of broadband service that may be collected or obtained through reasonable efforts.

Notice of Inquiry and Request for Comment

RUS seeks input on several questions concerning development of the e-Connectivity Pilot. Comments are requested from a broad range of stakeholders with an interest in rural broadband deployment. Specifically, RUS seeks comment on the following:

(1) Eligible rural areas are defined as having at least 90 percent of the households without *sufficient access* to broadband, defined in the law as 10 Mbps downstream, and 1 Mbps upstream. At present, RUS is working to determine what types of technologies and services are defined as “sufficient access.” In particular, RUS is seeking information about the transmission capacity required for economic development, and speed and latency, especially in peak usage hours, to ensure rural premises have access to

coverage similar to that offered in urban areas. Comments are specifically requested on whether affordability of service should be included in evaluating whether an area already has “sufficient access” and how to benchmark affordability of internet services. And if so, what equates to consumers’ costs being so high that they are effectively rendered inaccessible to rural households? Further, what other elements should RUS consider when defining sufficient access?

(2) RUS uses a combination of a Public Notice Filing—Public Notice Response process through our online mapping tool and the most current data of the National Broadband Map, or any other data regarding the availability of broadband service that may be collected or obtained through reasonable efforts. RUS’ mapping tool will publicly post proposed service territories of applicants to allow existing service providers an opportunity to comment if 10 Mbps downstream and 1 Mbps upstream service exists for households in the proposed service area or not. Notwithstanding this data, comments are sought on how data speeds are to be used or verified, given the limited availability of publicly-available information regarding accurate broadband speeds provided to rural households. Additionally, what other sources of data availability should be used for evaluation?

(3) RUS is working to ensure that projects funded by the e-Connectivity pilot provide improvements to rural prosperity. This includes projects that benefit rural industries such as agriculture, manufacturing, e-commerce, transportation, health care, and education. Comments are specifically requested on effective methods that can measure leading indicators of potential project benefits for these sectors, using readily available public data. USDA is also aiming to improve rural economies, especially for those being served. Comments are also being sought on how to evaluate the viability of applications that include local utility partnership arrangements, including locally-owned telecommunications companies where possible.

Dated: July 17, 2018.

Jonathan P. Claffey,

Senior Policy Advisor, Rural Utilities Service.

BILLING CODE P

DEPARTMENT OF COMMERCE**Bureau of the Census****Request for Nominations of Members To Serve on the National Advisory Committee on Racial, Ethnic, and Other Populations; Extension of Nominations Submission Period**

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of request for nominations; extension of nominations submission period.

SUMMARY: The Bureau of the Census (Census Bureau) is issuing this document to extend the nominations submission period for the Request for Nominations of Members to Serve on the National Advisory Committee on Racial, Ethnic, and Other Populations, which was published in the **Federal Register** on June 4, 2018. The extension is in response to public demand for more time to submit nominations for the Committee. The nominations submission period, which would have ended on August 3, 2018, is now extended until September 4, 2018.

DATES: Nomination submissions on the notice of request for nominations published on June 4, 2018 (83 FR 25643) must be received by September 4, 2018. The Census Bureau will retain nominations received after this date for consideration should additional vacancies occur.

ADDRESSES: Please submit nominations to the *census.national.advisory.committee@census.gov* (subject line "2018 NAC Nominations") or by letter submission to Tara Dunlop Jackson, Committee Liaison Officer, 2018 NAC Nominations, Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop Jackson, Committee Liaison Officer, Customer Liaison Marketing Services Office, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, at (301) 763-5222 or *census.national.advisory.committee@census.gov*. For TTY callers, please use the Federal Relay Service at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:**Background**

The National Advisory Committee on Racial, Ethnic, and Other Populations was established in accordance with the Federal Advisory Committee Act (FACA), Title 5, United States Code, Appendix 2. For more information about the Committee, membership, and

the nomination process, please see the original document on the notice of request for nominations published on June 4, 2018 (83 FR 25643).

In response to individuals and organizations who have requested more time to submit nominations of members to serve on the Committee, the Census Bureau has decided to extend the nominations submission period to September 4, 2018. This document announces the extension of the nominations submission period.

Dated: July 20, 2018.

Ron S. Jarmin,

Associate Director for Economic Programs, Performing the Non-Exclusive Functions and Duties of the Director, Bureau of the Census.

BILLING CODE 3510-07-P

DEPARTMENT OF COMMERCE**Bureau of the Census****Request for Nominations of Members To Serve on the Census Scientific Advisory Committee**

AGENCY: Bureau of the Census, Department of Commerce.

ACTION: Notice of request for nominations.

SUMMARY: The Bureau of the Census (Census Bureau) requests nominations of individuals to the Census Scientific Advisory Committee. The Census Bureau will consider nominations received in response to this notice, as well as from other sources. The **SUPPLEMENTARY INFORMATION** section of this notice provides Committee and membership criteria.

DATES: Please submit nominations by September 25, 2018. The Census Bureau will retain nominations received after this date for consideration should additional vacancies occur.

ADDRESSES: Please submit nominations to the *census.scientific.advisory.committee@census.gov* (subject line "2018 CSAC Nominations") or by letter submission to Tara Dunlop Jackson, Committee Liaison Officer, 2018 CSAC Nominations, Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233.

FOR FURTHER INFORMATION CONTACT: Tara Dunlop Jackson, Branch Chief for Advisory Committees, Customer Liaison and Marketing Services Office, Department of Commerce, U.S. Census Bureau, Room 8H177, 4600 Silver Hill Road, Washington, DC 20233, (301) 763-5222 or *census.scientific.advisory.committee@census.gov*.

SUPPLEMENTARY INFORMATION: The Census Scientific Advisory Committee was established in accordance with the Federal Advisory Committee Act (FACA), Title 5, United States Code (U.S.C.), Appendix 2. The following provides information about the Committee, membership, and the nomination process.

Objectives and Duties

1. The Census Scientific Advisory Committee advises the Director of the U.S. Census Bureau on the uses of scientific developments in statistical data collection, statistical analysis, survey methodology, geospatial analysis, econometrics, cognitive psychology, and computer science as they pertain to the full range of Census Bureau programs and activities (including: Communications, decennial, demographic, economic, field operations, geographic, information technology, and statistics).

2. The Census Scientific Advisory Committee provides scientific and technical expertise from the following disciplines: Demography, economics, geography, psychology, statistics, survey methodology, social and behavioral sciences, Information Technology and computing, marketing, communications, and other fields of expertise, as appropriate, to address Census Bureau program needs and objectives. This expertise is necessary to ensure that the Census Bureau continues to provide relevant and timely statistics used by tribal, federal, state, and local governments as well as business and industry in an increasingly technologically-oriented society.

3. The Census Scientific Advisory Committee functions solely as an advisory body under the FACA.

4. The Census Scientific Advisory Committee reports to the Director of the Census Bureau.

Membership

1. The Census Scientific Advisory Committee consists of up to 21 members and one Chair appointed by the Director of the Census Bureau. The Census Bureau is currently filling five seats.

2. Members are appointed for a three-year term.

3. Members shall serve as Special Government Employees (SGEs) and will be subject to the ethical standards applicable to SGEs. Committee membership will be reevaluated at the conclusion of the three-year term. Member renewal will be based on active attendance, participation in meetings, administrative compliance, Census Bureau needs, and the Director's concurrence.

4. Committee members are selected in accordance with applicable Department of Commerce guidelines. The Census Scientific Advisory Committee aims to have balanced representation, considering such factors as geography and technical and scientific expertise. The Committee will include members from diverse backgrounds, including academia and private enterprise, which are further diversified by business type or industry, geography, and other factors.

5. No employee of the federal government can serve as a member of the Census Scientific Advisory Committee.

Miscellaneous

1. Members of the Census Scientific Advisory Committee serve without compensation, but receive reimbursement for Committee-related travel and lodging expenses.

2. The Census Scientific Advisory Committee meets once or twice a year, budget permitting. Additional meetings may be held as deemed necessary by the Census Bureau Director or Designated Federal Official. All Committee meetings are open to the public in accordance with the FACA.

Nomination Information

1. Nominations are requested as described above.

2. Nominees must have scientific and technical expertise in such areas as demography, economics, geography, psychology, statistics, survey methodology, social and behavioral sciences, Information Technology, computing, or marketing. Such knowledge and expertise are needed to provide advice and recommendations to the Director of the Census Bureau on the trends, uses, and application of scientific innovations and developments in relation to the full range of Census Bureau programs and activities.

3. The Census Bureau is especially interested in receiving applications from persons with expertise in demography, statistics, business/finance, sociology, and marketing.

4. Individuals, groups, and/or organizations may submit nominations on behalf of individual candidates. A summary of the candidate's qualifications (resumé or curriculum vitae) must be included along with the nomination letter. Nominees must be able to actively participate in the tasks of the Census Scientific Advisory Committee, including, but not limited to, regular meeting attendance, Committee meeting discussion responsibilities, review of materials, as well as participation in conference calls,

webinars, working groups, and/or special Committee activities.

5. The Department of Commerce is committed to equal opportunity in the workplace and seeks diverse Committee membership.

Dated: July 20, 2018.

Ron S. Jarmin,

Associate Director for Economic Programs, Performing the Non-Exclusive Functions and Duties of the Director, Bureau of the Census.

Foreign-Trade Zones Board

[S-103-2018]

Foreign-Trade Zone 93—Raleigh/Durham, North Carolina; Application for Subzone; MAS US Holdings, Inc.; Siler City and Asheboro, North Carolina

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by the Triangle J Council of Governments, grantee of FTZ 93, requesting subzone status for the facilities of MAS US Holdings, Inc., located in Siler City and Asheboro, North Carolina. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a-81u), and the regulations of the FTZ Board (15 CFR part 400). It was formally docketed on July 23, 2018.

The proposed subzone would consist of the following sites: *Site 1* (40.4 acres) 1311 Eleventh Street, Siler City, Chatham County; *Site 2* (21.74 acres) 601 East Pritchard Street, Asheboro, Randolph County; and, *Site 3* (3.46 acres) 162 North Cherry Street, Asheboro, Randolph County. No authorization for production activity has been requested at this time. The proposed subzone would be subject to the existing activation limit of FTZ 93.

In accordance with the FTZ Board's regulations, Kathleen Boyce of the FTZ Staff is designated examiner to review the application and make recommendations to the Executive Secretary.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board's Executive Secretary at the address below. The closing period for their receipt is September 5, 2018. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to September 20, 2018.

A copy of the application will be available for public inspection at the

Office of the Executive Secretary, Foreign-Trade Zones Board, Room 21013, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230-0002, and in the "Reading Room" section of the FTZ Board's website, which is accessible via www.trade.gov/ftz.

For further information, contact Kathleen Boyce at Kathleen.Boyce@trade.gov or (202) 482-1346.

Dated: July 23, 2018.

Elizabeth Whiteman,

Acting Executive Secretary.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-964]

Seamless Refined Copper Pipe and Tube From the People's Republic of China: Rescission of Antidumping Duty Administrative Review; 2016-2017

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is rescinding its administrative review of the antidumping duty order on seamless refined copper pipe and tube (copper pipe and tube) from the People's Republic of China (China) for the period of review (POR) November 1, 2016, through October 31, 2017.

DATES: Applicable July 27, 2018.

FOR FURTHER INFORMATION CONTACT: Maisha Cryor AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-5831.

SUPPLEMENTARY INFORMATION:

Background

On November 1, 2017, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the antidumping duty order on copper pipe and tube from China for the period November 1, 2016, through October 31, 2017.¹ On November 21, 2017, the Ad Hoc Coalition for Domestically Produced Seamless Refined Copper Pipe

¹ See *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review*, 82 FR 50620 (November 1, 2017).

and Tube and its individual members² (collectively, the petitioners), timely requested that Commerce conduct an administrative review of this antidumping duty order with respect to Golden Dragon Precise Copper Tube Group, Inc. (Golden Dragon).³ On January 11, 2018, Commerce initiated an administrative review with respect to Golden Dragon, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i).⁴ On March 29, 2018, the petitioners timely withdrew their request for an administrative review.⁵

Rescission of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested a review withdraws the request within 90 days of the date of publication of the notice of initiation of the requested review. In this case, the petitioners withdrew their request for review by the 90-day deadline. Because Commerce received no other request for a review of the antidumping duty order with respect to Golden Dragon, and no other requests were made for a review of the antidumping duty order with respect to other companies, we are rescinding this administrative review covering the period November 1, 2016, through October 31, 2017, in accordance with 19 CFR 213(d)(1).

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries of copper pipe and tube from China during the POR. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after publication of this notice in the **Federal Register**.

² The individual members of Ad Hoc Coalition for Domestically Produced Seamless Refined Copper Pipe and Tube are Cerro Flow Products, LLC, Wieland Copper Products, LLC, Howell Metal Company, Mueller Copper Tube Products, Inc., and Mueller Copper Tube Company, Inc.

³ See Letter from the petitioners, "Seamless Refined Copper Pipe and Tube from China: Request for Antidumping Duty Administrative Review," dated November 21, 2017.

⁴ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 82 FR 1329, 1333 (January 11, 2018).

⁵ See Letter from the petitioners, "Seamless Refined Copper Pipe and Tube from China: Withdrawal of Request for Antidumping Duty Administrative Review," dated March 29, 2018.

Notification to Importers

This notice serves as the only reminder to importers of their responsibility, under 19 CFR 351.402(f)(2), to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a violation which is subject to sanction.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: July 20, 2018.

James Maeder,

Associate Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations performing the duties of Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

Annual U.S. Industry Program at the International Atomic Energy Agency (IAEA) General Conference; Meeting

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of 11th Annual U.S. Industry Program at the International Atomic Energy Agency (IAEA) General Conference.

Mission Description

The United States Department of Commerce's (DOC) International Trade Administration (ITA), with participation

from the U.S. Departments of Energy and State, is organizing the 11th Annual U.S. Industry Program at the International Atomic Energy Agency (IAEA) General Conference, to be held September 16–19, 2018, in Vienna, Austria. The IAEA General Conference is the premier global meeting of civil nuclear policymakers and typically attracts senior officials and industry representatives from all 162 Member States. The U.S. Industry Program is part of the U.S. Department of Commerce's (DOC) Civil Nuclear Trade Initiative, a U.S. Government effort to help U.S. civil nuclear companies identify and capitalize on commercial civil nuclear opportunities around the world. The purpose of the program is to help the U.S. nuclear industry promote its services and technologies to an international audience, including senior energy policymakers from current and emerging markets as well as IAEA staff.

Representatives of U.S. companies from across the U.S. civil nuclear supply chain are eligible to participate. In addition, organizations providing related services to the industry, such as universities, research institutions, and U.S. civil nuclear trade associations, are eligible for participation. The mission will help U.S. participants gain market insights, make industry contacts, solidify business strategies, and identify or advance specific projects with the goal of increasing U.S. civil nuclear exports to a wide variety of countries interested in nuclear energy.

The schedule includes: Meetings with foreign delegations and discussions with senior U.S. Government officials on important civil nuclear topics including regulatory, technology and standards, liability, public acceptance, export controls, financing, infrastructure development, and R&D cooperation. Past U.S. Industry Programs have included participation by the U.S. Secretary of Energy, the Chairman of the U.S. Nuclear Regulatory Commission (NRC) and senior U.S. Government officials from the Departments of Commerce, Energy, State, the Export-Import Bank of the United States and the National Security Council.

There are significant opportunities for U.S. businesses in the global civil nuclear energy market. With 55 reactors currently under construction in 15 countries and 160 nuclear plant projects planned in 27 countries over the next 8–10 years, this translates to a market demand for equipment and services totaling \$500–740 billion over the next ten years. This mission contributes to DOC's Civil Nuclear Trade Initiative by assisting U.S. businesses in entering or expanding in international markets.

Mission Setting

The IAEA General Conference is the premier global meeting of civil nuclear policymakers, and typically attracts over 1,200 senior officials and industry representatives from all 162 IAEA Member States. As such, it is an opportunity to highlight the breadth and depth of the U.S. civil nuclear sector to foreign energy policymakers and potential customers. The U.S. Industry Program will provide opportunities for U.S. industry representatives to meet with U.S. Government representatives and discuss key issues of interest for civil nuclear exporters. The program will also feature briefings from foreign government representatives, providing opportunities for participants to develop contacts in potential export markets.

Mission Goals

The purpose of the U.S. Industry Program is to highlight the benefits of U.S. civil nuclear technology to foreign decision makers in key export markets and to enable representatives from the U.S. public and private sector to discuss U.S. industry's role in the safe and secure expansion of civil nuclear power worldwide. U.S. participants will also have the opportunity to network and build relationships in the global civil nuclear sector, interact with foreign government and industry officials, and learn more about current and future project opportunities. Foreign government participants will hear about the expertise that U.S. industry has amassed in this sector and may learn how to better partner with U.S. industry on future nuclear power projects.

Mission Scenario

On Sunday September 16, trade mission participants will have one-on-one meetings with visiting ITA staff from top export markets as part of ITA's Showtime Program (meetings are subject to availability of visiting ITA staff) and an evening U.S. Industry Welcome Reception. On Monday, September 17, mission participants will begin with a Policymaker's Roundtable and an interagency U.S. Government briefing featuring discussion sessions and remarks by senior officials from the U.S. Departments of Commerce, Energy and State, and the NRC. In addition, on Monday, Tuesday, and Wednesday, meetings with foreign delegation officials from some of the top markets for U.S. civil nuclear exports will be scheduled. Approximately ten such meetings will be planned throughout the duration of the event. Throughout the weeklong conference, participants can attend IAEA side meetings using

their official IAEA badges, which will be provided as part of the program.

Event Dates and Proposed Agenda

****Note that specific events and meeting times have yet to be confirmed****

Sunday, September 16

3:00 p.m.–5:00 p.m. 1–1 Showtime Meetings with visiting ITA Staff
6:00 p.m.–8:00 p.m. U.S. Industry Welcome Reception

Monday, September 17

7:00 a.m. Industry Program Breakfast Begins
8:00–9:45 a.m. U.S. Policymakers Roundtable
9:45–10:00 a.m. Break
10:00–11:00 a.m. USG Dialogue with Industry
11:00 a.m.–6:00 p.m. IAEA Side Events
11:00 a.m.–12:30 p.m. Break
12:30–6:00 p.m. Country Briefings for Industry (presented by foreign delegates)
7:30–9:30 p.m. U.S. Mission to the IAEA Reception

Tuesday, September 18

9:00 a.m.–6:00 p.m. Country Briefings for Industry (presented by foreign delegates)
10:00 a.m.–6:00 p.m. IAEA Side Event Meetings

Wednesday, September 19

9:00 a.m.–6:00 p.m. Country Briefings for Industry (presented by foreign delegates)
10:00 a.m.–6:00 p.m. IAEA Side Event Meetings

Participation Requirements

Applicants must sign and submit a completed Trade Mission application form and satisfy all of the conditions of participation in order to be eligible for consideration. Applications will be evaluated on the applicant's ability to best satisfy the participation criteria. A minimum of 15 and maximum of 50 companies and/or trade associations and/or U.S. academic and research institutions will be selected to participate in the mission. The first fifteen applicants will be permitted to send two representatives per organization (if desired). After the first fifteen applicants, additional representatives will be permitted only if space is available. The Department of Commerce will evaluate applications and inform applicants of selection decisions [three weeks after publication in the **Federal Register**] and on a rolling basis thereafter until the maximum

number of participants has been selected.

Conditions for Participation

Applicants must submit a completed mission application signed by a company, trade association, or academic or research institution official, together with supplemental application materials, including adequate information on the organization's products and/or services, primary market objectives, and goals for participation. If the DOC receives an incomplete application, the DOC may reject the application, request additional information, or take the lack of information into account in its evaluation.

Each applicant must certify one's organization is not majority-owned or -controlled by a foreign government entity (or foreign government entities). Each applicant also must certify that the products or services it seeks to export through the mission are either produced in the United States, or, if not, marketed under the name of a U.S. firm and have demonstrable U.S. content as a percentage of the value of the finished product or service. In the case of a trade association, the applicant must certify that it will only be representing companies during the Trade Mission consistent with the domestic content criteria laid out in this section. In the case of an academic or research institution, the applicant must certify that as part of its activities at the event, it will represent the interests of the organization's staff that meet the criteria above.

Applicants must:

- Certify that the products and services that it wishes to market through the mission would be in compliance with U.S. export controls and regulations;
- Certify that it has identified any matter pending before any bureau or office in the U.S. Department of Commerce;
- Certify that it has identified any pending litigation (including any administrative proceedings) to which it is a party that involves the U.S. Department of Commerce;
- Sign and submit an agreement that it and its affiliates (1) have not and will not engage in the bribery of foreign officials in connection with a company's/participant's involvement in this mission, and (2) maintain and enforce a policy that prohibits the bribery of foreign officials; and
- Certify that it meets the minimum requirements as stated in this announcement.

Applicants from a company, organization or institution that is majority-owned or -controlled by a foreign government entity will not be considered for participation in the U.S. Industry Program.

Selection Criteria

Selection will be based on the following criteria:

- Suitability of the company's (or, in the case of another organization, represented companies' or constituents') products or services to each of the markets the company or organization has expressed an interest in exporting to as part of this trade mission.

- The company's (or, in the case of another organization, represented companies' or constituents') potential for business in each of the markets the company or organization has expressed an interest in exporting to as part of this trade mission, including likelihood of exports resulting from the mission.

- Consistency of the applicant company's (or, in the case of another organization, represented companies' or constituents') goals and objectives with the stated mission scope.

Referrals from political organizations and any documents containing references to partisan political activities (including political contributions) will be removed from an applicant's submission and will not be considered.

Timeframe for Recruitment and Participation

Recruitment for participation in the U.S. Industry Program as a representative of the U.S. civil nuclear industry will be conducted in an open and public manner, including publication in the **Federal Register**, posting on the DOC trade mission calendar, notices to industry trade associations and other multiplier groups. Recruitment will begin after publication in the **Federal Register** and conclude no later than August 3, 2018. The ITA will review applications and make selection decisions on a rolling basis thereafter. Applications received after August 3, 2018, will be considered only if space and scheduling permit.

Fees and Expenses

After a company or organization has been selected to participate on the mission, a payment to the DOC in the form of a participation fee is required. The fee covers ITA support to register U.S. industry participants for the IAEA General Conference. Participants will be able to take advantage of discounted rates for hotel rooms.

- The fee to participate in the event is \$2,700 for a large company and

\$2,266 for a small or medium-sized company (SME), a trade association, or a U.S. university or research institution. The fee for each additional representative (large company, trade association, university/research institution, or SME) is \$1,100.

- To apply to the mission, complete the trade mission application at <https://emenuapps.ita.doc.gov/ePublic/TM/8ROV>.

Participants selected for the Trade Mission will be expected to pay for the cost of all personal expenses, including, but not limited to, international travel, lodging, meals, transportation, communication, and incidentals, unless otherwise noted. In the event that the Mission is canceled, no personal expenses paid in anticipation of a Trade Mission will be reimbursed. However, participation fees for a canceled Trade Mission will be reimbursed to the extent they have not already been expended in the anticipation of the Mission.

Aluminum Extrusions From the People's Republic of China: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2016-2017

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is conducting an administrative review of the antidumping duty order on aluminum extrusions from the People's Republic of China (China) for the period of review (POR) May 1, 2016, through April 30, 2017. We determine that 25 of the

companies for which an administrative review was requested, and not withdrawn, failed to demonstrate eligibility for a separate rate; therefore, each is part of the China-wide entity. We also determine that Guangdong Xin Wei Aluminum Products Co., Ltd., Xin Wei Aluminum Company Limited, and Xin Wei Aluminum Co. Ltd. made no entries, exports, or sales of the subject merchandise during the POR covered by this administrative review.

DATES: Applicable July 27, 2018.

FOR FURTHER INFORMATION CONTACT:

Deborah Scott or Mark Flessner, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-2657 or (202) 482-6312, respectively.

SUPPLEMENTARY INFORMATION:

Background

Commerce initiated this review on July 6, 2017.¹ On February 8, 2018, Commerce published the *Preliminary Results* of this administrative review.² At that time, we invited interested parties to comment on the *Preliminary Results*.³ On March 13, 2018, we received case briefs from the Aluminum Extrusions Fair Trade Committee (the petitioner)⁴ and Xin Wei Aluminum Company Limited, Guangdong Xin Wei Aluminum Products Co., Ltd., Xin Wei Aluminum Co. Ltd., Xin Wei Aluminum Co., and Regal Ideas Inc. (collectively, Xin Wei/Regal).⁵ On March 19, 2018, we received rebuttal briefs from the petitioner⁶ and Tai-Ao Aluminium (Taishan) Co., Ltd. (Tai-Ao).⁷ No other party submitted case or rebuttal briefs. These final results cover 29 companies

for which an administrative review was initiated and not rescinded.⁸

Scope of the Order

The merchandise covered by the *Order*⁹ is aluminum extrusions which are shapes and forms, produced by an extrusion process, made from aluminum alloys having metallic elements corresponding to the alloy series designations published by The Aluminum Association commencing with the numbers 1, 3, and 6 (or proprietary equivalents or other certifying body equivalents).¹⁰

Imports of the subject merchandise are provided for under the following categories of the Harmonized Tariff Schedule of the United States (HTSUS): 6603.90.8100, 7616.99.51, 8479.89.94, 8481.90.9060, 8481.90.9085, 9031.90.9195, 8424.90.9080, 9405.99.4020, 9031.90.90.95, 7616.10.90.90, 7609.00.00, 7610.10.00, 7610.90.00, 7615.10.30, 7615.10.71, 7615.10.91, 7615.19.10, 7615.19.30, 7615.19.50, 7615.19.70, 7615.19.90, 7615.20.00, 7616.99.10, 7616.99.50, 8479.89.98, 8479.90.94, 8513.90.20, 9403.10.00, 9403.20.00, 7604.21.00.00, 7604.29.10.00, 7604.29.30.10, 7604.29.30.50, 7604.29.50.30, 7604.29.50.60, 7608.20.00.30, 7608.20.00.90, 8302.10.30.00, 8302.10.60.30, 8302.10.60.60, 8302.10.60.90, 8302.20.00.00, 8302.30.30.10, 8302.30.30.60, 8302.41.30.00, 8302.41.60.15, 8302.41.60.45, 8302.41.60.50, 8302.41.60.80, 8302.42.30.10, 8302.42.30.15, 8302.42.30.65, 8302.49.60.35, 8302.49.60.45, 8302.49.60.55, 8302.49.60.85, 8302.50.00.00, 8302.60.90.00, 8305.10.00.50, 8306.30.00.00, 8414.59.60.90, 8415.90.80.45, 8418.99.80.05, 8418.99.80.50, 8418.99.80.60, 8419.90.10.00, 8422.90.06.40, 8473.30.20.00, 8473.30.51.00, 8479.90.85.00, 8486.90.00.00, 8487.90.00.80, 8503.00.95.20, 8508.70.00.00, 8515.90.20.00, 8516.90.50.00,

8516.90.80.50, 8517.70.00.00, 8529.90.73.00, 8529.90.97.60, 8536.90.80.85, 8538.10.00.00, 8543.90.88.80, 8708.29.50.60, 8708.80.65.90, 8803.30.00.60, 9013.90.50.00, 9013.90.90.00, 9401.90.50.81, 9403.90.10.40, 9403.90.10.50, 9403.90.10.85, 9403.90.25.40, 9403.90.25.80, 9403.90.40.05, 9403.90.40.10, 9403.90.40.60, 9403.90.50.05, 9403.90.50.10, 9403.90.50.80, 9403.90.60.05, 9403.90.60.10, 9403.90.60.80, 9403.90.70.05, 9403.90.70.10, 9403.90.70.80, 9403.90.80.10, 9403.90.80.15, 9403.90.80.20, 9403.90.80.41, 9403.90.80.51, 9403.90.80.61, 9506.11.40.80, 9506.51.40.00, 9506.51.60.00, 9506.59.40.40, 9506.70.20.90, 9506.91.00.10, 9506.91.00.20, 9506.91.00.30, 9506.99.05.10, 9506.99.05.20, 9506.99.05.30, 9506.99.15.00, 9506.99.20.00, 9506.99.25.80, 9506.99.28.00, 9506.99.55.00, 9506.99.60.80, 9507.30.20.00, 9507.30.40.00, 9507.30.60.00, 9507.90.60.00, and 9603.90.80.50.

The subject merchandise entered as parts of other aluminum products may be classifiable under the following additional Chapter 76 subheadings: 7610.10, 7610.90, 7615.19, 7615.20, and 7616.99, as well as under other HTSUS chapters. In addition, fin evaporator coils may be classifiable under HTSUS numbers: 8418.99.80.50 and 8418.99.80.60. While HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this *Order* is dispositive.¹¹

Analysis of Comments Received

All issues raised in the case briefs filed by parties in this review are addressed in the Issues and Decision Memorandum, which is incorporated herein by reference. A list of the issues which any party raised, and to which we respond in the Issues and Decision Memorandum, follows in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically *via* Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov> and is available to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly on the internet at

<http://enforcement.trade.gov/frn/index.html>. The signed Issues and Decision Memorandum and the electronic version of the Issues and Decision Memorandum are identical in content.

Changes Since the Preliminary Results

Based on our analysis of the comments received, and for the reasons explained in the Issues and Decision Memorandum, we made certain changes to the treatment of Guangdong Xin Wei Aluminum Products Co., Ltd., Xin Wei Aluminum Company Limited, and Xin Wei Aluminum Co. Ltd.¹²

Final Determination of No Shipments

We find that a certification of no shipments on behalf of Guangdong Xin Wei Aluminum Products Co., Ltd., Xin Wei Aluminum Company Limited, and Xin Wei Aluminum Co. Ltd. satisfied the requirements of section 351.213(d)(3) of Commerce's regulations that there were no entries, exports, or sales of the subject merchandise during the POR. Therefore, we determine that Guangdong Xin Wei Aluminum Products Co., Ltd., Xin Wei Aluminum Company Limited, and Xin Wei Aluminum Co. Ltd. made no entries, exports, or sales of the subject merchandise during the POR covered by this administrative review. Consequently, these companies' separate rates remain unchanged from the last administrative review.

China-Wide Entity

For the purposes of the final results of this administrative review, we continue to find that the following entities are part of the China-wide entity because they failed to submit both a response to Commerce's quantity and value questionnaire and information to establish eligibility for a separate rate: (1) Activa International Inc.; (2) Atlas Integrated Manufacturing Ltd.; (3) Belton (Asia) Development Ltd.; (4) Belton (Asia) Development Limited; (5) Changzhou Tenglong Auto Parts Co., Ltd.; (6) Changzhou Tenglong Auto Accessories Manufacturing Co. Ltd.; (7) Changzhou Tenglong Auto Parts Co Ltd; (8) China Square; (9) China Square Industrial Co.; (10) China Square Industrial Ltd; (11) Daya Hardware Co Ltd; (12) ETLA Technology (Wuxi) Co. Ltd; (13) Global Hi-Tek Precision Co. Ltd; (14) Guangdong Whirlpool Electrical Appliances Co., Ltd.; (15) Guangdong Zhongya Aluminium Company Limited; (16) Henan New Kelong Electrical Appliances Co., Ltd.;

⁸Initially, this administrative review covered 220 companies. See *Initiation Notice*, 82 FR at 31294. However, Commerce rescinded this administrative review with respect to 191 companies for which all review requests were timely withdrawn. See *Preliminary Results*, 83 FR at 5604, and accompanying Preliminary Decision Memorandum.

⁹See *Aluminum Extrusions from the People's Republic of China: Antidumping Duty Order*, 76 FR 30650 (May 26, 2011) (the *Order*).

¹⁰For a complete description of the scope of the *Order*, see Memorandum, "Issues and Decisions Memorandum for the Final Results of the Antidumping Duty Administrative Review: Aluminum Extrusions from the People's Republic of China; 2016–2017," dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

¹¹See the *Order*.

¹²See Issues and Decision Memorandum, at Comment 2.

(17) Liaoning Zhongwang Group Co., Ltd.; (18) Liaoyang Zhongwang Aluminum Profile Co. Ltd.; (19) Midea International Training Co., Ltd.; (20) Midea International Trading Co., Ltd.; (21) Shenyang Yuanda Aluminum Industry Engineering Co. Ltd.; (22) Sincere Profit Limited; (23) Summit Heat Sinks Metal Co, Ltd; (24) USA Worldwide Door Components (PINGHU) Co., Ltd.; (25) Whirlpool Canada L.P.; and (26) Whirlpool Microwave Products Development Ltd.¹³

Commerce's policy regarding conditional review of the China-wide entity applies to this administrative review.¹⁴ Under this policy, the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the China-wide entity in the instant review, the entity is not under review, and the entity's current rate, *i.e.*, 86.01 percent,¹⁵ is not subject to change.

Adjustments for Countervailable Subsidies

Because no company established eligibility for an adjustment under section 777A(f) of the Act for countervailable domestic subsidies, for these final results, Commerce did not make an adjustment pursuant to section 777A(f) of the Act for countervailable domestic subsidies for separate-rate recipients. Furthermore, because the China-wide entity is not under review, we made no adjustment for countervailable export subsidies for the China-wide entity pursuant to section 772(c)(1)(C) of the Act.

Assessment

Pursuant to section 751(a)(2)(A) of the Act and 19 CFR 351.212(b), Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review. Commerce intends to issue assessment instructions to CBP 15 days after the date of publication of the final results of review in the **Federal Register**. Consistent with Commerce's assessment practice in non-market economy (NME) cases, if Commerce determines that an exporter under

review had no shipments of subject merchandise, any suspended entries that entered under the exporter's case number (*i.e.*, at that exporter's rate) will be liquidated at the China-wide rate.¹⁶

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided for by section 751(a)(2)(C) of the Act: (1) For previously investigated or reviewed Chinese and non-Chinese exporters not listed above that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the exporter-specific rate published for the most-recently completed segment of this proceeding in which the exporter was reviewed; (2) for all Chinese exporters of subject merchandise which have not been found to be entitled to a separate rate, the cash deposit rate will be that established for the China-wide entity, which is 86.01 percent; and (3) for all non-Chinese exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter with the subject merchandise. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties and/or countervailing duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties and/or countervailing duties occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties Regarding Administrative Protective Order

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance

with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

We are issuing and publishing notice of these final results in accordance with sections 751(a)(1) and 777(i)(1) of the Act and sections 351.213(h) and 351.221(b)(5) of Commerce's regulations.

Dated: July 23, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2015–2016

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) continues to find that manufacturers/exporters of crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells) sold solar products at less than normal value during the period of review (POR), December 1, 2015, through November 30, 2016.

DATES: Applicable July 27, 2018.

SUPPLEMENTARY INFORMATION:

Background

On January 9, 2018, Commerce published in the **Federal Register** the preliminary results of the 2015–2016 administrative review of the antidumping duty order on solar cells from the People's Republic of China (China).¹ For events subsequent to the *Preliminary Results*, see Commerce's Issues and Decision Memorandum.² The final weighted-average dumping margins are listed below in the "Final Results of Review" section of this notice.

Commerce has exercised its discretion to toll deadlines for the duration of the closure of the Federal Government from January 20 through 22, 2018.³ On May 8, 2018, in accordance with section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), Commerce extended the deadline for issuing the final results by 60 days,⁴ postponing the final results until July 11, 2018.

Scope of the Order

The merchandise covered by this order is crystalline silicon photovoltaic cells and modules, laminates, and panels, consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including, but not limited to, modules, laminates, panels and building integrated materials.⁵ Merchandise covered by this order is currently

¹ See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Preliminary Results of Antidumping Duty Administrative Review and Preliminary Determination of No Shipments; 2015–2016*, 83 FR 1018 (January 9, 2018) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum (PDM).

² See Memorandum, "Issues and Decision Memorandum for the Final Results of the 2015–2016 Antidumping Duty Administrative Review of Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, From the People's Republic of China," (Issues and Decision Memorandum), dated concurrently with this notice.

³ See Memorandum, "Deadlines Affected by the Shutdown of the Federal Government," dated January 23, 2018 (Tolling Memorandum). All deadlines in this segment of the proceeding have been extended by three days.

⁴ See Memorandum, "2015–2016 Antidumping Duty Administrative Review of Certain Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Extension of Deadline for Final Results of Antidumping Duty Administrative Review," dated May 8, 2018.

⁵ For a complete description of the scope of the order, see Issues and Decision Memorandum.

classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 8501.61.0000, 8507.20.80, 8541.40.6020, 8541.40.6030, and 8501.31.8000. Although these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this order is dispositive.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs filed by parties in this review are addressed in the Issues and Decision Memorandum, which is hereby adopted by this notice. A list of the issues that parties raised, and to which we responded in the Issues and Decision Memorandum, follows as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov> and to all parties in the Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly on the internet at <http://enforcement.trade.gov/frn/>. The paper copy and electronic version of the Issues and Decision Memorandum are identical in content.

Affiliation and Single Entity Determination

We preliminarily found that Changzhou Trina Solar Energy Co., Ltd./Trina Solar (Changzhou) Science and Technology Co., Ltd./Yancheng Trina Solar Energy Technology Co., Ltd./Changzhou Trina Solar Yabang Energy Co., Ltd./Turpan Trina Solar Energy Co., Ltd./Hubei Trina Solar Energy Co., Ltd. are affiliated with Trina Solar (Hefei) Science and Technology Co., Ltd., pursuant to section 771(33)(F) of the Act and that all of these companies should be treated as a single entity, *i.e.*, Trina Solar (Hefei) Science and Technology Co., Ltd. (Trina), pursuant to 19 CFR 351.401(f)(1)–(2).⁶ No interested party has disputed this treatment, and so these findings remain unchanged for these final results.

Changes Since the Preliminary Results⁷

Based on a review of the record and comments received from interested parties regarding our *Preliminary*

⁶ See *Preliminary Results* and accompanying PDM at 6.

⁷ See Issues and Decision Memorandum at comments 2 and 10.

Results, and for the reasons explained in the Issues and Decision Memorandum, we made revisions to our preliminary calculations of the weighted-average dumping margin for the mandatory respondent Trina.

Final Determination of No Shipments

In the *Preliminary Results*, we found that the following eight companies had no shipments during the POR: De-Tech Trading Limited HK, Dongguan Sunworth Solar Energy Co., Ltd., Jiawei Solarchina Co., Ltd., Ningbo ETDZ Holdings, Ltd., Shenzhen Sungold Solar Co., Ltd., Taizhou BD Trade Co., Ltd., Toenergy Technology Hangzhou Co., Ltd., and Wuxi Tianran Photovoltaic Co., Ltd.⁸ We did not receive comments from interested parties regarding our preliminary finding on no shipments. Consistent with Commerce's assessment practice in non-market economy cases, we completed the review with respect to the above-named companies. Based on the certifications submitted by the aforementioned companies, and our analysis of Customs and Border Protection (CBP) information,⁹ we continue to determine that these companies did not have any reviewable transactions during the POR. As noted in the "Assessment" section below, Commerce will issue appropriate instructions with respect to these companies to CBP based on our Final Results.¹⁰ In addition, these companies will maintain their rate from the most recent segment in which they participated.

Separate Rates

In the *Preliminary Results*, we found that evidence provided by Trina and 21 other companies/company groups supported finding an absence of both de jure and de facto government control, and, therefore, we preliminarily granted a separate rate to each of these companies/company groups.¹¹ We received no information since the issuance of the *Preliminary Results* that provides a basis for reconsidering these determinations with respect to the separate rate status of these 22 companies/company groups. Therefore, for the final results, we continue to find that these entities are eligible for separate rates.

⁸ See *Preliminary Results*, 83 FR 1018.

⁹ See PDM at 4–5.

¹⁰ See *Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties*, 76 FR 65694 (October 24, 2011) (Assessment of Antidumping Duties); see also the "Assessment" section of this notice, below.

¹¹ See *Preliminary Results*, 83 FR 1018; see also PDM at 11–12.

Final Results of Review

We determine that the following weighted-average dumping margins exist for the POR:

Exporter	Weighted-average dumping margin (percent)
Changzhou Trina Solar Energy Co., Ltd./Trina Solar (Changzhou) Science and Technology Co., Ltd./Yancheng Trina Solar Energy Technology Co., Ltd./Changzhou Trina Solar Yabang Energy Co., Ltd./Turpan Trina Solar Energy Co., Ltd./Hubei Trina Solar Energy Co., Ltd./Trina Solar (Hefei) Science and Technology Co., Ltd	15.85

Commerce’s change in policy regarding conditional review of the China-wide entity applies to this administrative review.¹² Under this policy, the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the China-wide entity, we did not conduct a review of the China-wide entity. Thus, the weighted-average dumping margin for the China-wide entity (*i.e.*, 238.95 percent) is not subject to change as a result of this review.¹³

Assessment

Commerce will determine, and CBP shall assess, antidumping duties on all appropriate entries covered by this review. Commerce intends to issue

assessment instructions to CBP 15 days after the publication date of these Final Results of review. In accordance with 19 CFR 351.212(b)(1), we are calculating importer- (or customer-)specific assessment rates for the merchandise subject to this review. For any individually examined respondent whose weighted-average dumping margin is above *de minimis* (*i.e.*, 0.50 percent), Commerce will calculate importer- (or customer-)specific assessment rates for merchandise subject to this review. Where the respondent reported reliable entered values, Commerce calculated importer- (or customer-)specific *ad valorem* rates by aggregating the dumping margins calculated for all U.S. sales to the importer (or customer) and dividing this amount by the total entered value of the sales to the importer (or customer).¹⁴ Where Commerce calculated an importer- (or customer-)specific weighted-average dumping margin by dividing the total amount of dumping for reviewed sales to the importer (or customer) by the total sales quantity associated with those transactions,

Commerce will direct CBP to assess importer- (or customer-)specific assessment rates based on the resulting per-unit rates.¹⁵ Where an importer- (or customer-)specific *ad valorem* or per-unit rate is greater than *de minimis*, Commerce will instruct CBP to collect the appropriate duties at the time of liquidation. Where either the respondent’s weighted average dumping margin is zero or *de minimis*, or an importer- (or customer-)specific *ad valorem* or per-unit rate is zero or *de minimis*, Commerce will instruct CBP to liquidate appropriate entries without regard to antidumping duties.¹⁶

For merchandise whose sale/entry was not reported in the U.S. sales database submitted by an exporter individually examined during this review, but that entered under the case number of that exporter (*i.e.*, at the individually-examined exporter’s cash deposit rate), Commerce will instruct CBP to liquidate such entries at the

¹² See *Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings*, 78 FR 65963, 65969–70 (November 4, 2013).

¹³ See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People’s Republic of China: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2014–2015*, 82 FR 29033 (June 27, 2017).

¹⁴ See 19 CFR 351.212(b)(1).

¹⁵ *Id.*

¹⁶ See *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification*, 77 FR 8101, 8103 (February 14, 2012).

China-wide rate. Additionally, if Commerce determines that an exporter under review had no shipments of the subject merchandise, any suspended entries that entered under that exporter's case number will be liquidated at the China-wide rate.¹⁷

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the Final Results of this administrative review for shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date of this notice in the **Federal Register**, as provided by section 751(a)(2)(C) of the Act: (1) For the exporters listed above, the cash deposit rate will be the rate listed for each exporter in the table in the "Final Results of Review" section of this notice, except if the rate is zero or *de minimis* (i.e., less than 0.5 percent), then the cash deposit rate will be zero; (2) for previously investigated Chinese and non-Chinese exporters that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific rate; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be the rate previously established for the PRC-wide entity (i.e., 238.95 percent); and (4) for all non-China exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied the non-Chinese exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Disclosure

We intend to disclose the calculations performed for these Final Results within five days of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Notification to Importers Regarding the Reimbursement of Duties

This notice also serves as a reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties

occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305, which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This determination is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221(b)(5).

Dated: July 11, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[A-533-869]

Certain New Pneumatic Off-the-Road Tires From India: Notice of Rescission of Antidumping Duty Administrative Review; 2017-2018

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is rescinding the antidumping duty (AD) order on certain new pneumatic off-the-road tires (OTR Tires) from India for the period of review (POR) February 2, 2017, through February 28, 2018.

DATES: Applicable July 27, 2018.

FOR FURTHER INFORMATION CONTACT: Trisha Tran, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-4852.

SUPPLEMENTARY INFORMATION:

Background

On March 5, 2018, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the AD order on OTR Tires from India for the period February 2, 2017, through February 28, 2018.¹ On March 30, 2018, ATC Tires Private Limited (ATC) and Alliance Tires Americas, Inc. (ATA) (collectively ATC) timely requested that Commerce conduct an administrative review of this AD order with respect to ATC.² No other party requested a review of the order. On May 2, 2018, Commerce initiated an administrative review with respect to ATC, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i).³ On May 17, 2018, ATC timely withdrew its request for an administrative review.⁴ No other party requested a review of ATC.

¹ See *Antidumping or Countervailing Duty, Order, Finding, or Suspended Investigation: Opportunity to Request Administrative Review*, 83 FR 9284 (March 5, 2018).

² See Letter from ATC, "Certain New Pneumatic Off-the-Road Tires from India: ATC Tires Private Limited's Request for Administrative Review," dated March 30, 2018.

³ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 83 FR 19215 (May 2, 2018).

⁴ See Letter from ATC, "Certain New Pneumatic Off-the-Road Tires from India: ATC Tires Private Limited's Withdrawal of Request for Administrative Review," dated May 17, 2018.

¹⁷ See *Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties*, 76 FR 65694 (October 24, 2011), for a full discussion of this practice.

Rescission of Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested a review withdraws the request within 90 days of the publication date of the notice of initiation of the requested review. In this case, ATC timely withdrew its request for review within 90 days of the publication date of the *Initiation Notice*. Because Commerce received no other request for a review of the AD order with respect to ATC, and no other requests were made for a review of the AD order with respect to other companies, we are rescinding this administrative review covering the period February 2, 2017, through February 28, 2018, in its entirety, in accordance with 19 CFR 213(d)(1).

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries of OTR Tires from India during the POR. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after the publication of this notice in the **Federal Register**.

Notification to Importers

This notice also serves as a final reminder to importers for whom this review is being rescinded of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of the antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to

judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: July 23, 2018.

James Maeder,

Associate Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations performing the duties of Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-979]

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Notice of Partial Rescission of Antidumping Duty Administrative Review; 2016-2017

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: Applicable July 27, 2018.

FOR FURTHER INFORMATION CONTACT: Krisha Hill, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, telephone: (202) 482-4037.

SUPPLEMENTARY INFORMATION:

Background

On December 7, 2012, the Department of Commerce (Commerce) published in the **Federal Register** the antidumping duty order on crystalline silicon photovoltaic cells, whether or not assembled into modules, from the People's Republic of China (China) (Order).¹ On December 4, 2017, Commerce published a notice of opportunity to request an administrative review of the Order.² Commerce received multiple timely requests for an administrative review of the Order. On February 23, 2018, in accordance with

¹ See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value, and Antidumping Duty Order*, 77 FR 73018 (December 7, 2012).

² See *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review*, 82 FR 57219 (December 4, 2017).

section 751(a) of Tariff Act of 1930, as amended (the Act), Commerce published in the **Federal Register** a notice of the initiation of an administrative review of the Order.³ The administrative review was initiated with respect to 45 companies or groups of companies, and covers the period from December 1, 2016, through November 30, 2017. All parties have subsequently timely withdrawn their requests to review the group Changzhou Trina Solar Energy Co., Ltd./Trina Solar (Changzhou) Science and Technology Co., Ltd./Yancheng Trina Solar Energy Technology Co., Ltd./Changzhou Trina Solar Yabang Energy Co., Ltd./Turpan Trina Solar Energy Co., Ltd./Hubei Trina Solar Energy Co., Ltd. (collectively, Trina).⁴

Rescission of Review, in Part

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested the review withdraws its request within 90 days of the date of publication of the notice of initiation of the requested review. All parties withdrew their requests for an administrative review of Trina within 90 days of the date of publication of the *Initiation Notice*. Accordingly, Commerce is rescinding this review with respect to Trina, in accordance with 19 CFR 351.213(d)(1).

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all subject merchandise exported by Trina and entered, or withdrawn from warehouse, for consumption during the period of review at a rate equal to the cash deposit of estimated antidumping duties required at the time of entry in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after publication of this notice in the **Federal Register**.

³ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 83 FR 8058 (February 23, 2018) (*Initiation Notice*).

⁴ See Letter from SolarWorld Americas, Inc., "Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled into Modules, from the People's Republic of China: Withdrawal of Request for Administrative Review and Request for Selection of Additional Mandatory Respondent," dated April 5, 2018; see also Letter from Changzhou Trina Solar Energy Co., Ltd., Yancheng Trina Solar Energy Technology Co., Ltd., and Changzhou Trina Solar Yabang Energy Co., Ltd., "Crystalline Silicon Photovoltaic Cells, Whether Or Not Assembled into Modules from the People's Republic of China—Withdrawal of Request for Review," dated April 4, 2018.

Notification to Importers

This notice serves as the only reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of the antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: July 23, 2018.

James Maeder,

Associate Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the duties of Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration**

RIN 0648-XG320

Marine Mammals; File No. 21678

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that John Calambokidis, Cascadia Research Collective, Waterstreet Building Suite 201, 218½ West Fourth Ave., Olympia, WA 98501, has applied in due form for a permit to conduct research on marine mammals.

DATES: Written, telefaxed, or email comments must be received on or before August 27, 2018.

ADDRESSES: The application and related documents are available for review by selecting "Records Open for Public Comment" from the "Features" box on the Applications and Permits for Protected Species (APPS) home page, <https://apps.nmfs.noaa.gov>, and then selecting File No. 21678 from the list of available applications.

These documents are also available upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427-8401; fax (301) 713-0376.

Written comments on this application should be submitted to the Chief, Permits and Conservation Division, at the address listed above. Comments may also be submitted by facsimile to (301) 713-0376, or by email to NMFS.Pr1Comments@noaa.gov. Please include the File No. in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits and Conservation Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Carrie Hubbard or Sara Young, (301) 427-8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222-226), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

The applicant proposes to continue long-term studies of marine mammals in the eastern North Pacific. Research would be conducted primarily along the west coast of the United States from the Mexico border to Canada, but may also occur in Alaskan waters and international waters of the Pacific Ocean. Twenty-four cetacean species would be studied, including those listed as endangered or threatened: Blue (*Balaenoptera musculus*), fin (*B. physalus*), humpback (*Megaptera novaeangliae*), Eastern North Pacific Southern Resident killer (*Orcinus orca*),

North Pacific right (*Eubalaena japonica*), sei (*B. borealis*), and sperm (*Physeter macrocephalus*) whales. Research methods vary by species, but would include vessel surveys, aerial surveys, unmanned aircraft systems (UAS), photo-identification, behavioral observations, passive acoustic recordings, underwater photography, sampling (breath, skin, feces, skin/blubber), prey mapping, and suction cup and dart tagging. Five species of pinnipeds, including Steller sea lions (*Eumetopias jubatus*) would also be studied, primarily at haul out areas in Puget Sound, WA. Seals and sea lions may be disturbed during abundance counts, scat collection, and UAS flights. The research would examine population size and trends, habitat use, social structure, range, movement patterns and rates, diving behavior, diet, ecology, behavior and the impacts of human activities on marine mammals. The permit would be valid for five years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: July 24, 2018.

Julia Marie Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2018-16057 Filed 7-26-18; 8:45 am]

BILLING CODE 3510-22-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED**Procurement List; Proposed Addition and Deletions**

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Notice; correction.

SUMMARY: The Committee for Purchase From People Who Are Blind or Severely Disabled published a document in the **Federal Register** of July 20, 2018, concerning a notice of Proposed Addition and Deletions.

FOR FURTHER INFORMATION CONTACT: For further information or to submit

comments contact: Michael R. Jurkowski, Telephone: (703) 603-2117.

Correction

In the **Federal Register** of July 20, 2018, in FR Doc. 2018-15571 (83 FR 140), the Committee would like to correct the notice for "Procurement List, Proposed Addition and Deletions" to replace the Initial Regulatory Flexibility Act Certification:

Procurement List; Proposed Addition to and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Addition to and Deletions from the Procurement List.

SUMMARY: The Committee is proposing to add a service to the Procurement List that will be furnished by a nonprofit agency employing persons who are blind or have other severe disabilities, and deletes products and services previously furnished by such agencies.

DATES: Comments must be received on or before: August 19, 2018.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 603-2117, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Addition

If the Committee approves the proposed addition, the entities of the Federal Government identified in this notice will be required to procure the service listed below from the nonprofit agency employing persons who are blind or have other severe disabilities.

The following service is proposed for addition to the Procurement List for production by the nonprofit agency listed:

Service

Service Type: Document Destruction Service
Mandatory for: Defense Logistics Agency, Defense Supply Center, 3990 East Broad Street, Columbus, OH

Mandatory Source(s) of Supply: Greene, Inc., Xenia, OH

Contracting Activity: Defense Logistics Agency Contracting SVCS OFF, Columbus

Deletions

The following products and services are proposed for deletion from the Procurement List:

Products

NSN(s)—Product Name(s):

6230-01-617-3776—Kit, Safety Flare, Programmable Flicker Pattern, Red LED, 8in Diameter, AA Battery Operated
6230-01-617-6959—Kit, Safety Flare, Programmable Flicker Pattern, Red LED, 8in Diameter, Rechargeable Power Unit

Mandatory Source(s) of Supply: Tarrant County Association for the Blind, Fort Worth, TX

Contracting Activity: Defense Logistics Agency Troop Support

NSN(s)—Product Name(s):

BILLING CODE 6353-01-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions

AGENCY: Committee for Purchase From
 People Who Are Blind or Severely
 Disabled.

ACTION: Additions to the Procurement
 List.

SUMMARY: This action adds services to
 the Procurement List that will be
 provided by nonprofit agencies
 employing persons who are blind or
 have other severe disabilities.

DATES: *Date added to the Procurement
 List:* August 26, 2018.

ADDRESSES: Committee for Purchase
 From People Who Are Blind or Severely
 Disabled, 1401 S Clark Street, Suite 715,
 Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT:
 Michael R. Jurkowski, Telephone: (703)
 603-2117, Fax: (703) 603-0655, or email
 CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Additions

On 5/18/2018 (83 FR 97) and 6/15/
 2018 (83 FR 116), the Committee for
 Purchase From People Who Are Blind
 or Severely Disabled published notices
 of proposed additions to the
 Procurement List.

After consideration of the material
 presented to it concerning capability of
 qualified nonprofit agencies to provide
 the services and impact of the additions
 on the current or most recent
 contractors, the Committee has
 determined that the services listed
 below are suitable for procurement by
 the Federal Government under 41 U.S.C.
 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will
 not have a significant impact on a
 substantial number of small entities.
 The major factors considered for this
 certification were:

1. The action will not result in any
 additional reporting, recordkeeping or
 other compliance requirements for small
 entities other than the small
 organizations that will provide the
 services to the Government.

2. The action will result in
 authorizing small entities to provide the
 services to the Government.

3. There are no known regulatory
 alternatives which would accomplish
 the objectives of the Javits-Wagner-
 O'Day Act (41 U.S.C. 8501-8506) in
 connection with services proposed for
 addition to the Procurement List.

End of Certification

Accordingly, the following services
 are added to the Procurement List:

Services

Service Type: Recycling Service
Mandatory for: U.S. Army, Walter Reed
 Army Institute of Research, Safety &
 Environment Department, Forest Glen
 Annex, Buildings 500, 501, 503, 508,
 509, 511 & the Temporary Phasing
 Facilities, 503 Robert Grant Avenue,
 Silver Spring, MD

Mandatory Source(s) of Supply: MVLE, Inc.,
 Springfield, VA

Contracting Activity: Dept Of The Army,
 W4PZ USA MED RSCH ACQUIS ACT

Service Type: Facilities Operation and
 Maintenance Service

Mandatory for: National Institutes of Health,
 NIH Animal Center, 16701 Elmer School
 Road, Dickerson, MD

Mandatory Source(s) of Supply: Skookum
 Educational Programs, Bremerton, WA

Contracting Activity: National Institutes of
 Health, NIH A E Construction

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Addition and Deletions

AGENCY: Committee for Purchase From
 People Who Are Blind or Severely
 Disabled.

ACTION: Proposed addition to and
 deletions from the Procurement List.

SUMMARY: The Committee is proposing
 to add a service to the Procurement List
 that will be provided by the nonprofit

agency employing persons who are
 blind or have other severe disabilities,
 and deletes a product and service
 previously furnished by such agencies.

DATES: *Comments must be received on
 or before:* August 26, 2018.

ADDRESSES: Committee for Purchase
 From People Who Are Blind or Severely
 Disabled, 1401 S. Clark Street, Suite
 715, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION CONTACT: For
 further information or to submit
 comments contact: Michael R.
 Jurkowski, Telephone: (703) 603-2117,
 Fax: (703) 603-0655, or email
 CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This
 notice is published pursuant to 41
 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its
 purpose is to provide interested persons
 an opportunity to submit comments on
 the proposed actions.

Addition

If the Committee approves the
 proposed addition, the entities of the
 Federal Government identified in this
 notice will be required to procure the
 service listed below from the nonprofit
 agency employing persons who are
 blind or have other severe disabilities.

The following service is proposed for
 addition to the Procurement List for
 production by the nonprofit agency
 listed:

Service

Service Type: Grounds Maintenance Service
Mandatory for: U.S. Air Force, Cannon Air
 Force Base, 110 Alison Avenue, Cannon
 AFB, NM

Mandatory Source(s) of Supply: CW
 Resources, Inc., New Britain, CT

Contracting Activity: Dept of the Air Force,
 FA4855 27 SOCONS LGC

Deletions

The following product and service are
 proposed for deletion from the
 Procurement List:

Product

NSN(s)—Product Name(s): 8410-00-NSH-
 6369—Knee Length, X Large

Mandatory Source(s) of Supply: Human
 Technologies Corporation, Utica, NY

Contracting Activity: AMS 31C3,
 Washington, DC

Service

Service Type: Ground Maintenance Service
Mandatory for: Niagara Falls International
 Airport: 914th Tactical Airlift Group
 (AFRES), Niagara Falls, NY

Mandatory Source(s) of Supply: Unknown
Contracting Activity: DEPT of the Air Force,

FA7014 AFDW PK

BILLING CODE 6353-01-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Charter Renewal of Department of Defense Federal Advisory Committees

AGENCY: Department of Defense.

ACTION: Renewal of Federal Advisory
Committee.

SUMMARY: The Department of Defense (DoD) is publishing this notice to announce that it is renewing the charter for the Army Education Advisory Committee (“the Committee”).

FOR FURTHER INFORMATION CONTACT: Jim Freeman, Advisory Committee Management Officer for the Department of Defense, 703-692-5952.

SUPPLEMENTARY INFORMATION: The Committee’s charter is being renewed in accordance with the Federal Advisory Committee Act (FACA) of 1972 (5 U.S.C., Appendix, as amended) and 41 CFR 102-3.50(d). The Committee’s charter and contact information for the Committee’s Designated Federal Officer (DFO) can be found at <http://www.facadatabase.gov/>.

The Committee provides the Secretary of Defense and the Deputy Secretary of Defense, through the Secretary of the Army, independent advice and recommendations on Army educational matters, pertaining to the educational doctrinal, and research policies and activities of the U.S. Army’s educational programs, to include the U.S. Army’s joint professional military education programs. The committee will access and provide independent advice and recommendations across the spectrum of educational policies, school curricula, educational philosophy and objectives, program effectiveness, facilities, staff and faculty, instructional methods, and other aspects of the organization and management of these programs. In addition, the Committee will provide independent advice and recommendations on matters pertaining to the Army Historical Program and the role and mission of the U.S. Army Center of Military History, particularly as they pertain to the study and use of military history in Army schools.

The Committee is composed of no more than 15 members and will include the following: a. Not more than 13

individuals who are eminent authorities in the fields of defense, management, leadership, and academia, including those who are deemed to be historical scholars; b. the Chief Historian of the Army, U.S. Army, Center of Military History; and c. the Assistant Deputy Chief of Staff, G-3/5/7 for U.S. Army Training and Doctrine Command, who will serve as a non-voting member of the Committee. All members of the Committee are appointed to provide advice on behalf of the Government on the basis of their best judgment without representing any particular point of view and in a manner that is free from conflict of interest. Except for reimbursement of official Committee-related travel and per diem, Committee members serve without compensation.

The public or interested organizations may submit written statements to the Committee membership about the Committee’s mission and functions. Written statements may be submitted at any time or in response to the stated agenda of planned meeting of the Committee. All written statements shall be submitted to the DFO for the Committee, and this individual will ensure that the written statements are provided to the membership for their consideration.

Dated: July 24, 2018.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison
Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD-2018-OS-0027]

Submission for OMB Review; Comment Request

AGENCY: Defense Security Service, DoD.

ACTION: 30-Day information collection
notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by August 27, 2018.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Sehra, DoD Desk Officer, at oir_submission@omb.eop.gov. Please identify the proposed information collection by DoD

Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571-372-0493, or whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Certificate Pertaining to Foreign Interest; SF328; OMB Control Number 0704-XXXX.

Type of Request: New.

Number of Respondents: 2,123.

Responses per Respondent: 1.

Annual Responses: 2,123.

Average Burden per Response: 70 minutes.

Annual Burden Hours: 2,476.8.

Needs and Uses: Completion of the SF 328 (which will be designated as a Common Form allowing its use by other federal agencies) and submission of supporting documentation (e.g., company or entity charter documents, board meeting minutes, stock or securities information, descriptions of organizational structures, contracts, sales, leases and/or loan agreements and revenue documents, annual reports and income statements, etc.) is part of the eligibility determination for access to classified information and/or issuance of a Facility Clearance.

Affected Public: Business or Other For-Profit; Not-For-Profit Institutions.

Frequency: On occasion.

Respondent’s Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Sehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Mr. Frederick Licari.

Requests for copies of the information collection proposal should be sent to Mr. Licari at whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

Dated: July 23, 2018.

Aaron T. Siegel,

*Alternate OSD Federal Register Liaison
Officer, Department of Defense.*

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD-2018-OS-0025]

Submission for OMB Review; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness, DoD.

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by August 27, 2018.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Sehra, DoD Desk Officer, at oira_submission@omb.eop.gov. Please identify the proposed information collection by DoD Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Fred Licari, 571-372-0493, or whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Data for Payment of Retired Personnel; DD Form 2656; OMB Control Number 0704-0569.

Type of Request: Revision.

Number of Respondents: 66,800.

Responses per Respondent: 1.

Annual Responses: 66,800.

Average Burden per Response: 15 minutes.

Annual Burden Hours: 16,700.

Needs and Uses: The information collection requirement is necessary to obtain applicable retirement information from Uniformed Service members and allow those members to make certain retired pay and survivor annuity elections prior to retirement from service or prior to reaching eligibility to receive retired pay. The form will also allow eligible members covered by the Blended Retirement System to make a voluntary election of a partial lump sum of retired pay, as required by Section 1415 of title 10, United States Code.

Affected Public: Individuals or Households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Sehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Mr. Frederick Licari.

BILLING CODE 3810-FF-P

DEPARTMENT OF EDUCATION

[Docket ID ED-2017-FSA-0047]

Privacy Act of 1974; Matching Program

AGENCY: Department of Education.

ACTION: Notice of a new matching program.

SUMMARY: This is a Notice of a new matching program between the Department of Education (ED) and the Defense Manpower Data Center (DMDC) of the U.S. Department of Defense (DoD). This is a new matching notice upon expiration of the previously published 18-month Computer Matching agreement August 1, 2017. It was originally established on February 1, 2010.

DATES: Submit your comments on the proposed matching program or before August 27, 2018.

The matching program will go into effect at the later of the following two dates: (1) The date of the last signatory to this CMA as set forth in Article XIX, below, or (2) 30 days after the publication of this notice on July 27, 2018, unless the matching notice needs to be changed as a result of public comment. The Department will publish any changes resulting from public comment.

The matching program will continue for 18 months after the applicable date and may be extended for an additional 12 months, if the respective agency Data Integrity Boards (DIBS) determine that the conditions specified in 5 U.S.C. 552a(o)(2)(D) have been met. The life of this CMA is estimated to cover the 18-month period from August 28, 2018 through February 27, 2020.

ADDRESSES: Submit your comments through the Federal eRulemaking Portal or via postal mail, commercial delivery, or hand delivery. We will not accept comments submitted by fax or by email or those submitted after the comment period. To ensure that we do not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

- *Federal eRulemaking Portal:* Go to www.regulations.gov to submit your comments electronically. Information on using *Regulations.gov*, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under the "help" tab.

- *Postal Mail, Commercial Delivery, or Hand Delivery:* If you mail or deliver your comments, address them to Marya Dennis, Management and Program Analyst, U.S. Department of Education, Federal Student Aid, Union Center Plaza, 830 First Street NE, Washington, DC 20002-5345.

Privacy Note: ED's policy is to make all comments received from members of the public available for public viewing in their entirety on the Federal

eRulemaking Portal at www.regulations.gov. Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for this notice. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Ms. Marya Dennis, Management and Program Analyst, U.S. Department of Education, Federal Student Aid, Union Center Plaza, 830 First Street NE, Washington, DC 20002-5345. Telephone: (202) 377-3385.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1-800-877-8339.

SUPPLEMENTARY INFORMATION: We provide this notice in accordance with 5 U.S.C. 552a (commonly known as the Privacy Act of 1974, as amended); Office of Management and Budget (OMB) Final Guidance Interpreting the Provisions of Public Law 100-503, the Computer Matching and Privacy Protection Act of 1988, 54 FR 25818 (June 19, 1989); and OMB Circular A-108, 81 FR 94424 (December 23, 2016).

Under sections 420R and 473(b) of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1070h and 20 U.S.C. 1087mm(b)), the Secretary of Defense must provide the Secretary of Education with information to identify the children of military personnel who have died as a result of their military service in Iraq or Afghanistan after September 11, 2001, to determine if the child is eligible for increased amounts of title IV, HEA program assistance. DoD and ED have determined that matching records contained in the DoD DMDC system and the Defense Enrollment Eligibility Reporting System (DEERS) against ED's Federal Student Aid Application File (18-11-01) is the only practical method that the agencies can use to meet the statutory requirements of the HEA.

The prior Computer Matching Agreement (CMA) was published in the **Federal Register** on June 30, 2017 (82 FR 29856). ED and DoD are now re-

establishing the CMA through this notice.

Participating Agencies

ED and DoD.

Authority for Conducting the Matching Program

Sections 420R and 473(b) of the HEA (20 U.S.C. 1070h and 20 U.S.C. 1087mm(b)) and 5 U.S.C. 552a.

Purpose(s)

This matching program identifies children whose parent or guardian was a member of the Armed Forces of the United States and died as a result of performing military service in Iraq or Afghanistan after September 11, 2001. These children (referred to as qualifying students) may be eligible for a greater amount of title IV, HEA program assistance. A qualifying student must have been age 24 or younger at the time of the parent's or guardian's death, or, if older than 24, enrolled part-time or full-time in an institution of higher education at the time of the parent's or guardian's death. Beginning July 1, 2010, students who are otherwise qualified children of deceased U.S. military who meet the requirements of section 420R of the HEA (20 U.S.C. 1070h) may also be eligible for higher amounts of title IV, HEA program assistance.

Categories of Individuals

The individuals whose records are included in this matching program are dependents of service personnel who died as a result of performing their military service in Iraq or Afghanistan after September 11, 2001, which records are located in the DoD DMDC and DEERS systems, and all students who complete a Free Application for Federal Student Aid.

Categories of Records

DoD uses the following data elements in this matching program: Dependent's Name, Date of Birth and SSN—extracted from DEERS; and Parent or Guardian's Date of Death—extracted from DMDC Data Base.

ED uses the SSN, date of birth, and the first two letters of an applicant's last name to match applicant records.

System(s) of Records

ED system of records: Federal Student Aid Application File (18–11–01) (76 FR 46774, August 3, 2011).

DoD system of records: DMDC 01, Defense Manpower Data Center Data Base (76 FR 72391) (November 23, 2011), and DMDC 02 DoD Defense Enrollment Eligibility Reporting

Systems (DEERS) (81 FR 49210) (July 27, 2016).

Accessible Format: Individuals with disabilities can obtain this document in an accessible format (such as, braille, large print, audiotape, or compact disc) on request to the contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. Free internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available through the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

James F. Manning,

Acting Chief Operating Officer, Federal Student Aid.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER18-2031-000]

Hudson Shore Energy Partners LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of HUDSON SHORE ENERGY PARTNERS LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and

assumptions of liability, is August 8, 2018.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the website that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Dated: July 19, 2018.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2833-108]

Public Utility District No. 1 of Lewis County, Washington; Notice of Application Accepted for Filing, Soliciting Comments, Motions To Intervene, and Protests

July 23, 2018.

Take notice that the following hydroelectric application has been filed with the Federal Energy Regulatory Commission and is available for public inspection:

- a. *Type of Application:* Proposed Revisions to Whitewater Boating Take-Out Plan and Project Boundary.
- b. *Project No:* 2833-108.
- c. *Date Filed:* March 1 and 2, 2018, and supplemented on June 14, 2018.

d. *Applicant:* Public Utility District No. 1 of Lewis County, Washington (licensee).

e. *Name of Project:* Cowlitz Falls Hydroelectric Project.

f. *Location:* The project is located on the Cowlitz River in Lewis County Washington.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a-825r.

h. *Applicant Contact:* Joseph M. First, Project Superintendent, PUD No. 1 of Lewis County, P.O. Box 1387, Morton, WA 98356; (360) 497-5351.

i. *FERC Contact:* Jon Cofrancesco at (202) 502-8951, or jon.cofrancesco@ferc.gov.

j. Deadline for filing comments, motions to intervene, and protests: August 22, 2018.

The Commission strongly encourages electronic filing. Please file motions to intervene, protests, and comments using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov, (866) 208-3676 (toll free), or (202) 502-8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. The first page of any filing should include docket number P-2833-108. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The licensee filed an application proposing revisions to the project's whitewater boating take-out site plan approved by the Commission's Order Modifying and Approving Plan for Whitewater Boating Take-out Site issued June 22, 2006. The proposed revisions would make changes to the existing approved Cooper Canyon Creek Take-Out Site, including unlimited open-gate access to the take-

out site, elimination of existing boater insurance requirements, elimination of the 1000-foot-long portage from the existing parking area to the entrance to the access road (340 spur road), additional parking at the take-out site, and changes to the project boundary associated with the 340 spur road and parking area. In addition, the licensee requests Commission approval of its conceptual plans to develop two alternate take-out sites in the area for use when the Cooper Canyon Creek Take-Out Site is inaccessible.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street NE, Room 2A, Washington, DC 20426, or by calling 202-502-8371. This filing may also be viewed on the Commission's website at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 866-208-3676 or email FERCOnlineSupport@ferc.gov, for TTY, call 202-502-8659. A copy is also available for inspection and reproduction at the address in item (h) above. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title "COMMENTS"; "PROTEST", or "MOTION TO INTERVENE" as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address,

and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RD18-4-000]

Commission Information Collection Activities (FERC-725G2¹); Comment Request; Revision

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, the Federal Energy Regulatory Commission (Commission or FERC) is submitting its information collection, FERC-725G2¹ (Reliability Standards for the Bulk Power System: PRC Reliability Standards) to the Office of Management and Budget (OMB) for review of the information collection requirements.

¹ Commission staff is using the FERC-725G2 is a temporary "place holder" information collection for this 30-day notice. FERC-725G information collection (OMB Control No. 1902-0252) is pending review at OMB in an unrelated item and only one item per OMB Control No. can be pending OMB review at a time. In order to submit this timely, to OMB, we are using a temporary place holder.

Any interested person may file comments directly with OMB and should address a copy of those comments to the Commission as explained below. The Commission previously issued a Notice in the **Federal Register** on May 16, 2018, requesting public comments. The Commission received no comments on the FERC-725G2 and is making this notation in its submittal to OMB.

DATES: Comments on the collection of information are due August 27, 2018.

ADDRESSES: Comments filed with OMB, identified by the OMB Control No.: 1902-0281, should be sent via email to the Office of Information and Regulatory Affairs: oir_submission@omb.gov. Attention: Federal Energy Regulatory Commission Desk Officer. The Desk Officer may also be reached via telephone at 202-395-8528. A copy of the comments should also be sent to the Commission, in Docket No. RD18-4-000, by either of the following methods:

- *eFiling at Commission's Website:* <http://www.ferc.gov/docs-filing/efiling.asp>.

- *Mail/Hand Delivery/Courier:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: <http://www.ferc.gov/help/submission-guide.asp>. For user assistance, contact FERC Online Support by email at ferconlinesupport@ferc.gov, or by phone at: (866) 208-3676 (toll-free), or (202) 502-8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at <http://www.ferc.gov/docs-filing/docs-filing.asp>.

FOR FURTHER INFORMATION CONTACT:

Ellen Brown may be reached by email at DataClearance@FERC.gov, telephone at (202) 502-8663, and fax at (202) 273-0873.

SUPPLEMENTARY INFORMATION:

Title: FERC-725G2, Reliability Standards for the Bulk Power System: PRC Reliability Standards.

OMB Control No.: 1902-0281.

Type of Request: Revision of FERC-725G2 information collection requirements as discussed in Docket No. RD18-4.

Abstract: The information collected by the FERC-725G2 is required to implement the statutory provisions of section 215 of the Federal Power Act (FPA) (16 U.S.C. 824o). Section 215 of the FPA buttresses the Commission's

efforts to strengthen the reliability of the interstate grid.

On March 16, 2018, the North American Electric Reliability Corporation (NERC, the Commission-approved ERO) submitted for Commission approval proposed Reliability Standard PRC-025-2. Reliability Standard PRC-025-2 addresses setting load-responsive protective relays associated with generation facilities at a level to prevent unnecessary tripping of generators during a system disturbance for conditions that do not pose a risk of damage to the associated equipment. Reliability Standard PRC-025-2 also improves upon the retired Reliability Standard PRC-025-1² by addressing certain relay setting application issues and by clarifying certain terminology and references. NERC requested that the Commission approve the Reliability Standard and find that the approved standard is just, reasonable, not unduly

discriminatory or preferential, and in the public interest. NERC also requested that the Commission approve: (i) The associated Implementation Plan; (ii) the associated Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs), which remain unchanged from Reliability Standard PRC-025-1; and (iii) the retirement of currently-effective Reliability Standard PRC-025-1.

Reliability Standard PRC-025-2 became effective on 7/1/2018, the first day of the first calendar quarter after the effective date of the applicable governmental authority's order approving the standard. NERC's Implementation Plan approved phased-in compliance dates after the effective date of Reliability Standard PRC-025-2.³

On May 2, 2018, pursuant to the relevant authority delegated to the Director, Office of Electric Reliability under 18 CFR 385.713 (2017) Reliability Standard PRC-025-2 and the retirement

of Reliability Standard PRC-025-1 was approved.

Type of Respondents: Generator Owner (GO), Transmission Owner (TO), and Distribution Provider (DP).

*Estimate of Annual Burden:*⁴ Details follow on the changes in Docket No. RD18-4-000 to Reliability Standard FERC-725G2.

Net Effect to Burden for FERC-725G2: Due to the retirement of Reliability Standard PRC-025-1 and implementation of Reliability Standard PRC-025-2, the number of respondents is reduced by 25, and the number of annual burden hours is reduced by 550 hours. (The net changes are due to a change in the number of affected entities on the NERC Registry.) The burden per respondent for Reliability Standard PRC-025-2 remains 22 hours (total for both one-time and ongoing burden, similar to the now-retired Reliability Standard PRC-025-1.)

² <http://www.nerc.net/standardsreports/standardssummary.aspx>.

³ See NERC's Implementation Plan at https://www.nerc.com/pa/Stand/Project%20201604%20Modifications%20to%20PRC0251%20DL/Project_2016_04_Implementation_Plan_Clean_01092018.pdf.

⁴ Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information

collection burden, refer to 5 Code of Federal Regulations 1320.3.

⁵ According to the NERC compliance registry as of March 9, 2018, NERC has registered 415 distribution providers (DP), 985 generator owners (GO) and 336 transmission owners (TO). However, under NERC's compliance registration program, entities may be registered for multiple functions, so these numbers incorporate some double counting. The number of unique entities responding will be approximately 994 entities registered as a transmission owner, a distribution provider, or a generator owner that is also a transmission owner and/or a distribution owner. This estimate assumes

all of the unique entities apply load-responsive protective relays.

⁶ The hourly cost (for salary plus benefits) uses the figures from the Bureau of Labor Statistics, May 2017, for two positions involved in the reporting and recordkeeping requirements. These figures include salary (https://www.bls.gov/oes/current/naics2_22.htm) and benefits (<http://www.bls.gov/news.release/ecec.nr0.htm>) and are: Engineer: \$64.91/hour, and File Clerk: \$31.16/hour. Hourly cost for the engineer are used for the one-time costs, and hourly cost for the file clerk are used for the ongoing record retention.

Comments: Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Dated: July 19, 2018.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ID-8512-000]

Miller, Paul J.; Notice of Filing

Take notice that on July 18, 2018, Paul J. Miller, submitted for filing an application for authority to hold interlocking positions, pursuant to section 305(b) of the Federal Power Act, 16 U.S.C. 825d(b) and section 45.8 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR part 45.8 (2018).

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as

⁷ GO = Generator Owner, DP = Distribution Provider, TO = Transmission Owner, each of which applies load-responsive protective relays at the terminals of the Elements listed in the proposed standard at section 3.2 (Facilities).

⁸ The estimated hourly costs (salary plus benefits) are based on Bureau of Labor Statistics (BLS) information May 2014, (at http://bls.gov/oes/current/naics3_221000.htm#17-0000) for an electrical engineer (\$59.62/hour for review and documentation), and for a file clerk (\$28.95/hour for record retention). Those figures (and the number of respondents) were used when the standard was approved and added to the OMB inventory. Hourly cost for the engineer are used for the one-time costs, and hourly cost for the file clerk are used for the ongoing record retention.

appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for electronic review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the website that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Comment Date: 5:00 p.m. Eastern Time on August 8, 2018.

Dated: July 19, 2018.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP18-523-000]

Columbia Gas Transmission, LLC; Notice of Request Under Blanket Authorization

Take notice that on July 13, 2018, Columbia Gas Transmission, LLC (Columbia), 700 Louisiana Street, Suite 700, Houston, Texas 77002-2700, filed in the above referenced docket, a prior notice request pursuant to sections 157.205 and 157.216 of the Commission's regulations under the Natural Gas Act (NGA) and Columbia's blanket certificate issued in Docket No. CP83-76-000, for authorization to (1) plug and abandon four injection/withdrawal (I/W) wells (Benton Well 9507 and Laurel Wells 9097, 9239, and 9285), (2) abandon and convert one I/W well to an observation well (Benton Well 7612), and (3) abandon associated pipelines and appurtenances located at Benton and Laurel Storage Fields in

Hocking County, Ohio, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The filing may also be viewed on the web at <http://www.ferc.gov> using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208-3676, or TTY, contact (202) 502-8659.

Any questions regarding this application may be directed to Linda Farquhar, Manager, Project Determinations & Regulatory Administration, Columbia Gas Transmission, LLC, 700 Louisiana Street, Suite 700, Houston, Texas 77002-2700, at (832) 320-5685 or fax (832) 320-6685 or linda_farquhar@transcanada.com.

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either: Complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's EA.

Any person may, within 60 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention. Any person filing to intervene or the Commission's staff may, pursuant to section 157.205 of the Commission's Regulations under the NGA (18 CFR 157.205) file a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the NGA.

The Commission strongly encourages electronic filings of comments, protests, and interventions via the internet in lieu of paper. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's website (www.ferc.gov) under the "e-Filing" link.

Dated: July 23, 2018.

Federal Energy Regulatory Commission

[Docket No. ER18-2003-000]

Lorenzo Wind, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding Lorenzo Wind, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is August 9, 2018.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 5 copies of the intervention or protest to the Federal Energy Regulatory Commission,

888 First Street NE, Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for electronic review in the Commission's Public Reference Room in Washington, DC. BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP18-13-000]

Notice of Schedule for Environmental Review of the Columbia Gas Transmission, Llc Line 8000 Replacement Project

On November 3, 2017, Columbia Gas Transmission, LLC filed an application in Docket No. CP18-13-000 requesting a Certificate of Public Convenience and Necessity pursuant to Sections 7(b) and (c) of the Natural Gas Act to construct, operate, and abandon certain natural gas pipeline facilities in Mineral County, West Virginia and Allegany County, Maryland. The proposed project is known as the Line 8000 Replacement Project (Project) and is part of Columbia's multi-year, comprehensive modernization program. The Project would not increase capacity and would continue to serve the Maryland distribution markets. According to Columbia, its Project would increase system reliability, thereby greatly reducing the risk of interruptions to Columbia's customers.

On November 17, 2017, the Federal Energy Regulatory Commission (Commission or FERC) issued its Notice of Application for the Project. Among other things, that notice alerted agencies issuing federal authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's Environmental

Assessment (EA) for the Project. This instant notice identifies the FERC staff's planned schedule for the completion of the EA for the Project.

Schedule for Environmental Review

Issuance of EA—August 29, 2018
90-day Federal Authorization Decision Deadline—November 27, 2018

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Project's progress.

Project Description

The Line 8000 Replacement Project would consist of:

- Replacement of about 13.25 miles of existing 12-inch-diameter bare steel pipeline, with approximately 13.54 miles of new, coated 12-inch-diameter natural gas transmission pipeline in five sections and four modification points along Line 8000 and Lateral Line 8006;
- replacement of about 0.54 miles of existing 4-inch-diameter bare steel pipeline, with approximately 0.67 miles of new coated 4-inch-diameter natural gas transmission pipeline along Lateral Lines 8225 and 8244;
- installation of two new pig¹ launcher and receiver sites and four new mainline valves associated with pipeline facilities;
- modifications/abandonment of three existing mainline valves and three existing side tap valve sites;
- modification of tie-ins at two regulator stations; and
- abandonment of 13 active residential taps and 109 inactive taps.

Background

On December 19, 2017, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Proposed Line 8000 Replacement Project and Request for Comments on Environmental Issues* (NOI). The NOI was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. In response to the NOI, the Commission received comments from Columbia Gas of Maryland, Inc., Direct Energy Business Marketing, LLC, the West Virginia Division of Culture and History, the Maryland Department of Environment, and one landowner. The comments addressed the conversion to an alternate

¹ A "pig" is a tool that the pipeline company inserts into and pushes through the pipeline for cleaning the pipeline, conducting internal inspections, or other purposes.

energy source for customers who would be affected by the abandonment of residential farm taps, the cost of the Project, cultural resources, air quality, stormwater and erosion, water resources, and land use. All substantive comments will be addressed in the EA.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/docs-filing/esubscription.asp.

Additional information about the Project is available from the Commission's Office of External Affairs at (866) 208-FERC or on the FERC website (www.ferc.gov). Using the "eLibrary" link, select "General Search" from the eLibrary menu, enter the selected date range and "Docket Number" excluding the last three digits (i.e., CP18-13), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208-3676, TTY (202) 502-8659, or at FERCOnlineSupport@ferc.gov. The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9981–30–OA]

Request for Nominations of Experts for the Clean Air Scientific Advisory Committee (CASAC) Ozone Review Panel

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) Science Advisory Board (SAB) Staff Office requests public nominations for scientific experts to form a CASAC ad hoc panel to provide advice through the chartered CASAC on the scientific and technical aspects of air quality criteria and the National Ambient Air Quality Standards (NAAQS) for ozone.

DATES: Nominations should be submitted by (August 17, 2018) per instructions below.

FOR FURTHER INFORMATION CONTACT: Any member of the public wishing further information regarding this Notice and Request for Nominations may contact Mr. Aaron Yeow, Designated Federal

Officer (DFO), SAB Staff Office, by telephone/voice mail at (202) 564–2050 or via email at yeow.aaron@epa.gov. General information concerning the CASAC can be found on the following website: <http://www.epa.gov/casac>.

SUPPLEMENTARY INFORMATION:

Background: The Clean Air Scientific Advisory Committee (CASAC) was established under section 109(d)(2) of the Clean Air Act (CAA or Act) (42 U.S.C. 7409) as an independent scientific advisory committee. The CASAC provides advice, information and recommendations on the scientific and technical aspects of air quality criteria and NAAQS under sections 108 and 109 of the Act. The CASAC shall also: Advise the EPA Administrator of areas in which additional knowledge is required to appraise the adequacy and basis of existing, new, or revised NAAQS; describe the research efforts necessary to provide the required information; advise the EPA Administrator on the relative contribution to air pollution concentrations of natural as well as anthropogenic activity; and advise the EPA Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such NAAQS.

As amended, 5 U.S.C., App. Section 109(d)(1) of the Clean Air Act (CAA) requires that EPA carry out a periodic review and revision, as appropriate, of the air quality criteria and the NAAQS for the six “criteria” air pollutants, including ozone. With the publication of the National Ambient Standards for Ozone (80 FR 65292) on October 26, 2015, the Agency completed its most recent review of the Ozone NAAQS. The CASAC's Ozone Review Panel for that review cycle was formed in January 2009 and completed its work in July 2014.

This **Federal Register** notice solicitation is seeking nominations for subject matter experts to serve on the CASAC Ozone Review Panel for the next review of the Ozone NAAQS that begins in fiscal year (FY) 2018. The Panel will be charged with reviewing the science and policy assessments, and related documents, that form the basis for the EPA's review of the Ozone NAAQS, and will provide advice through the Chartered CASAC.

The CASAC is a Federal advisory committee chartered under the Federal Advisory Committee Act (FACA). As a Federal Advisory Committee, the CASAC conducts business in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. App.

2) and related regulations. The CASAC and the CASAC Ozone Review Panel will comply with the provisions of FACA and all appropriate SAB Staff Office procedural policies.

Request for Nominations: The SAB Staff Office is seeking nominations of nationally and internationally recognized scientists with demonstrated expertise and research in the field of air pollution related to ozone. Experts are sought in: Air quality, atmospheric science and chemistry, causal inference, dosimetry, toxicology, controlled clinical exposure, epidemiology, biostatistics, human exposure modeling, risk assessment/modeling, uncertainty analysis, ecology and effects on welfare and the environment, and environmental economics.

Process and Deadline for Submitting Nominations: Any interested person or organization may nominate qualified individuals in the areas of expertise described above. Individuals may self-nominate. Nominations should be submitted in electronic format (preferred) using the online nomination form under "Public Input on Membership" on the CASAC web page at <http://www.epa.gov/casac>. To be considered, all nominations should include the information requested below. EPA values and welcomes diversity. All qualified candidates are encouraged to apply regardless of sex, race, disability or ethnicity. Nominations should be submitted by (August 17, 2018).

The following information should be provided on the nomination form: Contact information for the person making the nomination; contact information for the nominee; the disciplinary and specific areas of expertise of the nominee; the nominee's *curriculum vitae*; and a biographical sketch of the nominee indicating current position, educational background; research activities; sources of research funding for the last two years; and recent service on other national advisory committees or national professional organizations. Persons having questions about the nomination process or the public comment process described below, or who are unable to submit nominations through the CASAC website, should contact the DFO, as identified above. The DFO will acknowledge receipt of nominations and will invite the nominee to provide any additional information that the nominee feels would be useful in considering the nomination. The names and biosketches of qualified nominees identified by respondents to this **Federal Register** notice, and additional experts identified by the SAB Staff Office, will be posted

in a List of Candidates on the CASAC website at <http://www.epa.gov/casac>. Public comments on each List of Candidates will be accepted for 21 days from the date the list is posted. The public will be requested to provide relevant information or other documentation on nominees that the SAB Staff Office should consider in evaluating candidates.

For the EPA SAB Staff Office, a balanced review panel includes candidates who possess the necessary domains of knowledge, the relevant scientific perspectives (which, among other factors, can be influenced by work history and affiliation), and the collective breadth of experience to adequately address the charge. In forming this expert panel, the SAB Staff Office will consider public comments on the List of Candidates, information provided by the candidates themselves, and background information independently gathered by the SAB Staff Office. Selection criteria to be used for panel membership include: (a) Scientific and/or technical expertise, knowledge, and experience (primary factors); (b) availability and willingness to serve; (c) absence of financial conflicts of interest; (d) absence of an appearance of a lack of impartiality; (e) skills working in committees, subcommittees and advisory panels; and, (f) for the panel as a whole, diversity of expertise and viewpoints.

The SAB Staff Office's evaluation of an absence of financial conflicts of interest will include a review of the "Confidential Financial Disclosure Form for Special Government Employees Serving on Federal Advisory Committees at the U.S. Environmental Protection Agency" (EPA Form 3110-48). This confidential form allows government officials to determine whether there is a statutory conflict between a person's public responsibilities (which includes membership on an EPA federal advisory committee) and private interests and activities, or the appearance of a lack of impartiality, as defined by federal regulation. The form may be viewed and downloaded from the following URL address [https://yosemite.epa.gov/sab/sabproduct.nsf/Web/Form3110-48exp2018/\\$File/EPA3110-48exp2018.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/Web/Form3110-48exp2018/$File/EPA3110-48exp2018.pdf).

The approved policy under which the EPA SAB Office selects subcommittees and review panels is described in the following document: Overview of the Panel Formation Process at the Environmental Protection Agency Science Advisory Board (EPA-SAB-EC-02-010), which is posted on the SAB website at <http://yosemite.epa.gov/sab/>

[sabproduct.nsf/WebFiles/OverviewPanelForm/\\$File/ec02010.pdf](http://sabproduct.nsf/WebFiles/OverviewPanelForm/$File/ec02010.pdf).

Dated: July 19, 2018.

Khanna Johnston,

Deputy Director, EPA Science Advisory Board Staff Office.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OECA-2013-0327; FRL-9981-22-OEI]

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; NSPS for Portland Cement Plants (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), NSPS for Portland Cement Plants (EPA ICR No. 1051.14, OMB Control No. 2060-0025), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through August 31, 2018. Public comments were previously requested via the **Federal Register** on June 29, 2017 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may neither conduct nor sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before August 27, 2018.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA-HQ-OECA-2013-0327, to: (1) EPA online using www.regulations.gov (our preferred method); or by email to: docket.oeca@epa.gov; or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460; and (2) OMB via email to oir_submission@omb.eop.gov. Address comments to OMB Desk Officer for EPA.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats,

information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT:

Patrick Yellin, Monitoring, Assistance, and Media Programs Division, Office of Compliance, Mail Code 2227A, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564-2970; fax number: (202) 564-0050; email address: yellin.patrick@epa.gov.

SUPPLEMENTARY INFORMATION:

Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov, or in person at the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit: <http://www.epa.gov/dockets>.

Abstract: Owners and operators of affected facilities are required to comply with reporting and record keeping requirements for the General Provisions (40 CFR part 60, subpart A), as well as the specific requirements at 40 CFR part 60, subpart F. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with the standards.

Form numbers: None.

Respondents/affected entities: Portland cement plants.

Respondent's obligation to respond: Mandatory (40 CFR part 60, subpart F).

Estimated number of respondents: 95 (total).

Frequency of response: Initially and semiannually.

Total estimated burden: 14,500 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$2,290,000 (per year), which includes \$767,000 in annualized capital startup and/or operation and maintenance costs.

Changes in the estimates: There is a small adjustment decrease in the respondent labor hours and the total capital and O&M costs from the most-recently approved ICR due to a decrease in the number of respondents. Consistent with past ICRs, this ICR uses the most recent data from EPA's

Greenhouse Gas Reporting Program to estimate the respondent universe, which shows a decrease of 1 respondent as compared to the previous ICR.

Courtney Kerwin,

Director, Regulatory Support Division.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL-9980-97-OEI]

Privacy Act of 1974; System of Records

AGENCY: Office of Environmental Information, Environmental Protection Agency (EPA).

ACTION: Notice of a new system of records.

SUMMARY: The Environmental Protection Agency's (EPA) Office of Environmental Information (OEI), Office of Enterprise Information Programs (OEIP), eDiscovery Division, is giving notice that it proposes to establish a new system of records pursuant to the provisions of the Privacy Act of 1974 (5 U.S.C. 552a). The new system of records will contain information collected using the Agency's suite of tools that search and preserve electronically stored information (ESI) in support of eDiscovery requests, Freedom of Information Act (FOIA) requests or other formal information requests. Exemptions for this system of records will be included in the Agency's update of its Privacy Act regulations at 40 CFR part 16.

DATES: Persons wishing to comment on this system of records notice must do so by. If no comments are received, the systems of records notice will become effective by August 27, 2018.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-HQ-OEI-2012-0882, to the *Federal eRulemaking Portal*: <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or withdrawn. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information for which disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web,

cloud or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Brian K. Thompson, Acting Director, eDiscovery Division, Office of Environmental Protection Agency, U.S. Environmental Protection Agency, Mail Code 2822T, 1200 Pennsylvania Avenue NW, Washington, DC 20460; email, thompson.briank@epa.gov; telephone number, 202-564-4256.

SUPPLEMENTARY INFORMATION: The U.S. Environmental Protection Agency (EPA) plans to establish a Privacy Act system of records for information collected using its eDiscovery (electronic discovery) Enterprise Tool Suite. Depending on the specific need, the Agency will use a combination of several electronic tools that together assist with the preservation, search, processing, review and production of electronically stored information (ESI). The tool suite will be used to preserve, search, collect, sort and review ESI including email messages, word processing documents, media files, spreadsheets, presentations, scanned documents and data sets in support of legal discovery. The Agency will also use these tools to search for ESI that is responsive to requests for information submitted under FOIA or other formal information requests.

To minimize the risk of compromising the information that is being stored in the system, strict access controls have been imposed. Access to the tool suite containing records is restricted to a limited number of authorized users with the appropriate security clearances and password permissions. Access to the system is further limited by user type. System administrators have full access to the tool suite, including the ability to perform administrative functions. Other users are provided a level of access to the tool suite that is commensurate with their role in the system, allowing them to perform the functions for which they are authorized. Authorized users include federal and contract staff located throughout the country. The system is maintained in secure areas and buildings with physical access controls. The eDiscovery Enterprise Tool Suite is maintained by the Office of Environmental Information and is stored on servers located in Washington, DC, and Durham, NC. Data retrieved are stored on servers and work stations throughout the country. The

information contained in the system can be wide-ranging and potentially include emails, documents and other sources of ESI collected from custodians and may contain personally identifiable information. The information in the system will also contain the names and EPA email addresses of EPA employees, contractors, and grantees who have been identified as potential information custodians. Privacy information may be included in the ESI collected and maintained in the system. Individuals for whom records are maintained in the system include, but are not limited to, those individuals who have been identified as potential information custodians in a litigation, investigation, FOIA matter or other formal information request and those individuals whose information may appear in such records. The system will aid in protecting the privacy of individuals from unwarranted disclosure by allowing authorized users of the tool suite to identify files that contain privacy information to be protected from disclosure. EPA will safeguard individuals' privacy in a manner consistent with the Privacy Act, E-Government Act, OMB directives and other federal requirements concerning privacy. Accordingly, the privacy of individuals should not be affected.

SYSTEM NAME AND NUMBER

eDiscovery Enterprise Tool Suite, EPA-63.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

eDiscovery Enterprise Tool Suite, U.S. Environmental Protection Agency, eDiscovery Division, Office of Enterprise Information Programs, Office of Environmental Information, 1200 Pennsylvania Avenue NW, Washington, DC 20460. Records are also maintained in Research Triangle Park, 109 T.W. Alexander Drive, Durham, NC 27709.

SYSTEM MANAGER(S):

Greg Duke, eDiscovery Division, Office of Enterprise Information Programs, Office of Environmental Information, MC 3PM50, 1650 Arch Street, Philadelphia, PA 19103.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

40 U.S.C. 11315 and 44 U.S.C. 3506.

PURPOSE(S) OF THE SYSTEM:

To support the document identification and collection processes for eDiscovery, Freedom of Information Act requests and other formal information requests.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Categories of individuals covered by this system include: (1) All persons subject to a litigation hold due to a "reasonable anticipation of litigation" as determined by EPA; (2) all persons deemed a participant of past or present litigation, investigation or arbitration where EPA is involved, including civil and criminal enforcement cases and defensive litigation; and (3) individuals impacted by Freedom of Information Act (FOIA) requests, litigation or other cases in EPA.

A wide variety of individuals are covered by the system, including individuals who correspond with EPA; provide information to EPA that is subject to discovery, a FOIA request or other formal information request; or are the subject of litigation with EPA; individuals who file complaints or petitions with EPA; and individuals involved in matters with EPA as either plaintiffs or defendants in both civil and criminal matters.

CATEGORIES OF RECORDS IN THE SYSTEM:

- eDiscovery Litigation Hold Files. The litigation hold files contain the names and email addresses of EPA employees and EPA contractors, interns, or grantees who have been provided EPA email addresses and who have been identified as custodians of information that needs to be preserved in the anticipation of litigation. The records in the system will include these individuals' names and EPA email addresses which are entered into the system by designated EPA employees responsible for the administration of litigation holds. Information in the system includes litigation hold notices and answers to certification questions. Reports may be generated from the system that identify whether an individual is designated as a custodian of hold-responsive information, as well as reports containing the information received from individuals in response to questions asked through the litigation hold system.

- eDiscovery Case Tracking Files. The case tracking files contain information about the cases created in response to a litigation, investigation, FOIA matter or other formal information request. Case tracking files may contain the names, phone numbers, organizations, and email addresses of EPA employees and EPA contractors, interns, or grantees who have been identified as custodians in a case or as points of contact for managing the case. Information in the case tracking files may include the location of the information to be searched, search terms and case notes

entered into the system by designated EPA employees or contractors responsible for operating EPA's eDiscovery Enterprise Tool Suite.

- eDiscovery Collection Files. The collection files contain information potentially responsive to a litigation, investigation, FOIA matter or other formal information request. The Tool Suite may capture many types of personally identifiable information depending on where that information is stored, including an individual's name; work address and telephone number; home address and telephone number; email addresses; vehicle information; names of individuals associated with a FOIA request or litigation hold; or other related information. The collection files contain all data collected by the tools using the search criteria and may contain, but not be limited to, correspondence (e.g., case coordination reports; memoranda and other records of communication, including electronic communication over email systems or instant messaging among other EPA employees and/or personnel of other federal agencies and outside parties and attachments to those messages or communications); local/shared drive data; information collected or compiled from EPA database systems; spreadsheets of data collections often including personally identifiable information or law enforcement data used to track the process of investigations or focus investigative priorities; records relating to litigation by or against the United States government; records relating to requests for EPA records other than requests under the FOIA and the Privacy Act of 1974; legal documents including complaints, summaries, affidavits, litigation reports, motions, subpoenas and any other court filing or administrative filing, or other related litigation documents; documentary evidence; supporting documents related to the legal and programmatic issues of a case; transcripts of interviews; regulatory history (i.e., permits and reports generated as a result of normal program activity); administrative record material and comments on administrative records; technical support (reports generated to test search criteria); investigative notes; reports requesting permission and use; transcripts of tapes; records checks (personal history, police information, fingerprint cards, photographs); property reports; property obtained and retained by an examiner including documents, personal property and documentary or other evidence; employment records and information

related to employment matters; claims and records regarding discrimination, including employment and sex discrimination; personnel matters; contracts and information relating to contracts; manifests and other related investigative information.

RECORD SOURCE CATEGORIES:

EPA employees; employees of federal contractors; employees of other federal agencies and of state, local, tribal and foreign agencies; witnesses; informants; public source materials; and other persons who may have information relevant to the search criteria.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

EPA's General Routine Uses A, C, D, E, F, G, H, I, K, and L apply to this system. Please refer to <https://www.federalregister.gov/documents/2008/01/14/E8-445/amendment-to-general-routine-uses> for a full explanation of these routine uses (73 FR 2245).

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records in the system are stored in database applications running on computer servers.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Litigation hold and case tracking files are assigned a case file control number or case name. Information collected from individuals pertaining to particular cases may be retrieved by names of individuals, email addresses, and other unique identifiers.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records stored in the system are subject to records schedule 1012 and 0089.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Computer records are maintained in a secure, password protected computer system. Role-based access controls limit a user's access to the information in the system. Users are provided access to information in the system based on their need to know. Individuals working on a particular matter will be given access to the information related to that matter. The eDiscovery Enterprise Tool Suite is a password protected system requiring all users log in to access the information in the system. The system times out after a period of latency ensuring a user re-authenticates their session with a username and password. The system also maintains a user log that identifies

and records persons who access and use the system. Users of EPA systems are required to complete security and privacy training on an annual basis to ensure continued access to the system. All records are maintained in secure areas and buildings with physical access controls.

RECORD ACCESS PROCEDURES:

Request for access must be made in accordance with the procedures described in EPA's Privacy Act regulations at 40 CFR part 16. Requesters will be required to provide adequate identification, such as a driver's license, employee identification card or other identifying document. Additional identification procedures may be required in some instances.

CONTESTING RECORD PROCEDURES:

Requests for correction or amendment must identify the record to be changed and the corrective action sought. Complete EPA Privacy Act procedures are described in EPA's Privacy Act regulations at 40 CFR part 16.

NOTIFICATION PROCEDURES:

Any individual who wants to know whether this system of records contains a record about him or her should make a written request to the Agency Privacy Officer, MC 2831T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

For those records within the system collected and maintained pursuant to the Federal Rules of Civil Procedure (FRCP) and/or for the purpose of civil discovery, action or proceeding, 5 U.S.C. 552a(d)(5) will apply, stating that "nothing in this [Act] shall allow an individual access to any information compiled in reasonable anticipation of a civil action or proceeding." In addition, pursuant to 5 U.S.C. 552a(k)(2), this system is exempt from the following provisions of the Privacy Act, subject to the limitations set forth in that subsection: 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (e)(4)(H) and (f)(2) through (5). Finally, pursuant to 5 U.S.C. 552a(j)(2), when records are contained in this system related to a criminal enforcement proceeding, this system is exempt from the following provisions of the Privacy Act, subject to the limitations set forth in that subsection: 5 U.S.C. 552a(c)(3), (c)(4), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8), (f)(2) through (f)(5) and (g).

HISTORY:

None.

Dated: May 30, 2018.

Steven Fine,

Principal Deputy Assistant Administrator.

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

[CG Docket No. 03-123; DA 18-733]

Notice of Certification of State Telecommunications Relay Services (TRS) Programs

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: In this document, the Federal Communications Commission's (FCC or Commission) Consumer and Governmental Affairs Bureau (Bureau) hereby grants renewals of certifications to the state and U.S. territory TRS programs listed below.

DATES: These certifications, conditioned on a demonstration of ongoing compliance with the Commission's rules governing TRS, shall remain in effect for a five (5) year period, beginning July 26, 2018, and ending July 25, 2023, pursuant to 47 CFR 64.606(c). Beginning one year prior to the expiration of these certifications, July 25, 2022, each state or U.S. territory may apply for renewal of its TRS program certification by filing documentation in accordance with the Commission's rules, pursuant to 47 CFR 64.606(a).

FOR FURTHER INFORMATION CONTACT: Dana Wilson, Consumer and Governmental Affairs Bureau at: (202) 418-2247; email: Dana.Wilson@fcc.gov.

SUPPLEMENTARY INFORMATION: The full text of this document and copies of the filed applications are available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portal II, 445 12th Street SW, Room CY-A257, Washington, DC 20554. Applications also may be found by searching on the Commission's Electronic Comment Filing System at: <http://apps.fcc.gov/ecfs/> (insert CG Docket No. 03-123 into the Proceeding block). This document can also be downloaded in Word and Portable Document Format (PDF) at <https://www.fcc.gov/general/disability-rights-office-headlines>.

To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer and Governmental Affairs Bureau at (202)

418-0530 (voice), (844) 432-2275 (videophone), or (202) 418-0432 (TTY).

Synopsis

After reviewing each of the state and U.S. territory applications received, the Bureau has determined that:

(1) The TRS programs of the listed states and U.S. territories meet or exceed all operational, technical, and functional minimum standards contained in § 64.604 of the Commission's rules;

(2) The TRS programs of the listed states and U.S. territories make available adequate procedures and remedies for enforcing the requirements of their state and U.S. territory programs; and

(3) The TRS programs of the listed states and U.S. territories in no way conflict with federal law.

The Bureau also has determined that, where applicable, the intrastate funding mechanisms of the listed states and U.S. territories are labeled in a manner that promotes national understanding of TRS and does not offend the public, consistent with § 64.606(d) of the Commission's rules.

FEDERAL RESERVE SYSTEM

Notice of Proposals To Engage in or To Acquire Companies Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y, (12 CFR part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company, including the companies listed below, that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may

express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than August 13, 2018.

