Comment: One commenter stated that the obesity epidemic has contributed to the rising prevalence of obstructive sleep apnea, and sleep centers have already worked to reduce costs in diagnosis of obstructive sleep apnea by utilizing out-of-center, or home, sleep apnea testing. The commenter stated that further reduction in work RVUs, and hence payments for home sleep apnea testing services, may endanger the sustainability of sleep centers to provide this service to Medicare beneficiaries and may thus deny beneficiaries access to testing for obstructive sleep apnea. A different commenter stated that a reduction in work RVUs for home sleep apnea testing services will discourage vendors from producing technically better home sleep apnea testing devices and software.

Response: We agree with the commenter regarding the importance of sleep centers in helping to diagnose and treat the occurrence of obstructive sleep apnea. However, we remind the commenter that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2017 PFS final rule (81 FR 80272 through 80277), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. For the codes in the Home Sleep Apnea Testing family, we believe that the decreases in the surveyed work times should be reflected in decreases to the work RVUs.

Comment: Many commenters disagreed with the proposed work RVU of 0.85 for CPT codes 95800 and 95801, and stated that CMS should finalize the RUC-recommended work RVU of 1.00 for these services. Commenters stated that it was unclear why CMS chose to employ the crosswalk to CPT codes 93281 and 93260, which the commenters stated were not at all similar to the home sleep apnea test codes and are cardiovascular implantable recording device codes, not diagnostic studies.

Response: We continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes with clinically similar services are sometimes stronger comparator codes, we do not agree that codes must both constitute diagnostic studies to be used as a crosswalk. In the case of our specific crosswalk to CPT codes 93281 and 93260, we noted in the proposed rule that both of these codes have a work RVU of 0.85, as well as having the same intraservice time of 15 minutes and similar total times to CPT codes 95800 and 95801, and recent review dates within the last few years.

Comment: Several commenters stated that the existing times for CPT codes 95800 and 95801 were likely an overestimate due to the lack of experience providing these services when they were first valued as new codes in April 2010. Commenters stated that physicians are now more familiar with home sleep apnea testing and the new survey times were more reflective of this family of services.

Response: This information from the commenters appears to suggest that the current work RVUs for CPT codes 95800 and 95801 are also overestimates. If practitioners have become more familiar and efficient in the practice of home sleep apnea testing, we believe that the work RVUs should also be decreased to reflect the fact that the procedures can now be performed faster. We remind the commenters that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services, and we have no reason to believe that the intensity of these procedures has increased to the point of offsetting these gains in time efficiency.

Comment: Several commenters stated that, despite the fact that we indicated we did not intend to imply that the decrease in time should equate to a linear decrease in the valuation of work RVUs, this seems to be the approach taken in the proposed rule. Commenters stated that modifications to work RVUs should be based on empirical evidence, gathered through the survey process, which takes into consideration the amount of time required to provide a service as well as the complexity and intensity of each service.

Response: We disagree with the commenters, and we note that the proposed work RVUs for both CPT codes 95800 and 95801 were not based on pure time ratios on a one-to-one or linear basis. For CPT code 95800, use of

the intraservice time ratio alone would have yielded a work RVU of 0.79 and the total time ratio would have yielded a work RVU of 0.65. For CPT code 95801, use of the intraservice time ratio would have yielded a work RVU of 1.00 and the total time ratio would have yielded a work RVU of 0.78. We did not propose these values and instead proposed a work RVU of 0.85 for both codes specifically because the consideration of time ratios is only one component of our review process. We believe that our proposed work RVU of 0.85 for these services based on a pair of crosswalk codes, CPT codes 93281 and 93260 is appropriate, and note that we recognized that the use of pure time ratios at a one-to-one or linear basis would not accurately capture the changes in work taking place in these codes since their last valuation.

Comment: Many commenters disagreed with the proposed work RVU of 0.93 for CPT code 95806, and stated that CMS should finalize the RUC-recommended work RVU of 1.08. Commenters stated that the survey process values a service compared to other similar services, and that using an incremental approach in lieu of strong crosswalks and input from the RUC and physicians providing these services was unfounded.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We continue to believe that the proposed work RVU of 0.93 would be the most accurate valuation for CPT code 95806.

Comment: Several commenters stated that CPT code 95806 has become a more complex study and requires more time as well as greater levels of skill and training to perform the interpretation for this study. Commenters stated that more complex patients with a wider variety of sleep problems and more severe conditions are being studied with this modality, which means that the skills and continuing updates to education required to interpret these studies have dramatically increased.

Response: We agree with the commenters that due to the decreasing surveyed work times and rapidly increasing utilization for these codes, we had reason to believe that practitioners are becoming more efficient at performing the procedure. While the incorporation of new technology can sometimes make services more complex and difficult to perform, it can also have the opposite effect by making services less reliant on manual skill and technique. We do not agree with the commenter that the need for additional training to use the equipment would necessarily be grounds for an increase in the work RVU, as improvements in technology are commonplace across many different services and are not specific to this procedure. As detailed above, we also have reason to believe that the improved technology has led to greater efficiencies in the procedure which, under the resource-based nature of the RVU system, lends further support for a reduction in the work RVU.

After consideration of the public comments, we are finalizing the work RVUs and the direct PE inputs for the codes in the Home Sleep Apnea Testing family of codes as proposed.

(55) Neurostimulator Services (CPT Codes 95970, 95976, 95977, 95983, and 95984)

In October 2013, CPT code 95971 (Electronic analysis of implanted neurostimulator pulse generator system; simple spinal cord, or peripheral (*i.e.,* peripheral nerve, sacral nerve, neuromuscular) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming) was identified in the second iteration of the High Volume Growth screen. In January 2014, the RUC recommended that CPT codes 95971, 95972 (Electronic analysis of implanted neurostimulator pulse generator system; complex spinal cord, or peripheral (*i.e.,* peripheral nerve, sacral nerve, neuromuscular) (except cranial nerve) neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming) and 95974 (Electronic analysis of implanted neurostimulator pulse generator system; complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour) be referred to the CPT Editorial Panel to address the entire family regarding the time referenced in the CPT code descriptors. In June 2017, the CPT Editorial Panel revised CPT codes 95970, 95971, and 95972, deleted CPT codes 95974, 95975 (Electronic analysis of implanted neurostimulator pulse generator system; complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour), 95978 (Electronic analysis of implanted neurostimulator pulse generator system, complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), and 95979 (Electronic analysis of implanted neurostimulator pulse generator system, complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; each additional 30 minutes after first hour) and created four new CPT codes for analysis and programming of implanted cranial nerve neurostimulator pulse generator, analysis, and programming of brain neurostimulator pulse generator systems and analysis of stored neurophysiology recording data.

The RUC recommended a work RVU of 0.45 for CPT code 95970 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.,* contact group(s),interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters by physician or other qualified health care professional; with brain, cranial nerve, spinal cord, peripheral nerve, or sacral nerve neurostimulator pulse generator/transmitter, without programming)), which is identical to the current work RVU for this CPT code. The descriptor for this CPT code has been modified slightly, but the specialty societies affirmed that the work itself has not changed. To justify its recommendation, the RUC provided two references: CPT code 62368 (Electronic analysis of programmable, implanted pump for intrathecal or epidural drug infusion (includes evaluation of reservoir status, alarm status, drug prescription status); with reprogramming), with intraservice time of 15 minutes, total time of 27 minutes, and a work RVU of 0.67; and CPT code 99213 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; or Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the

presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family), with intraservice time of 15 minutes, total time of 23 minutes, and a work RVU of 0.97.

We disagreed with the RUC's recommendation because we did not believe that maintaining the work RVU, given a decrease of four minutes in total time, was appropriate. In addition, we noted that the reference CPT codes chosen have much higher intraservice and total times than CPT code 95970, and also have higher work RVUs, making them poor comparisons. Instead, we identified a crosswalk to CPT code 95930 (Visual evoked potential (VEP) checkerboard or flash testing, central nervous system except glaucoma, with interpretation and report) with 10 minutes intraservice time, 14 minutes total time, and a work RVU of 0.35. Therefore, we proposed a work RVU of 0.35 for CPT code 95970.

CPT code 95976 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.,* contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, dose lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with simple cranial nerve neurostimulator pulse generator/transmitter programming by physician or other qualified health care professional) is a new CPT code replacing CPT code 95974 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour). The description of the work involved in furnishing CPT code 95976 differs from that of the deleted CPT code in a few important ways, notably that the time parameter has been removed so that the CPT code no longer describes the first hour of programming. In addition, the new CPT code refers to simple rather than complex programming. Accordingly, the intraservice and total times for this CPT code are substantively different from those of the deleted CPT code. CPT code 95976 has an intraservice time of 11 minutes and a total time of 24 minutes, while CPT code 95974 has an intraservice time of 60 minutes and a total time of 110 minutes. The RUC recommended a work RVU of 0.95 for CPT code 95976. The RUC's top reference CPT code as chosen by the RUC survey participants was CPT code 95816 (Electroencephalogram (EEG); including recording awake and drowsy), with an intraservice time of 15 minutes, 26 minutes total time, and a work RVU of 1.08. The RUC indicated that the service is similar, but somewhat more complex than CPT code 95976.

We disagreed with the RUC's recommended work RVU for this CPT code because we did not believe that the large difference in time between the new CPT code and CPT code 95974 was reflected in the slightly smaller proportional decrease in work RVUs. The reduction in total time, from 110 minutes to 24 minutes is nearly 80 percent. However, the RUC's recommended work RVU reflects a reduction of just under 70 percent. We believe that a more appropriate crosswalk would be CPT code 76641 (Ultrasound, breast, unilateral, real time with image documentation, including axilla when performed; complete) with intraservice time of 12 minutes, total time of 22 minutes, and a work RVU of 0.73. Therefore, we proposed a work RVU of 0.73 for CPT code 95976.

CPT code 95977 describes the same work as CPT code 95976, but with complex rather than simple programming. The CPT Editorial Panel refers to simple programming of a neurostimulator pulse generator/transmitter as the adjustment of one to three parameter(s), while complex programming includes adjustment of more than three parameters. For purposes of applying the building block methodology and calculating intraservice and total time ratios, the RUC compared CPT code 94X84 with CPT code 95975 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, each additional 30 minutes after first hour), which is being deleted by the CPT Editorial Panel. We believe that this was an inappropriate comparison since it is time based (first hour of programming) and is an add-on code. Instead we believe that the RUC intended to compare CPT code 95977 with CPT code 95974 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude, pulse duration, configuration of wave form, battery status, electrode selectability, output modulation, cycling, impedance and patient compliance measurements); complex cranial nerve neurostimulator pulse generator/transmitter, with intraoperative or subsequent programming, with or without nerve interface testing, first hour), which has been recommended for deletion by the CPT Editorial Panel and is also the comparison for CPT code 95976. The RUC recommended a work RVU of 1.19 for CPT code 95977. The RUC disagreed with the two top reference services CPT code 99215 (Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A comprehensive history; A comprehensive examination; or Medical decision making of high complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 40 minutes are spent face-to-face with the patient and/or family) and CPT code 99202 (Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: An expanded problem focused history; an expanded problem focused examination; or straightforward medical decision making. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 20 minutes are spent face-to-face with the patient and/or family) and instead compared CPT code 95977 to CPT code 99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires at least 2 of these 3 key components: An expanded problem focused interval history; An expanded problem focused examination; or Medical decision making of low complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the patient is responding inadequately to therapy or has developed a minor complication.

Typically, 15 minutes are spent at the bedside and on the patient's facility floor or unit.) with total time of 31 minutes, intraservice time of 15 minutes, and a work RVU of 1.16; and CPT code 12013 (Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm), with total time of 27 minutes, intraservice time of 15 minutes, and a work RVU of 1.22.

We disagreed with the RUC's recommended work RVU of 1.19 for CPT code 95977. Once the comparison CPT code is corrected to CPT code 95974, the reverse building block calculation indicates that a lower work RVU (close to 0.82) would be a better reflection of the work involved in furnishing this service. As an alternative to the RUC's recommendation, we added the difference in RUC-recommended work RVUs between CPT codes 95976 and 95977 (0.24 RVUs) to the proposed work RVU of 0.73 for CPT code 95976. Therefore, we proposed a work RVU of 0.97 for CPT code 95977.

CPT code 95983 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.,* contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, doe lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, first 15 minutes face-to-face time with physician or other qualified health care professional) is the base code for add-on CPT code 95984 (Electronic analysis of implanted neurostimulator pulse generator/transmitter (*e.g.,* contact group(s), interleaving, amplitude, pulse width, frequency (Hz), on/off cycling, burst, magnet mode, doe lockout, patient selectable parameters, responsive neurostimulation, detection algorithms, closed loop parameters, and passive parameters) by physician or other qualified health care professional; with brain neurostimulator pulse generator/transmitter programming, each additional 15 minutes face-to-face time with physician or other qualified health care professional), which is an add-on CPT code and can only be billed with CPT code 95983. The RUC compared CPT code 95983 with CPT code 95978 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), which the CPT Editorial Panel is recommending for deletion. The primary distinction between the new and old CPT codes is that the new CPT code describes the first 15 minutes of programming while the deleted CPT code describes up to one hour of programming. The RUC recommended a work RVU of 1.25 for CPT code 95983 and a work RVU of 1.00 for CPT code 95984. For CPT code 95983, the RUC's recommendation is based on reference CPT codes 12013 (Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm), with total time of 27 minutes, intraservice time of 15 minutes, and a work RVU of 1.22; and CPT code 70470 (Computed tomography, head or brain; without contrast material, followed by contrast material(s) and further sections) with 25 minutes of total time, 15 minutes of intraservice time, and a work RVU of 1.27.

We disagreed with the RUC's recommended work RVU for CPT code 95983 because we did not believe that the reduction in work RVU reflected the change in time described by the CPT code. Using the reverse building block methodology, we estimated that a work RVU of nearer to 1.11 would be more appropriate. In addition, if we were to sum the RUC-recommended RVUs for a single hour of programming using one of the base CPT codes and three of the 15 minute follow-on CPT codes, 1 hour of programming would be valued at 4.25 work RVUs. This contrasts sharply from the work RVU of 3.50 for 1 hour of programming using the deleted CPT code 95978. We believe that a more appropriate valuation of the work involved in furnishing this service is reflected by a crosswalk to CPT code 93886 (Transcranial Doppler study of the intracranial arteries; complete study), with total time 27 minutes, intraservice time of 17 minutes, and a work RVU of 0.91. Therefore, we proposed a work RVU of 0.91 for CPT code 95983.

The RUC's recommended work RVU of 1.00 for CPT code 95984 is based on the key reference service CPT code 64645 (Chemodenervation of one extremity; each additional extremity, 5 or more muscles), which has total time of 26 minutes, intraservice time of 25 minutes, and a work RVU 1.39. This new CPT code is replacing CPT code 95978 (Electronic analysis of implanted neurostimulator pulse generator system (*e.g.,* rate, pulse amplitude and duration, battery status, electrode selectability and polarity, impedance and patient compliance measurements), complex deep brain neurostimulator pulse generator/transmitter, with initial or subsequent programming; first hour), which is being deleted by the CPT Editorial Panel. If we were to add the incremental difference between CPT codes 95983 and 95984 to the proposed value for the base CPT code (95983, work RVU = 0.91), we estimated that this add-on CPT code would have a work RVU of 0.75. The building block methodology results in a recommendation of a slightly higher work RVU of 0.82. We proposed a work RVU of 0.80 for CPT code 95984, which falls between the calculated value using incremental differences and the calculation from the reverse building block, and is supported by a crosswalk to CPT code 51797 (Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal)), which is an add-on CPT code with identical total and intraservice times (15 minutes) as CPT code 95984.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving the Neurostimulator Services family of codes.

Comment: We received a number of comments regarding our proposed work RVUs for CPT codes 95970, 95976, 95977, 95983, and 95984. Commenters suggested that CMS misunderstood the role of reference codes in the RUC's process, and that CMS should not be comparing the times for the surveyed code to the reference codes because they are not specifically intended to match in time.

Response: We appreciate the opportunity to clarify that we do not believe the reference codes provided by the RUC in the summary documents are being provided as a crosswalk. We did not state that we thought the two top reference codes, CPT code 62368 (total time of 27 minutes) and CPT code 99213 (total time of 23 minutes) were being used by the RUC as crosswalk codes (as that term is used in the RUC process). Instead, we pointed out that the two reference codes are generally not a particularly good comparison for a survey code with 15 minutes of total time. We understand that survey respondents, not the RUC, chose the reference codes, and that survey respondents do not have the physician times readily available when choosing from among services that they are familiar with. Nonetheless, we expect reference codes to generally have physician work times that are more similar to the survey code than an 80 percent difference (in the case of CPT

code 62368). When we make such an observation with regard to the times for reference codes in relation to a survey code, we are not disregarding parameters other than time. We also note that the RUC compares reference codes in terms of time or intensity relative to the survey code as a matter of common practice. We understand those comparisons to be intended by the RUC as one of several dimensions of a code's work RVU valuation.

As we have stated in the past, we believe that practitioners become more efficient at furnishing some services over time, shortening the amount of clinical time required. We still believe this is the case with regard to CPT code 95970, which has decreased in time without a significant change in intensity. We maintain that our crosswalk to CPT code 95930 with a work RVU of 0.35 for this CPT code is appropriate.

Comment: A commenter stated that, since CMS acknowledges that CPT code 95976 is different from CPT code 95974, which is being deleted, CMS should not compare the two codes for purpose of evaluating whether the decreased work time in the new code is appropriate in relation to the work involved in furnishing CPT code 95930. The commenter urged CMS to finalize the work RVU proposed by the RUC, which is 0.95.

Response: The major difference in the description of work involved in furnishing CPT code 95974 and CPT code 95976 involves a change from 'complex' to 'simple' programming. We do not believe that this change, which indicates a lower level of intensity for new CPT code 95976 than for deleted CPT code 95974, precludes us from using the deleted CPT code as the basis for evaluating whether the comparatively lower time involved in furnishing CPT code 95976 is adequately reflected by the RUC-recommended work RVU for this new CPT code. We continue to believe that the lower time in furnishing the work described by CPT code 95976, compared with the time in furnishing the service described by deleted CPT code 95974, should result in a lower work RVU than the value recommended by the RUC. Therefore, we are finalizing the work RVU for CPT code 95976 of 0.73 based on a crosswalk to CPT code 76641.

Comment: A commenter clarified that we incorrectly stated that the RUC compared the new CPT code 95977 with deleted CPT code 95975, which is an add-on code and would therefore not be an acceptable point of comparison.

Response: We appreciate the commenter informing us of the error and we agree that the RUC did not compare CPT code 95977 with the deleted code, CPT code 95975. Instead, the RUC compared the new code with several other codes: CPT code 99308 (Subsequent nursing facility care, per day, for the evaluation and management of a patient) with a work RVU of 1.16, 15 minutes of intra-service time and 31 minutes total time and CPT code 12013 (Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm) with a work RVU of 1.22, 15 minutes of intra-service time and 27 minutes total time. The RUC also cited the following two CPT codes for support: CPT code 93975 (Duplex scan of arterial inflow and venous outflow of abdominal, pelvic, scrotal contents and/or retroperitoneal organs; complete study) with a work RVU of 1.16, 20 minutes of intra-service time and 30 minutes total time, and 67810 (Incisional biopsy of eyelid skin including lid margin), with a work RVU of 1.18, 13 minutes of intra-service time and 27 minutes total time. Despite having cited these numerous CPT codes as support for their recommended work RVU for CPT code 95977, we do not see why CPT code 95974 is not an entirely appropriate point of comparison for CPT code 95977 as we explained in making our proposal. The only difference between new CPT code 95977 and new CPT code 95976 is complex vs. simple programming and, since as we explained in response to comments above, we believe it is appropriate to use the deleted CPT code 95974 for a time comparison with CPT code 95976, we believe that code is equally valid as the basis for comparison to CPT code 95977. The building block methodology between CPT code 95977 and CPT code 95974 suggests that a work RVU in the area of 0.82 would better reflect both the time and intensity of furnishing this service. In identifying a more appropriate work RVU, we looked at the difference in the RUC-recommended work RVU between CPT codes 95976 and 95977, which differ by simple vs. complex programming, and added the increment to our proposed value for CPT code 95976. We continue to believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Given that we are finalizing our proposed work RVU for CPT code 95976 of 0.73, we believe a work RVU of 0.97 for CPT code 95977 is appropriate. We are finalizing a work RVU of 0.97 for CPT code 95977 as proposed.

Comment: A commenter expressed opposition to our use of the reverse building block methodology to evaluate the RUC-recommended work RVU for CPT code 95983 and to identify possible alternative crosswalk CPT codes. Consequently, the commenter stated that our crosswalk of CPT code 93886 is based on invalid reasoning about how the time parameter factors into the code valuation. The work involved in furnishing the service described by the crosswalk code, according to the commenter, is less intense than the work described by the survey code.

Response: We disagree with the commenter that the reverse building block methodology not an appropriate approach to assessing whether the RUC-recommended work RVU for a code is appropriate. We employed a reverse building block methodology to assess the reasonableness of the RUC's recommendation, not to value the code in the first instance. As the commenter noted, the work described by new CPT code 95983 is difficult to value in relation to both the deleted code and other codes on the fee schedule because of the 15 minute time parameter. However, having looked carefully at the work involved in furnishing the service described by our crosswalk code, CPT code 93886, we do not believe it is less intense than the survey code. The service described by CPT code 93886 is performed on patients with recent brain hemorrhage, which we believe is as complex to study as the work involved in programming adjustments to multiple parameters in real time. We continue to believe that CPT code 93886 is an appropriate crosswalk for CPT code 95983, and we are finalizing a work RVU for this code of 0.91.

Comment: A commenter stated that our approach for valuing CPT code 95984 ignored physician work intensity and complexity in favor of a random calculation involving code increments, which is a flawed methodology. CMS's choice of crosswalk code, according to the commenter, is invalid because it is based on this incorrect approach.

Response: We disagree that the use of incremental differences in work RVU between codes that have an established pattern of intensity or time, is inappropriate. We remind the commenter that our calculation of increments is based on the RUC's recommended work RVUs for the relevant CPT codes. We continue to believe that this approach is necessary to maintain intra-family relativity of the PFS, and we maintain that CPT code 51797 is an appropriate crosswalk to the

add-on CPT code 95984. We are finalizing a work RVU for CPT 95984 of 0.80.

Comment: One commenter stated that CMS reduced the nonfacility service cost for clinical labor for CPT code 95970 to zero. The commenter stated that this may be a potential oversight, given that the RUC recommended nonfacility clinical labor time be reduced from 44 to 15 minutes. The commenter stated that it was not consistent for CMS to recommend a nonfacility service cost of zero in light of the nonfacility exam table (EF023) equipment time of 15 minutes, and that this clinical labor should still be reflected in this service.

Response: We disagree with the commenter and note that the RUC did not recommend any clinical labor time for CPT code 95970, as we proposed the RUC-recommended direct PE inputs without refinement. We believe that the equipment time assigned for the exam table (EF023) and the neurostimulator programmer (EQ209) indicate that these equipment items are in use by the practitioner and not the clinical staff.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Neurostimulator Services family of codes as proposed.

(56) Psychological and Neuropsychological Testing (CPT Codes 96105, 96110, 96116, 96125, 96127, 96112, 96113, 96121, 96130, 96131, 96132, 96133, 96136, 96137, 9613896138, 96139, 96X11, and 96146)

In CY 2016, the Psychological and Neuropsychological Testing family of codes were identified as potentially misvalued using a high expenditure services screen across specialties with Medicare allowed charges of $10 million or more. The entire family of codes was referred to the CPT Editorial Panel to be revised, as the testing practices had been significantly altered by the growth and availability of technology, leading to confusion about how to report the codes. In June 2017, the CPT Editorial Panel revised five existing codes, added 13 codes to provide better description of psychological and neuropsychological testing, and deleted CPT codes 96101, 96102, 96103, 96111, 96118, 96119, and 96120. The RUC and HCPAC submitted recommendations for the 13 new codes and for the existing CPT codes 96105, 96110, 96116, 96125, and 96127.

We proposed the RUC- and HCPAC-recommend work RVUs for several of the CPT codes in this family: A work RVU of 1.75 for CPT code 96105; a work RVU of 1.86 for CPT code 96116; a work RVU of 1.70 for CPT code 96125; a work RVU of 1.71 for CPT code 96121; a work RVU of 0.55 for CPT code 96136; a work RVU of 0.46 for CPT code 96137; and a work RVU of 0.51 for CPT code 96X11. CPT codes 96110, 96127, 96138, 96139, and 96146 were valued by the RUC for PE only.

This code family contains a subset of codes that describe psychological and neuropsychological testing administration and evaluation, not including assessment of aphasia, developmental screening, or developmental testing. The CPT Editorial Panel's recommended coding for this subset of services consists of seven new codes: Two that describe either psychological or neuropsychological testing when administered by physicians or other qualified health professionals (CPT codes 96136 and 96137), and two for either type of testing when administered by technicians (CPT codes 96138 and 96139); and four new codes that describe testing evaluation by physicians or other qualified health care professionals (CPT codes 96130 through 96133). This new coding effectively unbundles codes that currently report the full course of testing into separate codes for testing administration (CPT codes 96136, 96137, 96138, and 96139) and evaluation (CPT codes 96130, 96131, and 96132). According to a stakeholder that represents the psychologist and neuropsychologist community, this new coding will result in significant reductions in payment for these services due to the unbundling of the testing codes into codes for physician-administered tests and technician-administered tests. The stakeholder noted that because the new coding includes testing codes with zero work RVUs for the technician administered tests and the work RVUs are lower than they believe to be accurate, this new valuation would ignore the clinical evaluation and decision making performed by the physician or other qualified health professional during the course of testing administration and evaluation. Furthermore, the net result of the code valuations for these new codes is a reduction in the overall work RVUs for this family of codes. In other words, the stakeholder's analysis found that the RUC recommendations result in a reduction in total work RVUs, even though the actual physician work of a testing battery has not changed.

In the interest of payment stability for these high-volume services, we proposed to implement work RVUs for this code family, which would eliminate the approximately 2 percent reduction in work spending. We proposed to achieve work neutrality for this code family by scaling the work RVUs upward from the RUC-recommended values so that the size of the pool of work RVUs would be essentially unchanged for this family of services. Therefore, we proposed: A work RVU of 2.56 for CPT code 96112, rather than the RUC-recommended work RVU of 2.50; a work RVU of 1.16 for CPT code 96113, rather than the RUC-recommended work RVU of 1.10; a work RVU of 2.56 for CPT code 96130, rather than the RUC-recommended work RVU of 2.50; a work RVU of 1.96 for CPT code 96131, rather than the RUC-recommended work RVU of 1.90; a work RVU of 2.56 for CPT code 96132, rather than the RUC-recommended work RVU of 2.50; and a work RVU of 1.96 for CPT code 96133, rather than the RUC-recommended work RVU of 1.90. We saw no evidence that the typical practice for these services has changed to merit a reduction in valuation of professional services.

The RUC made several revisions to the recommended direct PE inputs for the administration codes from their respective predecessor codes, including revisions to quantities of testing forms. For the supply item, ''psych testing forms, average'' there is a quantity of 0.10 in the predecessor CPT code 96101, and a quantity of 0.33 in the predecessor CPT code 96102. For the supply item ''neurobehavioral status forms, average,'' there is a quantity of 1.0 in the predecessor CPT code 96118 and a quantity of 0.30 for predecessor CPT code 96119, and for the supply item ''aphasia assessment forms, average,'' there is a quantity of 1.0 in the predecessor CPT code 96118 and a quantity of 0.30 in predecessor CPT code 96119. The RUC recommendation does not include any forms for CPT codes 96132 and 96133. The RUC has replaced the corresponding predecessor supply items with new items ''WAIS–IV Record Form,'' ''WAIS–IV Response Booklet #1,'' and ''WAIS–IV Response Booklet #2,'' and assigned quantities of 0.165 for each of these new supply items for CPT codes 96136 through 96139. In our analysis, we found that the RUC-recommended direct PE refinements contributed significantly to the reduction in the overall payment for this code family. We saw no compelling evidence that the quantities of testing forms used in a typical course of testing would have been reduced dramatically and, in the interest of payment stability, we proposed to refine the direct PE inputs for CPT codes 96132 through 96139 by including 1.0 quantity each of the supply items ''WAIS–IV Record

Form,'' ''WAIS–IV Response Booklet #1'', and ''WAIS–IV Response Booklet #2.'' We believe that a typical course of testing would involve use of one booklet for each of the relevant codes. In addition, these proposed refinements would largely mitigate potentially destabilizing payment reductions for these services. We solicited comments on our proposed work RVUs and proposed PE refinements for this family of services.

We also proposed to remove the equipment time for the CANTAB Mobile (ED055) equipment item from CPT code 96146. This item was listed at different points in the recommendations as a supply item with a cost of $28 per assessment and as an equipment item for a software license with a cost of $2,800 that could be used for up to 100 assessments. We were unclear as to how the CANTAB Mobile would typically be used in this procedure, and we proposed to remove the equipment time pending the submission of more data about the item. We solicited additional information about the use of this item and how it should best be included into the PE methodology. We were also interested in information as to whether the submitted invoice refers to the cost of the mobile device itself, or the cost of user licenses for the mobile device, which was unclear from the information submitted with the recommendations.

The following is a summary of the comments we received regarding our proposed work RVUs and proposed direct PE refinements for this family of services.

Comment: Many commenters supported our proposal to increase payment from the RUC recommendations in the interest of payment stability. These commenters stated this proposal will help mitigate reductions in reimbursement rates for psychologists.

According to some commenters, some psychologists will see slight decreases for neuropsychological testing services due to the new coding structure, which they say aligns psychological and neuropsychological testing services with other testing services in the program. Some commenters said that, due to the new coding structure, reimbursement will be lower for neuropsychological evaluation services that are provided by physicians than those provided by technicians. These commenters stated that physicians should not be reimbursed at a lesser rate than EEG or MRI technicians or other physician extenders.

Response: We note that our proposed values for the evaluation CPT codes 96130 through 96133 and the administration and scoring CPT codes 96136 through 96139 are generally higher for the physician-administered codes than for the analogous technician-administered codes. According to our proposed rates, however, the valuation of the add-on code for each additional 30 minutes of administration and scoring when performed by a technician reported with CPT code 96139 is, however, slightly higher than the valuation of the add-on code for each additional 30 minutes of administration and scoring when performed by a physician or other qualified health care professional, reported with CPT code 96137. We thank commenters for bringing this potential rank-order anomaly to our attention. We believe that clinical staff will typically be providing some support when the physician or other qualified health care professional is performing testing administration as described by CPT codes 96136 and 96137. We are therefore refining the direct PE inputs for these services by adding 10 minutes of clinical labor time for the CA021 clinical labor activity, ''Perform procedure/service—NOT directly related to physician work time'' for these codes. We believe this will more accurately reflect the clinical staff support that is typical when a physician is performing test administration, and it will preserve appropriate rank-order among this subset of services, while mitigating reductions to payment rates for testing administration services.

Comment: The RUC noted that in the February 5, 2018 RUC submission to CMS, the RUC rescinded its interim recommendation from October 2017, and stated that CPT code 96X11 is deleted and will not be a CPT code for CPT 2019. The RUC recommended that CMS delete this service and work RVU recommendation for the 2019 PFS.

Response: As CPT code 96X11 will not be a CPT code for CY 2019, we are deleting this code. Based on the RUC-recommended utilization crosswalk, our proposed rates included utilization assumptions that for all services currently reported with CPT codes 96103 and 96120, half of these services will be reported with the new CPT code 96X11 and half will be reported with CPT code 96146. As we are not finalizing 96X11, for the purposes of ratesetting, our utilization for these service will include the assumption that half of the services currently reported with 96103 and 96120 will be reported with CPT code 96136 and half with CPT code 96146.

Comment: A commenter requested clarification on how much time is considered typical for the neuropsychologist to perform record review and test selection in newly created CPT codes 96132 and 96133.

Response: For CPT code 96132, we proposed the RUC-recommended 5 minutes of pre-service work time which reflects activities such as preliminary selection of tests and record review. As CPT code 96133 is an add-on code for reporting each additional hour, it does not include additional pre-service work time, as the latter would be considered to be included in the corresponding base code.

Comment: Several commenters disagreed with the proposal to remove the equipment time for the CANTAB Mobile (ED055) equipment item from CPT code 96146. Commenters stated that the PE Subcommittee determined that this was a software license and it would be more appropriately classified as equipment than as a supply. Commenters stated that they had submitted paid invoices for two additional software license-based automated instruments typically used when furnishing CPT code 96146, and that they were resubmitting these same invoices with their comment letter.

Response: We appreciate the feedback from the commenter that the CANTAB Mobile (ED055) equipment item referred to a software license. We continue to believe that software licenses would typically be classified as a form of indirect PE under our methodology, and as a result we are finalizing our proposal to remove this equipment time from CPT code 96146.

Comment: A commenter requested clarification on why new CPT codes 96138, 96139, and 96146 do not include a facility fee, despite the fact that their respective source CPT codes 96102, 96119, 96103, and 96120 do have RVUs in the facility setting.

Response: The source codes mentioned by the commenter have associated work RVUs, while the new CPT codes do not, and they do not include physician work time. The new CPT coding effectively unbundles professional and technical services for some of these codes. Codes that do not have a physician work component would typically not be valued in the facility setting.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the Psychological and Neuropsychological Testing family of codes as proposed. We are also finalizing the direct PE inputs as proposed, with the exception of the refinement to the CA021 clinical labor for CPT codes 96136 and 96137 as detailed above.

(57) Electrocorticography (CPT Code 95836)

CPT Code 95829 is used for Electrocorticogram performed at the time of surgery; however, a new code was needed to account for this non-face-to-face service for the review of a month's worth or more of stored data. CPT code 95836 (Electrocorticogram from an implanted brain neurostimulator pulse generator/transmitter, including recording, with interpretation and written report, up to 30 days) is a new code approved at the September 2017 CPT Editorial Panel Meeting to describe this service.

We disagreed with the RUC-recommended work RVU of 2.30 for CPT code 95836 and proposed a work RVU of 1.98 based on a direct crosswalk to the top reference, CPT code 95957 (Digital analysis of electroencephalogram (EEG) (*e.g.,* for epileptic spike analysis)). This is a recently-reviewed code with the same intraservice time of 30 minutes and a total time only 2 minutes lower than CPT code 95836. We agreed with the survey respondents that CPT code 95957 was an accurate valuation for this new code, and due to the clinically similar nature of the two procedures and their near-identical time values, we proposed to value both of them at the same work RVU of 1.98.

The RUC did not recommend, and we did not propose, any direct PE inputs for CPT code 95836.

The following is a summary of the public comments we received on our proposals involving CPT code 95836.

Comment: Many commenters disagreed with the proposed work RVU of 1.98 for CPT code 95836 and stated that CMS should finalize the RUC-recommended work RVU of 2.30. Commenters stated that the survey respondents chose CPT code 95957 as a reference service and not as a direct crosswalk. Commenters stated that the survey respondents pick from a list of 10–20 services to use as a comparison and then recommend a work RVU based on the intensity, complexity and physician time required to perform the surveyed code. Commenters stated that the median survey work RVU was actually 2.97, much higher than the key reference service, and that the respondents specifically indicated that CPT code 95836 is more intense and complex than CPT code 95957 on all measures.

Response: We disagree with the commenters that the key reference service of CPT code 95957 would be an inappropriate choice for a direct crosswalk, not least because the RUC commonly uses one of the key reference services in exactly this fashion. While it is true that the median survey work RVU was 2.97, we note that the RUC did not recommend this work valuation either, instead choosing to recommend a work RVU of 2.30 in recognition that the survey median would be a value that is too high to maintain relativity. Similarly, while the survey respondents specifically indicated that CPT code 95836 is more intense and complex than CPT code 95957 on all measures, we note that the survey respondents also indicated that CPT code 95836 is more intense and complex than the second key reference code, CPT code 95810 (Polysomnography; age 6 years or older, sleep staging with 4 or more additional parameters of sleep, attended by a technologist) which has a work RVU of 2.50. We proposed to use a crosswalk to CPT code 95957 not only because it was selected by the survey participants as the top key reference, but also because it is a recently-reviewed code with the same intraservice time of 30 minutes and a total time only 2 minutes lower than CPT code 95836. We continue to believe that this is the most accurate choice for work valuation.

Comment: Several commenters stated that although the specialty society did not submit any direct PE inputs, it is not a facility only code. Commenters stated that CPT code 95836 can be performed in both the nonfacility and the facility setting, and that the nonfacility is actually the typical setting for this service. Commenters stated that they understood that there would be no direct staffing, equipment or supply costs associated with this service and that indirect costs would be similar regardless of the setting in which the service is performed, but there would still be indirect practice expense associated with providing the service in the nonfacility. Commenters apologized for the misunderstanding and requested that CPT code 95836 should be valued in the nonfacility setting.

Response: We appreciate the additional information supplied by the commenters on this issue. We will remove the ''NA'' designation from the nonfacility setting for CPT code 95836. Due to the fact that there are no direct PE inputs for CPT code 95836, the PE RVU will be the same in both the nonfacility and facility settings because it is based solely on the indirect PE methodology.

After consideration of the public comments, we are finalizing the work RVU for CPT code 95836 as proposed. We are not finalizing any direct PE inputs for this code, but we will value it in both the facility and nonfacility settings as noted above.

(58) Chronic Care Remote Physiologic Monitoring (CPT Codes 99453, 99454, and 99457)

In the CY 2018 PFS final rule, we finalized separate payment for CPT code 99091 (Collection and interpretation of physiologic data (*e.g.,* ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time) (82 FR 53014). In that rule, we indicated that there would be new coding describing remote monitoring forthcoming from the CPT Editorial Panel and the RUC (82 FR 53014). In September 2017, the CPT Editorial Panel revised one code and created three new codes to describe remote physiologic monitoring and management, and the RUC provided valuation recommendations through our standard rulemaking process.

CPT codes 99453 (Remote monitoring of physiologic parameter(s) (*e.g.,* weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment) and 99454 (Remote monitoring of physiologic parameter(s) (*e.g.,* weight, blood pressure, pulse oximetry, respiratory flow rate), initial; device(s) supply with daily recording(s) or programmed alert(s) transmission, each 30 days) are both PE-only codes. We proposed the RUC-recommended work RVU of 0.61 for CPT code 99457 (Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified healthcare professional time in a calendar month requiring interactive communication with the patient/caregiver during the month).

For the direct PE inputs, we proposed to accept the RUC-recommended direct PE inputs for CPT code 99453 and to remove the ''Monthly cellular and licensing service fee'' supply from CPT code 99454. We do not believe that these licensing fees will be allocated to the use of an individual patient for an individual service, and instead believe they can be better understood as forms of indirect costs similar to office rent or administrative expenses. Therefore, we proposed to remove this supply input as a form of indirect PE. We proposed the direct PE inputs for CPT code 99457 without refinement.

The following is a summary of the public comments we received on our

proposals involving the Chronic Care Remote Physiologic Monitoring family of codes.

Comment: Commenters were very supportive of CMS making separate payment for these services. Several commenters supported the proposal of the RUC-recommended work RVU of 0.61 for CPT code 99457. A few commenters stated that the proposed rates for these services were too low, and that given industry standards, reimbursement should be increased.

Response: We appreciate the support for our proposal from the commenters.

Comment: Several commenters disagreed with the proposal to remove the ''Monthly cellular and licensing service fee'' supply from CPT code 99454. Commenters stated that the monthly cellular and licensing service fee was a direct practice expense input as it is allocable to the patient for this service. Commenters stated that this fee is not a license for the entire practice; rather it is an individually allocable fee for the period that the patients is monitored and the physician would not incur such fees if the patient did have the wireless monitor. Commenters clarified that the fee is comprised of the monthly cost associated with encryption of data for safe HIPAA compliant transfer, programmed alerts, and the monthly cost of pre-loaded connectivity used to transmit patient generated physiological data from a specific patient to the provider's software. Commenters stated that reliance upon a patient's cellular connectivity or WIFI, which may or may not be operating based on patient technology capabilities, was not reliable for medical delivery purposes.

Response: We disagree with the commenters and we continue to believe that the monthly cellular and licensing service fee constitutes a form of indirect PE. We believe that licensing and data costs are administrative costs that are not unique to individual procedures, in the same fashion that we do not assign separate direct PE for higher electricity costs to diagnostic imaging procedures as compared to cognitive evaluation procedures. We continue to believe that these data costs are appropriately captured via the indirect PE methodology as opposed to being included as a separate direct PE input. We also note that other services that require around-the-clock monitoring, such as the home PT/INR monitoring described in HCPCS code G0249 (Provision of test materials and equipment for home inr monitoring of patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets Medicare coverage criteria; includes: Provision of materials for use in the home and reporting of test results to physician; testing not occurring more frequently than once a week; testing materials, billing units of service include 4 tests), do not include additional direct PE inputs for data costs, and we do not believe it would be appropriate to include them for CPT code 99454.

Comment: One commenter stated that CMS should add the cost of equipment sanitation and reprocessing as a one-time cost that is directly attributable to a patient. The commenter stated that FDA device guidelines require that a reusable medical device be reprocessed, which includes sanitation or sterilization and ensuring that all personal data is 'wiped' or removed from the device. The commenter stated that this cost was not considered by the RUC, however, it is routinely part of the 'set up' costs that are onetime costs directly attributable to a patient.

Response: We disagree with the commenter that these expenses would constitute a separate form of direct PE. We agree with the RUC, which discussed the specialty society's recommended supply items, shipping costs and a device reprocessing fee, and determined that these expenses are not specifically allocable to the patient for this service, and would be considered indirect practice expenses.

Comment: One commenter stated that there was direct time spent by pharmacists for each patient, and the commenter requested that CMS factor pharmacist time into the PE valuation for CPT codes 99453, 99454, 99091, and 99457.

Response: We typically do not consider time spent by a pharmacist to be a part of the clinical labor time for purposes of direct PE. For additional information, we direct readers to the Practice Expense portion of this final rule (section II.B. of this final rule).

Comment: Many commenters pointed out that beneficiary cost sharing is a significant barrier to the use of non-face-to-face services, like remote patient monitoring. Commenters requested that CMS waive the cost sharing requirements for these codes.

Response: We do not have the authority to make changes to the applicable beneficiary cost sharing for most physicians' services, including these.

Comment: Many commenters requested that CMS clarify the kinds of technology covered under CPT codes 99453, 99454, and 99457. Commenters provided examples of the kinds of technology these codes should cover including software applications that could be integrated into a beneficiary's smart phone, Holter-Monitors, Fit-Bits, or artificial intelligence messaging. One commenter suggested that behavioral health data and data from wellness applications be included as well. Another commenter stated that the descriptor should include results of patients' self-care tasks. Many commenters stated that CMS should clarify certain elements in the scope of service and code descriptors and issue appropriate sub-regulatory guidance. Commenters inquired as to whether CPT code 99453 can be furnished via telecommunication technology, if it can be billed again if the number of parameters changed in the future. Commenters requested that CMS clarify the meaning of ''programmed alerts transmission'' in the descriptor for CPT code 99454, and whether it included transmissions that occurred other than daily. Commenters also encouraged CMS to allow flexibility in the time frame covered by these services.

Response: We plan to issue guidance to help inform practitioners and stakeholders on these issues.

Comment: Commenters requested that CMS clarify whether CPT code 99457 can be billed incident to a practitioner's professional services and asked that CMS make an exception to the direct supervision requirements, stating that general supervision is sufficient for these services.

Response: We note that CPT code 99457 describes professional time and therefore cannot be furnished by auxiliary personnel incident to a practitioner's professional services.

Comment: A few commenters suggested that additional medical professionals, including pharmacists, paramedics, chiropractors, physical therapists, occupational therapists and dentists should be allowed to bill Medicare for these services. Other commenters requested that CMS clarify the practitioners referred to as ''other qualified healthcare professionals'' in the code descriptor.

Response: We note that all practitioners must practice in accordance with applicable state law and scope of practice laws, and that some of the practitioners identified by the commenters are not authorized to bill Medicare independently for their services. We note that the term, ''other qualified healthcare professionals,'' used in the code descriptor is a defined by CPT, and that definition can be found in the CPT Codebook.

Comment: A few commenters provided specific suggestions for revising the code descriptors, including

the addition of secure messaging platforms, revision of the time thresholds, specifying that the follow-up should be written in all instances, including ''for medical consultative discussion and review'' in the descriptor for CPT codes 99446 through 99449, and striking ''referral services'' and rather, including language similar to the other codes regarding ''assessment and management'' services. Other commenters requested CMS clarify the definition of ''health record assessment'' in the descriptors for CPT codes 99451 and 99452. One commenter suggested that CMS add language about use of EHR to the existing CPT codes, rather than finalize separate payment for CPT codes 99451 and 99452.

Response: While we appreciate all of the specific suggestions regarding the code descriptions, we defer to the CPT to maintain code descriptors for CPT codes. Where additional clarification is needed, we may provide guidance in the future.

Comment: A few commenters urged CMS not to be prescriptive regarding the technology that could be used to perform consultations, including real-time video, a store-and-forward visit, or simply a patient-provider message via a patient portal.

Response: While we are sympathetic to the commenters' desire not to be overly prescriptive about the technology used to furnish these services, especially given the speed at which technology evolves, we note that we refer to the CPT code descriptors and guidance to ascertain the scope of technology that is used to furnish these services.

Comment: One commenter asked whether there were geographic restrictions on these services.

Response: There are no geographic restrictions, as these services are not Medicare telehealth services.

After considering the public comments, we are finalizing the RUC-recommended work RVU of 0.61 for CPT code 99457 and the direct PE inputs for all three codes as proposed.

(59) Interprofessional Internet Consultation (CPT Codes 99451, 99452, 99446, 99447, 99448, and 99449)

In September 2017, the CPT Editorial Panel revised four codes and created two codes to describe interprofessional telephone/internet/electronic medical record consultation services. CPT codes 99446 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 5–10 minutes of medical consultative discussion and review), 99447 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 11–20 minutes of medical consultative discussion and review), 99448 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 21–30 minutes of medical consultative discussion and review), and 99449 (Interprofessional telephone/internet assessment and management service provided by a consultative physician including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional; 31 minutes or more of medical consultative discussion and review) describe assessment and management services in which a patient's treating physician or other qualified healthcare professional requests the opinion and/or treatment advice of a physician with specific specialty expertise to assist with the diagnosis and/or management of the patient's problem without the need for the face-to-face interaction between the patient and the consultant. These CPT codes are currently assigned a procedure status of B (bundled) and are not separately payable under Medicare. The CPT Editorial Panel revised these codes to include electronic health record consultations, and the RUC reaffirmed the work RVUs it had previously submitted for these codes. We reevaluated the submitted recommendations and, in light of changes in medical practice and technology, we proposed to change the procedure status for CPT codes 99446, 99447, 99448, and 99449 from B (bundled) to A (active). We also proposed the RUC re-affirmed work RVUs of 0.35 for CPT code 99446, 0.70 for CPT code 99447, 1.05 for CPT code 99448, and 1.40 for CPT code 99449.

The CPT Editorial Panel also created two new codes, CPT code 99452 (Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or qualified health care professional, 30 minutes) and CPT code 99451 (Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 or more minutes of medical consultative time). The RUC-recommended work RVUs are 0.50 for CPT code 99452 and 0.70 for 99451. Since the CPT code for the treating/requesting physician or qualified healthcare professional and the CPT code for the consultative physician have similar intraservice times, we believe that these CPT codes should have equal values for work. Therefore, we proposed a work RVU of 0.50 for both CPT codes 99452 and 99451.

We welcomed comments on this proposal. We also direct readers to section II.D. of this final rule, Modernizing Medicare Physician Payment by Recognizing Communication Technology-Based Services, which includes additional detail regarding our policies for modernizing Medicare physician payment by recognizing communication technology-based services.

There are no recommended direct PE inputs for the codes in this family.

The following is a summary of the public comments we received on our proposals involving the Interprofessional Internet Consultation family of codes.

Comment: Almost all commenters were supportive of CMS' proposal to unbundle CPT codes 99446 through 99449 and make separate payment for CPT codes 99452 and 99451. Almost all commenters did not support lowering the RVU of CPT code 99451 to 0.50 as the work of the consulting physician in CPT code 99451 is more intense than the work of the treating physician in CPT code 99452. Commenters stated that the consulting practitioner exercises greater effort, both in judgment and technical skill to make a recommendation for the treatment of a previously unknown patient than the treating physician does in conveying the relevant information. A few commenters expressed concern that the proposed work RVU for CPT code 99452 is too low, and does not accurately reflect the resources associated with the work of the treating physician.

Response: We agree with commenters that the work of the consulting physician is significant, and we are persuaded by the additional descriptions of that work provided by commenters. We also agree with the commenters who suggested that the proposed work RVU of 0.50 for CPT code 99452 undervalues the work associated with aggregating patient information, communicating with the consulting practitioner, and

implementing the results of the consultation. We continue, however, to have concerns regarding the valuation of these services. We note that there are instances where the patient would not be new to the consulting practitioner, and therefore the intensity of the work would be reduced. We are also concerned that, given the similarity of intraservice times, CPT code 99452 is undervalued relative to CPT code 99451, especially since the code descriptor for CPT code 99452 specifies that the consulting practitioner can spend a minimum of 5 minutes providing the consultation. We believe that a work RVU of 0.50 more accurately describes the work associated with both services. Given the similarity of intraservice times and the information indicating that both codes may be undervalued at 0.50 RVUs, we are finalizing a work RVU of 0.70 for CPT codes 99451 and 99452.

Comment: A few commenters expressed concern that these codes were only payable in the facility setting.

Response: These codes are payable in both facility and non-facility settings.

Comment: One commenter requested that CMS include pharmacists as clinical staff in the direct PE.

Response: We direct readers to the discussion of this issue in the PE section of the rule (Section II.B. of this final rule). We also note that these codes do not have direct PE inputs.

(60) Chronic Care Management Services (CPT Code 99491)

In February 2017, the CPT Editorial Panel created a new code to describe at least 30 minutes of chronic care management services performed personally by the physician or qualified health care professional over one calendar month. CMS began making separate payment for CPT code 99490 (Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) in CY 2015 (79 FR 67715). CPT code 99490 describes 20 minutes of clinical staff time spent on care management services for patients with 2 or more chronic conditions. CPT code 99490 also includes 15 minutes of physician time for supervision of clinical staff. For CY 2019, the CPT Editorial Panel created CPT code 99491 (Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored) to describe situations when the billing practitioner is doing the care coordination work that is attributed to clinical staff in CPT code 99490. For CPT code 99491, the RUC recommended a work RVU of 1.45 for 30 minutes of physician time.

We believe this work RVU overvalues the resource costs associated with the physician performing the same care coordination activities that are performed by clinical staff in the service described by CPT code 99490. Additionally, this valuation of the work is higher than that of CPT code 99487 (Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, establishment or substantial revision of a comprehensive care plan, moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month), which includes 60 minutes of clinical staff time, creating a rank order anomaly within the family of codes if we were to accept the RUC-recommended value.

CPT code 99490 has a work RVU of 0.61 for 15 minutes of physician time. Therefore, as CPT code 99491 describes 30 minutes of physician time, we proposed a work RVU of 1.22, which is double the work RVU of CPT code 99490.

We did not propose any direct PE refinements for this code family.

The following is a summary of the public comments we received on our proposals involving CPT code 99491.

Comment: Almost all commenters recommended that CMS finalize the RUC-recommended work value of 1.45 for 99491. The RUC stated that CPT code 99491 is different from the existing chronic care management (CCM) services codes because those codes are performed by clinical staff under the supervision of a physician, while CPT code 99491 is performed by the physicians themselves. Commenters also stated that the typical patient requiring that the physician personally perform the care management services is of greater acuity than the typical patient for whom CCM may be performed by clinical staff. Additionally, CPT code 99491 cannot be reported with CPT code 99490 or CPT code 99487, and must therefore account for all of the care management work in the month. Commenters also pointed out that there are multiple examples of CMS valuing the work of a physician more highly than clinical staff when they perform the same services, for example CPT codes 96101 (Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, *e.g.,* MMPI, Rorschach, WAIS), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report) and 96102 (Psychological testing (includes psychodiagnostic assessment of emotionality, intellectual abilities, personality and psychopathology, *e.g.,* MMPI and WAIS), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face.)

Response: We agree with commenters that a work RVU of 1.45 accurately captures the resources associated when a physician furnishes CCM. We agree that in most cases, the physician would perform CCM on patients with higher acuity and therefore the care planning and medical decision making would be of greater intensity. We also agree with commenters that the work associated with personally performing CCM as opposed to supervising clinical staff is also of greater intensity. Therefore, we are finalizing that value based on our review of comments received.

Comment: A few commenters requested that CMS clarify that CPT code 99491 can be performed incident to a practitioner's professional services.

Response: CPT code 99491 is specifically for use when the billing practitioner personally performs care management services, so this code cannot be furnished incident to a practitioner's professional services.

(61) Diabetes Management Training (HCPCS Codes G0108 and G0109)

HCPCS codes G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes) and G0109 (Diabetes outpatient self-

management training services, group session (2 or more), per 30 minutes) were identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. For CY 2019, we proposed the HCPAC-recommended work RVU of 0.90 for HCPCS code G0108 and the HCPAC-recommended work RVU of 0.25 for HCPCS code G0109.

For the direct PE inputs, we noted that there was a significant disparity between the specialty recommendation and the final recommendation submitted by the HCPAC. We were concerned about the significant decreases in direct PE inputs in the final recommendation when compared to the current makeup of the two codes. The final HCPAC recommendation removed a series of different syringes and the patient education booklet that currently accompanies the procedure. We believe that injection training is part of these services and that the supplies associated with that training would typically be included in the procedures. Due to these concerns, we proposed to maintain the current direct PE inputs for HCPCS codes G0108 and G0109. Therefore, we proposed not to add the new supply item ''20x30 inch self-stick easel pad, white, 30 sheets/pad'' (SK129) to HCPCS code G0109 that was included in the final HCPAC recommendation, as it was not a current supply for HCPCS code G0109; however, we proposed to accept the submitted invoice price and to add the supply to our direct PE database.

The following is a summary of the public comments we received on our proposals involving the Diabetes Management Training family of codes.

Comment: Several commenters supported the proposal of the HCPAC-recommended work RVUs. Commenters also stated that they applauded CMS for recognizing and addressing the significant disparity in direct PE inputs between the specialty recommendations and the final recommendations submitted to CMS by the HCPAC.

Response: We appreciate the support for our proposals from the commenters.

Comment: One commenter expressed disappointment that CMS did not address barriers in Medicare that impact beneficiary utilization of the diabetes self-management training (DSMT) benefit. The commenter stated that CMS solicited comments from stakeholders in the CY 2017 PFS proposed rule on this subject, and the commenter has been part of ongoing conversations with CMS about this issue, through in-person meetings and written communications, over the past two years. The commenter stated that they were hopeful CMS would use this opportunity to address barriers to DSMT given that utilization of the DSMT benefit stands at only 5 percent of eligible Medicare beneficiaries.

Response: We appreciate the feedback from the commenter, and we will consider these issues for future rulemaking. However, we note that we did not specifically make any proposals associated with these subjects in the CY 2019 proposed rule.

Comment: One commenter stated that the final HCPAC recommendations removed a series of different syringes and the patient education booklet that currently accompany these procedures. The commenter stated that several anti-glycemic medications other than insulin require injection with a syringe and a significant number of persons with both type 1 and type 2 diabetes are prescribed these medications, however the list of supplies in the current direct PE inputs does not include syringes. The commenter therefore recommended that CMS add a series of different syringes to the direct PE inputs for HCPCS codes G0108 and G0109.

Response: We proposed to maintain the current direct PE inputs for HCPCS codes G0108 and G0109, which do not currently include the syringe supplies described by the commenter (supply codes SC051, SC052, and SC055). Although we are sensitive to the concerns raised by the commenter, we do not believe that adding these syringe supplies to the procedures would be consistent with our policy of maintaining the current direct PE inputs.

After consideration of the public comments, we are finalizing the work RVUs and the direct PE inputs for the codes in the Diabetes Management Training family of codes as proposed.

(62) External Counterpulsation (HCPCS Code G0166)

HCPCS code G0166 (External counterpulsation, per treatment session) was identified on a screen of CMS or Other source codes with Medicare utilization greater than 100,000 services annually. The RUC is not recommending a work RVU for HCPCS code G0166 because they found that there is no physician work involved in this service. After reviewing this code, we proposed a work RVU of 0.00 for HCPCS code G0166, and proposed to make the code valued for PE only. For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving HCPCS code G0166.

Comment: A commenter agreed with the proposal that an individual treatment session would have no physician work and supported the proposed direct PE inputs. However, the commenter stated that future coding solutions may be necessary to recognize management of these services that is additional to that captured by E/M coding.

Response: We appreciate the feedback from the commenter, and we will consider this information for future rulemaking.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for HCPCS code G0166 as proposed.

(63) Wound Closure by Adhesive (HCPCS Code G0168)

HCPCS code G0168 (Wound closure utilizing tissue adhesive(s) only) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, the RUC recommended a work RVU of 0.45 based on maintaining the current work RVU.

We disagreed with the recommended value and we proposed a work RVU of 0.31 for HCPCS code G0168 based on a direct crosswalk to CPT code 93293 (Transtelephonic rhythm strip pacemaker evaluation(s) single, dual, or multiple lead pacemaker system, includes recording with and without magnet application with analysis, review and report(s) by a physician or other qualified health care professional, up to 90 days). CPT code 93293 is a recently-reviewed code with the same 5 minutes of intraservice time and 1 fewer minute of total time. In reviewing HCPCS code G0168, the recommendations stated that the work involved in the service had not changed even though the surveyed intraservice time was decreasing by 50 percent, from 10 minutes to 5 minutes. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be reflected in decreases to work RVUs. In the case of HCPCS code G0168, we believe that it would be more accurate to propose a work RVU of 0.31 based on

the aforementioned crosswalk to CPT code 93293 to account for these decreases in the surveyed work time. Maintaining the current work RVU of 0.45 despite a 50 percent decrease in the surveyed intraservice time would result in a significant increase in the intensity of HCPCS code G0168, and we have no reason to believe that the procedure has increased in intensity since the last time that it was valued.

For the direct PE inputs, we proposed to refine the equipment times in accordance with our standard equipment time formulas.

The following is a summary of the public comments we received on our proposals involving HCPCS code G0168.

Comment: Many commenters disagreed with the proposed work RVU of 0.31 for HCPCS code G0168 and stated that CMS should finalize the HCPAC-recommended work RVU of 0.45. Commenters stated that CMS should not compare the valid survey time to the current work time because the initial CMS/Other source data is flawed and maintains zero validity for comparison. Commenters stated that surveyed time was never obtained from physicians who perform this service and should not be used as a comparison.

Response: We agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important element in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times and it undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we want to reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values in our methodology, we refer readers to our discussion of the subject in the CY 2017 final rule (81 FR 80273 through 80274).

Comment: Several commenters stated that HCPCS code G0168 should not be crosswalked to CPT code 93293, as this is an evaluation of pacemaker strips over a 90 day period. Commenters stated that the skill of closing a facial laceration, typically near the eye, using a surgical tissue adhesive for HCPCS code G0168 is more intense and complex to perform than CPT code 93293 and thus should be valued higher. Commenters stated that CPT code 51702 (Insertion of temporary indwelling bladder catheter; simple (*e.g.,* Foley)) would be a better reference service.

Response: We disagree with the commenters that CPT code 93293 would be an inappropriate choice for a crosswalk. CPT code 93293 describes a transtelephonic rhythm strip pacemaker evaluation(s) for a single, dual, or multiple lead pacemaker system. We do not agree that this crosswalk code has lower intensity or complexity due to the cognitive work involved in evaluating the patient correctly. Both CPT code 93293 and HCPCS code G0168 require skill on the part of the practitioner, only of different types. We also believe that our crosswalk to CPT code 92393 is a more accurate choice because it has the same intraservice work time (5 minutes) closely matches the total work time (13 minutes as opposed to 14 minutes) of HCPCS code G0168. By contrast, CPT code 51702 has nearly double the total work time at 25 minutes, which accounts for its higher work RVU of 0.50.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for HCPCS code G0168 as proposed.

(64) Removal of Impacted Cerumen (HCPCS Code G0268)

HCPCS code G0268 (Removal of impacted cerumen (one or both ears) by physician on same date of service as audiologic function testing) was identified as potentially misvalued on a screen of 0-day global services reported with an E/M visit 50 percent of the time or more, on the same day of service by the same patient and the same practitioner, that have not been reviewed in the last 5 years with Medicare utilization greater than 20,000. For CY 2019, we proposed the RUC-recommended work RVU of 0.61 for HCPCS code G0268.

For the direct PE inputs, we proposed to remove the clinical labor time for the ''Clean surgical instrument package'' (CA026) activity. There is no surgical instrument pack included in the recommended equipment for HCPCS code G0268, and this code already includes the standard 3 minutes allocated for cleaning the room and equipment. In addition, all of the instruments used in the procedure appear to be disposable supplies that would not require cleaning since they would only be used a single time.

The following is a summary of the public comments we received on our proposals involving HCPCS code G0268.

Comment: Several commenters supported our proposal of the HCPAC-recommended work RVU as well as the refinement to the direct PE inputs.

Response: We appreciate the support for our proposals from the commenters.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for HCPCS code G0268 as proposed.

(65) Structured Assessment, Brief Intervention, and Referral to Treatment for Substance Use Disorders (HCPCS Codes G0396, G0397, and G2011)

In response to the Request for Information in the CY 2018 PFS proposed rule (82 FR 34172), commenters requested that CMS pay separately for assessment and referral related to substance use disorders. In the CY 2008 PFS final rule (72 FR 66371), we created two G-codes to allow for appropriate Medicare reporting and payment for alcohol and substance abuse assessment and intervention services that are not provided as screening services, but that are performed in the context of the diagnosis or treatment of illness or injury. The codes are HCPCS code G0396 (Alcohol and/or substance (other than tobacco) abuse structured assessment (*e.g.,* AUDIT, DAST) and brief intervention, 15 to 30 minutes)) and HCPCS code G0397 (Alcohol and/or substance (other than tobacco) abuse structured assessment (*e.g.,* AUDIT, DAST) and intervention greater than 30 minutes)). In 2008, we instructed Medicare contractors to pay for these codes only when the services were considered reasonable and necessary.

Given the ongoing opioid epidemic and the current needs of the Medicare population, we expect that these services would often be reasonable and necessary. However, the utilization for these services is relatively low, which we believe is in part due to the service-specific documentation requirements for these codes (the current requirements are available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/downloads/SBIRT_Factsheet_ICN904084.pdf*). We believe that removing the additional documentation requirements will also ease the administrative burden on providers. Therefore, for CY 2019, we proposed to eliminate the service-specific documentation requirements for HCPCS codes G0397 and G0398. We welcomed comments on our proposal to change the documentation requirements for these codes.

The following is a summary of the comments we received regarding our proposal to change the documentation requirements for these codes.

Comment: The majority of commenters were supportive of this proposal, some noting that this will ease administrative burden and some noting that this will incentivize providers to deliver SBIRT services, thereby increasing access to this service. One commenter stated they believe that practitioners are not utilizing SBIRT for illicit drug use due to the absence of conclusive evidence to support use of this service for illicit drug use and therefore, support removing the service documentation requirements for SBIRT when used to screen for unhealthy alcohol use, but not when used to screen for illicit drug use.

Response: We thank the commenters for their feedback. We note that the services described by HCPCS codes G0397 and G0398 describe services for alcohol and/or substance abuse; we believe it would be administratively burdensome for practitioners were we to create varying rules for different diagnoses. Additionally, it is our intention to increase access to care for services that may be of use in addressing all substance use disorders, especially in light of the ongoing opioid epidemic. Therefore, we are finalizing our proposal to eliminate the service-specific documentation requirements for HCPCS codes G0397 and G0398.

Additionally, we proposed to create a third HCPCS code G2011with a lower time threshold in order to accurately account for the resource costs when practitioners furnish these services, but do not meet the minimum time requirements of the existing codes. We note that in the proposed rule we referred to this service as HCPCS code GSBR1, which was a placeholder code. The code will be described as G2011: Alcohol and/or substance (other than tobacco) abuse structured assessment (*e.g.,* AUDIT, DAST), and brief intervention, 5–14 minutes. We proposed a work RVU of 0.33, based on the intraservice time ratio between HCPCS codes G0396 and G0397. We welcomed comments on this code descriptor and proposed valuation for HCPCS code G2011.

The following is a summary of the comments we received on this code descriptor and proposed valuation for HCPCS code G2011.

Comment: Commenters were supportive of creating this code and the valuation proposed, and noted the lower time threshold will allow physicians the opportunity to provide brief counseling rather than 15 or more minutes of discussion, which requires extended interest from a patient who may not yet be ready for prolonged discussion and/or is receptive to being referred to another health care provider for treatment. One commenter recommended finalizing guidance that allows the newly proposed SBIRT HCPCS code to be used for alcohol, but not illicit drug use.

Response: We thank the commenters for their feedback. After considering these comments, we are finalizing the code descriptor and valuation for HCPCS code G2011 as proposed. We believe the code descriptor and guidance for this new SBIRT HCPCS code should be consistent with the existing SBIRT HCPCS codes. For future rulemaking we would consider recommendations on how to refine this family of codes under our standard process of reviewing codes.

(66) Prolonged Services (HCPCS Code GPRO1)

CPT codes 99354 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)) and 99355 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)) describe additional time spent face-to-face with a patient. Stakeholders have shared with us that the threshold of 60 minutes for CPT code 99354 is difficult to meet and is an impediment to billing these codes. In response to stakeholder feedback and as part of our proposal as discussed in section II.I. of this final rule, Evaluation and Management Services, to implement a single PFS rate for E/M visit levels 2–5 while maintaining payment stability across the specialties, we proposed HCPCS code GPRO1 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)), which could be billed with any level of E/M code. We noted that we did not propose to make any changes to CPT codes 99354 and 99355, which can still be billed, as needed, when their time thresholds and all other requirements are met. We proposed a work RVU of 1.17, which is equal to half of the work RVU assigned to CPT code 99354. Additionally, we proposed direct PE inputs for HCPCS code GPRO1 that are equal to one half of the values assigned to CPT code 99354, which can be found in the Direct PE Inputs public use file for this final rule.

Comment: As almost all commenters did not support the overall E/M coding and payment proposals, we did not receive many comments with specific suggestions on valuation for HCPCS code GPRO1. Of the commenters that supported creation of the code, most supported the proposed valuation while others, while supporting the creation of a 30-minute prolonged services code in principle, encouraged CMS to wait for recommendations from the CPT Editorial Panel and the RUC.

Response: For CY 2021, we are finalizing the proposed add-on code for HCPCS code GPRO1 using the input values, as proposed. We note that prior to implementation for 2021, we could consider, through rulemaking, the code and its valuation in the context of any potential changes to CPT codes and/or recommendations offered by stakeholders, including the RUC, as part of our annual process for valuing PFS services. See section II.I. of this final rule for further discussion of the E/M policy.

(67) Remote Pre-Recorded Services (HCPCS Code G2010)

For CY 2019, we proposed to make separate payment for remote evaluation services when a physician uses pre-recorded video and/or images submitted by a patient in order to evaluate a patient's condition through new HCPCS G-code G2010 (Remote evaluation of recorded video and/or images submitted by the patient (*e.g.,* store and forward), including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment). We proposed to value this service by a direct crosswalk to CPT code 93793 (Anticoagulant management for a patient taking warfarin, must include review and interpretation of a new home, office, or lab international normalized ratio (INR) test result, patient instructions, dosage adjustment (as needed), and scheduling of additional test(s), when performed), as we believe the work described is similar in kind and intensity to the work performed as part of HCPCS code G2010. Therefore, we proposed a work RVU of 0.18, preservice time of 3 minutes, intraservice time of 4 minutes, and post service time of 2 minutes. We also proposed to add 6 minutes of clinical labor (L037D) in the service period. We solicited comment on the code descriptor and valuation for HCPCS code G2010. We direct readers to section II.D. of this final rule, which includes additional detail regarding our proposed policies for modernizing Medicare physician payment by recognizing communication technology-based services.

The following is a summary of the comments we received on the code descriptor and valuation for HCPCS code G2010.

Comment: Several commenters stated that the proposed payment rate is too low, citing that it is below market compared to the rate many asynchronous telemedicine companies pay their contracted/employed physician staff, and noted that new patients in particular require more resources, whereas others stated that the proposed valuation was appropriate.

Response: We believe that the proposed valuation accurately reflects the resources involved in furnishing this service and note that we are finalizing limiting this service to established patients. We also note that we plan to monitor the utilization of this code and routinely address recommended changes in values for codes paid under the PFS.

After considering the public comments, we are finalizing the work RVU and direct PE inputs for HCPCS code G2010 as proposed.

(68) Brief Communication Technology-Based Service, *e.g.* Virtual Check-In (HCPCS Code G2012)

We proposed to create a G-code, HCPCS code G2012 (Brief communication technology based service, *e.g.* virtual check-in, by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion) to facilitate payment for these brief communication technology-based services. We proposed to base the code descriptor and valuation for HCPCS code G2012 on existing CPT code 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion), which is currently not separately payable under the PFS. As CPT code 99441 only describes telephone calls, we are proposing to create a new HCPCS code G2012 to encompass a broader array of communication modalities. We do, however, believe that the resource assumptions for CPT code 99441 would accurately account for the costs associated with providing the proposed virtual check-in service, regardless of the technology. We proposed a work RVU of 0.25, based on a direct crosswalk to CPT code 99441. For the direct PE inputs for HCPCS code G2012, we also proposed the direct PE inputs assigned to CPT code 99441. Given the breadth of technologies that could be described as telecommunications, we anticipated receiving public comments and working with the CPT Editorial Panel and the RUC to evaluate whether separate coding and payment is needed to account for differentiation between communication modalities. We solicited comment on the code descriptor, as well as the proposed valuation for HCPCS code G2012. We direct readers to section II.D. of this final rule, which includes additional detail regarding our proposed policies for modernizing Medicare physician payment by recognizing communication technology-based services.

The following is a summary of the comments we received on the code descriptor, as well as the proposed valuation for HCPCS code G2012.

Comment: Several commenters stated that the proposed payment rate would be inadequate for modalities that are both audio and visual capable, whereas other commenters stated that the proposed valuation was appropriate.

Response: We appreciate the input provided by the commenters. As noted in section II.D. of this final rule, we are finalizing the valuation for this service as proposed. We note that we are finalizing allowing audio-only real-time telephone interactions in addition to synchronous, two-way audio interactions that are enhanced with video or other kinds of data transmission. We believe the proposed valuation reflects the low work time and intensity and accounts for the resource costs and efficiencies associated with the use of communication technology. We recognize that the valuation of this service is relatively modest, especially compared to in-person services, however, we believe that the proposed valuation accurately reflects the resources involved in furnishing this service.

We plan to monitor the utilization of this code and note that we routinely address recommended changes in values for codes paid under the PFS and would expect to do this in future rulemaking.

After consideration of the public comments, we are finalizing the work RVU and direct PE inputs for HCPCS code G2012 as proposed.

(69) Visit Complexity Inherent to Certain Specialist Visits (HCPCS Code GCG0X)

We proposed to create a HCPCS G-code to be reported with an E/M service to describe the additional resource costs for specialties for whom E/M visit codes make up a large percentage of their total allowed charges and who we believe primarily bill level 4 and level 5 visits. The treatment approaches for these specialties generally do not have separate coding and are generally reported using the E/M visit codes. We proposed to create HCPCS code, GCG0X (Visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, or

interventional pain management-centered care (Add-on code, list separately in addition to an evaluation and management visit)). We proposed a valuation for HCPCS code GCG0X based on a crosswalk to 75 percent of the work RVU and time of CPT code 90785 (Interactive complexity), which would result in a proposed work RVU of 0.25 and a physician time of 8.25 minutes for HCPCS code GCG0X. CPT code 90785 has no direct PE inputs. Interactive complexity is an add-on code that may be billed when a psychotherapy or psychiatric service requires more work due to the complexity of the patient. We believe that this work RVU and physician time would be an accurate representation of the additional work associated with the higher level complex visits. For further discussion of proposals relating to this code, see section II.I. of this final rule. We solicited comment on the code descriptor, as well as the proposed valuation for HCPCS code GCG0X.

The following is a summary of the comments we received on the code descriptor, as well as the proposed valuation for HCPCS code GCG0X.

Comment: As almost all commenters did not support the overall E/M coding and payment proposals, we did not receive comments with specific suggestions on valuation for HCPCS code GCG0X.

Response: For CY 2021, we are finalizing the proposed add-on code for visit complexity inherent to non-procedural specialty care using the input values, as proposed. We note that prior to implementation for CY 2021, we could consider, through rulemaking, the code and its valuation in the context of any potential changes to CPT codes and/or recommendations offered by stakeholders, including the RUC, as part of our annual process for valuing PFS services. See section II.I. of this final rule for further discussion of the E/M policy.

(70) Visit Complexity Inherent to Primary Care Services (HCPCS Code GPC1X)

We proposed to create a HCPCS G-code for primary care services, GPC1X (Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an evaluation and management visit)). This code describes furnishing a visit to a new or existing patient, and can include aspects of care management, counseling, or treatment of acute or chronic conditions not accounted for by other coding. HCPCS code GPC1X would be billed in addition to the E/M visit code when the visit involved primary care-focused services. We proposed a work RVU of 0.07, physician time of 1.75 minutes. This proposed valuation accounts for the additional work resource costs associated with furnishing primary care that distinguishes E/M primary care visits from other types of E/M visits and maintains work budget neutrality across the office/outpatient E/M code set. For further discussion of proposals relating to this code, see section II.I. of this final rule. We solicited comment on the code descriptor, as well as the proposed valuation for HCPCS code GPC1X.

The following is a summary of the comments we received on the code descriptor, as well as the proposed valuation for HCPCS code GPC1X.

Comment: We received a few comments suggesting that the primary care add-on was undervalued, particularly in comparison to the add-on code for specialty visit complexity. A few commenters suggested that, at the very least, we should equalize the value for these codes.

Response: We agree that the proposed inputs do not reflect the resources associated with furnishing primary care visits. For CY 2021, we are finalizing the proposed add-on code for visit complexity inherent to primary care using the inputs associated with HCPCS code GCG1X: A work RVU of 0.25 and a physician time of 8.25 minutes. We note that prior to implementation for 2021, we could consider, through rulemaking, the code and its valuation in the context of any potential changes to CPT codes and/or recommendations offered by stakeholders, including the RUC, as part of our annual process for valuing PFS services. See section II.I. of this final rule for further discussion of the E/M policy.

(71) Podiatric Evaluation and Management Services (HCPCS Codes GPD0X and GPD1X)

We proposed to create two HCPCS G-codes, HCPCS codes GPD0X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, new patient) and GPD1X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, established patient), to describe podiatric evaluation and management services. We proposed a work RVU of 1.36, a physician time of 28.19 minutes, and direct costs summing to $21.29 for HCPCS code GPD0X, and a work RVU of 0.85, physician time of 21.73 minutes, and direct costs summing to $15.87 for HCPCS code GPD1X. These values are based on the average rate for CPT codes 99201–99203 and CPT codes 99211–99212 respectively, weighted by podiatric volume. For further discussion of proposals relating to these codes, see section II.I. of this final rule.

Comment: As almost all commenters did not support the overall E/M coding and payment proposals and these codes specifically, we did not receive comments with specific suggestions on valuation.

Response: In response to comments, we are not finalizing HCPCS codes GPD0X and GPD1X for CY 2019. See section X of this final rule for further discussion of the E/M policy.

(72) Comment Solicitation on Superficial Radiation Treatment Planning and Management

In the CY 2015 PFS final rule with comment period (79 FR 67666 through 67667), we noted that changes to the CPT prefatory language limited the codes that could be reported when describing services associated with superficial radiation treatment (SRT) delivery, described by CPT code 77401 (radiation treatment delivery, superficial and/or ortho voltage, per day). The changes effectively meant that many other related services were bundled with CPT code 77401, instead of being separately reported. For example, CPT guidance clarified that certain codes used to describe clinical treatment planning, treatment devices, isodose planning, physics consultation, and radiation treatment management cannot be reported when furnished in association with SRT. Stakeholders informed us that these changes to the CPT prefatory language prevented them from billing Medicare for codes that were previously frequently billed with CPT code 77401. We solicited comments as to whether the revised bundled coding for SRT allowed for accurate reporting of the associated services. In the CY 2016 PFS final rule with comment period (80 FR 70955), we noted that the RUC did not review the inputs for SRT procedures, and therefore, did not assess whether changes in valuation were appropriate in light of the bundling of associated services. In addition, we solicited recommendations from stakeholders regarding whether it would be appropriate to add physician work for this service, even though physician work is not included in other radiation treatment services. In the CY 2018 PFS proposed rule (82 FR 34012) and the CY 2018 PFS final rule (82 FR 53082), we noted that the 2016 National Correct

Coding Initiative (NCCI) Policy Manual for Medicare Services states that radiation oncology services may not be separately reported with E/M codes. While this NCCI edit is no longer active stakeholders have stated that MACs have denied claims for E/M services associated with SRT based on the NCCI policy manual language. According to stakeholders, the bundling of SRT with associated services, as well as coding confusion regarding the appropriate use of E/M coding to report associated physician work, meant that practitioners were not being paid appropriately for planning and treatment management associated with furnishing SRT. Due to these concerns regarding reporting of services associated with SRT, in the CY 2018 PFS proposed rule (82 FR 34012 through 34013), we proposed to make separate payment for the professional planning and management associated with SRT using HCPCS code GRRR1 (Superficial radiation treatment planning and management related services, including but not limited to, when performed, clinical treatment planning (for example, 77261, 77262, 77263), therapeutic radiology simulation-aided field setting (for example, 77280, 77285, 77290, 77293), basic radiation dosimetry calculation (for example, 77300), treatment devices (for example, 77332, 77333, 77334), isodose planning (for example, 77306, 77307, 77316, 77317, 77318), radiation treatment management (for example, 77427, 77431, 77432, 77435, 77469, 77470, 77499), and associated E/M per course of treatment). We proposed that this code would describe the range of professional services associated with a course of SRT, including services similar to those not otherwise separately reportable under CPT guidance. Furthermore, we proposed that this code would have included several inputs associated with related professional services such as treatment planning, treatment devices, and treatment management. Many commenters did not support our proposal to make separate payment for HCPCS code GRRR1 for CY 2018, stating that our proposed valuation of HCPCS code GRRR1 would represent a significant payment reduction for the associated services as compared with the list of services that they could previously bill in association with SRT. Commenters voiced concern that the proposed coding would inhibit access to care and discourage the use of SRT as a non-surgical alternative to Mohs surgery. We received comments recommending a variety of potential coding solutions but without a consistent preferred alternative. In the CY 2018 PFS final rule (82 FR 53081–53083), we solicited further comment, and stated that we would continue our dialogue with stakeholders to address appropriate coding and payment for professional services associated with SRT.

Given stakeholder feedback that we have continued to receive following the publication of the CY 2018 PFS final rule, we continue to believe that there are potential coding gaps for SRT-related professional services. We generally rely on the CPT process to determine coding specificity, and we believe that deferring to this process in addressing potential coding gaps is generally preferable. As our previous attempt at designing a coding solution in the CY 2018 PFS proposed rule did not gain stakeholder consensus, and given that there were various, in some cases diverging, suggestions on a coding solution from stakeholders, we did not propose changes relating to SRT coding, SRT-related professional codes, or payment policies for CY 2019. However, we solicited comment on the possibility of creating multiple G-codes specific to services associated with SRT, as was suggested by one stakeholder following the CY 2018 PFS final rule. These codes would be used separately to report services including SRT planning, initial patient simulation visit, treatment device design and construction associated with SRT, SRT management, and medical physics consultation. We solicited comment on whether we should create such G-codes to separately report each of the services described previously, mirroring the coding of other types of radiation treatment delivery. For instance, HCPCS code G6003 (Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks: Up to 5 mev) is used to report radiation treatment delivery, while associated professional services are billed with codes such as CPT codes 77427 (Radiation treatment management, 5 treatments), 77261 (Therapeutic radiology treatment planning; simple), 77332 (Treatment devices, design and construction; simple (simple block, simple bolus), and 77300 (Basic radiation dosimetry calculation, central axis depth dose calculation, TDF, NSD, gap calculation, off axis factor, tissue inhomogeneity factors, calculation of non-ionizing radiation surface and depth dose, as required during course of treatment, only when prescribed by the treating physician).

We stated that we consider contractor pricing such codes for CY 2019 because we believe that the preferable method to develop new coding is with multi-specialty input through the CPT and RUC process, and we prefer to defer nationally pricing such codes pending input from the CPT Editorial Panel and the RUC process to assist in determining the appropriate level of coding specificity for SRT-related professional services. Based on stakeholder feedback, we continue to believe there may be a coding gap for these services, and therefore, we solicited comment on whether we should create these G-codes and allow them to be contractor priced for CY 2019. This would be an interim approach for addressing the potential coding gap until the CPT Editorial Panel and the RUC can address coding for SRT and SRT-related professional services, giving the CPT Editorial Panel and the RUC an opportunity to develop a coding solution that could be addressed in future rulemaking.

The following is a summary of the comments we received on the possibility of creating multiple G-codes specific to services associated with SRT, which could be used separately to report services including SRT planning, initial patient simulation visit, treatment device design and construction associated with SRT, SRT management, and medical physics consultation, which would be contractor priced for CY 2019.

Comment: Many commenters urged CMS to make appropriate payment for SRT-related services, stating that it is a vital non-surgical alternative treatment for skin cancer. Many commenters also said that coding should recognize newer generation, Image Guided Superficial Radiation (IGSRT), stating that IGSRT is the most advanced form of this technology, and has far better outcomes compared to those achieved with SRT.

Some commenters recommended implementation of G-codes for SRT-related professional services, and they submitted alternative G-code scenarios that they believe would be preferable to adopting contractor-priced G-codes. These scenarios include one in which there would be one code for SRT-related treatment planning, with a value based on a crosswalk to CPT code 77261 (Therapeutic radiology treatment planning; simple), a code for SRT treatment device construction, with a value based on a crosswalk to CPT code 77332 (Treatment devices, design and construction; simple (simple block, simple bolus), and a code for SRT treatment management billed once per treatment, valued with a crosswalk to CPT code 99213 (Office or other outpatient visit for the evaluation and management of an established patient,

which requires at least 2 of these 3 key components: An expanded problem focused history; An expanded problem focused examination; Medical decision making of low complexity. Counseling and coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of low to moderate severity. Typically, 15 minutes are spent face-to-face with the patient and/or family.). According to this commenter, image guidance and tracking should not be billed with superficial treatments. Another commenter suggested a single code bundling SRT-related treatment management with SRT-related device construction as well as a code for SRT-related radiation treatment management, and a code representing treatment for multiple lesions. This commenter also urged us to either revalue CPT code 77401 or to create an additional G-code billable with CPT code 77401 to represent professional services associated with SRT. Another commenter suggested a code for SRT-related radiology treatment planning, and an SRT management code including five treatments. A commenter suggested a coding structure that recognizes Image-Guided Superficial Radiation Therapy as a newer generation of SRT, and would consist of CPT code 77401 for practitioners that utilize the SRT technologies; relying on human visualization for lesion(s) simulation, treatment and tracking, and a new G-code for providers who provide the newer generation technology relying on image-guided lesion simulation, treatment and tracking per fraction with Record and Verify precision tracking of treatment progress.

A commenter stated that any codes utilized as part of superficial radiation treatment delivery that include medical physics time should require that a qualified medical physicist perform the physics work.

A commenter stated that adopting contractor-priced G codes would be appropriate. Some other commenters, however, did not support our suggested adoption of contractor-priced codes. According to these commenters, we are correct in our belief that there are coding gaps in the current reimbursement structure, however a fuller evaluation that does not defer to Medicare contractors in determining reimbursement rates is appropriate. According to a commenter, contractor pricing creates unnecessary work for the Medicare Administrative Contractors and can also lead to wide variances in the valuing of codes across jurisdictions. Commenters expressed preference that coding for these services be developed through the CPT and RUC processes. Many commenters urged us not to change coding for CY 2019 for these services.

Response: We expect to take these comments into consideration for future rulemaking and we hope to continue a dialogue with stakeholders on these important services. We reiterate that we believe multi-specialty input through the CPT and RUC processes is the ideal way to develop coding specificity and evaluation, and we are not making any changes to payment policy based on this comment solicitation. In the interim, we refer readers to CPT guidance that states that CPT code 77401, when performed, may be reported with appropriate E/M codes, and this is the appropriate way to currently report professional work associated with SRT. Going forward, we will attempt to determine whether MACs are inappropriately denying billing of E/M codes with CPT code 77401, and we will instruct MACs accordingly.

(73) Adaptive Behavior Analysis Services

We note that we intended to assign a contractor price status in the Addendum B file of the proposed rule for the following CPT codes that describe adaptive behavior analysis services: CPT codes 97151, 97152, 97153, 97154, 97155, 97156, 97157, and 97158. These codes are formerly contractor priced Category III CPT codes that were converted to Category I for CY 2019. We inadvertently excluded these codes in the Addendum B file of the proposed rule, and have updated the Addendum B file for this final rule.

BILLING CODE 4120–01–P

TABLE 13: CY 2019 Work RVUs for New, Revised, and Potentially Misvalued Codes

HCPCS	Descriptor	CY 2018 Work RVU	Proposed CY 2019 Work RVU	Final CY 2019 Work RVU	CMS Work Time Refinement
0509T	Electroretinography (ERG) with interpretation and report, pattern (PERG)	NEW	0.40	0.40	No
10004	Fine needle aspiration biopsy; without imaging guidance; each additional lesion	NEW	0.80	0.80	No
10005	Fine needle aspiration biopsy, including ultrasound guidance; first lesion	NEW	1.46	1.46	No
10006	Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion	NEW	1.00	1.00	No
10007	Fine needle aspiration biopsy, including fluoroscopic guidance; first lesion	NEW	1.81	1.81	No
10008	Fine needle aspiration biopsy, including fluoroscopic guidance; each additional lesion	NEW	1.18	1.18	No
10009	Fine needle aspiration biopsy, including CT guidance; first lesion	NEW	2.26	2.26	No
10010	Fine needle aspiration biopsy, including CT guidance; each additional lesion	NEW	1.65	1.65	No
10011	Fine needle aspiration biopsy, including MR guidance; first lesion	NEW	C	C	No
10012	Fine needle aspiration biopsy, including MR guidance; each additional lesion	NEW	C	C	No
10021	Fine needle aspiration biopsy; without imaging guidance; first lesion	1.27	1.03	1.03	No
11102	Tangential biopsy of skin, (eg, shave, scoop, saucerize, curette), single lesion	NEW	0.66	0.66	No
11103	Tangential biopsy of skin, (eg, shave, scoop, saucerize, curette), each separate/additional lesion	NEW	0.29	0.38	No
11104	Punch biopsy of skin, (including simple closure when performed), single lesion	NEW	0.83	0.83	No
11105	Punch biopsy of skin, (including simple closure when performed), each separate/additional lesion	NEW	0.45	0.45	No
11106	Incisional biopsy of skin (eg, wedge), (including simple closure when performed), single lesion	NEW	1.01	1.01	No
11107	Incisional biopsy of skin (eg, wedge), (including simple closure when performed), each separate/additional lesion	NEW	0.54	0.54	No
11755	Biopsy of nail unit (eg, plate, bed, matrix, hyponychium, proximal and lateral nail folds)	1.31	1.08	1.25	No
20551	Injection(s); single tendon origin/insertion	0.75	0.75	0.75	No
20932	Allograft, includes templating, cutting, placement and internal fixation when performed; osteoarticular, including articular surface and contiguous bone	NEW	13.01	13.01	No
20933	Allograft, includes templating, cutting, placement and internal fixation when performed; hemicortical intercalary, partial (ie, hemicylindrical)	NEW	11.94	11.94	No
20934	Allograft, includes templating, cutting, placement and internal fixation when performed;	NEW	13.00	13.00	No

HCPCS	Descriptor	CY 2018 Work RVU	Proposed CY 2019 Work RVU	Final CY 2019 Work RVU	CMS Work Time Refinement
	intercalary, complete (ie, cylindrical)				
27369	Injection procedure for contrast knee arthrography or contrast enhanced CT/MRI knee arthrography	NEW	0.77	0.77	No
29105	Application of long arm splint (shoulder to hand)	0.87	0.80	0.80	No
29540	Strapping; ankle and/or foot	0.39	0.39	0.39	No
29550	Strapping; toes	0.25	0.25	0.25	No
31623	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with brushing or protected brushings	2.63	2.63	2.63	No
31624	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial alveolar lavage	2.63	2.63	2.63	No
33274	Transcatheter insertion or replacement of permanent leadless pacemaker, right ventricular, including imaging guidance (eg, fluoroscopy, venous ultrasound, ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed	NEW	7.80	7.80	No
33275	Transcatheter removal of permanent leadless pacemaker, right ventricular	NEW	8.59	8.59	No
33285	Insertion, subcutaneous cardiac rhythm monitor, including programming	NEW	1.53	1.53	No
33286	Removal, subcutaneous cardiac rhythm monitor	NEW	1.50	1.50	No
33289	Transcatheter implantation of wireless pulmonary artery pressure sensor for long term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed	NEW	6.00	6.00	No
33440	Replacement, aortic valve; by translocation of autologous pulmonary valve and transventricular aortic annulus enlargement of the left ventricular outflow tract with valved conduit replacement of pulmonary valve (Ross-Konno procedure)	NEW	64.00	64.00	No
33866	Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion	NEW	19.74	19.74	No
36568	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; younger than 5 years of age	1.67	2.11	2.11	No
36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; age 5 years or older	1.70	1.90	1.90	No
36572	Insertion of peripherally inserted central venous	NEW	1.82	1.82	No

HCPCS	Descriptor	CY 2018 Work RVU	Proposed CY 2019 Work RVU	Final CY 2019 Work RVU	CMS Work Time Refinement
	catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; younger than 5 years of age				
36573	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the insertion; age 5 years or older	NEW	1.70	1.70	No
36584	Replacement, complete, of a peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement	1.20	1.20	1.20	No
38531	Biopsy or excision of lymph node(s); open, inguinofemoral node(s)	NEW	6.74	6.74	No
38792	Injection procedure; radioactive tracer for identification of sentinel node	0.52	0.65	0.65	No
43762	Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; not requiring revision of gastrostomy tract	NEW	0.75	0.75	No
43763	Replacement of gastrostomy tube, percutaneous, includes removal, when performed, without imaging or endoscopic guidance; requiring revision of gastrostomy tract	NEW	1.41	1.41	No
45300	Proctosigmoidoscopy, rigid; diagnostic, with or without collection of specimen(s) by brushing or washing (separate procedure)	0.80	0.80	0.80	No
46500	Injection of sclerosing solution, hemorrhoids	1.42	1.74	1.74	No
49422	Removal of tunneled intraperitoneal catheter	6.29	4.00	4.00	No
50436	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed;	NEW	2.78	2.78	No
50437	Dilation of existing tract, percutaneous, for an endourologic procedure including imaging guidance (eg, ultrasound and/or fluoroscopy) and all associated radiological supervision and interpretation, as well as post procedure tube placement, when performed; including new access into the renal collecting system	NEW	4.83	4.85	Yes
52334	Cystourethroscopy with insertion of ureteral guide wire through kidney to establish a percutaneous nephrostomy, retrograde	4.82	3.37	3.37	No

HCPCS	Descriptor	CY 2018 Work RVU	Proposed CY 2019 Work RVU	Final CY 2019 Work RVU	CMS Work Time Refinement
53850	Transurethral destruction of prostate tissue; by microwave thermotherapy	10.08	5.42	5.42	No
53852	Transurethral destruction of prostate tissue; by radiofrequency thermotherapy	10.83	5.93	5.93	No
53854	Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy	NEW	5.70	5.93	No
57150	Irrigation of vagina and/or application of medicament for treatment of bacterial, parasitic, or fungoid disease	0.55	0.50	0.50	No
57160	Fitting and insertion of pessary or other intravaginal support device	0.89	0.89	0.89	No
58100	Endometrial sampling (biopsy) with or without endocervical sampling (biopsy), without cervical dilation, any method (separate procedure)	1.53	1.21	1.21	No
58110	Endometrial sampling (biopsy) performed in conjunction with colposcopy	0.77	0.77	0.77	No
64405	Injection, anesthetic agent; greater occipital nerve	0.94	0.94	0.94	No
64455	Injection(s), anesthetic agent and/or steroid, plantar common digital nerve(s) (eg, Morton's neuroma)	0.75	0.75	0.75	No
65205	Removal of foreign body, external eye; conjunctival superficial	0.71	0.49	0.49	No
65210	Removal of foreign body, external eye; conjunctival embedded (includes concretions), subconjunctival, or scleral nonperforating	0.84	0.61	0.61	No
67500	Retrobulbar injection; medication (separate procedure, does not include supply of medication)	1.44	1.18	1.18	No
67505	Retrobulbar injection; alcohol	1.27	0.94	1.18	No
67515	Injection of medication or other substance into Tenon's capsule	1.40	0.75	0.75	No
72020	Radiologic examination, spine, single view, specify level	0.15	0.23	0.15	No

I. Evaluation & Management (E/M) Visits

1. Background

a. E/M Visits Coding Structure

Physicians and other practitioners paid under the PFS bill for common office visits for evaluation and management (E/M) services under a relatively generic set of CPT codes (Level I HCPCS codes) that distinguish visits based on the level of complexity, site of service, and whether the patient is new or established. The CPT codes have three key components:

- History of Present Illness (History),
- Physical Examination (Exam) and
- Medical Decision Making (MDM).

These codes are broadly referred to as E/M visit codes. There are three to five E/M visit code levels, depending on site of service and the extent of the three components of history, exam and MDM. For example, there are three to four levels of E/M visit codes in the inpatient hospital and nursing facility settings, based on a relatively narrow degree of complexity in those settings. In contrast, there are five levels of E/M visit codes in the office or other outpatient setting based on a broader range of complexity in those settings.

Current PFS payment rates for E/M visit codes increase with the level of visit billed. As for all services under the PFS, the rates are based on the resources in terms of work (time and intensity), PE and malpractice expense required to furnish the typical case of the service. The current payment rates reflect typical service times for each code that are based on RUC recommendations.

In total, E/M visits comprise approximately 40 percent of allowed charges for PFS services, and office/outpatient E/M visits comprise approximately 20 percent of allowed charges for PFS services. Within these percentages, there is significant variation among specialties. According to Medicare claims data, E/M visits are furnished by nearly all specialties, but represent a greater share of total allowed services for physicians and other practitioners who do not routinely furnish procedural interventions or diagnostic tests. Generally, these practitioners include both primary care practitioners and specialists such as neurologists, endocrinologists and rheumatologists. Certain specialties, such as podiatry, tend to furnish lower level E/M visits more often than higher level E/M visits. Some specialties, such as dermatology and otolaryngology, tend to bill more E/M visits on the same day as they bill minor procedures.

Potential misvaluation of E/M codes is an issue that we have been carefully considering for several years. We have discussed at length in our recent PFS proposed and final rules that the E/M visit code set is outdated and needs to be revised and revalued (for example: 81 FR 46200 and 76 FR 42793). We have noted that this code set represents a high proportion of PFS expenditures, but has not been recently revalued to account for significant changes in the disease burden of the Medicare patient population and changes in health care practice that are underway to meet the Medicare population's health care needs (81 FR 46200). In the CY 2012 PFS proposed rule, we proposed to refer all E/M codes to the RUC for review as potentially misvalued (76 FR 42793). Many commenters to that rule were concerned about the possible inadequacies of the current E/M coding and documentation structure to address evolving chronic care management and to support primary care (76 FR 73060 through 73064). We did not finalize our proposal to refer the E/M codes for RUC review at that time. Instead, we stated that we would allow time for consideration of the findings of certain demonstrations and other initiatives to provide improved information for the valuation of chronic care management, primary care, and care transitions. We stated that we would also continue to consider the numerous policy alternatives that commenters offered, such as separate E/M codes for established visits for patients with chronic disease versus a post-surgical follow-up office visit.

Many stakeholders continue to similarly express to us through letters, meetings, public comments in past rulemaking cycles, and other avenues, that the E/M code set is outdated and needs to be revised. For example, some stakeholders recommend an extensive research effort to revise and revalue E/M services, especially physician work inputs (CY 2017 PFS final rule, 81 FR 80227–80228). In recent years, we have continued to consider the best ways to recognize the significant changes in health care practice, especially innovations in the active management and ongoing care of chronically ill patients, under the PFS. We have been engaged in an ongoing, incremental effort to identify gaps in appropriate coding and payment.

b. E/M Documentation Guidelines

For coding and billing E/M visits to Medicare, practitioners may use one of two versions of the E/M Documentation Guidelines for a patient encounter, commonly referenced based on the year of their release: the ''1995'' or ''1997'' E/M Documentation Guidelines. These guidelines are available on the CMS website.[3] They specify the medical record information within each of the three key components (such as number of body systems reviewed) that serves as support for billing a given level of E/M visit. The 1995 and 1997 guidelines are very similar to the guidelines that reside within the AMA's CPT codebook for E/M visits. For example, the core structure of what comprises or defines the different levels of history, exam, and medical decision-making are the same. However, the 1995 and 1997 guidelines include extensive examples of clinical work that comprise different levels of medical decision-making and do not appear in the AMA's CPT codebook. Also, the 1995 and 1997 guidelines do not contain references to preventive care that appear in the AMA's CPT codebook. We provide an example of how the 1995 and 1997 guidelines distinguish between level 2 and level 3 E/M visits in Table 18.

BILLING CODE 4120–01–P

TABLE 18: Key Component Documentation Requirements for Level 2 vs. 3 E/M Visit

Key Component*	Level 2 (1995)	Level 3 (1995)	Level 2 (1997)	Level 3 (1997)
History (History of Present Illness or HPI)	Review of Systems (ROS) n/a	Problem Pertinent ROS: inquires about the system directly related to the problem(s) identified in the HPI	No change from 1995	No change from 1995
Physical Examination (Exam)	A limited examination of the affected body area or organ system	A limited examination of the affected body area or organ system and other symptomatic or related organ system(s)	General multi-system exam: Performance and documentation of one to five elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of one to five elements	General multi-system exam: Performance and documentation of at least six elements in one or more organ system(s) or body area(s). Single organ system exam: Performance and documentation of at least six elements
Medical Decision Making (MDM) Measured by:** 1. **Problem** – Number of diagnoses/treatment options 2. **Data -** Amount and/or complexity of data to be reviewed 3. **Risk-** Risk of complications and/or morbidity or mortality	Straightforward: 1. Minimal 2. Minimal or no data review 3. Minimal risk	Low complexity: 1. Limited 2. Limited data review 3. Low risk	No change from 1995	

* For certain settings and patient types, each of these three key components must be met or exceeded (for example, new patients; initial hospital visits). For others, only two of the three key components must be met or exceeded (for example, established patients, subsequent hospital or other visits).
** Two of three met or exceeded.

BILLING CODE 4120–01–C

According to both Medicare claims processing manual instructions and CPT coding rules, when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter (or, in the case of inpatient E/M services, the floor time) the duration of the visit can be used as an alternative basis to select the appropriate E/M visit level (Pub. L. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.C available at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf*; see also 2017 CPT Codebook Evaluation and Management Services Guidelines, page 10). Public Law 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.B states, ''Instruct physicians to select the code for the service based upon the content of the service. The duration of the visit is an ancillary factor and does not control the level of the service to be billed unless more than 50 percent of the face-to-face time (for non-inpatient services) or more than 50 percent of the floor time (for inpatient services) is spent providing counseling or coordination of care as described in subsection C.'' Subsection C states that ''the physician may document time spent with the patient in conjunction with the medical decision-making involved and a description of the coordination of care or counseling provided. Documentation must be in sufficient detail to support the claim.'' The example included in subsection C further states, ''The code selection is based on the total time of the face-to-face encounter or floor time, not just the counseling time. The medical record must be documented in sufficient detail

to justify the selection of the specific code if time is the basis for selection of the code.''

Both the 1995 and 1997 E/M guidelines contain guidelines that address time, which state that ''In the case where counseling and/or coordination of care dominates (more than 50 percent of) the physician/patient and/or family encounter (face-to-face time in the office or other outpatient setting or floor/unit time in the hospital or nursing facility), time is considered the key or controlling factor to qualify for a particular level of E/M services.'' The guidelines go on to state that ''If the physician elects to report the level of service based on counseling and/or coordination of care, the total length of time of the encounter (face-to-face or floor time, as appropriate) should be documented and the record should describe the counseling and/or activities to coordinate care.'' [4]

We note that other manual provisions regarding E/M visits that are cited in this final rule are housed separately within Medicare's Internet-Only Manuals, and are not contained within the 1995 or 1997 E/M documentation guidelines.

In accordance with section 1862(a)(1)(A) of the Act, which requires services paid under Medicare Part B to be reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of a malformed body member, medical necessity is a prerequisite to Medicare payment for E/M visits. The Medicare Claims Processing Manual states, ''Medical necessity of a service is the overarching criterion for payment in addition to the individual requirements of a CPT code. It would not be medically necessary or appropriate to bill a higher level of evaluation and management service when a lower level of service is warranted. The volume of documentation should not be the primary influence upon which a specific level of service is billed. Documentation should support the level of service reported'' (Pub. L. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.1.A., available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf*).

Stakeholders have long maintained that all of the E/M documentation guidelines are administratively burdensome and outdated with respect to the practice of medicine. Stakeholders have provided CMS with examples of such outdated material (on history, exam and MDM) that can be found within all versions of the E/M guidelines (the AMA's CPT codebook, the 1995 guidelines and the 1997 guidelines). Stakeholders have told CMS that they believe the guidelines are too complex, ambiguous, fail to meaningfully distinguish differences among code levels, and are not updated for changes in technology, especially electronic health record (EHR) use. Prior attempts to revise the E/M guidelines were unsuccessful or resulted in additional complexity due to lack of stakeholder consensus (with widely varying views among specialties), and differing perspectives on whether code revaluation would be necessary under the PFS as a result of revising the guidelines, which contributed another layer of complexity to the considerations. For example, an early attempt to revise the guidelines resulted in an additional version designed for use by certain specialties (the 1997 version), and in CMS allowing the use of either the 1995 or 1997 versions for purposes of documentation and billing to Medicare. Another complication in revising the guidelines is that they are also used by many other payers, which have their own payment rules and audit protocols. Moreover, stakeholders have suggested that there is sometimes variation in how Medicare's own contractors (Medicare Administrative Contractors (MACs)) interpret and apply the guidelines as part of their audit processes.

As previously mentioned, in recent years, some clinicians and other stakeholders have requested a major CMS research initiative to overhaul not only the E/M documentation guidelines, but also the underlying coding structure and valuation. Stakeholders have reported to CMS that they believe the E/M visit codes themselves need substantial updating and revaluation to reflect changes in the practice of medicine, and that revising the documentation guidelines without addressing the codes themselves simply preserves an antiquated framework for payment of E/M services.

Last year, CMS sought public comment on potential changes to the E/M documentation rules, deferring making any changes to E/M coding itself in order to immediately focus on revision of the E/M guidelines to reduce unnecessary administrative burden (82 FR 34078 through 34080). In the CY 2018 PFS final rule (82 FR 53163 through 53166), we summarized the public comments we received and stated that we would take that feedback into consideration for future rulemaking. In response to commenters' request that we provide additional venues for stakeholder input, we held a listening session this year on March 18, 2018 (transcript and materials are available on the CMS website at *https://www.cms.gov/Outreach-and-Education/Outreach/NPC/National-Provider-Calls-and-Events-Items/2018-03-21-Documentation-Guidelines-and-Burden-Reduction.html?DLPage=1&DLEntries=10&DLSort=0&DLSortDir=descending*). We also sought input by participating in several listening sessions recently hosted by the Office of the National Coordinator for Health Information Technology (ONC) in the course of implementing section 4001(a) of the 21st Century Cures Act (Pub. L. 114–255). This provision requires the Department of Health and Human Services to establish a goal, develop a strategy, and make recommendations to reduce regulatory or administrative burdens relating to the use of EHRs. The ONC listening sessions sought public input on the E/M guidelines as one part of broader, related and unrelated burdens associated with EHRs.

Several themes emerged from this recent stakeholder input. Stakeholders commended CMS for undertaking efforts to revise the E/M guidelines and recommended a multi-year process. Many commenters advised CMS to obtain further input across specialties. They recommended town halls, open door forums or a task force that would come up with replacement guidelines that would work for all specialties over the course of several years. They urged CMS to proceed cautiously given the magnitude of the undertaking; past failed reform attempts by the AMA, CMS, and other payers; and the wide-ranging impact of any changes (for example, how other payers approach the issue).

We received substantially different recommendations by specialty. Based on this feedback, it is clear that any changes would have meaningful specialty-specific impacts, both clinical and financial. Based on this feedback, it also seems that the history and exam portions of the guidelines are most significantly outdated with respect to current clinical practice.

A few stakeholders seemed to indicate that the documentation guidelines on history and exam should be kept in their current form. Many stakeholders believed they should be simplified or reduced, but not eliminated. Some stakeholders indicated that the documentation guidelines on history and exam could be eliminated altogether, and/or that documentation of these parts of an E/M visit could be left

[4] Page 16 of the 1995 E/M guidelines and page 48 of the 1997 guidelines.

to practitioner discretion. We also heard from stakeholders that the degree to which an extended history and exam enables a given practitioner to reach a certain level of coding (and payment) varies according to their specialty. Many commenters advised CMS to increase reliance on medical decision-making (MDM) and time in determining the appropriate level of E/M visit, or to use MDM by itself, but many of these commenters noted that the MDM portions of the guidelines would need to be altered before being used alone. Commenters were divided on the role of time in distinguishing among E/M visit levels, and expressed some concern about potential abuse or inequities among more- or less-efficient practitioners. Some commenters expressed support for simplifying E/M coding generally into three levels such as low, medium and high, and potentially distinguishing those levels on the basis of time.

2. CY 2019 Final Policies

a. Overview

Having considered the public feedback to the CY 2018 PFS proposed rule (82 FR 53163 through 53166) and our other outreach efforts described above, in our CY 2019 proposed rule, we proposed several changes to E/M visit documentation and payment. We proposed that the changes would only apply to office/outpatient visit codes (CPT codes 99201 through 99215), except where we specify otherwise. We agreed with commenters that we should take a step-wise approach to these issues, and therefore, we limited proposed changes to the office/outpatient E/M code set. We understood from commenters that there are more unique issues to consider for the E/M code sets used in other settings such as inpatient hospital or emergency department care, such as unique clinical and legal issues and the potential intersection with hospital Conditions of Participation (CoPs). We may consider expanding our efforts more broadly to address sections of the E/M code set beyond the office/outpatient codes in future years.

We emphasized that, this year, we included our proposed E/M documentation changes in a proposed rule due to the longstanding nature of our instruction that practitioners may use either the 1995 or 1997 versions of the E/M guidelines to document E/M visits billed to Medicare, the magnitude of the proposed changes, and the associated payment policy proposals that require notice and comment rulemaking. We believed our proposed documentation changes for E/M visits were intrinsically related to our proposal to alter PFS payment for E/M visits, and the PFS payment proposal for E/M visits required notice and comment rulemaking. We noted that we were proposing a relatively broad outline of changes, and anticipated that many details related to program integrity and ongoing refinement would need to be developed over time through subregulatory guidance. This would afford flexibility and enable us to more nimbly and quickly make ongoing clarifications, changes and refinements in response to continued practitioner experience moving forward.

We put forth a key proposal that, at its core, strived to reduce the significant burden associated with documentation for payment purposes by eliminating the payment rules associated with the current primary means of varying payment among office/outpatient visits. Specifically, we proposed to develop single payment rates for the office/outpatient E/M visit levels 2 through 5 (one rate for established patients, and one rate for new patients), in order to mitigate the need for physicians and other practitioners to adhere to complex payment-specific documentation rules for each and every visit furnished to a Medicare beneficiary. If there were minimal payment variation based on the level of visit billed, then there would be minimal need to engage with the burdensome and outdated documentation guidelines and E/M visit coding to justify that the appropriate level visit was reported. Though we acknowledged a continued need to document information in the medical record for clinical and other purposes, our understanding based on extensive feedback from medical professionals was that the documentation specific to justifying the visit level reported to payers, including Medicare, was unduly and disproportionately burdensome among the many administrative burdens in current medical practice. To avoid the administrative burden and disruption of establishing a new G code to describe the level 2 through 5 combined visit, under our proposal practitioners would continue to report on the claim the CPT code associated with the level of visit the practitioner believed they furnished.

Along with eliminating payment variation for office/outpatient E/M visit levels 2 through 5, we proposed a series of corollary policies intended to vary payment for these visits based on a more meaningful set of attributes for visits. Our goal was that these payment variations, accomplished through new add-on and other coding changes, and multiple procedure payment reductions, would reflect the relative resource costs of furnishing E/M visits without requiring detailed documentation for purposes of justifying particular payment rates. We also expected these adjustments to offset some of the more significant potentially redistributive impacts of this proposal, especially among physicians and practitioners of different specialties. The potential redistributive impacts helped us to determine potential, initial values for the proposed add-on codes providing for the adjustments. Again, these proposals were intended to provide a more meaningful avenue for payment variation that would ease the documentation burdens currently faced by clinicians to justify the visit level that is reported for each and every visit with a beneficiary. These proposals reflected our longstanding beliefs that: There are certain complexities inherent in furnishing some kinds of E/M visits that are not currently accounted for in valuations for the current E/M code set, there are unaccounted-for efficiencies when E/M visits are billed on the same day as global procedure codes that are already valued to include resources associated with E/M services, and the current E/M coding system does not fully account for the variety of legitimate circumstances when the needs of individual patients require more time with their physicians. We also proposed to establish unique E/M visit codes for podiatric care and make changes to the PE methodology in order to standardize the amount of PE RVUs allocated for this series of codes, regardless of which specialties were assumed to bill them.

In conjunction with our proposal to effectively eliminate the variation in payment of choosing from among E/M visit levels 2 through 5 for office/outpatient visits, we proposed a minimum level of associated documentation that would apply for payment purposes across all level 2 through 5 office/outpatient E/M visits. We also proposed to allow practitioners a choice regarding the basis for their documentation for these visits: Current documentation guidelines (history, exam and MDM); MDM alone; or time alone. We proposed that, when using current documentation guidelines or MDM, the current guidelines for level 2 visits would apply. When using time to document a visit, the practitioner would be required to demonstrate the medical necessity of the visit and report the total amount of face-to-face time they spent with the beneficiary. We solicited public comment on what the total time

requirement should be when using time to document a level 2 through 5 visit. We presented several alternatives for determining the amount of time associated with each visit level: The new intra-service times associated with setting the payment rate for the visit codes, the midpoint of these new times, or the typical time for the CPT code reported on the claim (the time listed in the AMA/CPT codebook for that code) (83 FR 35837).

We sought feedback in particular on the option to document using time when prolonged E/M services are billed. We proposed that when a practitioner uses time to document the visit and also reports prolonged E/M services, we would require the practitioner to document that the typical time required for the base or ''companion'' visit is exceeded by the amount required to report prolonged services (83 FR 35837). We did not propose any changes to CPT codes 99354 and 99355, and under our proposal these codes could still be billed, as needed, when their time thresholds and all other requirements are met (83 FR 35774).

Since we proposed to create a single payment rate under the PFS that would be paid for services billed using the current CPT codes for level 2 through 5 visits, it would not be material to Medicare's payment decision which CPT code (of levels 2 through 5) would be reported on the claim, except to justify billing a level 2 or higher visit in comparison to a level 1 visit (providing the visit itself was reasonable and necessary) and when using certain potential approaches to documenting the visit using time (83 FR 35836 through 35837). However, we expected that for record keeping purposes or to meet requirements of other payers, practitioners would continue to choose and report the level of E/M visit they believed to be appropriate under the current CPT coding structure.

We also proposed to remove an existing manual provision for home visits requiring documentation in the patient's medical record of the medical necessity of furnishing the visit in the home. For all office/outpatient E/M visits, we also proposed several simplifications centered on reducing the need for duplicative, redundant data entry in the medical record.

Several thousand commenters responded to this series of proposals. Generally, the commenters stated appreciation for CMS' goal of reducing administrative burden and reforming E/M coding and payment, but expressed concern about many impacts of the proposals. Commenters largely objected to our proposal to eliminate payment differences for office/outpatient E/M visit levels 2 through 5 based on the level of visit complexity. Many commenters stated that they would experience payment cuts relative to the current payment structure. Commenters generally stated that the implementation timeframe for the changes as proposed was too aggressive, especially since stakeholders were uncertain as to whether other payers would follow Medicare's proposed policies. Many commenters suggested that CMS could implement the proposed documentation reduction without the coding/payment policies, or that these policies could be adopted on separate timeframes.

Many commenters suggested that the proposals did not specify the circumstances in which the proposed add-on codes for office/outpatient E/M visits could be used, and what documentation requirements might be adopted for them. Many commenters stated that it would be better if the physician community could consider a range of alternative coding and payment options to be modeled and thoroughly evaluated over several years instead of a single alternative during a 60-day public comment period.

Many commenters opposed our proposal to establish that clinicians billing an office/outpatient E/M visit level 2 through 5 need only document medical necessity as specified for a level 2 visit (unless time is used as the basis for the visit level). Some commenters supported allowing a choice of documentation methodologies, while others opposed it. The vast majority of commenters did not support having only a single payment level to distinguish visit complexity (other than level 1), despite the associated minimum documentation that we proposed for these codes. Most commenters noted that CMS did not provide enough specificity in its proposals for how clinicians would document using time, and that because the definitions and billing rules regarding the add-on codes were ambiguous, they questioned whether the codes would have clinical validity. Regarding the valuation of these services, some commenters stated that the proposal did not follow the statutory requirement regarding using relative resources to set PFS rates. Others perceived that some of the newly proposed codes would be required or restricted based on physician specialty, and that such limitations would violate statutory provisions prohibiting varying payment for the same physicians' service by physician specialty.

Many commenters recommended that CMS finalize the documentation proposals regarding home visits and redundant data recording for 2019, but defer other documentation reforms to future years after stakeholders provide additional input. Some commenters recommended that CMS finalize the proposed choice among documentation methodologies while stakeholders work with CMS to refine what the coding and payment changes should be.

After considering the comments, for 2019 we are finalizing several of our documentation proposals that will provide some significant and immediate burden reduction, but are unrelated to changes to payment and coding. Specifically, we are finalizing the proposals regarding home visits and redundant data recording (discussed further in this section), as proposed, effective January 1, 2019.

After considering the comments, especially those suggesting that implementation of significant payment and coding changes requires time for practitioners, vendors, health systems, and other stakeholders to prepare, we are finalizing modified changes in payment coding, and associated documentation rules for E/M office/outpatient visits for 2021. These changes, detailed below, incorporate many significant changes from our proposals based on suggestions from the many comments we received. In brief summation, we are finalizing a significant reduction in the current payment variation in office/outpatient E/M visit levels by paying a single rate for E/M office/outpatient visit levels 2, 3, and 4 (one for established and another for new patients) beginning in 2021. However, we are not finalizing the inclusion of E/M office/outpatient level 5 visits in the single payment rate, to better account for the care and needs of particularly complex patients. Also, after consideration of public comments, we are not finalizing aspects of our proposal that would have: Reduced payment when E/M office/outpatient visits are furnished on the same day as procedures, established separate podiatric E/M visit codes, or standardized the allocation of PE RVUs for the codes that describe these services. We are finalizing a policy for 2021 to adopt add-on codes that describe the additional resources inherent in visits for primary care and particular kinds of specialized medical care. As discussed further below, these codes will only be reportable with E/M office/outpatient level 2 through 4 visits, and their use generally will not impose new per-visit documentation requirements. These codes are neither required nor restricted by physician specialty, though we acknowledge that,

like many other physicians' services for which payment is made under the PFS, they are specifically intended to describe services that clinicians practicing in some specialties are more likely to perform than those in other specialties. We are also finalizing a policy for 2021 to adopt a new ''extended visit'' add-on code for use only with E/M office/outpatient level 2 through 4 visits to account for the additional resources required when practitioners need to spend extended time with the patient.

For CY 2019 and 2020, we will continue the current coding and payment structure for E/M office/outpatient visits, and, therefore, practitioners should continue to use either the 1995 or 1997 versions of the E/M guidelines to document E/M office/outpatient visits billed to Medicare for 2019 and 2020 (with the exception of our final policy to eliminate redundant data recording).

Beginning in 2021, for E/M office/outpatient levels 2 through 5 visits, we will allow for flexibility in how visit levels are documented, specifically a choice to use the current framework, MDM or time. For E/M office/outpatient level 2 through 4 visits, beginning in 2021 we will also apply a minimum supporting documentation standard associated with level 2 visits when practitioners use the current framework or MDM to document the visit.

We intend to engage in further discussions with the public over the next several years to potentially further refine our policies, through future notice and comment rulemaking, for 2021. We discuss the public comments, our responses to the specific concerns and perspectives offered by commenters, and final policies in greater detail in this section.

b. Public Comments and Responses

(1) Lifting Restrictions Related to E/M Documentation

(a) Eliminating Extra Documentation Requirements for Home Visits

Medicare pays for E/M visits furnished in the home (a private residence) under CPT codes 99341 through 99350. The payment rates for these codes are slightly more than for office visits (for example, approximately $30 more for a level 5 established patient, non-facility). The beneficiary need not be confined to the home to be eligible for such a visit. However, there is a Medicare Claims Processing Manual provision requiring that the medical record must document the medical necessity of the home visit made in lieu of an office or outpatient visit (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.14.1.B., available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf*). Stakeholders have suggested that whether a visit occurs in the home or the office is best determined by the practitioner and the patient without applying additional rules. We agreed, so we proposed to remove the requirement that the medical record must document the medical necessity of furnishing the visit in the home rather than in the office. We welcomed public comments on this proposal, including any potential, unintended consequences of eliminating this requirement.

Comment: Commenters were generally supportive of our proposal to remove the requirement that the medical record must document the medical necessity of furnishing the visit in the home rather than in the office. Many commenters included this proposal in a list of appropriate changes CMS should make immediately regarding documentation of E/M visits, effective January 1, 2019.

Response: We are finalizing this policy change to remove the requirement that the medical record must document the medical necessity of furnishing the visit in the home rather than in the office, as proposed, effective January 1, 2019.

(b) Public Comment Solicitation on Eliminating Prohibition on Billing Same-Day Visits by Practitioners of the Same Group and Specialty

The Medicare Claims Processing Manual states, ''As for all other E/M services except where specifically noted, the Medicare Administrative Contractors (MACs) may not pay two E/M office visits billed by a physician (or physician of the same specialty from the same group practice) for the same beneficiary on the same day unless the physician documents that the visits were for unrelated problems in the office, off campus-outpatient hospital, or on campus-outpatient hospital setting which could not be provided during the same encounter'' (Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 30.6.7.B., available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c12.pdf*).

This instruction was intended to reflect the idea that multiple visits with the same practitioner, or by practitioners in the same or very similar specialties within a group practice, on the same day as another E/M service would not be medically necessary. However, stakeholders have provided a few examples where this policy does not make sense with respect to the current practice of medicine as the Medicare enrollment specialty does not always coincide with all areas of medical expertise possessed by a practitioner—for example, a practitioner with the Medicare enrollment specialty of geriatrics may also be an endocrinologist. If such a practitioner was one of many geriatricians in the same group practice, they would not be able to bill separately for an E/M visit focused on a patient's endocrinological issue if that patient had another more generalized E/M visit by another geriatrician on the same day. Stakeholders have pointed out that in these circumstances, practitioners often respond to this instruction by scheduling the E/M visits on two separate days, which could unnecessarily inconvenience the patient. Given that the number and granularity of practitioner specialties recognized for purposes of Medicare enrollment continue to increase over time (consistent with the medical community's requests), the value to the Medicare program of the prohibition on same-day E/M visits billed by physicians in the same group and medical specialty may be diminishing, especially as we believe it is becoming more common for practitioners to have multiple specialty affiliations, but would have only one primary Medicare enrollment specialty. We believe that eliminating this policy may better recognize the changing practice of medicine while reducing administrative burden. The impact of this proposal on program expenditures and beneficiary cost sharing is unclear. To the extent that many of these services are currently merely scheduled and furnished on different days in response to the instruction, eliminating this manual provision may not significantly increase utilization, Medicare spending and beneficiary cost sharing.

We solicited public comment on whether we should eliminate the manual provision given the changes in the practice of medicine or whether there is concern that eliminating it might have unintended consequences for practitioners and beneficiaries.

We recognize that this instruction may be appropriate only in certain clinical situations, so we also solicited public comments on whether and how we should consider creating exceptions to, or modify this manual provision rather than eliminating it entirely. We also requested that the public provide additional examples and situations in

which the current instruction is not clinically appropriate.

Comment: We received many comments in response to this solicitation.

Response: We thank the commenters for all of the information submitted, and will review the many public comments we received on this topic and consider this issue further for potential future rulemaking.

(2) Documentation Changes for Office or Other Outpatient E/M Visits and Home Visits

(a) Providing Choices in Documentation—Medical Decision-Making, Time or Current Framework

Informed by comments and examples that we have received stating that the current E/M documentation guidelines are outdated with respect to the current practice of medicine, and in our efforts to simplify documentation for the purposes of coding E/M visit levels, we proposed to allow practitioners to choose, as an alternative to the current framework specified under the 1995 or 1997 guidelines, either MDM or time as a basis to determine the appropriate level of E/M visit. This would allow different practitioners in different specialties to choose to document the factor(s) that matter most given the nature of their clinical practice. It would also reduce the impact Medicare may have on the standardized recording of history, exam and MDM data in medical records, since practitioners could choose to no longer document many aspects of an E/M visit that they currently document under the 1995 or 1997 guidelines for history, physical exam and MDM. Although we initially considered reducing the number of key components that practitioners needed to document in choosing the appropriate level of E/M service to bill, feedback from the stakeholder community led us to believe that offering practitioners a choice to either retain the current framework or choose among new options that involve a reduced level of documentation would be less burdensome for practitioners, and would allow more stability for practitioners who may need time to prepare for any potential new documentation framework.

We sought to be clear that as part of this proposal, practitioners could use MDM, or time, or they could continue to use the current framework to document an E/M visit. In other words, we would be offering the practitioner the choice to continue to use the current framework by applying the 1995 or 1997 documentation guidelines for all three key components. However, our proposals on payment for office-based/outpatient E/M visits described later in this section would apply to all practitioners, regardless of their selected documentation approach. Under our proposal, all practitioners, even those choosing to retain the current documentation framework, would be paid at the proposed new payment rate described in the CY 2019 PFS proposed rule (one rate for new patients and another for established patients), and could also report applicable G-codes as we proposed (83 FR 35839 through 35843).

We also sought to be clear that we proposed to retain the current CPT coding structure for E/M visits (along with our proposal to create new replacement codes for podiatry office/outpatient E/M visits). Practitioners would report on the professional claim whatever level of visit (1 through 5) they believe they furnished using CPT codes 99201–99215. Because we believed the adoption of replacement G-codes to describe the visit levels 2 through 5 might result in unnecessary disruption to current billing systems and practices, we did not propose to modify the existing CPT coding structure for E/M visits. Since we proposed to create a single rate under the PFS that would be paid for services billed using the current CPT codes for level 2 through 5 E/M visits, under our proposal, it would not have been material to Medicare's payment decision which CPT code (of levels 2 through 5) is reported on the claim, except to justify billing a level 2 or higher visit in comparison to a level 1 visit (provided the visit itself was reasonable and necessary). We stated that we expected that, for record keeping purposes or to meet requirements of other payers, many practitioners would continue to choose and report the level of E/M visit they believed to be appropriate under the CPT coding structure.

Even though under our proposal, there would have been no payment differential for E/M visits based on which of the codes describing visit levels 2 through 5 were reported, we believed we would still need to simplify and change our documentation requirements to better align with the current practice of medicine and eliminate unnecessary aspects of the current documentation framework. As a corollary to our proposal to adopt a single payment amount for office/outpatient E/M visit levels 2 through 5 (83 FR 35839 through 35843), we proposed to apply a minimum documentation standard where, for the purposes of PFS payment for an office/outpatient E/M visit, practitioners would only need to meet documentation requirements currently associated with a level 2 visit for history, exam and/or MDM, except when using time to document the service. Practitioners could choose to document more information for clinical, legal, operational or other purposes, and we anticipated that for those reasons, practitioners would continue generally to seek to document medical record information that is consistent with the level of care furnished. For purposes of our medical review, however, for practitioners using the current documentation framework or, as we proposed, MDM, Medicare would only require documentation to support the medical necessity of the visit and the documentation that is associated with the current level 2 CPT visit code.

For example, for a practitioner choosing to document using the current framework (1995 or 1997 guidelines), our proposed minimum documentation for any billed level of E/M visit from levels 2 through 5 could include: (1) A problem-focused history that does not include a review of systems or a past, family, or social history; (2) a limited examination of the affected body area or organ system; and (3) straightforward medical decision making measured by minimal problems, data review, and risk (two of these three). If the practitioner was choosing to document based on MDM alone, Medicare would only require documentation supporting straightforward medical decision-making measured by minimal problems, data review, and risk (two of these three).

Some commenters had suggested that the current framework of guidelines for the MDM component of visits would need to be changed before MDM could be relied upon by itself to distinguish visit levels. We proposed to allow practitioners to rely on MDM in its current form to document their visit, and solicited public comment on whether and how guidelines for MDM might be changed in subsequent years.

As described earlier, we currently allow time or duration of visit to be used as the governing factor in selecting the appropriate E/M visit level only when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter (or, in the case of inpatient E/M services, the floor time). Our proposal to allow practitioners the choice of using time to document office/outpatient E/M visits would have meant that this time-based standard is not limited to E/M visits in which counseling and/or care coordination

accounts for more than 50 percent of the face-to-face practitioner/patient encounter. Rather, the amount of time personally spent by the billing practitioner face-to-face with the patient could be used to document the E/M visit regardless of the amount of counseling and/or care coordination furnished as part of the face-to-face encounter.

Some commenters had raised concerns with reliance on time to distinguish visit levels, for example the potential for abuse, inequities among more- or less-efficient practitioners, and specialties for which time is less of a factor in determining visit complexity. We noted in the proposed rule that relying on time as the basis for identifying the E/M visit level would also raise the issue of what would be required by way of supporting documentation; for example, what amount of time should be documented, and whether the specific activities comprising the time need to be documented and to what degree. However, a number of stakeholders had suggested that, within their specialties, time is a good indicator of the complexity of the visit or patient, and requested that we allow practitioners to use time as the single factor in all E/M visits, not just when counseling or care coordination dominate a visit. We agreed that for some practitioners and patients, time may be a good indicator of complexity of the visit, and proposed to allow practitioners the option to use time as the single factor in selecting visit level and documenting the E/M visit, regardless of whether counseling or care coordination dominate the visit. We stated that if finalized, we would monitor the results of this policy for any program integrity issues, administrative burden or other issues.

For practitioners choosing to support their coding and payment for an E/M visit by documenting the amount of time spent with the patient, we proposed to require the practitioner to document the medical necessity of the visit and show the total amount of time spent by the billing practitioner face-to-face with the patient. We solicited public comment on what that total time should be for payment of the single, new rate for E/M visits levels 2 through 5. We presented the typical time for our proposed new single payment for E/M visit levels 2 through 5 (the weighted average of the intra-service times across the current E/M visit utilization) and suggested we could use this time. We noted that currently the PFS does not require the practitioner to spend or document a specified amount of time with a given patient in order to receive payment for an E/M visit, unless the visit is dominated by counseling/care coordination and, on that account, the practitioner is using time as the basis for code selection. The times for E/M visits and most other PFS services in the physician time files, which are used to set PFS rates, are typical times rather than requirements, and were recommended by the AMA RUC and then reviewed and either adopted or adjusted for Medicare through our usual ratesetting process as ''typical,'' but not strictly required.

We presented a potential alternative to apply the AMA's CPT codebook provision that, for timed services, a unit of time is attained when the mid-point is passed,[5] such that we would require documentation that at least 16 minutes for an established patient (more than half of 31 minutes) and at least 20 minutes for a new patient (more than half of 38 minutes) were spent face-to-face by the billing practitioner with the patient, to support making payment at the proposed single rate for visit levels 2 through 5 when the practitioner chose to document the visit using time.

We presented another potential alternative to require documentation that the typical time for the CPT code that is reported (which is also the typical time listed in the AMA's CPT codebook for that code) was spent face-to-face by the billing practitioner with the patient. For example, a practitioner reporting CPT code 99212 (a level 2 established patient visit) would be required to document having spent a minimum of 10 minutes, and a practitioner reporting CPT code 99214 (a level 4 established patient visit) would be required to document having spent a minimum of 25 minutes. Under this approach, the total amount of time spent by the billing practitioner face-to-face with the patient would inform the level of E/M visit (of levels 2 through 5) coded by the billing practitioner. We noted that in contrast to other proposed documentation approaches discussed above, this approach of requiring documentation of the typical time associated with the CPT visit code reported on the claim would introduce unique payment implications for reporting that code, especially when the time associated with the billed E/M code is the basis for reporting prolonged E/M services.

We solicited public comments on the use of time as a framework for documentation of office/outpatient E/M visits, and whether we should adopt any of these approaches or specify other requirements with respect to the proposed option for documentation using time.

In providing us with feedback, we requested that commenters take into consideration ways in which the time associated with, or required for, the billing of any add-on codes (especially the proposed prolonged E/M visit add-on code(s) described in the CY 2019 PFS proposed rule (83 FR 35844)) would intersect with the time spent for the base E/M visit, when the practitioner is documenting the E/M visit using only time. Currently, when reporting prolonged E/M services, we expect the practitioner to exceed the typical time assigned for the base E/M visit code (also commonly referred to as the companion code). For example, in the CY 2017 PFS final rule (81 FR 80229), we expressed appreciation for the commenters' suggestion to display the typical times associated with relevant services. We also discussed, and in response to those comments, decided to post a file annually that notes the times assumed to be typical for purposes of PFS ratesetting for practitioners to use as a reference in deciding whether time requirements for reporting prolonged E/M services are met. We stated that although these typical times are not required for a practitioner to bill the displayed base codes, we expect that only time spent in excess of these times will be reported using a non-face-to-face prolonged service code. We proposed to formalize this policy in the case where a practitioner uses time to document a visit, since there would be a stricter time requirement associated with the base E/M code. Specifically, we proposed that, when a practitioner chooses to document using time and also reports prolonged E/M services, we would require the practitioner to document that the typical time required for the base or ''companion'' visit is exceeded by the amount required to report prolonged services. Further discussion of our proposal regarding reporting prolonged E/M services is available in the CY 2019 PFS proposed rule (83 FR 35844).

We believed that allowing practitioners to choose the most appropriate basis for distinguishing among the levels of E/M visits and applying a minimum documentation requirement, together with reducing the payment variation among E/M visit levels, would significantly reduce administrative burden for practitioners, and would avoid the current need to make coding and documentation decisions based on codes and documentation guidelines that are not a good fit with current medical practice. The practitioner could choose to use

[5] 2017 CPT Codebook Introduction, p.xv.

MDM, time or the current documentation framework, and could also apply the proposed policies discussed below regarding redundancy and who can document information in the medical record.

We solicited public comment on these proposals to provide practitioners choice in the basis for documenting E/M visits in an effort to allow for documentation alternatives that better reflect the current practice of medicine and to alleviate documentation burden. We stated our interest in receiving public comments on practitioners' ability to avail themselves of these choices for how they would impact clinical workflows, EHR templates, and other aspects of practitioner work.

Stakeholders had requested that CMS not merely shift burden by implementing another framework that might avoid issues caused by the current guidelines, but that would be equally complex and burdensome. Our primary goal was to reduce administrative burden so that the practitioner can focus on the patient, and we were interested in commenters' opinions as to whether our E/M visit proposals would, in fact, support and further this goal. We believed our proposals would allow practitioners to exercise greater clinical judgment and discretion in what they document, focusing on what is clinically relevant and medically necessary for the patient rather than what will illustrate that the appropriate visit level was reported. Although we proposed to no longer apply much of the E/M documentation guidelines involving history, physical exam and, for those choosing to document based on time, documentation of medical decision-making, we stated our expectation that practitioners would continue to perform as medically necessary for the patient and document E/M visits to ensure quality and continuity of care. For example, we believed that it remains an important part of care for the practitioner to understand the patient's social history, even though certain documentation options we proposed would no longer require that history to be re-documented to bill Medicare for the visit.

Comment: Many commenters supported the proposal to allow choice in documentation between the current framework, medical decision making or time. However, some commenters stated that such a policy would introduce too much variation in medical record format and content, or too many potential frameworks against which an auditor might review a claim. Commenters were unsure whether CMS envisioned the choice being made on a case-by-case basis or with some regularity. Other commenters noted that time alone is not an accurate measure of visit complexity or would be subject to gaming, or that CMS did not provide enough detail regarding time thresholds and documentation requirements to allow them to assess potential impact.

Many of the commenters did not support the proposal, as a corollary to our proposal to adopt a single payment amount for office-outpatient E/M visit levels 2 through 5, to apply a minimum level 2 documentation standard. These commenters were concerned that this standard would result in inadequate documentation for patient care, legal and other purposes. They noted that CMS overestimated the associated reduction in burden that would result from this proposal, and instead believe the level 2 documentation standard would reduce burden to a lesser degree than we estimated, or potentially increase burden. They indicated that there would be costs in terms of time and resources to update EHRs and train staff, and that they expected there would be the need to continue documenting many elements included in the current code definitions for patient care and other purposes, including other payers. Many commenters expressed concern that the documentation could potentially increase due to misalignment in documentation rules between payers, as they presume that Medicaid, commercial payers and secondary payers would not likely adopt Medicare's payment changes, at least not immediately. Several commercial payers or their associations expressed similar concerns and recommended implementing a more limited set of documentation changes and ongoing monitoring.

MedPAC and a few other commenters recommended paying for visits on the basis of time alone. MedPAC recommended requiring the time spent to be reported on the claim so CMS can collect data on current times actually spent and use it to more accurately set rates in the future.

A few commenters indicated what the time requirement should be when using time to document. Most of these commenters noted that CMS should require the typical time associated with the CPT code reported on the claim. One commenter who opposed the single payment rate stated that if CMS did finalize a single payment rate, then CMS should require only the time associated with the level 2 CPT codes (10 minutes for an established patient and 20 minutes for a new patient). Some commenters expressed support for requiring that this time be spent by the billing practitioner face-to-face with the patient, and a few commenters expressed support for allowing time spent by individuals other than the billing practitioner and/or time spent furnishing non-face-to-face care to count.

Response: For CY 2019 and 2020, we will continue the current coding and payment structure for E/M office/outpatient visits, and, therefore, practitioners should continue to use either the 1995 or 1997 versions of the E/M guidelines to document E/M office/outpatient visits billed to Medicare for 2019 and 2020 (with the exception of our final policy to eliminate redundant data recording).

We appreciate the issues raised by commenters but continue to believe our proposals allowing for flexibility in how E/M office/outpatient visit levels are documented and the applying of a minimum documentation standard as a corollary to establishing single payment rates for E/M office/outpatient visits will significantly reduce burden for clinicians and support them in making coding and documentation decisions that better align with current medical practice. Beginning in 2021, for E/M office/outpatient levels 2 through 5 visits, we will allow for flexibility in how visit levels are documented, allowing billing practitioners the choice to use the current framework, MDM or time. Specifically, for level 5 visits, for PFS payment purposes a practitioner can use the current framework with the documentation requirements applicable to a level 5 visit or the current definition of level 5 MDM. As an another alternative, the practitioner can document using time, which will require documentation of the medical necessity of the visit and that the billing practitioner personally spent at least the typical time associated with the level 5 CPT code that is reported face-to-face with the patient (40 minutes for an established patient and 60 minutes for a new patient). Since there will be no new intra-service time associated with the level 5 visit codes, we are finalizing our proposed alternative to use the typical time associated with the CPT code reported on the claim, consistent with current policy when counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter.

For E/M office/outpatient level 2 through 4 visits, in 2021 we will also allow choice of documentation methodology (current framework, MDM or time). For practitioners using the current documentation framework or

MDM, for PFS payment purposes, we will apply a minimum supporting documentation standard associated with E/M office/outpatient level 2 visits such that we only require documentation that is associated with the current level 2 CPT visit code (new or established patient, as applicable). For example, if the practitioner is choosing to document based on MDM alone, for PFS payment purposes we will only require documentation supporting straight forward medical decision-making measured by minimal problems, data review, and risk (two of these three). If choosing to document using time, for PFS payment purposes we will require the billing practitioner to document that the visit was medically reasonable and necessary and that the billing practitioner personally spent the current typical time for the CPT code reported (for example, 15 minutes when reporting CPT code 99213 (a level 3 established patient visit)). For administrative simplicity, it may be most straight forward to track to the typical time for the CPT code.

We address the public comments on our burden reduction estimate and changes to our estimate based on our final policies further below (see section VII. of this final rule, Regulatory Impact Analysis). We intend to engage in further discussions with the public over the next several years to potentially further refine our policies for 2021.

As we noted in the CY 2019 PFS proposed rule, we heard from a few commenters on the CY 2018 PFS proposed rule that some practitioners rely on unofficial Marshfield clinic or other criteria to help them document E/M visit levels. These commenters conveyed that the Marshfield ''point system'' is commonly used to supplement the E/M documentation guidelines, because of a lack of concrete criteria for certain elements of medical decision making in the 1995 and 1997 guidelines or in CPT guidance. Accordingly, in the CY 2019 PFS proposed rule, we solicited public comment on whether Medicare should use or adopt any aspects of other E/M documentation systems that may be in use among practitioners, such as the Marshfield tool. We were interested in feedback as to whether the 1995 and 1997 guidelines contain adequate information for practitioners to use in documenting visits under our proposals, or whether these versions of the guidelines would need to be supplemented in any way.

The following is a summary of the comments we received on whether Medicare should use or adopt any aspects of other E/M documentation systems that may be in use among practitioners, such as the Marshfield tool, and also whether the 1995 and 1997 guidelines contain adequate information for practitioners to use in documenting visits under our proposals, or whether these versions of the guidelines would need to be supplemented in any way.

Comment: We received a few comments clarifying how the Marshfield tool is currently used, but the commenters provided reasons not to use it as a replacement standard for current measures of visit complexity specified in the 1995 and 1997 documentation guidelines. A few commenters suggested new methods that could be used to support the level of E/M visit reported, such as risk adjustment with CMS's Hierarchical Condition Category scores used in Medicare Advantage; and some commenters recommended that CMS use medical decision making alone or in combination with time to distinguish visit/patient complexity. A few commenters recommended ways in which medical decision making could be relied upon, and ways that it should be changed, suggesting that history and physical exam might be incorporated with medical decision making. Many commenters recommended that CMS should continue to work with the AMA/CPT, specialty associations and other stakeholders to come up with revised measures of visit complexity, recommending between three to five levels.

Response: We appreciate commenters' feedback on this solicitation, and we considered it in the context of making a final decision. As stated previously, we are finalizing a significant reduction in the current payment variation in office/outpatient E/M visit levels by paying a single rate for E/M office/outpatient visit levels 2, 3, and 4 (one for established and another for new patients). However, we are not finalizing the inclusion of E/M office/outpatient level 5 visits in the single payment rate, in order to better account for the care and needs of particularly complex patients. Beginning in 2021, for E/M office/outpatient levels 2 through 5 visits, we will allow for flexibility in how visit levels are documented, specifically a choice to use the current framework, MDM or time, discussed previously. For E/M office/outpatient level 2 through 4 visits, in 2021 we will also apply a minimum supporting documentation standard associated with level 2 visits, also discussed previously. We intend to engage in further discussions with the public over the next several years to potentially further refine our policies for 2021.

(b) Removing Redundancy in E/M Visit Documentation

Stakeholders have recently expressed that CMS should not require documentation of information in the billing practitioner's note that is already present in the medical record, particularly with regard to history and exam. Currently, both the 1995 and 1997 guidelines provide such flexibility for certain parts of the history for established patients, stating, ''A Review of Systems ''ROS'' and/or a pertinent past, family, and/or social history (PFSH) obtained during an earlier encounter does not need to be re-recorded if there is evidence that the physician reviewed and updated the previous information. This may occur when a physician updates his/her own record or in an institutional setting or group practice where many physicians use a common record. The review and update may be documented by:

- Describing any new ROS and/or PFSH information or noting there has been no change in the information; and
- Noting the date and location of the earlier ROS and/or PFSH.

Documentation Guidelines ''DG'': The ROS and/or PFSH may be recorded by ancillary staff or on a form completed by the patient. To document that the physician reviewed the information, there must be a notation supplementing or confirming the information recorded by others (*https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/95Docguidelines.pdf*; *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNEdWebGuide/Downloads/97Docguidelines.pdf*).

We proposed to expand this policy to further simplify the documentation of history and exam for established patients such that, for both of these key components, when relevant information is already contained in the medical record, practitioners would only be required to focus their documentation on what has changed since the last visit or on pertinent items that have not changed, rather than re-documenting a defined list of required elements such as review of a specified number of systems and family/social history. Practitioners would still review prior data, update as necessary, and indicate in the medical record that they had done so. Practitioners would conduct clinically relevant and medically necessary elements of history and physical exam, and conform to the general principles of medical record documentation in the 1995 and 1997 guidelines. However,

practitioners would not need to re-record these elements (or parts thereof) if there is evidence that the practitioner reviewed and updated the previous information.

Comment: Commenters were very supportive of this proposal. Many commenters included this proposal in a list of appropriate changes CMS should make immediately regarding documentation of E/M visits, effective January 1, 2019.

Response: We are finalizing this policy to simplify the documentation of history and exam for established patients for E/M office/outpatient visits as proposed, effective January 1, 2019. Accordingly, when relevant information is already contained in the medical record, practitioners may choose to focus their documentation on what has changed since the last visit, or on pertinent items that have not changed, and need not re-record the defined list of required elements if there is evidence that the practitioner reviewed the previous information and updated it as needed. Practitioners should still review prior data, update as necessary, and indicate in the medical record that they have done so. We note that this policy to simplify and reduce redundancy in documentation is optional for practitioners, and they may choose to continue the current process of entering, re-entering and bringing forward information (83 FR 35838). The option to continue current documentation processes may be particularly important for practitioners who lack time to adjust workflows, templates and other aspects of their work by January 1, 2019.

We solicited comment on whether there may be ways to implement a similar provision for any aspects of medical decision-making, or for new patients, such as when prior data is available to the billing practitioner through an interoperable EHR or other data exchange. We stated our belief that there would be special challenges in realizing documentation efficiencies with new patients, since they may not have received exams or histories that were complete or relevant to the current complaint(s), and the information in the transferred record could be more likely to be incomplete, outdated or inaccurate.

Comment: A few commenters indicated that there might be ways to recognize some documentation efficiencies for referred new patients or situations where data are available through an interoperable EHR, but did not provide detail about what kinds of data are commonly available and how they might be relevant to the receiving practitioner for purposes of visit documentation.

Response: We appreciate the commenters' feedback in this area and will continue to consider this issue.

We similarly proposed that for both new and established patients, practitioners would no longer be required to re-enter information in the medical record regarding the chief complaint and history that are already entered by ancillary staff or the beneficiary. The practitioner could simply indicate in the medical record that they reviewed and verified this information. Our goal was to allow practitioners more flexibility to exercise greater clinical judgment and discretion in what they document, focusing on what is clinically relevant and medically necessary for the patient.

Comment: Commenters were very supportive of this proposal. Many commenters included this proposal in a list of appropriate changes CMS should make immediately regarding documentation of E/M visits, effective January 1, 2019.

Response: We are finalizing our proposal that, effective January 1, 2019, for new and established patients for E/M office/outpatient visits, practitioners need not re-enter in the medical record information on the patient's chief complaint and history that has already been entered by ancillary staff or the beneficiary. The practitioner may simply indicate in the medical record that he or she reviewed and verified this information. We note that this policy to simplify and reduce redundancy in documentation is optional for practitioners, and they may choose to continue the current process of entering, re-entering and bringing forward information (83 FR 35838). The option to continue current documentation processes may be particularly important for practitioners who lack time to adjust workflows, templates and other aspects of their work by January 1, 2019.

(c) Podiatry Visits

As described in the CY 2019 PFS proposed rule (83 FR 35843), as part of our proposal to improve payment accuracy by creating a single PFS payment rate for E/M visit levels 2 through 5 (with one proposed rate for new patients and one proposed rate for established patients), we proposed to create separate coding for podiatry visits that are currently reported as E/M office/outpatient visits. We proposed that, rather than reporting visits under the general E/M office/outpatient visit code set, podiatrists would instead report visits under new G-codes that more specifically identify and value their services. We proposed to apply substantially the same documentation standards for these proposed new podiatry-specific codes as we proposed for other office/outpatient E/M visits.

If a practitioner chose to use time to document a podiatry office/outpatient E/M visit, we proposed to apply substantially the same rules as those we proposed for documenting on the basis of time for other office/outpatient E/M visits. For practitioners choosing to use time to provide supporting documentation for the podiatry visit, we would require documentation supporting the medical necessity of the visit and showing the total amount of time spent by the billing practitioner face-to-face with the patient. We solicited public comment on what that total time would be for payment of the proposed new podiatry G-codes. The typical times for these proposed codes were 22 minutes for an established patient and 28 minutes for a new patient, and we noted we could use these times. Alternatively, we noted we could apply the AMA's CPT codebook provision that, for timed services, a unit of time is attained when the mid-point is passed,[6] such that we would require documentation that at least 12 minutes for an established patient (more than half of 22 minutes) or at least 15 minutes for a new patient (more than half of 28 minutes) were spent face-to-face by the billing practitioner with the patient, to support making payment for these codes when the practitioner chose to document the visit using time. We solicited comment on the use of time as a basis for documentation of our proposed podiatric E/M visit codes, and whether we should adopt any of these approaches or further specify other requirements with respect to this proposed option for podiatric practitioners to document their visits using time.

Comment: We did not receive any comments on how the proposed podiatric codes should be documented. A few commenters noted that our proposal to apply the same documentation rules to the proposed new podiatric codes as for all other office/outpatient E/M visits demonstrated that these visits were essentially the same, and that podiatry should not be singled out for the creation of separate codes.

Response: We believe the absence of comments on our proposals for documentation of the proposed podiatric codes is due to a lack of general support for creation of the new

[6] 2017 CPT Codebook Introduction, p.xv.

codes to describe podiatric E/M visits, as noted below in the comment summary on that topic. As discussed below, we are not finalizing our proposal to create new codes to describe podiatric E/M visits, and accordingly, we are not finalizing any rules regarding documentation of those codes.

(3) Minimizing Documentation Requirements by Simplifying Payment Amounts

As we have explained above, and in prior rulemaking, we believe that the coding, payment, and documentation requirements for E/M visits are overly burdensome and no longer aligned with the current practice of medicine. We believe the current set of 10 CPT codes for new and established office-based and outpatient E/M visits and their respective payment rates no longer appropriately reflect the complete range of services and resource costs associated with furnishing E/M services to all patients across the different physician specialties, and that documenting these services using the current guidelines has become burdensome and out of step with the current practice of medicine. To alleviate the effects and mitigate the burden associated with continued use of the outdated CPT code set, we proposed to simplify the office-based and outpatient E/M payment rates and documentation requirements, and create new add-on codes to better capture the differential resources involved in furnishing certain types of E/M visits.

In conjunction with our proposal to reduce the documentation requirements for E/M visit levels 2 through 5, we proposed to simplify the payment for those services by paying a single rate for the level 2 through 5 E/M visits. The visit level of the E/M service is tied to the documentation requirements in the 1995 and 1997 Documentation Guidelines for E/M Services, which may not be reflective of changes in technology or, in particular, the ways that electronic medical records have changed documentation and the patient's medical record. Additionally, current documentation requirements may not account for changes in care delivery, such as a growing emphasis on team based care, increases in the number of recognized chronic conditions, or increased emphasis on access to behavioral health care. However, based on the feedback we have received from stakeholders, it was clear to us that the burdens associated with documenting the selection of the level of E/M service arise from not only the documentation guidelines, but also from the coding structure itself. Like the documentation guidelines, the distinctions between visit levels reflect a reasonable assessment of variations in care, effort, and resource costs as identified and articulated several decades ago. We believed that the most important distinctions between the kinds of visits furnished to Medicare beneficiaries are not well reflected by the current E/M visit coding. Most significantly, we have understood from stakeholders that current E/M coding does not reflect important distinctions in services and differences in resources. At present, we believed the current payment for E/M visit levels, generally distinguished by common elements of patient history, physical exam, and MDM, that may have been good approximations for important distinctions in resource costs between kinds of visits in the 1990s, when the CPT developed the E/M code set, are increasingly outdated in the context of changing models of care and information technologies.

As described earlier in this section, we proposed to change the documentation requirements for E/M levels such that practitioners have the choice to use the 1995 guidelines, 1997 guidelines, time, or MDM to determine the E/M level. We believed that these proposed changes would better reflect the current practice of medicine and represent significant reductions in burdens associated with documenting visits using the current set of E/M codes.

In alignment with our proposed documentation changes, we proposed to develop a single set of RVUs under the PFS for E/M office-based and outpatient visit levels 2 through 5 for new patients (CPT codes 99202 through 99205) and a single set of RVUs for visit levels 2 through 5 for established patients (CPT codes 99212 through 99215). Although we considered creating new HCPCS G-codes that would describe the services associated with these proposed payment rates, given the wide and longstanding use of these visit codes by both Medicare and private payers, we believed it would have created unnecessary administrative burden to propose new coding. Therefore, we instead proposed to maintain the current code set. Of the five levels of office-based and outpatient E/M visits, the vast majority of visits are reported as levels 3 and 4. In CY 2016, CPT codes 99203 and 99204 (or E/M visit level 3 and level 4 for new patients) made up around 32 percent and 44 percent, respectively, of the total allowed charges for CPT codes 99201–99205. In the same year, CPT codes 99213 and 99214 (or E/M visit level 3 and 4 for established patients) made up around 39 percent and 50 percent, respectively, of the allowed charges for CPT codes 99211–99215. If our proposals to simplify the documentation requirements and to pay a single PFS rate for new patient E/M visit levels 2 through 5 and a single rate for established patient E/M visit levels 2 through 5 were finalized, practitioners would still bill the CPT code for whichever level of E/M service they furnished and they would be paid at the single PFS rate. However, we believed that eliminating the distinction in payment between visit levels 2 through 5 would eliminate the need to audit against the visit levels, and therefore, would provide immediate relief from the burden of documentation. A single payment rate would also eliminate the increasingly outdated distinction between the kinds of visits that are reflected in the current CPT code levels in both the coding and the associated documentation rules.

In order to set RVUs for the proposed single payment rate for new and established patient office/outpatient E/M visit codes, we proposed to develop resource inputs based on the current inputs for the individual E/M codes, generally weighted by the frequency at which they are currently billed, based on the 5 most recent years of Medicare claims data (CY 2012 through CY 2017). Specifically, we proposed a work RVU of 1.90 for CPT codes 99202 through 99205, a physician time of 37.79 minutes, and direct PE inputs that sum to $24.98, each based on an average of the current inputs for the individual codes weighted by 5 years of accumulated utilization data. Similarly, we proposed a work RVU of 1.22 for CPT codes 99212 through 99215, with a physician time of 31.31 minutes and direct PE inputs that sum to $20.70. These inputs were based on an average of the inputs for the individual codes, weighted by volume based on utilization data from the past 5 years (CY 2012 through CY 2017). Tables 19 and 20 reflect the payment rates in dollars that would result from the approach described above were it to have been implemented for CY 2018. In other words, the dollar amounts in the charts below reflect how the changes we proposed for CY 2019 would have impacted payment rates for CY 2018.

TABLE 19—PRELIMINARY COMPARISON OF PAYMENT RATES FOR OFFICE VISITS

[New patients]

HCPCS code	CY 2018 non-facility payment rate	CY 2018 non-facility payment rate under the proposed methodology
99201	$45	$44
99202	76	135
99203	110	
99204	167	
99205	211	

TABLE 20—PRELIMINARY COMPARISON OF PAYMENT RATES FOR OFFICE VISITS

[Established patients]

HCPCS code	Current non-facility payment rate	Proposed non-facility payment rate
99211	$22	$24
99212	45	93
99213	74	
99214	109	
99215	148	

Although we believed that the proposed rates for E/M visit levels 2 through 5 represent the valuation of a typical E/M service, we also recognized that the current E/M code set itself does not appropriately reflect differences in resource costs between certain types of E/M visits. As a result, we believed that the way we currently value the resource costs for E/M services through the existing HCPCS CPT code set for office-based and outpatient E/M visits does not appropriately reflect the resources used in furnishing the range of E/M services that are provided through the current the practice of medicine. Based on stakeholder comments and examples and our review of the literature on E/M services, we identified three types of E/M visits that differ from the typical E/M visit and are not appropriately reflected in the current office/outpatient E/M code set and valuation. Rather, these three types of E/M visits can be distinguished by the mode of care provided and, as a result, have different resource costs. The three types of E/M visits that differ from the typical E/M service are (1) separately identifiable E/M visits furnished in conjunction with a global procedure, (2) primary care E/M visits for continuous patient care, and (3) certain types of specialist E/M visits, including those with inherent visit complexity. We addressed each of these distinguishable visit types in the proposed rule.

The following is a summary of the comments we received on the proposed blended payment rate for new and established office/outpatient E/M visit levels 2 through 5.

Comment: While many commenters agreed that the current E/M coding for office/outpatient visits is flawed and some agreed that the current coding and valuation systematically undervalues primary care visits and visits furnished in the context of non-procedural specialty care, most commenters opposed this proposal. Many commenters stated that using a single payment rate for new and established office/outpatient E/M visit levels 2 through 5 could have highly variable negative repercussions at the specialty, practice, and practitioner level. Some commenters suggested that the proposed single payment rate for these visits was inherently not resource-based. Many commenters stated that the proposed single payment rate that did not vary based on patient complexity from levels 2 through 5 was insufficient to account for the resource differential associated with treating complex patients, and that, without accurate payment, physicians would be likely to either schedule multiple visits or stop taking on complex patients all together.

The few commenters who supported the proposal stated that the negative payment implications of the single proposed payment rate are outweighed by the reduction in documentation burden. While acknowledging that the initial years following adoption of a single payment rate for the level 2 through 5 E/M visit codes would be challenging, these commenters noted that over time, potential reductions in payment would be offset by the time saved from unnecessary documentation. Other commenters, while urging CMS not to finalize the proposed single payment rate for these codes, did provide suggested alternative coding structures. Of these comments, there was a consensus that three levels of coding for office and outpatient E/M services is preferable to two, whether that be accomplished through blended payment rates for levels 2 through 3 and 4 through 5, or through a blended rate for levels 2 through 4. Most commenters pointed to the joint CPT/AMA E/M workgroup formed in response to CMS' proposal, and urged CMS to wait for forthcoming coding and documentation definitions generated by that group and recommendations regarding valuation developed through the RUC process.

Response: We appreciate the number and broad range of interested commenters who responded to our proposal. After reviewing all of the comments received, we understand the broad consensus regarding the potential negative implications of the proposal for patients with the most complex needs and the clinicians who serve them. In attempting to eliminate the reliance on the current outmoded E/M coding structure as it is used for purposes of payment, we recognize that the alternative coding and payment structure we proposed lacked an element that we agree is critical in making accurate payment: Namely, accounting for resource costs for the most complex patients. While we believe that our proposal to address the inherent complexity involved in furnishing certain kinds of care combined with our proposed payment for visits that take additional time might have accounted for a significant portion of the resource costs associated with particularly complex patients, we recognize the concerns expressed by commenters that these payment adjustments might be insufficient in some cases. We also recognize the potential negative consequences to clinicians and access to care that could result if we do not ensure that coding and payment appropriately account for patients with the most complex needs.

We do not believe, however, that appropriate care for complex patients currently requiring visit levels 2 through 4 are nearly as dependent on the current payment variations for these services. Given that the significant majority of the volume is concentrated in the level 3 and 4 new and established patient visits, we believe the concerns expressed by commenters about potential shifts in practitioner behavior would be likely to occur. We believe it would simply not be practical for clinicians to prioritize seeing the relatively few potential patients requiring level 2 visits in order to maximize their revenue relative to per patient costs. Likewise, because the level 4 established patient E/M visit is the most commonly reported code among the 5 levels for both new and established patients, any effort to avoid treating patients requiring care that is currently reported as a level 4 visit would likely result in significantly reduced volume and overall revenue for physician practices. We will, however, monitor utilization of these services and make any necessary adjustments through future rulemaking. Additionally, we recognize that because level 5 visits represent a very small proportion of visits reported under current E/M coding, maintaining

differential payment rates and documentation for these visits will strike an appropriate balance, simplifying and reducing the burden in distinguishing among CPT codes for the vast majority of E/M visits, while retaining a separate payment rate for the level of care furnished to the most complex patients.

On that basis, we are finalizing for 2021, a single payment rate for levels 2 through 4 E/M office/outpatient visits (one rate for new, and one for established patients) and maintaining separate payment rates for new and established patients for level 5 E/M office/outpatient visits to account for the most complex patients and visits. We are finalizing a policy, modified from our proposal, to develop a set of single payment rates for visit levels 2 through 4 (one each for new and established patients), instead of levels 2 through 5, as proposed. We are finalizing development of payment rates for levels 2 through 4 visits using the weighted average of the current inputs (work RVUs, direct PE inputs, time and specialty mix) assigned to the individual codes, based on the most recent 5 years of utilization for each of the constituent codes. For the level 1 and level 5 office/outpatient E/M visits we are finalizing payment rates that rely on current inputs. The inputs we will use (in the absence of intervening changes to CPT coding or the development of other considerations) to develop proposed values for these services for 2021 appear in the Table 21.

TABLE 21—FINALIZED INPUTS FOR E/M OFFICE/OUTPATIENT CODES FOR 2021

HCPCS	Physician time	Work RVU	Malpractice RVU	Sum of direct PE inputs
99201	17.00	0.48	0.05	$13.97
99202	34.43	1.76	0.17	24.37
99203	34.43	1.76	0.17	24.37
99204	34.43	1.76	0.17	24.37
99205	67.00	3.17	0.28	30.92
99211	7.00	0.18	0.01	11.31
99212	30.26	1.18	0.08	20.41
99213	30.26	1.18	0.08	20.41
99214	30.26	1.18	0.08	20.41
99215	55.00	2.11	0.14	27.83

We are also finalizing separate, add-on payments for visit complexity inherently associated with primary care and non-procedural specialty care, as well as separate payment for extended visits via HCPCS G-codes. These codes and the associated policies will be discussed in greater detail in the discussion below. We recognize that many commenters, including the AMA, the RUC, and specialties that participate as members in those committees, have stated intentions of the AMA and the CPT Editorial Panel to revisit coding for E/M office/outpatient services in the immediate future. We note that the 2-year delay in implementation will provide the opportunity for us to respond to the work done by the AMA and the CPT Editorial Panel, as well as other stakeholders. We will consider any changes that are made to CPT coding for E/M services, and recommendations regarding appropriate valuation of new or revised codes, through our annual rulemaking process.

(4) Recognizing the Resource Costs for Different Types of E/M Visits

As a corollary to our proposal to adopt a single payment rate for office and outpatient E/M services for level 2 through 5 E/M visits, we stated that we could better capture differential resource costs and minimize reporting and documentation burden by proposing several additional payment policies and ratesetting adjustments. These additional proposals were intended to reflect the important distinctions between the kinds of visits furnished to Medicare beneficiaries, and to reduce the burden of billing and documentation rules to effectuate payment.

In response to the CY 2018 comment solicitation on burden reduction for E/M visits (82 FR 53163 through 53166), we received several comments that highlighted the inadequacy of the E/M code set to accurately pay for the resources associated with furnishing visits, particularly for primary care visits, and visits associated with treating patients with particular conditions for which there is not additional procedural coding. One commenter stated that the current structure and valuation of the E/M code set inadequately describes the range of services provided by different specialties, and in particular primary care services. This commenter noted that although the 10 office/outpatient E/M codes make up the bulk of the services reported by primary care practitioners, the valuation does not reflect their particular resource costs. Another commenter pointed out that for specialties that principally rely on E/M visit codes to bill for their professional services, the complex medical decision making and the intensity of their visits is not reflected in the E/M code set or documentation guidelines.

In view of the comments we received, we proposed the following adjustments to better capture the variety of resource costs associated with different types of care provided in E/M visits: (1) An E/M multiple procedure payment adjustment to account for duplicative resource costs when E/M visits and procedures with global periods are furnished together; (2) HCPCS G-code add-ons to recognize additional relative resources for primary care visits and inherent visit complexity that require additional work beyond that which is accounted for in the single payment rates for new and established patient levels 2 through level 5 visits; (3) HCPCS G-codes to describe podiatric E/M visits; (4) an additional prolonged face-to-face services add-on HCPCS G-code; and (5) a technical modification to the PE methodology to stabilize the allocation of indirect PE for visit services.

(a) Accounting for E/M Resource Overlap Between Stand-Alone Visits and Global Periods

Under the PFS, E/M services are generally paid in one of two ways: As standalone visits using E/M visit codes, or included in global procedural codes. In both cases, RVUs are allocated to the services to account for the estimated relative resources involved in furnishing professional E/M services. In the case of procedural codes with global periods,

the overall resource inputs reflect the costs of the E/M work considered to be typically furnished with the procedure. Therefore, the standalone E/M visit codes are not billable on the same day as the procedure codes unless the billing professional specifically indicates that the visit is separately identifiable from the procedure.

In cases where a physician furnishes a separately identifiable E/M visit to a beneficiary on the same day as a procedure, payment for the procedure and the E/M visit is based on rates generally developed under the assumption that these services are typically furnished independently. In CY 2017 PFS rulemaking, we noted that the current valuation for services with global periods may not accurately reflect much of the overlap in resource costs (81 FR 80209). We were particularly concerned that when a standalone E/M visit occurs on the same day as a 0-day global procedure, there are significant overlapping resource costs that are not accounted for. We believe that separately identifiable visits occurring on the same day as 0-day global procedures have resources that are sufficiently distinct from the costs associated with furnishing one of the 10 office/outpatient E/M visits to warrant payment adjustment. There are other existing policies under the PFS where we reduce payments if multiple procedures are furnished on the same day to the same patient. Medicare has a longstanding policy to reduce payment by 50 percent for the second and subsequent surgical procedures furnished to the same patient by the same physician on the same day, largely based on the presence of efficiencies in PE and pre- and post-surgical physician work. Effective January 1, 1995, the MPPR policy, with the same percentage reduction, was extended to nuclear medicine diagnostic procedures (CPT codes 78306, 78320, 78802, 78803, 78806, and 78807). In the CY 1995 PFS final rule with comment period (59 FR 63410), we indicated that we would consider applying the policy to other diagnostic tests in the future. In the CYs 2009 and 2010 PFS proposed rules (73 FR 38586 and 74 FR 33554, respectively), we stated that we planned to analyze nonsurgical services commonly furnished together (for example, 60 to 75 percent of the time) to assess whether an expansion of the MPPR policy could be warranted. MedPAC encouraged us to consider duplicative physician work, as well as PE, in any expansion of the MPPR policy. Finally, in the CY 2011 PFS final rule with comment period, CMS finalized the application of the MPPR to always-therapy services on the justification that there was significant overlap in the PE portion of these services (75 FR 73233).

Using the surgical MPPR as a template, we proposed that, as part of our proposal to make payment for the E/M levels 2 through 5 at a single PFS rate, we would reduce payment by 50 percent for the least expensive global procedure or visit that the same physician (or a physician in the same group practice) furnishes on the same day as a separately identifiable E/M visit, currently identified on the claim by an appended modifier –25. We believed that the efficiencies associated with furnishing an E/M visit in combination with a same-day global procedure were similar enough to those accounted for by the surgical MPPR to merit a reduction in the relative resources of 50 percent. We estimated that, based on CY 2017 Medicare claims data, applying a 50 percent MPPR to E/M visits furnished as separately identifiable services on the same day as a global procedure would reduce expenditures under the PFS by approximately 6.7 million RVUs. To accurately reflect resource costs of the different types of E/M visits that we previously identified while maintaining work budget neutrality within this proposal, we proposed to allocate those RVUs toward the values of the add-on codes that reflect the additional resources associated with E/M visits for primary care and inherent visit complexity, similar to existing policies. As we articulated in the CY 2012 PFS final rule with comment period, where the aggregate work RVUs within a code family change but the overall actual physician work associated with those services does not change, we make work budget neutrality adjustments to hold the aggregate work RVUs constant within the code family, while maintaining the relativity of values for the individual codes within that set (76 FR 73105).

Comment: Many commenters opposed this proposal. Commenters generally objected to the underlying principle of the application of an MPPR to office/outpatient E/M codes billed on the same day as a minor procedure. Many of these commenters stated that the current billing rules allow these services to be billed only when modifier –25 is used, and that modifier makes it clear that the visits are significant and separately identifiable. Consequently, these commenters stated that no payment adjustment should apply. Many commenters pointed to the RUC review process wherein procedures that are typically furnished with a same day visit are subject to adjustments to account for any resource costs that the RUC considers to be typically duplicative. Commenters stated that by applying an MPPR adjustment to these services, CMS was making an unwarranted second adjustment to account for efficiencies the RUC already considers to be addressed. A few commenters stated that CMS provided insufficient rationale for the choice to propose a 50 percent payment reduction instead of other potential adjustments. Several commenters also pointed out that there are a number of 0-day global procedure codes that are valued not to include any evaluation and management, such as CPT codes 98925–98929 (Osteopathic manipulative treatment (OMT)). Commenters urged CMS to exempt these codes from the MPPR adjustment.

Many commenters, including both physician specialty organizations and patient advocacy groups, expressed concerns about how physicians would respond to the financial incentives resulting from the application of an MPPR adjustment in the context of patient care. Commenters noted that it is often convenient for both the beneficiary and the practitioner to address multiple concerns in a single visit. Many commenters stated that there would be a strong financial incentive to bring patients back for necessary visits on a different day so as to avoid triggering the payment reduction. This would result in inconvenience to the beneficiary, as they would experience treatment delays and be forced to return for a visit. Some commenters suggested this approach would result in additional cost sharing for patients.

Several commenters also highlighted programmatic concerns, stating that an MPPR adjustment would incentivize fractured care and undermine the goals of patient-centered and value-based care. Commenters also requested that CMS clarify whether certain other visits, such as the annual wellness visit, would also be subject to the MPPR adjustment. Others stated that inconsistent guidance, differing policies, and varying edits among the MACs would result in confusion and administrative burden in the implementation of this proposal.

A few commenters, including MedPAC, supported the proposal. MedPAC stated that when a standalone E/M visit occurs on the same day as a procedure, there are efficiencies (for example, in pre-service and post-service clinician work and practice expense) that are not accounted for in the current payment system. MedPAC concluded

that applying an MPPR to the procedure or visit would account for these efficiencies. Additional commenters suggested alternative percentages for the reduction, such as 5 percent or 25 percent. A few commenters stated that, if the MPPR were to be implemented, services performed by primary care specialties such as internal medicine, family practice, geriatrics, and pediatrics should be exempt.

Response: We appreciate commenters' feedback on this aspect of the proposal, particularly the comments regarding the potentially troublesome incentives and undesirable consequences associated with the financial incentives.

We continue to have significant concerns about the appropriate payment when codes with global periods, especially 0 and 10-day global periods, are billed on the same day as an E/M visit. Generally, we understand that the global codes are valued to include the typical amount of evaluation and management furnished to patients as part of the service. We understand that when these codes are reported, the –25 modifier is used with an E/M code to report a significant, separately identifiable E/M visit that is furnished on the same day. We also note that the CPT descriptor of the –25 modifier includes language suggesting that the modifier can be used whenever care beyond the usual preoperative and postoperative care associated with the procedure is performed. We note further that the values for global codes are intended to incorporate the typical amount of pre- and post-operative care. However, given the CPT description of the –25 modifier, a separately reportable visit could be billed in any case where the pre- or post-operative care exceeds the typical amount. In contrast, there does not appear to be a way to similarly account for cases where the needs of a particular patient require less than the typical amount of preoperative and postoperative work.

Although many commenters suggested that the overlapping resource costs between global codes and E/M visits billed on the same day have already been accounted for, we are not persuaded by the statements that the RUC process has achieved this goal, and we agree with MedPAC's assessment of the significant problem with valuation of codes that describe global services. We acknowledge and appreciate the efforts of the RUC to address overlaps when they recognize that a code is usually reported with a same day E/M visit. However, as observers to the RUC process, we have noted a general tendency for the RUC to recommend only minor adjustments in physician time and direct PE inputs to account for overlap. We also often make adjustments to the RUC recommended valuation in cases where the agency believes there is overlap between services frequently billed together that has not been adequately addressed through the RUC process. More importantly, even if the RUC valuation process better accounted for the overlapping resource costs, those adjustments would be made to national valuation of particular codes based on snapshot, national claims data for a given year, and would apply to all physicians reporting the services regardless of whether or not these particular physicians were achieving the efficiencies that occur when visits are reported on the same day as codes with global periods. Because this dynamic is an inherent part of valuation based on the typical case for discrete services, we routinely prioritize review of high-volume services. However, we believe the application of this methodology in valuing global services is particularly problematic because there are several thousand codes with global periods and it is impractical to conduct these kinds of code-level reviews as frequently as would be necessary to improve the accuracy of accounting for these efficiencies.

We agree with commenters that if practitioners began deliberately scheduling visits on separate days, when they could be furnished together on the same day, in order to avoid the payment adjustment that could create a significant undue burden for beneficiaries. We have heard this concern before regarding other MPPRs. We note that we have major concerns about this kind of manipulation of patient scheduling, especially as it relates to the fundamental requirement that Medicare payment may be made only for reasonable and necessary medical care, and intend to consider this concern more broadly for future rulemaking. Because we are obligated to develop PFS payments based on the relative resources involved in furnishing services, we believe the total of payments to practitioners for physicians' services from both Medicare and beneficiaries should reflect efficiencies inherent in furnishing two services that can be furnished together without prompting manipulative scheduling practices that result in inconvenience and potential medical risks to Medicare beneficiaries.

After consideration of the public comments, we recognize that we must balance concerns about appropriate valuation with the potential disruptions to patient care suggested by commenters. Though we find the possible practice of scheduling medical services to maximize payment without regard to patient needs or costs to be highly problematic, we take these concerns seriously given the broad-based consensus within the medical and stakeholder community regarding likely behavioral changes in response to the proposal. After weighing these concerns, we are not finalizing the proposal to apply an MPPR to a separately identifiable office/outpatient E/M visit furnished on the same day as a global procedure. We intend to consider ways to address the practice of scheduling patients to avoid payment adjustments in future rulemaking.

Given the variety of comments we received regarding the valuation of specific codes, especially codes with global periods that are perceived to include no resource costs associated with evaluation and management, we intend to reconsider the appropriate global period assigned to certain services. We welcome stakeholder input regarding appropriate global period assignment through our routine valuation processes. We will also continue to consider how to address what we believe to be a significant problem of accurately accounting for duplicative resource costs in ways that will protect Medicare beneficiaries' access to appropriate care.

(b) HCPCS G-Code Add-Ons To Recognize Additional Relative Resources for Certain Kinds of Visits

The distribution of E/M visits is not uniform across medical specialties. We have found that certain specialists, like neurologists and endocrinologists, for example, bill higher level E/M codes more frequently than procedural specialists, such as dermatologists. We believed this tendency reflects a significant and important distinction between the kinds of E/M visits furnished by professionals whose treatment approaches are primarily reported using visit codes versus those professionals whose treatment approaches are primarily reported using available procedural or testing codes. However, based on feedback we received from the medical professionals who furnish primary care and have visits with greater complexity, we did not believe the current visit definitions and the associated documentation burdens are the most accurate descriptions of the variation in work. Instead, we believed these professionals have been particularly burdened by the documentation requirements, given that so much of their medical treatment is

described imperfectly by relatively generic visit codes.

Similarly, stakeholders such as the commenters responding to the CY 2018 PFS proposed rule have articulated persuasively that visits furnished for the purpose of primary care also involve distinct resource costs. In developing this proposal, we consulted a variety of resources, including the American Academy of Family Physicians (AAFP) definition of primary care that states that the resource costs associated with furnishing primary care services particularly include time spent coordinating patient care, collaborating with other physicians, and communicating with patients (see *https://www.aafp.org/about/policies/all/primary-care.html*). Despite our efforts in recent years to pay separately for certain aspects of primary care services, such as through the chronic care management or the transitional care management services, the currently available coding still does not adequately reflect the full range of primary care services, nor does it allow payment to fully capture the resource costs involved in furnishing a face-to-face primary care E/M visit. We recognized that primary care services frequently involve substantial non-face-to-face work, and noted that there is currently coding available to account for many of those resources, such as chronic care management (CCM), behavioral health integration (BHI), and prolonged non-face-to-face services. In light of the existing coding, our proposal only addressed the additional resources involved in furnishing the face-to-face portion of a primary care service. As the point of entry for many patients into the healthcare system, primary care visits frequently require additional time for communicating with the patient, patient education, consideration and review of the patient's medical needs. We believed the proposed value for the single payment rate for the E/M levels 2 through 5 new and established patient visit codes does not reflect these additional resources inherent to primary care visits, as evidenced by the fact that primary care visits are generally reported using level 4 E/M codes. Therefore, to more accurately account for the type and intensity of E/M work performed in primary care-focused visits, we proposed to create a HCPCS add-on G-code that could be billed with the generic E/M code set to adjust payment to account for additional costs beyond the typical resources accounted for in the single payment rate for the levels 2 through 5 visits.

We proposed to create a HCPCS G-code for primary care services, HCPCS code GPC1X (Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to an established patient evaluation and management visit)). As we believe a primary care visit is partially defined by an ongoing relationship with the patient, this code would describe furnishing a visit to an established patient. HCPCS code GPC1X could also be reported for other forms of face-to-face care management, counseling, or treatment of acute or chronic conditions not accounted for by other coding. We noted that we believed the additional resources to address inherent complexity in E/M visits associated with primary care services are associated only with stand-alone E/M visits as opposed to separately identifiable visits furnished within the global period of a procedure. Separately identifiable visits furnished within a global period are identified on the claim using modifier –25, and would be subject to the MPPR. We noted that we created separate coding that describes non-face-to-face care management and coordination, such as CCM and BHI; however, these services describe non-face-to-face care and can be provided by any specialty as long as they meet the requirements for those codes. HCPCS code GPC1X was intended to capture the additional resource costs, beyond those involved in the base E/M codes, of providing face-to-face primary care services for established patients. HCPCS code GPC1X would be billed in addition to the E/M visit for an established patient when the visit includes primary care services. For HCPCS code GPC1X, we proposed a work RVU of 0.07, physician time of 1.75 minutes, no direct PE inputs, and an MP RVU of 0.01. This proposed valuation accounted for the additional resource costs associated with furnishing primary care that distinguishes E/M primary care visits from other types of E/M visits, and would maintain work budget neutrality across the office/outpatient E/M code set. Furthermore, the proposed add-on G-code for primary care-focused E/M services would help to mitigate potential payment instability that could result from our adoption of single payment rates that apply for E/M code levels 2 through 5. As this add-on G-code would account for the inherent resource costs associated with furnishing primary care E/M services, we anticipated that it would be billed with every primary care-focused E/M visit for an established patient. Although we expected that this code would mostly be utilized by the primary care specialties, such as family practice or pediatrics, we were also aware that, in some instances, certain specialists function as primary care practitioners—for example, an OB/GYN or a cardiologist. Although the definition of primary care is widely agreed upon by the medical community and we intended for this G-code to account for the resource costs of performing those types of visits, regardless of Medicare enrollment specialty, we also solicited comment on how best to identify whether or not a primary care visit was furnished, particularly in cases where a specialist is providing those services. For especially complex patients, we also expected that this G-code would be billed alongside the new code we proposed for prolonged E/M services described later in this section.

We also solicited comment on whether this policy adequately addresses the deficiencies in CPT coding for E/M services in describing current medical practice, and concerns about the impact on payment for primary care and other services under the PFS.

We also proposed to create a HCPCS G-code to be reported with an E/M service to describe the additional resource costs for specialty professionals for whom E/M visit codes make up a large percentage of their overall allowed charges and whose treatment approaches we believed are generally reported using the level 4 and level 5 E/M visit codes rather than procedural coding. Due to these factors, the proposed single payment rate for E/M levels 2 through 5 visit codes would not necessarily reflect the resource costs of those types of visits. Therefore, we proposed to create a new HCPCS code GCG0X (Visit complexity inherent to evaluation and management associated with endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, cardiology, or interventional pain management-centered care (Add-on code, list separately in addition to an evaluation and management visit)). Given their billing patterns, we believed that these are specialties that apply predominantly non-procedural approaches to complex conditions that are intrinsically diffuse to multi-organ or neurologic diseases. Although some of these specialties are surgical in nature, we believed these surgical specialties are providing increased non-procedural care of high complexity in the Medicare population. The high complexity of these services is reflected

in the large proportion of level 4 and level 5 visits that we believed are reported by these specialties, and the extent to which E/M visits are a high proportion of these specialties' total allowed charges. Consequently, these are specialties for which the resource costs of the visits they typically perform are not fully captured in the proposed single payment rate for the levels 2 through level 5 office/outpatient visit codes. When billed in conjunction with standalone office/outpatient E/M visits for new and established patients, the combined valuation more accurately accounts for the intensity associated with higher level E/M visits. To establish a value for this add-on service to be applied with a standalone E/M visit, we proposed a crosswalk to 75 percent of the work and time of CPT code 90785 (Interactive complexity), which would result in a work RVU of 0.25, no direct PE inputs, and an MP RVU of 0.01, as well as 8.25 minutes of physician time based on the CY 2018 valuation for CPT code 90785. Interactive complexity is an add-on code that may be billed when a psychotherapy or psychiatric service requires more resources due to the complexity of the patient. We believed that the proposed valuation for CPT code 90785 would be an accurate representation of the additional work associated with the higher level complex visits. We noted that we believed the additional resources to address inherent complexity in E/M visits are associated with stand-alone E/M visits. Additionally, we acknowledged that resource costs for primary care are reflected with the proposed HCPCS code GPC1X, as opposed to the proposed HCPCS code GCG0X. We note that there are additional codes available that include face-to-face and non-face-to-face work, depending on the code, that previously would have been considered part of an E/M visit, such as the codes for CCM, BHI, and CPT code 99483 (Assessment of and care planning for a patient with cognitive impairment, requiring an independent historian, in the office or other outpatient, home or domiciliary or rest home, with all of the following required elements: Cognition-focused evaluation including a pertinent history and examination; Medical decision making of moderate or high complexity; Functional assessment (*e.g.,* basic and instrumental activities of daily living), including decision-making capacity; Use of standardized instruments for staging of dementia (*e.g.,* functional assessment staging test [FAST], clinical dementia rating [CDR]); Medication reconciliation and review for high-risk medications; Evaluation for neuropsychiatric and behavioral symptoms, including depression, including use of standardized screening instrument(s); Evaluation of safety (*e.g.,* home), including motor vehicle operation; Identification of caregiver(s), caregiver knowledge, caregiver needs, social supports, and the willingness of caregiver to take on caregiving tasks; Development, updating or revision, or review of an Advance Care Plan; Creation of a written care plan, including initial plans to address any neuropsychiatric symptoms, neuro-cognitive symptoms, functional limitations, and referral to community resources as needed (*e.g.,* rehabilitation services, adult day programs, support groups) shared with the patient and/or caregiver with initial education and support. Typically, 50 minutes are spent face-to-face with the patient and/or family or caregiver), which were developed to reflect the additional work of those practitioners furnishing primary care visits. Likewise, we proposed that practitioners in the specialty of psychiatry would not use either add-on code because psychiatrists may utilize CPT code 90785 to describe work that might otherwise be reported with a level 4 or level 5 E/M visit.

Given the broad scope of our proposals related to E/M services, we solicited feedback on any unintended consequences of those proposals. We also solicited comment on any other concerns related to primary care that we might consider for future rulemaking.

Comment: Many commenters stated that CMS needed to clarify the definition of primary care services that would fall under the scope of the primary care complexity add-on.

Some commenters suggested that ambiguity around the definition of the primary care add-on would create additional documentation burden and concern regarding audit risk. For example, many commenters presented examples of physicians of many different specialties furnishing particular services that might be considered to be primary care, such as when a dermatologist prescribes an anti-hypertensive medication, and what documentation would be required to justify billing of the add-on code.

In response to CMS' solicitation for accepted definitions of primary care, the AAFP stated that primary care services are performed by practitioners ''specifically trained for and skilled in comprehensive first contact and continuing care for persons with any undiagnosed sign, symptom, or health concern.'' The primary care physician ''provides definitive care to the undifferentiated patient at the point of first contact and takes continuing responsibility for providing the patient's comprehensive care.'' Because the definition of a primary care service hinges on the ongoing relationship with the patient, the AAFP recommended that the add-on code not be limited to established patients, but expanded to new patients when the physician has an expectation that an ongoing relationship will develop.

In response to CMS' request for comment on the circumstances when it would be appropriate for a specialist to bill for primary care services, the AAFP stated that while physicians who are not trained in the core primary care specialties can provide services focused on ''specific patient care needs related to prevention, health maintenance, acute care, chronic care, or rehabilitation'' but not within the context of ''comprehensive, first contact, and continuing care.'' Therefore, the AAFP stated that these practitioners were not providing primary care.

Response: We are appreciative of the concerns commenters shared regarding the potential risks of ambiguity in knowing when the code, as proposed, would be appropriately reported, and how the documentation would need to justify its appropriateness. The proposal to use an add-on code to account for the inherent complexity associated with primary care visits was intended to account for appropriate resource variation between primary care and other kinds of visits without imposing additional documentation to justify its being reported for each and every visit with a beneficiary. We note that this proposal was in keeping with our longstanding assessment that there are certain complexities inherent in furnishing some kinds of E/M visits that the current E/M coding and visit levels do not fully recognize. We also believe that in almost all cases where physicians and other professionals are furnishing primary care, information already in the medical record or on the claim, such as physician specialty, diagnosis codes, other service codes billed (chronic care or transitional care management services), or patient relationship codes would serve as sufficient documentation that the furnished visit met the primary care description. For example, we would expect that most practitioners enrolled in such specialties as family medicine, internal medicine, pediatrics, and geriatrics would be billing the primary care visit complexity add-on with every office/outpatient E/M visit. The visits themselves would still need to be

medically reasonable and necessary in order for the practitioner to report the service, and the documentation would need to illustrate medical necessity of the visit, but we believe the appropriateness of using the primary care add-on to the visit would not necessitate additional documentation. We also agree with the AAFP that billing this code should not be limited to established patients, as a primary care visit may also be a new patient visit where the expectation of an ongoing relationship is present.

For example, a 68-year-old woman with progressive congestive heart failure (CHF), diabetes and gout on multiple medications transfers care to a new primary care clinician. During a visit to establish care, the clinician discusses the patient's current health issues that includes confirmation that her CHF symptoms have remained stable over the past 3 months. She also denies symptoms to suggest hyper or hypoglycemia, but does note pain in her right wrist and knee. Based on the patient's history, physical exam findings and discussion, the clinician adjusts the dosage of some of the patient's medications, instructs the patient to take acetaminophen for her joint pain, request copies of prior diagnostic studies from his former providers, and orders laboratory tests to assess glycemic control, metabolic status and kidney function. The practitioner also discusses age appropriate prevention with the patient and orders a pneumonia vaccination and screening colonoscopy.

In this case, since the practitioner is furnishing care for conditions across a spectrum of diagnoses and organ systems and coordinating the patient's care among multiple health care providers, the practitioner would report the primary care resource add-on with the appropriate E/M code. We anticipate that the issues addressed by a physician will often track with the physician's specialty training. Therefore, it would not be unexpected for this physician to be reporting the primary care resource add-on code for almost all E/M visits, provided they are furnishing primary care during those visits. We would expect that claims records would include the billing physician's specialty and that the medical record would include the diagnoses for the patient, and the clinician's assessment and plan for that visit. This information would serve as sufficient documentation that the furnished visit met the primary care complexity description and so there would be no need to provide additional documentation.

We agree with AAFP that the vast majority of visits billed with the primary care complexity add-on would be performed by the previously mentioned specialties; however, we also recognize that there is not consensus among medical specialties on this definition. We also believe that there are clinical scenarios when a specialist may perform primary care. For example:

A cardiologist serving beneficiaries in a rural location provides care for complex cardiac conditions as well as primary care in her clinical practice. This practitioner sees a 75-year-old female with hypertension, coronary artery disease, and osteoarthritis for routine follow up care. During the visit, the patient describes a worsening pain in her hip and dizziness for the past month. The clinician notes gait instability and painful motion of her hip, and significant orthostasis upon standing. The clinician observes that the patient has made errors in filling her pill box, and has a new counter anti-histamine that the patient obtained from her friend to help with sleep. The clinician conducts a brief cognitive test, ascertains that the patient had not fallen, and recommends stopping the anti-cholinergic medication, and adjustment of her blood pressure medications with close follow-up monitoring. In addition to reviewing the patients' cardiac status, initiating imaging to evaluate the hip, the clinician also recommends a home safety evaluation and schedules a follow-up visit to include her adult daughter who lives nearby. In this case, since the clinician is furnishing primary care services as well as specialty cardiology services, the physician would appropriately be reporting the primary care complexity add-on in addition to the appropriate E/M visit code. We would expect that the claims record would include the billing physician's specialty. The medical record would also include the diagnoses for the patient and clinician's assessment and plan for that visit.

This information would serve as sufficient documentation that the furnished visit met the primary care and non-procedural specialty care complexity adjustment descriptions and so there would be no need to provide additional documentation.

Comment: Some commenters supported the creation of an add-on code for primary care visit complexity, but pointed out that, as proposed, the primary care add-on code was significantly undervalued, particularly in comparison to the add-on code for visit complexity associated with specialty care. Commenters were critical of the approach CMS used to value the proposed primary care add-on code. A few commenters suggested that CMS should equalize the values between the two add-on codes.

The AAFP did not support the add-on code, and instead suggested that CMS provide a 15 percent increase in payment to physicians who list their primary practice designation as family medicine, internal medicine, pediatrics, or geriatrics.

Response: The proposed valuation for the primary care complexity add-on code was based on the application of family budget neutrality to the proposed changes in other codes and payment policies—most notably applying an MPPR to E/M office/outpatient visit codes furnished in the same day as a procedure. While we continue to believe that budget neutrality within the code family can be an appropriate approach to assess relative resources under the PFS, we appreciate and agree with commenters' concerns regarding the asymmetry between the proposed values for the add-on codes for non-procedural specialty care complexity and primary care complexity. We also note that we are not finalizing the proposed multiple procedure payment adjustment for these E/M office/outpatient visit codes.

Comment: Many commenters did not support separate payment for an add-on code to account for the resource costs for the inherent complexity associated with furnishing non-procedural specialty visits. Commenters assumed that billing the visit complexity add-on code was limited to the specialties included in the code descriptor, constituting specialty-specific payment prohibited by statute. Commenters also stated that CMS was unclear about the rationale for which specialties were included in the code descriptor, and that the explanation provided was ambiguous and not clinically derived. Several commenters expressed concern that CMS did not include the work of a number of specialties that routinely furnish non-procedural specialist care and that primarily report that care through the office/outpatient E/M code set. Many commenters representing these specialties requested that CMS include them in the code descriptor. These include: Nephrology, infectious disease, gastroenterology, psychiatry, ophthalmology, pediatric ophthalmology, orthopedic surgery, sports medicine, neuro-ophthalmology, hepatology, interventional radiology, pulmonology, dermatology, medical oncology, Hematopoietic Cell Transplantation and Cellular Therapy (HCTCT), hospice, and palliative medicine. Some commenters also noted

that nurse practitioners are frequently specialized and recommended that they be eligible to bill for the specialty complexity add-on. A few commenters stated that Medicare enrollment specialty was a poor proxy for patient complexity, and that instead, CMS should rely on the patient's diagnosis. Several commenters did not agree with the proposed values for the add-on code, but none provided alternatives for CMS to consider.

Many commenters were also concerned about the documentation requirements that would be associated with the new coding, stating that CMS was replacing the burden of documenting the level of E/M visit with the burden of documenting proper use of the visit complexity add-ons. A few commenters did support the add-on codes in concept as a useful way of adjusting payment for different types of visits, although several commenters pointed out that the add-on codes were not valued sufficiently to overcome any reduction in payment due to the proposed single payment rate for visit levels. Commenters requested that CMS clarify whether the add-on codes could be billed concurrently for the same visit.

Response: We are appreciative of the concerns commenters shared regarding the potential risks of ambiguity in knowing when the code, as proposed, would be appropriately reported, and how the documentation would need to justify its appropriateness. The proposal to use an add-on code to account for the inherent complexity associated with non-procedural specialty care visits was intended to account for appropriate resource variation between non-procedural specialty care and other kinds of visits without imposing additional documentation to justify its being reported for each and every visit with a beneficiary. We noted that this proposal was in keeping with our longstanding assessment that there are certain complexities inherent in furnishing some kinds of E/M visits that the visit levels do not fully recognize. We also believed that in almost all cases where physicians and other professionals are furnishing specialty care that is centered around separately reportable office/outpatient visit codes (as opposed to procedural codes with global periods, for example), information already in the medical record or in the claims history for that practitioner, such as physician specialty, diagnosis codes, and/or other service codes billed (chemotherapy administration) would serve as sufficient documentation that the furnished visit met the description of non-procedural specialty care. For example, we would expect that most practitioners enrolled in the specialties used as descriptive examples in the proposed descriptor would report the complexity add-on with every office/outpatient E/M visit. The visits themselves would still need to be medically reasonable and necessary in order for the practitioner to report the service, and the documentation would need to illustrate medical necessity of the visit, but we believe the appropriateness of routinely using the add-on to the visit would not necessitate additional documentation for each and every visit.

A clinical scenario for the use of this proposed add-on code would be a 72-year-old female with colon cancer who sees her oncologist to discuss her treatment plan, including surgical and chemotherapeutic options. Since this E/M visit focuses on oncologic care, the physician would report the specialty care add-on in addition to the appropriate E/M visit code. It would not be unexpected for this physician to be reporting the non-procedural specialty care complexity add-on code for almost all E/M visits, provided they are providing oncologic care during those visits. We would expect that the claims record would include the billing physician's specialty. The medical record would also include the diagnoses for the patient and clinician's assessment and plan for that visit. This information would serve as sufficient documentation that the furnished visit met the description of non-procedural specialty care complexity and so there would be no need to provide additional documentation.

We also agree with commenters that the code descriptor omitted several specialties that provide this type of visit, such as nephrology, psychiatry, pulmonology, infectious disease, and hospice and palliative care medicine. We also believe that there are circumstances where specialties not included in the code descriptor would appropriately bill this add-on code for inherent visit complexity. As discussed previously, appropriate reporting of the specialty care resource add-on code should be apparent based on the nature of the clinical issues addressed at the E/M visit, and not limited by the practitioner's specialty.

In cases where appropriate reporting of the add-on code is not as apparent, we understand that some degree of visit-specific documentation might be necessary for purposes of demonstrating that the add-on code was reported appropriately. For example, a physician enrolled in Medicare as a pathologist may serve a broader role in a rural community, including furnishing primary care. In this instance, we expect that there would be documentation in the medical record to illustrate that it was appropriate for this physician to bill using the primary care complexity add-on. However, we do not believe that such scenarios would represent the majority of instances of appropriate use of the code. Additionally, we note that information usually included in medical documentation, combined with diagnosis coding, would likely suffice for purposes of documentation.

After consideration of the comments, we are finalizing for 2021 the proposal to introduce add-on codes that would adjust payment for new and established E/M office/outpatient visits to account for inherent complexity in primary care and non-procedural specialty care. We are finalizing the code descriptor for the add-on code for inherent complexity of E/M furnished primary care (HCPCS code GPC1X) as described in Table 22. We are also finalizing the code descriptor for the add-on code for inherent complexity of E/M furnished with non-procedural specialty care (HCPCS code GCG0X) in Table 22, and we note that we have included refinements to refer to additional kinds of non-procedural specialty care as suggested by commenters and clarifying that it could be reported for both new and established patients. We note that we are not including in the descriptor references to specialty care that routinely involves significant procedural interventions, such as interventional radiology and dermatology, since we do not agree with commenters that these kinds of specialty care are routinely considered to be ''non-procedural specialist care.'' However, we note that when clinical circumstances support it, practitioners not enrolled among the specialties expressly listed within the code descriptor may bill the inherent visit complexity add-on codes. We are also finalizing as proposed the code descriptor for inherent complexity of E/M furnished with primary care (HCPCS code GPC1X) with the refinement of including that it could be reported for both new and established patients. The add-on codes to account for inherent complexity in primary care and non-procedural specialty care could only be reported with E/M office/outpatient levels 2 through 4 visits. We note that for this and the other HCPCS G-codes we are finalizing for CY 2021, we are retaining the placeholder HCPCS code numbers until they are replaced through our standard process.

TABLE 22—FINALIZED CODE DESCRIPTORS FOR VISIT COMPLEXITY ADD-ONS

HCPCS	Descriptor
GPC1X	Visit complexity inherent to evaluation and management associated with primary medical care services that serve as the continuing focal point for all needed health care services (Add-on code, list separately in addition to level 2 through 4 office/outpatient evaluation and management visit, new or established).
GCG0X	Visit complexity inherent to evaluation and management associated with non-procedural specialty care including endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, interventional pain management, cardiology, nephrology, infectious disease, psychiatry, and pulmonology (Add-on code, list separately in addition to level 2 through 4 office/outpatient evaluation and management visit, new or established).

We again note that we are finalizing the add-on codes for primary care and non-procedural specialized care complexity adjustment, as well as other payment and coding changes to be implemented for E/M office/outpatient visits for CY 2021. We are specifying the later date, in great part, so that we have an opportunity to fully consider public comments and other important input from stakeholders on potential refinements in code and service definitions that can be used with ease, when appropriate, and by practitioners whom we currently believe are disproportionately burdened under the current coding and documentation requirements and, more generally, other important information involving coding and payment for E/M services.

After considering the public comments, we agree that the complexity associated with furnishing a primary care visit is equivalent to that associated with furnishing a non-procedural specialty care visit, and therefore, the two codes should be valued equally. We are finalizing, for 2021, the input values for these two codes as reflected in Table 23.

We note that these inputs reflect our proposed valuation of the non-procedural specialty complexity code, based on a modified crosswalk from CPT code 90785 as discussed in the CY 2019 PFS proposed rule (83 FR 35842).

TABLE 23—INPUTS FOR HCPCS CODES GCG0X AND GPC1X FINALIZED FOR 2021

HCPCS	Physician time	Work RVU	MP RVU
GCG0X	8.25	0.25	0.02
GPC1X	8.25	0.25	0.02

We also note that, while our policy will result in our inclusion of these input values in developing proposed rates for CY 2021, we also recognize that we routinely accept recommendations from the RUC and other stakeholders regarding appropriate valuation for PFS services, and would consider such recommendations regarding appropriate valuation for these services under our usual, annual process for receiving recommendations for PFS services.

In response to the commenters' concerns regarding the interactions between this code and the other codes that describe more complex E/M visits, we are clarifying that these add-on codes are intended to serve as a corollary to the single payment rate for E/M office/outpatient visit codes defined as levels 2 through 4 to provide for more appropriate recognition of the variations in resources involved in furnishing those services, and not to be used in association with E/M office/outpatient level 1 or level 5 visits.

While we believe that in most cases practitioners would only be reporting either the primary care complexity code or non-procedural specialty care complexity code, we believe there are some very rare circumstances where use of both codes might be appropriate. We return to our example of the cardiologist serving beneficiaries in a rural location who provides care for complex cardiac conditions as well as primary care in her clinical practice. Since the needs of the community prompt this physician to provide primary care services as well as specialty cardiology services, we would expect that she would report the primary care complexity add-on code and non-procedural specialty care complexity add-on code in addition to the appropriate E/M visit code when both primary care and non-procedural specialty care are furnished in connection with E/M visits.

(c) HCPCS G-Coded To Describe Podiatric E/M Visits

As described earlier, the vast majority of podiatric visits are reported using lower level E/M codes, with most E/M visits billed at a level 2 or 3, reflecting the type of work done by podiatrists as part of an E/M visit. Therefore, while the proposed consolidation of documentation and payment for E/M code levels 2 through 5 was intended to better reflect the universal elements of E/M visits across specialties and patients, we believed that podiatric E/M visits were not accurately represented by the consolidated E/M structure. In order for payment to reflect the resource costs of podiatric visits, we proposed to create two HCPCS G codes, HCPCS codes GPD0X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, new patient) and GPD1X (Podiatry services, medical examination and evaluation with initiation of diagnostic and treatment program, established patient), to describe podiatric E/M services. Under this proposal, podiatric E/M services would be billed using these G-codes instead of the generic office/outpatient E/M visit codes (CPT codes 99201 through 99205 and 99211 through 99215). We proposed to create these separate G-codes for podiatric E/M services to differentiate the resources associated with podiatric E/M visits rather than propose a negative add-on adjustment relative to the proposed single payment rates for the generic E/M levels 2 through 5 codes. Therefore, we proposed to create separate coding to describe these services, taking into account that most podiatric visits are billed as level 2 or 3 E/M codes. We based the coding structure and code descriptor on CPT codes 92004 (Ophthalmological services: Medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits) and 92012

(Ophthalmological services: Medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient), which describe visits specific to ophthalmology. To accurately reflect payment for the resource costs associated with podiatric E/M visits, we proposed a work RVU of 1.35, a physician time of 28.11 minutes, and direct PE inputs totaling $22.53 for HCPCS code GPD0X, and a work RVU of 0.85, physician time of 21.60 minutes, and direct PE inputs totaling $17.07 for HCPCS code GPD1X. These values were based on the average rate for the level 2 and 3 E/M codes (CPT codes 99201–99203 and CPT codes 99211–99212, respectively), weighted by podiatric volume.

Comment: Commenters opposed making separate payment for podiatric E/M visits using distinct coding. Commenters stated that, by creating separate coding and payment to describe these types of visits, CMS was singling out podiatrists and devaluing podiatric physicians' status among their peer physicians. Some commenters questioned the legality of our proposal since it would effectively pay physicians of different specialties different amounts for services that CPT considers to be the same. Furthermore, commenters stated that the proposed rates for podiatric E/M visits did not reflect the resource costs associated with providing podiatric care. Commenters also objected to the use of the ophthalmology visit codes as a precedent, stating that the significant practice expense associated with ophthalmologic visits was the impetus for separate coding for those services.

Response: Based on our consideration of the information presented by commenters, we are persuaded that there could be a perceived devaluation of the breadth and value of care associated with podiatric visits by use of separate coding for these visits. Given these potential negative consequences, we are not finalizing the proposal to adopt separate coding for podiatric E/M visits. However, as our discussion in the preceding sections reflects, we do not agree with the commenters that all office/outpatient visits furnished by physicians are only distinguishable by visit levels under the current CPT definitions. Instead, we believe that, like procedural services, visit services and their associated relative resource costs can vary greatly by the kind of care that is provided by particular physicians. We also believe that physician specialties can often reflect different approaches to medical care, and that the nomenclature used to describe and define various clinical specialties is useful for purposes of distinguishing among the types of services, including visits, furnished by physicians using these different approaches.

We also acknowledge that our proposal should have clearly articulated that we were not proposing to prohibit podiatrists from reporting the E/M office/outpatient visit codes under circumstances where those codes more accurately described visits with particular patients or, more broadly, visits generally furnished by particular podiatrists.

We also would like to note that our analysis of claims data indicates that the vast majority of podiatric visits are reported as level 2 and 3 visits. We believe that these claims data are an important piece of evidence regarding the relative resource costs of office/outpatient visits that are podiatric in nature. Therefore, we do not agree with the commenters that stated that our proposal did not reflect resource-based valuation, since we consider Medicare claims data to be one of the best sources of data regarding the resources involved in furnishing PFS services.

After considering the comments regarding this proposal, we are not finalizing our proposal to create separate coding for podiatric E/M services and establish payment rates for podiatric E/M visits based on historical billing patterns. We acknowledge the commenters' concerns that creating specific coding as we proposed could suggest a devaluation of services furnished by podiatrists. Therefore, we are not finalizing creation of specific coding and payment values for podiatric E/M visits. For CY 2021, podiatric E/M visits would be reported and paid using the E/M coding and payment structure applicable to other E/M office/outpatient visits.

(d) Adjustment to the PE/HR Calculation

As we explain in section II.B. of this final rule, Determination of Practice Expense (PE) Relative Value Units (RVUs), we generally allocate indirect costs for each code on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. Indirect expenses include administrative labor, office expense, and all other PEs that are not directly attributable to a particular service for a particular patient. Generally, the proportion of indirect PE allocated to a service is determined by calculating a PE/HR based upon the mix of specialties that bill for a service.