A. Federal Reserve Bank of St. Louis (David L. Hubbard, Senior Manager) P.O. Box 442, St. Louis, Missouri 63166-2034. Comments can also be sent electronically to

Comments.applications@stls.frb.org:

1. *First State Bancorp, Inc., Caruthersville, Missouri;* to acquire 100 percent of the voting shares of Mississippi County Savings and Loan Association, Charleston, Missouri, and thereby engage in operating a savings association pursuant to section 225.28(b)(4)(ii).

Board of Governors of the Federal Reserve System, July 24, 2018.

Yao-Chin Chao,

Assistant Secretary of the Board.

BILLING CODE P

FEDERAL TRADE COMMISSION

Granting of Requests for Early Termination of the Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination—on the dates indicated—of the waiting period provided by law and the premerger notification rules. The listing for each transaction includes the transaction number and the parties to the transaction. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

EARLY TERMINATIONS GRANTED—JUNE 1, 2018 THRU JUNE 30, 2018

BILLING CODE 6750-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Centers for Disease Control and Prevention****Board of Scientific Counselors, National Center for Injury Prevention and Control (BSC, NCIPC)**

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of closed meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the CDC announces the following meeting for the Board of Scientific Counselors, National Center for Injury Prevention and Control (BSC, NCIPC).

DATES: The meeting will be held on August 14, 2018, 1:00 p.m. to 3:00 p.m., EDT (CLOSED).

ADDRESSES: Teleconference.

FOR FURTHER INFORMATION CONTACT:

Gwendolyn H. Cattledge, Ph.D., M.S.E.H., Deputy Associate Director for Science, NCIPC, CDC, 4770 Buford Highway NE, Mailstop F-63, Atlanta, GA 30341, Telephone (770) 488-1430, Email address: NCIPCBSB@cdc.gov.

SUPPLEMENTARY INFORMATION: The meeting will be closed to the public in accordance with provisions set forth in Section 552b(c)(4) and (6), Title 5 U.S.C., and the Determination of the Director, Management Analysis and Services Office, CDC, pursuant to Public Law 92-463.

Purpose: The Board of Scientific Counselors makes recommendations regarding policies, strategies, objectives, and priorities; and reviews progress toward injury prevention goals and

provides evidence in injury prevention-related research and programs. The Board also provides advice on the appropriate balance of intramural and extramural research, the structure, progress and performance of intramural programs. The Board is designed to provide guidance on extramural scientific program matters, including the: (1) Review of extramural research concepts for funding opportunity announcements; (2) conduct of Secondary Peer Review of extramural research grants, cooperative agreements, and contracts applications received in response to the funding opportunity announcements as it relates to the Center's programmatic balance and mission; (3) submission of secondary review recommendations to the Center Director of applications to be considered for funding support; (4) review of research portfolios, and (5) review of program proposals.

Matters To Be Considered: The agenda will include discussions on Secondary Peer Review of extramural research grant and cooperative agreement applications received in response to one (1) Notice of Funding Opportunity (NOFO): RFA-CE-18-006, Research Grants for Primary or Secondary Prevention of Opioid Overdose (RO1). Agenda items are subject to change as priorities dictate.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Dia Taylor,

Acting Chief Operating Officer, Centers for Disease Control and Prevention.

[FR Doc. 2018-16101 Filed 7-26-18; 8:45 am]

BILLING CODE 4163-19-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Centers for Disease Control and Prevention****National Center for Health Statistics (NCHS), ICD-10 Coordination and Maintenance (C&M) Committee Meeting**

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: The CDC, National Center for Health Statistics (NCHS), Classifications and Public Health Data Standards Staff, announces the following meeting of the ICD-10 Coordination and Maintenance (C&M) Committee meeting. This meeting is open to the public, limited only by the space available. The meeting room accommodates approximately 240 people. We will be broadcasting the meeting live via Webcast at <http://www.cms.gov/live/>.

DATES: The meeting will be held on September 11, 2018, 9:00 a.m. to 5:00 p.m. EDT and September 12, 2018, 9:00 a.m. to 5:00 p.m. EDT.

ADDRESSES: Centers for Medicare and Medicaid Services (CMS) Auditorium, 7500 Security Boulevard, Baltimore, Maryland 21244.

FOR FURTHER INFORMATION CONTACT:

Traci Ramirez, Program Specialist, CDC, 3311 Toledo Rd., Hyattsville, MD 20782 telephone (301) 458-4454; email address TRamirez@cdc.gov.

SUPPLEMENTARY INFORMATION:

Purpose: The ICD-10 Coordination and Maintenance (C&M) Committee is a public forum for the presentation of proposed modifications to the International Classification of Diseases, Tenth Revision, Clinical Modification and ICD-10 Procedure Coding System.

Matters To Be Considered: The agenda will include discussions on ICD-10-PCS Topics:

Intraoperative Fluorescence Vascular Angiography for Lymphatic Mapping in Cervical and Uterine Cancers
Insertion of Intramedullary Nail Limb Lengthening System
Cell Suspension Autografting—REPEAT Subcutaneous Implantable Defibrillator System

Administration of erdafitinib
Administration of esketamine
hydrochloride nasal spray, for
intranasal use
Administration of ERLEADATM
(apalutamide), for oral use

Addenda and Key Updates

ICD-10-CM Topics
Deep Vein Thrombosis
Dravet Syndrome
Latent Tuberculosis Infection
Pressure ulcer of mucosal membrane by
site
ICD-10-CM Addendum

Agenda items are subject to change as priorities dictate.

Security Considerations: Due to increased security requirements, CMS has instituted stringent procedures for entrance into the building by non-government employees.

Attendees will need to present valid government-issued picture identification, and sign-in at the security desk upon entering the building.

Attendees who wish to attend the September 11-12, 2018, ICD-10-CM C&M meeting must submit their name and organization by September 3, 2018, for inclusion on the visitor list. This visitor list will be maintained at the front desk of the CMS building and used by the guards to admit visitors to the meeting.

Participants who attended previous Coordination and Maintenance meetings will no longer be automatically added to the visitor list. You must request inclusion of your name prior to each meeting you wish attend.

Please register to attend the meeting on-line at: <http://www.cms.hhs.gov/apps/events/>.

Please contact Mady Hue (410-786-4510) or Marilu.hue@cms.hhs.gov for questions about the registration process.

Note: CMS and NCHS no longer provide paper copies of handouts for the meeting. Electronic copies of all meeting materials will be posted on the CMS and NCHS websites prior to the meeting at <http://www.cms.hhs.gov/ICD9ProviderDiagnosticCodes/03meetings.asp#TopOfPage> and https://www.cdc.gov/nchs/icd/icd10cm_maintenance.htm.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention, and the Agency for Toxic Substances and Disease Registry.

Dia Taylor,

Acting Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4160-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day-18-0556]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled Assisted Reproductive Technology (ART) Program Reporting System to the Office of Management and Budget (OMB) for review and approval. CDC previously published a "Proposed Data Collection Submitted for Public Comment and Recommendations" notice on May 10, 2018 to obtain comments from the public and affected agencies. CDC did not receive comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy

of the information collection plan and instruments, call (404) 639-7570 or send an email to omb@cdc.gov. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

Proposed Project

Assisted Reproductive Technology (ART) Program Reporting System (OMB No. 0920-0556, expires 7/31/2018)—Revision—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 2(a) of Public Law 102-493 (known as the Fertility Clinic Success Rate and Certification Act of 1992 (FCSRCA), 42 U.S.C. 263a-1(a)) requires that each assisted reproductive technology (ART) program shall annually report to the Secretary through the Centers for Disease Control and Prevention: (1) Pregnancy success rates achieved by such ART program, and (2) the identity of each embryo laboratory used by such ART program and whether the laboratory is certified or has applied for such certification under the Act. The required information is currently reported by ART programs to CDC as specified in the Assisted Reproductive Technology (ART) Program Reporting System (OMB No. 0920-0556, exp. 7/31/2018). CDC seeks to extend OMB approval for a period of three years. The revised total burden estimate is lower than under the previous approval, due to removal of the burden associated with a one-time system upgrade that was completed under the prior approval. However, some of this burden reduction will be offset by an increase in the number of ART clinics and cycles reported, due to an increase in the utilization of ART in the United States.

The currently approved program reporting system, also known as the National ART Surveillance System (NASS), includes information about all ART cycles initiated by any of the ART programs in the United States. An ART cycle is considered to begin when a woman begins taking ovarian stimulatory drugs or starts ovarian monitoring with the intent of having embryos transferred; for each cycle, CDC collects information about the pregnancy outcome, as well as a number of data items deemed by experts in the field to be important to explain

variability in success rates across ART programs and individuals.

Each ART program reports its annual ART cycle data to CDC in mid-December. The annual data reporting consists of information about all ART cycles that were initiated in the previous calendar year. For example, the December 2017 reports described ART cycles that were initiated between January 1, 2016, and December 31, 2016. Data elements and definitions currently in use reflect CDC's prior consultations with representatives of the Society for Assisted Reproductive Technology (SART), the American Society for Reproductive Medicine, and RESOLVE: The National Infertility Association (a national, nonprofit consumer

organization), as well as a variety of individuals with expertise and interest in this field.

The estimated number of respondents (ART programs or clinics) is 464, based on the number of clinics that provided information in 2015; the estimated average number of responses (ART cycles) per respondent is 350. Additionally, approximately 5–10% of responding clinics will be randomly selected each year to participate in data validation and quality control activities; an estimated 35 clinics will be selected to report validation data on 70 cycles each on average. Finally, respondents may provide feedback to CDC about the usability and utility of the reporting system. The option to participate in the

feedback survey is presented to respondents when they complete their required data submission. Participation in the feedback survey is voluntary and is not required by the FCSRCA. CDC estimates that 75% of ART programs will participate in the feedback survey.

The collection of ART cycle information allows CDC to publish an annual report to Congress as specified by the FCSRCA and to provide information needed by consumers. OMB approval is requested for three years. The estimated annualized Burden Hours are 114,631 which is a decrease of 1,794 from the current OMB-approved collection. There are no costs to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
ART Clinics	NASS	464	350	42/60
	Data Validation	35	70	23/60
	Feedback Survey	348	1	2/60

[30Day–18–0222]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled Collaborating Center for Questionnaire Design and Evaluation Research (CCQDER), to the Office of Management and Budget (OMB) for review and approval. CDC previously published a “Proposed Data Collection Submitted for Public Comment and Recommendations” notice on March 1, 2018 to obtain comments from the public and affected agencies. CDC did not receive comments related to the previous notice. This notice serves to allow an additional 30

days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570 or send an email to omb@cdc.gov. Direct written comments and/or suggestions

regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Collaborating Center for Questionnaire Design and Evaluation Research (CCQDER) (OMB Control Number 0920–0222, Expiration 07/31/2018)—Revision—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC)

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through NCHS, shall undertake and support (by grant or contract) research, demonstrations, and evaluations respecting new or improved methods for obtaining current data to support statistical and epidemiological activities for the purpose of improving the effectiveness, efficiency, and quality of health services in the United States.

The Collaborating Center for Questionnaire Design and Evaluation Research (CCQDER) is the focal point within NCHS for questionnaire and survey development, pre-testing, and evaluation activities for CDC surveys (such as the NCHS National Health

Interview Survey, OMB No. 0920–0214) and other federally sponsored surveys. NCHS is requesting 3 years of OMB Clearance for this generic submission.

The CCQDER and other NCHS programs conduct cognitive interviews, focus groups, in-depth or ethnographic interviews, usability tests, field tests/pilot interviews, and experimental research in laboratory and field settings, both for applied questionnaire development and evaluation as well as more basic research on measurement errors and survey response.

Various techniques to evaluate interviewer administered, self-administered, telephone, Computer Assisted Personal Interviewing (CAPI), Computer Assisted Self-Interviewing (CASI), Audio Computer-Assisted Self-Interviewing (ACASI), and web-based questionnaires are used.

The most common questionnaire evaluation method is the cognitive interview. These evaluations are conducted by the CCQDER and contractors, as needed. The interview structure consists of respondents first answering a draft survey question and then providing textual information to reveal the processes involved in answering the test question. Specifically, cognitive interview respondents are asked to describe how and why they answered the question as they did. Through the interviewing process, various types of question-response problems that would not normally be identified in a traditional survey interview, such as interpretive errors and recall accuracy, are uncovered. By conducting a comparative analysis of cognitive interviews, it is also possible to determine whether particular interpretive patterns occur within particular sub-groups of the population.

Interviews are generally conducted in small rounds totaling 40–100 interviews; ideally, the questionnaire is re-worked between rounds, and revisions are tested iteratively until interviews yield relatively few new insights.

Cognitive interviewing is inexpensive and provides useful data on questionnaire performance while minimizing respondent burden. Cognitive interviewing offers a detailed depiction of meanings and processes used by respondents to answer questions—processes that ultimately produce the survey data. As such, the method offers an insight that can transform understanding of question validity and response error. Documented findings from these studies represent tangible evidence of how the question performs. Such documentation also serves CDC data users, allowing them to be critical users in their approach and application of the data.

In addition to cognitive interviewing, a number of other qualitative and quantitative methods are used to investigate and research measurement error and the survey response process. These methods include conducting focus groups, usability tests, in-depth or ethnographic interviews, and the administration and analysis of questions in both representative and non-representative field tests. Focus groups are conducted by the CCQDER and contractors, as needed. They are group discussions whose primary purpose is to elicit the basic sociocultural understandings and terminology that form the basis of questionnaire design. Each group typically consists of one moderator and 4 to 10 participants, depending on the research question. In-depth or ethnographic interviews are one-on-one interviews designed to elicit

the understandings or terminology that are necessary for question design, as well as to gather detailed information that can contribute to the analysis of both qualitative and quantitative data. Usability tests are typically one-on-one interviews that are used to determine how a given survey or information collection tool functions in the field, and how the mode and layout of the instrument itself may contribute to survey response error and the survey response process.

In addition to these qualitative methods, NCHS also uses various tools to obtain quantitative data, which can be analyzed alone or analyzed alongside qualitative data to give a much fuller accounting of the survey response process. For instance, phone, internet, mail, and in-person follow-up interviews of previous NCHS survey respondents may be used to test the validity of survey questions and questionnaires and to obtain more detailed information that cannot be gathered on the original survey. Additionally, field or pilot tests may be conducted on both representative and non-representative samples, including those obtained from commercial survey and web panel vendors. Beyond looking at traditional measures of survey errors (such as item missing and non-response rates, and response latency), these pilot tests can be used to run experimental designs in order to capture how different questions function in a field setting.

Similar methodology has been adopted by other federal agencies, as well as by academic and commercial survey organizations. There are no costs to respondents other than their time. The total estimated annual burden hours are 7,783.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Individuals or households	Eligibility Screening	4,000	1	5/60
Individuals or households	Questionnaire Development Studies	7,300	1	55/60
Individuals or households	Respondent Data Collection Sheet	7,300	1	5/60
Individuals or households	Focus groups	100	1	90/60

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Advisory Committee to the Director (ACD), Centers for Disease Control and Prevention (CDC)—Health Disparities Subcommittee (HDS)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the CDC announces the following meeting for the Advisory Committee to the Director, Centers for Disease Control and Prevention—Health Disparities Subcommittee (ACD, CDC–HDS). This meeting is open to the public, limited only by the 50 audio phone lines. The public is also welcome to listen to the meeting by teleconference. Please dial (866) 918–8397 and enter code 9346283. There are 50 lines available. The public comment period is from 3:15 p.m.–3:20 p.m.

DATES: The meeting will be held on October 9, 2018, 1:30 p.m. to 3:30 p.m., EDT.

ADDRESSES: Teleconference phone (866) 918–8397 and enter code 9346283.

FOR FURTHER INFORMATION CONTACT: Leandris Liburd, Ph.D., M.P.H., M.A., Designated Federal Officer, Health Disparities Subcommittee, Advisory Committee to the Director, CDC, 1600 Clifton Road NE, M/S K–77, Atlanta, Georgia 30329. Telephone (404) 498–6482, Email: ACDDirector@cdc.gov.

SUPPLEMENTARY INFORMATION:

Purpose: The Subcommittee will provide counsel to the CDC Director through the ACD on strategic and other health disparities and health equity issues and provide guidance on opportunities for CDC.

Matters to be Considered: The agenda will include discussions on new member orientation. This meeting will provide information to new members regarding their role & duties on this subcommittee. Agenda items are subject to change as priorities dictate.

The Director, Management Analysis and Services Office, has been delegated

the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Dia Taylor,

Acting Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–19–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–P–1283]

Determination That Metaxalone Tablets, 640 Milligrams, Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) has determined that metaxalone tablets, 640 milligrams (mg), were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for metaxalone tablets, 640 mg, if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT: Glen Cheng, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave. Bldg. 51, Rm. 6217, Silver Spring, MD 20993–0002, 301–796–1494.

SUPPLEMENTARY INFORMATION: In 1984, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98–417) (the 1984 amendments), which authorized the approval of duplicate versions of drug products under an ANDA procedure. ANDA applicants must, with certain exceptions, show that the drug for which they are seeking approval contains the same active ingredient in the same strength and dosage form as the “listed drug,” which is a version of the drug that was previously approved. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA).

The 1984 amendments include what is now section 505(j)(7) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C.

355(j)(7)), which requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the “Approved Drug Products With Therapeutic Equivalence Evaluations,” which is known generally as the “Orange Book.” Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug’s NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161 (21 CFR 314.161)). FDA may not approve an ANDA that does not refer to a listed drug.

Metaxalone tablets, 640 mg, are the subject of NDA 22–503, held by Primus Pharmaceuticals, Inc., and initially approved on June 1, 2015. Metaxalone tablets, 640 mg, are indicated as an adjunct to rest, physical therapy, and other measures for the relief of discomfort associated with acute, painful musculoskeletal conditions.

In a letter dated September 30, 2015, the previous NDA holder CorePharma, LLC notified FDA that metaxalone tablets, 640 mg, were discontinued, and FDA moved the drug product to the “Discontinued Drug Product List” section of the Orange Book.

Sovereign Pharmaceuticals, LLC submitted a citizen petition dated March 26, 2018 (Docket No. FDA–2018–P–1283), under 21 CFR 10.30, requesting that the Agency determine whether metaxalone tablets, 640 mg, were withdrawn from sale for reasons of safety or effectiveness.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that metaxalone tablets, 640 mg, were not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that metaxalone tablets, 640 mg, were withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal of metaxalone tablets, 640 mg, from sale. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have reviewed the available evidence and determined that this drug product was

not withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list metaxalone tablets, 640 mg, in the “Discontinued Drug Product List” section of the Orange Book. The “Discontinued Drug Product List” delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to metaxalone tablets, 640 mg, may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for this drug product should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: July 20, 2018.

Leslie Kux,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–N–0007]

Generic Drug User Fee Rates for Fiscal Year 2019

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Generic Drug User Fee Amendments of 2017 (GDUFA II), authorizes the Food and Drug Administration (FDA, Agency, or we) to

assess and collect fees for abbreviated new drug applications (ANDAs), drug master files (DMFs), generic drug active pharmaceutical ingredient (API) facilities, finished dosage form (FDF) facilities, contract manufacturing organization (CMO) facilities, and generic drug applicant program user fees. In this document, FDA is announcing fiscal year (FY) 2019 rates for GDUFA II fees.

FOR FURTHER INFORMATION CONTACT:

Melissa Hurley, Office of Financial Management, Food and Drug Administration, 8455 Colesville Rd., COLE–14202J, Silver Spring, MD 20993–0002, 240–402–4585.

SUPPLEMENTARY INFORMATION:

I. Background

Sections 744A and 744B of the FD&C Act (21 U.S.C. 379j–41 and 379j–42) establish fees associated with human generic drug products. Fees are assessed on: (1) Certain types of applications for human generic drug products; (2) certain facilities where APIs and FDFs are produced; (3) certain DMFs associated with human generic drug products; and (4) generic drug applicants who have approved ANDAs (the program fee) (see section 744B(a)(2)–(5) of the FD&C Act).

GDUFA II stipulates that user fees should total \$493,600,000 annually adjusted each year for inflation. For FY 2019, the generic drug fee rates are: ANDA (\$178,799), DMF (\$55,013), domestic API facility (\$44,226), foreign API facility (\$59,226), domestic FDF facility (\$211,305), foreign FDF facility (\$226,305), domestic CMO facility (\$70,435), foreign CMO facility (\$85,435), large size operation generic drug applicant program (\$1,862,167), medium size operation generic drug

applicant program (\$744,867), and small business generic drug applicant program (\$186,217). These fees are effective on October 1, 2018, and will remain in effect through September 30, 2019.

II. Fee Revenue Amount for FY 2019

The base revenue amount for FY 2019 is \$493,600,000, as set in the statute (see section 744B(b)(1) of the FD&C Act). GDUFA II directs FDA to use the yearly revenue amount as a starting point to set the fee rates for each fee type. For more information about GDUFA II, please refer to the FDA website (<https://www.fda.gov/gdufa>). The ANDA, DMF, API facility, FDF facility, CMO facility, and generic drug applicant program fee (GDUFA program fee) calculations for FY 2019 are described in this document.

GDUFA II specifies that the \$493,600,000 is to be adjusted for inflation increases for FY 2019 using two separate adjustments—one for personnel compensation and benefits (PC&B) and one for non-PC&B costs (see sections 744B(c)(1)(B) and (C) of the FD&C Act).

The component of the inflation adjustment for PC&B costs shall be one plus the average annual percent change in the cost of all PC&B paid per full-time equivalent position (FTE) at FDA for the first 3 of the 4 preceding fiscal years, multiplied by the proportion of PC&B costs to total FDA costs of human generic drug activities for the first 3 of the preceding 4 fiscal years (see section 744B(c)(1)(B) of the FD&C Act).

Table 1 summarizes the actual cost and total FTE for the specified fiscal years, and provides the percent change from the previous fiscal year and the average percent change over the first 3 of the 4 fiscal years preceding FY 2019. The 3-year average is 2.4152 percent.

TABLE 1—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENT CHANGE

Fiscal year	2015	2016	2017	3-Year average
Total PC&B	\$2,232,304,000	\$2,414,728,159	\$2,581,551,000
Total FTE	15,484	16,381	17,022
PC&B per FTE	\$144,168	\$147,408	\$151,660
Percent Change from Previous Year	2.1136	2.2474	2.8845	2.4152

The statute specifies that this 2.4152 percent should be multiplied by the proportion of PC&B expended for

human generic drug activities for the first 3 of the preceding 4 fiscal years. Table 2 shows the amount of PC&B and

the total amount obligated for human generic drug activities from FY 2015 through FY 2017.

TABLE 2—PC&B AS A PERCENT OF FEE REVENUES SPENT ON THE PROCESS OF HUMAN GENERIC DRUG APPLICATIONS OVER THE LAST 3 YEARS

Fiscal year	2015	2016	2017	3-Year average
PC&B	\$201,116,305	\$242,963,571	\$271,748,229
Non-PC&B	\$251,589,013	\$250,987,599	\$262,058,852
Total Costs	\$452,705,318	\$493,951,170	\$533,807,081

TABLE 2—PC&B AS A PERCENT OF FEE REVENUES SPENT ON THE PROCESS OF HUMAN GENERIC DRUG APPLICATIONS OVER THE LAST 3 YEARS—Continued

Fiscal year	2015	2016	2017	3-Year average
PC&B Percent	44.4254	49.1878	50.9076	48.1736
Non-PC&B Percent	55.5746	50.8122	49.0924	51.8264

The payroll adjustment is 2.4152 percent multiplied by 48.1736 percent (or 1.1635 percent).

The statute specifies that the portion of the inflation adjustment for non-PC&B costs for FY 2019 is the average annual percent change that occurred in the Consumer Price Index (CPI) for urban consumers (Washington-

Baltimore, DC-MD-VA-WV; not seasonally adjusted; all items; annual index) for the first 3 of the preceding 4 years of available data multiplied by the proportion of all costs other than PC&B costs to total costs of human generic drug activities (see section 744B(c)(1)(C) of the FD&C Act). Table 3 provides the

summary data for the percent change in the specified CPI. The data are published by the Bureau of Labor Statistics and can be found on its website at: https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURA311SA0,CUUSA311SA0.

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI FOR BALTIMORE-WASHINGTON AREA

Year	2015	2016	2017	3-Year average
Annual CPI	155.353	157.180	159.202
Annual Percent Change	0.3268	1.1760	1.2864	0.9297

To calculate the inflation adjustment for non-pay costs, we multiply the 3-year average percent change in the CPI (0.9297 percent) by the proportion of all costs other than PC&B to total costs of human generic drug activities obligated. Because 48.1736 percent was obligated for PC&B as shown in table 2, 51.8264 percent is the portion of costs other than PC&B. The non-pay adjustment is 0.9297 percent times 51.8264 percent, or 0.4818 percent.

To complete the inflation adjustment for FY 2019, we add the PC&B component (1.1635 percent) to the non-PC&B component (0.4818 percent) for a total inflation adjustment of 1.6453 percent (rounded), making 1.016453. We then multiply the base revenue amount for FY 2019 (\$493,600,000) by 1.016453, yielding an inflation-adjusted amount of \$501,721,000 (rounded to the nearest thousand dollars).

III. ANDA Filing Fee

Under GDUFA II, the FY 2019 ANDA filing fee is owed by each applicant that submits an ANDA on or after October 1, 2018. This fee is due on the submission date of the ANDA. Section 744B(b)(2)(B) of the FD&C Act specifies that the ANDA fee will make up 33 percent of the \$501,721,000, which is \$165,567,930.

To calculate the ANDA fee, FDA estimated the number of full application equivalents (FAEs) that will be submitted in FY 2019. The submissions are broken down into three categories: New originals (submissions that have not been received by FDA previously); submissions that have been refused to

receive (RTR) for reasons other than failure to pay fees; and applications that are resubmitted after having been RTR for reasons other than failure to pay fees. An ANDA counts as one FAE; however, 75 percent of the fee paid for an ANDA that has been RTR shall be refunded according to GDUFA II if (1) the ANDA is refused for a cause other than failure to pay fees, or (2) the ANDA has been withdrawn prior to receipt (section 744B(a)(2)(D)(i) of the FD&C Act). Therefore, an ANDA that is considered not to have been received by FDA due to reasons other than failure to pay fees or withdrawn prior to receipt counts as one-fourth of an FAE. After an ANDA has been RTR, the applicant has the option of resubmitting. For user fee purposes, these resubmissions are equivalent to new original submissions—ANDA resubmissions are charged the full amount for an application (one FAE).

FDA utilized data from ANDAs submitted from October 1, 2013, to April 30, 2018, to estimate the number of new original ANDAs that will incur filing fees in FY 2019. For FY 2019, the Agency estimates that approximately 918 new original ANDAs will be submitted and incur filing fees. Not all of the new original ANDAs will be received by the Agency and some of those not received will be resubmitted in the same fiscal year. Therefore, the Agency expects that the FAE count for ANDAs will be 926 for FY 2019.

The FY 2019 application fee is estimated by dividing the number of FAEs that will pay the fee in FY 2019 (926) into the fee revenue amount to be

derived from ANDA application fees in FY 2019 (\$165,567,930). The result, rounded to the nearest dollar, is a fee of \$178,799 per ANDA.

The statute provides that those ANDAs that include information about the production of active pharmaceutical ingredients other than by reference to a DMF will pay an additional fee that is based on the number of such active pharmaceutical ingredients and the number of facilities proposed to produce those ingredients (see section 744B(a)(3)(F) of the FD&C Act). FDA considers that this additional fee is unlikely to be assessed often; therefore, FDA has not included projections concerning the amount of this fee in calculating the fees for ANDAs.

IV. DMF Fee

Under GDUFA II, the DMF fee is owed by each person that owns a type II active pharmaceutical ingredient DMF that is referenced, on or after October 1, 2012, in a generic drug submission by an initial letter of authorization. This is a one-time fee for each DMF. This fee is due on the earlier of the date on which the first generic drug submission is submitted that references the associated DMF or the date on which the drug master file holder requests the initial completeness assessment. Under section 744B(a)(2)(D)(iii) of the FD&C Act, if a DMF has successfully undergone an initial completeness assessment and the fee is paid, the DMF will be placed on a publicly available list documenting DMFs available for reference.

To calculate the DMF fee, FDA assessed the volume of DMF

submissions over time. The Agency assessed DMFs from October 1, 2016, to April 30, 2018, and concluded that averaging the number of fee-paying DMFs provided the most accurate model for predicting fee-paying DMFs for FY 2019. The monthly average of paid DMF submissions the Agency received in FY 2017 and FY 2018 is 38. To determine the FY 2019 projected number of fee-paying DMFs, the average of 38 DMF submissions is multiplied by 12 months, which results in 456 estimated FY 2019 fee-paying DMFs. FDA is estimating 456 fee-paying DMFs for FY 2019.

The FY 2019 DMF fee is determined by dividing the DMF target revenue by the estimated number of fee-paying DMFs in FY 2019. Section 744B(b)(2)(A) of the FD&C Act specifies that the DMF fees will make up 5 percent of the \$501,721,000, which is \$25,086,050. Dividing the DMF revenue amount (\$25,086,050) by the estimated fee-paying DMFs (456), and rounding to the nearest dollar, yields a DMF fee of \$55,013 for FY 2019.

V. Foreign Facility Fee Differential

Under GDUFA II, the fee for a facility located outside the United States and its territories and possessions shall be \$15,000 higher than the amount of the fee for a facility located in the United States and its territories and possessions. The basis for this differential is the extra cost incurred by conducting an inspection outside the United States and its territories and possessions.

VI. FDF and CMO Facility Fees

Under GDUFA II, the annual FDF facility fee is owed by each person who owns an FDF facility that is identified in at least one approved generic drug submission owned by that person or his affiliates. The CMO facility fee is owed by each person who owns an FDF facility that is identified in at least one approved ANDA but is not identified in an approved ANDA held by the owner of that facility or its affiliates. These fees are due no later than the first business day on or after October 1 of each such year. Section 744B(b)(2)(C) of the FD&C Act specifies that the FDF and CMO facility fee revenue will make up 20 percent of the \$501,721,000, which is \$100,344,200.

To calculate the fees, data from FDA's Integrity Services (IS) were utilized as the primary source of facility information for determining the denominators of each facility fee type. IS is the master data steward for all facility information provided in generic drug submissions received by FDA. A facility's reference status in an approved

generic drug submission is extracted directly from submission data rather than relying on data from self-identification. This information provided the number of facilities referenced as FDF manufacturers in at least one approved generic drug submission. Based on FDA's IS data, the FDF and CMO facility denominators are 180 FDF domestic, 216 FDF foreign, 73 CMO domestic, and 97 CMO foreign facilities for FY 2019.

GDUFA II specifies that the CMO facility fee is to be equal to one-third the amount of the FDF facility fee. Therefore, to generate the target collection revenue amount from FDF and CMO facility fees (\$100,344,200), FDA must weight a CMO facility as one-third of an FDF facility. FDA set fees based on the estimate of 180 FDF domestic, 216 FDF foreign, 24.33 CMO domestic (73 multiplied by one-third), and 32.33 CMO foreign facilities (97 multiplied by one-third), which equals 452.66 total weighted FDF and CMO facilities for FY 2019.

To calculate the fee for domestic facilities, FDA first determines the total fee revenue that will result from the foreign facility differential by subtracting the fee revenue resulting from the foreign facility fee differential from the target collection revenue amount (\$100,344,200) as follows. The foreign facility fee differential revenue equals the foreign facility fee differential (\$15,000) multiplied by the number of FDF foreign facilities (216) plus the foreign facility fee differential (\$15,000) multiplied by the number of CMO foreign facilities (97), totaling \$4,695,000. This results in foreign fee differential revenue of \$4,695,000 from the total FDF and CMO facility fee target collection revenue. Subtracting the foreign facility differential fee revenue (\$4,695,000) from the total FDF and CMO facility target collection revenue (\$100,344,200) results in a remaining facility fee revenue balance of \$95,649,200. To determine the domestic FDF facility fee, FDA divides the \$95,649,200 by the total weighted number of FDF and CMO facilities (452.66), which results in a domestic FDF facility fee of \$211,305. The foreign FDF facility fee is \$15,000 more than the domestic FDF facility fee, or \$226,305.

According to GDUFA II, the domestic CMO fee is calculated as one-third the amount of the domestic FDF facility fee. Therefore, the domestic CMO fee is \$70,435, rounded to the nearest dollar. The foreign CMO fee is calculated as the domestic CMO fee plus the foreign fee differential of \$15,000. Therefore, the foreign CMO fee is \$85,435.

VII. API Facility Fee

Under GDUFA II, the annual API facility fee is owed by each person who owns a facility that is identified in (1) at least one approved generic drug submission or (2) in a Type II API DMF referenced in at least one approved generic drug submission. These fees are due no later than the first business day on or after October 1 of each such year. Section 744B(b)(2)(D) of the FD&C Act specifies the API facility fee will make up 7 percent of \$501,721,000 in fee revenue, which is \$35,120,470.

To calculate the API facility fee, data from FDA's IS were utilized as the primary source of facility information for determining the denominator. As stated above, IS is the master data steward for all facility information provided in generic drug submissions received by FDA. A facility's reference status in an approved generic drug submission is extracted directly from submission data rather than relying on data from self-identification. This information provided the number of facilities referenced as API manufacturers in at least one approved generic drug submission.

The total number of API facilities identified was 613; of that number, 79 were domestic and 534 were foreign facilities. The foreign facility differential is \$15,000. To calculate the fee for domestic facilities, FDA must first subtract the fee revenue that will result from the foreign facility fee differential. FDA takes the foreign facility differential (\$15,000) and multiplies it by the number of foreign facilities (534) to determine the total fee revenue that will result from the foreign facility differential. As a result of that calculation, the foreign fee differential revenue will make up \$8,010,000 of the total API fee revenue. Subtracting the foreign facility differential fee revenue (\$8,010,000) from the total API facility target revenue (\$35,120,470) results in a remaining balance of \$27,110,470. To determine the domestic API facility fee, we divide the \$27,110,470 by the total number of facilities (613), which gives us a domestic API facility fee of \$44,226. The foreign API facility fee is \$15,000 more than the domestic API facility fee, or \$59,226.

VIII. Generic Drug Applicant Program Fee

Under GDUFA II, if a person and its affiliates own at least one but not more than five approved ANDAs on October 1, 2018, the person and its affiliates shall owe a small business GDUFA program fee. If a person and its affiliates own at least 6 but not more than 19

approved ANDAs, the person and its affiliates shall owe a medium size operation GDUFA program fee. If a person and its affiliates own at least 20 approved ANDAs, the person and its affiliates shall owe a large size operation GDUFA program fee. These fees are due no later than the first business day on or after October 1 of each such year. Section 744B(b)(2)(E) of the FD&C Act specifies the GDUFA program fee will make up 35 percent of \$501,721,000 in fee revenue, which is \$175,602,350.

To determine the appropriate number of applicants for each tier, the Agency has posted lists of approved ANDAs on the FDA website (<https://www.fda.gov/gdufa>) and asked applicants on the list to claim which ANDAs and affiliates belong to the parent company. The original list of approved ANDAs came from the Agency’s Document Archiving, Reporting, and Regulatory Tracking System (DARRTS), which included all ANDAs with the status of “approved” as of April 30, 2018.

In determining the appropriate number of approved ANDAs, the Agency has factored in a number of variables that could affect the collection of the target revenue: (1) Inactive ANDAs—applicants who have not submitted an annual report for one or

more of their approved applications within the past 2 years; (2) FY 2018 Program Fee Arrears List—applicants who failed to satisfy the FY 2018 program fee and were unresponsive to attempts to collect; and (3) Prediction of Approvals Due to Goal Dates and Office of Generic Drugs Approval Rate—Due to the low percentage of additional approved ANDAs for a specified time period and the difficulties in determining how this population would affect the program fee tier of each company, this variable was not included in the determination of the FY 2019 GDUFA program fee. The list of original approved ANDAs from the DARRTS database as of April 30, 2018, shows 259 applicants in the small business tier, 62 applicants in the medium size tier, and 58 applicants in the large size tier. This list also takes into account all the withdrawals, consolidations, and transfer of ownerships from industry as of April 30, 2018. Factoring in all the variables for the second year of GDUFA II, the Agency estimates there will be 177 applicants in the small business tier, 49 applicants in the medium size tier, and 57 applicants in the large size tier for FY 2019.

To calculate the GDUFA program fee, GDUFA II provides that large size

operation generic drug applicants pay the full fee, medium size operation applicants pay two-fifths of the full fee, and small business applicants pay one-tenth of the full fee. To generate the target collection revenue amount from GDUFA program fees (\$175,602,350), we must weigh medium and small tiered applicants as a subset of a large size operation generic drug applicant. FDA will set fees based on the weighted estimate of 17.70 applicants in the small business tier (177 multiplied by 10 percent), 19.60 applicants in the medium size tier (49 multiplied by 40 percent), and 57 applicants in the large size tier, arriving at 94.30 total weighted applicants for FY 2019.

To generate the large size operation GDUFA program fee, FDA divides the target revenue amount of \$175,602,350 by 94.30, which equals \$1,862,167. The medium size operation GDUFA program fee is 40 percent of the full fee (\$744,867), and the small business operation GDUFA program fee is 10 percent of the full fee (\$186,217).

IX. Fee Schedule for FY 2019

The fee rates for FY 2019 are set out in table 4.

TABLE 4—FEE SCHEDULE FOR FY 2019

Fee category	Fees rates for FY 2019
Applications:	
Abbreviated New Drug Application (ANDA)	\$178,799
Drug Master File (DMF)	55,013
Facilities:	
Active Pharmaceutical Ingredient (API) Domestic	44,226
API—Foreign	59,226
Finished Dosage Form (FDF)—Domestic	211,305
FDF—Foreign	226,305
Contract Manufacturing Organization (CMO)—Domestic	70,435
CMO—Foreign	85,435
GDUFA Program:	
Large size operation generic drug applicant	1,862,167
Medium size operation generic drug applicant	744,867
Small business operation generic drug applicant	186,217

X. Fee Payment Options and Procedures

The new fee rates are effective October 1, 2018. To pay the ANDA, DMF, API facility, FDF facility, CMO facility, and GDUFA program fees, a Generic Drug User Fee Cover Sheet must be completed, available at <https://www.fda.gov/gdufa> and https://userfees.fda.gov/OA_HTML/gdufaCAcdLogin.jsp, and a user fee identification (ID) number must be generated. Payment must be made in U.S. currency drawn on a U.S. bank by electronic check, check, bank draft, U.S.

postal money order, credit card, or wire transfer. The preferred payment method is online using electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at <https://userfees.fda.gov/pay>. (Note: IOnly full payments are accepted; no partial payments can be made online.) Once an invoice is located, “Pay Now” should be selected to be redirected to <https://www.pay.gov/public/home> (Pay.gov).

Electronic payment options are based on the balance due. Payment by credit card is available for balances less than \$25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

FDA has partnered with the U.S. Department of the Treasury to utilize Pay.gov, a web-based payment application, for online electronic payment. The Pay.gov feature is available on the FDA website after completing the Generic Drug User Fee

Cover Sheet and generating the user fee ID number.

The user fee ID number must be included on the check, bank draft, or postal money order and must be made payable to the order of the Food and Drug Administration. Payments can be mailed to: Food and Drug Administration, P.O. Box 979108, St. Louis, MO 63197-9000. If checks are to be sent by a courier that requests a street address, the courier can deliver checks to: U.S. Bank, Attention: Government Lockbox 979108, 1005 Convention Plaza, St. Louis, MO 63101. (Note: This U.S. Bank address is for courier delivery only. For questions concerning courier delivery, U.S. Bank can be contacted at 314-418-4013. This telephone number is only for questions about courier delivery.) The FDA post office box number (P.O. Box 979108) must be written on the check, bank draft, or postal money order.

For payments made by wire transfer, the unique user fee ID number must be referenced. Without the unique user fee ID number, the payment may not be applied. If the payment amount is not applied, the invoice amount will be referred to collections. The originating financial institution may charge a wire transfer fee. Applicable wire transfer fees must be included with payment to ensure fees are fully paid. Questions about wire transfer fees should be addressed to the financial institution. The following account information should be used to send payments by wire transfer: U.S. Department of Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, account number: 75060099, routing number: 021030004, SWIFT: FRNYUS33. FDA's tax identification number is 53-0196965.

Dated: July 24, 2018.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2018-D-2456]

Slowly Progressive, Low-Prevalence Rare Diseases With Substrate Deposition That Results From Single Enzyme Defects: Providing Evidence of Effectiveness for Replacement or Corrective Therapies; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry entitled “Slowly Progressive, Low-Prevalence Rare Diseases with Substrate Deposition That Results from Single Enzyme Defects: Providing Evidence of Effectiveness for Replacement or Corrective Therapies.” This document is intended to provide guidance to sponsors on the evidence necessary to demonstrate the effectiveness of new drugs, including biological drugs, or new drug uses intended for slowly progressive, low-prevalence rare diseases that are associated with substrate deposition and are caused by single enzyme defects. This guidance applies only to those low-prevalence rare diseases with a well-characterized pathophysiology and in which changes in substrate deposition can be readily measured in relevant tissue(s).

DATES: Submit either electronic or written comments on the draft guidance by September 25, 2018 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2018-D-2456 for “Slowly Progressive, Low-Prevalence Rare Diseases with Substrate Deposition That Results from Single Enzyme Defects: Providing Evidence of Effectiveness for Replacement or Corrective Therapies; Draft Guidance for Industry; Availability.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions—*To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or Office of Communication, Outreach, and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Dragos Roman, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, Rm. 5152, Silver Spring, MD 20993–0002, 301–796–1285; or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled “Slowly Progressive, Low-Prevalence Rare Diseases with Substrate Deposition That Results from Single Enzyme Defects: Providing Evidence of Effectiveness for Replacement or Corrective Therapies.” This document is intended to provide guidance to sponsors on the evidence necessary to demonstrate the effectiveness of new

drugs or new drug uses intended for slowly progressive, low-prevalence rare diseases that are associated with substrate deposition and are caused by single enzyme defects. This guidance applies only to those low-prevalence rare diseases with a well-characterized pathophysiology and in which changes in substrate deposition can be readily measured in relevant tissue(s).

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on providing evidence of effectiveness for replacement or corrective therapies intended for slowly progressive, low-prevalence rare diseases with substrate deposition that results from single enzyme defects. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. This guidance is not subject to Executive Order 12866.

II. Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 312 have been approved under OMB control number 0910–0014. The collections of information in 21 CFR part 50 have been approved under OMB control number 0910–0755. The collections of information for expedited programs in the guidance for industry entitled “Expedited Programs for Serious Conditions—Drugs and Biologics” (available at <https://www.fda.gov/ucm/groups/fdagov-public/@fdagov-drugs-gen/documents/document/ucm358301.pdf>) have been approved under OMB control number 0910–0765.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at either <https://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm>, <http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatory>

www.regulations.gov.

Dated: July 20, 2018.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2018–N–2493]

ICU Medical, Inc., et al.; Withdrawal of Approval of 31 Abbreviated New Drug Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is withdrawing approval of 31 abbreviated new drug applications (ANDAs) from multiple applicants. The holders of the applications notified the Agency in writing that the drug products were no longer marketed and requested that the approval of the applications be withdrawn.

DATES: Approval is withdrawn as of August 27, 2018.

FOR FURTHER INFORMATION CONTACT: Trang Tran, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 1671, Silver Spring, MD 20993–0002, 240–402–7945, Trang.Tran@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: The holders of the applications listed in the table have informed FDA that these drug products are no longer marketed and have requested that FDA withdraw approval of the applications under the process described in § 314.150(c) (21 CFR 314.150(c)). The applicants have also, by their requests, waived their opportunity for a hearing. Withdrawal of approval of an application or abbreviated application under § 314.150(c) is without prejudice to refiling.

Application No.	Drug	Applicant
ANDA 020345	Aminosyn-HF (amino acids) Injection, 8%	ICU Medical, Inc., 600 North Field Dr., Lake Forest, IL 60045.
ANDA 040723	Isosorbide Dinitrate Extended-Release Tablets USP, 40 milligrams (mg).	Impax Laboratories, Inc., 30831 Huntwood Ave., Hayward, CA 94544.
ANDA 064062	Amphotericin B for Injection USP, 50 mg/vial	Teva Parenteral Medicines, Inc., 19 Hughes, Irvine, CA 92618.
ANDA 064200	Cefotaxime for Injection USP, Equivalent to (EQ) 500 mg base/vial, EQ 1 gram (g) base/vial, and EQ 2 g base/vial.	Fresenius Kabi USA, LLC, Three Corporate Dr., Lake Zurich, IL 60047.

Application No.	Drug	Applicant

ANDA 088648	Methotrexate Injection USP, EQ 25 mg base/mL	Norbrook Laboratories, Ltd., c/o Norbrook, Inc.
ANDA 088928	Chlorzoxazone Tablets USP, 250 mg	Actavis Elizabeth, LLC, Subsidiary of Teva Pharmaceuticals USA, Inc.
ANDA 090663	Gemcitabine for Injection USP, EQ 200 mg base/vial and EQ 1 g base/vial.	Hamel RDS GmbH, c/o B&H Consulting Services, Inc., 50 Division St., Suite 206, Somerville, NJ 08876.
ANDA 091469	Vancomycin HCl for Injection USP, EQ 10 g base/vial (Pharmacy Bulk Package).	Mylan Laboratories, Ltd., c/o Mylan Pharmaceuticals, Inc., 781 Chestnut Ridge Rd., P.O. Box 4310, Morgantown, WV 26504.
ANDA 202390	Tramadol HCl Tablets USP, 50 mg	Accord Healthcare, Inc., 1009 Slater Rd., Suite 210-B, Durham, NC 27703.
ANDA 203506	Oxymorphone HCl Extended-Release Tablets, 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg, 30 mg, and 40 mg.	Sun Pharmaceutical Industries, Ltd., c/o Sun Pharmaceutical Industries, Inc., 2 Independence Way, Princeton, NJ 08540.
ANDA 204320	Olanzapine Orally Disintegrating Tablets USP, 5 mg, 10 mg, 15 mg, and 20 mg.	Ajanta Pharma, Ltd., c/o Ajanta Pharma USA, Inc., 440 U.S. Highway 22 East, One Grande Commons, Suite 150, Bridgewater, NJ 08807.
ANDA 204706	Olopatadine HCl Ophthalmic Solution USP, EQ 0.1% base ...	Zambon S.p.A., c/o Camargo Pharmaceutical Services, LLC, 9825 Kenwood Rd., Suite 203, Cincinnati, OH 45242.
ANDA 207467	Nevirapine Extended-Release Tablets, 100 mg and 400 mg	Technology Organized, LLC, 9191 Point Replete Dr., Fort Belvoir, VA 22060.

Therefore, approval of the applications listed in the table, and all amendments and supplements thereto, is hereby withdrawn as of August 27, 2018. Introduction or delivery for introduction into interstate commerce of products without approved new drug applications violates section 301(a) and (d) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 331(a) and (d)). Drug products that are listed in the table that are in inventory on August 27, 2018 may continue to be dispensed until the inventories have been depleted or the drug products have reached their expiration dates or otherwise become violative, whichever occurs first.

Dated: July 23, 2018.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2017-D-6380]

Clarification of Orphan Designation of Drugs and Biologics for Pediatric Subpopulations of Common Diseases; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled “Clarification of Orphan Designation of Drugs and Biologics for Pediatric Subpopulations of Common Diseases.” FDA does not expect to grant any additional orphan-drug designation to drugs for pediatric subpopulations of common diseases (*i.e.*, diseases or conditions with an overall prevalence of 200,000 or greater). This will help resolve an unintended loophole in the Pediatric Research Equity Act (PREA) orphan exemption process where a sponsor holding a pediatric-subpopulation designation can submit a marketing application for use of its drug

in the non-orphan adult population of that disease, get a pediatric-subpopulation designation for the pediatric subset of the disease, and, due to this designation, be exempt from conducting the pediatric studies normally required under PREA when seeking approval of the adult indication.

DATES: The announcement of the guidance is published in the **Federal Register** on July 27, 2018.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2017-D-6380 for "Clarification of Orphan Designation of Drugs and Biologics for Pediatric Subpopulations

of Common Diseases." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Office of Orphan Products Development, Office of the Commissioner, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5295, Silver Spring, MD 20993. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for

electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:

Aaron Friedman, Office of Orphan Products Development, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 32, Rm. 5209, Silver Spring, MD 20993, 301-796-2989.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a final guidance for industry entitled "Clarification of Orphan Designation of Drugs and Biologics for Pediatric Subpopulations of Common Diseases." In the **Federal Register** of December 20, 2017 (82 FR 60402), FDA published a notice of availability for the draft guidance entitled "Clarification of Orphan Designation of Drugs and Biologics for Pediatric Subpopulations of Common Diseases," announcing that FDA does not expect to grant any additional orphan drug designation to drugs for pediatric subpopulations of common diseases (*i.e.*, diseases or conditions with an overall prevalence of over 200,000 in the United States). In the **Federal Register** of January 12, 2018 (83 FR 1619), FDA announced that it was extending the comment period for this draft guidance for an additional 30 days. FDA received several comments on the draft guidance and those comments were considered as the guidance was finalized. The guidance announced in this notice finalizes the draft guidance dated December 2017. FDA does not expect to grant any additional orphan-drug designation to drugs for pediatric subpopulations of common diseases (*i.e.*, diseases or conditions with an overall prevalence of 200,000 or greater). This will help resolve an unintended loophole in the Pediatric Research Equity Act (PREA) orphan exemption process where a sponsor holding a pediatric-subpopulation designation can submit a marketing application for use of its drug in the non-orphan adult population of that disease, get a pediatric-subpopulation designation for the pediatric subset of the disease, and, due to this designation, be exempt from conducting the pediatric studies normally required under PREA when seeking approval of the adult indication. This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on orphan designation of drugs and biologics for pediatric subpopulations of common diseases. It does not establish any rights for any person and is not binding on FDA or the

public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. This guidance is not subject to Executive Order 12866.

II. Electronic Access

Persons with access to the internet may obtain the guidance at either <https://www.fda.gov/Orphan> or <https://www.regulations.gov>.

Dated: July 23, 2018.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2018-D-2478]

Recommendations for Reducing the Risk of Transfusion-Transmitted Babesiosis; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft document entitled “Recommendations for Reducing the Risk of Transfusion-Transmitted Babesiosis; Draft Guidance for Industry.” The draft guidance document notifies blood establishments that collect blood and blood components that we have determined babesiosis to be a relevant transfusion-transmitted infection (RTTI) and provides recommendations for donor screening, donation testing, donor deferral, and product management to reduce the risk of transfusion-transmitted babesiosis (TTB). The recommendations contained in the guidance apply to the collection of blood and blood components, except Source Plasma.

DATES: Submit either electronic or written comments on the draft guidance by September 25, 2018 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the

instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA-2018-D-2478 for “Recommendations for Reducing the Risk of Transfusion-Transmitted Babesiosis; Draft Guidance for Industry.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The

second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993-0002. Send one self-addressed adhesive label to assist the office in processing your requests. The draft guidance may also be obtained by mail by calling CBER at 1-800-835-4709 or 240-402-8010. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Valerie A. Butler, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993-0002, 240-402-7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft document entitled “Recommendations for Reducing the Risk of Transfusion-Transmitted Babesiosis; Draft Guidance for Industry.” The draft guidance document

notifies blood establishments that collect blood and blood components that we have determined babesiosis to be an RTTI under 21 CFR 630.3(h)(2) and provides recommendations for donor screening, donation testing, donor deferral, and product management to reduce the risk of TTB. The recommendations contained in the draft guidance document applies to the collection of blood and blood components, except Source Plasma.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on recommendations for reducing the risk of transfusion-transmitted babesiosis. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. This guidance is not subject to Executive Order 12866.

II. Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 601 have been approved under OMB control number 0910–0338, and the collections of information in 21 CFR part 606, 21 CFR 610.40(h), and 21 CFR 630.40 have been approved under OMB control number 0910–0116.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at either <http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/default.htm> or <https://www.regulations.gov>.

Dated: July 20, 2018.

Peripheral Vascular Atherectomy Devices—Premarket Notification Submissions; Draft Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of the draft guidance entitled “Peripheral Vascular Atherectomy Devices—Premarket Notification [510(k)] Submissions.” This draft guidance provides recommendations for premarket submissions for a new or modified peripheral vascular atherectomy device. This draft guidance is not final nor is it in effect at this time.

DATES: Submit either electronic or written comments on the draft guidance by September 25, 2018 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2018–D–2494 for “Peripheral Vascular Atherectomy Devices—Premarket Notification [510(k)] Submissions.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

- *Confidential Submissions—*To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov>.

www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

An electronic copy of the guidance document is available for download from the internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the draft guidance document entitled "Peripheral Vascular Atherectomy Devices—Premarket Notification [510(k)] Submissions" to the Office of the Center Director, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993-0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT: Misti Malone, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 120, Silver Spring, MD 20993-0002, 301-796-2520.

SUPPLEMENTARY INFORMATION:

I. Background

Atherectomy is an interventional procedure performed to debulk atherosclerotic plaque from diseased arteries. Atherectomy has been used in treatment of both coronary and peripheral arterial disease. FDA has developed this draft guidance for members of industry who submit and FDA staff who review premarket submissions for atherectomy devices used in the peripheral vasculature. When finalized, this guidance is intended to provide recommendations for information to include in premarket notifications (510(k)) for peripheral vascular atherectomy devices (e.g., descriptive characteristics, labeling, biocompatibility, sterility, non-clinical, animal, and clinical performance testing).

II. Significance of Guidance

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on "Peripheral Vascular Atherectomy Devices—Premarket Notification [510(k)] Submissions." It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. This guidance is not subject to Executive Order 12866.

III. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by downloading an electronic copy from the internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at <https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm>. This guidance document is also available at <https://www.regulations.gov>. Persons unable to download an electronic copy of "Peripheral Vascular Atherectomy Devices—Premarket Notification [510(k)] Submissions" may send an email request to CDRH-Guidance@fda.hhs.gov to receive an electronic copy of the document. Please use the document number 16013 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This draft guidance refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520). The collections of information in the following FDA regulations and guidance have been approved by OMB as listed in the following table:

21 CFR part	Topic	OMB Control No.
807, subpart E	Premarket Notification	0910-0120
812	Investigational Device Exemption	0910-0078
820	Current Good Manufacturing Practice (CGMP); Quality System (QS) Regulation	0910-0073
807, subparts A through D	Electronic Submission of Medical Device Registration and Listing	0910-0625
50, 56	Protection of Human Subjects: Informed Consent; Institutional Review Boards	0910-0755
56	Institutional Review Boards	0910-0130
58	Good Laboratory Practice (GLP) Regulations for Nonclinical Laboratory Studies	0910-0119
801.150(a)(2) and (e)	Agreement for Shipments of Devices for Sterilization	0910-0131

Dated: July 20, 2018.

Food and Drug Administration

[Docket No. FDA-2018-N-2775]

Food Safety Modernization Act Domestic and Foreign Facility Reinspection, Recall, and Importer Reinspection Fee Rates for Fiscal Year 2019

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the

fiscal year (FY) 2019 fee rates for certain domestic and foreign facility reinspections, failures to comply with a recall order, and importer reinspections that are authorized by the Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the FDA Food Safety Modernization Act (FSMA). These fees are effective on October 1, 2018, and will remain in effect through September 30, 2019.

FOR FURTHER INFORMATION CONTACT: Jason Lewis, Office of Management, Office of Regulatory Affairs, Food and Drug Administration, 12420 Parklawn Dr., Rm. 2406, Rockville, MD 20857,

301-796-5957, email: Jason.Lewis@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

Section 107 of FSMA (Pub. L. 111-353) added section 743 to the FD&C Act (21 U.S.C. 379j-31) to provide FDA with the authority to assess and collect fees from, in part: (1) The responsible party for each domestic facility and the U.S. agent for each foreign facility subject to a reinspection, to cover reinspection-related costs; (2) the responsible party for a domestic facility and an importer who does not comply with a recall order, to cover food¹ recall activities associated with such order; and (3) each importer subject to a reinspection to cover reinspection-related costs (section 743(a)(1)(A), (B), and (D) of the FD&C Act). Section 743 of the FD&C Act directs FDA to establish fees for each of these activities based on an estimate of 100 percent of the costs of each activity for each year (section 743(b)(2)(A)(i), (ii), and (iv)), and these fees must be made available solely to pay for the costs of each activity for which the fee was incurred (section 743(b)(3)). These fees are effective on October 1, 2018, and will remain in effect through September 30, 2019. Section 743(b)(2)(B)(iii) of the FD&C Act directs FDA to develop a proposed set of guidelines in consideration of the burden of fee amounts on small businesses. As a first step in developing these guidelines, FDA invited public comment on the potential impact of the fees authorized by section 743 of the FD&C Act on small businesses (76 FR 45818, August 1, 2011). The comment period for this request ended November 30, 2011. As stated in FDA's September 2011 "Guidance for Industry: Implementation of the Fee Provisions of Section 107 of the FDA Food Safety Modernization Act," (<http://www.fda.gov/Food/GuidanceRegulation/GuidanceDocuments/RegulatoryInformation/FoodDefense/ucm274176.htm>), because FDA recognizes that for small businesses the full cost recovery of FDA reinspection or recall oversight could impose severe economic hardship, FDA intends to consider reducing certain fees for those firms. FDA does not intend to issue invoices for reinspection or recall order fees until FDA publishes a guidance document outlining the process through

which firms may request a reduction in fees.

In addition, as stated in the September 2011 Guidance, FDA is in the process of considering various issues associated with the assessment and collection of importer reinspection fees. The fee rates set forth in this notice will be used to determine any importer reinspection fees assessed in FY 2019.

II. Estimating the Average Cost of a Supported Direct FDA Work Hour for FY 2019

FDA is required to estimate 100 percent of its costs for each activity to establish fee rates for FY 2019. In each year, the costs of salary (or personnel compensation) and benefits for FDA employees account for between 50 and 60 percent of the funds available to, and used by, FDA. Almost all of the remaining funds (operating funds) available to FDA are used to support FDA employees for paying rent, travel, utility, information technology (IT), and other operating costs.

A. Estimating the Full Cost per Direct Work Hour in FY 2019

Full-time equivalent (FTE) reflects the total number of regular straight-time hours—not including overtime or holiday hours—worked by employees, divided by the number of compensable hours applicable to each fiscal year. Annual leave, sick leave, compensatory time off, and other approved leave categories are considered "hours worked" for purposes of defining FTE employment.

In general, the starting point for estimating the full cost per direct work hour is to estimate the cost of an FTE or paid staff year. Calculating an Agency-wide total cost per FTE requires three primary cost elements: Payroll, non-payroll, and rent.

We have used an average of past year cost elements to predict the FY 2019 cost. The FY 2019 FDA-wide average cost for payroll (salaries and benefits) is \$157,731; non-payroll—including equipment, supplies, IT, general and administrative overhead—is \$91,008; and rent, including cost allocation analysis and adjustments for other rent and rent-related costs, is \$24,400 per paid staff year, excluding travel costs.

Summing the average cost of an FTE for payroll, non-payroll, and rent, brings the FY 2019 average fully supported cost to \$273,139 per FTE, excluding travel costs. FDA will use this base unit fee in determining the hourly fee rate for reinspection and recall order fees for FY 2019 prior to including domestic or foreign travel costs as applicable for the activity.

To calculate an hourly rate, FDA must divide the FY 2019 average fully supported cost of \$273,139 per FTE by the average number of supported direct FDA work hours in FY 2017—the last FY for which data are available. See table 1.

TABLE 1—SUPPORTED DIRECT FDA WORK HOURS IN A PAID STAFF YEAR IN FY 2017

Total number of hours in a paid staff year	2,080
Less:	
10 paid holidays	- 80
20 days of annual leave	- 160
10 days of sick leave	- 80
12.5 days of training	- 100
26.5 days of general administration	- 184
26.5 days of travel	- 212
2 hours of meetings per week	- 104
Net Supported Direct FDA Work Hours Available for Assignments	1,160

Dividing the average fully supported FTE cost in FY 2019 (\$273,139) by the total number of supported direct work hours available for assignment in FY 2017 (1,160) results in an average fully supported cost of \$235 (rounded to the nearest dollar), excluding inspection travel costs, per supported direct work hour in FY 2019.

B. Adjusting FY 2017 Travel Costs for Inflation To Estimate FY 2019 Travel Costs

To adjust the hourly rate for FY 2019, FDA must estimate the cost of inflation in each year for FY 2018 and FY 2019. FDA uses the method prescribed for estimating inflationary costs under the Prescription Drug User Fee Act (PDUFA) provisions of the FD&C Act (section 736(c)(1) (21 U.S.C. 379h(c)(1)), the statutory method for inflation adjustment in the FD&C Act that FDA has used consistently. FDA previously determined the FY 2018 inflation rate to be 1.6868 percent; this rate was published in the FY 2018 PDUFA user fee rates notice in the **Federal Register** (September 14, 2017, 82 FR 43244). Utilizing the method set forth in section 736(c)(1) of the FD&C Act, FDA has calculated an inflation rate of 1.6868 percent for 2018 and 1.7708 percent for 2019, and FDA intends to use these inflation rates to make inflation adjustments for FY 2019 for several of its user fee programs; the derivation of this rate will be published in the **Federal Register** in the FY 2019 notice for the PDUFA user fee rates.

The average fully supported cost per supported direct FDA work hour, excluding travel costs of \$235 already takes into account inflation as the calculation above is based on FY 2019

¹ The term "food" for purposes of this document has the same meaning as such term in section 201(f) of the FD&C Act (21 U.S.C. 321(f)).

predicted costs. FDA will use this base unit fee in determining the hourly fee rate for reinspection and recall order fees for FY 2019 prior to including domestic or foreign travel costs as applicable for the activity. In FY 2017, FDA's Office of Regulatory Affairs (ORA) spent a total of \$5,846,091 for domestic regulatory inspection travel costs and General Services

Administration Vehicle costs related to FDA's Center for Food Safety and Applied Nutrition (CFSAN) and Center for Veterinary Medicine (CVM) field activities programs. The total ORA domestic travel costs spent is then divided by the 10,289 CFSAN and CVM domestic inspections, which averages a total of \$568 per inspection. These inspections average 34.05 hours per inspection. Dividing \$568 per inspection by 34.05 hours per inspection results in a total and an additional cost of \$17 (rounded to the nearest dollar) per hour spent for domestic inspection travel costs in FY 2017. To adjust for the \$17 per hour additional domestic cost inflation increases for FY 2018 and FY 2019, FDA must multiply the FY 2018 PDUFA inflation rate adjustor (1.016868) times the FY 2019 PDUFA inflation rate adjustor (1.017708) times the \$17 additional domestic cost, which results in an estimated cost of \$18 (rounded to the nearest dollar) per paid hour in addition to \$235 for a total of \$253 per paid hour (\$235 plus \$18) for each direct hour of work requiring domestic inspection travel. FDA will use these rates in charging fees in FY 2019 when domestic travel is required.

In FY 2017, ORA spent a total of \$2,566,050 on 480 foreign inspection trips related to FDA's CFSAN and CVM field activities programs, which averaged a total of \$5,346 per foreign inspection trip. These trips averaged 3 weeks (or 120 paid hours) per trip. Dividing \$5,346 per trip by 120 hours per trip results in a total and an additional cost of \$45 (rounded to the nearest dollar) per paid hour spent for foreign inspection travel costs in FY 2017. To adjust \$45 for inflationary increases in FY 2018 and FY 2019, FDA must multiply it by the same inflation factors mentioned previously in this document (1.016868 and 1.107708), which results in an estimated cost of \$47 (rounded to the nearest dollar) per paid hour in addition to \$235 for a total of \$282 per paid hour (\$235 plus \$47) for each direct hour of work requiring foreign inspection travel. FDA will use these rates in charging fees in FY 2019 when foreign travel is required.

TABLE 2—FSMA FEE SCHEDULE FOR FY 2019

Fee category	Fee rates for FY 2019
Hourly rate if domestic travel is required	\$253
Hourly rate if foreign travel is required	282

III. Fees for Reinspections of Domestic or Foreign Facilities Under Section 743(a)(1)(A)

A. What will cause this fee to be assessed?

The fee will be assessed for a reinspection conducted under section 704 of the FD&C Act (21 U.S.C. 374) to determine whether corrective actions have been implemented and are effective and compliance has been achieved to the Secretary of Health and Human Services' (the Secretary) (and, by delegation, FDA's) satisfaction at a facility that manufactures, processes, packs, or holds food for consumption necessitated as a result of a previous inspection (also conducted under section 704) of this facility, which had a final classification of Official Action Indicated (OAI) conducted by or on behalf of FDA, when FDA determined the non-compliance was materially related to food safety requirements of the FD&C Act. FDA considers such non-compliance to include non-compliance with a statutory or regulatory requirement under section 402 of the FD&C Act (21 U.S.C. 342) and section 403(w) of the FD&C Act (21 U.S.C. 343(w)). However, FDA does not consider non-compliance that is materially related to a food safety requirement to include circumstances where the non-compliance is of a technical nature and not food safety related (e.g., failure to comply with a food standard or incorrect font size on a food label). Determining when non-compliance, other than under sections 402 and 403(w) of the FD&C Act, is materially related to a food safety requirement of the FD&C Act may depend on the facts of a particular situation. FDA intends to issue guidance to provide additional information about the circumstances under which FDA would consider non-compliance to be materially related to a food safety requirement of the FD&C Act.

Under section 743(a)(1)(A) of the FD&C Act, FDA is directed to assess and collect fees from "the responsible party for each domestic facility (as defined in section 415(b) (21 U.S.C. 350d(b))) and the United States agent for each foreign

facility subject to a reinspection" to cover reinspection-related costs.

Section 743(a)(2)(A)(i) of the FD&C Act defines the term "reinspection" with respect to domestic facilities as "1 or more inspections conducted under section 704 subsequent to an inspection conducted under such provision which identified non-compliance materially related to a food safety requirement of th[e] Act, specifically to determine whether compliance has been achieved to the Secretary's satisfaction."

The FD&C Act does not contain a definition of "reinspection" specific to foreign facilities. In order to give meaning to the language in section 743(a)(1)(A) of the FD&C Act to collect fees from the U.S. agent of a foreign facility subject to a reinspection, the Agency is using the following definition of "reinspection" for purposes of assessing and collecting fees under section 743(a)(1)(A), with respect to a foreign facility, "1 or more inspections conducted by officers or employees duly designated by the Secretary subsequent to such an inspection which identified non-compliance materially related to a food safety requirement of the FD&C Act, specifically to determine whether compliance has been achieved to the Secretary's (and, by delegation, FDA's) satisfaction."

This definition allows FDA to fulfill the mandate to assess and collect fees from the U.S. agent of a foreign facility in the event that an inspection reveals non-compliance materially related to a food safety requirement of the FD&C Act, causing one or more subsequent inspections to determine whether compliance has been achieved to the Secretary's (and, by delegation, FDA's) satisfaction. By requiring the initial inspection to be conducted by officers or employees duly designated by the Secretary, the definition ensures that a foreign facility would be subject to fees only in the event that FDA, or an entity designated to act on its behalf, has made the requisite identification at an initial inspection of non-compliance materially related to a food safety requirement of the FD&C Act. The definition of "reinspection-related costs" in section 743(a)(2)(B) of the FD&C Act relates to both a domestic facility reinspection and a foreign facility reinspection, as described in section 743(a)(1)(A).

B. Who will be responsible for paying this fee?

The FD&C Act states that this fee is to be paid by the responsible party for each domestic facility (as defined in section 415(b) of the FD&C Act) and by the U.S. agent for each foreign facility (section 743(a)(1)(A) of the FD&C Act). This is

the party to whom FDA will send the invoice for any fees that are assessed under this section.

C. How much will this fee be?

The fee is based on the number of direct hours spent on such reinspections, including time spent conducting the physical surveillance and/or compliance reinspection at the facility, or whatever components of such an inspection are deemed necessary, making preparations and arrangements for the reinspection, traveling to and from the facility, preparing any reports, analyzing any samples or examining any labels if required, and performing other activities as part of the OAI reinspection until the facility is again determined to be in compliance. The direct hours spent on each such reinspection will be billed at the appropriate hourly rate shown in table 2 of this document.

IV. Fees for Non-Compliance With a Recall Order Under Section 743(a)(1)(B)

A. What will cause this fee to be assessed?

The fee will be assessed for not complying with a recall order under section 423(d) (21 U.S.C. 350l(d)) or section 412(f) of the FD&C Act (21 U.S.C. 350a(f)) to cover food recall activities associated with such order performed by the Secretary (and by delegation, FDA) (section 743(a)(1)(B) of the FD&C Act). Non-compliance may include the following: (1) Not initiating a recall as ordered by FDA; (2) not conducting the recall in the manner specified by FDA in the recall order; or (3) not providing FDA with requested information regarding the recall, as ordered by FDA.

B. Who will be responsible for paying this fee?

Section 743(a)(1)(B) of the FD&C Act states that the fee is to be paid by the responsible party for a domestic facility (as defined in section 415(b) of the FD&C Act) and an importer who does not comply with a recall order under section 423 or under section 412(f) of the FD&C Act. In other words, the party paying the fee would be the party that received the recall order.

C. How much will this fee be?

The fee is based on the number of direct hours spent on taking action in response to the firm's failure to comply with a recall order. Types of activities could include conducting recall audit checks, reviewing periodic status reports, analyzing the status reports and the results of the audit checks, conducting inspections, traveling to and

from locations, and monitoring product disposition. The direct hours spent on each such recall will be billed at the appropriate hourly rate shown in table 2 of this document.

V. How must the fees be paid?

An invoice will be sent to the responsible party for paying the fee after FDA completes the work on which the invoice is based. Payment must be made within 90 days of the invoice date in U.S. currency by check, bank draft, or U.S. postal money order payable to the order of the Food and Drug Administration. Detailed payment information will be included with the invoice when it is issued.

VI. What are the consequences of not paying these fees?

Under section 743(e)(2) of the FD&C Act, any fee that is not paid within 30 days after it is due shall be treated as a claim of the U.S. Government subject to provisions of subchapter II of chapter 37 of title 31, United States Code.

Dated: July 24, 2018.

Leslie Kux,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the President's Council on Sports, Fitness, and Nutrition

AGENCY: President's Council on Sports, Fitness, and Nutrition, Office of the Assistant Secretary for Health, Office of the Secretary, Department of Health and Human Services.

ACTION: Notice of meeting.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the U.S. Department of Health and Human Services (HHS) is hereby giving notice that the President's Council on Sports, Fitness, and Nutrition (PCSFN) will hold its annual meeting. The meeting will be open to the public.

DATES: The meeting will be held on September 21, 2018, from 9:30 a.m. to 12:30 p.m.

ADDRESSES: Newseum, Knight Conference Center 7th Floor, 555 Pennsylvania Ave. NW, Washington, DC 20001.

FOR FURTHER INFORMATION CONTACT: Ms. Holli M. Richmond, Executive Director, Office of the President's Council on Sports, Fitness, and Nutrition, Tower Building, 1101 Wootton Parkway, Suite 560, Rockville, MD 20852, (240) 276-

9567. Information about PCSFN, including details about the upcoming meeting, can be obtained at www.fitness.gov.

SUPPLEMENTARY INFORMATION: The primary functions of the PCSFN include (1) advising the President, through the Secretary, concerning progress made in carrying out the provisions of Executive Order 13265, as amended by Executive Order 13824, and recommending to the President, through the Secretary, actions to accelerate such progress; (2) recommending to the Secretary a national strategy to expand children's participation in youth sports, encourage regular physical activity, including active play and promote good nutrition for all Americans. Recommendations may address, but are not necessarily limited to, increasing awareness of the benefits of participation in sports and regular physical activity, as well as the importance of good nutrition; promoting private and public sector strategies to increase participation in sports, encourage regular physical activity, and improve nutrition; developing metrics that gauge youth sports participation and physical activity to inform efforts that will improve participation in sports and regular physical activity among young Americans; and establishing a national and local strategy to recruit volunteers who will encourage and support youth participation in sports and regular physical activity, through coaching, mentoring, teaching, or administering athletic and nutritional programs. The Council's performance of these functions shall take into account the Department of Health and Human Services' Physical Activity Guidelines for Americans, including consideration for youth with disabilities.

The Council shall meet, at a minimum, one time per fiscal year. The meeting will be held to (1) assess ongoing Council activities; and, (2) discuss and plan future projects and programs. The agenda for the planned meeting is being developed and will be posted at www.fitness.gov when it has been finalized.

The meeting that is scheduled to be held on September 21, 2018, is open to the public and the media. Every effort will be made to provide reasonable accommodations for persons with disabilities and/or special needs who wish to attend the meeting. Persons with disabilities and/or special needs should call (240) 276-9567 no later than close of business Monday, September 10, 2018, to request accommodations. Members of the public who wish to attend the meeting are asked to pre-register by sending an email to

rsvp.fitness@hhs.gov or by calling (240) 276-9567. Registration for public attendance must be completed before close of business Wednesday, September 12, 2018.

Dated: July 12, 2018.

Holli M. Richmond,

Executive Director, Office of the President's Council on Sports, Fitness, and Nutrition, U.S. Department of Health and Human Services.

[FR Doc. 2018-16056 Filed 7-26-18; 8:45 am]

BILLING CODE 4150-35-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive Patent License: Radiotherapeutics Against Somatostatin-Receptor Expressing Neuroendocrine Tumors

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung and Blood Institute (NHLBI), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive patent license to Molecular Targeting Technologies, Inc. (MTTI); a Delaware corporation, with its principle place of business in West Chester, Pennsylvania, to practice the inventions embodied in the patent application listed in the **SUPPLEMENTARY INFORMATION** section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development August 27, 2018 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated exclusive patent license should be directed to: Michael Shmilovich, Esq., Senior Licensing and Patent Manager, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892-2479, phone number 301-435-5019, or *shmilovm@mail.nih.gov*.

SUPPLEMENTARY INFORMATION: The following and all continuing U.S. and foreign patents/patent applications thereof are the intellectual properties to be licensed under the prospective agreement to MTTI: HHS Ref. E-150-2016-1-PCT-01, International Patent Application PCT/US2017/054863 filed October 3, 2017, entitled "Chemical Conjugates of Evans Blue Derivatives and Their Use As Radiotherapy And Imaging Agents."

The patent rights in these inventions have been assigned to the Government of the United States of America. The prospective patent license will be granted worldwide and in a field of use not broader than radiotherapeutics for somatostatin-receptor expressing neuroendocrine tumors.

The invention pertains to a radiotherapeutic against neuroendocrine tumors that express somatostatin receptor. Radionuclide therapies directed against tumors that express somatostatin receptors (SSTRs) have proven effective for the treatment of advanced, low- to intermediate-grade neuroendocrine tumors. The subject radiotherapeutic covered by the subject patent estate includes a somatostatin (SST) peptide derivative like octreotate (TATE), conjugated to an Evans Blue (EB) analog, and further chelated via DOTA to therapeutic radionuclide ¹⁷⁷Lu, a beta emitter. The EB analog reversibly binds to circulating serum albumin and improves the pharmacokinetics of SST peptide derivatives and reduce peptide-receptor radionuclide therapy toxicity. EB analog conjugated to octreotate (EB-DOTATATE) has been shown by the inventors to provide reversible albumin binding *in vivo* and extended half-life in circulation. When EB-TATE is slowly released into the tumor microenvironment, tumor uptake and internalization into SSTR positive tumors resulted in delivery of radioactive particles and tumor cell killing. EB-TATE displayed significantly more favorable pharmacokinetics than TATE alone by achieving higher tumor to non-tumor penetration as evidenced by positron emission tomography.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive patent license will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the NHLBI receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the prospective field of use that are timely filed in response to this notice will be treated as objections to the grant of the contemplated exclusive patent license.

Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Dated: July 20, 2018.

Michael A. Shmilovich,

Senior Licensing and Patenting Manager, National Heart, Lung, and Blood Institute, Office of Technology Transfer and Development.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Notice To Announce Commission of a Surgeon General's Report on Oral Health

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: On behalf of the United States Department of Health and Human Services, the Office of the Surgeon General, the National Institutes of Health, and the National Institute of Dental and Craniofacial Research, the U.S. Public Health Service's Oral Health Coordinating Committee announces the commission of a Surgeon General's Report presenting prominent issues affecting oral health. The report will document progress in oral health in the twenty years since the 2000 Surgeon General's Report on Oral Health, identify existing knowledge gaps, and articulate a vision for the future.

FOR FURTHER INFORMATION CONTACT:

Bruce A. Dye, DDS, MPH, Dental Epidemiology Officer, Office of Science Policy and Analysis, NIDCR, NIH, 31 Center Drive, Room 5B55, Rockville, MD, 20892. Phone: 301-496-7765, Email: bruce.dye@nih.gov.

SUPPLEMENTARY INFORMATION:

Scope of Problem: The charge for the first Surgeon General's report on oral health in 2000 was to define, describe, and evaluate the interaction between oral health and health and well-being (quality of life), through the lifespan in the context of changes in society. The overarching message from that report clearly communicated that oral health is essential to the general health and well-being of all Americans and can be achieved by all. In the intervening two decades, oral health has improved for many Americans, but not for all. Many Americans are retaining more of their natural teeth, complete tooth loss among older adults is at the lowest level ever

measured, and many younger children have less untreated tooth decay. Over the past two decades, we have learned more about how changes across the lifespan can substantially influence oral health and how health promotion activities and interventions targeted for specific life stages can benefit oral health and quality of life. However, many Americans continue to experience unnecessary pain and complications from poor oral health that adversely affect their well-being, adding substantial economic and social costs. Poor oral health also impacts our nation's ability to recruit young adults for military service and maintain military readiness.

Oral health workforce models and care delivery systems have evolved in the past two decades. There has been a substantial effort to incorporate early detection and preventive oral health measures into primary care settings and the expansion of the State Children's Health Insurance Program, Medicaid, and other health insurance programs have helped many Americans of all ages. Yet, as there have been some successes in integrating oral health into the broader health care system in the United States, many still view oral health care as a supplemental benefit, and not a priority benefit. This separate view of oral health negatively impacts our nation in a variety of ways, including the increasing use of emergency departments at substantial cost to treat dental pain and related conditions. Finally, the increasing problems of substance misuse and use disorders during the past two decades have impacted oral health at the patient, community, and provider level, which has raised awareness of the need to address dental provider prescribing patterns and pain management practices.

The first Surgeon General's report on oral health addressed determinants for oral health and disease. Twenty years later, the knowledge gained from science and technology has continued to provide a better understanding of the etiology and natural history of oral and craniofacial diseases and conditions, and we have gained a better understanding of these determinants. This knowledge has led to therapeutic interventions that have improved oral health over the past two decades. Ongoing research is improving our understanding of the biological influences on oral health, the relationship between oral diseases and general health, the role of technology and advanced materials in improving dental care, and the benefits of good oral health to overall well-being and the

community. Although we benefit from numerous advances that influence oral health, we still face challenges as we try to reach our goal of oral health for all.

Approach: The scope of the Surgeon General's Report is intended to be broad and comprehensive, with the goal of mapping the current landscape of the key issues that affect oral health. It will present information from a variety of data sources such as the National Health and Nutrition Examination Survey, Medical Expenditure Panel Survey, Behavioral Risk Factor Surveillance System, and others. These sources highlight changes in oral health over time, providing opportunities to monitor how determinants for health have changed, and the effect of those changes over the past 20 years. The report is intended to: (1) Underscore the critical nature of poor oral health as a public health issue; (2) provide a comprehensive review of the importance of oral health throughout life; (3) describe important contemporary issues affecting oral health and the promise of science to transform the oral health of the nation; (4) outline a vision for future directions; and (5) educate, encourage, and call upon all Americans to take action.

Potential Areas of Focus: Areas of focus in the report may include a description of the epidemiology of diseases and conditions that affect the craniofacial complex; a review of health promotion and disease prevention activities; factors that affect the etiology of poor oral health at the individual and population level; social determinants of health and their influence on oral health disparities; biological factors including the microbiome; social, economic, and health consequences of poor oral health; mental health, substance misuse and addiction impact on the oral health of individuals, providers, and communities; the state of oral health care access and coverage as it relates to prevention and treatment for dental diseases and related conditions; integration of oral health into primary health care settings; organization and financing of the provision of dental care within the health care system; ethical, legal, and policy issues; and the application of scientific research in the field, including methods, challenges, and current and future directions.

Dated: July 21, 2018.

Lawrence A. Tabak,

Deputy Director, National Institutes of Health.

[FR Doc. 2018-16096 Filed 7-26-18; 8:45 am]

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of an Exclusive Patent License: Development and Commercialization of Cancer Immunotherapy

AGENCY: National Institutes of Health, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: The National Cancer Institute, an institute of the National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an Exclusive Patent License to practice the inventions embodied in the U.S. Patents and Patent Applications listed in the Supplementary Information section of this notice to Midissia Therapeutics (“Midissia”) located in San Francisco, CA.

DATES: Only written comments and/or applications for a license which are received by the National Cancer Institute’s Technology Transfer Center on or before August 13, 2018 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, and comments relating to the contemplated Exclusive Patent License should be directed to: Ricquita Pollard, Technology Transfer Manager, NCI Technology Transfer Center, 9609 Medical Center Drive, RM 1E530 MSC 9702, Bethesda, MD 20892-9702 (for business mail), Rockville, MD 20850-9702; Telephone: (240) 276-5530; Facsimile: (240) 276-5504; Email: pollardrd@mail.nih.gov.

SUPPLEMENTARY INFORMATION:

Intellectual Property

1. United States Provisional Patent Application No. 62/248,964 filed Oct. 30, 2015 for “Compositions and Methods for the Treatment of HER2-Expressing Solid Tumor” [HHS Ref. No. E-187-2015/0US-01];
2. International Patent Application No. PCT/US2016/059680 filed October 31, 2016 for “Compositions and Methods for Treatment of HER2-Expressing Solid Tumor” [HHS Reference No. E-187-2015/0-PCT-02];
3. Canadian National Stage Patent Application (*No. not yet assigned*), filed April 30, 2018 [HHS Ref. No. E-187-2015/0-CA-03];
4. Japanese National Stage Patent Application No. 2018-521518, filed April 30, 2018 [HHS Ref. No. E-187-2015/0-JP-04];
5. Australian National Stage Patent Application No. 2016343845, filed April 30, 2018 [HHS Ref. No. E-187-2015/0-AU-05];

6. European National Stage Patent Application (*No. not yet assigned*), filed April 30, 2018 [HHS Ref. No. E-187-2015/0-EP-06];
7. U.S. National Stage Patent Application No. 15/771,932, filed April 30, 2018 [HHS Ref. No. E-187-2015/0-US-07];

The patent rights in these inventions have been assigned and/or exclusively licensed to the government of the United States of America.

The prospective exclusive license territory may be worldwide and the field of use may be limited to “development and commercialization of Ad-HER2 vaccines as a therapeutic against HER2-positive cancers as covered within the scope of the Licensed Patent Rights, excluding uses in combination with vectors/adjuvants, checkpoint inhibitors or other immune modulators.”

This technology describes a recombinant adenoviral vector that expresses the extracellular (EC) and transmembrane (TM) domains of the human HER2 protein and is designed to induce a polyclonal anti-tumor response. HER2 is a member of the epidermal growth factor family and is overexpressed in subsets of breast, ovarian, gastric, colorectal, pancreatic and endometrial cancers. This vaccine encodes for the entire EC and TM domains of human HER2neu and is specifically contained within a recombinant adenoviral vector that has the knob of Adenovirus 5 and substituted fiber of Adenovirus 35. The substitution of the knob of Adenovirus 35 whose receptor is CD46 allows for efficient and maximal transduction of human dendritic and hematopoietic cells.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive license will be royalty bearing, and the prospective exclusive license may be granted unless within fifteen (15) days from the date of this published notice, the National Cancer Institute receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

In response to this Notice, the public may file comments or objections. Comments and objections, other than those in the form of a license application, will not be treated confidentially, and may be made publicly available.

License applications submitted in response to this Notice will be presumed to contain business confidential information and any release of information in these license applications will be made only as

required and upon a request under the Freedom of Information Act, 5 U.S.C. 552.

Dated: July 19, 2018.

Richard U. Rodriguez,
Associate Director, Technology Transfer
Center, National Cancer Institute.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; 60-Day Comment Request; Intramural Continuing Umbrella of Research Experiences (iCURE) Application (National Cancer Institute)

AGENCY: National Institutes of Health, Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995 to provide opportunity for public comment on proposed data collection projects, the National Cancer Institute (NCI) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

DATES: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments, submit comments in writing, or request more information on the proposed project, contact: Alison Lin, 9609 Medical Center Drive, Rockville, MD 20850 or call non-toll-free number (240) 276-6177 or Email your request, including your address to: linaj@mail.nih.gov. Formal requests for additional plans and instruments must be requested in writing.

SUPPLEMENTARY INFORMATION: Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires: Written comments and/or suggestions from the public and affected agencies are invited to address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency’s estimate of the burden of the

proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Proposed Collection Title: Intramural Continuing Umbrella of Research Experiences (iCURE) Application, 0925-XXXX, Exp., Date XX/XXXX, EXISTING COLLECTION IN USE WITHOUT OMB APPROVAL, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: The new Intramural Continuing Umbrella of Research Experiences (iCURE) program supports mentored research experiences for qualified post-baccalaureate (including post masters) individuals, graduate students, and postdoctoral fellows in the multidisciplinary National Cancer Institute (NCI) intramural research environment. This information collection request are applications and a reference letter to help evaluate the merits of the candidates and their potential match for the iCURE program. iCURE is an extension of the highly successful NCI Center to Reduce Cancer Health Disparities' (CRCHD) Continuing Umbrella of Research Experiences (CURE) program which helps support the career progress of its scholars

toward research independence, as well as fosters and sustains diversity in the biomedical research pipeline. Like the CURE program, iCURE strongly encourages the participation of individuals from underrepresented populations and is aligned with NCI's interest in diversity. The benefit of collecting this information is to enable the selection of the best matching candidates for the iCURE program. The iCURE program aims to, 1. Enhance the diversity of the NCI Intramural Research Program (IRP), and 2. Promote the career progress of the iCURE scholars in cancer research.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated burden hours are 305.

ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Type of respondent	Number of respondents	Number of responses per respondent	Average time per response (in hours)	Total annual burden hour
Postbac Supplemental Application ...	Post-Baccalaureate (Including Post-Master's) Individuals.	50	1	30/60	25
Graduate Student Application	Graduate Students	30	1	2	60
Postdoctoral Fellowship Application	Postdoctoral Candidates	50	1	2	100
Reference Letter	PIs, professors, supervisors	240	1	30/60	120
Total	370	370	305

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Neurological Disorders and Stroke, Muscular Dystrophy Coordinating Committee Call for Committee Membership Nominations

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The Office of the Secretary of the Department of Health and Human Services (HHS) is seeking nominations for an individual to serve as a nonfederal public member on the Muscular Dystrophy Coordinating Committee.

DATES: Nominations are due by 5 p.m. EDT on August 31, 2018.

ADDRESSES: Nominations must be sent to Glen Nuckolls, Ph.D., by email to nuckollg@ninds.nih.gov.

FOR FURTHER INFORMATION CONTACT: Glen Nuckolls, Ph.D., by email to nuckollg@ninds.nih.gov or (301) 496-5745.

SUPPLEMENTARY INFORMATION: The Muscular Dystrophy Coordinating Committee (MDCC) is a federal advisory committee established in accordance with the Muscular Dystrophy Community Assistance, Research, and Education Amendments of 2001 (MD-CARE Act; Pub. L. 107-84). The MD-CARE Act was reauthorized in 2008 by Public Law 110-361, and again in 2014 by Public Law 113-166. The MD-CARE Act specifies that the committee membership be composed of 2/3 governmental agency representatives and 1/3 public members. We are seeking nominations for two non-federal, public members at this time, due to turnover of committee membership. Nominations will be accepted between July 31 and August 31, 2018.

Who is Eligible: Nominations are encouraged for new or reappointment of non-federal public members who can provide the public and/or patient perspectives to discussions of issues considered by the Committee. Self-

nominations and nominations of other individuals are both permitted. Only one nomination per individual is required. Multiple nominations for the same individual will not increase likelihood of selection. Non-federal, public members may be selected from the pool of submitted nominations or other sources as needed to meet statutory requirements and to form a balanced committee that represents the diversity within the muscular dystrophy communities. Nominations are especially encouraged from leaders or representatives of muscular dystrophy research, advocacy, or service organizations, individuals with muscular dystrophy or their parents or guardians. In accordance with White House Office of Management and Budget guidelines (FR Doc. 2014-19140), federally-registered lobbyists are not eligible.

Committee Composition: The Department strives to ensure that the membership of HHS Federal advisory committees is fairly balanced in terms of points of view represented and the committee's function. Every effort is made to ensure that the views of all genders, all ethnic and racial groups, and people with disabilities are

represented on HHS Federal advisory committees and, therefore, the Department encourages nominations of qualified candidates from these groups. The Department also encourages geographic diversity in the composition of the Committee. Appointment to this Committee shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, disability, and cultural, religious, or socioeconomic status. Requests for reasonable accommodation to enable participation on the Committee should be indicated in the nomination submission.

Member Terms: Non-Federal public members of the Committee serve for a term of 3 years, and may serve for an unlimited number of terms if reappointed. Members may serve after the expiration of their terms, until their successors have taken office.

Meetings and Travel: As specified by Public Law 113–166, the MDCC “shall meet no fewer than two times per calendar year.” Travel expenses are provided for non-federal public Committee members to facilitate attendance at in-person meetings. Members are expected to make every effort to attend all full committee meetings, twice per year, either in person or via remote access. Participation in relevant subcommittee, working and planning group meetings, and workshops, is also encouraged.

Submission Instructions and Deadline: Nominations are due by 5 p.m. EDT on August 31, 2018, and should be sent to Glen Nuckolls, Ph.D., by email to nuckollg@ninds.nih.gov.

Nominations must include contact information for the nominee, a current curriculum vitae or resume of the nominee and a paragraph describing the qualifications of the person to represent some portion(s) of the muscular dystrophy research, advocacy and/or patient care communities.

More information about the MDCC is available at <https://mdcc.nih.gov/>.

Dated: July 24, 2018.

Walter J. Koroshetz,

Director, National Institute of Neurological Disorders and Stroke, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive Patent License: Radiotherapy for Metastatic Castration-Resistant Prostate Cancer

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung and Blood Institute (NHLBI), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive commercialization patent license to Sinotau Pharmaceutical Group, headquartered in Beijing, China, to practice the inventions embodied in the patent application(s) listed in the Supplementary Information section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development August 27, 2018 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated exclusive patent license should be directed to: Michael Shmilovich, Esq., Senior Licensing and Patent Manager, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892–2479, phone number 301–435–5019, or shmilovm@mail.nih.gov.

SUPPLEMENTARY INFORMATION: The following and all continuing U.S. and foreign patents/patent applications thereof are the intellectual properties to be licensed under the prospective agreement to Sinotau Pharmaceutical Group: U.S. Provisional Patent Application 62/633,648, “Chemical Conjugates Of Evans Blue Derivatives And Their Use As Radiotherapy And Imaging Agents For Targeting Prostate Cancer,” filed February 22, 2018 (HHS Ref. No. E–054–2018–0). The patent rights in this invention have been assigned to the Government of the United States of America. The perspective license would be granted worldwide and in a field of use not broader than radiotherapeutics for metastatic castration-resistant prostate cancer.

The invention covered by the patents and patent applications pertaining to HHS Ref. No. E–054–2018–0 pertain to a therapeutic agent that includes a

chemically conjugated residue derived from (((R)-1-carboxy-2-mercaptoethyl)carbamoyl)-L-glutamic acid that is further bound to an Evans blue analog (EB). The EB analog reversibly binds to circulating serum albumin to provide a radiopharmaceutical that retains affinity and specificity to prostate specific membrane antigen (PSMA; in this case PSMA-617). PSMA is a surface molecule shown to be specifically expressed by prostate tumor cells. PSMA expression levels correlate with disease stage and with hormone refractory cancers. Although most PSMA expression appears to be restricted to the prostate cancer, low levels of expression can also be detected in the brain, kidneys, salivary glands, and small intestine. The antigen is also shown to be expressed by neovascular tumor vessels of multiple other cancers. Inclusion of the Evans blue analog promotes high internalization and retention rates of the conjugated target ligand, and therefore, higher accumulation in PSMA positive tumors. Labeling EB-PSMA-617 derivatives with the therapeutic beta emitters, *e.g.*, ⁹⁰Y, ⁸⁶Y, and ¹⁷⁷Lu gives rise to improved tumor response and survival rates.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive patent license will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the NHLBI receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the prospective field of use that are timely filed in response to this notice will be treated as objections to the grant of the contemplated exclusive patent license.

Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Dated: July 19, 2018.

Michael A. Shmilovich,

Senior Licensing and Patenting Manager, National Heart, Lung, and Blood Institute, Office of Technology Transfer and Development.

National Institutes of Health

Submission for OMB Review; 30-Day Comment Request Collection of Customer Service, Demographic, and Smoking/Tobacco Use Information From the National Cancer Institute's Contact Center (CC) Clients (NCI)

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below.

DATES: Comments regarding this information collection are best assured of having their full effect if received August 27, 2018.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, OIRA_submission@omb.eop.gov or by fax to 202-395-6974, Attention: Desk Officer for NIH.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Mary Anne Bright, Supervisory Public Health Advisor, CCPIB/OCPL, 9609 Medical Center Drive, Rockville, MD 20850, or call non-toll-free number 240-276-6647 or Email your request, including your address to: brightma@mail.nih.gov.

SUPPLEMENTARY INFORMATION: This proposed information collection was previously published in the **Federal Register** on May 14, 2018, page 22275 (83 FR 22275) and allowed 60 days for public comment. No public comments were received. The National Cancer Institute (NCI), National Institutes of Health, may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

In compliance with Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and

approval of the information collection listed below.

Proposed Collection: Collection of Customer Service, Demographic, and Smoking/Tobacco use Information from the National Cancer Institute’s Contact Center (CC) Clients, 0925–0208 Expiration Date 04/30/2019, REVISION, National Cancer Institute (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: The National Cancer Institute (NCI) currently collects: (1) Customer service and demographic

information from clients of the Contact Center (CC) in order to properly plan, implement, and evaluate cancer education efforts, including assessing the extent by which the CC reaches and impacts underserved populations; (2) smoking/tobacco use behavior of individuals seeking NCI’s smoking cessation assistance through the CC in order to provide smoking cessation services tailored to the individual client’s needs and track their smoking behavior at follow up. This is a request for OMB to approve a revised

submission for an additional three years to provide ongoing customer service collection of demographic information, and collection of brief customer satisfaction questions from NCI Contact Center Clients for the purpose of program planning and evaluation.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 1,875.

Estimated Annualized Burden Hours

TABLE A. 12–1—ESTIMATE OF ANNUAL BURDEN HOURS

Type of respondents	Survey instrument	Number of respondents	Frequency of responses	Average time per response (minutes/hour)	Annual burden hours
Telephone Clients (Appendix 1A)	Customer Service	31,562	1	1/60	526
	Demographic & Customer Satisfaction Questions.	13,100	1	2/60	437
Smoking Cessation Clients	Smoking Cessation “Intake” Questions (Appendix 1C).	3,380	1	6/60	338
	Customer Satisfaction Questions (Appendix 9).	676	1	2/60	23
VA Smoking Cessation Clients	Call Backs (Appendix 1D)	1,560	1	4/60	104
VA Follow Up Calls	Call Backs (Appendix 1E)	936	1	4/60	62
LiveHelp Clients	Demographic & Customer Satisfaction Questions (Appendix 1B).	6,236	1	2/60	208
Email Clients	Email Intake Form (Appendix 2)	1,002	1	10/60	167
Total	58,452	58,452	1,875

Dated: July 16, 2018.

Karla C. Bailey,

Project Clearance Liaison, National Cancer Institute, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Comments are invited on: (a) Whether the proposed collections of information

are necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Testing of Electronic Health Records Questions for the National Survey of Substance Abuse Treatment Services (N–SSATS) and the National Mental Health Services Survey (N–MHSS)—NEW

The Substance Abuse and Mental Health Services Administration (SAMHSA), Center for Behavioral Health Statistics and Quality (CBHSQ), is requesting approval for conducting cognitive testing on the use of electronic health records (EHRs) by substance abuse and mental health treatment facilities in the United States. The final goal of this cognitive testing is to incorporate questions on electronic health records to SAMHSA’s National

Survey of Substance Abuse Treatment Services (N–SSATS) and the National Mental Health Services Survey (N–MHSS).

Currently, there is a lack of national level data that exists on behavioral health care providers’ progress toward interoperability. The National Council for Behavioral Health in 2011/2012 conducted a survey to determine health information technology (IT) readiness. This data focused only on the membership of the National Council for Behavioral Health and does not provide national baseline data on the four domains of interoperability that are outlined in the Interoperability Roadmap (finding, sending, receiving and integrating data into EHRs) for behavioral health care providers. Currently, these providers are not eligible to participate in interoperability driving efforts such as the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) initiative. However, some behavioral health providers may be eligible in the future to participate in value-based payment initiatives such as the Merit-Based Incentive Payment System (MIPS). Measuring and reporting the state of interoperability will help to determine the type of support these providers need and their readiness to

participate in delivery system reform efforts in the future.

Collaboration between the Office of the National Coordinator for Health Information Technology (ONC) and SAMHSA on this data collection effort will provide an efficient manner to track trends in health IT adoption, use, and interoperability among behavioral health care providers. In addition, this collaboration will contribute to the development of strategic efforts to leverage health IT in behavioral health care settings to provide cost effective, high quality and patient-centered care. Results from this testing will allow ONC and SAMHSA to work together to quantitatively assess health IT adoption and interoperability among behavioral

health care providers using SAMHSA's current national surveys, the National Survey of Substance Abuse Treatment Services (N-SSATS) and the National Mental Health Services Survey (N-MHSS).

The information obtained from these efforts will be used to develop a new set of questions on the use and implementation of EHRs in behavioral health facilities for the N-SSATS and the N-MHSS surveys. Specifically, the information from the testing will be used to reduce respondent burden while simultaneously improving the quality of the data collected in these surveys.

Data from this testing will be collected mostly via telephone interviews, and few cases conducted

with in-person interviews. Results of this test will not be disseminated or used to inform policy, program, or budget decisions. Findings will be shared between ONC and SAMHSA staff to decide how the tested questions will be incorporated in the surveys.

It is estimated that the total burden for this project is 40 hours, based on a maximum of 80 interviews with an average of 30 minutes per interview.

The request for OMB seeks approval to conduct this testing of EHR questions during the Fall of 2018 for possible implementation starting in 2020.

The total estimated burden for this study is 39.2 hours for the period from September through December 2018.

Survey	Number of respondents	Responses per respondent	Total number of responses	Hours per response	Total burden hours
Interviews	80	1	80	.50	40

Send comments to Summer King, SAMHSA Reports Clearance Officer, 5600 Fishers Lane, Room 15E57-B, Rockville, MD 20857 OR email a copy at summer.king@samhsa.hhs.gov. Written comments should be received by September 25, 2018.

Summer King,
Statistician.

BILLING CODE 4162-20-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 concerning opportunity for public comment on proposed collections of information, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer at (240) 276-1243.

Comments are invited on: (a) Whether the proposed collections of information are necessary for the proper performance of the functions of the agency, including whether the

information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: National Survey of Substance Abuse Treatment Services (N-SSATS) (OMB No. 0930-0106)—Revision

The Substance Abuse and Mental Health Services Administration (SAMHSA) is requesting a revision of the National Survey of Substance Abuse Treatment (N-SSATS) data collection (OMB No. 0930-0106), which expires on December 31, 2018. N-SSATS provides both national and state-level data on the numbers and types of patients treated and the characteristics of facilities providing substance abuse treatment services. It is conducted under the authority of Section 505 of the Public Health Service Act (42 U.S.C. 290aa-4) to meet the specific mandates for annual information about public and private substance abuse treatment providers and the clients they serve.

This request includes:

- Collection of N-SSATS, which is an annual survey of substance abuse treatment facilities; and
- Updating of the Inventory of Behavioral Health Services (I-BHS) which is the facility universe for the N-SSATS as well as the annual survey of

mental health treatment facilities, the National Mental Health Services Survey (N-MHSS). The I-BHS includes all substance abuse treatment and mental health treatment facilities known to SAMHSA. (The N-MHSS data collection is covered under OMB No. 0930-0119.)

The information in I-BHS and N-SSATS is needed to assess the nature and extent of these resources, to identify gaps in services, and to provide a database for treatment referrals. Both I-BHS and N-SSATS are components of the Behavioral Health Services Information System (BHSIS).

The request for OMB approval will include a request to update the I-BHS facility listing on a continuous basis and to conduct the N-SSATS and the between cycle N-SSATS (N-SSATS BC) in 2019, 2020, and 2021. The N-SSATS BC is a procedure for collecting services data from newly identified facilities between main cycles of the survey and will be used to improve the listing of treatment facilities in the online Behavioral Health Treatment Services Locator.

Planned Changes

I-BHS: Only minor form changes corresponding with updated technology are planned.

N-SSATS: The N-SSATS with client counts will continue to be conducted in alternate years, as in the past, and the Treatment Locator will be updated monthly.

Version A (2019 and 2021)

The following items have been added compared to the 2017 N-SSATS:

Add questions about: Where clients obtain their medications for opioid use disorder if they originate elsewhere; how facilities treat alcohol use disorder; where clients obtain their medications for alcohol use disorder if they originate elsewhere; whether the facility only treats alcohol use disorder; detoxification from opioids of abuse with lofexidine or clonidine; the percent of clients on MAT for opioid use disorder that receive maintenance services, detoxification, and relapse prevention; testing for metabolic syndrome; drug and alcohol oral fluid testing; professional interventionist/educational consultant; recovery coach; vocational training or educational support; Naloxone and overdose education; “Outcome follow-up after discharge” which was moved from another question; medications for HIV treatment; medications for Hepatitis C treatment; the medications lofexidine and clonidine; Hepatitis A and B vaccinations; Buprenorphine (*extended-release, injectable, for example, Sublocade®*); clients with co-occurring pain and substance use; Federally Qualified Health Centers (FQHC); Disulfiram, Naltrexone, or Acamprosate for alcohol use disorder for outpatient, inpatient, and residential. Also, response categories were added to select that services are not provided, and for medication services provided, an “other” category was added.

The following items have been deleted compared to the 2017 N-SSATS: Questions about religious affiliation, standard operating procedures, outpatient capacity, how (paper/electronic/both) a facility performs selected activities, and the item asking about Access To Recovery (ATR) client payments have been deleted.

The following additional changes have been made compared to the 2017 N-SSATS: Removed the asterisk from

the question about primary focus of facilities, which means the information will no longer be published on the N-SSATS treatment locator; reorganized the question about services offered; moved the question on types of counseling to the question about services offered; changed the wording from Screening for Hepatitis B and C to Testing for Hepatitis B and C; changed “Screening for mental health disorders” to “Screening for mental disorders”; changed the question about clinical/therapeutic approaches to a “mark all that apply” format; changed the wording from “Computerized substance abuse treatment/telemedicine” to “Telemedicine/telehealth”; changed the question wording about the number of outpatient clients so it states, “As of March 29, 2019, how many active clients were receiving each of the following outpatient substance abuse services at this facility?” and changed the instructions to state “An active client is a client who received treatment in March and is still enrolled in treatment on March 29, 2019.”; and changed the question about halfway houses so it states, “Does this facility operate transitional housing, a halfway house, or a sober home for substance abuse clients at this location, that is, the location listed on the front cover?”

For the question about how facilities treat opioid use disorder, information was added about the question that states, “For this question, MAT refers to any or all of these medications unless specified.” Also, category 5 was reworded to say “This facility administers naltrexone to treat opioid use disorder. Naltrexone use is authorized through any medical staff who have prescribing privileges.” In addition, a category was added, “This facility prescribes buprenorphine to treat opioid use disorder. Buprenorphine use is authorized through a DATA 2000 waived physician, physician assistant, or nurse practitioner.” Finally, for the last option, the wording was changed to “This facility is a *federally-certified*

Opioid Treatment Program (OTP). (Most OTPs administer/dispense methadone; some only use buprenorphine.)”