As described earlier, E/M visits comprise a significant portion of allowable charges under the PFS and are used broadly across specialties such that our proposed changes can greatly impact the change in payment at the specialty level and at the practitioner level. Our proposals sought to simplify payment for E/M visit levels 2 through 5, and to additionally take into consideration that there are inherent differences in primary care-focused E/M services and in more complex E/M services such that those visits involve greater relative resources, while seeking to maintain overall payment stability across specialties. However, establishing a single PFS rate for new and established patient E/M levels 2 through 5 would have a large and unintended effect on many specialties due to the way that indirect PE is allocated based on the mixture of specialties that furnish a service. The single payment rates proposed for E/M levels 2 through 5 could not reflect the indirect PE previously allocated differentially across those 8 codes. Historically, a broad blend of specialties and associated PE/HR has been used in the allocation of indirect PE and MP RVUs to E/M services to determine payment rates for these services. As this proposal would have significantly altered the PE/HR allocation for the office/outpatient E/M codes and any previous opportunities for the public to comment on the data would not have applied to these kinds of E/M services, we did not believe it was in the public interest to allow the allocation of indirect PE to have such an outsized impact on the payment rates for this proposal. Due to the magnitude of the proposed coding and payment changes for E/M visits, it was unclear how the distribution of specialties across E/M services would change. We were concerned that such changes could produce anomalous results for indirect PE allocations since we did not yet know the extent to which specialties would utilize the proposed simplified E/M codes and proposed G-codes. In the past, when utilization data are not available or do not accurately reflect the expected specialty mix of a new service, we have proposed to crosswalk the PE/HR value from another specialty (76 FR 73036). As such, we proposed to create a single PE/HR value for E/M visits (including all of the proposed HCPCS G-codes discussed above) of approximately $136, based on an average of the PE/HR across all specialties that bill these E/M codes, weighted by the volume of those specialties' allowed E/M services. We believed that this was consistent with

the methodology used to develop the inputs for the proposed simplified E/M payment for the levels 2 through 5 E/M visit codes, and that, for purposes of consistency, the new PE/HR should be applied across the additional E/M codes. We believed a new PE/HR value would more accurately reflect the mix of specialties billing both the generic E/M code set and the add-on codes. If we finalized this proposal, we would have considered revisiting the PE/HR after several years of claims data become available.

The following is a summary of the comments we received on this proposal.

Comment: Many commenters noted that the application of a single PE/HR value to E/M visit codes had significant, if unintended, consequences for the allocation of indirect PE across the PFS. Commenters also stated that CMS did not provide enough information as to how we arrived at the PE/HR value, which resulted in difficulty among external stakeholders in modeling the proposal.

Response: We appreciate commenters highlighting the broad ramifications of this proposal.

After consideration of these comments, we will not be finalizing a separate PE/HR for office/outpatient E/M visits.

(e) HCPCS G-Code for Extended Visit Services

Time is often an important determining factor in the level of care, which we consider in our proposal described earlier that physicians and other practitioners can use time as the basis for documenting and billing the appropriate level of E/M visit for purposes of Medicare payment. Currently there is inadequate coding to describe services where the primary resource of a service is physician time. CPT codes 99354 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; first hour (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)) and 99355 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; each additional 30 minutes (List separately in addition to code for prolonged service)) describe additional time spent face-to-face with a patient and may be billed when the applicable amount of time exceeds the typical service time of the primary procedure.

Stakeholders have informed CMS that the ''first hour'' time threshold in the descriptor for CPT code 99354 is difficult to meet and is an impediment to billing these codes (81 FR 80228). In response to stakeholder feedback and as part of our proposal to implement a single payment rate for E/M visit levels 2 through 5 while maintaining payment accuracy across the specialties, we proposed to create a new HCPCS code GPRO1 (Prolonged evaluation and management or psychotherapy service(s) (beyond the typical service time of the primary procedure) in the office or other outpatient setting requiring direct patient contact beyond the usual service; 30 minutes (List separately in addition to code for office or other outpatient Evaluation and Management or psychotherapy service)). Given that the physician time of HCPCS code GPRO1 is half of the physician time assigned to CPT code 99354, we proposed a work RVU of 1.17, which is half the work RVU of CPT code 99354.

Comment: Many commenters, including the AMA, were supportive of the creation of this code in isolation from the rest of the E/M coding and payment proposals. Other commenters stated that the code was unnecessary, that current coding was sufficient to account for additional time spent with patients, and that it was unrealistic to expect that most physicians would be able to meet the time threshold in enough volume to offset the negative impacts of the single payment rate for E/M office/outpatient new and established patient visit levels 2 through 5. Some commenters suggested more documentation would be necessary to bill this new code. Many commenters also stated that referring to this code as ''prolonged services'' was inconsistent with coding conventions and CPT definitions, as the CPT Editorial Panel defined prolonged services as an unusual amount of time spent beyond the typical time and these commenters understood from the proposal that the code was intended to be reported more frequently. Many commenters stated that it would be difficult to assess how the code might be used without more specific guidelines regarding how time would be counted, particularly with regard to how many minutes would be assumed to be associated with the companion visit code and whether or not we adopt the usual CPT coding convention for appropriate reporting of the time-based code when over half the number of minutes (16 in this case) have been spent. Several commenters suggested that 16 minutes beyond the time associated with the proposed single payment rate (31 minutes as described by many of these commenters) would mean that the code could only be reported after 47 minutes spent with an established patient. These commenters suggested that that threshold would likely result in the code being used rarely.

Response: We agree with commenters that current coding describing prolonged services is not sufficient to capture additional time spent with patients, especially in the context of creating a single payment rate for office/outpatient E/M levels 2 through 4. We believe that time is a critical resource cost for physicians and other practitioners, and the time spent with patients is a great benefit to Medicare beneficiaries. We also note that we are required by statute to consider time, along with intensity, in establishing the work relative value units that determine PFS payments. We are therefore finalizing for 2021 separate payment for HCPCS code GPRO1, and are finalizing the input values as proposed.

We appreciate commenters' concerns regarding the current definitions and use of ''prolonged'' as applying to unusually long visits. We believe that time spent with patients ought to vary based on the particular needs of the patient and that variations in time spent face-to-face with the patient can be critical in defining differences between the services being furnished. Consequently, we agree that for many practitioners, times that extend beyond what we, or the CPT Editorial Panel, consider to be typical under the current visit code descriptors and definitions, might, in actual practice, be routine. We also note that many services, such as psychotherapy, are currently defined and paid based on the duration of the service.

However, since commenters have suggested that the term ''prolonged'' has been established in coding convention as applying only to unusually long visits as opposed to use in describing routine variations in the amount of time spent during visits with patients, we believe using an alternative term, like ''extended visit'' may serve to underscore our expectation that the length of some visits might exceed the typical length, but would not be unusual for certain practices or patients.

We also note that, for audit purposes, we would expect the medical record to reflect that the billing practitioner actually spent the amount of time with the patient described by the code and that the visit itself, in its entirety, was medically necessary; but we would not

expect additional documentation to demonstrate that the difference in time between the visit code and the extended visit code was, in isolation of the visit, medically necessary.

For CY 2021, we are finalizing a coding and payment policy to account for the additional resources required when practitioners need to spend extended time with their patients during particular E/M office/outpatient level 2 through 4 visits, regardless of the kind of care the practitioner is furnishing or whether or not the medical complexity of the visit is the determining factor for the length of visit. After considering the comments, we believe that 30 additional minutes (which, in accordance with CPT coding conventions for timed codes, can be reported after 15 additional minutes is spent with the patient) is an appropriate interval of time after which to reflect the additional resource costs associated with patient visits that require more time than is typical for the visit. After considering the questions and concerns expressed by commenters about how the new add-on code would be used, and in particular, the number of minutes that would serve as the basis for counting time toward an extended visit (for example, whether we would look to the typical time for the companion E/M code level and use the CPT coding convention for time-based codes), we acknowledge that it would not be workable to use the same conventions as are used for the prolonged service codes.

Under the current conventions used in reporting the existing prolonged service codes, the prolonged codes are defined by a set number of additional minutes beyond time associated with individual companion visit codes. For example, the initial prolonged services code describes 60 minutes of prolonged time beyond the time associated with the individual companion visit code. The current level 5 existing patient code is described by CPT as typically requiring 40 minutes with the patient, so that when reporting 99215 with the prolonged service code, the time being described is a total of 100 minutes (40 minutes for the level 5 code and 60 minutes for the initial prolonged code). Under applicable coding conventions, the code is reportable, when at least half the number of described minutes for the prolonged code is spent. This means that the initial prolonged service code can be reported with a level 5 existing patient code after 70 minutes (40 minutes for the full time associated with the level 5 visit and 30 minutes for half the number of minutes described by the initial prolonged service code).

We recognize that to implement use of either new or even the existing prolonged services code in the context of using a single payment rate for codes of varying levels, we would need to be clear about what time should be used for the companion visit codes. Currently, practitioners rely on the CPT ''typical'' times to determine the time for the visit codes of varying levels. This means that the thresholds for visit time required before the prolonged services can be reported are higher when higher level visits are reported in comparison to lower level visits. Under current payment rates, this situation is offset to some degree by the higher overall payment in circumstances where the higher level visit code is reported.

Because we are finalizing a single payment rate for levels 2–4, however, use of the ''typical'' CPT times as the basis for reporting add-on codes that describe additional time would mean that lower level visits that take more time would be paid at higher rates than higher visit rates that take the same amount of time. We believe that because we are paying a single rate for these services (as each of the codes describe a single ''typical'' for purposes of payment), we should also use a single number of minutes for purposes of reporting time-based add-on codes: The weighted average of the ''typical'' times associated with each of the codes that comprise the single payment rate.

One approach to implementing this would be to revise our billing rules to instruct practitioners to use the weighted average of the ''typical'' times associated with each of the codes that comprise the single payment rate, instead of the ''typical'' CPT times associated with the individual billed codes. We could apply this definition broadly to specify use of the weighted average typical times for level 2–4 codes regardless of whether or not they are being reported with time-based add-on codes, but we do not want to prevent practitioners from appropriately reporting visits based on the time defined as typical under the CPT code descriptors for office/outpatient E/M visits, especially since we are adopting a policy to allow clinicians to use time as the basis for documentation and code selection. Alternatively, we could require practitioners to use the weighted average of the ''typical'' times associated with each of the codes that comprise the single payment rate only in cases where time-based add-on codes are also being reported. However, we believe using two separate rules, especially one that deviates from the typical times established for the different visit levels that will continue to be routinely reported by a wide range of practitioners, would be likely to cause confusion.

After consideration of these issues and considering the alternatives, we are finalizing a code descriptor for the extended visit code that describes a single range of minutes that applies to the overall duration of face-to-face time during the visit, without regard to which level 2, 3, or 4 E/M office/outpatient visit was reported. This range is 34 to 69 minutes, so that the add-on code for extended visits would be appropriately reported in any case where a medically necessary E/M office/outpatient visit, reported using levels 2 through 4, required between 34 and 69 minutes (for established patients) and between 38 and 89 minutes (for new patients) of face-to-face time with the billing practitioner. We calculated the lower end of the range by summing the weighted average of intraservice times for the component codes that make up the single payment rate for level 2 through 4 visits (23 minutes for new and 19 minutes for established) and the additional amount of time required to bill the proposed add-on code (15 minutes under coding convention for prolonged services). The upper range of the use of the extended visit code is 69 minutes for established patients and 89 minutes for new patients.

We note that to report the current prolonged codes or the new extended services code, practitioners need to note that the requisite number of minutes were spent with the patient. We also note that we are finalizing the policy to allow practitioners the choice to use time as the basis for code selection for level 2 through 5 all office/outpatient E/M codes beginning in 2021 regardless of whether or not counseling and/or coordination of care accounts for more than 50 percent of the face-to-face physician/patient encounter. Under the new policy, then, any visits that exceed the length of the time ranges of the level 2 through 4 visit codes plus the extended visit code, could be reported using the level 5 visit code and the existing prolonged services code. Table 24A illustrates these rules:

TABLE 24A—MINUTES SPENT ON EXTENDED OUTPATIENT VISITS

[Established and new patients]

Established patient			New patient		
Level	Minutes spent	Codes reported	Level	Minutes spent	Codes reported
1	N/A		1	N/A	
2 ..... 3 ..... 4	34–69	99212/3/4+extended services G-code	2 ..... 3 ..... 4	38–89	99203/4/5+extended services G-code.
5	70+	99215+99354	5	90+	99205+99354.

The new extended services code will be described as GPRO1 (Extended time for evaluation and management service(s) in the office or other outpatient setting, when the visit requires direct patient contact of 34–69 total face-to-face minutes overall for an existing patient or 38–89 minutes for a new patient (List separately in addition to code for level 2 through 4 office or other outpatient Evaluation and Management service)). We again note that we are finalizing payment and coding changes to be implemented for E/M office/outpatient visits for CY 2021. We will consider any changes that are made to CPT coding, including for prolonged services, and recommendations regarding appropriate valuation of new or revised codes, through our annual rulemaking process.

In order to estimate the potential impact of the proposed changes in the proposed rule, we modeled the results of several options and examined the estimated resulting impacts in overall Medicare allowed charges by physician specialty. Because we are not finalizing many of the changes for CY 2019 as proposed, we believe the inclusion of those same discussions in this final rule is unnecessary and could potentially be confusing. We point readers to the CY 2019 PFS proposed rule, (83 FR 35844 through 35847) for discussion of the analyses relevant to the proposals. For analysis regarding the potential impacts of the alternatives considered in development of this final rule, we direct readers to the section VII. of this final rule, Regulatory Impact Analysis, in addition to the discussion that follows.

To compare the overall payment impact for the changes in payment for visit services between the current policy as of 2018 and the policies we are finalizing starting in 2021, we provide a narrative example in the paragraph below and Table 24B. In CY 2018, a physician would bill a level 4 E/M visit and document using the existing documentation framework for a level 4 E/M visit. The payment rate would be approximately $109 in the office setting. In CY 2021, the physician would bill the same visit code for a level 4 E/M visit, with the option to document the visit according to the minimum documentation requirements for a level 2 E/M visit if they choose to document based on MDM, or the 1995 or 1997 guidelines, or to document on the basis of time. The physician might also bill either of the proposed add-on codes (HCPCS codes GPC1X or GCG0X) depending on the type of patient care furnished, and could bill the extended services code if she met the time threshold for this code. The combined payment rate for the E/M visit code, plus the extended services code, and either HCPCS code GPC1X or GCG0X would be approximately $170.

TABLE 24B: Comparison of 2018 and 2021 Estimated National Payment Amounts for Visits

	Complexity Level under CPT	Visit Code	Visit Code	Visit Code With Either Primary or specialized care add-on code*	Visit Code with New Extended Services Code
New Patient	Level 2	$76	$130	$143	$197
	Level 3	$110			
	Level 4	$167			
	Level 5	$211	$212		
Established Patient	Level 2	$45	$90	$103	$157
	Level 3	$74			
	Level 4	$109			
	Level 5	$148	$149		

*In cases where one could bill both the primary and specialized care add-on, there would be an additional $13.

(f) Alternatives Considered

We considered a number of other options for simplifying coding and payment for E/M services to align with the proposed reduction in documentation requirements and to better account for the resources associated with inherent complexity, visit complexity, and visits furnished on the same day as a 0-day global procedure. As we are finalizing a policy very similar to one of the alternatives we considered for the proposed rule, we believe it would be confusing to include a detailed discussion of that policy as an alternative considered. We therefore direct interested readers to the CY 2019 PFS proposed rule (83 FR 35847).

Section 101(f) of the MACRA added a new subsection (r) under section 1848 of the Act entitled Collaborating with the Physician, Practitioner, and Other Stakeholder Communities to Improve Resource Use Measurement. Section 1848(r) of the Act requires the establishment and use of classification code sets: Care episode and patient condition groups and codes; and patient relationship categories and codes. As described in the CY 2018 PFS final rule, we finalized use of Level II HCPCS Modifiers as the patient relationship codes and finalized that Medicare claims submitted for items and services furnished by a physician or applicable practitioner on or after January 1, 2018, should include the applicable patient relationship codes, as well as the NPI of the ordering physician or applicable practitioner (if different from the billing physician or applicable practitioner). We noted that for CY 2018, reporting of the patient relationship modifiers would be voluntary and the use and selection of the modifiers would not be a condition of payment (82 FR 53234). The patient relationship codes are as follows: X1: Continuous/broad; X2: Continuous/focused; X3: Episodic/focused; X4: Episodic/broad; and X5: Only as ordered by another physician. These codes are to be used to help define and distinguish the relationship and responsibility of a clinician with a patient at the time of furnishing an item or service, facilitate the attribution of patients and episodes to one or more clinicians, and to allow clinicians to self-identify their patient relationships.

We considered proposing the use of the care episode and patient relationship codes to adjust payment for E/M visits to the extent that these codes are indicative of differentiated resources provided in E/M visits, and we considered using these codes as an alternative to the proposed use of G-codes to reflect visit complexity inherent to evaluation and management in primary care and certain other specialist services, as a way to more accurately reflect the resource costs associated with furnishing different kinds of E/M visits. We solicited comment on this alternative. We were particularly interested in whether the modifiers would accurately reflect the differences between resources for E/M visits across specialties and would therefore be useful to adjust payment differentially for the different types of E/M visits that we previously identified. The following is a summary of the comments we received on these items.

Comment: AAFP urged CMS not to use the patient relationship codes for the purposes of making differential payment, stating that these modifiers were never intended to adjust payment or reflect visit complexity, only to denote the relationship of the beneficiary and practitioner at any given encounter. One commenter stated that using patient relationship codes to adjust payment was an intriguing idea that should be researched further.

Response: We thank commenters for their input and will consider whether to adopt these codes for use to adjust payment at a later date through notice and comment rulemaking. We note, however, that we believe the use of the continuous care patient relationship codes stands as a good example of evidence in the claims record to support use of the primary care inherent complexity add-on code, as discussed previously.

In Table 24C, we estimate the specialty level impacts of the E/M payment and coding policies we are finalizing for 2021, calculated as if they were implemented for CY 2019.

TABLE 24C—ESTIMATED SPECIALTY LEVEL IMPACTS OF FINAL E/M PAYMENT AND CODING POLICIES IF IMPLEMENTED FOR 2019

Table 24C illustrates the estimated specialty level impacts associated with implementing our finalized policies for E/M coding and payment in CY 2019, rather than delaying until CY 2021. Table 24C shows the estimated impacts of adopting single payment rates for new and established patient E/M office/outpatient visit levels 2 through 4 (with the rates determined using input values that reflect the 5 year weighted average of current inputs for codes describing those visit levels), keeping separate rates for new and established patient E/M visit level 5 (with the rates determined using the current input values for level 5 visits), and adopting add-on codes with equal rates to adjust for the inherent visit complexity of primary care and non-procedural specialty care (with the rates determined using the input values from the proposed rule for the non-procedural specialty care complexity code). Under our finalized policies, specialties who disproportionately report lower level visits, such as podiatry, and specialties that report office/outpatient visits in conjunction with minor procedures, such as dermatology, would see the significant increases. Specialties that predominantly furnish higher level visits would have their payment decreases significantly mitigated by the maintenance of the level 5 visit and the add-on codes for inherent visit complexity for primary and non-procedural specialty care. Specialties that do not furnish office/outpatient visits generally would see modest reductions in overall payment.

We note that because our original proposal was developed more generally to maintain overall RVUs within the range of codes describing office/outpatient E/M visits, but, in response to public comment, we are not finalizing several elements of those proposals including, and especially, the multiple procedure payment reduction relating to global services billed with same day E/M services, the overall number of RVUs allocated to office/outpatient services would be increased relative to other PFS services. Under our established methodology and consistent with the governing statute, we usually apply a budget neutrality adjustment in the PFS conversion factor to account for the changes in overall RVUs. This adjustment would apply to all PFS services, and we are not finalizing any deviation from that approach for 2021. However, we also note that in some cases, we have proposed and finalized inputs for particular services that are designed to maintain the overall RVUs for those services despite changes in coding. For more detailed information on this approach to addressing valuation for families of services, we direct readers to the CY 2012 PFS final rule with comment period (76 FR 73105). We also note that while it has been our standard practice to avoid scaling the full set of work RVUs to maintain budget neutrality, we could also consider that alternative given the significance of office/outpatient visit codes in PFS relativity. Were we to consider either of these alternative

approaches for 2021, we would address them through future rulemaking.

g. Emergency Department and Other E/M Visit Settings

As we mentioned above, the E/M visit code set is comprised of individual subsets of codes that are specific to various clinical settings including office/outpatient, observation, hospital inpatient, emergency department, critical care, nursing facility, domiciliary or rest home, and home services. Some of these code subsets have three E/M levels of care, while others have five. Some of these E/M code subsets distinguish among levels based heavily on time, while others do not. Recent public comments have noted that some E/M code subsets intersect more heavily than others with hospital conditions of participation (CoP). For example, the American Psychiatric Association (APA) submitted a letter to CMS indicating that Medicare requires specific documentation in the medical record as part of the CoPs for inpatient psychiatric facilities. The APA believed that the required initial psychiatric evaluation for inpatients currently closely follows the E/M criteria for CPT codes 99221–99223, which are the codes that would be used to bill for these services. The APA stated that any changes in these E/M codes, without corresponding changes in the CoPs, could lead to the unintended consequence of adding to the burden of documentation by essentially requiring two different sets of data or areas of focus to be included, or two different documentation formats being required.

Regarding emergency department visits (CPT codes 99281–99285), we received more recent feedback through our coordinated efforts with ONC this year, emphasizing that these codes may benefit from a coding or payment compression into fewer levels of codes, or that documentation rules may need to be reduced or altered. However, in public comments to the CY 2018 PFS proposed rule, commenters noted several issues unique to the emergency department setting that we believe require further consideration. For example, commenters stated that intensity, and not time, is the main determinant of code level in emergency departments. They requested that CMS use caution in changing required elements for documentation so that medical information used for legal purposes (for example, meeting the prudent layperson standard) is not lost. They urged caution and requested that CMS not immediately implement any major changes. They recommended refocusing documentation on presenting conditions and medical decision-making. Some commenters were supportive of leaving it largely to the discretion of individual practitioners to determine the degree to which they should perform and document the history and physical exam in the emergency department setting. Other commenters suggested that CMS encourage use of standardized guidelines and minimum documentation requirements to facilitate post-treatment evaluation, as well as analysis of records for various clinical, legal, operational and other purposes. The commenters discussed the importance of extensive histories and exams in emergency departments, where usually there is no established relationship with the patient and differential diagnosis is critical to rule out many life-threatening conditions. They were cognizant of the need for a clear record of services rendered and the medical necessity for each service, procedure, diagnostic test, and MDM performed for every patient encounter.

In addition, although the RUC is in the process of revaluing this code set, some commenters stated that the main issue is not that the emergency department visit codes themselves are undervalued. Rather, these commenters noted that a greater percentage of emergency department visits are at a higher acuity level, yet payers often do not pay at a higher level of care and the visit is often inappropriately down-coded based on retrospective review. These commenters noted that the documentation needed to support a higher level of care is too burdensome or subjective. In addition, it seems that policy proposals regarding emergency department visits billed by physicians might best be coordinated with parallel changes to payment policy for facility billing of these codes, which would require more time and analyses.

Accordingly, we did not propose any changes to the emergency department E/M code set or to the E/M code sets for settings of care other than office-based and outpatient settings at this time. However, we solicited public comment on whether we should make any changes to it in future years, whether by way of documentation, coding, and/or payment and, if so, what the changes should be.

Consistent with public feedback to date, we are taking a step-wise approach and limiting our policy proposals this year to the office/outpatient E/M code set (and the limited proposal above regarding documentation of medical necessity for home visits in lieu of office visits). We may consider expanding our efforts more broadly to additional sections of the E/M visit code set in future years, and solicited public comment broadly on how we might proceed in this regard.

We received a few comments on this solicitation. We thank the commenters for their feedback and will take it into account for future rulemaking.

(h) Implementation Date

We proposed that our proposed E/M visit policies would be effective January 1, 2019. However, we were sensitive to commenters' suggestions that we should consider a multi-year process and proceed cautiously, allowing adequate time to educate practitioners and their staff; and to transition clinical workflows, EHR templates, institutional processes and policies (such as those for provider-based practitioners), and other aspects of practitioner work that would be impacted by these policy changes. We emphasized that our proposed documentation changes for office/outpatient E/M visits would be optional, and practitioners could choose to continue to document these visits using the current framework and rules, which may reduce the need for a delayed implementation. Nevertheless, practitioners who choose a new documentation framework may need time to deploy it. A delayed implementation date for our documentation proposals would also allow the AMA time to develop changes to the CPT coding definitions and guidance prior to our implementation, such as changes to MDM or code definitions that we could then consider for adoption. It would also allow other payers time to react and potentially adjust their policies. Accordingly, we solicited comment on whether a delayed implementation date, such as January 1, 2020, would be appropriate for our proposals.

Comment: With the exception of several documentation proposals, most of the commenters urged us not to finalize the E/M visit proposals, or to delay their implementation by at least one year. With the exception of our proposals regarding home E/M visits and reducing redundant recording of data, most commenters recommended that CMS engage in further work with the AMA and other stakeholders in the coming months to develop alternative approaches. Many commenters noted that our proposals regarding home E/M visits and reducing redundant recording of data would not impact payment or require extensive training or other extended preparatory time. The commenters largely recommended that CMS finalize these proposals for 2019,

but defer other documentation, coding and payment reforms to future years after obtaining additional stakeholder input. Some commenters did recommend that CMS finalize the proposed policy to allow choice among documentation methodologies while working with stakeholders to refine any coding and payment changes. A few commenters were supportive of a minimum level 2 documentation standard and intimated that this could be accomplished without changes to coding or payment, but other commenters opposed this approach.

Many stakeholders, including some commercial insurers and EHR-related associations, commented that if CMS were to finalize its proposals, the industry would need more time to prepare and CMS should delay implementation a year or more. Some commenters noted that CMS should consider not setting a date for implementation until the necessary structure is in place. Most commenters, including some insurers, urged CMS to work with the AMA or other stakeholders on alternative policies. For example, some insurers were concerned that the proposals would not allow them to understand the true complexity of care being delivered and recommended that documentation requirements should continue to be linked to complexity and, if the proposal were finalized, CMS would need to monitor various program integrity issues. They were concerned that the collapsed payment rate for level 2 through 5 E/M visits would disincentivize treatment of complex patients. Some health plans expressed concern that medical record data used to inform their payments and risk adjustment and HEDIS scores might be impacted. In response to our proposed rule, several organizations stated they are forming workgroups to conduct data analysis and develop policy alternatives, including the AMA and the Cognitive Care Alliance. The American Health Insurance Plans believed documentation requirements should continue to be linked to complexity.

Commenters were concerned there would not be enough time for developers and clinicians to make changes, leading to confusion in the market and disparate systems with other payers, in addition to other concerns about the coding and payment proposals discussed further below. The commenters were concerned about not having enough time to develop differing documentation based on payer status, and said that the burden on the clinician to determine which payer and which documentation method should not be underestimated.

Response: After consideration of public comments, we are not finalizing aspects of our proposal that would have reduced payment when E/M office/outpatient visits are furnished on the same day as certain procedures, established separate podiatric E/M visit codes, or standardized the allocation of PE RVUs for E/M visit codes. After considering the comments, for 2019 we are finalizing several of our documentation proposals that will provide some significant and immediate burden reduction but are unrelated to changes to payment and coding. Specifically, we are finalizing the proposals regarding home visits and redundant data recording (discussed above), as proposed and effective January 1, 2019. We are delaying implementation of our other final policies relating to payment for E/M visits to January 1, 2021.

J. Teaching Physician Documentation Requirements for Evaluation and Management Services

1. Background

Per 42 CFR part 415, subpart D, Medicare Part B makes payment under the PFS for teaching physician services when certain conditions are met, including that medical record documentation must reflect the teaching physician's participation in the review and direction of services performed by residents in teaching settings. Under § 415.172(b), for certain procedural services, the participation of the teaching physician may be demonstrated by the notes in the medical records made by a physician, resident, or nurse; and for E/M visits, the teaching physician is required to personally document their participation in the medical record. We received stakeholder feedback suggesting that documentation requirements for E/M services furnished by teaching physicians are burdensome and duplicative of notations that may have previously been included in the medical records by residents or other members of the medical team.

2. Implementation

We proposed to revise our regulations to eliminate potentially duplicative requirements for notations that may have previously been included in the medical records by residents or other members of the medical team. These modifications are intended to align and simplify teaching physician E/M service documentation requirements. We believed these changes would reduce burden and duplication of effort for teaching physicians. We proposed to amend § 415.172(b) to provide that, except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document that the teaching physician was present at the time the service is furnished. Additionally, the revised paragraph would specify that the presence of the teaching physician during procedures and E/M services may be demonstrated by the notes in the medical records made by a physician, resident, or nurse. We also proposed to amend § 415.174, by deleting paragraph (a)(3)(v) which requires the teaching physician to document the extent of their participation in the review and direction of the services furnished to each beneficiary. We proposed to add new paragraph (a)(6) to § 415.174 to provide that the medical record must document the extent of the teaching physician's participation in the review and direction of services furnished to each beneficiary, and that the extent of the teaching physician's participation may be demonstrated by the notes in the medical records made by a physician, resident, or nurse.

Comment: Many commenters supported the proposed regulatory changes without modifications.

Response: We appreciate the commenters' support of our proposals.

Comment: Some commenters disagreed with the proposed changes and indicated teaching physicians should continue to be personally responsible for documenting their physical presence and for verification with patients of all medical team members' documentation as it relates to the patient encounters. The commenters were concerned that the proposed changes would shift the documentation burden and responsibility from the teaching physician to the resident or nurse who has a limited number of hours of work. One commenter stated that the nurse would not be an inherent party to the teaching physician's or resident's involvement in an E/M service.

Response: While we appreciate the commenters' concerns, the purpose of these revisions to the regulations is to eliminate potentially duplicative requirements for notations that may have previously been included in the medical records by residents or other members of the medical team. The teaching physician continues to be

responsible for reviewing and verifying the accuracy of notations previously included by residents and members of the medical team, along with further documenting the medical record if the notations previously provided did not accurately demonstrate the teaching physician's involvement in an E/M service. After consideration of the comments received, we are finalizing the proposed changes to §§ 415.172(b) and 415.174 without modification.

K. GPCI Comment Solicitation

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(D) of the Act requires us to establish the GPCIs using the most recent data available. The last GPCI update was implemented in CY 2017; therefore, we are required to review and make any necessary revisions to the GPCIs for CY 2020. Please refer to the CY 2017 PFS final rule with comment period for a discussion of the last GPCI update (81 FR 80261 through 80270). Some commenters have continued to express concerns regarding some of the data sources used in developing the indices for PFS geographic adjustment purposes, specifically that we use residential rent data as a proxy for commercial rent in the rent index component of the PE GPCI—that is, the data that are used to develop the office rent component of the PE GPCI. We will continue our efforts to identify a nationally representative commercial rent data source that could be made available to CMS. In support of that effort, we were particularly interested in, and solicited comments regarding potential sources of commercial rent data for potential use in the next GPCI update for CY 2020.

We received a few comments in response to the comment solicitation, and we appreciate the commenters' feedback and input. We will consider the suggestions and information received for future rulemaking, and in particular for the CY 2020 statutorily required update to the GPCIs.

L. Therapy Services

1. Repeal of the Therapy Caps and Limitation To Ensure Appropriate Therapy

Section 50202 of the Bipartisan Budget Act of 2018 amended section 1833(g) of the Act, effective January 1, 2018, to repeal the application of the Medicare outpatient therapy caps and the therapy cap exceptions process while retaining and adding limitations to ensure therapy services are furnished when appropriate. Section 50202 also adds section 1833(g)(7)(A) of the Act which requires that after expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the previous therapy cap amounts, all therapy suppliers and providers must continue to use an appropriate modifier such as the KX modifier on claims for subsequent services in order for Medicare to pay for the services. We implemented this provision by continuing to use the existing KX modifier. By applying the KX modifier to the claim, the therapist or therapy provider is confirming that the services are medically necessary as justified by appropriate documentation in the medical record. Just as with the incurred expenses for the prior therapy cap amounts, there is one amount for physical therapy (PT) and speech language pathology (SLP) services combined and a separate amount for occupational therapy (OT) services. These KX modifier threshold amounts are indexed annually by the Medicare Economic Index (MEI). For CY 2018, the KX modifier threshold amount was $2,010 for PT and SLP services combined, and $2,010 for OT. After the beneficiary's incurred expenditures for outpatient therapy services exceed the KX modifier threshold amount for the year, claims for outpatient therapy services without the KX modifier are denied.

Along with the KX modifier thresholds, section 50202 also adds section 1833(g)(7)(B) of the Act that retains the targeted medical review (MR) process (first established through section 202 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA)), but at a lower threshold amount of $3,000. For CY 2018 (and each successive calendar year until 2028, at which time it is indexed annually by the MEI), the MR threshold is $3,000 for PT and SLP services and $3,000 for OT services. The targeted MR process means that not all claims exceeding the MR threshold amount are subject to review as they once were.

Section 1833(g)(8) of the Act, as re-designated by section 50202 of the Bipartisan Budget Act of 2018, retains the provider liability procedures which first became effective January 1, 2013, extending limitation of liability protections to beneficiaries who receive outpatient therapy services, when services are denied for certain reasons, including failure to include a necessary KX modifier.

2. Payment for Outpatient PT and OT Services Furnished by Therapy Assistants

Section 53107 of the Bipartisan Budget Act of 2018 (BBA of 2018) amended the Act to add a new subsection 1834(v) that addresses payment for outpatient therapy services for which payment is made under section 1848 or section 1834(k) of the Act that are furnished on or after January 1, 2022, in whole or in part by a therapy assistant (as defined by the Secretary). The new section 1834(v)(1) of the Act provides for payment of those services at 85 percent of the otherwise applicable Part B payment amount for the service. In accordance with section 1834(v)(1) of the Act, the reduced payment amount for such outpatient therapy services is applicable when payment is made directly under the PFS as specified in section 1848 of the Act, for example when payment is made to therapists in private practice (TPPs); and when payment is made based on the PFS as specified in section 1834(k)(3) of the Act, for example, when payment is made for outpatient therapy services identified in sections 1833(a)(8) and (9) of the Act, including payment to providers that submit institutional claims for therapy services such as outpatient hospitals, rehabilitation agencies, skilled nursing facilities, home health agencies and comprehensive outpatient rehabilitation facilities (CORFs). The reduced payment rate under section 1834(v)(1) of the Act for outpatient therapy services when furnished in whole or in part by a therapy assistant is not applicable to outpatient therapy services furnished by critical access hospitals for which payment is made as specified in section 1834(g) of the Act.

To implement this payment reduction, section 1834(v)(2)(A) of the Act requires us to establish a new modifier, in a form and manner specified by the Secretary, by January 1, 2019 to indicate, in the case of an outpatient therapy service furnished in whole or in part by a therapy assistant, that the service was furnished by a therapy assistant. Although we generally consider all genres of outpatient therapy services together (PT/OT/SLP), we did not believe there are therapy assistants in the case of SLP services, so we proposed to apply the new modifier only to services furnished in whole or in part by a physical therapist assistant (PTA) or an occupational therapy assistant (OTA). Section 1834(v)(2)(B) of the Act requires that each request for payment or bill submitted for an outpatient PT or OT

service furnished in whole or in part by a therapy assistant on or after January 1, 2020, must include the established modifier. As such, the modifier will be required to be reported on claims for outpatient PT and OT services with dates of service on and after January 1, 2020, when the service is furnished in whole or in part by a therapy assistant, regardless of whether the reduced payment under section 1834(v)(1) of the Act is applicable. However, the required payment reductions do not apply for these services until January 1, 2022, as required by section 1834(v)(1) of the Act.

To implement this provision, we proposed to establish two new modifiers to separately identify PT and OT services that are furnished in whole or in part by PTAs and OTAs, respectively. We proposed to establish two modifiers because the incurred expenses for PT and OT services are tracked and accrued separately in order to apply the two different KX modifier threshold amounts as specified by section 1833(g)(2) of the Act; and the use of the two proposed modifiers would facilitate appropriate tracking and accrual of services furnished in whole or in part by PTAs and OTAs. We additionally proposed that these two new therapy modifiers would be added to the existing three therapy modifiers—GP, GO, and GN—that are currently used to identify all therapy services delivered under a PT, OT or SLP plan of care, respectively. The addition of the two new modifiers as therapy modifiers would bring the total to five therapy modifiers, with four therapy modifiers used to report and track PT and OT services, instead of two. The GP, GO, and GN modifiers have existed since 1998 to track outpatient therapy services that were subject to the therapy caps. Although the therapy caps were repealed through amendments made to section 1833(g) of the Act by section 50202 of the Bipartisan Budget Act of 2018, as discussed in the above section, the statute continues to require that we track and accrue incurred expenses for all PT, OT, and SLP services, including those above the specified per beneficiary amounts for medically necessary therapy services for each calendar year; one amount for PT and SLP services combined, and another for OT services.

For purposes of implementing section 1834(v) of the Act through rulemaking as required under section 1834(v)(2)(C) of the Act, we proposed to define therapy assistant as an individual who meets the personnel qualifications set forth at § 484.4 of our regulations for a PTA and OTA. We proposed that the two new therapy modifiers would be used to identify services furnished in whole or in part by a PTA or an OTA; and, that these new therapy modifiers would be used instead of the GP and GO modifiers that are currently used to report PT and OT services delivered under the respective plan of care whenever the service is furnished in whole or in part by a PTA or OTA.

Effective for dates of service on and after January 1, 2020, the new therapy modifiers that identify services furnished in whole or in part by a PTA or OTA would be required to be used on all therapy claims instead of the existing modifiers GP and GO, respectively. As a result, in order to implement the provisions of the new subsection 1834(v) of the Act and carry out the continuing provisions of section 1833(g) of the Act as amended, we proposed that, beginning in CY 2020, five therapy modifiers be used to track outpatient therapy services instead of the current three. These five therapy modifiers would include two new therapy modifiers to identify PT and OT services furnished by PTAs and OTAs, respectively, and three existing therapy modifiers—GP, GO and GN—that will be used when PT, OT, and SLP services, respectively, are fully furnished by therapists or when fully furnished by or incident to physicians and NPPs.

The creation of therapy modifiers specific to PT or OT services delivered under a plan of care and furnished in whole or in part by a PTA or OTA would necessitate that we make changes to the descriptors of the existing GP and GO modifiers to clarify which qualified professionals, for example, therapist, physician, or NPP, can furnish the PT and OT services identified by these modifiers, and to differentiate them from the therapy modifiers specific to the services of PTAs and OTAs. We also proposed to revise the GN modifier descriptor to conform to the changes to the GP and GO modifiers by clarifying the qualified professionals that furnish SLP therapy services.

We proposed to define the two new therapy modifiers for services furnished in whole or in part by therapy assistants and to revise the existing therapy modifier descriptors as follows:

- New PT Assistant services modifier (to be used instead of the GP modifier currently reported when a PTA furnishes services in whole or in part): Services furnished in whole or in part by a physical therapist assistant under an outpatient physical therapy plan of care;
- New OT Assistant services modifier (to be used instead of the GO modifier currently reported when an OTA furnishes services in whole or in part): Services furnished in whole or in part by occupational therapy assistant under an outpatient occupational therapy plan of care.

We proposed that the existing GP modifier, ''Services delivered under an outpatient physical therapy plan of care'' would be revised to read as follows:

- *Revised GP modifier:* Services fully furnished by a physical therapist or by or incident to the services of another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient physical therapy plan of care.

We proposed that the existing GO modifier, ''Services delivered under an outpatient occupational therapy plan of care'' would be revised to read as follows:

- *Revised GO modifier:* Services fully furnished by an occupational therapist or by or incident to the services of another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient occupational therapy plan of care.

We proposed that the existing GN modifier, ''Services delivered under an outpatient speech-language pathology plan of care'' would be revised to be consistent with the revisions to the GP and GO modifiers to read as follows:

- *Revised GN modifier:* Services fully furnished by a speech-language pathologist or by or incident to the services of another qualified clinician—that is, physician, nurse practitioner, certified clinical nurse specialist, or physician assistant—under an outpatient speech-language pathology plan of care.

As finalized in CY 2005 PFS final rule with comment period (69 FR 66351 through 66354), and as required as a condition of payment under our regulations at §§ 410.59(a)(3)(iii), 410.60(a)(3)(iii), and 410.62(a)(3)(iii), the person furnishing outpatient therapy services incident to the physician, PA, NP or CNS service must meet the therapist personnel qualification and standards at § 484.4, except for licensure per section 1862(a)(20) of the Act. As such, we noted that only a therapist, not a therapy assistant, can furnish outpatient therapy services incident to the services of a physician or a non-physician practitioner (NPP), so the new PT- and OT-Assistant therapy modifiers cannot be used on the line of service when the rendering practitioner identified on the claim is a physician or an NPP. For therapy services billed by physicians or NPPs, whether furnished

personally or incident to their professional services, the GP or GO modifier is required for those PT or OT services furnished under an outpatient therapy plan.

We proposed that all services that are furnished in whole or in part by a PTA or OTA are subject to the use of the new therapy modifiers. A new therapy modifier would be required to be used whenever a PTA or OTA furnishes all or part of any covered outpatient therapy service. However, we did not believe the provisions of section 1834(v) of the Act were intended to apply when a PTA or OTA performs portions of the service such as administrative tasks that are not related to their qualifications as a PTA or OTA. Rather, we believed the provisions of section 1834(v) of the Act were meant to apply when a PTA or OTA is involved in providing some or all of the therapeutic portions of an outpatient therapy service. We proposed to define ''in part,'' for purposes of the proposed new modifiers, to mean any minute of the outpatient therapy service that is therapeutic in nature, and that is provided by the PTA or OTA when acting as an extension of the therapist. Therefore, a service furnished in part by a therapy assistant would not include a service for which the PTA or OTA furnished only non-therapeutic services that others without the PTA's or OTA's training can do, such as scheduling the next appointment, greeting and gowning the patient, and preparing or cleaning the room. We remind therapists and therapy providers that we do not recognize PTAs and OTAs to wholly furnish PT and OT evaluations and reevaluations, that is, CPT codes 97161 through 97164 for PT and CPT codes 97165 through 97168 for OT, but to the extent that they do furnish part of an evaluative service, the appropriate therapy modifier must be used on the claim to signal that the service was furnished in part by the PTA or OTA, and the payment reduction should be applied once it goes into effect. We continue to believe that the clinical judgment and decision making involved in furnishing an evaluation or re-evaluation is similar to that involved with establishing the therapy plan that can only be established by a therapist, physician, or NPP (NP, CNS, or PA) as specified in § 410.61 of our regulations. In addition, PTAs and OTAs are not recognized separately in the statute to enroll as practitioners for purposes of independently billing for their services under the Medicare program. For these reasons, Pub. 100–02, Medicare Benefits Policy Manual, Chapter 15, sections 230.1 and 230.2 state that PTAs and OTAs may not provide evaluative or assessment services, make clinical judgments or decisions; develop, manage, or furnish skilled maintenance program services; or take responsibility for the service. Although we expect that the therapist will continue to furnish the majority of an evaluative procedure service, section 1834(v)(1) of the Act requires that the adjusted payment amount (85 percent of the otherwise applicable Part B payment amount) be applied when a therapy assistant furnishes a therapy service in part, including part of an evaluative service.

Additionally, we would like to clarify that the requirements for evaluations, including those for documentation, are separate and distinct from those for plans of care (plans). The plan is a statutory requirement under section 1861(p) of the Act for outpatient PT services (and through sections 1861(g) and 1861(ll)(2) of the Act for outpatient OT and SLP services, respectively) and may only be established by a therapist or physician. Through § 410.61(b)(5), NPs, CNSs, and PAs are also permitted to establish the plan. This means that if the evaluative procedure is furnished in part by an assistant, the new therapy modifiers that distinguish services furnished by PTAs or OTAs must be applied to the claim; however, the plan, which is not separately reported or paid, must be established by the supervising therapist who furnished part of the evaluation services as specified at § 410.61(b). When an evaluative therapy service is billed by a physician or an NPP as the rendering provider, either the physician/NPP or the therapist furnishing the service incident to the services of the physician or NPP, may establish the therapy plan in accordance with § 410.61(b). All regulatory and subregulatory plan requirements continue to apply.

To implement the new statutory provision at section 1834(v)(2)(A) of the Act, we proposed to establish two new therapy modifiers to identify the services furnished in whole or in part by PTAs and OTAs. As required under section 1834(v)(2)(B) of the Act, claims from all providers of PT and OT services furnished on and after January 1, 2020, will be required to include these new PT- and OT-Assistant therapy modifiers for services furnished in whole or in part by a PTA or OTA. We proposed that these therapy modifiers would be required, when applicable, in place of the GP and GO modifiers currently used to identify all PT and OT services furnished under an outpatient plan of care, including the services furnished by PTAs and OTAs. To test our systems ahead of the required implementation date of January 1, 2020, we anticipated allowing voluntary reporting of the new modifiers at some point during CY 2019, which we would announce to our contractors, therapists and therapy providers through a Change Request, as part of our usual change management process.

We solicited comments on these proposals.

The following is a summary of the comments we received on these proposals.

Comment: Some commenters opposed paying differently for the services furnished in whole or in part by OTAs and PTAs while other commenters supported the payment differential, with a few comparing it to the 85 percent payment rate for certain NPPs.

Response: While we appreciate hearing various commenters' views, the new statutory provision at section 1834(v) of the Act added by section 53107 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted February 9, 2018) requires CMS to implement through notice and comment rulemaking a reduced rate for the services furnished on or after January 1, 2022, in whole or in part by therapy assistants at 85 percent of the otherwise applicable Part B payment amount for the service. Section 1834(v) of the Act further requires that we establish a modifier to identify services furnished in whole or in part by a therapy assistant by January 1, 2019, and that claims for outpatient therapy services furnished in whole or in part by therapy assistant on or after January 1, 2020, must include the modifier. As such, we are following statutory directives to implement section 1834(v) of the Act.

Comment: Some commenters supported our proposal to establish two modifiers, instead of one, to separately identify PT and OT services that are furnished in whole or in part by PTAs and OTAs, respectively. Several commenters expressed support for our proposal defining therapy assistant as an individual who meets the personnel qualifications set forth in § 484.4 of our regulations for PTAs and OTAs.

Response: We thank the many commenters who supported our proposals to (a) establish two new modifiers instead of one to separately define therapy assistant services furnished by PTAs and OTAs, and (b) to define the PTA and OTA as individuals who meet the personnel qualifications set forth in regulations at 42 CFR part 484. Although we stated that these personnel qualifications were located at § 484.4, we note that, effective January 13, 2018, the personnel qualifications for PTAs and OTAs were moved from

§ 484.4 and redesignated without changes at §§ 484.115(g) and (i), respectively (82 FR 4504, January 13, 2017).

Comment: Most commenters did not choose to comment specifically about our proposal to establish the two new modifiers as therapy modifiers for services furnished by PTAs and OTAs that are to be used instead of the current GP and GO modifiers used to capture the these services. However, several commenters opposed the structure we proposed for the modifiers that would be required on therapy claims when services are furnished by PTAs and OTAs which would change from the current two therapy modifiers, GP and GO, to identify all therapy services delivered under an outpatient PT or OT plan of care, to four therapy modifiers. Instead, they urged us to adopt new modifiers that would be used in tandem with, rather than replace, the respective existing GP and GO therapy modifiers on the same claim line of service to identify services delivered in whole or in part by PTAs and OTAs. The commenters stated that their suggested approach would mitigate administrative burden for all PT and OT professionals, as well as therapy assistants. Specifically, commenters stated that their therapists and therapy assistants use the same chargemasters, and their charge systems are hardcoded to default to either the PT or OT therapy modifier (GP or GO) that are now required on these claims, which saves both the therapists and therapy assistants from having to add the GP or GO therapy modifier to each claim line for the services they furnish. According to the commenters, under our proposal, both therapists and assistants would have to add one of the four modifiers for PT and OT services to the claim line and they would no longer be able to default their charge systems to report the GP or GO modifiers. This would mean that new PTA- and OTA-specific systems would need to be duplicated, creating undue chargemaster confusion and adding training and education burden to both therapists and therapy assistants for reporting one the four therapy modifiers. The commenters stated that adopting their proposal to add the new therapy assistant modifiers to the same claim line of service alongside the existing GP and GO modifiers eliminates the administrative burden on therapists since only therapy assistants would be required to use the new modifiers, and charge systems could remain hardcoded to default to the GP or GO modifiers as they are now to include all PT and OT services.

Response: We appreciate the commenters' concerns and agree that their suggested approach to use the new modifiers for services furnished in whole or in part by PTAs and OTAs on the same line of service as the existing GP and GO therapy modifiers, instead of replacing them, has merit, since it preserves the current use of the GP and GO therapy modifiers to identify outpatient therapy services furnished by both therapists and therapy assistants under a PT or OT plan of care. We also agree that adding the new therapy assistant modifiers to the same claim line of service alongside the existing GP and GO modifiers will prevent undue burden for physical therapists and occupational therapists, as only PTAs and OTAs will add the new modifiers to the claim line of service.

After considering the comments on the establishment and use of the new modifiers, the statutory changes, and our other payment policies for therapy services, we are not finalizing the new modifiers for therapy assistant services as therapy modifiers as proposed. Instead, we will use the two new modifiers for therapy assistant services as a type of payment modifier that will be used alongside of, instead of replacing, the GP and GO therapy modifiers, to identify the services furnished in whole or in part by PTAs or OTAs that will be tied to the reduced payment for the respective PT or OT discipline in CY 2022. By using the new modifiers for therapy assistants as payment modifiers, rather than therapy modifiers, services furnished by PTAs and OTAs will continue to be captured by the GP and GO therapy modifiers, as they are now, when delivered under the an outpatient PT or OT plan of care, respectively. We considered the commenters' requests not to use the two new modifiers for services furnished by PTAs and OTAs as therapy modifiers in addition to the current two therapy modifiers, GP and GO, respectively. We took into account their concerns about the reporting burden for both therapists and therapy assistants that would result if we were to double the number of therapy modifiers used to report the services delivered under PT and OT plans of care. We also considered the unintended consequences that could result from changing the long-standing nature of our three existing discipline-specific therapy modifiers used to report all services delivered under an outpatient plan of care for PT, OT, and SLP services. These consequences could be significant, especially since the existing modifiers are used by many other government payers and private insurers. Additionally, our claims processing systems have numerous edits tied to the therapy modifiers because these modifiers are used to track and accrue incurred costs of therapy services furnished under the outpatient therapy benefit by therapists and their assistants, as well as those services that physicians and NPPs furnish and bill as therapy services. Consequently, we agree with commenters that it is preferable to use the two new modifiers as payment modifiers to identify the services furnished in whole or in part by therapy assistants, instead of changing the overall configuration of our therapy modifiers established through CY 1998 rulemaking and designed to track services to the then therapy cap amounts for outpatient therapy services furnished under PT, OT, and SLP plans of care.

This approach—using payment modifiers rather than therapy modifiers—necessitates revisions to the descriptors we proposed for the new therapy assistant modifiers. As therapy modifiers, the new modifiers were proposed to define the PTA or OTA services delivered under an outpatient PT or OT plan of care, respectively. Modifying our proposal to instead use the two new modifiers as payment modifiers, we are removing references to the services being delivered under an outpatient PT or OT plan of care because the plan is specific to the GP and GO therapy modifiers. We also retained the terminology of ''in whole or in part'' as part of the definition of these therapy assistant payment modifiers, as specified at section 1834(v) of the Act, and clarified the therapy assistants' services are included as part of the corresponding PT or OT discipline. As a result, we are finalizing the two new payment modifiers to identify services furnished in whole or in part by a PTA and OTA, modifiers CQ and CO (C, capital letter O), respectively as follows.

- *PTA Modifier CQ:* Outpatient physical therapy services furnished in whole or in part by a physical therapist assistant.
- *OTA Modifier CO:* Outpatient occupational therapy services furnished in whole or in part by an occupational therapy assistant.

Because we are establishing the two new modifiers for the services furnished in whole or in part by a PTA or OTA as payment modifiers instead of as therapy modifiers, it is no longer necessary to revise the existing GP, GO, and GN therapy modifiers as we initially proposed to differentiate which professionals may furnish services using the GP, GO, and GN therapy modifiers in the absence of therapy modifiers used

specifically to identify services furnished in whole or in part by PTAs and OTAs. As a result, we are not finalizing our proposal to change the descriptors for the current therapy modifiers: GP, GO and GN—their descriptors and their use remains unchanged, as follows:

- GP—services delivered under an outpatient physical therapy plan of care.
- GO—services delivered under an outpatient occupational therapy plan of care.
- GN—services delivered under an outpatient speech-language pathology plan of care.

As part of the proposed rule, we noted that therapy assistants are precluded from furnishing outpatient therapy services incident to the services of a physician or NPP, and as such, the new PTA and OTA modifiers cannot be used on the line of service of the professional claim when the rendering NPI identified on the claim is a physician or an NPP. This is because PTAs and OTAs don't meet the qualifications of a physical or occupational therapist that is set forth as conditions of payment in the regulatory provisions at §§ 410.59(a)(3)(iii) and 410.60(a)(3)(iii). We are clarifying that this payment policy applies similarly when the CQ and CO modifiers are used as payment modifiers. We plan to revise our manual provisions at Pub. 100–02, Medicare Benefit Policy Manual, Chapter 15, section 230, as appropriate, to reference the new CQ and CO modifiers that will be used to identify services furnished in whole or in part by a PTA or OTA starting in CY 2020.

Comment: Several commenters referenced therapist and therapy assistant shortages, and stated that this discounted payment rate for services furnished in whole or in part by therapy assistants will increase financial hardships to retain therapists and therapy assistants. Commenters requested that CMS exempt therapy services furnished in rural areas, health professional shortage areas (HPSAs), and medically underserved areas (MUAs) from application of the reduced payment rate when a therapy assistant is involved.

Response: We understand the commenters' concerns. Given the parameters of the statute at section 1834(v) of the Act, we do not have authority to exempt services furnished in whole or in part by therapy assistants from application of the reduced payment rate when furnished in rural areas, HPSAs, and MUAs. As we do for other services, we will monitor for potential access issues and consider how to address them should they arise. We do not currently have information on the geographic distribution or quantity of services furnished in whole or in part by PTAs and OTAs, and look forward to reviewing this information as it becomes available after January 1, 2020, when the new therapy assistant modifiers are required to be reported on claims.

Comment: Many commenters expressed concerns about different aspects of our proposed interpretation of the statutory reference to services furnished ''in whole or in part'' by PTAs and OTAs. Commenters also expressed concern about our proposal to define ''in part'' to mean any minute of therapeutic services delivered by a PTA or OTA. Several commenters raised concerns about the reduced payment associated with the future use of the new modifiers to describe services furnished in whole or in part by PTAs and OTAs, and asked us to consider the practical day-to-day implications of using these modifiers. These commenters stated that requiring the new modifiers to be applied when any minute of outpatient therapy is delivered by the PTA or OTA has serious implications for beneficiary access to care.

Some commenters stated that documenting in the medical record the therapy services that are delivered in part by a therapy assistant will be burdensome for those services not fully or wholly furnished by an OTA or PTA, and some suggested that the reduced payment rates should only apply when the PTA or OTA furnishes the entire service.

Many commenters objected to our definition of ''in part'' and offered several alternatives. Some commenters suggested that we should not define when a PTA or OTA furnishes a service in whole or in part, but instead consider whether a therapist furnishes a service in whole or in part, stating that the PTA/OTA modifiers should not apply in cases where the therapist, not the assistant, furnishes the majority of the service.

Several commenters were concerned that applying the modifier when any minute of outpatient therapy is delivered by a therapy assistant has serious implications for beneficiary access to care and asked us to not finalize the definition of ''in part'' until CY 2020 rulemaking, when the new modifiers for services of therapy assistants are required on claims. The commenters stated that this delay would allow CMS additional time to engage in an extensive discussion with various external stakeholders in order to consider their input before CY 2020 rulemaking. Instead of waiting to define ''in part'' during CY 2020 rulemaking, one commenter suggested that we adopt a blended fee schedule rate for services furnished for more than 50 percent of the time by a therapist, including the services of both the 15-minute timed codes or untimed service-based codes, meaning that the rate paid would be 92.5 percent, halfway between 85 and 100 percent. Other commenters stated that the modifiers to identify services of PTAs and OTAs should not apply when the therapist fully furnished the services and the assistant merely lent a second pair of hands during the treatment for example, for safety reasons, such as where the patient is morbidly obese or has flaccid limb(s) and the completion of such services require more than one therapy professional.

Many commenters raised concerns about the application of our definition of ''in part'' when therapists and therapy assistants work together collaboratively. Some commenters raised concerns about applying the modifier for therapy assistant services when therapists and their assistants work interchangeably without a clear line between when the physical therapist might stop delivering treatment and the therapy assistant resumes treatment, and when the assistant acts as a second pair of hands to the therapist. Some commenters stated that when a therapist and assistant work together in a team-based approach, regardless of the amount of time the PTA or OTA contributes, that the new modifiers identifying services for application of the discounted payment rate should not apply. Some of these commenters requested that we exclude the use of new modifiers for therapy evaluations and re-evaluations because a therapy assistant is not permitted to fully furnish these services and these services require the therapist's clinical skill, judgment, and decision-making throughout. Others commenters requested that the modifiers should not apply for group therapy services, which are often provided collaboratively between the assistant and therapist because it is not fair to affix the discounted payment modifier to every patient in the group when a PTA or OTA furnishes one minute of the group service. Some commenters suggested we apply an 8-minute rule to the codes defined by 15-minute increments, stating that the modifiers should apply only when the PTA/OTA furnishes at least 8 minutes of the service, while other commenters asked us not to apply the assistant modifiers when these intervention services are furnished collaboratively by the therapist and

assistant. Several commenters recommended that CMS allow for reporting of the same code on the same day for the same beneficiary on two different claim lines to distinguish between those code units furnished by a therapist and those furnished by a therapy assistant in reference to the 15-minute timed intervention codes and the group therapy code (CPT code 97150).

Response: We acknowledge the views of the many commenters regarding our proposed interpretation of the statutory reference to therapy services furnished in whole or ''in part'' by PTAs and OTAs as part of the requirement that we establish a modifier to identify such services on claims beginning January 1, 2020, and apply a discounted payment rate to those services beginning January 1, 2022. We offer clarification on some of the commenters' concerns and alternatives, as follows. We do not agree that the statutory provision at section 1834(v) of the Act, which specifies a discounted payment rate for services furnished ''in whole or in part'' by a therapy assistant, could be interpreted to apply only when the therapy assistant furnishes the entire service. We also clarify that the modifiers would not apply to those services that are exclusively furnished by therapists without the assistance of PTAs or OTAs. However, the extent to which the modifiers apply to clinical scenarios in which the therapist and therapy assistant work together to furnish services collaboratively may be dependent on whether the therapy assistant's services are furnished in the absence of the therapist, whose time could then no longer be attributed to that patient. We do not agree that services in which the therapist and therapy assistant work collaboratively or in tandem are necessarily services that are not furnished ''in part'' by a therapy assistant. Rather, when a therapist and therapy assistant work together in furnishing a therapy service, we would generally view that service as being furnished in part by a therapy assistant, especially when the therapist is absent for a portion of the service, as explained above. We recognize there are other clinical scenarios and types of services where it is less obvious whether the service should be considered furnished ''in part'' by a therapy assistant when a therapist and therapy assistant work collaboratively together to treat one patient, and we anticipate addressing applicability of the modifiers in additional clinical scenarios through further rulemaking for CY 2020. We also clarify that the statutory provision at section 1834(v) of the Act requiring the reduced payment at 85 percent for services furnished in whole or in part by a therapy assistant beginning in CY 2022, does not permit us to make payment at 92.5 percent, as suggested by some commenters. We also note the concerns of the few commenters requesting that we allow the same procedure code for the same patient on the same day to appear on multiple claim lines, some of which might include the new modifier for therapy assistant services and others of which would not. CMS claims processing systems already allow, when not constrained by other policies such as Medically Unlikely Edits (MUEs), the same procedure code to be reported on two different claim lines as long as there is a different modifier used to uniquely identify the service and prevent the service from being considered a duplicate. For example, if a therapy assistant furnished one unit (15 minutes) and the therapist furnished 2 units (30 minutes) of the same procedure code that is defined to be billable in 15-minute increments, one unit of the procedure code would be billed on the claim line with the modifier for the therapy assistant's services and two units of the procedure code would be billed on another claim line without the assistant modifier.

We do not agree with the commenters' suggestion that we define ''in part'' to mean a therapy service for which a PTA or OTA furnishes 50 percent or a majority of the service, or an otherwise substantial part of the service. The discounted payment rate specified under section 1834(v)(1) of the Act is required to be applied for services furnished ''in whole or in part'' by a therapy assistant. We do not believe ''in whole or in part'' means that the discounted payment rate would apply only to services for which 50 percent or more of the service was furnished by a therapy assistant.

In our review of section 1834(v)(1) of the Act, we believe that the phrase ''in part'' could be read to mean that if a therapy assistant participates only in a very small (so insubstantial as to not be meaningful) portion of the service, the discounted payment rate would not apply. In the proposed rule, we proposed that ''in part'' would not include the non-therapeutic portions of a service that could be performed by others without the training of PTAs or OTAs. Along those same lines, after further consideration of the public comments explaining the fluid nature of clinical practice between therapists and therapy assistants and the complexity of identifying and documenting when a service is furnished in part by a therapy assistant, we believe it would be appropriate to define a therapy assistant's participation in furnishing a therapy service ''in part'' to mean that the therapy assistant furnished more than a de minimis portion of the therapy service. Specifically, we believe it would be appropriate to specify that a therapy assistant is considered to furnish a therapy service ''in part'' when they perform more than 10 percent of the service. If, instead of specifying as we proposed that the modifiers are applicable when any minute of a therapeutic service is furnished by a PTA or OTA, we specified that the modifiers apply when more than 10 percent of a service is furnished by the therapy assistant, 1.5 minutes of a 15-minute unit could be furnished by the PTA or OTA without being subject to the discounted payment rate. If this 10 percent de minimis standard is applied to an untimed service, for example to a therapy evaluation for which the typical time is 45 minutes, the PTA or OTA could furnish up to 4.5 minutes of the service before the modifier and discounted payment rate would apply. We anticipate addressing applicability of the ten percent de minimis standard for other clinical scenarios in further rulemaking for CY 2020.

After consideration of the public comments, the following reflects a full summary of our finalized policies.

We are finalizing the establishment of two modifiers, one to identify services furnished in whole or in part by PTAs and the other to identify services furnished in whole or in part by OTAs. We are also finalizing our proposal to define PTAs and OTAs as those individuals meeting the personnel qualifications set forth in part 484.

Instead of finalizing the new modifiers to identify services furnished by PTAs and OTAs as therapy modifiers, we are adopting a final policy to use these new modifiers as a payment modifier that will be appended on the same line of service with the respective PT or OT therapy modifier. This modified approach necessitates revisions to the proposed descriptors of the new CQ and CO modifiers, and allows us to proceed without making the proposed revisions to the current descriptors for the three therapy modifiers—GP, GO and GN. We are finalizing the new payment modifiers as follows.

- *CQ Modifier:* Outpatient physical therapy services furnished in whole or in part by a physical therapist assistant.
- *CO Modifier:* Outpatient occupational therapy services furnished

in whole or in part by an occupational therapy assistant.

We are not revising the three therapy modifiers as we had proposed. Instead, they will continue in effect, unmodified, as follows:

- GP—services delivered under an outpatient physical therapy plan of care.
- GO—services delivered under an outpatient occupational therapy plan of care.
- GN—services delivered under an outpatient speech-language pathology plan of care.

Instead of finalizing our proposed definition of a service that is furnished in whole or in part by a PTA or OTA as a service for which any minute of a therapeutic service is furnished by a PTA or OTA, we are finalizing a de minimis standard under which a service is furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA. We anticipate addressing application of the therapy assistant modifiers and the 10 percent standard more specifically, including their application for different scenarios and types of services, in rulemaking for CY 2020.

3. Functional Reporting Modifications

Since January 1, 2013, all providers of outpatient therapy services, including PT, OT, and SLP services, have been required to include functional status information on claims for therapy services. In response to the Request for Information (RFI) on CMS Flexibilities and Efficiencies that was issued in the CY 2018 PFS proposed rule (82 FR 34172 through 34173), we received comments requesting burden reduction related to the functional reporting requirements that were adopted to implement section 3005(g) of the Middle Class Tax Relief and Jobs Creation Act (MCTRJCA) of 2012 (Pub. L. 112–96, January 1, 2013). More information about these requirements can be found in the CY 2019 PFS proposed rule (83 FR 35852).

We proposed to discontinue the functional reporting requirements for services furnished on or after January 1, 2019. Specifically, we proposed to amend our regulations by removing the following: (1) Conditions of payment at §§ 410.59(a)(4), 410.60(a)(4), 410.62(a)(4), and 410.105(d) that require claims for OT, PT, SLP, and Comprehensive Outpatient Rehabilitation Facility (CORF) PT, OT, and SLP services, respectively, to contain prescribed information on patient functional limitations; and, (2) the functional reporting-related phrase that requires the plan's goals to be consistent with functional information on the claim at § 410.61(c) for outpatient PT, OT, and SLP services and at § 410.105(c)(1)(ii) for the PT, OT, and SLP services in CORFs. In addition, we would (1) remove the functional reporting subregulatory requirements implemented primarily through Change Request 8005 last issued on December 21, 2012, via Transmittal 2622, (2) eliminate the functional reporting standard systems edits we have applied to claims, and (3) remove the functional reporting requirement provisions in our internet Only Manual (IOM) provisions including the Medicare Claims Processing Manual, Chapter 5 and the functional reporting requirements in Chapters 12 and 15 of the Medicare Benefits Policy Manual.

Our proposal would end the requirements for the reporting and documentation of functional limitation G-codes (HCPCS codes G8978 through G8999 and G9158 through G9186) and severity modifiers (in the range CH through CN) for outpatient therapy claims with dates of service on and after January 1, 2019. Accordingly, with the conclusion of our functional reporting system for dates of service after December 31, 2018, we proposed to delete the applicable non-payable HCPCS G-codes specifically developed to implement that system through the CY 2013 PFS final rule with comment period (77 FR 68598 through 68978).

We sought comment on these proposals. The following is a summary of the comments we received on these proposals.

Comment: Many commenters supported the proposal to eliminate the functional reporting requirements for outpatient therapy services and urged us to end these requirements for reporting and documenting the G-codes and severity modifiers on claims for PT, OT, and SLP services beginning January 1, 2019. Many commenters agreed that these requirements are overly complex and burdensome for therapy providers.

Response: We appreciate the commenters' support of our proposal to end the reporting and documentation requirements effective January 1, 2019.

Comment: Some commenters disagreed with our proposal to end the functional reporting and documentation requirements beginning in CY 2019. One commenter who liked our functional reporting system suggested that we retain a reduced version of it. Two other commenters supported our requirement for assessment tools or outcome measures to be used to quantify the severity of dysfunction or disability. One commenter representing a software developer supported the flexibility in our rules permitting professional judgment of therapists to select from a composite outcome measure a single functional measure that reflects a more accurate disability rating. Another commenter representing a large private payer asked us to retain our functional reporting requirements because they believe that information about functional status of therapy patients remains an essential source of information for health plan care management activities such as health plan care coordination programs and to accurately complete risk adjustment requirements. This commenter also noted that the end of Medicare functional reporting requirements may cause therapists to stop documenting information about their patients' functional status, and this, along with the repeal of the therapy caps, could instead prompt therapists to furnish non-covered long-term custodial care services that are not medically necessary.

Response: We appreciate the commenters' support for the claims-based functional reporting system requirements currently in place including the use by the private payer of the functional status information reported on claims for health plan care management activities. While we acknowledge that functional status will no longer be required to be reported on Medicare claims and, thus, will not be available for use on claims for health plan care management activities, we do not share the commenter's concern though that the lack of a functional reporting requirement to document the non-payable HCPCS codes and related severity modifiers or the repeal of the therapy caps will cause therapists to begin furnishing therapy services that do not meet the statutory requirement for reasonable and necessary services or keep them from documenting other information required about patients' physical status in medical records. The documentation requirements specified in Pub. 100–02, Medicare Benefit Policy Manual, Chapter 15, section 220.3 titled Documentation Requirements for Therapy Services, in subsection C. for Evaluation/Re-Evaluation and Plan of Care, which were established prior to the MCTRJCA provisions' mandate, would remain in place. These documentation instructions continue to require that therapists document in the beneficiary's medical record, either in the evaluation or in the plan of care containing the evaluation, objective, measurable beneficiary physical function. In order to meet these requirements, therapists may use one of

four measurement instruments, including National Outcomes Measurement System (NOMS) by the American Speech-Language Hearing Association, Activity Measure—Post Acute Care (AM–PAC), Patient Inquiry by Focus On Therapeutic Outcomes, Inc. (FOTO), or OPTIMAL by Cedaron through the American Physical Therapy Association; or, when one of these tools is not used, they may use (a) functional assessment individual item and summary scores from commercially available therapy outcomes instruments, (b) functional assessment scores from tests and measurements validated in the professional literature that are appropriate for the condition/function being measured; or (c) other measurable progress towards identified goals for functioning in the home environment at the conclusion of the therapy episode of care. For these reasons, we believe therapists will continue to use the measurement tools they have used in the past to identify measureable physical functional status even after we discontinue the claims-based functional reporting requirements.

After consideration of the public comments, we are finalizing our proposed changes to discontinue the functional reporting requirements for outpatient therapy services furnished on or after January 1, 2019. Specifically, we are removing the following regulatory requirements: (1) Conditions of payment at §§ 410.59(a)(4), 410.60(a)(4), 410.62(a)(4), and 410.105(d) that require claims for OT, PT, SLP, and Comprehensive Outpatient Rehabilitation Facility (CORF) PT, OT, and SLP services, respectively, to contain prescribed information on patient functional limitations; and, (2) the functional reporting-related phrase that requires the plan's goals to be consistent with functional information on the claim at § 410.61(c) for outpatient PT, OT, and SLP services and at § 410.105(c)(1)(ii) for the PT, OT, and SLP services in CORFs.

In addition to amending these regulations, we are ending the requirements for the reporting and documentation of functional limitation G-codes (HCPCS codes G8978 through G8999 and G9158 through G9186) and severity modifiers (in the range CH through CN) for outpatient therapy claims with dates of service on and after January 1, 2019.

Instead of deleting the HCPCS G-codes effective for CY 2019 as proposed, we are finalizing a modification of that proposal to retain the set of 42 non-payable HCPCS G-codes until CY 2020 as this will allow time for therapy providers and other private insurers who currently use these HCPCS G-codes for purposes of functional reporting to update their billing systems and policies. This will avoid a situation where claims that inadvertently contain any of these G-codes during CY 2019 can be processed, and are not unnecessarily returned or rejected. The retention of HCPCS G-codes through CY 2019 will also allow physical and occupational therapists to report six of these non-payable HCPCS G-codes and the measures developed from them for purposes of meeting the MIPS program requirements which are found in section III.I.3. of this final rule.

We also intend to revise our manuals regarding the application of the functional reporting requirements in our IOM, Pub. 100–02, Medicare Benefits Policy Manual, Chapters 12 and 15, and Pub. 100–04, Medicare Claims Processing Manual, Chapter 5.

4. Therapy KX Threshold Amounts

As noted above in this section, the KX modifier thresholds were established through section 50202 of the Bipartisan Budget Act of 2018. These KX modifier thresholds were formerly referred to as therapy caps and are a permanent provision of the law, meaning that the statute does not specify an end date. These per-beneficiary amounts under section 1833(g) of the Act (as amended by section 4541 of the Balanced Budget Act of 1997) (Pub. L. 105–33, August 5, 1997) are updated each year based on the MEI. Specifically, these amounts are calculated by updating the previous year's amount by the MEI for the upcoming calendar year and rounding to the nearest $10.00. Increasing the CY 2018 KX modifier threshold amount of $2,010 by the CY 2019 MEI of 1.5 percent and rounding to the nearest $10.00 results in a CY 2019 KX threshold amount of $2,040 for PT and SLP services combined and $2,040 for OT services.

Along with the KX modifier thresholds, section 50202 of the Bipartisan Budget Act of 2018 also added section 1833(g)(7)(B) of the Act which retains the targeted medical review process, but at a lower threshold amount of $3,000 (until CY 2028) as detailed previously in this section. For CY 2018, the MR threshold is $3,000 for PT and SLP services combined and $3,000 for OT services. Under the established targeted review process, some, but not all claims exceeding the MR threshold amount are subject to review. For information on the targeted manual medical review process, go to *https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medicare-FFS-Compliance-Programs/Medical-Review/TherapyCap.html*.

CMS tracks each beneficiary's incurred expenses for therapy services annually and counts them toward the KX modifier and MR thresholds by applying the PFS rate for each service less any applicable multiple procedure payment reduction (MPPR) amount for services of CMS-designated ''always therapy'' services.

As required by section 1833(g)(6)(B) of the Act, added by section 603(b) of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, January 2, 2013) and extended by subsequent legislation, including section 50202 of the Bipartisan Budget Act of 2018, the PFS-rate accrual process is applied to outpatient therapy services furnished by critical access hospitals (CAHs) even though they may be paid on a cost basis (effective January 1, 2014).

For Maryland hospitals paid under the Maryland All-Payer Model, currently being tested under the authority of section 1115A of the Act (effective January 1, 2016), we use the submitted charge amounts to accrue to the KX modifier and MR thresholds.

After expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the KX modifier thresholds, therapy suppliers and providers use the KX modifier on claims for subsequent medically necessary services. By using the KX modifier, the therapist is attesting that the services above the KX modifier thresholds are reasonable and necessary and that there is documentation of medical necessity for the services in the beneficiary's medical record. Claims for outpatient therapy services that exceed the KX modifier thresholds but do not include the KX modifier are denied.

M. Part B Drugs: Application of an Add-On Percentage for Certain Wholesale Acquisition Cost (WAC)-Based Payments

Consistent with statutory provisions in section 1847A of the Act, many current Medicare Fee-For-Service (FFS) payments for separately payable drugs and biologicals furnished by providers and suppliers include an add-on set at 6 percent of the volume-weighted average sales price (ASP) or wholesale acquisition cost (WAC) for the drug or biological (the ''6 percent add-on''). Although section 1847A of the Act does not specifically state what the 6 percent add-on represents, it is widely believed to include services associated with drug acquisition that are not separately paid for, such as handling, storage, other overhead, as well as additional mark-

ups in drug distribution channels. The 6 percent add-on described in section 1847A of the Act has raised concerns because more revenue can be generated from percentage-based add-on payments for expensive drugs, and an opportunity to generate more revenue may create an incentive for the use of more expensive drugs (MedPAC Report to the Congress: Medicare and the Health Care Delivery System June 2015, *http://medpac.gov/docs/default-source/reports/june-2015-report-to-the-congress-medicare-and-the-health-care-delivery-system.pdf*, pages 65 through 72). Also, the Office of the Assistant Secretary for Planning and Evaluation (ASPE) March 8, 2016, Issue Briefing pointed out that administrative complexity and overhead costs are not exactly proportional to the price of a drug (*https://aspe.hhs.gov/pdf-report/medicare-part-b-drugs-pricing-and-incentives*). Thus, the suitability of using a percentage of the volume-weighted ASP or WAC of the drug or biological for an add-on payment may vary depending on the price of the drug or how the payment rate has been determined.

Although the add-on percentage for drug payments made under section 1847A of the Act is typically applied to the ASP, a 6 percent add-on is also applied to the WAC to determine the Part B drug payment allowances in the following situations. First, for single source drugs, as authorized in section 1847A(b)(4) of the Act, payment is made using the lesser of ASP or WAC; and section 1847A(b)(1) of the Act requires that a 6 percent add-on be applied regardless of whether WAC or ASP is less. Second, for drugs and biologicals where the ASP during first quarter of sales is unavailable, section 1847A(c)(4) of the Act allows the Secretary to determine the payment amount for the drug or biological based on the WAC or payment methodologies in effect on November 1, 2003. We note that this provision does not specify that an add-on percentage be applied if WAC-based payment is used, nor is an add-on percentage specified in the implementing regulations at § 414.904(e)(4). The application of the add-on percentage to WAC-based payments during a period where partial quarter ASP data was available was discussed in the 2011 PFS final rule with comment (75 FR 73465 through 73466). Third, in situations where Medicare Administrative Contractors (MACs) determine pricing for drugs that do not appear on the ASP pricing files and for new drugs, WAC-based payment amounts may also be used, as discussed in Chapter 17, Section 20.1.3 of the Medicare Claims Processing Manual. This section of the manual describes the use of a 6 percent add-on.

The incorporation of discounts in the determination of payment amounts made for Part B drug varies. Most Part B drug payments are based on the drug's or biological's ASP; as provided in section 1847A(c)(3) of the Act, the ASP is net of many discounts such as volume discounts, prompt pay discounts, cash discounts, free goods that are contingent on any purchase, chargebacks, and rebates (other than rebates under Medicaid drug rebate program). In contrast, the WAC of a drug or biological is defined in section 1847A(c)(6)(B) of the Act as the manufacturer's list price for the drug or biological to wholesalers or direct purchasers in the United States, not including prompt pay or other discounts, rebates or reductions in price, for the most recent month for which the information is available, as reported in wholesale price guides or other publications of drug or biological pricing data. Because the WAC does not include discounts, it typically exceeds ASP, and the use of a WAC-based payment amount for the same drug results in higher dollar payments than the use of an ASP-based payment amount.

Although discussions about the add-on tend to focus on ASP-based payments (because ASP-based payments are more common than WAC-based payments), the add-on for WAC-based payments has also been raised in the June 2017 MedPAC Report to the Congress (*http://www.medpac.gov/docs/default-source/reports/jun17_reporttocongress_sec.pdf*, pages 42 through 44). The MedPAC report focused on how the 2 quarter lag in payments determined under section 1847A of the Act led to a situation where undiscounted WAC-based payment amounts determined using information from 2 quarters earlier were used to pay for drugs that providers purchased at a discount. To determine the extent of the discounts, MedPAC sampled new, high-expenditure Part B drugs and found that these drugs' ASPs were generally lower than their WACs. Seven out of the 8 drugs showed pricing declines from initial WAC to ASP one year after being listed in the ASP pricing files with the remaining product showing no change, which suggests purchasers received discounts that WAC did not reflect. MedPAC further cited a 2014 OIG report (OIG, *Limitations in Manufacturer Reporting of Average Sales Price Data for Part B Drugs,* (OEI–12–13–00040), July 2014) to illustrate that there may be differences between WAC and ASP in other instances in which CMS utilizes WAC instead of ASP and noted that OIG found that ''WACs often do not reflect actual market prices for drugs.'' MedPAC also characterized Part B payments based on undiscounted list prices for products that were available at a discount as excessive. The report suggested that greater parity between ASP-based acquisition costs and WAC-based payments for Part B drugs could be achieved and recommended changing the 6 percent add-on for WAC-based payments to 3 percent. A 3 percent change was recommended based on statements made by industry, MedPAC's analysis of new drug pricing, and OIG data. The report also mentioned that discounts on WAC, such as prompt pay discounts, were available soon after the drug went on the market.

In the case of a drug or biological during an initial sales period in which data on the prices for sales for the drug or biological is not sufficiently available from the manufacturer, section 1847A(c)(4) of the Act permits the Secretary to make payments that are based on WAC. In other words, although payments under this section may be based on WAC, unlike section 1847A(b) of the Act (which specifies that certain payments must be made with a 6 percent add-on), section 1847A(c)(4) of the Act does not require that a particular add-on amount or percentage be applied to partial quarter WAC-based pricing. Consistent with section 1847A(c)(4) of the Act, we proposed that effective January 1, 2019, WAC based payments for Part B drugs made under section 1847A(c)(4) of the Act, utilize a 3 percent add-on in place of the 6 percent add-on that is currently being used. We proposed a 3 percent add-on because this percentage is consistent with MedPAC's analysis and recommendations discussed in the paragraph above and cited in its June 2017 Report to the Congress. Although other approaches for modifying the add-on amount, such as a flat fee, or percentages that vary with the cost of a drug, are possible, we proposed a fixed percentage in order to be consistent with other provisions in section 1847A of the Act that specify fixed add-on percentages of 6 percent (section 1847A(b) of the Act) or 3 percent (section 1847A(d)(3)(C) of the Act). A fixed percentage is also administratively simple to implement and administer, predictable, and easy for manufacturers, providers and the public to understand.

We have also reviewed corresponding regulation text at § 414.904(e)(4). To conform the regulation text more closely to the statutory language at section

1847A(c)(4) of the Act, we also proposed to strike the word ''applicable'' from paragraph (e)(4) of § 414.904. Section 1847A(c)(4) of the Act does not use the term ''applicable'' to describe the payment methodologies in effect on November 1, 2003.

We also discussed changing the policy articulated in the Medicare Claims Processing Manual that describes the application of the 6 percent add-on to payment determinations made by MACs for new drugs and biologicals. Chapter 17 section 20.1.3 of the Claims Processing Manual (*https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c17.pdf*) states that WAC-based payment limits for drugs and biologicals that are produced or distributed under a new drug application (or other new application) approved by the Food and Drug Administration, and that are not included in the ASP Medicare Part B Drug Pricing File or Not Otherwise Classified (NOC) Pricing File, are based on 106 percent of WAC. Invoice-based pricing is used if the WAC is not published. In the Hospital Outpatient Prospective Payment System (OPPS) program, the payment allowance limit is 95 percent of the published Average Wholesale Price (AWP). We discussed permitting MACs to use an add-on percentage of up to 3 percent for WAC-based payments for new drugs. MACs have longstanding authority to make payment determinations when we do not publish a payment limit in our national Part B drug pricing files and when a new drug becomes available. This proposal intended to preserve consistency with our proposed national pricing policy and would apply when MACs perform pricing determinations, for example during the period when ASPs have not been reported. The proposed policy would not alter OPPS payment limits; however, the CY 2019 OPPS proposed rule (83 FR 37046) includes a discussion about proposed changes to certain WAC-based drug payments under the OPPS.

We note that the PFS rule proposals do not include WAC-based payments for single source drugs under section 1847A(b) of the Act, that is, where the statute specifies that the payment limit is 106 percent of the lesser of ASP or WAC.

We have stated in previous rulemaking (80 FR 71101) that it is desirable to have fair reimbursement in a healthy marketplace that encourages product development. We have also stated that we seek to promote innovation to provide more options to patients and physicians, and competition to drive prices down (82 FR 53183). These positions have not changed. However, since 2011, concern about the impact of drug pricing and spending on Part B drugs has continued to grow. From 2011 to 2016, Medicare Part B drug spending increased from $17.6 billion to $28.0 billion, representing a compound annual growth rate of 9.8 percent, with per capita spending increasing 54 percent, from $532 to $818 (Based on Spending and Enrollment Data from the CMS Office of Enterprise Data and Analytics). These increases affect the spending by Medicare and beneficiary out-of-pocket costs. In the context of these concerns, we believe that implementation of these proposals would improve Medicare payment rates by better aligning payments with drug acquisition costs, especially for the growing number of drugs with high annual spending and high launch prices where single doses can cost tens or even hundreds of thousands of dollars. The proposals would also decrease beneficiary cost sharing. A 3 percentage point reduction in the total payment allowance will reduce a patient's 20 percent Medicare Part B copayment—for a drug that costs many thousands of dollars per dose, this can result in significant savings to an individual. The proposed approach would help Medicare beneficiaries afford to pay for new drugs by reducing out of pocket expenses and would help counteract the effects of increasing launch prices for newly approved drugs and biologicals. Finally, the proposals are consistent with recent MedPAC recommendations.

The following is a summary of the comments we received on these proposals.

Comment: Many commenters expressed concerns about the proposed add-on reduction and its effect on providers. Many of these commenters focused on the percentage portion of the add-on, stating that the proposed lower add-on would result in payment at ASP + 1.35 percent because of the sequester reduction.

Response: The Budget Control Act of 2011 (Pub. L. 112–25, enacted August 2, 2011) requires mandatory across-the-board reductions in Federal spending, also known as sequestration. The application of sequestration (after the American Taxpayer Relief Act of 2012 (Pub. L. 112–240, enacted January 2, 2013) postponed sequestration for 2 months) requires the reduction of Medicare payments by 2 percent for many Medicare FFS claims with dates-of-service on or after April 1, 2013. The proposed change to the add-on percentage does not include reductions applied to Medicare payments under sequestration, as sequestration is independent of Medicare payment policy. However, we understand the concerns about the reduction to the add-on and the effects of the sequester resulting in a situation where payment amounts could be potentially insufficient to cover acquisition costs for expensive drugs, such as for specialties like rheumatology, which utilize a narrow range of drugs with similar prices, and for providers who may not be able to acquire drugs below the ASP. The policy we proposed would reduce the add-on for WAC-based payment to 3 percent; it would be limited to new drugs and would not apply to the add-on to ASP-based payment amounts. The 3 percent reduction is discussed in further detail in the comment responses below.

Comment: A number of commenters stated that the 6 percent markup is intended to account for specific costs, such as handling, storage and other administrative expenses.

Response: Section 1847A of the Act does not specifically state what the 6 percent add-on represents, and the accompanying Conference Report to the Medicare Prescription Drug, Improvement, and Modernization Act of 2003, which added section 1847A to the Act, similarly does not discuss the purpose of the 6 percent add-on (see Conference Report on H.R. 1, November 20, 2003). Although section 1847A of the Act does not specifically state what the add-on represents, it is believed by many that the 6 percent add on includes various activities associated with drug acquisition that are not separately paid for, such as handling, and storage, as well as additional costs, such as overhead and mark-ups in drug distribution channels; however, there is no consensus on the intent of the add-on (MedPAC Report to the Congress: Medicare and the Health Care Delivery System June 2016, *http://www.medpac.gov/docs/default-source/reports/june-2016-report-to-the-congress-medicare-and-the-health-care-delivery-system.pdf?sfvrsn=0*, page 127).

Comment: Commenters expressed concerns that a payment reduction of 3 percent would affect physicians and limit their utilization of new drugs, particularly in practices where margins are small, such as rural practices and small practices. Commenters were concerned that payments for drugs under the proposed reduction would not cover overhead (such as costs to order and store drugs, and rising costs for compliance with standards for the preparation of sterile drugs for administration to a patient), and other

costs (such as taxes and markups from intermediaries like wholesalers). Commenters stated that such payment reductions would require physicians to take a loss on new drugs or would prevent physicians from providing new drugs in the office. Several commenters disagreed that the markup incentivizes the use of more expensive drugs, while others agreed that financial incentives to use Part B drugs exist, particularly in the case of expensive drugs. One commenter noted that Part B includes some of the most expensive drugs available in the United States. Several commenters also noted that MedPAC data suggested that WAC-based payments with a 3 percent add-on could sometimes be less than ASP based payments with a 6 percent add-on.

Response: The payment methodology in section 1847A of the Act was authorized by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173, enacted on December 8, 2003). Since then, drug prices have increased significantly, sometimes reaching into the tens and even hundreds of thousands of dollars for a single dose of a drug. We agree with commenters that Part B includes payments for very expensive drugs, and at least one GAO study has pointed out that the most new Part B drugs are costly and tend to be biologicals (Medicare Part B: Expenditures for New Drugs Concentrated among a Few Drugs, and Most Were Costly for Beneficiaries. (GAO Publication No. GAO–16–12; *https://www.gao.gov/assets/680/673304.pdf*)). As stated in the previous comment response, the purpose of the 6 percent add-on is not clear, however, we are interested in striking a balance between concerns about providers' overhead costs and concerns about addressing financial incentives that may lead to excessive drug use.

If the add-on is intended to account for administrative complexity, handling, storage and other overhead costs, these factors are not considered to be exactly proportional to current drug prices (*https://aspe.hhs.gov/pdf-report/medicare-part-b-drugs-pricing-and-incentives*). The application of the 6 percent add-on results in large dollar value payments for new drugs that are proportional only to the price of the drug. Further, the application of a 6 percent add-on to an undiscounted price like WAC, rather than a market-based price, can result in additional differences between acquisition cost and payment. This difference can become significant, particularly for higher cost drugs where the 6 percent add-on can be hundreds or even thousands of dollars, and can become even more substantial when WAC exceeds ASP or acquisition cost. We are concerned that as drug prices continue to increase, the add-on is continuing to evolve into a financial incentive that is not consistent with the appropriate use of new Part B drugs.

Many new drugs are expensive; single doses may cost thousands of dollars. Six percent add-ons for expensive drugs may be excessive relative to factors such as the cost to acquire a drug, handling and storage, and other overhead costs. We believe that overhead costs for most new drugs and biologicals are generally comparable to the overhead costs for most other injectable Part B drugs. For example, many heavily utilized injectable Part B drugs and biologicals, including new products, appear to be readily available since they are listed in drug wholesalers' catalogues. With certain exceptions, such as biologicals made from autologous cells, prescribing information indicates that many injectable Part B drugs and biologicals are stable under refrigeration or room temperature and do not require highly specialized storage or shipping conditions. We also note that many newer injectable drugs are also produced in ready to use liquid form, thus additional reconstitution and complicated dose preparation steps are not necessary. For many newer injectable products that were added to the ASP drug files in 2018, prescribing information indicates that dose preparation is comparable to many other sterile injectables and consists of drawing up the drug into a syringe using aseptic technique, and sometimes diluting the dose in a small volume bag of intravenous fluid. Some of the newer products are available in ready to use syringes which are administered directly to the patient with no special preparation steps.

We believe that the 3 percent reduction will help encourage the appropriate utilization of new drugs by lessening the financial incentive to overutilize drugs during their initial period of sales. We will discuss the percentage in more detail in the next comment response, but in general we believe that this reduction will not reduce margins for Part B drugs to an extent that would significantly and negatively affect providers, for several reasons. First, the overhead for many new drugs and biologicals is not likely to be significantly higher than the overhead for existing Part B injectable drugs (as discussed in the paragraph above). Second, the add-on is based on an undiscounted list price that is usually higher than market prices, and many new drugs and biologicals are costly. When the add-on is based on an undiscounted list price, this may contribute to potentially excessive add-on payments, particularly for expensive new drugs. As the WAC of a drug increases, so does the dollar value of the add-on, and this increase is not tied to any other factors, such actual market cost, administrative complexity of ordering the drug, or additional overhead costs, for example. The add-on for a costly drug can add significantly to the payment for a drug; a 6 percent add-on for a $5,000 dose of a drug is $300, while the 6 percent add-on for a $10,000 dose is $600. Third, the duration of the reduction to WAC-based payments for new drugs would be brief, applying only during an initial period as stipulated in section 1847A(c)(4) of the Act, where ASP data for drugs or biologicals (including biosimilars) is not sufficiently available to determine an ASP-based payment. Fourth, based on recent additions to the ASP drug pricing files, the change would affect only a small number of drugs each year. Typically, several drugs are added to the ASP Drug Pricing files each quarter, and not all of those drugs are priced based on WAC; some are added to the pricing files after the initial period of sales and are paid based on ASP. For these reasons, we are not persuaded that the reduction of the add-on for new drugs would have significant impact on margins for most physicians or other providers, including small and rural practices.

While some WAC based payments for new drugs could be less than ASP-based payments, the WAC exceeds the ASP for most new drugs entering the market. Our approach using a percentage of the WAC-based amount provides an administratively simple and straightforward solution for new Part B drugs.

We reiterate that our proposal did not include payments for single source drugs under section 1847A(b)(4) of the Act, where payment is made using the lesser of ASP or WAC. (This methodology applies after CMS receives ASP data for the drug.) Section 1847A(b)(1) of the Act requires that a 6 percent add-on be applied regardless of whether WAC or ASP is less; legislation would be required to change the percentage of the add-on that is specified in this provision.

Comment: Several commenters stated that the MedPAC analysis was too limited and did not support a 3 percent add-on. Some suggested that delaying the add-on reduction and conducting more research was a reasonable alternative. Several commenters noted that manufacturers could increase WAC in response to CMS' change in policy.

Response: The MedPAC analysis encompassed drugs with ASP data after 2005 that were in the top 20 highest expenditures in 2014. The analysis indicated that ASP was lower than WAC soon after a drug is marketed; a range of percentages from 0.0 to −2.7 percent was reported. We believe that the 0.0 to −2.7 percent range may underestimate the average difference between WAC and ASP because the MedPAC's group of 8 drugs did not encompass codes where WAC substantially exceeded ASP, such as certain biosimilars. We also note that this analysis of drugs was not the only factor for MedPAC's recommendation of a 3 percent add-on. The report stated that the recommendation for 3 percent change was also based on industry statements regarding prompt-pay discounts, and previous OIG research (*http://www.medpac.gov/docs/default-source/reports/jun17_reporttocongress_sec.pdf*, pages 43, 44, 52, and 68). For these reasons, we disagree with commenters that the MedPAC analysis was too limited.

Although the number of new drugs that appear on the ASP Drug Pricing Files with a WAC-based payment amount is limited, we stated in the proposed rule (83 FR 36047) that the average difference between WAC and ASP-based payment limits for a group of 3 recently approved drugs and biologicals that appeared on the ASP Drug Pricing Files (including one biosimilar biological product) was 9.0 percent. Excluding the biosimilar biological product results in a difference of 3.5 percent. These findings agree with the MedPAC's analysis and support the use of a 3 percent reduction to WAC-based payments for new drugs. Given the limited application of this policy change, the sources used by the MedPAC (which include industry statements), and our internal review, we do not believe that additional study or delay is necessary.

We are aware that ASP-based payments may exceed payments based on WAC if the percentage for the WAC add-on is smaller than the ASP add-on. The proposal for this policy change was limited to payments under section 1847A(c)(4) of the Act. We do not have authority to change the add-on for WAC based payments made under section 1847A(b)(4) of the Act or payments based on the ASP, and we have not addressed such payments in this rule. We believe that implementation of this relatively minor change without further delay is a positive step toward addressing high drug prices, including list prices. We acknowledge that manufacturers may increase Part B drug prices and that price increases could apply to both list prices like WAC and market-based prices, such as ASP. Section 1847A of the Act does not provide us with authority to addresses most increases for Part B drug prices (we have limited authority to substitute AMP-based prices for ASP, and authority to use alternative prices in response to certain public health emergencies). Price increases from manufacturers and other sources that add to high drug costs will be considered as we continue our work to address concerns about high drug prices.

Comment: Several commenters pointed out that the proposal does not address prices after the initial period of drug marketing, and that the MedPAC's recommendations about reducing the WAC payment add-on percentage were part of several proposals about Part B drug pricing. Several commenters also stated that the proposal to decrease WAC payments is not consistent with the President's goal to decrease list prices for drugs.

Response: This proposal encompassed a change in policy that could be implemented in a relatively short time period and without additional legislation. The proposal is also consistent with the 2019 President's Budget's proposal. Language in the Major Savings and Reforms document states that if discounts are available for new Part B drugs, the use of WAC-based payments results in Medicare paying more than under ASP-based pricing (*https://www.whitehouse.gov/wp-content/uploads/2018/02/msar-fy2019.pdf*, page 150). The Budget proposal also contained other agenda items that are similar to the MedPAC's 2017 recommendations and would require legislation to implement. Such legislative changes, including authority to limit or to otherwise regulate WAC or other list prices for drugs are outside the scope of this rule; however, other information pertaining to drug pricing will be made public as it is developed. We also note that the use of list prices to determine the payment for Part B drugs is limited and the number of drugs paid using list prices is small. As we continue to work on other approaches to address high drug prices, we plan to monitor Part B drug prices and changes to drug costs that may be related to this policy.

Comment: Many commenters focused on potential negative effects on patients, and expressed concerns that a negative impact on physicians would lead to fewer offices providing new drugs, leading to shifts to higher cost care settings like hospital outpatient departments, and ultimately leading to higher cost sharing payments. A few commenters stated that direct reductions in cost sharing (that is, the amount of money paid by a patient) would be minimal because secondary insurance (like Medigap) or alternative sources of payment are typically available and pay for much of Part B drug cost sharing.

In contrast, several commenters agreed that cost sharing could drop, though the effect would be transient (limited to the early phase of a drug's marketing). However, these commenters generally agree that the CMS proposal was a step in the right direction for addressing the high cost of drugs.

Response: Overall, as discussed in an earlier comment response, we believe that the scope of these changes is modest, will affect few drugs, and will exert a brief effect on Part B drug payment, applying only during the initial quarters when a new drug enters the market. As stated earlier in this section, the overhead for many new drugs and biologicals is not likely to be significantly higher than the overhead for existing Part B injectable drugs, the add-on is based on an undiscounted list price that tends to be higher than market prices, and many new drugs and biologicals are expensive, thus we do not expect a significant effect on providers' margins. Because we do not anticipate a significant or prolonged effect on providers' margins, we also disagree with the position that physicians' offices will be reluctant to administer new drugs and that this reduction to the add-on will negatively affect beneficiaries access to drugs at offices resulting in shifting patients to more expensive settings. As we stated in the proposed rule (83 FR 36047), we believe that the reduction in the WAC-based payment add-on can positively impact individual beneficiaries in situations where they encounter out of pocket cost sharing payments for new and expensive drugs entering the market. We acknowledge that many beneficiaries that receive Part B drugs have supplementary insurance, but for beneficiaries that do not have supplementary insurance, this policy will help reduce out of pocket costs. We would like to reiterate that single doses of new drugs may costs thousands of dollars or more and a 3 percent reduction in the add-on percentage can result in meaningful savings to individual patients. We agree with commenters that a change to the add-on for new drugs is a step in the right direction for addressing the high cost of drugs. Overall, this policy will also provide a modest reduction in spending

for drugs by lowering the total payment for new Part B drugs.

After considering the comments submitted in response to our proposal, consistent with section 1847A(c)(4) of the Act, we are finalizing our proposal to reduce the add-on percentage for WAC based payments for new drugs. Effective January 1, 2019, WAC based payments for new Part B drugs made under section 1847A(c)(4) of the Act, will utilize a 3 percent add-on in place of the 6 percent add-on that is currently being used. Our final policy is consistent with the President's Budget and affects an area where we have flexibility to make a change through regulation. The percentage reduction is also consistent with the MedPAC's analysis and recommendations discussed in this section and cited in its June 2017 Report to the Congress. A fixed percentage is also administratively simple to implement and administer, is predictable, and is easy for manufacturers, providers and the public to understand. We believe that the 3 percent reduction to the add-on for WAC-based payments will create greater parity overall between WAC and ASP for new drugs, biologicals and biosimilars and continue to encourage appropriate utilization of drugs. We are not persuaded that this modest and brief reduction in payments will impair access to new drugs or shift patient care to other settings.

This change does not apply to single source drugs or biologicals paid under section 1847A(b)(4) of the Act where payment is made using the lesser of ASP or WAC; section 1847A(b)(1) of the Act requires that a 6 percent add-on be applied regardless of whether WAC or ASP is less.

Comment: We received no specific comments on the proposal to conform the regulation text more closely to the statutory language at section 1847A(c)(4) of the Act. We proposed striking ''applicable'' from regulation text at § 414.904(e)(4).

Response: We are finalizing this change as proposed and revising regulation text at § 414.904(e)(4) so that the language is more consistent with the statute.

Comment: Several commenters opposed our intent to change the policy articulated in Chapter 17 of the Medicare Claims Processing Manual that describes the application of the 6 percent add-on to payment determinations made by MACs for new drugs and biologicals to reflect our proposal, if finalized. Commenters opposed the Manual changes for the same general reasons that they opposed the proposal to change the WAC-based add-on percentage under section 1847A(c)(4) of the Act. Commenters were also concerned about whether the use of an add-on that could be less than 3 percent would create additional financial stress for providers and whether the manual changes would apply to any WAC-based payment. The commenters also questioned whether CMS has authority to make these changes.

Response: The discussion about changes to Chapter 17 of the Medicare Claims Processing Manual was intended to provide notice of a potential corresponding subregulatory change to align with our regulatory policy if the provision to change the add-on percentage was finalized. Because we finalized the proposal to reduce the WAC-based payment add-on for payments made under the authority in section 1847A(c)(4) of the Act, in the near future we plan to issue Manual instructions that will address contractor pricing for new Part B drugs.

We are clarifying that changes to payments for WAC based drugs discussed in this rule apply only to new drugs and only during the time period while an ASP-based payment limit is not available. This time period begins when a drug is marketed and no ASP data is available for the manufacturer to report to us and ends at the end of the partial quarter pricing period when partial quarter ASP data becomes available to us. We will provide additional guidance or program instructions as appropriate.

The variable percentage that we plan to utilize in the manual, that is, the use of an add-on that is up to 3 percent, addresses the wide range of Part B drug prices. As discussed earlier in this section, the 6 percent add-on payment amount for very expensive drugs can result in very high add-on payments. For example, 6 percent of a $30,000 drug is $1800, while 6 percent of $300,000 is $18,000. We are aware of recently approved Part B drugs that have per dose price points up to several hundred thousand dollars. Our intent is to address the add-on payment that is associated with new drugs before national pricing and potentially other related policies, such as coverage, are developed. Our approach is consistent with provisions in section 1847A(c)(4) of the Act, which does not set a specific percentage for the add-on for drugs where ASP is not available. We also note that section 1847A(c)(5) of the Act provides authority to issue program instructions to implement section 1847A of the Act.

Comment: One commenter expressed concern about the lack of lead time for the changes in drug payment policy.

Response: Notice and comment rulemaking associated with Part B drug payments made under the methodology in section 1847A of the Act typically appears in the annual PFS Rule. Finalized changes to the add-on percentage will not be implemented until January 1, 2019. We believe that using the established process for notice and comment rulemaking is acceptable and provides sufficient notice for the public. As stated earlier in this section, we believe that this change is modest, and its effects on payment for individual drugs will be brief. Further, this change does not require any billing or claims processing changes.

In addition to the comments on the Part B drug add-on percentage for certain drugs discussed previously in this section, we received comments that suggested other alterations to the payment methodology under section 1847A of the Act. These suggestions include replacing a percentage add-on with a flat fee, changes to WAC-based pricing for drugs that are not new, changing payments for drugs that are not paid for under section 1847A of the Act (such as radiopharmaceuticals used in the office), the use of competitive acquisition or value-based payment for Part B drugs, making direct pricing interventions with manufacturers, requiring greater transparency for drug pricing, and educating (or otherwise influencing) providers about Part B drug prescribing. We also received comments pertaining to ASP reporting by manufacturers. Several commenters also questioned the authority for Part B drug payment reductions associated with the sequester. Comments on these issues are also outside the scope of this rule. Therefore, these comments are not addressed in this final rule.

N. Potential Model for Radiation Therapy

Section 3(a) of the Patient Access and Medicare Protection Act (PAMPA) (Pub. L. 114–115, enacted December 28, 2015) revised section 1848 of the Act so that, for the fee schedule established under section 1848(b) of the Act in 2017 and 2018, we must apply the same code definitions and work RVUs under section 1848(c)(2)(C)(ii) of the Act, and the same direct inputs for the PE RVUs for radiation treatment delivery and related imaging services under section 1848(c)(2)(C)(ii) of the Act as those definitions, units, and inputs for such services for the fee schedule established for services furnished in 2016. Section 51009 of the Bipartisan Budget Act of

2018 extended these policies through 2019. Furthermore, section 3(b) of the PAMPA requires the Secretary of Health and Human Services to submit to Congress a report on the development of an episodic APM for payment under the Medicare program under title XVIII of the Act for radiation therapy (RT) services furnished in non-facility settings (''Report to Congress''). In the Report to Congress [7] delivered in November 2017, we discussed the current status of RT services and payment, and reviewed model design considerations for a potential APM for RT services.

For the Report to Congress, the CMS Center for Medicare and Medicaid Innovation (Innovation Center) conducted an environmental scan of current evidence, as well as held a public listening session followed by an opportunity for RT stakeholders to submit written comments about a potential APM. A review of the applicable evidence in the Report to Congress demonstrated that episode payment models can be a tool for improving care and reducing expenditures. We believe that radiation oncology is a promising area of health care for bundled payments, in part, based on the findings in the Report to Congress. The CMS Innovation Center has and will continue to use public information regarding commercial initiatives, as well as stakeholder feedback to help inform the development, implementation, and refinement of design and testing of a potential model that tests payment for RT services under the authority of section 1115A of the Act.

III. Other Provisions of the Proposed Rule

A. Clinical Laboratory Fee Schedule

1. Background

Prior to January 1, 2018, Medicare paid for clinical diagnostic laboratory tests (CDLTs) on the Clinical Laboratory Fee Schedule (CLFS) under sections 1832, 1833(a), (b), and (h), and 1861 of the Social Security Act (the Act). Under the previous methodology, CDLTs were paid based on the lesser of: (1) The amount billed; (2) the local fee schedule amount established by the Medicare Administrative Contractor (MAC); or (3) a national limitation amount (NLA), which is a percentage of the median of all the local fee schedule amounts (or 100 percent of the median for new tests furnished on or after January 1, 2001). In practice, most tests were paid at the NLA. Under the previous system, the CLFS amounts were updated for inflation based on the percentage change in the Consumer Price Index for All Urban Consumers (CPI–U), and reduced by a multi-factor productivity adjustment and other statutory adjustments, but were not otherwise updated or changed.

Section 1834A of the Act, as established by section 216(a) of the Protecting Access to Medicare Act of 2014 (PAMA), required significant changes to how Medicare pays for CDLTs under the CLFS. The CLFS final rule, entitled Medicare Clinical Diagnostic Laboratory Tests Payment System (CLFS final rule), published in the **Federal Register** on June 23, 2016, implemented section 1834A of the Act. Under the CLFS final rule, ''reporting entities'' must report to CMS during a ''data reporting period'' ''applicable information'' collected during a ''data collection period'' for their component ''applicable laboratories.'' Applicable information is defined at § 414.502 as, with respect to each CDLT for a data collection period: Each private payor rate for which final payment has been made during the data collection period; the associated volume of tests performed corresponding to each private payor rate; and the specific Healthcare Common Procedure Coding System (HCPCS) code associated with the test. Applicable information does not include information about a test for which payment is made on a capitated basis. An applicable laboratory is defined at § 414.502, in part, as an entity that is a laboratory (as defined under the Clinical Laboratory Improvement Amendments (CLIA) definition at § 493.2) that bills Medicare Part B under its own National Provider Identifier (NPI). In addition, an applicable laboratory is an entity that receives more than 50 percent of its Medicare revenues during a data collection period from the CLFS and/or the Physician Fee Schedule (PFS). We refer to this component of the applicable laboratory definition as the ''majority of Medicare revenues threshold.'' The definition of applicable laboratory also includes a ''low expenditure threshold'' component which requires an entity to receive at least $12,500 of its Medicare revenues from the CLFS for its CDLTs that are not advanced diagnostic laboratory tests (ADLTs).

The first data collection period, for which applicable information was collected, occurred from January 1, 2016 through June 30, 2016. The first data reporting period, during which reporting entities reported applicable information to CMS, occurred January 1, 2017 through March 31, 2017. On March 30, 2017, we announced a 60-day enforcement discretion period of the assessment of civil monetary penalties (CMPs) for reporting entities that failed to report applicable information. Additional information about the 60-day enforcement discretion period is available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/2017-March-Announcement.pdf*.

In general, the payment amount for each CDLT on the CLFS furnished beginning January 1, 2018, is based on the applicable information collected during the data collection period and reported to us during the data reporting period, and is equal to the weighted median of the private payor rates for the test. The weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. The payment amounts established under the CLFS are not subject to any other adjustment, such as geographic, budget neutrality, or annual update, as required by section 1834A(b)(4)(B) of the Act. Additionally, section 1834A(b)(3) of the Act, implemented at § 414.507(d), provides a phase-in of payment reductions, limiting the amounts the CLFS rates for each CDLT (that is not a new ADLT or new CDLT) can be reduced as compared to the payment rates for the preceding year. For the first 3 years after implementation (CY 2018 through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. For most CDLTs, the data collection period, data reporting period, and payment rate update occur every 3 years. As such, the next data collection period for most CDLTs will be January 1, 2019 through June 30, 2019, and the next data reporting period will be January 1, 2020 through March 31, 2020, with the next update to CLFS occurring on January 1, 2021. Additional information on the private payor rate-based CLFS is detailed in the CLFS final rule (81 FR 41036 through 41101).

2. Recent Stakeholder Feedback

As we discussed in the CY 2019 PFS proposed rule (83 FR 35856), after the initial data collection and data reporting periods, we received feedback on a range of topics related to the private payor rate-based CLFS. Some commenters expressed concern that the

[7] Report to Congress: Episodic Alternative Payment Model for Radiation Therapy Services. *https://innovation.cms.gov/Files/reports/radiationtherapy-apm-rtc.pdf*.

CY 2018 CLFS payments rates are based on applicable information from only a relatively small number of laboratories. Some commenters stated that, because most hospital-based laboratories were not applicable laboratories, and therefore, did not report applicable information during the initial data reporting period, the CY 2018 CLFS payment rates do not reflect their information and are inaccurate. Other commenters were concerned that the low expenditure threshold excluded most physician office laboratories and many small independent laboratories from reporting applicable information.

We noted in the proposed rule that, in determining payment rates under the private payor rate-based CLFS, one of our objectives is to obtain as much applicable information as possible from the broadest possible representation of the national laboratory market on which to base CLFS payment amounts, for example, from independent laboratories, hospital outreach laboratories, and physician office laboratories, without imposing undue burden on those entities. As we noted throughout the CLFS final rule, we believe it is important to achieve a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a CDLT, and minimizing the reporting burden for entities. In response to this feedback and in the interest of facilitating our goal, we proposed a change to the Medicare CLFS for CY 2019 in section III.A. of the CY 2019 PFS proposed rule. We stated that we believe this proposal may result in more data being used on which to base CLFS payment rates.

In addition to this proposal, we solicited public comments on other approaches that have been requested by some stakeholders who suggested that such approaches would result in CMS receiving even more applicable information to use in establishing CLFS payment rates. The approaches include revising the definition of applicable laboratory and changing the low expenditure threshold. These topics are discussed in this section.

3. Change to the Majority of Medicare Revenues Threshold in Definition of Applicable Laboratory

In order for a laboratory to meet the majority of Medicare revenues threshold, section 1834A(a)(2) of the Act requires that, ''with respect to its revenues under this title, a majority of such revenues are from'' the CLFS and the PFS in a data collection period. In the CLFS final rule, we stated that ''revenues under this title'' are payments received from the Medicare program, which includes fee-for-service payments under Medicare Parts A and B, as well as Medicare Advantage (MA) payments under Medicare Part C, and prescription drug payments under Medicare Part D, and any associated Medicare beneficiary deductible or coinsurance amounts for Medicare services furnished during the data collection period (81 FR 41043). This total Medicare revenues amount (the denominator in the majority of Medicare revenues threshold calculation) is compared to the total of Medicare revenues received from the CLFS and/or PFS (the numerator in the majority of Medicare revenues threshold calculation). If the numerator is greater than 50 percent of the denominator for a data collection period, the entity has met the majority of Medicare revenues threshold criterion. We reflected that requirement in § 414.502 in the third paragraph of the definition of applicable laboratory.

As we explained in the CY 2019 PFS proposed rule, we have considered that our current interpretation of total Medicare revenues may have the effect of excluding laboratories that furnish Medicare services to a significant number of beneficiaries enrolled in MA plans under Medicare Part C from meeting the majority of Medicare revenues threshold criterion, and therefore, from qualifying as applicable laboratories. For instance, if a laboratory has a significant enough Part C component so that it is receiving greater than 50 percent of its total Medicare revenues from MA payments under Part C, it would not meet the majority of Medicare revenues threshold because its revenues derived from the CLFS and/or PFS would not constitute a majority of its total Medicare revenues. We stated that we believe if we were to exclude MA plan revenues from total Medicare revenues, more laboratories of all types may meet the majority of Medicare revenues threshold, and therefore, the definition of applicable laboratory, because it would have the effect of decreasing the amount of total Medicare revenues and increase the likelihood that a laboratory's CLFS and PFS revenues would constitute a majority of its Medicare revenues.

We stated in the proposed rule that we believe section 1834A of the Act permits an interpretation that MA plan payments to laboratories not be included in the total Medicare revenues component of the majority of Medicare revenues threshold calculation. Rather, MA plan payments to laboratories can be considered to only be private payor payments under the CLFS. We emphasized in the CY 2019 PFS proposed rule that this characterization of MA plan payments is limited to only the CLFS for purposes of defining applicable laboratory. Whether MA plan payments to laboratories or other entities are considered Medicare ''revenues'' or ''private payor payments'' in other contexts in the Medicare program is not relevant to our proposal, and our characterization of MA plan payments as private payor payments for purposes of the CLFS has no bearing on any aspect of the Medicare program other than the CLFS.

As noted above, we defined total Medicare revenues for purposes of the majority of Medicare revenues threshold calculation to include fee-for-service payments under Medicare Parts A and B, as well as MA payments under Medicare Part C, prescription drug payments under Medicare Part D, and any associated Medicare beneficiary deductible or coinsurance amounts for Medicare services furnished during the data collection period. However, section 1834A(a)(8) of the Act, which defines the term ''private payor,'' identifies at section 1834A(a)(8)(B) a ''Medicare Advantage plan under Part C'' as a type of private payor. Under the private payor rate-based CLFS, CLFS payment amounts are based on private payor rates that are reported to CMS. Accordingly, an applicable laboratory that receives MA plan payments is to consider those MA plan payments in identifying its applicable information, which must be reported to CMS. We explained in the proposed rule that we believe it is more logical to not consider MA plan payments under Part C to be both Medicare revenues for determining applicable laboratory status and private payor rates for purposes of reporting applicable information. Congress contemplated that applicable laboratories would furnish MA services, as reflected in the requirement that private payor rates must be reported for MA services. However, under our current definition of applicable laboratory, laboratories that furnish MA services, particularly those that furnish a significant amount, are less likely to meet the majority of Medicare revenues threshold, which means they would be less likely to qualify as applicable laboratories, and as a result, to report private payor rates for MA services.

Therefore, we stated in the proposed rule that after further review and consideration of the new private payor rate-based CLFS, we believe it is appropriate to include MA plan revenues as only private payor payments rather than both Medicare revenues, for the purpose of

determining applicable laboratory status, and private payor payments, for the purpose of specifying what is applicable information. Such a change would have the effect of eliminating the laboratory revenue generated from a laboratory's Part C-enrolled patient population as a factor in determining whether a majority of the laboratory's Medicare revenues are comprised of services paid under the CLFS or PFS. We noted that we believe this change would permit a laboratory with a significant Medicare Part C revenue component to be more likely to meet the majority of Medicare revenues threshold and qualify as an applicable laboratory. In other words, MA payments are currently included as total Medicare revenues (the denominator). In order to meet the majority of Medicare revenues threshold, the statute requires a laboratory to receive the majority of its Medicare revenues from the CLFS and or PFS. If MA plan payments were excluded from the total Medicare revenues calculation, the denominator amount would decrease. If the denominator amount decreases, the likelihood increases that a laboratory would qualify as an applicable laboratory. Therefore, we stated that we believe this proposal responds directly to stakeholders' concerns regarding the number of laboratories for which applicable information must be reported because a broader representation of the laboratory industry may qualify as applicable laboratories, which means we would receive more applicable information to use in setting CLFS payment rates.

For these reasons, we proposed that MA plan payments under Part C would not be considered Medicare revenues for purposes of the applicable laboratory definition. We noted in the CY 2019 PFS proposed rule that if finalized, we would revise paragraph (3) of the definition of applicable laboratory at § 414.502 accordingly. We reiterated that not characterizing MA plan payments under Medicare Part C as Medicare revenues would be limited to the definition of applicable laboratory under the CLFS, and would not affect, reflect on, or otherwise have any bearing on any other aspect of the Medicare program.

In an effort to provide stakeholders a better understanding of the potential reporting burden that may result from this proposal, we provided a summary of the distribution of data reporting that occurred for the first data reporting period. We explained that if we were to finalize the proposed change to the majority of Medicare revenues threshold component of the definition of applicable laboratory, additional laboratories of all types serving a significant population of beneficiaries enrolled in Medicare Part C could potentially qualify as applicable laboratories, in which case their data would be reported to us. As discussed in the proposed rule, we received over 4.9 million records from 1,942 applicable laboratories for the initial data reporting period, which we used to set CY 2018 CLFS rates. Additional analysis shows that the average number of records reported for an applicable laboratory was 2,573. The largest number of records reported for an applicable laboratory was 457,585 while the smallest amount was 1 record. A summary of the distribution of reported records from the first data collection period is illustrated in the Table 25.

TABLE 25—SUMMARY OF RECORDS REPORTED FOR FIRST DATA REPORTING PERIOD

[By applicable laboratory]

Total records	Average records	Min records	Max records	Percentile distribution of records				
				10th	25th	50th	75th	90th
4,995,877	2,573	1	457,585	23	79	294	1,345	4,884

Assuming a similar distribution of data reporting for the next data reporting period, the mid-point of reported records for an applicable laboratory would be approximately 300 (50th percentile for the first data reporting period was 294). However, as illustrated in Table 25, the number of records reported varies greatly, depending on the volume of services performed by a given laboratory. Laboratories with larger test volumes, for instance at the 90th percentile, should expect to report more records as compared to the midpoint used for this analysis. Likewise, laboratories with smaller test volume, for instance at the 10th percentile, should expect to report fewer records as compared to the midpoint.

The following is a summary of the comments we received and our responses to the comments regarding our proposal to modify the definition of applicable laboratory to exclude MA plan payments under Part C as Medicare revenues.

Comment: Many commenters supported CMS' proposal to exclude MA plan payments under Part C from total Medicare revenues and agreed it would help achieve CMS' goal of increasing the number of laboratories reporting applicable information. They stated that by excluding MA plan payments from total Medicare revenues, the denominator of the majority of Medicare revenues threshold, more laboratories of all types with a significant share of revenues from Medicare Part C would be more likely to qualify as an applicable laboratory and report applicable information to CMS. They also agreed that removal of MA plan payments from total Medicare revenues is consistent with the statute, which defines MA plans as a private payor, and therefore will help enable more laboratories to qualify as applicable laboratories. The commenters that supported excluding MA plan payments under Part C from total Medicare revenues urged CMS to finalize the proposal. However, some stakeholders objected to CMS' proposal because it would result in administrative reporting burden for additional laboratories without having a perceptible impact on CLFS rates (because the largest laboratories with the highest test volumes will continue to dominate the weighted median of private payor rates). They stated that increasing the number of laboratories qualifying for applicable laboratory status and imposing additional data reporting burden, with no perceptible impact expected on the CLFS rates, is in direct conflict with the Administration's goal of reducing regulatory burden.

Response: As discussed in the proposed rule, including MA plan payments as total Medicare revenues in the majority of Medicare revenues threshold (as we currently do) dilutes the percentage of total Medicare revenues attributed to CLFS and PFS revenues. As a result, laboratories performing tests for a significant Medicare Part C population are less likely to qualify as an applicable

laboratory and, therefore, to report applicable information to us.

For the additional data reporting burden, as discussed in the Regulatory Impact Analysis in section VII. of the proposed rule (83 FR 36048), we estimated that excluding MA plan payments from total Medicare revenues (the denominator) of the majority of Medicare revenues threshold, and keeping the numerator constant (that is, revenues from only the CLFS and or PFS) yielded an increase of 49 percent in the number of laboratories meeting the majority of Medicare revenues threshold.

We also noted in the proposed rule that there would only be an associated impact to the Medicare rates to the extent the additional applicable laboratories are paid at a higher (or lower) private payor rate, as compared to other laboratories that reported previously *and* to the extent the volume of services performed by these additional applicable laboratories is significant enough to make an impact on the weighted median of private payor rates. Given that the largest laboratories with the highest test volumes dominate the weighted median of private payor rates, and the largest laboratories reported data for the determination of CY 2018 CLFS rates and are expected to report again, we stated that we do not expect the additional reported data resulting from our proposed change to the majority of Medicare revenues threshold to have a predictable, direct impact on CLFS rates. By this we mean that we cannot predict whether the additional applicable laboratories reporting applicable information are paid at a higher (or lower) private payor rate, as compared to other laboratories that reported previously and whether the private payor rate volume of services performed by these additional applicable laboratories is significant enough to make an impact on the weighted median of private payor rates.

However, as we noted in the proposed rule, our proposal to exclude MA plan payments from total Medicare revenues responded directly to stakeholder concerns regarding the number of applicable laboratories reporting applicable information for the initial data reporting period. We believe that enabling more laboratories of all types that furnish testing to a significant Medicare Part C population to qualify as applicable laboratories and report data to CMS directly supports our goal of collecting as much applicable information as possible from the broadest representation of the national laboratory market on which to base CLFS payment amounts. Therefore, we believe receiving additional applicable information from more laboratories of all laboratory types outweighs the additional reporting burden on laboratories.

Comment: One commenter disagreed with CMS' proposal to define MA plan payments as private payor payments and not Medicare revenues for the purpose of determining applicable laboratory status. The commenter stated that MA plans are Medicare plans that rarely negotiate a rate that varies from the Medicare payment rate and that using MA plan payments to develop Medicare rates is simply a circular reference. The commenter also stated that Medicaid managed care plans should not be considered as a private payor because state Medicaid programs may set laboratory test rates at a percentage of the Medicare CLFS, for example, 80 percent of the Medicare CLFS rate. As such, the commenter stated that the use of Medicaid managed care plan data will create a ''downward spiral'' of CLFS rates.

Response: Sections 1834A(a)(8)(B) and (C) of the Act define a private payor to include a Medicare Advantage plan under Part C, and a Medicaid managed care organization (as defined in section 1903(m) of the Act), respectively. Therefore, the statute would not permit us to exclude a Medicare Advantage plan under Part C or a Medicaid managed care organization from the definition of private payor for the purposes of determining the applicable information reported to us from which to set CLFS rates. We understand the commenter's concern regarding the potential circularity of using Medicaid managed care and MA plan data to set Medicare CLFS rates to the extent that Medicaid managed care and MA plan rates are established based on Medicare rates. However, we note that section 1834A(a) of the Act explicitly directs us to use such data in setting the CLFS rates. For the suggestion that including Medicaid managed care plan data will result in a ''downward spiral,'' we note that the statute anticipates that rates will decrease under the new private payor rate-based CLFS and provides a phase-in of payment reductions. Section 1834A(b)(3) of the Act, implemented at § 414.507(d), limits the amounts the CLFS rates for each CDLT (that is not a new ADLT or new CDLT) can be reduced as compared to the payment rates for the preceding year. For the first 3 years after implementation (CY 2018 through CY 2020), the reduction cannot be more than 10 percent per year, and for the next 3 years (CY 2021 through CY 2023), the reduction cannot be more than 15 percent per year. We also note that the Medicaid managed care plans may or may not be obligated to continue to use Medicare rates (or a reduction thereof) as a basis for their rates were such a ''downward spiral'' to occur.

Comment: One commenter urged CMS to conduct a more robust and transparent analysis of this proposal to identify the types of laboratories to which this policy would apply and the relative impact on payment rates. The commenter also requested that CMS release the number of clinical laboratories that previously reported applicable information, based on market segment and geographic locations. The commenter asserted that without such information, it would be premature to implement a proposal that will only increase administrative burden on hospitals and other organizations which will be forced to re-determine their applicable laboratory status.

Response: As discussed previously, our proposal to exclude MA plan payments from the total Medicare revenues for purposes of applying the majority of Medicare revenues threshold would affect laboratories of all types, that is hospital laboratories, large and small independent laboratories, and physician office laboratories that furnish services to a significant Medicare Part C enrollment population. We also explained that since the largest laboratories with the highest test volumes dominate the weighted median of private payor rates, and the largest laboratories reported data for the determination of CY 2018 CLFS rates and are expected to report again, we did not expect the additional reported data resulting from our proposed change to the majority of Medicare revenues threshold to have a predictable, direct impact on CLFS rates. As we noted previously, this means that we cannot predict whether the additional applicable laboratories reporting applicable information are paid at a higher (or lower) private payor rate, as compared to other laboratories that reported previously *and* whether the private payor rate volume of services performed by these ''additional'' applicable laboratories is significant enough to make an impact on the weighted median of private payor rates. However, we noted that we believe this proposal responded directly to stakeholder concerns regarding the number of applicable laboratories reporting applicable information for the initial data reporting period (83 FR 36049). We also noted that in the previous data reporting period we received applicable information from 1,942 applicable laboratories from every state, the District of Columbia, and

Puerto Rico, and that additional summary information regarding data reporting for the Medicare CLFS from the first data reporting period is available on the CLFS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/CY2018-CLFS-Payment-System-Summary-Data.pdf*.

Given that section 1834A(a)(8)(B) of the Act specifically defines MA plans under Part C as private payors, and an applicable laboratory that receives MA plan payments must consider those MA plan payments in identifying its applicable information for reporting, we believe that it is more logical to consider MA plan payments only as private payor rates for purposes of reporting applicable information, rather than both private payor rates and Medicare revenues. We believe this is consistent with the statute and will help to increase laboratory participation from all types of laboratories. At the same time, we recognize the administrative concerns raised by some commenters regarding the data reporting requirements for laboratories with a significant Medicare Part C revenue component, particularly as some of these laboratories may be small physician offices or independent laboratories, which we have previously discussed as having a significant burden in reporting applicable information. However, as discussed previously in response to comments, we believe that modifying our definition of applicable laboratory so that we may receive applicable information from more laboratories that furnish tests to a significant Medicare Part C population, which are less likely to qualify for applicable laboratory status under the current policy, outweighs the additional reporting burden placed on these laboratories as well as directly supports our goal of collecting as much applicable information as possible from the broadest representation of the national laboratory market on which to base CLFS payment amounts. For these reasons we are finalizing our proposal to modify the definition of applicable laboratory to exclude MA plan revenues from total Medicare revenues (the denominator of the majority of Medicare revenues threshold). We are revising paragraph (3) of the definition of applicable laboratory at § 414.502 accordingly.

Comment: In addition to CMS' proposal to exclude MA plan payments from total Medicare revenues, one commenter recommended that CMS also remove prescription drug payments under Medicare Part D from the description of total Medicare revenues in the applicable laboratory definition. The commenter stated that including Part D payments is illogical because there is no circumstance under which such payments would be related to laboratory testing.

Response: As discussed previously, we are finalizing our proposal to modify the definition of applicable laboratory to exclude MA plan payments from total Medicare revenues, the denominator of the majority of Medicare revenues threshold, so that more types of laboratories may qualify as an applicable laboratory. While the agency did not propose or solicit comments on the possibility of excluding Medicare Part D revenues from total Medicare revenues, we will take the commenter's suggestion into consideration for future refinements to the CLFS. However, we note that if the commenter is correct that there is no circumstance under which such payments would be related to laboratory testing, then whether Part D payments are included or excluded from the denominator would have no effect on the calculation.

4. Solicitation of Public Comments on Other Approaches To Defining Applicable Laboratory

As discussed in the CY 2019 PFS proposed rule (83 FR 35858), and as noted previously, we define applicable laboratory at the NPI level, which means the laboratory's own billing NPI is used to identify a laboratory's revenues for purposes of determining whether it meets the majority of Medicare revenues threshold and the low expenditure threshold components of the applicable laboratory definition. For background purposes, the following summarizes some of the considerations we made in establishing this policy.

In the CLFS proposed rule, entitled Medicare Clinical Diagnostic Laboratory Tests Payment System, published in the October 1, 2015 **Federal Register**, we proposed to define applicable laboratory at the TIN level so that an applicable laboratory would be an entity that reports tax-related information to the IRS under a TIN with which all of the NPIs in the entity are associated, and was itself a laboratory or had at least one component that was a laboratory, as defined in § 493.2. In the CLFS proposed rule, we discussed that we considered proposing to define applicable laboratory at the NPI level. However, we did not propose that approach because we believed private payor rates for CDLTs are negotiated at the TIN level and not by individual laboratory locations at the NPI level. Numerous stakeholders had indicated that the TIN-level entity is the entity negotiating pricing, and therefore, is the entity in the best position to compile and report applicable information across its multiple NPIs when there are multiple NPIs associated with a TIN-level entity. We stated that we believed defining applicable laboratory by TIN rather than NPI would result in the same applicable information being reported, and would require reporting by fewer entities, and therefore, would be less burdensome to applicable laboratories. In addition, we stated that we did not believe reporting at the TIN level would affect or diminish the quality of the applicable information reported. To the extent the information is accurately reported, we expected reporting at a higher organizational level to produce exactly the same applicable information as reporting at a lower level (80 FR 59391 through 59393).

Commenters who objected to our proposal to define applicable laboratory at the TIN level stated that our definition would exclude hospital laboratories because, in calculating the applicable laboratory's majority of Medicare revenues amount, which looks at the percentage of Medicare revenues from the PFS and CLFS across the entire TIN-level entity, virtually all hospital laboratories would not be considered an applicable laboratory. Many commenters expressed particular concern that our proposed definition would exclude hospital outreach laboratories, stating that hospital outreach laboratories, which do not provide laboratory services to hospital patients, are direct competitors of the broader independent laboratory market, and therefore, excluding them from the definition of applicable laboratory would result in incomplete and inappropriate applicable information, which would skew CLFS payment rates. Commenters maintained that CMS needed to ensure reporting by a broad scope of the laboratory market to meet what they viewed as the intent of the statute that all sectors of the laboratory market be included to establish accurate market-based rates (81 FR 41045).

In issuing the CLFS final rule, we found particularly compelling the comments that urged us to adopt a policy that would better enable hospital outreach laboratories to be applicable laboratories because we agreed hospital outreach laboratories should be included in determining the new CLFS payment rates. We believed it was important to facilitate reporting of private payor rates for hospital outreach laboratories to ensure a broader representation of the national laboratory

market to use in setting CLFS payment amounts (81 FR 41045).

We also stated in the CLFS final rule that we believed the intent of the statute was to effectively exclude hospital laboratories as applicable laboratories, based on the statutory language, in particular, regarding the majority of Medicare revenues threshold criterion in section 1834A(a)(2) of the Act. Section 1834A(a)(2) of the Act provides that, to qualify as an applicable laboratory, an entity's revenues from the CLFS and the PFS need to constitute a majority of its total Medicare payments received from the Medicare program for a data collection period. What we found significant was that most hospital laboratories would not meet that majority of Medicare revenues threshold because their revenues under the Inpatient Prospective Payment System (IPPS) and Outpatient Prospective Payment System (OPPS) alone would likely far exceed the revenues they received under the CLFS and PFS. Therefore, we stated that we believe the statute intended to limit reporting primarily to independent laboratories and physician offices (81 FR 41045 through 41047). For a full discussion of the definition of applicable laboratory, see the CLFS final rule (81 FR 41041 through 41051).

a. Stakeholder Continuing Comments and Stakeholder-Suggested Alternative Approaches

As noted above, in response to public comments, we had previously finalized that an applicable laboratory is the NPI-level entity so that a hospital outreach laboratory assigned a unique NPI, separate from the hospital of which it is a part, is able to meet the definition of applicable laboratory and its applicable information can be used for CLFS rate-setting. We stated in the CY 2019 PFS proposed rule that we continue to believe that the NPI is the most effective mechanism for identifying Medicare revenues for purposes of determining applicable laboratory status and identifying private payor rates for purposes of reporting applicable information. Once a hospital outreach laboratory obtains its own unique billing NPI and bills for services using its own unique NPI, Medicare and private payor revenues are directly attributable to the hospital outreach laboratory. By defining applicable laboratory using the NPI, Medicare payments (for purposes of determining applicable laboratory status) and private payor rates and the associated volume of CDLTs can be more easily identified and reported to us. We also noted that we believe that finalizing our proposal to exclude MA plan payments under Medicare Part C from total Medicare revenues in the definition of applicable laboratory may increase the number of entities meeting the majority of Medicare revenues threshold, and therefore, allow them to qualify for applicable laboratory status. We stated that we believe that finalizing the change to the total Medicare revenues component of the applicable laboratory definition and our current policy that requires an entity to bill Medicare Part B under its own NPI, may increase the number of hospital outreach laboratories qualifying as applicable laboratories.

In addition, we noted that we are confident that our current policy supports our collecting sufficient applicable information in the next data reporting period, and that we received sufficient and reliable applicable information with which we set CY 2018 CLFS rates, and that those rates are accurate. We noted that we received applicable information from laboratories in every state, the District of Columbia, and Puerto Rico. This data included private payor rates for almost 248 million laboratory tests conducted by 1,942 applicable laboratories, with over 4 million records of applicable information. As we have noted, the largest laboratories dominate the market, and therefore, most significantly affect the payment weights (81 FR 41049). We stated that given that the largest laboratories reported their applicable information to CMS in the initial data reporting period, along with many smaller laboratories, we believe the data we used to calculate the CY 2018 CLFS rates was sufficient and resulted in accurate weighted medians of private payor rates.

However, we noted that we continue to consider refinements to our policies that could lead to including even more applicable information for the next data reporting period. Therefore, the comments and alternative approaches suggested by commenters, even though some were first raised prior to the CLFS final rule, were presented and offered for comment as part of the proposed rule.

(1) Using Form CMS–1450 UB 04 (and Electronic Equivalent, 837I) 14X Type of Bill (TOB) To Determine Majority of Medicare Revenues and Low Expenditure Thresholds

Although an NPI-based definition of applicable laboratories includes more hospital outreach laboratories than a TIN-based definition, some commenters expressed concern that the NPI-based definition of applicable laboratory may not be sufficient to capture all of the hospital outreach laboratories. These commenters suggested we revise the definition specifically for the purpose of including more hospital outreach laboratories. Under a suggested approach, a laboratory could determine whether it meets the majority of Medicare revenues threshold and low expenditure threshold using only the revenues from services reported on the Form CMS–1450 (approved Office of Management and Budget number 0938–0997) 14x Type of Bill (TOB), which is used only by hospital outreach laboratories. The CMS–1450 14X TOB is the uniform bill (also known as the UB–04) for institutional providers that was approved by the National Uniform Billing Committee (NUBC)[8] at its February 2005 meeting.

The data elements referenced in the UB–04 manual are also used in the electronic claim standard as required by the Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–191, enacted August 21, 1996) as per of sections 1171 and 1172 of the Act. Consequently, there was additional emphasis placed on aligning the reporting instructions to closely mirror the HIPAA claim standard for institutional providers for both paper and electronic claims. The TOB is a required element on both the UB 04 and electronic equivalent of the 837I transaction of the HIPAA compliant 005010 standard transaction. The NUBC defines the 14X TOB as an outpatient hospital TOB, and it is used by hospitals to bill a payor for outreach laboratory services for non-patients. As discussed in Transmittal 3425, a non-patient is defined as a beneficiary who is neither an inpatient nor an outpatient of a hospital, but who has a specimen that is submitted for analysis to a hospital and the beneficiary is not physically present at the hospital for purposes of the laboratory service. All hospitals (including Critical Access Hospitals) bill non-patient laboratory tests on a TOB 14X. They are paid under the CLFS, and the Part B deductible and coinsurance do not apply. We believe that laboratory services billed on the CMS 1450 14X encompass all of the laboratory testing services.

To address this stakeholder's concern of including hospital outreach laboratories, we solicited public comments in the CY 2019 PFS on revising the definition of applicable laboratory to permit the revenues identified on the Form CMS–1450 14x

[8] Copyright © 2012 the American Hospital Association, Chicago, Illinois. Reproduced with permission. No portion of this publication may be copied without the express written consent of the AHA.

TOB to be used instead of the revenues associated with the NPI that the laboratory uses in order to determine whether it meets the majority of Medicare revenues threshold (and the low expenditure threshold). Under this approach, the applicable revenues would be based on the bills used for hospital laboratory services provided to non-patients, which are paid under Medicare Part B (that is, the 14x TOB). If we pursued this approach, we explained that we would have to modify the definition of applicable laboratory in § 414.502 by indicating that an applicable laboratory may include an entity that bills Medicare Part B on the Form CMS–1450 14x TOB.

Although using the 14x TOB could alleviate some initial, albeit limited, administrative burden on hospital outreach laboratories to obtain a unique billing NPI, we explained that we would have operational and statutory authority concerns about defining applicable laboratory by the Form CMS–1450 14x TOB, as indicated below.

First, we explained that defining an applicable laboratory using the Form CMS–1450 14x TOB does not identify an entity the same way an NPI does. Whereas an NPI is associated with a provider or supplier to determine specific Medicare revenues, the 14x TOB is merely a billing mechanism that is currently used only for a limited set of services. Under an approach that permits laboratories to meet the majority of Medicare revenues threshold using the 14x TOB, private payor rates (and the volume of tests paid at those rates) would have to be identified that are associated with only the outreach laboratory services of a hospital's laboratory business. However, some private payors, such as MA plans, may not require hospital outreach laboratories to use the 14x TOB for their outreach laboratory services. To the extent a private payor does not require hospital outreach laboratory services to be billed on a 14x TOB (which specifically identifies outreach services), hospitals may need to develop their own mechanism for identifying and reporting only the applicable information associated with its hospital outreach laboratory services. In light of this possible scenario, we requested public comments about the utility of using the 14x TOB in the way we have described and on the level of administrative burden created if we defined applicable laboratory using the Form CMS–1450 14x TOB.

Second, we questioned whether hospitals would have sufficient time after publication of a new final rule that included using the Form CMS–1450 14x TOB, and any related subregulatory guidance, to develop and implement the information systems necessary to collect private payor rate data before the start of the next data collection period, that is, January 1, 2019. Therefore, we solicited public comments as to whether revising the definition of applicable laboratory to use the Form CMS–1450 14x TOB would allow laboratories sufficient time to make the necessary systems changes to identify applicable information before the start of the next data collection period.

Third, we noted that we believe defining applicable laboratory at the NPI level, as we currently do, provides flexibility for hospital outreach laboratories to not obtain a unique billing NPI, which may be burdensome, particularly where a hospital outreach laboratory performs relatively few outreach services under Medicare Part B. For example, under the current definition of applicable laboratory, if a hospital outreach laboratory's CLFS revenues in a data collection period are typically less than the low expenditure threshold, the hospital of which it is a part could choose not to obtain a separate NPI for its outreach laboratory and could thus avoid determining applicable laboratory status for its outreach laboratory component. In contrast, if laboratories were permitted to use the Form CMS–1450 14x TOB, revenues attributed to the hospital outreach laboratory would have to be calculated in every instance where those services exceeded the low expenditure threshold. This would be true even for a hospital outreach laboratory that performs relatively few outreach services under Medicare Part B. Therefore, we also solicited comments concerning this aspect of using the 14x TOB definition.

Fourth, and significantly, we stated that we believe that if we were to utilize such an approach in defining applicable laboratory, all hospital outreach laboratories would meet the majority of Medicare revenues threshold. We noted, at that time, we believed this approach would be inconsistent with the statute. By virtue of the majority of Medicare revenues threshold, the statute defines applicable laboratory in such a way that not all laboratories qualify as applicable laboratories. However, if we were to use the CMS–1450 14x TOB to define an applicable laboratory, all hospital outreach laboratories that use the 14x TOB would meet the majority of Medicare revenues threshold. Accordingly, we requested public comments regarding whether this definition would indeed be inconsistent with the statute, as well as comments that could identify circumstances under this definition whereby a hospital outreach laboratory would not meet the majority of Medicare revenues threshold.

The following is a summary of the comments we received and our responses to the comments regarding the use of the CMS–1450 14x TOB to define an applicable laboratory.

Comment: We received conflicting comments on this potential refinement to the definition of an applicable laboratory. Some commenters supported using the CMS–1450 14x TOB as a mechanism to define an applicable laboratory, and others were opposed to this approach. The commenters who supported this believe that it provides an opportunity for hospital outreach laboratories that have not obtained an NPI separate from the hospital to qualify as an applicable laboratory and report applicable information. These commenters opined that since the 14X TOB is used only to submit claims by hospital outreach laboratories for non-patient claims, this approach would include hospital laboratories without their own NPI who compete in the marketplace with independent clinical laboratories. These commenters also noted that, in their view, this approach would effectuate Congress' intent to determine whether a majority of Medicare revenues attributable to the laboratory part of the hospital—as opposed to the entire hospital—was from the CLFS and/or PFS.

Another commenter stated their view that considerable burden is associated with requiring a hospital outreach laboratory to obtain its own NPI. According to this commenter, a hospital would need to re-credential under a new NPI with each of their payors in order to submit claims and receive payment from each of their payors for their hospital outreach laboratory services. This commenter stated that this process could take more than a year to complete. Accordingly, this commenter concluded that hospital outreach laboratories rarely obtain their own unique NPI (separate from the hospital) and it would not be practical to do so for the single purpose of reporting applicable information to CMS.

Additional commenters in support of refinements to the definition responded to CMS' concern that revenues attributed to the hospital outreach laboratory would have to be calculated in every instance where those services exceeded the low expenditure threshold, even for a hospital outreach laboratory that performs relatively few outreach services under Medicare Part

B. In response to this concern, commenters noted that this refinement to the definition would require hospital outreach laboratories to have the same obligations as other laboratories that exceed the low expenditure threshold and that serve non-hospital patients. Furthermore, commenters suggested that if CMS is concerned that refinements to the definition would result in all hospital outreach laboratories meeting the majority of Medicare revenues threshold, that is the case for almost all independent laboratories, as well, where hospital outreach laboratories compete with independent laboratories in the marketplace. Furthermore, they stated it is reasonable that a laboratory whose revenues are derived primarily from the CLFS and/or PFS and that meets the low expenditure threshold be included in data reporting, regardless if it is a hospital outreach laboratory.

In contrast, several commenters strongly opposed the use of Form CMS–1450 14x TOB to define an applicable laboratory because of their views of the additional administrative burden for hospitals relative to the effect on CLFS rates. These commenters stated that even if every hospital outreach laboratory were to report private payor data, it is unlikely that it would result in a significant change to the weighted median of private payor rates due to the massive amount of data that would be reported by the large independent laboratories. They also agreed with the potential operational feasibility concerns we raised in the proposed rule.

Response: We appreciate the comments raised about the administrative aspects of obtaining an NPI for a hospital outreach laboratory for the sole purpose of reporting data to CMS and the associated administrative burden. We agree that one advantage of using the Form CMS–1450 14x TOB to define an applicable laboratory is that it provides an opportunity for more hospital outreach laboratories to report data for calculating CLFS rates. However, we also recognize that this will result in additional administrative burden on the hospital industry, such as changes to collect and report applicable information. We discuss specific operational concerns in more detail in the sections below. However, we generally believe that this advantage outweighs the potential burden for hospital outreach laboratories, the data collected from hospital outreach laboratories will create a dataset that is a more robust representation of the laboratory testing market, and that this outweighs the potential burden to hospital outreach laboratories. Accordingly, we are finalizing the use of the Form CMS–1450 14x TOB to define applicable laboratories for the next data collection period (January 1, 2019, through June 30, 2019) and the next data reporting period (January 1, 2020, and ends March 31, 2020), subject to other regulatory and subregulatory requirements, such as the regulatory low expenditure threshold.

We also considered the comments regarding the limited impact of this additional data to the weighted median of private payor rates. We believe that we will only know the impact of the data on CLFS rates by collecting data from hospital outreach laboratories. We believe inclusion of this information so that the CLFS rates better reflect the market outweighs the potential added burden on one segment of the market. However, if it becomes apparent that data from hospital outreach laboratories do not result in a significant change in the weighted median of private payor rates, we will revisit the use of the CMS–1450 14x TOB through future rulemaking.

Comment: A few commenters stated that CMS should not be concerned that hospitals will need to develop additional mechanisms to identify applicable information if private payors do not require hospital outreach laboratories to use the CMS–1450 14x TOB. They noted that this point is not relevant to reporting private payor rates because once applicable laboratory status is determined, the hospital outreach laboratory ''can simply report its private payor data for all of its fee for service work that is not part of a capitated plan.'' The commenters stated that the reporting entities for all other laboratory types would have the same burden as hospital outreach laboratories, that is, of identifying and reporting accurate applicable information.

In contrast, several stakeholders raised concerns about the implications this alternative approach would have on identifying applicable information for purposes of reporting that data to us. They stated that the Form CMS–1450 14x TOB will only capture Medicare Part B revenues, while private payor data would not be captured. In other words, the 14x TOB will correctly identify Medicare Part B revenues for purposes of determining applicable laboratory status, but that the hospital would be responsible for correctly identifying and collecting applicable information associated solely with the hospital outreach laboratory. Several commenters stated that billing systems for hospital outreach laboratories are not set up in a manner that allows this type of information to be easily extracted, and therefore, this approach to defining an applicable laboratory would pose a significant operational burden on hospitals.

Response: We note that hospital outreach laboratories who meet the definition of an applicable laboratory would have the same burden of identifying and reporting accurate applicable information as all other laboratory types that meet the definition of an applicable laboratory.

Comment: Some commenters stated that they believe hospitals would have sufficient time to develop and implement the information systems necessary to collect private payor rate data before the start of the next data collection period, and noted that even though the CLFS final rule was published less than 2 weeks prior to the end of the first data collection period, applicable laboratories were able to develop and implement the information systems necessary to collect private payor rate data and report it to CMS. However, several commenters expressed serious concerns about developing the systems to collect applicable information before the next data reporting period. They indicated that finalizing this alternative approach for defining an applicable laboratory would not allow hospital outreach laboratories sufficient time to make the necessary systems changes prior to the start of the next data collection, and as a result, there would be a risk that inaccurate data would be reported.

Response: As discussed previously in this section, the next data collection period is January 1, 2019, through June 30, 2019. A 6-month window follows the data collection period from July 1, 2019, through December 31, 2019 and the next data reporting period begins January 1, 2020, and ends March 31, 2020. While several commenters raised concerns about the operational changes needed for reporting before the next data collection period, we believe that, similar to the retroactive data collection that occurred under the initial private payor rate-based CLFS, hospitals, including the part of the hospital represented by their hospital outreach laboratories, could develop these operational changes in time. For example, hospitals, including the part of the hospital represented by their hospital outreach laboratories, could use the time before and during the next data collection period to develop processes to collect applicable information, the 6-month window between the collection and reporting periods to determine applicable laboratory status and retroactively collect applicable

information to report it before the close of the next data reporting period (March 31, 2020).

Comment: Many commenters noted the concern that hospital outreach laboratories would lose the flexibility to not obtain an NPI for low volume hospital outreach laboratories. For instance, they stated all hospitals would be required to go through the exercise of determining applicable laboratory status for their hospital outreach laboratory components. However, a few commenters indicated that hospital outreach laboratories would have the same obligations as every other laboratory to determine whether it is an applicable laboratory. Therefore, in their view, the loss of flexibility for hospital outreach laboratories to not obtain an NPI should not be a concern.

Response: We agree that the use of Form CMS–1450 14x TOB to define an applicable laboratory will require hospitals to assess applicable laboratory status for all outreach laboratory components, similar to the obligations of other laboratory types. For instance, all independent and physician office laboratories billing Medicare Part B under their own NPI must assess whether they qualify as an applicable laboratory, and if so, report applicable information to us. Consequently, independent and physician office laboratories do not have the flexibility of not reporting private payor data that is currently afforded to hospital outpatient laboratories. Use of the 14x TOB to define an applicable laboratory would equalize the obligations across laboratories, regardless of their affiliation with a hospital, to determine whether they qualify for applicable laboratory status. We note that, insofar as commenters expressed concern about low volume hospital outreach laboratories, our policy regarding laboratories receiving less than a minimum in CLFS revenues remains unchanged. Specifically, hospital outreach laboratories that do not receive at least $12,500 in CLFS revenues on the 14X TOB during a data collection period would be exempt from the reporting requirements.

Comment: Several commenters noted that by using the 14x TOB to define an applicable laboratory, all hospital outreach laboratories would meet the majority of Medicare revenues threshold. They, therefore, raised concerns about the legality of this approach. For instance, some commenters stated their view that Congress did not intend for all hospital outreach laboratories to qualify as applicable laboratories. In contrast, some commenters stated their view that Congress clearly intended for the CLFS to reflect a market-based system that includes hospital outreach laboratories and that it is reasonable for a laboratory with revenues derived primarily from the CLFS and/or PFS that also meets the low expenditure threshold to be an applicable laboratory, regardless of whether it is a hospital outreach laboratory or not.

Response: After further review of this issue, we believe that using Form CMS–1450 14x TOB provides a means of distinguishing services furnished by a hospital outreach laboratory from other services furnished and billed by a hospital using the same NPI. The statute specifically directs us to identify applicable ''laboratories'' and not ''providers'' or ''suppliers.'' We believe that hospital outreach laboratories without unique NPIs furnish clinical laboratory tests paid under the CLFS and PFS, albeit to Medicare beneficiaries who are not hospital patients. Accordingly, we believe such laboratories, should not be exempt from reporting the applicable data merely due to their shared use of a billing entity with a hospital.

Using the laboratory's own billing NPI as the basis for defining applicable laboratory, as we currently do, results in all independent laboratories meeting the statutory ''majority of Medicare revenues'' requirement because most, if not all, of an independent laboratory's Medicare revenues are received from the PFS and or CLFS. Similar to how the use of the NPI results in all independent laboratories meeting the majority of Medicare revenues threshold, using the Form CMS–1450 14x TOB as the basis for defining applicable laboratory would identify all hospital outreach laboratories that meet the statutorily required ''majority of Medicare revenues'' component of applicable laboratory.

We believe that the use of Form CMS–1450 14x TOB as a mechanism for applying the majority of Medicare revenues threshold identifies hospital outreach laboratories that meet this threshold, consistent with the statutory requirement for applicable laboratory status. We further believe that, absent having an NPI separate from the hospital, these hospital outreach laboratories otherwise would be excluded. We do not believe that the statute excludes laboratories that meet the majority of Medicare revenues threshold from potentially qualifying as an applicable laboratory. Therefore, using the 14x TOB to define applicable laboratory is consistent with the statute.

As stated above, accordingly, we are finalizing the use of the Form CMS–1450 14x TOB to define applicable laboratories, subject to other regulatory and subregulatory requirements, such as the regulatory low expenditure threshold.

Comment: Two commenters stated that it is unclear whether the burden associated with considering every hospital outreach laboratory to meet the majority of Medicare revenues threshold and an applicable laboratory (if the low expenditure threshold is also met) would outweigh the additional applicable information that would be reported. Therefore, they requested that we continue evaluating this approach before implementing any changes.

Response: As we stated previously, we generally believe that the advantage of including private payor data from hospital outreach laboratories in setting CLFS rates outweighs the potential burden for hospital outreach laboratories; data collected from hospital outreach laboratories will create a dataset that is a more robust representation of the laboratory testing market. We also note that the timing of the data collection and reporting periods, and the 6 month window in between provide time for laboratories to implement needed operational changes.

Comment: One commenter suggested that an alternative approach to identifying applicable laboratories would be for the hospital to develop an ''adjustment factor'' based on its payment-to-charges ratio to estimate laboratory revenues received from the IPPS and OPPS. The same commenter suggested that we remove the requirement that an applicable laboratory is an entity that bills Medicare Part B under its own NPI and that we amend the majority of Medicare revenues threshold so that ''Medicare revenues'' means payment for claims submitted on a CMS 1500, a CMS 1450 using a 14x TOB, or their electronic equivalents.

Response: We appreciate this suggested approach and we may consider it in future rulemaking.

In conclusion, as stated previously and for the reasons described previously, we are finalizing the use of the Form CMS–1450 14x TOB to define applicable laboratories, subject to other regulatory and subregulatory requirements, such as the regulatory low expenditure threshold.

We note that because of the low expenditure threshold, not all hospital outreach laboratories would meet the definition of an applicable laboratory and therefore not all hospital outreach laboratories would be required to report applicable information to us. In other words, hospital outreach laboratories

that do not receive at least $12,500 in CLFS revenues on the 14X TOB during a data collection period would be exempt from the reporting requirements.

We believe that defining applicable laboratory by the NPI may be preferable to using the CMS–1450 14x TOB for some hospitals and so expect that some hospital outreach laboratories may still want to obtain their own billing NPI separate from the hospital. As such, they may do so and may qualify as an applicable laboratory in this manner. If so, they would report applicable information during the next data reporting period beginning January 1, 2020, through March 31, 2020.

We note that we utilize ongoing subregulatory guidance and provider education materials to provide more details regarding how applicable laboratories, both those identified through NPIs and hospital outreach laboratories identified through the combination of NPI and services reported using the 14x TOBs, are to report the applicable data to CMS. We also note that for hospitals which have an applicable laboratory, whether via its own NPI for its outreach laboratory or by identifying its status with the 14X TOB, the applicable laboratory would be required to report applicable information by March 31, 2020, for services reimbursed for the period between January 1, 2019, and June 30, 2019.

In conclusion, as stated previously, we are finalizing the use of the Form CMS–1450 14x TOB to define applicable laboratories. In other words, we are finalizing modification of the definition of applicable laboratory to also include 14X TOB revenues. We will also revise paragraph (2) of the definition of applicable laboratory at § 414.502 accordingly.

(2) Using CLIA Certificate To Define Applicable Laboratories

Some commenters requested that we use the CLIA certificate rather than the NPI to identify a laboratory that would be considered an applicable laboratory. We discussed in the CLFS proposed rule (80 FR 59392) why not all entities that meet the CLIA regulatory definition at § 493.2 would be applicable laboratories, and therefore, we did not propose to use the CLIA certificate as the mechanism for defining applicable laboratory. However, some commenters to the CLFS proposed rule suggested we use the CLIA certificate to identify the organizational entity that would be considered an applicable laboratory so that each entity that had a CLIA certificate would be an applicable laboratory (81 FR 41045). We considered those comments in the CLFS final rule and discussed why we chose not to adopt that approach.

Among other reasons, we explained in the CLFS final rule that we believed a CLIA certificate-based definition of applicable laboratory would be overly inclusive by including all hospital laboratories, as opposed to just hospital outreach laboratories. In addition, the CLIA certificate is used to certify that a laboratory meets applicable health and safety regulations in order to furnish laboratory services. Unlike, for example, the NPI, with which revenues for specific services can easily be identified, the CLIA certificate is not associated with Medicare billing and cannot be used to identify revenues for specific services. We also indicated that we did not know how a hospital would determine whether its laboratories would meet the majority of Medicare revenues threshold (and the low expenditure threshold) using the CLIA certificate as the basis for defining an applicable laboratory. In addition, we stated that, given the difficulties many hospitals would likely have in determining whether their laboratories are applicable laboratories, we also believed hospitals may object to using the CLIA certificate (81 FR 41045).

However, in light of stakeholders' suggestions to use the CLIA certificate to include hospital outreach laboratories in the definition of applicable laboratories, we solicited public comments on that approach. Under such an approach, the majority of Medicare revenues threshold and low expenditure threshold components of the definition of applicable laboratory would be determined at the CLIA certificate level instead of the NPI level. We explained that if we pursued such an approach, we would have to modify the definition of applicable laboratory in § 414.502 to indicate that an applicable laboratory is one that holds a CLIA certificate under § 493.2 of the chapter. We noted in the CY 2019 PFS proposed rule that we would have concerns, however, about defining applicable laboratory by the CLIA certificate.

First, we explained that as we discussed in the CLFS final rule, given that information regarding the CLIA certificate is not required on the Form CMS–1450 14x TOB, which is the billing form used by hospitals for their laboratory outreach services, it is not clear how a hospital would identify and distinguish revenues generated by its separately CLIA-certified laboratories for their outreach services. Therefore, we solicited public comments regarding the mechanisms a hospital would need to develop to identify revenues if we used the CLIA certificate for purposes of determining applicable laboratory status, as well as comments about the administrative burden associated with developing such mechanisms.

In addition, we understood there could be a scenario where one CLIA certificate is assigned to a hospital's entire laboratory business, which would include laboratory tests performed for hospital patients as well as non-patients (that is, patients who are not admitted inpatients or registered outpatients of the hospital). For example, hospital laboratories with an outreach laboratory component would be assigned a single CLIA certificate if the hospital outreach laboratory has the same mailing address or location as the hospital laboratory. We noted that in this scenario, the majority of Medicare revenues threshold would be applied to the entire hospital laboratory, not just its outreach laboratory component. If a single CLIA certificate is assigned to the hospital's entire laboratory business, the hospital laboratory would be unlikely to meet the majority of Medicare revenues threshold because its laboratory revenues under the IPPS and OPPS alone would likely far exceed the revenues it receives under the CLFS and PFS. As a result, a hospital outreach laboratory that could otherwise meet the definition of applicable laboratory, as currently defined at the NPI level, would not be an applicable laboratory if we were to require the CLIA certificate to define applicable laboratory. Given that this approach could have the effect of decreasing as opposed to increasing the number of applicable laboratories, we requested public comments on this potential drawback of defining applicable laboratory at the CLIA certificate level. We stated in the comment solicitation that feedback on this topic could help inform us regarding potential refinements to the definition of applicable laboratory, and that depending on the comments we receive, it is possible we would consider approaches described in that section. The following is a summary of the comments we received and our responses to the comments regarding the use of the CLIA certificate to define an applicable laboratory.

Comment: Many commenters did not support using the CLIA certificate to define applicable laboratory because of the administrative complexity associated with this approach. Commenters stated that the CLIA certificate has no relationship to actual laboratory revenues, like the NPI does, and therefore, laboratories would need to develop their own mechanisms to attribute Medicare revenues to the CLIA

certificate. Commenters stated that any ''workaround'' to resolve these issues would be extremely burdensome to develop and implement. These same commenters also noted that when one CLIA certificate is assigned to a hospital's entire laboratory business, which would include laboratory tests performed for hospital patients as well as non-patients, the total Medicare revenues component of the majority of Medicare revenues threshold equation would be ''overly inclusive.'' Therefore, they agreed with CMS' concern that hospital outreach laboratories would be unlikely to meet the majority of Medicare revenues threshold under those circumstances because revenues from the IPPS and OPPS alone would likely far exceed the revenues those laboratories receive under the CLFS and PFS. For these reasons, they encouraged CMS to reject the use of the CLIA certificate for defining an applicable laboratory.

Response: We agree that defining applicable laboratory by the CLIA certificate would result in substantial administrative burden for the laboratory industry. From an administrative perspective, we believe the using the CLIA certificate unworkable for the purpose of determining applicable laboratory status because the CLIA certificate is not required on the CMS 1450 14x TOB which is the billing form used by hospital outreach laboratories. Therefore, no revenues can be readily identified by the CLIA certificate. Even if the hospital developed its own mechanism to identify revenues by the CLIA certificate, the CLIA certificate could be assigned to the hospital's entire laboratory business, which includes laboratory tests performed for hospital patients, as well as non-patients. For example, we understand hospital-based laboratories with an outreach component would be assigned a single CLIA certificate if the hospital outreach laboratory has the same mailing address or location as the main laboratory. In this scenario, the applicable laboratory criteria would be applied to the CLIA certificate of the entire hospital laboratory not just its outreach laboratory component. When a single CLIA certificate is assigned to the hospital's entire laboratory business, we believe it would result in the hospital laboratory not meeting the majority of Medicare revenues threshold because its laboratory revenues under the IPPS and OPPS alone will far exceed the revenues it receives under the CLFS and PFS. We also understand that a hospital could have multiple outreach laboratories each with its own CLIA certificate. Therefore, we believe those hospitals would also have difficulties separating Medicare revenues and applicable information among their various CLIA certificates as described below.

Comment: One commenter stated that it is unlikely that a single CLIA certificate would be assigned to both its outreach laboratory (non-patients) and its laboratory that that provides testing for its hospital inpatients and hospital outpatients. The commenter stated that it would be more likely that the outreach laboratory would be at a different location than the hospital and therefore, be assigned its own CLIA certificate even though the outreach laboratory is enrolled in the Medicare program under the hospital's NPI. As such, the commenter stated that an outreach laboratory operates as a distinct laboratory entity by virtue of having its own CLIA certificate and billing on the Form CMS–1450 14x TOB. The commenter suggested that the 14x TOB could be used in combination with each individual CLIA certificate to define applicable laboratory.

Response: We understand that the assignment of CLIA certificates for hospital outreach laboratories could vary depending on the location of the outreach laboratory. As discussed previously, Medicare revenues are not attributed to the CLIA certificate and information regarding the CLIA certificate is not required on the Form CMS–1450 14x TOB. As such, we believe the commenter's suggestion would result in defining applicable laboratory by the Form CMS–1450 14x TOB. We note that in cases in which a hospital owns and operates multiple outreach laboratories at different locations, we believe the administrative burden of attributing Medicare revenues to the CLIA certificate would be even more substantial as there could be several CLIA certificates assigned under the same NPI. In such cases, the hospital would need to attribute laboratory revenues among multiple CLIA certificates under the same billing entity. In other words, if the 14x TOB is used by a hospital to bill for laboratory tests furnished by more than one CLIA certificate under the same NPI, the hospital would need to devise a mechanism to attribute Medicare revenues to each individual CLIA certificate.

5. Solicitation of Public Comments on the Low Expenditure Threshold in the Definition of Applicable Laboratory

a. Decreasing the Low Expenditure Threshold

In the CLFS final rule, we established a low expenditure threshold component in the definition of applicable laboratory at § 414.502, which is reflected in paragraph (4). To be an applicable laboratory, at least $12,500 of an entity's Medicare revenues in a data collection period must be CLFS revenues (with the exception that there is no low expenditure threshold for an entity with respect to the ADLTs it furnishes). We established $12,500 as the low expenditure threshold because we believed it achieved a balance between collecting sufficient data to calculate a weighted median that appropriately reflects the private market rate for a test, and minimizing the reporting burden for laboratories that receive a relatively small amount of revenues under the CLFS. We indicated in the CLFS final rule (81 FR 41049) that once we obtained applicable information under the new payment system, we may decide to reevaluate the low expenditure threshold in future years and propose a different threshold amount through notice and comment rulemaking.

We explained in the CY 2019 PFS proposed rule that we recently heard from some laboratory stakeholders that the low expenditure threshold excludes most physician office laboratories and many small independent laboratories from reporting applicable information, and that by excluding so many laboratories, the payment rates under the new private payor rate-based CLFS reflect incomplete data, and therefore, inaccurate CLFS pricing.

As noted previously, we discussed in the CLFS final rule that we believed a $12,500 low expenditure threshold would reduce the reporting burden on small laboratories. In the CLFS final rule (81 FR 41051), we estimated that 95 percent of physician office laboratories and 55 percent of independent laboratories would not be required to report applicable information under our low expenditure criterion. Although we substantially reduced the number of laboratories qualifying as applicable laboratories (that is, approximately 5 percent of physician office laboratories and approximately 45 percent of independent laboratories), we estimated that the percentage of Medicare utilization would remain high. That is, approximately 5 percent of physician office laboratories would account for approximately 92 percent of CLFS

spending on physician office laboratories and approximately 45 percent of independent laboratories would account for approximately 99 percent of CLFS spending on independent laboratories (81 FR 41051).

We stated that it is our understanding that physician offices are generally not prepared to identify, collect, and report each unique private payor rate from each private payor for each laboratory test code subject to the data collection and reporting requirements, and the volume associated with each unique private payor rate. As such, we explained that we believe revising the low expenditure threshold so that more physician office laboratories are required to report applicable information would likely impose significant administrative burdens on physician offices. We stated that we also believe that increasing participation from physician office laboratories would have minimal overall impact on payment rates given that the weighted median of private payor rates is dominated by the laboratories with the largest test volume. We noted that our participation simulations from the first data reporting period show that increasing the volume of physician office laboratories reporting applicable information has minimal overall impact on the weighted median of private payor rates. For more information on our participation simulations, please visit the CLFS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/Downloads/CY2018-CLFS-Payment-System-Summary-Data.pdf*.

We stated in the proposed rule that we continue to believe the current low expenditure threshold strikes an appropriate balance between collecting enough private payor rate data to accurately represent the weighted median of private payor rates while limiting the administrative burden on small laboratories. In addition, as discussed previously in this section, we are finalizing excluding MA plan revenues under Part C from total Medicare revenues in the definition of applicable laboratory, and we noted that we expect more laboratories of all types, including physician office laboratories, may meet the majority of Medicare revenues threshold.

However, we recognized from stakeholders that some physician office laboratories and small independent laboratories that are not applicable laboratories because they do not meet the current low expenditure threshold may still want to report applicable information despite the administrative burden associated with qualifying as an applicable laboratory. Therefore, we sought public comment on revising the low expenditure threshold to increase the level of participation among physician office laboratories and small independent laboratories.

In the proposed rule we explained that one approach could be for us to decrease the low expenditure threshold by 50 percent, from $12,500 to $6,250, in CLFS revenues during a data collection period. Under such an approach, a laboratory would need to receive at least $6,250 in CLFS revenues in a data collection period. We stated that if we were to adopt such an approach, we would need to revise paragraph (4) of the definition of applicable laboratory at § 414.502 to replace $12,500 with $6,250. We solicited public comments on this approach.

We noted that we were particularly interested in comments from the physician community and small independent laboratories as to the administrative burden associated with such a revision to the low expenditure threshold. Specifically, we requested comments on the following issues: (1) Whether physician offices and small independent laboratories currently have adequate staff levels to meet the data collection and data reporting requirements; (2) whether data systems are currently in place to identify, collect, and report each unique private payor rate from each private payor for each CLFS test code and the volume of tests associated with each unique private payor rate; (3) if physician offices and small independent laboratories are generally not prepared to conduct the data collection and data reporting requirements, what is the anticipated timeframe needed for physician office and small independent laboratories to be able to meet the data collection and data reporting requirements; and (4) any other administrative concerns that decreasing the low expenditure threshold may impose on offices and small independent laboratories.

The following is a summary of the comments we received and our responses to the comments regarding the approach of decreasing the low expenditure threshold by 50 percent, from $12,500 to $6,250, in CLFS revenues during a data collection period.

Comment: Many commenters were opposed to reducing the low expenditure threshold because of the administrative burden it would place on physician office laboratories and small independent laboratories. Commenters noted that they experienced difficulties during the initial data collection and data reporting period with determining whether they met the definition of applicable laboratory and therefore if they were required to report applicable information. Some commenters that did report applicable information stated that they experienced significant administrative burden in collecting and compiling information, especially for test codes that involved numerous different sources of payment (such as the beneficiary's primary private payor, the beneficiary's secondary insurance, and coinsurance requirements). Some commenters reported having to remove staff from regular duties to work full time on preparing to report applicable information to CMS. A few commenters noted that physician office laboratories and small independent laboratories do not have the staffing or resources currently available, nor do they anticipate having them available in the future, to identify, collect and report each unique private payor rate for each CLFS test code and the volume of tests associated with each unique private payor rate. As such, commenters encouraged CMS not to decrease the low expenditure threshold component of the definition of applicable laboratory.

Response: We appreciate the comments regarding the administrative burden imposed by the data collection and reporting requirements on physician office laboratories and small independent laboratories and understand that reducing the low expenditure threshold by 50 percent would add more burden on this segment of the laboratory industry. We will consider the commenters' input regarding the low expenditure threshold as we continue to evaluate and refine Medicare CLFS payment policy in the future.

Comment: A few commenters suggested alternative approaches to lowering the low expenditure threshold that involve collecting data for physician office dependent tests and allowing laboratories to voluntarily report applicable information. For example, two commenters suggested that CMS identify laboratory tests predominantly performed by physician office laboratories and collect a statistically representative sample of data from physician office laboratories for the range of tests commonly performed in this setting. Under the commenters' approach, physician office laboratories would be required to report those tests. The commenters stated that this would ensure that the private payor rates for tests mostly performed by physician office laboratories are

represented in the weighted median of private payor rates used to determine CLFS rates. Moreover, a few other commenters suggested that CMS permit voluntary reporting so that laboratories that do not meet the current low expenditure threshold may report applicable information if they choose to.

Response: The suggestions to identify physician office laboratory dependent tests and to permit voluntary reporting have already been addressed in previous rulemaking and we chose not to adopt them (81 FR 41048). We noted that statute is clear about the particular information that is to be reported and on which we must base the new CLFS payment rates. Only applicable information of applicable laboratories is to be reported, and section 1834A(a)(3) of the Act indicates that applicable information is private payor rate information. We also explained that the statute imposes parameters on the collection and reporting of private payor rate information, and section 1834A(b) of the Act specifies that the payment amounts for CDLTs are to be based on the median of the private payor rate information. As such, we stated that we believe the statute supports our policy to prohibit information other than statutorily specified private payor rate information of applicable laboratories from being reported and used to set CLFS payment amounts under the revised CLFS. We also noted that we did not agree with the commenters' recommendation to allow voluntary reporting and at § 414.504(g), we finalized that an entity that does not meet the definition of an applicable laboratory may not report applicable information. We continue to believe that our policy to not allow voluntary reporting is the most appropriate interpretation of the statute, and that applicable information may not be reported for an entity that does not meet the definition of an applicable laboratory.

b. Increasing the Low Expenditure Threshold

We also discussed in the CY 2019 PFS proposed rule that we recognize many small laboratories may not want the additional administrative burden of data collection and reporting and, because their test volume is relatively low, their data is unlikely to have a meaningful impact on the weighted median of private payor rates for CDLTs under the CLFS. In response to comments from smaller laboratories that they prefer to not be applicable laboratories because of the burden of collecting and reporting applicable information, we stated that we could increase the low expenditure threshold in the definition of applicable laboratory by 50 percent, from $12,500 to $18,750, in CLFS revenues during a data collection period. Because physician office laboratories would be less likely to meet a higher threshold, such an approach would decrease the number of physician office laboratories and small independent laboratories required to collect and report applicable information. We noted that we expected decreasing the number of physician office laboratories and small independent laboratories reporting applicable information would have minimal impact on determining CLFS rates because the largest laboratories with the highest test volumes dominate the weighted median of private payor rates.

We stated that if we were to adopt such an approach, we would need to revise paragraph (4) of the definition of applicable laboratory at § 414.502 to replace $12,500 with $18,750. We explained in the proposed rule that we were particularly interested in comments from the physician community and small independent laboratories on the administrative burden and relief of increasing the low expenditure threshold and noted that we believe that feedback on the topics discussed in this section would help inform us regarding potential refinements to the low expenditure threshold. We noted that depending on the comments we received, we would consider approaches described in this section.

The following is a summary of the comments we received and our responses to the comments regarding the approach of increasing the low expenditure threshold by 50 percent, from $12,500 to $18,750, in CLFS revenues during a data collection period.

Comment: Several commenters did not support raising the low expenditure threshold because it would further reduce the amount of applicable information reported from small laboratories. However, one commenter encouraged CMS to increase the low expenditure threshold to exclude even more small laboratories from the administrative burden of collecting and reporting applicable information. A few commenters suggested that CMS not make any changes to the low expenditure threshold at this time and encouraged CMS to allow the program to mature and to only make changes after a careful and transparent review of the data with additional opportunities for public comment.

Response: We appreciate the comments from stakeholders on raising the low expenditure threshold and understand that increasing the low expenditure threshold by 50 percent would lead to fewer physician office laboratories and small independent laboratories from reporting applicable information for purposes of calculating CLFS rates. We will consider the commenters input on increasing the low expenditure threshold as we continue to evaluate and refine Medicare CLFS payment policy in the future, but make no changes to this policy at this time.

c. Additional Comments Received

Comment: Many commenters stated that CMS' implementation of the new private payor rate-based CLFS does not reflect the cost or the value of performing clinical laboratory services and that without meaningful changes to how data is collected from laboratories, Medicare beneficiaries will lose access to the vital laboratory services they rely on to monitor their health and prevent and treat many diseases and conditions. The commenters stated that CMS' regulations, which implemented the private payor rate-based CLFS required under PAMA, prohibit most independent laboratories and physician office laboratories, and virtually all hospital laboratories, from providing data to set Medicare rates, and therefore, results in ''skewed data'' that does not represent true market rates. The commenters stated that Congress directed CMS to implement a market-based payment system in which private market data from all segments of the laboratory industry, including independent laboratories, hospital laboratories, and physician office laboratories, would be collected in order to determine Medicare reimbursement for laboratory tests. To implement a true market based payment system the commenters encouraged CMS to develop payment rates through a statistically valid process to ensure that the private payer data collected accurately represents all sectors of the laboratory market.

Response: In general, section 1834A of the Act requires the payment amount for each CDLT on the CLFS to be based on the applicable information collected from applicable laboratories during a data collection period and reported to CMS during a data reporting period. For most tests on the CLFS, the statute requires the payment amount to be equal to the weighted median of the private payor rates for each test and specifies that the weighted median is calculated by arraying the distribution of all private payor rates, weighted by the volume for each payor and each laboratory. Given that the largest

laboratories reported their applicable information to CMS in the initial data reporting period, as well as many smaller laboratories, we believe the data we used to calculate the CY 2018 CLFS rates was sufficient and resulted in accurate weighted medians of private payor rates per test as required by the statute. As discussed previously in this section, we are finalizing our proposal to exclude MA plan payments under Part C from total Medicare revenues for purposes of the applicable laboratory definition. We believe this change will permit laboratories of all types with a significant Medicare Part C revenue component to be more likely to meet the majority of Medicare revenues threshold and qualify as an applicable laboratory. As a result of this change, we believe that applicable information from a broader segment of the laboratory industry will be reported for purposes of calculating the CLFS rates. As stated previously, we are finalizing the use of the Form CMS–1450 14x TOB to define applicable laboratories, subject to other regulatory and subregulatory requirements, such as the regulatory low expenditure threshold.

Comment: One commenter stated that the reductions in Medicare payment rates for laboratory tests result directly from CMS' regulatory decisions to relieve most laboratories of reporting burdens. According to the commenter, excluding so many laboratories from the data reporting requirements results in median prices that are not representative across the clinical laboratory industry. As such, the commenter noted that the market data upon which Medicare reimbursement is based does not reflect the market composition of the clinical laboratory industry. In other words, exempting low-volume and many hospital laboratories from reporting does not allow for Medicare prices to reflect the full range of payment amounts paid to varying entities. The commenter encouraged CMS to collect data from a broader segment of the laboratory industry and suggested that we weight private payor rates by market share (that is, prices typically paid per reporting entity), instead of based on overall volume per test.

Response: As discussed in response to the previous comment, section 1834A of the Act generally requires the payment amount for each CDLT on the CLFS to be based on the applicable information collected from applicable laboratories during a data collection period and reported to CMS during a data reporting period. Because for most tests, the payment amount is equal to the median of the private payor rates weighted by volume, the largest laboratories with the highest test volumes will most significantly affect the payment rates. Because of this, we established and implemented a low expenditure threshold to alleviate administrative burden on small laboratories. We believe that our current method of calculating the weighted median of private payor rates is appropriate and consistent with the statute. Given that the largest laboratories reported their applicable information to us in the initial data reporting period, along with many smaller laboratories, we believe the data we used to calculate the CY 2018 CLFS rates was sufficient and resulted in accurate weighted medians of private payor rates as required by statute. As noted above, we are finalizing changes to the definition of an applicable laboratory, which we believe will lead to an even more robust data collection from which to calculate payment rates for the next CLFS update.

Comment: Many commenters stated that the administrative burden for the first data reporting period was overwhelming and they offered suggestions on how to reduce the reporting burden on applicable laboratories. Many commenters suggested that CMS implement a ''data aggregation system'' consistent with statutory authority. In addition, a few commenters requested that CMS allow flexibility to exclude manual remittances from the definition of applicable information and therefore from data reporting. One commenter requested an ''across the board waiver'' from the reporting requirement for all small medical practices.

Response: We addressed the comment requesting exclusion of manual remittances from the definition of applicable information in the CLFS final rule (81 FR 41053 through 41054). We explained that the statute is clear that applicable information, which is used to set CLFS payment amounts, must be reported for applicable laboratories for a data collection period, and it defines applicable information, in part, as the payment rate that was paid by each private payor for the test during a data collection period and the volume of such tests for each such payor for the data collection period. As such, we stated that we believe the statute does not support selective reporting of applicable information for applicable laboratories. If the laboratory meets the definition of applicable laboratory, the applicable information for that laboratory must be reported. In addition, given that the statute requires applicable information to be reported for applicable laboratories, we do not believe granting an ''across the board waiver'' from the reporting requirements for all small laboratories would be consistent with statute. We believe that the low expenditure threshold would continue to exclude the majority of small laboratories from the applicable laboratory definition and, therefore, from data reporting.

With regard to the commenters suggesting that we implement aggregate reporting, we note that section 1834A(a)(6) of the Act permits the Secretary, beginning with January 1, 2019, to establish rules to aggregate reporting in situations where an applicable laboratory has more than one payment rate for the same payor for the same test or more than one payment rate for different payors for the same test. While the agency did not propose or solicit comments on implementing aggregate data reporting, we will take the commenters' suggestion into consideration for future refinements to the CLFS. However, to help reduce administrative burden for the next data reporting period, we will allow reporting entities the option to condense certain applicable information at the TIN-level, instead of reporting for each applicable laboratory individually at the NPI level. We will provide more information regarding the condensed reporting option through subregulatory guidance during the next data collection period.

Comment: One commenter suggested that CMS adopt a 90-day data collection period instead of the current 6-month data collection period to alleviate some of the burden associated with collecting applicable information.

Response: While we did not propose or solicit comments on changing the data collection period, we will take the commenter's suggestion into consideration for future refinements to the CLFS.

Comment: One commenter raised concerns about the integrity of the data reported during the first data reporting period. The commenter mentioned that the CLFS final rule was released just prior to the end of the first data collection period and as a result, laboratories struggled to collect information and submit the required data accurately. The commenter noted that many laboratories still do not have the systems in place to determine the private payor payment rates for each test and the associated volume paid at each rate, therefore exacerbating the potential for inaccurate reporting in the next data reporting period. The commenter was particularly concerned about how inaccurate data affects newer tests in which the volume of services has

remained relatively low as compared to well established laboratory procedures. For instance, because of the low volume of applicable information being reported for Tier 1 and Tier 2 molecular pathology procedures, the commenter stated that any inaccurate data reported has a greater impact on these test codes. The commenter noted that expanding the definition of an applicable laboratory would likely result in additional reporting errors and therefore, did not support any revisions to the definition of an applicable laboratory. Instead, the commenter urged CMS to refine the reporting process and implement measures to safeguard data integrity in future reporting periods. Specifically, the commenter requested that CMS consider implementing a data aggregation system for future data reporting periods, consistent with statutory authority. The commenter noted that a data aggregation system may guarantee more complete reporting and expand the ability of laboratories to report accurate data.

Response: We share the commenter's interest in collecting accurate data. As discussed previously, we are finalizing changes to the definition of applicable laboratory in § 414.502. We did not propose changes to the CLFS data reporting requirements or solicit comments on how to safeguard against inaccurate data. We will consider the issues raised by the commenter for future rulemaking. As noted in response to another comment, for the next data reporting period we will permit the reporting entity to condense applicable information for its applicable laboratories at the TIN level, instead of reporting for each of its applicable laboratories individually, and will issue subregulatory guidance on this topic.

Comment: One commenter stated that in general ''our market based system is flawed'' because it allows companies to profit on people's health. The commenter stated that the CLFS should be based on recovering costs only and not profit. The commenter noted that such approach will lead to a decrease in cost for laboratory testing and a standardization of fees across the industry.

Response: As previously noted, section 1834A of the Act generally requires the payment amount for each CDLT on the CLFS to be based on the applicable information collected from applicable laboratories during a data collection period and reported to us during a data reporting period. Basing CLFS rates on laboratory costs would not be permissible under the statute.

Comment: One commenter stated that uncertainty regarding the definition of an ADLT has discouraged some laboratories from applying for ADLT status, and suggested that we should implement the regulatory requirements in a manner that ''recognizes the uniqueness of the results generated by each precision diagnostic test due to its use of a proprietary algorithm validated in a unique patient cohort.''

Response: We did not propose or solicit any comments regarding changes to the definition of an ADLT, therefore, this comment is not within the scope of this rulemaking.

B. Changes to the Regulations Associated With the Ambulance Fee Schedule

1. Overview of Ambulance Services

a. Ambulance Services

Under the ambulance fee schedule, the Medicare program pays for ambulance transportation services for Medicare beneficiaries under Medicare Part B when other means of transportation are contraindicated by the beneficiary's medical condition and all other coverage requirements are met. Ambulance services are classified into different levels of ground (including water) and air ambulance services based on the medically necessary treatment provided during transport.

These services include the following levels of service:

- For Ground—

++ Basic Life Support (BLS) (emergency and non-emergency).

++ Advanced Life Support, Level 1 (ALS1) (emergency and non-emergency).

++ Advanced Life Support, Level 2 (ALS2).

++ Paramedic ALS Intercept (PI).

++ Specialty Care Transport (SCT).

- For Air—

++ Fixed Wing Air Ambulance (FW).

++ Rotary Wing Air Ambulance (RW).

b. Statutory Coverage of Ambulance Services

Under sections 1834(l) and 1861(s)(7) of the Act, Medicare Part B (Supplemental Medical Insurance) covers and pays for ambulance services, to the extent prescribed in regulations, when the use of other methods of transportation would be contraindicated by the beneficiary's medical condition.

The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments suggest that the Congress intended that—

- The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and

- Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility.

c. Medicare Regulations for Ambulance Services

The regulations relating to ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H. Section 410.10(i) lists ambulance services as one of the covered medical and other health services under Medicare Part B. Therefore, ambulance services are subject to basic conditions and limitations set forth at § 410.12 and to specific conditions and limitations included at §§ 410.40 and 410.41. Subpart H of part 414 describes how payment is made for ambulance services covered by Medicare Part B.

2. Ambulance Extender Provisions

a. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA), (Pub. L. 110–275, enacted July 15, 2008) amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008, and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports that originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.

- For covered ground ambulance transports that do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

The payment add-ons under section 1834(l)(13)(A) of the Act have been extended several times. Most recently, section 50203(a)(1) of the Bipartisan Budget Act of 2018 (BBA) (Pub. L. 115–123, enacted February 9, 2018) amended section 1834(l)(13)(A) of the Act to extend the payment add-ons through

December 31, 2022. Thus, these payment add-ons apply to covered ground ambulance transports furnished before January 1, 2023. We proposed to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement. (For further information regarding the implementation of this provision for claims processing, please see CR 10531. For a discussion of past legislation extending section 1834(l)(13) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74438 through 74439), the CY 2015 PFS final rule with comment period (79 FR 67743) and the CY 2016 PFS final rule with comment period (80 FR 71071 through 71072)).

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary.

We received two comments on this proposal. The following is a summary of those comments along with our response.

Comment: One commenter supported the 5-year extension of the add-on payments and appreciates CMS' implementation of the statutory requirement, and stated these provisions are critical to ensuring the delivery of ambulance services. Another commenter stated that due to the staffing and distances that might be involved in the use of ambulance services in varying areas (for example, urban, rural and super rural), these add-ons payments will assist in appropriate reimbursements for these services.

Response: We appreciate the commenters' support.

After consideration of the comments received, we are finalizing our proposal, without modification, to revise § 414.610(c)(1)(ii) to conform the regulations to this statutory requirement.

b. Amendment to Section 1834(l)(12) of the Act

Section 414(c) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (Pub. L. 108–173, enacted December 8, 2003) (MMA) added section 1834(l)(12) to the Act, which specified that, in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a ''qualified rural area,'' that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). This rural bonus is sometimes referred to as the ''Super Rural Bonus'' and the qualified rural areas (also known as ''super rural'' areas) are identified during the claims adjudicative process via the use of a data field included in the CMS-supplied ZIP code file.

The Super Rural Bonus under section 1834(l)(12) of the Act has been extended several times. Most recently, section 50203(a)(2) of the BBA amended section 1834(l)(12)(A) of the Act to extend this rural bonus through December 31, 2022. Therefore, we are continuing to apply the 22.6 percent rural bonus described in this section (in the same manner as in previous years) to ground ambulance services with dates of service before January 1, 2023 where transportation originates in a qualified rural area. Accordingly, we proposed to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. (For further information regarding the implementation of this provision for claims processing, please see CR 10531. For a discussion of past legislation extending section 1834(l)(12) of the Act, please see the CY 2014 PFS final rule with comment period (78 FR 74439 through 74440), CY 2015 PFS final rule with comment period (79 FR 67743 through 67744) and the CY 2016 PFS final rule with comment period (80 FR 71072)).

This statutory provision is self-implementing. It requires an extension of this rural bonus (which was previously established by the Secretary) through December 31, 2022, and does not require any substantive exercise of discretion on the part of the Secretary.

We received two comments on this proposal. The following is a summary of those comments along with our response.

Comment: One commenter supported the 5-year extension of this provision and appreciates CMS' implementation of the statutory requirement and noted this provision is critical to ensuring the delivery of ambulance services. Another commenter stated that due to the staffing and distances that might be involved in the use of ambulance services in varying areas (for example, urban, rural and super rural), these add-ons payments will assist in appropriate reimbursements for these services.

Response: We appreciate the commenters' support.

After consideration of the comments received, we are finalizing our proposal, without modification, to revise § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement.

3. Amendment to Section 1834(l)(15) of the Act

Section 637 of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, enacted January 2, 2013) added section 1834(l)(15) of the Act to specify that the fee schedule amount otherwise applicable under the preceding provisions of section 1834(l) of the Act shall be reduced by 10 percent for ambulance services furnished on or after October 1, 2013, consisting of non-emergency BLS services involving transport of an individual with end-stage renal disease for renal dialysis services (as described in section 1881(b)(14)(B) of the Act) furnished other than on an emergency basis by a provider of services or a renal dialysis facility. In the CY 2014 PFS final rule with comment period (78 FR 74440), we revised § 414.610 by adding paragraph (c)(8) to conform the regulations to this statutory requirement.

Section 53108 of the BBA amended section 1834(l)(15) of the Act to increase the reduction from 10 percent to 23 percent effective for ambulance services (as described in section 1834(l)(15) of the Act) furnished on or after October 1, 2018. The 10 percent reduction applies for ambulance services (as described in section 1834(l)(15) of the Act) furnished during the period beginning on October 1, 2013 and ending on September 30, 2018. Accordingly, we proposed to revise § 414.610(c)(8) to conform the regulations to this statutory requirement.

This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate decrease, and does not require any substantive exercise of discretion on the part of the Secretary. Accordingly, for ambulance services described in section

1834(l)(15) of the Act furnished during the period beginning on October 1, 2013 and ending on September 30, 2018, the fee schedule amount otherwise applicable (both base rate and mileage) is reduced by 10 percent, and for ambulance services described in section 1834(l)(15) of the Act furnished on or after October 1, 2018, the fee schedule amount otherwise applicable (both base rate and mileage) is reduced by 23 percent. (For further information regarding application of this mandated rate decrease, please see CR 10549.)

We received two comments on this proposal. The following is a summary of those comments along with our response.

Comment: One commenter supported the reduction of payment for these ambulance services and stated that the payment adjustment for non-emergency, BLS transports for ESRD beneficiaries is at an appropriate level. Another commenter stated that for accountable care organizations, transportation for dialysis services constitutes the largest portion of ambulance spending. According to the commenter, because patients often do not receive medical care during the transportation, they supported the reduction to the ambulance fee schedule for the transportation of patients with ESRD for renal dialysis services.

Response: We appreciate the commenters' support.

After consideration of the comments received, we are finalizing our proposal, without modification, to revise § 414.610(c)(8) to conform the regulations to the statutory requirement described above.

C. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Payment for Care Management Services

In the CY 2018 PFS final rule, we revised the payment methodology for Chronic Care Management (CCM) services furnished by RHCs and FQHCs, and established requirements and payment for general Behavioral Health Integration (BHI) and psychiatric Collaborative Care Management (CoCM) services furnished in RHCs and FQHCs, beginning on January 1, 2018.

For CCM services furnished by RHCs or FQHCs between January 1, 2016, and December 31, 2017, payment is at the PFS national average payment rate for CPT 99490. For CCM, general BHI, and psychiatric CoCM services furnished by RHCs or FQHCs on or after January 1, 2018, we established 2 new HCPCS codes. The first HCPCS code, G0511, is a General Care Management code for use by RHCs or FQHCs when at least 20 minutes of qualified CCM or general BHI services are furnished to a patient in a calendar month. The second HCPCS code, G0512, is a psychiatric CoCM code for use by RHCs or FQHCs when at least 70 minutes of initial psychiatric CoCM services or 60 minutes of subsequent psychiatric CoCM services are furnished to a patient in a calendar month.

The payment amount for HCPCS code G0511 is set at the average of the 3 national non-facility PFS payment rates for the CCM and general BHI codes and updated annually based on the PFS amounts. The 3 codes are CPT 99490 (20 minutes or more of CCM services), CPT 99487 (60 minutes or more of complex CCM services), and CPT 99484 (20 minutes or more of BHI services).

The payment amount for HCPCS code G0512 is set at the average of the 2 national non-facility PFS payment rates for CoCM codes and updated annually based on the PFS amounts. The 2 codes are CPT 99492 (70 minutes or more of initial psychiatric CoCM services) and CPT 99493 (60 minutes or more of subsequent psychiatric CoCM services).

For practitioners billing under the PFS, we proposed for CY 2019 a new CPT code, 994X7, which would correspond to 30 minutes or more of CCM furnished by a physician or other qualified health care professional and is similar to CPT codes 99490 and 99487. For RHCs and FQHCs, we proposed to add CPT code 994X7 as a general care management service and to include it in the calculation of HCPCS code G0511. That is, we proposed that starting on January 1, 2019, RHCs and FQHCs would be paid for HCPCS code G0511 based on the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 994X7. We note that CPT code 994X7 was a placeholder code, and the final code is CPT code 99491.

We proposed to revise § 405.2464 to reflect the current payment methodology that was finalized in the CY 2018 PFS and incorporate the addition of the new CPT code to HCPCS code G0511.

2. Communication Technology-Based and Remote Evaluation Services

RHC and FQHC visits are face-to-face (in-person) encounters between a patient and an RHC or FQHC practitioner during which time one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, nurse practitioners, physician assistants, certified nurse midwives, clinical psychologists, and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient. A Transitional Care Management service can also be an RHC or FQHC visit. A Diabetes Self-Management Training (DSMT) service or a Medical Nutrition Therapy (MNT) service furnished by a certified DSMT or MNT provider may also be an FQHC visit.

RHCs are paid an all-inclusive rate (AIR) for medically-necessary, face-to-face visits with an RHC practitioner. The rate is subject to a payment limit, except for those RHCs that have an exception to the payment limit for being ''provider-based'' (see § 413.65). FQHCs are paid the lesser of their charges or the FQHC Prospective Payment System (PPS) rate for medically-necessary, face-to-face visits with an FQHC practitioner. Only medically-necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner can be RHC or FQHC billable visits.

The RHC and FQHC payment rates reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day, and are not adjusted for the complexity of the patient health care needs, the length of the visit, or the number or type of practitioners involved in the patient's care.

Services furnished by auxiliary personnel (such as nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment. This may include services furnished prior to or after the billable visit that occur within a medically appropriate time period, which is usually 30 days or less.

RHCS and FQHCs are also paid for care management services, including chronic care management services, general behavioral health integration services, and psychiatric Collaborative Care Model services. These are typically non-face-to-face services that do not require the skill level of an RHC or FQHC practitioner and are not included in the RHC or FQHC payment methodologies.

For practitioners billing under the PFS, we proposed for CY 2019 separate payment for certain communication technology-based services. This includes what is referred to as ''Brief Communication Technology-Based Services'' for a ''virtual check-in'' and separate payment for remote evaluation of recorded video and/or images. The ''virtual check-in'' visit would be

billable when a physician or non-physician practitioner has a brief (5 to 10 minutes), non-face-to-face check in with a patient via communication technology to assess whether the patient's condition necessitates an office visit. This service could be billed only in situations where the medical discussion was for a condition not related to an E/M service provided within the previous 7 days, and does not lead to an E/M service or procedure within the next 24 hours or at the soonest available appointment. We also proposed payment for practitioners billing under the PFS for remote evaluation services. This payment would be for the remote evaluation of patient-transmitted information conducted via pre-recorded ''store and forward'' video or image technology, including interpretation with verbal follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment. We stated that both of these services would be priced under the PFS at a rate that reflects the resource costs of these non-face-to-face services relative to other PFS services, including face-to-face and in-person visits.

The RHC and FQHC payment models are distinct from the PFS model in that the payment is for a comprehensive set of services and supplies associated with an RHC or FQHC visit. A direct comparison between the payment for a specific service furnished in an RHC or FQHC and the same service furnished in a physician's office is not possible, because the payment for RHCs and FQHCs is a per diem payment that includes the cost for all services and supplies rendered during an encounter, and payment for a service furnished in a physician's office and billed under the PFS is only for that service.

We recognize that there are occasions when it may be beneficial to both the patient and the RHC or FQHC to utilize communication technology-based services to determine the course of action for a health issue. Currently under the RHC and FQHC payment systems, if the communication results in a face-to-face billable visit with an RHC or FQHC practitioner, the cost of the prior communication would be included in the RHC AIR or the FQHC PPS. However, if as a result of the communication it is determined that a visit is not necessary, there would not be a billable visit and there would be no payment.

RHCs and FQHCs furnish services in rural and urban areas that have been determined to be medically underserved areas or health professional shortage areas. They are an integral component of the Nation's health care safety net, and we want to ensure that Medicare patients who are served by RHCs and FQHCs are able to communicate with their RHC or FQHC practitioner in a manner that enhances access to care, consistent with evolving medical care. Particularly in rural areas where transportation is limited and distances may be far, we believe the use of communication technology-based services may help some patients to determine if they need to schedule a visit at the RHC or FQHC. If it is determined that a visit is not necessary, the RHC or FQHC practitioner would be available for other patients who need their care.

When communication technology-based services are furnished in association with an RHC or FQHC billable visit, the costs of these services are included in the RHC AIR or the FQHC PPS and are not separately billable. However, if there is no RHC or FQHC billable visit, these costs are not paid as part of an RHC AIR or FQHC PPS payment. We therefore proposed that, effective January 1, 2019, RHCs and FQHCs receive an additional payment for the costs of communication technology-based services or remote evaluation services that are not already captured in the RHC AIR or the FQHC PPS payment when the requirements for these services are met.

We proposed that RHCs and FQHCs receive payment for communication technology-based or remote evaluation services when at least 5 minutes of communication technology-based or remote evaluation services are furnished by an RHC or FQHC practitioner to a patient who has been seen in the RHC or FQHC within the previous year. These services may only be billed when the medical discussion or remote evaluation is for a condition not related to an RHC or FQHC service provided within the previous 7 days, and does not lead to an RHC or FQHC service within the next 24 hours or at the soonest available appointment, since in those situations the services are already paid as part of the RHC or FQHC per-visit payment.

We proposed to create a new virtual communication G-code for use by RHCs and FQHCs only, with a payment rate set at the average of the PFS national non-facility payment rates for HCPCS code GVCI1 for communication technology-based services, and HCPCS code GRAS1 for remote evaluation services. RHCs and FQHCs would be able to bill the virtual communication G-code either alone or with other payable services. The payment rate for the virtual communication G-code would be updated annually based on the PFS amounts. We note that HCPCS codes GCVI1 and GRAS1 were placeholder codes, and the final HCPCS codes are G2012 and G2010, respectively.

We also proposed to waive the RHC and FQHC face-to-face requirements when these services are furnished to an RHC or FQHC patient. Coinsurance would be applied to FQHC claims, and coinsurance and deductibles would apply to RHC claims for these services. Services that are currently being furnished and paid under the RHC AIR or FQHC PPS payment methodology will not be affected by the ability of the RHC or FQHC to receive payment for additional services that are not included in the RHC AIR or FQHC PPS.

3. Other Options Considered

We considered other options for payment for these services. First, we considered adding communication technology-based and remote evaluation services as an RHC or FQHC stand-alone service. Under this option, payment for RHCs would be at the AIR, and payment for FQHCs would be the lesser of total charges or the PPS rate. We did not propose this payment option because these services do not meet the requirements for an RHC or FQHC billable visit and payment at the RHC AIR or FQHC PPS would result in a payment rate incongruent with efficiencies inherent in the provision of the technology-based services.

The second option we considered was to allow RHCs and FQHCs to bill HCPCS codes G2012 or G2010 separately on an RHC or FQHC claim. We did not propose this payment option because we believe that a combined G-code is less burdensome and will allow expansion of these services without adding additional codes on an RHC or FQHC claim.

4. Comments and Responses

We invited comments on this proposal. In particular, we were interested in comments regarding the appropriateness of payment for communication technology-based and remote evaluation services in the absence of an RHC or FQHC visit, the burden associated with documentation for billing these codes (RHC or FQHC practitioner's time, medical records, etc.), and any potential impact on the per diem nature of RHC and FQHC billing and payment structure as a result of payment for these services.

The following is a summary of the comments we received regarding the addition of CPT code 99491 to the codes used to determine the payment for HCPCS code G0511 in RHCs and FQHCs, and the proposed requirements and payment for a new G-code for virtual communication for payment for communication technology-based and remote evaluation services. The majority of the commenters were very supportive of both proposals, and some requested clarification on issues related to billing, cost reporting, and payment for care management and virtual communication services in RHCs and FQHCs.

Comment: Several commenters requested clarification of how the inclusion of the new chronic care management code, CPT code 99491 (previously referred to as CPT code 994X7), would impact the payment of HCPCS code G0511 (the RHC and FQHC General Care Management code), and requested assurance that adding this code to the codes used to determine the payment for HCPCS code G0511 would not result in a lower payment rate.

Response: In the CY 2018 PFS final rule, we stated that if a new care management code is proposed and subsequently finalized for practitioners billing under the PFS, we would review the new code to determine if it should be included in the calculation of the RHC and FQHC General Care Management Code. The determination of whether a new care management code should be added to the codes used to determine the payment rate is based on the applicability of the service in RHCs and FQHCs, and may result in either an increase or decrease in the payment amount for HCPCS code G0511.

CPT code 99491 is for 30 minutes or more of CCM furnished by a physician or other qualified health care professional. Since this is similar to CPT codes 99490 and 99487, we determined that it should be included in the RHC and FQHC General Care Management code, which is paid using HCPCS code G0511. The CY 2019 payment rate for this code is expected to be $74.26, and the payment rate for CY 2019 payment rate for HCPCS code G0511 is expected to be approximately $67, which will result in a higher payment for HCPCS code G0511 than it would have been if CPT code 99491 was not added to the codes used to determine the rate. The rate is adjusted annually based on the PFS payment rates for these codes.

Comment: A commenter stated that the care management services included in the PFS are already contemplated and included in the RHC AIR and the FQHC PPS payments, which are designed to cover all activities related to a comprehensive primary care visit, even if they do not occur on the same day. The commenter did not support separate payment to RHCs and FQHCs for care management services, and stated that paying separately for these services results in duplicative payment. The commenter also noted that because the care management payment is made through the RHC and FQHC payment systems, it does not trigger a budget-neutrality adjustment and therefore represents additional spending for the Medicare program and its beneficiaries.

Response: Comprehensive, high quality, and coordinated primary care has always been an integral part of RHC and FQHC services in their communities, We respectfully disagree with the suggestion that the type of structured chronic care management and behavioral health integration services that are now separately paid as care management are already included in the RHC AIR or the FQHC PPS payment methodologies. These services have specific requirements which have not typically or routinely been provided by RHCs or FQHCs, and therefore have not been factored into either the RHC AIR or the FQHC PPS rate. RHC and FQHC payments are not subject to the budget neutrality provisions of the PFS, and we believe that the cost-saving potential of these services is likely to offset any additional Medicare spending.

Comment: A commenter encouraged CMS to evaluate the additional costs of providing CCM services for people with limited English proficiency and to adjust payment accordingly in future rulemaking.

Response: We are aware that some RHCs and FQHCs have a higher than average rate of patients with limited English proficiency, which may sometimes require additional time or resources. However, once the minimum requirements for care management are met, the RHC or FQHC can bill for the service, and the rate is based on the average cost of furnishing the services.

Comment: Several commenters noted their support for a new G-code for payment for communication technology-based and remote evaluation services and requested that CMS investigate its authority to allow FQHCs to serve as distant site providers for telehealth services to Medicare beneficiaries.

Response: Although both telehealth and virtual communication services use technology to communicate, these are separate and distinct services. Telehealth services are considered a substitute for an in-person visit, and are therefore paid at the same rate as it would have been had it been furnished in person. With some exceptions, telehealth services require the use of interactive audio and digital telecommunication systems that permit real-time communication between the practitioner at the distant site and the beneficiary at the originating site. The communication technology-based and remote evaluation services that we proposed are not a substitute for a visit, but are instead brief discussions with the RHC or FQHC practitioner to determine if a visit is necessary. If the discussion between the RHC or FQHC practitioner and the Medicare beneficiary results in a billable visit, then the usual RHC or FQHC billing would occur. The virtual communication G-code would only be separately payable if the discussion between the RHC or FQHC practitioner does not result from or lead to an RHC or FQHC billable visit. The payment rate for communication technology-based services are valued based on the shorter duration of time and the efficiencies associated with the use of communication technology.