Version B (2020)

All changes to the 2019 N-SSATS were made for the 2020 N-SSATS except: Add the question asking if a facility is part of an organization with multiple facilities or sites, and if applicable, the question asking information about the parent site; remove the question about the percent of clients on MAT for opioid use disorder that receive maintenance services, detoxification, and relapse prevention; All of Section B (Reporting Client Counts) has been deleted which includes: How the facility will complete client counts; number of facilities in client counts; names and addresses of additional facilities reported for; number of hospital inpatient client counts by category, by number under age 18, number receiving methadone, buprenorphine, or naltrexone, and number of dedicated beds; number of residential client counts by category, by number under age 18, and number receiving methadone, buprenorphine, or naltrexone, and number of dedicated beds; number of outpatient client counts by category, by number under age 18, and number receiving methadone, buprenorphine, or naltrexone; type of substance abuse problem, percent of co-occurring clients; and 12-month admissions; remove questions about how many hospital inpatients, residential clients, and outpatient clients received Disulfiram, Naltrexone, and Acamprosate for alcohol use disorder; and add several new electronic health record questions.

N-SSATS (Between Cycles—BC)

The same changes to the 2020 N-SSATS (Version B) are requested for the N-SSATS BC except the electronic health record questions will not be added.

Estimated annual burden for the BHSIS activities is shown below:

Type of respondent and activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
STATES:					
I-BHS Online ¹	56	75	4,200	0.08	336
State Subtotal	56	4,200	336
FACILITIES:					
I-BHS application ²	800	1	800	0.08	64
Augmentation screener	1,300	1	1,300	0.08	104
N-SSATS questionnaire	17,000	1	17,000	0.66	11,333
N-SSATS BC	1,000	1	1,000	0.58	580
Facility Subtotal	20,100	20,100	12,081

Type of respondent and activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Total	20,156	24,300	12,417

¹ States use the I-BHS Online system to submit information on newly licensed/approved facilities and on changes in facility name, address, status, etc.

² New facilities complete and submit the online I-BHS application form in order to get listed on the Inventory.

Send comments to Summer King, SAMHSA Reports Clearance Officer, 5600 Fisher Lane, Room 15E57B, Rockville, MD 20852 OR email a copy at summer.king@samhsa.hhs.gov. Written comments should be received by September 25, 2018.

Summer King,
Statistician.

BILLING CODE 4162-20-P

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Notice of Amendments to the Program Comment for the U.S. General Services Administration on Select Envelope and Infrastructure Repairs and Upgrades to Historic Public Buildings

AGENCY: Advisory Council on Historic Preservation.

ACTION: Notice.

SUMMARY: The Advisory Council on Historic Preservation (ACHP) has approved amendments to the Program Comment for the U.S. General Services Administration (GSA) that sets forth the way in which GSA complies with Section 106 of the National Historic Preservation Act for select repairs and upgrades to windows, lighting, roofing, and heating, ventilating, and air conditioning (HVAC) systems within historic public buildings. The amendments extend the life of the Program Comment through August 1, 2033, and update its reporting requirements.

DATES: The amendments took effect on July 27, 2018.

ADDRESSES: Address any questions concerning the amendments to Kirsten Kulis, Office of Federal Agency Programs, Advisory Council on Historic Preservation, 401 F Street NW, Suite 308, Washington, DC 20001.

FOR FURTHER INFORMATION CONTACT: Kirsten Kulis, (202) 517-0217, kkulis@achp.gov.

SUPPLEMENTARY INFORMATION: Section 106 of the National Historic Preservation Act requires federal agencies to consider the effects of their undertakings on historic properties and

to provide the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment with regard to such undertakings. The ACHP has issued the regulations that set forth the process through which Federal agencies comply with these duties. Those regulations are codified under 36 CFR part 800 (Section 106 regulations).

Under Section 800.14(e) of those regulations, agencies can request the ACHP to provide a “Program Comment” on a particular category of undertakings in lieu of conducting individual reviews of each individual undertaking under such category, as set forth in 36 CFR 800.4 through 800.7. An agency can meet its Section 106 responsibilities with regard to the effects of particular aspects of those undertakings by taking into account an applicable Program Comment and following the steps set forth in that comment.

On August 7, 2009, the ACHP issued such a Program Comment, for use by the General Services Administration (GSA), regarding repairs and upgrades to windows, lighting, roofing, and heating, ventilating, and air conditioning. Under the Program Comment, such repairs are undertaken using GSA’s Technical Preservation Guidelines (<https://www.gsa.gov/node/80914>), and are limited to those that do not adversely affect the qualities that qualify a subject historic building for listing in the National Register of Historic Places.

That Program Comment was set to expire on August 1, 2018. Earlier this year, GSA requested the ACHP to extend its term for fifteen (15) years, until August 1, 2033, and to de-couple its reporting requirements from those that occur under Section 3 of Executive Order 13287.

In late May 2018, after GSA requested consideration of such amendments, the ACHP held a conference call with the National Conference of State Historic Preservation Officers and the National Park Service (Technical Preservation Services). In late June 2018, ACHP emailed its members and other stakeholders requesting comments. Perhaps given the limited nature of the Program Comment itself and the straightforwardness of the proposed amendments, ACHP did not receive any substantive comments. The non-

substantive comments received were incorporated and are reflected in final amended version (see below).

The ACHP membership voted unanimously to adopt the mentioned amendments on July 20, 2018.

What follows is the text of the Program Comment, incorporating the adopted amendments:

Program Comment for General Services Administration Repairs and Upgrades to Windows, Lighting, Roofing, and Heating, Ventilating, and Air-Conditioning (HVAC), as Amended

I. Establishment and Authority: This Program Comment was issued by the Advisory Council on Historic Preservation (ACHP) as “Program Comment for General Services Administration Repairs and Upgrades to Windows, Lighting, Roofing, and Heating, Ventilating, and Air-Conditioning (HVAC)” on August 7, 2009, pursuant to 36 CFR 800.14(e). It provides the General Services Administration (GSA) with an alternative way to comply with its responsibilities under Section 106 of the National Historic Preservation Act, 54 U.S.C. 306108, and its implementing regulations, 36 CFR part 800 (Section 106), with regard to the effects of repairs and upgrades to windows, lighting, roofing, and heating, ventilating and air conditioning (HVAC) systems (Repairs/Upgrades) that follow the appended GSA Technical Preservation Guidelines (Guidelines). The appended Guidelines have been reviewed by the National Park Service, which confirms that they are in keeping with the Secretary of the Interior’s Standards on Rehabilitation. This Program Comment was amended in July 2018 to, among other things, extend its duration to August 1, 2033.

II. Applicability to General Services Administration: Only GSA may use this Program Comment.

III. Date of Effect: This Program Comment went into effect on August 7, 2009 and was amended in July 2018.

IV. Use of This Program Comment To Comply With Section 106 Regarding the Effects of the Repairs and Upgrades:

(1) GSA may comply with Section 106 regarding the effects of Repairs/Upgrades on historic properties by:

(i) Making a determination that the proposed Repair/Upgrade may not adversely affect a historic property;

(ii) Notifying the relevant State Historic Preservation Officer (SHPO), through use of the notice form appended to this Program Comment that it intends to carry out a Repair/Upgrade:

(a) If, within 10 business days from receipt of the notification, the SHPO objects to the use of this Program Comment for the proposed Repair/Upgrade, GSA may not use the Program Comment for the proposed Repair/Upgrade. GSA will then comply with Section 106 for the proposed Repair/Upgrade in accordance with 36 CFR §§ 800.3 through 800.7 or any applicable alternative per 36 CFR 800.14.

(b) If the SHPO agrees with the proposed Repair/Upgrade, or does not object within 10 business days from receipt of the notification, GSA may proceed with the proposed Repair/Upgrade in accordance with this Program Comment;

(iii) Conducting such Repair/Upgrade as provided by the relevant Guidelines appended to this document;

(iv) Ensuring that all work on the Repair/Upgrade is designed by an architect and supervised and approved by a preservation professional, both of whom meet the relevant standards outlined in the Secretary of the Interior's Professional Qualification Standards, pursuant to 36 CFR part 61. In addition, the qualified supervisor will ensure construction phase preservation competency and quality control measures are implemented; and

(v) Keeping a record, at the relevant GSA office, detailing each use of this Program Comment for no less than five years from the final date of the implementation. Each record must include the following information:

(a) A description of the implementation of the Program Comment (including the specific location of the work);

(b) The date(s) when the Program Comment was implemented;

(c) The name(s) of the qualified personnel that carried out and/or supervised the use of the Program Comment; and

(d) A summary of the implementation, indicating how the Repair/Upgrade was carried out, any problems that arose, and the final outcome. GSA must provide copies of these records, within a reasonable timeframe, when requested by the ACHP or the relevant SHPO.

V. Discoveries: If previously unknown features are discovered while work under this Program Comment is being implemented (e.g., a mural behind plaster), GSA will notify SHPO of the

discovery and provide SHPO an opportunity to object to the use of this Program Comment, per Stipulation IV(l)(ii), above.

VI. Program Comment Does Not Cover Undertakings Involving Activities Beyond the Specific Repairs/Upgrades: The Repairs/Upgrades within the scope of this Program Comment will be discrete undertakings that do not include activities beyond the Repairs/Upgrades themselves. Among other things, the Repairs/Upgrades themselves will not include earth disturbing activities, new construction, site acquisition, change of occupancy or use, or alteration of exteriors or significant interior spaces.

VII. Process for Adding or Updating Repairs/Upgrades and Guidelines: While this Program Comment, as originally adopted, was limited to repairs and upgrades to historic building windows, lighting, roofing, and heating, ventilating and air conditioning (HVAC) systems undertaken in accordance with GSA Guidelines (Appendix B), more Repairs/Upgrades (and their relevant Guidelines) may be added to it. Moreover, Guidelines already included in the Program Comment may eventually need updating. Accordingly, Repairs/Upgrades and their Guidelines may be added to this Program Comment, or updated, as follows: (1) GSA will notify the ACHP, the National Conference of State Historic Preservation Officers (NCSHPO), and the Department of the Interior (DOI) (collectively, parties) that it wants to add an Upgrade/Guideline, or to update a Guideline that is already a part of the Program Comment. Such a notification will include a draft of the proposal. (2) The parties will consult on the proposal; and (3) If a final version of the proposal is approved by the ACHP Executive Director, the ACHP will publish a notice of availability of the approved addition or update in the **Federal Register**. The addition or update will go into effect as part of this Program Comment upon such publication.

VIII. Process for Removing a Repair/Upgrade and Its Guideline: After consulting with the parties, the ACHP may remove a Repair/Upgrade and its Guideline from the scope of this Program Comment by publishing a **Federal Register** notice to that effect. The Program Comment will continue to operate with the other Repairs/Upgrades and their Guidelines that have not been removed.

IX. GSA Option To Use Applicable Section 106 Agreements: If an existing Section 106 agreement applies to a proposed Repair/Upgrade, GSA may

follow either that existing agreement or this Program Comment.

X. Latest Version of the Program Comment: GSA and/or the ACHP will include the most current version of the Program Comment (with the latest amendments and updates) in a publicly accessible website. The latest Web address for that site will be included in each of the **Federal Register** notices for amending, removing or updating the Program Comment. This document and its 41 appended form and guidelines will initially be available at www.achp.gov and www.gsa.gov/historicpreservation.

XI. Reports: GSA will include in its reports under Section 3 of Executive Order 13287, or as separate reports submitted to the parties via electronic mail on or before the Section 3 reporting deadline, a summary of its experience implementing this Program Comment, how often and where the Program Comment has been utilized, examples of successful implementation, and examples of failures or problems with implementation.

XII. Amendment: The ACHP may amend this Program Comment (other than the appended Guidelines themselves, which are added, updated or removed according to Stipulations VII and VIII, above) after consulting with the parties and publishing a **Federal Register** notice to that effect.

XIII. Termination: The ACHP may terminate this Program Comment by publication of a notice in the **Federal Register** 30 days before the termination takes effect.

XIV. Sunset Clause: This Program Comment will terminate on its own accord on August 1, 2033, unless it is amended before that date to extend that period.

XV. Historic Properties of Significance to Indian Tribes and Native Hawaiian Organizations: This Program Comment does not apply in connection with effects to historic properties that are located on tribal lands and/or that are of religious and cultural significance to Indian tribes or Native Hawaiian organizations.

XVI. Definitions: The definitions found at 36 CFR part 800 apply to the terms used in this Program Comment.

XVII. Notification Form and GSA Technical Preservation Guidance Appendices:

Appendix A—GSA Program Comment Notification Form

GSA PROGRAM COMMENT NOTIFICATION FORM

I. General

Building name(s):

Address (city, state):
 Project title:
 Qualified Preservation Professional preparing report:
 Date:
 (Note: Qualified professionals must meet the relevant standards outlined in the Secretary of the Interior's Professional Qualification Standards, pursuant to 36 CFR part 61.)

Location of work in the building:
 Project team (A/E Firm, Preservation Consultant, GSA Project Officer, Building Manager, and GSA Regional Historic Preservation Officer or Historic Preservation Program Staff Reviewer):

II. Scope and Purpose of Project (Bullets Are Acceptable)

III. Locations and Materials Affected (Check All That Apply)

Preservation Zones Affected (See Building Preservation Plan, Contact RHPO for Assistance.)

- Restoration
- Rehabilitation
- Renovation

Where does the project affect the historic property?

- Exterior
- Interior
- Lobbies/Vestibules
- Corridors
- Stairwells
- Elevators
- Restrooms
- Courtrooms
- Executive Suites
- General Office Space
- Other (specify)

What materials are affected by the project?

- Stone
- Brick
- Architectural Concrete
- Historic Roofing
- Bronze
- Architectural Metals (specify)
- Woodwork
- Ornamental Plaster
- Other (specify)

What assemblies are affected by the project?

- Windows and Skylights
- Doors
- Lighting
- Other (specify)

IV. Preservation Design Issues

List solutions explored, how resolved and why, such as (not inclusive):

- Locating new work/installation: Visibility, protection of ornamental finishes, cost concerns
- Design of new work/installation: Compatibility with existing original materials, research on original design (if original materials non-extant), materials/finishes chosen
- Method of supporting new work/installation
- Preservation and protection of historic materials

V. Graphics

Include the following:

- Site or floor plan showing work location(s)

- Captioned photographs of existing site conditions in affected restoration zone locations
- Reduced project drawings, catalogue cut sheets or photographs showing solutions

VI. Confirmation

The undersigned hereby confirms and represents to the best of his or her knowledge and belief, the following as of this date: (1) The information in this form is correct; (2) GSA has determined that the proposed work will not adversely affect a historic property; (3) this project approach is consistent with the relevant GSA Technical Preservation Guidelines; (4) the design team includes a qualified preservation architect, engineer or conservator; (5) the design addresses construction phase preservation competency and quality control; and (6) this form will be submitted to the relevant SHPO for its review and opportunity for objection in a timely manner.

BILLING CODE 4310-K6-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651–0110]

Agency Information Collection Activities: Visa Waiver Program Carrier Agreement

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 60-Day notice and request for comments; extension of an existing collection of information.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The

information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and will be accepted no later than September 25, 2018 to be assured of consideration.

ADDRESSES: Written comments and/or suggestions regarding the item(s) contained in this notice must include the OMB Control Number 1651–0110 in the subject line and the agency name. To avoid duplicate submissions, please use only *one* of the following methods to submit comments:

(1) *Email.* Submit comments to: CBP_PRA@cbp.dhs.gov.

(2) *Mail.* Submit written comments to CBP Paperwork Reduction Act Officer, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, Economic Impact Analysis Branch, 90 K Street NE, 10th Floor, Washington, DC 20229–1177.

FOR FURTHER INFORMATION CONTACT:

Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, Telephone number (202) 325–0056 or via email CBP_PRA@cbp.dhs.gov. Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at <https://www.cbp.gov/>.

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of

information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: Visa Waiver Program Carrier Agreement.

OMB Number: 1651–0110.

Form Number: CBP Form I–775.

Current Actions: This submission is being made to extend the expiration date with a decrease in burden hours due to updated agency estimates on respondents. There is no change to information collected or to CBP Form I–775.

Type of Review: Extension (without change).

Abstract: Section 223 of the Immigration and Nationality Act (INA) (8 U.S.C. 1223(a)) provides for the necessity of a transportation contract. The statute provides that the Attorney General may enter into contracts with transportation lines for the inspection and administration of aliens coming into the United States from a foreign territory or from adjacent islands. No such transportation line shall be allowed to land any such alien in the United States until and unless it has entered into any such contracts which may be required by the Attorney General. Pursuant to the Homeland Security Act of 2002, this authority was transferred to the Secretary of Homeland Security.

The Visa Waiver Program Carrier Agreement (CBP Form I–775) is used by carriers to request acceptance by CBP into the Visa Waiver Program (VWP). This form is an agreement whereby carriers agree to the terms of the VWP as delineated in Section 217(e) of the INA (8 U.S.C. 1187(e)). Once participation is granted, CBP Form I–775 serves to hold carriers liable for the transportation costs, to ensure the completion of required forms, and to share passenger data. Regulations are promulgated at 8 CFR part 217.6, Carrier Agreements. A copy of CBP Form I–775 is accessible at: <http://www.cbp.gov/newsroom/publications/forms?title=775>.

Affected Public: Businesses.

Estimated Number of Respondents: 98.

Estimated Number of Total Annual Responses: 98.

Estimated Time per Response: 30 minutes.

Estimated Total Annual Burden Hours: 49.

Dated: July 24, 2018.

Seth D Renkema,

Branch Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection.

[FR Doc. 2018–16063 Filed 7–26–18; 8:45 am]

BILLING CODE 9111–14–P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

Intent To Request Approval From OMB of One New Public Collection of Information: Law Enforcement Officers (LEOs) Flying Armed

AGENCY: Transportation Security Administration, DHS.

ACTION: 60-Day notice.

SUMMARY: The Transportation Security Administration (TSA) invites public comment on a new Information Collection Request (ICR) abstracted below that we will submit to the Office of Management and Budget (OMB) for approval in compliance with the Paperwork Reduction Act (PRA). The ICR describes the nature of the information collection and its expected burden. The collection involves gathering information from state, local and tribal armed law enforcement officers (LEOs) who require specialized screening at the checkpoint.

DATES: Send your comments by September 25, 2018.

ADDRESSES: Comments may be emailed to TSAPRA@tsa.dhs.gov or delivered to the TSA PRA Officer, Information Technology (IT), TSA–11, Transportation Security Administration, 601 South 12th Street, Arlington, VA 20598–6011.

FOR FURTHER INFORMATION CONTACT: Christina A. Walsh at the above address, or by telephone (571) 227–2062.

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation will be available at <http://www.reginfo.gov> upon its submission to OMB. Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Consistent with the requirements of Executive Order (E.O.) 13771, Reducing Regulation and Controlling Regulatory Costs, and E.O. 13777, Enforcing the Regulatory Reform Agenda, TSA is also requesting comments on the extent to which this request for information could be modified to reduce the burden on respondents.

Information Collection Requirement

TSA has broad statutory authority to assess a security risk for any mode of transportation, develop security measures for dealing with that risk, and enforce compliance with those measures.¹

TSA's mission includes the screening of individuals, accessible property, checked baggage, and cargo before boarding or loading on an aircraft to prevent or deter the carriage of any explosive, incendiary, or deadly or dangerous weapon on an aircraft. Under 49 CFR 1540.107, individuals are required to submit to screening and inspection before entering a sterile area of an airport or boarding an aircraft. The prohibition on carrying a weapon, however, does not apply to LEOs required to carry a firearm or other weapons while in the performance of law enforcement duties at the airport. See 49 CFR 1540.111(b). In addition, LEOs may fly armed if they meet the requirements of 49 CFR 1544.219. This section includes requirements for authorization to carry the weapon; training for flying armed; validation of the need for the weapon; notification requirements; prohibition related to consuming alcohol, and appropriation location of the weapon.

TSA has established a specialized screening process for State, local, and tribal LEOs when they are flying armed and need to go through screening at the checkpoint. When this situation will occur, LEOs are required to complete

¹ See 49 U.S.C. 114.

TSA Form 413A, Checkpoint Sign-In Log.

Purpose and Description of Data Collection

The information collected on TSA Form 413A includes identifying information on the LEOs; an affirmation that they are authorized to fly armed on official business and that they have an operational need to have their weapon accessible during the flight in accordance with 49 CFR part 1544; and identification of weapons they are carrying.

The information required by this form is used by the TSA Security Operations Center and the Law Enforcement/Federal Air Marshals Service in order to have situational awareness of armed law enforcement officer(s) presence on flights conducted by 49 CFR parts 1544 and/or 1546 regulated parties (aircraft operators and foreign air carriers). This real-time situational awareness is necessary in the event of a contingency on board the aircraft; such as but not limited to, a disruptive passenger, air piracy, or other threat to the safety and security of a commercial aircraft.

Respondents to this collection are State, local, and tribal police officers travelling with their weapons. TSA uses historical data to estimate 68,000 average annual responses. Each check-in requires filling out a log book and TSA estimates this activity requires one minute (0.0167 hours) to complete. TSA estimates this collection will place an annual average hour burden of 1,133 hours on the public.

Use of Results

TSA will use the information to have situational awareness of the presence of armed LEOs on flights conducted by 49 CFR parts 1544 and/or 1546 regulated parties (aircraft operators and foreign air carriers).

Dated: July 23, 2018.

Christina A. Walsh,

*TSA Paperwork Reduction Act Officer,
Information Technology.*

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Availability for the Final Environmental Impact Statement for the Proposed Gold Rock Mine Project, White Pine County, Nevada.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) Bristlecone Field Office, Ely, Nevada, has prepared a Final Environmental Impact Statement (EIS) for the Gold Rock Mine Project (Project), White Pine County, Nevada, and by this notice is announcing its availability.

DATES: The BLM will not issue a final decision on the proposal for a minimum of 30 days after the date that the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**.

ADDRESSES: Copies of the Final EIS for the Gold Rock Mine Project and other documents pertinent to this proposal may be examined at the Bristlecone Field Office: 702 North Industrial Way, Ely, Nevada. The document is available for download on the internet at: <http://on.doi.gov/1zAxyW9>.

FOR FURTHER INFORMATION CONTACT: Maria Ryan, Project Manager, (775) 289-1888; mmryan@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The Gold Rock Mine Project would involve construction and operation of an open-pit gold mine on public land in White Pine County, Nevada. Midway Gold U.S. was the original proponent. GRP Gold Rock, LLC Inc. (GRP) purchased the project in 2016. The project would involve expansion of an existing open pit and construction of two waste rock disposal areas, heap leaching facilities with an adsorption/desorption refining

plant, a carbon-in-leach plant, a tailings storage facility, roads, ancillary support facilities, and exploration areas. A 69kV power line would be built and tied into an existing power line with the Pan Mine located north of the project area. Water with which GRP has rights would be supplied via an existing well located on BLM-administered lands south of the main Project footprint. Construction and mining operations would occur within the fenced 8,757 acres and would disturb 3,946 acres. The proposed action also includes 200 acres of exploration disturbance in addition to the 267 acres of previously authorized exploration outside the fenced area.

The Final EIS describes and analyzes the proposed project site-specific impacts (including cumulative effects) on all affected resources. The Final EIS describes eight alternatives: (1) The Proposed Action; (2) the Northern Power Line Route Alternative; (3) the Southern Power Line Route Alternative; (4) the Northwest Main Access Route Alternative, Northern Power Line Route; (5) the Northwest Main Access Route Alternative, Southern Power Line Route; (6) the Modified County Road Re-Route Alternative; (7) the Western Tailings Storage Facility Alternative; and (8) the No Action Alternative.

1. Proposed Action

The proposed Project would be constructed and operated in the same geographic area as the reclaimed and closed Easy Junior Mine. The proposed Project consists of an open pit, two waste rock disposal areas, a heap leach pad and processing ponds, a carbon-in-leach plant, a tailings storage facility, haul and access roads, growth medium stockpiles, ancillary support facilities, and exploration associated with mining operation. Also under the Proposed Action, a 69-kV transmission line would extend south from the Pan Mine, east of and parallel to the approved Pan Mine Southwest Power Line, then extend southeast to the mine area. The site would be accessed using the existing main access route from US 50 on Green Springs Road (CR 5), then west on BLM Road 1179 (BLM 1179)/CR 1204, then south on Easy Junior Road (CR 1177) to the proposed mine area. Also under the Proposed Action, a county road that currently passes through the Gold Rock Mine Project area would be re-located onto existing and new BLM and county roads. Total disturbance in the project area would be approximately 3,946 acres.

2. Northern Power Line Route Alternative

The Northern Power Line Route Alternative was developed to minimize potential impacts to Greater sage-grouse and its habitat due to surface disturbance and from raptors using the power line between the Pan Mine and the Project as a perch to hunt for prey. This power line route would be shorter than the Proposed Action power line route. Fewer acres of Greater sage-grouse Priority Habitat Management Area (PHMA) and General Habitat Management Area (GHMA) would be disturbed and fewer acres of PHMA and GHMA would be located within 600 meters of the power line, as compared to the Proposed Action.

3. Southern Power Line Route Alternative

The Southern Power Line Route Alternative also was developed to minimize potential impacts to Greater sage-grouse and its habitat due to surface disturbance and from raptors using the power line as a perch to hunt for prey. This power line route would be shorter than Proposed Action power line route or the Northern Power Line Route Alternative. Fewer acres of PHMA and GHMA would be disturbed and fewer acres of PHMA and GHMA would be located within 600 meters of the power line, as compared to the Proposed Action power line or Northern Power Line Route Alternative.

4. Northwest Main Access Route Alternative, Northern Power Line Route

The Northwest Main Access Route Alternative, Northern Power Line Route was developed to address concerns about potential noise impacts to Greater sage-grouse. It would include the benefits of the Northern Power Line Route Alternative, and would move most mine-related traffic away from known active Greater sage-grouse leks. This alternative would also contribute to fewer potential vehicular collisions with big game due to its distance away from a known migration route for the Ruby Mountain mule deer herd.

5. Northwest Main Access Route Alternative, Southern Power Line Route

The Northwest Main Access Route Alternative, Southern Power Line Route was developed to address concerns about potential noise impacts to Greater sage-grouse. It would include the benefits of the Southern Power Line Route Alternative and would move most mine-related traffic away from known active Greater sage-grouse leks. This alternative would also contribute to fewer vehicular collisions with big game

due to its distance away from a known migration route for the Ruby Mountain mule deer herd.

6. Modified County Road Re-Route Alternative

The Modified County Road Re-route Alternative was developed to lessen impacts to GHMA. This alternative would involve use of existing roads rather than construction of a segment of new road in Greater sage-grouse habitat.

7. Western Tailings Storage Facility Alternative

The Western Tailings Storage Facility Alternative was developed to address concerns about potential surface disturbance impacts to PHMA and loss of mule deer crucial winter range. Under this alternative, the tailings storage facility would be located to the west of the heap leach pile, outside of mule deer crucial winter range. The mine area's eastern fence line would be shifted to the west to minimize restriction of movement for Ruby mule deer herd in their crucial winter range.

8. No Action Alternative

The No Action Alternative would not include any activities associated with the Proposed Action. Mineral resources in these areas of expansion would remain undeveloped. The construction and operation of the open pit, waste rock disposal areas, heap leach facilities, mill, tailings storage facility, and support facilities would not occur as currently proposed under the Proposed Action. The county road would not be re-routed. The exploration activities previously authorized under NVN-90376 for the project would continue, however. NEPA requires analysis of the No Action Alternative.

The BLM's Preferred Alternative is a combination of the Northwest Main Access Route Alternative, Southern Power Line Route (Alternative 5); the Modified County Road Re-route Alternative (Alternative 6); and the Western Tailings Storage Facility Alternative (Alternative 7). This Preferred Alternative would involve construction and operation of a shorter power line route than the Proposed Action by following the Southern Power Line Route. This power line would minimize surface disturbance impacts to PHMA and GHMA, as well as minimize potential raven and raptor predation of Greater sage-grouse. Total acres of surface disturbance in the Preferred Alternative are PHMA 1,872; GHMA 1,641.

In addition, the Preferred Alternative would use the Northwest Main Access Route, which would be located farther

from known active leks than the Proposed Action, minimizing potential noise impacts to Greater sage-grouse. This route could contribute to fewer vehicular collisions with big game due to its distance from a known migration route for Area 10 mule deer. The Preferred Alternative would use existing roads for the county road re-route as presented under the Modified County Road Re-route, minimizing new ground disturbance and impacts to GHMA.

The Preferred Alternative would incorporate the Western Tailings Storage Facility Alternative by shifting the tailings storage facility and related mine facility locations westward which would minimize surface disturbance in PHMA and mule deer crucial winter range and also would slightly increase the surface disturbance in GHMA.

The BLM identified action alternatives that would minimize impacts to the Greater sage-grouse, as well as mitigation measures to further avoid or minimize direct and indirect impacts PHMA and GHMA. In addition, the proponent committed to effective environmental protection measures, including mitigation measures to offset residual (long-term un-reclaimed) direct surface disturbance.

The BLM prepared the Draft EIS in conjunction with its four cooperating agencies: The Duckwater Shoshone Tribe of the Duckwater Reservation, Nevada; White Pine County Board of County Commissioners; Eureka County Board of Commissioners; and the Nevada Department of Wildlife (NDOW). After issuance of the Draft EIS, in accordance with a *Memorandum of Understanding between the BLM Nevada State Office and California State Office, and the Nevada Department of Conservation and Natural Resources, and the USFS Humboldt-Toiyabe National Forest* completed on April 1, 2016, the BLM added the Nevada Department of Conservation and Natural Resources Sagebrush Ecosystem Technical Team (SETT) as a fifth cooperating agency.

The BLM prepared and published a notice in the *Ely Times*, the *Eureka Sentinel*, the *High Desert Advocate*, and the *Reno Gazette-Journal* informing the public of the availability of the Draft EIS for review. The public was invited to provide written comments on the Draft EIS during the 45-day comment period. The BLM conducted public meetings in Ely, Eureka, and Reno during the review period for the Draft EIS.

A total of 26 individual comment submittals containing 253 discrete comments were received from the cooperating agencies, the public, the U.S. Environmental Protection Agency

(EPA), and the internal BLM review. The BLM considered all comments and incorporated them, as appropriate, into the FEIS. Those who submitted comments on the Draft EIS expressed concerns about the handling of leach solution and potentially acid-generating waste rock, and potential impacts to groundwater quality; loss of mule deer crucial winter range; potential impacts to Greater sage-grouse and their habitat; potential indirect impacts to the Railroad Valley springfish; loss of access to livestock grazing lands, including herding routes; long-term impacts to forage resource health in areas impacted by the proposed project; increased public accessibility to the area and impacts on private property; potential impacts on wild horses; potential impacts on Traditional Cultural Properties; socioeconomic impacts to the communities of Ely and Eureka, and to White Pine and Eureka counties; and particulate matter emissions and impacts to air quality. There were also comments received in general support for the mine. These public comments resulted in the addition of clarifying text, but did not significantly change the analysis. The proponent submitted a plan of operations for the Project in March 2013, and the BLM and EPA published notices of the availability of the Draft EIS in the **Federal Register** in February 2015. There have been several delays to completion of this Final EIS since 2013 due to sale of the mine, issuance of the Nevada and Northeast California Greater Sage-Grouse Land Use Plan Amendment (2015), and requests by the proponent to further address air quality concerns in 2016. The BLM has maintained on-going coordination and consultation with the Duckwater Shoshone Tribe. Both the BLM and GRP have committed to ongoing coordination through the life of the mine and have a Programmatic Agreement in place with the Nevada State Historic Preservation Office to address issues that arise.

Following a 30-day Final EIS availability and review period, the BLM will issue a Record of Decision (ROD). The decision reached in the ROD will be subject to appeal to the Interior Board of Land Appeals. The 30-day appeal period will begin with the issuance of the ROD.

Authority: 40 CFR 1506.6 and 40 CFR 1506.10.

Mindy Seal,

Field Manager, Bristlecone Field Office.

Filing of Plats of Survey: Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of official filing.

SUMMARY: The plats of survey of lands described in this notice are scheduled to be officially filed in the Bureau of Land Management (BLM), Alaska State Office, Anchorage, Alaska. The surveys, which were executed at the request of the U.S. Coast Guard, the Bureau of Indian Affairs and BLM, are necessary for the management of these lands.

DATES: Protests must be received by the BLM by August 27, 2018.

ADDRESSES: A copy of the plats may be obtained from the Alaska Public Information Center at the BLM Alaska State Office, 222 W 7th Avenue, Anchorage, Alaska 99513, upon required payment. The plats may be viewed at this location at no cost. Please use this address when filing written protests.

FOR FURTHER INFORMATION CONTACT:

Douglas N. Haywood, Chief, Branch of Cadastral Survey, Bureau of Land Management, Alaska State Office, 222 W. 7th Avenue, Anchorage, Alaska 99513; 1-907-271-5481; dhaywood@blm.gov. Persons who use a telecommunications device for the deaf may call the Federal Relay Service (FRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The lands surveyed are:

U.S. Survey No. 4901, accepted May 14, 2018.

Copper River Meridian, Alaska

A person or party who wishes to protest one or more plats of survey identified above must file a written notice of protest with the State Director for Alaska, BLM. The notice of protest must identify the plat(s) of survey that the person or party wishes to protest. The notice of protest must be filed before the scheduled date of official filing for the plat(s) of survey being protested. Any notice of protest filed after the scheduled date of official filing will not be considered. A notice of protest is considered filed on the date it is received by the State Director for Alaska during regular business hours; if received after regular business hours, a notice of protest will be considered filed the next business day. A written statement of reasons in support of a protest, if not filed with the notice of protest, must be filed with the State Director for Alaska within 30 calendar days after the notice of protest is filed. If a notice of protest against a plat of survey is received prior to the scheduled date of official filing, the official filing of the plat of survey identified in the notice of protest will be stayed pending consideration of the protest. A plat of survey will not be officially filed until the dismissal or resolution of all protests of the plat.

Before including your address, phone number, email address, or other personal identifying information in a notice of protest or statement of reasons, you should be aware that the documents you submit, including your personal identifying information, may be made publicly available in their entirety at any time. While you can ask us to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 43 U.S.C. Chap. 3.

Douglas N. Haywood,

Chief Cadastral Surveyor, Alaska.

BILLING CODE 4310-HC-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Clean Water Act

On July 24, 2018, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the Southern District of West Virginia in the lawsuit entitled *United States and West Virginia v. CSX Transportation, Inc.*, Civil Action No. 2:18-cv-01175.

The Complaint alleges that Defendant CSX Transportation, Inc., violated the Clean Water Act, the West Virginia Water Pollution Control Act, and the West Virginia Groundwater Protection Act by discharging oil into Armstrong Creek and the Kanawha River after Defendant's train derailed in February 2015 near Mount Carbon, West Virginia. The Consent Decree resolves the alleged violations through a settlement package with two components. First, the Consent Decree requires Defendant to pay a total civil penalty of \$2.2 million: \$1.2 million to resolve the United States' claims, and \$1 million to resolve West Virginia's claims. Second, Defendant must participate in a State supplemental environmental project ("State SEP") to settle West Virginia's claims only. The State SEP requires Defendant to pay \$500,000 into a State-created and State-owned escrow account that the State will use to fund upgrades to the Kanawha Falls Public Service District water treatment facility in Fayette County, West Virginia.

The publication of this notice opens a period for public comment on the Consent Decree. Comments should be addressed to the Acting Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States and West Virginia v. CSX Transportation, Inc.*, Civil Action No. 2:18-cv-01175, DOJ number 90-5-1-1-11264. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	Send them to:
By email	pubcomment-ees.enrd@usdoj.gov .
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

During the public comment period, the Consent Decree may be examined and downloaded at this Justice Department website: <https://>

www.justice.gov/enrd/consent-decrees. We will provide a paper copy of the Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Please enclose a check or money order for \$5.75 (25 cents per page reproduction cost) payable to the United States Treasury. For a paper copy without the signature pages, the cost is \$4.25.

Robert Brook,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 2018-16087 Filed 7-26-18; 8:45 am]

BILLING CODE 4410-15-P

DEPARTMENT OF LABOR

Office of the Secretary

Secretary's Order 05—2018

Subject: Procedures for Appointment of Individuals to Department of Labor Appellate Boards

1. *Purpose.* To provide for transparent and consistent processes by which the Secretary of Labor shall select and appoint individuals to the three appellate boards within the Department of Labor.

2. *Authorities and Directives Affected.*

A. *Authorities.* This Order is issued pursuant to the following authorities:

- i. 29 U.S.C. 551 *et seq.*;
- ii. 5 U.S.C. 301-02.

B. *Directives Affected.* This Order does not affect the authorities and responsibilities assigned by any other Secretary's Order, including but not limited to Order 02-2012 (77 FR 69378) and Order 03-2006 (20 CFR 801.201).

3. *Background.* The Secretary has the authority and responsibility to appoint the members of the Department's three appellate boards: the Administrative Review Board (ARB), the Benefits Review Board (BRB), and the Employees' Compensation Appeals Board (ECAB). These appointments should be made through a transparent and consistent process. Accordingly, this Order establishes procedures by which these appointments shall be made.

4. *Responsibilities.*

A. The Assistant Secretary for Administration and Management, in consultation with the Deputy Secretary, is assigned responsibility for issuing written guidance, as necessary, to implement this Order.

B. The Solicitor of Labor is responsible for providing legal advice to DOL on all matters arising in the implementation and administration of this Order.

5. *Procedure.* The following procedures shall apply to the selection and appointment of individuals to the ARB, BRB, and ECAB:

A. A notice of vacancy and solicitation of applications shall be posted in the **Federal Register** and on the relevant Board's website. The vacancy shall be held open for a minimum of thirty days, during which applications shall be accepted. The notice shall specify: The name of the board; the type of appointment; the duration, if any, of the appointment; the minimum criteria for appointment; the documentation an applicant must submit for consideration; the deadline by which such documentation must be submitted; and the email address and/or physical address where documentation may be submitted.

B. Applications will be directed to the Office of Executive Resources (OER) within the Office of the Assistant Secretary for Administration and Management (OASAM) to be screened for whether an applicant has timely submitted all required documentation and meets the minimal qualifications for the position, including vetting potential ethics concerns such as conflicts of interest in consultation with ethics counsel.

C. OER will deliver qualified applications to a six-person review panel. The members of the panel will be selected by the Secretary or the Secretary's designee,¹ and will consist of three career and three non-career Department employees who are members of the Senior Executive Service. The Department's Director, Human Resources Center, or her designee, shall be present for each meeting of the panel.

D. The panel will review the qualified applications, and rank the candidates. The panel will send the applications of the top-ranked candidates to an interview committee, which will be comprised of the Deputy Secretary and a career ethics attorney from Office of the Solicitor.

E. The interview committee will interview the top-ranked candidates and recommend to the Secretary which candidate should be chosen for the position. The interview committee will also provide the Secretary with the resumes of the other top-ranked candidates it interviewed but did not

¹ In the absence of specific Secretary's designee, the Solicitor of Labor shall be the designee.

recommend. The Secretary shall make the final decision and appointment, or may instead order another candidate search be completed.

6. *Privacy.* This Order is subject to the applicable laws, regulations, and procedures concerning the privacy of applicants to federal government employment.

7. *Exceptions.* The requirements of this Order are intended to be general in nature, and accordingly shall be construed and implemented consistent with more specific requirements of any statute, Executive Order, or other legal authority governing a particular board. In the event of a conflict, the specific statute, Executive Order, or other legal authority shall govern.

8. *Redelegation of Authority.* Except as otherwise provided by law, all of the authorities delegated in this Order may be redelegated in order to serve the purposes of this Order.

9. *Effective Date.* This order is effective immediately.

Dated: June 1, 2018.

R. Alexander Acosta,
Secretary of Labor.

[FR Doc. 2018-16127 Filed 7-26-18; 8:45 am]

BILLING CODE 4510-04-P

DEPARTMENT OF LABOR

Office of the Secretary

Procedures for Appointment of Individuals to Department of Labor Advisory Committees

Subject: Secretary's Order 04—2018

1. *Purpose.* To provide for transparent and consistent processes by which the Secretary of Labor and/or the designee of the Secretary of Labor shall select and appoint individuals to advisory committees¹ within the Department of Labor.

2. *Authorities and Directives Affected.*

A. *Authorities.* This Order is issued pursuant to the following authorities:

- i. 29 U.S.C. 551 *et seq.*;
- ii. 5 U.S.C. 301-02;
- iii. 5 U.S.C. app. 2, 1-15.

B. *Directives Affected.* This Order does not affect the authorities and responsibilities assigned by any other Secretary's Order.

¹ "Committee" refers to any Federal Advisory Committee Act (FACA) advisory committee, committee, board, task force, or working group to which the Secretary of Labor or the designee of the Secretary appoints individuals. This Order does not apply to internal committees, boards, task forces, or working groups, or to purely interagency committees, boards, task forces, or working groups.

3. *Background.* The Secretary and/or Secretary's designee has the authority and responsibility to appoint members of advisory committees that provide information, expertise, and recommendations to DOL agencies. These appointments should be made through a transparent and consistent process. Accordingly, this Order establishes procedures by which these appointments shall be made.

4. *Responsibilities.*

A. The Assistant Secretary for Administration and Management, in consultation with the Deputy Secretary, is assigned responsibility for issuing written guidance, as necessary, to implement this Order.

B. The Solicitor of Labor is responsible for providing legal advice to DOL on all matters arising in the implementation and administration of this Order.

5. *Procedure.* The following procedures shall apply to the selection and appointment of individuals to Department advisory committees for which the Secretary or the Secretary's designee is responsible:

A. A notice of vacancy and solicitation of applications shall be posted in the **Federal Register** and on the relevant committee or agency website. The vacancy shall be held open for a minimum of thirty days, during which applications shall be accepted. The notice shall specify: The name of the committee; the minimum requirements for committee membership, including specialized knowledge, experience, or other relevant criteria as mandated by the relevant statute, committee charter, or as determined by the agency administering the committee; the duration, if any, of the appointment; the minimum criteria for appointment; the documentation an applicant must submit for consideration; the deadline by which such documentation must be submitted; and the email address and/or physical address where documentation may be submitted.

B. Each application shall be directed to the relevant agency to be screened to determine whether the applicant has timely submitted all required documentation and meets the minimal qualifications for the position, including vetting the minimally qualified candidates for potential ethics concerns such as conflicts of interest in consultation with ethics counsel.

C. Qualified applications shall be reviewed by a panel established within the relevant agency. The members of each panel shall be selected by the head of the agency, and shall consist of six

employees who understand advisory committees and their functions. The Department's Director, Human Resources Center, or her designee, shall be present for each meeting of the panel. The panel shall select candidates it considers best meet the criteria for a specific committee. The committee shall send its proposed selections to the head of the agency, who shall review and provide the agency's recommendations to the Secretary and Deputy Secretary.

D. For an advisory committee that requires the Secretary himself make appointments, the Secretary shall make each final decision and appointment, or may instead order another candidate search be completed.

E. For an advisory committee that permits a Secretary's designee to make appointments, the Secretary, at his discretion, may review the recommendations himself pursuant to Paragraph 5.D of this order; or he may permit his designee to make the final decisions and appointments, or instead order another candidate search be completed, consistent with requirements of the applicable statute.

6. *Privacy.* This Order is subject to the applicable laws, regulations, and procedures concerning the privacy of applicants to federal government advisory committees.

7. *Exceptions; Administrative Matters.* The requirements of this Order are intended to be general in nature, and accordingly shall be construed and implemented consistent with more specific requirements of any statute, Executive Order, or other legal authority governing the composition of a particular advisory committee. In the event of a conflict, the specific statute, Executive Order, or other legal authority shall govern. The requirements of this Order are in addition to internal administrative procedures regarding the appointment of individuals to advisory committees.

8. *Redelegation of Authority.* Except as otherwise provided by law, all of the authorities delegated in this Order may be redelegated in order to serve the purposes of this Order.

9. *Date.* This order is effective immediately.

Dated: June 1, 2018.

R. Alexander Acosta,
Secretary of Labor.

[FR Doc. 2018-16124 Filed 7-26-18; 8:45 am]

BILLING CODE 4510-04-P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

[NARA-2018-051]

Agency Information Collection Activities: Proposed Collection; Comment Request**AGENCY:** National Archives and Records Administration (NARA).**ACTION:** Notice.

SUMMARY: NARA gives public notice that it proposes to request extension of three currently approved information collections. People use the first information collection to request permission to use privately owned equipment to digitize NARA and Presidential library archival holdings. They use the second information collection to request permission to film, photograph, or videotape at a NARA facility for news purposes. And they use the third information collection to request permission to use NARA facilities in the Washington, DC, area for events. We invite you to comment on these proposed information collections pursuant to the Paperwork Reduction Act of 1995.

DATES: We must receive written comments on or before September 25, 2018.

ADDRESSES: Send comments to Paperwork Reduction Act Comments (MP), Room 4100; National Archives and Records Administration; 8601 Adelphi Road; College Park, MD 20740-6001, fax them to 301-837-0319, or email them to tamee.fechhelm@nara.gov.

FOR FURTHER INFORMATION CONTACT: Contact Tamee Fechhelm by telephone at 301-837-1694 or fax at 301-837-0319 with requests for additional information or copies of the proposed information collections and supporting statements.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104-13), NARA invites the public and other Federal agencies to comment on proposed information collections. The comments and suggestions should address one or more of the following points: (a) Whether the proposed information collection is necessary for NARA to properly perform its functions; (b) NARA's estimate of the burden of the proposed information collection and its accuracy; (c) ways NARA could enhance the quality, utility, and clarity of the information it collects; (d) ways NARA could minimize the burden on respondents of

collecting the information, including through information technology; and (e) whether the collection affects small businesses. We will summarize any comments you submit and include the summary in our request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this notice, NARA solicits comments concerning the following information collections:

1. *Title:* Request to digitize records.

OMB number: 3095-0017.

Agency form number: None.

Type of review: Regular.

Affected public: Companies and organizations that wish to digitize archival holdings in the National Archives of the United States or a Presidential library for micropublication.

Estimated number of respondents: 10.

Estimated time per response: 5 hours.

Frequency of response: On occasion (when respondent wishes to request permission to digitize records).

Estimated total annual burden hours: 50.

Abstract: The information collection is prescribed by 36 CFR 1254.92. The collection is prepared by companies and organizations that wish to digitize archival holdings with privately-owned equipment. NARA uses the information to determine whether the request meets the criteria in 36 CFR 1254.94, to evaluate the records for digitization, and to schedule use of the limited space available for digitizing.

2. *Title:* Request to film, photograph, or videotape at a NARA facility for news purposes.

OMB number: 3095-0040.

Agency form number: None.

Type of review: Regular.

Affected public: Business or other for-profit, not-for-profit institutions.

Estimated number of respondents: 350.

Estimated time per response: 10 minutes.

Frequency of response: On occasion.

Estimated total annual burden hours: 58.

Abstract: The information collection is prescribed by 36 CFR 1280.48. The collection is prepared by organizations that wish to film, photograph, or videotape on NARA property for news purposes. NARA needs the information to determine if the request complies with NARA's regulations, to ensure protection of archival holdings, and to schedule the filming appointment.

3. *Title:* Request to use NARA facilities in the Washington, DC, area for events.

OMB number: 3095-0043.

Agency form number: None.

Type of review: Regular.

Affected public: Not-for-profit institutions, individuals or households, business or other for-profit, Federal Government.

Estimated number of respondents: 530.

Estimated time per response: Between 5 and 30 minutes.

Frequency of response: On occasion.

Estimated total annual burden hours: 169.

Abstract: The information collection is prescribed by 36 CFR 1280.80 and 1280.82. The collection is prepared by organizations that wish to use NARA public areas in the Washington, DC, area for an event. NARA uses the information to determine whether or not we can accommodate the request and to ensure that the proposed event complies with NARA regulations.

Swarnali Haldar,

Executive for Information Services/CIO.

BILLING CODE 7710-12-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-83696; File No. 4-678]

Program for Allocation of Regulatory Responsibilities Pursuant to Rule 17d-2; Notice of Filing and Order Approving and Declaring Effective an Amended Plan for the Allocation of Regulatory Responsibilities Among the Financial Industry Regulatory Authority, Inc., Miami International Securities Exchange, LLC, and MIAX PEARL, LLC

July 24, 2018.

Notice is hereby given that the Securities and Exchange Commission (“Commission”) has issued an Order, pursuant to Section 17(d) of the Securities Exchange Act of 1934 (“Act”),¹ approving and declaring effective an amendment to the plan for allocating regulatory responsibility (“Plan”) filed on June 28, 2018, pursuant to Rule 17d-2 of the Act,² by the Miami International Securities Exchange, LLC (“MIAX”), MIAX PEARL, LLC (“MIAX PEARL”), and the Financial Industry Regulatory Authority, Inc. (“FINRA”) (collectively, “Participating Organizations” or “parties”). This agreement amends and restates the agreement entered into between FINRA, MIAX, and MIAX PEARL on June 27, 2018, entitled “Agreement between Financial Industry Regulatory Authority, Inc., Miami International Securities Exchange, LLC and MIAX PEARL, LLC Pursuant to Rule 17d-2 under the Securities Exchange Act of 1934,” and any subsequent amendments thereafter.

I. Introduction

Section 19(g)(1) of the Act,³ among other things, requires every self-regulatory organization (“SRO”) registered as either a national securities exchange or national securities association to examine for, and enforce compliance by, its members and persons associated with its members with the Act, the rules and regulations thereunder, and the SRO’s own rules, unless the SRO is relieved of this responsibility pursuant to Section 17(d)⁴ or Section 19(g)(2)⁵ of the Act. Without this relief, the statutory obligation of each individual SRO could result in a pattern of multiple

examinations of broker-dealers that maintain memberships in more than one SRO (“common members”). Such regulatory duplication would add unnecessary expenses for common members and their SROs.

Section 17(d)(1) of the Act⁶ was intended, in part, to eliminate unnecessary multiple examinations and regulatory duplication.⁷ With respect to a common member, Section 17(d)(1) authorizes the Commission, by rule or order, to relieve an SRO of the responsibility to receive regulatory reports, to examine for and enforce compliance with applicable statutes, rules, and regulations, or to perform other specified regulatory functions.

To implement Section 17(d)(1), the Commission adopted two rules: Rule 17d-1 and Rule 17d-2 under the Act.⁸ Rule 17d-1 authorizes the Commission to name a single SRO as the designated examining authority (“DEA”) to examine common members for compliance with the financial responsibility requirements imposed by the Act, or by Commission or SRO rules.⁹ When an SRO has been named as a common member’s DEA, all other SROs to which the common member belongs are relieved of the responsibility to examine the firm for compliance with the applicable financial responsibility rules. On its face, Rule 17d-1 deals only with an SRO’s obligations to enforce member compliance with financial responsibility requirements. Rule 17d-1 does not relieve an SRO from its obligation to examine a common member for compliance with its own rules and provisions of the federal securities laws governing matters other than financial responsibility, including sales practices and trading activities and practices.

To address regulatory duplication in these and other areas, the Commission adopted Rule 17d-2 under the Act.¹⁰ Rule 17d-2 permits SROs to propose joint plans for the allocation of regulatory responsibilities with respect to their common members. Under paragraph (c) of Rule 17d-2, the Commission may declare such a plan effective if, after providing for

appropriate notice and opportunity for comment, it determines that the plan is necessary or appropriate in the public interest and for the protection of investors, to foster cooperation and coordination among the SROs, to remove impediments to, and foster the development of, a national market system and a national clearance and settlement system, and is in conformity with the factors set forth in Section 17(d) of the Act. Commission approval of a plan filed pursuant to Rule 17d-2 relieves an SRO of those regulatory responsibilities allocated by the plan to another SRO.

II. The Plan

On November 19, 2014, the Commission declared effective the Plan entered into between FINRA and MIAX for allocating regulatory responsibility pursuant to Rule 17d-2.¹¹ The Plan is intended to reduce regulatory duplication for firms that are common members of both MIAX and FINRA. The plan reduces regulatory duplication for firms that are members of MIAX and FINRA by allocating regulatory responsibility with respect to certain applicable laws, rules, and regulations. Included in the Plan is an exhibit that lists every MIAX rule for which FINRA bears responsibility under the Plan for overseeing and enforcing with respect to MIAX members that are also members of FINRA and the associated persons therewith (“Certification”). On January 12, 2017, the parties submitted a proposed amendment to the Plan to add MIAX PEARL as a Participant to the Plan.¹²

III. Proposed Amendment to the Plan

On June 28, 2018, the parties submitted a proposed amendment to the Plan (“Amended Plan”). The primary purpose of the Amended Plan is to allocate surveillance, investigation, and enforcement responsibilities for Rule 14e-4 under the Act, as well as certain provisions of Regulation SHO. The text of the proposed Amended Plan is as follows (additions are *underlined*; deletions are [bracketed]):

**AGREEMENT AMONG FINANCIAL INDUSTRY
REGULATORY AUTHORITY, INC.,
MIAMI INTERNATIONAL SECURITIES EXCHANGE, LLC AND MIA X PEARL, LLC
PURSUANT TO
RULE 17d-2 UNDER THE SECURITIES EXCHANGE ACT OF 1934**

This Agreement, by and among the Financial Industry Regulatory Authority, Inc. (“FINRA”), Miami International Securities Exchange, LLC (“MIA X”) and MIA X PEARL, LLC (“MIA X PEARL”), is made this [11th]27th day of [January, 2017]June, 2018 (the “Agreement”), pursuant to Section 17(d) of the Securities Exchange Act of 1934 (the “Exchange Act”) and Rule 17d-2 thereunder, which permits agreements between self-regulatory organizations to allocate regulatory responsibility to eliminate regulatory duplication. FINRA, MIA X and MIA X PEARL may be referred to individually as a “party” and together as the “parties.”

This Agreement amends and restates the agreement entered into between FINRA, [and] MIA X and MIA X PEARL on [October 13, 2014]January 11, 2017, entitled “Agreement between Financial Industry Regulatory Authority, Inc., [and] Miami International Securities Exchange, LLC and MIA X PEARL, LLC Pursuant to Rule 17d-2 under the Securities Exchange Act of 1934,” and any subsequent amendments thereafter.

WHEREAS, the parties desire to reduce duplication in the examination of their Common Members (as defined herein) and in the filing and processing of certain registration and membership records; and

WHEREAS, the parties desire to execute an agreement covering such subjects pursuant to the provisions of Rule 17d-2 under the Exchange Act and to file such agreement with the Securities and Exchange Commission (the “SEC” or “Commission”) for its approval.

NOW, THEREFORE, in consideration of the mutual covenants contained hereinafter, the parties hereby agree as follows:

1. **Definitions.** Unless otherwise defined in this Agreement or the context otherwise requires, the terms used in this Agreement shall have the same meaning as they have under the Exchange Act and the rules and regulations thereunder. As used in this Agreement, the following terms shall have the following meanings:
 - (a) “MIAX Rules,” “MIAX PEARL Rules” or “FINRA Rules” shall mean: (i) the rules of MIAX or MIAX PEARL, respectively, or (ii) the rules of FINRA, respectively, as the rules of an exchange or association are defined in Exchange Act Section 3(a)(27).
 - (b) “Common Rules” shall mean MIAX Rules and MIAX PEARL Rules that are substantially similar to the applicable FINRA Rules and certain provisions of the Exchange Act and SEC rules set forth on Exhibit 1 in that examination for compliance with such provisions and rules would not require FINRA to develop one or more new examination standards, modules, procedures, or criteria in order to analyze the application of the provision or rule, or a Common Member’s activity, conduct, or output in relation to such provision or rule. Common Rules shall not include any provisions regarding (i) notice, reporting or any other filings made directly to or from MIAX or MIAX PEARL, (ii) [compliance with other referenced]incorporation by reference of MIAX or MIAX PEARL Rules that are not Common Rules, (iii) exercise of discretion in a manner that differs from FINRA’s exercise of discretion including, but not limited to exercise of exemptive

authority, by MIAX or MIAX PEARL, (iv) prior written approval of MIAX or MIAX PEARL and (v) payment of fees or fines to MIAX or MIAX PEARL.

- (c) “Common Members” shall mean members of FINRA and at least one of MIAX or MIAX PEARL.
- (d) “Effective Date” shall be the date this Agreement is approved by the Commission.
- (e) “Enforcement Responsibilities” shall mean the conduct of appropriate proceedings, in accordance with FINRA’s Code of Procedure (the Rule 9000 Series) and other applicable FINRA procedural rules, to determine whether violations of Common Rules have occurred, and if such violations are deemed to have occurred, the imposition of appropriate sanctions as specified under FINRA’s Code of Procedure and sanctions guidelines.
- (f) “Regulatory Responsibilities” shall mean the examination responsibilities and Enforcement Responsibilities relating to compliance by the Common Members with the Common Rules and the provisions of the Exchange Act and the rules and regulations thereunder, and other applicable laws, rules and regulations, each as set forth on Exhibit 1 attached hereto. The term “Regulatory Responsibilities” shall also include the surveillance, investigation and Enforcement Responsibilities relating to compliance by Common Members with Rule 14e-4 of the Securities Exchange Act (“Rule 14e-4”), with a focus on the standardized call option provision of Rule 14e-4(a)(1)(ii)(D).

2. **Regulatory and Enforcement Responsibilities.** FINRA shall assume Regulatory Responsibilities and Enforcement Responsibilities for Common Members. Attached as

Exhibit 1 to this Agreement and made part hereof, MIAX and MIAX PEARL furnished FINRA with a current list of Common Rules and certified to FINRA that such rules that are MIAX Rules and MIAX PEARL Rules are substantially similar to the corresponding FINRA Rules (the “Certification”). FINRA hereby agrees that the rules listed in the Certification are Common Rules as defined in this Agreement. Each year following the Effective Date of this Agreement, or more frequently if required by changes in the rules of the parties, MIAX and MIAX PEARL shall submit an updated list of Common Rules to FINRA for review which shall add MIAX Rules or MIAX PEARL Rules not included in the current list of Common Rules that qualify as Common Rules as defined in this Agreement; delete MIAX Rules or MIAX PEARL Rules included in the current list of Common Rules that no longer qualify as Common Rules as defined in this Agreement; and confirm that the remaining rules on the current list of Common Rules continue to be MIAX Rules or MIAX PEARL Rules that qualify as Common Rules as defined in this Agreement. Within 30 days of receipt of such updated list, FINRA shall confirm in writing whether the rules listed in any updated list are Common Rules as defined in this Agreement. Notwithstanding anything herein to the contrary, it is explicitly understood that the term “Regulatory Responsibilities” does not include, and MIAX and MIAX PEARL shall retain full responsibility for (unless otherwise addressed by separate agreement or rule) (collectively, the “Retained Responsibilities”) the following:

- (a) surveillance, examination, investigation and enforcement with respect to trading activities or practices involving MIAX’s and MIAX PEARL’s own marketplace;
- (b) registration pursuant to their applicable rules of associated persons (i.e., registration rules that are not Common Rules);

-
- (c) discharge of their duties and obligations as a Designated Examining Authority pursuant to Rule 17d-1 under the Exchange Act; and
- (d) any MIAX Rules and MIAX PEARL Rules that are not Common Rules as provided in paragraph 6.
3. **Common Members.** Prior to the Effective Date, MIAX and MIAX PEARL shall furnish FINRA with a current list of Common Members, which shall be updated no less frequently than once each quarter.
4. **No Charge.** There shall be no charge to MIAX and MIAX PEARL by FINRA for performing the Regulatory Responsibilities and Enforcement Responsibilities under this Agreement except as hereinafter provided. FINRA shall provide MIAX and MIAX PEARL with ninety (90) days advance written notice in the event FINRA decides to impose any charges to MIAX and MIAX PEARL for performing the Regulatory Responsibilities under this Agreement. If FINRA determines to impose a charge, MIAX and MIAX PEARL shall have the right at the time of the imposition of such charge to terminate this Agreement; provided, however, that FINRA's Regulatory Responsibilities under this Agreement shall continue until the Commission approves the termination of this Agreement.
5. **Applicability of Certain Laws, Rules, Regulations or Orders.** Notwithstanding any provision hereof, this Agreement shall be subject to any statute, or any rule or order of the SEC. To the extent such statute, rule or order is inconsistent with one or more provisions of this Agreement, the statute, rule or order shall supersede the provision(s) hereof to the extent necessary to be properly effectuated and the provision(s) hereof in that respect shall be null and void.

6. **Notification of Violations.** In the event that FINRA becomes aware of apparent violations of any MIAX Rules or MIAX PEARL Rules, which are not listed as Common Rules, discovered pursuant to the performance of the Regulatory Responsibilities assumed hereunder, FINRA shall notify MIAX and MIAX PEARL of those apparent violations for such response as MIAX and MIAX PEARL deem appropriate. In the event that MIAX or MIAX PEARL becomes aware of apparent violations of any Common Rules, discovered pursuant to the performance of the Retained Responsibilities, MIAX and MIAX PEARL shall notify FINRA of those apparent violations and such matters shall be handled by FINRA as provided in this Agreement. Apparent violations of Common Rules shall be processed by, and enforcement proceedings in respect thereto shall be conducted by FINRA as provided hereinbefore; provided, however, that in the event a Common Member is the subject of an investigation relating to a transaction on MIAX or MIAX PEARL, MIAX and MIAX PEARL may in their discretion assume concurrent jurisdiction and responsibility. Each party agrees to make available promptly all files, records and witnesses necessary to assist the other in its investigation or proceedings.

7. **Continued Assistance.**

(a) FINRA shall make available to MIAX and MIAX PEARL all information obtained by FINRA in the performance by it of the Regulatory Responsibilities hereunder with respect to the Common Members subject to this Agreement. In particular, and not in limitation of the foregoing, FINRA shall furnish MIAX and MIAX PEARL any information it obtains about Common Members which reflects adversely on their financial condition. MIAX and MIAX PEARL shall make available to FINRA any information coming to its attention that reflects

adversely on the financial condition of Common Members or indicates possible violations of applicable laws, rules or regulations by such firms.

(b) The parties agree that documents or information shared shall be held in confidence, and used only for the purposes of carrying out their respective regulatory obligations. No party shall assert regulatory or other privileges as against any other with respect to documents or information that is required to be shared pursuant to this Agreement.

(c) The sharing of documents or information among the parties pursuant to this Agreement shall not be deemed a waiver as against third parties of regulatory or other privileges relating to the discovery of documents or information.

8. **Statutory Disqualifications.** When FINRA becomes aware of a statutory disqualification as defined in the Exchange Act with respect to a Common Member, FINRA shall determine pursuant to Sections 15A(g) and/or Section 6(c) of the Exchange Act the acceptability or continued applicability of the person to whom such disqualification applies and keep MIAX and MIAX PEARL advised of its actions in this regard for such subsequent proceedings as MIAX and MIAX PEARL may initiate.
9. **Customer Complaints.** MIAX and MIAX PEARL shall forward to FINRA copies of all customer complaints involving Common Members received by MIAX and MIAX PEARL relating to FINRA's Regulatory Responsibilities under this Agreement. It shall be FINRA's responsibility to review and take appropriate action in respect to such complaints.
10. **Advertising.** FINRA shall assume responsibility to review the advertising of Common Members subject to the Agreement, provided that such material is filed with FINRA in

accordance with FINRA's filing procedures and is accompanied with any applicable filing fees set forth in FINRA Rules.

11. **No Restrictions on Regulatory Action.** Nothing contained in this Agreement shall restrict or in any way encumber the right of any party to conduct its own independent or concurrent investigation, examination or enforcement proceeding of or against Common Members, as any party, in its sole discretion, shall deem appropriate or necessary.
12. **Termination.** This Agreement may be terminated by any party at any time upon the approval of the Commission after one (1) year's written notice to the other parties (or such shorter time as agreed by the parties), except as provided in paragraph 4.
13. **Arbitration.** In the event of a dispute among the parties as to the operation of this Agreement, the parties hereby agree that any such dispute shall be settled by arbitration in Washington, D.C. in accordance with the rules of the American Arbitration Association then in effect, or such other procedures as the parties may mutually agree upon. Judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction. Each party acknowledges that the timely and complete performance of its obligations pursuant to this Agreement is critical to the business and operations of the other parties. In the event of a dispute among the parties, the parties shall continue to perform their respective obligations under this Agreement in good faith during the resolution of such dispute unless and until this Agreement is terminated in accordance with its provisions. Nothing in this Section 13 shall interfere with a party's right to terminate this Agreement as set forth herein.
14. **Separate Agreement.** This Agreement is wholly separate from the following agreement: (1) the multiparty Agreement made pursuant to Rule 17d-2 of the Exchange Act among BATS Exchange, Inc., BOX Options Exchange, LLC, Chicago Board Options Exchange,

Incorporated, C2 Options Exchange, Incorporated, the International Securities Exchange, LLC, FINRA, MIAX, NYSE MKT LLC, the NYSE Arca, Inc., The NASDAQ Stock Market LLC, NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, ISE Gemini, LLC, EDGX Exchange, Inc., [and] ISE Mercury, LLC and MIAX PEARL, LLC involving the allocation of regulatory responsibilities with respect to common members for compliance with common rules relating to the conduct by broker-dealers of accounts for listed options or index warrants entered as approved by the SEC on [February 16, 2016] February 2, 2017, and as may be amended from time to time; and (2) the multiparty Agreement made pursuant to Rule 17d-2 of the Exchange Act among NYSE MKT LLC, BATS Exchange, Inc., EDGX Exchange, Inc., BOX Options Exchange LLC, NASDAQ OMX BX, Inc., C2 Options Exchange, Incorporated, Chicago Board Options Exchange, Incorporated, International Securities Exchange LLC, ISE Gemini, LLC, ISE Mercury, LLC, FINRA, NYSE Arca, Inc., The NASDAQ Stock Market LLC, NASDAQ OMX PHLX, Inc., [and] MIAX and MIAX PEARL, LLC involving the allocation of regulatory responsibilities with respect to SRO market surveillance of common members activities with regard to certain common rules relating to listed options approved by the SEC on [February 16, 2016] February 2, 2017, and as may be amended from time to time.

15. **Notification of Members.** The parties shall notify Common Members of this Agreement after the Effective Date by means of a uniform joint notice.
16. **Amendment.** This Agreement may be amended in writing provided that the changes are approved by each party. All such amendments must be filed with and approved by the Commission before they become effective.

17. **Limitation of Liability.** None of the parties nor any of their respective directors, governors, officers or employees shall be liable to any other party to this Agreement for any liability, loss or damage resulting from or claimed to have resulted from any delays, inaccuracies, errors or omissions with respect to the provision of Regulatory Responsibilities as provided hereby or for the failure to provide any such responsibility, except with respect to such liability, loss or damages as shall have been suffered by any party and caused by the willful misconduct of another party or their respective directors, governors, officers or employees. No warranties, express or implied, are made by any party hereto with respect to any of the responsibilities to be performed by them hereunder.
18. **Relief from Responsibility.** Pursuant to Sections 17(d)(1)(A) and 19(g) of the Exchange Act and Rule 17d-2 thereunder, FINRA, MIAX and MIAX PEARL join in requesting the Commission, upon its approval of this Agreement or any part thereof, to relieve MIAX and MIAX PEARL of any and all responsibilities with respect to matters allocated to FINRA pursuant to this Agreement; provided, however, that this Agreement shall not be effective until the Effective Date.
19. **Severability.** Any term or provision of this Agreement that is invalid or unenforceable in any jurisdiction shall, as to such jurisdiction, be ineffective to the extent of such invalidity or unenforceability without rendering invalid or unenforceable the remaining terms and provisions of this Agreement or affecting the validity or enforceability of any of the terms or provisions of this Agreement in any other jurisdiction.
20. **Counterparts.** This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, and such counterparts together shall constitute one and the same instrument.

Rule 14e-4(a)(1)(ii)(D).

[* FINRA shall not have Regulatory Responsibilities for these rules as they pertain to violations of insider trading activities, which is covered by a separate 17d-2 Agreement by and among BATS Exchange, Inc., BATS Y-Exchange, Inc., Chicago Board Options Exchange, Inc., Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, the NASDAQ Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, NYSE Amex LLC, and NYSE Arca Inc., effective December 16, 2011, as may be amended from time to time.]

[[#]FINRA shall not have Regulatory Responsibilities regarding (i) notice, reporting or any other filings made directly to or from MIAX or MIAX PEARL, (ii) compliance with other referenced MIAX or MIAX PEARL Rules that are not Common Rules, (iii) exercise of discretion including, but not limited to exercise of exemptive authority, by MIAX or MIAX PEARL, (iv) prior written approval of MIAX or MIAX PEARL and (v) payment of fees or fines to MIAX or MIAX PEARL.]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number 4-678 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to File Number 4-678. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed plan that are filed with the Commission, and all written communications relating to the proposed plan between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the plan also will be available for inspection and copying at the principal offices of FINRA, MIA X, and MIA X PEARL. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number 4-678 and should be submitted on or before August 17, 2018.

V. Discussion

The Commission finds that the proposed Amended Plan is consistent with the factors set forth in Section 17(d) of the Act¹⁴ and Rule 17d-2(c) thereunder¹⁵ in that the proposed Amended Plan is necessary or

appropriate in the public interest and for the protection of investors, fosters cooperation and coordination among SROs, and removes impediments to and fosters the development of the national market system. In particular, the Commission believes that the proposed Amended Plan should reduce unnecessary regulatory duplication by allocating to FINRA certain examination and enforcement responsibilities for Common Members that would otherwise be performed by FINRA and MIA X or MIA X PEARL. Accordingly, the proposed Amended Plan promotes efficiency by reducing costs to Common Members. Furthermore, because MIA X, MIA X PEARL, and FINRA will coordinate their regulatory functions in accordance with the Amended Plan, the Amended Plan should promote investor protection.

The Commission notes that, under the Amended Plan, MIA X, MIA X PEARL, and FINRA have allocated regulatory responsibility for those MIA X and MIA X PEARL rules, set forth in the Certification, that are substantially similar to the applicable FINRA rules in that examination for compliance with such provisions and rules would not require FINRA to develop one or more new examination standards, modules, procedures, or criteria in order to analyze the application of the rule, or a Common Member's activity, conduct, or output in relation to such rule. In addition, under the Amended Plan, FINRA would assume regulatory responsibility for certain provisions of the federal securities laws and the rules and regulations thereunder that are set forth in the Certification. The Common Rules covered by the Amended Plan are specifically listed in the Certification, as may be amended by the parties from time to time.

According to the Amended Plan, MIA X and MIA X PEARL will review the Certification at least annually, or more frequently if required by changes in either the rules of MIA X, MIA X PEARL or FINRA, and, if necessary, submit to FINRA an updated list of Common Rules to add MIA X or MIA X PEARL rules not included on the then-current list of Common Rules that are substantially similar to FINRA rules; delete MIA X or MIA X PEARL rules included in the then-current list of Common Rules that no longer qualify as common rules; and confirm that the remaining rules on the list of Common Rules continue to be MIA X or MIA X PEARL rules that qualify as common rules.¹⁶ FINRA will then confirm in writing whether the rules listed in any

updated list are Common Rules as defined in the Amended Plan. Under the Amended Plan, MIA X and MIA X PEARL also will provide FINRA with a current list of Common Members and shall update the list no less frequently than once each quarter.¹⁷ The Commission believes that these provisions are designed to provide for continuing communication between the parties to ensure the continued accuracy of the scope of the proposed allocation of regulatory responsibility.

The Commission is hereby declaring effective an Amended Plan that, among other things, allocates regulatory responsibility to FINRA for the oversight and enforcement of all MIA X and MIA X PEARL rules that are substantially similar to the rules of FINRA for Common Members of FINRA and MIA X, and FINRA and MIA X PEARL. Therefore, modifications to the Certification need not be filed with the Commission as an amendment to the Amended Plan, provided that the parties are only adding to, deleting from, or confirming changes to MIA X or MIA X PEARL rules in the Certification in conformance with the definition of Common Rules provided in the Amended Plan. However, should the parties decide to add a MIA X or MIA X PEARL rule to the Certification that is not substantially similar to a FINRA rule; delete a MIA X or MIA X PEARL rule from the Certification that is substantially similar to a FINRA rule; or leave on the Certification a MIA X or MIA X PEARL rule that is no longer substantially similar to a FINRA rule, then such a change would constitute an amendment to the Amended Plan, which must be filed with the Commission pursuant to Rule 17d-2 under the Act.¹⁸

Under paragraph (c) of Rule 17d-2, the Commission may, after appropriate notice and comment, declare a plan, or any part of a plan, effective. In this instance, the Commission believes that appropriate notice and comment can take place after the proposed amendment is effective. The primary purpose of the amendment is to allocate surveillance, investigation, and enforcement responsibilities for Rule 14e-4 under the Act, as well as certain provisions of Regulation SHO. By declaring it effective today, the Amended Plan can become effective and

¹⁷ See paragraph 3 of the Amended Plan.

¹⁸ The addition to or deletion from the Certification of any federal securities laws, rules, and regulations for which FINRA would bear responsibility under the Amended Plan for examining, and enforcing compliance by, Common Members, also would constitute an amendment to the Amended Plan.

¹⁴ 15 U.S.C. 78q(d).

¹⁵ 17 CFR 240.17d-2(c).

¹⁶ See paragraph 2 of the Amended Plan.

be implemented without undue delay. The Commission notes that the prior version of this plan immediately prior to this proposed amendment was published for comment and the Commission did not receive any comments thereon.¹⁹ Furthermore, the Commission does not believe that the amendment to the plan raises any new regulatory issues that the Commission has not previously considered.

VI. Conclusion

This order gives effect to the Amended Plan filed with the Commission in File No. 4–678. The parties shall notify all members affected by the Amended Plan of their rights and obligations under the Amended Plan.

It is therefore ordered, pursuant to Section 17(d) of the Act, that the Amended Plan in File No. 4–678, between the FINRA, MIAx, and MIAx PEARL, filed pursuant to Rule 17d–2 under the Act, hereby is approved and declared effective.

It is further ordered that MIAx and MIAx PEARL are each relieved of those responsibilities allocated to FINRA under the Amended Plan in File No. 4–678.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–83687; File No. SR–NYSENAT–2018–16]

Self-Regulatory Organizations; NYSE National, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Its Schedule of Fees and Rebates To Adopt Two New Adding Tiers and Regulatory Fees in Connection With Use of the Central Registration Depository

July 23, 2018.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the “Act”)² and Rule 19b–4 thereunder,³ notice is hereby given that, on July 9, 2018, NYSE National, Inc. (“Exchange” or “NYSE National”) filed with the Securities and Exchange Commission

(“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its Schedule of Fees and Rebates to adopt (1) two new adding tiers, and (2) regulatory fees in connection with use of the Central Registration Depository (“CRD”) by Exchange ETP Holders that are not also members of the Financial Industry Regulatory Authority, Inc. (“FINRA”). The Exchange proposes to implement the rule change on July 9, 2018.⁴ The proposed rule change is available on the Exchange’s website at www.nyse.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Schedule of Fees and Rebates to adopt (1) two new adding tiers, and (2) regulatory fees in connection with use of CRD.

The Exchange proposes to implement the rule change on July 9, 2018.

Proposed Adding Tiers

The Exchange proposes two new adding tiers for displayed and non-displayed orders in securities priced at or above \$1.00, as follows. Current

Adding Tier would be re-named “Adding Tier 1.”

Adding Tier 2

Under proposed Adding Tier 2, the Exchange would offer the following fees for transactions in stocks with a per share price of \$1.00 or more when adding liquidity to the Exchange if the ETP Holder quotes at least 5% of the NBBO⁵ in 1,000 or more symbols on an average daily basis, calculated monthly:

- \$0.0005 per share for adding displayed orders;
- \$0.0005 per share for orders that set a new Exchange BBO;
- \$0.0007 per share for adding non-displayed orders; and
- \$0.0005 per share for MPL orders.

For example, in a given month, if an ETP Holder quotes at least 5% of the NBBO in 800 symbols in round lots on the first day of the month and 1,400 symbols on the second day of the month, the ETP Holder would have 1,100 securities on average daily basis that meet the 5% NBBO requirement after the second day, and would qualify for the proposed Adding Tier 2 after the second day. Further, in a given symbol on a given day, if the ETP Holder maintains a bid at the NBB for 4% of the trading day and an offer at the NBO for 8% of the trading day, that would result in the ETP Holder quoting 6% of the NBBO in that symbol for that day and that symbol meeting the 5% NBBO requirement for that day.

Adding Tier 3

Under proposed Adding Tier 3, the Exchange would offer the following fees for transactions in stocks with a per share price of \$1.00 or more when adding liquidity to the Exchange if the ETP Holder quotes at least 5% of the NBBO⁶ in 600 or more symbols on an average daily basis, calculated monthly:

- \$0.0012 per share for adding displayed orders;
- \$0.0012 per share for orders that set a new Exchange BBO;
- \$0.0014 per share for adding non-displayed orders; and
- \$0.0005 per share for MPL orders.

Finally, as reflected in footnote * of the Schedule of Fees and Rebates, the volume requirements for the current

⁵ The Exchange would explain the proposed 5% requirement in a new footnote **. As proposed, ETP Holders would have to maintain a bid or an offer at the NBB or the NBO for at least 5% of the trading day in round lots in a security for that security to count toward the tier requirement. The terms “NBB,” “NBO,” “NBBO,” and “BBO” are defined in NYSE National Rule 1.1. The Exchange believes that the proposed 5% threshold is appropriate for a market of NYSE National’s size and trading volume.

⁶ See note 5, *supra*.

¹⁹ See *supra* note 12 (citing to Securities Exchange Act Release No. 79974).

²⁰ 17 CFR 200.30–3(a)(34).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b–4.

⁴ The Exchange originally filed to amend the Fee Schedule on June 27, 2018 (SR–NYSENAT–2018–14) and withdrew such filing on July 9, 2018. This filing replaces SR–NYSENAT–2018–14 in its entirety.

Adding Tier and the Taking Tier are waived until July 1, 2018. The Exchange proposes to extend the volume requirements [sic] for these tiers indefinitely. To effect this change, the Exchange would delete “until July 1, 2018” from footnote *. As noted, the current Adding Tier would be re-named “Adding Tier 1,” which will also be reflected in footnote *.

CRD Fees

The Exchange proposes to adopt regulatory fees related to CRD that would be collected by FINRA.⁷ As proposed, FINRA would collect and retain certain regulatory fees via CRD for the registration of persons associated with an Exchange ETP Holder that is not also a FINRA member. The CRD fees are use-based and there is no distinction in the cost incurred by FINRA if the user is a FINRA member or a member of an exchange but not a FINRA member. Accordingly, the Exchange proposes to adopt the following fees to mirror those assessed by FINRA pursuant to Section (4) of Schedule A to the FINRA By-Laws:⁸

(1) \$100 for each initial Form U4 filed for the registration of a representative or principal;

(2) \$110 for the additional processing of each initial or amended Form U4, Form U5 or Form BD that includes the initial reporting, amendment, or certification of one or more disclosure events or proceedings;

(3) \$15 for processing and posting to the CRD system each set of fingerprint cards submitted electronically by the Member, plus a pass-through of any other charge imposed by the United States Department of Justice for processing each set of fingerprints;

(4) \$30 for processing and posting to the CRD system each set of fingerprint cards submitted in non-electronic format by the Member, plus a pass-through of any other charge imposed by the United States Department of Justice for processing each set of fingerprints;

⁷ CRD is the central licensing and registration system for the U.S. securities industry. The CRD system enables individuals and firms seeking registration with multiple states and self-regulatory organizations to do so by submitting a single form, fingerprint card and a combined payment of fees to FINRA. Through CRD, FINRA maintains the qualification, employment and disciplinary histories of registered associated persons of broker dealers.

⁸ The proposed CRD fees are those charged by FINRA to non-FINRA members when such fees are applicable. The Exchange notes that there are certain FINRA CRD fees and requirements that are specific to FINRA members but do not apply to Exchange ETP Holders that are not also FINRA members. Exchange ETP Holders that are also FINRA members would be charged CRD fees according to Section (4) of Schedule A to the FINRA By-Laws.

(5) \$30 for processing and posting to the CRD system each set of fingerprint results and identifying information that has been processed through another self-regulatory organization and submitted to FINRA; and

(6) \$45 annually for system processing for each registered representative and principal.

* * * * *

The proposed changes are not otherwise intended to address any other issues, and the Exchange is not aware of any problems that ETP Holders would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,⁹ in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,¹⁰ in particular, because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members, issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers or dealers.

New Adding Tiers

The Exchange believes that the proposed Adding Tier 2 and Adding Tier 3 fees for ETP Holder with at least 5% of the NBBO in 1,000 or more symbols on an average daily basis, calculated monthly or 600 or more symbols on an average daily basis, calculated monthly, respectively, who maintain a bid or an offer at the NBB or NBO in each assigned security in round lots averaging at least 5% of the trading day on an average daily basis, calculated monthly, in securities with a per share price of \$1.00 or more when adding liquidity are reasonable because the proposed tiers would further contribute to incentivizing ETP Holders to provide increased displayed liquidity on the Exchange, benefiting all ETP Holders. In addition, the Exchange believes that the proposed Adding Tier 2 and Adding Tier 3 fees are equitable and not unfairly discriminatory as all similarly situated market participants will be subject to the same fees on an equal and non-discriminatory basis. The Exchange further believes that providing the same fee for adding displayed orders as that for orders that set a new Exchange BBO under Adding Tier 2 and Adding Tier 3 is reasonable because the \$0.0005 and \$0.0012 fee per share in Adding Tier 2 and Adding Tier 3, respectively, are

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(4) & (5).

sufficient incentive for providing liquidity.

Finally, the Exchange believes it is reasonable to indefinitely waive the Adding Tier (which would be re-named Adding Tier 1) and Taking Tier volume requirements because the waiver will enable the Exchange to continue to improve its overall competitiveness and strengthen its market quality for all market participants. The proposed waiver is not unfairly discriminatory because it will apply equally to all similarly situated ETP Holders.

CRD Fees

The proposed CRD fees are reasonable because they are identical to those adopted by FINRA for use of the CRD system for disclosure and the registration of associated persons of FINRA members.¹¹ As FINRA noted in its filing adopting its existing fees, FINRA believes the fees are reasonable based on the increased costs associated with operating and maintaining the CRD system, and listed a number of enhancements made to the CRD system since the last fee increase, including: (1) Incorporation of various uniform registration form changes; (2) electronic fingerprint processing; (3) Web EFT™, which allows subscribing firms to submit batch filings to the CRD system; (4) increases in the number and types of reports available through the CRD system; and (5) significant changes to BrokerCheck, including making BrokerCheck easier to use and expanding the amount of information made available through the system.¹² These increased costs are similarly borne by FINRA when an Exchange ETP Holder that is not a FINRA member uses the CRD system, so the fees collected for such use should, as proposed by the Exchange, mirror the fees assessed on FINRA members. FINRA further noted that the proposed fees are reasonable because they help to ensure the integrity of the information in the CRD system, which is important because the Commission, FINRA, other self-regulatory organizations and state securities regulators use the CRD system to make licensing and registration decisions, among other things.¹³

The Exchange similarly believes that the proposed fees, like FINRA's fees, are consistent with an equitable allocation of fees because the fees will apply equally to all individuals and firms required to report information to the

¹¹ See Securities Exchange Act Release No. 67247 (June 25, 2012), 77 FR 38866 (June 29, 2012) (SR-FINRA-2012-30).

¹² See *id.*, 77 FR at 38868.

¹³ *Id.*

CRD system. Thus, those members that register more individuals or submit more filings through the CRD system will generally pay more in fees than those that use the CRD system to a lesser extent. In addition, the proposed fees, like FINRA's fees, are equitable and not unfairly discriminatory because they will result in the same regulatory fees being charged to all ETP Holders required to report information to the CRD system and for services performed by FINRA, regardless of whether or not such ETP Holder is a FINRA member.

Further, the Exchange believes the proposed CRD fees provide for the equitable allocation of reasonable fees and other charges among its permit holders, and does not unfairly discriminate between customers, issuers, brokers and dealers. All similarly situated ETP Holders are subject to the same fee structure, and every Member firm must use the CRD system for registration and disclosure.

Finally, the Exchange believes that it is subject to significant competitive forces, as described below in the Exchange's statement regarding the burden on competition.

For the foregoing reasons, the Exchange believes that the proposal is consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,¹⁴ the Exchange believes that the proposed rule change would not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Instead, the Exchange believes that the proposed changes would encourage the submission of additional liquidity to a public exchange, thereby promoting price discovery and transparency and enhancing order execution opportunities for ETP Holders. The Exchange believes that this could promote competition between the Exchange and other execution venues, including those that currently offer similar order types and comparable transaction pricing, by encouraging additional orders to be sent to the Exchange for execution.

Finally, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees and rebates to remain competitive

with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees and credits in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. As a result of all of these considerations, the Exchange does not believe that the proposed changes will impair the ability of ETP Holders or competing order execution venues to maintain their competitive standing in the financial markets.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)¹⁵ of the Act and subparagraph (f)(2) of Rule 19b-4¹⁶ thereunder, because it establishes a due, fee, or other charge imposed by the Exchange.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)¹⁷ of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSENAT-2018-16 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSENAT-2018-16. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSENAT-2018-16 and should be submitted on or before August 17, 2018.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁸

Eduardo A. Aleman,
Assistant Secretary.

DEPARTMENT OF TRANSPORTATION**Federal Railroad Administration**

[Docket No. FRA-2017-0074, Notice No. 2; Safety Advisory 2018-01]

Addressing Electrode-Induced Rail Pitting From Pressure Electric Welding

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of Safety Advisory.

SUMMARY: FRA is issuing Safety Advisory 2018-01 to remind railroads, contractors, and the rail welding industry of the potential for electrode-induced rail pitting and fatigue cracking during the pressure electric rail welding process.

FOR FURTHER INFORMATION CONTACT: Mr. Matthew Brewer, Staff Director, Rail Integrity Division, Office of Railroad Safety, FRA, 500 Broadway, Suite 240, Vancouver, WA 98660, telephone (202) 385-2209; or Mr. Aaron Moore, Trial Attorney, Office of Chief Counsel, FRA, 1200 New Jersey Avenue SE, Washington, DC 20590, telephone (202) 493-7009.

SUPPLEMENTARY INFORMATION: On August 16, 2017, FRA published a notice of a draft safety advisory in the *Federal Register* to address electrode-induced rail pitting from pressure electric welding and seeking comment on the issue. 82 FR 38989. FRA noted its investigation and research into the issue demonstrated that improper electrode contact to the rail during the welding process could result in electrode-induced pitting that may lead to fatigue fracture and ultimately rail failure. As a result, FRA's draft safety advisory contained specific recommendations to help the industry prevent electrode-induced pitting.

FRA presented the information contained in the draft safety advisory to its Railroad Safety Advisory Committee's (RSAC) Rail Integrity Working Group. Subsequent RSAC discussions and comments submitted by the Association of American Railroads (AAR) indicated that the rail industry agrees with FRA's concern that stray arcing can result in the formation of electrode pits and that fatigue cracking can then develop from these electrode pits. AAR noted, however, that FRA's draft safety advisory did not present any information to support a finding that rail failures from electrode-induced rail pitting are a wide-spread problem. Further, AAR noted that its member railroads report they have seen no indications of a systemic problem involving electrode pitting, and that

railroads and welding companies have procedures in place to prevent electrode pitting and remediate it when it does occur. Accordingly, AAR asserted that FRA should not issue any recommendations burdening the industry such as those included in the draft safety advisory.

After consideration of AAR's comments and input from RSAC discussions, FRA agrees with AAR's position that, although stray arcing during the pressure electric welding process can result in the formation of electrode burns or pits on the web, head, or base of rail, and that fatigue cracking can develop from those burns or pits, railroads and welding companies have procedures in place addressing the issue of electrode pitting. Accordingly, in issuing Safety Advisory 2018-01, FRA has not adopted the specific recommended actions listed in its draft safety advisory and instead intends Safety Advisory 2018-01 to merely remind railroads, contractors, and the rail welding industry to be diligent in complying with existing practices and procedures designed to prevent electrode-induced pitting in rail and to mitigate the pitting when it does occur.

Safety Advisory 2018-01

Pressure electric welding is the process of using a hydraulically-operated welding head that clamps around two opposing rail ends, pressing an electrode on each rail, then hydraulically pulling the rail ends together while arcing current through the electrodes into the rails, causing them to essentially melt together to form a continuous rail. Stray arcing during this process results in the formation of electrode burns or pits on the web, head, or base of the rail. Fractures in the rail may originate from the electrode pits because they behave as stress raisers (also referred to as stress concentrations). Fatigue cracks may develop at locations of stress concentration. Once a fatigue crack initiates, the localized stress encourages the growth of the crack, which may potentially lead to rail failure. FRA believes electrode pitting may be a contributing factor, if not the root cause, in some accidents involving rail web cracking.

Figure 1 below shows a photograph of a rail with electrode pits in the web. The location of these electrode pits, when they occur, is typically four to eight inches on either side of the weld. Electrode-induced pitting from pressure electric welding may also occur in the head and base of the rail. It is unclear whether traditional ultrasonic rail

testing can consistently detect electrode-induced pitting.

In 2016, FRA's Office of Railroad Safety requested technical support from The National Transportation Systems Center (Volpe) to study the fatigue and fracture behavior of rails with pitting from electrodes used in welding. Volpe enlisted technical support from the U.S. Army's Benét Laboratories (Benét) to conduct forensic examination of three rail sections with electrode-induced pitting in the web from the pressure electric welding process. FRA obtained these rails from members of the railroad industry. Benét's examination included fractography (the science of studying fracture surfaces to identify the origin and causes of fracture), metallography (the science of studying the microstructure of metals to provide information concerning the properties and processing history of metallic alloys), and testing to determine the chemical composition and tensile mechanical properties of the rail steel. Benét confirmed the electrode-induced web fatigue cracking is a result of pitting caused by inadequate electrode-to-rail contact.

Specifically, Benét's metallurgical analyses concluded the cracking in the rail web originated from the pitting created by inadequate electrode-to-rail contact during the pressure electric welding process. The fractographic and metallographic examinations revealed evidence of fatigue cracking originating from the pitting and fast fracture once the fatigue crack reached a critical length. Figure 2 below shows three photographs of the fracture surface of a crack found in one of the rails Benét examined. These photographs support the metallurgical evidence indicative of three stages of fatigue fracture: (1) Crack initiation or formation originating from the pitting; (2) crack propagation or growth by metal fatigue; and (3) final rupture or fast fracture. Figure 3 below shows photographs of the microstructure near the electrode pits in each examined rail, providing further evidence the cracking originated from the pitting created by improper electrode contact during welding.

The results from the metallurgical analysis also suggested premature and sudden rail failure may result from high wheel-impact load (e.g., flat wheel), especially in cold-weather environments when the longitudinal rail force is tensile. Results from the chemical analysis and mechanical testing indicated the chemistry and mechanical properties of the rails selected for evaluation were within specifications the American Railway Engineering and Maintenance-of-Way

Association (AREMA) published, except for the hardness measurements in one rail, which were slightly lower than the AREMA minimum. Hardness is a measure of the resistance of a material to surface indentation produced by a carbide indenter applied at a given load for a given length of time. The lower hardness in that rail, manufactured in the 1950s, may be attributed to lower concentrations (compared to the other two rails) of alloying elements, specifically carbon, silicon, and

chromium, which were still within AREMA tolerances. Testing of the chemistry and the mechanical properties revealed all three rails were made from standard quality steel containing no other defects except the electrode-induced pitting.

FRA recognizes that the industry already has practices and procedures in place to avoid electrode pitting during the pressure electric welding process. Therefore, FRA is issuing Safety Advisory 2018-01 to remind railroads,

railroad employees, railroad contractors, and welding companies and their employees of the importance of complying with those procedures to prevent electrode pitting and, ultimately, to prevent rail failures. (FRA has posted a copy of this notice on its public website, www.fra.dot.gov, where you may view the figures below in their full resolution.)

DEPARTMENT OF TRANSPORTATION

Office of the Secretary of Transportation

[Docket No. DOT-OST-2018-0108]

Vendor and Grantee Invoice Submission Process Change

AGENCY: U.S. Department of Transportation (DOT).

ACTION: Notice of enforced change with request for comments.

SUMMARY: The DOT invites the public and other Federal agencies to comment on a proposed vendor invoice submission change. DOT will submit the proposed information collection request to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. This notice sets forth new processes and procedures for vendors and grantees that submit invoices and receive payments for DOT Operating Administrations (OAs). Existing users of DOT's eInvoicing system, including grantees and vendors, will also be required to use *Login.gov*. DOT's objective is to improve efficiency and reduce unnecessary burden on vendors and grantees by eliminating existing manual processes for invoice entry, invoice approvals and user registration to reduce costs, increase timeliness of payments, and improve data quality. Introducing e-authentication to facilitate user validation and account management will greatly reduce the burden on vendors and grantees by eliminating the current paper based registration process. This electronic

invoicing process is currently used by DOT's grantee community and was successfully piloted to select vendors.

DATES: Comments must be submitted on or before September 24, 2018.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information should be directed to the U.S. Department of Transportation, Office of Financial Management, B-30, Room W98-431, 1200 New Jersey Avenue SE, Washington DC 20590-0001, Anthony Chestnut, (202) 366-9661, DOTElectronicInvoicing@dot.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 2105-0564.

Type of Request: Revision to previously approved information collection.

Background: This notice sets forth new processes and procedures for existing and future vendors and grantees that submit invoices and receive payments from DOT Operating Administrations (OAs). The vendors and grantees involved must meet the following requirements to participate:

- Vendors and grantees will need to have electronic internet access to register in GSA *Login.gov* and login into Delphi eInvoicing system.
- The identities of system users will be verified prior to receiving access to the Delphi eInvoicing system. Information required for *Login.gov* includes his/her email address, full name, phone number, and password.
- System users will Register with and Create an account with GSA *Login.gov*. System users will provide his/her email address and receive an email back to confirm. They will then create a password and input a telephone number and opt to receive either a personal call from *Login.gov* or text message with an authentication code.
- Once the system user is authenticated, he/she will complete a

System Access Request for Delphi eInvoicing system. The users will provide the following information: Full name, office phone number, work email address, vendor name, purchase order (contract or grant award) numbers, and agency doing business with. System users will provide the form to DOT to finalize the access.

- Once access is complete, vendors will submit invoices electronically and DOT OAs will process invoices electronically.

Affected Public: All Current and Future DOT Vendors and grantees.

Total Estimated Number of Respondents: Greater than 5,000.

Total Estimated Number of Responses: Greater than 5,000.

Estimated Total Annual Burden Hours: 500 (Initial Registration Only Calculated at 5 Minutes per).

Frequency of Collection: One Time.

Annual Estimated Total Annual Burden Costs: \$5,000.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) whether the proposed collection of information is necessary for the Department's performance; (b) the accuracy of the estimated burden; (c) ways for the Department to enhance the quality, utility, and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C. 3501-3520, as amended.

Issued in Washington, DC, on July 24, 2018.

Jennifer Funk,

Acting, Deputy Chief Financial Officer, Department of Transportation.

Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2019; Medicare Shared Savings Program Requirements; Quality Payment Program; and Medicaid Promoting Interoperability Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses changes to the Medicare physician fee schedule (PFS) and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute.

DATES: *Comment date:* To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 10, 2018.

ADDRESSES: In commenting, please refer to file code CMS–1693–P. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the “Submit a comment” instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1693–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1693–P, Mail

Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

FOR FURTHER INFORMATION CONTACT:

Jamie Hermansen, (410) 786–2064, for any physician payment issues not identified below.

Lindsey Baldwin, (410) 786–1694, and Emily Yoder, (410) 786–1804, for issues related to evaluation and management (E/M) payment, communication technology-based services and telehealth services.

Isadora Gil, (410) 786–4532, for issues related to payment rates for nonexcepted items and services furnished by nonexcepted off-campus provider-based departments of a hospital, and work relative value units (RVUs).

Ann Marshall, (410) 786–3059, for issues related to E/M documentation guidelines.

Geri Mondowney, (410) 786–1172, or Donta Henson, (410) 786–1947, for issues related to geographic price cost indices (GPCIs).

Geri Mondowney, (410) 786–1172, or Tourette Jackson, (410) 786–4735, for issues related to malpractice RVUs.

Patrick Sartini, (410) 786–9252, for issues related to radiologist assistants.

Michael Soracoe, (410) 786–6312, for issues related to practice expense, work RVUs, impacts, and conversion factor.

Pamela West, (410) 786–2302, for issues related to therapy services.

Edmund Kasaitis, (410) 786–0477, for issues related to reduction of wholesale acquisition cost (WAC)-based payment.

Sarah Harding, (410) 786–4001, or Craig Dobyski, (410) 786–4584, for issues related to aggregate reporting of applicable information for clinical laboratory fee schedule.

Amy Gruber, (410) 786–1542, or Glenn McGuirk, (410) 786–5723, for issues related to the ambulance fee schedule.

Corinne Axelrod, (410) 786–5620, for issues related to care management services and communication technology-based services in Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs).

JoAnna Baldwin, (410) 786–7205, or Sarah Fulton, (410) 786–2749, for issues related to appropriate use criteria for advanced diagnostic imaging services.

David Koppel, (214) 767–4403, for issues related to Medicaid Promoting Interoperability Program.

Fiona Larbi, (410) 786–7224, for issues related to the Medicare Shared Savings Program Quality Measures.

Matthew Edgar, (410) 786–0698, for issues related to the physician self-referral law.

Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Benjamin Chin, (410) 786–0679, for inquiries related to Alternative Payment Models (APMs).

Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

A. Purpose

This major proposed rule proposes to revise payment policies under the Medicare PFS and make other policy changes, including proposals to implement certain provisions of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted on February 9, 2018), related to Medicare Part B payment, applicable to services furnished in CY 2019. In addition, this proposed rule includes proposals related to payment policy changes that are addressed in section III. of this proposed rule. We are requesting public comments on all of the proposals being made in this proposed rule.

1. Summary of the Major Provisions

The statute requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work; practice expense (PE); and malpractice (MP) expense. In addition, the statute requires that we establish by regulation each year’s payment amounts for all physicians’ services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas. In this major proposed rule, we are proposing to establish RVUs

for CY 2019 for the PFS, and other Medicare Part B payment policies, to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This proposed rule includes discussions and proposals regarding:

- Potentially Misvalued Codes.
- Communication Technology-Based Services.
- Valuation of New, Revised, and Misvalued Codes.
- Payment Rates under the PFS for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital.

Provisions in the Bipartisan Budget Act of 2018.

- E/M Visits.
- Therapy Services.
- Clinical Laboratory Fee Schedule.
- Ambulance Fee Schedule—
- Appropriate Use Criteria for Advanced Diagnostic Imaging Services.
- Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs).
- Medicare Shared Savings Program Quality Measures.
- Physician Self-Referral Law.
- CY 2019 Updates to the Quality Payment Program.
- Request for Information on Promoting Interoperability and Electronic Healthcare Information Exchange through Possible Revisions to the CMS Patient Health and Safety Requirements for Hospitals and Other Medicare- and Medicaid-Participating Providers and Suppliers.
- Request for Information on Price Transparency: Improving Beneficiary Access to Provider and Supplier Charge Information.

2. Summary of Costs and Benefits

We have determined that this major proposed rule is economically significant. For a detailed discussion of the economic impacts, see section VII. of this proposed rule.

II. Provisions of the Proposed Rule for the PFS

A. Background

Since January 1, 1992, Medicare has paid for physicians’ services under section 1848 of the Act, “Payment for Physicians’ Services.” The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into

payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239, enacted on December 19, 1989) (OBRA ’89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, enacted on November 5, 1990) (OBRA ’90). The final rule published on November 25, 1991 (56 FR 59502) set forth the first fee schedule used for payment for physicians’ services.

We note that throughout this major proposed rule, unless otherwise noted, the term “practitioner” is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

1. Development of the Relative Values

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians’ services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other

public commenters, and the rationale for their recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physician's service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding MP expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physician's service in the November 2, 1998 final rule (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: The Clinical Practice Expert Panel (CPEP) data; and the AMA's Socioeconomic Monitoring System (SMS) data. These data sources are described in greater detail in the CY 2012 PFS final rule with comment period (76 FR 73033).

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician's office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference,

if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some costs are borne by the facility. Medicare's payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those facility resources is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' MP insurance premium data from all the states, the District of Columbia, and

Puerto Rico. For more information on MP RVUs, see section II.C. of this proposed rule.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed 5-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the 5-year reviews, beginning for CY 2009, CMS and the RUC identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, that require the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VII. of this proposed rule, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than \$20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than \$20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each

component. Please refer to the CY 2017 PFS final rule with comment period for a discussion of the last GPCI update (81 FR 80261 through 80270).

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS's Office of the Actuary (OACT). The formula for calculating the Medicare PFS payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia CF, in a manner to ensure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate CF for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

B. Determination of Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physician's service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in

furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units under the PFS and Proposed Changes to the Practice Expense Methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the

magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file called "CY 2019 PFS Proposed Rule PE/HR" on the CMS website under downloads for the CY

2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For CY 2019, we have incorporated the available utilization data for two new specialties, each of which became a recognized Medicare specialty during 2017. These specialties are Hospitalists and Advanced Heart Failure and Transplant Cardiology. We are proposing to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Hospitalists from Emergency Medicine.
- Advanced Heart Failure and Transplant Cardiology from Cardiology.

The proposal is reflected in the “CY 2019 PFS Proposed Rule PE/HR” file available on the CMS website under the supporting data files for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of \$400 from our PE database and another service has a direct cost sum of \$200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs to the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion (see section II.B.2.b of this proposed rule). The general approach to developing the

indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

- Next, we incorporated the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we

establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file called “Calculation of PE RVUs under Methodology for Selected Codes” which is available on our website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.
Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the proposed aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a proposal in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we instead use the expected specialty that we identify on a list developed based on medical review and input from expert stakeholders. We display this list of expected specialty assignments as part

of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, “always therapy” services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 59283) a proposal to apply these service-level overrides for both PE and MP, rather than one or the other category.

For CY 2019, we are proposing to add 28 additional codes that we have identified as low volume services to the list of codes for which we assign the expected specialty. Based on our own medical review and input from the RUC and from specialty societies, we are proposing to assign the expected specialty for each code as indicated in Table 1. For each of these codes, only the professional component (reported with the –26 modifier) is nationally priced. The global and technical components are priced by the Medicare Administrative Contractors (MACs) which establish RVUs and payment amounts for these services. The list of codes that we are proposing to add is displayed in Table 1.

TABLE 1—NEW ADDITIONS TO EXPECTED SPECIALTY LIST FOR LOW VOLUME SERVICES

CPT code	Mod	Short descriptor	Expected specialty	2017 Utilization
70557	26	Mri brain w/o dye	Diagnostic Radiology	126
70558	26	Mri brain w/dye	Diagnostic Radiology	32
74235	26	Remove esophagus obstruction	Gastroenterology	10
74301	26	X-rays at surgery add-on	Diagnostic Radiology	73
74355	26	X-ray guide intestinal tube	Diagnostic Radiology	11
74445	26	X-ray exam of penis	Urology	26
74742	26	X-ray fallopian tube	Diagnostic Radiology	5
74775	26	X-ray exam of perineum	Diagnostic Radiology	80
75801	26	Lymph vessel x-ray arm/leg	Diagnostic Radiology	114
75803	26	Lymph vessel x-ray arms/leg	Diagnostic Radiology	41
75805	26	Lymph vessel x-ray trunk	Diagnostic Radiology	50
75810	26	Vein x-ray spleen/liver	Diagnostic Radiology	46
76941	26	Echo guide for transfusion	Obstetrics/Gynecology	15
76945	26	Echo guide villus sampling	Obstetrics/Gynecology	31
76975	26	Gi endoscopic ultrasound	Gastroenterology	49
78282	26	Gi protein loss exam	Diagnostic Radiology	8
79300	26	Nuclr rx interstit colloid	Diagnostic Radiology	2
86327	26	Immuno-electrophoresis assay	Pathology	24
87164	26	Dark field examination	Pathology	30
88371	26	Protein western blot tissue	Pathology	2
93532	26	R & I heart cath congenital	Cardiology	28
93533	26	R & I heart cath congenital	Cardiology	36
93561	26	Cardiac output measurement	Cardiology	28
93562	26	Card output measure subsq	Cardiology	38
93616	26	Esophageal recording	Cardiology	38
93624	26	Electrophysiologic study	Cardiology	51
95966	26	Meg evoked single	Neurology	72
95967	26	Meg evoked each addl	Neurology	61

The complete list of expected specialty assignments for individual low volume services, including the proposed assignments for the codes identified in Table 1, is available on our website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.

- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(Note: For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file called "Calculation of PE RVUs under Methodology for Selected Codes", the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).

- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service.

(Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from

Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the proposed aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS budget neutrality. (See "Specialties excluded from ratesetting calculation" later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- **Specialties excluded from ratesetting calculation:** For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 2.

TABLE 2—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthetist.
57	Individual certified prosthetist-orthotist.
58	Medical supply company with registered pharmacist.
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (e.g., drug and department stores).
88	Unknown supplier/provider specialty.
89	Certified clinical nurse specialist.
96	Optician.
97	Physician assistant.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
B2	Pedorthic personnel.
B3	Medical supply company with pedorthic personnel.

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the

professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000

(Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

- *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any

service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 3 details the manner in which the modifiers are applied.

TABLE 3—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES

Modifier	Description	Volume adjustment	Time adjustment
80, 81, 82	Assistant at Surgery	16%	Intraoperative portion.
AS	Assistant at Surgery—Physician Assistant.	14% (85% * 16%)	Intraoperative portion.
50 or LT and RT	Bilateral Surgery	150%	150% of work time.
51	Multiple Procedure	50%	Intraoperative portion.
52	Reduced Services	50%	50%.
53	Discontinued Procedure	50%	50%.
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims.	Preoperative + Intraoperative portion.
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims.	Postoperative portion.

TABLE 3—APPLICATION OF PAYMENT MODIFIERS TO UTILIZATION FILES—Continued

Modifier	Description	Volume adjustment	Time adjustment
62	Co-surgeons	62.5%	50%.
66	Team Surgeons	33%	33%.

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- *Work RVUs:* The setup file contains the work RVUs from this proposed rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

$$(1/(\text{minutes per year} * \text{usage})) * \text{price} * ((\text{interest rate}/(1 - (1/((1 + \text{interest rate})^{\text{life of equipment}})))) + \text{maintenance})$$

Where:

- minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
- usage = variable, see discussion in this proposed rule.
- price = price of the particular piece of equipment.
- life of equipment = useful life of the particular piece of equipment.
- maintenance = factor for maintenance; 0.05.
- interest rate = variable, see discussion in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Stakeholders have often suggested that particular equipment items are used less frequently than 50 percent of the time in the typical setting and that CMS should reduce the equipment utilization rate based on these recommendations. We appreciate and share stakeholders' interest in using the most accurate assumption regarding the equipment utilization rate for particular equipment items. However, we believe that absent robust, objective, auditable data regarding the use of particular items, the 50 percent assumption is the most appropriate within the relative value system. We welcome the submission of data that illustrates an alternative rate.

Maintenance: This factor for maintenance was finalized in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We do not believe that voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining maintenance factor, we do not believe that we have sufficient information at present to propose a variable maintenance factor for equipment cost per minute pricing. We continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

Interest Rate: In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small

Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). We are not proposing any changes to these interest rates for CY 2019. The interest rates are listed in Table 4.

TABLE 4—SBA MAXIMUM INTEREST RATES

Price	Useful life	Interest rate (%)
<\$25K	<7 Years	7.50
\$25K to \$50K	<7 Years	6.50
>\$50K	<7 Years	5.50
<\$25K	7+ Years	8.00
\$25K to \$50K	7+ Years	7.00
>\$50K	7+ Years	6.00

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2019 direct PE input database, which is available on the CMS website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640–67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and postservice periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of

equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for “Availability of prior images confirmed”, 2 minutes for “Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocol by radiologist”, 2 minutes for “Review examination with interpreting MD”, and 1 minute for “Exam documents scanned into PACS. Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.” In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a proposal to establish a range of appropriate standard minutes for the clinical labor activity, “Technologist QC images in PACS, checking for all images, reformats, and dose page.” These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a proposal to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values.

We also finalized standard times for clinical labor tasks associated with

pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902) at 4 minutes for “Accession specimen/prepare for examination”, 0.5 minutes for “Assemble and deliver slides with paperwork to pathologists”, 0.5 minutes for “Assemble other light microscopy slides, open nerve biopsy slides, and clinical history, and present to pathologist to prepare clinical pathologic interpretation”, 1 minute for “Clean room/equipment following procedure”, 1 minute for “Dispose of remaining specimens, spent chemicals/other consumables, and hazardous waste”, and 1 minute for “Prepare, pack and transport specimens and records for in-house storage and external storage (where applicable).” We do not believe these activities would be dependent on number of blocks or batch size, and we believe that these values accurately reflect the typical time it takes to perform these clinical labor tasks.

Historically, the RUC has submitted a “PE worksheet” that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties developing the recommendations. These variations have made it difficult for both the RUC’s development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC’s use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did for CY 2018, to facilitate rulemaking for CY 2019, we are continuing to display two versions of the Labor Task Detail public use file: One version with the old listing of clinical labor tasks, and one with the same tasks cross-walked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the “Prepare room, equipment and supplies” (CA013) clinical labor activity were split into 2 minutes for the “Prepare room, equipment and

supplies” activity and 1 minute for the “Confirm order, protocol exam” (CA014) activity. These RUC-reviewed codes do not currently have clinical labor time assigned for the “Confirm order, protocol exam” clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets.

As a result, we are proposing to maintain the 3 minutes of clinical labor time for the “Prepare room, equipment and supplies” activity and remove the clinical labor time for the “Confirm order, protocol exam” activity wherever we observed this pattern in the RUC-recommended direct PE inputs. If we had received RUC recommendations for codes that currently include clinical labor time for the “Confirm order, protocol exam” clinical labor task, we would have left the recommended clinical labor times unchanged, but there were no such codes reviewed for CY 2019. We note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being used in the calculation of PE RVUs.

b. Equipment Recommendations for Scope Systems

During our routine reviews of direct PE input recommendations, we have regularly found unexplained inconsistencies involving the use of scopes and the video systems associated with them. Some of the scopes include video systems bundled into the equipment item, some of them include scope accessories as part of their price, and some of them are standalone scopes with no other equipment included. It is not always clear which equipment items related to scopes fall into which of these categories. We have also frequently found anomalies in the equipment recommendations, with equipment items that consist of a scope and video system bundle recommended, along with a separate scope video system. Based on our review, the variations do not appear to be consistent with the different code descriptions.

To promote appropriate relativity among the services and facilitate the transparency of our review process, during the review of the recommended direct PE inputs for the CY 2017 PFS proposed rule, we developed a structure that separates the scope, the associated video system, and any scope accessories that might be typical as distinct equipment items for each code. Under this approach, we proposed standalone

prices for each scope, and separate prices for the video systems and accessories that are used with scopes.

(1) Scope Equipment

Beginning in the CY 2017 proposed rule (81 FR 46176 through 46177), we proposed standardizing refinements to the way scopes have been defined in the direct PE input database. We believe that there are four general types of scopes: Non-video scopes; flexible scopes; semi-rigid scopes, and rigid scopes. Flexible scopes, semi-rigid scopes, and rigid scopes would typically be paired with one of the scope video systems, while the non-video scopes would not. The flexible scopes can be further divided into diagnostic (or non-channeled) and therapeutic (or channeled) scopes. We proposed to identify for each anatomical application: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. We proposed to classify the existing scopes in our direct PE database under this classification system, to improve the transparency of our review process and improve appropriate relativity among the services. We planned to propose input prices for these equipment items through future rulemaking.

We proposed these changes only for the reviewed codes for CY 2017 that made use of scopes, along with updated prices for the equipment items related to scopes utilized by these services. But, we did not propose to apply these policies to codes with inputs reviewed prior to CY 2017. We also solicited comment on this separate pricing structure for scopes, scope video systems, and scope accessories, which we could consider proposing to apply to other codes in future rulemaking. We did not finalize price increases for a series of other scopes and scope accessories, as the invoices submitted for these components indicated that they are different forms of equipment with different product IDs and different prices. We did not receive any data to indicate that the equipment on the newly submitted invoices was more typical in its use than the equipment that we were currently using for pricing.

We did not make further changes to existing scope equipment in CY 2017 to allow the RUC's PE Subcommittee the opportunity to provide feedback. However, we believed there was some miscommunication on this point, as the RUC's PE Subcommittee workgroup that was created to address scope systems stated that no further action was required following the finalization of our proposal. Therefore, we made

further proposals in CY 2018 (82 FR 33961 through 33962) to continue clarifying scope equipment inputs, and sought comments regarding the new set of scope proposals. We considered creating a single scope equipment code for each of the five categories detailed in this rule: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. Under the current classification system, there are many different scopes in each category depending on the medical specialty furnishing the service and the part of the body affected. We stated our belief that the variation between these scopes was not significant enough to warrant maintaining these distinctions, and we believed that creating and pricing a single scope equipment code for each category would help provide additional clarity. We sought public comment on the merits of this potential scope organization, as well as any pricing information regarding these five new scope categories.

After considering the comments on the CY 2018 proposed rule, we did not finalize our proposal to create and price a single scope equipment code for each of the five categories previously identified. Instead, we supported the recommendation from the commenters to create scope equipment codes on a per-specialty basis for six categories of scopes as applicable, including the addition of a new sixth category of multi-channeled flexible video scopes. Our goal is to create an administratively simple scheme that will be easier to maintain and help to reduce administrative burden. We look forward to receiving detailed recommendations from expert stakeholders regarding the scope equipment items that would be typically required for each scope category, as well as the proper pricing for each scope.

(2) Scope Video System

We proposed in the CY 2017 PFS proposed rule (81 FR 46176 through 46177) to define the scope video system as including: (1) A monitor; (2) a processor; (3) a form of digital capture; (4) a cart; and (5) a printer. We believe that these equipment components represent the typical case for a scope video system. Our model for this system was the "video system, endoscopy (processor, digital capture, monitor, printer, cart)" equipment item (ES031), which we proposed to re-price as part of this separate pricing approach. We obtained current pricing invoices for the endoscopy video system as part of our investigation of these issues involving

scopes, which we proposed to use for this re-pricing. In response to comments, we finalized the addition of a digital capture device to the endoscopy video system (ES031) in the CY 2017 PFS final rule (81 FR 80188). We finalized our proposal to price the system at \$33,391, based on component prices of \$9,000 for the processor, \$18,346 for the digital capture device, \$2,000 for the monitor, \$2,295 for the printer, and \$1,750 for the cart. In the CY 2018 PFS final rule (82 FR 52991 through 52993), we outlined, but did not finalize, a proposal to add an LED light source into the cost of the scope video system (ES031), which would remove the need for a separate light source in these procedures. We also described a proposal to increase the price of the scope video system by \$1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.). With the addition of the LED light (equipment code EQ382 at a price of \$1,915), the updated total price of the scope video system would be set at \$36,306. We did not finalize this updated pricing to the scope video system in CY 2018, and indicated our intention to address these changes in CY 2019 to incorporate feedback from expert stakeholders.

(3) Scope Accessories

We understand that there may be other accessories associated with the use of scopes. We finalized a proposal in the CY 2017 PFS final rule (81 FR 80188) to separately price any scope accessories outside the use of the scope video system, and individually evaluate their inclusion or exclusion as direct PE inputs for particular codes as usual under our current policy based on whether they are typically used in furnishing the services described by the particular codes.

(4) Scope Proposals for CY 2019

We understand that the RUC has convened a Scope Equipment Reorganization Workgroup that will be incorporating feedback from expert stakeholders with the intention of making recommendations to us on scope organization and scope pricing. Since the workgroup was not convened in time to submit recommendations for the CY 2019 PFS rulemaking cycle, we are proposing to delay proposals for any further changes to scope equipment until CY 2020 so that we can incorporate the feedback from the aforementioned workgroup. However,

we are proposing to update the price of the scope video system (ES031) from its current price of \$33,391 to a price of \$36,306 to reflect the addition of the LED light and miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories, as we explained in detail in the CY 2018 PFS final rule (82 FR 52992 through 52993). We are also proposing to update the name of the ES031 equipment item from “video system, endoscopy (processor, digital capture, monitor, printer, cart)” to “scope video system (monitor, processor, digital capture, cart, printer, LED light)” to reflect the fact that the use of the ES031 scope video system is not limited to endoscopy procedures.

c. Balloon Sinus Surgery Kit (SA106) Comment Solicitation

Several stakeholders contacted CMS with regard to the use of the kit, sinus surgery, balloon (maxillary, frontal, or sphenoid) (SA106) supply in CPT codes 31295 (Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (e.g., balloon dilation)), transnasal or via canine fossa, 31296 (Nasal/sinus endoscopy, surgical; with dilation of frontal sinus ostium (e.g., balloon dilation)), and 31297 (Nasal/sinus endoscopy, surgical; with dilation of sphenoid sinus ostium (e.g., balloon dilation)). The stakeholders stated that the price of the SA106 supply (currently \$2,599.86) had decreased significantly since it was priced through rulemaking

for CY 2011 (75 FR 73351 through 75532), and that the Medicare payment for these three CPT codes using the supply no longer seemed to be in proportion to what the kits cost. They also indicated that the same catheter could be used to treat multiple sinuses rather than being a disposable one-time use supply. The stakeholders stated that marketing firms and sales representatives are advertising these CPT codes as a method for generating additional profits due to the payment for the procedures exceeding the resources typically needed to furnish the services, and requested that CMS investigate the use of the SA106 supply in these codes.

We appreciate the information supplied by the stakeholders regarding the use of the balloon sinus surgery kit. When CPT codes 31295–31297 were initially reviewed during the CY 2011 and CY 2012 PFS rulemaking cycles (75 FR 73251, and 76 FR 73184 through 73186, respectively), we expressed our reservations about the pricing and the typical quantity of this supply item used in furnishing these services. The RUC recommended for the CY 2012 rulemaking cycle that CMS remove the balloon sinus surgery kit from each of these codes and implement separately billable alpha-numeric HCPCS codes to allow practitioners to be paid the cost of the disposable kits per patient encounter instead of per CPT code. We stated at the time, and we continue to believe, that this option presents a series of potential problems that we have

addressed previously in the context of the broader challenges regarding our ability to price high cost disposable supply items. (For a discussion of this issue, we direct the reader to our discussion in the CY 2011 PFS final rule with comment period (75 FR 73251)). We stated at the time that since the balloon sinus surgery kits can be used when furnishing more than one service to the same beneficiary on the same day, we believed that it would be appropriate to include 0.5 balloon sinus surgery kits for each of the three codes, and we have maintained this 0.5 supply quantity when CPT codes 31295–31297 were recently reviewed again in CY 2018.

In light of the additional information supplied by the stakeholders, we are soliciting comments on two aspects of the use of the balloon sinus surgery kit (SA106) supply. First, we are soliciting comments on whether the 0.5 supply quantity of the balloon sinus surgery kit in CPT codes 31295–31297 would be typical for these procedures. We are concerned that the same kit can be used when furnishing more than one service to the same beneficiary on the same day, and that even the 0.5 supply quantity may be overstating the resources typically needed to furnish each service. Second, we are soliciting comments on the pricing of the balloon sinus surgery kit, given that we have received letters stating that the price has decreased since the initial pricing in the CY 2011 final rule. See Table 5 for the current component pricing of the balloon sinus surgery kit.

TABLE 5—BALLOON SINUS SURGERY KIT (SA106) PRICE

Supply components	Quantity	Unit	Price
kit, sinus surgery, balloon (maxillary, frontal, or sphenoid)	1	kit	\$2599.86
Sinus Guide Catheter	1	item	444.00
Sinus Balloon Catheter	1	item	820.80
Sinus Illumination System (100 cm lighted guidewire)	1	item	454.80
Light Guide Cable (8 ft)	1	item	514.80
ACMI/Stryker Adaptor	1	item	42.00
Sinus Guide Catheter Handle	1	item	66.00
Sinus Irrigation Catheter (22 cm)	1	item	150.00
Sinus Balloon Catheter Inflation Device	1	item	89.46
Extension Tubing (High Pressure) (20 in)	1	item	18.00

We are interested in any information regarding possible changes in the pricing for this kit or its individual components since the initial pricing we adopted in CY 2011.

d. Technical Corrections to Direct PE Input Database and Supporting Files

Subsequent to the publication of the CY 2018 PFS final rule, stakeholders alerted us to several clerical inconsistencies in the direct PE

database. We are proposing to correct these inconsistencies as described in this proposed rule and reflected in the CY 2019 proposed direct PE input database displayed on the CMS website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

For CY 2019, we are proposing to address the following inconsistencies:

- The RUC alerted us that there are 165 CPT codes billed with an office E/M code more than 50 percent of the time in the nonfacility setting that have more minimum multi-specialty visit supply packs (SA048) than post-operative visits included in the code’s global period. This indicates that either the inclusion of office E/M services was not accounted for in the code’s global period when these codes were initially reviewed by the PE Subcommittee, or

that the PE Subcommittee initially approved a minimum multi-specialty visit supply pack for these codes without considering the resulting overlap of supplies between SA048 and the E/M supply pack (SA047). The RUC

regarded these overlapping supply packs as a duplication, due to the fact that the quantity of the SA048 supply exceeded the number of postoperative visits, and requested that CMS remove the appropriate number of supply item

SA048 from 165 codes. After reviewing the quantity of the SA048 supply pack included for the codes in question, we are proposing to refine the quantity of minimum multi-specialty visit packs as displayed in Table 6.

TABLE 6—PROPOSED REFINEMENTS—MINIMUM MULTISPECIALTY VISIT PACK (SA048)

96904	0	1	1

In general, we are proposing to align the number of minimum multi-specialty visit packs with the number of post-operative office visits included in these codes. We are not proposing any supply pack quantity refinements for CPT codes 11100, 95974, or 95978 since they are being deleted for CY 2019. We are also not proposing any supply pack quantity refinements for CPT codes 45300, 46500, 57150, 57160, 58100, 64405, 95970, or HCPCS code G0268 since these codes were reviewed by the RUC this year and their previous direct PE inputs will be superseded by the new direct PE inputs we establish through this rulemaking process for CY 2019.

- A stakeholder notified us regarding a potential rank order anomaly in the direct PE inputs established for the Shaving of Epidermal or Dermal Lesions code family through PFS rulemaking for CY 2013. Three of these CPT codes describe benign shave removal of increasing lesion sizes: CPT code 11310 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 0.5 cm or less), CPT code 11311 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter

0.6 to 1.0 cm), and CPT code 11312 (Shaving of epidermal or dermal lesion, single lesion, face, ears, eyelids, nose, lips, mucous membrane; lesion diameter 1.1 to 2.0 cm). Each of these codes has a progressively higher work RVU corresponding to the increasing lesion diameter, and the recommended direct PE inputs also increase progressively from CPT codes 11310 to 11311 to 11312. However, the nonfacility PE RVU we established for CPT code 11311 is lower than the nonfacility PE RVU for CPT code 11310, which the stakeholder suggested may represent a rank order anomaly.

We reviewed the direct PE inputs for CPT code 11311 and found that there were clerical inconsistencies in the data entry that resulted in the assignment of the lower nonfacility PE RVU for CPT code 11311. We propose to revise the direct PE inputs to reflect the ones previously finalized through rulemaking for CPT code 11311.

- In CY 2018, we inadvertently assigned too many minutes of clinical labor time for the “Obtain vital signs” task to three therapy codes, given that these codes are typically billed in multiple units and in conjunction with other therapy codes for the same patient

on the same day, and we do not believe that it would be typical for clinical staff to obtain vital signs for each time a code is reported. The codes are: CPT code 97124 (Therapeutic procedure, 1 or more areas, each 15 minutes; massage, including effleurage, petrissage and/or tapotement (stroking, compression, percussion)); CPT code 97750 (Physical performance test or measurement (e.g., musculoskeletal, functional capacity), with written report, each 15 minutes); and CPT code 97755 (Assistive technology assessment (e.g., to restore, augment or compensate for existing function, optimize functional tasks and/or maximize environmental accessibility), direct one-on-one contact, with written report, each 15 minutes).

Therefore, we are proposing to refine the “Obtain vital signs” clinical labor task for these three codes back to their previous times of 1 minute for CPT codes 97124 and 97750 and to 3 minutes for CPT code 97755. We are also proposing to refine the equipment time for the table, mat, hi-lo, 6 x 8 platform (EF028) for CPT code 97124 to reflect the change in the clinical labor time.

- We received a letter from a stakeholder alerting us to an anomaly in

the direct PE inputs for CPT code 52000 (Cystourethroscopy (separate procedure)). The stakeholder stated that the inclusion of an endoscope disinfectant, rigid or fiberoptic, w-cart equipment item (ES005) was inadvertently overlooked in the recommendations for CPT code 52000 when it was reviewed during PFS rulemaking for CY 2017, and that the equipment would be necessary for endoscope sterilization. The stakeholder requested that this essential piece of equipment should be added to the direct PE inputs for CPT code 52000.

After reviewing the direct PE inputs for this code, we agree with the stakeholder and we are proposing to add the endoscope disinfectant (ES005) to CPT code 52000, and to add 22 minutes of equipment time for that item to match the equipment time of the other non-scope items included in this code.

e. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. For CY 2019, we are proposing the following price updates for existing direct PE inputs.

We are proposing to update the price of four supplies and one equipment item in response to the public submission of invoices. As these pricing updates were each part of the formal review for a code family, we are proposing that the new pricing take effect for CY 2019 for these items instead of being phased in over 4 years. For the details of these proposed price updates, please refer to section II.H of this proposed rule Table 16: Invoices Received for Existing Direct PE Inputs.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that

would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, as added by the PAMA, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen has submitted a report with updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Physician-FeeSched/PFS-Federal-Regulation-Notices.html>.

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis, physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).
- **Federal Register**, current DPEI data, historical proposed and final rules prior to FY 2018, and other resources; that is, AMA RUC reports (References).

StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in

hierarchical order considering both data representativeness and reliability:

1. If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Commercial price, as a weighted average of market share, represents a more robust estimate for each piece of equipment and a more precise reference for the RP.

2. If StrategyGen did not have market share for commercial products, then they used a weighted average (weighted by sample size) of the commercial price and GSA price for the RP. The impact of the GSA price may be nominal in some of these cases since it is proportionate to the commercial samples sizes.

3. Otherwise, if single price points existed from alternate supplier sites, the RP was the weighted average of the commercial price and the GSA price.

4. Finally, if no data were available for commercial products, the GSA average price was used as the RP; and when StrategyGen could find no market research for a particular piece of equipment or supply item, the current CMS prices were used as the RP.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current CMS price. Specifically, preliminary data indicate that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties will experience increases or decreases in their Medicare payments if CMS were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant reductions in RVUs, as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum

RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

After reviewing the StrategyGen report, we are proposing to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen. We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, we are proposing to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY

2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition period finalized in CY 2007 PFS final rule with comment period when changing to the “bottom-up” PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We are proposing to implement this phase-in over 4 years so that supply and

equipment values transition smoothly from the prices we currently include to the final updated prices in CY 2022. We are proposing to implement this pricing transition such that one quarter of the difference between the current price and the fully phased in price is implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the proposed transition from the current to the fully-implemented new pricing is provided in Table 7.

TABLE 7—EXAMPLE OF DIRECT PE PRICING TRANSITION

Current Price	\$100	
Final Price	200	
Year 1 (CY 2019) Price	125	¼ difference between \$100 and \$200.
Year 2 (CY 2020) Price	150	⅓ difference between \$125 and \$200.
Year 3 (CY 2021) Price	175	½ difference between \$150 and \$200.
Final (CY 2022) Price	200	

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we are proposing to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We are also proposing that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we are proposing to implement the established invoice price as the updated price and to phase in the new price over the

remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we are proposing to phase in over the 4-year transition period), we believe it is important to include them in the remaining transition toward the updated price. We are also proposing to phase in any updated pricing we establish during 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves (SB024) or exam tables (EF023), even if invoices are provided as part of the formal review of a code family. We would implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal is intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply and equipment items (meaning that these items are included in 100 or more codes).

We believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the

opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer time frame will allow more opportunities for public comment and submission of additional, applicable data. We welcome feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration. We are particularly interested in comments regarding the supply and equipment pricing for CPT codes 95165 and 95004 that are frequently used by the Allergy/Immunology specialty. The Allergy/Immunology specialty was disproportionately affected by the updated pricing, even with a 4-year phase-in. The direct PE costs for CPT code 95165 would go down from \$8.43 to \$8.17 as a result of the updated supply and equipment pricing information. This would result in the PE RVU for CPT code 96165 to decrease from 0.30 to 0.26. We are seeking feedback on the supply and equipment pricing for the affected codes typically performed by this specialty and whether the direct PE inputs should be reviewed along with the pricing. The full report from the contractor, including the updated supply and equipment pricing as it is proposed to be implemented over the proposed 4-year transition period, will be made available as a public use file displayed on the CMS website

under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

To maintain relativity between the clinical labor, supplies, and equipment portions of the PE methodology, we believe that the rates for the clinical labor staff should also be updated along with the updated pricing for supplies and equipment. We seek public comment regarding whether to update the clinical labor wages used in developing PE RVUs in future calendar years during the 4-year pricing transition for supplies and equipment, or whether it would be more appropriate to update the clinical labor wages at a later date following the conclusion of the transition for supplies and equipment, for example, to avoid other potentially large shifts in PE RVUs during the 4-year pricing transition period.

(2) Breast Biopsy Software (EQ370)

Following the publication of the CY 2018 PFS final rule, a stakeholder contacted us and requested that we update the price for the Breast Biopsy software (EQ370) equipment. This equipment item currently lacks a price in the direct PE database, and when an invoice for the Breast Biopsy software was first submitted during the CY 2014 PFS rule, we stated that this item served clinical functions similar to other items already included in the Magnetic Resonance (MR) room equipment package (EL008) included in the same CPT codes under review. Therefore, we did not create new direct PE inputs for this equipment item (78 FR 74344 through 74345). The stakeholder suggested that this software is used to subtract the imaging raw data series from the MRI Scanner, reformat the images in multiple planes to allow accurate targeting of the lesion to be biopsied, identify the location of a fiducial marker on the patient's skin, and then target the location of the enhancing lesion to be biopsied. The stakeholder requested that EQ370 be renamed as "Breast MRI computer aided detection and biopsy guidance software" and added to existing CPT codes 19085 (Biopsy, breast, with placement of breast localization device(s) (e.g., clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed, percutaneous; first lesion, including magnetic resonance guidance), 19086 (Biopsy, breast, with placement of breast localization device(s) (e.g., clip, metallic pellet), when performed, and imaging of the biopsy specimen, when performed,

percutaneous; each additional lesion, including magnetic resonance guidance), 19287 (Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; first lesion, including magnetic resonance guidance), and 19288 (Placement of breast localization device(s) (e.g., clip, metallic pellet, wire/needle, radioactive seeds), percutaneous; each additional lesion, including magnetic resonance guidance), as well as adding the equipment to two newly created MR breast codes with CAD, CPT codes 77X51 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral) and 77X52 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral). The stakeholder supplied an invoice with a purchase price of \$52,275 for the equipment.

After reviewing the use of the Breast Biopsy software (EQ370) equipment in these six codes, we are not proposing to update the price or add the software to these procedures. As we stated in the CY 2014 PFS final rule with comment period (78 FR 74345), we continue to believe that equipment item EQ370 serves clinical functions similar to other items already included in the MR room equipment package (EL008), and that it would be duplicative to include this Breast Biopsy software as a separate direct PE input. We also note that the RUC recommendations for the new CPT codes 77X51 and 77X52 do not include EQ370 in the recommended equipment for these procedures, and we do not have any reason to believe that the inclusion of additional Breast Biopsy software beyond what is already contained in the MR room equipment package would be typical. However, we will update the name of the EQ370 equipment item from "Breast Biopsy software" to the requested "Breast MRI computer aided detection and biopsy guidance software" to help better describe the equipment in question.

(3) Invoice Submission

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. For

CY 2019, we note that some stakeholders have submitted invoices for new, revised, or potentially misvalued codes after the February 10th deadline established for code valuation recommendations. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we would consider invoices submitted as public comments during the comment period following the publication of this proposed rule, and would consider any invoices received after February 10 or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices.

4. Adjustment to Allocation of Indirect PE for Some Office-Based Services

In the CY 2018 PFS final rule (82 FR 52999 through 53000), we established criteria for identifying the services most affected by the indirect PE allocation anomaly that does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in nonfacility settings. We also finalized a modification in the PE methodology for allocating indirect PE RVUs to better reflect the relative indirect PE resources involved in furnishing these services. The methodology, as described, is based on the difference between the ratio of indirect PE to work RVUs for each of the codes meeting eligibility criteria and the ratio of indirect PE to work RVU for the most commonly reported visit code. We refer readers to the CY 2018 PFS final rule (82 FR 52999 through 53000) for a discussion of our process for selecting services subject to the revised methodology, as well as a description of the methodology, which we began implementing for CY 2018 as the first year of a 4-year transition. For CY 2019, we are proposing to continue with the second year of the transition of this adjustment to the standard process for allocating indirect PE.

C. Determination of Malpractice Relative Value Units (RVUs)

1. Overview

Section 1848(c) of the Act requires that the payment amount for each service paid under the PFS be composed of three components: Work; PE; and malpractice (MP) expense. As required by section 1848(c)(2)(C)(iii) of the Act, beginning in CY 2000, MP RVUs are resource-based. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. In the CY 2015

PFS final rule with comment period, we implemented the third review and update of MP RVUs. For a comprehensive discussion of the third review and update of MP RVUs see the CY 2015 proposed rule (79 FR 40349 through 40355) and final rule with comment period (79 FR 67591 through 67596).

To determine MP RVUs for individual PFS services, our MP methodology is composed of three factors: (1) Specialty-level risk factors derived from data on specialty-specific MP premiums incurred by practitioners; (2) service level risk factors derived from Medicare claims data of the weighted average risk factors of the specialties that furnish each service; and (3) an intensity/complexity of service adjustment to the service level risk factor based on either the higher of the work RVU or clinical labor RVU. Prior to CY 2016, MP RVUs were only updated once every 5 years, except in the case of new and revised codes.

In the CY 2016 PFS final rule with comment period (80 FR 70906 through 70910), we finalized a policy to begin conducting annual MP RVU updates to reflect changes in the mix of practitioners providing services (using Medicare claims data), and to adjust MP RVUs for risk, intensity and complexity (using the work RVU or clinical labor RVU). We also finalized a policy to modify the specialty mix assignment methodology (for both MP and PE RVU calculations) to use an average of the 3 most recent years of data instead of a single year of data. Under this approach, for new and revised codes, we generally assign a specialty risk factor to individual codes based on the same utilization assumptions we make regarding the specialty mix we use for calculating PE RVUs and for PFS budget neutrality. We continue to use the work RVU or clinical labor RVU to adjust the MP RVU for each code for intensity and complexity. In finalizing this policy, we stated that the specialty-specific risk factors would continue to be updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews.

In CY 2017, we finalized the 8th GPCI update, which reflected updated MP premium data. We did not propose to use the updated MP premium data to propose updates for CY 2017 to the specialty risk factors used in the calculation of MP RVUs because it was inconsistent with the policy we previously finalized in the CY 2016 PFS final rule with comment period. That is, we indicated that the specialty-specific risk factors would continue to be

updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews. However, we solicited comment on whether we should consider doing so, perhaps as early as for CY 2018, prior to the fourth review and update of MP RVUs that must occur no later than CY 2020. After consideration of the comments received, we stated in the CY 2017 PFS final rule that we would consider the possibility of using the updated MP data to update the specialty risk factors used in the calculation of the MP RVUs prior to the next 5-year update in future rulemaking (81 FR 80191 through 80192).

In the CY 2018 PFS proposed rule, we proposed to use the updated MP data to update the specialty risk factors used in calculation of the MP RVUs prior to the next 5-year update (CY 2020). However, in the CY 2018 PFS final rule (82 FR 53000 through 53006), after consideration of the comments received and some differences we observed in the descriptions on the raw rate filings as compared to how those data were categorized to conform with the CMS specialties, we did not finalize our proposal to use the updated MP data. We are required to review, and if necessary, adjust the MP RVUs by CY 2020. We appreciate the feedback provided by commenters in response to the CY 2018 PFS proposed rule, and we are seeking additional comment regarding the next MP RVU update which must occur by CY 2020. Specifically, we are seeking comment on how we might improve the way that specialties in the state-level raw rate filings data are crosswalked for categorization into CMS specialty codes which are used to develop the specialty-level risk factors and the MP RVUs.

D. Modernizing Medicare Physician Payment by Recognizing Communication Technology-Based Services

The health care community uses the term “telehealth” broadly to refer to medical services furnished via communication technology. Under current PFS payment rules, Medicare routinely pays for many of these kinds of services. This includes some kinds of remote patient monitoring (either as separate services or as parts of bundled services), interpretations of diagnostic tests when furnished remotely, and, under conditions specified in section 1834(m) of the Act, services that would otherwise be furnished in person but are instead furnished via real-time, interactive communication technology. Over the past several years, CMS has

also established several PFS policies to explicitly pay for non-face-to-face services included as part of ongoing care management.

While all of the kinds of services stated above might be called “telehealth” by patients, other payers and health care providers, we have generally used the term “Medicare telehealth services” to refer to the subset of services defined in section 1834(m) of the Act. Section 1834(m) of the Act defines Medicare telehealth services and specifies the payment amounts and circumstances under which Medicare makes payment for a discrete set of services, all of which must ordinarily be furnished in-person, when they are instead furnished using interactive, real-time telecommunication technology. Section 1834(m)(4)(F)(i) of the Act enumerates certain Medicare telehealth services and section 1834(m)(4)(F)(ii) of the Act allows the Secretary to specify additional Medicare telehealth services using an annual process to add or delete services from the Medicare telehealth list. Section 1834(m)(4)(C) of the Act limits the scope of Medicare telehealth services for which payment may be made to those furnished to a beneficiary who is located in certain types of originating sites in certain, mostly rural, areas. Section 1834(m)(1) of the Act permits only physicians and certain other types of practitioners to furnish and be paid for Medicare telehealth services. Although section 1834(m)(4)(F)(ii) of the Act grants the Secretary the authority to add services to, and delete services from, the list of telehealth services based on the established annual process, it does not provide any authority to change the limitations relating to geography, patient setting, or type of furnishing practitioner because these requirements are specified in statute. However, we note that sections 50302, 50324, and 50325 of the Bipartisan Budget Act of 2018 (BBA 18) have modified or removed the limitations relating to geography and patient setting for certain telehealth services, including for certain home dialysis end-stage renal disease-related services, services furnished by practitioners in certain Accountable Care Organizations, and acute stroke-related services, respectively.

In the CY 2018 PFS proposed rule, we sought information from the public regarding ways that we might further expand access to telehealth services within the current statutory authority and pay appropriately for services that take full advantage of communication technologies. Commenters were very supportive of CMS expanding access to these kinds of services. Many

commenters noted that Medicare payment for telehealth services is restricted by statute, but encouraged CMS to recognize and support technological developments in healthcare.

We believe that the provisions in section 1834(m) of the Act apply particularly to the kinds of professional services explicitly enumerated in the statutory provisions, like professional consultations, office visits, and office psychiatry services. Generally, the services we have added to the telehealth list are similar to these kinds of services. As has long been the case, certain other kinds of services that are furnished remotely using communications technology are not considered “Medicare telehealth services” and are not subject to the restrictions articulated in section 1834(m) of the Act. This is true for services that were routinely paid separately prior to the enactment of the provisions in section 1834(m) of the Act and do not usually include patient interaction (such as remote interpretation of diagnostic imaging tests), and for services that were not discretely defined or separately paid for at the time of enactment and that do include patient interaction (such as chronic care management services).

As we considered the concerns expressed by commenters about the statutory restrictions on Medicare telehealth services, we recognized that the concerns were not limited to the barriers to payment for remotely furnished services like those described by the office visit codes. The commenters also expressed concerns pertaining to the limitations on appropriate payment for evolving physicians’ services that are inherently furnished via communication technology, especially as technology and its uses have evolved in the decades since the Medicare telehealth services statutory provision was enacted.

In recent years, we have sought to recognize significant changes in health care practice, especially innovations in the active management and ongoing care of chronically ill patients, and have relied on the medical community to identify and define discrete physicians’ services through the CPT Editorial Panel (82 FR 53163). In response to our comment solicitation on Medicare telehealth services in the CY 2018 PFS proposed rule (82 FR 53012), commenters provided many suggestions for how CMS could expand access to telehealth services within the current statutory authority and pay appropriately for services that take full advantage of communication technologies, such as waiving portions

of the statutory restrictions using demonstration authority. After considering those comments we recognize that concerns regarding the provisions in section 1834(m) of the Act may have been limiting the degree to which the medical community developed coding for new kinds of services that inherently utilize communication technology. We have come to believe that section 1834(m) of the Act does not apply to all kinds of physicians’ services whereby a medical professional interacts with a patient via remote communication technology. Instead, we believe that section 1834(m) of the Act applies to a discrete set of physicians’ services that ordinarily involve, and are defined, coded, and paid for as if they were furnished during an in-person encounter between a patient and a health care professional.

For CY 2019, we are aiming to increase access for Medicare beneficiaries to physicians’ services that are routinely furnished via communication technology by clearly recognizing a discrete set of services that are defined by and inherently involve the use of communication technology. Accordingly, we have several proposals for modernizing Medicare physician payment for communication technology-based services, described below. These services would not be subject to the limitations on Medicare telehealth services in section 1834(m) of the Act because, as we have explained, we do not consider them to be Medicare telehealth services; instead, they would be paid under the PFS like other physicians’ services. Additionally, we note that in furnishing these proposed services, practitioners would need to comply with any applicable privacy and security laws, including the HIPAA Privacy Rule.

1. Brief Communication Technology-Based Service, *e.g.*, Virtual Check-In (HCPCS Code GVC11)

The traditional office visit codes describe a broad range of physicians’ services. Historically, we have considered any routine non-face-to-face communication that takes place before or after an in-person visit to be bundled into the payment for the visit itself. In recent years, we have recognized payment disparities that arise when the amount of non-face-to-face work for certain kinds of patients is disproportionately higher than for others, and created coding and separate payment to recognize care management services such as chronic care management and behavioral health integration services (81 FR 80226). We

now recognize that advances in communication technology have changed patients’ and practitioners’ expectations regarding the quantity and quality of information that can be conveyed via communication technology. From the ubiquity of synchronous, audio/video applications to the increased use of patient-facing health portals, a broader range of services can be furnished by health care professionals via communication technology as compared to 20 years ago.

Among these services are the kinds of brief check-in services furnished using communication technology that are used to evaluate whether or not an office visit or other service is warranted. When these kinds of check-in services are furnished prior to an office visit, then we would currently consider them to be bundled into the payment for the resulting visit, such as through an evaluation and management (E/M) visit code. However, in cases where the check-in service does not lead to an office visit, then there is no office visit with which the check-in service can be bundled. To the extent that these kinds of check-ins become more effective at addressing patient concerns and needs using evolving technology, we believe that the overall payment implications of considering the services to be broadly bundled becomes more problematic. This is especially true in a resource-based relative value payment system. Effectively, the better practitioners are in leveraging technology to furnish effective check-ins that mitigate the need for potentially unnecessary office visits, the fewer billable services they furnish. Given the evolving technological landscape, we believe this creates incentives that are inconsistent with current trends in medical practice and potentially undermines payment accuracy.

Therefore, we are proposing to pay separately, beginning January 1, 2019, for a newly defined type of physicians’ service furnished using communication technology. This service would be billable when a physician or other qualified health care professional has a brief non-face-to-face check-in with a patient via communication technology, to assess whether the patient’s condition necessitates an office visit. We understand that the kinds of communication technology used to furnish these kinds of services has broadened over time and has enhanced the capacity for medical professionals to care for patients. We are seeking comment on what types of communication technology are utilized by physicians or other qualified health care professionals in furnishing these

services, including whether audio-only telephone interactions are sufficient compared to interactions that are enhanced with video or other kinds of data transmission.

The proposed code would be described as GVC11 (Brief communication technology-based service, *e.g.*, virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion). We further propose that in instances when the brief communication technology-based service originates from a related E/M service provided within the previous 7 days by the same physician or other qualified health care professional, that this service would be considered bundled into that previous E/M service and would not be separately billable, which is consistent with code descriptor language for CPT code 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion) on which this service is partially modeled. We propose that in instances when the brief communication technology-based service leads to an E/M in-person service with the same physician or other qualified health care professional, this service would be considered bundled into the pre- or post-visit time of the associated E/M service, and therefore, would not be separately billable. We also note that this service could be used as part of a treatment regimen for opioid use disorders and other substance use disorders, since there are several components of Medication Assisted Therapy (MAT) that could be done virtually, or to assess whether the patient's condition requires an office visit.

We propose pricing this distinct service at a rate lower than existing E/M in-person visits to reflect the low work time and intensity and to account for the resource costs and efficiencies associated with the use of communication technology. We expect that these services would be initiated by

the patient, especially since many beneficiaries would be financially liable for sharing in the cost of these services. For the same reason, we believe it is important for patients to consent to receiving these services, and we are specifically seeking comment on whether we should require, for example, verbal consent that would be noted in the medical record for each service. We are also proposing that this service can only be furnished for established patients because we believe that the practitioner needs to have an existing relationship with the patient, and therefore, basic knowledge of the patient's medical condition and needs, in order to perform this service. We are not proposing to apply a frequency limit on the use of this code by the same practitioner with the same patient, but we want to ensure that this code is appropriately utilized for circumstances when a patient needs a brief non-face-to-face check-in to assess whether an office visit is necessary. We are seeking comment on whether it would be clinically appropriate to apply a frequency limitation on the use of this code by the same practitioner with the same patient, and on what would be a reasonable frequency limitation. We are also seeking comment on the timeframes under which this service would be separately billable compared to when it would be bundled. We believe the general construct of bundling the services that lead directly to a billable visit is important, but we are concerned that establishing strict timeframes may create unintended consequences regarding scheduling of care. For example, we do not want to bundle only the services that occur within 24 hours of a visit only to see a significant number of visits occurring at 25 hours after the initial service. In order to mitigate these incentives, we are seeking comment on whether we should consider broadening the window of time and/or circumstances in which this service should be bundled into the subsequent related visit. We note that these services, like any other physicians' service, would need to be medically reasonable and necessary in order to be paid by Medicare. We are seeking comment on how clinicians could best document the medical necessity of this service, consistent with documentation requirements necessary to demonstrate the medical necessity of any service under the PFS. For details related to developing utilization estimates for these services, see section VII. Regulatory Impact Analysis, of this proposed rule. For additional details related to valuation of these services,

see section II.H. Valuation of Specific Codes, of this proposed rule. We are seeking comment on our proposed definition and valuation of this code.

2. Remote Evaluation of Pre-Recorded Patient Information (HCPCS Code GRAS1)

Stakeholders have requested that CMS make separate Medicare payment when a physician uses recorded video and/or images captured by a patient in order to evaluate a patient's condition. These services involve what is referred to under section 1834(m) of the Act as "store-and-forward" communication technology that provides for the "asynchronous transmission of health care information." We note that we believe these services involve pre-recorded patient-generated still or video images. Other types of patient-generated information, such as information from heart rate monitors or other devices that collect patient health marker data, could potentially be reported with CPT codes that describe remote patient monitoring. Under section 1834(m) of the Act, payment for telehealth services furnished using such store-and-forward technology is permitted only under Federal telemedicine demonstration programs conducted in Alaska or Hawaii, and these telehealth services remain subject to the other statutory restrictions governing Medicare telehealth services. Much like the virtual check-in described above, these services are not meant to substitute for an in-person service currently separately payable under the PFS, and therefore, are distinct from the telehealth services described under section 1834(m) of the Act. Effective January 1, 2019, we are proposing to create specific coding that describes the remote professional evaluation of patient-transmitted information conducted via pre-recorded "store and forward" video or image technology. These services would not be subject to the Medicare telehealth restrictions in section 1834(m) of the Act, and the valuation would reflect the resource costs associated with furnishing services utilizing communication technology.

Much like the brief communication technology-based services discussed above, these services may be used to determine whether or not an office visit or other service is warranted. When the review of the patient-submitted image and/or video results in an in-person E/M office visit with the same physician or qualified health care professional, we propose that this remote service would be considered bundled into that office visit and therefore would not be separately billable. We further propose

that in instances when the remote service originates from a related E/M service provided within the previous 7 days by the same physician or qualified health care professional, that this service would be considered bundled into that previous E/M service and also would not be separately billable. In summary, we propose this service to be a stand-alone service that could be separately billed to the extent that there is no resulting E/M office visit and there is no related E/M office visit within the previous 7 days of the remote service being furnished. The proposed coding and separate payment for this service is consistent with the progression of technology and its impact on the practice of medicine in recent years, and would result in increased access to services for Medicare beneficiaries. The proposed code for this service would be described as GRAS1 (Remote evaluation of recorded video and/or images submitted by the patient (e.g., store and forward), including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment). We are seeking comment as to whether these services should be limited to established patients; or whether there are certain cases, like dermatological or ophthalmological services, where it might be appropriate for a new patient to receive these services. For example, when a patient seeks care for a specific skin condition from a dermatologist with whom she does not have a prior relationship, and part of the inquiry is an assessment of whether the patient needs an in-person visit, the patient could share, and the dermatologist could remotely evaluate, pre-recorded information. We also note that this service is distinct from the brief communication technology-based service described above in that this service involves the practitioner's evaluation of a patient-generated still or video image, and the subsequent communication of the resulting response to the patient, while the brief communication technology-based service describes a service that occurs in real time and does not involve the transmission of any recorded image.

For details related to developing utilization estimates for these services, see section VII. Regulatory Impact Analysis, of this proposed rule. For further discussion related to valuation of this service, please see the section II.H. Valuation of Specific Codes, of this proposed rule. We are seeking public

comment on our proposed definition and valuation of the code.

3. Interprofessional Internet Consultation (CPT Codes 994X6, 994X0, 99446, 99447, 99448, and 99449)

As part of our standard rulemaking process, we received recommendations from the RUC to assist in establishing values for six CPT codes that describe interprofessional consultations. In 2013, CMS received recommendations from the RUC for CPT codes 99446 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5–10 minutes of medical consultative discussion and review), 99447 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 11–20 minutes of medical consultative discussion and review), 99448 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 21–30 minutes of medical consultative discussion and review), and 99449 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 31 minutes or more of medical consultative discussion and review). CMS declined to make separate payment, stating in the CY 2014 PFS final rule with comment period that these kinds of services are considered bundled (78 FR 74343). For CY 2019, the CPT Editorial Panel created two new codes to describe additional consultative services, including a code describing the work of the treating physician when initiating a consult, and the RUC recommended valuation for new codes, CPT codes 994X0 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes) and 994X6 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician

or other qualified health care professional, 5 or more minutes of medical consultative time). The RUC also reaffirmed their prior recommendations for the existing CPT codes. The six codes describe assessment and management services conducted through telephone, internet, or electronic health record consultations furnished when a patient's treating physician or other qualified healthcare professional requests the opinion and/or treatment advice of a consulting physician or qualified healthcare professional with specific specialty expertise to assist with the diagnosis and/or management of the patient's problem without the need for the patient's face-to-face contact with the consulting physician or qualified healthcare professional. Currently, the resource costs associated with seeking or providing such a consultation are considered bundled, which in practical terms means that specialist input is often sought through scheduling a separate visit for the patient when a phone or internet-based interaction between the treating practitioner and the consulting practitioner would have been sufficient. We believe that proposing payment for these interprofessional consultations performed via communications technology such as telephone or internet is consistent with our ongoing efforts to recognize and reflect medical practice trends in primary care and patient-centered care management within the PFS.

Beginning in the CY 2012 PFS proposed rule (76 FR 42793), we have recognized the changing focus in medical practice toward managing patients' chronic conditions, many of which particularly challenge the Medicare population, including heart disease, diabetes, respiratory disease, breast cancer, allergies, Alzheimer's disease, and factors associated with obesity. We have expressed concerns that the current E/M coding does not adequately reflect the changes that have occurred in medical practice, and the activities and resource costs associated with the treatment of these complex patients in the primary care setting. In the years since 2012, we have acknowledged the shift in medical practice away from an episodic treatment-based approach to one that involves comprehensive patient-centered care management, and have taken steps through rulemaking to better reflect that approach in payment under the PFS. In CY 2013, we established new codes to pay separately for transitional care management (TCM)

services. Next, we finalized new coding and separate payment beginning in CY 2015 for chronic care management (CCM) services provided by clinical staff (81 FR 80226). In the CY 2017 PFS final rule, we established separate payment for complex CCM services, an add-on code to the visit during which CCM is initiated to reflect the work of the billing practitioner in assessing the beneficiary and establishing the CCM care plan, and established separate payment for Behavioral Health Integration (BHI) services (81 FR 80226 through 80227).

As part of this shift in medical practice, and with the proliferation of team-based approaches to care that are often facilitated by electronic medical record technology, we believe that making separate payment for interprofessional consultations undertaken for the benefit of treating a patient will contribute to payment accuracy for primary care and care management services. We are proposing separate payment for these services, discussed in section II.H. Valuation of Specific Codes, of this proposed rule.

While we are proposing to make separate payment for these services because we believe they describe resource costs directly associated with seeking a consultation for the benefit of the beneficiary, we do have concerns about how these services can be distinguished from activities undertaken for the benefit of the practitioner, such as information shared as a professional courtesy or as continuing education. We do not believe that those examples would constitute a service directly attributable to a single Medicare beneficiary, and therefore neither the Medicare program nor the beneficiary should be responsible for those costs. We are therefore seeking comment on our assumption that these are separately identifiable services, and the extent to which they can be distinguished from similar services that are nonetheless primarily for the benefit of the practitioner. We note that there are program integrity concerns around making separate payment for these interprofessional consultation services, including around CMS' or its contractors' ability to evaluate whether an interprofessional consultation is reasonable and necessary under the particular circumstances. We are seeking comment on how best to minimize potential program integrity issues, and are particularly interested in information on whether these types of services are paid separately by private payers and if so, what controls or limitations private payers have put in

place to ensure these services are billed appropriately.

Additionally, since these codes describe services that are furnished without the beneficiary being present, we are proposing to require the treating practitioner to obtain verbal beneficiary consent in advance of these services, which would be documented by the treating practitioner in the medical record, similar to the conditions of payment associated with the care management services under the PFS. Obtaining advance consent includes ensuring that the patient is aware of applicable cost sharing. We welcome comments on this proposal.

4. Medicare Telehealth Services Under Section 1834(m) of the Act

a. Billing and Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. For further details, see the full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006).

b. Adding Services to the List of Medicare Telehealth Services

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us. Under this process, we assign any submitted request to add to the list of telehealth services to one of the following two categories:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the list of telehealth services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.

- *Category 2:* Services that are not similar to those on the current list of

telehealth services. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

The list of telehealth services, including the proposed additions described below, is included in the Downloads section to this proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Historically, requests to add services to the list of Medicare telehealth services had to be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. However, for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC. To be considered during PFS rulemaking for CY 2020, requests to add services to the list of Medicare telehealth services must be submitted and received by February 10, 2019. Each request to add a service to the list of Medicare telehealth

services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the list of Medicare telehealth services, requesters should be advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the list of Medicare telehealth services, including where to mail these requests, see our website at <https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html>.

c. Submitted Requests To Add Services to the List of Telehealth Services for CY 2019

Under our current policy, we add services to the telehealth list on a Category 1 basis when we determine that they are similar to services on the existing telehealth list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the telehealth list that resemble those services already on this list.

We received several requests in CY 2017 to add various services as Medicare telehealth services effective for CY 2019. The following presents a discussion of these requests, and our proposals for additions to the CY 2019 telehealth list. Of the requests received, we found that two services were sufficiently similar to services currently on the telehealth list to be added on a Category 1 basis. Therefore, we are proposing to add the following services to the telehealth list on a Category 1 basis for CY 2019:

- HCPCS codes G0513 and G0514 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; first 30 minutes (list separately in addition to code for preventive service) and (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (list separately in addition to

code G0513 for additional 30 minutes of preventive service).

We found that the services described by HCPCS codes G0513 and G0514 are sufficiently similar to office visits currently on the telehealth list. We believe that all the components of this service can be furnished via interactive telecommunications technology. Additionally, we believe that adding these services to the telehealth list would make it administratively easier for practitioners who report these services in connection with a preventive service that is furnished via telehealth, as both the base code and the add-on code would be reported with the telehealth place of service.

We also received requests to add services to the telehealth list that do not meet our criteria for Medicare telehealth services. We are not proposing to add to the Medicare telehealth services list the following procedures for chronic care remote physiologic monitoring, interprofessional internet consultation, and initial hospital care; or to change the requirements for subsequent hospital care or subsequent nursing facility care, for the reasons noted in the paragraphs that follow.

(1) Chronic Care Remote Physiologic Monitoring: CPT Codes

- CPT code 990X0 (Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment).
- CPT code 990X1 (Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days).
- CPT code 994X9 (Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month).

In the CY 2016 PFS final rule with comment period (80 FR 71064), we responded to a request to add CPT code 99490 (Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/

decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) to the Medicare telehealth list. We discussed that the services described by CPT code 99490 can be furnished without the beneficiary's face-to-face presence and using any number of non-face-to-face means of communication. We stated that it was therefore unnecessary to add that service to the list of Medicare telehealth services. Similarly, CPT codes 990X0, 990X1, and 994X9 describe services that are inherently non face-to-face. As discussed in section II.H. Valuation of Specific Codes, we instead are proposing to adopt CPT codes 990X0, 990X1, and 994X9 for payment under the PFS. Because these codes describe services that are inherently non face-to-face, we do not consider them Medicare telehealth services under section 1834(m) of the Act; therefore, we are not proposing to add them to the list of Medicare telehealth services.

(2) Interprofessional Internet Consultation: CPT Codes

- CPT code 994X0 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes).
- CPT code 994X6 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time).

As discussed in section II.H. Valuation of Specific Codes, we are proposing to adopt CPT codes 994X0 and 994X6 for payment under the PFS as these are distinct services furnished via communication technology. Because these codes describe services that are inherently non face-to-face, we do not consider them as Medicare telehealth services under section 1834(m) of the Act; therefore we are not proposing to add them to the list of Medicare telehealth services for CY 2019.

(3) Initial Hospital Care Services: CPT Codes

- CPT code 99221 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A detailed or comprehensive history; A detailed or comprehensive examination; and Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care

with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of low severity.)

- CPT code 99222 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of moderate severity.)

- CPT code 99223 (Initial hospital care, per day, for the evaluation and management of a patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; and Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the problem(s) requiring admission are of high severity.)

We have previously considered requests to add these codes to the telehealth list. As we stated in the CY 2011 PFS final rule with comment period (75 FR 73315), while initial inpatient consultation services are currently on the list of approved telehealth services, there are no services on the current list of telehealth services that resemble initial hospital care for an acutely ill patient by the admitting practitioner who has ongoing responsibility for the patient's treatment during the course of the hospital stay. Therefore, consistent with prior rulemaking, we do not propose that initial hospital care services be added to the Medicare telehealth services list on a category 1 basis.

The initial hospital care codes describe the first visit of the hospitalized patient by the admitting practitioner who may or may not have seen the patient in the decision-making phase regarding hospitalization. Based on the description of the services for these codes, we believed it is critical that the initial hospital visit by the admitting practitioner be conducted in person to ensure that the practitioner

with ongoing treatment responsibility comprehensively assesses the patient's condition upon admission to the hospital through a thorough in-person examination. Additionally, the requester submitted no additional research or evidence that the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient; therefore, we also do not propose adding initial hospital care services to the Medicare telehealth services list on a Category 2 basis.

We note that Medicare beneficiaries who are being treated in the hospital setting can receive reasonable and necessary E/M services using other HCPCS codes that are currently on the Medicare telehealth list, including those for subsequent hospital care, initial and follow-up telehealth inpatient and emergency department consultations, as well as initial and follow-up critical care telehealth consultations.

Therefore, we are not proposing to add the initial hospital care services to the list of Medicare telehealth services for CY 2019.

(4) Subsequent Hospital Care Services: CPT Codes

- CPT code 99231 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A problem focused interval history; A problem focused examination; Medical decision making that is straightforward or of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering or improving. Typically, 15 minutes are spent at the bedside and on the patient's hospital floor or unit.)

- CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; an expanded problem focused examination; medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 25 minutes are spent at the

bedside and on the patient's hospital floor or unit.)

- CPT code 99233 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; a detailed examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is unstable or has developed a significant complication or a significant new problem. Typically, 35 minutes are spent at the bedside and on the patient's hospital floor or unit.)

CPT codes 99231–99233 are currently on the list of Medicare telehealth services, but can only be billed via telehealth once every 3 days. The requester asked that we remove the frequency limitation. We stated in the CY 2011 PFS final rule with comment period (75 FR 73316) that, while we still believed the potential acuity of hospital inpatients is greater than those patients likely to receive Medicare telehealth services that were on the list at that time, we also believed that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth in order to ensure that hospitalized patients have frequent encounters with their admitting practitioner. We also noted that we continue to believe that the majority of these visits should be in-person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis. Because of our concerns regarding the potential acuity of hospital inpatients, we finalized the addition of CPT codes 99231–99233 to the list of Medicare telehealth services, but limited the provision of these subsequent hospital care services through telehealth to once every 3 days. We continue to believe that admitting practitioners should continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Our concerns and position on the provision of subsequent hospital care services via telehealth have not changed. Therefore, we are not proposing to remove the frequency limitation on these codes.

(5) Subsequent Nursing Facility Care Services: CPT Codes

- CPT code 99307 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key

components: A problem focused interval history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is stable, recovering, or improving. Typically, 10 minutes are spent at the bedside and on the patient's facility floor or unit.)

- CPT code 99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; an expanded problem focused examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.)

- CPT code 99309 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A detailed interval history; a detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient has developed a significant complication or a significant new problem. Typically, 25 minutes are spent at the bedside and on the patient's facility floor or unit.)

- CPT code 99310 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: A comprehensive interval history; a comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. The patient may be unstable or may have developed a significant new problem requiring immediate physician attention. Typically, 35 minutes are spent at the

bedside and on the patient's facility floor or unit.)

CPT codes 99307–99310 are currently on the list of Medicare telehealth services, but can only be billed via telehealth once every 30 days. The requester asked that we remove the frequency limitation when these services are provided for psychiatric care. We stated in the CY 2011 PFS final rule with comment period (75 FR 73317) that we believed it would be appropriate to permit some subsequent nursing facility care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, but because of our concerns regarding the potential acuity and complexity of SNF inpatients, we limited the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. Since these codes are used to report care for patients with a variety of diagnoses, including psychiatric diagnoses, we do not think it would be appropriate to remove the frequency limitation only for certain diagnoses. The services described by these CPT codes are essentially the same service, regardless of the patient's diagnosis. We also continue to have concerns regarding the potential acuity and complexity of SNF inpatients, and therefore, we are not proposing to remove the frequency limitation for subsequent nursing facility care services in CY 2019.

In summary, we are proposing to add the following codes to the list of Medicare telehealth services beginning in CY 2019 on a category 1 basis:

- HCPCS code G0513 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; first 30 minutes (list separately in addition to code for preventive service).

- HCPCS code G0514 (Prolonged preventive service(s) (beyond the typical service time of the primary procedure), in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (list separately in addition to code G0513 for additional 30 minutes of preventive service).

5. Expanding the Use of Telehealth Under the Bipartisan Budget Act of 2018

a. Expanding Access to Home Dialysis Therapy Under the Bipartisan Budget Act of 2018

Section 50302 of the BBA of 2018 amended sections 1881(b)(3) and

1834(m) of the Act to allow an individual determined to have end-stage renal disease receiving home dialysis to choose to receive certain monthly end-stage renal disease-related (ESRD-related) clinical assessments via telehealth on or after January 1, 2019. The new section 1881(b)(3)(B)(ii) of the Act requires that such an individual must receive a face-to-face visit, without the use of telehealth, at least monthly in the case of the initial 3 months of home dialysis and at least once every 3 consecutive months after the initial 3 months.

As added by section 50302(b)(1) of the BBA of 2018, subclauses (IX) and (X) of section 1834(m)(4)(C)(ii) of the Act include a renal dialysis facility and the home of an individual as telehealth originating sites but only for the purposes of the monthly ESRD-related clinical assessments furnished through telehealth provided under section 1881(b)(3)(B) of the Act. Section 50302(b)(1) also added a new section 1834(m)(5) of the Act which provides that the geographic requirements for telehealth services under section 1834(m)(4)(C)(i) of the Act do not apply to telehealth services furnished on or after January 1, 2019 for purposes of the monthly ESRD-related clinical assessments where the originating site is a hospital-based or critical access hospital-based renal dialysis center, a renal dialysis facility, or the home of an individual. Section 50302(b)(2) of the BBA of 2018 amended section 1834(m)(2)(B)(ii) of the Act to require that no originating site facility fee is to be paid if the home of the individual is the originating site.

Our current regulation at § 410.78 specifies the conditions that must be met in order for Medicare Part B to pay for covered telehealth services included on the telehealth list when furnished by an interactive telecommunications system. In accordance with the new subclauses (IX) and (X) of section 1834(m)(4)(C)(ii) of the Act, we are proposing to revise our regulation at § 410.78(b)(3) to add a renal dialysis facility and the home of an individual as Medicare telehealth originating sites, but only for purposes of the home dialysis monthly ESRD-related clinical assessment in section 1881(b)(3)(B) of the Act. We propose to amend § 414.65(b)(3) to reflect the requirement in section 1834(m)(2)(B)(ii) of the Act that there is no originating site facility fee paid when the originating site for these services is the patient's home. Additionally, we are proposing to add new § 410.78(b)(4)(iv)(A), to reflect the provision in section 1834(m)(5) of the Act, added by section 50302 of the BBA

of 2018, specifying that the geographic requirements described in section 1834(m)(4)(C)(i) of the Act do not apply with respect to telehealth services furnished on or after January 1, 2019, in originating sites that are hospital-based or critical access hospital-based renal dialysis centers, renal dialysis facilities, or the patient's home, respectively under sections 1834(m)(4)(C)(ii)(VI), (IX) and (X) of the Act, for purposes of section 1881(b)(3)(B) of the Act.

b. Expanding the Use of Telehealth for Individuals With Stroke Under the Bipartisan Budget Act of 2018

Section 50325 of the BBA of 2018 amended section 1834(m) of the Act by adding a new paragraph (6) that provides special rules for telehealth services furnished on or after January 1, 2019, for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke (acute stroke telehealth services), as determined by the Secretary. Specifically, section 1834(m)(6)(A) of the Act removes the restrictions on the geographic locations and the types of originating sites where acute stroke telehealth services can be furnished. Section 1834(m)(6)(B) of the Act specifies that acute stroke telehealth services can be furnished in any hospital, critical access hospital, mobile stroke units (as defined by the Secretary), or any other site determined appropriate by the Secretary, in addition to the current eligible telehealth originating sites. Section 1834(m)(6)(C) of the Act limits payment of an originating site facility fee to acute stroke telehealth services furnished in sites that meet the usual telehealth restrictions under section 1834(m)(4)(C) of the Act.

To implement these requirements, we are proposing to create a new modifier that would be used to identify acute stroke telehealth services. The practitioner and, as appropriate, the originating site, would append this modifier when clinically appropriate to the HCPCS code when billing for an acute stroke telehealth service or an originating site facility fee, respectively. We note that section 50325 of the BBA of 2018 did not amend section 1834(m)(4)(F) of the Act, which limits the scope of telehealth services to those on the Medicare telehealth list. Practitioners would be responsible for assessing whether it would be clinically appropriate to use this modifier with codes from the Medicare telehealth list. By billing with this modifier, practitioners would be indicating that the codes billed were used to furnish telehealth services for diagnosis, evaluation, or treatment of symptoms of

an acute stroke. We believe that the adoption of a service level modifier is the least administratively burdensome means of implementing this provision for practitioners, while also allowing CMS to easily track and analyze utilization of these services.

In accordance with section 1834(m)(6)(B) of the Act, as added by section 50325 of the BBA of 2018, we are also proposing to revise § 410.78(b)(3) of our regulations to add mobile stroke unit as a permissible originating site for acute stroke telehealth services. We are proposing to define a mobile stroke unit as a mobile unit that furnishes services to diagnose, evaluate, and/or treat symptoms of an acute stroke and are seeking comment on this definition, as well as additional information on how these units are used in current medical practice. We are therefore proposing that mobile stroke units and the current eligible telehealth originating sites, which include hospitals and critical access hospitals as specified in section 1834(m)(6)(B) of the Act, but excluding renal dialysis facilities and patient homes because they are only allowable originating sites for purposes of home dialysis monthly ESRD-related clinical assessments in section 1881(b)(3)(B) of the Act, would be permissible originating sites for acute stroke telehealth services.

We also seek comment on other possible appropriate originating sites for telehealth services furnished for the diagnosis, evaluation, or treatment of symptoms of an acute stroke. Any additional sites would be adopted through future rulemaking. As required under section 1834(m)(6)(C) of the Act, the originating site facility fee would not apply in instances where the originating site does not meet the originating site type and geographic requirements under section 1834(m)(4)(C) of the Act. Additionally, we are proposing to add § 410.78(b)(4)(iv)(B) to specify that the requirements in section 1834(m)(4)(C) of the Act do not apply with respect to telehealth services furnished on or after January 1, 2019, for purposes of diagnosis, evaluation, or treatment of symptoms of an acute stroke.

6. Modifying § 414.65 Regarding List of Telehealth Services

In the CY 2015 PFS final rule with comment period, we finalized a proposal to change our regulation at § 410.78(b) by deleting the description of the individual services for which Medicare payment can be made when furnished via telehealth, noting that we revised § 410.78(f) to indicate that a list of Medicare telehealth codes and

descriptors is available on the CMS website (79 FR 67602). In accordance with that change, we are proposing a technical revision to also delete the description of individual services and exceptions for Medicare payment for telehealth services in § 414.65, by amending § 414.65(a) to note that Medicare payment for telehealth services is addressed in § 410.78 and by deleting § 414.65(a)(1).

7. Comment Solicitation on Creating a Bundled Episode of Care for Management and Counseling Treatment for Substance Use Disorders

There is an evidence base that suggests that routine counseling, either associated with medication assisted treatment (MAT) or on its own, can increase the effectiveness of treatment for substance use disorders (SUDs). According to a study in the *Journal of Substance Abuse Treatment*,¹ patients treated with a combination of web-based counseling as part of a substance abuse treatment program demonstrated increased treatment adherence and satisfaction. The federal guidelines for opioid treatment programs describe that MAT and wrap-around psychosocial and support services can include the following services: Physical exam and assessment; psychosocial assessment; treatment planning; counseling; medication management; drug administration; comprehensive care management and supportive services; care coordination; management of care transitions; individual and family support services; and health promotion (<https://store.samhsa.gov/shin/content/PEP15-FEDGUIDEOTP/PEP15-FEDGUIDEOTP.pdf>). Creating separate payment for a bundled episode of care for components of MAT such as management and counseling treatment for substance use disorders (SUD), including opioid use disorder, treatment planning, and medication management or observing drug dosing for treatment of SUDs under the PFS could provide opportunities to better leverage services furnished with communication technology while expanding access to treatment for SUDs.

We also believe making separate payment for a bundled episode of care for management and counseling for SUDs could be effective in preventing the need for more acute services. For example, according to the *Healthcare*

¹ Van L. King, Robert K. Brooner, Jessica M. Peirce, Ken Kolodner, Michael S. Kidorf, "A randomized trial of Web based videoconferencing for substance abuse counseling," *Journal of Substance Abuse Treatment*, Volume 46, Issue 1, 2014, Pages 36–42, <http://www.sciencedirect.com/science/article/pii/S0740547213001876>.

Cost and Utilization Project,² Medicare pays for one-third of opioid-related hospital stays, and Medicare has seen the largest annual increase in the number of these stays over the past 2 decades. We believe that separate payment for a bundled episode of care could help avoid such hospital admissions by supporting access to management and counseling services that could be important in preventing hospital admissions and other acute care events.

As indicated above, we are considering whether it would be appropriate to develop a separate bundled payment for an episode of care for treatment of SUDs. We are seeking public comment on whether such a bundled episode-based payment would be beneficial to improve access, quality and efficiency for SUD treatment. Further, we are seeking public comment on developing coding and payment for a bundled episode of care for treatment for SUDs that could include overall treatment management, any necessary counseling, and components of a MAT program such as treatment planning, medication management, and observation of drug dosing. Specifically, we are seeking public comments related to what assumptions we might make about the typical number of counseling sessions as well as the duration of the service period, which types of practitioners could furnish these services, and what components of MAT could be included in the bundled episode of care. We are interested in stakeholder feedback regarding how to define and value this bundle and what conditions of payment should be attached. Additionally, we are seeking comment on whether the concept of a global period, similar to the currently existing global periods for surgical procedures, might be applicable to treatment for SUDs.

We also seek comment on whether the counseling portion and other MAT components could also be provided by qualified practitioners “incident to” the services of the billing physician who would administer or prescribe any necessary medications and manage the overall care, as well as supervise any other counselors participating in the treatment, similar to the structure of the Behavioral Health Integration codes

which include services provided by other members of the care team under the direction of the billing practitioner on an “incident to” basis (81 FR 80231). We welcome comments on potentially creating a bundled episode of care for management and counseling treatment for SUDs, which we will consider for future rulemaking.

Additionally, we invite public comment and suggestions for regulatory and subregulatory changes to help prevent opioid use disorder and improve access to treatment under the Medicare program. We seek comment on methods for identifying non-opioid alternatives for pain treatment and management, along with identifying barriers that may inhibit access to these non-opioid alternatives including barriers related to payment or coverage. Consistent with our “Patients Over Paperwork” Initiative, we are interested in suggestions to improve existing requirements in order to more effectively address the opioid epidemic.

E. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.H. of this proposed rule, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the RUC, MedPAC, and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National

Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Physician Quality Reporting System (PQRS) databases. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians’ services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (<http://www.medpac.gov/docs/default-source/congressional-testimony/testimony-report-to-the-congress-medicare-payment-policy-march-2006.pdf?sfvrsn=0>), MedPAC discussed the importance of appropriately valuing physicians’ services, noting that misvalued services can distort the market for physicians’ services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians’ services under the PFS can become misvalued over time. MedPAC stated, “When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.” We believe services can also become overvalued when PE declines. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE rises.

As MedPAC noted in its March 2009 Report to Congress (<http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf>), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to

²Pamela L. Owens, Ph.D., Marguerite L. Barrett, M.S., Audrey J. Weiss, Ph.D., Raynard E. Washington, Ph.D., and Richard Kronick, Ph.D. “Hospital Inpatient Utilization Related to Opioid Overuse Among Adults 1993–2012,” Statistical Brief #177. Healthcare Cost and Utilization Project (HCUP). July 2014. Agency for Healthcare Research and Quality, Rockville, MD, <https://www.hcup-us.ahrq.gov/reports/statbriefs/sb177-Hospitalizations-for-Opioid-Overuse.jsp>.

improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and

appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well.

Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed approximately 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period, we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called "Harvard-valued codes"). In CY 2009 (73 FR 38589), we requested

recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least \$10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time).

In the CY 2016 PFS final rule with comment period, we finalized for review a list of potentially misvalued services, which included eight codes in the neurostimulators analysis-programming family (CPT codes 95970–95982). We also finalized as potentially misvalued 103 codes identified through our screen of high expenditure services across specialties.

In the CY 2017 PFS final rule, we finalized for review a list of potentially misvalued services, which included eight codes in the end-stage renal disease home dialysis family (CPT codes 90963–90970). We also finalized as potentially misvalued 19 codes identified through our screen for 0-day global services that are typically billed with an evaluation and management (E/M) service with modifier 25.

In the CY 2018 PFS final rule, we finalized arthrodesis of sacroiliac joint (CPT code 27279) as potentially misvalued. Through the use of comment solicitations with regard to specific codes, we also examined the valuations of other services, in addition to, new potentially misvalued code screens (82 FR 53017 through 53018).

3. CY 2019 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. The public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10 of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that there have been changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.

- An anomalous relationship between the code being proposed for review and other codes.

- Evidence that technology has changed physician work.

- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.

- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.

- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.

- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the PQRS databases).

- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate whether we proposed each nominated code as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

We received one submission that nominated several high-volume codes for review under the potentially misvalued code initiative. In their request, the submitter noted a systemic overvaluation of work RVUs in certain procedures and tests based "on a

number of Government Accountability Office (GAO) and the Medicare Payment Advisory Commission (MedPAC) reports, media reports regarding time inflation of specific services, and the January 19, 2017 Urban Institute report for CMS." The submitter suggested that the times CMS assumes in estimating work RVUs are inaccurate for procedures, especially due to substantial overestimates of preservice and postservice time, including follow-up inpatient and outpatient visits that do not take place. According to the submitter, the time estimates for tests and some other procedures are primarily overstated as part of the intraservice time. Furthermore, the submitter stated that previous RUC reviews of these services did not result in reductions in valuation that adequately reflected reductions in surveyed times.

Based on these analyses, the submitter requested that the codes listed in Table 8 be prioritized for reviewed under the potentially misvalued code initiative.

TABLE 8—PUBLIC NOMINATIONS DUE TO OVERVALUATION

CPT code	Short description
27130	Total hip arthroplasty.
27447	Total knee arthroplasty.
43239	Egd biopsy single/multiple.
45385	Colonoscopy w/lesion removal.
70450	CT head w/o contrast.
93000	Electrocardiogram complete.
93306	Tte w/doppler complete.

Another commenter requested that CPT codes 92992 (Atrial septectomy or septostomy; transvenous method, balloon (e.g., Rashkind type) (includes cardiac catheterization)) and 92993 (Atrial septectomy or septostomy; blade method (Park septostomy) (includes cardiac catheterization)) be reviewed under the potentially misvalued code initiative in order to establish national RVU values for these services under the MPFS. These codes are currently priced by the Medicare Administrative Contractors (MACs).

b. Update on the Global Surgery Data Collection

CMS currently bundles payment for postoperative care within 10 or 90 days after many surgical procedures. Historically, we have not collected data on how many postoperative visits are

actually performed during the global period. Section 523 of the MACRA added a new paragraph 1848(c)(8) to the Act, and section 1848(c)(8)(B) required CMS to use notice and comment rulemaking to implement a process to collect data on the number and level of postoperative visits and use these data to assess the accuracy of global surgical package valuation. In the CY 2017 PFS final rule, we adopted a policy to collect postoperative visit data.

Beginning July 1, 2017, CMS required practitioners in groups with 10 or more practitioners in nine states (Florida, Kentucky, Louisiana, Nevada, New Jersey, North Dakota, Ohio, Oregon, and Rhode Island) to use the no-pay CPT code 99024 (Postoperative follow-up visit, normally included in the surgical package, to indicate that an E/M service was performed during a postoperative period for a reason(s) related to the original procedure) to report postoperative visits. Practitioners who only practice in practices with fewer than 10 practitioners are exempted from required reporting, but are encouraged to report if feasible. The 293 procedures for which reporting is required are those furnished by more than 100 practitioners, and either are nationally furnished more than 10,000 times annually or have more than \$10 million in annual allowed charges. A list of the procedures for which reporting is required is updated annually to reflect any coding changes and is posted on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Global-Surgery-Data-Collection-.html>.

In these nine states, from July 1, 2017 through December 31, 2017, there were 990,581 postoperative visits reported using CPT code 99024. Of the 32,573 practitioners who furnished at least one of the 293 procedures during this period and who, based on Tax Identification Numbers in claims data, were likely to meet the practice size threshold, only 45 percent reported one or more visit using CPT code 99024 during this 6-month period. The share of practitioners who reported any CPT code 99024 claims varied by specialty. Among surgical oncology, hand surgery, and orthopedic surgeons, reporting rates were 92, 90, and 87 percent, respectively. In contrast, the reporting rate for emergency medicine physicians was 4 percent. (See Table 9.)

TABLE 9—SHARE OF PRACTITIONERS WHO REPORTED ANY CPT CODE 99024 CLAIMS, BY SPECIALTY

* Limited to practitioners who performed at least one of the 293 relevant global procedures and were affiliated with a tax identification number with 10 or more practitioners.

**Practitioners who submitted one or more CPT code 99024 claims between July 1st, 2017 and December 31st, 2017.

Among 10-day global procedures performed from July 1, 2017 through December 31, 2017, where it is possible to clearly match postoperative visits to specific procedures, only 4 percent had

one or more matched visit reported with CPT code 99024. The percentage of 10-day global procedures with a matched visit reported with CPT code 99024 varied by specialty. Among procedures with 10-day global periods performed by hand surgeons, critical care, and obstetrics/gynecology 44, 36, and 23

percent, respectively, of procedures had a matched visit reported using CPT code 99024. In contrast, less than 5 percent of 10-day global procedures performed by many other specialties had a matched visit reported using CPT code 99024. (See Table 11.)

* Limited to the 293 procedures where postoperative visit reporting is required and to those performed by practitioners who work in practices with 10 or more practitioners. Because matching may be unclear in these circumstances, multiple procedures performed on a single day and procedures with overlapping global periods were excluded.

** Matching was based on patient, service dates, and global period duration.

Among 90-day global procedures performed from July 1, 2017 through December 31, 2017, where it is possible to clearly match postoperative visits to specific procedures, 67 percent had one or more matched visit reported using CPT code 99024. Again, this rate varied by specialty as shown in Table 12. Under the PFS, procedures with 90-day global periods have more than one postoperative visit. It should be noted that the rates described in this and prior paragraphs are based on any matched postoperative visit reported using CPT code 99024.

* Limited to the 293 procedures where post-operative visit reporting is required and to those performed by practitioners who work in practices with 10 or more practitioners. Because matching may be unclear in these circumstances, multiple procedures performed on a single day and procedures with overlapping global periods were excluded.

** Matching was based on patient, service dates, and global period duration.

One potential explanation for these findings is that many practitioners are not consistently reporting postoperative visits using CPT code 99024. We are soliciting suggestions as to how to encourage reporting to ensure the validity of the data without imposing undue burden. Specifically, we are soliciting comments on whether we need to do more to make practitioners aware of their obligation and whether we should consider implementing an enforcement mechanism.

Given the very small number of postoperative visits reported using CPT code 99024 during 10-day global periods, we are seeking comment on whether or not it might be reasonable to assume that many visits included in the valuation of 10-day global packages are not being furnished, or whether there are alternative explanations for what could be a significant level of underreporting of postoperative visits. For example, we are soliciting comments on whether it is likely that in many cases the practitioner reporting the procedure code is not performing the postoperative visit, or if the postoperative visit is being furnished by a different practitioner. Alternatively, we are soliciting comments on whether it is possible that some or all of the postoperative visits are occurring after the global period ends and are, therefore, reported and paid separately.

We conducted an analysis to try to assess the extent of underreporting. We identified a set of “robust reporters” who appeared to be regularly reporting post-operative visits using CPT code 99024. They were defined as practitioners who (a) furnished 10 or more procedures with 90-day global periods where it is possible for us to match specific procedures to reported post-operative visits without ambiguity, and (b) reported a post-operative visit using CPT code 99024 for at least half of these 90-day global procedures. Among this subset of practitioners and procedures, we found that 87 percent of procedures with 90-day global periods

had one or more associated post-operative visits. However, only 16 percent of procedures with a 10-day global period had an associated postoperative visit reported using CPT code 99024. These findings suggest that post-operative visits following procedures with 10-day global periods are not typically being furnished rather than not being reported.

Under current policy, in cases where practitioners agree on the transfer of care for the postoperative portion of the global period, the surgeon bills only for the surgical care using modifier 54 “for surgical care only” and the practitioner who furnishes the postoperative care bills using modifier 55 “postoperative management only.” The global surgery payment is then split between the two practitioners. However, practitioners are not required to report these modifiers unless there is a formal transfer of postoperative care. We are also soliciting comments on whether we should consider requiring use of the modifiers in cases where the surgeon does not expect to perform the postoperative visits, regardless of whether or not the transfer of care is formalized.

We are also seeking comment on the best approach to 10-day global codes for which the preliminary data suggest that postoperative visits are rarely performed by the practitioner reporting the global code. That is, we are seeking comments on whether we should consider changing the global period and reviewing the code valuation.

Finally, we note that claims-based data collection using CPT code 99024 is intended to collect information on the number of post-operative visits but not the level of post-operative visits. We anticipate beginning, in the near future, a separate survey-based data collection effort on the level of post-operative visits including the time, staff, and activities involved in furnishing post-operative visits and non-face-to-face services. The survey component is intended to address concerns from the

physician community that information on the number of visits alone cannot capture differences between specialties, specific procedure codes, and setting in terms of the time and effort spent on post-operative visits and non-face-to-face services included in global periods.

RAND developed a survey that collects information on the time, staff, and activities related to five post-operative visits furnished by sampled practitioners. The CY 2017 PFS final rule (81 FR 80222) described a sampling approach for the survey that would have collected data on post-operative visits related to the full range of procedures with 10-day and 90-day global periods using a stratified random sample of approximately 5,000 practitioners. RAND piloted the post-operative visit survey in a small subsample of practitioners and found a very low response rate. This low response rate raised concerns that the survey would not yield useful or representative information on post-operative visits if the survey were fielded in the full sample.

In an effort to increase response rate and collect sufficient data on the level of visits associated with at least some procedures with 10-day and 90-day global periods, we refocused the survey effort to collect information on post-operative visits and non-face-to-face services associated with a small number of high-volume procedure codes. The survey sampling frame includes practitioners who perform above a threshold volume of the selected high-volume procedure codes. Practitioner participation in the survey-based data collection effort is important to ensure that CMS collects useful and representative data to understand the range of activities, staff, and time involved in furnishing post-operative visits. Future survey-based data collection may cover post-operative visits and non-face-to-face services associated with a broader range of procedures with 10-day and 90-day global periods.

F. Radiologist Assistants

In accordance with § 410.32(b)(3), except as otherwise provided, all diagnostic X-ray and other diagnostic tests covered under section 1861(s)(3) of the Act and payable under the physician fee schedule must be furnished under at least a general level of physician supervision as defined in paragraph (b)(3)(i) of this regulation. In addition, some of these tests require either direct or personal supervision as defined in paragraph (b)(3)(ii) or (iii) of this regulation, respectively. We list the required minimum physician supervision level for each diagnostic X-ray and other diagnostic test service along with the codes and relative values for these services in the PFS Relative Value File, which is posted on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Relative-Value-Files.html>. For most diagnostic imaging procedures, this required physician supervision level applies only to the technical component (TC) of the procedure.

In response to the Request for Information on CMS Flexibilities and Efficiencies (RFI) that was issued in the CY 2018 PFS proposed rule (82 FR 34172 through 34173), many commenters recommended that we revise the physician supervision requirements at § 410.32(b) for diagnostic tests with a focus on those that are typically furnished by a radiologist assistant under the supervision of a physician. Specifically, the commenters stated that all diagnostic tests, when performed by radiologist assistants (RAs), can be furnished under direct supervision rather than personal supervision of a physician, and that we should revise the Medicare supervision requirements so that when RAs conduct diagnostic imaging tests that would otherwise require personal supervision, they only need to do so under direct supervision. In addition to increasing efficiency, stakeholders suggested that the current supervision requirements for certain diagnostic imaging services unduly restrict RAs from conducting tests that they are permitted to do under current law in many states.

After consideration of these comments on the RFI, as well as information provided by stakeholders, we are proposing to revise our regulations to specify that all diagnostic imaging tests may be furnished under the direct supervision of a physician when performed by an RA in accordance with state law and state scope of practice rules. Stakeholders

representing the radiology community have provided us with information showing that the RA designation includes registered radiologist assistants (RRAs) who are certified by The American Registry of Radiologic Technologists, and radiology practitioner assistants (RPAs) who are certified by the Certification Board for Radiology Practitioner Assistants. We are proposing to revise our regulation at § 410.32 to add a new paragraph (b)(4) to state that diagnostic tests performed by an RRA or an RPA require only a direct level of physician supervision, when permitted by state law and state scope of practice regulations. We note that for diagnostic imaging tests requiring a general level of physician supervision, this proposal would not change the level of physician supervision to direct supervision. Otherwise, the diagnostic imaging tests must be performed as specified elsewhere under § 410.32(b). We based this proposal on recommendations from the practitioner community which included specific recommendations on how to implement the change. We received information submitted by representatives of the practitioner community, including information on the education and clinical experience of RAs, which we took into consideration in determining if this proposal would pose a significant risk to patient safety, and we determined that it would not. In addition, we considered information provided by stakeholders that indicates that 28 states have statutes or regulations that recognize RAs, and these states have general or direct supervision requirements for RAs.

G. Payment Rates Under the Medicare PFS for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital

1. Background

Sections 1833(t)(1)(B)(v) and (t)(21) of the Act require that certain items and services furnished by certain off-campus provider-based departments (PBDs) (collectively referenced here as nonexcepted items and services furnished by nonexcepted off-campus PBDs) shall not be considered covered outpatient department services for purposes of payment under the Hospital Outpatient Prospective Payment System (OPPS), and payment for those nonexcepted items and services furnished on or after January 1, 2017 shall be made under the applicable payment system under Medicare Part B if the requirements for such payment are otherwise met. These requirements were

enacted in section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74). In the CY 2017 OPPS/Ambulatory Surgical Center (ASC) final rule with comment period (81 FR 79699 through 79719), we established several policies and provisions to define the scope of nonexcepted items and services in nonexcepted off-campus PBDs. We also finalized the PFS as the applicable payment system for most nonexcepted items and services furnished by nonexcepted off-campus PBDs. At the same time, we issued an interim final rule with comment period (81 FR 79720 through 79729) in which we established payment policies under the PFS for nonexcepted items and services furnished on or after January 1, 2017. In the following paragraphs, we summarize the policies that we adopted for CY 2017 and CY 2018, and we propose payment policies for CY 2019. For issues related to the excepted status of off-campus PBDs or the excepted status of items and services, please see the CY 2019 OPPS/ASC proposed rule.

2. Payment Mechanism

In establishing the PFS as the applicable payment system for most nonexcepted items and services in nonexcepted off-campus PBDs under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, we recognized that there was no technological capability, at least in the near term, to allow off-campus PBDs to bill under the PFS for those nonexcepted items and services. Off-campus PBDs bill under the OPPS for their services on an institutional claim, while physicians and other suppliers bill under the PFS on a practitioner claim. The two systems that process these different types of claims, the Fiscal Intermediary Standard System (“FISS”) and the Multi-Carrier System (“MCS”) system, respectively, were not designed to accept or process claims of a different type. To permit an off-campus PBD to bill directly under a different payment system than the OPPS would have required significant changes to these complex systems as well as other systems involved in the processing of Medicare Part B claims. Consequently, we proposed and finalized a policy for CY 2017 and CY 2018 in which nonexcepted off-campus PBDs continue to bill for nonexcepted items and services on the institutional claim utilizing a new claim line modifier “PN” to indicate that an item or service is a nonexcepted item or service.

We implemented requirements under section 1833(t)(1)(B) of the Act for CY 2017 and CY 2018 by applying an overall downward scaling factor, called

the PFS Relativity Adjuster to payments for nonexcepted items and services furnished in nonexcepted off-campus PBDs. The PFS Relativity Adjuster generally reflects the average (weighted by claim line volume times rate) of the site-specific rate under the PFS compared to the rate under the OPPS (weighted by claim line volume times rate) for nonexcepted items and services furnished in nonexcepted off-campus PBDs. As we have discussed extensively in prior rulemaking (81 FR 97920 through 97929 and 82 FR 53021), we established a new set of site-specific payment rates under the PFS that reflect the relative resource cost of furnishing the technical component (TC) of services furnished in nonexcepted off-campus PBDs. For the majority of HCPCS codes, these rates are based on either (1) the difference between the PFS nonfacility payment rate and the PFS facility rate, (2) the technical component, or (3) in instances where payment would have been made only to the facility or to the physician, the full nonfacility rate. The PFS Relativity Adjuster refers to the percentage of the OPPS payment amount paid under the PFS for a nonexcepted item or service to the nonexcepted off-campus PBD.

To operationalize the PFS Relativity Adjuster as a mechanism to pay for nonexcepted items and services furnished by nonexcepted off-campus PBDs, we adopted the packaging payment rates and multiple procedure payment reduction (MPPR) percentage that applies under the OPPS. We also incorporated the claims processing logic that is used for payments under the OPPS for comprehensive APCs (C-APCs), conditionally and unconditionally packaged items and services, and major procedures. As we noted in the CY 2017 interim final rule (82 FR 53024), we believe that this maintains the integrity of the cost-specific relativity of current payments under the OPPS compared with those under the PFS.

In CY 2017, we implemented a PFS Relativity Adjuster of 50 percent of the OPPS rate for nonexcepted items and services furnished in nonexcepted off-campus PBDs. For a detailed explanation of how we developed the PFS Relativity Adjuster of 50 percent for CY 2017, including assumptions and exclusions, we refer readers to the CY 2017 OPPS/ASC interim final rule with comment period (81 FR 79720 through 79729). Beginning for CY 2018, we adopted a PFS Relativity Adjuster of 40 percent of the OPPS rate. For a detailed explanation of how we developed the PFS Relativity Adjuster of 40 percent, we refer readers to the CY 2018 PFS

final rule (82 FR 53019 through 53042). A brief overview of the general approach we took for CY 2018 and how it differs from the proposal for CY 2019 appears below.

3. The PFS Relativity Adjuster

The PFS Relativity Adjuster reflects the overall relativity of the applicable payment rate for nonexcepted items and services furnished in nonexcepted off-campus PBDs under the PFS compared with the rate under the OPPS. To develop the PFS Relativity Adjuster for CY 2017, we did not have all of the claims data needed to identify the mix of items and services that would be billed using the “PN” modifier. Instead, we analyzed hospital outpatient claims data from January 1 through August 25, 2016, that contained the “PO” modifier, which was a new mandatory reporting requirement for CY 2016 for claims that were billed by an off-campus department of a hospital. We limited our analysis to those claims billed on the 13X Type of Bill because those claims were used for Medicare Part B billing under the OPPS. We then identified the 25 most frequently billed major codes that were billed by claim line; that is, items and services that were separately payable or conditionally packaged. Specifically, we restricted our analysis to codes with OPPS status indicators (SI) “J1”, “J2”, “Q1”, “Q2”, “Q3”, “S”, “T”, or “V”. The most frequently billed service with the “PO” modifier in CY 2016 was described by HCPCS code G0463 (Hospital outpatient clinic visit for the assessment and management of a patient), which, in CY 2016, was paid under APC 5012 at a rate of \$102.12; the total number of claim lines for this service was approximately 6.7 million as of August 2016. Under the PFS, there are ten CPT codes describing different levels of office visits for new and established payments. We compared the payment rate under OPPS for G0463 (\$102.12) to the average of the difference between the nonfacility and facility rates for CPT code 99213 (Level III office visit for an established patient) and CPT code 99214 (Level IV office visit for an established patient) in CY 2016 and found that the relative payment difference was approximately 22 percent. We did not include HCPCS code G0463 in our calculation of the PFS Relativity Adjuster for CY 2017 because we were concerned that there was no single, directly comparable code under the PFS. As we stated in the CY 2017 interim final rule (81 FR 79723), we wanted to mitigate the risk of underestimating the overall relativity between the PFS and OPPS rates. From the remaining top 24 most frequently

billed codes, we excluded HCPCS code 36591 (Collection of blood specimen from a completely implantable venous access device) because, under PFS policies, the service was only separately payable under the PFS when no other code was on the claim. We also removed HCPCS code G0009 (Administration of Pneumococcal Vaccine) because there was no payment for this code under the PFS. For the remaining top 22 codes furnished with the “PO” modifier in CY 2016, the average (weighted by claim line volume times rate) of the nonfacility payment rate estimate for the PFS compared to the estimate for the OPPS was 45 percent. We indicated that, because of our inability to estimate the effect of the packaging difference between the OPPS and the PFS, we would assume a 5 percentage point adjustment upward from the calculated amount of 45 percent; therefore, we established the PFS Relativity Adjuster of 50 percent for CY 2017.

In establishing the PFS Relativity Adjuster for CY 2018, we still did not have claims data for items and services furnished reported with a “PN” modifier. However, we updated the list of the 25 most frequently billed HCPCS codes using an entire year (CY 2016) of claims data for services submitted with a “PO” modifier and we updated the corresponding utilization weights for the codes used in the analysis. The order and composition of the top 25 separately payable HCPCS codes, based on the full year of claims from CY 2016 submitted with the “PO” modifier, changed minimally from the codes we used in our original analysis for the CY 2017 OPPS/ASC interim final rule with comment period. For a detailed list of the HCPCS codes we used in calculating the CY 2017 PFS Relativity Adjuster and the CY 2018 PFS Relativity Adjuster, we refer readers to the CY 2018 PFS final rule (82 FR 53030 through 53031). As noted earlier, in establishing the PFS Relativity Adjuster of 50 percent for CY 2017, we did not include in the weighted average code comparison, the relative rate for the most frequently billed service furnished in off-campus PBDs, HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), in part to ensure that we were not underestimating the overall relativity between the PFS and the OPPS. In contrast, in the CY 2018 PFS final rule, we stated that our objective for CY 2018 was to ensure that we did not overestimate the appropriate overall payment relativity, and that the payment made to nonexcepted off-campus PBDs better aligned with the

services that are most frequently furnished in the setting. Therefore, in addition to using updated claims data, we revised the PFS Relativity Adjuster to incorporate the relative payment rate for HCPCS code G0463 into our analysis. We followed all other exclusions and assumptions that were made in calculating the CY 2017 PFS Relativity Adjuster. Our analysis resulted in a 35 percent relative difference in payment rates. Similar to our stated rationale in the CY 2017 PFS final rule, we increased the PFS Relativity Adjuster to 40 percent, acknowledging the difficulty of estimating the effect of the packaging differences between the OPPS and the PFS.

4. Proposed Payment Policies for CY 2019

In prior rulemaking, we stated our expectation that our general approach of adjusting OPPS payments using a single scaling factor, the PFS Relativity Adjuster, would continue to be an appropriate payment mechanism to implement provisions of section 603 of the Bipartisan Budget Act of 2015, and would remain in place until we are able to establish code-specific reductions that represent the technical component of services furnished under the PFS or until we are able to implement system changes needed to enable nonexcepted off-campus PBDs to bill for nonexcepted items and services under the PFS directly (82 FR 53029). As we continue to explore alternative options related to requirements under section 1833(t)(21)(C) of the Act, we believe that this overall approach is still appropriate, and we are proposing to continue to allow nonexcepted off-campus PBDs to bill for nonexcepted items and services on an institutional claim using a “PN” modifier until we identify a workable alternative mechanism that would improve payment accuracy.

We made several adjustments to our methodology for calculating the PFS Relativity Adjuster for CY 2019. Most importantly, we had access to a full year of claims data from CY 2017 for services submitted with the “PN” modifier. Incorporating these data allows us to improve the accuracy of the PFS Relativity Adjuster by accounting for the specific mix of nonexcepted items and services furnished in nonexcepted off-campus PBDs. In analyzing the CY 2017 claims data, we identified just under 2,000 unique OPPS HCPCS/SI pairs reported in CY 2017 with status indicators “J1”, “J2”, “Q1”, “Q2”, “Q3”, “S”, “T”, or “V”. The data reinforce our previous observation that

the single most frequently reported service furnished in nonexcepted off-campus PBDs is HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient). Nearly half (49 percent) of all claim lines for separately payable or conditionally packaged services furnished by nonexcepted off-campus PBDs included HCPCS code G0463 in CY 2017, representing 30 percent of total Medicare payments for separately payable or conditionally packaged services. The top 30 HCPCS/SI combinations accounted for 80 percent of all claim lines and approximately 60 percent of Medicare payments for services that are separately billable. In contrast with prior analyses, we also looked at claims units, which reflects HCPCS/SI combinations that are billed more than once on a claim line. Certain HCPCS codes are much more frequently billed in multiple units than others. For instance, HCPCS code G0463, which appears in nearly half of all claim lines, only represents eight percent of all claims units with a SI for separately payable or conditionally packaged services. The largest differences between the number of claim lines and the number of claims units are for injections and immunizations, which are not typically separately payable or conditionally packaged under the OPPS. For instance, HCPCS code Q9967 (Low osmolar contrast material, 300–399 mg/ml iodine concentration, per ml) was reported in 12,268 claim lines, but 1,168,393 times (claims units) in the aggregate. HCPCS code Q9967 has an OPPS status indicator of “N”, meaning that there is no separate payment under OPPS (items and services are packaged into APC rates).

To calculate the PFS Relativity Adjuster using the full range of claims data submitted with a “PN” modifier in CY 2017, we first established site-specific rates under the PFS that reflect the technical component (TC) of items and services furnished by nonexcepted off-campus PBDs in CY 2017. These HCPCS-level rates reflect our best current estimate of the amount that would have been paid for the service in the office setting under the PFS for practice expenses not associated with the professional component of the service. As discussed in prior rulemaking (81 FR 79720 through 79729), we believe the most appropriate code-level comparison would reflect the technical component (TC) of each HCPCS code under the PFS. However, we do not currently calculate a separate TC rate for all HCPCS codes under the PFS—only for those for which the

professional component (PC) and TC of the service are distinct and can be separately billed by two different practitioners or other suppliers under the PFS. For most of the remainder of services that do not have a separately payable TC under the PFS, we estimated the site-specific rate as (1) the difference between the PFS nonfacility rate and the PFS facility rate, or (2) in instances where payment would have been made only to the facility or only to the physician, the full nonfacility rate. As with the PFS rates that we developed when calculating the PFS Relativity Adjuster for CY 2017 and CY 2018, there were large code-level differences between the applicable PFS rate and the OPPS rate.

In calculating the proposed PFS Relativity Adjuster for CY 2019, we employed the same fundamental methodology that we used to calculate the PFS Relativity Adjuster for CY 2017 and CY 2018. We began by limiting our analysis to the items and services billed in CY 2017 with a “PN” modifier that are separately payable or conditionally packaged under the OPPS (SI = “J1”, “J2”, “Q1”, “Q2”, “Q3”, “S”, “T”, or “V”) and compared the rates for these codes under the OPPS with the site-specific rates under the PFS. Next, we imputed PFS rates for a limited number of items and services that are separately payable or conditionally packaged under the OPPS but are contractor priced under the PFS. We also imputed PFS rates for some HCPCS codes that are not separately payable under the OPPS (SI = “N”), but are separately payable under the PFS. This includes items and services with an indicator status of “X” under the PFS, which are statutorily excluded from payment under the PFS, but may be paid under a different fee schedule, such as the Clinical Lab Fee Schedule (CLFS). We summed the HCPCS-level rates under the PFS across all nonexcepted items and services, weighted by the number of HCPCS claims for each service. Next, we calculated the sum of the HCPCS-level OPPS rate for items and services that are separately payable or conditionally packaged, also weighted by the number of HCPCS claims. We compared the weighted sum of the site-specific PFS rate with the weighted sum of the OPPS rate for items and services reported in CY 2017 and we found that our updated analysis supports maintaining a PFS Relativity Adjuster of 40 percent. In view of this analysis, we propose to continue applying a PFS Relativity Adjuster of 40 percent for CY 2019. Moreover, we propose to maintain this PFS Relativity Adjuster for future years

until updated data or other considerations indicate that an alternative adjuster or a change to our approach is warranted, which we would then propose through notice and comment rulemaking. We discuss some of our ongoing data analyses and future plans regarding implementation of section 603 of the Bipartisan Budget Act of 2015 below.

5. Policies Related to Supervision, Beneficiary Cost-Sharing, and Geographic Adjustments

In the CY 2018 PFS final rule (81FR 53019 through 53031), we finalized policies related to supervision rules, beneficiary cost sharing, and geographic adjustments. We finalized that supervision rules in nonexcepted off-campus PBDs that furnish nonexcepted items and services are the same as those that apply for hospitals, in general. We also finalized that all beneficiary cost sharing rules that apply under the PFS in accordance with sections 1848(g) and 1866(a)(2)(A) of the Act continue to apply when payment is made under the PFS for nonexcepted items and services furnished by nonexcepted off-campus PBDs, regardless of cost sharing obligations under the OPSS. Lastly, we finalized the policy to apply the same geographic adjustments used under the OPSS to nonexcepted items and services furnished in nonexcepted off-campus PBDs. We note that we are maintaining these policies as finalized in CY 2018 PFS final rule.

6. Partial Hospitalization

a. Partial Hospitalization Services

Partial hospitalization programs (PHPs) are intensive outpatient psychiatric day treatment programs furnished to patients as an alternative to inpatient psychiatric hospitalization, or as a stepdown to shorten an inpatient stay and transition a patient to a less intensive level of care. Section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital, to its outpatients, or by a Community Mental Health Center (CMHC). In the CY 2017 OPSS/ASC proposed rule (81 FR 45690), in the discussion of the proposed implementation of section 603 of Bipartisan Budget Act of 2015, we noted that because CMHCs also furnish PHP services and are ineligible to be provider-based to a hospital, a nonexcepted off-campus PBD would be eligible for PHP payment if the entity enrolls and bills as a CMHC for payment under the OPSS. We further noted that a hospital may choose to enroll a nonexcepted off-campus PBD as a

CMHC, provided it meets all Medicare requirements and conditions of participation.

Commenters expressed concern that without a clear payment mechanism for PHP services furnished by nonexcepted off-campus PBDs, access to partial hospitalization services would be limited, and pointed out the critical role PHPs play in the continuum of mental health care. Many commenters believed that the Congress did not intend for partial hospitalization services to no longer be paid for by Medicare when such services are furnished by nonexcepted off-campus PBDs. Several commenters disagreed with the notion of enrolling as a CMHC in order to receive payment for PHP services. These commenters stated that hospital-based PHPs and CMHCs are inherently different in structure, operation, and payment, and noted that the conditions of participation for hospital departments and CMHCs are different. Several commenters requested that CMS find a mechanism to pay hospital-based PHPs in nonexcepted off-campus PBDs.

Because we shared the commenters' concerns, in the CY 2017 OPSS/ASC final rule with comment period and interim final rule with comment period (81 FR 79715, 79717, and 79727), we adopted payment for partial hospitalization items and services furnished by nonexcepted off-campus PBDs under the PFS. When billed in accordance with the CY 2017 interim final rule, these partial hospitalization services are paid at the CMHC per diem rate for APC 5853, for providing three or more partial hospitalization services per day (81 FR 79727).

In the CY 2017 OPSS/ASC proposed rule (81 FR 45681), the CY 2017 OPSS/ASC final rule with comment period, and the interim final rule with comment period (81 FR 79717 and 79727), we noted that when a beneficiary receives outpatient services in an off-campus department of a hospital, the total Medicare payment for those services is generally higher than when those same services are provided in a physician's office. Similarly, when partial hospitalization services are provided in a hospital-based PHP, Medicare pays more than when those same services are provided by a CMHC. Our rationale for adopting the CMHC per diem rate for APC 5853 as the PFS payment amount for nonexcepted off-campus PBDs providing PHP services is because CMHCs are freestanding entities that are not part of a hospital, but they provide the same PHP services as hospital-based PHPs (81 FR 79727). This is similar to the differences between freestanding entities paid under the PFS that furnish

other services also provided by hospital-based entities. Similar to other entities currently paid for their technical component services under the PFS, we believe CMHCs would typically have lower cost structures than hospital-based PHPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security. We believe that paying for nonexcepted hospital-based partial hospitalization services at the lower CMHC per diem rate aligns with section 603 of Bipartisan Budget Act of 2015, while also preserving access to PHP services. In addition, nonexcepted off-campus PBDs will not be required to enroll as CMHCs in order to bill and be paid for providing partial hospitalization services. However, a nonexcepted off-campus PBD that wishes to provide PHP services may still enroll as a CMHC if it chooses to do so and meets the relevant requirements. Finally, we recognize that because hospital-based PHPs are providing partial hospitalization services in the hospital outpatient setting, they can offer benefits that CMHCs do not have, such as an easier patient transition to and from inpatient care, and easier sharing of health information between the PHP and the inpatient staff.

In the CY 2018 PFS final rule, we did not require these PHPs to enroll as CMHCs but instead we continued to pay nonexcepted off-campus PBDs providing PHP items and services under the PFS. Further, in that CY 2018 PFS final rule, we continued to adopt the CMHC per diem rate for APC 5853 as the PFS payment amount for nonexcepted off-campus PBDs providing three or more PHP services per day in CY 2018 (82 FR 53025 to 53026).

For CY 2019, we propose to continue to identify the PFS as the applicable payment system for PHP services furnished by nonexcepted off-campus PBDs, and propose to continue to set the PFS payment rate for these PHP services as the per diem rate that would be paid to a CMHC in CY 2019. We further propose to maintain these policies for future years until updated data or other considerations indicate that a change to our approach is warranted, which we would then propose through notice and comment rulemaking.

7. Future Years

We continue to believe the amendments made by section 603 of the Bipartisan Budget Act of 2015 were intended to eliminate the Medicare payment incentive for hospitals to purchase physician offices, convert them to off-campus PBDs, and bill

under the OPSS for items and services they furnish there. Therefore, we continue to believe the payment policy under this provision should ultimately equalize payment rates between nonexcepted off-campus PBDs and physician offices to the greatest extent possible, while allowing nonexcepted off-campus PBDs to bill in a straight-forward way for services they furnish.

Under the proposed methodology for CY 2019 as described previously, we use updated claims data for CY 2019, in combination with the expanded number of site specific, technical component rates for nonexcepted items and services furnished in nonexcepted off campus PBDs, in order to ensure that Medicare payment to hospitals billing for nonexcepted items and services furnished by nonexcepted off-campus PBDs reflects the relative resources involved in furnishing the items and services. We recognize that for certain specialties, service lines, and nonexcepted off-campus PBD types, total Medicare payments for the same services might be either higher or lower when furnished by a nonexcepted off-campus PBD rather than in a physician office. We also note that our approach adopts packaging rules and MPPR rules under the OPSS.

As noted above, we intend to continue to examine the claims data in order to assess whether a different PFS Relativity Adjuster is warranted and also to consider whether additional adjustments to the methodology are appropriate. In particular, we are monitoring claims for shifts in the mix of services furnished in nonexcepted off campus PBDs that may affect the relativity between the PFS and OPSS. An increase over time in the share of nonexcepted items and services with lower technical component rates under the PFS compared with APC rates under the OPSS might result in a lower PFS Relativity Adjuster, for example. We will also carefully assess annual payment policy updates to the PFS and OPSS fee schedule rules, respectively, to identify changes in overall relativity resulting from any new or modified policies such as expanded packaging under the OPSS or an increase in the number of HCPCS codes with global periods under the PFS. As part of these ongoing efforts, we are also analyzing PFS claims data to identify patterns of services furnished together on the same day. We anticipate that this will ultimately allow us to make refinements to the PFS Relativity Adjuster to better account for the more extensive packaging of services under the OPSS and the potential underreporting of services that are not separately payable

under the OPSS but are paid separately under the PFS.

Another dimension of our ongoing efforts to improve implementation of section 603 of the Bipartisan Budget Act of 2015 is the development and refinement of a new set of payment rates under the PFS that reflect the relative resource costs of furnishing the technical component of items and services furnished in nonexcepted off campus PBDs. Although we believe that our site-specific HCPCS-level rates reflect the best available estimate of the amount that would have been paid for the service in the office setting under the PFS for practice expenses not associated with the professional component of the service, for the majority of HCPCS codes there is no established methodology for separately valuing the resource costs incurred by a provider while furnishing a service from those incurred exclusively by the facility in which the service is furnished. We continue to explore alternatives to our current estimates that would better reflect the TC of services furnished in nonexcepted off campus PBDs. We are broadly interested in stakeholder feedback and recommendations for ways in which CMS can improve pricing and transparency with regard to the differences in the payment rates across sites of service.

We expect that our continued analyses of claims data and our ongoing exploration of systems changes that are needed to allow nonexcepted off campus PBDs to bill directly for the TC portion of nonexcepted items and services may lead us to consider a different approach for implementing section 603 of the Bipartisan Budget Act of 2015. On the whole, however, we believe that the proposed PFS Relativity Adjuster for CY 2019 of 40 percent would advance the effort to equalize payment rates in the aggregate between physician offices and nonexcepted off-campus PBDs. Maintaining our policy of applying an overall scaling factor to OPSS payments allows hospitals to continue billing through a facility claim form and permits continued use of the packaging rules and cost report-based relative payment rate determinations for nonexcepted services.

H. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has

also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.E. of this proposed rule. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period, we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule, the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period, we reviewed the comments received during the 60-day public comment period following release of the

CY 2016 PFS final rule with comment period, and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values. For CY 2017, we did not identify any new codes that described such wholly new services. Therefore, we did not establish any code values on an interim final basis.

For CY 2018, we generally proposed the RUC-recommended work RVUs for new, revised, and potentially misvalued codes. We proposed these values based on our understanding that the RUC generally considers the kinds of concerns we historically raised regarding appropriate valuation of work RVUs. However, during our review of these recommended values, we identified some concerns similar to those we recognized in prior years. Given the relative nature of the PFS and our obligation to ensure that the RVUs reflect relative resource use, we included descriptions of potential alternative approaches we might have taken in developing work RVUs that differed from the RUC-recommended values. We sought comment on both the RUC-recommended values, as well as the alternatives considered. Several commenters generally supported the proposed use of the RUC-recommended work RVUs, without refinement. Other commenters expressed concern about the effect of the misvalued code reviews on particular specialties and settings and disappointment with our proposed approach for valuing codes for CY 2018. A detailed summary of the comments and our responses can be found in the CY 2018 PFS final rule (82 FR 53033–53035).

We clarified in response to commenters that we are not relinquishing our obligation to independently establish appropriate RVUs for services paid under the PFS. We will continue to thoroughly review and consider information we receive from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS

and the federal government as part of our process for establishing valuations. While generally proposing the RUC-recommended work RVUs for new, revised, and potentially misvalued codes was our approach for CY 2018, we note that we also included alternative values where we believed there was a possible opportunity for increased precision. We also clarified that as part of our obligation to establish RVUs for the PFS, we annually make an independent assessment of the available recommendations, supporting documentation, and other available information from the RUC and other commenters to determine the appropriate valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we propose those values as recommended. Additionally, we will continue to engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conducted a review that included the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally included, but had not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assessed the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar

codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we used in the building block approach may have included preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We used the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refined the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where

a service is typically furnished to a beneficiary on the same day as an evaluation and management (E/M) service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believed that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjusted the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we removed 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also removed a work RVU of 0.09 (4 minutes \times 0.0224 IWPUT) if we did not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY

2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes used the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believed that such changes in time were already accounted for in the RUC's recommendation, then we did not make such adjustments. Likewise, we did not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We used the ratios to identify potential work RVUs and considered these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we have believed that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure

has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277) we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule, we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes is one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommended work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes, and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to section II.H.4 of this proposed rule for a detailed discussion of the proposed valuation, and alternative valuation considered for specific codes. Table 13 contains a list of codes for which we propose work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2018. The proposed work RVUs, work time and other payment information for all proposed CY 2019 payable codes are available on the CMS website under downloads for the CY 2019 PFS proposed rule. Table 13 also contains

the CPT code descriptors for all proposed, new, revised, and potentially misvalued codes discussed in this section.

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 14 details our refinements of the RUC's direct PE recommendations at the code-specific level. In this proposed rule, we address several refinements that are common across codes, and refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is \$0.30 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the

PE RVU, as well as the impact on the indirect allocator for the average service. We also note that nearly half of the refinements listed in Table 14 result in changes under the \$0.30 threshold and are unlikely to result in a change to the RVUs.

We also note that the proposed direct PE inputs for CY 2019 are displayed in the CY 2019 direct PE input database, available on the CMS website under the downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. The inputs displayed there have been used in developing the proposed CY 2019 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to

portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the "PE worksheets." For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice

clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. Some recommendations, however, include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2019, we received invoices for several new supply and equipment items. Tables 15 and 16 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, we encourage stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database during the 60-day public comment period for this proposed rule. We expect that invoices received outside of the public comment period would be submitted by February 10th of the following year for consideration in future rulemaking, similar to our new process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 15 and 16 also

include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the proposed PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our proposed inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address proposed code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the public use files for the PFS proposed and final rules for each year display both the services subject to the MPPR lists on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2019 are available on the CMS website under downloads for the CY 2019 PFS proposed rule at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261–74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659–69662).

4. Proposed Valuation of Specific Codes for CY 2019

(1) Fine Needle Aspiration (CPT Codes 10021, 10X11, 10X12, 10X13, 10X14, 10X15, 10X16, 10X17, 10X18, 10X19, 76492, 77002 and 77021)

CPT code 10021 was identified as part of the OPPS cap payment proposal in CY 2014 (78 FR 74246–74248), and it was reviewed by the RUC for direct PE inputs only as part of the CY 2016 rule cycle. Afterwards, CPT codes 10021 and 10022 were referred to the CPT Editorial Panel to consider adding additional clarifying language to the code descriptors and to include bundled imaging guidance due to the fact that imaging had become typical with these services. In June 2017, the CPT Editorial Panel deleted CPT code 10022, revised CPT code 10021, and created nine new codes to describe fine needle aspiration procedures with and without imaging guidance. These ten codes were surveyed and reviewed for the October 2017 and January 2018 RUC meetings. Several imaging services were also reviewed along with the rest of the code family, although only CPT code 77021 was subject to a new survey.

For CY 2019, we are proposing the RUC-recommended work RVU for seven of the ten codes in this family. Specifically, we are proposing a work RVU of 0.80 for CPT code 10X11 (Fine needle aspiration biopsy; without

imaging guidance; each additional lesion), a work RVU of 1.00 for CPT code 10X13 (Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion), a work RVU of 1.81 for CPT code 10X14 (Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion), a work RVU of 1.18 for CPT code 10X15 (Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion), and a work RVU of 1.65 for CPT code 10X17 (Fine needle aspiration biopsy, including CT guidance; each additional lesion). We are also proposing to assign the recommended contractor-priced status to CPT codes 10X18 (Fine needle aspiration biopsy, including MR guidance; first lesion) and 10X19 (Fine needle aspiration biopsy, including MR guidance; each additional lesion) due to low utilization until these services are more widely utilized. In addition, we are proposing the recommended work RVU of 1.50 for CPT code 77021 (Magnetic resonance guidance for needle placement (*e.g.*, for biopsy, fine needle aspiration biopsy, injection, or placement of localization device) radiological supervision and interpretation), as well as proposing to reaffirm the current work RVUs of 0.67 for CPT code 76942 (Ultrasonic guidance for needle placement (*e.g.*, biopsy, fine needle aspiration biopsy, injection, localization device), imaging supervision and interpretation) and 0.54 for 77002 (Fluoroscopic guidance for needle placement (*e.g.*, biopsy, fine needle aspiration biopsy, injection, localization device)).

We disagree with the RUC-recommended work RVU of 1.20 for CPT code 10021 (Fine needle aspiration biopsy; without imaging guidance; first lesion) and are proposing a work RVU of 1.03 based on a direct crosswalk to CPT code 36440 (Push transfusion, blood, 2 years or younger). CPT code 36440 is a recently reviewed code with the same intraservice time of 15 minutes and 2 additional minutes of total time. In reviewing CPT code 10021, we noted that the recommended intraservice time is decreasing from 17 minutes to 15 minutes (12 percent reduction), and the recommended total time is decreasing from 48 minutes to 33 minutes (32 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.27 to 1.20, which is a reduction of just over 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two

components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 10021, we believe that it would be more accurate to propose a work RVU of 1.03 based on a crosswalk to CPT code 36440 to account for these decreases in the surveyed work time.

We disagree with the RUC-recommended work RVU of 1.63 for CPT code 10X12 (Fine needle aspiration biopsy, including ultrasound guidance; first lesion) and are proposing a work RVU of 1.46. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 10021 and 10X12 is equivalent to the recommended interval of 0.43 RVUs. Therefore, we are proposing a work RVU of 1.46 for CPT code 10X12, based on the recommended interval of 0.43 additional RVUs above our proposed work RVU of 1.03 for CPT code 10021. The proposed increment of 0.43 RVUs above CPT code 10021 is also based on the use of two crosswalk codes: CPT code 99225 (Subsequent observation care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components); and CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components). Both of these codes have the same intraservice time and 1 additional minute of total time as compared with CPT code 10X12, and both crosswalk codes share a work RVU of 1.39.

We disagree with the RUC-recommended work RVU of 2.43 for CPT code 10X16 (Fine needle aspiration biopsy, including CT guidance; first lesion) and we are proposing a work RVU of 2.26. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 10021 and 10X16 is equivalent to the recommended interval of 1.23 RVUs. Therefore, we are proposing a work RVU of 2.26 for CPT code 10X16, based on the recommended interval of 1.23 additional RVUs above our proposed work RVU of 1.03 for CPT code 10021. The proposed use of the recommended increment from CPT code 10021 is also based on the use of a crosswalk to CPT code 74263 (Computed tomographic (CT) colonography, screening, including image postprocessing), another CT procedure with 38 minutes of intraservice time and 50 minutes of total time at a work RVU of 2.28.

We note that the recommended work pool is increasing by approximately 20 percent for the Fine Needle Aspiration

family as a whole, while the recommended work time pool for the same codes is only increasing by about 2 percent. Since time is defined as one of the two components of work, we believe that this indicates a discrepancy in the recommended work values. We do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we do not believe that it would serve the interests of relativity to propose the recommended work values for all of the codes in this family. We believe that, generally speaking, the recoding of a family of services should maintain the same total work pool, as the services themselves are not changing, only the coding structure under which they are being reported. We also note that through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular services. For example, a practitioner would not be carrying out the full preservice work twice for CPT codes 10022 and 76942, but preservice times were assigned to both of the codes under the old coding. We believe the new coding assigns more accurate work times and thus reflects efficiencies in resource costs that existed regardless of how the services were previously reported.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Prepare room, equipment and supplies" (CA013) activity to 3 minutes and to refine the clinical labor time for the "Confirm order, protocol exam" (CA014) activity to 0 minutes for CPT code 77021. This code did not previously have clinical labor time assigned for the "Confirm order, protocol exam" clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(2) Biopsy of Nail (CPT Code 11755)

CPT code 11755 (Biopsy of nail unit (*e.g.*, plate, bed, matrix, hyponychium, proximal and lateral nail folds) (separate procedure)) was identified as potentially

misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, the HCPAC recommended a work RVU of 1.25 based on the survey median value.

We disagree with the recommended value and are proposing a work RVU of 1.08 for CPT code 11755 based on the survey 25th percentile value. We note that the recommended intraservice time for CPT code 11755 is decreasing from 25 minutes to 15 minutes (40 percent reduction), and the recommended total time for CPT code 11755 is decreasing from 55 minutes to 39 minutes (29 percent reduction); however, the recommended work RVU is only decreasing from 1.31 to 1.25, which is a reduction of less than 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 11755, we believe that it would be more accurate to propose the survey 25th percentile work RVU than the survey median to account for these decreases in the surveyed work time.

The proposed work RVU of 1.08 is also based on a crosswalk to CPT code 11042 (Debridement, subcutaneous tissue (includes epidermis and dermis, if performed); first 20 sq cm or less), which has a work RVU of 1.01, the same intraservice time of 15 minutes, and a similar total time of 36 minutes. We also note that, generally speaking, working with extremities like nails tends to be less intensive in clinical terms than other services, especially as compared to surgical procedures. We believe that this further supports our proposal of a work RVU of 1.08 for CPT code 11755.

We are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(3) Skin Biopsy (CPT Codes 11X02, 11X03, 11X04, 11X05, 11X06, and 11X07)

In CY 2016, CPT codes 11100 (Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion) and 11101 (Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; each separate/additional lesion) were identified as

potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of \$10 million or more. Prior to the January 2016 RUC meeting, the specialty society notified the RUC that its survey data displayed a bimodal distribution of responses with more outliers than usual. The RUC referred CPT codes 11100 and 11101 to the CPT Editorial Panel. In February 2017, the CPT Editorial Panel deleted these two codes and created six new codes for primary and additional biopsy based on the thickness of the sample and the technique utilized.

For CY 2019, we are proposing the RUC-recommended work RVUs for five of the six codes in the family. We are proposing a work RVU of 0.66 for CPT code 11X02 (Tangential biopsy of skin, (e.g., shave, scoop, saucerize, curette), single lesion), a work RVU of 0.83 for CPT code 11X04 (Punch biopsy of skin, (including simple closure when performed), single lesion), a work RVU of 0.45 for CPT code 11X05 (Punch biopsy of skin, (including simple closure when performed), each separate/additional lesion), a work RVU of 1.01 for CPT code 11X06 (Incisional biopsy of skin (e.g., wedge), (including simple closure when performed), single lesion), and a work RVU of 0.54 for CPT code 11X07 (Incisional biopsy of skin (e.g., wedge), (including simple closure when performed), each separate/additional lesion).

For CPT code 11X03 (Tangential biopsy of skin, (e.g., shave, scoop, saucerize, curette), each separate/additional lesion), we disagree with the RUC-recommended work RVU of 0.38 and are proposing a work RVU of 0.29. When we compared the RUC-recommended work RVU of 0.38 to other add-on codes in the RUC database, we found that CPT code 11X03 would have the second-highest work RVU for any code with 7 minutes or less of total time, with the recommended work RVU noticeably higher than other related add-on codes, and we did not agree that the tangential biopsy service being performed should have an anomalously high work value in comparison to other similar add-on codes. Our proposed work RVU of 0.29 is based on a crosswalk to CPT code 11201 (Removal of skin tags, multiple fibrocuteaneous tags, any area; each additional 10 lesions, or part thereof), a clinically related add-on procedure with 5 minutes of intraservice and total time as opposed to the surveyed 6 minutes for CPT code 11X03. We also noted that the intraservice time ratio between CPT code 11X03 and the recommended reference code, CPT code 11732

(Avulsion of nail plate, partial or complete, simple; each additional nail plate), was 75 percent (6 minutes divided by 8 minutes). This 75 percent ratio when applied to the work RVU of CPT code 11732 also produced a work RVU of 0.29 ($0.38 * 0.75 = 0.29$). Finally, we are also supporting the proposed work RVU through a crosswalk to CPT code 33508 (Endoscopy, surgical, including video-assisted harvest of vein(s) for coronary artery bypass procedure), which has a higher intraservice time of 10 minutes but a similar work RVU of 0.31. We believe that our proposed work RVU of 0.29 for CPT code 11X03 better serves the interests of relativity, as well as better fitting with the other recommended work RVUs within this family of codes.

For the direct PE inputs, we are proposing to remove the 2 minutes of clinical labor time for the "Review home care instructions, coordinate visits/prescriptions" (CA035) activity for CPT codes 11X02, 11X04, and 11X06. These codes are typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

We are proposing to refine the quantity of the "gown, staff, impervious" (SB024) and the "mask, surgical, with face shield" (SB034) supplies from 2 to 1 for CPT codes 11X02, 11X04, and 11X06. We are proposing to remove one gown and one surgical mask from these codes as duplicative since these supplies are also included within the surgical instrument cleaning pack (SA043). We are also proposing to remove all of the supplies in the three add-on procedures (CPT codes 11X03, 11X05, and 11X07) that were not contained in the previous add-on procedure for this family, CPT code 11101. We do not believe that the use of these supplies would be typical for the "each additional lesion" add-on codes, as these supplies are all included in the base codes and are not currently utilized in CPT code 11101. We note that the recommended direct PE costs for the three new add-on codes represent an increase of approximately 500 percent from the direct PE costs for CPT code 11101, and believe that this is largely due to the addition of these new supplies.

(4) Injection Tendon Origin-Insertion (CPT Code 20551)

CPT code 20551 (Injection(s); single tendon origin/insertion) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.75 for CPT code 20551.

We are proposing to maintain the current work RVU for many of the CPT codes identified as potentially misvalued on the screen of 0-day global services reported with an E/M visit 50 percent of the time or more. We note that regardless of the proposed work valuations for individual codes, which may or may not retain the same work RVU, we continue to have reservations about the valuation of 0-day global services that are typically billed with a separate E/M service with the use of Modifier 25 (indicating that a significant and separately identifiable E/M service was provided on the same day). As we stated in the CY 2017 PFS final rule (81 FR 80204), we continue to believe that the routine billing of separate E/M services in conjunction with a particular code may indicate a possible problem with the valuation of the code bundle, which is intended to include all the routine care associated with the service. We will continue to consider additional ways to address the appropriate valuation for these services.

For the direct PE inputs, we are proposing to remove the clinical labor time for the "Provide education/obtain consent" (CA011) and the "Review home care instructions, coordinate visits/prescriptions" (CA035) activities for CPT code 20551. This code is typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for obtaining consent or reviewing home care instructions given that these tasks would typically be done during the same day E/M service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(5) Structural Allograft (CPT Codes 209X3, 209X4, and 209X5)

In February 2017, the CPT Editorial Panel created three new codes to describe allografts. These codes were designated as add-on codes and revised to more accurately describe the structural allograft procedures they represent. For CY 2019, we are

proposing the RUC-recommended work RVUs for all three codes. We are proposing a work RVU of 13.01 for CPT code 209X3 (Allograft, includes templating, cutting, placement and internal fixation when performed; osteoarticular, including articular surface and contiguous bone), a work RVU of 11.94 for CPT code 209X4 (Allograft, includes templating, cutting, placement and internal fixation when performed; hemicortical intercalary, partial (*i.e.*, hemicylindrical)), and a work RVU of 13.00 for CPT code 209X5 (Allograft, includes templating, cutting, placement and internal fixation when performed; intercalary, complete (*i.e.*, cylindrical)).

These three new codes are all facility-only procedures with no recommended direct PE inputs.

(6) Knee Arthrography Injection (CPT Code 27X69)

CPT code 27370 (Injection of contrast for knee arthrography) repeatedly appeared on high volume growth screens between 2008 and 2016, and the RUC expressed concern that the high volume growth for this procedure was likely due to its being reported incorrectly as arthrocentesis or aspiration. In June 2017, the CPT Editorial Panel deleted CPT code 27370 and replaced it with a new code, 27X69, to report injection procedure for knee arthrography or enhanced CT/MRI knee arthrography.

The RUC recommended a work RVU for CPT code 27X69 of 0.96, which is identical to the work RVU for CPT code 27370 (Injection of contrast for knee arthrography). The RUC's recommendation is based on key reference service, CPT code 23350 (Injection procedure for shoulder arthrography or enhanced CT/MRI shoulder arthrography), with identical intraservice time (15 minutes) and total time (28 minutes) as the new CPT code and a work RVU of 1.00. The RUC notes that its recommendation is lower than the 25th percentile from the survey results, but that the work described by the service should be valued identically with the CPT code being replaced. We disagree with the RUC's recommended work RVU for CPT code 27X69. Both the total (28 minutes) and intraservice (15 minutes) times for the new CPT code are considerably lower than the deleted CPT code 27370. Based on the reduced times and the projected work RVU from the reverse building block methodology (0.60 work RVUs), we believe this CPT code should be valued at 0.77 work RVUs, supported by a crosswalk to CPT code 29075 (Application, cast; elbow to finger (short arm)), with total time of 27

minutes and intraservice time of 15 minutes. Therefore, we are proposing a work RVU of 0.77 for CPT code 27X69.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Prepare room, equipment and supplies" (CA013) activity to 3 minutes and to refine the clinical labor time for the "Confirm order, protocol exam" (CA014) activity to 0 minutes. The predecessor code for 27X69, CPT code 27370, did not previously have clinical labor time assigned for the "Confirm order, protocol exam" clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished.

We are proposing to remove the clinical labor time for the "Scan exam documents into PACS. Complete exam in RIS system to populate images into work queue" (CA032) activity. CPT code 27X69 does not include a PACS workstation among the recommended equipment, and the predecessor code 27370 did not previously include time for this clinical labor activity. We believe that data entry activities such as this task would be classified as indirect PE, as they are considered administrative activities and are not individually allocable to a particular patient for a particular service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(7) Application of Long Arm Splint (CPT Code 29105)

CPT code 29105 (Application of long arm splint (shoulder to hand)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.80 for CPT code 29105.

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(8) Strapping Lower Extremity (CPT Codes 29540 and 29550)

CPT codes 29540 (Strapping; ankle and/or foot) and 29550 (Strapping; toes) were identified as potentially misvalued

on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the HCPAC-recommended work RVU of 0.39 for CPT code 29540 and the HCPAC-recommended work RVU of 0.25 for CPT code 29550.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Provide education/obtain consent" (CA011) activity from 3 minutes to 2 minutes for both codes, as this is the standard clinical labor time assigned for patient education and consent. We are also proposing to remove the 2 minutes of clinical labor time for the "Review home care instructions, coordinate visits/prescriptions" (CA035) activity for both codes. CPT codes 29540 and 29550 are both typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(9) Bronchoscopy (CPT Codes 31623 and 31624)

CPT code 31623 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings) was identified on a high growth screen of services with total Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2009 through 2014. CPT code 31624 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage) was also included for review as part of the same family of codes. For CY 2019, we are proposing the RUC-recommended work RVU of 2.63 for CPT codes 31623 and 31624.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Complete post-procedure diagnostic forms, lab and x-ray requisitions" (CA027) activity from 4 minutes to 2 minutes for CPT codes 31623 and 31624. Two minutes is the standard time, as well as the current time for this clinical labor activity, and we have no reason to believe that the time to perform this task has increased since the codes were last reviewed. We did not receive any explanation in the recommendations as to why the time for

this activity would be doubling over the current values. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(10) Pulmonary Wireless Pressure Sensor Services (CPT Codes 332X0 and 93XX1)

In September 2017, the CPT Editorial Panel created a code to describe pulmonary wireless sensor implantation and another code for remote care management of patients with an implantable, wireless pulmonary artery pressure sensor monitor. For CY 2019, we are proposing the RUC-recommended work RVU of 6.00 for CPT code 332X0 (Transcatheter implantation of wireless pulmonary artery pressure sensor for long term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed), and the RUC-recommended work RVU of 0.70 for CPT code 93XX1 (Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional).

We are not proposing any direct PE refinements for this code family.

(11) Cardiac Event Recorder Procedures (CPT Codes 332X5 and 332X6)

In February 2017, the CPT Editorial Panel created two new codes replacing cardiac event recorder codes to reflect new technology. For CY 2019, we are proposing the RUC-recommended work RVU of 1.53 for CPT code 332X5 (Insertion, subcutaneous cardiac rhythm monitor, including programming) and the RUC-recommended work RVU of 1.50 for CPT code 332X6 (Removal, subcutaneous cardiac rhythm monitor).

We are not proposing any direct PE refinements for this code family.

(12) Aortoventriculoplasty With Pulmonary Autograft (CPT Code 335X1)

In September 2017, the CPT Editorial Panel created one new code to combine the efforts of aortic valve and root replacement with subvalvular left ventricular outflow tract enlargement to allow for an unobstructed left ventricular outflow tract.

For CY 2019, we are proposing the RUC-recommended work RVU of 64.00 for CPT code 335X1 (Replacement, aortic valve; by translocation of

autologous pulmonary valve and transventricular aortic annulus enlargement of the left ventricular outflow tract with valved conduit replacement of pulmonary valve (Ross-Konno procedure)). When this code is re-reviewed in a few years as part of the new technology screen, we look forward to receiving new recommendations on the whole family, including the related Ross and Konno procedures (CPT codes 33413 and 33412 respectively) that were used as references for CPT code 335X1.

For the direct PE inputs, we are proposing to refine the preservice clinical labor times to match our standards for 90-day global procedures. We are proposing to refine the clinical labor time for the "Coordinate pre-surgery services (including test results)" (CA002) activity from 25 minutes to 20 minutes, to refine the clinical labor time for the "Schedule space and equipment in facility" (CA003) activity from 12 minutes to 8 minutes, and to refine the clinical labor time for the "Provide pre-service education/obtain consent" (CA004) activity from 26 minutes to 20 minutes. We are also proposing to add 15 minutes of clinical labor time for the "Perform regulatory mandated quality assurance activity (pre-service)" (CA008) activity. We agree with the recommendation that the total preservice clinical labor time for CPT code 335X1 is unchanged from the two reference codes at 75 minutes. However, we believe that the clinical labor associated with additional coordination between multiple specialties prior to patient arrival is more accurately described through the use of the CA008 activity code than by distributing this 15 minutes amongst the other preservice clinical labor activities. We previously established standard preservice times for 90-day global procedures, and did not want to propose clinical labor times above those standards for CPT code 335X1. We also note that there is no effect on the total clinical labor direct costs in this situation, since the same 15 minutes of preservice clinical labor time is still being furnished.

(13) Hemi-Aortic Arch Replacement (CPT Code 33X01)

At the September 2017 CPT Editorial Panel meeting, the Panel created one new add-on code to report hemi-aortic arch graft replacement. For CY 2019, we are proposing the RUC-recommended work RVU of 19.74 for CPT code 33X01 (Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion). CPT code

33X01 is a facility-only procedure with no recommended direct PE inputs.

(14) Leadless Pacemaker Procedures (CPT Codes 33X05 and 33X06)

At the September 2017 CPT Editorial Panel meeting, the Panel replaced the five leadless pacemaker services Category III codes with the addition of two new CPT codes to report transcatheter leadless pacemaker procedures and revised five codes to include evaluation and interrogation services of leadless pacemaker systems.

For CPT code 33X05 (Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (e.g., fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (e.g., interrogation or programming), when performed), we disagree with the recommended work RVU of 8.77 and we are proposing a work RVU of 7.80 based on a direct crosswalk to one of the top reference codes selected by the RUC survey participants, CPT code 33207 (Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular). This code has the same 60 minutes of intraservice time as CPT code 33X05 and an additional 61 minutes of total time at a work RVU of 7.80. In our review of CPT code 33X05, we noted that this reference code had an additional inpatient hospital visit of CPT code 99232 (Subsequent hospital care, per day, for the evaluation and management of a patient, which requires at least 2 of 3 key components) and a full instead of a half discharge visit of CPT code 99238 (Hospital discharge day management; 30 minutes or less) included in its 90-day global period. The combined work RVU of these two visits would be equal to 2.03. However, the recommended work RVU for CPT code 33X05 was 0.97 work RVUs higher than CPT code 33207, despite having fewer of these visits and significantly less surveyed total time. While we acknowledge that CPT code 33X05 is a more intense procedure than CPT code 33207, we do not believe that it should be valued almost a full RVU higher than the reference code given the fewer visits in the global period and the lower surveyed work time.

Therefore, we are proposing to crosswalk CPT code 33X05 to CPT code 33207 at the same work RVU of 7.80. The proposed work RVU is also supported through a reference crosswalk to CPT code 38542 (Dissection, deep jugular node(s)), which has 60 minutes of intraservice time, 198 minutes of total time, and a work RVU of 7.95. We believe that our proposed work RVU of

7.80 is a more accurate valuation for CPT code 33X05, while still recognizing the greater intensity of this procedure in comparison to its reference code.

For CPT code 33X06 (Transcatheter removal of permanent leadless pacemaker, right ventricular), we disagree with the RUC-recommended work RVU of 9.56 and we are proposing a work RVU of 8.59. Although we disagree with the RUC-recommended work RVU, we concur that the relative difference in work between CPT codes 33X05 and 33X06 is equivalent to the recommended interval of 0.79 RVUs. Therefore, we are proposing a work RVU of 8.59 for CPT code 33X06, based on the recommended interval of 0.79 additional RVUs above our proposed work RVU of 7.80 for CPT code 33X05. We also note that our proposed work RVU for CPT code 33X06 situates it approximately halfway between the two reference codes from the survey, with CPT code 33270 (Insertion or replacement of permanent subcutaneous implantable defibrillator system, with subcutaneous electrode, including defibrillation threshold evaluation, induction of arrhythmia, evaluation of sensing for arrhythmia termination, and programming or reprogramming of sensing or therapeutic parameters, when performed) having an intraservice time of 90 minutes and a work RVU of 9.10, and CPT code 33207 having an intraservice time of 60 minutes and a work RVU of 7.80. CPT code 33X06 has a surveyed intraservice time of 75 minutes and nearly splits the difference between them at our proposed work RVU of 8.59.

We are not proposing any direct PE refinements for this code family.

(15) PICC Line Procedures (CPT Codes 36568, 36569, 36X72, 36X73, and 36584)

In CY 2016, CPT code 36569 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; age 5 years or older) was identified as potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of \$10 million or more. CPT code 36569 is typically reported with CPT codes 76937 (Ultrasound guidance for vascular access requiring ultrasound evaluation of potential access sites, documentation of selected vessel patency, concurrent realtime ultrasound visualization of vascular needle entry, with permanent recording and reporting) and 77001 (Fluoroscopic guidance for central venous access device placement, replacement (catheter only or complete), or removal) and was

referred to the CPT Editorial Panel to have the two common imaging codes bundled into the code. In September 2017, the CPT Editorial Panel revised CPT codes 36568 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump; younger than 5 years of age), 36569 and 36584 (Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement) and created two new CPT codes to specify the insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion.

For CY 2019, we are proposing the RUC-recommended work RVU for two of the CPT codes in the family. We are proposing the RUC-recommended work RVU of 2.11 for CPT code 36568 and the RUC-recommended work RVU of 1.90 for CPT code 36569.

For CPT code 36X72 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; younger than 5 years of age), we disagree with the RUC-recommended work RVU of 2.00 and are proposing a work RVU of 1.82 based on a direct crosswalk to CPT code 50435 (Exchange nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation). CPT code 50435 is a recently reviewed code that also includes radiological supervision and interpretation with similar intraservice and total time values. In our review of CPT code 36X72, we were concerned about the possibility that the recommended work RVU of 2.00 could create a rank order anomaly in terms of intensity with the other codes in the family. We noted that the recommended intraservice time for CPT code 36X72 as compared to CPT code 36568, the most similar code in the family, is decreasing from 38 minutes to 22 minutes (42 percent), and the recommended total time is decreasing from 71 minutes to 51 minutes (38

percent); however, the recommended work RVU is only decreasing from 2.11 to 2.00, which is a reduction of just over 5 percent. We also noted that CPT code 36X72 has a lower recommended intraservice time and total time as compared to CPT code 36569, yet has a higher recommended work RVU. Although we do not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

In the case of CPT code 36X72, we believe that it would be more accurate to propose a work RVU of 1.82 based on a crosswalk to CPT code 50435 to better fit with the recommended work RVUs for CPT codes 36568 and 36569. The proposed work valuation is also based on the use of three additional crosswalk codes: CPT code 32554 (Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance), CPT code 43198 (Esophagoscopy, flexible, transnasal; with biopsy, single or multiple), and CPT code 64644 (Chemodiversion of one extremity; 5 or more muscles). All of these codes were recently reviewed with similar intensity, intraservice time, and total time values, and all three of them also share a work RVU of 1.82.

For CPT code 36X73 (Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older), we disagree with the RUC-recommended work RVU of 1.90 and are proposing a work RVU of 1.70 based on maintaining the current work RVU of CPT code 36569. In our review of CPT code 36X73, we were again concerned about the possibility that the recommended work RVU of 1.90 could create a rank order anomaly in terms of intensity with the other codes in the family. We noted that the recommended intraservice time for CPT code 36X73 as compared to CPT code 36569, the most similar code in the family, is decreasing from 27 minutes to 15 minutes (45 percent), and the recommended total time is decreasing from 60 minutes to 40 minutes (33 percent); however, the RUC-recommended work RVU is exactly the same for these two codes at 1.90. Although we do not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work

RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

In the case of CPT code 36X73, we believe that it would be more accurate to propose a work RVU of 1.70 based on maintaining the current work RVU of CPT code 36569. These two CPT codes describe the same procedure done with (CPT code 36X73) and without (CPT code 36569) imaging guidance and radiological supervision and interpretation. Because the inclusion of the imaging described by CPT code 36X73 has now become the typical case for this service, we believe that it is more accurate to maintain the current work RVU of 1.70 as opposed to increasing the work RVU to 1.90, especially considering that the new surveyed work time for CPT code 36X73 is lower than the current work time for CPT code 36569. The proposed work RVU of 1.70 is also based on a crosswalk to CPT code 36556 (Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older). This is a recently reviewed code with the same 15 minutes of intraservice time and the same 40 minutes of total time with a work RVU of 1.75.

For CPT code 36584, we disagree with the RUC-recommended work RVU of 1.47 and are proposing a work RVU of 1.20 based on maintaining the current work RVU. We note that the recommended intraservice time for CPT code 36584 is decreasing from 15 minutes to 12 minutes (20 percent reduction), and the recommended total time is decreasing from 45 minutes to 34 minutes (25 percent reduction); however, the recommended work RVU is increasing from 1.20 to 1.47, an increase of approximately 23 percent. Although we do not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. We are especially concerned when the recommended work RVU is increasing despite survey results indicating that the work time is decreasing due to a combination of improving technology and greater efficiencies in practice patterns.

In the case of CPT code 36584, we believe that it would be more accurate to propose a work RVU of 1.20 based on maintaining the current work RVU for the code. Because the inclusion of the imaging has now become the typical case for this service, we believe that it

is more accurate to maintain the current work RVU of 1.20 as opposed to increasing the work RVU to 1.47, especially considering that the new surveyed work time for CPT code 36584 is decreasing from the current work time. The proposed work RVU of 1.20 is also based on a crosswalk to CPT code 40490 (Biopsy of lip), which has the same total time of 34 minutes and slightly higher intraservice time at a work RVU of 1.22.

We note that the RUC-recommended work pool is increasing by approximately 68 percent for the PICC Line Procedures family as a whole, while the RUC-recommended work time pool for the same codes is only increasing by about 22 percent. Since time is defined as one of the two components of work, we believe that this indicates a discrepancy in the recommended work values. We do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we do not believe that it would serve the interests of relativity to propose the RUC-recommended work values for all of the codes in this family. We believe that, generally speaking, the recoding of a family of services should maintain the same total work pool, as the services themselves are not changing, only the coding structure under which they are being reported. We also note that, through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular services. For example, a practitioner would not be carrying out the full preservice work three times for CPT codes 36568, 76937, and 77001, but preservice times were assigned to all of the codes under the old coding. We believe the new coding assigns more accurate work times and thus reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Prepare, set-up and start IV, initial positioning and monitoring of patient" (CA016) activity from 4 minutes to 2 minutes for CPT codes 36X72 and 36X73. We note that the two reference codes for the two new codes, CPT codes 36568 and 36569, currently have 2 minutes assigned for this activity, and CPT code 36584 also has a recommended 2 minutes assigned to this same activity. We do not agree that the patient positioning would take twice

as long for CPT codes 36X72 and 36X73 as compared to the rest of the family, and are therefore refining both of them to the same 2 minutes of clinical labor time. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(16) Biopsy or Excision of Inguinofemoral Node(s) (CPT Code 3853X)

In September 2017, the CPT Editorial Panel created a new code to describe biopsy or excision of inguinofemoral node(s). A parenthetical was added to CPT codes 56630 (Vulvectomy, radical, partial) and 56633 (Vulvectomy, radical, complete) to instruct separate reporting of code 3853X with radical vulvectomy. This service was previously reported with unlisted codes.

CPT code 3853X (Biopsy or excision of lymph node(s); open, inguinofemoral node(s)) is a new CPT code describing a lymph node biopsy without complete lymphadenectomy. The RUC recommended a work RVU of 6.74 for CPT code 3853X, with 223 minutes of total time and 65 minutes of intraservice time. We propose the RUC-recommended work RVU of 6.74 for CPT code 3853X. However, we are concerned that this CPT code is described as having a 10-day global period. The two CPT codes that are often reported together with this code, CPT code 56630 (Vulvectomy, radical, partial) and CPT code 56633 (Vulvectomy, radical, complete), are both 90-day global codes. In addition, CPT code 3853X has a discharge visit and two follow up visits in the global period. This is consistent with the number of postoperative visits typically associated with 90-day global codes. Therefore, we propose to assign a 90-day global indicator for CPT code 3853X rather than the 10-day global time period reflected in the RUC recommendation.

We are not proposing any direct PE refinements for this code family.

(17) Radioactive Tracer (CPT Code 38792)

CPT code 38792 (Injection procedure; radioactive tracer for identification of sentinel node) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we are proposing the RUC-recommended work RVU of 0.65 for CPT code 38792.

For the direct PE inputs, we are proposing to refine the clinical labor

time for the "Prepare room, equipment and supplies" (CA013) activity to 3 minutes and to refine the clinical labor time for the "Confirm order, protocol exam" (CA014) activity to 0 minutes. CPT code 38792, as well as its alternate reference code 78300 (Bone and/or joint imaging; limited area), both did not previously have clinical labor time assigned for the "Confirm order, protocol exam" clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(18) Percutaneous Change of G-Tube (CPT Code 43760)

CPT code 43760 (Change of gastrostomy tube, percutaneous, without imaging or endoscopic guidance) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. It was surveyed for the April 2017 RUC meeting and recommendations for work and direct PE inputs were submitted to CMS. However, the RUC also noted that because the data for CPT code 43760 were bimodal, it might be appropriate to consider changes in the CPT descriptors to better differentiate physician work. In September 2017, the CPT Editorial Panel deleted CPT code 43760 and will use two new codes (43X63 and 43X64) that describe replacement of gastrostomy tube, with and without revision of gastrostomy tract, respectively. (See below.) Therefore, we are not proposing work or direct PE values for CPT code 43760.

(19) Gastrostomy Tube Replacement (CPT Codes 43X63 and 43X64)

In September 2017, the CPT Editorial Panel created two new codes that describe replacement of gastrostomy tube, with and without revision of gastrostomy tract, respectively. These two new codes were surveyed for the January 2018 RUC meeting and recommendations for work and direct PE inputs were submitted to CMS.

We are proposing a work RVU of 0.75 for CPT code 43X63 (Replacement of

gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; not requiring revision of gastrostomy tract.) and a work RVU of 1.41 for CPT code 43X64 (Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; requiring revision of gastrostomy tract.), consistent with the RUC's recommendations for these new CPT codes.

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(20) Diagnostic Proctosigmoidoscopy—Rigid (CPT Code 45300)

CPT code 45300 (Proctosigmoidoscopy, rigid; diagnostic, with or without collection of specimen(s) by brushing or washing (separate procedure)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.80 for CPT code 45300.

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(21) Hemorrhoid Injection (CPT Code 46500)

CPT code 46500 (Injection of sclerosing solution, hemorrhoids) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes.

For CPT code 46500, we disagree with the RUC-recommended work RVU of 2.00 and we are proposing a work RVU of 1.74 based on a direct crosswalk to CPT code 68811 (Probing of nasolacrimal duct, with or without irrigation; requiring general anesthesia). This is another recently-reviewed 10-day global code with the same 10 minutes of intraservice time and slightly higher total time. When CPT code 46500 was previously reviewed as described in the CY 2016 PFS final rule with comment period (80 FR 70963), we finalized a proposal to reduce the work RVU from 1.69 to 1.42, which reduced the work RVU by the same ratio as the

reduction in the total work time. In light of the additional evidence provided by this new survey, we agree that the work RVU should be increased from the current value of 1.42. However, we believe that our proposed work RVU of 1.74 based on a crosswalk to CPT code 68811 is more accurate than the RUC-recommended work RVU of 2.00.

In the most recent survey of CPT code 46500, the intraservice work time remained unchanged at 10 minutes while the total time increased by only 2 minutes, increasing from 59 minutes to 61 minutes (3 percent). However, the RUC-recommended work RVU is increasing from 1.42 to 2.00, an increase of 41 percent, and also an increase of 19 percent over the historic value of 1.69 for CPT code 46500. Although we do not imply that the increase in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, minimal increases in surveyed work time typically should not be reflected in disproportionately large increases to work RVUs. In the case of CPT code 46500, we believe that our crosswalk to CPT code 68811 at a work RVU of 1.74 more accurately maintains relativity with other 10-day global codes on the PFS. We also note that the 3 percent increase in surveyed work time for CPT code 46500 matches a 3 percent increase in the historic work RVU of the code, from 1.69 to 1.74. Therefore, we are proposing a work RVU of 1.74 for CPT code 46500 based on the aforementioned crosswalk.

For the direct PE inputs, we are proposing to remove 10 minutes of clinical labor time for the “Assist physician or other qualified healthcare professional—directly related to physician work time (100%)” (CA018) activity. This clinical labor time is listed twice in the recommendations along with a statement that although the clinical labor has not changed from prior reviews, time for both clinical staff members was inadvertently not included in the previous spreadsheets. We appreciate this notification in the recommendations, and therefore, we are asking for more information about why the clinical labor associated with this additional staff member was left out for previous reviews. We are particularly interested in knowing what activities the additional staff member would be undertaking during the procedure. We are proposing to remove the clinical labor associated with this additional clinical staff member pending the receipt of additional information. We are also proposing to remove 1 impervious staff gown (SB027), 1

surgical mask with face shield (SB034), and 1 pair of shoe covers (SB039) pending more information about the additional clinical staff member.

We are proposing to remove the clinical labor time for the “Review home care instructions, coordinate visits/prescriptions” (CA035) activity. CPT code 46500 is typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing home care instructions given that this task would typically be done during the same day E/M service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(22) Removal of Intraperitoneal Catheter (CPT Code 49422)

In October 2016, CPT code 49422 (Removal of tunneled intraperitoneal catheter) was identified as a site of service anomaly because Medicare data from 2012–2014 indicated that it was performed less than 50 percent of the time in the inpatient setting, yet included inpatient hospital E/M services within the 10-day global period. The code was resurveyed using a 0-day global period for the April 2017 RUC meeting. For CY 2019, we are proposing the RUC-recommended work RVU of 4.00 for CPT code 49422.

We are not proposing any direct PE refinements for this code family.

(23) Dilation of Urinary Tract (CPT Codes 50X39, 50X40, 52334, and 74485)

In October 2014, the CPT Editorial Panel deleted six codes and created twelve new codes to describe genitourinary catheter procedures and bundle inherent imaging services. In January 2015, the specialty societies indicated that CPT code 50395 (Introduction of guide into renal pelvis and/or ureter with dilation to establish nephrostomy tract, percutaneous), which was identified as part of the family, would be referred to the CPT Editorial Panel to clear up any confusion with overlap in physician work with CPT code 50432 (Placement of nephrostomy catheter, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation). In September 2017, the CPT Editorial Panel deleted CPT code 50395 and created two new codes to report dilation of existing tract, and establishment of new access to the collecting system, including percutaneous, for an endourologic procedure including imaging guidance

(e.g., ultrasound and/or fluoroscopy), all associated radiological supervision and interpretation, as well as post procedure tube placement when performed.

The specialty society surveyed the new CPT code 50X39 (Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed), and the RUC recommended a total time of 70 minutes, intraservice time of 30 minutes, and a work RVU of 3.37. The RUC indicated that its recommended work RVU for this CPT code is identical to the work RVU of the CPT code being deleted, even though imaging guidance CPT code 74485 has now been bundled into the valuation of the CPT code. The RUC provided two key reference CPT codes to support its recommendation: CPT code 50694 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, without separate nephrostomy catheter) with total time of 111 minutes, intraservice time of 62 minutes, and a work RVU of 5.25; and CPT code 50695 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new access, with separate nephrostomy catheter), with total time of 124 minutes and intraservice time of 75 minutes, and a work RVU of 6.80. To further support its recommendation, the RUC also referenced CPT code 52287 (Cystourethroscopy, with injection(s) for chemodenervation of the bladder) with total time of 58 minutes, intraservice time of 21 minutes, and a work RVU of 3.37. We disagree with the RUC that the work RVU for this CPT code should be the same as the CPT code being deleted. Survey respondents indicated that the total time for completing the service described by the new CPT code is nearly 30 minutes less than the existing CPT code, even though imaging guidance was described as part of the procedure. We also note that the reference CPT codes both have substantially higher total and intraservice times than CPT code 50X39. We considered a number of parameters to arrive at our proposed work RVU of 2.78, supported by a

crosswalk to CPT code 31646 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with therapeutic aspiration of tracheobronchial tree, subsequent, same hospital stay). We examined the intraservice time ratio for the new CPT code in relation to the combination of CPT codes that the service represents and found that this would support a work RVU of 2.55. We also calculated the intraservice time ratio for the new CPT code in relation to each of the two reference CPT codes. For the comparison with CPT code 50694, the intraservice time ratio is 2.54, while the comparison with the second reference CPT code 50695 yields an intraservice time ratio of 2.72. We took the highest of these three values, 2.72, and found a corresponding crosswalk that we believe appropriately values the service described by the new CPT code. Therefore, we are proposing a work RVU of 2.78 for CPT code 50X39.

The specialty society also surveyed the new CPT code 50X40 (Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system) and the RUC recommended a total time of 100 minutes, an intraservice time of 60 minutes, and a work RVU of 5.44. The recommended intraservice time of 60 minutes reflects the 75th percentile of survey results, rather than the median survey time, which is typically used for determining the intraservice time for new CPT codes. The RUC justified the use of the higher intraservice time because they believe the time better represents the additional time needed to introduce the guidewire into the renal pelvis and/or ureter, above and beyond the work involved in performing CPT code 50X39. The RUC compared this CPT code to CPT code 52235 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; MEDIUM bladder tumor(s) (2.0 to 5.0 cm)), with total time of 94 minutes, intraservice time of 45 minutes, and a work RVU of 5.44. The RUC also cited, as support, the second key reference CPT code 50694 (Placement of ureteral stent, percutaneous, including diagnostic nephrostogram and/or ureterogram when performed, imaging guidance (e.g., ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; new

access, without separate nephrostomy catheter) with total time 111 minutes, intraservice time 62 minutes, and a work RVU of 5.25. We do not agree with the RUC's recommended work RVU because we believe that the intraservice time for this CPT code should reflect the survey median rather than the 75th percentile. There is no indication that the additional work of imaging guidance was systematically excluded by survey respondents when estimating the time needed to furnish the service. Therefore, we are proposing to reduce the intraservice time for CPT code 50X40 from the RUC-recommended 60 minutes to the survey median time of 45 minutes. We note that this is still 15 minutes more than the intraservice time for CPT code 50X39, primarily for the provider to introduce the guidewire into the renal pelvis and/or ureter. We welcome comments about the amount of time needed to furnish this procedure. With the revised intraservice time of 45 minutes and a total time of 85 minutes, we believe that the RUC-recommended work RVU for this CPT code is overstated. When we apply the increment between the RUC-recommended values for between CPT codes 50X39 and 50X40 (2.07 work RVUs) in addition to our proposed work RVU for CPT code 50X39, we estimate that this CPT code is more accurately represented by a work RVU of 4.83. This value is supported by a crosswalk to CPT code 36902 (Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty), which has intraservice time of 40 minutes and total time of 86 minutes. We believe that CPT code 36902 describes a service that is similar to the new CPT code 50X40 and therefore provides a reasonable crosswalk. We are proposing a work RVU of 4.83 for CPT code 50X40.

We are proposing the RUC-recommended work RVU of 3.37 for CPT code 52334 (Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde)

and the RUC-recommended work RVU of 0.83 for CPT code 74485 (Dilation of ureter(s) or urethra, radiological supervision and interpretation).

For the direct PE inputs, we are proposing to remove the clinical labor time for the "Confirm availability of prior images/studies" (CA006) activity for CPT code 52334. This code does not currently include this clinical labor time, and unlike the two new codes in the family (CPT codes 50X39 and 50X40), CPT code 52234 does not include imaging guidance in its code descriptor. When CPT code 52234 is performed with imaging guidance, it would be billed together with a separate imaging code that already includes clinical labor time for confirming the availability of prior images. As a result, we believe that it would be duplicative to include this clinical labor time in CPT code 52234.

(24) Transurethral Destruction of Prostate Tissue (CPT Codes 53850, 53852, and 538X3)

In September 2017, the CPT Editorial Panel created a new code (CPT code 538X3) to report transurethral destruction of prostate tissue by radiofrequency-generated water vapor thermotherapy. CPT codes 53850 (Transurethral destruction of prostate tissue; by microwave thermotherapy) and 53852 (Transurethral destruction of prostate tissue; by radiofrequency thermotherapy) were also included for review as part of the same family of codes.

For CPT code 53850 (Transurethral destruction of prostate tissue; by microwave thermotherapy), the RUC-recommended a work RVU of 5.42, supported by a direct crosswalk to CPT code 33272 (Removal of subcutaneous implantable defibrillator electrode) with a total time of 151 minutes, intraservice time of 45 minutes, and a work RVU of 5.42. The RUC indicated that a work RVU of 5.42 accurately reflects the lowest value of the three CPT codes in this family. We are proposing the work RVU of 5.42 for CPT code 53850, as recommended by the RUC.

The RUC recommended a work RVU of 5.93 for CPT code 53852 (Transurethral destruction of prostate tissue; by radiofrequency thermotherapy) and for CPT code 538X3 (Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy). We are proposing the RUC-recommended value of 5.93 for CPT code 53852.

CPT code 538X3 (Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy) is a service reflecting

the use of a new technology, “radiofrequency generated water vapor thermotherapy,” as distinct from CPT code 53852, which describes destruction of tissue by “radiofrequency thermotherapy.” The RUC indicated that this CPT code is the most intense of the three CPT codes in this family, thereby justifying a work RVU identical to that of CPT code 53852 despite lower intraservice and total times. The RUC stated that 15 minutes of post service time is appropriate due to greater occurrence of post-procedure hematuria necessitating a longer monitoring time. However, the post-service monitoring time for this CPT code, 15 minutes, is identical to that for CPT code 53852. We do not agree with the explanation provided by the RUC for recommending a work RVU identical to that of CPT code 53852, given that the total time is 5 minutes lower, and the post service times are identical. Both the intraservice time ratio between this new CPT code and CPT code 53852 (4.94) and the total time ratio between the two CPT codes (5.72) suggest that the RUC-recommended work RVU of 5.93 overestimates the work involved in furnishing this service. We reviewed other 90-day global CPT codes with similar times and identified CPT code 24071 (Excision, tumor, soft tissue of upper arm or elbow area, subcutaneous; 3 cm or greater) with a total time of 183 minutes, intraservice time of 45 minutes, and a work RVU of 5.70 as an appropriate crosswalk. We believe that this is a better reflection of the work involved in furnishing CPT code 538X3, and therefore, we are proposing a work RVU of 5.70 for this CPT code. We welcome comments about the time and intensity required to furnish this new service. Since this CPT code reflects the use of a new technology, it will be reviewed again in 3 years.

For the direct PE inputs, we are proposing to add a new supply (SA128: “kit, Rezum delivery device”), a new equipment item (EQ389: “generator, water thermotherapy procedure”), and updating the price of two supplies (SA036: “kit, transurethral microwave thermotherapy” and SA037: “kit, transurethral needle ablation (TUNA)”) in response to the submission of invoices. We note that these invoices were submitted along with additional information listing the vendor discount for these supplies and equipment. We appreciate the inclusion of the discounted prices on these invoices, and we encourage other invoice submissions to provide the discounted price as well where available. Based on the market research on supply and equipment

pricing carried out by our contractors, we have reason to believe that a vendor discount of 10–15 percent is common on many supplies and equipment. Since we are obligated by statute to establish RVUs for each service as required based on the resource inputs required to furnish the typical case of a service, we have concerns that relying on invoices for supply and equipment pricing absent these vendor discounts may overestimate the resource cost of some services. We encourage the submission of additional invoices that include the discounted price of supplies and equipment to more accurately assess the market cost of these resources. Furthermore, we refer readers to our discussion of the market-based supply and equipment pricing update detailed in section II.B. of this proposed rule.

(25) Vaginal Treatments (CPT Codes 57150 and 57160)

CPT codes 57150 (Irrigation of vagina and/or application of medicament for treatment of bacterial, parasitic, or fungoid disease) and 57160 (Fitting and insertion of pessary or other intravaginal support device) were identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.50 for CPT code 57150 and the RUC-recommended work RVU of 0.89 for CPT code 57160.

We are not proposing any direct PE refinements for this code family.

(26) Biopsy of Uterus Lining (CPT Codes 58100 and 58110)

CPT code 58100 (Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. CPT code 58110 (Endometrial sampling (biopsy) performed in conjunction with colposcopy) was also included for review as part of the same family of codes. For CY 2019, we are proposing the RUC-recommended work RVU of 1.21 for CPT code 58100 and the RUC-recommended work RVU of 0.77 for CPT code 58110.

For the direct PE inputs, we are proposing to remove the clinical labor time for the “Review/read post-procedure x-ray, lab and pathology reports” (CA028) activity for CPT code 58100. This code is typically billed with a same day E/M service, and we believe that it would be duplicative to assign clinical labor time for reviewing reports given that this task would typically be done during the same day E/M service. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(27) Injection Greater Occipital Nerve (CPT Code 64405)

CPT code 64405 (Injection, anesthetic agent; greater occipital nerve) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.94 for CPT code 64405.

For the direct PE inputs, we are proposing to refine the equipment time for the exam table (EF023) in accordance with our standard equipment time formulas.

(28) Injection Digital Nerves (CPT Code 64455)

CPT code 64455 (Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (e.g., Morton’s neuroma)) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.75 for CPT code 64455.

For the direct PE inputs, we are proposing to refine the equipment time for the exam table (EF023) in accordance with our standard equipment time formulas.

(29) Removal of Foreign Body—Eye (CPT Codes 65205 and 65210)

CPT codes 65205 (Removal of foreign body, external eye; conjunctival superficial) and 65210 (Removal of foreign body, external eye; conjunctival embedded (includes concretions), subconjunctival, or scleral nonperforating) were identified as potentially misvalued on a screen of 0-day global services reported with an

E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000.

For CY 2019, we are proposing the RUC-recommended work RVU of 0.49 for CPT code 65205. We note that the recommendations for this code included a statement that the work required to perform CPT code 65205 and the procedure itself had not fundamentally changed since the time of the last review. However, due to the fact that the surveyed intraservice time had decreased from 5 minutes to 3 minutes, the work RVU was lowered from the current value of 0.71 to the recommended work RVU of 0.49, based on a direct crosswalk to CPT code 68200 (Subconjunctival injection). We note that this recommendation appears to have been developed under a methodology similar to our ongoing use of time ratios as one of several methods used to evaluate work. We used time ratios to identify potential work RVUs and considered these work RVUs as potential options relative to the values developed through other options. As we have stated in past rulemaking (such as 82 FR 53032–53033), we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in newly valued work RVUs, as indeed it does not in the case of CPT code 65205 here. Instead, we believed that, since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. We appreciate that the RUC-recommended work RVU for CPT code 65205 has taken these changes in work time into account, and we support the use of similar methodologies, where appropriate, in future work valuations.

For CPT code 65210, we disagree with the RUC-recommended work RVU of 0.75 and we are proposing a work RVU of 0.61 based on a direct crosswalk to CPT code 92511 (Nasopharyngoscopy with endoscope). This crosswalk code has the same intraservice time of 5 minutes and 4 additional minutes of total time as compared to CPT code 65210. We note that the recommended intraservice time for CPT code 65210 is decreasing from 13 minutes to 5 minutes (62 percent reduction), and the recommended total time for CPT code 65210 is decreasing from 25 minutes to 13 minutes (48 percent reduction); however, the RUC-recommended work RVU is only decreasing from 0.84 to 0.75, which is a reduction of about 11 percent. As we noted earlier, we do not believe that the decrease in time as

reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, and we are not proposing a linear decrease in the work valuation based on these time ratios. However, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs, and we do not believe that the recommended work RVU of 0.75 appropriately reflects these decreases in surveyed work time.

Our proposed work RVU of 0.61 is also based on a crosswalk to CPT code 51700 (Bladder irrigation, simple, lavage and/or instillation), another recently reviewed code with higher time values and a work RVU of 0.60. We also note that two injection codes (CPT codes 20551 and 64455) were reviewed at the same RUC meeting as CPT code 65210, each of which shared the same intraservice time of 5 minutes and had a higher total time of 21 minutes. Both of these codes had a RUC-recommended work RVU of 0.75, which we are proposing without refinement for CY 2019. Due to the fact that CPT code 65210 has a lower total time and a lower intensity than both of these injection procedures, we did not agree that CPT code 65210 should be valued at the same work RVU of 0.75. We believe that our proposed work RVU of 0.61 based on a crosswalk to CPT code 92511 is a more accurate value for this code.

For the direct PE inputs, we noted that the RUC-recommended equipment time for the screening lane (EL006) equipment in CPT codes 65205 and 65210 was equal to the total work time in addition to the clinical labor time needed to set up and clean the equipment. We disagree that the screening lane would typically be in use for the total work time, given that this includes the preservice evaluation time and the immediate postservice time. Although we are not currently proposing to refine the equipment time for the screening lane in these two codes, we are soliciting comments on whether the use of the intraservice work time would be more typical than the total work time for CPT codes 65205 and 65210.

(30) Injection—Eye (CPT Codes 67500, 67505, and 67515)

CPT code 67515 (Injection of medication or other substance into Tenon's capsule) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5

years with Medicare utilization greater than 20,000. CPT codes 67500 (Retrobulbar injection; medication (separate procedure, does not include supply of medication)) and 67505 (Retrobulbar injection; alcohol) were also included for review as part of the same family of codes. For CY 2019, we are proposing the RUC-recommended work RVU of 1.18 for CPT code 67500.

For CPT code 67505, we disagree with the RUC-recommended work RVU of 1.18 and we are proposing a work RVU of 0.94 based on a direct crosswalk to CPT code 31575 (Laryngoscopy, flexible; diagnostic). This is a recently reviewed code with the same intraservice time of 5 minutes and 2 fewer minutes of total time as compared to CPT code 67505. We disagreed with the recommendation to propose the same work RVU of 1.18 for both CPT code 67500 and 67505 for several reasons. We noted that the current work RVU of 1.44 for CPT code 67500 is higher than the current work RVU of 1.27 for CPT code 67505, while the current work time of CPT code 67500 is less than the current work time for CPT code 67505. This supported the view that CPT code 67500 should be valued higher than CPT code 67505 due to its greater intensity, which we also found to be supportable on clinical grounds. The typical patient for CPT code 67505 has already lost their sight, and there is less of a concern about accidental blindness as compared to CPT code 67500. At the recommended identical work RVUs, CPT code 67500 has almost triple the intensity of CPT code 67505. Similarly, the intensity does not match our clinical understanding of the complexity and difficulty of the two procedures.

We also noted that the surveyed total time for CPT code 67505 was 7 minutes less than the surveyed time for CPT code 67500, approximately 21 percent lower. If we were to take the total time ratio between the two codes, it would produce a suggested work RVU of 0.93 (26 minutes divided by 33 minutes times a work RVU of 1.18). This time ratio suggested a work RVU almost identical to the 0.94 value that we determined via a crosswalk to CPT code 31575. Based on the preceding rationale, we are proposing a work RVU of 0.94 for CPT code 67505.

For CPT code 67515, we disagree with the RUC-recommended work RVU of 0.84 and we are proposing a work RVU of 0.75 based on a crosswalk to CPT code 64450 (Injection, anesthetic agent; other peripheral nerve or branch). The recommended work RVU is based on a direct crosswalk to CPT code 65222 (Removal of foreign body, external eye;

corneal, with slit lamp) at a work RVU of 0.84. However, the recommended crosswalk code has more than double the intraservice time of CPT code 67515 at 7 minutes, and we believe that it would be more accurate to use a crosswalk to a code with a more similar intraservice time such as CPT code 64450, which is another type of injection procedure. The proposed work RVU of 0.75 is also based on the use of the intraservice time ratio with the first code in the family, CPT code 67500. The intraservice time ratio between these codes is 0.60 (3 minutes divided by 5 minutes), which yields a suggested work RVU of 0.71 when multiplied by the recommended work RVU of 1.18 for CPT code 67500. We believe that this provides further rationale for our proposed work RVU of 0.75 for CPT code 67515.

We are not proposing any direct PE refinements for this code family.

(31) X-Ray Spine (CPT Codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120)

CPT codes 72020 (Radiologic examination, spine, single view, specify level) and 72072 (Radiologic examination, spine; thoracic, 3 views) were identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. The code family was expanded to include ten additional CPT codes to be reviewed together as a group: CPT codes 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 72050 (Radiologic examination, spine, cervical; 4 or 5 views), 72052 (Radiologic examination, spine, cervical; 6 or more views), 72070 (Radiologic examination, spine; thoracic, 2 views), 72074 (Radiologic examination, spine; thoracic, minimum of 4 views), 72080 (Radiologic examination, spine; thoracolumbar junction, minimum of 2 views), 72100 (Radiologic examination, spine, lumbosacral; 2 or 3 views), 72110 (Radiologic examination, spine, lumbosacral; minimum of 4 views), 72114 (Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views), and 72120 (Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views).

The radiologic examination procedures described by CPT codes 72020 (Radiologic examination, spine, single view, specify level), 72040 (Radiologic examination, spine, cervical; 2 or 3 views), 72050 (Radiologic examination, spine, cervical; 4 or 5 views), 72052

(Radiologic examination, spine, cervical; 6 or more views), 72070 (Radiologic examination, spine; thoracic, 2 views), 72072 (Radiologic examination, spine; thoracic, 3 views), 72074 (Radiologic examination, spine; thoracic, minimum of 4 views), 72080 (Radiologic examination, spine; thoracolumbar junction, minimum of 2 views), 72100 (Radiologic examination, spine, lumbosacral; 2 or 3 views), 72110 (Radiologic examination, spine, lumbosacral; minimum of 4 views), 72114 (Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views), 72120 (Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views), 72200 (Radiologic examination, sacroiliac joints; less than 3 views), 72202 (Radiologic examination, sacroiliac joints; 3 or more views), 72220 (Radiologic examination, sacrum and coccyx, minimum of 2 views), 73070 (Radiologic examination, elbow; 2 views), 73080 (Radiologic examination, elbow; complete, minimum of 3 views), 73090 (Radiologic examination; forearm, 2 views), 73650 (Radiologic examination; calcaneus, minimum of 2 views), and 73660 (Radiologic examination; toe(s), minimum of 2 views) were all identified as potentially misvalued through a screen for CPT codes with high utilization. With approval from the RUC Research Subcommittee, the specialty societies responsible for reviewing these CPT codes did not conduct surveys, but instead employed a “crosswalk methodology,” in which they derived physician work and time components for CPT codes by comparing them to similar CPT codes. We recognize that a substantial amount of time and effort is involved in conducting surveys of potentially misvalued CPT codes; however, we have concerns about the quality of the underlying data used to value these CPT codes. The descriptors and other information on which the recommendations are based have themselves not been surveyed, in several instances, since 1995. There is no new information about any of these CPT codes that would allow us to detect any potential improvements in efficiency of furnishing the service or evaluate whether changes in practice patterns have affected time and intensity. We are not categorically opposed to changes in process or methodology that might reduce the burden of conducting surveys, but without the benefit of any additional data, through surveys or otherwise, we are not convinced that there is a basis for evaluating the RUC’s

recommendations for work RVUs for each of these CPT codes.

Since all 20 of the CPT codes in this group have very similar intraservice (from 3–5 minutes) and total (ranging from 5–8 minutes) times, we are proposing to use an alternative approach to the valuation of work RVUs for these CPT codes. We calculated the utilization-weighted average RUC-recommended work RVU for the 20 CPT codes. The result of this calculation is a work RVU of 0.23, which we propose to apply uniformly to each CPT code: 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, 72120, 72200, 72202, 72220, 73070, 73080, 73090, 73650, and 73660. We recognize that the proposed work RVU for some of these CPT codes may be somewhat lower at the code level than the RUC’s recommendation, while the proposed work RVU for other CPT codes may be slightly higher than the RUC’s recommended value. We nevertheless believe that the alternative, accepting the RUC’s recommendation for each separate CPT code implies a level of precision about the time and intensity of the CPT codes that we have no way to validate.

For the direct PE inputs, we are proposing to add a patient gown (SB026) supply to CPT code 72120. We noted that all of the other codes in the family that included clinical labor time for the “Greet patient, provide gowning, ensure appropriate medical records are available” (CA009) task included a patient gown, and we are proposing to add the patient gown to match the other codes in the family. We believe that the exclusion of the patient gown for CPT code 72120 was most likely due to a clerical error in the recommendations. We are also proposing to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

In our review of the clinical labor time recommended for the “Perform procedure/service—NOT directly related to physician work time” (CA021) task, we noted that the standard convention for this family of codes seemed to be 3 minutes of clinical labor time per view being conducted. For example, CPT code 72020 with a single view had 3 minutes of recommended clinical labor time for this activity, while CPT code 72070 with two views had 6 minutes. However, we also noted that for the codes with 2–3 views such as CPT codes 72040 and 72100, the recommended clinical labor time of 9 minutes appears to assume that 3 views would always be typical for the procedure. The same pattern occurred for codes with 4–5 views, which have a

recommended clinical labor time of 15 minutes (assuming 5 views is typical), and for codes with 6 or more views, which have a recommended clinical labor time of 21 minutes (assuming 7 views is typical).

We are not proposing to refine the clinical labor times for this task as we do not have data available to know how many views would be typical for these CPT codes. However, we note that the intraservice clinical labor time has not changed in roughly 2 decades for these X-ray services, including during this most recent review, and we believe that improving technology during this span of time may have resulted in greater efficiencies in the procedures. We continue to be interested in data sources regarding the intraservice clinical labor times for services such as these that do not match the physician intraservice time, and we welcome any comments that may be able to provide additional details for the twelve codes under review in this family.

(32) X-Ray Sacrum (CPT Codes 72200, 72202, and 72220)

CPT code 72220 (Radiologic examination, sacrum and coccyx, minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT codes 72200 (Radiologic examination, sacroiliac joints; less than 3 views) and 72202 (Radiologic examination, sacroiliac joints; 3 or more views) were also included for review as part of the same family of codes. See (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120) for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we are proposing to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

(33) X-Ray Elbow-Forearm (CPT Codes 73070, 73080, and 73090)

CPT codes 73070 (Radiologic examination, elbow; 2 views) and 73090 (Radiologic examination; forearm, 2 views) were identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 73080 (Radiologic examination, elbow; complete, minimum of 3 views) was also included for review as part of the same family of codes. See (31) X-Ray Spine (CPT codes 72020, 72040, 72050, 72052, 72070, 72072, 72074, 72080, 72100, 72110, 72114, and 72120) above

for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we are proposing to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

(34) X-Ray Heel (CPT Code 73650)

CPT code 73650 (Radiologic examination; calcaneus, minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. See (31) X-Ray Spine above for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we are proposing to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

(35) X-Ray Toe (CPT Code 73660)

CPT code 73660 (Radiologic examination; toe(s), minimum of 2 views) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. See (31) X-Ray Spine above for a discussion of proposed work RVUs for these codes.

For the direct PE inputs, we are proposing to add a patient gown (SB026) supply to CPT code 73660. We noted that the other codes in related X-ray code families that included clinical labor time for the “Greet patient, provide gowning, ensure appropriate medical records are available” (CA009) task included a patient gown, and we are proposing to add the patient gown to match the other codes in these families. We are also proposing to refine the equipment time for the basic radiology room (EL012) in accordance with our standard equipment time formulas.

(36) X-Ray Esophagus (CPT Codes 74210, 74220, and 74230)

CPT code 74220 (Radiologic examination; esophagus) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT codes 74210 (Radiologic examination; pharynx and/or cervical esophagus) and 74230 (Swallowing function, with cineradiography/videoradiography) were also included for review as part of the same family of codes.

We are proposing the work RVUs recommended by the RUC for the CPT codes in this family as follows: A work RVU 0.59 for CPT code 74210 (Radiologic examination; pharynx and/or cervical esophagus), a work RVU of 0.67 for CPT code 74220 (Radiologic

examination; esophagus), and a work RVU of 0.53 for CPT code 74230 (Swallowing function, with cineradiography/videoradiography).

For the direct PE inputs, we noted that the recommended quantity of the Polibar barium suspension (SH016) supply is increasing from 1 ml to 150 ml for CPT code 74210 and 100 ml are being added to CPT code 74220, which did not previously include this supply. The RUC recommendation states that this supply quantity increase is due to clinical necessity, but does not go into further details about the typical use of the supply. Although we are not proposing to refine the quantity of the Polibar barium suspension at this time, we are seeking additional comment about the typical use of the supply in these procedures. We are also proposing to refine the equipment times for all three codes in accordance with our standard equipment time formulas.

(37) X-Ray Urinary Tract (CPT Code 74420)

CPT code 74420 (Urography, retrograde, with or without KUB) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually.

We are proposing the RUC-recommended work RVU of 0.52 for CPT code 74420 (Urography, retrograde, with or without KUB).

For the direct PE inputs, we are proposing to remove the 1 minute of clinical labor time for the “Confirm order, protocol exam” (CA014) activity. The clinical labor time recommended for this activity is not included in the reference code, nor is it included in any of the two dozen other X-ray codes that were reviewed at the same RUC meeting. There is also no explanation in the recommended materials as to why this clinical labor time would need to be added. We do not believe that this clinical labor would be typical for CPT code 74420, and we are proposing to remove it to match the rest of the X-ray codes. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(38) Fluoroscopy (CPT Code 76000)

CPT code 76000 (Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. CPT code 76001 (Fluoroscopy, physician or other qualified health care professional time more than 1 hour, assisting a nonradiologic physician or other qualified health care professional) was

also included for review as part of the same family of codes. However, due to the fact that supervision and interpretation services have been increasingly bundled into the underlying procedure codes, the RUC concluded that this practice is rare, if not obsolete, and CPT code 76001 was recommended for deletion by the CPT Editorial Panel for CY 2019.

We are proposing the RUC-recommended work RVU of 0.30 for CPT code 76000 (Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time, other than 71023 or 71034 (e.g., cardiac fluoroscopy)).

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(39) Echo Exam of Eye Thickness (CPT Code 76514)

CPT code 76514 (Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness)) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWP/UT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard-valued and CMS/Other source codes.

For CPT code 76514, we disagree with the RUC-recommended work RVU of 0.17 and we are proposing a work RVU of 0.14. We note that the recommended intraservice time for CPT code 76514 is decreasing from 5 minutes to 3 minutes (40 percent reduction), and the recommended total time for CPT code 76514 is decreasing from 15 minutes to 5 minutes (67 percent reduction); however, the RUC-recommended work RVU is not decreasing at all and remains at 0.17. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs.

We also note that the RUC recommendations for CPT code 76514 stated that, although the steps in the procedure are unchanged since it was first valued, the workflow has changed. With the advent of smaller and easier to use pachymeters, the technician now typically takes the measurements that used to be taken by the practitioner for CPT code 76514, and the intraservice time was reduced by two minutes to account for the technician performing

this service. We believe that this change in workflow indicates that the work RVU for the code should be reduced in some fashion, since some of the work that was previously done by the practitioner is now typically performed by the technician. We have no reason to believe that there is more intensive cognitive work being performed by the practitioner after these measurements are taken since the recommendations indicated that the steps in the procedure are unchanged since this code was first valued.

Therefore, we are proposing a work RVU of 0.14 for CPT code 76514, which is based on taking half of the intraservice time ratio. We considered applying the intraservice time ratio to CPT code 76514, which would reduce the work RVU to 0.10 based on taking the change in intraservice time (from 5 minutes to 3 minutes) and multiplying this ratio of 0.60 times the current work RVU of 0.17. However, we recognize that the minutes shifted to the clinical staff were less intense than the minutes that remained in CPT code 76514, and therefore, we applied half of the intraservice time ratio for a reduction of 0.03 RVUs to arrive at a proposed work RVU of 0.14. We believe that this proposed value more accurately takes into account the changes in workflow that have caused substantial reductions in the surveyed work time for the procedure.

We are not proposing any direct PE refinements for this code family.

(40) Ultrasound Elastography (CPT Codes 767X1, 767X2, and 767X3)

In September 2017, the CPT Editorial Panel created three new codes describing the use of ultrasound elastography to assess organ parenchyma and focal lesions: CPT codes 767X1 (Ultrasound, elastography; parenchyma), 767X2 (Ultrasound, elastography; first target lesion) and 767X3 (Ultrasound, elastography; each additional target lesion). The most common use of this code set will be for preparing patients with disease of solid organs, like the liver, or lesions within solid organs.

The RUC recommended a work RVU of 0.59 for CPT code 767X1 (Ultrasound, elastography; parenchyma (e.g., organ)), a work RVU of 0.59 for CPT code 767X2 (Ultrasound, elastography; first target lesion), and a work RVU of 0.50 for add-on CPT code 767X3 (Ultrasound, elastography; each additional target lesion). We are proposing the RUC-recommended work RVUs for each of these new CPT codes.

For the direct PE inputs, we are proposing to refine the clinical labor

time for the “Prepare room, equipment and supplies” (CA013) activity to 3 minutes and to refine the clinical labor time for the “Confirm order, protocol exam” (CA014) activity to 0 minutes for CPT codes 767X1 and 767X2. CPT code 76700 (Ultrasound, abdominal, real time with image documentation; complete), the reference code for these two new codes, did not previously have clinical labor time assigned for the “Confirm order, protocol exam” clinical labor task, and we do not have any reason to believe that these particular services being furnished by the clinical staff have changed in the new codes, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished in CPT codes 767X1 and 767X2. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(41) Ultrasound Exam—Scrotum (CPT Code 76870)

CPT code 76870 (Ultrasound, scrotum and contents) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. We are proposing a work RVU of 0.64 for CPT code 76870 (Ultrasound, scrotum and contents), as recommended by the RUC.

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Prepare room, equipment and supplies” (CA013) activity to 3 minutes and to refine the clinical labor time for the “Confirm order, protocol exam” (CA014) activity to 0 minutes. CPT code 76870 did not previously have clinical labor time assigned for the “Confirm order, protocol exam” clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished under the CA013 room preparation activity. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(42) Contrast-Enhanced Ultrasound (CPT Codes 76X0X and 76X1X)

In September 2017, the CPT Editorial Panel created two new CPT codes describing the use of intravenous microbubble agents to evaluate

suspicious lesions by ultrasound. CPT code 76X0X (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion) is a stand-alone procedure for the evaluation of a single target lesion. CPT code 76X1X (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection) is an add-on code for the evaluation of each additional lesion.

The two new CPT codes in this family represent a new technology that involves the use of intravenous microbubble agents to evaluate suspicious lesions by ultrasound. The first new CPT code, 76X0X (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion), is the base code for the new add-on CPT code 76X1X (Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection). The RUC reviewed the survey results for CPT code 76X0X and recommended total time of 30 minutes and intraservice time of 20 minutes. Their recommendation for a work RVU of 1.62 is based neither on the median of the survey results (1.82) nor the 25th percentile of the survey results (1.27). Instead, the RUC-recommended work RVU is based on a crosswalk to CPT code 73719 (Magnetic resonance (e.g., proton) imaging, lower extremity other than joint; with contrast material(s)), which has identical intraservice and total times as the survey CPT code. The RUC also identified a comparison CPT code (CPT code 73222 (Magnetic resonance (e.g., proton) imaging, any joint of upper extremity; with contrast material(s)) with work RVU 1.62 and similar times. For add-on CPT code 76X1X, the RUC recommended a work RVU of 0.85, which is the 25th percentile of survey results, with total and intraservice times of 15 minutes.

While we generally agree that, particularly in instances where a CPT code represents a new technology or procedure, there may be reason to deviate from survey metrics, we are confused by the logic behind the RUC's recommendation of a work RVU of 1.62 for CPT code 76X0X. When we consider the range of existing CPT codes with 30 minutes total time and 20 minutes intraservice time, we note that a work RVU of 1.62 is among the highest potential crosswalks. We also note that the RUC agreed with the 25th percentile of survey results for the new add-on CPT code, 76X1X, and we do not see why the 25th percentile wouldn't also

be appropriate for the base CPT code, 76X0X. Therefore, we are proposing a work RVU of 1.27 for CPT code 76X0X. We identified two CPT codes with total time of 30 minutes and intraservice time of 20 minutes that bracket the proposed work RVU of 1.27: CPT code 93975 (Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study) has a work RVU of 1.16, and CPT code 72270 (Myelography, 2 or more regions (e.g., lumbar/thoracic, cervical/thoracic, lumbar/cervical, lumbar/thoracic/cervical), radiological supervision and interpretation) has a work RVU of 1.33. We are proposing the RUC-recommended work RVU of 0.85 for add-on CPT code 76X1X.

For the direct PE inputs, we are proposing to refine the clinical labor time for the "Prepare room, equipment and supplies" (CA013) activity to 3 minutes and to refine the clinical labor time for the "Confirm order, protocol exam" (CA014) activity to 0 minutes for CPT code 76X0X. CPT codes 76700 (Ultrasound, abdominal, real time with image documentation; complete) and 76705 (Ultrasound, abdominal, real time with image documentation; limited), the reference codes for this new code, did not previously have clinical labor time assigned for the "Confirm order, protocol exam" clinical labor task, and we do not have any reason to believe that these particular services being furnished by the clinical staff have changed in the new code, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations, since the same 3 minutes of clinical labor time is still being furnished in CPT code 76X0X.

We are proposing to remove the 50 ml of the phosphate buffered saline (SL180) for CPT codes 76X0X and 76X1X. When these codes were reviewed by the RUC, the conclusion that was reached was to remove this supply and replace it with normal saline. Since the phosphate buffered saline remained in the recommended direct PE inputs, we believe its inclusion may have been a clerical error. We are proposing to remove the supply and soliciting comments on the phosphate buffered saline or a replacement saline solution. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(43) Magnetic Resonance Elastography (CPT Code 76X01)

The CPT Editorial Panel created a new stand-alone code (76X01)

describing the use of magnetic resonance elastography for the evaluation of organ parenchymal pathology. This code will most often be used to evaluate patients with disease of solid organs (for example, cirrhosis of the liver) or pathology within solid organs that manifest with increasing fibrosis or scarring. The goal with magnetic resonance elastography is to evaluate the degree of fibrosis/scarring (that is, stiffness) without having to perform more invasive procedures (for example, biopsy). This technique can be used to characterize the severity of parenchymal disease, follow disease progression, or response to therapy.

The RUC recommended a work RVU for new CPT code 76X01 (Magnetic resonance (e.g., vibration) elastography) of 1.29, with 15 minutes of intraservice time and 25 minutes of total time. The recommendation is based on a comparison with two reference CPT codes, CPT code 74183 (Magnetic resonance (e.g., proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences) with total time of 40 minutes, intraservice time of 30 minutes, and a work RVU of 2.20; and CPT code 74181 (Magnetic resonance (e.g., proton) imaging, abdomen; without contrast material(s)), which has a total time of 30 minutes, intraservice time of 20 minutes, and a work RVU of 1.46. The RUC stated that both reference CPT codes have higher work values than the new CPT code, which is justified in both cases by higher intra-service times. They note that, despite shorter intraservice and total time, CPT code 76X01 is slightly more intense to perform due to the evaluation of wave propagation images and quantitative stiffness measures. We do not agree with the RUC's recommended work RVU for this CPT code. Using the RUC's two top reference CPT codes as a point of comparison, the intraservice time ratio in both instances suggests that a work RVU closer to 1.10 would be more appropriate. We recognize that the RUC believes the new CPT code is slightly more intense to furnish, but we are concerned about the relativity of this code in comparison with other imaging procedures that have similar intraservice and total times. Instead of the RUC-recommended work RVU of 1.29 for CPT code 76X01, we are proposing a work RVU of 1.10, which is based on a direct crosswalk to CPT code 71250 (Computed tomography, thorax; without contrast material). CPT code 71250 has identical intraservice time (15 minutes) and total time (25 minutes) compared to CPT code 76X01, and we

believe that the work involved in furnishing both services is similar. We note that CPT code 76X01 describes a new technology and will be reviewed again by the RUC in 3 years.

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Prepare room, equipment and supplies” (CA013) activity from 6 minutes to 5 minutes, and for the “Prepare, set-up and start IV, initial positioning and monitoring of patient” (CA016) activity from 4 minutes to 3 minutes. We disagree that this additional clinical labor time would be typical for these activities, which are already above the standard times for these tasks. In both cases, we propose to maintain the current time from the reference CPT code 72195 (Magnetic resonance (e.g., proton) imaging, pelvis; without contrast material(s)) for these clinical labor activities. We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(44) Computed Tomography (CT) Scan for Needle Biopsy (CPT Code 77012)

CPT code 77012 (Computed tomography guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), radiological supervision and interpretation) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually.

We are proposing the RUC-recommended work RVU of 1.50 for CPT code 77012 (Computed tomography guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), radiological supervision and interpretation).

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Prepare room, equipment and supplies” (CA013) activity to 3 minutes and to refine the clinical labor time for the “Confirm order, protocol exam” (CA014) activity to 0 minutes. CPT code 77012 did not previously have clinical labor time assigned for the “Confirm order, protocol exam” clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished under the CA013 room preparation activity.

We are proposing to refine the equipment time for the CT room (EL007) to maintain the current time of 9

minutes. CPT code 77012 is a radiological supervision and interpretation procedure and there has been a longstanding convention in the direct PE inputs, shared by 38 other codes, to assign an equipment time of 9 minutes for the equipment room in these procedures. We do not believe that it would serve the interests of relativity to increase the equipment time for the CT room in CPT code 77012 without also addressing the equipment room time for the other radiological supervision and interpretation procedures. Therefore, we are proposing to maintain the current equipment room time of 9 minutes until this group of procedures can be subject to a more comprehensive review. We are also proposing to refine the equipment time for the Technologist PACS workstation (ED050) in accordance with our standard equipment time formulas.

(45) Dual-Energy X-Ray Absorptiometry (CPT Code 77081)

CPT code 77081 (Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; appendicular skeleton (peripheral) (e.g., radius, wrist, heel)) was identified as potentially misvalued on a screen of codes with a negative intraservice work per unit of time (IWPUT), with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we are proposing the RUC-recommended work RVU of 0.20 for CPT code 77081.

We are not proposing any direct PE refinements for this code family.

(46) Breast MRI With Computer-Aided Detection (CPT Codes 77X49, 77X50, 77X51, and 77X52)

CPT codes 77058 (Magnetic resonance imaging, breast, without and/or with contrast material(s); unilateral) and 77059 (Magnetic resonance imaging, breast, without and/or with contrast material(s); bilateral) were identified in 2016 on a high expenditure services screen across specialties with Medicare allowed charges of \$10 million or more. When preparing to survey these codes, the specialties noted that the clinical indications had changed for these exams. The technology had advanced to make computer-aided detection (CAD) typical and these codes did not parallel the structure of other magnetic resonance imaging (MRI) codes. In June 2017 the CPT Editorial Panel deleted CPT codes 0159T, 77058, and 77059 and created four new CPT codes to report breast MRI with and without contrast (including computer-aided detection).

The RUC recommended a work RVU of 1.45 for CPT code 77X49 (Magnetic resonance imaging, breast, without contrast material; unilateral). This recommendation is based on a comparison with CPT codes 74176 (Computed tomography, abdomen and pelvis; without contrast material) and 74177 (Computed tomography, abdomen and pelvis; with contrast material(s)), which both have similar intraservice and total times in relation to CPT code 77X49. We disagree with the RUC’s recommended work RVU because we do not believe that the reduction in total time of 15 minutes between the new CPT code 77X49 and the deleted CPT code 74177 is adequately reflected in its recommendation. While total time has decreased by 15 minutes, the only other difference between the two CPT codes is the change in the descriptor from the phrase ‘without and/or with contrast material(s)’ to ‘without contrast material,’ suggesting that there is less work involved in the new CPT code than in the deleted CPT code. Instead, we are proposing a work RVU of 1.15 for CPT code 77X49, which is similar to the total time ratio between the new CPT code and the deleted CPT code. It is also supported by a crosswalk to CPT code 77334 (Treatment devices, design and construction; complex (irregular blocks, special shields, compensators, wedges, molds or casts)). CPT code 77334 has total time of 35 minutes, intraservice time of 30 minutes, and a work RVU of 1.15.

CPT code 77X50 (Magnetic resonance imaging, breast, without contrast material; bilateral) describes the same work as CPT code 77X49, but reflects a bilateral rather than the unilateral procedure. The RUC recommended a work RVU of 1.60 for CPT code 77X50. Since we are proposing a different work RVU for the unilateral procedure than the value proposed by the RUC, we believe it is appropriate to recalibrate the work RVU for CPT code 77X50 relative to the RUC’s recommended difference in work between the two CPT codes. The RUC’s recommendation for the bilateral procedure is 0.15 work RVUs larger than for the unilateral procedure. Therefore, we are proposing a work RVU of 1.30 for CPT code 77X50.

The RUC recommended a work RVU of 2.10 for CPT code 77X51 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral). CPT code 77X51 is a new CPT code that bundles the deleted CPT code for unilateral breast

MRI without and/or with contrast material(s) with CAD, which was previously reported, in addition to the primary procedure CPT code, as CPT code 0159T (computer aided detection, including computer algorithm analysis of MRI image data for lesion detection/characterization, pharmacokinetic analysis, with further physician review for interpretation, breast MRI). Consistent with our belief that the proposed value for the base CPT code in this series of new CPT codes (CPT code 77X49) should be a work RVU of 1.15, we are proposing a work RVU for CPT code 77X51 that adds the RUC-recommended difference in RUC-recommended work RVUs between CPT codes 77X49 and 77X51 (0.65 work RVUs) to the proposed work RVU for CPT code 77X49. Therefore, we are proposing a work RVU of 1.80 for CPT code 77X51.

The last new CPT code in this series, CPT code 77X52 (Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral) describes the same work as CPT code 77X51, but reflects a bilateral rather than a unilateral procedure. The RUC recommended a work RVU of 2.30 for this CPT code. Similar to the process for valuing work RVUs for CPT code 77X50 and CPT code 77X51, we believe that a more appropriate work RVU is calculated by adding the difference in the RUC recommended work RVU for CPT codes 77X49 and 77X52, to the proposed value for CPT code 77X49. Therefore, we are proposing a work RVU of 2.00 for CPT code 77X52.

For the direct PE inputs, we are proposing to refine the clinical labor time for the “Prepare, set-up and start IV, initial positioning and monitoring of patient” (CA016) activity from 7 minutes to 3 minutes for CPT codes 77X49 and 77X50, and from 9 minutes to 5 minutes for CPT codes 77X51 and 77X52. We note that when the MRI of Lower Extremity codes were reviewed during the previous rule cycle (CPT codes 73718–73720), these codes contained either 3 minutes or 5 minutes of recommended time for this same clinical labor activity. We also note that the current Breast MRI codes that are being deleted and replaced with these four new codes, CPT codes 77058 and 77059, contain 5 minutes of clinical labor time for this same activity. We have no reason to believe that the new codes would require additional clinical labor time for patient positioning, especially given that the recommended

clinical labor times are decreasing in comparison to the reference codes for obtaining patient consent (CA011) and preparing the room (CA013). Therefore, we are refining the clinical labor time for the CA016 activity as detailed above to maintain relativity with the current clinical labor times in the reference codes, as well as with other recently reviewed MRI procedures.

Included in the recommendations for this code family were five new equipment items: CAD Server (ED057), CAD Software (ED058), CAD Software—Additional User License (ED059), Breast coil (EQ388), and CAD Workstation (CPU + Color Monitor) (ED056). We did not receive any invoices for these five equipment items, and as such we do not have any direct pricing information to use in their valuation. We are proposing to use crosswalks to similar equipment items as proxies for three of these new types of equipment until we do have pricing information:

- CAD software (ED058) is crosswalked to flow cytometry analytics software (EQ380).
- Breast coil (EQ388) is crosswalked to Breast biopsy device (coil) (EQ371).
- CAD Workstation (CPU + Color Monitor) (ED056) is crosswalked to Professional PACS workstation (ED053).

We welcome the submission of invoices with pricing information for these three new equipment items for our consideration to replace the use of these proxies. For the other two equipment items (CAD Server (ED057) and CAD Software—Additional User License (ED059)), we are not proposing to establish a price at this time as we believe both of them would constitute forms of indirect PE under our methodology. We do not believe that the CAD Server or Additional User License would be allocated to the use of an individual patient for an individual service, and can be better understood as forms of indirect costs similar to office rent or administrative expenses. We understand that as the PE data age, these issues involving the use of software and other forms of digital tools become more complex. However, the use of new technology does not change the statutory requirement under which indirect PE is assigned on the basis of direct costs that must be individually allocable to a particular patient for a particular service. We look forward to continuing to seek out new data sources to help in updating the PE methodology.

We are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

(47) Blood Smear Interpretation (CPT Code 85060)

CPT code 85060 (Blood smear, peripheral, interpretation by physician with written report) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, the RUC recommended a work RVU of 0.45 based on maintaining the current work RVU.

We disagree with the recommended value and are proposing a work RVU of 0.36 for CPT code 85060 based on the total time ratio between the current time of 15 minutes and the recommended time established by the survey of 12 minutes. This ratio equals 80 percent, and 80 percent of the current work RVU of 0.45 equals a work RVU of 0.36. When we reviewed CPT code 85060, we found that the recommended work RVU was higher than nearly all of the other global XXX codes with similar time values, and we do not believe that this blood smear interpretation procedure would have an anomalously high intensity. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 85060, we believe that it would be more accurate to propose the total time ratio at a work RVU of 0.36 to account for these decreases in the surveyed work time.

The proposed work RVU is also based on the use of three crosswalk codes. We are directly supporting the proposed valuation through a crosswalk to CPT code 95930 (Visual evoked potential (VEP) checkerboard or flash testing, central nervous system except glaucoma, with interpretation and report), which has a work RVU of 0.35 along with 10 minutes of intraservice time and 14 minutes of total time. We also explain the proposed valuation by bracketing it between two other crosswalks, with CPT code 99152 (Moderate sedation services provided by the same physician or other qualified health care professional performing the diagnostic or therapeutic service that the sedation supports; initial 15 minutes of intraservice time, patient age 5 years or older) on the lower end at a work RVU of 0.25 and CPT code 93923 (Complete bilateral noninvasive physiologic studies of upper or lower extremity arteries, 3 or more levels, or single level study with provocative

functional maneuvers) on the higher end at a work RVU of 0.45.

The RUC recommended no direct PE inputs for CPT code 85060 and we are recommending none.

(48) Bone Marrow Interpretation (CPT Code 85097)

CPT code 85097 (Bone marrow, smear interpretation) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, the RUC recommended a work RVU of 1.00 based on a direct crosswalk to CPT code 88121 (Cytopathology, in situ hybridization (e.g., FISH), urinary tract specimen with morphometric analysis, 3–5 molecular probes, each specimen; using computer-assisted technology).

We disagree with the RUC-recommended value and we are proposing a work RVU of 0.94 for CPT code 85097 based on maintaining the current work valuation. We noted that the survey indicated that CPT code 85097 typically takes 25 minutes of work time to perform, down from a previous work time of 30 minutes, and, generally speaking, since the two components of work are time and intensity, we believe that significant decreases in time should be reflected in decreases to work RVUs. For the specific case of CPT code 85097, we are supporting our proposed work RVU of 0.94 through a crosswalk to CPT code 88361 (Morphometric analysis, tumor immunohistochemistry (e.g., Her-2/neu, estrogen receptor/progesterone receptor), quantitative or semiquantitative, per specimen, each single antibody stain procedure; using computer-assisted technology), a recently reviewed code from CY 2018 with the identical time values and a work RVU of 0.95.

We also considered a work RVU of 0.90 based on double the recommended work RVU of 0.45 for CPT code 85060 (Blood smear, peripheral, interpretation by physician with written report). When both of these CPT codes were under review, the explanation was offered that in a peripheral blood smear, typically, the practitioner does not have the approximately 12 precursor cells to review, whereas in an aspirate from the bone marrow, the practitioner is examining all the precursor cells. Additionally, for CPT code 85097, there are more cell types to look at as well as more slides, usually four, whereas with CPT code 85060 the practitioner would typically only look at one slide. While we do not propose to value CPT code 85097 at twice the work RVU of CPT code 85060, we believe this analysis also supports maintaining the current

work RVU of 0.94 as opposed to raising it to 1.00.

For the direct PE inputs, we are proposing to remove the clinical labor time for the “Accession and enter information” (PA001) and “File specimen, supplies, and other materials” (PA008) activities. As we stated previously, information entry and specimen filing tasks are not individually allocable to a particular patient for a particular service and are considered to be forms of indirect PE. While we agree that these are necessary tasks, under our established methodology we believe that they are more appropriately classified as indirect PE.

(49) Fibrinolysins Screen (CPT Code 85390)

CPT code 85390 (Fibrinolysins or coagulopathy screen, interpretation and report) was identified as potentially misvalued on a screen of codes with a negative IWPUP, with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for Harvard valued and CMS/Other source codes. For CY 2019, we are proposing the RUC-recommended work RVU of 0.75 for CPT code 85390.

Because this is a work only code, the RUC did not recommend, and we are not proposing any direct PE inputs for CPT code 85390.

(50) Electroretinography (CPT Codes 92X71, 92X73, and 03X0T)

CPT code 92275 (Electroretinography with interpretation and report) was identified in 2016 on a high expenditure services screen across specialties with Medicare allowed charges of \$10 million or more. In January 2016, the specialty society noted that they became aware of inappropriate use of CPT code 92275 for a less intensive version of this test for diagnosis and indications that are not clinically proven and for which less expensive and less intensive tests already exist. CPT changes were necessary to ensure that the service for which CPT code 92275 was intended was clearly described, as well as an accurate vignette and work descriptor were developed. In September 2017, the CPT Editorial Panel deleted CPT code 92275 and replaced it with two new codes to describe electroretinography full field and multi focal. A category III code was retained for pattern electroretinography.

For CPT code 92X71 (Electroretinography (ERG) with interpretation and report; full field (e.g., ffERG, flash ERG, Ganzfeld ERG)), we disagree with the recommended work RVU of 0.80 and we are instead

proposing a work RVU of 0.69 based on a direct crosswalk to CPT code 88172 (Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, first evaluation episode, each site). CPT code 88172 is another interpretation procedure with the same 20 minutes of intraservice time, which we believe is a more accurate comparison for CPT code 92X71 than the two reference codes chosen by the survey participants due to their significantly higher and lower intraservice times. We note that the recommended intraservice time for CPT code 92X71 as compared to its predecessor CPT code 92275 is decreasing from 45 minutes to 20 minutes (56 percent reduction), and the recommended total time is decreasing from 71 minutes to 22 minutes (69 percent reduction); however, the work RVU is only decreasing from 1.01 to 0.80, which is a reduction of just over 20 percent. Although we do not imply that the decreases in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 92X71, we have reason to believe that the significant drops in surveyed work time as compared to CPT code 92275 are a result of improvements in technology since the predecessor code was reviewed. The older machines used for electroretinography were slower and more cumbersome, and now the same work for the service can be performed in significantly less time. Therefore, we are proposing a work RVU of 0.69 based on the direct crosswalk to CPT code 88172, which we believe more accurately accounts for these decreases in surveyed work time.

For CPT code 92X73 (Electroretinography (ERG) with interpretation and report; multifocal (mfERG)), we disagree with the RUC-recommended work RVU of 0.72 and are proposing a work RVU of 0.61. We concur that the relative difference in work between CPT code 92X71 and 92X73 is equivalent to the recommended interval of 0.08 RVUs. Therefore, we are proposing a work RVU of 0.61 for CPT code 92X73, based on the recommended interval of 0.08 fewer RVUs below our proposed work RVU of 0.69 for CPT code 92X71. The proposed work RVU is also based on the use of two crosswalk codes: CPT code 88387 (Macroscopic examination, dissection, and preparation of tissue for

non-microscopic analytical studies; each tissue preparation); and CPT code 92100 (Serial tonometry (separate procedure) with multiple measurements of intraocular pressure over an extended time period with interpretation and report, same day). Both codes share the same 20 minutes of intraservice and 20 minutes of total time, with a work RVU of 0.62 for CPT code 88387 and a work RVU of 0.61 for CPT code 92100.

The recommendations for this code family also include Category III code 03X0T (Electroretinography (ERG) with interpretation and report, pattern (PERG)). We typically assign contractor pricing for Category III codes since they are temporary codes assigned to emerging technology and services. However, in cases where there is an unusually high volume of services that will be performed under a Category III code, we have sometimes assigned an active status to the procedure and developed RVUs before a formal CPT code is created. In the case of Category III code 03X0T, the recommendations indicate that approximately 80 percent of the services currently reported under CPT code 92275 will be reported under the new Category III code. Since this will involve an estimated 100,000 services for CY 2019, we believe that the interests of relativity would be better served by assigning an active status to Category III code 03X0T and creating RVUs through the use of a proxy crosswalk to a similar existing service. Therefore, we are proposing to assign an active status to Category III code 03X0T for CY 2019, with a work RVU and work time values crosswalked from CPT code 92250 (Fundus photography with interpretation and report). CPT code 92250 is a clinically similar procedure that was recently reviewed during the CY 2017 rule cycle. We are proposing a work RVU of 0.40 and work times of 10 minutes of intraservice and 12 minutes of total time for Category III code 03X0T based on this crosswalk to CPT code 92250.

For the direct PE inputs, we are proposing to remove the preservice clinical labor in the facility setting for CPT codes 92X71 and 92X73. Both of these codes are diagnostic tests under which the professional (26 modifier) and technical (TC modifier) components will be separately billable, and codes that have these professional and technical components typically will not have direct PE inputs in the facility setting since the technical component is only valued in the nonfacility setting. We also note on this subject that the predecessor code, CPT code 92275, does not currently include any preservice

clinical labor, nor any facility direct PE inputs.

We are proposing to remove the clinical labor time for the “Greet patient, provide gowning, ensure appropriate medical records are available” (CA009) and the “Provide education/obtain consent” (CA011) activities for CPT codes 92X71 and 92X73. Both of these CPT codes will typically be reported with a same day E/M service, and we believe that these clinical labor tasks will be carried out during the E/M service. We believe that their inclusion in CPT codes 92X71 and 92X73 would be duplicative. We are also proposing to refine the clinical labor time for the “Prepare room, equipment and supplies” (CA013) activity to 3 minutes and to refine the clinical labor time for the “Confirm order, protocol exam” (CA014) activity to 0 minutes for both codes. The predecessor CPT code 92275 did not previously have clinical labor time assigned for the “Confirm order, protocol exam” clinical labor task, and we do not have any reason to believe that the services being furnished by the clinical staff have changed in the new codes, only the way in which this clinical labor time has been presented on the PE worksheets. We also note that there is no effect on the total clinical labor direct costs in these situations since the same 3 minutes of clinical labor time is still being furnished.

We are proposing to refine the clinical labor time for the “Clean room/equipment by clinical staff” (CA024) activity from 12 minutes to 8 minutes for CPT codes 92X71 and 92X73. The recommendations for these codes stated that cleaning is carried out in several steps: The patient is first cleaned for 2 minutes, followed by wires and electrodes being scrubbed carefully with detergent, soaked, and then rinsed with sterile water. We agree with the need for 2 minutes of patient cleaning time and for the cleaning of the wires and electrodes to take place in two different steps. However, our standard clinical labor time for room/equipment cleaning is 3 minutes, and therefore, we are proposing a total time of 8 minutes for these codes, based on 2 minutes for patient cleaning and then 3 minutes for each of the two steps of wire and electrode cleaning.

We are proposing to refine the clinical labor time for the “Technologist QC’s images in PACS, checking for all images, reformat, and dose page” (CA030) activity from 10 minutes to 3 minutes for CPT codes 92X71 and 92X73. We finalized in the CY 2017 PFS final rule (81 FR 80184–80186) a range of appropriate standard minutes for this

clinical labor activity, ranging from 2 minutes for simple services up to 5 minutes for highly complex services. We believe that the complexity of the imaging in CPT codes 92X71 and 92X73 is comparable to the CT and magnetic resonance (MR) codes that have been recently reviewed, such as CPT code 76X01 (Magnetic resonance (e.g., vibration) elastography). Therefore, in order to maintain relativity, we are proposing the same clinical labor time of 3 minutes for CPT codes 92X71 and 92X73 that has been recommended for these CT and MR codes. We are also proposing to refine the clinical labor time for the “Review examination with interpreting MD/DO” (CA031) activity from 5 minutes to 2 minutes for CPT codes 92X71 and 92X73. We also finalized in the CY 2017 PFS final rule a standard time of 2 minutes for reviewing examinations with the interpreting MD, and we have no reason to believe that these codes would typically require additional clinical labor at more than double the standard time.

We noted that the new equipment item “Contact lens electrode for mfERG and ffERG” (EQ391) was listed twice for CPT code 92X71 but only a single time for CPT code 92X73. We are seeking additional information about whether the recommendations intended this equipment item to be listed twice, with one contact intended for each eye, or whether this was a clerical mistake. We are also interested in additional information as to why the contact lens electrode was listed twice for CPT code 92X71 but only a single time for CPT code 92X73. Finally, we are also proposing to refine the equipment times in accordance with our standard equipment time formulas.

We are proposing to use the direct PE inputs for CPT code 92X73, including the refinements detailed above, as a proxy for Category III code 03X0T until it can be separately reviewed by the RUC.

(51) Cardiac Output Measurement (CPT Codes 93561 and 93562)

CPT codes 93561 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; with cardiac output measurement) and 93562 (Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; subsequent measurement of cardiac output) were identified as potentially misvalued on a screen of codes with a negative IWPUP, with 2016 estimated Medicare utilization over 10,000 for RUC reviewed codes and over 1,000 for

Harvard valued and CMS/Other source codes. The specialty societies noted that CPT codes 93561 and 93562 are primarily performed in the pediatric population, thus the Medicare utilization for these Harvard-source services is not over 1,000. However, the specialty societies requested and the RUC agreed that these services should be reviewed under this negative IWPUP screen.