Section 1834(m)(4)(C)(ii) of the Act authorizes RHCs and FQHCs to serve as telehealth ''originating sites'' (that is, where the patient is located) for qualified telehealth services. Section 1834(m)(1) of the Act, which describes distant site telehealth services (where the practitioner is located), does not include RHCs and FQHCs. We do not have the authority to allow RHCs and FQHCs to furnish distant site telehealth services, and RHCs and FQHCs may not bill for distant site telehealth services under the PFS.

Comment: Some commenters supported a separate payment for communication technology-based and remote evaluation services using a virtual communication G-code because these new services were not included in the calculation of the Medicare FQHC PPS rate, but requested that CMS reconsider the payment amount for these services. The commenters suggested that because an FQHC practitioner is required and the face-to-face requirements for these services are waived, the payment should be on par with a traditional FQHC visit.

Response: We disagree with the suggestion that the payment be on par with a regular FQHC visit. If the communication technology-based or remote evaluation service results in a face-to-face visit with an RHC or FQHC practitioner, the cost of the brief communication with the RHC or FQHC practitioner would already be included in the RHC AIR or the FQHC PPS payment. If the communication

technology-based or remote evaluation service does not originate from or result in a face-to-face visit with an RHC or FQHC practitioner, the RHC or FQHC may bill using the new virtual communication G-code. The payment rate for these services under the PFS reflects the resource costs of these non-face-to-face services relative to other PFS services, including face-to-face and in-person visits. We did not propose payment for these services as an RHC or FQHC visit or at the same payment rate as an RHC or FQHC visit because these services do not meet the requirements for an RHC or FQHC billable visit, and payment at the RHC AIR or FQHC PPS would result in a payment rate incongruent with efficiencies inherent in the provision of these communication services.

Comment: Commenters recommended not implementing any type of frequency limitation, especially as RHCs and FQHCs learn to utilize these services for their patients. Commenters stated that any frequency limitation would be arbitrary, may have the opposite effect of the provision's intended purpose to encourage innovative ways to provide comprehensive care to Medicare beneficiaries, that the reimbursement rate does not provide a financial incentive for overuse of this service, and that the cost of virtual visits, even if unlimited, would more than offset the cost of even one emergency room visit.

Response: We agree that frequency limitations should not be implemented at this time.

Comment: Some commenters questioned the feasibility of billing for virtual communication services because they noted that the coinsurance requirement will discourage individuals from utilizing virtual communication services to assess whether or not they need to come in for an E/M visit, and will create patient confusion and dissatisfaction if they receive a bill for these services.

Response: We are aware that coinsurance can be a barrier for some beneficiaries, but we do not have the statutory authority to waive the coinsurance requirement. RHCs and FQHCs should inform their patients that coinsurance applies, and provide information on the availability of assistance to qualified patients in meeting their cost sharing obligations, or any other programs to provide financial assistance, if applicable.

Comment: A few commenters expressed concern about how care management is currently reported and how virtual communication services will be reported on the RHC cost report. The commenters stated that although care management services are considered RHC services, they are reported separately on line 80 in the non-reimbursable section of the cost report, and as a result, they are not considered allowable costs on the RHC cost report. The commenters stated that this process is administratively cumbersome, exposes the RHC to an audit risk, and represents a significant barrier for RHCs in offering care management services. The commenters suggested that the costs included on line 80 should only be the direct costs associated with care management services, which would allow RHCs to more easily identify those costs and assure them that they are completing this form correctly. The commenters noted similar concerns for the reporting of virtual communication services, and recommended that CMS allow the costs associated with virtual communication to be reported in the reimbursable section of the RHC cost report.

Response: Reducing administrative burden and encouraging the appropriate use of services is a high priority for CMS, and we appreciate the detailed comments and suggested changes regarding the reporting of care management and virtual communication services on the RHC cost report. Cost reporting information in typically provided in subregulatory guidance, and we will carefully consider these comments.

Comment: A commenter questioned how virtual communication that occurs during non-RHC hours would be billed and calculated on the cost report.

Response: Services such as care management and virtual communication services are not billable visits in RHCs and FQHCs and may occur outside of the RHC's or FQHC's posted hours. As stated previously, information on cost reporting will be provided in subregulatory guidance.

Comment: Some commenters recommended removing the timeframe restrictions for billing virtual communication services, stating that they are vague, arbitrary, administratively burdensome, or that allowing daily check in would improve health and reduce costs. Other commenters suggested modifying the timeframe limitations with a clear cut-off that RHCs and FQHCs can track and calculate, such as within the previous 3 days or subsequent 24 hours, or the previous and subsequent 24 hours. One commenter stated that the timeframe restrictions would require RHCs and FQHCs to review prior patient clinical activity, assess the diagnostic category of any recent activity, and then delay for 24 hours to ascertain whether the service is followed by a clinical visit, rather than billing immediately for the services. This commenter also stated that most computer billing systems are not set up for this type of review, and a supplemental billing process would be costly, and noted that there are no restrictions on face-to-face visits in RHCs or FQHCs.

Response: PFS payments for HCPCS code G2012 (communication technology-based services), and HCPCS code G2010 (remote evaluation services) are based on the descriptor for CPT code 99441 (Telephone evaluation and management service by a physician or other qualified health care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion). HCPCS code G0071, the new virtual communication G-code for RHCs and FQHCs, is set at the average of the PFS national non-facility payment rates for HCPCS codes G2012 and G2010, and would be billed by the RHC or FQHC when the minimum requirements for either of these codes are met.

Except for the Initial Preventive Physical Exam and the Annual Wellness Visit, RHC and FQHC visits do not have frequency limitations, and a patient could have more than one RHC or FQHC billable visit in the same week if it is a medically-necessary, face-to-face visit with an RHC or FQHC practitioner. If a service is not medically-necessary, or is not furnished by an RHC or FQHC practitioner, or does not require the skill level of an RHC or FQHC practitioner, it would not be a billable visit. Since the RHC AIR and FQHC PPS payment methodologies are designed to include all services and supplies incident to a visit, the absence of time restrictions could result in duplicate payment to the RHC or FQHC. Since the virtual communication payment is designed to provide payment to the RHC or FQHC when there is no billable visit, the time restrictions are necessary to avoid any duplicate payment.

Communication technology-based and remote evaluation services are initiated by a patient who has been seen in the past year by the RHC or FQHC practitioner, and in many cases, a review of prior patient clinical activity and diagnoses would be necessary as part of the virtual communication with the patient. Since most RHCs and FQHCs are utilizing electronic health records, we expect that RHCs and

FQHCs will be able to comply with the time restrictions without any additional burden. It is also our understanding that most RHCs and FQHCs (like other providers and supplies) may not always submit a claim immediately upon furnishing a service. As with any new service, we expect that there would be a period of adjustment, and we will monitor implementation to determine if changes are necessary.

Comment: Commenters questioned if an RHC could bill for virtual communication services if the discussion results in the patient going to an emergency room, an urgent care center, or a specialist not affiliated with the RHC or FQHC, or if it leads to an ''incident-to'' service at the RHC (such as an injection) that is not a billable visit.

Response: If the discussion with the RHC or FQHC practitioner does not occur within 7 days of an RHC or FQHC visit, and does not result in an RHC or FQHC visit with 24 hours or the soonest available appointment with an RHC or FQHC practitioner, and all other requirements are met, the RHC or FQHC could bill for virtual communication services. This would apply even if the patient is subsequently seen in an emergency room, urgent care center, or by a non-RHC or FQHC practitioner, or has a subsequent non-billable service in the RHC or FQHC such as an injection.

Comment: A commenter questioned if communication technology-based and remote evaluation services could be used by RHC and FQHC practitioners to help beneficiaries determine whether they should visit an RHC or FQHC for DSMT services, and states that this would allow RHC and FQHC practitioners to reach beneficiaries in both rural and urban underserved area and improve the lives of beneficiaries with diabetes. Another commenter questioned if the new virtual communication codes for RHCs and FQHCs would impact payment for DSMT in FQHCs.

Response: We agree that outreach and education to communities on diabetes prevention services are important, especially in rural and urban underserved areas. However, communication technology-based and remote evaluation services would be billable by RHCs and FQHCs only when the discussion requires the skill level of the RHC or FQHC practitioner. If the discussion could be conducted by a nurse, health educator, or other clinical personnel, it would not be billable as a virtual communication service. Payment for DSMT in FQHCs would not be impacted by the new virtual communication codes.

Comment: A commenter agreed that virtual communication services should be limited to established patients (seen by an RHC or FQHC practitioner within the previous year), and recommends that audio-only technology (that is, telephone) should be allowed for virtual check-ins because many RHC or FQHC patients may not have access to technology capabilities beyond audio-only communication.

Response: We note that while other technology can be used, telephone discussions are acceptable for billing the virtual communication G-code.

Comment: A commenter suggested that CMS should consider redefining what constitutes a billable RHC visit and develop a new and expansive definition so that new healthcare services such as care management and virtual communication services can be incorporated in the RHC cost-based model in the same manner as face-to-face billable visits.

Response: We welcome suggestions on modifying program requirements, but redefining RHC and FQHC billable visits is outside the scope of this regulation.

Comment: A commenter stated that the proposed PFS change for CPT code 99213 will result in independent RHCs and provider-based RHCs with more than 50 beds being paid $10 less per visit than practitioners billing under the PFS. The commenter stated that this will cause some RHCs to leave the RHC program, resulting in higher costs to Medicare, and questioned what can be done to raise the RHC capped encounter payment.

Response: RHCs are paid based on their costs, subject to a payment limit set out at section 1833(f) of the Act, except for those RHCs that have an exception to the payment limit, and is adjusted annually based on the Medicare Economic Index. We do not have the authority to make changes in the RHC payment rate.

Comment: A commenter questioned if this proposed change will impact the FQHC payment rate.

Response: The RHC AIR and the FQHC PPS would not be impacted by these changes.

Comment: A commenter questioned if the new virtual communication G-code would be accepted by Medicare Advantage Plans.

Response: HCPCS code G0071 is part of the HCPCS code set and must be accepted by all payers as a HIPAA standard (45 CFR 162.1002). RHCs and FQHCs should consult their associated MA plans for billing information.

Comment: A commenter questioned whether the two new add-on codes proposed for inherent visit complexity would apply to RHCs and FQHCs and be eligible for separate payment in addition to their standard all inclusive rate, and several commenters requested that RHCs and FQHCs be allowed to bill separately for interprofessional internet consultations.

Response: The two new add-on codes proposed for inherent visit complexity are for practitioners billing under the PFS, and do not apply to RHCs and FQHCs. The RHC AIR and the FQHC PPS includes all costs associated with a billable visit, and therefore consultations with other practitioners are not separately billable.

Comment: We received comments on allowing RNs to provide billable visits in RHCs, allowing FQHCs to bill for assessment and care planning for patients with cognitive impairment, reducing the requirements for psychiatric collaborative care management services in RHCs and FQHCs, providing separate payment to RHCs and FQHCs for medications to treat alcohol and substance use disorders, revising payment for pneumococcal vaccines, and reducing the requirements for patient consent for care management services.

Response: These comments are beyond the scope of this rule.

5. Finalized Provisions

As a result of the comments, we are finalizing the following provisions:

- Effective January 1, 2019, the payment rate for HCPCS code G0511 (General Care Management Services) is set at the average of the national non-facility PFS payment rates for CPT codes 99490, 99487, 99484, and 99491.
- Effective January 1, 2019, RHCs and FQHCs are paid for HCPCS code G0071 (Virtual Communication Services), when HCPCS code G0071 is on an RHC or FQHC claim, either alone or with other payable services, and at least 5 minutes of communication technology-based or remote evaluation services are furnished by an RHC or FQHC practitioner to a patient who has had an RHC or FQHC billable visit within the previous year, and the medical discussion or remote evaluation is for a condition not related to an RHC or FQHC service provided within the previous 7 days, and does not lead to an RHC or FQHC visit within the next 24 hours or at the soonest available appointment. We are adding a new paragraph (e) to § 405.2464 to reflect this payment and making additional minor conforming changes to this section.
- HCPCS code G0071 is set at the average of the national non-facility PFS payment rates for HCPCS code G2012

(communication technology-based services) and HCPCS code G2010 (remote evaluation services) and is updated annually based on the PFS national non-facility payment rate for these codes.

- RHC and FQHC face-to-face requirements are waived when these services are furnished to an RHC or FQHC patient. Coinsurance and deductibles apply to RHC claims for G0071 and coinsurance applies to FQHC claims for G0071.

6. Other Regulatory Updates

In addition to the regulatory change described in this section of the rule, we are finalizing the following technical corrections for accuracy:

- Removal of the extra section mark in the definition of ''Federally qualified health center (FQHC)'' in § 405.2401.
- Replacing the word ''his'' with ''his or her'' in the definition of ''Secretary'' in § 405.2401.
- Reordering the occurrence of RHC and FQHC in § 405.2462(g).

7. Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act

Section 6083 of the SUPPORT for Patients and Communities Act (Pub. L. 115–271, enacted on October 24, 2018) provides additional payments to RHCs and FQHCs for services furnished for the treatment of opioid use disorders by practitioners meeting certain requirements. We anticipate guidance from the Department of Health and Human Services on the implementation of this provision will be forthcoming.

D. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

Section 218(b) of the Protecting Access to Medicare Act (PAMA) (Pub. L. 113–93, enacted April 1, 2014) amended Title XVIII of the Act to add section 1834(q) of the Act directing us to establish a program to promote the use of appropriate use criteria (AUC) for advanced diagnostic imaging services. The CY 2016 PFS final rule with comment period addressed the initial component of the new Medicare AUC program, specifying applicable AUC. In that rule (80 FR 70886), we established an evidence-based process and transparency requirements for the development of AUC, defined provider-led entities (PLEs) and established the process by which PLEs may become qualified to develop, modify or endorse AUC. The first list of qualified PLEs was posted on the CMS website at the end of June 2016 at which time their AUC libraries became specified applicable AUC for purposes of section 1834(q)(2)(A) of the Act. The CY 2017 PFS final rule addressed the second component of this program, specification of qualified clinical decision support mechanisms (CDSMs). In the CY 2017 PFS final rule (81 FR 80170), we defined CDSM, identified the requirements CDSMs must meet for qualification, including preliminary qualification for mechanisms documenting how and when each requirement is reasonably expected to be met, and established a process by which CDSMs may become qualified. We also defined applicable payment systems under this program, specified the first list of priority clinical areas, and identified exceptions to the requirement that ordering professionals consult specified applicable AUC when ordering applicable imaging services. The first list of qualified CDSMs was posted on the CMS website in July 2017.

The CY 2018 PFS final rule addressed the third component of this program, the consultation and reporting requirements. In the CY 2018 PFS final rule (82 FR 53190), we established the start date of January 1, 2020 for the Medicare AUC program for advanced diagnostic imaging services. It is for services ordered on and after this date that ordering professionals must consult specified applicable AUC using a qualified CDSM when ordering applicable imaging services, and furnishing professionals must report AUC consultation information on the Medicare claim. We further specified that the AUC program will begin on January 1, 2020 with a year-long educational and operations testing period during which time AUC consultation information is expected to be reported on claims, but claims will not be denied for failure to include proper AUC consultation information. We also established a voluntary period from July 2018 through the end of 2019 during which ordering professionals who are ready to participate in the AUC program may consult specified applicable AUC through qualified CDSMs and communicate the results to furnishing professionals, and furnishing professionals who are ready to do so may report AUC consultation information on the claim (*https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/Downloads/MM10481.pdf*). Additionally, to incentivize early use of qualified CDSMs to consult AUC, we established in the CY 2018 Updates to the Quality Payment Program; and Quality Payment Program: Extreme and Uncontrollable Circumstances Policy for the Transition Year final rule with comment period and interim final rule (hereinafter ''CY 2018 Quality Payment Program final rule'') a high-weight improvement activity for ordering professionals who consult specified AUC using a qualified CDSM for the Merit-based Incentive Payment System (MIPS) performance period that began January 1, 2018 (82 FR 54193).

In the CY 2019 PFS proposed rule, we proposed additions to the definition of applicable setting, clarification around who may perform the required AUC consultation using a qualified CDSM under this program, clarification that reporting is required across claim types and by both the furnishing professional and furnishing facility, changes to the policy for significant hardship exceptions for ordering professionals under this program, mechanisms for claims-based reporting, and a solicitation of feedback regarding the methodology to identify outlier ordering professionals.

1. Background

AUC present information in a manner that links: A specific clinical condition or presentation; one or more services; and an assessment of the appropriateness of the service(s). Evidence-based AUC for imaging can assist clinicians in selecting the imaging study that is most likely to improve health outcomes for patients based on their individual clinical presentation. For purposes of this program, AUC is a set or library of individual appropriate use criteria. Each individual criterion is an evidence-based guideline for a particular clinical scenario based on a patient's presenting symptoms or condition.

AUC need to be integrated as seamlessly as possible into the clinical workflow. CDSMs are the electronic portals through which clinicians access the AUC during the patient workup. They can be standalone applications that require direct entry of patient information, but may be more effective when they are integrated into electronic health records (EHRs). Ideally, practitioners would interact directly with the CDSM through their primary user interface, thus minimizing interruption to the clinical workflow.

2. Statutory Authority

Section 218(b) of the PAMA added a new section 1834(q) of the Act entitled, ''Recognizing Appropriate Use Criteria for Certain Imaging Services,'' which directs the Secretary to establish a new program to promote the use of AUC. Section 1834(q)(4) of the Act requires

ordering professionals to consult with specified applicable AUC through a qualified CDSM for applicable imaging services furnished in an applicable setting and paid for under an applicable payment system; and payment for such service may only be made if the claim for the service includes information about the ordering professional's consultation of specified applicable AUC through a qualified CDSM.

3. Discussion of Statutory Requirements

There are four major components of the AUC program under section 1834(q) of the Act, and each component has its own implementation date: (1) Establishment of AUC by November 15, 2015 (section 1834(q)(2) of the Act); (2) identification of mechanisms for consultation with AUC by April 1, 2016 (section 1834(q)(3) of the Act); (3) AUC consultation by ordering professionals, and reporting on AUC consultation by January 1, 2017 (section 1834(q)(4) of the Act); and (4) annual identification of outlier ordering professionals for services furnished after January 1, 2017 (section 1834(q)(5) of the Act). We did not identify mechanisms for consultation by April 1, 2016. Therefore, we did not require ordering professionals to consult CDSMs or furnishing professionals to report information on the consultation by the January 1, 2017 date.

a. Establishment of AUC

In the CY 2016 PFS final rule with comment period, we addressed the first component of the Medicare AUC program under section 1834(q)(2) of the Act—the requirements and process for establishment and specification of applicable AUC, along with relevant aspects of the definitions under section 1834(q)(1) of the Act. This included defining the term ''provider-led entity'' and finalizing requirements for the rigorous, evidence-based process by which a PLE would develop AUC, upon which qualification is based, as provided in section 1834(q)(2)(B) of the Act and in the CY 2016 PFS final rule with comment period. Using this process, once a PLE is qualified by us, the AUC that are developed, modified or endorsed by the qualified PLE are considered to be specified applicable AUC under section 1834(q)(2)(A) of the Act. We defined PLE to include national professional medical societies, health systems, hospitals, clinical practices and collaborations of such entities such as the High Value Healthcare Collaborative or the National Comprehensive Cancer Network. Qualified PLEs may collaborate with third parties that they believe add value to their development of AUC, provided such collaboration is transparent. We expect qualified PLEs to have sufficient infrastructure, resources, and the relevant experience to develop and maintain AUC according to the rigorous, transparent, and evidence-based processes detailed in the CY 2016 PFS final rule with comment period.

In the same rule we established a timeline and process under § 414.94(c)(2) for PLEs to apply to become qualified. Consistent with this timeline the first list of qualified PLEs was published at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/PLE.html* in June 2016 (OMB Control Number 0938–1288).

b. Mechanism for AUC Consultation

In the CY 2017 PFS final rule, we addressed the second major component of the Medicare AUC program—the specification of qualified CDSMs for use by ordering professionals for consultation with specified applicable AUC under section 1834(q)(3) of the Act, along with relevant aspects of the definitions under section 1834(q)(1) of the Act. This included defining the term CDSM and finalizing functionality requirements of mechanisms, upon which qualification is based, as provided in section 1834(q)(3)(B) of the Act and in the CY 2017 PFS final rule. CDSMs may receive full qualification or preliminary qualification if most, but not all, of the requirements are met at the time of application. The preliminary qualification period began June 30, 2017 and ends when the AUC consulting and reporting requirements become effective on January 1, 2020. The preliminarily qualified CDSMs must meet all requirements by that date. We defined CDSM as an interactive, electronic tool for use by clinicians that communicates AUC information to the user and assists them in making the most appropriate treatment decision for a patient's specific clinical condition. Tools may be modules within or available through certified EHR technology (as defined in section 1848(o)(4) of the Act) or private sector mechanisms independent from certified EHR technology or a mechanism established by the Secretary.

In the CY 2017 PFS final rule, we established a timeline and process in § 414.94(g)(2) for CDSM developers to apply to have their CDSMs qualified. Consistent with this timeline, the first list of qualified CDSMs was published at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/CDSM.html* in July 2017 (OMB Control Number 0938–1315).

c. AUC Consultation and Reporting

In the CY 2018 PFS final rule, we addressed the third major component of the Medicare AUC program—consultation with applicable AUC by the ordering professional and reporting of such consultations under section 1834(q)(4) of the Act. We established a January 1, 2020 effective date for the AUC consultation and reporting requirements for this program. We also established a voluntary period during which early adopters can begin reporting limited consultation information on Medicare claims from July 2018 through December 2019. During the voluntary period there is no requirement for ordering professionals to consult AUC or furnishing professionals to report information related to the consultation. On January 1, 2020, the program will begin with an educational and operations testing period and during this time we will continue to pay claims whether or not they correctly include AUC consultation information. Ordering professionals must consult specified applicable AUC through qualified CDSMs for applicable imaging services furnished in an applicable setting, paid for under an applicable payment system and ordered on or after January 1, 2020; and furnishing professionals must report the AUC consultation information on the Medicare claim for these services ordered on or after January 1, 2020.

Consistent with section 1834(q)(4)(B) of the Act, we also established that furnishing professionals must report the following information on Medicare claims for advanced diagnostic imaging services as specified in section 1834(q)(1)(C) of the Act and defined in § 414.94(b), furnished in an applicable setting as defined in section 1834(q)(1)(D) of the Act, paid for under an applicable payment system as defined in section 1834(q)(4)(D) of the Act, and ordered on or after January 1, 2020: (1) The qualified CDSM consulted by the ordering professional; (2) whether the service ordered would or would not adhere to specified applicable AUC, or whether the specified applicable AUC consulted was not applicable to the service ordered; and (3) the NPI of the ordering professional (if different from the furnishing professional). Clarifying revisions to the reporting requirement are discussed later in this preamble.

Section 1834(q)(4)(C) of the Act provides for exceptions to the AUC consultation and reporting requirements in the case of: A service ordered for an

individual with an emergency medical condition, a service ordered for an inpatient and for which payment is made under Medicare Part A, and a service ordered by an ordering professional for whom the Secretary determines that consultation with applicable AUC would result in a significant hardship. In the CY 2017 PFS final rule, we adopted a regulation at § 414.94(h)(1)(i) to specify the circumstances under which AUC consultation and reporting requirements are not applicable. These include applicable imaging services ordered: (1) For an individual with an emergency medical condition (as defined in section 1867(e)(1) of the Act); (2) for an inpatient and for which payment is made under Medicare Part A; and (3) by an ordering professional who is granted a significant hardship exception to the Medicare EHR Incentive Program payment adjustment for that year under § 495.102(d)(4), except for those granted under § 495.102(d)(4)(iv)(C). In the CY 2019 PFS proposed rule, we proposed changes to the conditions for significant hardship exceptions, and we summarize and respond to public comments on our proposals later in this preamble. We remind readers that, consistent with section 1834(q)(4)(A) of the Act, ordering professionals must consult AUC for every applicable imaging service furnished in an applicable setting and paid under an applicable payment system unless a statutory exception applies.

Section 1834(q)(4)(D) of the Act specifies the applicable payment systems for which AUC consultation and reporting requirements apply and, in the CY 2017 PFS final rule, consistent with the statute, we defined applicable payment system in our regulation at § 414.94(b) as: (1) The PFS established under section 1848(b) of the Act; (2) the prospective payment system for hospital outpatient department services under section 1833(t) of the Act; and (3) the ambulatory surgical center payment system under section 1833(i) of the Act.

Section 1834(q)(1)(D) of the Act specifies the applicable settings in which AUC consultation and reporting requirements apply: A physician's office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other ''provider-led outpatient setting determined appropriate by the Secretary.'' In the CY 2017 PFS final rule, we added this definition to our regulation at § 414.94(b). Proposed additional applicable settings are discussed later in this preamble.

d. Identification of Outliers

The fourth component of the Medicare AUC program is specified in section 1834(q)(5) of the Act, Identification of Outlier Ordering Professionals. The identification of outlier ordering professionals under this paragraph facilitates a prior authorization requirement that applies for outlier professionals beginning January 1, 2020, as specified under section 1834(q)(6) of the Act. Because we established a start date of January 1, 2020 for AUC consultation and reporting requirements, we will not have identified any outlier ordering professionals by that date. As such, implementation of the prior authorization component is delayed. However, we did finalize in the CY 2017 PFS final rule the first list of priority clinical areas to guide identification of outlier ordering professionals as follows:

- Coronary artery disease (suspected or diagnosed).
- Suspected pulmonary embolism.
- Headache (traumatic and non-traumatic).
- Hip pain.
- Low back pain.
- Shoulder pain (to include suspected rotator cuff injury).
- Cancer of the lung (primary or metastatic, suspected or diagnosed).
- Cervical or neck pain.

We did not include proposals to expand or modify the list of priority clinical areas in this final rule.

4. Proposals for Continuing Implementation

In the CY 2019 PFS proposed rule, we proposed to amend § 414.94 of our regulations, ''Appropriate Use Criteria for Certain Imaging Services,'' to reflect the following policies.

a. Expanding Applicable Settings

Section 1834(q)(1)(D) of the Act specifies that the AUC consultation and reporting requirements apply only in an applicable setting, which means a physician's office, a hospital outpatient department (including an emergency department), an ambulatory surgical center, and any other provider-led outpatient setting determined appropriate by the Secretary. In the CY 2017 PFS final rule, we codified this definition in § 414.94(b). We proposed to revise the definition of applicable setting to add an independent diagnostic testing facility (IDTF).

We believe the addition of IDTFs to the definition of applicable setting will ensure that the AUC program is in place across outpatient settings in which outpatient advanced diagnostic imaging services are furnished. IDTFs furnish services for a large number of Medicare beneficiaries; nearly $1 billion in claims for 2.4 million beneficiaries in 2010 (OEI–05–09–00560). An IDTF is independent of a hospital or physician's office and diagnostic tests furnished by an IDTF are performed by licensed, certified non-physician personnel under appropriate physician supervision (§ 410.33). Like other applicable settings, IDTFs must meet the requirements specified in § 410.33 of our regulations to be enrolled to furnish and bill for advanced diagnostic imaging and other IDTF services. Services that may be provided by an IDTF include, but are not limited to, magnetic resonance imaging (MRI), ultrasound, x-rays, and sleep studies. An IDTF may be a fixed location, a mobile entity, or an individual non-physician practitioner, and diagnostic procedures performed by an IDTF are paid under the PFS. IDTF services must be furnished under the appropriate level of physician supervision as specified in § 410.33(b); and all procedures furnished by the IDTF must be ordered in writing by the patient's treating physician or non-physician practitioner. As such, we believe the IDTF setting is a provider-led outpatient setting appropriate for addition to the list of applicable settings under section 1834(q)(1)(D), and we proposed to add IDTF to our definition of applicable setting under § 414.94(b) of the regulations.

We note that under the PFS, payment for many diagnostic tests including the advanced diagnostic imaging services to which the AUC program applies can be made either ''globally'' when the entire service is furnished and billed by the same entity; or payment can be made separately for the technical component (TC) of the service and the professional component (PC) when those portions of the service are furnished and billed by different entities. In general, the TC for an advanced diagnostic imaging service is the portion of the test during which the patient is present and the image is captured. The PC is the portion of the test that involves a physician's interpretation and report on the captured image. For example, when a CT scan is ordered by a patient's treating physician, the entire test (TC and PC) could be furnished by a radiologist in their office and billed as a ''global'' service. Alternatively, the TC could be furnished and billed by an IDTF, and the PC could be furnished and billed by a radiologist in private practice. By adding IDTFs as an

applicable setting, we believe we would appropriately and consistently apply the AUC program across the range of outpatient settings where applicable imaging services are furnished.

We proposed to revise the definition of applicable setting under § 414.94(b) to include an IDTF. We invited comments on this proposal and on the possible inclusion of any other applicable setting. We reminded commenters that application of the AUC program is not only limited to applicable settings, but also to services for which payment is made under applicable payment systems (the PFS, the OPPS, and the ASC payment system).

The following is a summary of the comments we received on revising the definition of applicable setting under § 414.94(b) to include an IDTF and on the possible inclusion of any other applicable setting.

Comment: The majority of commenters supported adding IDTF to the definition of applicable setting. These commenters agreed that this addition would apply the AUC program appropriately and consistently across outpatient settings where applicable advanced diagnostic imaging services are furnished and reported. In contrast, a few commenters were concerned with expanding the definition of applicable setting until CMS and other impacted stakeholders have a better understanding of the program and 3 to 5 years of experience with it. These commenters suggested that any expanded definition will add complexity and make implementation even more difficult by the 2020 required start date as the addition of another applicable setting would require broader reporting of AUC consultation information. To this end, these commenters requested modification to the proposal to allow some flexibility on the timeline to add IDTFs as an applicable setting. Finally, a few commenters requested that the definition of applicable setting be further expanded to include any office-based service, including for example, situations in which physicians have an MRI in their own office.

Response: We appreciate these perspectives by the commenters. We continue to believe that the IDTF setting is a provider-led outpatient setting appropriate for addition to the list of applicable settings under section 1834(q)(1)(D) of the Act, and are finalizing this definition as proposed. We disagree that the definition will add complexity as we seek consistency in applying our regulations across outpatient settings in which outpatient advanced diagnostic imaging services are furnished, and would be concerned with applying these requirements in different settings along different timelines. Because we did not propose adding other settings to this definition we will not expand it further in this final rule, but will continue to monitor claims for advanced diagnostic imaging services across the Medicare program. We remind readers that the physician's office (including one where advanced imaging equipment is located), hospital outpatient department (including an emergency department), and an ambulatory surgical center are already included in the definition of applicable setting.

After considering the comments, we are finalizing the proposal revising the definition of applicable setting under § 414.94(b) to include an IDTF.

b. Consultations by Ordering Professionals

Section 1834(q)(1)(E) of the Act defines the term ''ordering professional'' as a physician (as defined in section 1861(r)) or a practitioner described in section 1842(b)(18)(C) who orders an applicable imaging service. The AUC consultation requirement applies to these ordering professionals. We proposed that the consultation with AUC through a qualified CDSM may be performed by auxiliary personnel under the direction of the ordering professional and incident to the ordering professional's services, when the consultation is not performed personally by the ordering professional whose NPI will be listed on the order for an advanced imaging service.

In response to the CY 2018 PFS proposed rule, we received several public comments requesting clarification regarding who is required to perform the consultation of AUC through a qualified CDSM. Commenters not only sought clarification, but also provided recommendations for requirements around this topic. Some commenters recommended that CMS strictly interpret the statutory language and only allow the clinician placing the order to perform the consultation and others recommended that CMS allow others to perform the AUC consultation on behalf of the clinician.

Section 1834(q)(4)(A)(i) of the Act requires an ordering professional to consult with a qualified CDSM, and this was codified in our regulations at § 414.94(j). The statute does not explicitly provide for consultations under the AUC program to be fulfilled by other professionals, individuals or organizations on behalf of the ordering professional; however, we continue to seek ways to minimize the burden of this new Medicare program and understand that many practices currently use clinical staff, working under the direction of the ordering professional, to interact with the CDSM for AUC consultation and subsequent ordering of advanced diagnostic imaging. Therefore, we proposed to modify paragraph § 414.94(j) to specify that additional individuals may perform the required AUC consultation.

When the AUC consultation is not performed personally by the ordering professional, we proposed the consultation may be performed by auxiliary personnel incident to the ordering physician or non-physician practitioner's professional service. We believed this approach was appropriate under this program and still accomplishes the goal of promoting the use of AUC. This proposed policy would allow the ordering professional to exercise their discretion to delegate the performance of this consultation. It is important to note that the ordering professional is ultimately responsible for the consultation as their NPI is reported by the furnishing professional on the claim for the applicable imaging service; and that it is the ordering professional who could be identified as an outlier ordering professional and become subject to prior authorization based on their ordering pattern.

We proposed to revise the AUC consultation requirement specified at § 414.94(j) to specify that the AUC consultation may be performed by auxiliary personnel under the direction of the ordering professional and incident to the ordering professional's services.

The following is a summary of the comments we received on this proposal. Overall commenters either agreed or disagreed with the proposal to expand who can perform the consultation with a qualified CDSM, and the commenters that agreed with the concept of the proposal either requested clarification around the term auxiliary personnel or recommended that we use more specific language to describe eligible personnel.

Comment: Some commenters were completely against the concept of this proposal and did not support allowing anyone beyond the ordering professional to perform the AUC consultation stating that allowing anyone other than the ordering professional to perform the consultation would undermine the intent of the AUC program and increase administrative burden. A few of those commenters suggested that expanding the scope of individuals who can perform the consultation would actually increase

burden and confusion for ordering professionals. Others opposed the proposal on the basis that the educational goals of the program would be undermined or auxiliary personnel would manipulate the information to achieve adherent responses. These commenters wanted ordering professionals to be directly exposed to AUC. Some of the commenters that agreed with the proposal specifically stated that the intent of the AUC program would not be diminished by expanding AUC consultation beyond the ordering professional. However, the vast majority of commenters agreed that expanding beyond the ordering professional allows flexibility and the opportunity for the AUC consultation requirement to be less burdensome on the ordering professional.

Response: We agree that the AUC program should be a learning program for ordering professionals. However, to balance the burden put upon ordering professionals and their offices to comply with this program as well as focus on the educational component of this program, we maintain that expanding AUC consultations to individuals beyond the ordering professional is an important step. We envision that the ordering professionals will, even when they do not personally perform the AUC consultation, remain closely involved and will engage with the individual to whom they delegate the task of performing the consultation. For many ordering professionals, this delegation may save time when they routinely order tests that are consistently considered to adhere to AUC. In those cases, the back-and-forth between the ordering professional and the individual who conducts the consultation may be minimal. We anticipate that, when an AUC consultation is performed by someone other than the ordering professional and the result is that the imaging service does not adhere to the consulted AUC, that information will be provided back to the ordering professional to allow them to consider whether a different test (or no test) should be ordered, or if the original order is still appropriate for the patient. Additionally, ordering professionals may still choose to personally perform the consultation. This may be ideal for ordering professionals with CDSMs that allow for seamless interaction, such as the case of a CDSM integrated within an EHR.

Regardless of who performs the AUC consultation, the ordering professional is ultimately responsible for the order and may become subject to prior authorization if they demonstrate a pattern of non-adherent orders. Therefore, the ordering professional not only has a vested interest in terms of providing the right test for their patient, but also to monitor the frequency with which they order tests that do not adhere to AUC.

Comment: While the majority of commenters agreed with expanding who, beyond the ordering professional, can personally perform the consultation with a qualified CDSM, they expressed either confusion with the term ''auxiliary personnel'' or recommended additional regulatory language to more specifically identify the scope of individuals who could perform the AUC consultation. Other commenters questioned the applicability of ''incident to'' provisions since consulting AUC through a CDSM is not a billable service.

Some commenters suggested additional language that would identify specific licensed professionals, lay out training requirements, allow for medical assistants or credentialed clinical staff, cite state scope of practice laws, or require that the individual be present in the office of the ordering professional. These commenters stated that the AUC consultation should not be an administrative task that can be performed by any staff member, such as a receptionist or data entry clerk. The underlying concern of commenters that wanted to explicitly allow only clinical personnel to consult AUC was that the individual performing an AUC consultation would need to understand the patient's medical information, the advanced imaging service being recommended and the clinical information that is returned by the CDSM. Commenters stated that this understanding on the part of the individual who performs the AUC consultation was particularly important when a CDSM indicates that the order is not adherent to AUC.

Some commenters specifically addressed our proposal that the individual who consults AUC must be under the direction of the ordering professional. At least one commenter noted the need for direct supervision while another said the individual should be physically located in the office of the ordering professional as opposed to off-site. Other commenters suggested that we use language that allows for maximum flexibility.

One commenter gave an example that drew parallels between CDSMs and Computerized Provider Order Entry (CPOE) systems, and suggested the same requirements should apply to individuals consulting CDSMs. The commenter stated that for CPOE entries to count toward meeting Medicaid Meaningful Use thresholds, the entry must be made by a licensed healthcare professional or credentialed medical assistant. Similarly, the commenter suggested the consultation should be performed consistent with state scope of practice laws since the use of CPOE is limited to those individuals referenced above, as it is within their state scope of practice to enter orders into medical records.

Response: We agree with comments suggesting that the language we proposed could potentially cause confusion, and we understand the disagreement among commenters regarding precisely who, beyond the ordering professional, should be eligible to perform the AUC consultation. We further agree that the concept of services incident to a physician's professional services may not be directly relevant to the action of consulting AUC using a CDSM. We proposed using ''incident to'' as a description of the relationship between the ordering professional and the auxiliary personnel consulting the AUC.

We also agree that there are similarities between CPOE systems and CDSMs, and that individuals using these systems should have some level of knowledge of the clinical information they are inputting and, importantly, the information they receive back from the system. However, we also agree with the view of most commenters that ordering professionals should have flexibility to delegate the AUC consultation task. We also agree that the learning and educational aspects of AUC are more likely to be realized when there is real communication between the ordering professional and the person performing the consultation. While we proposed the consultation could be performed incident to the ordering professional's service, we agree with commenters that the ''incident to'' concept is difficult to apply to a service that is not billable and does not require the patient to be present. We further agree with comments recommending that there be good communication and a close relationship between the ordering professional and individual consulting the AUC. In the case of consulting AUC, we believe it is important that the individual who uses the CDSM is working under the ordering professional, and that the individual is available to the ordering professional to discuss the results of the consultation and any responsive adjustments to planned orders.

Comment: A few commenters suggested allowing the furnishing professional to occasionally consult AUC using a CDSM. Another

commenter questioned whether auxiliary personnel would be permitted to change the order based on the AUC consultation and an additional commenter questioned whether physical therapists could write orders.

Response: While a furnishing professional may consult AUC as they wish for other purposes, such a consultation would not suffice for purposes of the AUC consultation required under this program. The AUC consultation must be performed by the ordering professional or an individual to whom the ordering professional has delegated it; and the ordering professional may only delegate the required AUC consultation to an individual as specified in our final policy. The furnishing professional may perform their own AUC consultation to verify information; however, that would not replace the consultation that is required to be performed by the ordering professional or their appropriately designated surrogate. The AUC program does not change the scope of professionals permitted under law to write or change orders for advanced diagnostic imaging services.

Comment: Some commenters questioned whether there was statutory authority to allow anyone other than the ordering professional to personally perform the AUC consultation with a CDSM.

Response: We do not believe it is inconsistent with the statute to allow an individual other than the ordering professional to perform the AUC consultation with a qualified CDSM. Moreover, regardless of who performs the act of consulting with a qualified CDSM, it is important to understand that the ordering professional remains ultimately responsible for the AUC consultation and communication of the consultation information to the furnishing professional.

Comment: A commenter who disagreed with our proposal to permit certain individuals other than the ordering professional to perform the AUC consultation suggested that the proposal is counter to the intent of the existing regulation at § 414.94(k) finalized in the CY 2018 PFS final rule. The commenter suggested that educating ordering professionals regarding the optimal use of advanced imaging services can only be accomplished when ordering professionals are directly exposed to AUC.

Response: We believe the intent of the statutory provisions requiring the AUC program is to increase appropriate ordering of advanced imaging services through a learning system, and that can still be achieved even if we allow delegation of the consultation when the individual performing it has the proper training and is working under the appropriate direction of the ordering professional.

Comment: One commenter requested a specific set of standards or training requirements for such auxiliary personnel to ensure that diagnostic imaging services comply with AUC requirements.

Response: At this time, we are not in a position to establish training requirements or standards tailored to the AUC program for individuals that may be delegated the AUC consultation.

Based on the public comments received, we do not believe it would be appropriate to move forward with the proposal to specify the scope of individuals who can perform the AUC consultation as auxiliary personnel. We are modifying our proposal in response to comments, and conforming the regulation at § 414.94(j)(2), to clarify that, in the event of a significant hardship, the requirement to consult AUC does not apply and specify that, when not personally performed by the ordering professional, the consultation with a qualified CDSM may be performed by clinical staff under the direction of the ordering professional. We have used the term clinical staff elsewhere in the Medicare program to identify the individuals that may perform care management services including chronic care management (CCM), behavioral health integration (BHI) and transitional care management (TCM) services. These services involve some non-face-to-face services along with clinical activities around the care plan and communication and coordination with the patient's other healthcare professionals. For care management, the clinical staff requirement ensures that the individual performing the service must have the level of clinical knowledge necessary to effectively coordinate and communicate with the treating clinician. Similarly, in the case of the AUC program, the individual performing the AUC consultation must have sufficient clinical knowledge to interact with the CDSM and communicate with the ordering professional. After considering public comments on our proposal, we have concluded that allowing clinical staff to perform the AUC consultation under the direction of the ordering professional is a better fit with the AUC program than our proposal, and is responsive to public comments asserting that the concept of ''incident to'' is not relevant in the context of the AUC program. We believe the policy we are finalizing, to allow the AUC consultation to be performed by clinical staff under the direction of the ordering professional, further reflects a balance between those commenters who wanted only the ordering professional to perform the consultation and those who suggested we should allow the consultation to be delegated. Clinical staff will have a level of knowledge that allows for effective communication of advanced diagnostic imaging orders, interaction with AUC, and engagement with the ordering professional, while they remain under the direction of the ordering professional.

c. Reporting AUC Consultation Information

Section 1834(q)(4)(B) of the Act requires that payment for an applicable imaging service furnished in an applicable setting and paid for under an applicable payment system may only be made if the claim for the service includes certain information about the AUC consultation. As such, the statute requires that AUC consultation information be included on any claim for an outpatient advanced diagnostic imaging service, including those billed and paid under any applicable payment system (the PFS, OPPS or ASC payment system). When we initially codified the AUC consultation reporting requirement in § 414.94(k) through rulemaking in the CY 2018 PFS final rule, we specified only that ''furnishing professionals'' must report AUC consultation information on claims for applicable imaging services. This led some stakeholders to believe that AUC consultation information would be required only on practitioner claims. To better reflect the statutory requirements of section 1834(q)(4)(B) of the Act, we proposed to revise our regulations to clarify that AUC consultation information must be reported on all claims for an applicable imaging service furnished in an applicable setting and paid for under an applicable payment system. The revised regulation would more clearly express the scope of advanced diagnostic imaging services that are subject to the AUC program, that is, those furnished in an applicable setting and paid under an applicable payment system.

The language codified in § 414.94(k) uses the term furnishing professional to describe who must report the information on the Medicare claims. We recognize that section 1834(q)(1)(F) of the Act specifies that a ''furnishing professional'' is a physician (as defined in section 1861(r)) or a practitioner described in section 1842(b)(18)(C) who furnishes an applicable imaging service.

However, because section 1834(q)(4)(B) of the Act, as described above, clearly includes all claims paid under applicable payment systems without exclusion, we believe that the claims from both furnishing professionals and facilities must include AUC consultation information. In other words, we would expect this information to be included on the practitioner's claim for the PC of the applicable advanced diagnostic imaging service and on the provider's or supplier's claim for the facility portion or TC of the imaging service.

As such, we proposed to revise § 414.94(k) to clearly reflect the scope of claims for which AUC consultation information must be reported, and to clarify that the requirement to report AUC consultation information is not limited to the furnishing professional. The following is a summary of the comments we received.

Comment: Some commenters stated that they appreciate the clarification that the requirement to report AUC consultation information is not limited to the furnishing professional. These commenters thanked CMS for addressing the increasingly common instances in which the TC and PC of an advanced diagnostic imaging service are performed at separate locations. Additionally, these commenters acknowledged that the clarification recognizes situations when payment can be made globally, to include both the TC and PC furnished and billed by the same entity, and situations of Method II billing by critical access hospitals. In contrast, other commenters opposed the reporting of AUC consultation information on all claims, specifically the facility claims, for an applicable imaging service furnished in an applicable setting and paid under an applicable payment system. These commenters noted that requiring the reporting of AUC consultation information does not appropriately target the ordering professionals for whom the AUC program is intended, and creates a duplicative effort when CMS receives AUC consultation information from both facilities and furnishing professionals for different parts of the same exam. A few other commenters expressed concern that requiring two sources of AUC consultation information that relates to the same test for the same patient could result in situations where one source was inaccurate or provides conflicting information.

Response: The statutory requirement under section 1834(q)(4)(B) of the Act specifies that payment for an applicable imaging service furnished in an applicable setting and paid for under an applicable payment system may only be made if the claim for the service includes certain information about the AUC consultation. We recognize that this requirement to report AUC consultation information is not placed on the ordering professional, but rather on those submitting claims for the advanced diagnostic imaging service that the ordering professional orders. We also recognize that the TC or facility portion of an applicable imaging service is frequently furnished and billed by a different entity than the PC portion of the service. We do not currently do any matching or comparison of separate claims for the PC and TC or facility portion of an advanced diagnostic imaging service. Rather, we process these separate claims individually, and have no immediate plans to begin doing otherwise for purposes of the AUC program. We hope to learn more about the implementation of this program, including issues such as these commenters have raised, during the educational and operations testing period.

After considering the comments, we are finalizing without modification the proposal to revise § 414.94(k) to clearly reflect the scope of claims for which AUC consultation information must be reported, and to make this requirement consistent with section 1834(q)(4)(B) of the Act.

d. Claims-Based Reporting

In the CY 2018 PFS proposed rule (82 FR 34094) we discussed using a combination of G-codes and modifiers to report the AUC consultation information on the Medicare claim. We received numerous public comments objecting to this potential solution. In the 2018 PFS final rule, we agreed with many of the commenters that additional approaches to reporting AUC consultation information on Medicare claims should be considered, and we learned from many commenters that reporting a unique consultation identifier (UCI) would be a less burdensome and preferred approach. The UCI would include all the information required under section 1834(q)(4)(B) of the Act including an indication of AUC adherence, non-adherence and not applicable responses. Commenters noted that capturing a truly distinguishing UCI on the claim will allow for direct mapping from a single AUC consultation to embedded information within a CDSM. We indicated that we would work with stakeholders to further explore the concept of using a UCI to satisfy the requirements of section 1834(q)(4)(B) of the Act, which will be used for Medicare claims processing and, ultimately, for the identification of outlier ordering professionals, and consider developing a taxonomy for a UCI.

We had the opportunity to engage with some stakeholders over the last 6 months and we understand that some commenters from the previous rule continue to be in favor of a UCI, while some may have changed their position upon further consideration.

We provide the following information to summarize alternatives we considered. We had originally considered assigning a G-code for every qualified CDSM with a code descriptor containing the name of the qualified CDSM. The challenge to this approach arises when there is more than one advanced imaging service on a single claim. We could attribute a single G-code to all of the applicable imaging services for the patient's clinical condition on the claim, which might be appropriate if each AUC consultation for each service was through the same CDSM. If a different CDSM was used for each service (for example, when services on a single claim were ordered by more than one ordering professional and each ordering professional used a different CDSM) then multiple G-codes could be needed on the claim. Each G-code would appear on the claim individually as its own line item. As a potential solution, we considered the use of modifiers, which are appealing because they would appear on the same line as the CPT code that identifies the specific billed service. Therefore, information entered onto a claim would arrive into the claims processing system paired with the relevant AUC consultation information.

When reporting the required AUC consultation information based on the response from a CDSM: (1) The imaging service would adhere to the applicable AUC; (2) the imaging service would not adhere to such criteria; or (3) such criteria were not applicable to the imaging service ordered, three modifiers could be developed. These modifiers, when placed on the same line with the CPT code for the advanced imaging service would allow this information to be easily accessed in the Medicare claims data and matched with the imaging service.

Stakeholders have made various suggestions for a taxonomy that could be used to develop a UCI to report the required information. Stakeholders have also considered where to place the UCI on the claim. We understand the majority of solutions suggested by stakeholders involving a UCI are claim-

level solutions and would not allow us to attribute the CDSM used or the AUC adherence status (adherent or not adherent, or not applicable) to a specific imaging service. As such, the approach of using a UCI would not identify whether an AUC consultation was performed for each applicable imaging service reported on a claim form, or be useful for purposes of identifying outlier ordering professionals in accordance with section 1834(q)(5) of the Act.

We have received ideas from stakeholders that are both for and against the two approaches we have identified; and we appreciate the stakeholders that have provided additional information or engaged us in this discussion. Internally, we have explored the possibility of using, and feasibility of developing, a UCI; and concluded that, although we initiated this approach during the CY 2018 PFS final rule, it is not feasible to create a uniform UCI taxonomy, determine a location of the UCI on the claims forms, obtain the support and permission by national bodies to use claim fields for this purpose, and solve the underlying issue that the UCI seems limited to claim-level reporting. Using coding structures that are already in place (such as G-codes and modifiers) would allow us to establish reporting requirements prior to the start of the program (January 1, 2020).

Since we did not finalize a proposal in the CY 2018 PFS final rule, we proposed in this rule to use established coding methods, to include G-codes and modifiers, to report the required AUC information on Medicare claims. This would allow the program to be implemented by January 1, 2020. We will consider future opportunities to use a UCI and look forward to continued engagement with and feedback from stakeholders.

The following is a summary of comments we received on this proposal.

Comment: The majority of commenters agreed with our proposed approach of using G-codes and modifiers to append AUC information on claims. Of those commenters, most stated that the approach is not without flaws, including increased workflow challenges and complexity, time needed for staff to learn and incorporate these changes into billing practices, and the limited information modifiers may convey for outlier identification purposes. We summarize and respond to comments on these issues below. However, they acknowledged that there is a lack of better alternatives. Other commenters disagreed with the proposal, and recommended CMS not require claims-based reporting until a UCI can be reported on claims. In addition to those recommending a delay in reporting, others suggested that CMS not require claims-based reporting at all and instead allow information to be transmitted directly from qualified CDSMs to CMS.

Response: We agree with commenters that G-codes and modifiers may not be the ideal solution. However, it is important that we make strides to implement this program and prepare stakeholders for the method of reporting in the immediate years of the program. We will continue to discuss with stakeholders the potential of using a UCI in the future. There are hurdles to overcome with respect to the use of a UCI that are discussed in the comment summaries and responses below. Some of these include understanding how UCI information would be used in the development of the eventual outlier ordering professional methodology, and where it would be appended to the claim. In addition, there is disagreement among stakeholders regarding whether the UCI would contain a taxonomy and embed meaningful information. Additionally, as we have consulted with stakeholders responsible for updating the claims forms, which would be necessary to establish a field to report a UCI on claims, we understand that it would be a matter of years before the forms could be updated. As such, the prospect of developing and using a UCI is not a realistic immediate solution.

Comment: There were disagreements and concerns among commenters that support the use of G-codes to identify which qualified CDSM was consulted. Some were concerned that CMS could not develop G-codes quickly enough to keep pace with newly qualified CDSMs and that the total number of G-codes would be unwieldy. Others supported the use of a single generic G-code to describe that a qualified CDSM was consulted but would not identify a particular CDSM. Another commenter pointed out that a G-code would not be necessary on claims when a CDSM was not consulted, rather, only a modifier (placed on the same line as the CPT code for the imaging service) would be used in these circumstances.

Commenters pointed out that claims for both the furnishing facility and furnishing professional are capable of reporting G-codes and modifiers, but identified an issue related to resorting of information on claims as they are processed through the system. In other words, the codes billed on separate claim lines can come through the system and end up in a different order than how they originally appeared when the claim was submitted. This means CMS cannot presume to pair an imaging service reported on a specific claim line with a specific G-code when more than one imaging service appears on the claim. A commenter suggested that furnishing professionals could split their claims so only one imaging service and one G-code would appear on each claim. Commenters pointed out that while this is possible on the furnishing professional claim, it is not possible on the furnishing facility claim due to other rules involving facility billing and same-day procedures.

Response: We are optimistic that we can issue G-codes in a timely manner upon qualifying new CDSMs. There are a number of CDSMs already qualified and G-codes could be issued for those prior to the start of the educational and operations testing period set to begin in 2020. We could secure additional G-codes with general descriptors to describe ''newly qualified CDSM A,'' ''newly qualified CDSM B,'' etc. to be ready for assignment to a specific CDSM upon qualification. That would allow some time for the descriptor to be changed to reflect the name of the CDSM, but also enable immediate use of the appropriate G-code for reporting purposes. This information will be contained in standard coding information issued by the agency as well as on the AUC website that lists all qualified CDSMs.

Regarding the use of one generic G-code to describe that a qualified CDSM was consulted, we are not confident that this would satisfy the statutory requirement under section 1834(q)(4)(B) of the Act to report which qualified CDSM was consulted. However, we may find that generic codes are needed as a temporary measure as we move forward with implementation.

If a CDSM is not consulted, for example due to the ordering professional attesting to a significant hardship, then we agree that a distinct G-code for that purpose is not necessary. Rather the modifier describing that hardship could be placed on the same claim line as the CPT code for the imaging service.

We agree with commenters that the issue of claims processing system resorting of claims information is problematic. When multiple imaging services are reported on a single claim, it will not be possible to pair the G-code describing which CDSM was consulted with the imaging service for which it was consulted. While we could require the furnishing professional to split the claim, we are not committing to that solution at this point but will explore that option as we move forward with implementation. Another possible

solution, though still imperfect, could be to list the G-code on a line and place the modifiers describing AUC adherence on the line with the CPT code describing the imaging service. This model could work when the same ordering professional has ordered all of the furnished imaging services on the claim, and if we presume that an ordering professional will consistently use only one qualified CDSM. We appreciate commenters raising these issues and we will continue to explore options to address them.

Comment: One commenter suggested that, instead of G-codes, CPT codes should be developed to identify the qualified CDSM consulted.

Response: Initially we do not believe it will be possible for AMA–CPT to issue CPT codes identifying qualified CDSMs in time for the program to begin. We do, however, understand that there may be benefits to making these codes Level 1 HCPCS codes that are issued by AMA–CPT as opposed to HCPCS Level 3 codes (G-codes). We will look into the benefits and potential problems of using CPT codes to describe which qualified CDSM was consulted. An initial concern we have, in addition to timing to accommodate the start of the AUC program, is whether CPT code descriptors could be changed quickly enough to accommodate newly qualified CDSMs and whether CPT codes would be set aside for future use.

Comment: Many commenters observed that, under this AUC program, qualified CDSMs must generate and provide a certification or documentation at the time of order that documents which qualified CDSM was consulted, the name and NPI of the ordering professional that consulted the CDSM, and whether the service ordered would or would not adhere to specified applicable AUC or whether the specified applicable AUC consulted was not applicable to the service ordered. As a result, these commenters assumed that the CDSM would also communicate the relevant G-codes and modifiers, and requested that CMS clarify that qualified CDSMs are required to explicitly communicate their assigned G-code and the adherence modifier to the ordering professional. The commenters stated that absent this clarification, some CDSMs may simply convey their name and an indication (other than the relevant modifier) as to whether the ordered service ''adhered,'' or ''didn't adhere,'' or the AUC ''didn't apply'' to the imaging test. The commenters were concerned that if CDSMs provide AUC consultation results in this way, it would create additional burden for ordering professionals to manually assign coding information to be transmitted for billing purposes.

A few of these commenters stated that they requested this clarification because they noted: (1) Each qualified CDSM will know its G-code and can readily convert their adherence rating system into modifiers, (2) the required data could be transmitted between EHR and CDSM vendors and communicated between professionals in a standardized manner, and (3) accuracy of consultation reporting would improve.

Response: Commenters accurately described what information must be included in the certification or documentation generated by a qualified CDSM at the time of order, and this is specified in our regulation at § 414.94(g)(1)(vi). As we move forward in finalizing our approach for claims-based reporting where CDSMs will be represented through G-codes, and AUC adherence represented through modifiers, we agree with commenters that CDSMs should include the G-codes and modifiers in their certification or documentation. We would like to see CDSMs begin to do this as the specific G-codes and modifiers become available. And as the commenters noted, this would seem to be a simple thing for CDSMs to do. If we do not see CDSMs making such adjustments to their certification or documentation, we will consider imposing a requirement in regulation.

Comment: Commenters had varying views of using a UCI to report consultation information on claims. Some commenters were interested in moving forward with the UCI requirement when the claims forms are adjusted to accommodate this new information. Others disagreed on whether or not a taxonomy with embedded meaning was necessary. Some of these commenters supported a UCI issued by the qualified CDSM that was unique to that CDSM. A G-code would also appear on the claim that would identify which qualified CDSM was consulted and then the UCI would be used to pair the information with the data in the CDSM specific to that consultation. Others supported a UCI with a taxonomy with embedded meaning so one could look at the UCI and know, without accessing additional information, which CDSM was consulted and the outcome of that consultation. We also heard from commenters that the UCI could be lengthy and therefore prone to transcription errors when entering information on the order or the claim form.

Response: We will continue to consult with stakeholders about the future possibility of using the UCI.

Comment: Numerous commenters were concerned about the requirements for claims-based reporting of AUC consultation information when the claims are not yet able to accommodate new types of information. Most of these commenters expressed concern about the placement of the UCI and other commenters pointed out that the furnishing facility claim does not contain a designated location for the ordering professional's NPI.

Response: We agree with these concerns and will work with the appropriate stakeholders to identify a possible future location for a UCI to be appended to claims. We are not committing to using the UCI at this time but will be open to exploring the possibility of developing a UCI that could be appended to claims in the future. We will also work to better understand and identify a potentially appropriate place on the furnishing facility claim to include the ordering professional's NPI, and to understand whether changes to that claim form may be needed. In the short term we will consider other implementation options so that fields on the claims are not used improperly.

Comment: Several commenters sought clarification on how, absent a UCI, AUC claims-based information as reported by the furnishing professional and facility would be reconciled with the AUC consultation performed by the ordering professional as there is interest in establishing best practices for retaining this information. These commenters requested clarification on who bears responsibility if such data are not available during an audit, considering that the ordering professional interacts with the CDSM and provides the information that the furnishing provider submits on the claim.

Response: It is the responsibility of the ordering professional to consult AUC and to provide that consultation information to the furnishing professional; and it is the responsibility of the furnishing professional and facility to accurately report that information on claims for applicable imaging services. We will take into account the specific roles of ordering and furnishing professionals and facilities as the program develops and we begin to engage in program monitoring activities.

Comment: Many commenters noted the practice of ''exam substitution'' permitted by Sections 80.6.2–80.6.4 of Chapter 15 of the Medicare Benefit Policy Manual when the furnishing

professional determines a different diagnostic imaging service should be ordered in certain circumstances and the ordering practitioner is not available to provide a new order. To this end, commenters recommended additional proposals to modify the reporting method using G-codes and modifiers by creating additional modifiers for those orders that (1) are initiated in one location and furnished at a different point of service, (2) furnished after a second consultation has occurred, or (3) are the result of interpretation-only services.

Response: We thank these commenters for their suggestions on additional modifiers and will consider these recommendations during implementation.

Based on the public comments we are finalizing the proposal to use G-codes and modifiers to report consultation information on claims. We appreciate that commenters pointed out concerns and technical issues regarding this approach and we will work to address them during implementation.

e. Significant Hardship Exception

We proposed to revise § 414.94(i)(3) of our regulations to adjust the significant hardship exception requirements under the AUC program. We proposed criteria specific to the AUC program and independent of other programs. An ordering professional experiencing any of the following when ordering an advanced diagnostic imaging service would not be required to consult AUC using a qualified CDSM, and the claim for the applicable imaging service would not be required to include AUC consultation information. The proposed criteria include:

- Insufficient internet access;
- EHR or CDSM vendor issues; or
- Extreme and uncontrollable circumstances.

Insufficient internet access is specific to the location where an advanced diagnostic imaging service is ordered by the ordering professional. EHR or CDSM vendor issues may include situations where ordering professionals experience temporary technical problems, installation or upgrades that temporarily impede access to the CDSM, vendors cease operations, or we de-qualify a CDSM. We expect these situations to generally be irregular and unusual. Extreme and uncontrollable circumstances include disasters, natural or man-made, that have a significant negative impact on healthcare operations, area infrastructure or communication systems. These could include areas where events occur that have been designated a federal Emergency Management Agency (FEMA) major disaster or a public health emergency declared by the Secretary. Based on 2016 data from the Medicare EHR Incentive Program and the 2019 payment year MIPS eligibility and special status file, we estimate that 6,699 eligible clinicians could submit such a request due to extreme and uncontrollable circumstances or as a result of a decertification of an EHR, which represents less than 1 percent of available ordering professionals.

In the CY 2017 PFS final rule, for purposes of the AUC program significant hardship exceptions, we provided that those who received significant hardship exceptions in the following categories from § 495.102(d)(4) would also qualify for significant hardship exceptions for the AUC program:

- Insufficient internet Connectivity (as specified in § 495.102(d)(4)(i)).
- Practicing for less than 2 years (as specified in § 495.102(d)(4)(ii)).
- Extreme and Uncontrollable Circumstances (as specified in § 495.102(d)(4)(iii)).
- Lack of Control over the Availability of CEHRT (as specified in § 495.102(d)(4)(iv)(A)).
- Lack of Face-to-Face Patient Interaction (as specified in § 495.102(d)(4)(iv)(B)).

In the CY 2018 PFS proposed rule, we proposed to amend the AUC significant hardship exception regulation to specify that ordering professionals who are granted reweighting of the Advancing Care Information (ACI) performance category to zero percent of the final score for the year under MIPS per § 414.1380(c)(2) due to circumstances that include the criteria listed in § 495.102(d)(4)(i), (d)(4)(iii), and (d)(4)(iv)(A) and (B) (as outlined in the bulleted list above) would be excepted from the AUC consultation requirement during the same year that the re-weighting applies for purposes of the MIPS payment adjustment. This proposal removed § 495.102(d)(4)(ii), practicing for less than 2 years, as a criterion since these clinicians are not MIPS eligible clinicians and thus would never meet the criteria for reweighting of their MIPS ACI performance category for the year.

In response to public comments, we did not finalize the proposed changes to the significant hardship exceptions in the CY 2018 PFS final rule and instead decided further evaluation was needed before moving forward with any modifications. Our original intention was to design the AUC significant hardship exception process in alignment with the process for the Medicare EHR Incentive Program for eligible professionals, and then for the MIPS ACI (now Promoting Interoperability) performance category. Under section 1848(a)(7)(A) of the Act, the downward payment adjustment for eligible professionals under the Medicare EHR Incentive Program will end in 2018, and we are unable to continue making reference to a regulation relating to a program that is no longer in effect. As we have continued to evaluate both policy options and operational considerations for the AUC significant hardship exception, we have concluded that the most appropriate approach, which we consider to be more straightforward and less burdensome than the current approach, involves establishing significant hardship criteria and a process that is independent from other Medicare programs. We also note as we have in the past that the AUC program is a real-time program with a need for real-time significant hardship exceptions. This is in contrast to the way significant hardship exceptions are handled under MIPS where the hardship might impact some or all of a performance period, or might impact reporting, both of which occur well before the MIPS payment adjustment is applied in a subsequent year. We recognize that when a significant hardship arises, an application process to qualify for an exception becomes a time consuming hurdle for health care providers to navigate, and we believe that it is important to minimize the burden involved in seeking significant hardship exceptions. As such, we proposed that ordering professionals would self-attest if they are experiencing a significant hardship at the time of placing an advanced diagnostic imaging order and such attestation would be supported with documentation of significant hardship. Ordering professionals attesting to a significant hardship would communicate that information to the furnishing professional with the order and it would be reflected on the furnishing professional's and furnishing facility's claim by appending a HCPCS modifier. The modifier would indicate that the ordering professional has self-attested to experiencing a significant hardship and communicated this to the furnishing professional with the order. Claims for advanced diagnostic imaging services that include a significant hardship exception modifier would not be required to include AUC consultation information.

In addition to the proposals above, we invited the public to comment on any

additional circumstances that would cause the act of consulting AUC to be particularly difficult or challenging for the ordering professional, and for which it may be appropriate for an ordering professional to be granted a significant hardship exception under the AUC program. Although we understand the desire by some for significant hardship categories unrelated to difficulty in consulting AUC through a CDSM, we remind readers that circumstances that are not specific to AUC consultation, such as the ordering professional being in clinical practice for a short period of time or having limited numbers of Medicare patients, would not impede clinicians from consulting AUC through a CDSM as required to meet the requirements of this program.

The following is a summary of the comments we received on the modifications to the significant hardship exceptions and additional circumstances for consideration as needing significant hardship exceptions.

Comment: Some commenters requested that clinicians in the Quality Payment Program be excepted from or considered automatically in compliance with the AUC program requirements. Some of these commenters specified that an exception should apply to all primary care practitioners, others suggested an exception should apply to all clinicians in the Quality Payment Program, and several commenters requested that hospitals and health systems be exempt from reporting AUC consultation information. One commenter requested that facility and institutional providers be exempt. Acknowledging that the statutory language in section 218(b) of the PAMA does not include such an exception, some of these commenters clarified that CMS should seek legislative authority to add such an exception.

Response: As added by section 218(b) of the PAMA, section 1834(q)(4)(B) of the Act specifies that AUC consultation information must be included on all claims for applicable imaging services when furnished in an applicable setting and paid under an applicable payment system, which includes the physician fee schedule, prospective payment system for hospital outpatient department services and the ambulatory surgical center payment system. Section 1834(q)(4)(C) of the Act also set forth specific exceptions, including for a service ordered for an individual with an emergency medical condition, a service ordered for an inpatient for which payment is made under Medicare Part A, or for a service ordered by an ordering professional for whom AUC consultation would result in a significant hardship. In the case of significant hardship, section 1834(q)(4)(C)(iii) of the Act provides for such exceptions in situations when the Secretary determines, on a case-by-case basis, that an ordering professional is exempt because ''consultation with applicable appropriate use criteria would result in a significant hardship, such as in the case of a professional who practices in a rural area without sufficient internet access.'' Given these statutory provisions, blanket exceptions, considered significant hardships or otherwise, for clinicians in the Quality Payment Program, for facility or institutional providers, or for hospitals and health systems, would not be consistent with the statutory requirements. While we understand that stakeholders may view the AUC program as duplicative of the Quality Payment Program, we also note that there are specific and distinct differences between the programs. The AUC program was established to promote appropriate use of advanced diagnostic imaging and improve ordering patterns for these services through the consultation of AUC with real time reporting requirements and payment implications. While some components of the Quality Payment Program can involve using AUC and clinical decision support, their use is not mandatory, and the Quality Payment Program provides numerous options for participation across all MIPS performance categories. In contrast, consultation with AUC using a CDSM is required for each order for an applicable imaging service furnished in an applicable setting and paid under an applicable payment system under the AUC program. If amendments are made to the AUC statutory provisions, we will adjust our regulations throughout § 414.94 accordingly. However, at this time, we do not have the authority to include exceptions to the AUC program beyond the scope of those specified in section 1834(q)(4)(C) of the Act.

Comment: Some commenters requested an additional significant hardship category based on a low-volume threshold for practices with low patient volumes, low number of covered services or a low number of Medicare charges. Some commenters supported this request by noting the increased cost and burden a small practice would be required to undertake to meet the requirements of the AUC program.

Response: As noted above, we believe that significant hardships are reflective of situations that would impede clinicians from consulting AUC through a CDSM. As the program is structured and given the availability of qualified CDSMs that are free of charge, we do not agree that ordering professionals in practices with low patient volumes, low number of covered services or a low number of Medicare charges would be impeded from consulting AUC. While we do understand that participation in the AUC program may result in increased cost and burden, which could arguably be disproportionate for these types of low volume practices, we do not have the authority to include exceptions to the AUC program beyond the scope of those specified in section 1834(q)(4)(C) of the Act.

Comment: Several commenters provided recommendations for other categories of significant hardship exceptions. One commenter requested an exception for professionals when the PLE they rely upon becomes unavailable, and another commenter requested a significant hardship exception when there is a lack of AUC for the service(s) requiring consultation or AUC are outdated. Another commenter suggested that new physicians be excepted from the AUC program and another identified imaging services ordered as the result of a clinical research protocol as a potential significant hardship.

Response: We disagree with adding these scenarios to the significant hardship exceptions under this program. For unavailable PLEs and AUC, we established specific requirements for both qualified PLEs and CDSMs that address the two situations included above. First, qualified CDSMs are required to make available, at a minimum, specified applicable AUC that reasonably address common and important clinical scenarios within all priority clinical areas and be able to incorporate specified applicable AUC from more than one qualified PLE. Should a qualified PLE cease to exist or otherwise become unavailable, then the qualified CDSM through which the AUC for that qualified PLE is consulted would no longer meet the requirements to be a qualified CDSM (assuming it does not incorporate AUC from another qualified PLE), and as such, would be de-qualified as a CDSM under this program. As noted above, de-qualification of a CDSM would be an allowable circumstance for an ordering professional to attest to a significant hardship due to EHR or CDSM vendor issues. Second, when an ordering professional consults a qualified CDSM and there are no AUC applicable to the service ordered, that information would be reported on the claim as such. In these situations, the qualified CDSM is required under § 414.94(g)(1)(vi) to

generate and provide a certification or documentation at the time of order that documents whether the specified applicable AUC consulted was not applicable to the service ordered. The ordering professional is then required to provide that information to the furnishing professional and facility so that it can be reported as specified under § 414.94(k). The absence of applicable AUC does not constitute an exception from the requirement to consult AUC using the qualified CDSM in an effort to find specified applicable AUC for the order. Third, qualified PLEs are required to review their AUC regularly and update them at least annually when appropriate; and qualified CDSMs are required to make any updated AUC content available within 12 months of the qualified PLE's update(s). Finally, we do not believe that being a new physician or conducting clinical research would cause the act of consulting AUC to be particularly difficult or challenging for the ordering professional.

Comment: Several commenters revisited previously expressed concerns about the emergency services exception. The commenters requested clarification around what constitutes an emergency medical condition. One commenter suggested that CMS revise the regulatory language to allow exceptions when an emergency medical condition is suspected for cases in which clinicians, in their best judgment, believe a patient may be experiencing a medical emergency at the time of order. This commenter noted that this approach was the intent of section 218(b) of the PAMA as explained by a member of Congress who was involved in drafting the statutory language, and that the reference to section 1867(e) of the Act instead of section 1867(a) of the Act was an inadvertent drafting error. One commenter requested that CMS delay requiring AUC consultations in the emergency department until the ambiguity over what services are considered emergency services is resolved.

Response: Section 1834(q)(4)(C)(i) of the Act provides for an exception to the AUC consultation and reporting requirements in the case of a service ordered for an individual with an emergency medical condition as defined in section 1867(e)(1) of the Act, not section 1867(a) of the Act as the commenter suggests. The regulation reflects the current statutory language and we will not amend our regulation in response to these comments. As stated in our response to comments in the CY 2017 PFS final rule with comment, we agree that exceptions granted for an individual with an emergency medical condition include instances where an emergency medical condition is suspected, but not yet confirmed. This may include, for example, instances of severe pain or severe allergic reactions. In these instances, the exception is applicable even if it is determined later that the patient did not in fact have an emergency medical condition.

Comment: Many commenters generally supported the proposed significant hardship categories and self-attestation approach, with one commenter specifically encouraging oversight of AUC and the use of significant hardship exceptions. However, many other commenters challenged the proposed approach to annotating the significant hardship self-attestation on every Medicare claim. Specifically, they requested that a blanket exception or single attestation be applied over a period of time to avoid increased burden of communicating and reporting a significant hardship attestation on every advanced diagnostic imaging order, and suggested using a significant hardship exception modifier on the subsequent claim(s) after the single attestation. One commenter noted that the approach as proposed by CMS is more burdensome than requiring the use of an applications process.

Response: Because the AUC program requires real time reporting on Medicare claims, we believe the best way to ensure clinicians have the ability and flexibility to use the significant hardships allowable under this program is to establish a mechanism for real time application of significant hardship attestations. To accomplish this, inclusion of the relevant significant hardship modifier on each Medicare claim offers the most straightforward approach, enabling ordering professionals to use a significant hardship exception as needed and without more complicated, time consuming steps that could result in a delay in the transmission, acceptance and processing of the imaging order for the ordering and furnishing professionals, as well as a delay in care for the patient. We note that applying a blanket exception for a specific period of time for ordering professionals based on a single significant hardship attestation would introduce a level of complexity and burden to the process that was not identified by requestors. Following such a single attestation, furnishing professionals (as well as CMS) would need to keep track of which ordering professionals had attested to a significant hardship as well as the period of time applicable to each attestation every time an order is received and a claim is prepared, submitted and processed. We disagree with commenters that inclusion of significant hardship information on each imaging order and subsequent claim imposes extensive burden, or that other approaches would be less burdensome and achieve the same goal of allowing for a real time significant hardship exception process under the real time AUC program.

Comment: Many commenters posed specific requests for clarification around the proposed significant hardship exception categories. One commenter requested further clarity and a broader application of insufficient internet access and extreme and uncontrollable circumstances to include, respectively, situations out of the control of the ordering professional like slow internet and no physical access to the CDSM, lost CDSM usernames and passwords and other situations preventing an ordering professional from consulting at the time of the patient encounter. Other commenters requested clarification around how orders would be made during downtime and how and when to document the significant hardship and by whom. A few commenters did not understand how de-certification of an EHR would qualify as a significant hardship since there are no certification requirements related to the AUC program. Others requested further information on how hardship information must be reported on the claim, specific information on coding a significant hardship, how to handle emergency situations and what to report when orders are changed.

Response: We appreciate the comments submitted requesting further clarification around exactly how significant hardship exceptions will be operationalized. We note that many of the questions posed are specific to claims reporting details. We expect to provide further details and clarification in the claims processing instructions that we expect to release following the final rule.

We describe insufficient internet access as specific to the location where an advanced diagnostic imaging service is ordered by the ordering professional. To further clarify, we note that in addition to ordering imaging services in an area without sufficient internet access, a significant hardship may apply when ordering professionals would face insurmountable barriers to obtaining infrastructure to have internet access (that is, lack of broadband). We do not believe that occasions of slow internet constitute a significant hardship.

We describe EHR or CDSM vendor issues as situations where ordering professionals experience temporary technical problems, installation or upgrades that temporarily impede access to the CDSM, vendors cease operations, or we de-qualify a CDSM and note that we expect these situations to be irregular and unusual. De-certification of an EHR would qualify as a significant hardship when the ordering professionals' qualified CDSM is integrated into their EHR, and the ordering professional's access to the CDSM is temporarily impeded due to installation issues associated with switching to a new vendor. We do not agree that losing CDSM usernames and passwords constitutes a significant hardship under the AUC program. Self-attestation for this significant hardship should be used as needed when the situations described above occur. We have not established limitations around using the EHR or CDSM vendor issues or the other significant hardship exceptions, but may monitor the use of these exceptions to ensure misuse or overuse does not become a problem.

We describe extreme and uncontrollable circumstances to include disasters, natural or man-made, that have a significant negative impact on healthcare operations, area infrastructure or communication systems. We also explain these may include areas where events occur that have been designated by FEMA as a major disaster or a public health emergency declared by the Secretary. To further clarify, these circumstances are events that are entirely outside the control of the ordering professional that prevent the ordering professional from consulting AUC through a qualified CDSM. We believe the hardship criteria under this program are similar to other programs such as MIPS and Promoting Interoperability, particularly the flexibility that is given to clinicians to identify extreme and uncontrollable circumstances.

Comment: Several commenters submitted a variety of additional comments and questions about the proposed significant hardship exceptions. One commenter questioned why the AUC hardships are not completely aligned with Quality Payment Program hardships. One stated that interpretation-only services do not need to include documentation of AUC consultation because professionals with no face-to-face encounters are excepted. One commenter questioned why an ordering professional with a significant hardship exception would need to communicate AUC consultation information, and suggested that they should only need to communicate the exception information to the furnishing professional and facility. A few commenters recommended that furnishing professionals should be held harmless when ordering professionals self-attest to experiencing a significant hardship.

Response: As explained above, the AUC program requires real time reporting of information on the Medicare claims for payment purposes. The Quality Payment Program is not a real time program but instead uses data from prior performance years to determine status and potential payment adjustments in future years. This distinct and significant difference, along with statutory differences between the programs, necessitates a separate significant hardship exception approach and process for the AUC program. As discussed throughout this section, we have made efforts to align significant hardship exception concepts with the Quality Payment Program as closely as possible; however, we are unable to achieve full alignment due to the innate programmatic differences. For ordering professionals without face-to-face patient interactions, we did not include this circumstance in our proposals and do not provide for such an exception in this final rule. The degree of patient interaction does not create in itself a significant hardship to consultation with applicable AUC. For communicating consultation information on the imaging order when a significant hardship is experienced, the commenter is correct. No AUC consultation information is to be communicated when an ordering professional self-attests to experiencing a significant hardship and communicates that on the order. This confusion likely arose from language that we inadvertently included in the preamble and have corrected for the final rule. Section 1834(q)(4)(B) of the Act requires certain information to be included on the claim for applicable imaging services under this program. As long as the furnishing professional and facilities correctly include the required information or append the appropriate hardship modifier, the claims will not be denied for failing to include AUC consultation information, and the furnishing professionals and facilities are not held responsible for the self-attestation made by the ordering professional. As noted above, we may monitor the use of these exceptions to ensure misuse or overuse does not become a problem, with the understanding that they reflect the ordering professional's self-attestation, not a representation made by the furnishing professional or facility. It is not appropriate for furnishing professionals or facilities to append significant hardship modifiers at their discretion; and we note that support for the use of such a modifier should be included by the ordering professional in the patient's medical record.

After considering the public comments, we are finalizing the significant hardship categories of insufficient internet access, EHR or CDSM vendor issues, and extreme and uncontrollable circumstances and updating this language in § 414.94(i)(3) of our regulations. We are also finalizing our proposal to allow ordering professionals experiencing a significant hardship to self-attest and include that information on the order for the advanced diagnostic imaging service, which the furnishing professional or facility would then communicate on the Medicare claim for the service by appending a HCPCS modifier identifying the ordering professional's self-attested significant hardship category.

f. Identification of Outliers

As previously mentioned, the fourth component of the AUC program specified in section 1834(q)(5) of the Act, is the identification of outlier ordering professionals. In our efforts to start a dialogue with stakeholders, we invited the public to submit their ideas on a possible methodology for the identification of outlier ordering professionals who would eventually be subject to a prior authorization process when ordering advanced diagnostic imaging services. Specifically, we solicited comments on the data elements and thresholds that we should consider when identifying outliers. We also intend to perform and use analysis to assist us in developing the outlier methodology for the AUC program. Our existing prior authorization programs generally do not specifically focus on outliers. We are interested in hearing ideas from the public on how outliers could be determined for the AUC program. Because we would be concerned about data integrity and reliability, we do not intend to include data from the educational and operations testing period in CY 2020 in the analysis used to develop our outlier methodology. Since we intend to evaluate claims data to inform our methodology we expect to address outlier identification and prior authorization more fully in CY 2022 or 2023 rulemaking. We appreciate the feedback received from public commenters and as noted above, we

expect to solicit additional public comment to inform our methodology through rulemaking before finalizing our approach.

5. Summary

We appreciate the commenters that continue to provide their perspective and feedback on this program. Based on those comments we will finalize the following:

We will finalize as proposed to add IDTFs to the definition of applicable settings under § 414.94(b) of this program. We will also finalize as proposed that furnishing professionals and all furnishing entities are required to report AUC consultation information on the claim as specified under § 414.94(k). In addition we will finalize as proposed the significant hardship exception criteria and process under § 414.94(i)(3) to be specific to the AUC program and independent of other Medicare programs.

We will not finalize as proposed the proposal to allow the AUC consultation, when not personally performed by the ordering professional, to be performed by auxiliary personnel incident to the ordering professional's services. Rather we are finalizing under § 414.94(j)(2) that when delegated by the ordering professional, clinical staff under the direction of the ordering professional may perform the AUC consultation with a qualified CDSM.

Additionally, we will move forward with plans to use G-codes and modifiers to report AUC consultation information on the Medicare claims.

We will continue to post information on our website for this program, accessible at *www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Appropriate-Use-Criteria-Program/index.html*.

E. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for the incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of CEHRT. We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Program.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of ''meaningful EHR user'' in regulations at § 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the ''Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2018 Rates; Quality Reporting Requirements for Specific Providers; Medicare and Medicaid Electronic Health Record (EHR) Incentive Program Requirements for Eligible Hospitals, Critical Access Hospitals, and Eligible Professionals; Provider-Based Status of Indian Health Service and Tribal Facilities and Organizations; Costs Reporting and Provider Requirements; Agreement Termination Notices'' final rule (82 FR 37990, 38487) (hereafter referred to as the ''FY 2018 IPPS/LTCH PPS final rule''), we established that, for 2017, Medicaid EPs would be required to report on any six eCQMs that are relevant to the EP's scope of practice. In proposing and finalizing that change, we indicated that it is our intention to align eCQM requirements for Medicaid EPs with the requirements of Medicare quality improvement programs, to the extent practicable.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2019

CMS annually reviews and revises the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In section III.I.3.h.(2)(b)(i) of this final rule, we amend the list of available eCQMs for the CY 2019 performance period. To keep eCQM specifications current and minimize complexity, we proposed to align the eCQMs available for Medicaid EPs in 2019 with those available for MIPS eligible clinicians for the CY 2019 performance period (83 FR 35871). Specifically, we proposed that the eCQMs available for Medicaid EPs in 2019 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established under MIPS for the CY 2019 performance period.

We explained that we believed that this proposal would be responsive to stakeholder feedback supporting quality measure alignment between MIPS and the Medicaid Promoting Interoperability Program for EPs, and that it would encourage EP participation in the Medicaid Promoting Interoperability Program by allowing those that are also MIPS eligible clinicians the ability to report the same eCQMs as they report for MIPS in 2019. In addition, we explained that we believed that aligning the eCQMs available in each program would ensure the most uniform application of up-to-date clinical standards and guidelines possible.

We explained that we anticipated that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs will report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on the available eCQMs for 2019. We explained that we expected that this proposal would have only a minimal impact on states, by requiring minor adjustments to state systems for 2019 to maintain current eCQM lists and specifications.

We also requested comments on whether in future years of the Medicaid Promoting Interoperability Program beyond 2019, we should include all e-specified measures from the core set of quality measures for Medicaid and the Children's Health Insurance Program (CHIP) (the Child Core Set) and the core set of health care quality measures for adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as ''Core Sets'') as additional options for Medicaid EPs.

Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These core sets comprise measures that specifically focus on populations served by the Medicaid and CHIP programs and are of particular importance to their care. Several of these Core Set measures are included in the MIPS eCQM list, but some are not. We explained that we believe that including, as eCQM reporting options for Medicaid EPs, the e-specified measures from the Core Sets that are not

also on the MIPS eCQM list would increase EP utilization of these measures and provide states with better data to report. At this time, the only measure within the Core Sets that would not be available as an option for Medicaid EPs in 2019 (because it is not on the MIPS eCQM list for Performance Year 2019) is NQF–1360, ''Audiological Diagnosis No Later Than 3 Months of Age.'' However, as these Core Sets are updated annually, in future years there may be other eCQMs that would not be on the MIPS eCQM list, and that could be included.

For 2019, we proposed that Medicaid EPs would report on any six eCQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. After we removed the NQS domain requirements for Medicaid EPs' 2017 eCQM submissions in the FY 2018 IPPS/LTCH PPS final rule, we have found that allowing EPs to report on any six quality measures that are relevant to their practice has increased EPs' flexibility to report pertinent data. In addition, this policy of allowing Medicaid EPs to report on any six measures relevant to their scope of practice would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS eligible clinicians who elect to submit eCQMs must generally submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a) for the data submission criteria that apply to individual MIPS eligible clinicians and groups that elect to submit data with other collection types.

We proposed that for 2019 the Medicaid Promoting Interoperability Program would adopt the MIPS requirement that EPs report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure).

We also requested comments on how high priority measures should be identified for Medicaid EPs. We proposed (83 FR 35872) to use all three of the following methods to identify which of the available measures are high priority measures, but invited comments on other possibilities.

1. We proposed to use the same set of high priority measures for EPs participating in the Medicaid Promoting Interoperability Program that the MIPS program has identified for eligible clinicians. As discussed in section III.I.3.h.(2)(b)(i) of this final rule, we proposed to amend § 414.1305 to revise the definition of high priority measure for purposes of MIPS to mean an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure, beginning with the 2021 MIPS payment year.

2. For 2019, we also proposed to identify as high priority measures the available eCQMs that are included in the previous year's Core Sets and that are also included on the MIPS list of eCQMs. We explained that because the Core Sets are released at the beginning of each year, it would not be possible to update the list of high-priority eCQMs with those added to the current year's Core Sets. We also explained that CMS has already identified the measures included in the Core Sets as ones that specifically focus on populations served by the Medicaid and CHIP programs and are particularly important to their care. The eCQMs that would be available for Medicaid EPs to report in 2019, that are both part of the Core Sets and on the MIPS list of eCQMs, and that would be considered high priority measures under our proposal are: CMS2, ''Preventive Care and Screening: Screening for Depression and Follow-Up Plan''; CMS4, ''Initiation and Engagement of Alcohol and Other Drug Dependence Treatment''; CMS122, ''Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)''; CMS125, ''Breast Cancer Screening''; CMS128, ''Anti-depressant Medication Management''; CMS136, ''Follow-Up Care for Children Prescribed ADHD Medication (ADD)''; CMS153, ''Chlamydia Screening for Women''; CMS155, ''Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents''; and CMS165, ''Controlling High Blood Pressure.''

3. We also proposed to give each state the flexibility to identify which of the available eCQMs selected by CMS are high priority measures for Medicaid EPs in that state, with review and approval from CMS, through their State Medicaid HIT Plans (SMHP), similar to the flexibility granted states to modify the definition of Meaningful Use at § 495.332(f). We explained that we believe this proposal would give states the ability to identify as high priority those measures that align with their state health goals or other programs within the state. We proposed to amend § 495.332(f) to provide for this state flexibility to identify high priority measures.

We proposed that any eCQMs identified via any of these mechanisms be considered to be high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2019.

We also proposed that the eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program would be a full CY in 2019 for EPs who have demonstrated meaningful use in a prior year, in order to align with the corresponding performance period in MIPS for the quality performance category. We explained that we continue to align Medicaid Promoting Interoperability Program requirements with requirements for other CMS quality programs, such as MIPS, to the extent practicable, to reduce the burden of reporting different data for separate programs. In addition, we explained that we have found that clinical quality data from an entire year reporting period is significantly more useful than partial year data for quality measurement and improvement because it gives states a fuller picture of a health care provider's care and patient outcomes. We proposed that the eCQM reporting period for Medicaid EPs demonstrating meaningful use for the first time, which was established in the final rule entitled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 Through 2017'' (80 FR 62762) (hereafter referred to as ''Stage 3 final rule''), would remain any continuous 90-day period (80 FR 62892).

We explained that we will adjust future years' requirements for reporting eCQMs in the Medicaid Promoting Interoperability Program through rulemaking, and will continue to align the quality reporting requirements, as logical and feasible, to minimize EP burden.

Comment: Many commenters stated that they support the alignment of the eCQMs available for Medicaid EPs in 2019 with those available for MIPS eligible clinicians for the CY 2019 performance period. These commenters stated that alignment between the two programs helps reduce health care provider reporting burden. In addition, several commenters noted that the MIPS eCQM list is geared toward adults and that including measures from the Child Core Set in future years, after 2019, would add measures that are more applicable to certain specialties that serve Medicaid and CHIP beneficiaries, such as pediatricians and pediatric dentists.

Response: We appreciate these comments, and we continue to look for

opportunities to align programs, make measures more relevant to Medicaid EPs, and reduce reporting burden when possible.

Comment: Several commenters supported the proposal to include any e-specified measures from the Adult Core Set and Child Core Set that are not also on the MIPS eCQM list, in order to align with other CMS programs, as well as to provide a wider variety of measures that are specifically applicable to Medicaid EPs.

Response: We agree that the measures included in the Adult Core Set and the Child Core Set are targeted toward Medicaid patients and Medicaid health care providers. These Core Sets are tools states can use to monitor and improve the quality of health care provided to Medicaid and CHIP enrollees. Although under statute, state reporting on these measure sets is voluntary, we aim to increase the number of states reporting on a uniform set of measures and to support states in using these measures to drive quality improvement for the beneficiaries they serve.

Comment: One commenter stated that the e-specified Adult Core Set and Child Core Set measures that are not also on the MIPS eCQM list should not be included in future years of the Medicaid Promoting Interoperability Program beyond 2019 because the Medicaid Promoting Interoperability Program is approaching the final years of participation and Medicaid EPs are already aware of the requirements they need to meet to be a meaningful EHR user. In addition, the same commenter stated that adding additional measures from the Core Sets would create a large burden on all states to update their attestation systems for the one or two remaining participation years.

Response: We appreciate this comment, but point out that the burden to states would be no greater than including any additional measures that may be added to the MIPS eCQM set in future years, if CMS continues to align the MIPS and Medicaid Promoting Interoperability Program eCQM requirements. We also point out that many of the positive comments regarding this proposal came from states that appreciated the proposal to align with other CMS reporting requirements. Those commenters did not indicate that such a requirement would impose a significant burden on states.

After careful consideration of the comments, we are finalizing without change our proposal to amend the list of available eCQMs for the CY 2019 performance period. To keep eCQM specifications current and minimize complexity, we are aligning the eCQMs available for Medicaid EPs in 2019 with those available for MIPS eligible clinicians for the CY 2019 performance period. Specifically, the eCQMs available for Medicaid EPs in 2019 will consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established under MIPS for the CY 2019 performance period.

We did not propose to include the e-specified measures within the Adult Core Set and Child Core Set that are not also on the MIPS eCQM list for eCQM reporting in the Medicaid Promoting Interoperability Program in 2019, due to timing and logistical feasibility. However, we intend to reevaluate whether to add these measures when proposing eCQM reporting requirements for the Medicaid Promoting Interoperability Program for 2020 and beyond.

Comment: Many commenters stated their support for aligning the Medicaid Promoting Interoperability Program with the MIPS requirement that eligible clinicians who elect to submit eCQMs must generally submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure).

Response: We thank these commenters and we will continue to look for opportunities to align the programs and reduce reporting burden when possible.

Comment: One commenter stated that there are relatively few pediatric-appropriate measures in the Medicaid Promoting Interoperability Program and MIPS, and therefore recommended that CMS provide specific clarification that pediatric providers would not be held responsible for adult measures that are not necessarily applicable to pediatrics.

Response: We acknowledge that not all Medicaid EPs may find six measures applicable to their scope of practice. Therefore, we note that our policy continues to allow Medicaid EPs to report eCQMs with zero in the denominator, which indicates that they have no data on that eCQM in their EHR from the reporting period. If fewer than six measures are relevant to a Medicaid EP's scope of practice, he or she may submit ''zero denominator'' eCQMs that his or her CEHRT is able to calculate to meet the requirement to report six measures. If an EP's CEHRT contains no data on a specific eCQM, when states are auditing EP's submissions, it may create a rebuttable presumption that that measure falls outside of the EP's scope of practice. However, unless they cannot otherwise report on six measures, we encourage EPs to report on eCQMs that contain data, which are more likely to be within their scope of practice, instead of reporting eCQMs with a zero denominator.

Comment: One commenter stated that some specialists may have difficulty finding an outcome or high priority measure applicable to their scope of practice. The commenter also noted that this difficulty is alleviated under MIPS with the group reporting option, which is not available under the Medicaid Promoting Interoperability Program.

Response: In light of this concern, we now explain that if no outcome or high priority measures apply to a Medicaid EP's scope of practice and there is no data for any of the outcome or high priority measures reportable by his or her CEHRT, he or she may report on six non-outcome and non-high priority measures that are applicable to his or her scope of practice.

Comment: One commenter inquired as to a state's responsibility for auditing the eCQMs a Medicaid EP submits, how a state would ensure that the reported eCQMs are within the EP's scope of practice, and how a state would know whether there was an unselected relevant outcome or high priority measure.

Response: Under § 495.368, states are required to combat fraud and abuse and ensure that incentive payments are made properly per the requirements of the program, including the eCQM reporting requirements. In regard to this particular requirement, we believe that Medicaid EPs are in the best position to determine which measures are applicable to their scope of practice, not the state. Therefore, when verifying EPs' submissions, either at prepayment or during a post-payment audit, states should give Medicaid EPs the widest reasonable latitude to determine which eCQMs are relevant to their scope of practice. For instance, an EP should be able to meet the eCQM reporting requirements by submitting non-zero data for six relevant eCQMs, including one outcome or high-priority measure, regardless of whether there may be an unselected eCQM *more* relevant to his or her practice. That is, as we noted above, we do not think EPs should be reporting on eCQMs with a zero denominator unless that is the only way the EP can report on six measures. We encourage states to provide technical assistance to Medicaid EPs and to design their attestation systems in such a way that will assist EPs to meet this program requirement, and that will help avoid recouping incentive payments.

After careful consideration of the comments, we are finalizing our

proposal that for 2019, Medicaid EPs will report on any six eCQMs that are relevant to the EP's scope of practice, regardless of whether they report via attestation or electronically. We are also finalizing the proposal that for 2019 the Medicaid Promoting Interoperability Program will adopt the MIPS requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure). Additionally, in response to comments summarized above, we now explain that if no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, he or she may report on any six eCQMs that are relevant.

Comment: Some commenters approved of our proposal to allow states to indicate which eCQMs are high priority measures for that state's Medicaid agency.

Response: We thank these commenters for their comments.

Comment: A few commenters opposed offering states the flexibility to identify high priority eCQMs because it can cause additional cost to states for technology updates, and additional burden for vendors to customize and make software updates in a short timeframe. They also commented that having differences among states can cause burden on Medicaid EPs.

Response: We do not believe that this flexibility and variation between states will cause any additional burden for states, vendors or Medicaid EPs. Allowing states to identify their own high priority measures is entirely optional. If a state chooses not to identify additional high priority measures, the state would need to take no additional action. Furthermore, we expect that providing this option for states will reduce Medicaid EP burden, as it will give EPs a wider range of options to meet the requirement that they report on at least one outcome measure, or on at least one high priority measure if an outcome measure is not available or relevant. Additionally, as we explain above, if no outcome or priority measure is relevant to a Medicaid EP's scope of practice, he or she may instead report on any six measures that are relevant.

Finally, this proposal should not increase burden on CEHRT vendors. States may select high priority measures only from the list of eCQMs that are already available for Medicaid EPs to meet the requirements of the program. Medicaid EPs are not required to select any of their state-specific high priority measures. Therefore, the CEHRT need not vary between states, but must be able to calculate and report on at least one outcome measure (or, if an applicable outcome measure is not available or relevant, one other high priority measure) relevant to the provider's scope of practice, whether or not that is a state-specific high priority measure.

We received no comments on the first and second methods of identifying high priority measures for the Medicaid Promoting Interoperability Program. After careful consideration of the comments on our proposed approach to how high priority measures would be identified, we are finalizing it without modification.

Comment: Several commenters stated their support for aligning the eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program with the corresponding performance period in MIPS, because they agreed this proposal would reduce EP burden. In addition, commenters noted that consistency with previous years will reduce confusion among EPs.

Response: We appreciate these comments and will continue to align when possible.

Comment: Several commenters urged CMS to adopt a 90-day eCQM reporting period within CY 2019 for all Medicaid EPs. A couple commenters indicated that the transition between 2014 Edition and 2015 Edition CEHRT during the year may create difficulty for Medicaid EPs to report a full year of data.

Response: We acknowledge that many Medicaid EPs might be upgrading or implementing new CEHRT in 2019. However, Medicaid EPs frequently upgrade or implement new CEHRT, regardless of the reporting year. Regardless of what CEHRT the EP used during the eCQM reporting period, the data that Medicaid EPs are required to report for eCQMs is a snapshot based on the data within the CEHRT, taken at the time of attestation, for the reporting period. Medicaid EPs are only responsible for reporting exactly the data that their CEHRT produces. As certified, 2015 Edition CEHRT should accurately calculate and report the eCQM data for the full reporting period, in accordance with the relevant certification requirements at 45 CFR 170.315(c), even if that 2015 Edition CEHRT was not implemented for the entire reporting period. Vendors should ensure that their CEHRT is performing in accordance with relevant 2015 Edition Certification requirements as defined by the Office of the National Coordinator for Health IT. The reporting process for EPs should be no different regardless of the length of the reporting period.

After careful consideration of the comments, we are finalizing without change our proposal that the eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program will be a full CY in 2019 for EPs who have demonstrated meaningful use in a prior year, in order to align with the corresponding performance period in MIPS for the quality performance category. The eCQM reporting period for Medicaid EPs demonstrating meaningful use for the first time, which was established in the Stage 3 final rule, will remain any continuous 90-day period (80 FR 62892).

3. Proposed Revisions to the EHR Reporting Period and eCQM Reporting Period in 2021 for EPs Participating in the Medicaid Promoting Interoperability Program

In the July 28, 2010 final rule titled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program'' at 75 FR 44319, we established that, in accordance with section 1903(t)(4)(A)(iii) of the Act, in no case may any Medicaid EP receive an incentive after 2021 (see § 495.310(a)(2)(v)). Therefore, December 31, 2021 is the last date that states could make Medicaid Promoting Interoperability Program payments to Medicaid EPs (other than pursuant to a successful appeal related to 2021 or a prior year).

For states to make payments by that deadline, there must be sufficient time after EHR and eCQM reporting periods end for Medicaid EPs to attest to states, for states to conduct their prepayment processes, and for states to issue payments. Therefore, we proposed to amend § 495.4 to provide that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program would be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. Similarly, we proposed to change the eCQM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program to a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that the state can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021.

We explained that we understand that the October 31, 2021 date might not provide some states with sufficient time to process payments by December 31,

2021. We also explained that we believe that states are best positioned to determine the last possible date in CY 2021 by which the EHR or eCQM reporting periods for Medicaid EPs must end, and the deadline for receiving EP attestations, so that the state is able to issue all payments by December 31, 2021. Therefore, we proposed to allow states the flexibility to set alternative, earlier final deadlines for EHR or eCQM reporting periods for Medicaid EPs in CY 2021, with prior approval from us, through their State Medicaid HIT Plans (SMHP). If a state establishes an alternative, earlier date within CY 2021 by which all EHR or eCQM reporting periods in CY 2021 must end, Medicaid EPs in that state would continue to have a reporting period of a minimum of any continuous 90-day period within CY 2021. The end date for the reporting period would have to occur before the day of attestation, which must occur prior to the final deadline for attestations established by their state. We proposed to amend § 495.332(f) to provide for this state flexibility to identify an alternative date by which all EHR reporting periods or eCQM reporting periods for Medicaid EPs in CY 2021 must end.

We believe there is no reason why a state would need to set a date by which EHR reporting periods and eCQM reporting periods must end for Medicaid EPs that is earlier than the day before that state's attestation deadline for EPs. Doing so would restrict Medicaid EPs' ability to select EHR and eCQM reporting periods. Therefore, we proposed that any alternative deadline for CY 2021 EHR and eCQM reporting periods set by a state may not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state.

The following is a summary of the comments we received regarding these proposals.

Comment: Multiple commenters stated their support for the proposal that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program would be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021. They agreed that this would help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. They also stated their support of the 90-day period for eCQM reporting, and for state flexibility to set earlier final deadlines for EHR or eCQM reporting periods for Medicaid EPs in CY 2021.

Response: We appreciate these comments and thank the commenters for their input.

Comment: A commenter pointed out that the earlier in the year a state sets the reporting period and attestation deadline, the more burden is put on Medicaid EPs to attest after a 90 day EHR and eCQM reporting period in 2021. They requested that we balance the burden between states and Medicaid EPs by setting a regulatory date before which a state could not set an attestation deadline.