For CPT code 93561, we disagree with the RUC-recommended work RVU of 0.95 and we are proposing a work RVU of 0.60 based on a crosswalk to CPT code 77003 (Fluoroscopic guidance and localization of needle or catheter tip for spine or paraspinal diagnostic or therapeutic injection procedures (epidural or subarachnoid)). CPT Code 77003 is another recently-reviewed add-on global code with the same 15 minutes of intraservice time and 2 additional minutes of preservice evaluation time. In our review of CPT code 93561, we found that there was a particularly unusual relationship between the surveyed work times and the RUC-recommended work RVU. We noted that the recommended intraservice time for CPT code 93561 is decreasing from 29 minutes to 15 minutes (48 percent reduction), and the recommended total time for CPT code 93561 is decreasing from 78 minutes to 15 minutes (81 percent reduction); however, the recommended work RVU is instead increasing from 0.25 to 0.95, which is an increase of nearly 300 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should typically be reflected in decreases to work RVUs, not increases in valuation. We recognize that CPT code 93561 is an unusual case, as it is shifting from 0-day global status to add-on code status. However, when the work time for a code is going down and the unit of service is being reduced, we would not expect to see an increased work RVU under these circumstances, and especially not such a large work RVU increase. Therefore, we are proposing instead to crosswalk CPT code 93561 to CPT code 77003 at a work RVU of 0.60, which we believe is a more accurate valuation in relation to other recently-reviewed add-on codes on the PFS. We believe that this proposed work RVU of 0.60 better preserves relativity with other clinically similar codes with similar surveyed work times.

For CPT code 93562, we disagree with the recommended work RVU of 0.77

and are proposing a work RVU of 0.48 based on the intraservice time ratio with CPT code 93561. We observed a similar pattern taking place with CPT code 93562 as with the first code in the family, noting that the recommended intraservice time is decreasing from 16 minutes to 12 minutes (25 percent reduction), and the recommended total time is decreasing from 44 minutes to 12 minutes (73 percent reduction); however, the RUC-recommended work RVU is instead increasing from 0.01 to 0.77. We recognize that CPT code 93562 is another unusual case, as it is also shifting from 0-day global status to add-on code status, and the current work RVU of 0.01 was a decrease from the code's former valuation of 0.16 following the removal of moderate sedation in the CY 2017 rule cycle. However, when the work time for a code is going down and the unit of service is being reduced, we typically would not expect to see a work RVU increase under these circumstances, and especially not such a large work RVU increase. Therefore, we are proposing instead to apply the intraservice time ratio from CPT code 93561, for a ratio of 0.80 (12 minutes divided by 15 minutes) multiplied by the proposed work RVU of 0.60 for CPT code 93561, which results in the proposed work RVU of 0.48 for CPT code 93562. We note that the RUC-recommended work values also line up according to the same intraservice time ratio, with the recommended work RVU of 0.77 for CPT code 93562 existing in a ratio of 0.81 with the recommended work RVU of 0.95 for CPT code 93561. We believe that this provides further rationale for our proposal to value the work RVU of CPT code 93562 at 80 percent of the work RVU of CPT code 93561.

There are no recommended direct PE inputs for the codes in this family and we are not proposing any direct PE inputs.

(52) Coronary Flow Reserve Measurement (CPT Codes 93571 and 93572)

CPT code 93571 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel) was identified on a list of all services with total Medicare utilization of 10,000 or more that have increased by at least 100 percent from 2009 through 2014. CPT code 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including

pharmacologically induced stress; each additional vessel) was also included for review as part of the same family of CPT codes. The RUC recommended a work RVU of 1.50 for CPT code 93571, which is lower than the current work RVU of 1.80. The total time for this service decreased by 5 minutes from 20 minutes to 15 minutes. The RUC's recommendation is based on a crosswalk to CPT code 15136 (Dermal autograft, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof), which has an identical intraservice and total time as CPT code 93571 of 15 minutes. We disagree with the recommended work RVU of 1.50 for this CPT code because we do not believe that a reduction in work RVU from 1.80 to 1.50 is commensurate with the reduction in time for this service of five minutes. Using the building block methodology, we believe the work RVU for CPT code 93571 should be 1.35. We believe that a crosswalk to CPT code 61517 (Implantation of brain intracavitary chemotherapy agent (List separately in addition to CPT code for primary procedure)) with a work RVU of 1.38 is more appropriate because it has an identical intraservice and total time (15 minutes) as CPT code 93571, describes work that is similar, and is closer to the calculations for intraservice time ratio, total time ratio, and the building block method. Therefore, we are proposing a work RVU of 1.38 for CPT code 93571.

We are proposing the RUC-recommended work RVU for CPT code 93572 (Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel) of 1.00.

Both of these codes are facility-only procedures with no recommended direct PE inputs.

(53) Peripheral Artery Disease (PAD) Rehabilitation (CPT Code 93668)

During 2017, we issued a national coverage determination (NCD) for Medicare coverage of supervised exercise therapy (SET) for the treatment of peripheral artery disease (PAD). Previously, the service had been assigned noncovered status under the PFS. CPT code 93668 (Peripheral arterial disease (PAD) rehabilitation, per session) was payable before the end of CY 2017, retroactive to the effective date of the NCD (May 25, 2017), and for CY 2018, CMS made payment for Medicare-covered SET for the treatment of PAD,

consistent with the NCD, reported with CPT code 93668. We used the most recent RUC-recommended work and direct PE inputs and requested that the RUC review the service, which had not been reviewed since 2001, for direct PE inputs. The RUC is not recommending a work RVU for CPT code 93668 due to the belief that there is no physician work involved in this service. After reviewing this code, we are proposing a work RVU of 0.00 for CPT code 93668 and are proposing to continue valuing the code for PE only.

(54) Home Sleep Apnea Testing (CPT Codes 95800, 95801, and 95806)

CPT codes 95800 (Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time), 95801 (Sleep study, unattended, simultaneous recording; minimum of heart rate, oxygen saturation, and respiratory analysis (e.g., by airflow or peripheral arterial tone)), and 95806 (Sleep study, unattended, simultaneous recording of, heart rate, oxygen saturation, respiratory airflow, and respiratory effort (e.g., thoracoabdominal movement)) were flagged by the CPT Editorial Panel and reviewed at the October 2014 Relativity Assessment Workgroup meeting. Due to rapid growth in service volume, the RUC recommended that these services be reviewed after 2 more years of Medicare utilization data (2014 and 2015 data). These three codes were surveyed for the April 2017 RUC meeting and new recommendations for work and direct PE inputs were submitted to CMS.

For CPT code 95800, the RUC recommended a work RVU of 1.00 based on the survey 25th percentile value. We disagree with the recommended value and are proposing a work RVU of 0.85 based on a pair of crosswalk codes: CPT code 93281 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; multiple lead pacemaker system) and CPT code 93260 (Programming device evaluation (in person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional; implantable subcutaneous lead defibrillator system). Both of these codes have a work RVU of 0.85, as well as having the same intraservice time of

15 minutes, similar total times to CPT code 95800, and recent review dates within the last few years.

In reviewing CPT code 95800, we noted that the recommended intraservice time is decreasing from 20 minutes to 15 minutes (25 percent reduction), and the recommended total time is decreasing from 50 minutes to 31 minutes (38 percent reduction); however, the RUC-recommended work RVU is only decreasing from 1.05 to 1.00, which is a reduction of less than 5 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of CPT code 95800, we believe that it would be more accurate to propose a work RVU of 0.85 based on the aforementioned crosswalk codes to account for these decreases in the surveyed work time. We also note that in this case where the surveyed times are decreasing and the utilization of CPT code 95800 is increasingly significantly (quadrupling in the last 5 years), we have reason to believe that practitioners are becoming more efficient at performing the procedure, which, under the resource-based nature of the RVU system, lends further support for a reduction in the work RVU.

For CPT code 95801, the RUC proposed a work RVU of 1.00 again based on the survey 25th percentile. We disagree with the recommended value and we are again proposing a work RVU of 0.85 based on the same pair of crosswalk codes, CPT codes 93281 and 93260. We noted that CPT codes 95800 and 95801 had identical recommended work RVUs and identical recommended survey work times. Given that these two codes also have extremely similar work descriptors, we interpreted this to mean that the two codes could have the same work RVU, and therefore, we are proposing the same work RVU of 0.85 for both codes.

For CPT code 95806, the RUC recommended a work RVU of 1.08 based on a crosswalk to CPT code 95819 (Electroencephalogram (EEG); including recording awake and asleep). Although we disagree with the RUC-recommended work RVU of 1.08, we concur that the relative difference in work between CPT codes 95800 and 95801 and CPT code 95806 is equivalent to the recommended interval of 0.08 RVUs. Therefore, we are proposing a work RVU of 0.93 for CPT code 95806, based on the recommended interval of

0.08 additional RVUs above our proposed work RVU of 0.85 for CPT codes 95800 and 95801. We also note that CPT code 95806 is experiencing a similar change in the recommended work and time values comparable to CPT code 95800. The recommended intraservice time for CPT code 95806 is decreasing from 25 minutes to 15 minutes (40 percent), and the recommended total time is decreasing from 50 minutes to 31 minutes (38 percent); however, the recommended work RVU is only decreasing from 1.25 to 1.08, which is a reduction of only 14 percent. As we stated for CPT code 95800, we do not believe that decreases in work time must equate to a one-to-one or linear decrease in the valuation of work RVUs, but we do believe that these changes in surveyed work time suggest that practitioners are becoming more efficient at performing the procedure, and that it would be more accurate to maintain the recommended work interval with CPT codes 95800 and 95801 by proposing a work RVU of 0.93 for CPT code 95806.

We are not proposing any direct PE refinements for this code family.

(55) Neurostimulator Services (CPT Codes 95970, 95X83, 95X84, 95X85, and 95X86)

In October 2013, CPT code 95971 (Electronic analysis of implanted neurostimulator pulse generator system; simple spinal cord, or peripheral (i.e., peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming) was identified in the second iteration of the High Volume Growth screen. In January 2014, the RUC recommended that CPT codes 95971, 95972 (Electronic analysis of implanted neurostimulator pulse generator system; complex spinal cord, or peripheral (i.e., peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming) and 95974 (Electronic analysis of implanted neurostimulator pulse generator system; complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour) be referred to the CPT Editorial Panel to address the entire family regarding the time referenced in the CPT code descriptors. In June 2017, the CPT Editorial Panel revised CPT codes 95970, 95971, and 95972, deleted CPT codes 95974, 95975 (Electronic analysis of implanted neurostimulator pulse

generator system; complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour), 95978 (Electronic analysis of implanted neurostimulator pulse generator system, complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), and 95979 (Electronic analysis of implanted neurostimulator pulse generator system, complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; each additional 30 minutes after first hour) and created four new CPT codes for analysis and programming of implanted cranial nerve neurostimulator pulse generator, analysis, and programming of brain neurostimulator pulse generator systems and analysis of stored neurophysiology recording data.

The RUC recommended a work RVU of 0.45 for CPT code 95970 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming)), which is identical to the current work RVU for this CPT code. The descriptor for this CPT code has been modified slightly, but the specialty societies affirmed that the work itself has not changed. To justify its recommendation, the RUC provided two references: CPT code 62368 (Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming), with intraservice time of 15 minutes, total time of 27 minutes, and a work RVU of 0.67; and CPT code 99213 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; or Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/

or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family), with intraservice time of 15 minutes, total time of 23 minutes, and a work RVU of 0.97. We disagree with the RUC's recommendation because we do not believe that maintaining the work RVU, given a decrease of four minutes in total time, is appropriate. In addition, we note that the reference CPT codes chosen have much higher intraservice and total times than CPT code 95970, and also have higher work RVUs, making them poor comparisons. Instead, we identified a crosswalk to CPT code 95930 (Visual evoked potential (VEP) checkerboard or flash testing, central nervous system except glaucoma, with interpretation and report) with 10 minutes intraservice time, 14 minutes total time, and a work RVU of 0.35. Therefore, we are proposing a work RVU of 0.35 for CPT code 95970.

CPT code 95X83 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional) is a new CPT code replacing CPT code 95974 (Electronic analysis of implanted neurostimulator pulse generator system (e.g., rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour). The description of the work involved in furnishing CPT code 95X83 differs from that of the deleted CPT code in a few important ways, notably that the time parameter has been removed so that the CPT code no longer describes the first hour of programming. In addition, the new CPT code refers to simple rather than complex programming. Accordingly, the intraservice and total times for this CPT code are substantively different from those of the deleted CPT code. CPT code 95X83 has

an intraservice time of 11 minutes and a total time of 24 minutes, while CPT code 95974 has an intraservice time of 60 minutes and a total time of 110 minutes. The RUC recommended a work RVU of 0.95 for CPT code 95X83. The RUC's top reference CPT code as chosen by the RUC survey participants was CPT code 95816 (Electroencephalogram (EEG); including recording awake and drowsy), with an intraservice time of 15 minutes, 26 minutes total time, and a work RVU of 1.08. The RUC indicated that the service is similar, but somewhat more complex than CPT code 95X83. We disagree with the RUC's recommended work RVU for this CPT code because we do not believe that the large difference in time between the new CPT code and CPT code 95974 is reflected in the slightly smaller proportional decrease in work RVUs. The reduction in total time, from 110 minutes to 24 minutes is nearly 80 percent. However, the RUC's recommended work RVU reflects a reduction of just under 70 percent. We believe that a more appropriate crosswalk would be CPT code 76641 (Ultrasound, breast, unilateral, real time with image documentation, including axilla when performed; complete) with intraservice time of 12 minutes, total time of 22 minutes, and a work RVU of 0.73. Therefore, we are proposing a work RVU of 0.73 for CPT code 95X83.

CPT code 95X84 describes the same work as CPT code 95X83, but with complex rather than simple programming. The CPT Editorial Panel refers to simple programming of a neurostimulator pulse generator/transmitter as the adjustment of one to three parameter(s), while complex programming includes adjustment of more than three parameters. For purposes of applying the building block methodology and calculating intraservice and total time ratios, the RUC compared CPT code 94X84 with CPT code 95975 (Electronic analysis of implanted neurostimulator pulse generator system (e.g., rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour), which is being deleted by the CPT Editorial Panel. We believe that this was an inappropriate comparison since it is time based (first hour of programming) and is an add-on code. Instead we believe that the RUC

intended to compare CPT code 95X84 with CPT code 95974 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.*, rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour), which has been recommended for deletion by the CPT Editorial Panel and is also the comparison for CPT code 95X83. The RUC recommended a work RVU of 1.19 for CPT code 95X84. The RUC disagreed with the two top reference services CPT code 99215 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; or Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family) and CPT code 99202 (Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; or straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family) and instead compared CPT code 95X84 to CPT code 99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; or Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or

family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication. Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.) with total time of 31 minutes, intraservice time of 15 minutes, and a work RVU of 1.16; and CPT code 12013 (Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm), with total time of 27 minutes, intraservice time of 15 minutes, and a work RVU of 1.22. We disagree with the RUC's recommended work RVU of 1.19 for CPT code 95X84. Once the comparison CPT code is corrected to CPT code 95974, the reverse building block calculation indicates that a lower work RVU (close to 0.82) would be a better reflection of the work involved in furnishing this service. As an alternative to the RUC's recommendation, we added the difference in RUC-recommended work RVUs between CPT code 95X83 and 95X84 (0.24 RVUs) to the proposed work RVU of 0.73 for CPT code 95X83. Therefore, we propose a work RVU of 0.97 for CPT code 95X84.

CPT code 95X85 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.*, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, doe lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional) is the base for add-on CPT code 95X86 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.*, contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, doe lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional), which is an add-on CPT code and can only be billed with CPT code 95X85. The RUC compared CPT code 95X85 with CPT code 95978 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.*, rate, pulse

amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), which the CPT Editorial Panel is recommending for deletion. The primary distinction between the new and old CPT codes is that the new CPT code describes the first 15 minutes of programming while the deleted CPT code describes up to one hour of programming. The RUC recommended a work RVU of 1.25 for CPT code 95X85 and a work RVU of 1.00 for CPT code 95X86. For CPT code 95X85, the RUC's recommendation is based on reference CPT codes 12013 (Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm), with total time of 27 minutes, intraservice time of 15 minutes, and a work RVU of 1.22; and CPT code 70470 (Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections) with 25 minutes of total time, 15 minutes of intraservice time, and a work RVU of 1.27. We disagree with the RUC's recommended work RVU for CPT code 95X85 because we do not believe that the reduction in work RVU reflects the change in time described by the CPT code. Using the reverse building block methodology, we estimate that a work RVU of nearer to 1.11 would be more appropriate. In addition, if we were to sum the RUC-recommended RVUs for a single hour of programming using one of the base CPT codes and three of the 15 minute follow-on CPT codes, 1 hour of programming would be valued at 4.25 work RVUs. This contrasts sharply from the work RVU of 3.50 for 1 hour of programming using the deleted CPT code 95978. We believe that a more appropriate valuation of the work involved in furnishing this service is reflected by a crosswalk to CPT code 93886 (Transcranial Doppler study of the intracranial arteries; complete study), with total time 27 minutes, intraservice time of 17 minutes, and a work RVU of 0.91. Therefore, we are proposing a work RVU of 0.91 for CPT code 95X85.

The RUC's recommended work RVU of 1.00 for CPT code 95X86 is based on the key reference service CPT code 64645 (Chemodeneration of one extremity; each additional extremity, 5 or more muscles), which has total time of 26 minutes, intraservice time of 25 minutes, and a work RVU 1.39. This new CPT code is replacing CPT code 95978 (Electronic analysis of implanted

neurostimulator pulse generator system (e.g., rate, pulse amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), which is being deleted by the CPT Editorial Panel. If we add the incremental difference between CPT codes 95X85 and 95X86 to the proposed value for the base CPT code (95X85, work RVU = 0.91), we estimate that this add-on CPT code should have a work RVU of 0.75. The building block methodology results in a recommendation of a slightly higher work RVU of 0.82. We are proposing a work RVU of 0.80 for CPT code 95X86, which falls between the calculated value using incremental differences and the calculation from the reverse building block, and is supported by a crosswalk to CPT code 51797 (Voiding pressure studies, intra-abdominal (*i.e.*, rectal, gastric, intraperitoneal)), which is an add-on CPT code with identical total and intraservice times (15 minutes) as CPT code 95X86.

We are not proposing any direct PE refinements for this code family.

(56) Psychological and Neuropsychological Testing (CPT Codes 96105, 96110, 96116, 96125, 96127, 963X0, 963X1, 963X2, 963X3, 963X4, 963X5, 963X6, 963X7, 963X8, 963X9, 96X10, 96X11, 96X12)

In CY 2016, the Psychological and Neuropsychological Testing family of codes were identified as potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of \$10 million or more. The entire family of codes was referred to the CPT Editorial Panel to be revised, as the testing practices had been significantly altered by the growth and availability of technology, leading to confusion about how to report the codes. In June 2017, the CPT Editorial Panel revised five existing codes, added 13 codes to provide better description of psychological and neuropsychological testing, and deleted CPT codes 96101, 96102, 96103, 96111, 96118, 96119, and 96120. The RUC and HCPAC submitted recommendations for the 13 new codes and for the existing CPT codes 96105, 96110, 96116, 96125, and 96127.

We are proposing the RUC- and HCPAC-recommended work RVUs for several of the CPT codes in this family: A work RVU of 1.75 for CPT code 96105; a work RVU of 1.86 for CPT code 96116; a work RVU of 1.70 for CPT code 96125; a work RVU of 1.71 for CPT code

963X2; a work RVU of 0.55 for CPT code 963X7; a work RVU of 0.46 for CPT code 963X8; and a work RVU of 0.51 for CPT code 96X11. CPT codes 96110, 96127, 963X9, 96X10, and 96X12 were valued by the RUC for PE only.

This code family contains a subset of codes that describe psychological and neuropsychological testing administration and evaluation, not including assessment of aphasia, developmental screening, or developmental testing. The CPT Editorial Panel's recommended coding for this subset of services consists of seven new codes: Two that describe either psychological or neuropsychological testing when administered by physicians or other qualified health professionals (CPT codes 963X7 and 963X8), and two for either type of testing when administered by technicians (CPT codes 963X9 and 96X10); and four new codes that describe testing evaluation by physicians or other qualified health care professionals (CPT codes 963X3–963X6). This new coding effectively unbundles codes that currently report the full course of testing into separate codes for testing administration (CPT codes 963X7, 963X8, 963X9, and 96X10) and evaluation (CPT Codes 963X3, 963X4, and 963X5). According to a stakeholder that represents the psychologist and neuropsychologist community, this new coding will result in significant reductions in payment for these services due to the unbundling of the testing codes into codes for physician-administered tests and technician-administered tests. The stakeholder asserts that because the new coding includes testing codes with zero work RVUs for the technician administered tests and the work RVUs are lower than they believe to be accurate, this new valuation would ignore the clinical evaluation and decision making performed by the physician or other qualified health professional during the course of testing administration and evaluation. Furthermore, the net result of the code valuations for these new codes is a reduction in the overall work RVUs for this family of codes. In other words, the stakeholder's analysis found that the RUC recommendations result in a reduction in total work RVUs, even though the actual physician work of a testing battery has not changed.

In the interest of payment stability for these high-volume services, we are proposing to implement work RVUs for this code family, which would eliminate the approximately 2 percent reduction in work spending. We are proposing to achieve work neutrality for this code

family by scaling the work RVUs upward from the RUC-recommended values so that the size of the pool of work RVUs would be essentially unchanged for this family of services. Therefore, we are proposing: A work RVU of 2.56 for CPT code 963X0, rather than the RUC recommended work RVU of 2.50; a work RVU of 1.16 for CPT code 963X1, rather than the RUC-recommended work RVU of 1.10; a work RVU of 2.56 for CPT code 963X3, rather than the RUC-recommended work RVU of 2.50; a work RVU of 1.96 for CPT code 963X4, rather than the RUC-recommended work RVU of 1.90; a work RVU of 2.56 for CPT code 963X5, rather than the RUC-recommended work RVU of 2.50; and a work RVU of 1.96 for CPT code 963X6, rather than the RUC-recommended work RVU of 1.90. We see no evidence that the typical practice for these services has changed to merit a reduction in valuation of professional services.

The RUC made several revisions to the recommended direct PE inputs for the administration codes from their respective predecessor codes, including revisions to quantities of testing forms. For the supply item, "psych testing forms, average" there is a quantity of 0.10 in the predecessor CPT code 96101, and a quantity of 0.33 in the predecessor CPT code 96102. For the supply item "neurobehavioral status forms, average," there is a quantity of 1.0 in the predecessor CPT code 96118 and a quantity of 0.30 for predecessor CPT code 96119, and for the supply item "aphasia assessment forms, average," there is a quantity of 1.0 in the predecessor CPT code 96118 and a quantity of 0.30 in predecessor CPT code 96119. The RUC recommendation does not include any forms for CPT codes 963X5 and 963X6. The RUC has replaced the corresponding predecessor supply items with new items "WAIS-IV Record Form," "WAIS-IV Response Booklet #1," and "WAIS-IV Response Booklet #2," and assigned quantities of 0.165 for each of these new supply items for CPT codes 963X7–96X10. In our analysis, we find that the RUC-recommended PE refinements contributes significantly to the reduction in the overall payment for this code family. We see no compelling evidence that the quantities of testing forms used in a typical course of testing would have reduced dramatically and, in the interest of payment stability, we are proposing to refine the direct PE inputs for CPT codes 963X5–96X10 by including 1.0 quantity each of the supply items "WAIS-IV Record Form," "WAIS-IV Response Booklet #1", and

“WAIS–IV Response Booklet #2.” We believe that a typical course of testing would involve use of one booklet for each of the relevant codes. In addition, these proposed refinements would largely mitigate potentially destabilizing payment reductions for these services. We are seeking comment on our proposed work RVUs and proposed PE refinements for this family of services.

For the direct PE inputs, we are proposing to remove the equipment time for the CANTAB Mobile (ED055) equipment item from CPT code 96X12. This item was listed at different points in the recommendations as a supply item with a cost of \$28 per assessment and as an equipment item for a software license with a cost of \$2,800 that could be used for up to 100 assessments. We are unclear as to how the CANTAB Mobile would typically be used in this procedure, and we are proposing to remove the equipment time pending the submission of more data about the item. We are seeking additional information about the use of this item and how it should best be included into the PE methodology. We are also interested in information as to whether the submitted invoice refers to the cost of the mobile device itself, or the cost of user licenses for the mobile device, which was unclear from the information submitted with the recommendations.

(57) Electroencephalogram (CPT Code 96X00)

CPT Code 95829 is used for Electroencephalogram performed at the time of surgery; however, a new code was needed to account for this non-face-to-face service for the review of a month’s worth or more of stored data. CPT code 96X00 (Electroencephalogram from an implanted brain neurostimulator pulse generator/transmitter, including recording, with interpretation and written report, up to 30 days) is a new code approved at the September 2017 CPT Editorial Panel Meeting to describe this service.

We disagree with the RUC-recommended work RVU of 2.30 for CPT code 96X00 and are proposing a work RVU of 1.98 based on a direct crosswalk to the top reference, CPT code 95957 (Digital analysis of electroencephalogram (EEG) (*e.g.*, for epileptic spike analysis)). This is a recently-reviewed code with the same intraservice time of 30 minutes and a total time only 2 minutes lower than CPT code 96X00. We agree with the survey respondents that CPT code 95957 is an accurate valuation for this new code, and due to the clinically similar nature of the two procedures and their near-identical time values, we

are proposing to value both of them at the same work RVU of 1.98.

The RUC did not recommend, and we did not propose, any direct PE inputs for CPT code 96X00.

(58) Chronic Care Remote Physiologic Monitoring (CPT Codes 990X0, 990X1, and 994X9)

In the CY 2018 PFS final rule, we finalized separate payment for CPT code 99091 (Collection and interpretation of physiologic data (*e.g.*, ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time) (82 FR 53014). In that rule, we indicated that there would be new coding describing remote monitoring forthcoming from the CPT Editorial Panel and the RUC (82 FR 53014). In September 2017, the CPT Editorial Panel revised one code and created three new codes to describe remote physiologic monitoring and management and the RUC provided valuation recommendations through our standard rulemaking process.

CPT codes 990X0 (Remote monitoring of physiologic parameter(s) (*e.g.*, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment) and 990X1 (Remote monitoring of physiologic parameter(s) (*e.g.*, weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days) are both PE-only codes. We are proposing the RUC-recommended work RVU of 0.61 for CPT code 994X9 (Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month).

For the direct PE inputs, we are proposing to accept the RUC-recommended direct PE inputs for CPT code 990X0 and to remove the “Monthly cellular and licensing service fee” supply from CPT code 990X1. We do not believe that these licensing fees would be allocated to the use of an individual patient for an individual service, and instead believe they can be better understood as forms of indirect costs similar to office rent or administrative expenses. Therefore, we are proposing to remove this supply input as a form of indirect PE. We are

proposing the direct PE inputs for CPT code 994X9 without refinement.

(59) Interprofessional Internet Consultation (CPT Codes 994X6, 994X0, 99446, 99447, 99448, and 99449)

In September 2017, the CPT Editorial Panel revised four codes and created two codes to describe interprofessional telephone/internet/electronic medical record consultation services. CPT codes 99446 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient’s treating/requesting physician or other qualified health care professional; 5–10 minutes of medical consultative discussion and review), 99447 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient’s treating/requesting physician or other qualified health care professional; 11–20 minutes of medical consultative discussion and review), 99448 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient’s treating/requesting physician or other qualified health care professional; 21–30 minutes of medical consultative discussion and review), and 99449 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient’s treating/requesting physician or other qualified health care professional; 31 minutes or more of medical consultative discussion and review) describe assessment and management services in which a patient’s treating physician or other qualified healthcare professional requests the opinion and/or treatment advice of a physician with specific specialty expertise to assist with the diagnosis and/or management of the patient’s problem without the need for the face-to-face interaction between the patient and the consultant. These CPT codes are currently assigned a procedure status of B (bundled) and are not separately payable under Medicare. The CPT Editorial Panel revised these codes to include electronic health record consultations, and the RUC reaffirmed the work RVUs it had previously submitted for these codes. We reevaluated the submitted recommendations and, in light of changes in medical practice and technology, we are proposing to change the procedure status for CPT codes 99446, 99447, 99448, and 99449 from B

(bundled) to A (active). We are also proposing the RUC re-affirmed work RVUs of 0.35 for CPT code 99446, 0.70 for CPT code 99447, 1.05 for CPT code 99448, and 1.40 for CPT code 99449.

The CPT Editorial Panel also created two new codes, CPT code 994X0 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes) and CPT code 994X6 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time). The RUC-recommended work RVUs are 0.50 for CPT code 994X0 and 0.70 for 994X6. Since the CPT code for the treating/requesting physician or qualified healthcare professional and the CPT code for the consultative physician have similar intraservice times, we believe that these CPT codes should have equal values for work. Therefore, we are proposing a work RVU of 0.50 for both CPT codes 994X0 and 994X6.

We welcome comments on this proposal. We also direct readers to section II.D. of this proposed rule, which includes additional detail regarding our proposed policies for modernizing Medicare physician payment by recognizing communication technology-based services.

There are no recommended direct PE inputs for the codes in this family.

(60) Chronic Care Management Services (CPT Code 994X7)

In February 2017, the CPT Editorial Panel created a new code to describe at least 30 minutes of chronic care management services performed personally by the physician or qualified health care professional over one calendar month. CMS began making separate payment for CPT code 99490 (Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) in CY 2015 (79 FR 67715). CPT code 99490 describes 20 minutes of clinical staff

time spent on care management services for patients with 2 or more chronic conditions. CPT code 99490 also includes 15 minutes of physician time for supervision of clinical staff. For CY 2019, the CPT Editorial Panel created CPT code 994X7 (Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) to describe situations when the billing practitioner is doing the care coordination work that is attributed to clinical staff in CPT code 99490. For CPT code 994X7, the RUC recommended a work RVU of 1.45 for 30 minutes of physician time. We believe this work RVU overvalues the resource costs associated with the physician performing the same care coordination activities that are performed by clinical staff in the service described by CPT code 99490.

Additionally, this valuation of the work is higher than that of CPT code 99487 (Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month), which includes 60 minutes of clinical staff time, creating a rank order anomaly within the family of codes if we were to accept the RUC-recommended value.

CPT code 99490 has a work RVU of 0.61 for 15 minutes of physician time. Therefore, as CPT code 994X7 describes 30 minutes of physician time, we are proposing a work RVU of 1.22, which is double the work RVU of CPT code 99490.

We are not proposing any direct PE refinements for this code family.

(61) Diabetes Management Training (HCPCS Codes G0108 and G0109)

HCPCS codes G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes) and G0109 (Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes) were identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, we are proposing the HCPAC-recommended work RVU of 0.90 for HCPCS code G0108 and the HCPAC-recommended work RVU of 0.25 for HCPCS code G0109.

For the direct PE inputs, we note that there is a significant disparity between the specialty recommendation and the final recommendation submitted by the HCPAC. We are concerned about the significant decreases in direct PE inputs in the final recommendation when compared to the current makeup of the two codes. The final HCPAC recommendation removed a series of different syringes and the patient education booklet that currently accompanies the procedure. We believe that injection training is part of these services and that the supplies associated with that training would typically be included in the procedures. Due to these concerns, we are proposing to maintain the current direct PE inputs for HCPCS codes G0108 and G0109. Therefore, we will not add the new supply item "20x30 inch self-stick easel pad, white, 30 sheets/pad" (SK129) to HCPCS code G0109, as it is not a current supply for HCPCS code G0109; however, we are proposing to accept the submitted invoice price and to add the supply to our direct PE database.

(62) External Counterpulsation (HCPCS Code G0166)

HCPCS code G0166 (External counterpulsation, per treatment session) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. The RUC is not recommending a work RVU for HCPCS code G0166 due to the belief that there is no physician work involved in this service. After reviewing this code, we are proposing a work RVU of 0.00 for HCPCS code G0166, and are proposing to make the code valued for PE only.

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(63) Wound Closure by Adhesive (HCPCS Code G0168)

HCPCS code G0168 (Wound closure utilizing tissue adhesive(s) only) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, the RUC recommended a work RVU of 0.45 based on maintaining the current work RVU.

We disagree with the recommended value and we are proposing a work RVU of 0.31 for HCPCS code G0168 based on a direct crosswalk to CPT code 93293 (Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days). CPT code 93293 is a recently-reviewed code with the same 5 minutes of intraservice time and 1 fewer minute of total time. In reviewing HCPCS code G0168, the recommendations stated that the work involved in the service had not changed even though the surveyed intraservice time was decreasing by 50 percent, from 10 minutes to 5 minutes. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of HCPCS code G0168, we believe that it would be more accurate to propose a work RVU of 0.31 based on the aforementioned crosswalk to CPT code 93293 to account for these decreases in the surveyed work time. Maintaining the current work RVU of 0.45 despite a 50 percent decrease in the surveyed intraservice time would result in a significant increase in the intensity of HCPCS code G0168, and we have no reason to believe that the procedure has increased in intensity since the last time that it was valued.

For the direct PE inputs, we are proposing to refine the equipment times in accordance with our standard equipment time formulas.

(64) Removal of Impacted Cerumen (HCPCS Code G0268)

HCPCS code G0268 (Removal of impacted cerumen (one or both ears) by physician on same date of service as

audiologic function testing) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we are proposing the RUC-recommended work RVU of 0.61 for HCPCS code G0268.

For the direct PE inputs, we are proposing to remove the clinical labor time for the “Clean surgical instrument package” (CA026) activity. There is no surgical instrument pack included in the recommended equipment for HCPCS code G0268, and this code already includes the standard 3 minutes allocated for cleaning the room and equipment. In addition, all of the instruments used in the procedure appear to be disposable supplies that would not require cleaning since they would only be used a single time.

(65) Structured Assessment, Brief Intervention, and Referral to Treatment for Substance Use Disorders (HCPCS Codes G0396, G0397, and GSBR1)

In response to the Request for Information in the CY 2018 PFS proposed rule (82 FR 34172), commenters requested that CMS pay separately for assessment and referral related to substance use disorders. In the CY 2008 PFS final rule (72 FR 66371), we created two G-codes to allow for appropriate Medicare reporting and payment for alcohol and substance abuse assessment and intervention services that are not provided as screening services, but that are performed in the context of the diagnosis or treatment of illness or injury. The codes are HCPCS code G0396 (Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., AUDIT, DAST) and brief intervention, 15 to 30 minutes)) and HCPCS code G0397 (Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., AUDIT, DAST) and intervention greater than 30 minutes)). In 2008, we instructed Medicare contractors to pay for these codes only when the services were considered reasonable and necessary.

Given the ongoing opioid epidemic and the current needs of the Medicare population, we expect that these services would often be reasonable and necessary. However, the utilization for these services is relatively low, which we believe is in part due to the service-specific documentation requirements for these codes (the current requirements can be found here: [https://](https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/downloads/SBIRT_Factsheet_ICN904084.pdf)

www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/downloads/SBIRT_Factsheet_ICN904084.pdf). We believe that removing the additional documentation requirements will also ease the administrative burden on providers. Therefore, for CY 2019, we are proposing to eliminate the service-specific documentation requirements for HCPCS codes G0397 and G0398. We welcome comments on our proposal to change the documentation requirements for these codes.

Additionally, we are proposing to create a third HCPCS code, GSBR1, with a lower time threshold in order to accurately account for the resource costs when practitioners furnish these services, but do not meet the requirements of the existing codes. The proposed code descriptor is: Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., AUDIT, DAST), and brief intervention, 5–14 minutes. We are proposing a work RVU of 0.33, based on the intraservice time ratio between HCPCS codes G0396 and G0397. We welcome comments on this code descriptor and proposed valuation for HCPCS code GSBR1.

(66) Prolonged Services (HCPCS Code GPRO1)

CPT codes 99354 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)) and 99355 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)) describe additional time spent face-to-face with a patient. Stakeholders claim that the threshold of 60 minutes for CPT code 99354 is difficult to meet and is an impediment to billing these codes. In response to stakeholder feedback and as part of our proposal as discussed in section II.I. of this proposed rule to implement a single PFS rate for E/M visit levels 2–5 while maintaining payment stability across the specialties, we are proposing HCPCS code GPRO1 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the

office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)), which could be billed with any level of E/M code. We note that we do not propose to make any changes to CPT codes 99354 and 99355, which could still be billed, as needed, when their time thresholds and all other requirements are met. We are proposing a work RVU of 1.17, which is equal to half of the work RVU assigned to CPT code 99354. Additionally, we are proposing direct PE inputs for HCPCS code GPRO1 that are equal to one half of the values assigned to CPT code 99354, which can be found in the Direct PE Inputs public use file for this proposed rule.

(67) Remote Pre-Recorded Services (HCPCS Code GRAS1)

For CY 2019, we are proposing to make separate payment for remote services when a physician uses pre-recorded video and/or images submitted by a patient in order to evaluate a patient's condition through new HCPCS G-code GRAS1 (Remote evaluation of recorded video and/or images submitted by the patient (e.g., store and forward), including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment). We are proposing to value this service by a direct crosswalk to CPT code 93793 (Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed), as we believe the work described is similar in kind and intensity to the work performed as part of HCPCS code GRAS1. Therefore, we are proposing a work RVU of 0.18, preservice time of 3 minutes, intraservice time of 4 minutes, and post service time of 2 minutes. We are also proposing to add 6 minutes of clinical labor (L037D) in the service period. We are seeking comment on the code descriptor and valuation for HCPCS code GRAS1. We direct readers to section II.D. of this proposed rule, which includes additional detail regarding our proposed policies for modernizing Medicare physician payment by recognizing communication technology-based services.

(68) Brief Communication Technology-Based Service, e.g., Virtual Check-in (HCPCS Code GVCI1)

We are proposing to create a G-code, HCPCS code GVCI1 (Brief communication technology based service, e.g. virtual check-in, by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion) to facilitate payment for these brief communication technology-based services. We propose to base the code descriptor and valuation for HCPCS code GVCI1 on existing CPT code 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion), which is currently not separately payable under the PFS. As CPT code 99441 only describes telephone calls, we are proposing to create a new HCPCS code GVCI1 to encompass a broader array of communication modalities. We do, however, believe that the resource assumptions for CPT code 99441 would accurately account for the costs associated with providing the proposed virtual check-in service, regardless of the technology. We are proposing a work RVU of 0.25, based on a direct crosswalk to CPT code 99441. For the direct PE inputs for HCPCS code GVCI1, we are also proposing the direct PE inputs assigned to CPT code 99441. Given the breadth of technologies that could be described as telecommunications, we look forward to receiving public comments and working with the CPT Editorial Panel and the RUC to evaluate whether separate coding and payment is needed to account for differentiation between communication modalities. We are seeking comment on the code descriptor, as well as the proposed valuation for HCPCS code GVCI1. We direct readers to section II.D. of this proposed rule, which includes additional detail regarding our proposed policies for modernizing Medicare physician payment by recognizing

communication technology-based services.

(69) Visit Complexity Inherent to Certain Specialist Visits (HCPCS Code GCG0X)

We are proposing to create a HCPCS G-code to be reported with an E/M service to describe the additional resource costs for specialties for whom E/M visit codes make up a large percentage of their total allowed charges and who we believe primarily bill level 4 and level 5 visits. The treatment approaches for these specialties generally do not have separate coding and are generally reported using the E/M visit codes. We are proposing to create HCPCS code, GCG0X (Visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or interventional pain management-centered care (Add-on code, list separately in addition to an evaluation and management visit)). We are proposing a valuation for HCPCS code GCG0X based on a crosswalk to 75 percent of the work RVU and time of CPT code 90785 (Interactive complexity), which would result in a proposed work RVU of 0.25 and a physician time of 8.25 minutes for HCPCS code GCG0X. CPT code 90785 has no direct PE inputs. Interactive complexity is an add-on code that may be billed when a psychotherapy or psychiatric service requires more work due to the complexity of the patient. We believe that this work RVU and physician time would be an accurate representation of the additional work associated with the higher level complex visits. For further discussion of proposals relating to this code, see section II.I of this proposed rule. We are seeking comment on the code descriptor, as well as the proposed valuation for HCPCS code GCG0X.

(70) Visit Complexity Inherent to Primary Care Services (HCPCS Code GPC1X)

We are proposing to create a HCPCS G-code for primary care services, GPC1X (Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an evaluation and management visit)). This code describes furnishing a visit to a new or existing patient, and can include aspects of care management, counseling, or treatment of acute or chronic

conditions not accounted for by other coding. HCPCS code GPC1X would be billed in addition to the E/M visit code when the visit involved primary care-focused services. We are proposing a work RVU of 0.07, physician time of 1.75 minutes. This proposed valuation accounts for the additional work resource costs associated with furnishing primary care that distinguishes E/M primary care visits from other types of E/M visits and maintains work budget neutrality across the office/outpatient E/M code set. For further discussion of proposals relating to this code, see section II.I of this proposed rule. We are seeking comment on the code descriptor, as well as the proposed valuation for HCPCS code GPC1X.

(71) Podiatric Evaluation and Management Services (HCPCS Codes GPD0X and GPD1X)

We are proposing to create two HCPCS G-codes, HCPCS codes GPD0X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, new patient) and GPD1X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, established patient), to describe podiatric evaluation and management services. We are proposing a work RVU of 1.36, a physician time of 28.19 minutes, and direct costs summing to \$21.29 for HCPCS code GPD0X, and a work RVU of 0.85, physician time of 21.73 minutes, and direct costs summing to \$15.87 for HCPCS code GPD1X. These values are based on the average rate for CPT codes 99201–99203 and CPT codes 99211–99212 respectively, weighted by podiatric volume. For further discussion of proposals relating to these codes, see section II.I of this proposed rule.

(72) Comment Solicitation on Superficial Radiation Treatment Planning and Management

In the CY 2015 PFS final rule with comment period (79 FR 67666–67667), we noted that changes to the CPT prefatory language limited the codes that could be reported when describing services associated with superficial radiation treatment (SRT) delivery, described by CPT code 77401 (radiation treatment delivery, superficial and/or ortho voltage, per day). The changes effectively meant that many other related services were bundled with CPT code 77401, instead of being separately reported. For example, CPT guidance clarified that certain codes used to describe clinical treatment planning, treatment devices, isodose planning,

physics consultation, and radiation treatment management cannot be reported when furnished in association with SRT. Stakeholders informed us that these changes to the CPT prefatory language prevented them from billing Medicare for codes that were previously frequently billed with CPT code 77401. We solicited comments as to whether the revised bundled coding for SRT allowed for accurate reporting of the associated services. In the CY 2016 PFS final rule with comment period (80 FR 70955), we noted that the RUC did not review the inputs for SRT procedures, and therefore, did not assess whether changes in valuation were appropriate in light of the bundling of associated services. In addition, we solicited recommendations from stakeholders regarding whether it would be appropriate to add physician work for this service, even though physician work is not included in other radiation treatment services. In the CY 2018 PFS proposed rule (82 FR 34012) and the CY 2018 PFS final rule (82 FR 53082), we noted that the 2016 National Correct Coding Initiative (NCCI) Policy Manual for Medicare Services states that radiation oncology services may not be separately reported with E/M codes. While this NCCI edit is no longer active stakeholders have stated that MACs have denied claims for E/M services associated with SRT based on the NCCI policy manual language. According to stakeholders, the bundling of SRT with associated services, as well as coding confusion regarding the appropriate use of E/M coding to report associated physician work, meant that practitioners were not being paid appropriately for planning and treatment management associated with furnishing SRT. Due to these concerns regarding reporting of services associated with SRT, in the CY 2018 PFS proposed rule (82 FR 34012–34013), we proposed to make separate payment for the professional planning and management associated with SRT using HCPCS code GRRR1 (Superficial radiation treatment planning and management related services, including but not limited to, when performed, clinical treatment planning (for example, 77261, 77262, 77263), therapeutic radiology simulation-aided field setting (for example, 77280, 77285, 77290, 77293), basic radiation dosimetry calculation (for example, 77300), treatment devices (for example, 77332, 77333, 77334), isodose planning (for example, 77306, 77307, 77316, 77317, 77318), radiation treatment management (for example, 77427, 77431, 77432, 77435, 77469, 77470, 77499), and associated E/M per course of treatment).

We proposed that this code would describe the range of professional services associated with a course of SRT, including services similar to those not otherwise separately reportable under CPT guidance. Furthermore, we proposed that this code would have included several inputs associated with related professional services such as treatment planning, treatment devices, and treatment management. Many commenters did not support our proposal to make separate payment for HCPCS code GRRR1 for CY 2018, stating that our proposed valuation of HCPCS code GRRR1 would represent a significant payment reduction for the associated services as compared with the list of services that they could previously bill in association with SRT. Commenters voiced concern that the proposed coding would inhibit access to care and discourage the use of SRT as a non-surgical alternative to Mohs surgery. We received comments recommending a variety of potential coding solutions and found that there was not general agreement among commenters about a preferred alternative. In the CY 2018 PFS final rule (82 FR 53081–53083), we solicited further comment, and stated that we would continue our dialogue with stakeholders to address appropriate coding and payment for professional services associated with SRT.

Given stakeholder feedback that we have continued to receive following the publication of the CY 2018 PFS final rule, we continue to believe that there are potential coding gaps for SRT-related professional services. We generally rely on the CPT process to determine coding specificity, and we believe that deferring to this process in addressing potential coding gaps is generally preferable. As our previous attempt at designing a coding solution in the CY 2018 PFS proposed rule did not gain stakeholder consensus, and given that there were various, in some cases diverging, suggestions on a coding solution from stakeholders, we are not proposing changes relating to SRT coding, SRT-related professional codes, or payment policies for CY 2019. However, we are seeking comment on the possibility of creating multiple G-codes specific to services associated with SRT, as was suggested by one stakeholder following the CY 2018 PFS final rule. These codes would be used separately to report services including SRT planning, initial patient simulation visit, treatment device design and construction associated with SRT, SRT management, and medical physics consultation. We are seeking comment

on whether we should create such G codes to separately report each of the services described above, mirroring the coding of other types of radiation treatment delivery. For instance, HCPCS code G6003 (Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; Up to 5 mev) is used to report radiation treatment delivery, while associated professional services are billed with codes such as CPT codes 77427 (Radiation treatment management, 5 treatments), 77261 (Therapeutic radiology treatment planning; simple), 77332 (Treatment devices, design and construction; simple (simple block, simple bolus), and 77300 (Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity

factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician). We are interested in public comment on whether it would be appropriate to create separate codes for professional services associated with SRT in a coding structure parallel to radiation treatment delivery services such as HCPCS code G6003. We are seeking comment on creating these codes for inclusion in this update of the PFS. We are also interested in whether such codes should be contractor priced for CY 2019. We would consider contractor pricing such codes for CY 2019 because we believe that the preferable method to develop new coding is with multi-specialty input through the CPT and RUC process, and we prefer to defer nationally pricing

such codes pending input from the CPT Editorial Panel and the RUC process to assist in determining the appropriate level of coding specificity for SRT-related professional services. Based on stakeholder feedback, we continue to believe there may be a coding gap for these services, and therefore, we are soliciting comment on whether we should create these G codes and allow them to be contractor priced for CY 2019. This would be an interim approach for addressing the potential coding gap until the CPT Editorial Panel and the RUC can address coding for SRT and SRT-related professional services, giving the CPT Editorial Panel and the RUC an opportunity to develop a coding solution that could be addressed in future rulemaking.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
03X0T	Electroretinography (ERG) with interpretation and report, pattern (PERG).	NEW	C	0.40	No.
10021	Fine needle aspiration biopsy; without imaging guidance; first lesion.	1.27	1.20	1.03	No.
10X11	Fine needle aspiration biopsy; without imaging guidance; each additional lesion.	NEW	0.80	0.80	No.
10X12	Fine needle aspiration biopsy, including ultrasound guidance; first lesion.	NEW	1.63	1.46	No.
10X13	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion.	NEW	1.00	1.00	No.
10X14	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion.	NEW	1.81	1.81	No.
10X15	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion.	NEW	1.18	1.18	No.
10X16	Fine needle aspiration biopsy, including CT guidance; first lesion.	NEW	2.43	2.26	No.
10X17	Fine needle aspiration biopsy, including CT guidance; each additional lesion.	NEW	1.65	1.65	No.
10X18	Fine needle aspiration biopsy, including MR guidance; first lesion.	NEW	C	C	No.
10X19	Fine needle aspiration biopsy, including MR guidance; each additional lesion.	NEW	C	C	No.
11755	Biopsy of nail unit (e.g., plate, bed, matrix, hyponychium, proximal and lateral nail folds).	1.31	1.25	1.08	No.
11X02	Tangential biopsy of skin, (e.g., shave, scoop, saucerize, curette), single lesion.	NEW	0.66	0.66	No.
11X03	Tangential biopsy of skin, (e.g., shave, scoop, saucerize, curette), each separate/additional lesion.	NEW	0.38	0.29	No.
11X04	Punch biopsy of skin, (including simple closure when performed), single lesion.	NEW	0.83	0.83	No.
11X05	Punch biopsy of skin, (including simple closure when performed), each separate/additional lesion.	NEW	0.45	0.45	No.
11X06	Incisional biopsy of skin (e.g., wedge), (including simple closure when performed), single lesion.	NEW	1.01	1.01	No.
11X07	Incisional biopsy of skin (e.g., wedge), (including simple closure when performed), each separate/additional lesion.	NEW	0.54	0.54	No.
20551	Injection(s); single tendon origin/insertion	0.75	0.75	0.75	No.
209X3	Allograft, includes templating, cutting, placement and internal fixation when performed; osteoarticular, including articular surface and contiguous bone.	NEW	13.01	13.01	No.
209X4	Allograft, includes templating, cutting, placement and internal fixation when performed; hemicortical intercalary, partial (i.e., hemicylindrical).	NEW	11.94	11.94	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
209X5	Allograft, includes templating, cutting, placement and internal fixation when performed; intercalary, complete (<i>i.e.</i> , cylindrical).	NEW	13.00	13.00	No.
27X69	Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography.	NEW	0.96	0.77	No.
29105	Application of long arm splint (shoulder to hand)	0.87	0.80	0.80	No.
29540	Strapping; ankle and/or foot	0.39	0.39	0.39	No.
29550	Strapping; toes	0.25	0.25	0.25	No.
31623	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings.	2.63	2.63	2.63	No.
31624	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage.	2.63	2.63	2.63	No.
332X0	Transcatheter implantation of wireless pulmonary artery pressure sensor for long term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed.	NEW	6.00	6.00	No.
332X5	Insertion, subcutaneous cardiac rhythm monitor, including programming.	NEW	1.53	1.53	No.
332X6	Removal, subcutaneous cardiac rhythm monitor	NEW	1.50	1.50	No.
335X1	Replacement, aortic valve; by translocation of autologous pulmonary valve and transventricular aortic annulus enlargement of the left ventricular outflow tract with valved conduit replacement of pulmonary valve (Ross-Konno procedure).	NEW	64.00	64.00	No.
33X01	Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion.	NEW	19.74	19.74	No.
33X05	Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (<i>e.g.</i> , fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (<i>e.g.</i> , interrogation or programming), when performed.	NEW	8.77	7.80	No.
33X06	Transcatheter removal of permanent leadless pacemaker, right ventricular.	NEW	9.56	8.59	No.
36568	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; younger than 5 years of age.	1.67	2.11	2.11	No.
36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; age 5 years or older.	1.70	1.90	1.90	No.
36584	Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement.	1.20	1.47	1.20	No.
36X72	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; younger than 5 years of age.	NEW	2.00	1.82	No.
36X73	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older.	NEW	1.90	1.70	No.
3853X	Biopsy or excision of lymph node(s); open, inguofemoral node(s).	NEW	6.74	6.74	No.
38792	Injection procedure; radioactive tracer for identification of sentinel node.	0.52	0.65	0.65	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
43X63	Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; not requiring revision of gastrostomy tract.	NEW	0.75	0.75	No.
43X64	Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; requiring revision of gastrostomy tract.	NEW	1.41	1.41	No.
45300	Proctosigmoidoscopy, rigid; diagnostic, with or without collection of specimen(s) by brushing or washing (separate procedure).	0.80	0.80	0.80	No.
46500	Injection of sclerosing solution, hemorrhoids	1.42	2.00	1.74	No.
49422	Removal of tunneled intraperitoneal catheter	6.29	4.00	4.00	No.
50X39	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed.	NEW	3.37	2.78	No.
50X40	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (e.g., ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system.	NEW	5.44	4.83	Yes.
52334	Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde.	4.82	3.37	3.37	No.
53850	Transurethral destruction of prostate tissue; by microwave thermotherapy.	10.08	5.42	5.42	No.
53852	Transurethral destruction of prostate tissue; by radio-frequency thermotherapy.	10.83	5.93	5.93	No.
538X3	Transurethral destruction of prostate tissue; by radio-frequency generated water vapor thermotherapy.	NEW	5.93	5.70	No.
57150	Irrigation of vagina and/or application of medicament for treatment of bacterial, parasitic, or fungoid disease.	0.55	0.50	0.50	No.
57160	Fitting and insertion of pessary or other intravaginal support device.	0.89	0.89	0.89	No.
58100	Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method (separate procedure).	1.53	1.21	1.21	No.
58110	Endometrial sampling (biopsy) performed in conjunction with colposcopy.	0.77	0.77	0.77	No.
64405	Injection, anesthetic agent; greater occipital nerve	0.94	0.94	0.94	No.
64455	Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (e.g., Morton's neuroma).	0.75	0.75	0.75	No.
65205	Removal of foreign body, external eye; conjunctival superficial.	0.71	0.49	0.49	No.
65210	Removal of foreign body, external eye; conjunctival embedded (includes concretions), subconjunctival, or scleral nonpenetrating.	0.84	0.75	0.61	No.
67500	Retrobulbar injection; medication (separate procedure, does not include supply of medication).	1.44	1.18	1.18	No.
67505	Retrobulbar injection; & alcohol	1.27	1.18	0.94	No.
67515	Injection of medication or other substance into Tenon's capsule.	1.40	0.84	0.75	No.
72020	Radiologic examination, spine, single view, specify level ..	0.15	0.15	0.23	No.
72040	Radiologic examination, spine, cervical; 2 or 3 views	0.22	0.22	0.23	No.
72050	Radiologic examination, spine, cervical; 4 or 5 views	0.31	0.31	0.23	No.
72052	Radiologic examination, spine, cervical; 6 or more views	0.36	0.35	0.23	No.
72070	Radiologic examination, spine; thoracic, 2 views	0.22	0.22	0.23	No.
72072	Radiologic examination, spine; thoracic, 3 views	0.22	0.22	0.23	No.
72074	Radiologic examination, spine; thoracic, minimum of 4 views.	0.22	0.22	0.23	No.
72080	Radiologic examination, spine; thoracolumbar junction, minimum of 2 views.	0.22	0.22	0.23	No.
72100	Radiologic examination, spine, lumbosacral; 2 or 3 views	0.22	0.22	0.23	No.
72110	Radiologic examination, spine, lumbosacral; minimum of 4 views.	0.31	0.31	0.23	No.
72114	Radiologic examination, spine, lumbosacral; complete, including bending views, minimum of 6 views.	0.32	0.31	0.23	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
72120	Radiologic examination, spine, lumbosacral; bending views only, 2 or 3 views.	0.22	0.22	0.23	No.
72200	Radiologic examination, sacroiliac joints; less than 3 views.	0.17	0.17	0.23	No.
72202	Radiologic examination, sacroiliac joints; 3 or more views	0.19	0.18	0.23	No.
72220	Radiologic examination, sacrum and coccyx, minimum of 2 views.	0.17	0.17	0.23	No.
73070	Radiologic examination, elbow; 2 views	0.15	0.15	0.23	No.
73080	Radiologic examination, elbow; complete, minimum of 3 views.	0.17	0.17	0.23	No.
73090	Radiologic examination; forearm, 2 views	0.16	0.16	0.23	No.
73650	Radiologic examination; calcaneus, minimum of 2 views	0.16	0.16	0.23	No.
73660	Radiologic examination; toe(s), minimum of 2 views	0.13	0.13	0.23	No.
74210	Radiologic examination; pharynx and/or cervical esophagus.	0.36	0.59	0.59	No.
74220	Radiologic examination; esophagus	0.46	0.67	0.67	No.
74230	Swallowing function, with cineradiography/videoradiography.	0.53	0.53	0.53	No.
74420	Urography, retrograde, with or without KUB	0.36	0.52	0.52	No.
74485	Dilation of ureter(s) or urethra, radiological supervision and interpretation.	0.54	0.83	0.83	No.
76000	Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time, other than 71023 or 71034 (e.g., cardiac fluoroscopy).	0.17	0.30	0.30	No.
76514	Ophthalmic ultrasound, diagnostic; corneal pachymetry, unilateral or bilateral (determination of corneal thickness).	0.17	0.17	0.14	No.
767X1	Ultrasound, elastography; parenchyma (e.g., organ)	NEW	0.59	0.59	No.
767X2	Ultrasound, elastography; first target lesion	NEW	0.59	0.59	No.
767X3	Ultrasound, elastography; each additional target lesion	NEW	0.50	0.50	No.
76870	Ultrasound, scrotum and contents	0.64	0.64	0.64	No.
76942	Ultrasonic guidance for needle placement (e.g., biopsy, fine needle aspiration biopsy, injection, localization device), imaging supervision and interpretation.	0.67	0.67	0.67	No.
76X01	Magnetic resonance (e.g., vibration) elastography	NEW	1.29	1.10	No.
76X0X	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); initial lesion.	NEW	1.62	1.27	No.
76X1X	Ultrasound, targeted dynamic microbubble sonographic contrast characterization (non-cardiac); each additional lesion with separate injection.	NEW	0.85	0.85	No.
77012	Computed tomography guidance for needle placement (e.g., biopsy, aspiration, injection, localization device), radiological supervision and interpretation.	1.16	1.50	1.50	No.
77021	Magnetic resonance guidance for needle placement (e.g., for biopsy, fine needle aspiration biopsy, injection, or placement of localization device) radiological supervision and interpretation.	1.50	1.50	1.50	No.
77081	Dual-energy X-ray absorptiometry (DXA), bone density study, 1 or more sites; appendicular skeleton (peripheral) (e.g., radius, wrist, heel).	0.22	0.20	0.20	No.
77X49	Magnetic resonance imaging, breast, without contrast material; unilateral.	NEW	1.45	1.15	No.
77X50	Magnetic resonance imaging, breast, without contrast material; bilateral.	NEW	1.60	1.30	No.
77X51	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; unilateral.	NEW	2.10	1.80	No.
77X52	Magnetic resonance imaging, breast, without and with contrast material(s), including computer-aided detection (CAD-real time lesion detection, characterization and pharmacokinetic analysis) when performed; bilateral.	NEW	2.30	2.00	No.
85060	Blood smear, peripheral, interpretation by physician with written report.	0.45	0.45	0.36	No.
85097	Bone marrow, smear interpretation	0.94	1.00	0.94	No.
85390	Fibrinolytics or coagulopathy screen, interpretation and report.	0.37	0.75	0.75	No.
92X71	Electroretinography (ERG) with interpretation and report; full field (e.g., ffERG, flash ERG, Ganzfeld ERG).	NEW	0.80	0.69	No.
92X73	Electroretinography (ERG) with interpretation and report; multifocal (mfERG).	NEW	0.72	0.61	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
93561	Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; with cardiac output measurement.	0.25	0.95	0.60	No.
93562	Indicator dilution studies such as dye or thermodilution, including arterial and/or venous catheterization; subsequent measurement of cardiac output.	0.01	0.77	0.48	No.
93571	Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel.	1.80	1.50	1.38	No.
93572	Intravascular Doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel.	1.44	1.00	1.00	No.
93668	Peripheral arterial disease (PAD) rehabilitation, per session.	0.00	0.00	0.00	No.
93XX1	Remote monitoring of a wireless pulmonary artery pressure sensor for up to 30 days including at least weekly downloads of pulmonary artery pressure recordings, interpretation(s), trend analysis, and report(s) by a physician or other qualified health care professional.	NEW	0.70	0.70	No.
95800	Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time.	1.05	1.00	0.85	No.
95801	Sleep study, unattended, simultaneous recording; minimum of heart rate, oxygen saturation, and/respiratory analysis (e.g., by airflow or peripheral arterial tone).	1.00	1.00	0.85	No.
95806	Sleep study, unattended, simultaneous recording of, heart rate, oxygen saturation, respiratory airflow, and respiratory effort (e.g., thoracoabdominal movement).	1.25	1.08	0.93	No.
95970	Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming.	0.45	0.45	0.35	No.
95X83	Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional.	NEW	0.95	0.73	No.
95X84	Electronic analysis of implanted neurostimulator pulse generator/transmitter (e.g., contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with complex cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional.	NEW	1.19	0.97	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
95X85	Electronic analysis of implanted neurostimulator pulse generator/transmitter (<i>e.g.</i> , contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional.	NEW	1.25	0.91	No.
95X86	Electronic analysis of implanted neurostimulator pulse generator/transmitter (<i>e.g.</i> , contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional.	NEW	1.00	0.80	No.
96105	Assessment of aphasia (includes assessment of expressive and receptive speech and language function, language comprehension, speech production ability, reading, spelling, writing, <i>e.g.</i> , by boston diagnostic aphasia examination) with interpretation and report, per hour.	1.75	1.75	1.75	No.
96110	Developmental screening (<i>e.g.</i> , developmental milestone survey, speech and language delay screen) with scoring and documentation, per standardized instrument.	0.00	0.00	0.00	No.
96116	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, <i>e.g.</i> , acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; first hour.	1.86	1.86	1.86	No.
96125	Standardized cognitive performance testing (<i>e.g.</i> , ross information processing assessment) per hour of a qualified health care professional's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report.	1.70	1.70	1.70	No.
96127	Brief emotional/behavioral assessment (<i>e.g.</i> , depression inventory, attention-deficit/hyperactivity disorder [ADHD] scale), with scoring and documentation, per standardized instrument.	0.00	0.00	0.00	No.
963X0	Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; first hour.	NEW	2.50	2.56	No.
963X1	Developmental test administration (including assessment of fine and/or gross motor, language, cognitive level, social, memory and/or executive functions by standardized developmental instruments when performed), by physician or other qualified health care professional, with interpretation and report; each additional 30 minutes.	NEW	1.10	1.16	No.
963X2	Neurobehavioral status exam (clinical assessment of thinking, reasoning and judgment, <i>e.g.</i> , acquired knowledge, attention, language, memory, planning and problem solving, and visual spatial abilities), by physician or other qualified health care professional, both face-to-face time with the patient and time interpreting test results and preparing the report; each additional hour.	NEW	1.71	1.71	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
963X3	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour.	NEW	2.50	2.56	No.
963X4	Psychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour.	NEW	1.90	1.96	No.
963X5	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; first hour.	NEW	2.50	2.56	No.
963X6	Neuropsychological testing evaluation services by physician or other qualified health care professional, including integration of patient data, interpretation of standardized test results and clinical data, clinical decision making, treatment planning and report, and interactive feedback to the patient, family member(s) or caregiver(s), when performed; each additional hour.	NEW	1.90	1.96	No.
963X7	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, first 30 minutes.	NEW	0.55	0.55	No.
963X8	Psychological or neuropsychological test administration and scoring by physician or other qualified health care professional, two or more tests, any method, each additional 30 minutes.	NEW	0.46	0.46	No.
963X9	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; first 30 minutes.	NEW	0.00	0.00	No.
96X00	Electrocorticogram from an implanted brain neurostimulator pulse generator/transmitter, including recording, with interpretation and report, up to 30 days.	NEW	2.30	1.98	No.
96X10	Psychological or neuropsychological test administration and scoring by technician, two or more tests, any method; each additional 30 minutes.	NEW	0.00	0.00	No.
96X11	Psychological or neuropsychological test administration using single instrument, with interpretation and report by physician or other qualified health care professional and interactive feedback to the patient, family member(s), or caregivers(s), when performed.	NEW	0.51	0.51	No.
96X12	Psychological or neuropsychological test administration, with single automated instrument via electronic platform, with automated result only.	NEW	0.00	0.00	No.
990X0	Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment.	NEW	0.00	0.00	No.
990X1	Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days.	NEW	0.00	0.00	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
99201	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.	0.48	0.48	0.48	No.
99202	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; An expanded problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family.	0.93	0.93	1.90	Yes.
99203	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A detailed history; A detailed examination; Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate severity. Typically, 30 minutes are spent face-to-face with the patient and/or family.	1.42	1.42	1.90	Yes.
99204	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family.	2.43	2.43	1.90	Yes.
99205	Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 60 minutes are spent face-to-face with the patient and/or family.	3.17	3.17	1.90	Yes.
99211	Office or other outpatient visit for the evaluation and management of an established patient, that may not require the presence of a physician or other qualified health care professional. Usually, the presenting problem(s) are minimal. Typically, 5 minutes are spent performing or supervising these services.	0.18	0.18	0.18	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
99212	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straight-forward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family.	0.48	0.48	1.22	Yes.
99213	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.	0.97	0.97	1.22	Yes.
99214	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family.	1.50	1.50	1.22	Yes.
99215	Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family.	2.11	2.11	1.22	Yes.
99446	Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 5–10 minutes of medical consultative discussion and review.	B	0.35	0.35	No.
99447	Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 11–20 minutes of medical consultative discussion and review.	B	0.70	0.70	No.
99448	Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 21–30 minutes of medical consultative discussion and review.	B	1.05	1.05	No.

99449	Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified healthcare professional; 31 minutes or more of medical consultative discussion and review.	B	1.40	1.40	No.
994X0	Interprofessional telephone/Internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes.	NEW	0.50	0.50	No.
994X6	Interprofessional telephone/Internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time.	NEW	0.70	0.50	No.
994X7	CCM provided personally by a physician/QHP	NEW	1.45	1.22	No.
994X9	Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month.	NEW	0.61	0.61	No.
G0108	Diabetes outpatient self-management training services, individual, per 30 minutes.	0.90	0.90	0.90	No.
G0109	Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes.	0.25	0.25	0.25	No.
G0166	External counterpulsation, per treatment session	0.07	0.00	0.00	No.
G0168	Wound closure utilizing tissue adhesive(s) only	0.45	0.45	0.31	No.
G0268	Removal of impacted cerumen (one or both ears) by physician on same date of service as audiologic function testing.	0.61	0.61	0.61	No.
GCG0X	Visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or interventional pain management-centered care (Add-on code, list separately in addition to an evaluation and management visit).	NEW	0.25	No.
GPC1X	Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an evaluation and management visit).	NEW	0.07	No.
GPD0X	Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, new patient.	NEW	1.35	No.
GPD1X	Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, established patient.	NEW	0.85	No.
GPRO1	Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service).	NEW	1.17	No.
GRAS1	Remote pre-recorded service via recorded video and/or images submitted by the patient (e.g., store and forward), including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment.	NEW	0.18	No.
GGBR1	Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., audit, dast), and brief intervention, 5–14 minutes.	NEW	0.33	No.

TABLE 13—CY 2019 PROPOSED WORK RVUS FOR NEW, REVISED, AND POTENTIALLY MISVALUED CODES—Continued

HCPCS	Descriptor	Current work RVU	RUC work RVU	CMS work RVU	CMS time refinement
GVC11	Brief communication technology-based service, <i>e.g.</i> , virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion.	NEW	0.25	No.

I. Evaluation & Management (E/M) Visits

1. Background

a. E/M Visits Coding Structure

Physicians and other practitioners paid under the PFS bill for common office visits for evaluation and management (E/M) services under a relatively generic set of CPT codes (Level I HCPCS codes) that distinguish visits based on the level of complexity, site of service, and whether the patient is new or established. The CPT codes have three key components:

- History of Present Illness (History),
- Physical Examination (Exam) and
- Medical Decision Making (MDM).

These codes are broadly referred to as E/M visit codes. There are three to five E/M visit code levels, depending on site of service and the extent of the three components of history, exam and MDM. For example, there are three to four levels of E/M visit codes in the inpatient hospital and nursing facility settings, based on a relatively narrow degree of complexity in those settings. In contrast, there are five levels of E/M visit codes in the office or other outpatient setting based on a broader range of complexity in those settings.

Current PFS payment rates for E/M visit codes increase with the level of visit billed. As for all services under the PFS, the rates are based on the resources in terms of work (time and intensity), PE and malpractice expense required to furnish the typical case of the service. The current payment rates reflect typical service times for each code that are based on RUC recommendations.

In total, E/M visits comprise approximately 40 percent of allowed charges for PFS services, and office/outpatient E/M visits comprise approximately 20 percent of allowed charges for PFS services. Within these percentages, there is significant variation among specialties. According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed services for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Generally, these practitioners include both primary care practitioners and specialists such as neurologists, endocrinologists and rheumatologists. Certain specialties, such as podiatry, tend to furnish lower level E/M visits more often than higher level E/M visits. Some specialties, such as dermatology and otolaryngology, tend to bill more E/M visits on the same day as they bill minor procedures.

Potential misvaluation of E/M codes is an issue that we have been carefully considering for several years. We have discussed at length in our recent PFS proposed and final rules that the E/M visit code set is outdated and needs to be revised and revalued (for example: 81 FR 46200 and 76 FR 42793). We have noted that this code set represents a high proportion of PFS expenditures, but has not been recently revalued to account for significant changes in the disease burden of the Medicare patient population and changes in health care practice that are underway to meet the Medicare population’s health care needs (81 FR 46200). In the CY 2012 PFS

proposed rule, we proposed to refer all E/M codes to the RUC for review as potentially misvalued (76 FR 42793). Many commenters to that rule were concerned about the possible inadequacies of the current E/M coding and documentation structure to address evolving chronic care management and to support primary care (76 FR 73060 through 73064). We did not finalize our proposal to refer the E/M codes for RUC review at that time. Instead, we stated that we would allow time for consideration of the findings of certain demonstrations and other initiatives to demonstrate improved information for the valuation of chronic care management, primary care, and care transitions. We stated that we would also continue to consider the numerous policy alternatives that commenters offered, such as separate E/M codes for established visits for patients with chronic disease versus a post-surgical follow-up office visit.

Many stakeholders continue to similarly express to us through letters, meetings, public comments in past rulemaking cycles, and other avenues, that the E/M code set is outdated and needs to be revised. For example, some stakeholders recommend an extensive research effort to revise and revalue E/M services, especially physician work inputs (CY 2017 PFS final rule, 81 FR 80227–80228). In recent years, we have continued to consider the best ways to recognize the significant changes in health care practice, especially innovations in the active management and ongoing care of chronically ill patients, under the PFS. We have been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment.

b. E/M Documentation Guidelines

For coding and billing E/M visits to Medicare, practitioners may use one of two versions of the E/M Documentation Guidelines for a patient encounter, commonly referenced based on the year of their release: The “1995” or “1997” E/M Documentation Guidelines. These guidelines are available on the CMS website.³ They specify the medical record information within each of the three key components (such as number of body systems reviewed) that serves as support for billing a given level of E/M

³ See: <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/95Docguidelines.pdf>; <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/97Docguidelines.pdf>; and the Evaluation and Management Services guide at <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/eval-mgmt-serv-guide-ICN006764.pdf>.

visit. The 1995 and 1997 guidelines are very similar to the guidelines that reside within the AMA’s CPT codebook for E/M visits. For example, the core structure of what comprises or defines the different levels of history, exam, and medical decision-making are the same.

However, the 1995 and 1997 guidelines include extensive examples of clinical work that comprise different levels of medical decision-making and do not appear in the AMA’s CPT codebook. Also, the 1995 and 1997 guidelines do not contain references to preventive care

that appear in the AMA’s CPT codebook. We provide an example of how the 1995 and 1997 guidelines distinguish between level 2 and level 3 E/M visits in Table 18.

TABLE 18—KEY COMPONENT DOCUMENTATION REQUIREMENTS FOR LEVEL 2 VS. 3 E/M VISIT

Key component*	Level 2 (1995)	Level 3 (1995)	Level 2 (1997)	Level 3 (1997)
History (History of Present Illness or HPI).	Review of Systems (ROS) n/a.	Problem Pertinent ROS: Inquires about the system directly related to the problem(s) identified in the HPI.	No change from 1995	No change from 1995.
Physical Examination (Exam).	A limited examination of the affected body area or organ system.	A limited examination of the affected body area or organ system and other symptomatic or related organ system(s).	General multi-system exam: Performance and documentation of one to five elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of one to five elements.	General multi-system exam: Performance and documentation of at least six elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of at least six elements.
Medical Decision Making (MDM) Measured by:** 1. Problem—Number of diagnoses/treatment options. 2. Data—Amount and/or complexity of data to be reviewed. 3. Risk—Risk of complications and/or morbidity or mortality.	Straightforward: 1. Minimal 2. Minimal or no data review. 3. Minimal risk	Low complexity: 1. Limited. 2. Limited data review. 3. Low risk.	No change from 1995.	

* For certain settings and patient types, each of these three key components must be met or exceeded (for example, new patients; initial hospital visits). For others, only two of the three key components must be met or exceeded (for example, established patients, subsequent hospital or other visits).

** Two of three met or exceeded.

According to both Medicare claims processing manual instructions and CPT coding rules, when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter (or, in the case of inpatient E/M services, the floor time) the duration of the visit can be used as an alternative basis to select the appropriate E/M visit level (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.C available at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>; see also 2017 CPT Codebook Evaluation and Management Services Guidelines, page 10). Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.B states, “Instruct physicians to select the code for the service based upon the content of the service. The duration of the visit is an ancillary factor and does not control the level of the service to be billed unless more than 50 percent of the face-to-face time (for

non-inpatient services) or more than 50 percent of the floor time (for inpatient services) is spent providing counseling or coordination of care as described in subsection C.” Subsection C states that “the physician may document time spent with the patient in conjunction with the medical decision-making involved and a description of the coordination of care or counseling provided. Documentation must be in sufficient detail to support the claim.” The example included in subsection C further states, “The code selection is based on the total time of the face-to-face encounter or floor time, not just the counseling time. The medical record must be documented in sufficient detail to justify the selection of the specific code if time is the basis for selection of the code.”

Both the 1995 and 1997 E/M guidelines contain guidelines that address time, which state that “In the case where counseling and/or coordination of care dominates (more

than 50 percent of) the physician/patient and/or family encounter (face-to-face time in the office or other outpatient setting or floor/unit time in the hospital or nursing facility), time is considered the key or controlling factor to qualify for a particular level of E/M services.” The guidelines go on to state that “If the physician elects to report the level of service based on counseling and/or coordination of care, the total length of time of the encounter (face-to-face or floor time, as appropriate) should be documented and the record should describe the counseling and/or activities to coordinate care.”⁴

We note that other manual provisions regarding E/M visits that are cited in this proposed rule are housed separately within Medicare’s Internet-Only Manuals, and are not contained within the 1995 or 1997 E/M documentation guidelines.

⁴ Page 16 of the 1995 E/M guidelines and page 48 of the 1997 guidelines.

In accordance with section 1862(a)(1)(A) of the Act, which requires services paid under Medicare Part B to be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, medical necessity is a prerequisite to Medicare payment for E/M visits. The Medicare Claims Processing Manual states, “Medical necessity of a service is the overarching criterion for payment in addition to the individual requirements of a CPT code. It would not be medically necessary or appropriate to bill a higher level of evaluation and management service when a lower level of service is warranted. The volume of documentation should not be the primary influence upon which a specific level of service is billed. Documentation should support the level of service reported” (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1A, available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>).

Stakeholders have long maintained that all of the E/M documentation guidelines are administratively burdensome and outdated with respect to the practice of medicine. Stakeholders have provided CMS with examples of such outdated material (on history, exam and MDM) that can be found within all versions of the E/M guidelines (the AMA’s CPT codebook, the 1995 guidelines and the 1997 guidelines). Stakeholders have told CMS that they believe the guidelines are too complex, ambiguous, fail to meaningfully distinguish differences among code levels, and are not updated for changes in technology, especially electronic health record (EHR) use. Prior attempts to revise the E/M guidelines were unsuccessful or resulted in additional complexity due to lack of stakeholder consensus (with widely varying views among specialties), and differing perspectives on whether code revaluation would be necessary under the PFS as a result of revising the guidelines, which contributed another layer of complexity to the considerations. For example, an early attempt to revise the guidelines resulted in an additional version designed for use by certain specialties (the 1997 version), and in CMS allowing the use of either the 1995 or 1997 versions for purposes of documentation and billing to Medicare. Another complication in revising the guidelines is that they are also used by many other payers, which have their own payment rules and audit

protocols. Moreover, stakeholders have suggested that there is sometimes variation in how Medicare’s own contractors (Medicare Administrative Contractors (MACs) interpret and apply the guidelines as part of their audit processes.

As previously mentioned, in recent years, some clinicians and other stakeholders have requested a major CMS research initiative to overhaul not only the E/M documentation guidelines, but also the underlying coding structure and valuation. Stakeholders have reported to CMS that they believe the E/M visit codes themselves need substantial updating and revaluation to reflect changes in the practice of medicine, and that revising the documentation guidelines without addressing the codes themselves simply preserves an antiquated framework for payment of E/M services.

Last year, CMS sought public comment on potential changes to the E/M documentation rules, deferring making any changes to E/M coding itself in order to immediately focus on revision of the E/M guidelines to reduce unnecessary administrative burden (82 FR 34078 through 34080). In the CY 2018 PFS final rule (82 FR 53163 through 53166), we summarized the public comments we received and stated that we would take that feedback into consideration for future rulemaking. In response to commenters’ request that we provide additional venues for stakeholder input, we held a listening session this year on March 18, 2018 (transcript and materials are available on the CMS website at <https://www.cms.gov/Outreach-and-Education/Outreach/NPC/National-Provider-Calls-and-Events-Items/2018-03-21-Documents-Guidelines-and-Burden-Reduction.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=descending>). We also sought input by participating in several listening sessions recently hosted by the Office of the National Coordinator for Health Information Technology (ONC) in the course of implementing section 4001(a) of the 21st Century Cures Act (Pub. L. 114–255). This provision requires the Department of Health and Human Services to establish a goal, develop a strategy, and make recommendations to reduce regulatory or administrative burdens relating to the use of EHRs. The ONC listening sessions sought public input on the E/M guidelines as one part of broader, related and unrelated burdens associated with EHRs.

Several themes emerged from this recent stakeholder input. Stakeholders commended CMS for undertaking to revise the E/M guidelines and

recommended a multi-year process. Many commenters advised CMS to obtain further input across specialties. They recommended town halls, open door forums or a task force that would come up with replacement guidelines that would work for all specialties over the course of several years. They urged CMS to proceed cautiously given the magnitude of the undertaking; past failed reform attempts by the AMA, CMS, and other payers; and the wide-ranging impact of any changes (for example, how other payers approach the issue).

We received substantially different recommendations by specialty. Based on this feedback, it is clear that any changes would have substantial specialty-specific impacts, both clinical and financial. Based on this feedback, it also seems that the history and exam portions of the guidelines are most significantly outdated with respect to current clinical practice.

A few stakeholders seemed to indicate that the documentation guidelines on history and exam should be kept in their current form. Many stakeholders believed they should be simplified or reduced, but not eliminated. Some stakeholders indicated that the documentation guidelines on history and exam could be eliminated altogether, and/or that documentation of these parts of an E/M visit could be left to practitioner discretion. We also heard from stakeholders that the degree to which an extended history and exam enables a given practitioner to reach a certain level of coding (and payment) varies according to their specialty. Many stakeholders advised CMS to increase reliance on medical decision-making (MDM) and time in determining the appropriate level of E/M visit, or to use MDM by itself, but many of these commenters believed that the MDM portions of the guidelines would need to be altered before being used alone. Commenters were divided on the role of time in distinguishing among E/M visit levels, and expressed some concern about potential abuse or inequities among more- or less-efficient practitioners. Some commenters expressed support for simplifying E/M coding generally into three levels such as low, medium and high, and potentially distinguishing those levels on the basis of time.

2. CY 2019 Proposed Policies

Having considered the public feedback to the CY 2018 PFS proposed rule (82 FR 53163 through 53166) and our other outreach efforts described above, we are proposing several changes to E/M visit documentation and

payment. The proposed changes would only apply to office/outpatient visit codes (CPT codes 99201 through 99215), except where we specify otherwise. We agree with commenters that we should take a step-wise approach to these issues, and therefore, we would limit initial changes to the office/outpatient E/M code set. We understand from commenters that there are more unique issues to consider for the E/M code sets used in other settings such as inpatient hospital or emergency department care, such as unique clinical and legal issues and the potential intersection with hospital Conditions of Participation (CoPs). We may consider expanding our efforts more broadly to address sections of the E/M code set beyond the office/outpatient codes in future years.

We wish to emphasize that, this year, we are including our proposed E/M documentation changes in a proposed rule due to the longstanding nature of our instruction that practitioners may use either the 1995 or 1997 versions of the E/M guidelines to document E/M visits billed to Medicare, the magnitude of the proposed changes, and the associated payment policy proposals that require notice and comment rulemaking. We believe our proposed documentation changes for E/M visits are intrinsically related to our proposal to alter PFS payment for E/M visits (discussed below), and the PFS payment proposal for E/M visits requires notice and comment rulemaking. We note that we are proposing a relatively broad outline of changes in this proposed rule, and we anticipate that many details related to program integrity and ongoing refinement would need to be developed over time through subregulatory guidance. This would afford flexibility and enable us to more nimbly and quickly make ongoing clarifications, changes and refinements in response to continued practitioner experience moving forward.

a. Lifting Restrictions Related to E/M Documentation

(i) Eliminating Extra Documentation Requirements for Home Visits

Medicare pays for E/M visits furnished in the home (a private residence) under CPT codes 99341 through 99350. The payment rates for these codes are slightly more than for office visits (for example, approximately \$30 more for a level 5 established patient, non-facility). The beneficiary need not be confined to the home to be eligible for such a visit. However, there is a Medicare Claims Processing Manual provision requiring that the medical record must document the medical

necessity of the home visit made in lieu of an office or outpatient visit (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.14.1.B, available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>). Stakeholders have suggested that whether a visit occurs in the home or the office is best determined by the practitioner and the patient without applying additional rules. We agree, so we are proposing to remove the requirement that the medical record must document the medical necessity of furnishing the visit in the home rather than in the office. We welcome public comments on this proposal, including any potential, unintended consequences of eliminating this requirement. If we finalize this proposal in the CY 2019 PFS final rule, we would update the manual to reflect the change.

(ii) Public Comment Solicitation on Eliminating Prohibition on Billing Same-Day Visits by Practitioners of the Same Group and Specialty

The Medicare Claims Processing Manual states, “As for all other E/M services except where specifically noted, the Medicare Administrative Contractors (MACs) may not pay two E/M office visits billed by a physician (or physician of the same specialty from the same group practice) for the same beneficiary on the same day unless the physician documents that the visits were for unrelated problems in the office, off campus-outpatient hospital, or on campus-outpatient hospital setting which could not be provided during the same encounter” (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.7.B, available on the CMS website at <https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf>).

This instruction was intended to reflect the idea that multiple visits with the same practitioner, or by practitioners in the same or very similar specialties within a group practice, on the same day as another E/M service would not be medically necessary. However, stakeholders have provided a few examples where this policy does not make sense with respect to the current practice of medicine as the Medicare enrollment specialty does not always coincide with all areas of medical expertise possessed by a practitioner—for example, a practitioner with the Medicare enrollment specialty of geriatrics may also be an endocrinologist. If such a practitioner was one of many geriatricians in the

same group practice, they would not be able to bill separately for an E/M visit focused on a patient’s endocrinological issue if that patient had another more generalized E/M visit by another geriatrician on the same day. Stakeholders have pointed out that in these circumstances, practitioners often respond to this instruction by scheduling the E/M visits on two separate days, which could unnecessarily inconvenience the patient. Given that the number and granularity of practitioner specialties recognized for purposes of Medicare enrollment continue to increase over time (consistent with the medical community’s requests), the value to the Medicare program of the prohibition on same-day E/M visits billed by physicians in the same group and medical specialty may be diminishing, especially as we believe it is becoming more common for practitioners to have multiple specialty affiliations, but would have only one primary Medicare enrollment specialty. We believe that eliminating this policy may better recognize the changing practice of medicine while reducing administrative burden. The impact of this proposal on program expenditures and beneficiary cost sharing is unclear. To the extent that many of these services are currently merely scheduled and furnished on different days in response to the instruction, eliminating this manual provision may not significantly increase utilization, Medicare spending and beneficiary cost sharing.

We are soliciting public comment on whether we should eliminate the manual provision given the changes in the practice of medicine or whether there is concern that eliminating it might have unintended consequences for practitioners and beneficiaries. We recognize that this instruction may be appropriate only in certain clinical situations, so we seek public comments on whether and how we should consider creating exceptions to, or modify this manual provision rather than eliminating it entirely. We are also requesting that the public provide additional examples and situations in which the current instruction is not clinically appropriate.

b. Documentation Changes for Office or Other Outpatient E/M Visits and Home Visits

(i) Providing Choices in Documentation—Medical Decision-Making, Time or Current Framework

Informed by comments and examples that we have received asserting that the current E/M documentation guidelines

are outdated with respect to the current practice of medicine, and in our efforts to simplify documentation for the purposes of coding E/M visit levels, we propose to allow practitioners to choose, as an alternative to the current framework specified under the 1995 or 1997 guidelines, either MDM or time as a basis to determine the appropriate level of E/M visit. This would allow different practitioners in different specialties to choose to document the factor(s) that matter most given the nature of their clinical practice. It would also reduce the impact Medicare may have on the standardized recording of history, exam and MDM data in medical records, since practitioners could choose to no longer document many aspects of an E/M visit that they currently document under the 1995 or 1997 guidelines for history, physical exam and MDM. While we initially considered reducing the number of key components that practitioners needed to document in choosing the appropriate level of E/M service to bill, feedback from the stakeholder community led us to believe that offering practitioners a choice to either retain the current framework or choose among new options that involve a reduced level of documentation would be less burdensome for practitioners, and would allow more stability for practitioners who may need time to prepare for any potential new documentation framework.

We wish to be clear that as part of this proposal, practitioners could use MDM, or time, or they could continue to use the current framework to document an E/M visit. In other words, we would be offering the practitioner the choice to continue to use the current framework by applying the 1995 or 1997 documentation guidelines for all three key components. However, our proposals on payment for office-based/outpatient E/M visits described later in this section would apply to all practitioners, regardless of their selected documentation approach. All practitioners, even those choosing to retain the current documentation framework, would be paid at the proposed new payment rate described in section II.I.2.c. of this proposed rule (one rate for new patients and another for established patients), and could also report applicable G-codes proposed in that section.

We also wish to be clear that we are proposing to retain the current CPT coding structure for E/M visits (along with creating new replacement codes for podiatry office/outpatient E/M visits) as described later in this section. Practitioners would report on the

professional claim whatever level of visit (1 through 5) they believe they furnished using CPT codes 99201–99215. We considered making an alternative proposal to adopt a single G-code to describe office/outpatient E/M visit levels 2 through 5 in conjunction with our proposal to establish a single PFS payment rate for those visits that is described later in this section. Because we believe the adoption of a reduced number of G-codes to describe the visit levels 2 through 5 might result in unnecessary disruption to current billing systems and practices, we are not proposing to modify the existing CPT coding structure for E/M visits. Since we are proposing to create a single rate under the PFS that would be paid for services billed using the current CPT codes for level 2 through 5 E/M visits, it would not be material to Medicare's payment decision which CPT code (of levels 2 through 5) is reported on the claim, except to justify billing a level 2 or higher visit in comparison to a level 1 visit (provided the visit itself was reasonable and necessary). We expect that, for record keeping purposes or to meet requirements of other payers, many practitioners would continue to choose and report the level of E/M visit they believe to be appropriate under the CPT coding structure.

Even though there would be no payment differential for E/M visits level 2 through 5, we believe we would still need to simplify and change our documentation requirements to better align with the current practice of medicine and eliminate unnecessary aspects of the current documentation framework. As a corollary to our proposal to adopt a single payment amount for office/outpatient E/M visit levels 2 through 5 (see section II.I.2.c. of this proposed rule), we propose to apply a minimum documentation standard where, for the purposes of PFS payment for an office/outpatient E/M visit, practitioners would only need to meet documentation requirements currently associated with a level 2 visit for history, exam and/or MDM (except when using time to document the service, see below). Practitioners could choose to document more information for clinical, legal, operational or other purposes, and we anticipate that for those reasons, they would continue generally to seek to document medical record information that is consistent with the level of care furnished. For purposes of our medical review, however, for practitioners using the current documentation framework or, as we are proposing, MDM, Medicare

would only require documentation to support the medical necessity of the visit and the documentation that is associated with the current level 2 CPT visit code.

For example, for a practitioner choosing to document using the current framework (1995 or 1997 guidelines), our proposed minimum documentation for any billed level of E/M visit from levels 2 through 5 could include: (1) A problem-focused history that does not include a review of systems or a past, family, or social history; (2) a limited examination of the affected body area or organ system; and (3) straightforward medical decision making measured by minimal problems, data review, and risk (two of these three). If the practitioner was choosing to document based on MDM alone, Medicare would only require documentation supporting straightforward medical decision-making measured by minimal problems, data review, and risk (two of these three).

Some commenters have suggested that the current framework of guidelines for the MDM component of visits would need to be changed before MDM could be relied upon by itself to distinguish visit levels. We propose to allow practitioners to rely on MDM in its current form to document their visit, and are soliciting public comment on whether and how guidelines for MDM might be changed in subsequent years.

As described earlier, we currently allow time or duration of visit to be used as the governing factor in selecting the appropriate E/M visit level, only when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter (or, in the case of inpatient E/M services, the floor time). Our proposal to allow practitioners the choice of using time to document office/outpatient E/M visits would mean that this time-based standard is not limited to E/M visits in which counseling and/or care coordination accounts for more than 50 percent of the face-to-face practitioner/patient encounter. Rather, the amount of time personally spent by the billing practitioner face-to-face with the patient could be used to document the E/M visit regardless of the amount of counseling and/or care coordination furnished as part of the face-to-face encounter.

Some commenters have raised concerns with reliance on time to distinguish visit levels, for example the potential for abuse, inequities among more- or less-efficient practitioners, and specialties for which time is less of a factor in determining visit complexity. Relying on time as the basis for

identifying the E/M visit level also raises the issue of what would be required by way of supporting documentation; for example, what amount of time should be documented, and whether the specific activities comprising the time need to be documented and to what degree. However, a number of stakeholders have suggested that, within their specialties, time is a good indicator of the complexity of the visit or patient, and requested that we allow practitioners to use time as the single factor in all E/M visits, not just when counseling or care coordination dominate a visit. We agree that for some practitioners and patients, time may be a good indicator of complexity of the visit, and are proposing to allow practitioners the option to use time as the single factor in selecting visit level and documenting the E/M visit, regardless of whether counseling or care coordination dominate the visit. If finalized, we would monitor the results of this proposed policy for any program integrity issues, administrative burden or other issues.

For practitioners choosing to support their coding and payment for an E/M visit by documenting the amount of time spent with the patient, we propose to require the practitioner to document the medical necessity of the visit and show the total amount of time spent by the billing practitioner face-to-face with the patient. We are soliciting public comment on what that total time should be for payment of the single, new rate for E/M visits levels 2 through 5. The typical time for our proposed new payment for E/M visit levels 2 through 5 is 31 minutes for an established patient and 38 minutes for a new patient, and we could use these times. These times are weighted averages of the intra-service times across the current E/M visit utilization. Accordingly, these times are higher than the current typical time for a level 2, 3 or 4 visit, but lower than the current typical time for a level 5 visit. We note that currently the PFS does not require the practitioner to spend or document a specified amount of time with a given patient in order to receive payment for an E/M visit, unless the visit is dominated by counseling/care coordination and, on that account, the practitioner is using time as the basis for code selection. The times for E/M visits and most other PFS services in the physician time files, which are used to set PFS rates, are typical times rather than requirements, and were recommended by the AMA RUC and then reviewed and either adopted or adjusted for Medicare through our usual

rate setting process as “typical,” but not strictly required.

One alternative is to apply the AMA’s CPT codebook provision that, for timed services, a unit of time is attained when the mid-point is passed,⁵ such that we would require documentation that at least 16 minutes for an established patient (more than half of 31 minutes) and at least 20 minutes for a new patient (more than half of 38 minutes) were spent face-to-face by the billing practitioner with the patient, to support making payment at the proposed single rate for visit levels 2 through 5 when the practitioner chooses to document the visit using time.

Another alternative is to require documentation that the typical time for the CPT code that is reported (which is also the typical time listed in the AMA’s CPT codebook for that code) was spent face-to-face by the billing practitioner with the patient. For example, a practitioner reporting CPT code 99212 (a level 2 established patient visit) would be required to document having spent a minimum of 10 minutes, and a practitioner reporting CPT code 99214 (a level 4 established patient visit) would be required to document having spent a minimum of 25 minutes. Under this approach, the total amount of time spent by the billing practitioner face-to-face with the patient would inform the level of E/M visit (of levels 2 through 5) coded by the billing practitioner. We note that in contrast to other proposed documentation approaches discussed above, this approach of requiring documentation of the typical time associated with the CPT visit code reported on the claim would introduce unique payment implications for reporting that code, especially when the time associated with the billed E/M code is the basis for reporting prolonged E/M services.

We are soliciting public comments on the use of time as a framework for documentation of office/outpatient E/M visits, and whether we should adopt any of these approaches or specify other requirements with respect to the proposed option for documentation using time.

In providing us with feedback, we ask commenters to take into consideration ways in which the time associated with, or required for, the billing of any add-on codes (especially the proposed prolonged E/M visit add-on code(s) described in section II.I.2.d.v. of this proposed rule) would intersect with the time spent for the base E/M visit, when the practitioner is documenting the E/M visit using only time. Currently, when

reporting prolonged E/M services, we expect the practitioner to exceed the typical time assigned for the base E/M visit code (also commonly referred to as the companion code). For example, in the CY 2017 PFS final rule (81 FR 80229), we expressed appreciation for the commenters’ suggestion to display the typical times associated with relevant services. We also discussed, and in response to those comments, decided to post a file annually that notes the times assumed to be typical for purposes of PFS ratesetting for practitioners to use as a reference in deciding whether time requirements for reporting prolonged E/M services are met. We stated that while these typical times are not required for a practitioner to bill the displayed base codes, we would expect that only time spent in excess of these times would be reported using a non-face-to-face prolonged service code. We are now proposing to formalize this policy in the case where a practitioner uses time to document a visit, since there would be a stricter time requirement associated with the base E/M code. Specifically, we propose that, when a practitioner chooses to document using time and also reports prolonged E/M services, we would require the practitioner to document that the typical time required for the base or “companion” visit is exceeded by the amount required to report prolonged services. See section II.I.2.d.v. of this proposed rule for further discussion of our proposal regarding reporting prolonged E/M services.

As we discuss further in this section of the proposed rule, we believe that allowing practitioners to choose the most appropriate basis for distinguishing among the levels of E/M visits and applying a minimum documentation requirement, together with reducing the payment variation among E/M visit levels, would significantly reduce administrative burden for practitioners, and would avoid the current need to make coding and documentation decisions based on codes and documentation guidelines that are not a good fit with current medical practice. The practitioner could choose to use MDM, time or the current documentation framework, and could also apply the proposed policies below regarding redundancy and who can document information in the medical record.

We heard from a few commenters on the CY 2018 PFS proposed rule that some practitioners rely on unofficial Marshfield clinic or other criteria to help them document E/M visit levels. These commenters conveyed that the

⁵ 2017 CPT Codebook Introduction, p.xv.

Marshfield “point system” is commonly used to supplement the E/M documentation guidelines, because of a lack of concrete criteria for certain elements of medical decision making in the 1995 and 1997 guidelines or in CPT guidance. We are soliciting public comment on whether Medicare should use or adopt any aspects of other E/M documentation systems that may be in use among practitioners, such as the Marshfield tool. We are interested in feedback as to whether the 1995 and 1997 guidelines contain adequate information for practitioners to use in documenting visits under our proposals, or whether these versions of the guidelines would need to be supplemented in any way.

We are seeking public comment on these proposals to provide practitioners choice in the basis for documenting E/M visits in an effort to allow for documentation alternatives that better reflect the current practice of medicine and to alleviate documentation burden. We are also interested in public comments on practitioners’ ability to avail themselves of these choices with respect to how they would impact clinical workflows, EHR templates, and other aspects of practitioner work. Commenters have requested that CMS not merely shift burden by implementing another framework that might avoid issues caused by the current guidelines, but that would be equally complex and burdensome. Our primary goal is to reduce administrative burden so that the practitioner can focus on the patient, and we are interested in commenters’ opinions as to whether our E/M visit proposals would, in fact, support and further this goal. We believe these proposals would allow practitioners to exercise greater clinical judgment and discretion in what they document, focusing on what is clinically relevant and medically necessary for the patient. While we propose to no longer apply much of the E/M documentation guidelines involving history, exam and, for those choosing to document based on time, documentation of medical decision-making, our expectation is that practitioners would continue to perform and document E/M visits as medically necessary for the patient to ensure quality and continuity of care. For example, we believe that it remains an important part of care for the practitioner to understand the patient’s social history, even though we would no longer require that history to be documented to bill Medicare for the visit.

(ii) Removing Redundancy in E/M Visit Documentation

Stakeholders have recently expressed that CMS should not require documentation of information in the billing practitioner’s note that is already present in the medical record, particularly with regard to history and exam. Currently, both the 1995 and 1997 guidelines provide such flexibility for certain parts of the history for established patients, stating, “A Review of Systems “ROS” and/or a pertinent past, family, and/or social history “PFSH” obtained during an earlier encounter does not need to be re-recorded if there is evidence that the physician reviewed and updated the previous information. This may occur when a physician updates his/her own record or in an institutional setting or group practice where many physicians use a common record. The review and update may be documented by:

- Describing any new ROS and/or PFSH information or noting there has been no change in the information; and
- Noting the date and location of the earlier ROS and/or PFSH.

Documentation Guidelines “DG”: The ROS and/or PFSH may be recorded by ancillary staff or on a form completed by the patient. To document that the physician reviewed the information, there must be a notation supplementing or confirming the information recorded by others (<https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/95Docguidelines.pdf>; <https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/97Docguidelines.pdf>).

We propose to expand this policy to further simplify the documentation of history and exam for established patients such that, for both of these key components, practitioners would only be required to focus their documentation on what has changed since the last visit or on pertinent items that have not changed, rather than re-documenting a defined list of required elements such as review of a specified number of systems and family/social history. Since medical decision-making can only be accurately formed upon a substantial basis of accurate and timely health information, and the CPT code descriptors for all E/M visits would continue to include the elements of history and exam, we expect that practitioners would still conduct clinically relevant and medically necessary elements of history and physical exam, and conform to the

general principles of medical record documentation in the 1995 and 1997 guidelines. However, practitioners would not need to re-record these elements (or parts thereof) if there is evidence that the practitioner reviewed and updated the previous information.

We are seeking comment on whether there may be ways to implement a similar provision for any aspects of medical decision-making, or for new patients, such as when prior data is available to the billing practitioner through an interoperable EHR or other data exchange. We believe there would be special challenges in realizing documentation efficiencies with new patients, since they may not have received exams or histories that were complete or relevant to the current complaint(s), and the information in the transferred record could be more likely to be incomplete, outdated or inaccurate.

Also, we propose that for both new and established patients, practitioners would no longer be required to re-enter information in the medical record regarding the chief complaint and history that are already entered by ancillary staff or the beneficiary. The practitioner could simply indicate in the medical record that they reviewed and verified this information. We wish to be clear that these proposed policy changes would be optional, where a practitioner could choose to continue to use the current framework, and the more detailed information could continue to be entered, re-entered or brought forward in documenting a visit, regardless of the documentation approach selected by the practitioner. Our goal is to allow practitioners more flexibility to exercise greater clinical judgment and discretion in what they document, focusing on what is clinically relevant and medically necessary for the patient. Our expectation is that practitioners would continue to periodically review and assess static or baseline historical information at clinically appropriate intervals.

(iii) Podiatry Visits

As described in greater detail in section II.I.2.d.iii. of this proposed rule, as part of our proposal to improve payment accuracy by creating a single PFS payment rate for E/M visit levels 2 through 5 (with one proposed rate for new patients and one proposed rate for established patients), we propose to create separate coding for podiatry visits that are currently reported as E/M office/outpatient visits. We propose that, rather than reporting visits under the general E/M office/outpatient visit

code set, podiatrists would instead report visits under new G-codes that more specifically identify and value their services. We propose to apply substantially the same documentation standards for these proposed new podiatry-specific codes as we propose above for other office/outpatient E/M visits.

If a practitioner chose to use time to document a podiatry office/outpatient E/M visit, we propose to apply substantially the same rules as those we are proposing for documenting on the basis of time for other office/outpatient E/M visits, discussed above. For practitioners choosing to use time to provide supporting documentation for the podiatry visit, we would require documentation supporting the medical necessity of the visit and showing the total amount of time spent by the billing practitioner face-to-face with the patient. We are soliciting public comment on what that total time would be for payment of the proposed new podiatry G-codes. The typical times for these proposed codes are 22 minutes for an established patient and 28 minutes for a new patient, and we could use these times. Alternatively, we could apply the AMA's CPT codebook provision that, for timed services, a unit of time is attained when the mid-point is passed,⁶ such that we would require documentation that at least 12 minutes for an established patient (more than half of 22 minutes) or at least 15 minutes for a new patient (more than half of 28 minutes) were spent face-to-face by the billing practitioner with the patient, to support making payment for these codes when the practitioner chooses to document the visit using time. We are soliciting comment on the use of time as a basis for documentation of our proposed podiatric E/M visit codes, and whether we should adopt any of these approaches or further specify other requirements with respect to this proposed option for podiatric practitioners to document their visits using time.

c. Minimizing Documentation Requirements by Simplifying Payment Amounts

As we have explained above, including in prior rulemaking, we believe that the coding, payment, and documentation requirements for E/M visits are overly burdensome and no longer aligned with the current practice of medicine. We believe the current set of 10 CPT codes for new and established office-based and outpatient E/M visits and their respective payment rates no

longer appropriately reflect the complete range of services and resource costs associated with furnishing E/M services to all patients across the different physician specialties, and that documenting these services using the current guidelines has become burdensome and out of step with the current practice of medicine. We have included the proposals described above to mitigate the burden associated with the outdated documentation guidelines for these services. To alleviate the effects and mitigate the burden associated with continued use of the outdated CPT code set, we are proposing to simplify the office-based and outpatient E/M payment rates and documentation requirements, and create new add-on codes to better capture the differential resources involved in furnishing certain types of E/M visits.

In conjunction with our proposal to reduce the documentation requirements for E/M visit levels 2 through 5, we are proposing to simplify the payment for those services by paying a single rate for the level 2 through 5 E/M visits. The visit level of the E/M service is tied to the documentation requirements in the 1995 and 1997 Documentation Guidelines for E/M Services, which may not be reflective of changes in technology or, in particular, the ways that electronic medical records have changed documentation and the patient's medical record. Additionally, current documentation requirements may not account for changes in care delivery, such as a growing emphasis on team based care, increases in the number of recognized chronic conditions, or increased emphasis on access to behavioral health care. However, based on the feedback we have received from stakeholders, it is clear to us that the burdens associated with documenting the selection of the level of E/M service arise from not only the documentation guidelines, but also from the coding structure itself. Like the documentation guidelines, the distinctions between visit levels reflect a reasonable assessment of variations in care, effort, and resource costs as identified and articulated several decades ago. We believe that the most important distinctions between the kinds of visits furnished to Medicare beneficiaries are not well reflected by the current E/M visit coding. Most significantly, we have understood from stakeholders that current E/M coding does not reflect important distinctions in services and differences in resources. At present, we believe the current payment for E/M visit levels, generally distinguished by common elements of

patient history, physical exam, and MDM, that may have been good approximations for important distinctions in resource costs between kinds of visits in the 1990s, when the CPT developed the E/M code set, are increasingly outdated in the context of changing models of care and information technologies.

As described earlier in this section, we are proposing to change the documentation requirements for E/M levels such that practitioners have the choice to use the 1995 guidelines, 1997 guidelines, time, or MDM to determine the E/M level. We believe that these proposed changes will better reflect the current practice of medicine and represent significant reductions in burdens associated with documenting visits using the current set of E/M codes.

In alignment with our proposed documentation changes, we are proposing to develop a single set of RVUs under the PFS for E/M office-based and outpatient visit levels 2 through 5 for new patients (CPT codes 99202 through 99205) and a single set of RVUs for visit levels 2 through 5 for established patients (CPT codes 99212 through 99215). While we considered creating new HCPCS G-codes that would describe the services associated with these proposed payment rates, given the wide and longstanding use of these visit codes by both Medicare and private payers, we believe it would have created unnecessary administrative burden to propose new coding. Therefore, we are instead proposing to maintain the current code set. Of the five levels of office-based and outpatient E/M visits, the vast majority of visits are reported as levels 3 and 4. In CY 2016, CPT codes 99203 and 99204 (or E/M visit level 3 and level 4 for new patients) made up around 32 percent and 44 percent, respectively, of the total allowed charges for CPT codes 99201–99205. In the same year, CPT codes 99213 and 99214 (or E/M visit level 3 and 4 for established patients) made up around 39 percent and 50 percent, respectively, of the allowed charges for CPT codes 99211–99215. If our proposals to simplify the documentation requirements and to pay a single PFS rate for new patient E/M visit levels 2 through 5 and a single rate for established patient E/M visit levels 2 through 5 are finalized, practitioners would still bill the CPT code for whichever level of E/M service they furnished and they would be paid at the single PFS rate. However, we believe that eliminating the distinction in payment between visit levels 2 through 5 will eliminate the need to audit against the visit levels, and therefore,

⁶ 2017 CPT Codebook Introduction, p.xv.

will provide immediate relief from the burden of documentation. A single payment rate will also eliminate the increasingly outdated distinction between the kinds of visits that are reflected in the current CPT code levels in both the coding and the associated documentation rules.

In order to set RVUs for the proposed single payment rate for new and established patient office/outpatient E/M visit codes, we are proposing to develop resource inputs based on the current inputs for the individual E/M codes, generally weighted by the frequency at which they are currently billed, based on the 5 most recent years of Medicare claims data (CY 2012 through CY 2017). Specifically, we are proposing a work RVU of 1.90 for CPT codes 99202–99205, a physician time of 37.79 minutes, and direct PE inputs that sum to \$24.98, each based on an average of the current inputs for the individual codes weighted by 5 years of accumulated utilization data. Similarly, we are proposing a work RVU of 1.22 for CPT codes 99212–99215, with a physician time of 31.31 minutes and direct PE inputs that sum to \$20.70. These inputs are based on an average of the inputs for the individual codes, weighted by volume based on utilization data from the past 5 years (CY 2012 through CY 2017). Tables 19 and 20 reflect the payment rates in dollars that would result from the approach described above were it to have been implemented for CY 2018. In other words, the dollar amounts in the charts below reflect how the changes we are proposing for CY 2019 would have impacted payment rates for CY 2018. Proposed RVUs for CY 2019 appear in addendum B of this proposed rule, available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSchd/index.html>.

TABLE 19—PRELIMINARY COMPARISON OF PAYMENT RATES FOR OFFICE VISITS NEW PATIENTS

HCPCS code	CY 2018 non-facility payment rate	CY 2018 non-facility payment rate under the proposed methodology
99201	\$45	\$44
99202	76	135
99203	110
99204	167

TABLE 20—PRELIMINARY COMPARISON OF PAYMENT RATES FOR OFFICE VISITS ESTABLISHED PATIENTS

HCPCS code	Current non-facility payment rate	Proposed non-facility payment rate
99211	\$22	\$24
99212	45	93
99213	74
99214	109
99215	148

While we believe that the proposed rates for E/M visit levels 2 through 5 represent the valuation of a typical E/M service, we also recognize that the current E/M code set itself does not appropriately reflect differences in resource costs between certain types of E/M visits. As a result, we believe that the way we currently value the resource costs for E/M services through the existing HCPCS CPT code set for office-based and outpatient E/M visits does not appropriately reflect the resources used in furnishing the range of E/M services that are provided through the current the practice of medicine. Based on stakeholder comments and examples and our review of the literature on E/M services, we have identified three types of E/M visits that differ from the typical E/M visit and are not appropriately reflected in the current office/outpatient E/M code set and valuation. Rather, these three types of E/M visits can be distinguished by the mode of care provided and, as a result, have different resource costs. The three types of E/M visits that differ from the typical E/M service are (1) separately identifiable E/M visits furnished in conjunction with a 0-day global procedure, (2) primary care E/M visits for continuous patient care, and (3) certain types of specialist E/M visits, including those with inherent visit complexity. We address each of these distinguishable visit types in the following proposals.

d. Recognizing the Resource Costs for Different Types of E/M Visits

Rather than maintain distinctions in services and payment that are based on the current E/M visit codes, we believe we can better capture differential resources costs and minimize reporting and documentation burden by proposing several corollary payment policies and ratesetting adjustments. These additional proposals better reflect the important distinctions between the kinds of visits furnished to Medicare beneficiaries, and would no longer require complex and burdensome billing and documentation rules to effectuate payment.

In response to the CY 2018 comment solicitation on burden reduction for E/M visits (82 FR 53163 through 53166), we received several comments that highlighted the inadequacy of the E/M code set to accurately pay for the resources associated with furnishing visits, particularly for primary care visits, and visits associated with treating patients with particular conditions for which there is not additional procedural coding. One commenter stated that the current structure and valuation of the E/M code set inadequately describes the range of services provided by different specialties, and in particular primary care services. This commenter noted that although the 10 office/outpatient E/M codes make up the bulk of the services reported by primary care practitioners, the valuation does not reflect their particular resource costs. Another commenter pointed out that for specialties that principally rely on E/M visit codes to bill for their professional services, the complex medical decision making and the intensity of their visits is not reflected in the E/M code set or documentation guidelines. Additionally, we believe that when a separately identifiable visit is furnished in conjunction with a procedure, that there are certain duplicative resource costs that are also not accounted for by current coding and payment.

Therefore, we are proposing the following adjustments to better capture the variety of resource costs associated with different types of care provided in E/M visits: (1) An E/M multiple procedure payment adjustment to account for duplicative resource costs when E/M visits and procedures with global periods are furnished together; (2) HCPCS G-code add-ons to recognize additional relative resources for primary care visits and inherent visit complexity that require additional work beyond that which is accounted for in the single payment rates for new and established patient levels 2 through level 5 visits; (3) HCPCS G-codes to describe podiatric E/M visits; (4) an additional prolonged face-to-face services add-on G code; and (5) a technical modification to the PE methodology to stabilize the allocation of indirect PE for visit services (i) Accounting for E/M Resource Overlap between Stand-Alone Visits and Global Periods

Under the PFS, E/M services are generally paid in one of two ways: As standalone visits using E/M visit codes, or included in global procedural codes. In both cases, RVUs are allocated to the services to account for the estimated relative resources involved in furnishing professional E/M services. In the case of procedural codes with global periods,

the overall resource inputs reflect the costs of the E/M work considered to be typically furnished with the procedure. Therefore, the standalone E/M visit codes are not billable on the same day as the procedure codes unless the billing professional specifically indicates that the visit is separately identifiable from the procedure.

In cases where a physician furnishes a separately identifiable E/M visit to a beneficiary on the same day as a procedure, payment for the procedure and the E/M visit is based on rates generally developed under the assumption that these services are typically furnished independently. In CY 2017 PFS rulemaking, we noted that the current valuation for services with global periods may not accurately reflect much of the overlap in resource costs (81 FR 80209). We are particularly concerned that when a standalone E/M visit occurs on the same day as a 0-day global procedure, there are significant overlapping resource costs that are not accounted for. We believe that separately identifiable visits occurring on the same day as 0-day global procedures have resources that are sufficiently distinct from the costs associated with furnishing one of the 10 office/outpatient E/M visits to warrant payment adjustment. There are other existing policies under the PFS where we reduce payments if multiple procedures are furnished on the same day to the same patient. Medicare has a longstanding policy to reduce payment by 50 percent for the second and subsequent surgical procedures furnished to the same patient by the same physician on the same day, largely based on the presence of efficiencies in PE and pre- and post-surgical physician work. Effective January 1, 1995, the MPPR policy, with the same percentage reduction, was extended to nuclear medicine diagnostic procedures (CPT codes 78306, 78320, 78802, 78803, 78806, and 78807). In the CY 1995 PFS final rule with comment period (59 FR 63410), we indicated that we would consider applying the policy to other diagnostic tests in the future. In the CYs 2009 and 2010 PFS proposed rules (73 FR 38586 and 74 FR 33554, respectively), we stated that we planned to analyze nonsurgical services commonly furnished together (for example, 60 to 75 percent of the time) to assess whether an expansion of the MPPR policy could be warranted. MedPAC encouraged us to consider duplicative physician work, as well as PE, in any expansion of the MPPR policy. Finally, in the CY 2011 PFS final rule, CMS finalized the application of

the MPPR to always-therapy services on the justification that there was significant overlap in the PE portion of these services (75 FR 73233).

Using the surgical MPPR as a template, we are proposing that, as part of our proposal to make payment for the E/M levels 2 through 5 at a single PFS rate, we would reduce payment by 50 percent for the least expensive procedure or visit that the same physician (or a physician in the same group practice) furnishes on the same day as a separately identifiable E/M visit, currently identified on the claim by an appended modifier -25. We believe that the efficiencies associated with furnishing an E/M visit in combination with a same-day procedure are similar enough to those accounted for by the surgical MPPR to merit a reduction in the relative resources of 50 percent. We estimate based on CY 2017 Medicare claims data that applying a 50 percent MPPR to E/M visits furnished as separately identifiable services in the same day as a procedure would reduce expenditures under the PFS by approximately 6.7 million RVUs. To accurately reflect resource costs of the different types of E/M visits that we previously identified while maintaining work budget neutrality within this proposal, we are proposing to allocate those RVUs toward the values of the add-on codes that reflect the additional resources associated with E/M visits for primary care and inherent visit complexity, similar to existing policies. As we articulated in the CY 2012 PFS final rule with comment period, where the aggregate work RVUs within a code family change but the overall actual physician work associated with those services does not change, we make work budget neutrality adjustments to hold the aggregate work RVUs constant within the code family, while maintaining the relativity of values for the individual codes within that set (76 FR 73105).

(ii) Proposed HCPCS G-Code Add-Ons To Recognize Additional Relative Resources for Certain Kinds of Visits

The distribution of E/M visits is not uniform across medical specialties. We have found that certain specialists, like neurologists and endocrinologists, for example, bill higher level E/M codes more frequently than procedural specialists, such as dermatology. We believe this tendency reflects a significant and important distinction between the kinds of visits furnished by professionals whose treatment approaches are primarily reported using visit codes versus those professionals whose treatment approaches are

primarily reported using available procedural or testing codes. However, based on feedback we received from the medical professionals who furnish primary care and have visits with greater complexity, such as the comments cited above, we do not believe the current visit definitions and the associated documentation burdens are the most accurate descriptions of the variation in work. Instead, we believe these professionals have been particularly burdened by the documentation requirements given that so much of their medical treatment is described imperfectly by relatively generic visit codes.

Similarly stakeholders, such as the commenters responding to the CY 2018 PFS proposed rule, have articulated persuasively that visits furnished for the purpose of primary care also involve distinct resource costs. In developing this proposal, we consulted a variety of resources, including the American Academy of Family Physicians (AAFP) definition of primary care that states that the resource costs associated with furnishing primary care services particularly include time spent coordinating patient care, collaborating with other physicians, and communicating with patients (see <https://www.aafp.org/about/policies/all/primary-care.html>). Despite our efforts in recent years to pay separately for certain aspects of primary care services, such as through the chronic care management or the transitional care management services, the currently available coding still does not adequately reflect the full range of primary care services, nor does it allow payment to fully capture the resource costs involved in furnishing a face-to-face primary care E/M visit. We recognize that primary care services frequently involve substantial non-face-to-face work, and note that there is currently coding available to account for many of those resources, such as chronic care management (CCM), behavioral health integration (BHI), and prolonged non-face-to-face services. In light of the existing coding, this proposal only addresses the additional resources involved in furnishing the face-to-face portion of a primary care service. As the point of entry for many patients into the healthcare system, primary care visits frequently require additional time for communicating with the patient, patient education, consideration and review of the patient's medical needs. We believe the proposed value for the single payment rate for the E/M levels 2 through 5 new and established patient visit codes does

not reflect these additional resources inherent to primary care visits, as evidenced by the fact that primary care visits are generally reported using level 4 E/M codes. Therefore, to more accurately account for the type and intensity of E/M work performed in primary care-focused visits, we are proposing to create a HCPCS add-on G-code that may be billed with the generic E/M code set to adjust payment to account for additional costs beyond the typical resources accounted for in the single payment rate for the levels 2 through 5 visits.

We are proposing to create a HCPCS G-code for primary care services, GPC1X (Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an established patient evaluation and management visit)). As we believe a primary care visit is partially defined by an ongoing relationship with the patient, this code would describe furnishing a visit to an established patient. HCPCS code GPC1X can also be reported for other forms of face-to-face care management, counseling, or treatment of acute or chronic conditions not accounted for by other coding. We note that we believe the additional resources to address inherent complexity in E/M visits associated with primary care services are associated only with stand-alone E/M visits as opposed to separately identifiable visits furnished within the global period of a procedure. Separately identifiable visits furnished within a global period are identified on the claim using modifier -25, and would be subject to the MPPR. We note that we have created separate coding that describes non-face-to-face care management and coordination, such as CCM and BHI; however, these services describe non-face-to-face care and can be provided by any specialty so long as they meet the requirements for those codes. HCPCS code GPC1X is intended to capture the additional resource costs, beyond those involved in the base E/M codes, of providing face-to-face primary care services for established patients. HCPCS code GPC1X would be billed in addition to the E/M visit for an established patient when the visit includes primary care services. For HCPCS code GPC1X, we are proposing a work RVU of 0.07, physician time of 1.75 minutes, a PE RVU of 0.07, and an MP RVU of 0.01. This proposed valuation accounts for the additional resource costs associated with

furnishing primary care that distinguishes E/M primary care visits from other types of E/M visits, and maintains work budget neutrality across the office/outpatient E/M code set. Furthermore, the proposed add-on G-code for primary care-focused E/M services would help to mitigate potential payment instability that could result from our adoption of single payment rates that apply for E/M code levels 2 through 5. As this add-on G-code would account for the inherent resource costs associated with furnishing primary care E/M services, we anticipate that it would be billed with every primary care-focused E/M visit for an established patient. While we expect that this code will mostly be utilized by the primary care specialties, such as family practice or pediatrics, we are also aware that, in some instances, certain specialists function as primary care practitioners—for example, an OB/GYN or a cardiologist. Although the definition of primary care is widely agreed upon by the medical community and we intend for this G-code to account for the resource costs of performing those types of visits, regardless of Medicare enrollment specialty, we are also seeking comment on how best to identify whether or not a primary care visit was furnished particularly in cases where a specialist is providing those services. For especially complex patients, we also expect that it may be billed alongside the proposed new code for prolonged E/M services described later in this section. We are also seeking comment on whether this policy adequately addresses the deficiencies in CPT coding for E/M services in describing current medical practice, and concerns about the impact on payment for primary care and other services under the PFS. Given the broad scope of our proposals related to E/M services, we are seeking feedback on any unintended consequences of those proposals. We are also seeking comment on any other concerns related to primary care that we might consider for future rulemaking.

We are also proposing to create a HCPCS G-code to be reported with an E/M service to describe the additional resource costs for specialty professionals for whom E/M visit codes make up a large percentage of their overall allowed charges and whose treatment approaches we believe are generally reported using the level 4 and level 5 E/M visit codes rather than procedural coding. Due to these factors, the proposed single payment rate for E/M levels 2 through 5 visit codes would not necessarily reflect the

resource costs of those types of visits. Therefore, we are proposing to create a new HCPCS code GCG0X (Visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, cardiology, or interventional pain management-centered care (Add-on code, list separately in addition to an evaluation and management visit)). Given their billing patterns, we believe that these are specialties that apply predominantly non-procedural approaches to complex conditions that are intrinsically diffuse to multi-organ or neurologic diseases. While some of these specialties are surgical in nature, we believe these surgical specialties are providing increased non-procedural care of high complexity in the Medicare population. The high complexity of these services is reflected in the large proportion of level 4 and level 5 visits that we believe are reported by these specialties, and the extent to which E/M visits are a high proportion of these specialties' total allowed charges. Consequently, these are specialties for which the resource costs of the visits they typically perform are not fully captured in the proposed single payment rate for the levels 2 through level 5 office/outpatient visit codes. When billed in conjunction with standalone office/outpatient E/M visits for new and established patients, the combined valuation more accurately accounts for the intensity associated with higher level E/M visits. To establish a value for this add-on service to be applied with a standalone E/M visit, we are proposing a crosswalk to 75 percent of the work and time of CPT code 90785 (Interactive complexity), which results in a work RVU of 0.25, a PE RVU of 0.07, and an MP RVU of 0.01, as well as 8.25 minutes of physician time based on the CY 2018 valuation for CPT code 90785. Interactive complexity is an add-on code that may be billed when a psychotherapy or psychiatric service requires more resources due to the complexity of the patient. We believe that the proposed valuation for CPT code 90785 would be an accurate representation of the additional work associated with the higher level complex visits. We note that we believe the additional resources to address inherent complexity in E/M visits are associated with stand-alone E/M visits. Additionally, we acknowledge that resource costs for primary care are reflected with the proposed HCPCS code GPC1X, as opposed to the

proposed HCPCS code GCG0X. We note that there are additional codes available that include face-to-face and non-face-to-face work, depending on the code, that previously would have been considered part of an E/M visit, such as the codes for CCM, BHI, and CPT code 99483 (Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (*e.g.*, basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (*e.g.*, functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (*e.g.*, home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (*e.g.*, rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver), which were developed to reflect the additional work of those practitioners furnishing primary care visits. Likewise, we are proposing that practitioners in the specialty of psychiatry would not use either add-on code because psychiatrists may utilize CPT code 90785 to describe work that might otherwise be reported with a level 4 or level 5 E/M visit.

We are seeking comment on both of these proposals.

(iii) Proposed HCPCS G-Code To Describe Podiatric E/M Visits

As described earlier, the vast majority of podiatric visits are reported using lower level E/M codes, with most E/M visits billed at a level 2 or 3, reflecting the type of work done by podiatrists as part of an E/M visit. Therefore, while the proposed consolidation of

documentation and payment for E/M code levels 2 through 5 is intended to better reflect the universal elements of E/M visits across specialties and patients, we believe that podiatric E/M visits are not accurately represented by the consolidated E/M structure. In order for payment to reflect the resource costs of podiatric visits, we are also proposing to create two HCPCS G-codes, HCPCS codes GPD0X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, new patient) and GPD1X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, established patient), to describe podiatric E/M services. Under this proposal, podiatric E/M services would be billed using these G-codes instead of the generic office/outpatient E/M visit codes (CPT codes 99201 through 99205 and 99211 through 99215). We propose to create these separate G-codes for podiatric E/M services to differentiate the resources associated with podiatric E/M visits rather than proposing a negative add-on adjustment relative to the proposed single payment rates for the generic E/M levels 2 through 5 codes. Therefore, we are proposing to create separate coding to describe these services, taking into account that most podiatric visits are billed as level 2 or 3 E/M codes. We based the coding structure and code descriptor on CPT codes 92004 (Ophthalmological services: Medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits) and 92012 (Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient), which describe visits specific to ophthalmology. To accurately reflect payment for the resource costs associated with podiatric E/M visits, we are proposing a work RVU of 1.35, a physician time of 28.11 minutes, and direct PE inputs totaling \$22.53 for HCPCS code GPD0X, and a work RVU of 0.85, physician time of 21.60 minutes, and direct PE inputs totaling \$17.07 for HCPCS code GPD1X. These values are based on the average rate for the level 2 and 3 E/M codes (CPT codes 99201–99203 and CPT codes 99211–99212, respectively), weighted by podiatric volume.

(iv) Proposed Adjustment to the PE/HR Calculation

As we explain in section II.B. Determination of Practice Expense (PE) Relative Value Units (RVUs), of this

proposed rule, we generally allocate indirect costs for each code on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. Indirect expenses include administrative labor, office expense, and all other PEs that are not directly attributable to a particular service for a particular patient. Generally, the proportion of indirect PE allocated to a service is determined by calculating a PE/HR based upon the mix of specialties that bill for a service.

As described earlier, E/M visits comprise a significant portion of allowable charges under the PFS and are used broadly across specialties such that our proposed changes can greatly impact the change in payment at the specialty level and at the practitioner level. Our proposals seek to simplify payment for E/M visit levels 2 through 5, and to additionally take into consideration that there are inherent differences in primary care-focused E/M services and in more complex E/M services such that those visits involve greater relative resources, while seeking to maintain overall payment stability across specialties. However, establishing a single PFS rate for new and established patient E/M levels 2 through-5 would have a large and unintended effect on many specialties due to the way that indirect PE is allocated based on the mixture of specialties that furnish a service. The single payment rates proposed for E/M levels 2 through 5 cannot reflect the indirect PE previously allocated differentially across those 8 codes. Historically, a broad blend of specialties and associated PE/HR has been used in the allocation of indirect PE and MP RVUs to E/M services to determine payment rates for these services. As this proposal significantly alters the PE/HR allocation for the office/outpatient E/M codes and any previous opportunities for the public to comment on the data would not have applied to these kinds of E/M services, we do not believe it is in the public interest to allow the allocation of indirect PE to have such an outsized impact on the payment rates for this proposal. Due to the magnitude of the proposed coding and payment changes for E/M visits, it is unclear how the distribution of specialties across E/M services would change. We are concerned that such changes could produce anomalous results for indirect PE allocations since we do not yet know the extent to which specialties would utilize the proposed simplified E/M codes and proposed G-codes. In the past, when utilization data are not

available or do not accurately reflect the expected specialty mix of a new service, we have proposed to crosswalk the PE/HR value from another specialty (76 FR 73036). As such, we are proposing to create a single PE/HR value for E/M visits (including all of the proposed HCPCS G-codes discussed above) of approximately \$136, based on an average of the PE/HR across all specialties that bill these E/M codes, weighted by the volume of those specialties' allowed E/M services. We believe that this is consistent with the methodology used to develop the inputs for the proposed simplified E/M payment for the levels 2 through 5 E/M visit codes, and that, for purposes of consistency, the new PE/HR should be applied across the additional E/M codes. We believe a new PE/HR value would more accurately reflect the mix of specialties billing both the generic E/M code set and the add-on codes. If we finalize this proposal, we will consider revisiting the PE/HR after several years of claims data become available.

(v) Proposed HCPCS G-Code for Prolonged Services

Time is often an important determining factor in the level of care, which we consider in our proposal described earlier that physicians and other practitioners can use time as the basis for documenting and billing the appropriate level of E/M visit for purposes of Medicare payment. Currently there is inadequate coding to describe services where the primary resource of a service is physician time. CPT codes 99354 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting

requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)) and 99355 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)) describe additional time spent face-to-face with a patient and may be billed when the applicable amount of time exceeds the typical service time of the primary procedure.

Stakeholders have informed CMS that the "first hour" time threshold in the descriptor for CPT code 99354 is difficult to meet and is an impediment to billing these codes (81 FR 80228). In response to stakeholder feedback and as part of our proposal to implement a single payment rate for E/M visit levels 2 through 5 while maintaining payment accuracy across the specialties, we are proposing to create a new HCPCS code GPRO1 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)). Given that the physician time of HCPCS code GPRO1 is half of the physician time assigned to CPT code 99354, we are proposing a work RVU of 1.17, which is half the work RVU of CPT code 99354.

In order to estimate the potential impact of these proposed changes, we modeled the results of several options and examined the estimated resulting impacts in overall Medicare allowed charges by physician specialty. In order to isolate the potential impact of these changes from other concurrent proposed changes, we conducted this analysis largely using the code set, policies, and input data that we developed in establishing PFS rates for CY 2018. However, we used the suite of ratesetting programs that included several updates relevant for CY 2019 rulemaking. Consequently, we conducted our analysis regarding potential specialty-level impacts in order to identify the specialties with allowed charges most likely to be impacted by the potential change. We believe these estimates illustrate the magnitude of potential changes for certain physician specialties. However, because our modeling did not account for the full range of technical changes in the input data used in PFS ratesetting, the potential impacts for these isolated policies are relatively imprecise, especially compared to the specialty-level impacts displayed in section VII. of this proposed rule.

Tables 21, 22, and 23 show the estimated changes, for certain physician specialties, and isolated from other proposed changes, in expenditures for PFS services based on potential changes for E/M coding and payment. We note that we are making additional data available to the public to inform our modeling on our E/M coding and payment proposals, available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html>.

TABLE 21—UNADJUSTED ESTIMATED SPECIALTY IMPACTS OF PROPOSED SINGLE RVU AMOUNTS FOR OFFICE/OUTPATIENT E/M 2 THROUGH 5 LEVELS

Specialty	Allowed charges (in millions)	Estimated potential impact of valuing levels 2–5 together, without additional adjustments
PODIATRY	\$2,022	12%.
DERMATOLOGY	3,525	7%.
HAND SURGERY	202	6%.
OTOLARNGOLOGY	1,220	5%.
ORTHOPEDIC SURGERY	3,815	4%.
ORAL/MAXILLOFACIAL SURGERY	57	4%.
COLON AND RECTAL SURGERY	168	Less than 3% estimated increase in overall payment.
OBSTETRICS/GYNECOLOGY	664	
OPTOMETRY	1,276	
PHYSICIAN ASSISTANT	2,253	
PLASTIC SURGERY	387	
ALLERGY/IMMUNOLOGY	240	Minimal change to overall payment.
ANESTHESIOLOGY	1,995	
AUDIOLOGIST	67	
CARDIAC SURGERY	313	

TABLE 21—UNADJUSTED ESTIMATED SPECIALTY IMPACTS OF PROPOSED SINGLE RVU AMOUNTS FOR OFFICE/OUTPATIENT E/M 2 THROUGH 5 LEVELS—Continued

Specialty	Allowed charges (in millions)	Estimated potential impact of valuing levels 2–5 together, without additional adjustments
CHIROPRACTOR	789	
CRITICAL CARE	334	
EMERGENCY MEDICINE	3,196	
FAMILY PRACTICE	6,382

TOTAL	93,486	0.

Table 21 characterizes the estimated overall impact for certain physician specialties, of establishing single payment rates for the new and established patient E/M code levels 2 through 5, without any of the additional coding or proposed payment adjustments, including the estimated

percentage change for the specialties with an estimated increase or decrease in payment greater than 3 percent. Those specialties that tend to bill lower level E/M visits would benefit the most from the proposed change to single PFS payment rates, while those specialties that tend to bill more higher level E/M

visits would see the largest decreases in payment with the change to a single PFS rate. The single payment rate for E/M code levels 2 through 5 would benefit podiatry the most because, due to the nature of most podiatric E/M visits, they tend to bill only level 2 and 3 E/M visits.

TABLE 22—SPECIALTY SPECIFIC IMPACTS INCLUDING PAYMENT ACCURACY ADJUSTMENTS

Specialty	Allowed charges (in millions)	Estimated potential impact of valuing levels 2–5 together, with additional adjustments
OBSTETRICS/GYNECOLOGY	\$664	4%.

Table 22 characterizes the estimated overall impact for certain physician specialties, including the proposed adjustments have been made to reflect the distinctions in resource costs among certain types of E/M visits. In other words, Table 22 shows the proposed impacts of adopting the proposed single payment rates for new and established patient E/M visit levels 2 through 5, the application of a MPPR to E/M visits when furnished by the same practitioner (or practitioner in the same practice) on the same-day as a global procedure code, the add-on G-codes for primary care-focused services and inherent visit complexity, and the technical adjustments to the PE/HR value. Table 22 includes the estimated percentage change for the specialties with an estimated increase or decrease in payment greater than three percent. In our modeling, we assumed E/M visits for specialties that provide a significant

portion of primary care like family practice, internal medicine, pediatrics and geriatrics utilized the G-code for visit complexity inherent to evaluation and management associated with primary medical care services with every office/outpatient visit furnished. Also for the purposes of our modeling, we assumed that specialties including endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or interventional pain management-centered care utilized the G-code for visit complexity inherent to evaluation and management with every office/ outpatient E/M visit. Table 22 does not include the impact of the use of the additional prolonged services code. The specialties that we estimate would experience a decrease in payments are those that bill a large portion of E/M visits on the same day as procedures,

and would see a reduction based on the application of the MPPR adjustments. Some of these specialties, such as allergy/immunology and cardiology are also negatively impacted by the proposed single payment rates themselves, although not to the same degree as they would have been without any adjustments to provide alternate coding to reflect their resource costs, as illustrated in Table 21. The specialties that we estimate will see an increase in payments from these proposals, like psychiatry, nurse practitioner, and endocrinology, are seeing payment increases due to a combination of the single payment rate and the add-on codes for inherent visit complexity.

As an example, in CY 2018, a physician would bill a level 4 E/M visit and document using the existing documentation framework for a level 4 E/M visit. Their payment rate would be approximately \$109 in the office setting.

If these proposals are finalized, the physician would bill the same visit code for a level 4 E/M visit, documenting the visit according to the minimum documentation requirements for a level 2 E/M visit and/or based on their choice of using time, MDM, or the 1995 or 1997 guidelines, plus either of the proposed add-on codes (HCPCS codes GPC1X or GCG0X) depending on the type of patient care furnished, and could bill one unit of the proposed prolonged services code (HCPCS code GPRO1) if they meet the time threshold for this code. The combined payment rate for the generic E/M code and HCPCS code GPRO1 would be approximately \$165 with HCPCS code GPC1X and approximately \$177 with HCPCS code GCG0X.

We welcome comments on all of these proposals.

(vi) Alternatives Considered

We considered a number of other options for simplifying coding and payment for E/M services to align with the proposed reduction in documentation requirements and better account for the resources associated with inherent complexity, visit complexity, and visits furnished on the same day as a 0-day global procedure. For example, we considered establishing single payment rates for new and established patients for combined E/M visit levels 2 through 4, as opposed to combined E/M visit levels 2 through 5. This option would have retained a separately valued payment rate for level 5 visits that would be reserved for the most complex visits or patients. However, maintaining a separately valued payment rate for this higher level visit based on the current CPT code definition has the consequence of preserving some of the current coding distinctions within the billing systems. Ultimately we believe that providing for two levels of payment and documentation (setting aside level 1 visits which are primarily visits by clinical staff) relieves more burden than three levels, and that two levels plus the proposed add-on coding more accurately captures the differential resource costs involved in furnishing E/M services to all patients. If we retained a coding scheme involving three or more levels of E/M visits, it would not be appropriate to apply a minimum documentation requirement as we propose to do. We would need to develop documentation requirements unique to each of the higher level visits. There would be a greater need for program integrity mechanisms to prevent upcoding and ensure that practitioners who chose to report the

highest level visit justified their selection of code level. We could still simplify the documentation requirements for E/M visits relative to the current framework, but would need a more extensive, differential documentation framework than what we propose in this rule, in order to distinguish among visit levels. We are interested in stakeholder input on the best number of E/M visit levels and how to best achieve a balance between number of visit levels and simpler, updated documentation rules. We are seeking input as to whether these two aspects of our proposals together can reduce burden and ensure accurate payment across the broad range of E/M visits, including those for complex and high need beneficiaries.

TABLE 23—UNADJUSTED ESTIMATED SPECIALTY IMPACTS OF SINGLE PFS RATE FOR OFFICE/OUTPATIENT E/M LEVELS 2 THROUGH 4

Specialty	Allowed charges (millions)	Impact (percent)
Podiatry	\$2,022	10
Dermatology ...	3,525	6
Hand Surgery	202	5
Oral/Maxillo-facial Surgery	57	4
Otolaryngology	1,220	4
Cardiology	6,723	-3
Hematology/Oncology	1,813	-3
Neurology	1,565	-3
Rheumatology	559	-6
Endocrinology	482	-8

Note: All other specialty level impacts were within +/- 3%.

Table 23 shows the specialties that would experience the greatest increase or decrease by establishing single payment rates for E/M visit levels 2 through 4, while maintaining the value of the level 1 and the level 5 E/M visits. The specialty level impacts are similar to those in Table 21 as the specialties that bill more higher level visits do not benefit by maintaining a distinct payment for the level 5 visit as much as they experience a reduction in the rate for a level 4 visit. Similarly, the specialties that bill predominantly lower level visits would still benefit disproportionately to the increase in rate for the level 2 and level 3 visits.

Section 101(f) of the MACRA, enacted on April 16, 2015, added a new subsection (r) under section 1848 of the Act entitled Collaborating with the Physician, Practitioner, and Other Stakeholder Communities to Improve Resource Use Measurement. Section 1848(r) of the Act requires the

establishment and use of classification code sets: Care episode and patient condition groups and codes; and patient relationship categories and codes. As described in the CY 2018 PFS final rule, we finalized use of Level II HCPCS Modifiers as the patient relationship codes and finalized that Medicare claims submitted for items and services furnished by a physician or applicable practitioner on or after January 1, 2018, should include the applicable patient relationship codes, as well as the NPI of the ordering physician or applicable practitioner (if different from the billing physician or applicable practitioner). We noted that for CY 2018, reporting of the patient relationship modifiers would be voluntary and the use and selection of the modifiers would not be a condition of payment (82 FR 53234). The patient relationship codes are as follows: X1: Continuous/broad; X2: Continuous/focused; X3: Episodic/focused; X4: Episodic/broad; and X5: Only as ordered by another physician. These codes are to be used to help define and distinguish the relationship and responsibility of a clinician with a patient at the time of furnishing an item or service, facilitate the attribution of patients and episodes to one or more clinicians, and to allow clinicians to self-identify their patient relationships.

We considered proposing the use of these codes to adjust payment for E/M visits to the extent that these codes are indicative of differentiated resources provided in E/M visits, and we considered using these codes as an alternative to the proposed use of G-codes to reflect visit complexity inherent to evaluation and management in primary care and certain other specialist services, as a way to more accurately reflect the resource costs associated with furnishing different kinds of E/M visits. We are seeking comment on this alternative. We are particularly interested in whether the modifiers would accurately reflect the differences between resources for E/M visits across specialties and would therefore be useful to adjust payment differentially for the different types of E/M visits that we previously identified.

e. Emergency Department and Other E/M Visit Settings

As we mentioned above, the E/M visit code set is comprised of individual subsets of codes that are specific to various clinical settings including office/outpatient, observation, hospital inpatient, emergency department, critical care, nursing facility, domiciliary or rest home, and home services. Some of these code subsets have three E/M levels of care, while

others have five. Some of these E/M code subsets distinguish among levels based heavily on time, while others do not. Recent public comments have asserted that some E/M code subsets intersect more heavily than others with hospital conditions of participation (CoP). For example, the American Psychiatric Association (APA) submitted a letter to CMS indicating that Medicare requires specific documentation in the medical record as part of the CoPs for inpatient psychiatric facilities. The APA believed that the required initial psychiatric evaluation for inpatients currently closely follows the E/M criteria for CPT codes 99221–99223, which are the codes that would be used to bill for these services. The APA stated that any changes in these E/M codes, without corresponding changes in the CoPs, could lead to the unintended consequence of adding to the burden of documentation by essentially requiring two different sets of data or areas of focus to be included, or two different documentation formats being required.

Regarding emergency department visits (CPT codes 99281–99285), we received more recent feedback through our coordinated efforts with ONC this year, emphasizing that these codes may benefit from a coding or payment compression into fewer levels of codes, or that documentation rules may need to be reduced or altered. However, in public comments to the CY 2018 PFS proposed rule, commenters noted several issues unique to the emergency department setting that we believe require further consideration. For example, commenters stated that intensity, and not time, is the main determinant of code level in emergency departments. They requested that CMS use caution in changing required elements for documentation so that medical information used for legal purposes (for example, meeting the prudent layperson standard) is not lost. They urged caution and requested that CMS not immediately implement any major changes. They recommended refocusing documentation on presenting conditions and medical decision-making. Some commenters were supportive of leaving it largely to the discretion of individual practitioners to determine the degree to which they should perform and document the history and physical exam in the emergency department setting. Other commenters suggested that CMS encourage use of standardized guidelines and minimum documentation requirements to facilitate post-treatment evaluation, as

well as analysis of records for various clinical, legal, operational and other purposes. The commenters discussed the importance of extensive histories and exams in emergency departments, where usually there is no established relationship with the patient and differential diagnosis is critical to rule out many life-threatening conditions. They were cognizant of the need for a clear record of services rendered and the medical necessity for each service, procedure, diagnostic test, and MDM performed for every patient encounter.

In addition, although the RUC is in the process of reevaluating this code set, some commenters stated that the main issue is not that the emergency department visit codes themselves are undervalued. Rather, these commenters believed that a greater percentage of emergency department visits are at a higher acuity level, yet payers often do not pay at a higher level of care and the visit is often inappropriately down-coded based on retrospective review. These commenters believed that the documentation needed to support a higher level of care is too burdensome or subjective. In addition, it seems that policy proposals regarding emergency department visits billed by physicians might best be coordinated with parallel changes to payment policy for facility billing of these codes, which would require more time and analyses.

Accordingly, we are not proposing any changes to the emergency department E/M code set or to the E/M code sets for settings of care other than office-based and outpatient settings at this time. However, we are seeking public comment on whether we should make any changes to it in future years, whether by way of documentation, coding, and/or payment and, if so, what the changes should be.

Consistent with public feedback to date, we are taking a step-wise approach and limiting our policy proposals this year to the office/outpatient E/M code set (and the limited proposal above regarding documentation of medical necessity for home visits in lieu of office visits). We may consider expanding our efforts more broadly to additional sections of the E/M visit code set in future years, and are seeking public comment broadly on how we might proceed in this regard.

f. Proposed Implementation Date

We propose that these proposed E/M visit policies would be effective January 1, 2019. However, we are sensitive to commenters' suggestions that we should consider a multi-year process and proceed cautiously, allowing adequate time to educate practitioners and their

staff; and to transition clinical workflows, EHR templates, institutional processes and policies (such as those for provider-based practitioners), and other aspects of practitioner work that would be impacted by these policy changes. Our proposed documentation changes for office/outpatient E/M visits would be optional, and practitioners could choose to continue to document these visits using the current framework and rules, which may reduce the need for a delayed implementation. Nevertheless, practitioners who choose a new documentation framework may need time to deploy it. A delayed implementation date for our documentation proposals would also allow the AMA time to develop changes to the CPT coding definitions and guidance prior to our implementation, such as changes to MDM or code definitions that we could then consider for adoption. It would also allow other payers time to react and potentially adjust their policies. Accordingly, we are seeking comment on whether a delayed implementation date, such as January 1, 2020, would be appropriate for our proposals.

J. Teaching Physician Documentation Requirements for Evaluation and Management Services

1. Background

Per 42 CFR part 415, subpart D, Medicare Part B makes payment under the PFS for teaching physician services when certain conditions are met, including that medical record documentation must reflect the teaching physician's participation in the review and direction of services performed by residents in teaching settings. Under § 415.172(b), for certain procedural services, the participation of the teaching physician may be demonstrated by the notes in the medical records made by a physician, resident, or nurse; and for E/M visits, the teaching physician is required to personally document their participation in the medical record. We received stakeholder feedback suggesting that documentation requirements for E/M services furnished by teaching physicians are burdensome and duplicative of notations that may have previously been included in the medical records by residents or other members of the medical team.

2. Proposed Implementation

We are proposing to revise our regulations to eliminate potentially duplicative requirements for notations that may have previously been included in the medical records by residents or

other members of the medical team. These proposed changes are intended to align and simplify teaching physician E/M service documentation requirements. We believe these proposed changes will reduce burden and duplication of effort for teaching physicians. We are proposing to amend § 415.172(b) to provide that, except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document that the teaching physician was present at the time the service is furnished. Additionally, the revised paragraph would specify that the presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by a physician, resident, or nurse. We are also proposing to amend § 415.174, by deleting paragraph (a)(3)(v) which currently requires the teaching physician to document the extent of their participation in the review and direction of the services furnished to each beneficiary, and adding new paragraph (a)(6), to provide that the medical record must document the extent of the teaching physician's participation in the review and direction of services furnished to each beneficiary, and that the extent of the teaching physician's participation may be demonstrated by the notes in the medical records made by a physician, resident, or nurse.

K. Solicitation of Public Comments on the Low Expenditure Threshold Component of the Applicable Laboratory Definition Under the Medicare Clinical Laboratory Fee Schedule (CLFS)

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for clinical diagnostic laboratory tests (CDLTs) under the CLFS. The CLFS final rule titled, Medicare Clinical Diagnostic Laboratory Tests Payment System final rule (CLFS final rule), published in the **Federal Register** on June 23, 2016, implemented section 1834A of the Act. Under the CLFS final rule (81 FR 41036), "reporting entities" must report to CMS during a "data reporting period" "applicable information" (that is, certain private payer data) collected for a "data collection period" for their component

"applicable laboratories." In general, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected for the 6-month data collection period and reported to us in the 3-month data reporting period, and is equal to the weighted median of the private payor rates for the CDLT.

An applicable laboratory is defined at § 414.502, in part, as an entity that is a laboratory (as defined under the Clinical Laboratory Improvement Amendments (CLIA) definition at § 493.2) that bills Medicare Part B under its own National Provider Identifier (NPI). In addition, an applicable laboratory is an entity that receives more than 50 percent of its Medicare revenues during a data collection period from the CLFS and/or the PFS. We refer to this component of the applicable laboratory definition as the "majority of Medicare revenues threshold." The definition of applicable laboratory also includes a "low expenditure threshold" component, which requires an entity to receive at least \$12,500 of its Medicare revenues from the CLFS in a data collection period for its CDLTs that are not advanced diagnostic laboratory tests (ADLTs).

We established \$12,500 as the low expenditure threshold because we believed it achieved a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a CDLT, and minimizing the reporting burden for laboratories that receive a relatively small amount of revenues under the CLFS. In the CLFS final rule (81 FR 41051), we estimated that 95 percent of physician office laboratories and 55 percent of independent laboratories would not be required to report applicable information under our low expenditure threshold criterion. Although we substantially reduced the number of laboratories qualifying as applicable laboratories (that is, approximately 5 percent of physician office laboratories and approximately 45 percent of independent laboratories) we estimated that the percentage of Medicare utilization would remain high. That is, approximately 5 percent of physician office laboratories would account for approximately 92 percent of CLFS spending on physician office laboratories and approximately 45 percent of independent laboratories would account for approximately 99 percent of CLFS spending on independent laboratories (81 FR 41051).

Recently, we have heard from some laboratory stakeholders that the low expenditure threshold excludes most physician office laboratories and many

small independent laboratories from reporting applicable information, and that by excluding so many laboratories, the payment rates under the new private payor rate-based CLFS reflects incomplete data, and therefore, inaccurate CLFS pricing. However, it is our understanding that physician offices are generally not prepared to identify, collect, and report each unique private payor rate from each private payor for each laboratory test code on the CLFS and the volume associated with each unique private payor rate. As such, we believe revising the low expenditure threshold so that more physician office laboratories are required to report applicable information would be a very significant administrative burden on physician's offices. We also believe that increasing participation from physician office laboratories would have minimal overall impact on payment rates given that the weighted median of private payor rates is dominated by the laboratories with the largest test volume.

However, we recognize from stakeholders that some physician office laboratories and small independent laboratories that are not applicable laboratories because they do not meet the current low expenditure threshold may still want to report applicable information, despite the administrative burden associated with qualifying as an applicable laboratory. Therefore, we are seeking public comments on reducing the low expenditure threshold by 50 percent, from \$12,500 to \$6,250, in CLFS revenues during a data collection period. Since more physician office laboratories would meet the low expenditure threshold, we would expect such an approach to increase the level of applicable information reported by physician office laboratories and small independent laboratories. We are seeking public comments regarding the potential administrative burden on physician office laboratories and small independent laboratories that would result from reducing the low expenditure threshold. We are also soliciting public comments on an approach that would increase the low expenditure threshold by 50 percent, from \$12,500 to \$18,750, in CLFS revenues received in a data collection period. Since fewer physician office laboratories and small independent laboratories would meet the definition of applicable laboratory, we would expect such an approach to result in a decreased level of applicable information reported. For a complete discussion of our solicitation of comments on the low expenditure threshold component of the definition

of applicable laboratory under the Medicare CLFS, we refer readers to section III.A. of this proposed rule.

L. GPCI Comment Solicitation

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(D) of the Act requires us to establish the GPCIs using the most recent data available. The last GPCI update was implemented in CY 2017; therefore, we are required to review and make any necessary revisions to the GPCIs for CY 2020. Please refer to the CY 2017 PFS final rule with comment period for a discussion of the last GPCI update (81 FR 80261 through 80270). Some stakeholders have continued to express concerns regarding some of the data sources used in developing the indices for PFS geographic adjustment purposes, specifically that we use residential rent data as a proxy for commercial rent in the rent index component of the PE GPCI—that is, the data that are used to develop the office rent component of the PE GPCI. We will continue our efforts to identify a nationally representative commercial rent data source that could be made available to CMS. In support of that effort, we are particularly interested in, and seek comments regarding potential sources of commercial rent data for potential use in the next GPCI update for CY 2020.

M. Therapy Services

1. Repeal of the Therapy Caps and Limitation To Ensure Appropriate Therapy

Section 50202 of the Bipartisan Budget Act of 2018 (BBA of 2018) amended section 1833(g) of the Act, effective January 1, 2018, to repeal the application of the Medicare outpatient therapy caps and the therapy cap exceptions process while retaining and adding limitations to ensure therapy services are furnished when appropriate. Section 50202 also adds section 1833(g)(7)(A) of the Act to require that after expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the previous therapy cap amounts, all therapy suppliers and providers must continue to use an appropriate modifier such as the KX modifier on claims for subsequent services in order for Medicare to pay for the services. We implemented this provision by continuing to use the KX modifier. By applying the KX modifier to the claim, the therapist or therapy provider is confirming that the services are medically necessary as justified by

appropriate documentation in the medical record. Just as with the incurred expenses for the prior therapy cap amounts, there is one amount for physical therapy (PT) and speech language pathology (SLP) services combined and a separate amount for occupational therapy (OT) services. These KX modifier threshold amounts are indexed annually by the Medicare Economic Index (MEI). For CY 2018, this KX modifier threshold amount is \$2,010 for PT and SLP services combined, and \$2,010 for OT. After the beneficiary's incurred expenditures for outpatient therapy services exceed the KX modifier threshold amount for the year, claims for outpatient therapy services without the KX modifier are denied.

Along with the KX modifier thresholds, section 50202 also adds section 1833(g)(7)(B) of the Act that retains the targeted medical review (MR) process (first established through section 202 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA)), but at a lower threshold amount of \$3,000. For CY 2018 (and each successive calendar year until 2028, at which time it is indexed annually by the MEI), the MR threshold is \$3,000 for PT and SLP services and \$3,000 for OT services. The targeted MR process means that not all claims exceeding the MR threshold amount are subject to review as they once were.

Section 1833(g)(8) of the Act, as redesignated by section 50202 of the BBA of 2018, retains the provider liability procedures which first became effective January 1, 2013, extending limitation of liability protections to beneficiaries who receive outpatient therapy services, when services are denied for certain reasons, including failure to include a necessary KX modifier.

2. Proposed Payment for Outpatient PT and OT Services Furnished by Therapy Assistants

Section 53107 of the Bipartisan Budget Act of 2018 (BBA of 2018) amended the Act to add a new subsection 1834(v) that addresses payment for outpatient therapy services for which payment is made under section 1848 or section 1834(k) of the Act that are furnished on or after January 1, 2022, in whole or in part by a therapy assistant (as defined by the Secretary). The new section 1834(v)(1) of the Act provides for payment of those services at 85 percent of the otherwise applicable Part B payment amount for the service. In accordance with section 1834(v)(1) of the Act, the reduced payment amount for such outpatient

therapy services is applicable when payment is made directly under the PFS as specified in section 1848 of the Act, for example when payment is made to therapists in private practice (TPPs); and when payment is made based on the PFS as specified in section 1834(k)(3) of the Act, for example, when payment is made for outpatient therapy services identified in sections 1833(a)(8) and (9) of the Act, including payment to providers that submit institutional claims for therapy services such as outpatient hospitals, rehabilitation agencies, skilled nursing facilities, home health agencies and comprehensive outpatient rehabilitation facilities (CORFs). The reduced payment rate under section 1834(v)(1) of the Act for outpatient therapy services when furnished in whole or in part by a therapy assistant is not applicable to outpatient therapy services furnished by critical access hospitals for which payment is made as specified in section 1834(g) of the Act.

To implement this payment reduction, section 1834(v)(2)(A) of the Act requires us to establish a new modifier, in a form and manner specified by the Secretary, by January 1, 2019 to indicate, in the case of an outpatient therapy service furnished in whole or in part by a therapy assistant, that the service was furnished by a therapy assistant. Although we generally consider all genres of outpatient therapy services together (PT/OT/SLP), we do not believe there are “therapy assistants” in the case of SLP services, so we propose to apply the new modifier only to services furnished in whole or in part by a physical therapist assistant (PTA) or an occupational therapist assistant (OTA). Section 1834(v)(2)(B) of the Act requires that each request for payment or bill submitted for an outpatient PT or OT service furnished in whole or in part by a therapy assistant on or after January 1, 2020, must include the established modifier. As such, the modifier will be required to be reported on claims for outpatient PT and OT services with dates of service on and after January 1, 2020, when the service is furnished in whole or in part by a therapy assistant, regardless of whether the reduced payment under section 1834(v)(1) of the Act is applicable. However, the required payment reductions do not apply for these services until January 1, 2022, as required by section 1834(v)(1) of the Act.

To implement this provision, we are proposing to establish two new modifiers to separately identify PT and OT services that are furnished in whole or in part by PTAs and OTAs,

respectively. We are proposing to establish two modifiers because the incurred expenses for PT and OT services are tracked and accrued separately in order to apply the two different KX modifier threshold amounts as specified by section 1833(g)(2) of the Act; and the use of the two proposed modifiers will facilitate appropriate tracking and accrual of services furnished in whole or in part by PTAs and OTAs. We additionally propose that these two therapy modifiers would be added to the existing three therapy modifiers—GP, GO, and GN—that are currently used to identify all therapy services delivered under a PT, OT or SLP plan of care, respectively. The GP, GO, and GN modifiers have existed since 1998 to track outpatient therapy services that were subject to the therapy caps. Although the therapy caps were repealed through amendments made to section 1833(g) of the Act by section 50202 of the BBA of 2018, as discussed in the above section, the statute continues to require that we track and accrue incurred expenses for all PT, OT, and SLP services, including those above the specified per beneficiary amounts for medically necessary therapy services for each calendar year; one amount for PT and SLP services combined, and another for OT services.

For purposes of implementing section 1834(v) of the Act through rulemaking as required under section 1834(v)(2)(C) of the Act, we are proposing to define “therapy assistant” as an individual who meets the personnel qualifications set forth at § 484.4 of our regulations for a physical therapist assistant and an occupational therapy assistant (PTA and OTA, respectively). We are proposing that the two new therapy modifiers would be used to identify services furnished in whole or in part by a PTA or an OTA; and, that these new therapy modifiers would be used instead of the GP and GO modifiers that are currently used to report PT and OT services delivered under the respective plan of care whenever the service is furnished in whole or in part by a PTA or OTA.

Effective for dates of service on and after January 1, 2020, the new therapy modifiers that identify services furnished in whole or in part by a PTA or OTA would be required to be used on all therapy claims instead of the existing modifiers GP and GO, respectively. As a result, in order to implement the provisions of the new subsection 1834(v) of the Act and carry out the continuing provisions of section 1833(g) of the Act as amended, we are proposing that, beginning in CY 2020, five therapy modifiers be used to track outpatient

therapy services instead of the current three. These five therapy modifiers include two new therapy modifiers to identify PT and OT services furnished by PTAs and OTAs, respectively, and three existing therapy modifiers—GP, GO and GN—that will be used when PT, OT, and SLP services, respectively, are fully furnished by therapists or when fully furnished by or incident to physicians and NPPs.

The creation of therapy modifiers specific to PT or OT services delivered under a plan of care furnished in whole or in part by a PTA or OTA would necessitate that we make changes to the descriptors of the existing GP and GO modifiers to clarify which qualified professionals, for example, therapist, physician, or NPP, can furnish the PT and OT services identified by these modifiers, and to differentiate them from the therapy modifiers specific to the services of PTAs and OTAs. We also propose to revise the GN modifier descriptor to conform to the changes to the GP and GO modifiers by clarifying the qualified professionals that furnish SLP therapy services.

We are proposing to define the new therapy modifiers for services furnished in whole or in part by therapy assistants and to revise the existing therapy modifier descriptors as follows:

- *New—PT Assistant services modifier (to be used instead of the GP modifier currently reported when a PTA furnishes services in whole or in part):* Services furnished in whole or in part by a physical therapist assistant under an outpatient physical therapy plan of care;

- *New—OT Assistant services modifier (to be used instead of the GO modifier currently reported when an OTA furnishes services in whole or in part):* Services furnished in whole or in part by occupational therapy assistant under an outpatient occupational therapy plan of care;

We are proposing that the existing GP modifier “Services delivered under an outpatient physical therapy plan of care” be revised to read as follows:

- *Revised GP modifier:* Services fully furnished by a physical therapist or by or incident to the services of another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient physical therapy plan of care;

We are proposing that the existing GO modifier “Services delivered under an outpatient occupational therapy plan of care” be revised to read as follows:

- *Revised GO modifier:* Services fully furnished by an occupational therapist or by or incident to the services of

another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient occupational therapy plan of care; and

We are proposing that the existing GN modifier that currently reads “Services delivered under an outpatient speech-language pathology plan of care” be revised to be consistent with the revisions to the GP and GO modifiers to read as follows:

- *Revised GN modifier:* Services fully furnished by a speech-language pathologist or by or incident to the services of another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient speech-language pathology plan of care.

As finalized in CY 2005 PFS final rule with comment (69 FR 66351 through 66354), and as required as a condition of payment under our regulations at §§ 410.59(a)(3)(iii), 410.60(a)(3)(iii), and 410.62(a)(3)(iii), the person furnishing outpatient therapy services incident to the physician, PA, NP or CNS service must meet the therapist personnel qualification and standards at § 484.4, except for licensure per section 1862(a)(20) of the Act. As such, we note that only a therapist, not a therapy assistant, can furnish outpatient therapy services incident to the services of a physician or a non-physician practitioner (NPP), so the new PT- and OT-Assistant therapy modifiers cannot be used on the line of service when the rendering practitioner identified on the claim is a physician or an NPP. For therapy services billed by physicians or NPPs, whether furnished personally or incident to their professional services, the GP or GO modifier is required for those PT or OT services furnished under an outpatient therapy plan.

We propose that all services that are furnished “in whole or in part” by a PTA or OTA are subject to the use of the new therapy modifiers. A new therapy modifier would be required to be used whenever a PTA or OTA furnishes all or part of any covered outpatient therapy service. However, we do not believe the provisions of section 1834(v) of the Act were intended to apply when a PTA or OTA performs portions of the service such as administrative tasks that are not related to their qualifications as a PTA or OTA. Rather, we believe the provisions of section 1834(v) were meant to apply when a PTA or OTA is involved in providing some or all of the therapeutic portions of an outpatient therapy service. We are proposing to define “in part,” for purposes of the proposed new modifiers, to mean any

minute of the outpatient therapy service that is therapeutic in nature, and that is provided by the PTA or OTA when acting as an extension of the therapist. Therefore, a service furnished “in part” by a therapy assistant would not include a service for which the PTA or OTA furnished only non-therapeutic services that others without the PTA’s or OTA’s training can do, such as scheduling the next appointment, greeting and gowning the patient, preparing or cleaning the room. We remind therapists and therapy providers that we do not recognize PTAs and OTAs to wholly furnish PT and OT evaluations and re-evaluations, that is, CPT codes 97161 through 97164 for PT and CPT codes 97165 through 97168 for OT; but to the extent that they do furnish part of an evaluative service, the appropriate therapy modifier must be used on the claim to signal that the service was furnished in part by the PTA or OTA, and the payment reduction should be applied once it goes into effect. We continue to believe that the clinical judgment and decision making involved in furnishing an evaluation or re-evaluation is similar to that involved with establishing the therapy plan that can only be established by a therapist, physician, or NPP (NP, CNS, or PA) as specified in § 410.61 of our regulations. In addition, PTAs and OTAs are not recognized separately in the statute to enroll as practitioners for purposes of independently billing for their services under the Medicare program. For these reasons, Pub. 100–02, Medicare Benefits Policy Manual, Chapter 15, sections 230.1 and 230.2 state that PTAs and OTAs “. . . may not provide evaluative or assessment services, make clinical judgments or decisions; develop, manage, or furnish skilled maintenance program services; or take responsibility for the service.” While we expect that the therapist will continue to furnish the majority of an evaluative procedure service, section 1834(v)(1) of the Act requires that the adjusted payment amount (85 percent of the otherwise applicable Part B payment amount) be applied when a therapy assistant furnishes a therapy service “in part,” including part of an evaluative service.

Additionally, we would like to clarify that the requirements for evaluations, including those for documentation, are separate and distinct from those for plans of care (plans). The plan is a statutory requirement under section 1861(p) of the Act for outpatient PT services (and through sections 1861(g) and 1861(l)(2) of the Act for outpatient OT and SLP services, respectively) and may only be established by a therapist

or physician. Through § 410.61(b)(5), NPs, CNSs, and PAs are also permitted to establish the plan. This means that if the evaluative procedure is furnished in part by an assistant, the new therapy modifiers that distinguish services furnished by PTAs or OTAs must be applied to the claim; however, the plan, which is not separately reported or paid, must be established by the supervising therapist who furnished part of the evaluation services as specified at § 410.61(b). When an evaluative therapy service is billed by a physician or an NPP as the rendering provider, either the physician/NPP or the therapist furnishing the service incident to the services of the physician or NPP, may establish the therapy plan in accordance with § 410.61(b). All regulatory and subregulatory plan requirements continue to apply.

To implement the new statutory provision at section 1834(v)(2)(A) of the Act, we are proposing to establish two new therapy modifiers to identify the services furnished in whole or in part by PTAs and OTAs. As required under section 1834(v)(2)(B) of the Act, claims from all providers of PT and OT services furnished on and after January 1, 2020, will be required to include these new PT- and OT-Assistant therapy modifiers for services furnished in whole or in part by a PTA or OTA. We propose that these modifiers will be required, when applicable, in place of the GP and GO modifiers currently used to identify PT and OT services furnished under an outpatient plan of care. To test our systems ahead of the required implementation date of January 1, 2020, we anticipate allowing voluntary reporting of the new modifiers at some point during CY 2019, which we will announce to our contractors and therapy providers through a Change Request, as part of our usual change management process.

We seek comments on these proposals.

3. Proposed Functional Reporting Modifications

Since January 1, 2013, all providers of outpatient therapy services, including PT, OT, and SLP services, have been required to include functional status information on claims for therapy services. In response to the Request for Information (RFI) on CMS Flexibilities and Efficiencies that was issued in the CY 2018 PFS proposed rule (82 FR 34172 through 34173), we received comments requesting burden reduction related to the reporting of the functional reporting requirements that were adopted to implement the requirements of section 3005(g) of the Middle Class

Tax Relief and Jobs Creation Act (MCTRJCA) of 2012, effective January 1, 2013.

After considering comments received through the CY 2013 PFS final rule with comment period (77 FR 68598–68978), we finalized the design of the functional reporting system. The MCTRJCA required us to implement a claims-based data collection strategy in order to collect data on patient function over the course of PT, OT, and SLP services in order to better understand patient condition and outcomes. The functional reporting system we implemented collects data using non-payable HCPCS G-codes (HCPCS codes G8978 through G8999 and G9158 through G9186) and modifiers (in the range CH through CN) to describe a patient’s functional limitation and severity at: (a) The time of the initial service, (b) at periodic intervals in sync with existing progress reporting intervals, (c) at discharge, and (d) when reporting certain evaluative and re-evaluative procedures (often times billed at time of initial service). Claims without the required functional reporting information are returned to therapy services providers, rather than denied, so that they can add the required information and resubmit claims. Therapy services providers must also document functional reporting information in the patient’s medical record each time it is reported. The MCTRJCA also specified that data from the functional reporting system were to be used to aid us in recommending changes to, and reforming Medicare payment for outpatient therapy services that were then subject to the therapy caps under section 1833(g) of the Act. We conducted an analysis that focused on the functional reporting data that have been submitted through the claims-based system, both by therapy discipline and by episodes of care by discipline using a similar episode definition (for example, clean 60 calendar day period) that was used in our prior utilization reports for CY 2008 through CY 2010 that can be found on the Therapy Services web page in the Studies and Reports page at <https://www.cms.gov/Medicare/Billing/TherapyServices/Studies-and-Reports.html>). However, we did not find the results compelling enough to use as a basis to recommend or undertake administrative reforms of the current payment mechanism for therapy services. Furthermore, going forward, the functional reporting data we would collect may be even less useful for purposes of recommending or reforming payment for therapy services because, as described earlier, section 50202 of the

Bipartisan Budget Act of 2018 (BBA of 2018) amended section 1833(g) of the Act to repeal the application of the Medicare outpatient therapy caps and associated exceptions process, while imposing protections to ensure therapy services are furnished when appropriate.

The general consensus of the commenters (organizations of physical therapists, occupational therapists, and speech-language pathologists, as well as other organizations of providers of therapy services and individual stakeholders) who responded to our RFI on burden reduction was that the functional reporting requirements for outpatient therapy services are overly complex and burdensome. The majority of commenters urged us to substantially revise and repurpose our functional reporting requirements for other programmatic purposes or to eliminate the functional reporting requirements all together. Most commenters to the RFI on burden reduction criticized us for not having shared with them an analysis of the functional reporting data we had collected to date, even though MCTRJCA does not require that we share any such analysis. A couple of commenters recommended we evolve our functional reporting requirements, at least in the short-term, with the following three changes: (a) Require reporting only at intake and discharge; (b) permit reporting through clinical data registries, electronic health records (EHRs), facility-based submission vehicles, etc., instead of the claims-based reporting required by section 3005(g) of MCTRJCA; and (c) allow functional reporting by therapy providers under MIPS as a clinical practice improvement activity. The short-term recommendation for reduced reporting was based on an independent analysis by one specialty society using a sample of our CY 2014 claims. That analysis noted that over an episode of care: (a) 93 percent reported when an evaluation code was reported; (b) 12 percent to 16 percent reported at the time of progress reporting interval; and (c) 36 percent of the episodes reported discharge data. In the long-term, these same RFI commenters believe our functional reporting system should be eliminated in favor of CMS policies that move therapy providers toward reporting using standardized measures of function. Other commenters suggested that we use standardized measures that reflect global function, or that are condition-specific. Some commenters would like to see CMS develop setting-appropriate quality measures for outpatient therapy that can

be used to both (a) measure functionality and (b) meld patient assessment data and functional measures with relevant measures developed in response to the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act of 2014) (Pub. L. 113–185) that is applicable to CMS post-acute care (PAC) settings.

As part of the requirements of section 3005(g) of MCTRJCA, we established our functional reporting claims-based data collection strategy effective January 1, 2013 in the CY 2013 PFS final rule (77 FR 689580 through 68978) and will have been collecting these functional reporting data for the last 5 years at the close of CY 2018. Because the data from the functional reporting system were to be used to inform our recommendations and reform of Medicare payment for outpatient therapy services that are subject to the therapy caps under section 1833(g) of the Act, we reviewed and analyzed the data internally but did not find them particularly useful in considering how to reform payment for therapy services as an alternative to the therapy caps. In the meantime, section 50202 of BBA of 2018, as discussed previously, amended section 1833(g) of the Act to reform therapy payment. Because section 3005(g) of MCTRJCA was not codified into the Act, and did not specify how long the data collection strategy should last, we do not believe it was intended to last indefinitely. We note that we share commenters' concerns, including those who favor the elimination of functional reporting because it is overly complex and burdensome to report, and that those that questioned the utility of the collected data given the lack of standardized measures used to report the severity of the functional limitation being reported. In response to commenters' concerns that we have not yet shared an analysis of the collected functional reporting data with them, we note that we have not published or shared the results to date because we did not find the results informative when reviewing them for purpose of the section 3005(g) of MCTRJCA requirement. A few commenters requested that we continue to collect functional reporting data in a reduced format—at the outset and at discharge of the therapy episode—as a collective short-term solution, while favoring the elimination of functional reporting in the long-term because, according to our data and the commenters' own data, the discharge data are only infrequently reported. However, we do not believe that collecting additional years of

functional reporting data in this reduced format would add utility to our data collection efforts. After consideration of these comments on the RFI along with a review of all of the requirements under section 3005(g) of MCTRJCA, and in light of the recent statutory amendments to section 1833(g) of the Act, we have concluded that continuing to collect more years of these functional reporting data, whether through the same or a reduced format, will not yield additional information that would be useful to inform future analyses, and that allowing the current functional reporting requirements to remain in place could result in unnecessary burden for providers of therapy services without providing further benefit to the Medicare program in the form of additional data.

As a result, we are proposing to discontinue the functional reporting requirements for services furnished on or after January 1, 2019. Specifically, we are proposing to amend our regulations by removing the following: (1) Conditions of payment at §§ 410.59(a)(4), 410.60(a)(4), 410.62(a)(4), and 410.105(d) that require claims for OT, PT, SLP, and Comprehensive Outpatient Rehabilitation Facility (CORF) PT, OT, and SLP services, respectively, to contain prescribed information on patient functional limitations; and, (2) the functional reporting-related phrase that requires the plan's goals to be consistent with functional information on the claim at § 410.61(c) for outpatient PT, OT, and SLP services and at § 410.105(c)(1)(ii) for the PT, OT, and SLP services in CORFs. In addition, we would: (1) Remove the functional reporting subregulatory requirements implemented primarily through Change Request 8005 last issued on December 21, 2012, via Transmittal 2622; (2) eliminate the functional reporting standard systems edits we have applied to claims; and (3) remove the functional reporting requirement provisions in our internet Only Manual (IOM) provisions including the Medicare Claims Processing Manual, Chapter 5; and, the functional reporting requirements in Chapters 12 and 15 of the Medicare Benefits Policy Manual.

If finalized, our proposal would end the requirements for the reporting and documentation of functional limitation G-codes (HCPCS codes G8978 through G8999 and G9158 through G9186) and severity modifiers (in the range CH through CN) for outpatient therapy claims with dates of service on and after January 1, 2019. Accordingly, with the conclusion of our functional reporting system for dates of service after

December 31, 2018, we would delete the applicable non-payable HCPCS G-codes specifically developed to implement that system through the CY 2013 PFS final rule with comment period (77 FR 68598 through 68978).

We are seeking comment on these proposals.

N. Part B Drugs: Application of an Add-On Percentage for Certain Wholesale Acquisition Cost (WAC)-Based Payments

Consistent with statutory provisions in section 1847A of the Act, many current Medicare Fee For Service (FFS) payments for separately payable drugs and biologicals furnished by providers and suppliers include an add-on set at 6 percent of the volume-weighted average sales price (ASP) or wholesale acquisition cost (WAC) for the drug or biological (the “6 percent add-on”). Although section 1847A of the Act does not specifically state what the 6 percent add-on represents, it is widely believed to include services associated with drug acquisition that are not separately paid for, such as handling, and storage, as well as additional mark-ups in drug distribution channels. The 6 percent add-on described in section 1847A of the Act has raised concerns because more revenue can be generated from percentage-based add-on payments for expensive drugs, and an opportunity to generate more revenue may create an incentive for the use of more expensive drugs (MedPAC Report to the Congress: Medicare and the Health Care Delivery System June 2015, <http://medpac.gov/docs/default-source/reports/june-2015-report-to-the-congress-medicare-and-the-health-care-delivery-system.pdf>, pages 65 through 72). Also, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) March 8, 2016, Issue Briefing pointed out that that administrative complexity and overhead costs are not exactly proportional to the price of a drug (<https://aspe.hhs.gov/pdf-report/medicare-part-b-drugs-pricing-and-incentives>). Thus, the suitability of using a percentage of the volume-weighted average sales price or WAC of the drug or biological for an add-on payment may vary depending on the price of the drug or how the payment rate has been determined.

While the add-on percentage for drug payments made under section 1847A of the Act is typically applied to the ASP, the same 6 percent add-on is also applied to the WAC to determine the Part B drug payment allowances in the following situations. First, for single source drugs as authorized in section 1847A(b)(4) of the Act, payment is made using the lesser of ASP or WAC; and

section 1847A(b)(1) of the Act requires that a 6 percent add-on be applied regardless of whether WAC or ASP is less. Second, for drugs and biologicals where average sales price during first quarter of sales is unavailable, section 1847A(c)(4) of the Act allows the Secretary to determine the payment amount for the drug or biological based on the WAC or payment methodologies in effect on November 1, 2003. We note that this provision does not specify that an add-on percentage be applied if WAC-based payment is used, nor is an add-on percentage specified in the implementing regulations at § 414.904(e)(4). The application of the add-on percentage to WAC-based payments during a period where partial quarter ASP data was available was discussed in the 2011 PFS final rule with comment (75 FR 73465 through 73466). Third, in situations where Medicare Administrative Contractors (MACs) determine pricing for drugs that do not appear on the ASP pricing files and for new drugs, WAC-based payment amounts may also be used, as discussed in Chapter 17, Section 20.1.3 of the Medicare Claims Processing Manual. This section of the Manual describes the use of a 6 percent add-on.

The incorporation of discounts in the determination of payment amounts made for Part B drug varies. Most Part B drug payments are based on the drug’s or biological’s ASP; as provided in section 1847A(c)(3) of the Act, the ASP is net of many discounts such as volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase, chargebacks, rebates (other than rebates under Medicaid drug rebate program), etc. In contrast, the WAC of a drug or biological is defined in section 1847A(c)(6)(B) of the Act as the manufacturer’s list price for the drug or biological to wholesalers or direct purchasers in the United States, not including prompt pay or other discounts, rebates or reductions in price, for the most recent month for which the information is available, as reported in wholesale price guides or other publications of drug or biological pricing data. Because the WAC does not include discounts, it typically exceeds ASP, and the use of a WAC-based payment amount for the same drug results in higher dollar payments than the use of an ASP-based payment amount.

Although discussions about the add-on tend to focus on ASP-based payments (because ASP-based payments are more common than WAC-based payments), the add-on for WAC-based payments has also been raised in the June 2017 MedPAC Report to the

Congress (http://www.medpac.gov/docs/default-source/reports/jun17-report-to-congress_sec.pdf, pages 42 through 44). The MedPAC report focused on how the 2 quarter lag in payments determined under section 1847A of the Act led to a situation where undiscounted WAC-based payment amounts determined using information from 2 quarters earlier were used to pay for drugs that providers purchased at a discount. To determine the extent of the discounts, MedPAC sampled new, high-expenditure Part B drugs and found that these drugs’ ASPs were generally lower than their WACs. Seven out of the 8 drugs showed pricing declines from initial WAC to ASP one year after being listed in the ASP pricing files with the remaining product showing no change, which suggests purchasers received discounts that WAC did not reflect. MedPAC further cited a 2014 OIG report (OIG, *Limitations in Manufacturer Reporting of Average Sales Price Data for Part B Drugs*, (OEI–12–13–00040), July 2014) to illustrate that there may be differences between WAC and ASP in other instances in which CMS utilizes WAC instead of ASP and noted that OIG found that “WACs often do not reflect actual market prices for drugs.” MedPAC also characterized Part B payments based on undiscounted list prices for products that were available at a discount as excessive. The report suggested that greater parity between ASP-based acquisition costs and WAC-based payments for Part B drugs could be achieved and recommended changing the 6 percent add-on for WAC-based payments to 3 percent. A 3 percent change was recommended based on statements made by industry, MedPAC’s analysis of new drug pricing, and OIG data. The report also mentioned that discounts on WAC, such as prompt pay discounts, were available soon after the drug went on the market.

In the case of a drug or biological during an initial sales period in which data on the prices for sales for the drug or biological is not sufficiently available from the manufacturer, section 1847A(c)(4) of the Act permits the Secretary to make payments that are based on WAC. In other words, although payments under this section may be based on WAC, unlike section 1847A(b) of the Act (which specifies that certain payments must be made with a 6 percent add-on), section 1847A(c)(4) of the Act does not require that a particular add-on amount be applied to partial quarter WAC-based pricing. Consistent with section 1847A(c)(4) of the Act, we are proposing that effective January 1,

2019, WAC based payments for Part B drugs made under section 1847A(c)(4) of the Act, utilize a 3 percent add-on in place of the 6 percent add-on that is currently being used. We are proposing a 3 percent add-on because this percentage is consistent with MedPAC's analysis and recommendations discussed in the paragraph above and cited in their June 2017 Report to the Congress. Although other approaches for modifying the add-on amount, such as a flat fee, or percentages that vary with the cost of a drug, are possible, we are proposing a fixed percentage in order to be consistent with other provisions in section 1847A of the Act which specify fixed add-on percentages of 6 percent (1847A(b)) or 3 percent (section 1847A(d)(3)(C) of the Act). A fixed percentage is also administratively simple to implement and administer, is predictable, and is easy for manufacturers, providers and the public to understand.

We have also reviewed corresponding regulation text at § 414.904(e)(4). To conform the regulation text more closely to the statutory language at section 1847A(c)(4) of the Act, we are also proposing to strike the word "applicable" from paragraph (e)(4). Section 1847A(c)(4) of the Act does not use the term "applicable" to describe the payment methodologies in effect on November 1, 2003.

If we were to finalize these proposals, we would also change the policy articulated in the Claims Processing Manual that describes the application of the 6 percent add-on to payment determinations made by MACs for new drugs and biologicals. Chapter 17 section 20.1.3 of the Claims Processing Manual (<https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c17.pdf>) states that WAC-based payment limits for drugs and biologicals that are produced or distributed under a new drug application (or other new application) approved by the Food and Drug Administration, and that are not included in the ASP Medicare Part B Drug Pricing File or Not Otherwise Classified (NOC) Pricing File, are based on 106 percent of WAC. Invoice-based pricing is used if the WAC is not published. In OPSS, the payment allowance limit is 95 percent of the published Average Wholesale Price (AWP). We would change our policy to permit MACs to use an add-on percentage of up to 3 percent for WAC-based payments for new drugs. MACs have longstanding authority to make payment determinations when we do not publish a payment limit in our national Part B drug pricing files and

when new a drug becomes available. This proposal would preserve consistency with our proposed national pricing policy and would apply when MACs perform pricing determinations, for example during the period when ASPs have not been reported. This proposed policy would not alter OPSS payment limits.

We note that these proposals do not include WAC-based payments for single source drugs under section 1847A(b) of the Act, that is, where the statute specifies that the payment limit is 106 percent of the lesser of ASP or WAC.

We have stated in previous rulemaking that it is desirable to have fair reimbursement in a healthy marketplace that encourages product development (80 FR 71101). We have also stated that we seek to promote innovation to provide more options to patients and physicians, and competition to drive prices down (82 FR 53183). These positions have not changed. However, since 2011, concern about the impact of drug pricing and spending on Part B drugs has continued to grow. From 2011 to 2016, Medicare Part B drug spending increased from \$17.6 billion to \$28.0 billion, representing a compound annual growth rate of 9.8 percent, with per capita spending increasing 54 percent, from \$532 to \$818 (Based on Spending and Enrollment Data from Centers for Medicare and Medicaid Services Office of Enterprise Data and Analytics). These increases affect the spending by Medicare and beneficiary out-of-pocket costs. In the context of these concerns, we believe that implementation of these proposals will improve Medicare payment rates by better aligning payments with drug acquisition costs, especially for the growing number of drugs with high annual spending and high launch prices where single doses can cost tens or even hundreds of thousands of dollars. The proposals will also decrease beneficiary cost sharing. A 3 percentage point reduction in the total payment allowance will reduce a patient's 20 percent Medicare Part B copayment—for a drug that costs many thousands of dollars per dose, this can result in significant savings to an individual. The proposed approach would help Medicare beneficiaries afford to pay for new drugs by reducing out of pocket expenses and would help counteract the effects of increasing launch prices for newly approved drugs and biologicals. Finally, the proposals are consistent with recent MedPAC recommendations.

III. Other Provisions of the Proposed Rule

A. Clinical Laboratory Fee Schedule

1. Background

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS) under sections 1832, 1833(a), (b) and (h), and 1861 of the Social Security Act (the Act). Under the previous methodology, CDLTs were paid based on the lesser of: (1) The amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI-U), and reduced by a multi-factor productivity adjustment and other statutory adjustments, but were not otherwise updated or changed.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. The CLFS final rule, entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), published in the **Federal Register** on June 23, 2016, implemented section 1834A of the Act. Under the CLFS final rule, "reporting entities" must report to CMS during a "data reporting period" "applicable information" collected during a "data collection period" for their component "applicable laboratories." Applicable information is defined at § 414.402 as, with respect to each CDLT for a data collection period: Each private payor rate for which final payment has been made during the data collection period; the associated volume of tests performed corresponding to each private payor rate; and the specific Healthcare Common Procedure Coding System (HCPCS) code associated with the test. Applicable information does not include information about a test for which payment is made on a capitated basis. An applicable laboratory is defined at § 414.502, in part, as an entity that is a laboratory (as defined under the Clinical Laboratory Improvement Amendments (CLIA) definition at § 493.2) that bills Medicare Part B under its own National Provider Identifier

(NPI). In addition, an applicable laboratory is an entity that receives more than 50 percent of its Medicare revenues during a data collection period from the CLFS and/or the Physician Fee Schedule (PFS). We refer to this component of the applicable laboratory definition as the “majority of Medicare revenues threshold.” The definition of applicable laboratory also includes a “low expenditure threshold” component which requires an entity to receive at least \$12,500 of its Medicare revenues from the CLFS for its CDLTs that are not advanced diagnostic laboratory tests (ADLTs).

The first data collection period, for which applicable information was collected, occurred from January 1, 2016 through June 30, 2016. The first data reporting period, during which reporting entities reported applicable information to CMS, occurred January 1, 2017 through March 31, 2017. On March 30, 2017, we announced a 60-day enforcement discretion period of the assessment of Civil Monetary Penalties (CMPs) for reporting entities that failed to report applicable information. Additional information about the 60-day enforcement discretion period may be found on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf>.

In general, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to us during the data reporting period, and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new ADLT or new CDLT) can be reduced as compared to the payment rates for the preceding year. For the first 3 years after implementation (CY 2018 through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. For most CDLTs, the data collection period, data reporting

period, and payment rate update occur every 3 years. As such, the next data collection period for most CDLTs will be January 1, 2019 through June 30, 2019, and the next data reporting period will be January 1, 2020 through March 31, 2020, with the next update to CLFS occurring on January 1, 2021. Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101).

2. Recent Stakeholder Feedback

After the initial data collection and data reporting periods, we received stakeholder feedback on a range of topics related to the private payor rate-based CLFS. Some stakeholders expressed concern that the CY 2018 CLFS payments rates are based on applicable information from only a relatively small number of laboratories. Some stakeholders stated that, because most hospital-based laboratories were not applicable laboratories, and therefore, did not report applicable information during the initial data reporting period, the CY 2018 CLFS payment rates do not reflect their information and are inaccurate. Other stakeholders were concerned that the low expenditure threshold excluded most physician office laboratories and many small independent laboratories from reporting applicable information.

In determining payment rates under the private payor rate-based CLFS, one of our objectives is to obtain as much applicable information as possible from the broadest possible representation of the national laboratory market on which to base CLFS payment amounts, for example, from independent laboratories, hospital outreach laboratories, and physician office laboratories, without imposing undue burden on those entities. As we noted throughout the CLFS final rule, we believe it is important to achieve a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a CDLT, and minimizing the reporting burden for entities. In response to stakeholder feedback and in the interest of facilitating our goal, we are proposing one change, discussed below, to the Medicare CLFS for CY 2019. We believe this proposal may result in more data being used on which to base CLFS payment rates.

In addition to this proposal, we are soliciting public comments on other approaches that have been requested by some stakeholders who suggested that such approaches would result in CMS receiving even more applicable information to use in establishing CLFS

payment rates. The approaches include revising the definition of applicable laboratory and changing the low expenditure threshold. These topics are discussed below.

3. Proposed Change to the Majority of Medicare Revenues Threshold in Definition of Applicable Laboratory

In order for a laboratory to meet the majority of Medicare revenues threshold, section 1834A(a)(2) of the Act requires that, “with respect to its revenues under this title, a majority of such revenues are from” the CLFS and the PFS in a data collection period. In the CLFS final rule, we stated that “revenues under this title” are payments received from the Medicare program, which includes fee-for-service payments under Medicare Parts A and B, as well as Medicare Advantage (MA) payments under Medicare Part C, and prescription drug payments under Medicare Part D, and any associated Medicare beneficiary deductible or coinsurance amounts for Medicare services furnished during the data collection period (81 FR 41043). This total Medicare revenues amount (the denominator in the majority of Medicare revenues threshold calculation) is compared to the total of Medicare revenues received from the CLFS and/or PFS (the numerator in the majority of Medicare revenues threshold calculation). If the numerator is greater than 50 percent of the denominator for a data collection period, the entity has met the majority of Medicare revenues threshold criterion. We reflected that requirement in § 414.502 in the third paragraph of the definition of applicable laboratory.

We have considered that our current interpretation of total Medicare revenues may have the effect of excluding laboratories that furnish Medicare services to a significant number of beneficiaries enrolled in MA plans under Medicare Part C from meeting the majority of Medicare revenues threshold criterion, and therefore, from qualifying as applicable laboratories. For instance, if a laboratory has a significant enough Part C component so that it is receiving greater than 50 percent of its total Medicare revenues from MA payments under Part C, it would not meet the majority of Medicare revenues threshold because its revenues derived from the CLFS and/or PFS would not constitute a majority of its total Medicare revenues. We believe that if we were to exclude MA plan revenues from total Medicare revenues, more laboratories of all types may meet the majority of Medicare revenues threshold, and therefore, the definition

of applicable laboratory, because it would have the effect of decreasing the amount of total Medicare revenues and increase the likelihood that a laboratory's CLFS and PFS revenues would constitute a majority of its Medicare revenues.

We believe section 1834A of the Act permits an interpretation that MA plan payments to laboratories not be included in the total Medicare revenues component of the majority of Medicare revenues threshold calculation. Rather, MA plan payments to laboratories can be considered to only be private payor payments under the CLFS. We emphasize here that this characterization of MA plan payments is limited to only the CLFS for purposes of defining applicable laboratory. Whether MA plan payments to laboratories or other entities are considered Medicare "revenues" or "private payor payments" in other contexts in the Medicare program is irrelevant here. Nor does our characterization of MA plan payments as private payor payments for purposes of the CLFS have any bearing on any aspect of the Medicare program other than the CLFS. This is because of language included in section 1834A of the Act that is specifically targeted to the CLFS, explained below.

As noted above, we defined total Medicare revenues for purposes of the majority of Medicare revenues threshold calculation to include fee-for-service payments under Medicare Parts A and B, as well as MA payments under Medicare Part C, and prescription drug payments under Medicare Part D, and any associated Medicare beneficiary deductible or coinsurance amounts for Medicare services furnished during the data collection period. However, section 1834A(a)(8) of the Act, which defines the term "private payor," identifies at section 1834A(a)(8)(B) a "Medicare Advantage plan under Part C" as a type of private payor. Under the private payor rate-based CLFS, CLFS payment amounts are based on private payor rates that are reported to CMS. So, an applicable laboratory that receives Medicare Advantage (MA) plan payments is to consider those MA plan payments in identifying its applicable information, which must be reported to

CMS. We believe it is more logical to not consider MA plan payments under Part C to be both Medicare revenues for determining applicable laboratory status and private payor rates for purposes of reporting applicable information. Congress contemplated that applicable laboratories would furnish MA services, as reflected in the requirement that private payor rates must be reported for MA services. However, under our current definition of applicable laboratory, laboratories that furnish MA services, particularly those that furnish a significant amount, are less likely to meet the majority of Medicare revenues threshold, which means they would be less likely to qualify as applicable laboratories, and therefore, to report private payor rates for MA services.

Therefore, after further review and consideration of the new private payor rate-based CLFS, we believe it is appropriate to include MA plan revenues as only private payor payments rather than both Medicare revenues, for the purpose of determining applicable laboratory status, and private payor payments, for the purpose of specifying what is applicable information. Such a change would have the effect of eliminating the laboratory revenue generated from a laboratory's Part C-enrolled patient population as a factor in determining whether a majority of the laboratory's Medicare revenues are comprised of services paid under the CLFS or PFS. We believe this change would permit a laboratory with a significant Medicare Part C revenue component to be more likely to meet the majority of Medicare revenues threshold and qualify as an applicable laboratory. In other words, MA payments are currently included as total Medicare revenues (the denominator). In order to meet the majority of Medicare revenues threshold, the statute requires a laboratory to receive the majority of its Medicare revenues from the CLFS and or PFS. If MA plan payments were excluded from the total Medicare revenues calculation, the denominator amount would decrease. If the denominator amount decreases, the likelihood increases that a laboratory would qualify as an applicable

laboratory. Therefore, we believe this proposal responds directly to stakeholders' concerns regarding the number of laboratories for which applicable information must be reported because a broader representation of the laboratory industry may qualify as applicable laboratories, which means we would receive more applicable information to use in setting CLFS payment rates.

For these reasons, we are proposing that MA plan payments under Part C would not be considered Medicare revenues for purposes of the applicable laboratory definition. We would revise paragraph (3) of the definition of applicable laboratory at § 414.502 accordingly. We reiterate that not characterizing MA plan payments under Medicare Part C as Medicare revenues would be limited to the definition of applicable laboratory under the CLFS, and would not affect, reflect on, or otherwise have any bearing on any other aspect of the Medicare program.

In an effort to provide stakeholders a better understanding of the potential reporting burden that may result from this proposal, we are providing a summary of the distribution of data reporting that occurred for the first data reporting period. If we were to finalize the proposed change to the majority of Medicare revenues threshold component of the definition of applicable laboratory, additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C could potentially qualify as applicable laboratories, in which case their data would be reported to us. As discussed previously, we received over 4.9 million records from 1,942 applicable laboratories for the initial data reporting period, which we used to set CY 2018 CLFS rates. Additional analysis shows that the average number of records reported for an applicable laboratory was 2,573. The largest number of records reported for an applicable laboratory was 457,585 while the smallest amount was 1 record. A summary of the distribution of reported records from the first data collection period is illustrated in the Table 24.

TABLE 24—SUMMARY OF RECORDS REPORTED FOR FIRST DATA REPORTING PERIOD

[By applicable laboratory]

Total records	Average records	Min records	Max records	Percentile distribution of records				
				10th	25th	50th	75th	90th
4,995,877	2,573	1	457,585	23	79	294	1,345	4,884

Assuming a similar distribution of data reporting for the next data reporting period, the mid-point of reported records for an applicable laboratory would be approximately 300 (50th percentile for the first data reporting period was 294). However, as illustrated in Table 24, the number of records reported varies greatly, depending on the volume of services performed by a given laboratory. Laboratories with larger test volumes, for instance at the 90th percentile, should expect to report more records as compared to the midpoint used for this analysis. Likewise, laboratories with smaller test volume, for instance at the 10th percentile, should expect to report less records as compared to the midpoint.

We welcome comments on our proposal to modify the definition of applicable laboratory to exclude MA plan payments under Part C as Medicare revenues.

4. Solicitation of Public Comments on Other Approaches to Defining Applicable Laboratory

As noted previously, we define applicable laboratory at the NPI level, which means the laboratory's own billing NPI is used to identify a laboratory's revenues for purposes of determining whether it meets the majority of Medicare revenues threshold and the low expenditure threshold components of the applicable laboratory definition. For background purposes, the following summarizes some of the considerations we made in establishing this policy.

In the CLFS proposed rule, entitled Medicare Clinical Diagnostic Laboratory Tests Payment System, published in the October 1, 2015 **Federal Register**, we proposed to define applicable laboratory at the TIN level so that an applicable laboratory would be an entity that reports tax-related information to the IRS under a TIN with which all of the NPIs in the entity are associated, and was itself a laboratory or had at least one component that was a laboratory, as defined in § 493.2. In the CLFS proposed rule, we discussed that we considered proposing to define applicable laboratory at the NPI level. However, we did not propose that approach because we believed private payor rates for CDLTs are negotiated at the TIN level and not by individual laboratory locations at the NPI level. Numerous stakeholders had indicated that the TIN-level entity is the entity negotiating pricing, and therefore, is the entity in the best position to compile and report applicable information across its multiple NPIs when there are

multiple NPIs associated with a TIN-level entity. We stated that we believed defining applicable laboratory by TIN rather than NPI would result in the same applicable information being reported, and would require reporting by fewer entities, and therefore, would be less burdensome to applicable laboratories. In addition, we stated that we did not believe reporting at the TIN level would affect or diminish the quality of the applicable information reported. To the extent the information is accurately reported, we expected reporting at a higher organizational level to produce exactly the same applicable information as reporting at a lower level (80 FR 59391 through 59393).

Commenters who objected to our proposal to define applicable laboratory at the TIN level stated that our definition would exclude hospital laboratories because, in calculating the applicable laboratory's majority of Medicare revenues amount, which looks at the percentage of Medicare revenues from the PFS and CLFS across the entire TIN-level entity, virtually all hospital laboratories would not be considered an applicable laboratory. Many commenters expressed particular concern that our proposed definition would exclude hospital outreach laboratories, stating that hospital outreach laboratories, which do not provide laboratory services to hospital patients, are direct competitors of the broader independent laboratory market, and therefore, excluding them from the definition of applicable laboratory would result in incomplete and inappropriate applicable information, which would skew CLFS payment rates. Commenters maintained that CMS needed to ensure reporting by a broad scope of the laboratory market to meet what they viewed as Congressional intent that all sectors of the laboratory market be included to establish accurate market-based rates (81 FR 41045).

In issuing the CLFS final rule, we found particularly compelling the comments that urged us to adopt a policy that would better enable hospital outreach laboratories to be applicable laboratories because we agreed hospital outreach laboratories should be accounted for in the new CLFS payment rates. We noted that hospital outreach laboratories are laboratories that furnish laboratory tests for patients who are not admitted hospital inpatients or registered outpatients of the hospital and who are enrolled in Medicare separately from the hospital of which they are a part as independent laboratories that do not serve hospital patients. We believed it was important to facilitate reporting of private payor

rates for hospital outreach laboratories to ensure a broader representation of the national laboratory market to use in setting CLFS payment amounts (81 FR 41045).

We were clear in the CLFS final rule, however, that we believe Congressional intent was to effectively exclude hospital laboratories as applicable laboratories, which was apparent from the statutory language, in particular, the majority of Medicare revenues threshold criterion in section 1834A(a)(2) of the Act. Section 1834A(a)(2) of the Act provides that, to qualify as an applicable laboratory, an entity's revenues from the CLFS and the PFS needs to constitute a majority of its total Medicare payments received from the Medicare program for a data collection period. What we found significant was that most hospital laboratories would not meet that majority of Medicare revenues threshold because their revenues under the IPPS and OPFS alone would likely far exceed the revenues they received under the CLFS and PFS. Therefore, we believe the statute intended to limit reporting primarily to independent laboratories and physician offices (81 FR 41045 through 41047). For a more complete discussion of the definition of applicable laboratory, see the CLFS final rule (81 FR 41041 through 41051).

a. Stakeholder Continuing Comments and Stakeholder-Suggested Alternative Approaches

As noted above, in response to public comments, we finalized that an applicable laboratory is the NPI-level entity so that a hospital outreach laboratory assigned a unique NPI, separate from the hospital of which it is a part, is able to meet the definition of applicable laboratory and its applicable information can be used for CLFS rate-setting. We continue to believe that the NPI is the most effective mechanism for identifying Medicare revenues for purposes of determining applicable laboratory status and identifying private payor rates for purposes of reporting applicable information. Once a hospital outreach laboratory obtains its own unique billing NPI and bills for services using its own unique NPI, Medicare and private payor revenues are directly attributable to the hospital outreach laboratory. By defining applicable laboratory using the NPI, Medicare payments (for purposes of determining applicable laboratory status) and private payor rates and the associated volume of CDLTs can be more easily identified and reported to us. We also believe that, if finalized, our proposal to exclude MA plan revenues under Medicare Part C from total Medicare revenues in the

definition of applicable laboratory may increase the number of entities meeting the majority of Medicare revenues threshold, and therefore, qualifying for applicable laboratory status. In summary, we believe the proposed change to the total Medicare revenues component of the applicable laboratory definition and our current policy that requires an entity to bill Medicare Part B under its own NPI, may increase the number of hospital outreach laboratories qualifying as applicable laboratories.

In addition, we are confident that our current policy supports our collecting sufficient applicable information in the next data reporting period, and that we received sufficient and reliable applicable information with which we set CY 2018 CLFS rates, and that those rates are accurate. For instance, we received applicable information from laboratories in every state, the District of Columbia, and Puerto Rico. This data included private payor rates for almost 248 million laboratory tests conducted by 1,942 applicable laboratories, with over 4 million records of applicable information. In addition, as we've noted, the largest laboratories dominate the market, and therefore, most significantly affect the payment weights (81 FR 41049). Given that the largest laboratories reported their applicable information to CMS in the initial data reporting period, along with many smaller laboratories, we believe the data we used to calculate the CY 2018 CLFS rates was sufficient and resulted in accurate weighted medians of private payor rates.

However, we continue to consider refinements to our policies that could lead to including even more applicable information for the next data reporting period. To that end, the comments and alternative approaches suggested by stakeholders, even though some were first raised prior to the CLFS final rule, are presented and considered for comment now.

(1) Using Form CMS–1450 Bill Type 14x To Determine Majority of Medicare Revenues and Low Expenditure Thresholds

Some stakeholders that expressed concern over the CY 2018 CLFS payments rates stated that the NPI-based definition of applicable laboratory reduces the number of hospital outreach laboratories reporting data. These stakeholders suggested we revise the definition specifically for the purpose of including more hospital outreach laboratories. Under a suggested approach, a laboratory could determine whether it meets the majority of Medicare revenues threshold and low

expenditure threshold using only the revenues from services reported on the Form CMS–1450 (approved Office of Management and Budget number 0938–0997) 14x bill type, which is used only by hospital outreach laboratories. Therefore, per the stakeholder suggestions, we are seeking public comments on the following approach.

This approach would revise the definition of applicable laboratory to permit the revenues identified on the Form CMS–1450 14x bill type to be used instead of the revenues associated with the NPI the laboratory uses, to determine whether it meets the majority of Medicare revenues threshold (and the low expenditure threshold). Under this approach, the applicable revenues would be based on the bills used for hospital laboratory services provided to non-patients, which are paid under Medicare Part B (that is, the 14x bill type). If we pursued this approach, we would have to modify the definition of applicable laboratory in § 414.502 by indicating that an applicable laboratory may include an entity that bills Medicare Part B on the Form CMS–1450 14x bill type.

Although using the 14x bill type could alleviate some initial, albeit limited, administrative burden on hospital outreach laboratories to obtain a unique billing NPI, we would have operational and statutory authority concerns about defining applicable laboratory by the Form CMS–1450 14x bill type.

First, defining applicable laboratory using the Form CMS–1450 14x bill type does not identify an entity the way an NPI does. Whereas an NPI is associated with a provider or supplier to determine specific Medicare revenues, the 14x bill type is merely a billing mechanism that is currently used only for a limited set of services. Under an approach that permits laboratories to meet the majority of Medicare revenues threshold using the 14x bill type, private payor rates (and the volume of tests paid at those rates) would have to be identified that are associated with only the outreach laboratory services of a hospital's laboratory business. However, some private payors, such as MA plans, may not require hospital laboratories to use the 14x bill type for their outreach laboratory services. To the extent a private payor does not require hospital outreach laboratory services to be billed on a 14x bill type (which specifically identifies outreach services), hospitals may need to develop their own mechanism for identifying and reporting only the applicable information associated with its hospital outreach laboratory services. In light of this

possible scenario, we are interested in public comments about the utility of using the 14x bill type in the way we have described and on the level of administrative burden created if we defined applicable laboratory using the Form CMS–1450 14x bill type.

Second, we question whether hospitals would have sufficient time after publication of a new final rule that included using the Form CMS–1450 14x bill type, and any related subregulatory guidance, to develop and implement the information systems necessary to collect private payor rate data before the start of the next data collection period, that is, January 1, 2019. To that end, we are interested in public comments as to whether revising the definition of applicable laboratory to use the Form CMS–1450 14x bill type would allow laboratories sufficient time to make the necessary systems changes to identify applicable information before the start of the next data collection period.

Third, we believe defining applicable laboratory at the NPI level, as we currently do, provides flexibility for hospital outreach laboratories to not obtain a unique billing NPI, which may be significant particularly where a hospital outreach laboratory performs relatively few outreach services under Medicare Part B. For example, under the current definition of applicable laboratory, if a hospital outreach laboratory's CLFS revenues in a data collection period are typically much less than the low expenditure threshold, the hospital of which it is a part could choose not to obtain a separate NPI for its outreach laboratory and could thus avoid determining applicable laboratory status for its outreach laboratory component. In contrast, if laboratories were permitted to use the Form CMS–1450 14x bill type, revenues attributed to the hospital outreach laboratory would have to be calculated in every instance where those services exceeded the low expenditure threshold. This would be true even for a hospital outreach laboratory that performs relatively few outreach services under Medicare Part B. Therefore, we are interested in comments concerning this aspect of using the 14x bill type definition.

Fourth, and significantly, we believe that if we were to utilize such an approach in defining applicable laboratory, all hospital outreach laboratories would meet the majority of Medicare revenues threshold. At this time, we believe that this approach would be inconsistent with the statute. By virtue of the majority of Medicare revenues threshold, the statute defines applicable laboratory in such a way that

not all laboratories qualify as applicable laboratories. However, if we were to use the CMS-1450 14x bill type to define an applicable laboratory, all hospital outreach laboratories that use the 14x bill type would meet the majority of Medicare revenues threshold.

Accordingly, we are interested in public comments regarding whether this definition would indeed be inconsistent with the statute, as well as comments that can identify circumstances under this definition whereby a hospital outreach laboratory would not meet the majority of Medicare revenues threshold.

(2) Using CLIA Certificate To Define Applicable Laboratories

Some industry stakeholders have requested that we use the CLIA certificate rather than the NPI to identify a laboratory that would be considered an applicable laboratory. We discussed in the CLFS proposed rule (80 FR 59392) why not all entities that meet the CLIA regulatory definition at § 493.2 would be applicable laboratories, and therefore, we did not propose to use CLIA as the mechanism for defining applicable laboratory. However, some commenters to the CLFS proposed rule suggested we use the CLIA certificate to identify the organizational entity that would be considered an applicable laboratory so that each entity that had a CLIA certificate would be an applicable laboratory (81 FR 41045). We considered those comments in the CLFS final rule and discussed why we chose not to adopt that approach.

Among other reasons, we explained in the CLFS final rule that we believed a CLIA certificate-based definition of applicable laboratory would be overly inclusive by including all hospital laboratories, as opposed to just hospital outreach laboratories. In addition, the CLIA certificate is used to certify that a laboratory meets applicable health and safety regulations in order to furnish laboratory services. It is not associated with Medicare billing so, unlike for example, the NPI, with which revenues for specific services can easily be identified, the CLIA certificate cannot be used to identify revenues for specific services. We also indicated that we did not see how a hospital would determine whether its laboratories would meet the majority of Medicare revenues threshold (and the low expenditure threshold) using the CLIA certificate as the basis for defining an applicable laboratory. In addition, we stated that, given the difficulties many hospitals would likely have in determining whether their laboratories are applicable laboratories,

we also believed hospitals may object to using the CLIA certificate (81 FR 41045).

However, in light of stakeholders' suggestions to use the CLIA certificate to include hospital outreach laboratories in the definition of applicable laboratories, we are soliciting public comments on that approach. Under such approach, the majority of Medicare revenues threshold and low expenditure threshold components of the definition of applicable laboratory would be determined at the CLIA certificate level instead of the NPI level. If we pursued such approach, we would have to modify the definition of applicable laboratory in § 414.502 to indicate that an applicable laboratory is one that holds a CLIA certificate under § 493.2 of the chapter. We would have concerns, however, about defining applicable laboratory by the CLIA certificate.

First, as we discussed in the CLFS final rule, given that information regarding the CLIA certificate is not required on the Form CMS-1450 14x bill type, which is the billing form used by hospitals for their laboratory outreach services, it is not clear how a hospital would identify and distinguish revenues generated by its separately CLIA-certified laboratories for their outreach services. We are interested in public comments regarding the mechanisms a hospital would need to develop to identify revenues if we used the CLIA certificate for purposes of determining applicable laboratory status, as well as comments about the administrative burden associated with developing such mechanisms.

In addition, we understand there could be a scenario where one CLIA certificate is assigned to a hospital's entire laboratory business, which would include laboratory tests performed for hospital patients as well as non-patients (that is, patients who are not admitted inpatients or registered outpatients of the hospital). For example, hospital laboratories with an outreach laboratory component would be assigned a single CLIA certificate if the hospital outreach laboratory has the same mailing address or location as the hospital laboratory. In this scenario, the majority of Medicare revenues threshold would be applied to the entire hospital laboratory, not just its outreach laboratory component. If a single CLIA certificate is assigned to the hospital's entire laboratory business, the hospital laboratory would be unlikely to meet the majority of Medicare revenues threshold because its laboratory revenues under the IPPS and OPSS alone would likely far exceed the revenues it receives under the CLFS and PFS. As a result, a hospital outreach laboratory that could otherwise meet the

definition of applicable laboratory, as currently defined at the NPI level, would not be an applicable laboratory if we were to require the CLIA certificate to define applicable laboratory. Given that this approach could have the effect of decreasing as opposed to increasing the number of applicable laboratories, we are requesting public comments on this potential drawback of defining applicable laboratory at the CLIA certificate level.

We believe that feedback on the topics discussed in this section could help inform us regarding potential refinements to the definition of applicable laboratory. We welcome comments on these topics from the public, including, physicians, laboratories, hospitals, and other interested stakeholders. We are especially interested in comments regarding the administrative burden of using the Form CMS-1450 14x bill type or CLIA certificate to identify applicable information attributed only to the hospital outreach laboratory portion of a hospital's total laboratory business. Depending on the comments we receive, it is possible we would consider approaches described in this section.

Again, we continue to believe that our current regulatory definitions and data collection processes are reasonable pursuant to governing law. The above public comments are solicited as part of the agency's ongoing engagement with stakeholders to receive the most up-to-date information and comments from those affected by the CLFS fee schedule.

5. Solicitation of Public Comments on the Low Expenditure Threshold in the Definition of Applicable Laboratory

a. Decreasing the Low Expenditure Threshold

In the CLFS final rule, we established a low expenditure threshold component in the definition of applicable laboratory at § 414.502, which is reflected in paragraph (4). To be an applicable laboratory, at least \$12,500 of an entity's Medicare revenues in a data collection period must be CLFS revenues (with the exception that there is no low expenditure threshold for an entity with respect to the ADLTs it furnishes). We established \$12,500 as the low expenditure threshold because we believed it achieved a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a test, and minimizing the reporting burden for laboratories that receive a relatively small amount of revenues under the CLFS. We indicated in the CLFS final rule (81 FR 41049) that once we

obtained applicable information under the new payment system, we may decide to reevaluate the low expenditure threshold in future years and propose a different threshold amount through notice and comment rulemaking.

Recently, we have heard from some laboratory stakeholders that the low expenditure threshold excludes most physician office laboratories and many small independent laboratories from reporting applicable information, and that by excluding so many laboratories, the payment rates under the new private payor rate-based CLFS reflect incomplete data, and therefore, inaccurate CLFS pricing.

As noted above, we discussed in the CLFS final rule that we believed a \$12,500 low expenditure threshold would reduce the reporting burden on small laboratories. In the CLFS final rule (81 FR 41051), we estimated that 95 percent of physician office laboratories and 55 percent of independent laboratories would not be required to report applicable information under our low expenditure criterion. Although we substantially reduced the number of laboratories qualifying as applicable laboratories (that is, approximately 5 percent of physician office laboratories and approximately 45 percent of independent laboratories), we estimated that the percentage of Medicare utilization would remain high. That is, approximately 5 percent of physician office laboratories would account for approximately 92 percent of CLFS spending on physician office laboratories and approximately 45 percent of independent laboratories would account for approximately 99 percent of CLFS spending on independent laboratories (81 FR 41051).