Response: The commenters raise important questions about whether burden should be reduced on state staff and systems to the disadvantage of Medicaid EPs. Therefore, while we are finalizing the proposed policies without change, we are considering whether to propose in future rulemaking that no state may set a reporting period deadline for CY 2021 that is earlier than June 30, 2021 or an attestation deadline that is earlier than July 1, 2021. In the meanwhile, we welcome input from states and other interested parties on whether any state would need more than 6 months to process Medicaid EPs' attestations, perform the required prepayment validations, and disburse incentive payments.

Comment: One commenter requested that CMS provide outreach and educational materials to providers about the 2021 deadline, as they anticipate confusion.

Response: We will work with State Medicaid Agencies and provider communities to ensure that outreach and education are provided about the final attestation deadline and the end of the program.

Comment: Some commenters requested that CMS consider making the eCQM reporting period any 90 days within CY 2020 as well. They note that a full year reporting period may create significant backlogs of 2020 and 2021 attestations in 2021 that may create difficulty for states to issue payments by the statutory deadline.

Response: We understand that this is a concern. We will continue to monitor this issue as we develop proposed rules for the Medicaid Promoting Interoperability Program in 2020.

After careful consideration of the comments, we are finalizing our proposal to amend § 495.4 to provide that the EHR reporting period in 2021 for all EPs in the Medicaid Promoting Interoperability Program will be a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021. We are also finalizing our proposal to change the eCQM reporting period in 2021 for EPs in the Medicaid Promoting Interoperability Program to a minimum of any continuous 90-day period within CY 2021, provided that the end date for this period falls before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability Program payments on or before December 31, 2021.

In addition, we are finalizing our proposal to allow states the flexibility to set alternative, earlier final deadlines for EHR or eCQM reporting periods for Medicaid EPs in CY 2021, with prior approval from us, through their State Medicaid HIT Plan (SMHP). Any alternative deadline for CY 2021 EHR and eCQM reporting periods set by a state may not be any earlier than the day prior to the attestation deadline for Medicaid EPs attesting to that state.

Although we did not address reporting periods in 2021 for eligible hospitals in the proposed rule, we acknowledge that there will be a similar issue if there are still hospitals eligible to receive Medicaid Promoting Interoperability Program payments in 2021, including Medicaid-only eligible hospitals as well as ''dually-eligible'' eligible hospitals and critical access hospitals (CAHs) (those that are eligible for an incentive payment under Medicare for meaningful use of CEHRT and/or subject to the Medicare payment reduction for failing to demonstrate meaningful use of CEHRT, and are also eligible to earn a Medicaid incentive payment for meaningful use of CEHRT). However, based on attestation data and information from states' SMHPs regarding the number of years states disburse Medicaid Promoting Interoperability Program payments to hospitals, we believe that there will be no hospitals eligible to receive Medicaid Promoting Interoperability Program payments in 2021 due to the requirement that, after 2016, eligible hospitals cannot receive a Medicaid Promoting Interoperability Program payment unless they have received such a payment in the prior fiscal year. At this time, we believe that there are no hospitals that will be able to receive incentive payments in 2020 or 2021. We invited comments and suggestions on whether this belief is accurate, and if not, how we could address the issue in a manner that limits the burden on hospitals and states. The following is a summary of the comments we received on this issue.

Comment: One commenter stated that CMS's belief is accurate, and that they

do not anticipate any hospitals to participate in program years 2020 or 2021. However, the commenter requested that CMS take into consideration the audit and appeals process, which may result in payments made during those years.

Response: We acknowledge that Medicaid Promoting Interoperability Program incentive payments might still be made to hospitals after hospitals' participation years, or even after December 31, 2021, in the limited circumstance of a successful hospital appeal related to participation in the Medicaid Promoting Interoperability Program in a prior year.

We did not propose any specific policy regarding eligible hospital reporting periods for 2021 in this rule and thus are not finalizing any policy in this area now, but we expect to solicit additional comment on the issue in a future proposed rule that is more specifically related to hospital payment.

4. Revisions to Stage 3 Meaningful Use Measures for Medicaid EPs

a. Change to Objective 6 (Coordination of Care Through Patient Engagement)

In the Stage 3 final rule, we adopted a phased approach under Stage 3 for EP Objective 6 (Coordination of care through patient engagement), Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging). This phased approach established a 5 percent threshold for both measures 1 and 2 of this objective for an EHR reporting period in 2017. (80 FR 62848 through 62849) In the same rule, we established that the threshold for Measure 1 would rise to 10 percent, beginning with the EHR reporting period in 2018, and that the threshold for Measure 2 would rise to 25 percent, beginning with the EHR reporting period in 2018. We stated that we would continue to monitor performance on these measures to determine if any further adjustment was needed. In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38493), we established a policy allowing EPs, eligible hospitals, and CAHs to use either 2014 Edition or 2015 Edition CEHRT, or a combination of 2014 Edition and 2015 Edition CEHRT, for an EHR reporting period in CY 2018, and depending on which Edition(s) they use, to attest to the Modified Stage 2 objectives and measures or the Stage 3 objectives and measures. In doing so, we also delayed the rise of the Objective 6 Measure 1 and Measure 2 thresholds until 2019.

We explained that based on feedback we have received, we understand that these two measures are the largest barrier to successfully demonstrating meaningful use, especially in rural areas and at safety net clinics. Stakeholders have reported a variety of causes that have resulted in lower patient participation than was anticipated when the Stage 3 final rule was issued. The data that we have collected via states for Medicaid EPs and at CMS from Medicare EPs for previous program years support this feedback. The primary issue is that the view, download, transmit measure requires a positive action by patients, which cannot be controlled by an EP. Medicaid populations that are at the greatest risk have lower levels of internet access, internet literacy and health literacy than the general population. Although the Secure Electronic Messaging measure does not require patient action, only that the EP send a secure message, we have received feedback that this functionality is not highly utilized by patients. Although we encourage Medicaid EPs to continue to reach out to patients via secure messaging to engage them in their health care between office visits, it is not productive for EPs to send messages to patients who are unlikely to see them or take action. Retaining the current threshold of 5 percent for both measures would continue to incentivize Medicaid EPs to engage patients in their own care without raising the requirements to unattainable thresholds for EPs who serve vulnerable Medicaid patients. Therefore, we proposed to amend § 495.24(d)(6)(i) such that the thresholds for Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging) of Meaningful Use Stage 3 EP Objective 6 (Coordination of care through patient engagement) would remain 5 percent for 2019 and subsequent years.

The following is a summary of the comments we received on this proposal.

Comment: The majority of commenters stated that they support CMS's proposal for the Objective 6 threshold to remain at 5 percent for the remainder of the Medicaid Promoting Interoperability Program, and that raising the thresholds would place undue burden on EPs.

Response: We thank the many commenters who stated their support.

Comment: One commenter stated that certain populations, specifically older adults, may struggle to engage with technology, which created challenges for health care providers and recommended giving special consideration to health care providers who struggle to meet this objective.

Response: We understand that some Medicaid EPs struggle to meet the objective due to factors outside of their control. However, this comment further supports our decision to keep the Objective 6 threshold at 5 percent rather than increasing it, as would happen without this rule change.

Comment: Several commenters noted that the Medicaid Promoting Interoperability Program and the Medicare Promoting Interoperability category of MIPS are still not fully aligned, and that this creates reporting burdens for providers. These commenters requested further alignment, between these two Objective 6 measures, which were proposed for removal under MIPS, as well as more broadly between the two programs.

Response: We agree that alignment of MIPS and the Medicaid Promoting Interoperability Program, to the degree practicable, is advantageous. The greater the discrepancy between the program requirements, the greater the reporting burden on health care providers who participate in both programs. We are finalizing our proposed changes to the Objective 6 measures without change, because we anticipate that doing so will reduce Medicaid EP burden. However, especially in light of these comments, we will also consider proposing further changes to the Medicaid Promoting Interoperability Program in future rulemaking, to improve alignment with the objectives and measures under the MIPS program. In the meanwhile, we welcome input from the public on this topic, and on additional ways that CMS can improve alignment between the two programs.

In addition, we note that the change from the Modified Stage 2 objectives and measures will make this objective easier for Medicaid EPs to meet. There are three measures under ''Objective 6: Coordination of Care through Patient Engagement.'' To be a meaningful EHR user, an EP must attest to all three measures, but only meet the thresholds for two of those three. Under Modified Stage 2, both Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging) were required (but not under the same objective) and Measure 3 was not an option. Both Measure 2 and Measure 3 do not rely on any patient action, but only require Medicaid EPs' action.

After reviewing the comments, we are finalizing without change the proposal to amend § 495.24(d)(6)(i) so that the thresholds for Measure 1 (View, Download, or Transmit) and Measure 2 (Secure Electronic Messaging) of Meaningful Use Stage 3 EP Objective 6 (Coordination of care through patient engagement) will remain 5 percent for 2019 and subsequent years.

b. Change to the Syndromic Surveillance Reporting Measure

In the proposed rule, we explained that in the Stage 3 final rule, we established that the syndromic surveillance reporting measure for EPs was limited to those who practice in urgent care settings (80 FR 62866 through 62870). Since then, we have received feedback from states and public health agencies that while many are unable to accept non-emergency or non-urgent care ambulatory syndromic surveillance data electronically, some public health agencies can and do want to receive data from health care providers in non-urgent care settings. We also explained that we believe that public health agencies that set the requirements for data submission to public health registries are in a better position to judge which health care providers can contribute useful data.

Therefore, we proposed to amend § 495.24(d)(8)(i)(B)(*2*), EP Objective 8 (Public health and clinical data registry reporting), Measure 2 (Syndromic surveillance reporting measure), to amend the language restricting the use of syndromic surveillance reporting for meaningful use only to EPs practicing in an urgent care setting. We proposed to include any EP defined by the state or local public health agency as a provider who can submit syndromic surveillance data. This change would not alter the exclusion for this measure at § 495.24(d)(8)(i)(C)(*2*)(*i*), for EPs who are not in a category of health care providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system, as defined by the state or local public health agency. Furthermore, we did not propose to create any requirements for syndromic surveillance registries to include all EPs. Additionally, we noted that under the specifications for the 2015 Edition of CEHRT for syndromic surveillance, it is possible that an EP could own CEHRT and submit syndromic surveillance in a format that is not accepted by the local jurisdiction. In this case, the EP may take an exclusion for syndromic surveillance.

The following is a summary of the comments we received on this proposal.

Comment: Several commenters stated their support of our proposal to include any EP defined by the state or local public health agency as a provider who can submit syndromic surveillance data.

Response: We thank the commenters for their support.

After careful consideration of the comments, we are finalizing without change our proposal to amend § 495.24(d)(8)(i)(B)(*2*), EP Objective 8 (Public health and clinical data registry reporting), Measure 2 (Syndromic surveillance reporting measure), to amend the language restricting the use of syndromic surveillance reporting for meaningful use only to EPs practicing in an urgent care setting. The new objective will also include any other setting from which ambulatory syndromic surveillance data are collected by the state or local public health agency. This change does not alter the exclusion for this measure at § 495.24(d)(8)(i)(C)(*2*)(*i*), for EPs who are not in a category of health care providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system, as defined by the state or local public health agency. Furthermore, this does not create any requirements for syndromic surveillance registries to include all EPs. Additionally, under the specifications for the 2015 Edition of CEHRT for syndromic surveillance, it is possible that an EP could own CEHRT and submit syndromic surveillance in a format that is not accepted by the local jurisdiction. In this case, the EP may take an exclusion for syndromic surveillance.

F. Medicare Shared Savings Program

As required under section 1899 of the Act, we established the Medicare Shared Savings Program (Shared Savings Program) to facilitate coordination and cooperation among health care providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). The final rule establishing the Shared Savings Program appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; Final Rule (76 FR 67802) (hereinafter referred to as the ''November 2011 final rule'')). A subsequent major update to the program rules appeared in the June 9, 2015 **Federal Register** (Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations; Final Rule (80 FR 32692) (hereinafter referred to as the ''June 2015 final rule'')). The final rule entitled, ''Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations,'' which addressed changes related to the program's financial benchmark methodology, appeared in the June 10, 2016 **Federal Register** (81 FR 37950) (hereinafter referred to as the ''June 2016 final rule'')).

In August 2018, we issued the ''Medicare Program: Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success'' proposed rule (hereinafter referred to as the ''August 2018 proposed rule'') which addressed a number of proposed policy changes including redesign of the participation options available under the program to encourage ACOs to transition to two-sided models; new tools to support coordination of care across settings and strengthen beneficiary engagement; revisions to ensure rigorous benchmarking; and policies promoting use of interoperable electronic health record technology among ACO providers/suppliers (83 FR 41786). In section V. of this final rule, we are finalizing the following proposals from the August 2018 proposed rule:

- A voluntary 6-month extension for existing ACOs whose participation agreements expire on December 31, 2018 and the methodology for determining financial and quality performance for this 6-month performance year from January 1, 2019, through June 30, 2019;
- Policies implementing the Bipartisan Budget Act of 2018 provisions on voluntary alignment;
- Modifications to the definition of primary care services used in assigning beneficiaries to ACOs to reflect recent code changes;
- Extension of policies providing relief for ACOs and their clinicians impacted by extreme and uncontrollable circumstances during 2017 to performance year 2018 and subsequent years; and
- Policies to promote interoperability among ACO providers/suppliers, including establishing a new program eligibility requirement regarding CEHRT use and retiring the CEHRT quality measure (ACO–11).

We expect to address the remaining proposals in the August 2018 proposed rule in a forthcoming final rule.

We have also made use of the annual calendar year (CY) PFS rules to address quality reporting for the Shared Savings Program and certain other issues. In the CY 2018 PFS final rule (82 FR 53209 through 53226), we finalized revisions to several different policies under the

Shared Savings Program, including the assignment methodology, quality measure validation audit process, use of the skilled nursing facility (SNF) 3-day waiver, and handling of demonstration payments for purposes financial reconciliation and establishing historical benchmarks. In addition, in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77255 through 77260, and 82 FR 53688 through 53706, respectively), we finalized policies related to the Alternative Payment Model (APM) scoring standard under the Merit-Based Incentive Payment System (MIPS), which reduces the reporting burden for MIPS eligible clinicians who participate in MIPS APMs, such as the Shared Savings Program, by: (1) Using the CAHPS for ACOs survey and the ACO reported CMS Web Interface quality data for purposes of assessing quality performance in the Shared Savings Program and to score the MIPS quality performance category for these eligible clinicians; (2) automatically awarding MIPS eligible clinicians participating in Shared Savings Program ACOs a minimum of one-half of the total points in the MIPS improvement activities performance category; (3) requiring ACO participants to report Advancing Care Information (ACI) data at the group practice level or solo practitioner level; and (4) not assessing MIPS eligible clinicians on the MIPS cost performance category because, through their participation in the ACO, they are already being assessed on cost and utilization under the Shared Savings Program.

As a general summary, in the CY 2019 PFS proposed rule, we proposed the following changes to the quality performance measures that will be used to assess quality performance under the Shared Savings Program for performance year 2019 and subsequent years:

- Changes to Patient Experience of Care Survey measures.
- Changes to CMS Web Interface and Claims-Based measures.

In addition, in the August 2018 proposed rule, we proposed another change to the Shared Savings Program quality measure set, which we are finalizing in section V.B.2.f. of this final rule. We proposed to remove the ACO–11—*Use of Certified EHR Technology* measure (83 FR 41908 through 41911). We refer readers to section V.B.2.f. of this final rule for a description of that proposal and a discussion of related public comments.

1. Quality Measurement

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the November 2011 final rule, we established a quality measure set spanning four domains: Patient experience of care, care coordination/patient safety, preventive health, and at-risk population (76 FR 67872 through 67891). Since the Shared Savings Program was established, we have updated the measures that comprise the quality performance measure set for the Shared Savings Program through the annual rulemaking in the CY 2015, 2016, and 2017 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, and 81 FR 80484 through 80489, respectively).

As we stated in the November 2011 final rule establishing the Shared Savings Program (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. For performance year 2018, 31 quality measures will be used to determine ACO quality performance (81 FR 80488 and 80489). The information used to determine ACO performance on these quality measures will be submitted by the ACO through the CMS Web Interface, submitted by ACO participant TINs to MIPS for the Promoting Interoperability (PI) performance category (formerly Advancing Care Information), calculated by CMS from administrative claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey. The CAHPS for ACOs survey is based on the Clinician and Group Consumer Assessment of Healthcare Providers and Systems (CG–CAHPS) Survey and includes additional, program specific questions that are not part of the CG–CAHPS. The CG–CAHPS survey is maintained, and periodically updated, by the Agency for Healthcare Research and Quality (AHRQ) in HHS.

The quality measures collected through the CMS Web Interface in 2015 and 2016 were used to determine whether eligible professionals participating in an ACO would avoid the PQRS and automatic Physician Value-Based Payment Modifier (Value Modifier) downward payment adjustments for 2017 and 2018 and to determine if ACO participants were eligible for upward, neutral or downward adjustments based on quality measure performance under the Value Modifier. Beginning with the 2017 performance period, which impacts payments in 2019, PQRS and the Value Modifier were replaced by the MIPS. Eligible clinicians who are participating in an ACO and who are subject to MIPS (MIPS eligible clinicians) will be scored under the APM scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track of the Shared Savings Program that is not an Advanced APM, as well as those participating in an ACO in a track that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS. Beginning with the 2017 reporting period, measures collected through the CMS Web Interface will be used to determine the MIPS quality performance category score for MIPS eligible clinicians participating in a Shared Savings Program ACO. Starting with the 2018 performance period, the quality performance category under the MIPS APM Scoring Standard for MIPS eligible clinicians participating in a Shared Savings Program ACO will include measures collected through the CMS Web Interface and the CAHPS for ACOs survey measures.

The CAHPS for ACOs Survey includes the core questions contained in the CG–CAHPS, plus additional questions to measure access to and use of specialist care, experience with care coordination, patient involvement in decision-making, experiences with a health care team, health promotion and patient education, patient functional status, and general health. The 2018 CAHPS for ACOs Survey 3.0 incorporates updates made by AHRQ to the CG–CAHPS survey based on feedback from survey users and stakeholders, as well as analyses of multiple data sets. For a summary of the history of changes to the CAHPS for ACOs survey, please refer to the CY 2019 PFS proposed rule (83 FR 35875). Additional information on the CG–CAHPS survey update is available on the AHRQ website at *https://www.ahrq.gov/sites/default/files/wysiwyg/cahps/surveys-guidance/cg/about/proposed-changes-cahps-c&g-survey2015.pdf*.

In addition to incorporating changes based on the AHRQ survey update, CMS removed all items included in the

Summary Survey Measures (SSMs), *Helping You to Take Medications as Directed* and *Between Visit Communication* from the 2018 survey. These optional SSMs were not part of the scored measures. The update resulted in a reduction in the number of survey questions from 80 to 58. The CAHPS for ACOs SSMs that contribute to the ACO performance score for performance year 2018, as finalized in the CY 2017 PFS final rule (81 FR 80488) are as follows: Getting Timely Care, Appointments & Information; How Well Your Providers Communicate; Patients' Rating of Provider; Access to Specialists; Health Promotion and Education; Shared Decision Making; Health Status & Functional Status; and Stewardship of Patient Resources. In addition, the core survey includes SSMs on Care Coordination and Courteous & Helpful Office Staff. However, because these measures are not included in the Shared Savings Program quality measure set for 2018, scores for these measures will be provided to ACOs for informational purposes only and will not be used in determining the ACOs' quality scores.

b. Proposals for Changes to the CAHPS Measure Set

To enhance the Patient/Caregiver Experience domain and align with MIPS (82 FR 54163), we proposed to begin scoring the 2 SSMs that are currently collected with the administration of the CAHPS for ACOs survey and shared with the ACOs for informational purposes only. Under this proposal, we would add the following CAHPS for ACOs SSMs that are already collected and provided to ACOs for informational purposes to the quality measure set for the Shared Savings Program as ACO–45, *CAHPS: Courteous and Helpful Office Staff,* and ACO–46: *CAHPS: Care Coordination.* These measures would be scored and included in the ACO quality determination starting in 2019. Both of these SSMs are currently designated by AHRQ as CG CAHPS core measures.

The Courteous and Helpful Office Staff SSM, which we proposed to add as ACO–45, asks about the helpfulness, courtesy and respectfulness of office staff. This SSM has been a CG–CAHPS core measure in the previous two versions of the CG–CAHPS survey, but was previously provided for informational purposes only and not included in the ACO quality score determination. We also proposed to add the SSM, *CAHPS: Care Coordination* to the CAHPS for ACOs measures used in ACO quality score determination as ACO–46. The Care Coordination SSM asks questions about provider access to beneficiary information and provider follow-up. This SSM was designated a core measure in the most recent version of the CG–CAHPS survey.

Including these measures in the quality measure set that is used to assess the quality performance of ACOs under the Shared Savings Program would place greater emphasis on outcome measures and the voice of the patient and provide ACOs with an additional incentive to act upon opportunities for improved care coordination and communication, and would align with the MIPS measure set finalized in the CY 2018 Quality Payment Program final rule (82 FR 54163). Care Coordination and patient and caregiver engagement are goals of the Shared Savings Program. The Care Coordination SSM emphasizes the care coordination goal, while the Courteous and Helpful Office Staff SSM supports patient engagement as it addresses a topic that has been identified as important to beneficiaries in testing. For performance year 2016, the mean performance rates across all ACOs for these two measures, which were not included in the ACO quality score determination, were 87.18 for the Care Coordination SSM and 92.12 for Courteous and Helpful Office Staff SSM.

Consistent with § 425.502(a)(4), regarding the scoring of newly introduced quality measures, we proposed that these additional SSMs would be pay-for-reporting for all ACOs for 2 years (performance years 2019 and 2020). The measures would then phase into pay-for-performance in the program, according to the schedule in Table 26 beginning in performance year 2021. We solicited comment on this proposed change to the quality measure set.

The following is a summary of the comments we received on this proposed change to the CAHPS measures included in the Shared Savings Program quality measure set.

Comment: The majority of commenters supported our proposal. Several commenters noted that ACOs have had experience with these measures for some time now and that patient experience measures help to keep providers accountable for patient-centered care. A few commenters indicated support for the proposal but noted reservations, including the potentially limited ability of ACOs that include independent physician groups and hospitals as ACO participants to impact performance on ACO–45, a concern that the subjectivity of the CAHPS for ACOs measures (especially ACO–45) may put too much emphasis on aspects of care that have little effect on quality outcomes, and a recommendation to consider expanding ACO–45 (Courteous and Helpful Office Staff) to include medical assistants and nurses. Some commenters recommended delaying implementation of the proposal. A commenter suggested that we work with the Core Quality Measures Collaborative (CQMC) to re-evaluate the ACO quality measures, before implementing this proposed change. Another commenter recommended that we streamline the Shared Savings Program quality measure set. In addition, one commenter noted its support in principle for adding a quality measure to assess patients' experience with office staff, but indicated that adding a measure with a high average performance rate seems unnecessary for improving care.

Response: We believe that adding ACO–45 *CAHPS: Courteous and Helpful Office Staff* puts greater emphasis on the voice of the patient and provides ACOs with an additional incentive to act upon opportunities for improved communication. With regard to the comment that ACOs that include independent physician groups and hospitals as ACO participants may not be able to influence the outcomes of ACO–45 *CAHPS: Courteous and Helpful Office Staff,* we note that this SSM has been provided for informational purposes as part of the CAHPS for ACO survey for several years. Therefore, we believe ACOs have had sufficient experience with the SSM and have had the opportunity to monitor the survey results and make improvements, as needed. Scoring this measure would also provide ACOs with a stronger incentive to improve performance on this measure that has been identified as important by the beneficiaries they serve. We would also re-emphasize that measures newly added to the scored measures set will be pay-for-reporting for the first 2 years after inclusion, giving ACOs additional time to work toward improvement. With regard to the concern that the proposed new CAHPS measures do not impact quality outcomes, we disagree. We consider the patient's experience of care to be a quality outcome. We also note that the Courteous and Helpful Office Staff measure focuses on an issue that has been identified as important to beneficiaries in testing and that the Care Coordination SSM addresses a primary objective of the Shared Savings Program. With regard to commenters' suggestions that we delay implementation of the proposal to score these measures, including the suggestion that we work with the CQMC

to re-evaluate the ACO quality measures first, we disagree with delaying the scoring of these important SSMs. These measures assess performance in areas that the beneficiaries served by ACOs have identified as valuable and that are central to the fundamental purpose of the Shared Savings Program to promote care coordination and improve quality of care. Again, we note that the newly-scored measures would be pay-for-reporting for the first 2 years after their addition, giving ACOs additional time to become familiar with them before the performance rates are considered in scoring. In response to the commenter's suggestion that we streamline the Shared Savings Program quality measure set, we do not have plans at this time to reduce the number of CAHPS measures for which ACOs are held accountable. The two CAHPs measures we proposed to add to the quality measure set for scoring purposes are already being collected and reported to ACOs for informational purposes; thus, the addition of these measures should not result in significant additional burden on ACOs. Moreover, we note that overall, we are reducing the total number of quality measures in the ACO quality measure set, as detailed below and summarized in Table 26 of this final rule.

With regard to the comment supporting the intent of our proposal to start scoring performance on the Courteous and Helpful Office Staff measure, but stating that it is unnecessary to add a measure with a high average performance rate, we believe that this is an important area for continued measurement as beneficiaries have expressed its importance to them in testing, as noted previously. In addition, we believe it is important to continue monitoring this measure because it is an important factor in patient experience of care. By scoring this measure, we acknowledge its continued importance as a patient experience measure. With regard to the comment that we consider expanding ACO–45 to include medical assistants and nurses, we will take this comment under consideration for further analysis as part of any potential future measure refinement.

After considering the comments, we are finalizing our proposal to begin scoring ACO–45 and ACO–46 as part of the CAHPS for ACO survey beginning with quality reporting for performance years during 2019. Consistent with our existing policy regarding the scoring of newly introduced quality measures, these additional SSMs will be pay-for-reporting for all ACOs for 2 years (performance years during 2019 and performance year 2020). The measures would then phase into pay-for-performance beginning in performance year 2021 (§ 425.502(a)(4)). The phase-in schedule for the 2019 ACO quality measures set that we are finalizing in this rule is presented in Table 26.

Additionally, we solicited comment on potentially converting the Health and Functional Status SSM (ACO–7) to pay-for-performance in the future. The Health and Functional Status SSM is currently pay-for-reporting for all years. We have not scored this measure because the scores on the Health and Functional Status SSM may reflect the underlying health of beneficiaries seen by ACO providers/suppliers as opposed to the quality of the care provided by the ACO. We also sought stakeholder feedback on possible options for enhancing the collection of health and functional status data, including potentially changing our data collection procedures to collect data from the same ACO's assigned beneficiaries over time. We noted that such a change could allow for measurement of functional status changes that occurred while beneficiaries were receiving care from ACO providers/suppliers. We also solicited other recommendations regarding the potential inclusion of a functional status measure in the assessment of ACO quality performance in the future.

The following is a summary of the comments we received regarding potentially converting the Health and Functional Status SSM (ACO–7) to pay-for-performance in the future.

Comment: The majority of commenters opposed including ACO–7—*Health and Functional Status* as a pay-for-performance measure in future years, noting that the measure is largely outside of the physician's control. Some commenters were supportive of including a Health and Functional Status measure as pay-for-performance, but expressed concerns with inclusion of the measure as it is currently structured. For example, one commenter stated that the current structure of the SSM captures patient health and functional status at a single point in time but not as a change in status over time. A number of commenters emphasized this point, noting that a lack of baseline data for this measure for the ACO-assigned beneficiary population means the results cannot be attributed to ACOs. One commenter acknowledged the potential for collecting longitudinal data, but questioned the effectiveness of this approach given that ACOs may not have the same beneficiaries assigned over multiple years. Another commenter expressed concern regarding the lack of benchmark information against which ACOs might measure their performance to date. A commenter encouraged CMS to conduct analyses using existing CAHPS data to identify models that allow for a fair comparison across ACOs. Another commenter suggested an approach to scoring health and functional status using another survey instrument (such as Patient Reported Outcomes Measurement Information System), or collecting baseline data for an ACO and implementing adjustments to account for differences in patient mix across ACOs.

Response: We appreciate the comments. We agree that additional analytic work would be needed in order to assess the potential implications of adding a scored health and functional status measure to the ACO quality measure set in the future. As we plan for future updates and changes to the Shared Savings Program measure set, we will consider this feedback from commenters further before making any proposal to begin scoring ACO–7—*Health and Functional Status* or to include a different scored heath and functional status measure.

Comment: We also received a few general comments on the applicability of the CAHPS for ACOs SSM to institutional providers, including a comment that raised concerns about low response rates and low reliability of the results.

Response: We made no proposals to adjust the application of the CAHPS for ACOs survey for any specific provider types under the Shared Savings Program. The CAHPS for ACO survey is focused on beneficiaries' experience of care received from clinicians in ambulatory care settings. Consequently, we note that CMS currently excludes beneficiaries from CAHPS sampling if 100 percent of their primary care service visits were performed in an institutional setting (as determined using HCPCS codes). However, after reviewing our current CAHPS sampling process, starting with the CAHPS sample for performance year 2018, we will also begin excluding beneficiaries if their last primary care service visit (as determined using HCPCS codes) during the sampling timeframe was performed in an institutional setting. We believe this change will help to ensure that beneficiaries who are residing in institutional settings are appropriately excluded from CAHPS sampling. Patient experience is a key component of quality measurement under the Shared Savings Program, and at this time we do not have plans to provide exemptions from patient experience measures for

specific ACOs. We will monitor this issue, and may in the future consider whether additional changes to measures of patient experience would be appropriate moving forward, based on the goals and priorities of the Shared Savings Program.

c. Proposed Changes to the CMS Web Interface and Claims-Based Quality Measure Sets

In developing the proposals we made in the CY 2019 PFS proposed rule, we considered the agency's efforts to streamline quality measures, reduce regulatory burden and promote innovation as part of the agency's Meaningful Measures initiative (*see* CMS Press Release, CMS Administrator Verma Announces New Meaningful Measures Initiative and Addresses Regulatory Reform; Promotes Innovation at LAN Summit, October 30, 2017, available at *https://www.cms.gov/Newsroom/MediaReleaseDatabase/Press-releases/2017-Press-releases-items/2017-10-30.html*). As noted in the proposed rule, under the Meaningful Measures initiative, we have committed to assessing only those core issues that are most vital to providing high-quality care and improving patient outcomes, with the aim of focusing on outcome-based measures, reducing unnecessary burden on providers, and putting patients first. In considering the quality reporting requirements under the Shared Savings Program, we also considered the quality reporting requirements under other initiatives, such as the MIPS and Million Hearts Initiative, and consulted with the measures community to ensure that the specifications for the measures used under the Shared Savings Program are up-to-date with current clinical guidelines, focus on outcomes over process, reflect agency and program priorities, and reduce reporting burden.

Since the Shared Savings Program was first established in 2012, we have updated the quality measure set to reduce reporting burden and focus on more meaningful, outcome-based measures. The most recent updates to the Shared Savings Program quality measure set were made in the CY 2017 PFS final rule (81 FR 80484 through 80489) to adopt the ACO measure recommendations made by the Core Quality Measures Collaborative, a multi-stakeholder group with the goal of aligning quality measures for reporting across public and private initiatives to reduce provider reporting burden. Currently, more than half of the 31 Shared Savings Program quality measures are outcome-based, including:

- Patient-reported outcome measures collected through the CAHPS for ACOs Survey that strengthen patient and caregiver experience.
- Outcome measures supporting effective communication and care coordination, such as unplanned admission and readmission measures.
- Intermediate outcome measures that address the effective treatment of chronic disease, such as hemoglobin A1c control for patients with diabetes.

In the CY 2019 PFS proposed rule, we proposed to reduce the total number of measures in the Shared Savings Program quality measure set. The proposals were intended to reduce the burden on ACOs and their participating providers and suppliers by lowering the number of measures they are required to report through the CMS Web Interface and on which they are assessed using claims data. Reducing the number of measures on which ACOs are assessed would reduce the number of performance metrics that they are required to track and eliminate redundancies between measures that target similar populations. The proposed reduction in the number of measures would enable ACOs to better utilize their resources toward improving patient care. The proposed reduction in the number of measures would further reduce burden by aligning with the proposed changes to the CMS Web Interface measures that are reported under MIPS as discussed in Tables A, C, and D of Appendix 1: Proposed MIPS Quality Measures of the proposed rule. We recognize that ACOs and their participating providers and suppliers dedicate resources to performing well on our quality metrics, and we believe that reducing the number of metrics and aligning them across programs would allow them to more effectively target those resources toward improving patient care. We proposed to reduce the number of measures by minimizing measure overlap and eliminating several process measures. The proposal to remove process measures also aligns with our proposal to reduce the number of process measures within the MIPS measure set as discussed in section III.H.b.iii of this final rule and would support the CMS goal of moving toward outcome-based measurement.

We proposed to retire the following claims-based quality measures, which have a high degree of overlap with other measures that would remain in the measure set:

- ACO–35—Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM).
- ACO–36—All-Cause Unplanned Admissions for Patients with Diabetes.
- ACO–37—All-Cause Unplanned Admission for Patients with Heart Failure.

Within the claims-based quality measures, a high degree of overlap exists between measures with respect to the population being measured (the denominator), because a single admission may be counted in multiple measures. For example, ACO–35 addresses unplanned readmissions from a SNF, and the vast majority of these SNF readmissions are also captured in the numerator of ACO–8 Risk-Standardized All Condition Readmission. Similarly, ACO–36 and ACO–37 address unplanned admissions for patients with diabetes and heart failure and most of these admissions are captured in the numerator of ACO–38 *Risk-Standardized Acute Admission Rates for Patients with Multiple Chronic Conditions* (please note that the measure name has been updated to align with changes made by the measure steward). Therefore, to reduce redundancies within the Shared Savings Program measure set, we proposed to remove ACO–35, ACO–36, and ACO–37 from the measure set. However, because these measures are claims-based measures and therefore do not impose any reporting burden on ACOs, we intend to continue to provide information to ACOs on their performance on these measures for use in their quality improvement activities through a new quarterly claims-based quality outcome report that ACOs began receiving in August 2018.

We also proposed to retire claims-based measure ACO–44—*Use of Imaging Studies for Low Back Pain,* as this measure is restricted to individuals 18–50 years of age, which results in low denominator rates under the Shared Savings Program, meaning that the measure is not a meaningful reflection of the beneficiaries cared for by Shared Savings Program ACOs. Although this measure was originally added to the Shared Savings Program quality measure set in order to align with the Core Quality Measures Collaborative, we proposed to remove this measure as a result of low denominators for many ACOs. We also indicated that removing this measure would align ACO quality measurement with the MIPS requirements as this measure was removed for purposes of reporting under the MIPS program in the CY 2018 Quality Payment Program final rule (82 FR 54159). However, in recognition of the value in providing feedback to providers on potential overuse of diagnostic procedures, we noted that we intended to continue to provide ACOs feedback on performance on this

measure as part of the new quarterly claims based quality report.

We welcomed public comment on our proposal to retire these 4 claims-based measures from the quality measure set.

The following is a summary of the comments we received on our proposal to retire ACO–35—*Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM),* ACO–36—*All-Cause Unplanned Admissions for Patients with Diabetes,* and ACO–37—*All-Cause Unplanned Admission for Patients with Heart Failure* from the quality measure set.

Comment: The majority of commenters supported our proposal to remove these measures stating that they appreciated our efforts to modernize the quality measurement requirements and reduce measure overlap. However, a commenter who supported our proposal cautioned, ''that there may be a tipping point at which the choice of measures becomes too narrowed. . . .'' Another commenter expressed concern that diabetes is not included as one of the multiple chronic conditions for purposes of ACO–38—*All-Cause Unplanned Admissions for Patients with Multiple Chronic Conditions (MCC).* The commenter noted that the retirement of ACO–36—*All-Cause Unplanned Admissions for Patients with Diabetes,* without an adequate alternative to measure performance in this area could cause a potential decline in provider performance and care quality. This commenter emphasized that reducing admission rates of diabetic patients should be a shared goal and priority of CMS and ACOs. Another commenter asked if we considered adding diabetes as a qualifying condition for ACO–38.

Response: We acknowledge the concerns raised by commenters with respect to the proposed removal of ACO–36 *All-Cause Unplanned Admissions for Patients with Diabetes.* However, we disagree with the commenter who stated that without a comparable diabetes measure to replace ACO–36 there would be a decline in provider performance and care quality. An analysis of ACO data from the 2015 performance year found that, as a result of the other comorbidities included for purposes of ACO–38, 48 percent of assigned ACO beneficiaries included in the diabetes measure were also included in the MCC measure. Measure overlap was even higher when considering the number of unplanned admissions shared by the two measures. Almost three-fourths (73 percent) of the unplanned admissions for assigned ACO beneficiaries under ACO–36 were also unplanned admissions for purposes of ACO–38, and thus were counted in both measures. In addition, we note that the Shared Savings Program measure set still includes a diabetes measure that monitors Hemoglobin A1c control *(ACO–27: Diabetes Hemoglobin A1c (HbA1c) Poor Control (>9%))* which is reported via the CMS Web Interface. Consequently, we believe that removing ACO–36 will not negatively impact patients with diabetes as the majority of readmissions for these patients are captured by ACO–38. In addition, we note that we plan to continue providing metrics on ACO–36 and ACO–37 in the quarterly claims-based measure reports for informational purposes only, which will allow ACOs to continue to monitor their results for these metrics. We are not considering revisions to add diabetes as a qualifying condition for ACO–38 at this time, but we will consider any changes to the ACO–38 cohort during the annual measure update. In response to the comment that there may be a point at which the measure set becomes too narrow, we understand the concern and will continue to carefully consider the balance between burden reduction and meaningful measurement in order to retain a sufficiently robust measure set against which ACO performance can be measured.

After considering the comments, we are finalizing our proposal to remove ACO–35—*Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM),* ACO–36—*All-Cause Unplanned Admissions for Patients with Diabetes,* and ACO–37—*All-Cause Unplanned Admission for Patients with Heart Failure* from the Shared Savings Program quality measure set effective for quality reporting for performance years during 2019.

The following is a summary of the comments we received on our proposal to retire ACO–44—*Use of Imaging Studies for Low Back Pain* from the quality measure set.

Comment: A majority of commenters supported our proposal stating that they agreed the measure should be removed due to low denominators in the Medicare population and because the measure was retired from MIPS. MedPAC opposed the removal of this measure stating, ''According to our analysis, imaging for patients with nonspecific low back pain affects between 3.1 to 8.9 percent of Medicare beneficiaries.'' MedPAC encouraged CMS to consider respecifying the measure to include beneficiaries over the age of 50 and retaining the measure in the ACO quality measure set.

Response: We appreciate the recommendation to respecify the ACO *imaging for low-back pain* measure to include beneficiaries over age 50 and recognize the value of including over-utilization of care measures in the ACO quality measure set. However, we note that CMS is not the measure steward for this measure. We have raised the issue with the measure steward and will continue to coordinate with the measure owner. Additionally, we note that we proposed to remove this measure to align ACO quality measurement with the MIPS reporting requirements as this measure was removed from the quality measure set under the MIPS program in the CY 2018 Quality Payment Program final rule (82 FR 54159).

After considering the comments, we are finalizing our proposal to remove ACO–44 from the Shared Savings Program quality measure set effective for quality reporting for performance years during 2019.

Although we proposed to retire ACO–35 *Skilled Nursing Facility 30-Day All-Cause Readmission Measure (SNFRM)* from the set of quality measures that are scored for the Shared Savings Program, we recognize the value of measuring the quality of care furnished to Medicare beneficiaries in SNFs. Therefore, we solicited comment on the possibility of adding the Skilled Nursing Facility Quality Reporting Program (SNFQRP) measure ''Potentially Preventable 30-Day Post-Discharge Readmission Measure for Skilled Nursing Facilities'' to the Shared Savings Program quality measure set through future rulemaking. This measure differs from ACO–35—*SNFRM,* which we are removing from the quality measure set as discussed above, as the SNFQRP measure looks only at unplanned, potentially preventable readmissions for Medicare FFS beneficiaries within 30 days of discharge to a lower level of care from a SNF, while ACO–35 assesses hospital readmissions from a SNF, that occur within 30 days following discharge from a hospital for beneficiaries admitted to a SNF after hospital discharge. As a result, the SNFQRP measure would have less overlap with ACO–8 (Risk-Standardized All Cause Readmission measure) because the readmission windows for the two measures are different. Specifically, the readmission window for the SNFQRP measure is 30 days following discharge from a SNF, while the readmission window for ACO–8 is 30 days following discharge from a hospital.

The following is a summary of the comments we received on the possibility of adding the SNFQRP measure ''Potentially Preventable 30-Day Post-Discharge Readmission Measure for Skilled Nursing Facilities''

to the Shared Savings Program quality measure set through future rulemaking.

Comment: A few commenters supported the potential inclusion of the SNFQRP measure to the Shared Savings Program quality measure set through future rulemaking stating that the SNFQRP measure would potentially add more value to the Shared Savings Program measure set than ACO–35 as it is more targeted. Additionally, a few commenters suggested that we should test the measure in the ACO population and consider risk-adjusting the measure for sociodemographic factors prior to proposing the measure for inclusion into the Shared Savings Program quality measure set. However, the majority of commenters were opposed to potentially adding this measure to the Shared Savings Program quality measure set. One commenter stated that the SNFQRP measure assumes that the ACO has input into the care processes at the SNF and has the ability to direct patients to higher quality facilities, which is not always the case. Another commenter stated that as the measure is already used in the SNFQRP, they would not support inclusion in the Shared Savings Program quality measure set because they support avoiding the use of duplicative measures across CMS programs. Some of the commenters further stated that they believed this measure would still overlap with ACO–8 *Risk-Standardized All Condition Readmission* measure.

Response: As we plan for future updates and changes to the Shared Savings Program quality measure set, we will consider this feedback prior to making any proposals regarding the SNFQRP measure.

Further, as we stated in the CY 2019 PFS proposed rule (83 FR 35877), we seek to align with changes made to the CMS Web Interface measures under the Quality Payment Program. In the 2017 PFS final rule, we stated that we do not believe it is beneficial to propose CMS Web interface measures for ACO quality reporting separately (81 FR 80499). Therefore, in order to avoid confusion and duplicative rulemaking, we adopted a policy that any future changes to the CMS Web interface measures would be proposed and finalized through rulemaking for the Quality Payment Program, and that such changes would be applicable to ACO quality reporting under the Shared Savings Program. In accordance with the policy adopted in the CY 2017 PFS final rule (81 FR 80501), we did not make any specific proposals related to changes in CMS Web Interface measures reported under the Shared Savings Program. Rather, we referred readers to Tables A, C, and D of Appendix 1: Proposed MIPS Quality Measures in the proposed rule for a complete discussion of the proposed changes to the CMS Web Interface measures. Based on the changes being finalized in Tables A, C and D of Appendix 1: Finalized MIPS Quality Measures of this final rule, ACOs will no longer be responsible for reporting the following measures for purposes of the Shared Savings Program starting with reporting for performance years during 2019:

- ACO–12 (NQF #0097) Medication Reconciliation Post-Discharge.
- ACO–15 (NQF #0043) Pneumonia Vaccination Status for Older Adults.
- ACO–16 (NQF #0421) Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow Up.
- ACO–41 (NQF #0055) Diabetes: Eye Exam.
- ACO–30 (NQF #0068) Ischemic Vascular Disease (IVD): Use of Aspirin or another Antithrombotic.

We note that ACO–41 is one measure within a two-component diabetes composite that is currently scored as one measure. The removal of ACO–41 means that ACO–27 Diabetes Hemoglobin A1c (HbA1c) Poor Control (>9%)) will now be assessed as an individual measure. As discussed in section III.I.2.B.i of this final rule, lists of the measures being finalized for purposes of MIPS are in Tables A, C and D of Appendix 1: Finalized MIPS Quality Measures.

Additionally, we proposed to add the following measure to the CMS Web Interface for purposes of the Quality Payment Program:

- ACO–47 (NQF #0101) Falls: Screening, Risk-Assessment, and Plan of Care to Prevent Future Falls.

Based on the policies being finalized for purposes of MIPS in Table A of Appendix 1: Finalized MIPS Quality Measures, Shared Savings Program ACOs will not be responsible for reporting this measure starting with quality reporting for performance years during 2019.

Table 26 shows the Shared Savings Program quality measure set for performance years during 2019 and subsequent performance years.

BILLING CODE 4120–01–P

TABLE 26: Measure Set for Use in Establishing the Shared Savings Program Quality Performance Standard, Starting with Performance Years during 2019

Domain	ACO Measure #	Measure Title	New Measure	NQF #/Measure Steward	Method of Data Submission	Pay for Performance Phase-In R – Reporting P – Performance PY1	PY2	PY3

[1] Measures that are currently collected as part of the administration of the CAHPS for ACO survey, but will be considered new measures for purposes of the pay-for-performance phase-in.

[2] The language in parentheses has been added for clarity and no changes have been made to the measure.

BILLING CODE 4120–01–C

In this section of this final rule, we are finalizing proposals to eliminate 9 measures and to add 2 measures to the Shared Savings Program quality measure set. Separately, in August 2018 proposed rule, we also proposed to remove ACO–11—*Percent of Primary Care Physicians Who Successfully Meet Meaningful Use Requirements* (83 FR 41910 and 41911). We are finalizing the removal of ACO–11 in section V.B.2.f. of this final rule and refer readers to that section for a summary of that proposal and a discussion of public comments related to it. The net result of the final policies included in this final rule is a set of 23 measures on which ACOs' quality performance will be assessed for performance years during 2019 and subsequent performance years. The 4 domains will include the following numbers of quality measures (See Table 27):

- Patient/Caregiver Experience of Care—10 measures.
- Care Coordination/Patient Safety—4 measures.
- Preventive Health—6 measures.
- At Risk Populations—3 measures.

Table 27 provides a summary of the number of measures by domain and the total points and domain weights that will be used for scoring purposes under the changes to the quality measure set finalized in this rule.

TABLE 27: Number of Measures and Total Points for Each Domain within the Shared Savings Program Quality Performance Standard, Starting with Performance Years during 2019

Domain	Number of Individual Measures	Total Measures for Scoring Purposes	Total Possible Points	Domain Weight
Patient/Caregiver Experience	10	10 individual survey module measures	20	25%
Care Coordination/ Patient Safety	4	4 measures	8	25%
Preventive Health	6	6 measures	12	25%
At-Risk Population	3	3 individual measures	6	25%
Total in all Domains	23	23	46	100%

G. Physician Self-Referral Law

1. Background

Section 1877 of the Act, also known as the physician self-referral law: (1) Prohibits a physician from making referrals for certain designated health services (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from filing claims with Medicare (or billing another individual, entity, or third party payer) for those referred services. The statute establishes a number of specific exceptions, and grants the Secretary the authority to create regulatory exceptions for financial relationships that pose no risk of program or patient abuse. Additionally, the statute mandates refunding any amount collected under a bill for an item or service furnished under a prohibited referral. Finally, the statute imposes reporting requirements and provides for sanctions, including civil monetary penalty provisions.

Section 50404 of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, enacted February 9, 2018) added provisions to section 1877(h)(1) of the Act pertaining to the writing and

signature requirements in certain compensation arrangement exceptions to the statute's referral and billing prohibitions. Although we believe that the newly enacted provisions in section 1877(h)(1) of the Act are principally intended merely to codify in statute existing CMS policy and regulations with respect to compliance with the writing and signature requirements, we proposed revisions to our regulations to address any actual or perceived difference between the statutory and regulatory language, to codify in regulation our longstanding policy regarding satisfaction of the writing requirement found in many of the exceptions to the physician self-referral law, and to make the Bipartisan Budget Act of 2018 policies applicable to compensation arrangement exceptions issued using the Secretary's authority in section 1877(b)(4) of the Act.

In the CY 2016 PFS final rule with comment period (80 FR 70885), we revised § 411.357(a)(7), (b)(6), and (d)(1)(vii) to permit a lease arrangement or personal service arrangement to continue indefinitely beyond the stated expiration of the written documentation describing the arrangement under certain circumstances. Section 50404 of the Bipartisan Budget Act of 2018 added substantively identical holdover provisions to section 1877(e) of the Act. Because the new statutory holdover provisions effectively mirror the existing regulatory provisions, we do not believe it is necessary to revise § 411.357(a)(7), (b)(6), and (d)(1)(vii) as a result of these statutory revisions. Therefore, we made no proposals to these provisions.

2. Special Rules on Compensation Arrangements (Section 1877(h)(1)(D) & (E) of the Act)

Many of the exceptions for compensation arrangements in § 411.357 require that the arrangements are set out in writing and signed by the parties. (See § 411.357(a)(1), (b)(1), (d)(1)(i), (e)(1)(i), (e)(4)(i), (l)(1), (p)(2), (q) (incorporating the requirement contained in § 1001.952(f)(4)), (r)(2)(ii), (t)(1)(ii) or (t)(2)(iii) (both incorporating the requirements contained in § 411.357(e)(1)(i)), (v)(7), (w)(7), (x)(1)(i), and (y)(1).)[9] As described above, section 50404 of the Bipartisan Budget Act of 2018 amended section 1877 of the Act with respect to the writing and signature requirements in the statutory compensation arrangement exceptions. As detailed in this section, we proposed a new special rule on compensation arrangements at § 411.354(e) and proposed to amend existing § 411.353(g) to codify the statutory provisions in our regulations.

a. Writing Requirement (§ 411.354(e))

In the CY 2016 PFS final rule with comment period, we stated CMS' longstanding policy that the writing requirement in various compensation arrangement exceptions in § 411.357 can be satisfied by ''a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties'' (80 FR 71315). Our guidance on the writing requirement appeared in the preamble of the CY 2016 PFS final rule with comment period but was not codified in regulations. Section 50404 of the Bipartisan Budget Act of 2018 added subparagraph D, ''Written Requirement Clarified,'' to section 1877(h)(1) of the Act. Section 1877(h)(1)(D) of the Act provides that, in the case of any requirement in section 1877 of the Act for a compensation arrangement to be in writing, such requirement shall be satisfied by such means as determined by the Secretary, including by a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties involved.

In light of the recently added statutory provision at section 1877(h)(1)(D) of the Act, we proposed to add a special rule on compensation arrangements at § 411.354(e). Proposed § 411.354(e) provides that, in the case of any requirement in 42 CFR part 411, subpart J, for a compensation arrangement to be in writing, the writing requirement may be satisfied by a collection of documents, including contemporaneous documents evidencing the course of conduct between the parties. The proposed special rule at § 411.354(e) codifies our existing policy on the writing requirement, as previously articulated in the CY 2016 PFS final rule with comment period. (See 80 FR 71314 *et seq.*)

b. Special Rule for Certain Arrangements Involving Temporary Noncompliance With Signature Requirements (§ 411.353(g))

Many of the exceptions for compensation arrangements in § 411.357 require that the arrangement (that is, the written documentation evidencing the arrangement) is signed by the parties to the arrangement. Under our existing special rule for certain arrangements involving temporary noncompliance with signature requirements at § 411.353(g)(1), an entity that has a compensation arrangement with a physician that satisfies all the requirements of an applicable exception in § 411.355, § 411.356 or § 411.357 except the signature requirement may submit a claim and receive payment for a designated health service referred by the physician, provided that: (1) The parties obtain the required signature(s) within 90 consecutive calendar days immediately following the date on which the compensation arrangement became noncompliant (without regard to whether any referrals occur or compensation is paid during such 90-day period); and (2) the compensation arrangement otherwise complies with all criteria of the applicable exception. Existing § 411.353(g)(1) specifies the paragraphs where the applicable signature requirements are found and existing § 411.353(g)(2) limits an entity's use of the special rule at § 411.353(g)(1) to only once every 3 years with respect to the same referring physician.

Section 50404 of the Bipartisan Budget Act of 2018 added subparagraph E, ''Signature Requirement,'' to section 1877(h)(1) of the Act. Section 1877(h)(1)(E) of the Act provides that, in the case of any requirement in section 1877 of the Act for a compensation arrangement to be in writing and signed by the parties, the signature requirement is satisfied if: (1) Not later than 90 consecutive calendar days immediately following the date on which the compensation arrangement became noncompliant, the parties obtain the required signatures; and (2) the compensation arrangement otherwise complies with all criteria of the applicable exception. Notably, under the newly added section 1877(h)(1)(E) of the Act, an applicable signature requirement is not limited to specific exceptions and entities are not limited in their use of the rule to only once every 3 years with respect to the same referring physician. In addition, section 1877(h)(1)(E) of the Act does not include a reference to the occurrence of referrals or the payment of compensation during the 90-day period when the signature requirement is not met.

To conform the regulations with the recently added statutory provision at section 1877(h)(1)(E) of the Act, we proposed to amend existing § 411.353(g) by: (1) Revising the reference at § 411.353(g)(1) to specific exceptions and signature requirements; (2) deleting the reference at § 411.353(g)(1) to the

[9] We note that, where the writing requirement appears in the statutory and regulatory exceptions, we interpret it uniformly, regardless of any minor differences in the language of the requirement. See 80 FR 71315. Similarly, we interpret the signature requirement uniformly where it appears, regardless of any minor differences in the language of the statutory and regulatory exceptions.

occurrence of referrals or the payment of compensation during the 90-day period when the signature requirement is not met; and (3) deleting the limitation at § 411.353(g)(2). In the alternative, we proposed to delete § 411.353(g) in its entirety and codify in proposed § 411.354(e) the special rule for signature requirements in section 1877(h)(1)(E) of the Act. We solicited comments regarding the best approach for codifying in regulation this provision of the Bipartisan Budget Act of 2018.

The following is a summary of the comments we received regarding the best approach for codifying in regulation sections 1877(h)(1)(D) & (E) of the Act.

Comment: We received a few comments in support of our proposal to codify our existing policy on the writing requirement in a special rule on compensation arrangements at § 411.354(e). No commenters opposed the proposal or suggested revisions or additions to the proposed regulatory text in § 411.354(e).

Response: We are finalizing proposed § 411.354(e) without modification. We remind readers that § 411.354(e) codifies our longstanding policy on the writing requirement in various compensation exceptions, as explained in detail in the CY 2016 PFS final rule with comment period. (See 80 FR 71314 *et seq.*)

Comment: We received a few comments expressing general support for the special rule on temporary noncompliance with signature requirements. Commenters appreciated the flexibility that the special rule affords. We received no comments in opposition to our proposal. Commenters approved of our efforts to align our regulations pertaining to temporary noncompliance with signature requirements with the statutory provision at section 1877(h)(1)(E) of the Act. Most commenters did not note if it would be better to codify section 1877(h)(1)(E) of the Act at § 411.353(g) or to delete § 411.353(g) in its entirety and codify section 1877(h)(1)(E) of the Act in the special rules on compensation arrangements at § 411.354(e). A couple of commenters acknowledged that both proposals provide clarification but expressed a preference that we delete § 411.353(g) in its entirety and codify section 1877(h)(1)(E) of the Act in proposed § 411.354(e), asserting that such a change would provide a ''clear reflection of the statute.''

Response: We believe it would be less disruptive to provider and supplier compliance efforts to amend § 411.353(g), a regulation that has been in place for over 10 years. Therefore, we are finalizing our proposal to revise the special rule for temporary noncompliance with signature requirements at § 411.353(g), thus aligning § 411.353(g) with the newly added section 1877(h)(1)(E) of the Act.

Comment: We received a few comments seeking physician self-referral law regulatory changes that were not proposed.

Response: These comments are beyond the scope of this rulemaking and are not addressed in this final rule.

Finally, we note that the effective date of section 50404 of the Bipartisan Budget Act was February 9, 2018. Thus, beginning February 9, 2018, parties who meet the requirements of section 1877(h)(1)(E) of the Act, including parties who otherwise would have been barred from relying on the special rule for certain arrangements involving temporary noncompliance with signature requirements at § 411.353(g)(1) because of the 3-year limitation at § 411.353(g)(2), may avail themselves of the new statutory provision at section 1877(h)(1)(E) of the Act.

After reviewing the comments, we are finalizing the special rule on compensation arrangements at § 411.354(e) as proposed, and we are finalizing the modifications to § 411.353(g) as proposed.

N. Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes

1. General

Section 1877 of the Act prohibits a physician from referring a Medicare beneficiary for certain designated health services (DHS) to an entity with which the physician (or a member of the physician's immediate family) has a financial relationship, unless an exception applies. Section 1877 of the Act also prohibits the DHS entity from submitting claims to Medicare or billing the beneficiary or any other entity for Medicare DHS that are furnished as a result of a prohibited referral.

Section 1877(h)(6) of the Act and § 411.351 of our regulations specify that the following services are DHS:

- Clinical laboratory services.
- Physical therapy services.
- Occupational therapy services.
- Outpatient speech-language pathology services.
- Radiology services.
- Radiation therapy services and supplies.
- Durable medical equipment and supplies.
- Parenteral and enteral nutrients, equipment, and supplies.
- Prosthetics, orthotics, and prosthetic devices and supplies.
- Home health services.
- Outpatient prescription drugs.
- Inpatient and outpatient hospital services.

2. Annual Update to the Code List

a. Background

In § 411.351, we specify that the entire scope of four DHS categories is defined in a list of CPT/HCPCS codes (the Code List), which is updated annually to account for changes in the most recent CPT and HCPCS Level II publications. The DHS categories defined and updated in this manner are:

- Clinical laboratory services.
- Physical therapy, occupational therapy, and outpatient speech-language pathology services.
- Radiology and certain other imaging services.
- Radiation therapy services and supplies.

The Code List also identifies those items and services that may qualify for either of the following two exceptions to the physician self-referral prohibition:

- EPO and other dialysis-related drugs furnished in or by an ESRD facility (§ 411.355(g)).
- Preventive screening tests, immunizations, or vaccines (§ 411.355(h)).

The definition of DHS at § 411.351 excludes services for which payment is made by Medicare as part of a composite rate (unless the services are specifically identified as DHS and are themselves payable through a composite rate, such as home health and inpatient and outpatient hospital services). Effective January 1, 2011, EPO and dialysis-related drugs furnished in or by an ESRD facility (except drugs for which there are no injectable equivalents or other forms of administration), have been reimbursed under a composite rate known as the ESRD prospective payment system (ESRD PPS) (75 FR 49030). Accordingly, EPO and any dialysis-related drugs that are paid for under ESRD PPS are not DHS and are not listed among the drugs that could qualify for the exception at § 411.355(g) for EPO and other dialysis-related drugs furnished by an ESRD facility.

ESRD-related oral-only drugs, which are drugs or biologicals with no injectable equivalents or other forms of administration other than an oral form, were scheduled to be paid under ESRD PPS beginning January 1, 2014 (75 FR 49044). However, there have been several delays of the implementation of payment of these drugs under ESRD PPS. On December 19, 2014, section 204 of the Stephen Beck, Jr., Achieving a Better Life Experience Act of 2014

(ABLE) (Pub. L. 113–295) was enacted and delayed the inclusion of these oral-only drugs under the ESRD PPS until 2025. Until that time, such drugs furnished in or by an ESRD facility are not paid as part of a composite rate and thus, are DHS.

The Code List was last updated in Tables 44 and 45 of the CY 2018 PFS final rule (82 FR 53339).

b. Response to Comments

We received no comments relating to the Code List that became effective January 1, 2018.

c. Revisions Effective for CY 2019

The updated, comprehensive Code List effective January 1, 2019, is available on our website at *http://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.html*.

Additions and deletions to the Code List conform it to the most recent publications of CPT and HCPCS Level II and to changes in Medicare coverage policy and payment status.

Tables 28 and 29 identify the additions and deletions, respectively, to the comprehensive Code List that become effective January 1, 2019. Tables 28 and 29 also identify the additions and deletions to the list of codes used to identify the items and services that may qualify for the exception in § 411.355(g) (regarding dialysis-related outpatient prescription drugs furnished in or by an ESRD facility) and in § 411.355(h) (regarding preventive screening tests, immunizations, and vaccines).

I. CY 2019 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This final rule will make payment and policy changes to the Quality Payment Program starting January 1, 2019, except as noted for specific provisions elsewhere in this final rule. The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, enacted April 16, 2015) amended title XVIII of the Act to repeal the Medicare sustainable growth rate (SGR) formula, to reauthorize the Children's Health Insurance Program, and to strengthen Medicare access by improving physician and other clinician payments and making other improvements. The MACRA advances a forward-looking, coordinated framework for clinicians to successfully participate in the Quality Payment Program, which rewards value in one of two ways:

- The Merit-based Incentive Payment System (MIPS).
- Advanced Alternative Payment Models (Advanced APMs).

As we move into the third year of the Quality Payment Program, we have taken all stakeholder input into consideration, including recommendations made by the Medicare Payment Advisory Commission (MedPAC), an independent congressional agency established by the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) to advise the U.S. Congress on issues

affecting the Medicare program, such as payment policies under Medicare, the factors affecting expenditures for the efficient provision of services, and the relationship of payment policies to access and quality of care for Medicare beneficiaries. We will continue to implement the Quality Payment Program as required, smoothing the transition where possible and offering targeted educational resources for program participants. A few examples of how we are working to address stakeholder input are evident in our work around burden reduction and reshaping our focus of interoperability. We have heard the concern about process-based measures, and we are continuing to move towards the development and use of more outcome measures by way of removing process measures that are topped out and funding new quality measure development, as required by section 102 of MACRA. We have also developed new episode-based cost measures, with stakeholder feedback, for inclusion in the cost performance category beginning in 2019, with additional measure development occurring for potential inclusion in future years.

Additionally, we have also received feedback from stakeholders regarding the added value of the Quality Payment Program. To that point, CMS has begun a series of strategic planning sessions to (1) assess the current value of the program for clinicians and beneficiaries alike and (2) implement the program in a way that is understandable to beneficiaries, as they are the core of the Medicare program.

As a priority for the Quality Payment Program Year 3, we are committed to continue using the framework established by the Patients over Paperwork initiative to assist in reducing clinician burden, implementing the Meaningful Measures Initiative, promoting interoperability, continuing our support of small and rural practices, empowering patients, and promoting price transparency.

Reducing Clinician Burden

We are committed to reducing clinician burden by simplifying and streamlining the program for participating clinicians. Examples include:

- Implementing the Meaningful Measures Initiative, which is a framework that applies a series of cross-cutting criteria to identify and utilize the most meaningful measures with the least amount of burden and greatest impact on patient outcomes;
- Promoting advances in interoperability; and
- Establishing an automatic extreme and uncontrollable circumstances policy for MIPS eligible clinicians.

Improving Patient Outcomes and Reducing Burden Through Meaningful Measures

Regulatory reform and reducing regulatory burden are high priorities for CMS. To reduce the regulatory burden on the healthcare industry, lower health care costs, and enhance patient care, we launched the Meaningful Measures Initiative in October 2017.[10] This initiative is one component of our agency-wide Patients Over Paperwork Initiative,[11] which is aimed at evaluating and streamlining regulations with a goal to reduce unnecessary cost and burden, increase efficiencies, and improve beneficiary experience. The Meaningful Measures Initiative is aimed at identifying the highest priority areas for quality measurement and quality improvement to assess the core quality of care issues that are most vital to advancing our work to improve patient outcomes. The Meaningful Measures Initiative represents a new approach to quality measures that fosters operational efficiencies, and reduces cost associated with collection and reporting burden, while producing quality measurement that is more focused on meaningful outcomes.

The Meaningful Measures Framework has the following principles for identifying measures that:

- Address high-impact measure areas that safeguard public health;
- Patient-centered and meaningful to patients;
- Outcome-based where possible;
- Fulfill each program's statutory requirements;
- Minimize the level of burden for health care providers (for example, through a preference for EHR-based measures where possible, such as electronic clinical quality measures);
- Significant opportunity for improvement;
- Address measure needs for population based payment through alternative payment models; and
- Align across programs and/or with other payers.

To achieve these objectives, we have identified 19 Meaningful Measures areas and mapped them to six overarching quality priorities as shown in Table 30.

TABLE 30—MEANINGFUL MEASURES FRAMEWORK DOMAINS AND MEASURE AREAS

Quality priority	Meaningful measure area
Making Care Safer by Reducing Harm Caused in the Delivery of Care	Healthcare-Associated Infections. Preventable Healthcare Harm.
Strengthen Person and Family Engagement as Partners in Their Care	Care is Personalized and Aligned with Patient's Goals. End of Life Care according to Preferences. Patient's Experience of Care. Patient Reported Functional Outcomes.
Promote Effective Communication and Coordination of Care	Medication Management. Admissions and Readmissions to Hospitals. Transfer of Health Information and Interoperability.
Promote Effective Prevention and Treatment of Chronic Disease	Preventive Care. Management of Chronic Conditions. Prevention, Treatment, and Management of Mental Health. Prevention and Treatment of Opioid and Substance Use Disorders. Risk Adjusted Mortality.
Work with Communities to Promote Best Practices of Healthy Living	Equity of Care. Community Engagement.

TABLE 30—MEANINGFUL MEASURES FRAMEWORK DOMAINS AND MEASURE AREAS—Continued

Quality priority	Meaningful measure area
Make Care Affordable	Appropriate Use of Healthcare. Patient-focused Episode of Care. Risk Adjusted Total Cost of Care.

By including Meaningful Measures in our programs, we believe that we can also address the following cross-cutting measure criteria:

- Eliminating disparities;
- Tracking measurable outcomes and impact;
- Safeguarding public health;
- Achieving cost savings;
- Improving access for rural communities; and
- Reducing burden.

We believe that the Meaningful Measures Initiative will improve outcomes for patients, their families, and health care providers while reducing burden and costs for clinicians and providers and promoting operational efficiencies.

In the quality performance category under MIPS, clinicians have the flexibility to select and report the measures that matter most to their practice and patients. However, we have received feedback that some clinicians find the performance requirements confusing, and the program makes it difficult for them to choose measures that are meaningful to their practices and have more direct benefit to beneficiaries. For the 2019 MIPS performance period, we are finalizing the following updates: (1) Adding 8 new MIPS quality measures that include 4 patient reported outcome measures, 6 high priority measures, and 2 measures on important clinical topics in the Meaningful Measures framework; and (2) removing 26 quality measures.

In addition to having the right measures, we want to ensure that the collection of information is valuable to clinicians and worth the cost and resources of collecting the information.

Promoting Interoperability Performance Category

As required by MACRA, the Quality Payment Program includes a MIPS performance category that focuses on meaningful use of certified EHR technology, referred to in the CY 2017 and CY 2018 Quality Payment Program final rules as the ''advancing care information'' performance category. As part of our approach to promoting and prioritizing interoperability of healthcare data, in Quality Payment Program Year 2, we changed the name of the performance category to the Promoting Interoperability performance category.

We have prioritized interoperability, which we define as health information technology, that enables the secure exchange of electronic health information with, and use of electronic health information from, other health information technology without special effort on the part of the user; allows for complete access, exchange, and use of all electronically accessible health information for authorized use under applicable law; and does not constitute information blocking as defined by the 21st Century Cures Act (Pub. L. 114–255, enacted December 13, 2016). We are committed to working with the Office of the National Coordinator for Health IT (ONC) on implementation of the interoperability provisions of the 21st Century Cures Act to have seamless but secure exchange of health information for clinicians and patients, ultimately enabling Medicare beneficiaries to get their claims information electronically. In addition, we are prioritizing quality measures and improvement activities that support interoperability.

To further CMS' commitment to implementing interoperability, at the 2018 Healthcare Information and Management Systems Society (HIMSS) conference, CMS Administrator Seema Verma announced the launching of the MyHealthEData initiative.[12] This initiative aims to empower patients by ensuring that they control their healthcare data and can decide how their data is going to be used, all while keeping that information safe and secure. The overall government-wide initiative is led by the White House Office of American Innovation with participation from HHS—including its CMS, ONC, and the National Institutes of Health (NIH)—as well as the U.S. Department of Veterans Affairs (VA). MyHealthEData aims to break down the barriers that prevent patients from having electronic access and true control of their own health records from the device or application of their choice. This effort will approach the issue of healthcare data from the patient's perspective.

For the Promoting Interoperability performance category, we require MIPS eligible clinicians to use 2015 Edition certified EHR technology beginning with the 2019 MIPS performance period to make it easier for:

- Patients to access their data.
- Patient information to be shared between doctors and other health care providers.

Continuing To Support Small and Rural Practices

We understand that the Quality Payment Program is a big change for clinicians, especially for those in small and rural practices. We intend to continue to offer tailored flexibilities to help these clinicians to participate in the program. For example, in this rule we are finalizing our proposal to retain a small practice bonus under MIPS by moving it to the quality performance category. We will also continue to support small and rural practices by offering free and customized resources available within local communities, including direct, one-on-one support from the Small, Underserved, and Rural Support Initiative along with our other no-cost technical assistance.

Further, we note that we are finalizing our proposal to amend our regulatory text to allow small practices to continue using the Medicare Part B claims collection type. We are also finalizing our proposal to revise the regulatory text to allow a small practice to submit quality data for covered professional services through the Medicare Part B claims submission type for the quality performance category, as discussed further in section III.I.3.h. of this final rule. Finally, in the CY 2018 Quality Payment Program final rule, we finalized a policy to allow small practices to continue to choose to participate in MIPS as a virtual group (82 FR 53598).

Empowering Patients Through the Patients Over Paperwork Initiative

Our Patients Over Paperwork initiative establishes an internal process to evaluate and streamline regulations with a goal to reduce unnecessary burden, to increase efficiencies, and to

[12] *https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2018-Fact-sheets-items/2018-03-06.html.*

improve the beneficiary experience.[13] This administration is dedicated to putting patients first, empowering consumers of healthcare to have the information they need to be engaged and active decision-makers in their care. As a result of this consumer empowerment, clinicians will gain competitive advantage by delivering coordinated, high-value quality care.

The policies for the Quality Payment Program in this final rule promote competition and empower patients. We are consistently listening, and we are committed to using data-driven insights, increasingly aligned and meaningful quality measures, and technology that empowers patients and clinicians to make decisions about their healthcare.

In conjunction with development of the Patients Over Paperwork initiative, we are making progress toward developing a patient-centered portfolio of measures for the Quality Payment Program, including 7 new outcome measures included on the 2017 CMS Measures Under Consideration List,[14] 5 of which are directly applicable to the prioritized specialties of general medicine/crosscutting and orthopedic surgery. Finally, on September 21, 2018, CMS awarded seven organizations new cooperative agreements to partner with the agency in developing, improving, updating, or expanding quality measures for Medicare's Quality Payment Program. Awardees will work to establish more appropriate measures for clinical specialties underrepresented in the current measure set with the goal of improving patient care, and focus on outcome measures, including patient-reported and functional-status measures, to better reflect what matters most to patients.[15]

b. Summary of the Major Provisions

In May 2018, CMS announced that 91 percent of MIPS eligible clinicians participated in the 2017 transition year. (See *https://www.cms.gov/blog/quality-payment-program-exceeds-year-1-participation-goal*.) This CY 2017 performance period data were incorporated for this final rule when estimating eligibility and payment adjustment for the CY 2019 MIPS performance period. One important finding is that many more clinicians than reported in the CY 2019 PFS proposed rule are expected to participate in MIPS using the group reporting option. This increase means more clinicians are covered in MIPS and are measured on their performance.

(1) Quality Payment Program Year 3

During the first 2 years of the program, we have heard concerns from clinicians that were not eligible to participate. Under MIPS, for year 3, we are expanding in this final rule the opportunities to participate, while still understanding the burden required to participate, to include physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals in the list of MIPS eligible clinicians. We also are finalizing an opt-in policy that allows some clinicians, who otherwise would have been excluded under the low-volume threshold, the option to participate in MIPS.

We believe the third year of the Quality Payment Program should build upon the foundation that has been established in the first 2 years, which provides a trajectory for clinicians moving to a performance-based payment system. This trajectory provides clinicians the ability to participate in the program through two pathways: MIPS and Advanced APMs.

(2) Payment Adjustments

As discussed in section VII.F.8. of this final rule, for the 2021 payment year and based on Advanced APM participation during the 2019 MIPS performance period, we estimate that between 165,000 and 220,000 clinicians will become Qualifying APM Participants (QP). As a QP, an eligible clinician is not subject to the MIPS reporting requirements and payment adjustment, and qualifies for a lump sum APM incentive payment equal to 5 percent of their aggregate payment amounts for covered professional services for the year prior to the payment year. We estimate that the total lump sum APM incentive payments will be approximately $600–800 million for the 2021 Quality Payment Program payment year.

Again, we estimate that approximately 798,000 clinicians would be MIPS eligible clinicians in the 2019 MIPS performance period, an increase of almost 148,000 from the estimate we provided in the CY 2019 PFS proposed rule, which reflects growth in group reporting and our ability to better capture group reporting. The final number will depend on several factors, including the number of eligible clinicians excluded from MIPS based on their status as QPs or Partial QPs, the number that report as groups, and the number that elect to opt-in to MIPS. In the 2021 MIPS payment year, MIPS payment adjustments, which only apply to covered professional services, will be applied based on MIPS eligible clinicians' performance on specified measures and activities within four integrated performance categories. We estimate that MIPS payment adjustments will be approximately equally distributed between negative MIPS payment adjustments ($390 million) and positive MIPS payment adjustments ($390 million) to MIPS eligible clinicians, as required by the statute to ensure budget neutrality. Positive MIPS payment adjustments will also include up to an additional $500 million for exceptional performance to MIPS eligible clinicians whose final score meets or exceeds the additional performance threshold of 75 points that we are establishing in this final rule. However, the distribution will change based on the final population of MIPS eligible clinicians for the 2021 MIPS payment year and the distribution of final scores under the program.

2. Definitions

At § 414.1305, subpart O—

- We are revising in this final rule the regulation to define the following terms:
  - ++ Ambulatory Surgical Center (ASC)-based MIPS eligible clinician.
  - ++ Collection type.
  - ++ Health IT vendor.
  - ++ MIPS determination period.
  - ++ Submission type.
  - ++ Submitter type.
  - ++ Third party intermediary.
- We are revising in this final rule the definitions of the following terms:
  - ++ High priority measure.
  - ++ Hospital-based MIPS eligible clinician
  - ++ Low-volume threshold.
  - ++ MIPS eligible clinician.
  - ++ Non-patient facing MIPS eligible clinician.
  - ++ Qualified clinical data registry (QCDR).
  - ++ Qualifying APM Participant (QP).
  - ++ Small practice.

These terms and definitions are discussed in detail in relevant sections of this final rule.

3. MIPS Program Details

a. MIPS Eligible Clinicians

Under § 414.1305, a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, is defined as any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); and a group that includes such clinicians. Section 1848(q)(1)(C)(II) of the Act provides the Secretary with discretion, beginning with the 2021 MIPS payment year, to specify additional eligible clinicians (as defined in section 1848(k)(3)(B) of the Act) as MIPS eligible clinicians. Such clinicians may include physical therapists, occupational therapists, or qualified speech-language pathologists; qualified audiologists (as defined in section 1861(ll)(3)(B) of the Act); certified nurse-midwives (as defined in section 1861(gg)(2) of the Act); clinical social workers (as defined in section 1861(hh)(1) of the Act); clinical psychologists (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietitians or nutrition professionals.

As discussed in the CY 2019 PFS proposed rule (83 FR 35883 through 35884), we received feedback from non-physician associations representing each type of additional eligible clinician through listening sessions and meetings with various stakeholder entities and through public comments discussed in the CY 2017 Quality Payment Program final rule (81 FR 77038). Commenters generally supported the specification of such clinicians as MIPS eligible clinicians beginning with the 2021 MIPS payment year. In order to assess whether these additional eligible clinicians could successfully participate in MIPS, we evaluated whether there would be sufficient measures and activities applicable and available for each of the additional eligible clinician types. We finalized in the CY 2018 Quality Payment Program final rule (82 FR 53780), that having sufficient measures for the quality performance category, means having sufficient measures applicable and available means that we can calculate a quality performance category percent score for the MIPS eligible clinician because at least one quality measure is applicable and available to the clinician. For the improvement activities performance category, we stated the belief that all MIPS eligible clinicians will have sufficient activities applicable and available. We focused our analysis on the quality and improvement activities performance categories because these performance categories require submission of data. We did not focus on the Promoting Interoperability performance category because there is extensive analysis regarding who can participate in the Promoting Interoperability performance category under the current exclusion criteria. In addition, in section III.I.3.h.(5) of this final rule, we are finalizing a policy to automatically assign a zero percent weighting for the Promoting Interoperability performance category for these new types of MIPS eligible clinicians. We did not focus as part of our analysis on the cost performance category because we are only able to assess cost performance for a subset of eligible clinicians—specifically, those who are currently eligible as a result of not meeting any of the current exclusion criteria. So the impact of the cost performance category for these additional eligible clinicians will continue to be considered but is currently not a decisive factor for successful participation in MIPS. From our analysis, we found that improvement activities would generally be applicable and available for each of the additional eligible clinician types. However, for the quality performance category, we found that not all of the additional eligible clinician types would have sufficient MIPS quality measures applicable and available. As discussed in section III.I.3.h.(2)(b)(iii) of this final rule, for the quality performance category, we are finalizing our proposals to remove several MIPS quality measures. In the CY 2019 PFS proposed rule (83 FR 35883 through 35884), we explained that if those measures were finalized for removal, we anticipated that qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or nutrition professionals would each have less than 6 MIPS quality measures applicable and available to them. However, if the quality measures were not finalized for removal, we would reassess whether these eligible clinicians would have an adequate amount of MIPS quality measures available to them. We proposed to include these additional clinicians in the MIPS eligible clinician definition if we found that they do have at least 6 MIPS quality measures available to them. As discussed in ''Appendix 1: Finalized MIPS Quality Measures'', TABLE Group C. of this final rule, we are retaining one of the MIPS quality measures that was proposed for removal: ''Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use'' (Quality #185). We do not believe that this measure is applicable to any of the proposed additional eligible clinicians. Therefore, it does not affect the number of available measures for these clinicians. We refer readers to section III.I.3.h.(2) of this final rule for more information regarding quality measures.

We focused on the quality performance category because the quality and improvement activities performance categories require submission of data. We believed there would generally be applicable and available improvement activities for each of the additional eligible clinician types, but that not all of the additional eligible clinician types would have sufficient MIPS quality measures applicable and available if the proposed MIPS quality measures were removed from the program. In our analysis, we did find QCDR measures approved for the CY 2018 performance period that are either high priority and/or outcome measures that, if approved for the CY 2019 performance period, may be applicable to these additional eligible clinicians. However, this would necessitate that the clinician utilize a QCDR in order to be successful in MIPS. Further, we have heard some concerns from the non-physician associations, through written correspondence, that since their clinicians would be joining the program 2 years after its inception, we should consider several ramp-up policies in order to facilitate an efficient integration of these clinicians into MIPS. We note that the MIPS program is still ramping up, and we will continue to increase the performance threshold to ensure a gradual and incremental transition to the performance threshold that will be used in the Quality Payment Program Year 6. Therefore, if specified as MIPS eligible clinicians beginning with the 2021 MIPS payment year, the additional eligible clinicians would have 4 years in the program in order to ramp up. Conversely, if specified as MIPS eligible clinicians beginning in a future year, they would be afforded less time to ramp up the closer the program gets to Quality Payment Program Year 6.

We requested comments on our proposal to amend § 414.1305 to modify the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of

the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, a clinical social worker (as defined in section 1861(hh)(1) of the Act), a clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and a group that includes such clinicians. Alternatively, we proposed that if the quality measures proposed for removal were not finalized, then we would include additional eligible clinician types in the definition of a MIPS eligible clinician beginning with the 2021 MIPS payment year (specifically, qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or nutrition professionals), provided that we determine that each applicable eligible clinician type would have at least 6 MIPS quality measures available to them. In addition, we requested comments on: (1) Specifying qualified speech-language pathologists, qualified audiologists, certified nurse-midwives, and registered dietitians or nutrition professionals as MIPS eligible clinicians beginning with the 2021 MIPS payment year; and (2) delaying the specification of one or more additional eligible clinician types as MIPS eligible clinicians until a future MIPS payment year.

The following is a summary of the public comments received on our proposals and our responses:

Comment: Many commenters supported our proposal to expand the definition of MIPS eligible clinicians to physical therapists, occupational therapists, clinical social workers, and clinical psychologists. A few commenters encouraged us to ensure that a reasonable number of measures are maintained for these newly eligible clinicians. Other commenters specifically discussed adding qualified audiologist and qualified speech-language pathologists as MIPS eligible clinicians, stating that there are enough discipline-specific measures for these clinicians to be included in the program. One commenter specifically stated that registered dietitians have seven quality measures on which to report, and, therefore should be included in the program. A few commenters requested that we include the following additional clinicians as MIPS eligible clinicians: Nurse navigators, oncology staff nurses, and clinical pharmacists, stating that adding more clinicians would enable better understanding of healthcare data across other specialties.

Response: We appreciate the additional information provided regarding the quality measures available to the additional eligible clinicians. After review of the additional information regarding quality measures we revisited our findings and found support for the comments. We were persuaded by the arguments of the specialties who requested to be included in the program including: Physical therapists, occupational therapists, speech-language pathologists, audiologists, clinical psychologists, and dieticians or nutrition professionals. However, we believe that clinical social workers may not have six applicable quality measures to report. For example, some measures may contain CPT codes utilized by clinical social workers, but may not be applicable to their practice. We do believe that there is at least one quality measure that clinical social workers could report for MIPS. We encourage the clinicians within the specialty provide feedback during the specialty measure set solicitation process to create a measure set applicable to clinical social workers for implementation in future rulemaking. This will ensure proper scoring based on applicable measures and will not hold clinical social workers accountable for measures that are outside their scope. Therefore, we are modifying our proposal by removing clinical social workers from our proposed list and including qualified speech-language pathologists, qualified audiologists, and registered dieticians who were not in our proposed list but have requested inclusion as MIPS eligible clinicians. We are finalizing to modify § 414.1305 the definition of a MIPS eligible clinician to include: Beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, qualified speech-language pathologist; a qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietician or nutrition professional; and a group that includes such clinicians. We note that we do not have discretion under the statute to include clinicians other than those specified in section 1848(q)(1)(C)(II) of the Act. Thus, nurses and pharmacists would not be able to participate in MIPS.

Comment: A few commenters requested that clinical social workers not be included in MIPS. They stated several reasons why they believe that clinical social workers should not be included in MIPS: (1) Many of their clinicians are solo or small group practices and do not have the technology infrastructure in place to effectively meet expectations in the Promoting Interoperability performance category; (2) many are in private practice and have limited ability to influence the overall care of patients limiting their ability to manage the overall cost of the beneficiary; (3) while there are more than six measures available in the mental/behavioral health measure set there are only four claims measures appropriate for use by clinical social workers as determined by eligible CPT codes and scope of practice; and (4) some of the available MIPS CQM measures are limited by patient diagnosis, such as dementia, which may further limit a clinical social workers ability to effectively report on six quality measures, as there are only two outcome measures in the Mental/Behavioral health measure set for clinical social workers and they require the utilization of the PHQ–9 measure which is only reportable via EHR. When a clinical social worker does not utilize EHR technology there may be further limitations to reporting adequate measures.

Response: After review of the additional information regarding quality measures, we revisited our findings and found support for the comments. We were persuaded by the arguments of the specialties who requested to be included in the program including: Physical therapists; occupational therapists; speech-language pathologists; audiologists; clinical psychologists; and dieticians or nutrition professionals. We understand the issues that have been highlighted by the commenters and believe that some clinical social workers may have a difficult time successfully participating in MIPS. Therefore, we agree that clinical social workers should not be added as a MIPS eligible clinician at this time. However, we do believe that they may be able to participate at some point in the future. From our analysis, clinical social workers may not have six applicable quality measures to report at this time. For example, some measures may contain CPT codes utilized by clinical social workers, but may not be applicable to their practice. We do believe that there is at least one quality measure that clinical social workers

could report for MIPS. Therefore, we are modifying our proposal by removing clinical social workers and certified nurse-midwives from our proposed list and including qualified speech-language pathologists, qualified audiologists, and registered dieticians who were not in our proposed list but have requested inclusion as MIPS eligible clinicians. We are finalizing to modify § 414.1305 the definition of a MIPS eligible clinician to include, beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, qualified speech-language pathologist; a qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietician or nutrition professional; and a group that includes such clinicians. We encourage clinicians who are not eligible to participate in MIPS to voluntarily report on applicable measures and activities for MIPS. The data received will not be used to assess performance for the purpose of the MIPS payment adjustment; however, these clinicians will have the opportunity to access feedback on their submitted MIPS data. We agree that the two outcome measures within the mental/behavioral health specialty measure set do require the utilization of the PHQ–9 to measure the depression outcome; however, we disagree with the commenter as this is not restricted to EHR and available by MIPS CQMs Specification.

Comment: One commenter recommended that we adopt a standard definition of a Quality Payment Program eligible provider, eligible clinician and/or an eligible professional as it continues to expand the list of eligible clinicians. The commenter recommended the word ''physician'' be replaced with provider and/or clinician, stating that this terminology better reflects the collaboration of the current inter-professional healthcare team.

Response: We understand the commenter to be suggesting that we unify the definitions of eligible clinician and MIPS eligible clinician. While we agree that a unified definition might have certain benefits, we believe that two separate definitions are necessary as the two tracks of the Quality Payment Program (MIPS and APM) have distinctly different requirements for participation and the term eligible clinicians reflects, a broader set of clinician types than the term MIPS eligible clinicians. We note that both terms already refer to clinicians.

Comment: Some commenters stated that inclusion of these additional eligible clinicians in the program with just two months' notice is overly burdensome and would ultimately prove counterproductive. One commenter stated that because of the limited scope of MIPS reporting that is applicable to these specialties, we should carefully evaluate whether the expense and added burden of reporting for these specialties is commensurate with the benefits. Another commenter noted that these clinicians tend to have a high patient turnover rate, which could make certain measures challenging. Several commenters opposed expanding the definition of eligible clinician to the proposed clinician types, stating that the clinician types do not, as a general rule, encompass the same types of workflows as current MIPS eligible clinicians, and, therefore, adding these clinicians could increase the cost, time, and effort for reporting and documentation. Many commenters requested we create ramp-up policies for the additional eligible clinicians, such as a pick-your-pace approach or a 1-year delayed effective date. Likewise, a few commenters requested that we allow the additional clinicians to opt-in for the first year in which they are eligible to participate. A few commenters requested that we consider a one-time bonus payment for voluntary reporting, and requested modified quality benchmarks, performance thresholds, reporting requirements, and data completeness requirements.

Response: We acknowledge that adding these additional clinicians will require some adaptation to the current systems and processes and will take careful consideration by measure stewards to determine the appropriateness of adding clinician encounters to align with measure intent. However, we believe the benefits outweigh the costs as these clinicians are an integral part of the health care delivery team. We believe that all eligible clinicians benefit from participation in quality reporting under MIPS and help reach one of our strategic objectives to improve beneficiary outcomes and engage and empower consumers by providing healthcare information useful for driving value and making healthcare decisions. Regarding measures that are considered challenging, the additional clinicians should choose measures and activities that are applicable and meaningful to them. As noted in the proposed rule (83 FR 35884), the MIPS program is still ramping up, and we will continue to increase the performance threshold to ensure a gradual and incremental transition to the performance threshold that will be used in the Quality Payment Program Year 6. Therefore, if specified as MIPS eligible clinicians beginning with the 2021 MIPS payment year, the additional eligible clinicians would have 4 years in the program in order to ramp up. Conversely, if specified as MIPS eligible clinicians beginning in a future year, they would be afforded less time to ramp up the closer the program gets to Quality Payment Program Year 6. In addition, for the first 2 years of MIPS, clinicians who are not MIPS eligible had the opportunity to voluntarily report to become familiar with MIPS measures and reporting. For these reasons, we do not believe we should adopt policies such as those suggested by the commenters. We note that additional eligible clinicians that exceed at least one, but not all, of the low-volume threshold criteria will have the opportunity to opt-in to participate in MIPS as discussed in section III.I.3.c.(5) of this final rule. We do not agree with offering a one-time bonus payment for voluntary reporting as section 1848(q)(1)(C)(vi) of the Act precludes the application of a MIPS adjustment factor (or additional MIPS adjustment factor) to an individual who is not a MIPS eligible clinician. Finally, as these additional clinicians will be defined as MIPS eligible clinicians, they will be subject to the same requirements as other MIPS eligible clinicians, including quality benchmarks, performance thresholds, reporting requirements, and data completeness requirements.

Comment: Several commenters requested that we provide targeted education on program requirements to additional eligible clinicians. Specifically, the commenters urged us to provide compliance support to small practices, by creating an industry pathway to EHR reporting. A few commenters requested that we convene a Technical Expert Panel (TEP) comprised of individuals representing the additional eligible clinician types to inform adaptation of the Quality Payment Program to meet their needs.

Response: We have consistently provided targeted education on program requirements in the past and intend to continue doing so through various means including: Webinars, national provider calls, virtual office hours, speaking engagements, and tailored educational resources for the additional clinicians. No cost technical assistance is also available by contacting the Quality Payment Program Service Center by phone at 1–866–288–8292, (TTY) 1–877–715–6222 or by email at *QPP@cms.hhs.gov*. We will also continue to support small and rural

practices by offering free and customized resources available within local communities, including direct, one-on-one support from the Small, Underserved, and Rural Support Initiative along with our other no-cost technical assistance. We appreciate the suggestion to convene a TEP comprised of the additional clinicians. We will continue to explore additional opportunities for this type of engagement in the future.

Comment: Many commenters noted their concern regarding whether the Quality Payment Program could be utilized for these new clinician types, asking us to consider if these clinicians are able to meet MIPS reporting requirements across all performance categories before expanding the list of MIPS-eligible clinicians. Specifically, some commenters stated that the Promoting Interoperability performance category would be difficult to meet without a change in meaningful use guidelines, noting that because these clinicians rarely bill the clinician group directly and may not be integrated with the clinician group's EHR, interoperability remains a material issue. These commenters requested that we weight the Promoting Interoperability performance category at zero percent or allow new eligible clinicians to opt-in to this performance category. Another commenter requested clarification on whether the proposal to automatically assign a zero percent weighting for the Promoting Interoperability performance category for these new types of MIPS eligible clinicians applies to both individual clinicians and groups. Another commenter asked for clarification regarding if they could continue to report as a group. One commenter questioned whether the additional clinicians would be removed from the denominator for these measures. Other commenters asked for clarification on how quality measures will be captured as most of these clinicians may not have electronic medical records (EMRs).

Response: In the CY 2019 PFS proposed rule (83 FR 35883 through 35884) to assess whether these additional eligible clinicians could successfully participate in MIPS, we evaluated whether there would be sufficient measures and activities applicable and available for each of the additional eligible clinician types. We did not focus on the Promoting Interoperability performance category because for CY 2019 we are finalizing to automatically assign a zero percent weighting for the Promoting Interoperability performance category which will be reweighted to the quality performance category for these new types of MIPS eligible clinicians. In response to the comment, the proposal to automatically assign a zero percent weighting for the Promoting Interoperability performance category does apply to both individual clinicians and groups. Clinicians may choose to report for MIPS as an individual or as part of a group. If the clinician chooses to report as part of a group, then under the policy we established previously (82 FR 53687), all of the MIPS eligible clinicians in the group must qualify for a zero percent weighting in order for the Promoting Interoperability performance category to be reweighted in the final score. We refer readers to section III.I.3.h.(5)(h)(ii) of this final rule for further details on the policy that we are finalizing in this rule to automatically assign a zero percent weighting for the Promoting Interoperability performance category. Regarding data submission requirements for quality measures, the additional eligible clinicians may submit their quality data through the same data collection types available to all MIPS eligible clinicians including eCQMs, MIPS Clinical Quality Measures (MIPS CQMs), QCDR measures, Medicare Part B claims measures, CMS Web Interface measures, the CAHPS for MIPS survey, and administrative claims measures which may be submitted via one of the submission types including: Direct; log in and upload; log in and attest; Medicare Part B claims; and the CMS Web Interface. We refer readers to section III.I.3.h.(1) in this final rule for further information regarding performance category measures and reporting.

Comment: A few commenters requested that we be certain that we are operationally prepared to support reporting and scoring for the additional eligible clinician types, as clinicians have experienced operational data submissions issues in the past.

Response: We intend to have our Quality Payment Program portal ready to accept and process data for all MIPS eligible clinicians for 2021 MIPS payment year.

Comment: Several commenters requested clarification on how our proposal would apply to eligible clinicians billing under a hospital- or facility-based TIN. A few commenters stated that the rule does not indicate whether hospitals should report the NPI of these clinicians on the UB–04 claims used by hospitals and cautioned that adding these clinician types to UB–04 claims would entail significant administrative burden to hospitals. One commenter also stated that the majority of facility-based outpatient therapy claims do not contain the rendering NPI and usually contain just a facility NPI; therefore, most facility-based outpatient therapy claims will not be eligible for MIPS. A few commenters said that due to a technicality in how facility-based claims (such as those submitted by inpatient rehabilitation facilities) are submitted, only independently rendered, private practice outpatient therapy services will be included in MIPS, and facility-based outpatient therapy will generally not be included. One commenter recommended that we operationalize the inclusion of facility-based clinicians in MIPS by treating the facility NPI as a MIPS-participating NPI and allow the facility to report measures under MIPS like a group. Another commenter argued that facility-based outpatient therapy clinicians should be included in the program. A few commenters sought clarification of how clinicians of therapy services in skilled-nursing facilities will be treated, stating that assessing individual clinicians for quality and adjusting payment poses unique challenges in this setting.

Response: These additional clinicians will be defined as MIPS eligible clinicians and will be subject to the same requirements as other MIPS eligible clinicians billing under a hospital- or facility-based TIN. MIPS eligible clinician may report as an individual or as part of a group. We finalized at § 414.1380(e)(2)(i) and (ii) the determination of a facility-based individual and facility-based group. A facility-based individual is a MIPS eligible clinician that furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service codes used in the HIPAA standard transaction as an inpatient hospital or emergency room setting based on claims for a period prior to the performance period as specified by CMS. A facility-based group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the facility-based individual determination. Therefore, if a MIPS eligible clinician is submitting their data as part of a facility-based group their NPI number would need to be annotated on the claim which is part of normal billing practices. We refer readers to section III.I.3.h.(2)(a)(iv) of this final rule for further details regarding the application of facility-based measures. The definition of a hospital-based clinician finalized at § 414.1410 is primarily applicable to the Promoting Interoperability performance category. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR

53684) for details on a hospital-based clinician. We are aware that facility-based outpatient therapy and skilled nursing facility claims do not contain the rendering NPI and usually contain just a facility NPI; therefore, facility-based outpatient therapy and skilled nursing facility claims will not be eligible for MIPS. For those billed Medicare Part B allowed charges we are able to associate with a MIPS eligible clinician at an NPI level, such covered professional services furnished by such clinicians would be included for purposes of applying any MIPS payment adjustment. It is our intention to provide clinicians with their eligibility status prior to the performance period through the Quality Payment Program portal eligibility determination tool. This should allow clinicians to know ahead of time whether they are included in MIPS or not. We will take these comments into consideration in future rulemaking.

Comment: A few commenters noted that adding physical and occupational therapists would affect the determination of practice size. One commenter expressed concern that groups may lose their small group status even though the composition of the practice did not change.

Response: We do not anticipate that the small practice size determination will be affected by adding additional clinicians to the definition of MIPS eligible clinician. Small practice is defined at § 414.1305 to mean a practice consisting of 15 or fewer eligible clinicians. Thus, the definition of small practice already accounts for all eligible clinicians in the practice, including those that we are adding to the definition of MIPS eligible clinician.

Comment: One commenter requested clarification regarding how the additional MIPS eligible clinicians would be subject to payment reductions if they do not meet the performance requirements under MIPS.

Response: The additional eligible clinicians, who are not otherwise excluded, will be included in the performance requirements for a MIPS eligible clinician for CY 2021 payment year. In addition, MIPS eligible clinicians are subject to the MIPS payment adjustment factor. Clinicians who are considered MIPS eligible and who do not report under MIPS may receive a final score of zero and an associated negative payment adjustment of 7 percent during the CY 2021 payment year.

Comment: Some commenters stated that the additional clinician types could water down the performance pool, and increasing the number of participants will create increased competition for an additional performance threshold, making it more difficult for disadvantaged clinicians to meaningfully participate in MIPS.

Response: Although the number of MIPS eligible clinicians will increase, we do not anticipate that the additional clinicians will substantially change the total number of MIPS eligible clinicians or make it more difficult for other clinicians to meaningfully participate in MIPS. Regarding the additional performance threshold, we note that the eligible clinician must first qualify for the additional performance threshold for exceptional performance. We do not believe that the addition of new clinician types to be MIPS eligible implies they are going to perform at a level that qualifies for the additional performance threshold. We refer readers to Table 98 in section VII (Regulatory Impact Analysis) of this final rule for information regarding the impact of expanding the definition of MIPS eligible clinicians on the total number of MIPS eligible clinicians and the total estimated PFS amount paid.

Comment: One commenter believed it was unnecessary to include the proposed additional eligible clinicians as they would more than likely be ineligible because they would fall below the low-volume threshold.

Response: We understand that some of the additional eligible clinicians may not exceed the low-volume threshold. However, as discussed in section III.I.3.c.(5) of this final rule, we are also finalizing an opt-in option that will allow eligible clinicians to opt-in to MIPS if the eligible clinician or group meets or exceeds at least one, but not all, of the low-volume threshold criteria. In addition, MIPS eligible clinicians may participate in MIPS as part of a group or virtual group which should improve their ability to exceed the low-volume threshold. We believe this option would allow the additional eligible clinicians the opportunity to participate in MIPS if they desired to do so.

Comment: Several commenters suggested that there is misalignment between the proposed expanded list of eligible clinician types for the MIPS and the scope of clinician types for the Advanced Alternative Payment Model path under the Quality Payment Program. Specifically, a few commenters noted that, currently, a number of clinician types (for example, clinical psychologists and certified nurse midwives) could be in an Advanced APM, but that we are proposing to include clinician types for MIPS that may not be eligible for the Advanced APM path under the Quality Payment Program. Thus, commenters suggested that we standardize the included clinician types across the Quality Payment Program unless there are appropriate clinical reasons for differences. One commenter requested clarification as to whether physical, occupational, and speech therapists, as eligible clinicians, can participate in the Advanced APMs path under the Quality Payment Program. Another commenter requested that we provide guidance on how APM entities, ACOs, and other health care organizations should identify these clinician types on their clinician participation lists.

Response: We note that the proposed expanded list of eligible clinician types for the MIPS is not misaligned with the scope of eligible clinicians for the Advanced APMs path under the Quality Payment Program. In accordance with section 1848(q)(1)(C)(i)(I) of the Act, we defined MIPS eligible clinician for the 2019 and 2020 MIPS payment years to include only physicians (as defined under section 1861(r) of the Act), physician assistants, nurse practitioners, clinician nurse specialists, and certified registered nurse anesthetists (and groups that include these clinicians). In contrast, we explained in the CY 2017 Quality Payment Program final rule (81 FR 77405 through 77406), for the Advanced APM path under the Quality Payment Program, the term ''eligible clinician'' is defined in section 1833(z)(3)(B) of the Act (by cross-reference to the definition of ''eligible professional'' in section 1848(k)(3)(B) of the Act), and includes: Physicians, physician assistants, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, certified nurse-midwives, clinical social workers, clinical psychologists, registered dietitians or nutrition professionals, physical or occupational therapists, qualified speech-language pathologists, and qualified audiologists, and a group that includes these professionals. Our proposed expansion of the list of MIPS eligible clinician types would actually align with the current scope of eligible clinicians under the Advanced APM path of the Quality Payment Program. Currently, any of those eligible clinicians who participate sufficiently in Advanced APMs can become QPs for a year and receive the associated APM Incentive Payment. We note that each APM has its own focus, and many offer participation opportunities for a broad scope of eligible clinicians. Although the design of existing or future APMs is beyond the scope of this final rule, we welcome ideas on how to further engage

the full scope of eligible clinicians as we work hard to develop more APM opportunities. Additionally, we finalized in the CY 2017 Quality Payment Program final rule (81 FR 77442) that the eligible clinicians for whom we would make QP determinations would be all the eligible clinicians participating in an APM Entity in an Advanced APM, as identified at each of three snapshot dates, during a QP Performance Period. The eligible clinicians for whom we make QP determinations are those identified on an Advanced APM's Participation List or Affiliated Practitioner List on one of those three dates. Lastly, we note that decisions about the eligible clinicians that are included on the Participation List or Affiliated Practitioner List for any particular Advanced APM are made based on the specific terms and conditions of the Advanced APM, which can vary based on the model test, entities involved, payment arrangements, and other factors.

After consideration of the public comments received, we are finalizing a modification of our proposal to amend § 414.1305 to revise the definition of a MIPS eligible clinician, as identified by a unique billing TIN and NPI combination used to assess performance, to mean any of the following (excluding those identified at § 414.1310(b)): A physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); beginning with the 2021 MIPS payment year, a physical therapist, occupational therapist, qualified speech-language pathologist; qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act); clinical psychologist (as defined by the Secretary for purposes of section 1861(ii) of the Act); and registered dietician or nutrition professional; and a group that includes such clinicians.

b. MIPS Determination Period

As discussed in the proposed rule (83 FR 35884 through 35886), currently MIPS uses various determination periods to identify certain MIPS eligible clinicians for consideration for certain applicable policies. For example, the low-volume threshold, non-patient facing, small practice, hospital-based, and ambulatory surgical center (ASC)-based determinations are on the same timeline with slight differences in the claims run-out policies, whereas the facility-based determinations has a slightly different determination period. The virtual group eligibility determination requires a separate election process. We proposed to add a virtual group eligibility determination period beginning in CY 2020 as discussed in section III.I.3.f.(2)(a) of this final rule. In addition, the rural and HPSA determinations do not utilize a determination period.

Under § 414.1305, the low-volume threshold determination period is described as a 24-month assessment period consisting of an initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period, and a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2020 MIPS payment year and future years, each segment of the low-volume threshold determination period includes a 30-day claims run out.

Under § 414.1305, the non-patient facing determination period is described as a 24-month assessment period consisting of an initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period and a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible MIPS clinician, group, or virtual group that is identified as non-patient facing during the initial 12-month segment will continue to be considered non-patient facing for the applicable year regardless of the results of the second 12-month segment analysis. For the 2020 MIPS payment year and future years, each segment of the non-patient facing determination period includes a 30-day claims run out.

In the CY 2018 Quality Payment Program final rule (82 FR 53581), we finalized that for the small practice size determination period, we would utilize a 12-month assessment period, which consists of an analysis of claims data that spans from the last 4 months of a calendar year 2 years prior to the performance period followed by the first 8 months of the next calendar year and includes a 30-day claims run out.

In the CY 2017 Quality Payment Program final rule (81 FR 77238 through 77240), we finalized that to identify a MIPS eligible clinician as hospital-based we would use claims with dates of service between September 1 of the calendar year 2 years preceding the performance period through August 31 of the calendar year preceding the performance period, but in the event it is not operationally feasible to use claims from this time period, we would use a 12-month period as close as practicable to this time period.

In the CY 2018 Quality Payment Program final rule (82 FR 53684 through 53685), we finalized that to identify a MIPS eligible clinician as ASC-based, we would use claims with dates of service between September 1 of the calendar year 2 years preceding the performance period through August 31 of the calendar year preceding the performance period, but in the event it is not operationally feasible to use claims from this time period, we would use a 12-month period as close as practicable to this time period.

In the CY 2018 Quality Payment Program final rule (82 FR 53760), we discussed, but did not finalize, our proposal or the alternative option for how an individual clinician or group would elect to use and be identified as using facility-based measurement for the MIPS program. Because we were not offering facility-based measurement until the 2019 MIPS performance period, we did not need to finalize either of these for the 2018 MIPS performance period. However, as discussed in section III.I.3.i.(1)(d) of this final rule, we proposed to amend § 414.1380(e)(2)(i)(A) to specify a criterion for a clinician to be eligible for facility-based measurement. Specifically, that is, the clinician furnishes 75 percent or more of his or her covered professional services in sites of service identified by the place of service codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, or emergency room setting based on claims for a 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period with a 30-days claims run out. We did not propose to utilize the MIPS determination period for purposes of the facility-based determination because for the facility-based determination, we are only using the first segment of the MIPS determination period. We are using the

first segment because the performance period for measures in the hospital value-based purchasing program overlapped in part with that determination period. If we were to use the second segment, we could not be assured that the clinician actually worked in the hospital on which their MIPS score would be based during that time. We believe this approach provides clarity and is a cleaner than providing a special exception for the facility-based determination in the MIPS determination period for the second segment. We refer readers to section III.I.3.i.(1)(d) for further details on the facility-based determinations and the time periods that are applicable to those determinations.

In the CY 2018 Quality Payment Program final rule (82 FR 53602 through 53604), we finalized that for the virtual group eligibility determination period, we would utilize an analysis of claims data during an assessment period of up to 5 months that would begin on July 1 and end as late as November 30 of the calendar year prior to the applicable performance period and include a 30-day claims run out. To capture a real-time representation of TIN size, we finalized that we would analyze up to 5 months of claims data on a rolling basis, in which virtual group eligibility determinations for each TIN would be updated and made available monthly. We noted that an eligibility determination regarding TIN size is based on a relative point in time within the 5-month virtual group eligibility determination period, and not made at the end of such 5-month determination period. Beginning with the 2019 performance period, we proposed to amend § 414.1315(c)(1) to establish a virtual group eligibility determination period to align with the first segment of the MIPS determination period, which includes an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. We refer readers to section III.I.3.f.(2)(a) of this final rule for further details on this proposal.

In addition, we have established other special status determinations, including rural area and HPSA. Rural area is defined at § 414.1305 as a ZIP code designated as rural, using the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data set available. HPSAs are defined at § 414.1305 as areas designated under section 332(a)(1)(A) of the Public Health Service Act.

We understand that the current use of various MIPS determination periods is complex and causes confusion. Therefore, beginning with the 2021 MIPS payment year, we proposed to consolidate several of these policies into a single MIPS determination period that would be used for purposes of the low-volume threshold and to identify MIPS eligible clinicians as non-patient facing, a small practice, hospital-based, and ASC-based, as applicable. We did not propose to include the facility-based or virtual group eligibility determination periods or the rural and HPSA determinations in the MIPS determination period, as they each require a different process or timeline that does not align with the other determination periods, or do not utilize determination periods. We invited public comments on the possibility of incorporating these determinations into the MIPS determination period in the future.

There are several reasons we believe a single MIPS determination period for most of the eligibility criteria is the most appropriate. First, it would simplify the program by aligning most of the MIPS eligibility determination periods. Second, it would continue to allow us to provide eligibility determinations as close to the beginning of the performance period as feasible. Third, we believe a timeframe that aligns with the fiscal year is easier to communicate and more straightforward to understand compared to the current determination periods. Finally, it would allow us to extend our data analysis an additional 30 days.

It is important to note that during the final 3 months of the calendar year in which the performance period occurs, in general, we do not believe it would be feasible for many MIPS eligible clinicians who join an existing practice (existing TIN) or join a newly formed practice (new TIN) to participate in MIPS as individuals. We refer readers to section III.I.3.i.(2)(b) of this final rule for more information on the proposed reweighting policies for MIPS eligible clinicians who join an existing practice or who join a newly formed practice during this timeframe.

We requested comments on our proposal that beginning with the 2021 MIPS payment year, the MIPS determination period would be a 24-month assessment period including a two-segment analysis of claims data consisting of: (1) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period; and (2) a second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs. The first segment would include a 30-day claims run out. The second segment would not include a claims run out, but would include quarterly snapshots for informational use only, if technically feasible. For example, a clinician could use the quarterly snapshots to understand their eligibility status between segments. Specifically, we believe the quarterly snapshots would be helpful for new TIN/NPIs and TINs created between the first segment and the second segment allowing them to see their preliminary eligibility status sooner. Without the quarterly snapshots, these clinicians would not have any indication of their eligibility status until just before the submission period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold, or a MIPS eligible clinician that is identified as non-patient facing, a small practice, hospital-based, or ASC-based, as applicable, during the first segment would continue to be identified as such for the applicable MIPS payment year regardless of the second segment. For example, for the 2021 MIPS payment year, the first segment would be October 1, 2017 through September 30, 2018, and the second segment would be October 1, 2018 through September 30, 2019. However, based on our experience with the Quality Payment Program, we believe that some eligible clinicians, whose TIN or TIN/NPIs are identified as eligible during the first segment and do not exist in the second segment, are no longer utilizing these same TIN or TIN/NPI combinations. Therefore, because those TIN or TIN/NPIs would not exceed the low-volume threshold in the second segment, they would no longer be eligible for MIPS. For example, in the 2019 performance period a clinician exceeded the low-volume threshold during the first segment of the determination period (data from the end of CY 2017 to early 2018) under one TIN; then in CY 2019 the clinician switches practices under a new TIN and during segment two of the determination period. Therefore, it is determined that the clinician is not eligible (based on CY 2019 data) under either TIN. This clinician would not be eligible to participate in MIPS based on either segment of the determination

period because the TIN that was assessed for the first segment of the determination period no longer exists. So there are no charges or services that would be available to assess in the second segment for that TIN and the new TIN assessed during the second segment was not eligible. In this scenario, though the clinician exceeded the low-volume threshold criteria initially, the clinician is not required to submit any data based on TIN eligibility determinations. However, it is important to note that if a TIN or TIN/NPI did not exist in the first segment but does exist in the second segment, these eligible clinicians could be eligible for MIPS. For example, the eligible clinician may not find their TIN or TIN/NPI in the Quality Payment Program lookup tool but may still be eligible if they exceed the low-volume threshold in the second segment. We proposed to incorporate this policy into our proposed definition of MIPS determination period at § 414.1305. We also requested comments on our proposals to define MIPS determination period at § 414.1305 and modify the definitions of low-volume threshold, non-patient facing, a small practice, hospital-based, and ASC-based at § 414.1305 to incorporate references to the MIPS determination period.

The following is a summary of the public comments received on our proposals and our responses:

Comment: Several commenters supported our proposal, noting that the varying determination periods add unnecessary confusion and this policy would reduce complexity. One commenter recommended we continue our efforts to align the determination period with facility-based, virtual groups, and rural and HPSA eligibility determinations.

Response: We appreciate the commenters' support.

Comment: Some commenters stated that in order for clinicians to successfully perform over a 12-month period for the cost and quality performance categories, the clinician must know before the start of the performance period their full eligibility status for MIPS.

Response: We understand that it is important for clinicians to know their eligibility status prior to the performance period. It is our intention to provide eligibility determinations as close to the beginning of the performance period as feasible. We would like to assure commenters that we are working diligently to provide clinicians with this information at the earliest time possible.

Comment: A few commenters supported using quarterly snapshots for the second segment of the MIPS determination period to show preliminary eligibility status. One commenter recommended that the first quarterly snapshot for the second segment be mandated to be available in the look-up tool no later than January 1, 2019, the first day of the CY 2019 performance period. One commenter recommended that if a clinician does not exceed the low-volume threshold during the quarterly snapshots, then they should be automatically excluded from MIPS unless further snapshots allow for an opt-in similar to the proposed low-volume threshold opt-in policy.

Response: While the statute does not require the use of quarterly snapshots, we believe the snapshots may provide useful information for eligible clinicians. Therefore, we are working to provide the quarterly snapshots, if feasible. In addition, it is important to note that the quarterly snapshots are being provided for informational use only and are not final until after the second segment of the MIPS determination period closes and a reconciliation between the segments occurs. Since the quarterly snapshots are not final this information is subject to change and should not be considered the final eligibility determination. The eligibility determination will be made after a reconciliation of the first and second segment of the MIPS determination period.

Comment: Several commenters did not support the proposed 24-month MIPS determination period, with most arguing for a single determination period. These commenters recommended that the MIPS determination period be a single, 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs. Another commenter stated that a preliminary assessment for the exclusions would be useful, but the final decision should be made only based on performance period data. One commenter stated that the two segments lead to confusion and uncertainty about participation status and requested that the second segment have an end date and notification date prior to the start of the performance year. Another commenter opposed the shift in determination period dates unless the eligibility tool on the Quality Payment Program website is updated in a timely fashion prior to the performance year.

Response: If we had a singular eligibility determination period we would not be able to identify eligible clinicians who switch practices between the first and second segments of the MIPS determination period. We estimate that this would affect approximately 13 percent of MIPS eligible clinicians who may switch practices between the first and second determination periods. If we did not conduct the first segment analyses then there would be no way to inform clinicians of their eligibility status prior to the performance period. The second segment accounts for the identification of additional, previously unidentified individual eligible clinicians and groups who do not exceed the low-volume threshold or meet other special circumstances. It is our intention that the eligibility tool on the Quality Payment Program website will be updated to provide eligibility determinations prior to the start of the performance period.

Comment: A few commenters noted the challenge for clinicians who exceeded the low-volume threshold during the first segment of the MIPS determination period and then discovered late in the performance period, after the second segment of the MIPS determination period that they are no longer eligible. One commenter suggested that if a clinician exceeds the low-volume threshold during the second segment of MIPS eligibility determination period, the clinician should remain excluded unless the clinician opts-in. One commenter noted that these issues may be less of a problem if the opt-in proposal is finalized. Another commenter requested the definition of the MIPS determination period be expanded to account for scenarios when an eligible clinician or group exceeded the low-volume threshold during the first segment but falls below the low-volume threshold during the second segment or when a eligible clinician or group is not categorized as a special status (such as non-patient facing) during the first segment but gains special status during the second segment.

Response: We agree that the issues identified by the commenters may be alleviated with the opt-in policy. If an eligible clinician finds out following the second segment of the MIPS determination period that they are no longer eligible to participate in MIPS and they meet the requirements of the opt-in policy they may choose to participate in MIPS by opting-in to MIPS. Regarding changing statuses between the two segments of the MIPS determination period, we are finalizing

the definition of the MIPS determination period at § 414.1305(2) that subject to § 414.1310(b)(1)(iii), an individual eligible clinician or group that is identified as not exceeding the low-volume threshold or as having special status during the first segment of the MIPS determination period will continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician or group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of that segment. While we would like to ensure that there is as much flexibility as possible within the MIPS program, we believe it is important that MIPS eligible clinicians choose how they will participate in MIPS as a whole, either as an individual or as a group. Whether MIPS eligible clinicians participate in MIPS as an individual or group, it is critical for us to assess the performance of individual MIPS eligible clinicians or groups across the four performance categories collectively as either an individual or group in order for the final score to reflect performance at a true individual or group level and to ensure the comparability of data.

After consideration of the public comments received, we are finalizing our proposal to define MIPS determination period at § 414.1305 beginning with the 2021 MIPS payment year, as a 24-month assessment period including a two-segment analysis of claims data consisting of: (1) An initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period; and (2) a second 12-month segment beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs. The first segment would include a 30–day claims run out. The second segment would not include a claims run out, but would include quarterly snapshots for informational use only, if technically feasible. In addition, we are finalizing that subject to § 414.1310(b)(1)(iii), an individual eligible clinician or group that is identified as not exceeding the low-volume threshold or as having special status during the first segment of the MIPS determination period will continue to be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician or group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of that segment. Finally, at § 414.1305 we are finalizing our proposal to modify the definitions of low-volume threshold, non-patient facing MIPS eligible clinician, a small practice, hospital-based MIPS eligible clinician, and ASC-based MIPS eligible clinician at § 414.1305 to incorporate references to the MIPS determination period.

c. Low-Volume Threshold

(1) Overview

As discussed in the CY 2019 PFS proposed rule (83 FR 35886), section 1848(q)(1)(C)(iv) of the Act, as amended by section 51003(a)(1)(A)(ii) of the Bipartisan Budget Act of 2018, provides that, for performance periods beginning on or after January 1, 2018, the low-volume threshold selected by the Secretary may include one or more or a combination of the following (as determined by the Secretary): (1) The minimum number of part B-enrolled individuals who are furnished covered professional services (as defined in section 1848(k)(3)(A) of the Act) by the eligible clinician for the performance period involved; (2) the minimum number of covered professional services furnished to part B-enrolled individuals by such clinician for such performance period; and (3) the minimum amount of allowed charges for covered professional services billed by such clinician for such performance period.

Under § 414.1310(b)(1)(iii), for a year, eligible clinicians who do not exceed the low-volume threshold for the performance period with respect to a year are excluded from MIPS. Under § 414.1305, the low-volume threshold is defined as, for the 2019 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume threshold determination period, has Medicare Part B allowed charges less than or equal to $30,000 or provides care for 100 or fewer Part B-enrolled Medicare beneficiaries. In addition, for the 2020 MIPS payment year and future years, the low-volume threshold is defined as the low-volume threshold that applies to an individual eligible clinician or group that, during the low-volume threshold determination period, has Medicare Part B allowed charges less than or equal to $90,000 or provides care for 200 or fewer Part B-enrolled Medicare beneficiaries. The low-volume threshold determination period is a 24-month assessment period consisting of: (1) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding the performance period; and (2) a second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician or group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the low-volume threshold determination period includes a 60-day claims run out. For the 2020 MIPS payment year, each segment of the low-volume threshold determination period includes a 30-day claims run out.

(2) Amendments To Comply With the Bipartisan Budget Act of 2018

In the CY 2019 PFS proposed rule (83 FR 35887), we proposed to amend § 414.1305 to modify the definition of low-volume threshold in accordance with section 1848(q)(1)(C)(iv) of the Act, as amended by section 51003(a)(1)(A)(ii) of the Bipartisan Budget Act of 2018. Specifically, we requested comments on our proposals that for the 2020 MIPS payment year, we will utilize the minimum number (200 patients) of Part B-enrolled individuals who are furnished covered professional services by the eligible clinician or group during the low-volume threshold determination period or the minimum amount ($90,000) of allowed charges for covered professional services to Part B-enrolled individuals by the eligible clinician or group during the low-volume threshold determination period.

The following is a summary of the public comments received on our proposals and our responses:

Comment: A few commenters supported the technical amendments passed by Congress in the Bipartisan Budget Act of 2018, specifically noting support for the proposal to not use Part B drugs for the low-volume threshold determinations, and to rely instead on covered professional services (instead of all Medicare Part B items and services) to determine MIPS eligibility. Other commenters supported that items or services beyond the PFS, especially Part B drugs, would not be subject to the

MIPS payment adjustment factor or the MIPS additional payment adjustment factor.

Response: We appreciate the commenters' support.

Comment: One commenter expressed concern about using covered professional services for low-volume threshold determinations because it could make it difficult for eligible clinicians and groups to predict whether they are subject or excluded from MIPS. Additionally, the commenter recommended that we provide timely notification based on the results of the first determination period.

Response: We understand that utilizing covered professional services rather than all Medicare Part B items and services is a different approach to calculating the low-volume threshold. For the CY 2018 and CY 2019 MIPS payment years, we have utilized two calculations in order to make low-volume threshold determinations: The number of patients and the amount of allowed charges for each eligible clinician or group. These calculations were based on the patients who were furnished any Part B item or service, and on the allowed charges for all Part B items and services. Beginning for the 2020 MIPS payment year, the calculations will instead be based only on covered professional services. A clinician may identify and monitor a claim to distinguish covered professional services from Part B items and services by calculating one professional claim line with positive allowed charges to be considered one covered professional service. In addition, we believe the quarterly snapshots will be helpful for new TIN/NPIs and TINs created between the first segment and the second segment allowing them to see their preliminary eligibility status sooner. In addition, we believe these policies will allow clinicians to understand their eligibility determination as close to the beginning of the performance period as feasible.

After consideration of the public comments received, we are finalizing our proposal to amend § 414.1305 to modify the definition of low-volume threshold to mean for the 2020 MIPS payment year, we will utilize the minimum number (200 patients) of Part B-enrolled individuals who are furnished covered professional services by the eligible clinician or group during the low-volume threshold determination period or the minimum amount ($90,000) of allowed charges for covered professional services to Part B-enrolled individuals by the eligible clinician or group during the low-volume threshold determination period.

(3) MIPS Program Details

In the CY 2019 PFS proposed rule (83 FR 35887), we requested comments on our proposal to modify § 414.1310 to specify in paragraph (a), Program Implementation, that except as specified in paragraph (b), MIPS applies to payments for covered professional services furnished by MIPS eligible clinicians on or after January 1, 2019. We also requested comments on our proposal to revise § 414.1310(b)(1)(ii) to specify that for a year, a MIPS eligible clinician does not include an eligible clinician that is a Partial Qualifying APM Participant (as defined in § 414.1305) and does not elect, as discussed in section III.I.4.e. of this final rule, to report on applicable measures and activities under MIPS. Finally, we requested comments on our proposal to revise § 414.1310(d) to specify that, in no case will a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) apply to payments for covered professional services furnished during a year by eligible clinicians (including those described in paragraphs (b) and (c) of this section) who are not MIPS eligible clinicians, including those who voluntarily report on applicable measures and activities under MIPS.

We did not receive any comments regarding these proposals.

We are finalizing our proposal to modify § 414.1310 to specify in paragraph (a), Program Implementation, that except as specified in paragraph (b), MIPS applies to payments for covered professional services furnished by MIPS eligible clinicians on or after January 1, 2019. We are also finalizing our proposal to revise § 414.1310(b)(1)(ii) to specify that for a year, a MIPS eligible clinician does not include an eligible clinician that is a Partial Qualifying APM Participant (as defined in § 414.1305) and does not elect, as discussed in section III.I.4.e. of this final rule, to report on applicable measures and activities under MIPS. Finally, we are finalizing our proposal to revise § 414.1310(d) to specify that, in no case will a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) apply to payments for covered professional services furnished during a year by eligible clinicians (including those described in paragraphs (b) and (c) of this section) who are not MIPS eligible clinicians, including those who voluntarily report on applicable measures and activities under MIPS.

(4) Addition of Low-Volume Threshold Criterion Based on Number of Covered Professional Services

In the CY 2018 Quality Payment Program final rule (82 FR 53591), we received several comments in response to the proposed rule regarding adding a third criterion of items and services for defining the low-volume threshold. We refer readers to that rule for further details.

As discussed in the CY 2019 PFS proposed rule (83 FR 35887) for the 2021 MIPS payment year and future years, we proposed to add one additional criterion to the low-volume threshold determination—the minimum number of covered professional services furnished to Part B-enrolled individuals by the clinician. Specifically, we requested comments on our proposal, for the 2021 MIPS payment year and future years, that eligible clinicians or groups who meet at least one of the following three criteria during the MIPS determination period will not exceed the low-volume threshold: (1) Those who have allowed charges for covered professional services less than or equal to $90,000; (2) those who provide covered professional services to 200 or fewer Part B-enrolled individuals; or (3) those who provide 200 or fewer covered professional services to Part B-enrolled individuals.

For the third criterion, we proposed to set the threshold at 200 or fewer covered professional services furnished to Part B-enrolled individuals for several reasons. First, in the CY 2018 Quality Payment Program final rule (82 FR 53589 through 53590), although we received positive feedback from stakeholders on the increased low-volume threshold, we also heard from some stakeholders that they would like to participate in the program. Second, setting the third criterion at 200 or fewer covered professional services, combined with our proposed policy with respect to opting in to MIPS, allows us to ensure that a significant number of eligible clinicians have the ability to opt-in if they wish to participate in MIPS. Finally, when we considered where to set the low-volume threshold for covered professional services, we examined two options: 100 or 200 covered professional services. For 100 covered professional services, there is some historical precedent. In the CY 2017 Quality Payment Program final rule (81 FR 77062), we finalized a low-volume threshold that excluded individual eligible clinicians or groups that have Medicare Part B allowed charges less than $30,000 or that provide care for 100 or fewer Part B-

enrolled Medicare beneficiaries; we believe the latter criterion is comparable to 100 covered professional services. Conversely for 200 covered professional services, in the CY 2018 Quality Payment Program final rule with comment period (82 FR 53588), we discussed that based on our data analysis, excluding individual eligible clinicians or groups that have Medicare Part B allowed charges less than or equal to $90,000 or that provide care for 200 or fewer Part B-enrolled Medicare beneficiaries decreased the percentage of MIPS eligible clinicians that come from small practices. In addition, in the CY 2018 Quality Payment final rule (82 FR 53955), we codified at § 414.1380(b)(1)(iv) that the minimum case requirements for quality measures are 20 cases, which both services thresholds being considered (100 or 200) exceed. We also codified at § 414.1380(b)(1)(v) that the minimum case requirement for the all-cause hospital readmission measure is 200 cases, which only the 200 services threshold consideration exceeds. We believe that setting a threshold of 200 services for the third criterion, combined with our proposed policy for opting in to MIPS, strikes the appropriate balance between allowing a significant number of eligible clinicians the ability to opt-in (as described in this section) to MIPS and consistency with the previously established low-volume threshold criteria. In section VII.F.8.b. of this final rule, we estimated no additional clinicians would be excluded if we add the third criterion because a clinician that cares for at least 200 beneficiaries would have at least 100 or 200 services; however, we estimate 27,903 clinicians would opt-in with the low-volume threshold at 200 services, as compared to 12,242 clinicians if we did not add the third criterion. If we set the third criterion at 100 services, then we estimate 32,828 clinicians would opt-in.

The following is a summary of the public comments received on our proposals and our responses:

Comment: Many commenters supported the low-volume threshold criteria and the newly proposed criterion based on number of covered professional services. Many commenters noted this policy will reduce burden, will help mitigate adverse effects on solo and small or rural practices, and combined with the opt-in policy, allow practices to transition into MIPS. Commenters specifically noted that the addition of the third criteria and the proposed opt-in policy will permit clinicians who are ready to participate if they had been previously excluded. Several commenters also mentioned the newly proposed criterion would increase the number of eligible clinicians that are able to participate in MIPS.

Response: We appreciate the commenters' support.

Comment: One commenter noted concern that MIPS reporting requirements may place significant financial, administrative, and operational burdens on clinicians treating a low volume of Medicare patients.

Response: It is important to note that clinicians who treat a low-volume of Part B Medicare beneficiaries may be excluded from MIPS if they fall below the low-volume threshold.

Comment: Many commenters opposed the low-volume threshold criteria because they noted the thresholds for the individual criteria are too high and excluded too many clinicians and added complexity. Many of these commenters stated that the proposed low-volume threshold limits the number of clinicians in the budget neutral pool and effectively precludes MIPS eligible clinicians with good performance from earning more than a nominal payment adjustment. Several commenters expressed concern that eligible clinicians who make large financial commitments and organizational infrastructure modifications to obtain designation as exceptional performers would be adversely affected. A few commenters noted that practices with these types of clinicians do not have large compliance staff and other resources that larger groups have, and therefore, it may be difficult for these clinicians to report and navigate the program with short notice. Many commenters also stated the proposed low-volume threshold would not move the Quality Payment Program toward value and could jeopardize clinicians, particularly those in small or rural practices, by leaving them unprepared should they become MIPS eligible. One commenter expressed concerned that the threshold could make it difficult to benchmark data because fewer practices would be expected to participate in the program. One commenter requested lowering the performance threshold to the $30,000 in Part B claims or 100 Part B patients threshold that we utilized for 2017 MIPS performance period or lowering the criteria for the opt-in policy. A few commenters recommended that we consider revisiting the low-volume thresholds to increase the percentage of clinicians that are eligible.

Response: We believe that the proposed low-volume threshold strikes the correct balance by including a sufficient number of clinicians, while excluding those who are not quite ready to participate and need additional time to prepare, such as clinicians in small and rural practices. The addition of the third criterion for covered professional services, in conjunction with the opt-in policy, creates a highly-desired opportunity to join MIPS and provides new flexibility for clinicians otherwise excluded to drive value and improve patient outcomes when they are prepared to meaningfully participate. We have heard feedback from many clinicians indicating the desire to participate in MIPS. This feedback was especially prominent from clinicians in small practices who were initially included in the 2017 performance year, but excluded in 2018 due to the increase in the low-volume threshold. The addition of the third criterion for covered professional services, in conjunction with the opt-in policy, provides new flexibilities to participate in MIPS, which creates opportunities for clinicians to drive value and improve patient outcomes. While we understand that the inclusion of any new element may add complexity, we believe that this enhancement will benefit both clinicians and beneficiaries. We will work closely with the clinician and stakeholder community to develop educational resources to help clarify the requirements and reduce any potential confusion. Further, we do not believe that the addition of the third criterion for covered professional services will exclude more clinicians, as clinicians who are currently treating over 200 beneficiaries would likely also be furnishing over 200 covered professional services. As discussed, in section III.I.3.j. of this final rule, we are finalizing our proposal to increase the MIPS performance threshold to 30 points and the exceptional performance bonus to 75 points in 2019. We believe that this will likely result in an evolving distribution of payment adjustments for high performing clinicians who have made the investments to advance quality improvement, enhance clinical practice, and improve outcomes for beneficiaries.

We understand that some MIPS eligible clinicians may work in small group practices and may not have the same resources as a large group. As discussed in the proposed rule (83 FR 35882) we intend to continue to offer tailored flexibilities to help these clinicians to participate in the program. For example, we are finalizing to retain a small practice bonus under MIPS by moving it to the quality performance category. We will also continue to

support small and rural practices by offering free and customized resources available within local communities, including direct, one-on-one support from the Small, Underserved, and Rural Support Initiative along with our other no-cost technical assistance. Further, we note that we are finalizing to amend our regulatory text to allow small practices to continue using the Medicare Part B claims collection type and submission types, either as an individual or as a group. Finally, small practices may continue to choose to participate in MIPS as a virtual group. In addition, we will continue offering the voluntary reporting option, and encourage clinicians to pursue this pathway so that they can familiarize themselves with the program requirements and prepare to participate in future years. We clarify that for the first several years of MIPS, which we view as transitional, we anticipate that the distribution of MIPS payment adjustments will be spread across many more clinicians and groups due to the moderate performance thresholds and not necessarily because clinicians are excluded by the low-volume threshold. For example, in 2017, the performance threshold was set at 3 points, which resulted in an estimated participation rate of 91 percent of MIPS eligible clinicians. As discussed in section III.I.3.j. of this final rule, we are finalizing our proposal to increase the MIPS performance threshold to 30 points and the exceptional performance bonus to 75 points in 2019, which we anticipate will likely result in an evolving distribution of payment adjustments for high performing clinicians who have made the investments to advance quality improvement, enhance clinical practice, and improve outcomes for beneficiaries.

We do not believe that the total amount of dollars available for the payment adjustments is low because too many clinicians are excluded from the program. After incorporating the data submitted for the 2017 MIPS performance period (which we refer to as Quality Payment Program Year 1 data) to estimate the CY 2021 MIPS payment year, an estimated three-quarters (approximately $66.6B) of all PFS dollars will be included in the CY 2021 MIPS payment year. Of the remaining one-quarter (approximately $23.2B), only 2 percent (or less than 1 percent of total PFS dollars) were associated with clinicians who did not meet the low-volume threshold. The remaining clinicians excluded from the budget neutral payment adjustments were Qualifying APM Participants, clinicians with ineligible specialties, and newly enrolled clinicians (11 percent of total PFS dollars). We considered the impact of lowering the low-volume threshold to $30,000/100 beneficiaries/100 covered professional services from the finalized low-volume threshold of this final rule based on the budget neutrality distributions and the size of the total payments. As seen in Figure 1, reducing the low-volume threshold to $30,000/100 beneficiaries/100 covered professional services) [16] leads to an increase in the number of MIPS eligible clinicians (by approximately 73,000 clinicians) and on the dollars available in the budget neutral pool ($131M), but has minimal impact on the maximum possible positive payment adjustment. The majority of clinicians excluded from MIPS with the higher low-volume threshold are clinicians in small practices with fewer than 15 clinicians. We understand the importance of ensuring meaningful participation in the program. We will continue to strike a balance between ensuring sufficient participation in MIPS while also addressing the needs of small practices that may find it difficult to meet the program requirements.

[16] The estimated values when the threshold is set to $30,000/100 beneficiaries/100 covered professional services are not reflective of actual MIPS results for the 2019 MIPS payment year. There are slight differences in data sources and methods compared to the 2019 MIPS payment year such as the low-volume threshold in this model is based on covered PFS services and the model assumes a 33 percent opt-in assumption and uses the QP thresholds for the 2019 QP performance period.

FIGURE 1: Budget neutral pool for redistribution and maximum payment adjustment for different low-volume thresholds. (Estimates apply CY2019 MIPS performance period final policies)*

	$30,000/100 beneficiairies/100 covered professional services	$90,000/200 beneficiairies/200 covered professional services
Budget neutral pool for redistribution	$441	$310
Maximum payment adjustment	5.0%	4.7%
Number of MIPS Eligible Clinicians	871,238	797,990

Data: CY 2019 Quality Payment Program Final Rule Regulatory Impact Analysis data; with 33 percent opt-in assumption.
**The estimates presented only reflect the impact of lowering the low-volume threshold. All other model specifications are reflective of CY 2019 performance period finalized policies and the data sources described in the regulatory impact analysis of this final rule.*

Comment: One commenter encouraged us to continue reviewing the low-volume threshold annually to ensure that the low-volume threshold serves the purpose of excluding those for which the work of MIPS reporting would outweigh the number of Medicare beneficiaries impacted. A few commenters stated that the burden and cost of reporting for those who do not exceed the low-volume threshold far exceeds any possible benefit.

Response: We are committed to continuing program simplification and burden reduction as we move into future years, including identifying additional opportunities to help clinicians successfully participate. We will continue to assess the low-volume threshold, as needed, to help reduce burden for clinicians, especially those in small and rural practices, who still find participation challenging. We believe that it is important to implement the low-volume threshold in a way that provides more time for clinicians to familiarize themselves with the performance requirements under MIPS and, most importantly, prepare to drive clinical quality improvement and improved outcomes for all Medicare beneficiaries. We refer readers to the regulatory impact analysis in section VII.F.8.b. of this final rule for further details on the burden and cost of reporting.

Comment: A few commenters requested that we clarify how a covered professional service would count when calculating the low-volume threshold. Other commenters supported defining the concept of a covered professional service as a single billing of a CPT code. One commenter suggested 15-minute increments as the defining characteristic of a professional service.

Response: For the CY 2018 and CY 2019 MIPS payment years, we have utilized two calculations in order to make low-volume threshold determinations: The number of patients and the amount of allowed charges for each eligible clinician or group. These calculations were based on the patients who were furnished any Part B item or service, and on the allowed charges for all Part B items and services. Beginning for the 2020 MIPS payment year, the calculations will instead be based on covered professional services rather than all Part B items and services.

Comment: One commenter requested clarification on the definition of allowed charges for the low-volume threshold. The commenter asked if allowed charges is equivalent to the full PFS amount or the PFS amount minus the 20 percent co-pay. The commenter also asked about the applicable Multiple Procedure Payment Reduction for a given session. The commenter noted that each option would result in a different dollar amount.

Response: In general, allowed charges refers to the maximum amount Medicare will pay for a covered professional service under the PFS, which is the PFS fee schedule amount reduced by the applicable beneficiary co-payment. For purposes of MIPS low-volume threshold determinations, allowed charges are calculated before any Multiple Procedure Payment Reduction is applied. We refer readers to the CY 2018 Quality Payment Program final rule with comment period (82 FR 53578 through 53579) where we discuss the items and services to which the MIPS payment adjustment could be applied under Part B.

Comment: A few commenters requested we outline a plan for the low-volume threshold, such as a roadmap approach in which we propose and adopt lower thresholds for several performance years at a time.

Additionally, the commenters requested that we describe if CMS has plans to include currently excluded clinicians in the MIPS program in the future. A few commenters asked for a report on the number of low-volume clinicians that elect to be eligible and for us to use this experience to modify the low-volume threshold criteria in future years to move more clinicians into value-based programs.

Response: We agree that providing more clarity and stability into the future of MIPS would be helpful and are interested in working with stakeholders on what such future changes should look like. We are working to provide as much consistency as possible for the low-volume threshold while being flexible and considering changing needs. We note that we are finalizing the low-volume threshold for the 2021 MIPS payment year and future years, as well. Regarding a report on the number of clinicians who are excluded due to the low-volume threshold but elect to opt-in to MIPS, we will consider this suggestion for our MIPS Experience Report.

After consideration of the public comments received, we are finalizing our proposal to modify the definition of low-volume threshold at § 414.1305, to mean that for the 2021 MIPS payment year and future years, that eligible clinicians or groups who meet at least one of the following three criteria during the MIPS determination period will not exceed the low-volume threshold: (1) Those who have allowed charges for covered professional services less than or equal to $90,000; (2) those who provide covered professional services to 200 or fewer Part B-enrolled individuals; or (3) those who provide 200 or fewer covered professional services to Part B-enrolled individuals.

(5) Low-Volume Threshold Opt-In

In the CY 2018 Quality Payment Program proposed rule (82 FR 30026), we proposed the option to opt-in to MIPS participation if clinicians might otherwise be excluded under the low-volume threshold. We received general support from comments received on that final rule (82 FR 53589). However, we did not finalize the proposal for the 2019 MIPS performance period at that time. We were concerned that we would not be able to operationalize this policy in a low-burden manner to MIPS eligible clinicians as it was proposed.

After consideration of operational and user experience implications of an opt-in policy, we proposed an approach we believed could be implemented in a way that provides the least burden to clinicians. As discussed in the CY 2019 PFS proposed rule (83 FR 35887 through 35890), we proposed to modify § 414.1310(b)(1)(iii) to provide that beginning with the 2021 MIPS payment year, if an eligible clinician or group meets or exceeds at least one, but not all, of the low-volume threshold determinations, including as defined by dollar amount (less than or equal to $90,000) or number of beneficiaries (200 or fewer), or number of covered professional services (200 or fewer), then such eligible individual or group may choose to opt-in to MIPS.

This policy would apply to individual eligible clinicians and groups who exceed at least one, but not all, of the low-volume threshold criteria and would otherwise be excluded from MIPS participation as a result of the low-volume threshold. We believed that it would be beneficial to provide, to the extent feasible, such individual eligible clinicians and groups with the ability to opt-in to MIPS. Conversely, this policy would not apply to individual eligible clinicians and groups who exceed all of the low-volume threshold criteria, who unless otherwise excluded, are required to participate in MIPS. In addition, this policy would not apply to individual eligible clinicians and groups who do not exceed any of the low-volume threshold criteria, who would be excluded from MIPS participation without the ability to opt-in to MIPS. Although we believe we proposed the appropriate balance for the low-volume threshold elements and the opt-in policy, we requested comments on other low-volume threshold criteria and supporting justification for the recommended criteria.

Under the proposed policies, we estimated clinician eligibility based on the following (we refer readers to the regulatory impact analysis in section VII.F.8.b. of this final rule for further details on our assumptions): (1) Eligible because they exceed all three criteria of the low-volume threshold and are not otherwise excluded (estimated 770,000 based on our assumptions of who did individual and group reporting); (2) eligible because they exceed at least one, but not all, of the low-volume threshold criteria and elect to opt-in (estimated 28,000 for a total MIPS eligible clinician population of approximately 798,000); (3) potentially eligible if they either did group reporting or elected to opt-in [17] (estimated 390,000); (4) excluded because they do not exceed any of the low-volume threshold criteria (estimated 78,000); and (5) excluded due to non-eligible specialty, newly enrolled, or QP status (estimated 209,000).

We proposed that applicable eligible clinicians who meet one or two, but not all, of the criteria to opt-in and are interested in participating in MIPS would be required to make a definitive choice to either opt-in to participate in MIPS or choose to voluntarily report before data submission (83 FR 35888). If they do not want to participate in MIPS, they will not be required to do anything and will be excluded from MIPS under the low-volume threshold. For those who do want to participate in MIPS, we considered the option of allowing the submission of data to signal that the clinician is choosing to participate in MIPS. However, we anticipated that some clinicians who utilize the quality data code (QDC) claims submission type may have their systems coded to automatically append QDCs on claims for eligible patients. We were concerned that they could submit a QDC code and inadvertently opt-in when that was not their intention.

For individual eligible clinicians and groups to make an election to opt-in or voluntarily report to MIPS, they will make an election via the Quality Payment Program portal by logging into their account and simply selecting either the option to opt-in (positive, neutral, or negative MIPS adjustment) or to remain excluded and voluntarily report (no MIPS adjustment). Once the eligible clinician has elected to participate in MIPS, the decision to opt-in to MIPS will be irrevocable and cannot be changed for the applicable performance period. Clinicians who opt-in will be subject to the MIPS payment adjustment during the applicable MIPS payment year. Clinicians who do not decide to opt-in to MIPS will remain excluded and may choose to voluntarily report. Such clinicians will not receive a MIPS payment adjustment factor. To assist commenters in providing pertinent comments, we developed a website that provided design examples of the different approaches to MIPS participation in CY 2019. The website utilized wireframe (schematic) drawings to illustrate the three different approaches to MIPS participation: Voluntary reporting to MIPS, opt-in reporting to MIPS, and required to

[17] A clinician may be in a group that we estimated would not elect group reporting, however, the group would exceed the low-volume threshold on all three criteria if the group elected group reporting. Similarly, an individual or group may exceed at least one but not all of the low-volume threshold criteria, but we estimated the clinician or group would not elect to opt-in to MIPS. In both cases, these clinicians could be eligible for MIPS if the group or individual makes choices that differ from our assumptions.

participate in MIPS. The website provided specific matrices illustrating potential stakeholder experiences when opting-in or voluntarily reporting.

The option to opt-in to participate in the MIPS as a result of an individual eligible clinician or group exceeding at least one, but not all, of the low-volume threshold elements differs from the option to voluntarily report to the MIPS as established at § 414.1310(b)(2) and (d). Individual eligible clinicians and groups opting-in to participate in MIPS will be considered MIPS eligible clinicians, and therefore subject to the MIPS payment adjustment factor; whereas, individual eligible clinicians and groups voluntarily reporting measures and activities for the MIPS are not considered MIPS eligible clinicians, and therefore not subject to the MIPS payment adjustment factor. MIPS eligible clinicians and groups that made an election to opt-in will be able to participate in MIPS at the individual, group, or virtual group level for that performance period. Eligible clinicians and groups that are excluded from MIPS, but voluntarily report, are able to report measures and activities at the individual or group level; however, such eligible clinicians and groups are not able to voluntarily report for MIPS at the virtual group level.

In Table 31, we provided possible scenarios regarding which eligible clinicians may be able to opt-in to MIPS depending upon their beneficiary count, dollars, and covered professional services if the proposed opt-in policy was finalized.

TABLE 31—LOW-VOLUME THRESHOLD DETERMINATION OPT-IN SCENARIOS

Beneficiaries	Dollars	Covered professional services	Eligible for opt-in
≤200	≤90K	≤200	Excluded not eligible to Opt-in.
≤200	≤90K	>200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
≤200	>90K	≤200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
>200	≤90K	>200	Eligible to Opt-in, Voluntarily Report, or Not Participate.
>200	>90K	>200	Not eligible to Opt-in, Required to Participate.

We recognize that the low-volume threshold opt-in option may expand MIPS participation at the individual, group, and virtual group levels. For solo practitioners and groups with 10 or fewer eligible clinicians (including at least one MIPS eligible clinician) that exceed at least one, but not all, of the elements of the low-volume threshold and are interested in participating in MIPS via the opt-in and doing so as part of a virtual group, such solo practitioners and groups will need to make an election to opt-in to participate in the MIPS. Therefore, beginning with the 2021 MIPS payment year, we proposed that a virtual group election would constitute a low-volume threshold opt-in for any prospective member of the virtual group (solo practitioner or group) that exceeds at least one, but not all, of the low-volume threshold criteria. As a result of the virtual group election, any such solo practitioner or group will be treated as a MIPS eligible clinician for the applicable MIPS payment year.

During the virtual group election process, the official virtual group representative of a virtual group submits an election to participate in the MIPS as a virtual group to CMS prior to the start of a performance period (82 FR 53601 through 53604). The submission of a virtual group election includes TIN and NPI information, which is the identification of TINs composing the virtual group and each member of the virtual group. As part of a virtual group election, the virtual group representative is required to confirm through acknowledgement that a formal written agreement is in place between each member of the virtual group (82 FR 53604). A virtual group may not include a solo practitioner or group as part of a virtual group unless an authorized person of the TIN has executed a formal written agreement.

For a solo practitioner or group that exceeds only one or two elements of the low-volume threshold, an election to opt-in to participate in the MIPS as part of a virtual group would be represented by being identified as a TIN that is included in the submission of a virtual group election. Such solo practitioners and groups opting-in to participate in the MIPS as part of a virtual group would not need to independently make a separate election to opt-in to participate in the MIPS. We note that being identified as a TIN in a submitted virtual group election, any such TIN (represented as a solo practitioner or group) that exceeds at least one, but not all, of the low-volume threshold elements during the MIPS determination period is signifying an election to opt-in to participate in MIPS as part of a virtual group and recognizing that a MIPS payment adjustment factor would be applied to any such TIN based on the final score of the virtual group. For a virtual group election that includes a TIN determined to exceed at least one, but not all, of the low-volume threshold elements during the MIPS determination period, such election would have a precedence over the eligibility determination made during the MIPS determination period pertaining to the low-volume threshold and as a result, any such TIN would be considered MIPS eligible and subject to a MIPS payment adjustment factor due the virtual group election. Furthermore, we note that a virtual group election would constitute an election to opt-in to participate in MIPS and any low-volume threshold determinations that result from segment 2 data analysis of the MIPS determination period would not have any bearing on the virtual group election. Thus, a TIN included as part of a virtual group election that submitted prior to the start of the applicable performance period and does not exceed at least one element of the low-volume threshold during segment 2 of the MIPS determination period, such TIN would be considered MIPS eligible and a virtual group participant by virtue of the virtual group's election to participate in MIPS as a virtual group that was made prior to the applicable performance period. For virtual groups with a composition that may only consist of solo practitioners and groups that exceed at least one, but not all of the low-volume threshold elements, such virtual groups are encouraged to form a virtual group that would include a sufficient number of TINs to ensure that such virtual groups are able to meet program requirements such as case minimum criteria that would allow measures to be scored. For example, if a virtual group does not have a sufficient number of cases to report for quality measures (minimum of 20 cases per measures), a virtual group would

not be scored on such measures (81 FR 77175).

We further noted that APM Entities in MIPS APMs, which meet one or two, but not all, of the low-volume threshold elements to opt-in and are interested in participating in MIPS under the APM scoring standard, would be required to make a definitive choice at the APM Entity level to opt-in to participate in MIPS. For such APM Entities to make an election to opt-in to MIPS, they would make an election via a similar process that individual eligible clinicians and groups will use to make an election to opt-in. Once the APM Entity has elected to participate in MIPS, the decision to opt-in to MIPS is irrevocable and cannot be changed for the performance period in which the data was submitted. Eligible clinicians in APM Entities in MIPS APMs that opt-in would be subject to the MIPS payment adjustment factor. APM Entities in MIPS APMs that do not decided to opt-in to MIPS cannot voluntarily report.

Additionally, we proposed for applicable eligible clinicians participating in a MIPS APM, whose APM Entity meets one or two, but not all, of the low-volume threshold elements rendering the option to opt-in and does not decide to opt-in to MIPS, that if their TIN or virtual group does elect to opt-in, it does not mean that the eligible clinician is opting-in on his/her own behalf, or on behalf of the APM Entity, but that the eligible clinician is still excluded from MIPS participation as part of the APM Entity even though such eligible clinician is part of a TIN or virtual group. This is necessary because low-volume threshold determinations are currently conducted at the APM Entity level for all applicable eligible clinicians in MIPS APMs, and therefore, the low-volume threshold opt-in option should similarly be executed at the APM Entity level rather than at the individual eligible clinician, TIN, or virtual group level. Thus, in order for an APM Entity to opt-in to participate in MIPS at the APM Entity level and for eligible clinicians within such APM Entity to be subject to the MIPS payment adjustment factor, an election would need to be made at the APM Entity level in a similar process that individual eligible clinicians and groups would use to make an election to opt-in to participate in MIPS.

We requested comments on our proposals: (1) To modify § 414.1305 for the low-volume threshold definition at paragraph (3) to specify that, beginning with the 2021 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician or group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to $90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals; (2) that a clinician who is eligible to opt-in would be required to make an affirmative election to opt-in to participate in MIPS, elect to be a voluntary reporter, or by not submitting any data the clinician is choosing to not report; and (3) to modify § 414.1310(b)(1)(iii) under Applicability to specify exclusions as follows: Beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to report on applicable measures and activities under MIPS, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For APM Entity groups in MIPS APMs, only the APM Entity group election can result in the APM Entity group being treated as MIPS eligible clinicians for the applicable payment year.

The following is a summary of the public comments received on our proposals and our responses:

Comment: Many commenters supported the opt-in policy as proposed. Many commenters supported that clinicians electing to opt-in may have either a negative or positive payment adjustment. One commenter stated the opportunity for clinicians to opt-in to MIPS will help to offset the additional exclusions resulting from the addition of a third low-volume criterion. A few commenters noted the opt-in provides a participation opportunity for clinicians who bill low-cost services and would not otherwise exceed the low-volume threshold based on allowed charges. Other commenters noted that MIPS is the only way for MIPS eligible clinicians to earn a meaningful MIPS payment adjustment factor and opt-in is the only way for eligible clinicians who do not exceed the low-volume threshold to participate. Many commenters noted the policy provides flexibility and may encourage those clinicians who are not ready to have their payment affected by MIPS performance to test their ability to gather and submit performance data and gain experience with MIPS.

Response: We appreciate the commenters' support. We note that if an eligible clinician chooses to opt-in to MIPS then they will be subject to the MIPS payment adjustment during the applicable MIPS payment year. If a clinician is eligible to opt-in but does not want to participate in MIPS, and be subject to the MIPS payment adjustment, then we would encourage clinicians to voluntarily report.

Comment: Many commenters opposed the opt-in policy. A few commenters noted concern that the opt-in will reduce incentives to participate in MIPS, with one specifically stating it does not align with the agency's stated goal for MIPS to be a pathway to eventual participation in APMs. Some commenters also noted concern with how the opt-in may affect the overall scores, stating that (1) the additional clinicians who voluntarily opt-in are likely to be above the MIPS threshold, and therefore may reduce the amount of positive MIPS payment adjustment factors for clinicians who are required to participate, (2) the opt-in will likely continue to flatten the clinician's final score, lowering the overall aggregate increase, and (3) if too many eligible clinicians are excluded, positive payment adjustments would be insufficient to help offset the investments practices health systems must make to succeed under MIPS. Another commenter stated that CMS should identify a core set of data on MIPS and its various exclusions to be updated annually in conjunction with the proposed rule to allow stakeholders to follow the impacts of those exclusions longitudinally.

Response: While we encourage clinicians who are excluded to opt-in to the program once they are prepared to meaningfully participate as a means of driving value and improving outcomes for more Medicare beneficiaries, we believe that the opt-in policy does not undermine APM participation or the transition of clinicians from MIPS to APMs because the opt-in policy is applied at the APM Entity level for clinicians and groups participating in APMs. For this final rule, we analyzed the impact of the opt-in policy by running models which incorporate the Quality Payment Program Year 1 submissions data. The models include eligibility without opt-in, opt-in based on a random sample of 33 percent of clinicians who can elect to opt-in, and opt-in where only high performers (that is, clinicians who can anticipate a positive adjustment) elect to opt-in. To model the situation where only high performers would opt-in to MIPS, we assumed 100 percent of clinicians with final scores above the additional performance threshold would opt-in and 50 percent of clinicians above the performance threshold but below the additional performance threshold would

opt-in. We observed a very modest impact to the payment adjustment irrespective of the opt-in assumption used. Please see Figure 2 for the model by opt-in assumption. Lastly, we appreciate the request for additional core data to be made available, we will continue to work with stakeholders to identify the information that is valuable and release it accordingly.

Comment: Many commenters supported an opt-in policy, but believed the policy should be available to more clinicians. Of these commenters, most believed that the opt-in should be available even if the clinician did not exceed any of the low-volume criteria. A few commenters indicated that MIPS should be voluntary for all clinicians. One commenter requested that we make the opt-in policy retroactive to the MIPS 2018 performance period for year-to-year consistency, simplification, and to improve overall participation. Another commenter stated that the clinicians who switch practices in the last three months of MIPS performance period should be able to opt-in.

Response: We do not believe that we have the flexibility to allow any clinician who wishes to participate in MIPS to opt-in nor to retroactively apply the opt-in policy to the 2018 MIPS performance period. Finally, as discussed in the section III.I.3.b. of this final rule, during the final 3 months of the calendar year in which the performance period occurs, in general, we do not believe it would be feasible for many MIPS eligible clinicians who join an existing practice (existing TIN) or join a newly formed practice (new TIN) to participate in MIPS as individuals. To clarify if an eligible clinician switches to an existing TIN or a new TIN they may be able to participate in MIPS as a group. However, they would not be able to participate as an individual.

Comment: Several commenters supported the proposal that eligible clinicians who are eligible to opt-in would be required to make an affirmative election to opt-in to participate in MIPS. One commenter agreed that an affirmative election to report is necessary to avoid confusion and possible inadvertent claims submissions that might involuntarily opt-in a clinician to MIPS.

Response: We agree that even eligible clinicians submitting MIPS data via claims must make an affirmative election.

Comment: Several commenters sought clarification on the deadline to opt-in. A few commenters wondered if clinicians can choose to wait until the data submission deadline for a performance year, or whether they must elect to opt-in sooner than that. One commenter recommended that clinicians should have a deadline of no later than the last day in the month of February, or perhaps the 15th of March, for the performance period in which they intend to participate. This commenter stated that allowing the choice to opt-in at any point during the performance period will only increase participatory rates among clinicians or groups who have knowledge of favorable outcomes and will excuse those whose outcomes were undesirable. One commenter encouraged us to allow clinicians to opt-in at the time of data submission, as this would create the least amount of burden on clinicians who wish to opt-into the program. Another commenter urged us to allow an opt-in decision at any point during the data submission window and to provide confirmation of the decision to opt-in. Another commenter stated that we should not make the opt-in decision irrevocable.

Response: We would like to create a process for eligible clinicians who wish to opt-in to MIPS that is the least burdensome but also provides the clinician with the most flexibility. We are exploring if we can operationally allow clinicians to opt-in at any time prior to the submission period and will provide further guidance via subregulatory guidance if this becomes available. We are finalizing at § 414.1310(b)(1)(iii) under Applicability to specify exclusions as follows: Beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to report on applicable measures and activities under MIPS, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. We agree that allowing clinicians the choice to opt-in at any point during the performance period may increase the potential that only high performers will opt-in, but we believe that this policy accounts for clinicians who identified in the second segment of the MIPS determination period. Also, we plan to monitor this issue and will address it through future rulemaking if necessary. Finally, regarding the opt-in decision being irrevocable, we believe it is necessary for the clinician to make a definitive decision regarding their participation in MIPS. If the decision to opt-in was not definitive then we believe the potential for a clinician to have an unfair advantage is increased by their ability to review their final feedback and scoring information available at submissions and subsequently alter their participation decision.

Comment: One commenter noted that with the manual election to indicate opt-in, the need for a low-volume threshold criterion based on professional services should not make a difference in a clinician's ability to opt-in. Other commenters opposed the requirement for the eligible clinician to manually opt-in, noting that it would add administrative burden. Another commenter stated that it is unnecessary to create a MIPS opt-in policy for some low-volume clinicians as they may not meet the case minimums for measures.

Response: We do not believe that the manual election to opt-in has relevance to the clinician's covered professional services. We are providing the third criterion of covered professional services to expand the number of clinicians eligible to opt-in to the program. Regarding the manual election to opt-in, we believe this is the least burdensome approach to ensuring that clinicians are making an informed decision regarding their MIPS participation. We believe that most MIPS eligible clinicians that provide at least 200 covered professional service will be able to meet the case minimums for measures.

Comment: A few commenters requested additional clarification on the implication of the opt-in policy on the MIPS payment adjustment and on how we estimated the number of opt-in clinicians.

Response: We described our approach to estimating the opt-in policy in the regulatory impact analysis of the CY 2019 PFS proposed rule (83 FR 36057 through 36068). We sought comment on this approach and refer readers to the Regulatory Impact Analysis (RIA) in section VII. of this final rule for additional information. The RIA for this final rule examined the impact of the opt-in policy on payment adjustments by using two alternate opt-in assumptions: (1) If only clinicians with scores above the performance threshold opt-in (the actual opt-in is likely to be lower than this estimated number of clinicians opting-in); and (2) if none of the clinicians elected to opt-in. See Figure 2 for a summary of the results. As shown in Figure 2, the opt-in policy was found to have a small impact on the budget neutral pool when we assumed a random 33 percent of clinicians would opt-in irrespective of their performance and a minimal impact on payment adjustments regardless of the opt-in assumption used. Given these findings, we chose to use the 33 percent opt-in

assumption for all CY 2019 performance period estimates.

FIGURE 2: Budget Neutral Pool for Redistribution and Maximum Payment Adjustment for Different Opt-in Assumptions

	Without opt-in	33% random opt-in	High-performers opt-in
Budget neutral pool for redistribution	$296	$310	$296
Maximum payment adjustment	4.7%	4.7%	4.6%
Number of MIPS Eligible Clinicians	770,087	797,990	787,928

Data: CY 2019 Quality Payment Program Final Rule Regulatory Impact Analysis data.

Comment: A few commenters supported the proposal to only allow APM entities to opt-in as a group. One commenter urged us to explain in-depth the application of the low-volume threshold opt-in option for MIPS APM TINs.

Response: We explained the application of the low-volume threshold for APM Entities in MIPS APMs in detail in the CY 2019 PFS proposed rule (83 FR 35889) and refer readers to that discussion.

Comment: One commenter did not agree that performance category data submitted by a third party intermediary needed a separate opt-in election. The commenter stated that in these instances, the clinician or group has chosen to engage a third party intermediary for MIPS reporting which the commenter believed is an affirmative event demonstrating intent to participate in the MIPS program. The commenter also noted that for clinicians or small-groups submitting quality data via QDC codes on claims, if those clinicians and/or small groups also submit any category data via a third-party intermediary, the Quality Payment Program portal, or the CMS Web Interface, that should be considered as an opt-in decision. One commenter requested that we provide a technical interface/API which allows clinicians and groups to opt-in through the service of third party intermediaries.

Response: We want to ensure that clinicians are making an informed decision regarding opting-in to participate in MIPS. It is imperative that they make a definitive decision since clinicians who opt-in will be subject to the MIPS payment adjustment during the applicable MIPS payment year. We believe that an election to opt-in to MIPS must be made by the clinician or group through a definitive opt-in decision to participate in MIPS regardless of the way in which the data is submitted. In addition, in response to public comments, in instances where a third party intermediary is representing a MIPS eligible clinician, the third party intermediary must be able to transmit the clinician's opt-in decision to CMS. We refer readers to section III.I.3.k. of this final rule for more information regarding third party intermediary requirements.

Comment: A few commenters requested information for clinicians and groups to make an informed choice about the opt-in. One commenter urged us to make it clear as to whether a clinician and group is eligible to opt-in to MIPS, what this decision could mean in terms of reducing or increasing their Medicare payments, and when the decision would be final. A few commenters requested the eligibility information prior to the start of the performance period, so that MIPS eligible clinicians and groups who want to opt-in to MIPS have the information necessary to make an informed choice about their participation options. Other commenters requested information on how the two MIPS determination periods work with the opt-in policy.

Response: We understand that it is important for clinicians to know their eligibility status prior to the performance period. We are working to provide quarterly snapshots, if feasible. We believe these quarterly snapshots will provide important information to clinicians so that they may make informed decisions regarding whether they should opt-in to participate in MIPS. It is important to note that the quarterly snapshots are being provided for informational use only and not final until after the second segment of the MIPS determination period closes (which is September 30 of the calendar year in which the applicable performance period occurs) and a reconciliation occurs. Since the quarterly snapshots are not final this information is subject to change and should not be considered the final eligibility determination. The eligibility determination will be made after a reconciliation of the first and second segment of the MIPS determination period. We are finalizing at § 414.1310(b)(1)(iii) under Applicability to specify exclusions that include, beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all,

of the low-volume threshold criteria and elects to report on applicable measures and activities under MIPS, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year.

Comment: One commenter recommended that we change the name of the voluntary participation option to ensure that clinicians do not confuse that option with opt-in participation. Since a voluntary participant is only reporting data, they suggested changing that category to Voluntary Reporting to ensure this is not confused with opt-in Participation.

Response: We agree and are modifying the participation terms on the Quality Payment Program website to provide clear directions. Therefore, we note that when clinicians are reporting for MIPS they may enter the Quality Payment Program portal to choose the appropriate MIPS participation. For those eligible clinicians or groups who exceed all three criteria of the low-volume threshold their participation will be automatically selected as they are required to participate. For individual eligible clinicians and groups who are qualified they may make an election to by choosing to either: Agree to opt-in participation or to voluntarily report to MIPS, the clinician would make an election via the Quality Payment Program portal by logging into their account and simply selecting either the option to opt-in participation (positive, neutral, or negative MIPS adjustment) or to remain excluded and voluntarily report (no MIPS adjustment). So the three options when reporting data through the Quality Payment Program portal are: Voluntary reporting, opt-in participation, and required to participate in MIPS. We referred readers to the Quality Payment Program at *qpp.cms.gov/design-examples* to review the finalized wireframe drawings.

After consideration of the public comments received, we are finalizing our proposals: (1) To modify § 414.1305 for the low-volume threshold definition at paragraph (3) to specify that, beginning with the 2021 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to $90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals; (2) that a clinician who is eligible to opt-in would be required to make an affirmative election to opt-in to participate in MIPS, elect to be a voluntary reporter, or by not submitting any data the clinician is choosing to not report; and (3) to modify § 414.1310(b)(1)(iii) under Applicability to specify exclusions as follows: Beginning with the 2021 MIPS payment year, if an individual eligible clinician, group, or APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to report on applicable measures and activities under MIPS, the individual eligible clinician, group, or APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For such solo practitioners and groups that elect to participate in MIPS as a virtual group (except for APM Entity groups in MIPS APMs), the virtual group election under § 414.1315 constitutes an election under this paragraph and results in the solo practitioners and groups being treated as MIPS eligible clinicians for the applicable MIPS payment year. For such APM Entity groups in MIPS APMs, only the APM Entity group election can constitute an election under this paragraph and result in the APM Entity group being treated as MIPS eligible clinicians for the applicable MIPS payment year. We note that a virtual group election does not constitute a Partial QP election under revised § 414.1310(b)(1)(ii). In order for an individual eligible clinician or APM Entity with a Partial QP status to explicitly elect to participate in MIPS and be subject to the MIPS payment adjustment factor, such individual eligible clinician or APM Entity would make such election during the applicable performance period as a Partial QP status becomes applicable and such option for election is warranted.

(6) Part B Services Subject to MIPS Payment Adjustment

Section 1848(q)(6)(E) of the Act, as amended by section 51003(a)(1)(E) of the Bipartisan Budget Act of 2018, provides that the MIPS adjustment factor and, as applicable, the additional MIPS adjustment factor, apply to the amount otherwise paid under Part B with respect to covered professional services (as defined in subsection (k)(3)(A) of the Act) furnished by a MIPS eligible clinician during a year (beginning with 2019) and with respect to the MIPS eligible clinician for such year.

In the CY 2019 PFS proposed rule (83 FR 35890), we requested comments on our proposal to amend § 414.1405(e) to modify the application of both the MIPS adjustment factor and, if applicable, the additional MIPS adjustment factor so that beginning with the 2019 MIPS payment year, these adjustment factors will apply to Part B payments for covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by the MIPS eligible clinician during the year. We are making this change beginning with the first MIPS payment year and note that these adjustment factors will not apply to Part B drugs and other items furnished by a MIPS eligible clinician, but will apply to covered professional services furnished by a MIPS eligible clinician. We refer readers to section III.I.3.j. of this final rule for further details on this modification.

The following is a summary of the public comments received on our proposals and our responses:

Comment: One commenter stated that they support the technical amendment made by Congress in the Bipartisan Budget Act of 2018 to clarify that items or services beyond the PFS, especially Part B drugs, should not be included when determining MIPS eligibility and applying the MIPS payment adjustment.

Response: We appreciate the commenters' support.

After consideration of the public comments received, we are finalizing our proposal to amend § 414.1405(e) to modify the application of both the MIPS adjustment factor and, if applicable, the additional MIPS adjustment factor so that beginning with the 2019 MIPS payment year, these adjustment factors will apply to Part B payments for covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by the MIPS eligible clinician during the year. We are making this change beginning with the first MIPS payment year and note that these adjustment factors will not apply to Part B drugs and other items furnished by a MIPS eligible clinician, but will apply to covered professional services furnished by a MIPS eligible clinician.

d. Partial QPs

(1) Partial QP Elections Within Virtual Groups

In the CY 2017 Quality Payment Program final rule, we finalized that following a determination that eligible clinicians in an APM Entity group in an Advanced APM are Partial QPs for a year, the APM Entity will make an election whether to report on applicable measures and activities as required under MIPS. If the APM Entity elects to report to MIPS, all eligible clinicians in

the APM Entity would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the APM Entity elects not to report, all eligible clinicians in the APM Entity group will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year (81 FR 77449).

We also finalized that in cases where the Partial QP determination is made at the individual eligible clinician level, if the individual eligible clinician is determined to be a Partial QP, the eligible clinician will make the election whether to report on applicable measures and activities as required under MIPS and, as a result, be subject to the MIPS reporting requirements and payment adjustments (81 FR 77449). If the individual eligible clinician elects to report to MIPS, he or she would be subject to the MIPS reporting requirements and payment adjustments for the relevant year. If the individual eligible elects not to report to MIPS, he or she will be excluded from the MIPS reporting requirements and payment adjustments for the relevant year.

We also clarified how we consider the absence of an explicit election to report to MIPS or to be excluded from MIPS. We finalized that for situations in which the APM Entity is responsible for making the decision on behalf of all eligible clinicians in the APM Entity group, the group of Partial QPs will not be considered MIPS eligible clinicians unless the APM Entity opts the group into MIPS participation, so that no actions other than the APM Entity's election for the group to participate in MIPS would result in MIPS participation (81 FR 77449). For eligible clinicians who are determined to be Partial QPs individually, we finalized that we will use the eligible clinician's actual MIPS reporting activity to determine whether to exclude the Partial QP from MIPS in the absence of an explicit election. Therefore, if an eligible clinician who is individually determined to be a Partial QP submits information to MIPS (not including information automatically populated or calculated by CMS on the Partial QP's behalf), we will consider the Partial QP to have reported, and thus to be participating in MIPS. Likewise, if such an individual does not take any action to submit information to MIPS, we will consider the Partial QP to have elected to be excluded from MIPS (81 FR 77449).

In the CY 2018 Quality Payment Program final rule, we clarified that in the case of an eligible clinician participating in both a virtual group and an Advanced APM who has achieved Partial QP status, that the eligible clinician would be excluded from the MIPS payment adjustment unless the eligible clinician elects to report under MIPS (82 FR 53615). As discussed in the CY 2019 PFS proposed rule (83 FR 35890 through 35891), we incorrectly stated that affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period would constitute an explicit election to report under MIPS for all Partial QPs. As such, we also incorrectly stated that all eligible clinicians who participate in a virtual group and achieve Partial QP status would remain subject to the MIPS payment adjustment due to their virtual group election to report under MIPS, regardless of their Partial QP election. We note that an election made prior to the start of an applicable performance period to participate in MIPS as part of a virtual group is separate from an election made during the performance period that is warranted as a result of an individual eligible clinician or APM Entity achieving Partial QP status during the applicable performance period. A virtual group election does not equate to an individual eligible clinician or APM Entity with a Partial QP status explicitly electing to participate in MIPS. In order for an individual eligible clinician or APM Entity with a Partial QP status to explicitly elect to participate in MIPS and be subject to the MIPS payment adjustment factor, such individual eligible clinician or APM Entity would make such election during the applicable performance period as a Partial QP status becomes applicable and such option for election is warranted. Thus, we are restating that affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period does not constitute an explicit election to report under MIPS as it pertains to making an explicit election to either report to MIPS or be excluded from MIPS for individual eligible clinicians or APM Entities that have Partial QP status.

Related to this clarification, we are finalizing in section III.I.4.e.(3) of this final rule to clarify that beginning with the 2021 MIPS payment year, when an eligible clinician is determined to be a Partial QP for a year at the individual eligible clinician level, the individual eligible clinician has the option to make an election whether to report to MIPS. If the eligible clinician elects to report to MIPS, he or she will be subject to MIPS reporting requirements and payment adjustments. If the eligible clinician elects to not report to MIPS, he or she will not be subject to MIPS reporting requirements and payment adjustments. If the eligible clinician does not make any affirmatively election to report to MIPS, he or she will not be subject to MIPS reporting requirements and payment adjustments. As a result, beginning with the 2021 MIPS payment year, for eligible clinicians who are determined to be Partial QPs individually, we will not use the eligible clinician's actual MIPS reporting activity to determine whether to exclude the Partial QP from MIPS in the absence of an explicit election.

Therefore, the finalized policy in section III.I.4.e.(3) of this final rule eliminates the scenario in which affirmatively agreeing to participate in MIPS as part of a virtual group prior to the start of the applicable performance period will constitute an explicit election to report under MIPS for eligible clinicians who are determined to be Partial QPs individually and make no explicit election to either report to MIPS or be excluded from MIPS. We believe this change is necessary because QP status and Partial QP status, achieved at the APM Entity level or eligible clinician level, is applied to an individual and all of his or her TIN/NPI combinations, whereas virtual group participation is determined at the TIN level. Therefore, we do not believe that it is appropriate that the actions of the TIN in joining the virtual group should deprive the eligible clinician who is a Partial QP, whether that status was achieved at APM Entity level or eligible clinician level, of the opportunity to elect whether or not to opt-in to MIPS.

e. Group Reporting

We refer readers to § 414.1310(e) and the CY 2018 Quality Payment Program final rule (82 FR 53592 through 53593) for a description of our previously established policies regarding group reporting.

In the CY 2018 Quality Payment Program final rule (82 FR 53593), we clarified that we consider a group to be either an entire single TIN or portion of a TIN that: (1) Is participating in MIPS according to the generally applicable scoring criteria while the remaining portion of the TIN is participating in a MIPS APM or an Advanced APM according to the MIPS APM scoring standard; and (2) chooses to participate in MIPS at the group level. We further clarify that we consider a group to be an entire single TIN that chooses to participate in MIPS at the group level. However, individual eligible clinicians (TIN/NPIs) within that group may receive a MIPS payment adjustment

based on the APM scoring standard if they are on the participant list of a MIPS APM. We proposed to amend §§ 414.1310(e) and 414.1370(f)(2) to codify this policy and more fully reflect the scoring hierarchy as discussed in section III.I.3.h.(6) of this final rule.

As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53593), one of the overarching themes we have heard from stakeholders is that we make an option available to groups that would allow a portion of a group to report as a separate sub-group on measures and activities that are more applicable to the sub-group and be assessed and scored accordingly based on the performance of the sub-group. We stated that in future rulemaking, we intend to explore the feasibility of establishing group-related policies that would permit participation in MIPS at a sub-group level and create such functionality through a new identifier. In the CY 2018 Quality Payment Program proposed rule (82 FR 30027), we solicited public comments on the ways in which participation in MIPS at the sub-group level could be established. In addition, in the CY 2018 Quality Payment Program final rule (82 FR 53593), we sought comment on additional ways to define a group, not solely based on a TIN. Because there are several operational challenges with implementing a sub-group option, we did not propose any such changes to our established reporting policies in this final rule. Rather, we are considering facilitating the use of a sub-group identifier in the Quality Payment Program Year 4 through future rulemaking, as necessary. In addition, it has come to our attention that providing a sub-group option may provide potential gaming opportunities. For example, a group could manipulate scoring by creating sub-groups that are comprised of only the high performing clinicians in the group. Therefore, we requested comment on implementing sub-group level reporting through a separate sub-group sub-identifier in the Quality Payment Program Year 4 and possibly future years of the program.

In the CY 2019 PFS proposed rule (83 FR 35891) we requested comments on the following: (1) Whether and how a sub-group should be treated as a separate group from the primary group: For example, if there is 1 sub-group within a group, how would we assess eligibility, performance, scoring, and application of the MIPS payment adjustment at the sub-group level; (2) whether all of the sub-group's MIPS performance data should be aggregated with that of the primary group or should be treated as a distinct entity for determining the sub-group's final score, MIPS payment adjustments, and public reporting, and eligibility be determined at the whole group level; (3) possible low burden solutions for identification of sub-groups: For example, whether we should require registration similar to the CMS Web Interface or a similar mechanism to the low-volume threshold opt-in that we proposed and is discussed in section III.I.3.c.(5) of this final rule; and (4) potential issues or solutions needed for sub-groups utilizing submission mechanisms, measures, or activities, such as APM participation, that are different than the primary group. We also welcomed comments on other approaches for sub-group reporting that we should consider. We received many comments on group reporting and will take them into consideration for future rulemaking.

f. Virtual Groups

(1) Background

We refer readers to § 414.1315 and the CY 2018 Quality Payment Program final rule (82 FR 53593 through 53617) for our previously established policies regarding virtual groups.

(2) Virtual Group Election Process

We refer readers to § 414.1315(c) and the CY 2018 Quality Payment Program final rule (82 FR 53601 through 53604) for our previously established policies regarding the virtual group election process.

We proposed to amend § 414.1315(c) to continue to apply the previously established policies regarding the virtual group election process for the 2022 MIPS payment year and future years, with the exception of the proposed policy modification discussed below (83 FR 35891 through 35892).

Under § 414.1315(c)(2)(ii), an official designated virtual group representative must submit an election on behalf of the virtual group by December 31 of the calendar year prior to the start of the applicable performance period. In the CY 2018 Quality Payment Program final rule (82 FR 53603), we stated that such election will occur via email to the Quality Payment Program Service Center using the following email address for the 2018 and 2019 performance periods: *MIPS_VirtualGroups@cms.hhs.gov*. Beginning with the 2022 MIPS payment year, we proposed to amend § 414.1315(c)(2)(ii) to provide that the election would occur in a manner specified by CMS. We anticipate that a virtual group representative would make an election on behalf of a virtual group by registering to participate in MIPS as a virtual group via a web-based system developed by CMS. We believe that a web-based system would be less burdensome for virtual groups given that the interactions stakeholders would have with the Quality Payment Program are already conducted via the Quality Payment Program portal, and would provide stakeholders with a seamless user experience. Stakeholders would be able to make a virtual group election in a similar manner to all other interactions with the Quality Payment Program portal and would no longer need to separately identify the appropriate email address to submit such an election and email an election outside of the Quality Payment Program portal. The Quality Payment Program portal is the gateway and source for interaction with MIPS that contains a range of information on topics including eligibility, data submission, and performance reports. We believe that using the same web-based platform to make a virtual group election would enhance the one-stop MIPS interactive experience and eliminate the potential for stakeholders to be unable to identify or erroneously enter the email address.

We solicited public comment on this proposal, which would provide for an election to occur in a manner specified by CMS such as a web-based system developed by CMS.

The following is a summary of the public comments received regarding the proposal to continue to apply the previously established policies regarding the virtual group election process for the 2022 MIPS payment year and future years, with the exception of providing for an election to occur in a manner specified by CMS, such as a web-based system developed by CMS, and our responses.

Comment: Several commenters supported the proposal to facilitate virtual group elections through the Quality Payment Program portal, as opposed to email, and indicated that the use of portal would be less burdensome for virtual groups and facilitate a more seamless user experience. A few commenters noted that the web-based system linked to the existing portal could give interested participants an easier means of connecting with other possible virtual group members. The commenters recommended that CMS explore the inclusion/development of a platform within the portal that would facilitate interactions and connections between parties interested in forming or joining a virtual group. Additionally, the commenters requested that CMS clearly outline and provide additional guidance on the election process via the

Quality Payment Program website. Another commenter recommended that CMS devise, as part of the portal, a direct way for clinicians to confirm their virtual group-eligibility status with 100 percent reliability, and eliminate potential human errors when using a Quality Payment Program representative as an intermediary.

Response: We will consider various means for providing information and guidance to virtual groups regarding the election process, and explore options for facilitating and supporting virtual group formation and providing virtual group eligibility via the Quality Payment Program portal in future years. It should be noted that all necessary information pertaining to virtual groups will be published on the CMS website prior to the virtual group election period, which occurs during the calendar before the start of the applicable performance period.

After consideration of the public comments, we are finalizing our proposal at § 414.1315(c) to continue to apply the previously established policies regarding the virtual group election process for the 2022 MIPS payment year and future years, with the exception of providing for an election to occur in a manner specified by CMS, such as a web-based system developed by CMS.

(a) Virtual Group Eligibility Determinations

For purposes of determining TIN size for virtual group participation eligibility for the CY 2018 and 2019 performance periods, we coined the term ''virtual group eligibility determination period'' and defined it to mean an analysis of claims data during an assessment period of up to 5 months that would begin on July 1 and end as late as November 30 of the calendar year prior to the applicable performance period and includes a 30-day claims run out (82 FR 53602). We proposed to modify the virtual group eligibility determination period beginning with the 2019 performance period (83 FR 35892 through 35893). We proposed to amend § 414.1315(c)(1) to establish a virtual group eligibility determination period to mean an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. The virtual group eligibility determination period aligns with the first segment of data analysis under the MIPS eligibility determination period. As part of the virtual group eligibility determination period, TINs would be able to inquire about their TIN size prior to making an election during a 5-month timeframe, which would begin on August 1 and end on December 31 of a calendar year prior to the applicable performance period. TIN size inquiries would be made through the Quality Payment Program Service Center. For TINs that inquire about their TIN size during such 5-month timeframe, it should be noted that any TIN size information provided is only for informational purposes and may be subject to change; official eligibility regarding TIN size and all other eligibility pertaining to virtual groups would be determined in accordance with the MIPS determination period and other applicable special status eligibility determination periods. The proposed modification would provide stakeholders with real-time information regarding TIN size for informational purposes instead of TIN size eligibility determinations on an ongoing basis (between July 1 and November 30 of the calendar year prior to the applicable performance period) due to technical limitations.

For the 2018 and 2019 performance periods, TINs could determine their status by contacting their designated TA representative as provided at § 414.1315(c)(1); otherwise, the TIN's status would be determined at the time that the TIN's virtual group election is submitted. We proposed to amend § 414.1315(c)(1) to remove this provision since the inquiry about TIN size would be for informational purposes only and may be subject to change.

We believe that the utilization of the Quality Payment Program Service Center, versus the utilization of designated TA representatives, as the means for stakeholders to obtain information regarding TIN size provides continuity and a seamless experience for stakeholders. We note that the TA resources already available to stakeholders would continue to be available. The following describes the experience a stakeholder would encounter when interacting with the Quality Payment Program Service Center to obtain information pertaining to TIN size. For example, the applicable performance period for the 2022 MIPS payment year would be CY 2020. If a group contacted the Quality Payment Program Service Center on September 20, 2019, the claims data analysis would include the months of October of 2018 through August of 2019. If another group contacted the Quality Payment Program Service Center on November 20, 2019, the claims data analysis would include the months of October of 2018 through September of 2019 with a 30-day claims run out.

We believe this virtual group eligibility determination period provides a real-time representation of TIN size for purposes of determining virtual group eligibility and allows solo practitioners and groups to know their real-time virtual group eligibility status and plan accordingly for virtual group implementation. Beginning with the 2022 MIPS payment year, it is anticipated that starting in August of each calendar year prior to the applicable performance period, solo practitioners and groups would be able to contact the Quality Payment Program Service Center and inquire about their TIN size. TIN size determinations would be based on the number of NPIs associated with a TIN, which may include clinicians (NPIs) who do not meet the definition of a MIPS eligible clinician at § 414.1305 or who are excluded from MIPS under § 414.1310(b) or (c).

We proposed to continue to apply the aforementioned previously established virtual group policies for the 2022 MIPS payment year and future years, with the exception of the following policy modifications:

- The virtual group eligibility determination period would align with the first segment of the MIPS determination period, which includes an analysis of claims data during a 12-month assessment period (fiscal year) that would begin on October 1 of the calendar year 2 years prior to the applicable performance period and end on September 30 of the calendar year preceding the applicable performance period and include a 30-day claims run out. As part of the virtual group eligibility determination period, TINs would be able to inquire about their TIN size prior to making an election during a 5-month timeframe, which would begin on August 1 and end on December 31 of a calendar year prior to the applicable performance period.
- MIPS eligible clinicians would be able to contact their designated technical assistance representative or, beginning with the 2022 MIPS payment year, the Quality Payment Program Service Center, as applicable, to inquire about their TIN size for informational purposes in order to assist MIPS eligible clinicians in determining whether or not to participate in MIPS as part of a virtual group. We anticipate that starting in August of each calendar year prior to the applicable performance period, solo practitioners and groups would be able to contact the Quality Payment Program

Service Center and inquire about virtual group participation eligibility.

• A virtual group representative would make an election on behalf of a virtual group by registering to participate in MIPS as a virtual group in a form and manner specified by CMS. We anticipate that a virtual group representative would make the election via a web-based system developed by CMS.

We also proposed updates to § 414.1315 in an effort to more clearly and concisely capture previously established policies. These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text.

The following is a summary of the public comments received on these proposals and our responses.

Comment: One commenter requested that CMS revisit the virtual group definition's current limit of ten clinicians because the definition of eligible clinician will be expanded. The commenter recommended revising the definition and measure virtual groups by setting an attributed membership floor to improve reporting validity.

Response: In regard to determining TIN size for purposes of virtual group eligibility, we count each NPI associated with a TIN in order to determine whether or not a TIN exceeds the threshold of 10 NPIs, which includes clinicians who are eligible and not eligible for MIPS. We believe that such an approach provides continuity over time if the definition of a MIPS eligible clinician is expanded in future years under section 1848(q)(1)(C)(i)(II) of the Act to include other eligible clinicians (82 FR 53596). As discussed in the 2018 Quality Payment Program final rule (82 FR 53596 through 53597), we considered an alternative approach for determining TIN size, which would determine TIN size for virtual group eligibility based on NPIs who are MIPS eligible clinicians. However, as we conducted a comparative assessment of the application of such alternative approach with the current definition of a MIPS eligible clinician (as defined at § 414.1305) and a potential expanded definition of a MIPS eligible clinician, we found that such an approach could create confusion as to which factors determine virtual group eligibility and cause the pool of virtual group eligible TINs to significantly be reduced once the definition of a MIPS eligible clinician would be expanded, which may impact a larger portion of virtual groups that intend to participate in MIPS as a virtual group for consecutive performance periods. Such impact would be the result of the current definition of a MIPS eligible clinician being narrower than the potential expanded definition of a MIPS eligible clinician. We did not pursue such an approach given that it did not align with our objective of establishing virtual group eligibility policies that are simplistic in understanding and provide continuity.

Furthermore, we note that given that the TIN size is already based on the total number of NPIs within a TIN, the expanded definition of a MIPS eligible clinician will not impact the population of TINs eligible to form or join a virtual group. In regard to increasing the TIN size threshold of 10, section 1848(q)(5)(I)(ii) of the Act establishes a threshold of 10 and as a result, we do not have discretion to expand virtual group participation to TINs with more than 10 NPIs.

Comment: A few commenters supported our proposal to align the virtual group eligibility determination period with the first segment of the MIPS determination period for consistency. The commenters also supported the availability of TIN size information that can be considered by groups prior to submitting a virtual group election. One commenter requested that CMS provide notification regarding the timeframe for the virtual group election process each year.

Response: In regard to the virtual group election period, we publish the timeframe for virtual groups to make an election in subregulatory guidance (that is, materials published and posted on the CMS website and information disseminated via a listserv) each year on the CMS website in advance of the start of the election period. Each year, the virtual group election period will occur prior to the start of an applicable performance period and have an end date of December 31.

Comment: One commenter requested clarification as to why a virtual group election must be made prior to the performance period and recommended that CMS postpone the deadline to the third quarter of the performance year.

Response: Section 1848(q)(5)(I)(iii)(I) of the Act provides that the virtual group election process must include the following requirement: An individual MIPS eligible clinician or group electing to be in a virtual group must make their election prior to the start of the performance period and cannot change their election during the performance period.

After consideration of the public comments, we are finalizing our proposals to continue to apply the aforementioned previously established virtual group policies for the 2022 MIPS payment year and future years, with the exception of the following:

• The virtual group eligibility determination period is the first segment of the MIPS determination period (proposal finalized at § 414.1315(c)(1)(ii)), which consists of an analysis of claims data during a 12-month assessment period (fiscal year) that begins on October 1 of the calendar year 2 years prior to the applicable performance period and ends on September 30 of the calendar year preceding the applicable performance period and includes a 30-day claims run out. As part of the virtual group eligibility determination period, TINs will be able to inquire about their TIN size prior to making an election during a 5-month timeframe, which will begin on August 1 and end on December 31 of a calendar year prior to the applicable performance period. We refer readers to section III.I.3.b. of this final rule for more information regarding the MIPS determination period.

• MIPS eligible clinicians will be able to contact their designated technical assistance representative or, beginning with the 2022 MIPS payment year, the Quality Payment Program Service Center, as applicable, to inquire about their TIN size for informational purposes in order to assist MIPS eligible clinicians in determining whether or not to participate in MIPS as part of a virtual group. We anticipate that starting in August of each calendar year prior to the applicable performance period, solo practitioners and groups would be able to contact the Quality Payment Program Service Center and inquire about virtual group participation eligibility.

• A designated virtual group representative must submit an election, on behalf of the solo practitioners and groups that compose a virtual group, to participate in MIPS as a virtual group for a performance period in a form and manner specified by CMS by the election deadline specified at § 414.1315(b) (proposal finalized at § 414.1315(c)(2)(ii)) We anticipate that a virtual group representative will make the election via a web-based system developed by CMS.

Also, we are finalizing updates to § 414.1315 in an effort to more clearly and concisely capture previously established policies. The updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text.

We note that we are further revising § 414.1315 to consolidate paragraphs (c)(2)(ii) and (iii) and redesignate paragraph (c)(2)(iv) as paragraph (c)(2)(iii) for clarity. Additionally, we are revising redesignated paragraph

(c)(2)(iii) to refer to ''the start of data submission'' rather than ''the start of an applicable submission period'' because ''submission period'' is not an expressly defined term.

g. MIPS Performance Period

In the CY 2018 Quality Payment Program final rule (82 FR 53617 through 53619), we finalized at § 414.1320(c)(1) that for purposes of the 2021 MIPS payment year, the performance period for the quality and cost performance categories is CY 2019 (January 1, 2019 through December 31, 2019). We did not finalize the performance period for the quality and cost performance categories for purposes of the 2022 MIPS payment year or future years. We also redesignated § 414.1320(d)(1) and finalized at § 414.1320(c)(2) that for purposes of the 2021 MIPS payment year, the performance period for the Promoting Interoperability and improvement activities performance categories is a minimum of a continuous 90-day period within CY 2019, up to and including the full CY 2019 (January 1, 2019 through December 31, 2019).

As noted in the CY 2018 Quality Payment Program final rule, we received comments that were not supportive of a full calendar year performance period for the quality and cost performance categories. However, we continue to believe that a full calendar year performance period for the quality and cost performance categories will be less confusing for MIPS eligible clinicians. As discussed in the CY 2019 PFS proposed rule (83 FR 35893), we believe that a longer performance period for the quality and cost performance categories will likely include more patient encounters, which will increase the denominator of the quality and cost measures. Statistically, larger sample sizes provide more accurate and actionable information. Additionally, a full calendar year performance period is consistent with how many of the measures used in our program were designed to be performed and reported. We also noted that the Bipartisan Budget Act of 2018 (Pub. L. 115–119, enacted February 9, 2018) has provided further flexibility to the 3rd, 4th, and 5th years of MIPS to help continue the gradual transition to MIPS.

Regarding the Promoting Interoperability performance category, we have heard from stakeholders through public comments, letters, and listening sessions that they oppose a full year performance period, indicating that it is very challenging and may add administrative burdens (83 FR 35893). Some stated that a 90-day performance period is necessary in order to enable clinicians to have a greater focus on the objectives and measures that promote patient safety, support clinical effectiveness, and drive toward advanced use of health IT. They also noted that as this performance category requires the use of CEHRT, a 90-day performance period will help relieve pressure on clinicians to quickly implement changes and updates from their CEHRT vendors and developers so that patient care is not compromised. Others cited the challenges associated with reporting on a full calendar year for clinicians newly employed by a health system or practice during the course of a program year, switching CEHRT, vendor issues, system downtime, cyber-attacks, difficulty getting data from old places of employment, and office relocation. Most stakeholders stated that the performance period should be 90 days in perpetuity, as this would greatly reduce the reporting burden (83 FR 35893).

In the CY 2019 PFS proposed rule (83 FR 35893), in an effort to provide as much transparency as possible so that MIPS eligible clinicians and groups may plan for participation in the program, we requested comments on our proposals at § 414.1320(d)(1) that for purposes of the 2022 MIPS payment year and future years, the performance period for the quality and cost performance categories would be the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. For example, for the 2022 MIPS payment year, the performance period would be 2020 (January 1, 2020 through December 31, 2020), and for the 2023 MIPS payment year, the performance period would be CY 2021 (January 1, 2021 through December 31, 2021).

In addition, we requested comments on our proposal at § 414.1320(d)(2) that for purposes of the 2022 MIPS payment year and future years, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. For example, for the 2022 MIPS payment year, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020). For the 2023 MIPS payment year, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within CY 2021, up to and including the full CY 2021 (January 1, 2021 through December 31, 2021) that occurs 2 years before the MIPS payment year (83 FR 35893).

Finally, we requested comments on our proposal to add § 414.1320(e)(1) that for purposes of the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020) (83 FR 35893).

The following is a summary of the public comments received on these proposals and our responses:

Comment: Several commenters agreed with our proposal to maintain the quality and cost performance periods as a full calendar year that occurs 2 years prior to the applicable MIPS payment year, noting that this proposal provides some of the stability needed for MIPS. One commenter supported a full calendar year for the cost performance category as this allows for a greater number of cases to be included in each measure, which will give a more reliable performance result. Another commenter supported a full calendar year for the quality and cost performance categories because they stated that it is in the best interest of patients encouraging clinicians to evolve in their approach to delivering care.

Response: We appreciate the commenters' support.

Comment: Several commenters opposed a full calendar-year performance period for the quality and cost performance categories and urged CMS to establish a minimum 90-day performance period, consistent with the other performance categories. Commenters noted that a minimum of 90-day performance period would reduce the administrative burden in MIPS, align the performance period across MIPS performance categories and allow the agency to shorten the 2-year lag between performance and payment. Other commenters requested that clinicians be allowed to choose between 90 days up to a full year of reporting. Another commenter urged CMS to consider adopting a 90-day performance period to capture eligible clinicians who may join a group in the middle of a performance year. One commenter agreed with the challenges CMS

outlined in the proposed rule (83 FR 35893) regarding the Promoting Interoperability performance category and stated that these various challenges create obstacles outside the control of the clinician, which inhibits their ability to collect and report 12 months of MIPS data for the quality performance category as well.

Response: We do not believe that it would be in the best interest of MIPS eligible clinicians to have less than a full calendar year performance period for the quality and cost performance categories for the 2022 MIPS payment year and future years, as we are maintaining consistency with the performance period established for the first 3 MIPS payment years. We believe this will be less burdensome and confusing for MIPS eligible clinicians. As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53618), statistically, larger sample sizes provide more accurate and actionable information. Additionally, a full calendar year performance period is consistent with how many of the measures used in our program were designed to be reported and performed; some of the measures do not allow for a 90-day performance period. We believe these issues make the quality performance category inherently different for reporting requirements and measures than the Promoting Interoperability and improvement activities performance categories. We do not believe reducing the performance period for the quality and cost performance categories will alleviate any issues with clinicians switching practices. Regarding reducing the 2-year lag between performance and payment, as noted in the CY 2017 Quality Payment Final Rule (81 FR 77077), the data submission activities and claims for services furnished during the 1 year performance period (which could be used for claims- or administrative claims-based quality or cost measures) may not be fully processed until the following year. These circumstances require adequate lead time to collect performance data, assess performance, and compute the MIPS adjustment so the applicable MIPS adjustment can be made available to each MIPS eligible clinician at least 30 days prior to when the MIPS payment adjustment is applied each year. Finally, in regard to the challenges we outlined in the proposed rule (83 FR 35893), these were specifically referring to the Promoting Interoperability performance category. We do not believe that these challenges affect the quality performance category, as well.

Comment: A few commenters noted that establishing a 90-day performance period would give CMS an opportunity to set benchmarks based on more current data, rather than from 4 years prior to the applicable MIPS payment year.

Response: We believe that benchmarks based on data from a 90-day performance period would be less reliable than those based on a full calendar year because fewer reported instances would meet the case minimum needed to be included in the benchmarks. This would also cause some measures to not have an available benchmark that could be used for scoring. In addition, using a 90-day performance period would not allow the creation of benchmarks from more current data. This is because we would still need to wait until the end of the data submission period before we could create the benchmarks based on data submitted by all MIPS eligible clinicians, and to publish historical benchmarks prior to the beginning of the performance period, we would still need to use data from 2 years prior to the performance period (4 years prior to the MIPS payment year).

Comment: Several commenters supported the proposal to keep the minimum performance period for the improvement activities performance category at 90 days, noting the proposal maintains stability and simplifies the program. One commenter stated that practices should be able to complete improvement activities lasting 90 days even if the performance spans over two performance periods. The commenter stated that CMS should require practices to complete at least 45 consecutive days during each of two consecutive performance periods to equal a total of at least 90 days, noting that this lowers the burden on clinicians and further encourages participation in this performance category.

Response: We appreciate the support for our proposal. However, we do not agree that an improvement activity should be split into two, 45-day periods. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77186), after researching several organizations, we believe a minimum of 90 days is a reasonable amount of time required for performing an activity. We do not believe that performance periods as short as 45 days are sufficient for many of the available improvement activities to ensure that the activities being performed result in actual practice improvements.

Comment: One commenter opposed our proposal to keep the minimum performance period for the improvement activities performance category at 90-days and urged CMS to adopt a 12-month performance period. The commenter noted that a 12-month performance period may be in the best interest of patients and may evolve clinicians' approach to delivering care.

Response: We appreciate the commenters' recommendation. However, we believe that a minimum of a continuous 90-day performance period is appropriate for MIPS eligible clinicians to perform improvement activities that would improve clinical practice and provides more flexibility as some improvement activities may be ongoing, while others may be appropriately episodic.

Comment: Many commenters supported our proposal to keep the minimum performance period for the Promoting Interoperability performance category at 90 days, noting that this proposal maintains stability, helps reduce administrative burden, provides clinicians with the time needed to manage changes and updates from their CEHRT vendors and developers, allows for effective measurement, and allows clinicians the flexibility to address scheduled or unanticipated events such as switching EHR vendors, system downtime, and cyber-attacks without jeopardizing patient care. Several commenters requested that CMS consider extending this performance period beyond the CY 2020 MIPS performance period.

Response: We appreciate the commenters' support. We believe it is premature to establish policy beyond CY 2020 at this time appreciating the continued work in this area across HHS. We are finalizing the Promoting Interoperability performance period specific to CY 2019. We will take the comment into consideration for future rulemaking.

Comment: One commenter requested that CMS investigate ways to shorten the time between performance periods and for future MIPS payment years in the Quality Payment Program. This commenter noted concern that 2 years is too long to impact practice patterns and lead to meaningful changes in behavior.

Response: We understand the commenter's concern. However, as discussed in the CY 2017 Quality Payment Program final rule (81 FR 77083), there is a ''2-year lag'' at this time, in order to account for the post-submission processes of calculating the MIPS eligible clinician's final score, establishing budget neutrality and issuing the MIPS payment adjustment factors, and allowing for a targeted review period to occur prior to the application of the MIPS payment

adjustment. We will continue working to shorten the ''2-year lag'' that the commenter describes.

Comment: Several commenters urged CMS to consider the timing of previous year MIPS feedback reports, which are released in July after the close of the performance period, noting that this timeline does not allow for clinicians to make necessary changes before the beginning of the next performance period. Several commenters noted that, if the performance period was reduced to a 90-day minimum with the option to submit additional data, individuals and groups would have greater flexibility to incorporate previous MIPS feedback into their performance during the remaining portion of 2019, thereby increasing quality and patient safety, and to focus more of their attention on improving patient care.

Response: Regarding the release of the feedback reports for the 1st year of MIPS, we provided 3 rounds of feedback including: (1) Round 1—at the point of submission feedback; (2) round 2—pre-performance feedback; and (3) round 3—performance feedback. First, in round 1, at the point of submission we provided real time feedback that was available from the opening to the close of the submission period. Second, in round 2, we provided pre-performance feedback, which was available at the beginning of the close of the submission period and updated the round 2 feedback as new data became available such as CAHPS for MIPS survey, all-cause readmission measure, and cost measures data. Third, in round 3, we provided performance feedback that while it looks similar to round 2 is different in that the data is final with no new data being added and the payment adjustment(s) is included. This is the data that can be used to determine if a targeted review is to be filed. Considering there are opportunities for a clinician to gain insight into their possible performance prior to the release of the performance feedback in July, we encourage MIPS eligible clinicians to review the preliminary feedback and make necessary process and performance improvements, as needed. While we agree that there is some benefit to a 90-day performance period, we believe that more continuous feedback is more beneficial. We also note that operationally our goal is to provide as much continuous submission opportunity as we can support in the future, including allowing clinicians to submit data during the performance period, as feasible. The ability to receive more frequent and continuous submissions will further our ability to provide more frequent feedback to MIPS eligible clinicians.

Comment: A few commenters did not support the 90-day performance period for the Promoting Interoperability performance category and urged CMS to move to full calendar year reporting as soon as possible to achieve value-based care, stating that patients and families should be able to experience the benefits of health IT any day of the year, rather than a particular 3-month period. One commenter noted that a 12-month performance period would more effectively achieve the objectives of MACRA. One commenter also noted that requiring full-year reporting would be less burdensome because it aligns with performance period for the quality performance category. Finally, one commenter also noted that requiring full-year reporting is more likely to prompt changes to clinician workflows.

Response: Although the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period during the calendar year, clinicians may report for a period up to and including the full calendar year. In addition, we do not believe that the duration of the performance period is indicative of the availability of the EHR to patients. We believe it is likely that a clinician who uses an EHR for a period of 90 days will continue to use it year round.

Comment: One commenter urged us to consider the practical implications of a 90-day performance period for Promoting Interoperability measure reporting, emphasizing the need to ensure MIPS eligible clinicians and groups maintain interoperability capabilities in months that are not in the Promoting Interoperability performance period. This commenter noted the reporting periods may vary across eligible clinicians and groups and that a 90-day performance period could reduce the MIPS program's incentives for interoperability and may delay roll-out of enhanced interoperability functionality.

Response: While MIPS eligible clinicians are required to report for a minimum of 90 days, they have the flexibility to report for a longer performance if they choose. Further we believe that once CEHRT is being utilized by the MIPS eligible clinician, it will be used on an ongoing basis and not just during a 90-day performance period.

After consideration of the public comments received, we are finalizing our proposal at § 414.1320(d)(1) that for purposes of the 2022 MIPS payment year and future years, the performance period for the quality and cost performance categories would be the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year. In addition, we are finalizing our proposal at § 414.1320(d)(2) that for purposes of the 2022 MIPS payment year and future years, the performance period for the improvement activities performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. We are also finalizing our proposal to add at § 414.1320(e)(1) that for purposes of the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category would be a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Finally, we are finalizing revisions to § 414.1320(b)(2) and (c)(2) to refer to the new name of the Promoting Interoperability performance category.

h. MIPS Performance Category Measures and Activities

(1) Data Submission Requirements

(a) Background

We refer readers to § 414.1325 and the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77087 through 77095, and 82 FR 53619 through 53626, respectively) for our previously established policies regarding data submission requirements.

(b) Collection Types, Submission Types and Submitter Types

It has come to our attention that the way we have previously described data submission by MIPS eligible clinicians, groups and third party intermediaries does not precisely reflect the experience users have when submitting data to us. To clarify, we have previously used the term ''submission mechanisms'' to refer not only to the mechanism by which data is submitted, but also to certain types of measures and activities on which data are submitted (for example, electronic clinical quality measures (eCQMs) reported via EHR) and to the entities submitting such data (for example, third party intermediaries on behalf of MIPS eligible clinicians and groups). To ensure clarity and precision for all users, we are proposing to revise existing and define additional terminology to more precisely reflect the experience users have when submitting data to the Quality Payment Program.

In the CY 2019 PFS proposed rule (83 FR 35894), we requested comments on our proposal to define the following terms at § 414.1305:

- Collection type as a set of quality measures with comparable specifications and data completeness criteria, including, as applicable: eCQMs; MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. The term MIPS CQMs would replace what was formerly referred to as registry measures since entities other than registries may submit data on these measures. These new terms are referenced in the collection type field for the following measure tables of the appendices in the CY 2019 PFS proposed rule (83 FR 36092 through 36358): Table Group A: Proposed New Quality Measures for Inclusion in MIPS for the 2021 MIPS Payment Year and Future Years; Table Group B: Proposed New and Modified MIPS Specialty Measure Sets for the 2021 MIPS Payment Year and Future Years; Table C: Quality Measures Proposed for Removal from the Merit-Based Incentive Payment System Program for the 2019 Performance Period and Future Years; and Table Group D: Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year and Future Years.
- Submitter type as the MIPS eligible clinician, group, or third party intermediary acting on behalf of a MIPS eligible clinician or group, as applicable, that submits data on measures and activities under MIPS.
- Submission type as the mechanism by which a submitter type submits data to CMS, including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims and the CMS Web Interface. The direct submission type allows users to transmit data through a computer-to-computer interaction, such as an API. The log in and upload submission type allows users to upload and submit data in the form and manner specified by CMS with a set of authenticated credentials. The log in and attest submission type allows users to manually attest that certain measures and activities were performed in the form and manner specified by CMS with a set of authenticated credentials. We note that there is no submission type for the administrative claims collection type because we calculate measures for this collection type based on administrative claims data available to us.