It is our understanding that physician offices are generally not prepared to identify, collect, and report each unique private payor rate from each private payor for each laboratory test code subject to the data collection and reporting requirements, and the volume associated with each unique private payor rate. As such, we believe revising the low expenditure threshold so that more physician office laboratories are required to report applicable information would likely impose significant administrative burdens on physician offices. We also believe that increasing participation from physician office laboratories would have minimal overall impact on payment rates given that the weighted median of private payor rates is dominated by the laboratories with the largest test volume. We note that our participation simulations from the first data reporting

period show that increasing the volume of physician office laboratories reporting applicable information has minimal overall impact on the weighted median of private payor rates. For more information on our participation simulations, please visit the CLFS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/CY2018-CLFS-Payment-System-Summary-Data.pdf>.

We continue to believe the current low expenditure threshold strikes an appropriate balance between collecting enough private payor rate data to accurately represent the weighted median of private payor rates while limiting the administrative burden on small laboratories. In addition, as discussed previously in this section, we are proposing to exclude MA plan revenues under Part C from total Medicare revenues in the definition of applicable laboratory, and if we finalize that proposal, we expect more laboratories of all types, including physician office laboratories, may meet the majority of Medicare revenues threshold.

However, we recognize from stakeholders that some physician office laboratories and small independent laboratories that are not applicable laboratories because they do not meet the current low expenditure threshold may still want to report applicable information despite the administrative burden associated with qualifying as an applicable laboratory. Therefore, we are seeking public comments on revising the low expenditure threshold to increase the level of participation among physician office laboratories and small independent laboratories. One approach could be for us to decrease the low expenditure threshold by 50 percent, from \$12,500 to \$6,250, in CLFS revenues during a data collection period. Under such approach, a laboratory would need to receive at least \$6,250 in CLFS revenues in a data collection period. If we were to adopt such an approach, we would need to revise paragraph (4) of the definition of applicable laboratory at § 414.502 to replace \$12,500 with \$6,250. We are seeking public comments on this approach.

We are particularly interested in comments from the physician community and small independent laboratories as to the administrative burden associated with such a revision to the low expenditure threshold. Specifically, we are requesting comments on the following issues: (1) Whether physician offices and small independent laboratories currently have

adequate staff levels to meet the data collection and data reporting requirements; (2) whether data systems are currently in place to identify, collect, and report each unique private payor rate from each private payor for each CLFS test code and the volume of tests associated with each unique private payor rate; (3) if physician offices and small independent laboratories are generally not prepared to conduct the data collection and data reporting requirements, what is the anticipated timeframe needed for physician office and small independent laboratories to be able to meet the data collection and data reporting requirements; and (4) any other administrative concerns that decreasing the low expenditure threshold may impose on offices and small independent laboratories.

b. Increasing the Low Expenditure Threshold

We recognize that many small laboratories may not want the additional administrative burden of data collection and reporting and, because their test volume is relatively low, their data is unlikely to have a meaningful impact on the weighted median of private payor rates for CDLTs under the CLFS. Mindful of stakeholder feedback from smaller laboratories that prefer to not be applicable laboratories because of the burden of collecting and reporting applicable information, we could increase the low expenditure threshold in the definition of applicable laboratory by 50 percent, from \$12,500 to \$18,750, in CLFS revenues during a data collection period. Because physician office laboratories would be less likely to meet a higher threshold, such approach would decrease the number of physician office laboratories and small independent laboratories required to collect and report applicable information. We expect decreasing the number of physician office laboratories and small independent laboratories reporting applicable information will have minimal impact on determining CLFS rates because we believe the largest laboratories with the highest test volumes will continue to dominate the weighted median of private payor rates.

If we were to adopt such an approach, we would need to revise paragraph (4) of the definition of applicable laboratory at § 414.502 to replace \$12,500 with \$18,750. We are seeking public comments on this approach. We are particularly interested in comments from the physician community and small independent laboratories on the administrative burden and relief of increasing the low expenditure

threshold. We believe that feedback on the topics discussed in this section will help inform us regarding potential refinements to the low expenditure threshold. We welcome comments on these topics from the public including, physicians, laboratories, hospitals, and other interested stakeholders. We are particularly interested in receiving comments from the physician community and small independent laboratories as to the administrative burden and relief associated with revisions to the low expenditure threshold. Depending on the comments we receive, it is possible we would consider approaches described in this section.

B. Proposed Changes to the Regulations Associated With the Ambulance Fee Schedule

1. Overview of Ambulance Services

a. Ambulance Services

Under the ambulance fee schedule, the Medicare program pays for ambulance transportation services for Medicare beneficiaries under Medicare Part B when other means of transportation are contraindicated by the beneficiary's medical condition and all other coverage requirements are met. Ambulance services are classified into different levels of ground (including water) and air ambulance services based on the medically necessary treatment provided during transport.

These services include the following levels of service:

- For Ground—
- ++ Basic Life Support (BLS) (emergency and non-emergency)
- ++ Advanced Life Support, Level 1 (ALS1) (emergency and non-emergency)
- ++ Advanced Life Support, Level 2 (ALS2)
- ++ Paramedic ALS Intercept (PI)
- ++ Specialty Care Transport (SCT)
 - For Air—
 - ++ Fixed Wing Air Ambulance (FW)
 - ++ Rotary Wing Air Ambulance (RW)

b. Statutory Coverage of Ambulance Services

Under sections 1834(l) and 1861(s)(7) of the Act, Medicare Part B (Supplemental Medical Insurance) covers and pays for ambulance services, to the extent prescribed in regulations, when the use of other methods of transportation would be contraindicated by the beneficiary's medical condition.

The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments

suggest that the Congress intended that—

- The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and
- Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility.

c. Medicare Regulations for Ambulance Services

The regulations relating to ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H. Section 410.10(i) lists ambulance services as one of the covered medical and other health services under Medicare Part B. Therefore, ambulance services are subject to basic conditions and limitations set forth at § 410.12 and to specific conditions and limitations included at §§ 410.40 and 410.41. Part 414, subpart H, describes how payment is made for ambulance services covered by Medicare Part B.

2. Ambulance Extender Provisions

a. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA), (Pub. L. 110–275) amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008, and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13)(A) of the Act have been extended several times. Most recently, section 50203(a)(1) of the Bipartisan

Budget Act of 2018 (BBA) (Pub. L. 115–123, enacted on February 9, 2018) amended section 1834(l)(13)(A) of the Act to extend the payment add-ons through December 31, 2022. Thus, these payment add-ons apply to covered ground ambulance transports furnished before January 1, 2023. We are proposing to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement. (For further information regarding the implementation of this provision for claims processing, please see CR 10531. For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74438 through 74439), the CY 2015 PFS final rule with comment period (79 FR 67743) and the CY 2016 PFS final rule with comment period (80 FR 71071 through 71072)).

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary.

b. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (Pub. L. 108–173, enacted on December 8, 2003) (MMA) added section 1834(l)(12) to the Act, which specified that, in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area," that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of

rural census tract). This rural bonus is sometimes referred to as the “Super Rural Bonus” and the qualified rural areas (also known as “super rural” areas) are identified during the claims adjudicative process via the use of a data field included in the CMS-supplied ZIP code file.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Most recently, section 50203(a)(2) of the BBA amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2022. Therefore, we are continuing to apply the 22.6 percent rural bonus described in this section (in the same manner as in previous years) to ground ambulance services with dates of service before January 1, 2023 where transportation originates in a qualified rural area. Accordingly, we are proposing to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. (For further information regarding the implementation of this provision for claims processing, please see CR 10531. For a discussion of past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74439 through 74440), CY 2015 PFS final rule with comment period (79 FR 67743 through 67744) and the CY 2016 PFS final rule with comment period (80 FR 71072)).

This statutory provision is self-implementing. It requires an extension of this rural bonus (which was previously established by the Secretary) through December 31, 2022, and does not require any substantive exercise of discretion on the part of the Secretary.

3. Amendment to Section 1834(l)(15) of the Act

Section 637 of the American Taxpayer Relief Act of 2012 (ATRA) (Pub.L. 112–240), added section 1834(l)(15) of the Act to specify that the fee schedule amount otherwise applicable under the preceding provisions of section 1834(l) of the Act shall be reduced by 10 percent for ambulance services furnished on or after October 1, 2013, consisting of non-emergency basic life support (BLS) services involving transport of an individual with end-stage renal disease for renal dialysis services (as described in section 1881(b)(14)(B) of the Act) furnished other than on an emergency basis by a provider of services or a renal dialysis facility. In the CY 2014 PFS final rule with comment period (78 FR 74440), we revised § 414.610 by adding paragraph (c)(8) to conform the regulations to this statutory requirement.

Section 53108 of the BBA amended section 1834(l)(15) of the Act to increase the reduction from 10 percent to 23 percent effective for ambulance services (as described in section 1834(l)(15) of the Act) furnished on or after October 1, 2018. The 10 percent reduction applies for ambulance services (as described in section 1834(l)(15) of the Act) furnished during the period beginning on October 1, 2013 and ending on September 30, 2018. Accordingly, we are proposing to revise § 414.610(c)(8) to conform the regulations to this statutory requirement.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate decrease, and does not require any substantive exercise of discretion on the part of the Secretary. Accordingly, for ambulance services described in section 1834(l)(15) of the Act furnished during the period beginning on October 1, 2013 and ending on September 30, 2018, the fee schedule amount otherwise applicable (both base rate and mileage) is reduced by 10 percent, and for ambulance services described in section 1834(l)(15) of the Act furnished on or after October 1, 2018, the fee schedule amount otherwise applicable (both base rate and mileage) is reduced by 23 percent. (For further information regarding application of this mandated rate decrease, please see CR 10549.)

C. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Payment for Care Management Services

In the CY 2018 PFS final rule, we revised the payment methodology for Chronic Care Management (CCM) services furnished by RHCs and FQHCs, and established requirements and payment for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2018.

For CCM services furnished by RHCs or FQHCs between January 1, 2016, and December 31, 2017, payment is at the PFS national average payment rate for CPT 99490. For CCM, general BHI, and psychiatric CoCM services furnished by RHCs or FQHCs on or after January 1, 2018, we established 2 new HCPCS codes. The first HCPCS code, G0511, is a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. The second HCPCS code, G0512, is a psychiatric CoCM

code for use by RHCs or FQHCs when at least 70 minutes of initial psychiatric CoCM services or 60 minutes of subsequent psychiatric CoCM services are furnished to a patient in a calendar month.

The payment amount for HCPCS code G0511 is set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. The 3 codes are CPT 99490 (20 minutes or more of CCM services), CPT 99487 (60 minutes or more of complex CCM services), and CPT 99484 (20 minutes or more of BHI services).

The payment amount for HCPCS code G0512 is set at the average of the 2 national non-facility PFS payment rates for CoCM codes and updated annually based on the PFS amounts. The 2 codes are CPT 99492 (70 minutes or more of initial psychiatric CoCM services) and CPT 99493 (60 minutes or more of subsequent psychiatric CoCM services).

For practitioners billing under the PFS, we are proposing for CY 2019 a new CPT code, 994X7, which would correspond to 30 minutes or more of CCM furnished by a physician or other qualified health care professional and is similar to CPT codes 99490 and 99487. For RHCs and FQHCs, we are proposing to add CPT code 994X7 as a general care management service and to include it in the calculation of HCPCS code G0511. That is, we propose that starting on January 1, 2019, RHCs and FQHC would be paid for G0511 based on the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 994X7.

We propose to revise § 405.2464 to reflect the current payment methodology that was finalized in the CY 2018 PFS and incorporate the addition of new CPT codes to HCPCS G0511.

2. Communication Technology-Based Services and Remote Evaluations

RHC and FQHC visits are face-to-face (in-person) encounters between a patient and an RHC or FQHC practitioner during which time one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, nurse practitioners, physician assistants, certified nurse midwives, clinical psychologists, and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient. A Transitional Care Management service can also be an RHC or FQHC visit. A Diabetes Self-Management Training (DSMT) service or a Medical Nutrition Therapy (MNT)

service furnished by a certified DSMT or MNT provider may also be an FQHC visit.

RHCs are paid an all-inclusive rate (AIR) for medically-necessary, face-to-face visits with an RHC practitioner. The rate is subject to a payment limit, except for those RHCs that have an exception to the payment limit for being "provider-based" (see § 413.65). FQHCs are paid the lesser of their charges or the FQHC Prospective Payment System (PPS) rate for medically-necessary, face-to-face visits with an FQHC practitioner. Only medically-necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner can be RHC or FQHC billable visits.

The RHC and FQHC payment rates reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day, and are not adjusted for the complexity of the patient health care needs, the length of the visit, or the number or type of practitioners involved in the patient's care.

Services furnished by auxiliary personnel (such as nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment. This may include services furnished prior to or after the billable visit that occur within a medically appropriate time period, which is usually 30 days or less.

RHCs and FQHCs are also paid for care management services, including chronic care management services, general behavioral health integration services, and psychiatric Collaborative Care Model services. These are typically non-face-to-face services that do not require the skill level of an RHC or FQHC practitioner and are not included in the RHC or FQHC payment methodologies.

For practitioners billing under the PFS, we are proposing for CY 2019 separate payment for certain communication technology-based services. This includes what is referred to as "Brief Communication Technology-based Service" for a "virtual check-in" and separate payment for remote evaluation of recorded video and/or images. The "virtual check-in" visit would be billable when a physician or non-physician practitioner has a brief (5 to 10 minutes), non-face-to-face check in with a patient via communication technology to assess whether the patient's condition necessitates an office visit. This service could be billed only in situations where the medical

discussion was for a condition not related to an E/M service provided within the previous 7 days, and does not lead to an E/M service or procedure within the next 24 hours or at the soonest available appointment. We are also proposing payment for practitioners billing under the PFS for remote evaluation services. This payment would be for the remote evaluation of patient-transmitted information conducted via pre-recorded "store and forward" video or image technology, including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment. Both of these services would be priced under the PFS at a rate that reflects the resource costs of these non-face-to-face services relative to other PFS services, including face-to-face and in-person visits.

The RHC and FQHC payment models are distinct from the PFS model in that the payment is for a comprehensive set of services and supplies associated with an RHC or FQHC visit. A direct comparison between the payment for a specific service furnished in an RHC or FQHC and the same service furnished in a physician's office is not possible, because the payment for RHCs and FQHCs is a per diem payment that includes the cost for all services and supplies rendered during an encounter, and payment for a service furnished in a physician's office and billed under the PFS is only for that service.

We recognize that there are occasions when it may be beneficial to both the patient and the RHC or FQHC to utilize communications-based technology to determine the course of action for a health issue. Currently under the RHC and FQHC payment systems, if the communication results in a face-to-face billable visit with an RHC or FQHC practitioner, the cost of the prior communication would be included in the RHC AIR or the FQHC PPS. However, if as a result of the communication it is determined that a visit is not necessary, there would not be a billable visit and there would be no payment.

RHCs and FQHCs furnish services in rural and urban areas that have been determined to be medically underserved areas or health professional shortage areas. They are an integral component of the Nation's health care safety net, and we want to assure that Medicare patients who are served by RHCs and FQHCs are able to communicate with their RHC or FQHC practitioner in a

manner that enhances access to care, consistent with evolving medical care. Particularly in rural areas where transportation is limited and distances may be far, we believe the use of communication technology may help some patients to determine if they need to schedule a visit at the RHC or FQHC. If it is determined that a visit is not necessary, the RHC or FQHC practitioner would be available for other patients who need their care.

When communication-based technology services are furnished in association with an RHC or FQHC billable visit, the costs of these services are included in the RHC AIR or the FQHC PPS and are not separately billable. However, if there is no RHC or FQHC billable visit, these costs are not paid as part of an RHC AIR or FQHC PPS payment. We are therefore proposing that, effective January 1, 2019, RHCs and FQHCs receive an additional payment for the costs of communication technology-based services or remote evaluation services that are not already captured in the RHC AIR or the FQHC PPS payment when the requirements for these services are met.

We propose that RHCs and FQHCs receive payment for communication technology-based services or remote evaluation services when at least 5 minutes of communications-based technology or remote evaluation services are furnished by an RHC or FQHC practitioner to a patient that has been seen in the RHC or FQHC within the previous year. These services may only be billed when the medical discussion or remote evaluation is for a condition not related to an RHC or FQHC service provided within the previous 7 days, and does not lead to an RHC or FQHC service within the next 24 hours or at the soonest available appointment, since in those situation the services are already paid as part of the RHC or FQHC per-visit payment.

We propose to create a new Virtual Communications G code for use by RHCs and FQHCs only, with a payment rate set at the average of the PFS national non-facility payment rates for HCPCS code GVC11 for communication technology-based services, and HCPCS code GRAS1 for remote evaluation services. RHCs and FQHCs would be able to bill the Virtual Communications G-code either alone or with other payable services. The payment rate for the Virtual Communications G-code would be updated annually based on the PFS amounts.

We also propose to waive the RHC and FQHC face-to-face requirements when these services are furnished to an

RHC or FQHC patient. Coinsurance would be applied to FQHC claims, and coinsurance and deductibles would apply to RHC claims for these services. Services that are currently being furnished and paid under the RHC AIR or FQHC PPS payment methodology will not be affected by the ability of the RHC or FQHC to receive payment for additional services that are not included in the RHC AIR or FQHC PPS.

3. Other Options Considered

We considered other options for payment for these services. First, we considered adding communication technology-based and remote evaluation services as an RHC or FQHC stand-alone service. Under this option, payment for RHCs would be at the AIR, and payment for FQHCs would be the lesser of total charges or the PPS rate. We are not proposing this payment option because these services do not meet the requirements for an RHC or FQHC billable visit and payment at the RHC AIR or FQHC PPS would result in a payment rate incongruent with efficiencies inherent in the provision of the technology-based services.

The second option we considered was to allow RHCs and FQHCs to bill HCPCS codes GVC11 or GRAS1 separately on an RHC or FQHC claim. We are not proposing this payment option because we believe that a combined G code is less burdensome and will allow expansion of these services without adding additional codes on an RHC or FQHC claim.

We invite comments on this proposal. In particular, we are interested in comments regarding the appropriateness of payment for communication technology-based and remote evaluation services in the absence of an RHC or FQHC visit, the burden associated with documentation for billing these codes (RHC or FQHC practitioner's time, medical records, etc.), and any potential impact on the per diem nature of RHC and FQHC billing and payment structure as a result of payment for these services. We are also seeking public comment on whether it would be clinically appropriate to apply a frequency limitation on the use of the new Virtual Communications G code by the same RHC or FQHC with the same patient, and on what would be a reasonable frequency limitation to ensure that this code is appropriately utilized.

4. Other Regulatory Updates

In addition to the regulatory change described in this section of the rule, we propose the following for accuracy:

- Removal of the extra section mark in the definition of "Federally qualified health center (FQHC)" in § 405.2401.
- Replacing the word "his" with "his or her" in the definition of "Secretary" in § 405.2401.

D. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

Section 218(b) of the Protecting Access to Medicare Act (PAMA) amended Title XVIII of the Act to add section 1834(q) of the Act directing us to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. The CY 2016 PFS final rule with comment period addressed the initial component of the new Medicare AUC program, specifying applicable AUC. In that rule (80 FR 70886), we established an evidence-based process and transparency requirements for the development of AUC, defined provider-led entities (PLEs) and established the process by which PLEs may become qualified to develop, modify or endorse AUC. The first list of qualified PLEs was posted on the CMS website at the end of June 2016 at which time their AUC libraries became specified applicable AUC for purposes of section 1834(q)(2)(A) of the Act. The CY 2017 PFS final rule addressed the second component of this program, specification of qualified clinical decision support mechanisms (CDSMs). In the CY 2017 PFS final rule (81 FR 80170), we defined CDSM, identified the requirements CDSMs must meet for qualification, including preliminary qualification for mechanisms documenting how and when each requirement is reasonably expected to be met, and established a process by which CDSMs may become qualified. We also defined applicable payment systems under this program, specified the first list of priority clinical areas, and identified exceptions to the requirement that ordering professionals consult specified applicable AUC when ordering applicable imaging services. The first list of qualified CDSMs was posted on the CMS website in July 2017.

The CY 2018 PFS final rule addressed the third component of this program, the consultation and reporting requirements. In the CY 2018 PFS final rule (82 FR 53190), we established the start date of January 1, 2020 for the Medicare AUC program for advanced diagnostic imaging services. It is for services ordered on and after this date that ordering professionals must consult specified applicable AUC using a qualified CDSM when ordering applicable imaging services, and furnishing professionals must report

AUC consultation information on the Medicare claim. We further specified that the AUC program will begin on January 1, 2020 with a year-long educational and operations testing period during which time claims will not be denied for failure to include proper AUC consultation information. We also established a voluntary period from July 2018 through the end of 2019 during which ordering professionals who are ready to participate in the AUC program may consult specified applicable AUC through qualified CDSMs and communicate the results to furnishing professionals, and furnishing professionals who are ready to do so may report AUC consultation information on the claim (<https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/Downloads/MM10481.pdf>). Additionally, to incentivize early use of qualified CDSMs to consult AUC, we established in the CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstances Policy for the Transition Year final rule with comment period and interim final rule (hereinafter "CY 2018 Quality Payment Program final rule") a high-weight improvement activity for ordering professionals who consult specified AUC using a qualified CDSM for the Merit-based Incentive Payment System (MIPS) performance period that began January 1, 2018 (82 FR 54193).

This rule proposes additions to the definition of applicable setting, clarification around who may perform the required AUC consultation using a qualified CDSM under this program, clarification that reporting is required across claim types and by both the furnishing professional and furnishing facility, changes to the policy for significant hardship exceptions for ordering professionals under this program, mechanisms for claims-based reporting, and a solicitation of feedback regarding the methodology to identify outlier ordering professionals.

1. Background

AUC present information in a manner that links: A specific clinical condition or presentation; one or more services; and an assessment of the appropriateness of the service(s). Evidence-based AUC for imaging can assist clinicians in selecting the imaging study that is most likely to improve health outcomes for patients based on their individual clinical presentation. For purposes of this program AUC is a set or library of individual appropriate use criteria. Each individual criterion is

an evidence-based guideline for a particular clinical scenario based on a patient's presenting symptoms or condition.

AUC need to be integrated as seamlessly as possible into the clinical workflow. CDSMs are the electronic portals through which clinicians access the AUC during the patient workup. They can be standalone applications that require direct entry of patient information, but may be more effective when they are integrated into Electronic Health Records (EHRs). Ideally, practitioners would interact directly with the CDSM through their primary user interface, thus minimizing interruption to the clinical workflow.

2. Statutory Authority

Section 218(b) of the PAMA added a new section 1834(q) of the Act entitled, "Recognizing Appropriate Use Criteria for Certain Imaging Services," which directs the Secretary to establish a new program to promote the use of AUC. Section 1834(q)(4) of the Act requires ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system; and payment for such service may only be made if the claim for the service includes information about the ordering professional's consultation of specified applicable AUC through a qualified CDSM.

3. Discussion of Statutory Requirements

There are four major components of the AUC program under section 1834(q) of the Act, and each component has its own implementation date: (1) Establishment of AUC by November 15, 2015 (section 1834(q)(2) of the Act); (2) identification of mechanisms for consultation with AUC by April 1, 2016 (section 1834(q)(3) of the Act); (3) AUC consultation by ordering professionals, and reporting on AUC consultation by January 1, 2017 (section 1834(q)(4) of the Act); and (4) annual identification of outlier ordering professionals for services furnished after January 1, 2017 (section 1834(q)(5) of the Act). We did not identify mechanisms for consultation by April 1, 2016. Therefore, we did not require ordering professionals to consult CDSMs or furnishing professionals to report information on the consultation by the January 1, 2017 date.

a. Establishment of AUC

In the CY 2016 PFS final rule with comment period, we addressed the first component of the Medicare AUC program under section 1834(q)(2) of the

Act—the requirements and process for establishment and specification of applicable AUC, along with relevant aspects of the definitions under section 1834(q)(1) of the Act. This included defining the term PLE (provider-led entity) and finalizing requirements for the rigorous, evidence-based process by which a PLE would develop AUC, upon which qualification is based, as provided in section 1834(q)(2)(B) of the Act and in the CY 2016 PFS final rule with comment period. Using this process, once a PLE is qualified by CMS, the AUC that are developed, modified or endorsed by the qualified PLE are considered to be specified applicable AUC under section 1834(q)(2)(A) of the Act. We defined PLE to include national professional medical societies, health systems, hospitals, clinical practices and collaborations of such entities such as the High Value Healthcare Collaborative or the National Comprehensive Cancer Network. Qualified PLEs may collaborate with third parties that they believe add value to their development of AUC, provided such collaboration is transparent. We expect qualified PLEs to have sufficient infrastructure, resources, and the relevant experience to develop and maintain AUC according to the rigorous, transparent, and evidence-based processes detailed in the CY 2016 PFS final rule with comment period.

In the same rule we established a timeline and process under § 414.94(c)(2) for PLEs to apply to become qualified. Consistent with this timeline the first list of qualified PLEs was published at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/PLE.html> in June 2016 (OMB Control Number 0938–1288).

b. Mechanism for AUC Consultation

In the CY 2017 PFS final rule, we addressed the second major component of the Medicare AUC program—the specification of qualified CDSMs for use by ordering professionals for consultation with specified applicable AUC under section 1834(q)(3) of the Act, along with relevant aspects of the definitions under section 1834(q)(1) of the Act. This included defining the term CDSM and finalizing functionality requirements of mechanisms, upon which qualification is based, as provided in section 1834(q)(3)(B) of the Act and in the CY 2017 PFS final rule. CDSMs may receive full qualification or preliminary qualification if most, but not all, of the requirements are met at the time of application. The preliminary qualification period began June 30, 2017

and ends when the AUC consulting and reporting requirements become effective on January 1, 2020. The preliminarily qualified CDSMs must meet all requirements by that date. We defined CDSM as an interactive, electronic tool for use by clinicians that communicates AUC information to the user and assists them in making the most appropriate treatment decision for a patient's specific clinical condition. Tools may be modules within or available through certified EHR technology (as defined in section 1848(o)(4) of the Act) or private sector mechanisms independent from certified EHR technology or a mechanism established by the Secretary.

In the CY 2017 PFS final rule, we established a timeline and process in § 414.94(g)(2) for CDSM developers to apply to have their CDSMs qualified. Consistent with this timeline, the first list of qualified CDSMs was published at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/CDSM.html> in July 2017 (OMB Control Number 0938–1315).

c. AUC Consultation and Reporting

In the CY 2018 PFS final rule, we addressed the third major component of the Medicare AUC program—consultation with applicable AUC by the ordering professional and reporting of such consultations under section 1834(q)(4) of the Act. We established a January 1, 2020 effective date for the AUC consultation and reporting requirements for this program. We also established a voluntary period during which early adopters can begin reporting limited consultation information on Medicare claims from July 2018 through December 2019. During the voluntary period there is no requirement for ordering professionals to consult AUC or furnishing professionals to report information related to the consultation. On January 1, 2020, the program will begin with an educational and operations testing period and during this time we will continue to pay claims whether or not they correctly include AUC consultation information. Ordering professionals must consult specified applicable AUC through qualified CDSMs for applicable imaging services furnished in an applicable setting, paid for under an applicable payment system and ordered on or after January 1, 2020; and furnishing professionals must report the AUC consultation information on the Medicare claim for these services ordered on or after January 1, 2020.

Consistent with section 1834(q)(4)(B) of the Act, we also established that furnishing professionals must report the

following information on Medicare claims for advanced diagnostic imaging services as specified in section 1834(q)(1)(C) of the Act and defined in § 414.94(b), furnished in an applicable setting as defined in section 1834(q)(1)(D) of the Act, paid for under an applicable payment system as defined in section 1834(q)(4)(D) of the Act, and ordered on or after January 1, 2020: (1) The qualified CDSM consulted by the ordering professional; (2) whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; and (3) the NPI of the ordering professional (if different from the furnishing professional). Proposed clarifying revisions to the reporting requirement are discussed later in this preamble.

Section 1834(q)(4)(C) of the Act provides for exceptions to the AUC consultation and reporting requirements in the case of: A service ordered for an individual with an emergency medical condition, a service ordered for an inpatient and for which payment is made under Medicare Part A, and a service ordered by an ordering professional for whom the Secretary determines that consultation with applicable AUC would result in a significant hardship. In the CY 2017 PFS final rule, we adopted a regulation at § 414.94(h)(1)(i) to specify the circumstances under which AUC consultation and reporting requirements are not applicable. These include applicable imaging services ordered: (1) For an individual with an emergency medical condition (as defined in section 1867(e)(1) of the Act); (2) for an inpatient and for which payment is made under Medicare Part A; and (3) by an ordering professional who is granted a significant hardship exception to the Medicare EHR Incentive Program payment adjustment for that year under 42 CFR 495.102(d)(4), except for those granted under § 495.102(d)(4)(iv)(C). We are proposing changes to the conditions for significant hardship exceptions, and our proposals are discussed later in this preamble. We remind readers that consistent with section 1834(q)(4)(A) of the Act, ordering professionals must consult AUC for every applicable imaging service furnished in an applicable setting and paid under an applicable payment system unless a statutory exception applies.

Section 1834(q)(4)(D) of the Act specifies the applicable payment systems for which AUC consultation and reporting requirements apply and, in the CY 2017 PFS final rule, consistent

with the statute, we defined applicable payment system in our regulation at § 414.94(b) as: (1) The PFS established under section 1848(b) of the Act; (2) the prospective payment system for hospital outpatient department services under section 1833(t) of the Act; and (3) the ambulatory surgical center payment system under section 1833(i) of the Act.

Section 1834(q)(1)(D) of the Act specifies the applicable settings in which AUC consultation and reporting requirements apply: A physician's office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other "provider-led outpatient setting determined appropriate by the Secretary." In the CY 2017 PFS final rule, we added this definition to our regulation at § 414.94(b). Proposed additional applicable settings are discussed later in this preamble.

d. Identification of Outliers

The fourth component of the Medicare AUC program is specified in section 1834(q)(5) of the Act, Identification of Outlier Ordering Professionals. The identification of outlier ordering professionals under this paragraph facilitates a prior authorization requirement that applies for outlier professionals beginning January 1, 2020, as specified under section 1834(q)(6) of the Act. Because we established a start date of January 1, 2020 for AUC consultation and reporting requirements, we will not have identified any outlier ordering professionals by that date. As such, implementation of the prior authorization component is delayed. However, we did finalize in the CY 2017 PFS final rule the first list of priority clinical areas to guide identification of outlier ordering professionals as follows:

- Coronary artery disease (suspected or diagnosed).
- Suspected pulmonary embolism.
- Headache (traumatic and non-traumatic).
- Hip pain.
- Low back pain.
- Shoulder pain (to include suspected rotator cuff injury).
- Cancer of the lung (primary or metastatic, suspected or diagnosed).
- Cervical or neck pain.

We are not including proposals to expand or modify the list of priority clinical areas in this proposed rule.

4. Proposals for Continuing Implementation

We propose to amend § 414.94 of our regulations, "Appropriate Use Criteria

for Certain Imaging Services," to reflect the following proposals.

a. Expanding Applicable Settings

Section 1834(q)(1)(D) of the Act specifies that the AUC consultation and reporting requirements apply only in an applicable setting, which means a physician's office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other provider-led outpatient setting determined appropriate by the Secretary. In the CY 2017 PFS final rule, we codified this definition in § 414.94(b). We are proposing to revise the definition of applicable setting to add an independent diagnostic testing facility (IDTF).

We believe the addition of IDTFs to the definition of applicable setting will ensure that the AUC program is in place across outpatient settings in which outpatient advanced diagnostic imaging services are furnished. IDTFs furnish services for a large number of Medicare beneficiaries; nearly \$1 billion in claims for 2.4 million beneficiaries in 2010 (OEI-05-09-00560). An IDTF is independent of a hospital or physician's office and diagnostic tests furnished by an IDTF are performed by licensed, certified non-physician personnel under appropriate physician supervision (§ 410.33). Like other applicable settings, IDTFs must meet the requirements specified in § 410.33 of our regulations to be enrolled to furnish and bill for advanced diagnostic imaging and other IDTF services. Services that may be provided by an IDTF include, but are not limited to, magnetic resonance imaging (MRI), ultrasound, x-rays, and sleep studies. An IDTF may be a fixed location, a mobile entity, or an individual non-physician practitioner, and diagnostic procedures performed by an IDTF are paid under the PFS. IDTF services must be furnished under the appropriate level of physician supervision as specified in § 410.33(b); and all procedures furnished by the IDTF must be ordered in writing by the patient's treating physician or non-physician practitioner. As such, we believe the IDTF setting is a provider-led outpatient setting appropriate for addition to the list of applicable settings under section 1834(q)(1)(D), and we propose to add IDTF to our definition of applicable setting under § 414.94(b) of the regulations.

We note that under the PFS, payment for many diagnostic tests including the advanced diagnostic imaging services to which the AUC program applies can be made either "globally" when the entire

service is furnished and billed by the same entity; or payment can be made separately for the technical component (TC) of the service and the professional component (PC) when those portions of the service are furnished and billed by different entities. In general, the TC for an advanced diagnostic imaging service is the portion of the test during which the patient is present and the image is captured. The PC is the portion of the test that involves a physician's interpretation and report on the captured image. For example, when a CT scan is ordered by a patient's treating physician, the entire test (TC and PC) could be furnished by a radiologist in their office and billed as a "global" service. Alternatively, the TC could be furnished and billed by an IDTF, and the PC could be furnished and billed by a radiologist in private practice. By adding IDTFs as an applicable setting, we believe we would appropriately and consistently apply the AUC program across the range of outpatient settings where applicable imaging services are furnished.

We propose to revise the definition of applicable setting under § 414.94(b) to include an IDTF. We invite comments on this proposal and on the possible inclusion of any other applicable setting. We remind commenters that application of the AUC program is not only limited to applicable settings, but also to services for which payment is made under applicable payment systems (the physician fee schedule, the OPSS, and the ASC payment system).

b. Consultations by Ordering Professionals

Section 1834(q)(1)(E) of the Act defines the term "ordering professional" as a physician (as defined in section 1861(r)) or a practitioner described in section 1842(b)(18)(C) who orders an applicable imaging service. The AUC consultation requirement applies to these ordering professionals. We are proposing that the consultation with AUC through a qualified CDSM may be performed by clinical staff working under the direction of the ordering professional, subject to applicable State licensure and scope of practice law, when the consultation is not performed personally by the ordering professional whose NPI will be listed on the order for an advanced imaging service.

In response to the CY 2018 PFS proposed rule, we received several public comments requesting clarification regarding who is required to perform the consultation of AUC through a qualified CDSM. Commenters not only sought clarification, but also provided recommendations for

requirements around this topic. Some commenters recommended that CMS strictly interpret the statutory language and only allow the clinician placing the order to perform the consultation and others recommended that CMS allow others to perform the AUC consultation on behalf of the clinician.

Section 1834(q)(4)(A)(i) of the Act requires an ordering professional to consult with a qualified CDSM, and this was codified in our regulations at § 414.94(j). The statute does not explicitly provide for consultations under the AUC program to be fulfilled by other professionals, individuals or organizations on behalf of the ordering professional; however, we continue to seek ways to minimize the burden of this new Medicare program and understand that many practices currently use clinical staff, working under the direction of the ordering professional, to interact with the CDSM for AUC consultation and subsequent ordering of advanced diagnostic imaging. Therefore, we propose to modify paragraph § 414.94(j) to specify that additional individuals may perform the required AUC consultation.

When the AUC consultation is not performed personally by the ordering professional, we propose the consultation may be performed by auxiliary personnel incident to the ordering physician or non-physician practitioner's professional service. We believe this approach is appropriate under this program and still accomplishes the goal of promoting the use of AUC. This proposed policy would allow the ordering professional to exercise their discretion to delegate the performance of this consultation. It is important to note that the ordering professional is ultimately responsible for the consultation as their NPI is reported by the furnishing professional on the claim for the applicable imaging service; and that it is the ordering professional who could be identified as an outlier ordering professional and become subject to prior authorization based on their ordering pattern.

We propose to revise the AUC consultation requirement specified at § 414.94(j) to specify that the AUC consultation may be performed by auxiliary personnel under the direction of the ordering professional and incident to the ordering professional's services.

c. Reporting AUC Consultation Information

Section 1834(q)(4)(B) of the Act requires that payment for an applicable imaging service furnished in an applicable setting and paid for under an

applicable payment system may only be made if the claim for the service includes certain information about the AUC consultation. As such, the statute requires that AUC consultation information be included on any claim for an outpatient advanced diagnostic imaging service, including those billed and paid under any applicable payment system (the PFS, OPSS or ASC payment system). When we initially codified the AUC consultation reporting requirement in § 414.94(k) through rulemaking in the CY 2018 PFS final rule, we specified only that "furnishing professionals" must report AUC consultation information on claims for applicable imaging services. This led some stakeholders to believe that AUC consultation information would be required only on practitioner claims. To better reflect the statutory requirements of section 1834(q)(4)(B) of the Act, we are proposing to revise our regulations to clarify that AUC consultation information must be reported on all claims for an applicable imaging service furnished in an applicable setting and paid for under an applicable payment system. The revised regulation would more clearly express the scope of advanced diagnostic imaging services that are subject to the AUC program, that is, those furnished in an applicable setting and paid under an applicable payment system.

The language codified in § 414.94(k) uses the term furnishing professional to describe who must report the information on the Medicare claims. We recognize that section 1834(q)(1)(F) of the Act specifies that a "furnishing professional" is a physician (as defined in section 1861(r)) or a practitioner described in section 1842(b)(18)(C) who furnishes an applicable imaging service. However, because section 1834(q)(4)(B) of the Act, as described above, clearly includes all claims paid under applicable payment systems without exclusion, we believe that the claims from both furnishing professionals and facilities must include AUC consultation information. In other words, we would expect this information to be included on the practitioner's claim for the professional component of the applicable advanced diagnostic imaging service and on the provider's or supplier's claim for the facility portion or TC of the imaging service.

As such, we propose to revise § 414.94(k) to clearly reflect the scope of claims for which AUC consultation information must be reported, and to clarify that the requirement to report AUC consultation information is not limited to the furnishing professional.

d. Claims-Based Reporting

In the CY 2018 PFS proposed rule (82 FR 34094) we discussed using a combination of G-codes and modifiers to report the AUC consultation information on the Medicare claim. We received numerous public comments objecting to this potential solution. In the 2018 PFS final rule, we agreed with many of the commenters that additional approaches to reporting AUC consultation information on Medicare claims should be considered, and we learned from many commenters that reporting a unique consultation identifier (UCI) would be a less burdensome and preferred approach. The UCI would include all the information required under section 1834(q)(4)(B) of the Act including an indication of AUC adherence, non-adherence and not applicable responses. Commenters noted that capturing a truly distinguishing UCI on the claim will allow for direct mapping from a single AUC consultation to embedded information within a CDSM. We indicated that we would work with stakeholders to further explore the concept of using a UCI to satisfy the requirements of section 1834(q)(4)(B) of the Act, which will be used for Medicare claims processing and, ultimately, for the identification of outlier ordering professionals, and consider developing a taxonomy for a UCI.

We had the opportunity to engage with some stakeholders over the last 6 months and we understand that some commenters from the previous rule continue to be in favor of a UCI, while some may have changed their position upon further consideration.

We provide the following information to summarize alternatives we considered. CMS had originally considered assigning a G-code for every qualified CDSM with a code descriptor containing the name of the qualified CDSM. The challenge to this approach arises when there is more than one advanced imaging service on a single claim. CMS could attribute a single G-code to all of the applicable imaging services for the patient's clinical condition on the claim, which might be appropriate if each AUC consultation for each service was through the same CDSM. If a different CDSM was used for each service (for example, when services on a single claim were ordered by more than one ordering professional and each ordering professional used a different CDSM) then multiple G-codes could be needed on the claim. Each G-code would appear on the claim individually as its own line item. As a

potential solution, we considered the use of modifiers, which are appealing because they would appear on the same line as the CPT code that identifies the specific billed service. Therefore, information entered onto a claim would arrive into the claims processing system paired with the relevant AUC consultation information.

When reporting the required AUC consultation information based on the response from a CDSM: (1) The imaging service would adhere to the applicable AUC; (2) the imaging service would not adhere to such criteria; or (3) such criteria were not applicable to the imaging service ordered, three modifiers could be developed. These modifiers, when placed on the same line with the CPT code for the advanced imaging service would allow this information to be easily accessed in the Medicare claims data and matched with the imaging service.

Stakeholders have made various suggestions for a taxonomy that could be used to develop a UCI to report the required information. Stakeholders have also considered where to place the UCI on the claim. We understand the majority of solutions suggested by stakeholders involving a UCI are claim-level solutions and would not allow CMS to attribute the CDSM used or the AUC adherence status (adherent or not adherent, or not applicable) to a specific imaging service. As such, the approach of using a UCI would not identify whether an AUC consultation was performed for each applicable imaging service reported on a claim form, or be useful for purposes of identifying outlier ordering professionals in accordance with section 1834(q)(5) of the Act.

We have received ideas from stakeholders that are both for and against the two approaches we have identified; and we appreciate the stakeholders that have provided additional information or engaged us in this discussion. Internally, we have explored the possibility of using and feasibility of developing a UCI, and concluded that, although we initiated this approach during the CY 2018 PFS final rule, it is not feasible to create a uniform UCI taxonomy, determine a location of the UCI on the claims forms, obtain the support and permission by national bodies to use claim fields for this purpose, and solve the underlying issue that the UCI seems limited to claim-level reporting. Using coding structures that are already in place (such as G-codes and modifiers) would allow CMS to establish reporting requirements prior to the start of the program (January 1, 2020).

Since we did not finalize a proposal in the CY 2018 PFS final rule, we propose in this rule to use established coding methods, to include G-codes and modifiers, to report the required AUC information on Medicare claims. This will allow the program to be implemented by January 1, 2020. We will consider future opportunities to use a UCI and look forward to continued engagement with and feedback from stakeholders.

e. Significant Hardship Exception

We are proposing to revise § 414.94(i)(3) of our regulations to adjust the significant hardship exception requirements under the AUC program. We are proposing criteria specific to the AUC program and independent of other programs. An ordering professional experiencing any of the following when ordering an advanced diagnostic imaging service would not be required to consult AUC using a qualified CDSM, and the claim for the applicable imaging service would not be required to include AUC consultation information. The proposed criteria include:

- Insufficient internet access;
- EHR or CDSM vendor issues; or
- Extreme and uncontrollable circumstances.

Insufficient internet access is specific to the location where an advanced diagnostic imaging service is ordered by the ordering professional. EHR or CDSM vendor issues may include situations where ordering professionals experience temporary technical problems, installation or upgrades that temporarily impede access to the CDSM, vendors cease operations, or CMS de-qualifies a CDSM. CMS expects these situations to generally be irregular and unusual. Extreme and uncontrollable circumstances include disasters, natural or man-made, that have a significant negative impact on healthcare operations, area infrastructure or communication systems. These could include areas where events occur that have been designated a Federal Emergency Management Agency (FEMA) major disaster or a public health emergency declared by the Secretary. Based on 2016 data from the Medicare EHR Incentive Program and the 2019 payment year MIPS eligibility and special status file, we estimate that 6,699 eligible clinicians could submit such a request due to extreme and uncontrollable circumstances or as a result of a decertification of an EHR, which represents less than 1-percent of available ordering professionals.

In the CY 2017 PFS final rule, for purposes of the AUC program significant hardship exceptions, we

provided that those who received significant hardship exceptions in the following categories from § 495.102(d)(4) would also qualify for significant hardship exceptions for the AUC program:

- Insufficient Internet Connectivity (as specified in § 495.102(d)(4)(i)).
- Practicing for less than 2 years (as specified in § 495.102(d)(4)(ii)).
- Extreme and Uncontrollable

Circumstances (as specified in § 495.102(d)(4)(iii)).

- Lack of Control over the Availability of CEHRT (as specified in § 495.102(d)(4)(iv)(A)).
- Lack of Face-to-Face Patient

Interaction (as specified in § 495.102(d)(4)(iv)(B)).

In the CY 2018 PFS proposed rule, we proposed to amend the AUC significant hardship exception regulation to specify that ordering professionals who are granted reweighting of the Advancing Care Information (ACI) performance category to zero percent of the final score for the year under MIPS per § 414.1380(c)(2) due to circumstances that include the criteria listed in § 495.102(d)(4)(i), (d)(4)(iii), and (d)(4)(iv)(A) and (B) (as outlined in the bulleted list above) would be excepted from the AUC consultation requirement during the same year that the reweighting applies for purposes of the MIPS payment adjustment. This proposal removed § 495.102(d)(4)(ii), practicing for less than 2 years, as a criterion since these clinicians are not MIPS eligible clinicians and thus would never meet the criteria for reweighting of their MIPS ACI performance category for the year.

In response to public comments, we did not finalize the proposed changes to the significant hardship exceptions in the CY 2018 PFS final rule and instead decided further evaluation was needed before moving forward with any modifications. As we have continued to evaluate both policy options and operational considerations for the AUC significant hardship exception, we have concluded that the most appropriate approach, which we consider to be more straightforward and less burdensome than the current approach, involves establishing significant hardship criteria and a process that is independent from other Medicare programs. Our original intention was to design the AUC significant hardship exception process in alignment with the process for the Medicare EHR Incentive Program for eligible professionals, and then for the MIPS ACI (now Promoting Interoperability) performance category. Under section 1848(a)(7)(A) of the Act, the downward payment adjustment for

eligible professionals under the Medicare EHR Incentive Program will end in 2018, and we are unable to continue making reference to a regulation relating to a program that is no longer in effect. We also note as we have in the past that the AUC program is a real-time program with a need for real-time significant hardship exceptions. This is in contrast to the way significant hardship exceptions are handled under MIPS where the hardship might impact some or all of a performance period, or might impact reporting, both of which occur well before the MIPS payment adjustment is applied in a subsequent year. We recognize that when a significant hardship arises, an application process to qualify for an exception becomes a time consuming hurdle for health care providers to navigate, and we believe that it is important to minimize the burden involved in seeking significant hardship exceptions. As such, we are proposing that ordering professionals would self-attest if they are experiencing a significant hardship at the time of placing an advanced diagnostic imaging order and such attestation be supported with documentation of significant hardship. Ordering professionals attesting to a significant hardship would communicate that information, along with the AUC consultation information, to the furnishing professional with the order and it would be reflected on the furnishing professional's and furnishing facility's claim by appending a HCPCS modifier. The modifier would indicate that the ordering professional has self-attested to experiencing a significant hardship and communicated this to the furnishing professional with the order. Claims for advanced diagnostic imaging services that include a significant hardship exception modifier would not be required to include AUC consultation information.

In addition to the proposals above, we invite the public to comment on any additional circumstances that would cause the act of consulting AUC to be particularly difficult or challenging for the ordering professional, and for which it may be appropriate for an ordering professional to be granted a significant hardship exception under the AUC program. While we understand the desire by some for significant hardship categories unrelated to difficulty in consulting AUC through a CDSM, we remind readers that circumstances that are not specific to AUC consultation, such as the ordering professional being in clinical practice for a short period of time or having limited numbers of

Medicare patients, would not impede clinicians from consulting AUC through a CDSM as required to meet the requirements of this program.

f. Identification of Outliers

As previously mentioned, the fourth component of the AUC program specified in section 1834(q)(5) of the Act, is the identification of outlier ordering professionals. In our efforts to start a dialogue with stakeholders, we would like to invite the public to submit their ideas on a possible methodology for the identification of outlier ordering professionals who would eventually be subject to a prior authorization process when ordering advanced diagnostic imaging services. Specifically, we are soliciting comments on the data elements and thresholds that CMS should consider when identifying outliers. We also intend to perform and use analysis to assist us in developing the outlier methodology for the AUC program. Our existing prior authorization programs generally do not specifically focus on outliers. We are interested in hearing ideas from the public on how outliers could be determined for the AUC program. Because we would be concerned about data integrity and reliability, we do not intend to include data from the educational and operations testing period in CY 2020 in the analysis used to develop our outlier methodology. Since we intend to evaluate claims data to inform our methodology we expect to address outlier identification and prior authorization more fully in CY 2022 or 2023 rulemaking. As noted above, we expect to solicit public comment to inform our methodology through rulemaking before finalizing our approach.

We note that we may not provide comprehensive comment summaries and responses to comments submitted in response to this solicitation. Rather, we will actively consider all input as we develop the methodology for the identification of outliers.

5. Summary

Section 1834(q) of the Act includes rapid timelines for establishing a Medicare AUC program for advanced diagnostic imaging services. The impact of this program is extensive as it will apply to every physician or other practitioner who orders or furnishes advanced diagnostic imaging services (for example, MRI, computed tomography (CT) or positron emission tomography (PET)). This crosses almost every medical specialty and could have a particular impact on primary care

physicians since their scope of practice can be quite broad.

We continue to believe the best implementation approach is one that is diligent, maximizes the opportunity for public comment and stakeholder engagement, and allows for adequate advance notice to physicians and practitioners, beneficiaries, AUC developers, and CDSM developers. It is for these reasons we propose to continue a stepwise approach, adopted through notice and comment rulemaking.

In summary, we are proposing policies to modify existing requirements and criteria and to provide further clarification on implementation of the AUC program. We include a proposal to add IDTFs to the definition of applicable settings under this program. We also include proposals regarding who beyond the ordering professional may consult AUC through a qualified CDSM to meet the statutory requirements for the AUC program, as well as a proposal to more clearly include all entities required to report AUC consultation information on the claim. Finally, we propose to modify the significant hardship exception criteria and process under § 414.94(i)(3) to be specific to the AUC program and independent of other Medicare programs. We are also requesting public comment on other circumstances that could be considered significant hardships, posing particular real-time difficulty or challenge to the ordering professional in consulting AUC. We invite the public to submit comments on these proposals, as well as provide comment on potential methods for, and issues related to, mechanisms for claims-based reporting and identifying outlier ordering professionals.

We will continue to post information on our website for this program, accessible at www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/index.html.

E. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for the incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of CEHRT. We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Programs.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of “meaningful EHR user” in regulations at § 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the “Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2018 Rates; Quality Reporting Requirements for Specific Providers; Medicare and Medicaid Electronic Health Record (EHR) Incentive Program Requirements for Eligible Hospitals, Critical Access Hospitals, and Eligible Professionals; Provider-Based Status of Indian Health Service and Tribal Facilities and Organizations; Costs Reporting and Provider Requirements; Agreement Termination Notices” final rule (82 FR 37990, 38487) (hereafter referred to as the “FY 2018 IPPS/LTCH PPS final rule”), we established that, for 2017, Medicaid EPs would be required to report on any six eCQMs that are relevant to the EP’s scope of practice. In proposing and finalizing that change, we indicated that it is our intention to align eCQM requirements for Medicaid EPs with the requirements of Medicare quality improvement programs, to the extent practicable.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2019

CMS annually reviews and revises the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In section III.H.3.h.(2)(b)(i) of this proposed rule, we are proposing to amend the list of available eCQMs for the CY 2019 performance period. To keep eCQM specifications current and minimize complexity, we propose to align the eCQMs available for Medicaid EPs in 2019 with those available for MIPS eligible clinicians for the CY 2019 performance period. Specifically, we

propose that the eCQMs available for Medicaid EPs in 2019 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established under MIPS for the CY 2019 performance period.

We believe that this proposal would be responsive to stakeholder feedback supporting quality measure alignment between MIPS and the Medicaid Promoting Interoperability Program for EPs, and that it would encourage EP participation in the Medicaid Promoting Interoperability Program by allowing those that are also MIPS eligible clinicians the ability to report the same eCQMs as they report for MIPS in 2019. In addition, we believe that aligning the eCQMs available in each program would ensure the most uniform application of up-to-date clinical standards and guidelines possible.

We anticipate that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs will report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on the available eCQMs for 2019. We expect that this proposal would have only a minimal impact on states, by requiring minor adjustments to state systems for 2019 to maintain current eCQM lists and specifications.

We also request comments on whether in future years of the Medicaid Promoting Interoperability Program beyond 2019, we should include all e-specified measures from the core set of quality measures for Medicaid and the Children’s Health Insurance Program (CHIP) (the Child Core Set) and the core set of health care quality measures for adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as “Core Sets”) as additional options for Medicaid EPs. Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These core sets comprise measures that specifically focus on populations served by the Medicaid and CHIP programs and are of particular importance to their care. Several of these Core Set measures are included in the MIPS eCQM list, but some are not. We believe that including as eCQM reporting options for Medicaid

EPs the e-specified measures from the Core Sets that are not also on the MIPS eCQM list would increase EP utilization of these measures and provide states with better data to report. At this time, the only measure within the Core Sets that would not be available as an option for Medicaid EPs in 2019 (because it is not on the MIPS eCQM list) is NQF-1360, “Audiological Diagnosis No Later Than 3 Months of Age.” However, as these Core Sets are updated annually, there may be other eCQMs that could be included in future years.

For 2019, we propose that Medicaid EPs would report on any six eCQMs that are relevant to the EP’s scope of practice, regardless of whether they report via attestation or electronically. After we removed the NQS domain requirements for EPs’ 2017 eCQM submissions in the FY 2018 IPPS/LTCH PPS final rule, we have found that allowing EPs to report on any six quality measures that are relevant to their practice has increased EPs’ flexibility to report pertinent data. In addition, this policy would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS eligible clinicians who elect to submit eCQMs must submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a)(2) and (3) for the data submission criteria that apply to individual MIPS eligible clinicians and groups who elect to submit data for other collection types.

We also propose that for 2019 the Medicaid Promoting Interoperability Program would adopt the MIPS requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure). We also request comments on how high priority measures should be identified for Medicaid EPs. We propose to use all three of the following methods to identify which of the available measures are high priority measures, but invite comments on other possibilities.

1. We would use the same set of high priority measures for EPs participating in the Medicaid Promoting Interoperability Program that the MIPS program has identified for eligible clinicians. We note that in section III.H., we are proposing to amend § 414.1305 to revise the definition of high priority measure for purposes of MIPS to mean an outcome (including intermediate-

outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure, beginning with the 2021 MIPS payment year.

2. For 2019, we would also identify as high priority measures the available eCQMs that are included in the previous year’s Core Sets and that are also included on the MIPS list of eCQMs. Because the Core Sets are released at the beginning of each year, it would not be possible to update the list of high-priority eCQMs with those added to the current year’s Core Sets. CMS has already identified the measures included in the Core Sets as ones that specifically focus on populations served by the Medicaid and CHIP programs and are particularly important to their care. The eCQMs that would be available for EPs to report in 2019, that are both part of the Core Sets and on the MIPS list of eCQMs, and that would be considered high priority measures under our proposal are: CMS2, “Preventive Care and Screening: Screening for Depression and Follow-Up Plan”; CMS4, “Initiation and Engagement of Alcohol and Other Drug Dependence Treatment”; CMS122, “Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)”; CMS125, “Breast Cancer Screening”; CMS128, “Anti-depressant Medication Management”; CMS136, “Follow-Up Care for Children Prescribed ADHD Medication (ADD)”; CMS153, “Chlamydia Screening for Women”; CMS155, “Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents”; and CMS165, “Controlling High Blood Pressure.”

3. We would also give each state the flexibility to identify which of the available eCQMs selected by CMS are high priority measures for EPs in that state, with review and approval from CMS, through their State Medicaid HIT Plans (SMHP), similar to the flexibility granted states to modify the definition of Meaningful Use at § 495.332(f). This would give states the ability to identify as high priority those measures that align with their state health goals or other programs within the state. We proposed to amend § 495.332(f) to provide for this state flexibility to identify high priority measures.

We propose that any eCQMs identified via any of these mechanisms be considered to be high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2019. We invite comments on whether all three of these methods should be utilized (as proposed) or whether there are reasons to instead use

a subset of these methods, or only one of them.

We also propose that the eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program would be a full CY in 2019 for EPs who have demonstrated meaningful use in a prior year, in order to align with the corresponding performance period in MIPS for the quality performance category. We continue to align Medicaid Promoting Interoperability Program requirements with requirements for other CMS quality programs, such as MIPS, to the extent practicable, to reduce the burden of reporting different data for separate programs. In addition, we have found that clinical quality data from an entire year reporting period is significantly more useful than partial year data for quality measurement and improvement because it gives states a fuller picture of a health care provider’s care and patient outcomes. The eCQM reporting period for EPs demonstrating meaningful use for the first time, which was established in the final rule entitled “Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017” (80 FR 62762) (hereafter referred to as “Stage 3 final rule”), would remain any continuous 90-day period (80 FR 62892).

We will adjust future years’ requirements for reporting eCQMs in the Medicaid Promoting Interoperability Program as necessary, through rulemaking, and will continue to align the quality reporting requirements, as logical and feasible, to minimize EP burden.

We invite public comment on these proposals.

3. Proposed Revisions to the EHR Reporting Period and eCQM Reporting Period in 2021 for EPs Participating in the Medicaid Promoting Interoperability Program

In the July 28, 2010 final rule titled “Medicare and Medicaid Programs; Electronic Health Record Incentive Program” at 75 FR 44319, we established that, in accordance with section 1903(t)(4)(A)(iii) of the Act, in no case may any Medicaid EP receive an incentive after 2021 (see § 495.310(a)(2)(v)). Therefore, December 31, 2021 is the last date that states could make Medicaid Promoting Interoperability Program payments to Medicaid EPs (other than pursuant to a successful appeal related to 2021 or a prior year).

For states to make payments by that deadline, there must be sufficient time after EHR and eCQM reporting periods

end for EPs to attest to states, for states to conduct their prepayment processes, and for states to issue payments. Therefore, we propose to amend § 495.4 to provide that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program would be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. Similarly, we propose to change the eCQM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program to a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021.

We understand that the October 31, 2021 date might not provide some states with sufficient time to process payments by December 31, 2021. We believe that states are best positioned to determine the last possible date in CY 2021 by which the EHR or eCQM reporting periods for Medicaid EPs must end, and the deadline for receiving EP attestations, so that the state is able to issue all payments by December 31, 2021. Therefore, we propose to allow states the flexibility to set alternative, earlier final deadlines for EHR or eCQM reporting periods for Medicaid EPs in CY 2021, with prior approval from us, through their State Medicaid HIT Plan (SMHP). If a state establishes an alternative, earlier date within CY 2021 by which all EHR or eCQM reporting periods in CY 2021 must end, Medicaid EPs in that state would continue to have a reporting period of a minimum of any continuous 90-day period within CY 2021. The end date for the reporting period would have to occur before the day of attestation, which must occur prior to the final deadline for attestations established by their state. We proposed to amend § 495.332(f) to provide for this state flexibility to identify an alternative date by which all EHR reporting periods or eCQM reporting periods for Medicaid EPs in CY 2021 must end.

We believe there is no reason why a state would need to set a date by which EHR reporting periods and eCQM reporting periods must end for Medicaid EPs that is earlier than the day before that state's attestation deadline for EPs. Doing so would restrict EPs' ability to select EHR and eCQM reporting periods. Therefore, we propose that any

alternative deadline for CY 2021 EHR and eCQM reporting periods set by a state may not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state.

We invite public comment on this proposal.

While we are not making any proposals regarding eligible hospitals in this proposed rule, we acknowledge that there will be a similar issue if there are still hospitals eligible to receive Medicaid Promoting Interoperability Program payments in 2021, including Medicaid-only eligible hospitals as well as "dually-eligible" eligible hospitals and critical access hospitals (CAHs) (those that are eligible for an incentive payment under Medicare for meaningful use of CEHRT and/or subject to the Medicare payment reduction for failing to demonstrate meaningful use of CEHRT, and are also eligible to earn a Medicaid incentive payment for meaningful use of CEHRT). However, based on attestation data and information from states' SMHPs regarding the number of years states disburse Medicaid Promoting Interoperability Program payments to hospitals, we believe that there will be no hospitals eligible to receive Medicaid Promoting Interoperability Program payments in 2021 due to the requirement that, after 2016, eligible hospitals cannot receive a Medicaid Promoting Interoperability Program payment unless they have received such a payment in the prior fiscal year. At this time, we believe that there are no hospitals that will be able to receive incentive payments in 2020 or 2021. We invite comments and suggestions on whether this belief is accurate, and if not, how we could address the issue in a manner that limits the burden on hospitals and states. We are not proposing any specific policy in this rule, but, if necessary, we expect to address the issue in a future proposed rule that is more specifically related to hospital payment.

4. Proposed Revisions to Stage 3 Meaningful Use Measures for Medicaid EPs

a. Proposed Change to Objective 6 (Coordination of Care Through Patient Engagement)

In the Stage 3 final rule, we adopted a phased approach under Stage 3 for EP Objective 6 (Coordination of care through patient engagement), Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging). This phased approach established a 5 percent threshold for both measures 1 and 2 of this objective

for an EHR reporting period in 2017. (80 FR 62848 through 62849) In the same rule, we established that the threshold for Measure 1 would rise to 10 percent, beginning with the EHR reporting period in 2018, and that the threshold for Measure 2 would rise to 25 percent, beginning with the EHR reporting period in 2018. We stated that we would continue to monitor performance on these measures to determine if any further adjustment was needed. In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38493), we established a policy allowing EPs, eligible hospitals, and CAHs to use either 2014 Edition or 2015 Edition CEHRT, or a combination of 2014 Edition and 2015 Edition CEHRT, for an EHR reporting period in CY 2018, and depending on which Edition(s) they use, to attest to the Modified Stage 2 objectives and measures or the Stage 3 objectives and measures. In doing so, we also delayed the rise of the Objective 6 Measure 1 and Measure 2 thresholds until 2019.

Based on feedback we have received, we understand that these two measures are the largest barrier to successfully demonstrating meaningful use, especially in rural areas and at safety net clinics. Stakeholders have reported a variety of causes that have resulted in lower patient participation than was anticipated when the Stage 3 final rule was issued. The data that we have collected via states for Medicaid EPs and at CMS from Medicare EPs for previous program years supports this feedback. The primary issue is that the view, download, transmit measure requires a positive action by patients, which cannot be controlled by an EP. Medicaid populations that are at the greatest risk have lower levels of internet access, internet literacy and health literacy than the general population. While the Secure Electronic Messaging measure does not require patient action, only that the EP send a secure message, we have received feedback that this functionality is not highly utilized by patients. While we encourage EPs to continue to reach out to patients via secure messaging to engage them in their health care between office visits, it is not productive for EPs to send messages to patients who are unlikely to see them or take action. Retaining the current threshold of 5 percent for both measures would continue to incentivize EPs to engage patients in their own care without raising the requirements to unattainable thresholds for EPs who serve vulnerable Medicaid patients. Therefore, we propose to amend § 495.24(d)(6)(i) such that the thresholds

for Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging) of Meaningful Use Stage 3 EP Objective 6 (Coordination of care through patient engagement) would remain 5 percent for 2019 and subsequent years.

We invite comments on this proposal.

b. Proposed Change to the Syndromic Surveillance Reporting Measure

In the Stage 3 final rule, we established that the syndromic surveillance reporting measure for EPs was limited to those who practice in urgent care settings (80 FR 62866 through 62870). Since then, we have received feedback from states and public health agencies that while many are unable to accept non-emergency or non-urgent care ambulatory syndromic surveillance data electronically, some public health agencies can and do want to receive data from health care providers in non-urgent care settings. We believe that public health agencies that set the requirements for data submission to public health registries are in a better position to judge which health care providers can contribute useful data.

Therefore, we propose to amend § 495.24(d)(8)(i)(B)(2), EP Objective 8 (Public health and clinical data registry reporting), Measure 2 (Syndromic surveillance reporting measure), to amend the language restricting the use of syndromic surveillance reporting for meaningful use only to EPs practicing in an urgent care setting. We propose to include any EP defined by the state or local public health agency as a provider who can submit syndromic surveillance data. This change would not alter the exclusion for this measure at § 495.25(d)(8)(i)(C)(2)(i), for EPs who are not in a category of health care providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system, as defined by the state or local public health agency. Furthermore, this does not create any requirements for syndromic surveillance registries to include all EPs. Additionally, under the specifications for the 2015 Edition of CEHRT for syndromic surveillance, it is possible that an EP could own CEHRT and submit syndromic surveillance in a format that is not accepted by the local jurisdiction. In this case, the EP may take an exclusion for syndromic surveillance.

We invite comments on this proposal.

F. Medicare Shared Savings Program

As required under section 1899 of the Act, we established the Medicare

Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among health care providers to improve the quality of care for Medicare Fee-For-Service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; Final Rule (76 FR 67802) (hereinafter referred to as the "November 2011 final rule"). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; Final Rule (80 FR 32692) (hereinafter referred to as the "June 2015 final rule"). The final rule entitled, "Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations," which addressed changes related to the program's financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the "June 2016 final rule").

We have also made use of the annual calendar year (CY) Physician Fee Schedule (PFS) rules to address quality reporting for the Shared Savings Program and certain other issues. In the CY 2018 PFS final rule (82 FR 53209 through 53226), we finalized revisions to several different policies under the Shared Savings Program, including the assignment methodology, quality measure validation audit process, use of the skilled nursing facility (SNF) 3-day waiver, and handling of demonstration payments for purposes financial reconciliation and establishing historical benchmarks. In addition, in the CY 2017 Quality Payment Program final rule (81 FR 77255 through 77260) and the CY 2018 Quality Payment Program final rule (82 FR 53688 through 53706), we finalized policies related to the Alternative Payment Model (APM) scoring standard under the Merit-Based Incentive Payment System (MIPS), which reduces the reporting burden for MIPS eligible clinicians who participate

in MIPS APMs, such as the Shared Savings Program, by: (1) Using the CAHPS for ACOs survey and the ACO reported CMS Web Interface quality data for purposes of assessing quality performance in the Shared Savings Program and to score the MIPS quality performance category for these eligible clinicians; (2) automatically awarding MIPS eligible clinicians participating in Shared Savings Program ACOs a minimum of one-half of the total points in the MIPS improvement activities performance category; (3) requiring ACO participants to report Advancing Care Information (ACI) data at the group practice level or solo practitioner level; and (4) not assessing MIPS eligible clinicians on the MIPS cost performance category because, through their participation in the ACO, they are already being assessed on cost and utilization under the Shared Savings Program.

As a general summary, we are proposing the following changes to the quality performance measures that will be used to assess quality performance under the Shared Savings Program for performance year 2019 and subsequent years:

- Changes to Patient Experience of Care Survey measures.
- Changes to CMS Web Interface and Claims-Based measures.

1. Quality Measurement

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the November 2011 final rule, we established a quality performance standard consisting of 33 measures across four domains, including patient experience of care, care coordination/patient safety, preventive health, and at-risk population (76 FR 67872 through 67891). Since the Shared Savings Program was established, we have updated the measures that comprise the quality performance standard for the Shared Savings Program through the annual rulemaking in the CY 2015, 2016, and 2017 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, and 81 FR 80484 through 80489, respectively).

As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify

measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes.

For performance year 2018, 31 quality measures are used to determine ACO quality performance (81 FR 80488 and 80489). Quality measures are submitted by the ACO through the CMS Web Interface, calculated by CMS from administrative and claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey. The CAHPS for ACOs survey is based on the Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG-CAHPS) Survey and includes additional, program specific questions that are not part of the CG-CAHPS. The CG-CAHPS survey is maintained, and periodically updated, by the Agency for Healthcare Research and Quality (AHRQ).

The quality measures collected through the CMS Web Interface in 2015 and 2016 were used to determine whether eligible professionals participating in an ACO would avoid the PQRS and automatic Physician Value-Based Payment Modifier (Value Modifier) downward payment adjustments for 2017 and 2018 and to determine if ACO participants were eligible for upward, neutral or downward adjustments based on quality measure performance under the Value Modifier. Beginning with the 2017 performance period, which impacts payments in 2019, PQRS and the Value Modifier were replaced by the MIPS. Eligible clinicians who are participating in an ACO and subject to MIPS (MIPS eligible clinicians) will be scored under the alternative payment model (APM) scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track of the Shared Savings Program that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS. Beginning with the 2017 reporting period, measures collected through the CMS Web Interface will be used to determine the MIPS quality performance category score for MIPS eligible clinicians participating in a Medicare Shared Savings Program ACO. Starting with the 2018 performance period, the quality performance category under the MIPS APM Scoring Standard for MIPS eligible clinicians participating in a Shared Savings Program ACO will include measures collected through the

CMS Web Interface and the CAHPS for ACOs survey measures.

The CAHPS for ACOs Survey includes the core questions contained in the CG-CAHPS, plus additional questions to measure access to and use of specialist care, experience with care coordination, patient involvement in decision-making, experiences with a health care team, health promotion and patient education, patient functional status, and general health. From 2014 through 2017, ACOs had the option to use a short version of the survey (8 Summary Survey Measures (SSMs) used in assessing quality performance, 1 SSM scored for informational purposes) or a longer version of the survey (8 SSMs used in determining quality performance and 4 SSMs scored for informational purposes). Although not all measures in the longer version of the survey were used in determining the ACO's quality score, the measure performance rate information could be used by the ACO in its quality improvement efforts. For 2018, CMS will only offer one version of the CAHPS for ACOs survey. Eight SSMs will be used in quality determination and two SSMs will be scored for informational purposes. There were no changes to the scored measure set between the 2017 and 2018 surveys: The 2018 survey is a streamlined version of the survey that assesses the same content areas required in 2017, using fewer survey items.

The 2018 CAHPS for ACOs survey incorporates updates made by AHRQ to the Clinician and Group (CG) CAHPS survey that were based on feedback from survey users and stakeholders as well as analyses of multiple data sets. In the "Notice of Proposed Changes for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) Clinician & Group Survey" published in the January 21, 2015 **Federal Register** (80 FR 2938–2939), AHRQ solicited public comment on proposed updates to produce the CAHPS Clinician & Group Survey v. 3.0. Based on analyses of multiple data sets and comments received from the public, AHRQ, released the CAHPS Clinician & Group Survey v. 3.0. The 2018 CAHPS for ACOs survey includes language refinements and core SSM item changes that align with the CAHPS Clinician & Group Survey v. 3.0.

Additional information on the CG-CAHPS survey update is available on the AHRQ website at <https://www.ahrq.gov/sites/default/files/wysiwyg/cahps/surveys-guidance/cg/about/proposed-changes-cahps-c&g-survey2015.pdf>.

In addition to incorporating changes based on the AHRQ survey update, CMS removed all items included in the SSMs, *Helping You to Take Medications as Directed and Between Visit Communication*. These were optional SSMs that were not part of the scored measures. The update resulted in reducing the number of questions from 80 to 58 questions. Accordingly, the CAHPS for ACOs SSMs that contribute to the ACO performance score for performance year 2018, as finalized in the CY 2017 PFS final rule (81 FR 80488) are: Getting Timely Care, Appointments & Information; How Well Your Providers Communicate; Patients' Rating of Provider; Access to Specialists; Health Promotion and Education; Shared Decision Making; Health Status & Functional Status; and Stewardship of Patient Resources. In addition, the core survey includes SSMs on Care Coordination and Courteous & Helpful Office Staff. However, because these measures are not included in the Shared Savings Program quality measure set for 2018, scores for these measures will be provided to ACOs for informational purposes only and will not be used in determining the ACOs' quality scores.

b. Proposals for Changes to the CAHPS Measure Set

To enhance the Patient/Caregiver Experience domain and align with MIPS (82 FR 54163), we are proposing to begin scoring the 2 SSMs that are currently collected with the administration of the CAHPS for ACOs survey and shared with the ACOs for informational purposes only. Under this proposal, we would add the following CAHPS for ACOs SSMs that are already collected and provided to ACOs for informational purposes to the quality measure set for the Shared Savings Program as ACO-45, CAHPS: Courteous and Helpful Office Staff, and ACO-46: CAHPS: Care Coordination. These measures would be scored and included in the ACO quality determination starting in 2019. Both of these SSMs are currently designated by AHRQ as CG CAHPS core measures.

The Courteous and Helpful Office Staff SSM, which would be added as ACO-45, asks about the helpfulness, courtesy and respectfulness of office staff. This SSM has been a CG-CAHPS core measure in the previous two versions of the CG-CAHPS survey, but was previously provided for informational purposes only and not included in the ACO quality score determination. We are also proposing to add the SSM, CAHPS: Care Coordination to the CAHPS for ACOs

measures used in ACO quality score determination as ACO-46. The Care Coordination SSM asks questions about provider access to beneficiary information and provider follow-up. This SSM was designated a core measure in the most recent version of the CG-CAHPS survey.

Inclusion of these measures in the quality measure set that is used to assess the quality performance of ACOs under the Shared Savings Program would place greater emphasis on outcome measures and the voice of the patient and provide ACOs with an additional incentive to act upon opportunities for improved care coordination and communication, and would align with the MIPS measure set finalized in the CY 2018 Quality Payment Program final rule (82 FR 54163). Care Coordination and patient and caregiver engagement are goals of the Shared Savings Program. The Care Coordination SSM emphasizes the care coordination goal, while the Courteous and Helpful Office Staff SSM supports patient engagement as it addresses a topic that has been identified as important to beneficiaries in testing. For performance year 2016, the mean performance rates across all ACOs for these two measures, which were not included in the ACO quality score determination, were 87.18 for the Care Coordination SSM and 92.12 for Courteous and Helpful Office Staff SSM.

Consistent with § 425.502(a)(4), regarding the scoring of newly introduced quality measures, we propose that these additional SSMs would be pay-for-reporting for all ACOs for 2 years (performance years 2019 and 2020). The measures would then phase into pay-for-performance for ACOs in their first agreement period in the program according to the schedule in Table 25 beginning in performance year 2021. We seek comment on this proposed change to the quality measure set.

Additionally, we seek comment on potentially converting the Health and Functional Status SSM (ACO-7) to pay-for-performance in the future. The Health and Functional Status SSM is currently pay-for-reporting for all years. We have not scored this measure because the scores on the Health and Functional Status SSM may reflect the underlying health of beneficiaries seen by ACO providers/suppliers as opposed to the quality of the care provided by the ACO. We are also considering possible options for enhancing collection of Health and Functional Status data. One option would be to change our data collection procedures to collect data from the same ACO assigned beneficiaries over time. This

change could allow for measurement of changes that occurred while beneficiaries were receiving care from ACO providers/suppliers. We are seeking stakeholder feedback on this approach or other recommendations regarding the potential inclusion of a functional status measure in the assessment of ACO quality performance in the future.

c. Proposed Changes to the CMS Web Interface and Claims-Based Quality Measure Sets

In developing these proposals, we considered the agency's efforts to streamline quality measures, reduce regulatory burden and promote innovation as part of the agency's Meaningful Measures initiative (See CMS Press Release, CMS Administrator Verma Announces New Meaningful Measures Initiative and Addresses Regulatory Reform; Promotes Innovation at LAN Summit, October 30, 2017, available at <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Press-releases/2017-Press-releases-items/2017-10-30.html>). Under the Meaningful Measures initiative, CMS has committed to assessing only those core issues that are most vital to providing high-quality care and improving patient outcomes, with the aim of focusing on outcome-based measures, reducing unnecessary burden on providers, and putting patients first. In considering the quality reporting requirements under the Shared Savings Program, we have also considered the quality reporting requirements under other initiatives, such as the MIPS and Million Hearts Initiative, and consulted with the measures community to ensure that the specifications for the measures used under the Shared Savings Program are up-to-date with current clinical guidelines, focus on outcomes over process, reflect agency and program priorities, and reduce reporting burden.

Since the Shared Savings Program was first established in 2012, we have not only updated the quality measure set to reduce reporting burden, but also to focus on more meaningful, outcome-based measures. The most recent updates to the Shared Savings Program quality measure set were made in the CY 2017 PFS final rule (81 FR 80484 through 80489) to adopt the ACO measure recommendations made by the Core Quality Measures Collaborative, a multi-stakeholder group with the goal of aligning quality measures for reporting across public and private initiatives to reduce provider reporting burden. Currently, more than half of the 31 Shared Savings Program quality measures are outcome-based, including:

- Patient-reported outcome measures collected through the CAHPS for ACOs Survey that strengthen patient and caregiver experience.

- Outcome measures supporting effective communication and care coordination, such as unplanned admission and readmission measures.
- Intermediate outcome measures that address the effective treatment of chronic disease, such as hemoglobin A1c control for patients with diabetes.

In this rule, we are proposing to reduce the total number of measures in the Shared Savings Program quality measure set. These proposals are intended to reduce the burden on ACOs and their participating providers and suppliers by lowering the number of measures they are required to report through the CMS Web Interface and on which they are assessed through the use of claims data. Reducing the number of measures on which ACOs are measured would reduce the number of performance metrics that they are required to track and eliminate redundancies between measures that target similar populations. The proposed reduction in the number of measures would enable ACOs to better utilize their resources toward improving patient care. These proposals further reduce burden by aligning with the proposed changes to the CMS Web Interface measures that are reported under MIPS as discussed in Tables A, C, and D of Appendix 1: Proposed MIPS Quality Measures of this proposed rule. We recognize that ACOs and their participating providers and suppliers dedicate resources to performing well on our quality metrics, and we believe that reducing the number of metrics and aligning them across programs would allow them to more effectively target those resources toward improving patient care. We are proposing to reduce the number of measures by minimizing measure overlap and eliminating several process measures. The proposal to remove process measures also aligns with our proposal to reduce the number of process measures within the MIPS measure set as discussed in section III.H.b.iii of this proposed rule and would support the CMS goal of moving toward outcome-based measurement.

We are proposing to retire the following claims-based quality measures, which have a high degree of overlap with other measures that would remain in the measure set:

- ACO-35—Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM).
- ACO-36—All-Cause Unplanned Admissions for Patients with Diabetes.

- ACO-37—All-Cause Unplanned Admission for Patients with Heart Failure.

Within the claims-based quality measures, overlap exists between measures with respect to the population being measured (the denominator), because a single admission may be counted in the numerator for multiple measures. For example, ACO-35 addresses unplanned readmissions from a SNF, and the vast majority of these SNF readmissions are also captured in the numerator of ACO-8 Risk-Standardized All Condition Readmission. Similarly, ACO-36 and ACO-37 address unplanned admissions for patients with diabetes and heart failure and most of these admissions are captured in the numerator of ACO-38 Risk-Standardized Acute Admission Rates for Patients with Multiple Chronic Conditions (please note that the measure name has been updated to align with changes made by the measure steward). Therefore, to reduce redundancies within the Shared Savings Program measure set, we propose to remove ACO-35, ACO-36, and ACO-37 from the measure set. However, because these measures are claims-based measures and therefore do not impose any reporting burden on ACOs, we intend to continue to provide information to ACOs on their performance on these measures for use in their quality improvement activities through a new quarterly claims-based quality outcome report that ACOs will begin receiving in 2018.

Although we are proposing to retire ACO-35 (SNFRM) from the set of quality measures that are scored for the Shared Savings Program, we recognize the value of measuring the quality of care furnished to Medicare beneficiaries in SNFs. Therefore, we are seeking comment on the possibility of adding the Skilled Nursing Facility Quality Reporting Program (SNFQRP) measure “Potentially Preventable 30-Day Post-Discharge Readmission Measure for Skilled Nursing Facilities” to the Shared Savings Program quality measure set through future rulemaking. This measure differs from ACO-35 (Skilled Nursing Facility 30-Day All-Cause Readmission Measure), which we are proposing to remove above, as the SNFQRP measure looks only at unplanned, potentially preventable readmissions for Medicare Fee-For-Service beneficiaries within 30 days of discharge to a lower level of care from a SNF, while ACO-35 assesses

readmissions from a SNF, regardless of cause, that occur within 30 days following discharge from a hospital. As a result, the SNFQRP measure would have less overlap with ACO-8 (Risk-Standardized All Cause Readmission measure) than does ACO-35 (SNFRM), because the two measures’ readmission windows differ. Specifically, the readmission window for the SNFQRP measure is 30 days following discharge from a SNF, while the readmission window for ACO-8 is 30 days following discharge from a hospital.

We are also proposing to retire claims-based measure ACO-44 (Use of Imaging Studies for Low Back Pain), as this measure is restricted to individuals 18–50 years of age, which results in low denominator rates under the Shared Savings Program, meaning that the measure is not a valuable reflection of the beneficiaries cared for by Shared Savings Program ACOs. As a result, although this measure was originally added to the Shared Savings Program quality measure set in order to align with the Core Quality Measures Collaborative, we no longer believe ACO-44 is a meaningful measure that should be retained in the Shared Savings Program quality measure set. The deletion of this measure would also align ACO quality measurement with the MIPS requirements as this measure was removed for purposes of reporting under the MIPS program in the CY 2018 Quality Payment Program final rule (82 FR 54159). However, in recognition of the value in providing feedback to providers on potential overuse of diagnostic procedures, we intend to continue to provide ACOs feedback on performance on this measure as part of the new quarterly claims based quality report.

We welcome public comment on our proposal to retire these 4 claims-based measures from the quality measure set.

Further, we seek to align with changes made to the CMS Web Interface measures under the Quality Payment Program. In the 2017 PFS final rule, we stated we do not believe it is beneficial to propose CMS Web interface measures for ACO quality reporting separately (81 FR 80499). Therefore, in order to avoid confusion and duplicative rulemaking, we adopted a policy that any future changes to the CMS Web interface measures would be proposed and finalized through rulemaking for the Quality Payment Program, and that such changes would be applicable to ACO quality reporting under the Shared

Savings Program. In accordance with the policy adopted in the CY 2017 PFS final rule (81 FR 80501), we are not making any specific proposals related to changes in CMS Web Interface measures reported under the Shared Savings Program. Rather, we refer readers to Tables A, C, and D of Appendix 1: Proposed MIPS Quality Measures of this proposed rule for a complete discussion of the proposed changes to the CMS Web Interface measures. If the proposed changes are finalized, ACOs would no longer be responsible for reporting the following measures for purposes of the Shared Savings Program starting with reporting for performance year 2019:

- ACO-12 (NQF #0097) Medication Reconciliation Post-Discharge.
- ACO-13 (NQF #0101) Falls: Screening for Future Fall Risk.
- ACO-15 (NQF #0043) Pneumonia Vaccination Status for Older Adults.
- ACO-16 (NQF #0421) Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow Up.
- ACO-41 (NQF #0055) Diabetes: Eye Exam.
- ACO-30 (NQF #0068) Ischemic Vascular Disease (IVD): Use of Aspirin or another Antithrombotic.

We note that ACO-41 is one measure within a two-component diabetes composite that is currently scored as one measure. The proposed removal of ACO-41 means that ACO-27 Diabetes Hemoglobin A1c (HbA1c) Poor Control (>9%) would now be assessed as an individual measure. If the proposed changes are finalized as proposed, Table 26 shows the maximum possible points that may be earned by an ACO in each domain and overall in performance year 2019 and in subsequent performance years.

Additionally, we note that we are proposing to add the following measure to the CMS Web Interface for purposes of the Quality Payment Program:

- ACO-47 (NQF #0101) Falls: Screening, Risk-Assessment, and Plan of Care to Prevent Future Falls.

If this proposal is finalized, consistent with our policy of adopting changes to the CMS Web Interface Measures through rulemaking for the Quality Payment Program, Shared Savings Program ACOs would be responsible for reporting this measure starting in performance year 2019.

Table 25 shows the proposed Shared Savings Program quality measure set for performance year 2019 and subsequent performance years.

TABLE 25—PROPOSED MEASURE SET FOR USE IN ESTABLISHING THE SHARED SAVINGS PROGRAM QUALITY PERFORMANCE STANDARD, STARTING WITH PERFORMANCE YEAR 2019

Domain	ACO measure No.	Measure title	New measure	NQF #/measure steward	Method of data submission	Pay for performance phase-in			
						PY1	PY2	PY3	
AIM: Better Care for Individuals									
Patient/Caregiver Experience.	ACO-1	CAHPS: Getting Timely Care, Appointments, and Information.		NQF N/A AHRQ	Survey	R	P	P	
	ACO-2	CAHPS: How Well Your Providers Communicate.		NQF N/A AHRQ	Survey	R	P	P	
	ACO-3	CAHPS: Patients' Rating of Provider		NQF N/A AHRQ	Survey	R	P	P	
	ACO-4	CAHPS: Access to Specialists		NQF #N/A CMS/AHRQ	Survey	R	P	P	
	ACO-5	CAHPS: Health Promotion and Education		NQF #N/A AHRQ	Survey	R	P	P

	ACO-40	Depression Remission at Twelve Months		NQF #0710 MNCM	CMS Web Interface	R	R	R	
	ACO-27	Diabetes Hemoglobin A1c (HbA1c) Poor Control (>9%).		NQF #0059 NCQA	CMS Web Interface	R	P	P	
Clinical Care for At Risk Population— Hypertension.	ACO-28	Hypertension : Controlling High Blood Pressure.		NQF #0018 NCQA	CMS Web Interface	R	P	P	

¹ Measures that are currently collected as part of the administration of the CAHPS for ACO survey, but will be considered new measures for purposes of the pay for performance phase-in.
² The language in parentheses has been added for clarity and no changes have been made to the measure.

We are proposing to eliminate 10 measures and to add one measure to the Shared Savings Program quality measure set. This would result in 24 measures for which ACOs would be held accountable. With these proposed measure changes, the 4 domains would

include the following numbers of quality measures (See Table 26):

- Patient/Caregiver Experience of Care—10 measures.
- Care Coordination/Patient Safety—5 measures, including the double-weighted EHR measure (ACO-11).
- Preventive Health—6 measures.

- At Risk Populations—3 measures.

Table 26 provides a summary of the number of measures by domain and the total points and domain weights that would be used for scoring purposes under the changes to the quality measure set proposed in this proposed rule.

TABLE 26—NUMBER OF MEASURES AND TOTAL POINTS FOR EACH DOMAIN WITHIN THE SHARED SAVINGS PROGRAM QUALITY PERFORMANCE STANDARD, STARTING WITH PERFORMANCE YEAR 2019

Domain	Number of individual measures	Total measures for scoring purposes	Total possible points	Domain weight (%)
Patient/Caregiver Experience	10	10 individual survey module measures	20	25
Care Coordination/Patient Safety	5	5 measures, including double-weighted EHR measure.	12	25
Preventive Health	6	6 measures	12	25
At-Risk Population	3	3 individual measures	6	25
Total in all Domains	24	24	50	100

G. Physician Self-Referral Law

1. Background

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain designated health services (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those referred services. The statute establishes a number of specific exceptions, and grants the Secretary the authority to create regulatory exceptions for financial relationships that pose no risk of program or patient abuse. Additionally, the statute mandates refunding any amount collected under a bill for an item or service furnished under a prohibited referral. Finally, the statute imposes reporting requirements and provides for sanctions, including civil monetary penalty provisions.

Section 50404 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted February 9, 2018) added provisions to section 1877(h)(1) of the Act pertaining to the writing and signature requirements in certain compensation arrangement exceptions to the statute's referral and billing prohibitions. Although we believe that the newly enacted provisions in section 1877(h)(1) of the Act are principally intended merely to codify in statute existing CMS policy and regulations with respect to compliance with the writing and signature requirements, we are proposing revisions to our regulations to address any actual or perceived difference between the statutory and regulatory language, to codify in regulation our longstanding policy regarding satisfaction of the writing requirement found in many of the exceptions to the physician self-referral law, and to make the Bipartisan Budget Act of 2018 policies applicable

to compensation arrangement exceptions issued using the Secretary's authority in section 1877(b)(4) of the Act.

In the CY 2016 PFS final rule with comment period (80 FR 70885), we revised § 411.357(a)(7), (b)(6), and (d)(1)(vii) to permit a lease arrangement or personal service arrangement to continue indefinitely beyond the stated expiration of the written documentation describing the arrangement under certain circumstances. Section 50404 of the Bipartisan Budget Act of 2018 added substantively identical holdover provisions to section 1877(e) of the Act. Because the new statutory holdover provisions effectively mirror the existing regulatory provisions, we do not believe it is necessary to revise § 411.357(a)(7), (b)(6), and (d)(1)(vii) as a result of these statutory revisions.

2. Special Rules on Compensation Arrangements (Section 1877(h)(1)(E) of the Act)

Many of the exceptions for compensation arrangements in § 411.357 require that the arrangements are set out in writing and signed by the parties. (See § 411.357(a)(1), (b)(1), (d)(1)(i), (e)(1)(i), (e)(4)(i), (l)(1), (p)(2), (q) (incorporating the requirement contained in § 1001.952(f)(4)), (r)(2)(ii), (t)(1)(ii) or (t)(2)(iii) (both incorporating the requirements contained in § 411.357(e)(1)(i)), (v)(7), (w)(7), (x)(1)(i), and (y)(1).)⁷ As described above, section 50404 of the Bipartisan Budget Act of 2018 amended section 1877 of the Act with respect to the writing and signature requirements in the statutory compensation arrangement exceptions. As detailed below, we are proposing a new special rule on compensation arrangements at § 411.354(e) and

⁷ We note that, where the writing requirement appears in the statutory and regulatory exceptions, we interpret it uniformly, regardless of any minor differences in the language of the requirement. See 80 FR 71315. Similarly, we interpret the signature requirement uniformly where it appears, regardless of any minor differences in the language of the statutory and regulatory exceptions.

proposing to amend existing § 411.353(g) to codify the statutory provisions in our regulations.

a. Writing Requirement (§ 411.354(e))

In the CY 2016 PFS final rule with comment period, we stated CMS' longstanding policy that the writing requirement in various compensation arrangement exceptions in § 411.357 can be satisfied by “a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties” (80 FR 71315). Our guidance on the writing requirement appeared in the preamble of the CY 2016 PFS final rule with comment period but was not codified in regulations. Section 50404 of the Bipartisan Budget Act of 2018 added subparagraph D, “Written Requirement Clarified,” to section 1877(h)(1) of the Act. Section 1877(h)(1)(D) of the Act provides that, in the case of any requirement in section 1877 of the Act for a compensation arrangement to be in writing, such requirement shall be satisfied by such means as determined by the Secretary, including by a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties involved.

In light of the recently added statutory provision at section 1877(h)(1)(D) of the Act, we are proposing to add a special rule on compensation arrangements at § 411.354(e). Proposed § 411.354(e) provides that, in the case of any requirement in 42 CFR part 411, subpart J, for a compensation arrangement to be in writing, the writing requirement may be satisfied by a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties. The special rule at § 411.357(e) codifies our existing policy on the writing requirement, as previously articulated in the CY 2016 PFS final rule with comment period. (See 80 FR 71314 *et seq.*)

b. Special Rule for Certain Arrangements Involving Temporary Noncompliance With Signature Requirements (§ 411.353(g))

Many of the exceptions for compensation arrangements in § 411.357 require that the arrangement (that is, the written documentation evidencing the arrangement) is signed by the parties to the arrangement. Under our existing special rule for certain arrangements involving temporary noncompliance with signature requirements at § 411.353(g)(1), an entity that has a compensation arrangement with a physician that satisfies all the requirements of an applicable exception in § 411.355, § 411.356 or § 411.357 except the signature requirement may submit a claim and receive payment for a designated health service referred by the physician, provided that: (1) The parties obtain the required signature(s) within 90 consecutive calendar days immediately following the date on which the compensation arrangement became noncompliant (without regard to whether any referrals occur or compensation is paid during such 90-day period); and (2) the compensation arrangement otherwise complies with all criteria of the applicable exception. Existing § 411.353(g)(1) specifies the paragraphs where the applicable signature requirements are found and existing § 411.353(g)(2) limits an entity's use of the special rule at § 411.353(g)(1) to only once every 3 years with respect to the same referring physician.

Section 50404 of the Bipartisan Budget Act of 2018 added subparagraph E, "Signature Requirement," to section 1877(h)(1) of the Act. Section 1877(h)(1)(E) of the Act provides that, in the case of any requirement in section 1877 of the Act for a compensation arrangement to be in writing and signed by the parties, the signature requirement is satisfied if: (1) Not later than 90 consecutive calendar days immediately following the date on which the compensation arrangement became noncompliant, the parties obtain the required signatures; and (2) the compensation arrangement otherwise complies with all criteria of the applicable exception. Notably, under the newly added section 1877(h)(1)(E) of the Act, an applicable signature requirement is not limited to specific exceptions and entities are not limited in their use of the rule to only once every 3 years with respect to the same referring physician. In addition, section 1877(h)(1)(E) of the Act does not include a reference to the occurrence of referrals or the payment of

compensation during the 90-day period when the signature requirement is not met.

To conform the regulations with the recently added statutory provision at section 1877(h)(1)(E) of the Act, we are proposing to amend existing § 411.353(g) by: (1) Revising the reference at § 411.353(g)(1) to specific exceptions and signature requirements; (2) deleting the reference at § 411.353(g)(1) to the occurrence of referrals or the payment of compensation during the 90-day period when the signature requirement is not met; and (3) deleting the limitation at § 411.353(g)(2). In the alternative, we are proposing to delete § 411.353(g) in its entirety and codify in proposed § 411.354(e) the special rule for signature requirements in section 1877(h)(1)(E). We seek comments regarding the best approach for codifying in regulation this provision of the Bipartisan Budget Act of 2018.

Finally, we note that the effective date of section 50404 of the Bipartisan Budget Act was February 9, 2018. Thus, beginning February 9, 2018, parties who meet the requirements of section 1877(h)(1)(E) of the Act, including parties who otherwise would have been barred from relying on the special rule for certain arrangements involving temporary noncompliance with signature requirements at § 411.353(g)(1) because of the 3-year limitation at § 411.353(g)(2), may avail themselves of the new statutory provision at section 1877(h)(1)(E) of the Act.

H. CY 2019 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This proposed rule would make payment and policy changes to the Quality Payment Program. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted April 16, 2015) amended title XVIII of the Act to repeal the Medicare sustainable growth rate (SGR) formula, to reauthorize the Children's Health Insurance Program, and to strengthen Medicare access by improving physician and other clinician payments and making other improvements. The MACRA advances a forward-looking, coordinated framework for clinicians to successfully take part in the Quality Payment Program that rewards value in one of two ways:

- The Merit-based Incentive Payment System (MIPS).
- Advanced Alternative Payment Models (Advanced APMs).

As we move into the third year of the Quality Payment Program, we have taken all stakeholder input into consideration including recommendations made by the Medicare Payment Advisory Commission (MedPAC), an independent congressional agency established by the Balanced Budget Act of 1997 (Pub. L. 105–33) to advise the U.S. Congress on issues affecting the Medicare program, including payment policies under Medicare, the factors affecting expenditures for the efficient provision of services, and the relationship of payment policies to access and quality of care for Medicare beneficiaries. We will continue to implement the Quality Payment Program as required, smoothing the transition where possible and offering targeted educational resources for program participants. A few examples of how we are working to address MedPAC's concerns are evident in our work around burden reduction and reshaping our focus of interoperability. Additionally, we heard the concern about process-based measures, and we are continuing to move towards the development and use of more outcome measures by way of removing process measures that are topped out and funding new quality measure development, as required by section 102 of MACRA. Additionally, we are also developing new episode-based cost measures, with stakeholder feedback, for potential inclusion in the cost performance category beginning in 2019. CMS acknowledges that the Quality Payment Program is a large shift for many clinicians and practices, and thus, we will continue to implement the program gradually with targeted educational resources, public trainings, and technical assistance for those who qualify. With MIPS, eligible clinicians now report under one program, which replaces three separate legacy programs. The Quality Payment Program takes a comprehensive approach to payment. Instead of basing payment only on a series of fee-for-service billing codes, the Quality Payment Program adds consideration of quality through a set of evidence-based measures and clinical practice improvement activities that were primarily developed by clinicians.

As a priority for Quality Payment Program Year 3, we are committed to reducing clinician burden, implementing the Meaningful Measures Initiative, promoting interoperability, continuing our support of small and rural practices, empowering patients through the Patients Over Paperwork initiative, and promoting price transparency.

Reducing Clinician Burden

We are committed to reducing clinician burden by simplifying and reducing burden for participating clinicians. Examples include:

- Implementing the Meaningful Measures Initiative, which is a framework that applies a series of cross-cutting criteria to keep the most meaningful measures with the least amount of burden and greatest impact on patient outcomes;
- Promoting advances in interoperability; and
- Establishing an automatic extreme and uncontrollable circumstances policy for MIPS eligible clinicians.

Improving Patient Outcomes and Reducing Burden Through Meaningful Measures

Regulatory reform and reducing regulatory burden are high priorities for us. To reduce the regulatory burden on the healthcare industry, lower health

care costs, and enhance patient care, in October 2017, we launched the Meaningful Measures Initiative.⁸ This initiative is one component of our agency-wide Patients Over Paperwork Initiative,⁹ which is aimed at evaluating and streamlining regulations with a goal to reduce unnecessary cost and burden, increase efficiencies, and improve beneficiary experience. The Meaningful Measures Initiative is aimed at identifying the highest priority areas for quality measurement and quality improvement to assess the core quality of care issues that are most vital to advancing our work to improve patient outcomes. The Meaningful Measures Initiative represents a new approach to quality measures that fosters operational efficiencies and will reduce costs, including the collection and reporting burden, while producing quality measurement that is more focused on meaningful outcomes.

The Meaningful Measures Framework has the following objectives:

- Address high-impact measure areas that safeguard public health;
- Patient-centered and meaningful to patients;
- Outcome-based where possible;
- Fulfill each program’s statutory requirements;
- Minimize the level of burden for health care providers (for example, through a preference for EHR-based measures where possible, such as electronic clinical quality measures);
- Significant opportunity for improvement;
- Address measure needs for population based payment through alternative payment models; and
- Align across programs and/or with other payers.

To achieve these objectives, we have identified 19 Meaningful Measures areas and mapped them to six overarching quality priorities as shown in Table 27.

TABLE 27—MEANINGFUL MEASURES FRAMEWORK DOMAINS AND MEASURE AREAS

Quality priority	Meaningful measure area
Making Care Safer by Reducing Harm Caused in the Delivery of Care	Healthcare-Associated Infections. Preventable Healthcare Harm.
Strengthen Person and Family Engagement as Partners in Their Care	Care is Personalized and Aligned with Patient’s Goals. End of Life Care according to Preferences. Patient’s Experience of Care. Patient Reported Functional Outcomes.
Promote Effective Communication and Coordination of Care	Medication Management. Admissions and Readmissions to Hospitals. Transfer of Health Information and Interoperability.
Promote Effective Prevention and Treatment of Chronic Disease	Preventive Care. Management of Chronic Conditions. Prevention, Treatment, and Management of Mental Health. Prevention and Treatment of Opioid and Substance Use Disorders. Risk Adjusted Mortality.
Work with Communities to Promote Best Practices of Healthy Living	Equity of Care. Community Engagement.
Make Care Affordable	Appropriate Use of Healthcare. Patient-focused Episode of Care. Risk Adjusted Total Cost of Care.

By including Meaningful Measures in our programs, we believe that we can also address the following cross-cutting measure criteria:

- Eliminating disparities;
- Tracking measurable outcomes and impact;
- Safeguarding public health;
- Achieving cost savings;
- Improving access for rural communities; and
- Reducing burden.

We believe that the Meaningful Measures Initiative will improve outcomes for patients, their families,

and health care providers while reducing burden and costs for clinicians and providers and promoting operational efficiencies.

In the quality performance category, clinicians have the flexibility to select and report the measures that matter most to their practice and patients. However, we have received feedback that some clinicians find the performance requirements confusing, and the program makes it difficult for them to choose measures that are meaningful to their practices and have more direct benefit to beneficiaries. For

the 2019 MIPS performance period, we are proposing the following updates: (1) Adding 10 new MIPS quality measures that include 4 patient reported outcome measures, 7 high priority measures, 1 measure that replaces an existing measure, and 2 other measures on important clinical topics in the Meaningful Measures framework; and (2) removing 34 quality measures.

In addition to having the right measures, we want to ensure that the collection of information is valuable to clinicians and worth the cost and burden of collecting the information. In

⁸ Meaningful Measures web page: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html>.

⁹ See Remarks by Administrator Seema Verma at the Health Care Payment Learning and Action Network (LAN) Fall Summit, as prepared for delivery on October 30, 2017, <https://www.cms.gov/>

[Newsroom/MediaReleaseDatabase/Fact-sheets/2017-Fact-Sheet-items/2017-10-30.html](https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2017-Fact-Sheet-items/2017-10-30.html).

section III.H.3.h.(2)(b)(iv) of this proposed rule, we are requesting comments on a tiered scoring system for quality measures where measures would be awarded points based on their value. We are also seeking comment on what patient reported outcome measures produce better outcomes and request accompanying supporting evidence that the measures do, in fact, improve outcomes.

Promoting Interoperability Performance Category

As required by MACRA, the Quality Payment Program includes a MIPS performance category that focuses on meaningful use of certified EHR technology, referred to in the CY 2017 and CY 2018 Quality Payment Program rules as the “advancing care information” performance category. As part of our approach to promoting and prioritizing interoperability of healthcare data, in Quality Payment Program Year 2, we changed the name of the performance category to the Promoting Interoperability performance category.

We have prioritized interoperability, which we define as health information technology that enables the secure exchange of electronic health information with, and use of electronic health information from, other health information technology without special effort on the part of the user; allows for complete access, exchange, and use of all electronically accessible health information for authorized use under applicable law; and does not constitute information blocking as defined by the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016). We are committed to working with the Office of the National Coordinator for Health IT (ONC) on implementation of the interoperability provisions of the 21st Century Cures Act to have seamless but secure exchange of health information for clinicians and patients, ultimately enabling Medicare beneficiaries to get their claims information electronically. In addition, we are prioritizing quality measures and improvement activities that lead to interoperability.

To further CMS’ commitment to implementing interoperability, at the 2018 Healthcare Information and Management Systems Society (HIMSS) conference, CMS Administrator Seema Verma announced the launching of the MyHealthEData initiative.¹⁰ This initiative aims to empower patients by

¹⁰ <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2018-Fact-sheets-items/2018-03-06.html>.

ensuring that they control their healthcare data and can decide how their data is going to be used, all while keeping that information safe and secure. The overall government-wide initiative is led by the White House Office of American Innovation with participation from HHS—including its CMS, ONC, and the National Institutes of Health (NIH)—as well as the U.S. Department of Veterans Affairs (VA). MyHealthEData aims to break down the barriers that prevent patients from having electronic access and true control of their own health records from the device or application of their choice. This effort will approach the issue of healthcare data from the patient’s perspective.

For the Promoting Interoperability performance category, we require MIPS eligible clinicians to use 2015 Edition certified EHR technology beginning with the 2019 MIPS performance period to make it easier for:

- Patients to access their data.
- Patient information to be shared between doctors and other health care providers.

Continuing To Support Small and Rural Practices

We understand that the Quality Payment Program is a big change for clinicians, especially for those in small and rural practices. We intend to continue to offer tailored flexibilities to help these clinicians to participate in the program. For example, we propose to retain a small practice bonus under MIPS by moving it to the quality performance category. We will also continue to support small and rural practices by offering free and customized resources available within local communities, including direct, one-on-one support from the Small, Underserved, and Rural Support Initiative along with our other no-cost technical assistance.

Further, we note that we are proposing to amend our regulatory text to allow small practices to continue using the Medicare Part B claims collection type. We are also proposing to revise the regulatory text to allow a small practice to submit quality data for covered professional services through the Medicare Part B claims submission type for the quality performance category, as discussed further in section III.H.3.h. of this proposed rule. Finally, small practices may continue to choose to participate in MIPS as a virtual group, as discussed in section III.H.3. of this proposed rule.

Empowering Patients Through the Patients Over Paperwork Initiative

Our Patients Over Paperwork initiative establishes an internal process to evaluate and streamline regulations with a goal to reduce unnecessary burden, to increase efficiencies, and to improve the beneficiary experience.¹¹ This administration is dedicated to putting patients first, empowering consumers of healthcare to have the information they need to be engaged and active decision-makers in their care. As a result of this consumer empowerment, clinicians will gain competitive advantage by delivering coordinated, high-value quality care.

The proposals for the Quality Payment Program in this proposed rule seek to promote competition and to empower patients. We are consistently listening, and we are committed to using data-driven insights, increasingly aligned and meaningful quality measures, and technology that empowers patients and clinicians to make decisions about their healthcare.

In conjunction with development of the Patients Over Paperwork initiative, we are making progress toward developing a patient-centered portfolio of measures for the Quality Payment Program, including 7 new outcome measures included on the 2017 CMS Measures Under Consideration List,¹² 5 of which are directly applicable to the prioritized specialties of general medicine/crosscutting and orthopedic surgery. Finally, on March 2, 2018, CMS announced a funding opportunity for \$30 million in grants to be awarded for quality measure development. The funding opportunity is aimed at external stakeholders with insight into clinician and patient perspectives on quality measurement and areas for improvement to advance quality measures for the Quality Payment Program.¹³