In the CY 2019 PFS proposed rule (83 FR 35894), we solicited additional feedback and alternative suggestions on terminology that appropriately reflects the concepts described in the proposed definitions of collection type, submitter type and submission type, as well as the term MIPS CQMs to replace the formerly used term of registry measures.

The following is a summary of the comments we received on ''Collection Types, Submission Types and Submitter Types''.

Comment: A few commenters supported the clarification of submission terms, stating that the new definitions recognize the complexity of measure types and submission options and reduce the potential for confusion. Commenters asked whether, if we finalize these terminology updates, educational information will be made available on the Quality Payment Program website so that clinicians will understand and appropriately apply these terms. One commenter also emphasized the importance of ensuring that submitting and attesting to measures is flexible and easy for clinicians to do.

Response: We intend to update the Quality Payment Program website appropriately and provide any relevant educational materials.

Comment: One commenter recommended that, if the ''collection type'' definition only refers to quality measures, CMS change ''collection type'' to ''quality measure type'' and requested that CMS provide a definition for data collection recognizing that all performance categories collect data. Another commenter also recommended that we recommend that we change ''collection type'' to ''measure type'' or ''measure category'' to more intuitively and accurately reflect the meaning of the term.

Response: The proposed definition of collection type states that it is specific to a set of quality measures. Therefore, we do not agree the suggested term of ''quality measure type'' would be the most beneficial in clarifying the actual submission experience for the user, in comparison to how submission mechanisms were discussed in our previous policies. We also note that the usage of the term ''quality measure type'' is commonly used to refer to mean a specific type of measure such as process or outcome measure. While we agree that all performance categories do in fact collect data, for purposes of clarifying the user experience for data submission, it is most beneficial to only refer to data collection in regards to the quality performance category. The suggested terms ''measure type'' or ''measure category'' could create further misunderstanding of the intent of the definition. As far as ''measure type'', there are other measures available in the program than just those available for reporting on in the quality performance category. For the term ''measure category'', we disagree as this could give the implication that this is another performance category within the Quality Payment Program.

Comment: One commenter recommended that we change the term ''submission type'' to ''submission method'' and to define the mechanisms by which CMS means by ''direct,'' ''log in,'' ''upload,'' and ''attest.''

Response: We agree that the term ''submission method'' is an appropriate term for the proposed definition. However, the term did not gain support during user testing that surpassed the proposed terms. According to feedback from user testing, the proposed terms of collection, submitter and submission type, were found to be intuitive and to match the user experience when submitting data to the Quality Payment Program. The direct, log in and upload, log in and attest modes of data submission will be discussed in further detail in forthcoming educational resources. We also encourage review of the terms and wireframes for the submission types on *qpp.cms.gov/design-examples*.

Comment: One commenter recommended that we change ''submitter type'' to ''submitting entity'' and define this as the entity who will be submitting the eligible clinician's data.

Response: We believe that consistent terminology would be most beneficial in providing clarity for users submitting data to the Quality Payment Program. We also note that the term submitter type includes both entities that would submit on a clinician's behalf, as well as actions made directly by clinicians or their practice.

After consideration of the public comments received, we are finalizing our proposal at § 414.1305 to define the following terms:

- Collection type as a set of quality measures with comparable specifications and data completeness criteria, including, as applicable: eCQMs; MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. The term MIPS CQMs would replace what was formerly referred to as registry measures since entities other than registries may submit data on these measures. These new terms are referenced in the collection type field for the following measure tables of ''Appendix 1: Finalized MIPS Quality

Measures'' in this final rule: Table Group A: Finalized New Quality Measures for Inclusion in MIPS for the 2021 MIPS Payment Year and Future Years; Table Group B: Finalized New and Modified MIPS Specialty Measure Sets for the 2021 MIPS Payment Year and Future Years; Table Group C: Quality Measures Finalized for Removal in the 2021 MIPS Payment Year and Future Years; and Table Group D: Measures with Substantive Changes Finalized for the 2021 MIPS Payment Year and Future Years.

- Submitter type as the MIPS eligible clinician, group, or third party intermediary acting on behalf of a MIPS eligible clinician or group, as applicable, that submits data on measures and activities under MIPS.
- Submission type as the mechanism by which a submitter type submits data to CMS, including, as applicable: Direct, log in and upload, log in and attest, Medicare Part B claims and the CMS Web Interface. The direct submission type allows users to transmit data through a computer-to-computer interaction, such as an API. The log in and upload submission type allows users to upload and submit data in the form and manner specified by CMS with a set of authenticated credentials. The log in and attest submission type allows users to manually attest that certain measures and activities were performed in the form and manner specified by CMS with a set of authenticated credentials. We note that there is no submission type for the administrative claims collection type because we calculate measures for this collection type based on administrative claims data available to us.

(c) Performance Category Measures and Reporting

We previously finalized at § 414.1325(a) and (e), respectively, that MIPS eligible clinicians and groups must submit measures, objectives, and activities for the quality, improvement activities, and advancing care information performance categories and that there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category; CMS will calculate performance on these measures using administrative claims data. In the CY 2019 PFS proposed rule (83 FR 35894), we proposed to amend § 414.1325(a) to incorporate § 414.1325(e), as they both address which performance categories require data submission; § 414.1325(f) would be redesignated as § 414.1325(e). We also proposed in the CY 2019 PFS proposed rule (83 FR 35894) at § 414.1325(a)(2)(ii) that there is no data submission requirement for the quality or cost performance category, as applicable, for MIPS eligible clinicians and groups that are scored under the facility-based measurement scoring methodology described in § 414.1380(e). We also recognized the need to clarify to users how they submit data to us. In the CY 2019 PFS proposed rule (83 FR 35894), there are five basic submission types that we proposed to define in MIPS: Direct; log in and upload; login and attest; Medicare Part B claims; and the CMS Web Interface. We proposed to reorganize § 414.1325(b) and (c) by performance category in the CY 2019 PFS proposed rule (83 FR 35894). We proposed in the CY 2019 PFS proposed rule (83 FR 35894) to also clarify at § 414.1325(b)(1) that an individual MIPS eligible clinician may submit their MIPS data for the quality performance category using the direct, login and upload, and Medicare Part B claims submission types. In the CY 2019 PFS proposed rule (83 FR 35894), similarly, we proposed to clarify at § 414.1325(b)(2) that an individual MIPS eligible clinician may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, login and upload, or login and attest submission types. As for groups, we proposed in the CY 2019 PFS proposed rule (83 FR 35894) to clarify at § 414.1325(c)(1) that groups may submit their MIPS data for the quality performance category using the direct, login and upload, and CMS Web Interface (for groups consisting of 25 or more eligible clinicians) submission types. Lastly, we proposed to clarify at § 414.1325(c)(2) that groups may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, login and upload, or login and attest submission types in the CY 2019 PFS proposed rule (83 FR 35894). We believe that these clarifications will enhance the submission experience for clinicians and other stakeholders. As technology continues to evolve, we will continue to look for new ways that we can offer further technical flexibilities on submitting data to the Quality Payment Program. In the CY 2019 PFS proposed rule (83 FR 35894), we requested comment on these proposals. To assist commenters in providing pertinent comments, we developed a website that uses wireframe (schematic) drawings to illustrate a subset of the different submission types available for MIPS participation. Specifically, the wireframe drawings describe the direct, login and attest, and login and upload submission types. We refer readers to the Quality Payment Program at *qpp.cms.gov/design-examples* to review these wireframe drawings. The website will provide specific matrices illustrating potential stakeholder experiences when choosing to submit data under MIPS.

As previously expressed in the 2017 Quality Payment Program final rule (81 FR 77090), we want to move away from claims reporting, since approximately 69 percent of the Medicare Part B claims measures are topped out. Although we would like to move towards the utilization of electronic reporting by all clinicians and groups, we realize that small practices face additional challenges, and this requirement may limit their ability to participate. For this reason, we believe that Medicare Part B claims measures should be available to small practices, regardless of whether they are reporting as individual MIPS eligible clinicians or as groups. Therefore, we proposed amending § 414.1325(c)(1) to make the Medicare Part B claims collection type available to MIPS eligible clinicians in small practices beginning with the 2021 MIPS payment year in the CY 2019 PFS proposed rule (83 FR 35894). Although this will limit the current availability of Medicare Part B claims measures for individual MIPS eligible clinicians that do not meet the definition of a small practice, it will expand the availability of such measures for small practices who choose to participate in MIPS as a group, which currently does not have a claims-based reporting option as a group.

Under § 414.1325(c)(4), we previously finalized that groups may submit their MIPS data using the CMS Web Interface (for groups consisting of 25 or more eligible clinicians) for the quality, improvement activities, and promoting interoperability performance categories. In the CY 2019 PFS proposed rule (83 FR 35894 through 35895), we proposed that the CMS Web Interface submission type would no longer be available for groups to use to submit data for the improvement activities and Promoting Interoperability performance categories at § 414.1325(c)(2). The CMS Web Interface has been designed based on user feedback as a method for quality submissions only; however, groups that elect to utilize the CMS Web Interface can still submit improvement activities or promoting interoperability data via direct, log in and attest or log in and upload submission types. We also recognized that certain groups that have elected to use the CMS Web Interface

may prefer to have their data submitted on their behalf by a third party intermediary described at § 414.1400(a). We recognized the benefit and burden reduction in such a flexibility and therefore proposed to allow third party intermediaries to submit data to the CMS Web Interface in addition to groups in the CY 2019 PFS proposed rule (83 FR 35895). Specifically, we proposed in the CY 2019 PFS proposed rule (83 FR 35895) to redesignate § 414.1325(c)(4) as § 414.1325(c)(1) and amend § 414.1325(c)(1) to allow third party intermediaries to submit data using the CMS Web Interface on behalf of groups. To further our efforts to provide flexibility in reporting to the Quality Payment Program, we solicited comment in the CY 2019 PFS proposed rule (83 FR 35895) on expanding the CMS Web Interface submission type to groups consisting of 16 or more eligible clinicians to inform our future rulemaking.

We previously finalized at § 414.1325(e) that there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category and that CMS will calculate performance on these measures using administrative claims data. We also finalized at § 414.1325(f)(2), (which, as noted, we proposed to redesignate as § 414.1325(e)(2)) that for Medicare Part B claims, data must be submitted on claims with dates of service during the performance period that must be processed no later than 60 days following the close of the performance period. We neglected to codify this requirement at § 414.1325(e) (which, as noted, we proposed to consolidate with § 414.1325(a)) for administrative claims data used to assess performance in the cost performance category and for administrative claims-based quality measures. Therefore, in the CY 2019 PFS proposed rule (83 FR 35895), we proposed to amend § 414.1325(a)(2)(i) to reflect that claims included in the measures are those submitted with dates of service during the performance period that are processed no later than 60 days following the close of the performance period.

In the CY 2019 PFS proposed rule (83 FR 35895), a summary of these proposed changes is included in Tables 32 and 33. For reference, Table 32 summarizes the data submission types for individual MIPS eligible clinicians that we proposed at § 414.1325(b) and (e) in the CY 2019 PFS proposed rule (83 FR 35895). Table 33 summarizes the data submission types for groups that we proposed at § 414.1325(c) and (e) in the CY 2019 PFS proposed rule (83 FR 35895 through 35896). We requested comment on these proposals.

The following is a summary of the comments we received on ''Performance Category Measures and Reporting''.

Comment: Many commenters supported our proposal to allow small practices to use the Medicare Part B claims-based reporting option for group reporting, with some noting that this option specifically relieves the burden on rural providers. However, several of these commenters opposed limiting the Medicare Part B claims reporting to only clinicians in small practices, stating that many clinicians are excluded from the special small practice policies despite operating as small practices in all other respects, and there may be circumstances where reporting via Medicare Part B claims as individuals is the best option for clinicians in larger multispecialty practices to allow each clinician to focus on quality measures most relevant to his/her specialty and scope of practice. A few commenters stated that this policy would result in a negative impact on clinicians who are part of specialties that do not have relevant eCQMs available to them, but have nonetheless implemented workflows to support reporting data using Medicare Part B claims; requiring them to change these workflows based solely on practice size would cause unnecessary clinician burden without an offsetting benefit to the clinician already participating in the program. Therefore, these commenters recommended that CMS retain the Medicare Part B claims-based reporting option in the quality performance category for all clinicians regardless of practice size. One commenter also requested that we provide a definition for a small practice in the final rule.

Response: We likewise acknowledge that many clinicians that are not in a small practice currently report via Medicare Part B claims. However, as we previously expressed in the CY 2017 Quality Payment Program final rule (81 FR 77090), we want to move away from claims reporting, as more measures are available through health IT mechanisms such as registries, QCDRs, and health IT vendors. We believe it is important to move away from manual methods of reporting and instead utilize more electronic methods such as using EHRs, registries, QCDRs. Also, as we have described above with our revised terms, clinicians that are part of a practice that opts not to work with a third party intermediary can submit data directly to us, which is a flexibility we have under MIPS that was not available under the legacy programs. We note that this change does not require the use of eCQMs by MIPS eligible clinicians that are not considered to be part of a small practice. Rather, MIPS eligible clinicians that do not meet the definition of a small practice will have the ability to select from all other collection types. We refer readers to § 414.1305 for the definition of small practice.

Comment: A few commenters did not support the proposal to make the Medicare Part B claims collection type available to clinicians in small practices, stating that it does not align with the objectives of electronic reporting and Promoting Interoperability. Commenters specifically stated that the small administrative burden to implement CEHRT exceeds the cost of the various benefits of utilizing technology to improve the quality of care and that CEHRT is the only method that is completely accurate based upon the patient record and prevents organizations from ''cherry-picking'' patients to meet the 60 percent reporting threshold. One commenter also noted that registries are available at very affordable costs for clinicians and groups. Another commenter stated concern about how small and rural practices that have made the financial investment into CEHRT would react to this proposed update, stating that the proposal sends an inconsistent message to those small and rural psychiatric practices that made the financial investment to adopt CEHRT.

Response: To clarify, our policy is to make the Medicare Part B claims collection type only available to small practices. We agree that there are many benefits to CEHRT adoption and also agree that many registries are available at low cost. We do not agree that this sends an inconsistent message with the objectives of electronic reporting and Promoting Interoperability as we still encourage all clinicians (small practices and non-small practices) to submit electronically. However, we recognize that small practices have additional challenges and believe that continuing to allow the Medicare Part B claims collection type only to small practices is beneficial. To further highlight alignment in policy regarding small practices across performance categories in MIPS, as discussed in section III.I.3.h.(5) of this final rule for the Promoting Interoperability performance category, small practices can apply for a significant hardship exception if they have issues acquiring an EHR.

Comment: Several commenters opposed the proposed removal of Medicare Part B claims-based reporting

as an option for clinicians. One commenter noted concern because the proposal to expand the definition of a MIPS eligible clinician stated it would also coincide with a decrease in the number of group practices that will be considered a small practice. Commenters requested that CMS finalize a future timeframe for retiring the Medicare Part B claims based submission type for eligible clinicians, stating that: Medicare Part B claims based submission of quality data is still an extremely popular submission method in certain specialties; eliminating this reporting option may reduce the number of clinicians who participate in MIPS reporting; clinicians in many specialties, most notably those that are hospital based, will have to transition to use of a qualified registry or QCDR for quality measure reporting once claims based reporting is no longer an option, and this will require new and unplanned costs and further burden. Commenters also noted that clinicians who elect to report via Medicare Part B claims-based reporting, and choose to report topped out measures, are penalized in their quality score under current methods by receiving a maximum of 7 of 10 points for each topped out measure; therefore there is not an inappropriate incentive for continued use of this method. Another commenter stated that the removal of Medicare Part B claims reporting contradicts the provisions in the Bipartisan Budget Act of 2018 that moves the Agency toward accepting more claims data. Another commenter recommended waiting to see if the number of clinicians reporting through Medicare Part B claims increases over the next years and then determine if a future proposal is appropriate.

Response: We acknowledge that many clinicians that are not in a small practice currently report via Medicare Part B claims. However, we disagree that only allowing the reporting of this collection type to small practices forces non-small practices to transition to the use of a qualified registry or QCDR for quality measure reporting, as there are other collection types and submitter types available in which non-small practices can report (that is, eCQMs, MIPS CQMs, CMS Web Interface measures, the CMS approved survey vendor measure and Administrative claims measures). For example, a non-small practice that does not wish to enter into an arrangement with a third party intermediary can use the MIPS CQM collection type and either login and upload their data or use the direct submission type for the quality performance category. These submission types do not require the usage of a third party intermediary, but we note that there are certain technical capabilities that a practice must have to submit data in this manner. Additional details on the form and manner requirements of these submission types is available at *qpp.cms.gov/design-examples*.

We agree that choosing to report topped out measures is not incentivized. As discussed in the CY 2019 PFS proposed rule (83 FR 35894), we want to move away from claims reporting, since approximately 69 percent of the Medicare Part B claims measures are topped out. This is a contributing factor as to why we are looking to decrease the usage of this option over time, as we have been signaling we would do for many years. We will continue to work with stakeholders on providing further transparency of the future of this collection type. It is unclear to what reference the commenter is discussing where the removal of claims reporting is a contradiction to provisions made in the Bipartisan Budget Act of 2018. We do not believe that this proposal is inconsistent with the Bipartisan Budget Act of 2018.

We do not believe further delay is warranted but will continue to work with stakeholders to provide further clarity on the future of this collection type. Lastly, we disagree that the expansion of the MIPS eligible clinician type as discussed in section III.I.3.c. will decrease the number of small practices. As defined at § 414.1305, a small practice is a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period. We note that this definition currently includes both eligible clinicians and MIPS eligible clinicians, and therefore, the expansion of the MIPS eligible clinician definition should not negatively impact a practice's ability to be considered a small practice.

Comment: One commenter asked us to acknowledge that, from their experiences participating in MIPS for the CY 2017 transition period, when a group attests for promoting interoperability but uses Medicare Part B claims to submit for the quality performance category as individuals, every clinician must have quality data and this data does not roll-up to the group.

Response: In the CY 2017 Quality Payment Program final rule (81 FR 77087 through 77088), Tables 1 and 2 summarized allowable individual and group submission types. In the 2017 MIPS performance period, Medicare Part B claims submissions for the quality performance category could only be used by individuals, and no group score was calculated for this collection type. In this final rule, we are finalizing our proposal to allow small practices the option to report as individuals or a group using Medicare Part B claims data so that a group performance score can be calculated for quality and combined with other group scores from other performance categories.

Comment: One commenter urged CMS to provide greater detail about whether there is value in the data submitted through the Medicare Part B claims measure collection type, given the reduced number of clinically appropriate and applicable claims measures under Medicare Part B, particularly considering data that is collected from claims forms contains minimal clinical information.

Response: Medicare Part B Claims Measure Specifications do provide value in the data submitted. Denominator eligibility can be determined by billing already included within a Medicare Part B Claim. The eligible clinician can submit a quality data code to attest to the quality action defined by the measure specification. The Medicare Part B Measure Specifications address a number of clinical outcomes on prevalent health conditions (for example, diabetes, hypertension). In addition to the outcomes, the Medicare Part B Claims Measure Specifications provide eligible clinicians who provide services in a small practice to participate within MIPS without incurring additional costs in data abstraction by third party intermediaries.

Comment: One commenter urged CMS to provide greater detail about whether small and rural practices who report their performance solely through Medicare Part B claims measures would be afforded the opportunity to submit fewer than 6 measures (including one outcome or high priority measure) as currently required. This commenter also urged CMS to provide greater detail about whether new Medicare Part B claims quality measures would be accepted for inclusion in the rulemaking process, or if only the current Medicare Part B claims quality measures would be continued for use by small and rural practices.

Response: We did not propose any changes to the quality performance submission criteria for the Medicare Part B claims collection type. We validate the availability and applicability of quality measures for clinicians who collect data via claims with fewer than six measures. Clinicians would only need to report the measures that are applicable. We refer readers to

section III.I.3.i.(1)(b)(vii) of this final rule for more discussion on our data validation process. Any updates to the measures list would go through future rulemaking. We want to clarify, that while reference was made to both small and rural practices by the commenter, this policy is limited to those that are small practices. We note that a practice that is small and rural would be eligible to use the Medicare Part B claims collection type, but only with meeting the special status designation of being a small practice.

Comment: One commenter requested clarification on how CMS would determine that a claims submission is intended for group reporting if the group is only submitting data for the quality performance category of MIPS.

Response: In the scenarios where we only receive Medicare Part B claims submissions for a practice for the quality performance category of MIPS, we intend on calculating the quality performance category for the practice as both a group and as individuals and will apply the quality performance category score that is the greater of the two. We considered requiring an election for assessment as a group but believe this would be unduly burdensome on small practices.

Comment: One commenter disagreed with our proposal to eliminate Web Interface reporting for the improvement activities and Promoting Interoperability performance categories, stating this reduces flexibility for groups and adds unnecessary complexity.

Response: We clarify that the CMS Web Interface has been designed as a method for quality submissions only, based on user feedback. As we developed the CMS Web Interface for usage under the Quality Payment Program, we engaged in user testing with stakeholders and the inclusion of the improvement activities and promoting interoperability performance categories within the CMS Web Interface tool negatively impacted the design. Instead, what users experienced for submissions in the first year of the program was a seamless interaction between the CMS Web Interface and the ability to attest for these two performance categories. With the finalization of this policy, users will have the exact same experiences of reporting data for the promoting interoperability and improvement activities performance categories while still using the CMS Web Interface for the quality performance category. We reiterate that we are simply updating our policy to reflect the existing user experience that stakeholders encounter. We would also like to highlight that groups that elect to utilize the CMS Web Interface can still submit improvement activities or promoting interoperability data via direct and log in and upload, if they choose not to utilize the login and attest submission type.

Comment: One commenter supported our proposal to eliminate Web Interface reporting for the improvement activities and Promoting Interoperability performance categories.

Response: We appreciate the commenter's support.

Comment: One commenter appreciated that we clarified that groups may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, login and upload, or login and attest submission types.

Response: Our intent was to provide clarity with the submission experience for clinicians and other stakeholders.

Comment: A few commenters supported our proposal to allow third party intermediaries to submit data using the CMS Web Interface on behalf of groups, which alleviates burden on group practices to report the data themselves.

Response: We appreciate the commenters' support.

After consideration of the public comments received, we are finalizing our proposal to amend § 414.1325(a) to incorporate § 414.1325(e), as they both address which performance categories require data submission; § 414.1325(f) will be redesignated as § 414.1325(e). We are finalizing our proposal at § 414.1325(a)(2)(ii) that there is no data submission requirement for the quality or cost performance category, as applicable, for MIPS eligible clinicians and groups that are scored under the facility-based measurement scoring methodology described in § 414.1380(e). We are finalizing our proposals to reorganize § 414.1325(b) and (c) by performance category and to clarify at § 414.1325(b)(1) that an individual MIPS eligible clinician may submit their MIPS data for the quality performance category using the direct, login and upload, and Medicare Part B claims submission types. We are finalizing our proposal to clarify at § 414.1325(b)(2) that an individual MIPS eligible clinician may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, login and upload, or login and attest submission types. We are finalizing our proposal to clarify at § 414.1325(c)(1) that groups may submit their MIPS data for the quality performance category using the direct, login and upload, and CMS Web Interface (for groups consisting of 25 or more eligible clinicians) submission types. We are also finalizing our proposal to clarify at § 414.1325(c)(2) that groups may submit their MIPS data for the improvement activities or Promoting Interoperability performance categories using the direct, login and upload, or login and attest submission types. We are finalizing our proposal to amend § 414.1325(c)(1) to make the Medicare Part B claims collection type available to MIPS eligible clinicians in small practices beginning with the 2021 MIPS payment year. We are finalizing our proposal at § 414.1325(c)(2) to state that the CMS Web Interface submission type will no longer be available for groups to use to submit data for the improvement activities and Promoting Interoperability performance categories. We are finalizing our proposal to redesignate § 414.1325(c)(4) as § 414.1325(c)(1) and amend § 414.1325(c)(1) to allow third party intermediaries to submit data using the CMS Web Interface on behalf of groups. We are finalizing our proposal to redesignate § 414.1325(f)(2) as § 414.1325(e)(2) that for Medicare Part B claims, data must be submitted on claims with dates of service during the performance period that must be processed no later than 60 days following the close of the performance period. Lastly, we are also finalizing our proposal to amend § 414.1325(a)(2)(i) to reflect that claims included in the measures are those submitted with dates of service during the performance period that are processed no later than 60 days following the close of the performance period. We received many comments on our comment solicitation to expand the scope of practices that can utilize the Web Interface and will take them into consideration for future rulemaking.

TABLE 32—DATA SUBMISSION TYPES FOR MIPS ELIGIBLE CLINICIANS REPORTING AS INDIVIDUALS

Performance category/submission combinations accepted	Submission type	Submitter type	Collection type
Quality	Direct Log in and upload. Medicare Part B claims (small practices) [1].	Individual or Third Party Intermediary [2]. Individual	eCQMs. MIPS CQMs. QCDR measures. Medicare Part B claims measures (small practices).
Cost	No data submission required [2]	Individual	
Promoting Interoperability	Direct Log in and upload. Log in and attest.	Individual or Third Party Intermediary.	
Improvement Activities	Direct Log in and upload. Log in and attest.	Individual or Third Party Intermediary.	

[1] Third party intermediary does not apply to Medicare Part B claims submission type.
[2] Requires no separate data submission to CMS: Measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare claims. *Note:* As used in this rule, the term ''Medicare Part B claims'' differs from ''administrative claims'' in that ''Medicare Part B claims'' require MIPS eligible clinicians to append certain billing codes to denominator-eligible claims to indicate the required quality action or exclusion occurred.

TABLE 33—DATA SUBMISSION TYPES FOR MIPS ELIGIBLE CLINICIANS REPORTING AS GROUPS

Performance category/submission combinations accepted	Submission types	Submitter type	Collection type
Quality	Direct Log in and upload. CMS Web Interface (groups of 25 or more eligible clinicians). Medicare Part B claims (small practices) [1].	Group or Third Party Intermediary	eCQMs. MIPS CQMs. QCDR measures. CMS Web Interface measures. Medicare Part B claims measures (small practices). CMS approved survey vendor measure. Administrative claims measures.
Cost	No data submission required [1 2]	Group	
Promoting Interoperability	Direct Log in and upload. Log in and attest.	Group or Third Party Intermediary	
Improvement Activities	Direct Log in and upload. Log in and attest.	Group or Third Party Intermediary	

[1] Third party intermediary does not apply to Medicare Part B claims submission type.
[2] Requires no separate data submission to CMS: Measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare claims. *Note:* As used in this rule, the term ''Medicare Part B claims'' differs from ''administrative claims'' in that ''Medicare Part B claims'' require MIPS eligible clinicians to append certain billing codes to denominator-eligible claims to indicate the required quality action or exclusion occurred.

(d) Submission Deadlines

We previously finalized data submission deadlines in the CY 2017 Quality Payment Program final rule (81 FR 77095 through 77097) at § 414.1325(f), which outlined data submission deadlines for all submission mechanisms for individual eligible clinicians and groups for all performance categories. As discussed in section III.I.3.h.(1) of this final rule, the term submission mechanism, that includes submission via the qualified registry, QCDR, EHR, Medicare Part B claims, the CMS Web Interface and attestation, does not align with the existing process of data submission to the Quality Payment Program. In the CY 2019 PFS proposed rule (83 FR 35896), we proposed to revise regulatory text language at § 414.1325(f), which, as noted, we proposed to redesignate as § 414.1325(e), to outline data submission deadlines for all submission types for individual eligible clinicians and groups for all performance categories. In the CY 2019 PFS proposed rule (83 FR 35896), we also proposed to revise § 414.1325(e)(1) to allow flexibility for CMS to alter submission deadlines for the direct, login and upload, the CMS Web Interface, and login and attest submission types. We anticipate that in scenarios where the March 31st deadline falls on a weekend or holiday, we will extend the submission period to the next business day (that is, Monday). There also may be instances where due to unforeseen technical issues, the submission system may be inaccessible for a period of time. If this scenario were to occur, we anticipate that we will extend the submission period to account for this lost time, to the extent feasible. We note that this revision would also revise the previously finalized policy at § 414.1325(e)(3) stating that data must be submitted during an 8-week period following the close of the performance period, and that the period must begin no earlier than January 2 and end no later than March 31 for the CMS Web Interface. In the CY 2019 PFS proposed rule (83 FR 35896), we proposed to align the deadline for the CMS Web Interface submission type with all other submission type deadlines at § 414.1325(e)(1), while we also proposed to remove the previously finalized policy at § 414.1325(e)(3) because it is no longer needed to mandate a different submission

deadline for the CMS Web Interface submission type. In the CY 2019 PFS proposed rule (83 FR 35896), we also proposed a number of other technical revisions to § 414.1325 to more clearly and concisely reflect previously established policies.

The following is a summary of the comments we received on ''Submission Deadlines''.

Comment: Several commenters supported our proposal to align the deadline for the CMS Web Interface submission type with all other submission type deadlines and appreciated further aligning deadlines within the program, stating that predictable and achievable deadlines are preferred for planning and education purposes. Another commenter urged us to make this new deadline clear to physicians by emphasizing the different deadlines at the start of the performance year.

Response: We will take all feedback into consideration for future educational materials.

Comment: One commenter opposed our proposal to align the deadline for the CMS Web Interface submission type with all other submission type deadlines, stating that this flexibility is being used to shorten the deadline, and that the earliest deadline should be set at March 31.

Response: We disagree that this flexibility is being used to shorten the deadline. We clarify that it is no longer necessary to mandate a different submission deadline for the CMS Web Interface submission type and this proposal will bring further alignment amongst submission types. Furthermore, this policy extends the CMS Web Interface submission deadline by approximately 4 additional weeks.

After consideration of the public comments received, we are finalizing our proposal to redesignate § 414.1325(f) as § 414.1325(e), to outline data submission deadlines for all submission types for individual eligible clinicians and groups for all performance categories. We are finalizing our proposal to revise § 414.1325(e)(1) to allow flexibility for CMS to alter submission deadlines for the direct, login and upload, the CMS Web Interface, and login and attest submission types. We are also finalizing our proposals to align the deadline for the CMS Web Interface submission type with all other submission type deadlines at § 414.1325(e)(1), and to remove the previously finalized policy at § 414.1325(e)(3) because it is no longer needed to mandate a different submission deadline for the CMS Web Interface submission type.

(2) Quality Performance Category

(a) Background

We refer readers to §§ 414.1330 through 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

(i) Assessing Performance on the Quality Performance Category

As discussed in the CY 2019 PFS proposed rule (83 FR 35896), under § 414.1330(a), for purposes of assessing performance of MIPS eligible clinicians on the quality performance category, we will use: Quality measures included in the MIPS final list of quality measures; and quality measures used by QCDRs. We proposed to amend § 414.1330(a) to account for facility-based measurement and the APM scoring standard. For that reason, we proposed at § 414.1330(a) to specify, for a MIPS payment year, that we use the following quality measures, as applicable to assess performance in the quality performance category: Measures included in the MIPS final list of quality measures established by CMS through rulemaking; QCDR measures approved by CMS under § 414.1440; facility-based measures as described under § 414.1380; and MIPS APM measures as described at § 414.1370.

We did not receive any comments on the proposal of how we will assess performance in the quality performance category. Therefore, we are finalizing our proposal to amend § 414.1330(a) to state that for a MIPS payment year, we use the following quality measures, as applicable, to assess performance in the quality performance category: Measures included in the MIPS final list of quality measures established by CMS through rulemaking; QCDR measures approved by CMS under § 414.1440; facility-based measures as described in § 414.1380; and MIPS APM measures as described in § 414.1370.

(ii) Contribution to Final Score

In the CY 2019 PFS proposed rule (83 FR 35896) under § 414.1330(b)(2) and (3), we state that performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year and 30 percent of a MIPS eligible clinician's final score for each MIPS payment year thereafter. Section 1848(q)(5)(E)(i)(I) of the Act, as amended by section 51003(a)(1)(C)(i) of the Bipartisan Budget Act of 2018, provides that 30 percent of the final score shall be based on performance with respect to the quality performance category, but that for each of the 1st through 5th years for which MIPS applies to payments, the quality performance category performance percentage shall be increased so that the total percentage points of the increase equals the total number of percentage points that is based on the cost performance category performance is less than 30 percent for the respective year. As discussed in section III.I.3.i.(c) of this final rule, we proposed to weight the cost performance category at 15 percent for the 2021 MIPS payment year. Accordingly, we proposed to amend § 414.1330(b)(2) to provide that performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year, and proposed at § 414.1330(b)(3) that the quality performance category comprises 45 percent of a MIPS eligible clinician's final score for the 2021 MIPS payment year.

We received the following comments on our proposals regarding the quality performance category's contribution to the final score proposal:

Comment: A few commenters supported our proposals.

Response: We thank the commenters for their support.

Comment: Several commenters did not support the proposed reduction of the quality performance category weight to 45 percent from 50 percent for the 2021 MIPS payment year, suggesting that CMS maintain the weight at 50 percent. The commenters indicated that adjusting the weight downward sends the wrong message to physicians regarding quality of care and that de-emphasizing quality runs contrary to the aim of reforming toward a value-based system. Further, commenters stated that altering the weight prematurely leads to less stability with the program and adds complexity. A few commenters recommended that we transfer the weight from the improvement activity category as needed to preserve the weight of the quality category.

Response: As discussed in section III.I.3.h.(3) of this final rule, we are finalizing the proposal to weight the cost performance category at 15 percent for the 2021 MIPS payment year. Accordingly, section 1848(q)(5)(E)(i)(1) of the Act requires that the quality performance category weight to be 45 percent. While we understand that the quality performance category requires additional resources to report, we believe that we are measuring value by rewarding performance in quality while keeping down costs and that clinicians can influence the cost of services that they do not personally perform by

improving care management with other clinicians and avoiding unnecessary services. Regarding the commenters' recommendation that we reduce the weight of the improvement activities performance category to preserve the weight of the quality performance category, we note that we do not have discretion to reduce the weight of the improvement activities performance category except for scenarios where reweighting can occur due to measures and activities and not being available and applicable. Please refer to section III.I.3.i.(1)(e) for information on our reweighting policies.

As discussed in section III.I.3.h.(3) of this final rule, we are finalizing our proposal to weight the cost performance category at 15 percent for the 2021 MIPS payment year. After consideration of the public comments received, we are finalizing our proposal to amend § 414.1330(b)(2) to provide that performance in the quality performance category comprises 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year, and our proposal to amend § 414.1330(b)(3) to provide that the quality performance category comprises 45 percent of a MIPS eligible clinician's final score for the 2021 MIPS payment year.

(iii) Quality Data Submission Criteria

(A) Submission Criteria

(aa) Submission Criteria for Groups Reporting Quality Measures, Excluding CMS Web Interface Measures and the CAHPS for MIPS Survey Measure

In the CY 2019 Quality Payment Program proposed rule (83 FR 35896 through 35897), we referred readers to § 414.1335(a)(1) for our previously established submission criteria for quality measures submitted via claims, registry, QCDR, or EHR. As discussed in section III.I.3.h. of this final rule, we proposed revisions to existing and additional terminology to clarify the data submission processes available for MIPS eligible clinicians, groups and third party intermediaries, to align with the way users actually submit data to the Quality Payment Program. For that reason, we proposed to revise § 414.1335(a)(1) to state that data would be collected for the following collection types: Medicare Part B claims measures; MIPS CQMs; eCQMs; or QCDR measures. Codified at § 414.1335(a)(1)(i), MIPS eligible clinicians and groups must submit data on at least six measures including at least one outcome measure. If an applicable outcome measure is not available, eligible clinicians and groups must report one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician or group, they must report on each measure that is applicable. Furthermore, we proposed beginning with the 2021 MIPS payment year to revise § 414.1335(a)(1)(ii) to indicate that MIPS eligible clinicians and groups that report on a specialty or subspecialty measure set, must submit data on at least six measures within that set, provided the set contain at least six measures. If the set contains fewer than six measures or if fewer than six measures apply to the MIPS eligible clinician or group, they must report on each measure that is applicable.

As previously expressed in the 2017 Quality Payment Program final rule (81 FR 77090), we want to move away from claims reporting, since approximately 69 percent of the Medicare Part B claims measures are topped out. As discussed in section III.I.3.h. of this final rule, we proposed to limit the Medicare Part B claims submission type, and therefore, the Medicare Part B claims measures, to MIPS eligible clinicians in small practices. We refer readers to section III.I.3.h of this final rule for discussion of this proposal.

The following is a summary of the public comments on these proposals and our responses:

Comment: A few commenters did not support the proposed specialty or subspecialty measure set submission criteria, citing the potential difficulty in reporting measures within the set that are not applicable. One commenter requested that, if the proposal is finalized, CMS should clarify how the requirement applies when clinicians submit both MIPS CQMs and QCDR measures to meet the quality performance category requirements, recognizing that some eligible clinicians may not be able to meet the requirement to report on all measures within a specialty or subspecialty set. Another commenter recommended that CMS revise its data submission criteria pertaining to specialty and subspecialty measure sets and require clinicians to report at least one outcome or high priority measure.

Response: To clarify, should a MIPS eligible clinician choose to report on a specialty or a subspecialty measure set, they are only required to submit data on six measures within that set, provided the set contain at least six measures. If the set contains fewer than six measures or if fewer than six measures apply to the MIPS eligible clinician or group, they are required to report on each measure that is applicable. If a MIPS eligible clinician chooses to report only on a specialty or subspecialty measure set and reports on less than 6 quality measures through either the MIPS CQM or Medicare Part B claims collection types, they will be subjected to the measure validation process that will validate whether the clinician actually had less than 6 measures available or applicable to their scope of practice. If a MIPS eligible clinician chooses to report via the QCDR measure collection type, they will be required to meet the reporting requirement of 6 quality measures. If a MIPS eligible clinician reports fewer than 6 quality measures through a QCDR, they will receive zero points for each unreported quality measure. As stated at revised § 414.1335(a)(1)(ii), MIPS eligible clinicians are required to report at least one outcome measure, or if no outcome measures are available or applicable, report another high priority measure in lieu of an outcome measure.

Comment: One commenter sought clarification on the proposed specialty or subspecialty measure set submission criteria. Specifically, the commenter questioned what a MIPS eligible clinician or group is required to do if fewer than 6 measures apply to the MIPS eligible clinician within their specialty or sub-specialty domain. Additionally, the commenter requested clarification on whether outcome measures or high-priority measures for specialty sets were required.

Response: The clinician is required to report at least one outcome measure or, if an applicable outcome measure is not available, one other high priority measure. If a MIPS eligible clinician chooses to report on a specialty or subspecialty measure set, the set contains at least 6 quality measures, and the clinician reports on fewer than 6 measures through the MIPS CQM or Medicare Part B claims collection type, the clinician will be subjected to the measure validation process, which will validate whether fewer than 6 measures were actually available and applicable to their scope of practice. If the measure validation process determines that at least 6 measures were available and applicable to the clinician's scope of practice, they will receive zero points for each unreported measure. We refer readers to Appendix 1: Finalized MIPS Quality Measures in this final rule, where the specialty sets are finalized in Table Group B. There are high priority measures available in all the specialty sets, and therefore a MIPS eligible clinician should be able to select a specialty set that reflects their scope of practice, and be able to report on the measures within that set, including the high-priority measures.

After consideration of the public comments received, we are finalizing our proposal to amend § 414.1335(a)(1) to state that data would be collected for the following collection types: Medicare Part B claims measures; MIPS CQMs; eCQMs; or QCDR measures. Codified at § 414.1335(a)(1)(i), MIPS eligible clinicians and groups must submit data on at least six measures including at least one outcome measure. If an applicable outcome measure is not available, they must report one other high priority measure. If fewer than six measures apply to the MIPS eligible clinician or group, report on each measure that is applicable. We are also finalizing our proposal to amend § 414.1335(a)(1)(ii) to state that MIPS eligible clinicians and groups that report on a specialty or subspecialty measure set, must submit data on at least six measures within that set, provided the set contains at least six measures. If the set contains fewer than six measures or if fewer than six measures apply to the MIPS eligible clinician or group, they must report on each measure that is applicable.

(bb) Submission Criteria for Groups Reporting CMS Web Interface Measures

As noted in the CY 2019 PFS proposed rule (83 FR 35897), we did not propose any changes to the established submission criteria for CMS Web Interface measures. For purposes of clarity and organization, we are finalizing a technical change by moving the regulation text on the sampling requirements for reporting CMS Web Interface measures from § 414.1335(a)(2) to § 414.1340(c)(1). However, beginning with the 2021 MIPS payment year, we proposed to revise the terminology with which CMS Web Interface measures are referenced-to align with the updated submission terminology as discussed in section III.I.3.h. of this final rule. Therefore, we proposed to revise § 414.1335(a)(2) from ''via the CMS Web Interface-for groups consisting of 25 or more eligible clinicians only'', to ''for CMS Web Interface measures''.

In order to ensure that the collection of information is valuable to clinicians and worth the cost and burden of collecting information, and address the challenge of fragmented reporting for multiple measures and submission options, we solicited comment on expanding the CMS Web Interface option to groups with 16 or more eligible clinicians. Preliminary analysis has indicated that expanding the CMS Web Interface option to groups of 16 or more eligible clinicians would likely result in many of these new groups not being able to fully satisfy measure case minimums on multiple CMS Web Interface measures. However, we could possibly mitigate this issue if we require smaller groups (with 16–24 eligible clinicians) to report on only a subset of the CMS Web Interface measures, such as the preventive care measures. We solicited stakeholder feedback on the issue of expanding the CMS Web interface to groups of 16 or more, as well as other factors we should consider with such expansion. We received comments from stakeholders regarding expanding the CMS Web Interface option to groups with 16 or more eligible clinicians. We thank commenters for their input and may take this input into consideration in future years.

As discussed in section III.F.1.c. of this final rule, changes proposed and finalized through rulemaking to the CMS Web Interface measures for MIPS would be applicable to ACO quality reporting under the Shared Savings Program. As discussed in Table Group D: Measures with Substantive Changes Proposed for the 2021 MIPS Payment Year and Future Years of the measures appendix of this final rule, we proposed to remove 6 measures from the CMS Web Interface in MIPS. If finalized, groups reporting CMS Web Interface measures for MIPS would not be responsible for reporting those removed measures. We refer readers to the quality measure appendix for additional details on the proposals related to changes in CMS Web Interface measures.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77116), the CMS Web Interface has a two-step attribution process that associates beneficiaries with TINs during the period in which performance is assessed (adopted from the Physician Value-based Payment Modifier (VM) program). The CAHPS for MIPS survey utilizes the same two-step attribution process as the CMS Web Interface. The CY 2017 Quality Payment Program final rule (81 FR 77116) noted that attribution would be conducted using the different identifiers in MIPS. For purposes of the CMS Web Interface and the CAHPS for MIPS survey, we clarified that attribution would be conducted at the TIN level (83 FR 35897).

We did not receive comments on the proposal to revise § 414.1335(a)(2) from ''via the CMS Web Interface-for groups consisting of 25 or more eligible clinicians only'', to ''for CMS Web Interface measures''.

We are finalizing revisions to § 414.1335(a)(2) to state that via the CMS Web Interface measures- for groups consisting of 25 or more eligible clinicians only, groups must report on all measure included in the CMS Web Interface. The group must report on the first 248 consecutively ranked beneficiaries in the sample for each module.

(cc) Submission Criteria for Groups Electing to Report Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey

As noted in the CY 2019 PFS proposed rule (83 FR 35897), we did not propose any changes to the established submission criteria for the CAHPS for MIPS Survey at § 414.1335(a)(3). However, beginning with the 2021 MIPS payment year, we proposed to revise § 414.1335(a)(3) to clarify for the CAHPS for MIPS survey, for the 12-month performance period, a group that wishes to voluntarily elect to participate in the CAHPS for MIPS survey measure must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measure data to us.

We did not receive comments on the proposal to clarify the requirement to use a CMS approved CAHPS for MIPS survey vendor.

We are finalizing our proposal to amend § 414.1335(a)(3) to clarify for the CAHPS for MIPS survey that beginning with the 2021 MIPS payment year, for the 12-month performance period, a group that wishes to voluntarily elect to participate in the CAHPS for MIPS survey measure must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measure data to us.

(B) Summary of Data Submission Criteria

In the CY 2019 PFS proposed rule (83 FR 35897), we did not propose any changes to the quality data submission criteria for the 2021 MIPS payment year; however, as discussed in section III.I.3.h. of this final rule, we proposed changes to existing and additional submission related terminology. Similarly, although we did not propose changes to the data completeness criteria at § 414.1340, we proposed changes to existing and additional submission related terminology. For that reason, we proposed to revise § 414.1340 to specify that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2021; MIPS eligible clinicians and groups submitting quality measure data

on the Medicare Part B claims measures must submit data on at least 60 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for the 2021 MIPS payment year; and groups submitting quality measures data on CMS Web Interface measures or the CAHPS for MIPS survey measure, must meet the data submission requirement on the sample of the Medicare Part B patients CMS provides. Tables 34 and 35 clearly capture the data completeness requirements and submission criteria by collection type for individual clinicians and groups.

TABLE 34—SUMMARY OF DATA COMPLETENESS REQUIREMENTS AND PERFORMANCE PERIOD BY COLLECTION TYPE FOR THE 2020 AND 2021 MIPS PAYMENT YEARS

Collection type	Performance period	Data completeness
Medicare Part B claims measures ..	Jan 1–Dec 31	60 percent of individual MIPS eligible clinician's, or group's Medicare Part B patients for the performance period.
Administrative claims measures	Jan 1–Dec 31	100 percent of individual MIPS eligible clinician's Medicare Part B patients for the performance period.
QCDR measures, MIPS CQMs, and eCQMs.	Jan 1–Dec 31	60 percent of individual MIPS eligible clinician's, or group's patients across all payers for the performance period.
CMS Web Interface measures	Jan 1–Dec 31	Sampling requirements for the group's Medicare Part B patients: Populate data fields for the first 248 consecutively ranked and assigned Medicare beneficiaries in the order in which they appear in the group's sample for each module/measure. If the pool of eligible assigned beneficiaries is less than 248, then the group would report on 100 percent of assigned beneficiaries.
CAHPS for MIPS survey measure ..	Jan 1–Dec 31	Sampling requirements for the group's Medicare Part B patients.

TABLE 35—SUMMARY OF QUALITY DATA SUBMISSION CRITERIA FOR MIPS PAYMENT YEAR 2020 AND 2021 FOR INDIVIDUAL CLINICIANS AND GROUPS

Clinician type	Submission criteria	Measure collection types (or measure sets) available
Individual Clinicians	Report at least six measures including one outcome measure, or if an outcome measure is not available report another high priority measure; if less than six measures apply then report on each measure that is applicable. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Individual MIPS eligible clinicians select their measures from the following collection types: Medicare Part B claims measures (individual clinicians in small practices only), MIPS CQMs, QCDR measures, eCQMs, or reports on one of the specialty measure sets if applicable.
Groups (non-CMS Web Interface).	Report at least six measures including one outcome measure, or if an outcome measure is not available report another high priority measure; if less than six measures apply then report on each measure that is applicable. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Groups select their measures from the following collection types: Medicare Part B claims measures (small practices only), MIPS CQMs, QCDR measures, eCQMs, or the CAHPS for MIPS survey—or reports on one of the specialty measure sets if applicable. Groups of 16 or more clinicians who meet the case minimum of 200 will also be automatically scored on the administrative claims based all-cause hospital readmission measure.
Groups (CMS Web Interface for group of at least 25 clinicians).	Report on all measures includes in the CMS Web Interface collection type and optionally the CAHPS for MIPS survey. Clinicians would need to meet the applicable data completeness standard for the applicable performance period for each collection type.	Groups report on all measures included in the CMS Web Interface measures collection type and optionally the CAHPS for MIPS survey. Groups of 16 or more clinicians who meet the case minimum of 200 will also be automatically scored on the administrative claims based all-cause hospital readmission measure.

We received comments on the proposal to revise § 414.1340 to specify that MIPS eligible clinicians and groups submitting quality measures data must submit data on at least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2021:

Comment: One commenter requested that CMS clarify the 90-day performance period mentioned in Table 31 of the proposed rule. This commenter requested more information concerning to which measures the performance period would apply and expressed concerns about the differing performance period for measures.

Response: We clarify that in the CY 2019 PFS proposed rule (83 FR 35898), the reference in Table 31 to a 90-day performance period for certain measures was an inadvertent error. To clarify, there is no 90-day performance period for any MIPS quality measure. For the 2020 and 2021 MIPS payment years, the performance period is 12 months. Table 34 Summary of Data Completeness Requirements and Performance Period by Collection Type for the 2020 and 2021 MIPS Payment Years has been updated to reflect this correction.

Comment: One commenter opposed a full calendar-year performance period given the proposed 60 percent data completion requirement for the quality performance category and the potential burden in developing and implementing new applicable measures.

Response: While the data completeness requirement will remain at 60 percent for the 2019 performance

period, we have previously noted our interest in incorporating higher data completeness thresholds in future years to ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures and to avoid measure selection bias as much as possible, but believe it should be done so in a gradual manner. In the CY 2019 PFS proposed rule (83 FR 35893), we noted our belief that a full calendar year performance period for the quality and cost performance categories will be less confusing for MIPS eligible clinicians. A longer performance period for quality will likely include more patient encounters, which will increase the denominator of the quality measures reported. Statistically, a larger sample size provides more accurate and actionable information. Furthermore, a full calendar year performance period is consistent with how many of the measures used in our program were designed to be performed and reported.

Comment: A few commenters supported the fact that our proposal to maintain the 60 percent data completeness threshold and encouraged CMS to retain this policy for future program years.

Response: We thank the commenters for their support.

Comment: One commenter recommended that CMS increase the data completeness threshold to 100 percent. Other commenters noted that because calculating and submitting an accurate reporting rate requires an analysis of a full set of data and is often a manual and error-prone process, they do not believe it significantly reduces provider burden to have a 60 percent data completeness threshold as compared to 100 percent.

Response: As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53632), we noted concerns about the unintended consequences of accelerating the data completeness threshold so dramatically, which may jeopardize a MIPS eligible clinician's ability to participate and perform well in MIPS, particularly with those clinicians who are not as experienced with MIPS quality measure submission. While we do continue to monitor the data completeness threshold with future intentions of raising the threshold for data completeness, we want to ensure that the data completeness requirement is achievable by all MIPS eligible clinicians. We do agree that it is important to incorporate higher data completeness thresholds in future years to ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures and to avoid measure selection bias as much as possible, but believe it should be done so in a gradual manner.

Comment: One commenter requested clarification on whether the data completeness criteria is 60 percent of the performance year, regardless of time, or if MIPS eligible clinicians are mandated to include 60 percent of their patient data from the calendar year.

Response: As stated at § 414.1340(b)(2), MIPS eligible clinicians are required to submit data on at least 60 percent of the applicable Medicare Part B patients seen during the performance period, as illustrated in Table 34.

Comment: One commenter expressed support for updating the terminology of the data completeness criteria, stating that it does not change the data completeness criteria from the previous years.

Response: We thank the commenter for their support. We clarify that we did not make any proposals or changes to the data completeness criteria, and only made changes to existing and additional submission related terminology, as explained in the CY 2019 PFS proposed rule (83 FR 35897).

After consideration of the public comments received, we are finalizing revisions to § 414.1340 to specify that MIPS eligible clinicians and groups submitting quality measures data on QCDR measures, MIPS CQMs, or the eCQMs must submit data on at least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2021; MIPS eligible clinicians and groups submitting quality measure data on the Medicare Part B claims measures must submit data on at least 60 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for the 2021 MIPS payment year; and groups submitting quality measures data on CMS Web Interface measures or the CAHPS for MIPS survey measure, must meet the data submission requirement on the sample of the Medicare Part B patients CMS provides, as applicable.

(iv) Application of Facility-Based Measures

Under section 1848(q)(2)(C)(ii) of the Act, the Secretary may use measures for payment systems other than for physicians, such as measures used for inpatient hospitals, for purposes of the quality and cost performance categories. However, the Secretary may not use measures for hospital outpatient departments, except in the case of items and services furnished by emergency physicians, radiologists, and anesthesiologists. We refer readers to section III.I.3.i.(1)(d) of this final rule for a full discussion of facility-based measures and scoring for the 2021 MIPS payment year.

(b) Selection of MIPS Quality Measures for Individual MIPS Eligible Clinicians and Groups Under the Annual List of Quality Measures Available for MIPS Assessment

(i) Background and Policies for the Call for Measures and Measure Selection Process

In the CY 2019 PFS proposed rule (83 FR 35898 through 35899), we noted that developed and announced our Meaningful Measures Initiative.[18] By identifying the highest priority areas for quality measurement and quality improvement, the Meaning Measures Initiative identifies the core quality of care issues that advances our work to improve patient outcomes. Through subregulatory guidance, we will categorize quality measures by the 19 Meaningful Measure areas as identified on the Meaningful Measures Initiative website at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html.* The categorization of quality measures by Meaningful Measure area would provide MIPS eligible clinicians and groups with guidance as to how each measure fits into the framework of the Meaningful Measure Initiative.

Furthermore, under § 414.1305, a high priority measure is defined as an outcome, appropriate use, patient safety, efficiency, patient experience or care coordination quality measure. Due to the immense impact of the opioid epidemic across the United States, we believe it is imperative to promote the measurement of opioid use and overuse, risks, monitoring, and education through quality reporting. For that reason, beginning with the 2019 performance period, we proposed at § 414.1305 to amend the definition of a high priority measure to include quality measures that relate to opioids and to further clarify the types of outcome measures that are considered high priority. Beginning with the 2021 MIPS payment year, we proposed to define at § 414.1305 a high priority measure to mean an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or

[18] Link to Meaningful Measures web page on CMS site to be provided at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/MMF/General-info-Sub-Page.html.*

opioid-related quality measure. Outcome measures would include intermediate-outcome and patient-reported outcome measures. We requested comment on this proposal, specifically if stakeholders have suggestions on what aspects of opioids should be measured—for example, whether we should focus solely on opioid overuse. We summarize and respond to the comments received on this proposal below.

Previously finalized MIPS quality measures can be found in the CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174) and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). The new MIPS quality measures finalized for inclusion in MIPS for the 2019 performance period and future years are found in Table Group A of the ''Appendix 1: Finalized MIPS Quality Measures'' of this final rule. The current specialty measure sets can be found in the CY 2018 Quality Payment Program final rule (82 FR 53976 through 54146). The finalized new and modified quality measure specialty sets can be found in Table Group B of the ''Appendix 1: Finalized MIPS Quality Measures'' of this final rule and include new measures, previously finalized measures with modifications, and previously finalized measures with no modifications.

We note that modifications made to the specialty sets may include the removal of certain previously finalized quality measures. Certain MIPS specialty sets have further defined subspecialty sets, each of which constitutes a separate specialty set. In instances where an individual MIPS eligible clinician or group reports on a specialty or subspecialty set, if the set has less than six measures, that is all the clinician is required to report. MIPS eligible clinicians are not required to report on the specialty measure sets, but they are suggested measures for specific specialties. Please note that the finalized specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 9, 2018,[19] we announced that we would be accepting recommendations for potential new specialty measure sets for Year 3 of MIPS under the Quality Payment Program. These recommendations were based on the MIPS quality measures finalized in the CY 2018 Quality Payment Program final rule, and includes recommendations to add or remove the current MIPS quality measures from the specialty measure sets. All specialty measure set recommendations submitted for consideration were assessed to ensure that they meet the needs of the Quality Payment Program.

In the CY 2017 Quality Payment Program final rule (81 FR 77137), we finalized that substantive changes to MIPS quality measures, to include but are not limited to, measures that have had measure specification changes, measure title changes, or domain changes. MIPS quality measures with finalized substantive changes can be found in Table Group D of the ''Appendix 1: Finalized MIPS Quality Measures'' of this final rule.

As referenced in the CY 2017 Quality Payment Program final rule (81 FR 77291), with regards to eCQMs, in the 2015 EHR Incentive Program final rule, CMS required eligible clinicians, eligible hospitals, and critical access hospitals (CAHs) to use the most recent version of an eCQM for electronic reporting beginning in 2017 (80 FR 62893). We proposed this policy for the end-to-end electronic reporting bonus under MIPS and encourage MIPS eligible clinicians to work with their EHR vendors to ensure they have the most recent version of the eCQM. We will not accept an older version of an eCQM as a submission for the MIPS program for the quality performance category or the end-to-end electronic reporting bonus within that category. MIPS eligible clinicians and groups reporting on the quality performance category are required to use the most recent version of the eCQM specifications. The annual updates to the eCQM specifications and any applicable addenda are available on the electronic quality improvement (eCQI) Resource Center website at *https://ecqi.healthit.gov* for the applicable performance period. Furthermore, as discussed in section III.E. of this final rule, the Medicaid Promoting Interoperability Program generally intends to utilize eCQM measures as they are available in MIPS. We refer readers to section III.E. of this final rule for additional details and criteria on the Medicaid Promoting Interoperability Program.

In MIPS, there are a limited number of CMS Web Interface measures. We solicited comment on building upon the CMS Web Interface submission type by expanding the core set of measures available for that submission type to include other specialty specific measures (such as surgery). We thank stakeholders for their comments, and will consider it for future rulemaking.

To provide clinicians with a more cohesive reporting experience, where they may focus on activities and measures that are meaningful to their scope of practice, we discuss the development of public health priority measurement sets that would include measures and activities across the quality, Promoting Interoperability, and improvement activities performance categories, focused on public health priorities such as fighting the opioid epidemic, in section III.I.3.h.(5), of this final rule. We refer readers to section III.I.3.h.(5) of this final rule for additional details on this concept.

We received comments on the proposal to revise the definition of a high priority measure, to include quality measures that relate to opioids and to further clarify the types of outcome measures that are considered high priority; and the policy that MIPS eligible clinicians must use the most recent specification of MIPS eCQMs while reporting for MIPS:

Comment: A few commenters expressed concern with the proposals to revise the definition of high-priority measures to include opioid related quality measures and to add several new measures to the MIPS program specifically focused on opioid use. The commenters urged CMS to consider the unintended consequences that could result if seriously ill patients experience barriers to receiving appropriate pain management. Specifically, commenters stated that, if the proposed policies are finalized, they could create incentives to reduce opioid prescriptions, even for patients with debilitating pain resulting from advanced disease progression who would respond to opioid treatment with more potential benefit than risk. The commenters also asked CMS to consider protections that could be incorporated into opioid-focused measures, such as exceptions for patients receiving hospice and palliative care and other patients with advanced stage serious illness. Further, commenters suggested that CMS rely on clinical evidence regarding the reliability and validity of measures or activities to address public health and safety concerns with opioids. One commenter also expressed concerns that measures may not take into account numerous factors that play a role in the opioid crisis, including habits outside of clinicians' control such as combining opioids with other medicines, using opioid for something other than pain, and failure to adhere to medicines as prescribed. One commenter

[19] Listserv messaging was distributed through the Quality Payment Program listserv on January 9th, 2018, titled: ''CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets and/or Revisions to the Existing Specialty Measure Sets for the 2019 Program Year of Merit-based Incentive Payment System (MIPS).''

recommended including quality measures that address the application of non-addictive alternatives to pain management, whether in the form of pharmacotherapeutics, medication-assisted treatment, or non-pharmacological options.

Response: To clarify, our intention is not to create barriers for seriously ill patients receiving appropriate pain management, we encourage appropriate treatment, but also encourage proper monitoring, management, follow-up, and education of patients. We believe it is important to consider patients such as those receiving hospice and palliative care, and will discuss with measure stewards of opioid-related measures whether exceptions for such patients may be appropriate. Furthermore, we have considered the reliability and validity of measures, as we require that measures have completed reliability and validity testing prior to them being considered as quality measures in MIPS. We agree with commenters that the application of non-addictive alternatives to pain management is an important area to include in quality measurement, and encourage stakeholders to reach out to the measure stewards for the consideration of their suggestions. Based on the comments and concerns expressed by commenters, we are clarifying that the finalized definition of a high priority measure is broad enough to include all aspects of opioid-related measurement rather than focus on a specific aspect of opioid measurement. We believe there are multiple areas within opioid measurement that are important; for example (but not limited to): Medication management, patient education, patient outcomes, monitoring, pain management, and follow-up.

Comment: Several commenters agreed that opioid-related measures should be categorized as high-priority measures due to national interest. The commenters encouraged CMS to evaluate the inclusion of any opioid-related measures, especially eCQMs that measure developers bring to the table. Commenters stated that any opioid-related quality measures, especially if designated as high-priority measures, need to recognize that numerous factors play a role in opioid use, including factors such as pain control, patient use of other medicines combined with opioids, patient use of opioids for something other than pain, and patient failure to adhere to medicines as prescribed. One commenter cautioned against focusing solely on overuse, but rather focus on a combination of how well patient's pain is controlled, if functional improvement goals have been met, and opioid use. A few commenters indicated that identifying patients by daily use and daily dosage may not, on its own, be a good indication of quality patient care. Commenters also encouraged CMS to include patient-reported outcomes measures that look at symptom management and pain interference.

Response: We will consider opioid-related quality measures as they are submitted through the call for measures process or as QCDR measures, and also encourage the development of fully tested eCQMs. We agree with the commenters that factors such as pain control, use of other medications, and adherence are all important factors and that overuse should not be the only focus of measurement. We encourage stakeholders to submit patient-reported outcomes measures that also relate to opioids during the call for measures process or as QCDR measures during the self-nomination process.

Comment: A few commenters expressed support of the policy to require the reporting of the most current version of the eCQM. One commenter recommended that to improve electronic capture, calculation, and reporting of quality measures, CMS should incent the use of standardized semantic content from recognized developers. Further, the commenter encouraged CMS to incorporate this work into its implementation guides to ensure eCQM calculations and benchmarks are accurate and that EHRs are accurately capturing eCQMs. In addition, a commenter noted that to continue to encourage eCQM reporting, CMS should not remove the 8 eCQMs from the measure list in 2019 as proposed.

Response: We will take these recommendations into consideration for future years of MIPS. We note that eCQM calculation standards are also included as a part of ONC's Health IT Certification Program to ensure accuracy and consistency. We refer readers to the 2015 Edition Health IT Certification Criterion at 45 CFR 170.315(c)(1) (Clinical quality measures) for additional information on the criteria. Furthermore, we have identified those 8 eCQMs for removal for reasons including the measure having high, unvarying performance rates, or the measure is being replaced by a more robust measure that has a more meaningful quality action. Quality actions include steps taken to advance the patient care provided, moving beyond documenting in the medical record or conducting a standard of care process. For example, was a follow-up examination conducted on the patient monitor changes in medical condition or did the specialist follow-up with the primary care physician to close the referral loop. We believe that it is important to have measures in the program that provide meaningful quality measurement, by demonstrating a performance gap and having a robust quality action.

Comment: A few commenters did not support the timeline for removing eCQMs from the measure set because of the time required for EHR vendors to modify systems. One commenter recommended supporting the last two versions of eCQMs to allow sufficient time for vendors and health care organizations to develop and deploy the latest eCQM versions.

Response: As described in the CY 2017 Quality Payment Program final rule (81 FR 77291), in the 2015 EHR Incentive Programs final rule, CMS required EPs, eligible hospitals, and CAHs to use the most recent version of an eCQM for electronic reporting beginning in 2017 (80 FR 62893). Furthermore, we update specifications annually in order to stay relevant with the clinical guidelines, updates to terminology, and to correct any identified issues. We will take this recommendation into further consideration, as we plan for our annual update process improvements.

Comment: A few commenters requested clarification on whether or not practices will be required to use 2015 Edition CEHRT for the entire performance year for quality and the latest version of eCQM to earn the end-to-end bonus.

Response: As described at § 414.1305, the definition of CEHRT for 2019 and subsequent years is EHR technology (which could include multiple technologies) certified under the ONC Health IT Certification Program that meets the 2015 Edition Base EHR definition (as defined at 45 CFR 170.102), and has been certified to the 2015 Edition health IT certification criteria. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we finalized that the CEHRT bonus would be available to MIPS eligible clinicians who report via qualified registries, QCDRs, EHRs, or the CMS Web Interface for the Quality Payment Program, in a manner that meets the end-to-end reporting requirements. Thus, in order for practices to earn the end-to-end bonus for reporting eCQMs for the 2019 performance period, they will need to be reporting using the latest version of the eCQM and will need to use CEHRT that has been certified to the 2015 Edition.

Comment: A few commenters noted concern with the timeline for the approval and communication of updated quality measures with the 12-month performance period, noting that clinicians and groups relying on this information for measure selection are unable to easily access a measure list until months after the performance period begins. Commenters also noted that QCDR measures have traditionally not been approved until the end of December preceding the performance year, leaving registries with limited time to update their dashboards in time for the January 1 start of the new performance year. Commenters stated that clinicians need additional time to work with their EHRs to ensure that they are capturing the elements necessary to report on a measure. Therefore, commenters urged CMS to approve and communicate updates earlier.

Response: With regard to MIPS quality measures, the final specifications of the measures can only be posted once the final rule is published. For Year 2 of the program there was a delay in posting the measures within the Quality Payment Program Explore Measures Tool due to technical difficulties. However, the measure specifications were made available on the Quality Payment Program resource library (*http://qpp.cms.gov*) prior to the beginning of the performance period. We will continue to post the year 3 measure specifications on the Quality Payment Program resource library prior to the beginning of the performance period and will make every effort to update the Quality Payment Program Explore Measures Tool with the year 3 measures prior to the performance period, or as close to the beginning of the performance period as technically feasible. We also note that we do not incorporate the QCDR measures into the Quality Payment Program Explore Measures Tool, rather these will be available on the Quality Payment Program resource library. During the limited timeframe available between November 1st and January 1st, we have reviewed over a thousand QCDR measure submissions for consideration in the upcoming MIPS performance period, communicated those decisions to the QCDRs, and posted the qualified postings by January 1 of the performance period. QCDRs and registries are notified prior to January 1 regarding which measures will be approved for the upcoming performance period. In section III.I.3.k.(3) of this final rule, we describe the finalized policy to move the self-nomination period up to begin in July 1 and end on September 1, thereby giving us an earlier start to evaluate and make decisions on QCDR measures.

Comment: Many commenters stated that the current timeline for release of measure specifications in December is overly burdensome and hinders the consistency of measure data in terms of comparability of results over time as it does not allow adequate time to build and test systems prior to QCDRs reporting measures on January 1.

Response: We understand the commenters' concerns, and interpret their reference to measures to mean the MIPS quality measure specifications not the QCDR measure specifications. We clarify that it is not technically feasible to release the MIPS quality measure specifications until the final rule is published. We will take the commenters suggestion in to consideration as we consider the operational feasibility of releasing the MIPS quality measure specifications earlier than December. As stated in the CY 2017 Quality Payment Program final rule (81 FR 77368), in order for a QCDR to be approved for a given performance period, they must support the minimum of 6 quality measures to be approved. Similar to previous performance periods, we plan to provide QCDRs and qualified registries with time to select additional MIPS quality measures to support for the upcoming performance period based upon their review of the measure specifications. Furthermore, we note that we expect that QCDRs and qualified registries would be up and running by January 1 of the performance period to accept and retain data, to allow clinicians to begin their data collection on January 1 of the performance period. However, the data will not be submitted to us until the start of data submission for the 2019 performance period.

After consideration of the public comments received, we are finalizing our proposal, beginning with the 2021 MIPS payment year, to define a high priority measure at § 414.1305 as an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Outcome measures include intermediate-outcome and patient-reported outcome measures.

In the CY 2017 Quality Payment Program final rule (81 FR 77090), we indicated that we intend to reduce the number of claims-based measures in future program years as more measures become available through electronic collection types such as eCQMs or MIPS CQMs. In section III.I.3.h of this final rule, we are finalizing our proposal to limit the Medicare Part B claims collection type to small practices, which furthers our goal of moving away from Medicare Part B claims measures. We strongly encourage measure stewards to keep this in mind as they develop and submit measures for consideration, during the call for measures process (specifically for the MIPS quality performance category).

(ii) Topped Out Measures

In the CY 2018 Quality Payment Program final rule (82 FR 53637 through 53640), we finalized the 4-year timeline to identify topped out measures, after which we may propose to remove the measures through future rulemaking. After a measure has been identified as topped out for 3 consecutive years through the benchmarks, we may propose to remove the measure through notice and comment rulemaking. Therefore, in the 4th year, if finalized through rulemaking, the measure would be removed and would no longer be available for reporting during the performance period. We refer readers to the 2018 MIPS Quality Benchmarks' file, that is located on the Quality Payment Program resource library (*https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html*) to determine which measure benchmarks are topped out for 2018 and would be subject to the cap if they are also topped out in the 2019 MIPS Quality Benchmarks' file. It should be noted that the final determination of which measure benchmarks are subject to the topped out cap would not be available until the 2019 MIPS Quality Benchmarks' file is released in late 2018.

In the CY 2019 PFS proposed rule (83 FR 35899 through 35900), we proposed that once a measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors. We are concerned that topped out non-high priority process measures require data collection burden without added value for eligible clinicians and groups participating in MIPS. It is important to remove these types of measures, so that available measures provide meaningful value to

clinicians collecting data, beneficiaries, and the program. However, we would also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to the Agency).

Since QCDR measures are not approved or removed from MIPS through the rulemaking timeline or cycle, we proposed to exclude QCDR measures from the topped out timeline that was finalized in the CY 2018 Quality Payment Program final rule (82 FR 53640). When a QCDR measure reaches topped out status, as determined during the QCDR measure approval process, it may not be approved as a QCDR measure for the applicable performance period. Because QCDRs have more flexibility to develop innovative measures, we believe there is limited value in maintaining topped out QCDR measures in MIPS.

We received comments on the following proposals: (1) Once a measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle; and (2) to exclude QCDR measures from the topped out timeline that was finalized in the CY 2018 Quality Payment Program final rule:

Comment: Several commenters supported the topped out proposal, stating that it would reduce clinician burden, discontinue measures that have limited value to the Quality Payment Program, and continue to focus on measures that are clinically meaningful to patients. One commenter noted that this proposal will allow CMS to differentiate between exceptional, high performing, and other clinicians. Several commenters recommended that topped out measures be removed regardless of the collection type.

Response: We disagree that topped out measures should be removed regardless of the collection type. There have been instances where measures have been specified through multiple collection types, but have only become topped out in one or two of the collection types. If there is an opportunity to collect more robust data on a measure, while the measure is not topped out for that particular collection type, we believe we should continue to do so.

Comment: Several commenters did not support the proposal to exclude QCDR measures from the topped out timeline, indicating that review processes for QCDR and MIPS measures should be standardized and provide clinicians, groups, and measure stewards sufficient notice to review and potentially replace topped out measures. One commenter indicated that applying the topped out policy to QCDR measures will also ensure consistency across the program and minimize complexity. A few commenters indicated that maintaining QCDR measures in the program for a minimum number of years will also limit measures with sufficient historical data to set a benchmark that permits the evaluation of performance. Several commenters noted that removal of topped out QCDR measures would limit the number of specialty-specific measures available and stated that and the proposal does not allow sufficient time and volume of cases to determine if QCDR measures have a valid benchmark. One commenter recommended a two-year retention policy for extremely topped out QCDR measures to reduce burden and confusion for clinicians.

Response: We note that the process and timeline in which MIPS quality measures and QCDR measures are approved for a given MIPS performance period is different, as is the criteria for consideration. QCDRs are expected to be nimble and innovative enough to develop QCDR measures that are robust in their quality action and demonstrate a performance gap. We believe topped out measures do not add value in the realm of quality measurement, and believe they should be removed from the program as appropriate. We do not agree that removing topped out QCDR measures would create complexity, since it is a well-established process that QCDR measures are reviewed for approval on an annual basis, and is something that stakeholders should be aware of. We also do not believe that topped out QCDR measures should be retained in the program for 2 years; this may inadvertently impact a high performing clinician who may not receive a high score when compared to other clinicians reporting on the same measure. For example, a clinician whose performance rate is at 96 percent on a topped out measure may receive fewer points than another clinician whose reporting rate is at 98 percent on the same measure, when both performance rates would be considered high performing. We do not agree that the removal of topped out QCDR measures would impact the number of available specialty-specific measures available, since QCDR measures are reviewed and approved on a more accelerated timeline in comparison to the MIPS quality measures. Furthermore, MIPS eligible clinicians who wish to use QCDRs, are not limited to reporting on QCDR measures.

Comment: Many commenters did not support the proposal to allow the identification and removal of extremely topped out measures. Several commenters noted that removal of measures will have a large impact on small practices and specialists who have limited options regarding relevant quality measures. Several commenters stated that more time is needed to determine if measures are truly topped out because benchmarks may reflect the performance of only top-performing clinicians rather than performance across all clinicians. They stated that additional time would allow for the collection of more robust data. Many commenters stated that topped out measures should all have the same 4-year timeline because the process to develop a measure that could replace a topped out measure is lengthy and recommended close communication with measure stewards. A few commenters recommended a 2-year timeline for the removal of extremely topped out measures. A few commenters encouraged CMS to defer to measure developers and national endorsement organizations to define which measures are topped out. One commenter noted that additional factors should be taken into consideration prior to removing an extremely topped out measure, including the type of measure, the length of time the measure is reported, measure steward and specialist input, performance results, reporting options, data sources, small sample size, public health issues covered, and whether measures are used in other programs. One commenter recommended that prior to removing a topped out measure, CMS be transparent about the data used to determine topped out status, so the public has an understanding of how many clinicians reported the measure and the performance rate.

Response: We note that in addition to the quality measures available in the MIPS quality measure set, QCDR measures are also available. We review measure benchmarks as a part of our process for identifying topped out and extremely topped out measures and believe that extremely topped out measures, such as those with an average mean performance within the 98th to 100th percentile, leave no room for further quality improvement, thereby providing clinicians little value. We

utilized the 2018 quality measure benchmarks as a part of the criteria used to identify those measures for removal. The benchmarks are reflective of the performance of those clinicians who have reported on the measure and will continue to do so should the measure be available in the program which is why we do not believe there will be variances in the high performing data submitted if the measure is retained. We do not believe that we should retain the extremely topped out measures within a 4 year timeline because the measures take a lengthy time to replace. While the timeline to add MIPS quality measures does typically take about 2 years, we note there are additional measures (QCDR measures) available for reporting through QCDRs. We appreciate the commenters' feedback suggesting we defer to measure developers and national endorsement organizations to define which measures are topped out; we can take this suggestion in to future consideration. In the CY 2019 PFS proposed rule (83 FR 35900), we stated we would also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to the Agency). We encourage stakeholders to continue to submit quality measures that address measurement gaps as we incrementally remove quality measures that are extremely topped out, merely reflect the standard of care without a quality action, or are duplicative of other more robust quality measures, as we believe they no longer provide meaningful measurement to clinicians.

After consideration of the public comments received, we are finalizing our proposal that once the measure has reached an extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, after taking into account any other relevant factors. However, we will also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to CMS).

We are also finalizing our proposal to exclude QCDR measures from the topped out timeline that was finalized in the CY 2018 Quality Payment Program final rule (82 FR 53640). When a QCDR measure reaches topped out status, as determined during the QCDR measure approval process, it may not be approved as a QCDR measure for the applicable performance period.

(iii) Removal of Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we discussed removal criteria for quality measures, including that a quality measure may be considered for removal if the Secretary determines that the measure is no longer meaningful, such as measures that are topped out. Furthermore, if a measure steward is no longer able to maintain the quality measure, it would also be considered for removal.

We have previously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 Quality Payment Program final rule (81 FR 77101), we explained that we believe that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality of care patients receive. In the CY 2018 Quality Payment Program quality measure set, 102 of the 275 quality measures are process measures that are not considered high priority. As discussed above, beginning with the 2021 MIPS payment year, we proposed to define at § 414.1305 a high priority measure to mean an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Because the removal of all non-high priority process measures would impact most specialty sets, nearly 94 percent, we believe incrementally removing non-high priority process measures through notice and comment rulemaking is appropriate.

As described in the CY 2019 PFS proposed rule (83 FR 35900), beginning with the 2019 performance period, we proposed to implement an approach to incrementally remove process measures where prior to removal, consideration will be given to, but is not limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan at *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development.html*.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- Whether the measure has reached an extremely topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made, as described in section III.I.3.(b)(ii) of this final rule.

We received the following comments on the proposal to implement a process to incrementally remove process measures:

Comment: While some commenters supported the inclusion of population measures, several commenters recommended the removal of population health measures, which it believed are often incorrectly attributed, especially for specialty clinicians and rural clinicians, and often have a very low statistical reliability at the individual clinician and group practice levels.

Response: We believe that population measures may reduce burden on clinicians and allow for assessment of public health issues on a larger scale. Reliability is one of the many important and scientific issues that CMS addresses and tests during our measure development process regardless of measure type (that is, whether the measures are population-based or provider-specific measures). We recognize that specialty clinicians and rural clinicians may be more likely to have a smaller sample size, and that this may result in lower reliability. At the same time, we also recognize that many clinicians or groups may have sufficient volume depending on the measures under development, and because measure reliability also depends on the particular cohort and outcome of the specific measures under development. As part of the CMS standardized measure development process, we will address the reliability issue in several ways. We will consult national experts and stakeholders including health care providers and patients in conceptualizing and selecting measures for development and conduct rigorous testing of the measure reliability and volume threshold for use.

Comment: Many commenters supported the removal of 34 MIPS measures to align with CMS's Meaningful Measures framework and allow eligible clinicians to reduce and

prioritize other measures, providing a focus on improving patient care and outcomes. A few commenters encouraged CMS to continue to review its quality measure sets to identify the most meaningful measures and further align hospital and clinician reporting requirements.

Response: We agree that alignment across quality programs is important in an effort to reduce clinician burden, and will seek to continue to look for ways to align with other programs while maintaining the objective and goals of MIPS through future rulemaking.

Comment: Many commenters did not support the proposal to remove measures, stating that many specialists will not have enough relevant measures to meet reporting requirements, clinicians may still be required to report removed measures to other payers, and process measures are under the control of the clinician and often important when coupled with other measures including cost measures. A few commenters indicated that important quality of care aspects may only be captured by a process measure, even those that are topped out. One commenter disagreed with the removal of topped out measures generally until the vast majority of peer reviewed literature demonstrates a significant change in practice patterns. One commenter recommended delaying the removal of measures, to allow time for clinicians to comply with program requirements.

Response: We note that prior to proposing to remove quality measures from the program, we take into consideration the impacts the removal would have on the number of measures available to clinicians in the program. We do not agree that we should delay the removal of measures. We continue to believe that non-high priority process measures impose data collection burden without adding value for eligible clinicians and groups participating in MIPS. Typically, process measures merely reflect the standard of care and do not have a robust quality action. In many instances, process measures have high, unvarying performance leaving no room for improvement. We understand that there are some process measures that are valuable, but believe that it is important that they address one of the high priority areas and demonstrate a performance gap in order to be meaningful. Furthermore, we do understand that important quality of care aspects may only be captured by some topped out process measures, and encourage clinicians to continue to measure and monitor their progress in these areas; however, we do not believe that these measures provide value or should be tied to a pay for performance program such as MIPS. If a MIPS quality measure is removed from the program, it is because the measure no longer has value in the performance payment program; however, we believe that clinicians can still collect and evaluate data on these metrics for their own internal quality improvement goals or areas of improvement as outlined in peer reviewed literature. We are aware that there are certain process measures that may be required to be reported to other payers; however, note that this difference may reflect different underlying goals of their program. Another consideration is that these process measures with high, unvarying performance, may also impact a MIPS eligible clinician's ability to receive a high score in the quality performance category. While we agree that process measures are under the control of the clinician and often important when coupled with other measures including cost measures, we do not believe that this justifies retaining extremely topped out measures in MIPS.

Comment: Several commenters expressed concern about the timeline for removing measures. A few commenters requested that CMS maintain the 4-year measure removal policy since it would give clinicians, professional societies, and third party vendors (for example, registries) some time to prepare and develop an alternative reporting strategy. One commenter recommended an incremental phased approach according to a specified timeline, similar to the 4-year timeline currently in place for removing topped out measures from the program in order to ensure that the removal of the measures is truly warranted and to allow clinicians time to begin implementing other measures for reporting purposes. One commenter recommend that CMS only propose removal of measures during the official measure process to assist with predictability.

Response: To clarify, similar to how MIPS quality measures are proposed and finalized into the MIPS program through notice-and-comment rulemaking, we utilize a similar approach for removing measures from the program. We do not believe that a 4-year timeline to remove all measures is appropriate. A topped out measure timeline that is 4 years long is appropriate for measures with high performance where special scoring caps are applied as a response to the high unvarying performance; however, we are still finalizing the policy to remove extremely topped out measures (within the 98–100 percent range) through the following rulemaking cycle after the measure is identified as extremely topped out. This is to note that there are exceptions to the 4 year timeline, and in instances where there are more robust measures being proposed and finalized, we believe it is appropriate to remove duplicative measures through notice-and-comment rulemaking without consideration to a longer timeline. In addition, measures that are not maintained or updated to reflect current clinical guidelines are not reflective of a clinician's scope of practice, should also be proposed for removal in the next rulemaking cycle. Furthermore, the removal of low-bar, standard of care process measures aligns with our goals to have more outcomes based measures in the program. Furthermore, a 4-year timeline does not take into consideration that we may propose new quality measures that are more robust in their quality action that would deem the existing process measure to be duplicative. Also, as process measures top out, they will inadvertently impact a clinician's ability to achieve a high score for that specific measure. As stated earlier above, we will only propose the removal of MIPS quality measures through formal notice-and-comment rulemaking, and we believe that this annual process will provide stakeholders with sufficient notice and opportunity to voice their concerns on specific measure removals through the public comment process.

Comment: One commenter also requested that CMS evaluate measures for removal based on the collection type. They stated that the differences in collection types can be enough of a workflow and cost consideration in alterations that it should be a factor in the consideration of measures removal. For example, there are several eCQMs proposed for removal due to a duplicative measure being available; however, in most instances, that duplicative measure is not available as an eCQM. This would potentially force practices to maintain relationships and pay for reporting through multiple vendors to maintain their list of measures.

Response: Initially, we proposed to remove specific MIPS quality measures that were duplicative of new, robust measures. We have taken the comments into consideration and in instances where the new measure does not have eCQM available as a collection type, we have decided not to remove the existing (duplicative) measure for the eCQM collection type only. We refer readers to Appendix 1: Finalized Quality Measures of this final rule for additional detail on

these eCQMs. We clarify that we do look at the availability of measures through the different collection types as we review measures for possible inclusion or removal, and will continue to monitor and consider the availability through the collection types as criteria when removing quality measures from MIPS.

After consideration of the public comments received, we are finalizing our proposal, beginning with the 2021 MIPS payment year, to implement an approach to incrementally remove process measures where prior to removal, consideration will be given to, but will not be limited to:

- Whether the removal of the process measure impacts the number of measures available for a specific specialty.
- Whether the measure addresses a priority area highlighted in the Measure Development Plan: *https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/Measure-development.html*.
- Whether the measure promotes positive outcomes in patients.
- Considerations and evaluation of the measure's performance data.
- Whether the measure is designated as high priority or not.
- Whether the measure has reached an extremely topped out status within the 98th to 100th percentile range, due to the extremely high and unvarying performance where meaningful distinctions and improvement in performance can no longer be made.

(iv) Categorizing Measures by Value

In the CY 2019 PFS proposed rule (83 FR 35900), we outlined the various types of MIPS quality and QCDR measures available for reporting in the quality performance category, such as outcome, high-priority, composite, and process measures, we acknowledge that not all measures are created equal. For example, the value or information gained by reporting on certain process measures does not equate that which is collected on outcome measures. We seek to ensure that the collection and submission of data is valuable to clinicians and worth the cost and burden of collecting the information.

Based on this, we solicited comment on implementing a system where measures are classified as a particular value (gold, silver or bronze) and points are awarded based on the value of the measure. For example, higher value measures that are considered ''gold'' standard, which could include outcome measures, composite measures, or measures that address agency priorities (such as opioids). The CAHPS for MIPS survey, which collects patient experience data, may also be considered a high value measure. Measures that are considered second tier, or at a ''silver'' standard would be measures that are considered process measures that are directly related to outcomes and have a good gap in performance (there is no high, unwavering performance) and demonstrate room for improvement; or topped out outcome measures. Lower value measures, such as standard of care process measures or topped out process measures would be considered ''bronze'' measures. We refer readers to section III.I.3.i.(1)(b)(xi) of this final rule for discussion on the assignment of value and scoring based on measure value.

We have received comments from stakeholders regarding categorizing measure by value. We thank commenters for their input and may take this input into consideration in future years.

(3) Cost Performance Category

For a description of the statutory basis and our existing policies for the cost performance category, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77162 through 77177, and 82 FR 53641 through 53648, respectively).

(a) Weight in the Final Score

In the CY 2018 Quality Payment Program final rule, we established that the weight of the cost performance category would be 10 percent of the final score for the 2020 MIPS payment year (82 FR 53643). We had previously finalized in the CY 2017 Quality Payment Program final rule at § 414.1350(b)(3) that beginning with the 2021 MIPS payment year, the cost performance category would be 30 percent of the final score, as required by section 1848(q)(5)(E)(i)(II)(aa) of the Act (81 FR 77166). Section 51003(a)(1)(C) of the Bipartisan Budget Act of 2018, enacted on February 9, 2018, amended section 1848(q)(5)(E)(i)(II)(bb) of the Act such that for each of the second, third, fourth, and fifth years for which the MIPS applies to payments, not less than 10 percent and not more than 30 percent of the MIPS final score shall be based on the cost performance category score. Additionally, this provision shall not be construed as preventing the Secretary from adopting a 30 percent weight if the Secretary determines, based on information posted under section 1848(r)(2)(I) of the Act, that sufficient cost measures are ready for adoption for use under the cost performance category for the relevant performance period. Section 51003(a)(2) of the Bipartisan Budget Act of 2018 amended section 1848(r)(2) of the Act to add a new paragraph (I), which we discuss in section III.I.3.h.(3)(b)(i) of this final rule.

In light of these amendments, in the proposed rule (83 FR 35900 through 35901), we proposed at § 414.1350(d)(3) that the cost performance category would make up 15 percent of a MIPS eligible clinician's final score for the 2021 MIPS payment year. As discussed in section III.I.3.h.(3)(b)(iv) of this final rule, § 414.1350(b) will be redesignated as § 414.1350(d). We proposed to delete the existing text under § 414.1350(b)(3) and address the weight of the cost performance category for the MIPS payment years following 2021 in future rulemaking. We also proposed a technical change to the text at § 414.1350(b) (redesignated as § 414.1350(d)) to state that the cost performance category weight will be as specified under redesignated § 414.1350(d), unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act (83 FR 35901).

We believe that measuring cost is an integral part of measuring value, and we believe that clinicians have a significant impact on the costs of patient care. However, we proposed to only modestly increase the weight of the cost performance category for the 2021 MIPS payment year from the 2020 MIPS payment year because we recognize that cost measures are still relatively early in the process of development and that clinicians do not have the level of familiarity or understanding of cost measures that they do of comparable quality measures (83 FR 35900 through 35901). As described in section III.I.3.h.(3)(b)(ii) of this final rule, we are finalizing the addition of 8 episode-based measures to the cost performance category beginning with the 2019 MIPS performance period. This is a first step in developing a more robust and clinician-focused measurement of cost performance. We will continue to work on developing additional episode-based measures that we may consider proposing for the cost performance category in future years. Introducing more measures over time would allow for more clinicians to be measured in this performance category. It would also allow time for more outreach to clinicians to better educate them on the cost measures. We considered maintaining the weight of the cost performance category at 10 percent for the 2021 MIPS payment year as we recognize that clinicians are still learning about the cost performance category and being introduced to new measures. We invited comment on

whether we should consider an alternative weight for the 2021 MIPS payment year.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Several commenters supported our proposal to increase the weight of the cost performance category to 15 percent for the 2021 MIPS payment year, noting the importance of managing cost in measuring the value of a clinician as well as the opportunity to gradually increase the weight of the performance category.

Response: We thank the commenters for their support for this proposal.

Comment: Several commenters opposed our proposal to increase the weight of the cost performance category to 15 percent for MIPS payment year 2021. They believed that the increased flexibility provided by the Bipartisan Budget Act of 2018 should be used to maintain the weight at 10 percent for MIPS payment year 2021 and in future years. Some commenters requested that the weight of the cost performance category not be increased until CMS can address issues of social and complexity risk factors and of clinical risk adjustment for measures in areas such as oncology. Some commenters suggested maintaining the weight of the cost performance category at 10 percent until CMS is able to provide more detailed and actionable performance data and develop more reliable and valid measures.

Additionally, several commenters opposed our proposal to increase the weight of the cost performance category because we proposed to add new episode-based measures (as detailed in section III.I.3.h.(3)(b)(ii) of this rule) and clinicians should have time to learn about these measures before the category weight is increased. Additionally, several commenters suggested CMS wait to increase the cost performance category weight until sufficient episode groups exist for additional specialties.

Response: We continue to investigate ways to best accommodate the issue of clinical and social risk adjustment in measures contained in the cost performance category. All measures included in the cost performance category are adjusted for clinical risk. We have adopted a complex patient bonus at the final score level that adjusts again for patient clinical complexity as well as some elements of social complexity. We also continue to consider ways to offer actionable feedback on cost measures to clinicians in the future.

In regards to the episode-based measures, we do not believe the introduction of these new measures should mean that the weight of the performance category should be maintained, especially since stakeholders had the opportunity to gain experience with the new measures through field testing in the fall of 2017. The performance category also still includes two measures that were used in the first 2 years of MIPS. The Bipartisan Budget Act of 2018 gave CMS increased flexibility to establish the weight of the cost performance category for the first 5 years of MIPS, but the weight is still required to be 30 percent beginning with the 2024 MIPS payment year. Therefore, we believe it is necessary to begin adjusting the weight gradually, including increasing the weight to 15 percent for the 2021 MIPS payment year. We will concurrently look to increase the number of clinicians who are measured in the cost performance category by developing and considering for inclusion in the Quality Payment Program more episode-based measures that cover additional types of clinicians and specialties.

After consideration of the public comments, we are finalizing our proposal at § 414.1350(d)(3) to weight the cost performance category at 15 percent for the 2021 MIPS payment year as proposed. Additionally, we are also finalizing our proposal to delete the existing text under § 414.1350(b)(3) and address the weight of the cost performance category for the MIPS payment years following 2021 in future rulemaking as proposed. Finally, we are finalizing our proposed technical change to the text at § 414.1350(b) (redesignated as § 414.1350(d)) to state that the cost performance category weight will be as specified under redesignated § 414.1350(d), unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act, as proposed.

In accordance with section 1848(q)(5)(E)(i)(II)(bb) of the Act, we will continue to evaluate whether sufficient cost measures are ready for adoption under the cost performance category and move towards the goal of increasing the weight to 30 percent of the final score. To provide for a smooth transition, we anticipate that we would increase the weight of the cost performance category by 5 percentage points each year until we reach the required 30 percent weight for the 2024 MIPS payment year. We invited comments on this approach to weighting the cost performance category for the 2022 and 2023 MIPS payment years, considering our flexibility in setting the weight between 10 percent and 30 percent of the final score, the availability of cost measures, and our desire to ensure a smooth transition to a 30 percent weight for the cost performance category. We appreciate the comments we received and will consider them as we develop proposals for future rulemaking.

(b) Cost Criteria

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. In the CY 2018 Quality Payment Program final rule, we established two cost measures (total per capita cost measure and Medicare spending per beneficiary (MSPB) measure) for the 2018 MIPS performance period and future performance periods (82 FR 53644). These measures were previously established for the 2017 MIPS performance period (81 FR 77168). We will continue to evaluate cost measures that are included in MIPS on a regular basis and anticipate that measures could be added or removed through rulemaking as measure development continues. In general, we expect to evaluate cost measures according to the measure reevaluation and maintenance processes outlined in the ''Blueprint for the CMS Measures Management System'' (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/BlueprintVer14.pdf*). As described in section 2 of the Blueprint for the CMS Measures Management System Version 14.0, we will conduct annual evaluations to review the continued accuracy of the measure specifications. Annual updates ensure that the procedure, diagnostic, and other codes used in the measure account for updates to coding systems over time. To the extent that these updates would constitute a substantive change to a measure, we would ensure the changes are proposed for adoption through rulemaking. We will also comprehensively reevaluate the measures every 3 years to ensure that they continue to meet measure priorities. As a part of this comprehensive reevaluation, we will gather information through environmental scans and literature reviews of recent studies and new clinical guidelines that may inform potential refinements. We will also analyze measure performance rates and re-assess the reliability and validity of the measures. Throughout these

reevaluation efforts, we will summarize and consider all stakeholder feedback received on the measure specifications during the implementation process, and may seek input through public comment periods. In addition, the measure development contractor may acquire individual input on measures by convening Technical Expert Panels (TEPs) and clinical subcommittees. Aside from these regular measure reevaluations, there may be ad-hoc reviews of the measures if new evidence comes to light which indicates that significant revisions may be required.

We will also continue to update the specifications to address changes in coding, risk adjustment, and other factors. The process for updating measure specifications will take place through ongoing maintenance and evaluation, during which we expect to continue seeking stakeholder input. As we noted above, any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking. We appreciate the feedback that we have received so far throughout the measure development process and believe that stakeholders will continue to provide feedback to the measure development contractor on episode-based cost measures by submitting written comments during public comment opportunities, by participating in the clinical subcommittees convened by the measure development contractor, or by attending education and outreach events. We will take all comments and feedback into consideration as part of the ongoing measure evaluation process.

As we noted in the CY 2017 Quality Payment Program final rule (81 FR 77137) regarding quality measures, which we believe would also apply for cost measures, some updates may incorporate changes that would not substantively change the intent of the measure. Examples of such changes may include updated diagnosis or procedure codes or changes to exclusions to the patient population or definitions. While we address such changes on a case-by-case basis, we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. As described in section 3 of the Blueprint for the CMS Measures Management System Version 14.0, if substantive changes to these measures become necessary, we expect to follow the pre-rulemaking process for new measures, including resubmission to the Measures Under Consideration (MUC) list and consideration by the Measure Applications Partnership (MAP). The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are attributable and applicable to clinicians. The MAP also reviews measures for clinician level feasibility, reliability, and validity. They also consider whether the measures are scientifically acceptable and reflect current clinical guidelines.

Section 51003(a)(2) of the Bipartisan Budget Act of 2018 amended section 1848(r)(2) of the Act to add a new paragraph (I) requiring the Secretary to post on the CMS website information on cost measures in use under MIPS, cost measures under development and the time-frame for such development, potential future cost measure topics, a description of stakeholder engagement, and the percent of expenditures under Medicare Part A and Part B that are covered by cost measures. This information shall be posted no later than December 31 of each year beginning with 2018. We expect this posting will provide a list of the cost measures established for the cost performance category for the current performance period (for example, the posting in 2018 would include a list of the measures for the 2018 MIPS performance period), as well as a list of any cost measures that may be proposed for a future performance period through rulemaking. We will provide hyperlinks to the measure specifications documents and include the percent of Medicare Part A and Part B expenditures that are covered by these cost measures. The posting will also include a list and description of the measures under development at that time. We intend to summarize the timeline for measure development, including the stakeholder engagement activities undertaken, which may include a TEP, clinical subcommittees, field testing, and education and outreach activities, such as national provider calls and listening sessions. Finally, the posting will provide an overview of potential future topics in cost measure development, such as any clinical areas in which measures may be developed in the future (83 FR 35901 through 35902).

(ii) Episode-Based Measures for the 2019 and Future Performance Periods

Episode-based measures differ from the total per capita cost measure and MSPB measure because episode-based measure specifications only include items and services that are related to the episode of care for a clinical condition or procedure (as defined by procedure and diagnosis codes), as opposed to including all services that are provided to a patient over a given timeframe.

We discussed our progress in the development of episode-based measures in the CY 2018 Quality Payment Program proposed rule (82 FR 30049 through 30050) and received significant positive feedback on the process used to develop the measures as well as the measures' clinical focus that was informed by expert opinion (82 FR 53644 through 53646). The specific measures selected for the initial round of field testing were included based on the volume of beneficiaries impacted by the condition or procedure, the share of cost to Medicare impacted by the condition or procedure, the number of clinicians/clinician groups attributed, and the potential for alignment with existing quality measures.

We have developed episode-based measures to represent the cost to Medicare for the items and services furnished to a patient during an episode of care (''episode''). Episode-based measures are developed to let attributed clinicians know the cost of the care clinically related to their initial treatment of a patient and provided during the episode's timeframe. Specifically, we define cost based on the allowed amounts on Medicare claims, which include both Medicare payments and beneficiary deductible and coinsurance amounts. Episode-based measures are calculated using Medicare Parts A and B fee-for-service claims data and are based on episode groups. Episode groups:

- Represent a clinically cohesive set of medical services rendered to treat a given medical condition.
- Aggregate all items and services provided for a defined patient cohort to assess the total cost of care.
- Are defined around treatment for a condition (acute or chronic) or performance of a procedure.

Items and services in the episode group could be treatment services, diagnostic services, and ancillary items and services directly related to treatment (such as anesthesia for a surgical procedure). They could also be items and services that occur after the initial treatment period that may be furnished to patients as follow-up care or to treat complications resulting from the treatment. An episode is a specific instance of an episode group for a specific patient and clinician. For example, in a given year, a clinician might be attributed 20 episodes (instances of the episode group) from the episode group for heart failure. In section III.I.3.h.(3)(b)(iv) of this final rule, we discuss the attribution rules for cost measures.

After episodes are attributed to one or more clinicians, items and services may be included in the episode costs if they are furnished within a patient's episode window. Items and services will be included if they are the trigger event for the episode or if a service assignment rule identifies them as a clinically related item or service during the episode. The detailed specifications for these measures, which include information about the service assignment rules, can be reviewed at *qpp.cms.gov*.

To ensure a more accurate comparison of cost across clinicians, episode costs are payment standardized and risk adjusted. Payment standardization adjusts the allowed amount for an item or service to facilitate cost comparisons and limit observed differences in costs to those that may result from health care delivery choices. Payment standardized costs remove any Medicare payment differences due to adjustments for geographic differences in wage levels or policy-driven payment adjustments such as those for teaching hospitals. Risk adjustment accounts for patient characteristics that can influence spending and are outside of clinician control. For example, for the elective outpatient PCI episode-based measure, the risk adjustment model may account for a patient's history of heart failure.

The measure development contractor has continued to seek extensive stakeholder feedback on the development of episode-based measures, building on the processes outlined in the CY 2018 Quality Payment Program final rule (82 FR 53644). These processes included convening a TEP and clinical subcommittees to solicit expert and clinical input for measure development, conducting national field testing on the episode-based cost measures developed, and seeking input from clinicians and stakeholders through engagement activities. Seven clinical subcommittees were convened through an open call for nominations between March 17, 2017 and April 24, 2017, composed of nearly 150 clinicians affiliated with almost 100 specialty societies. These subcommittees met at an in-person meeting and through webinars from May 2017 to January 2018 to select an episode group or groups to develop and provide detailed clinical input on each component of episode-based cost measures. These components included episode triggers and windows, item and service assignment, exclusions, attribution methodology, and risk adjustment variables.

As described in the CY 2018 Quality Payment Program final rule (82 FR 53645), we provided an initial opportunity for clinicians to review their performance based on the new episode-based measures developed by the clinical subcommittees in the fall of 2017 through national field testing.

During field testing, we sought feedback from stakeholders on the draft measure specifications, feedback report format, and supplemental documentation through an online form. We received over 200 responses, including 53 comment letters, during the field test feedback period. We shared the feedback on the draft measure specifications with the clinical subcommittees who considered it in providing input on measure refinements after the end of field testing. A field testing feedback summary report is publicly available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-field-testing-feedback-summary-report.pdf.*

To engage clinicians and stakeholders, we conducted extensive outreach activities including hosting National Provider Calls (NPCs) to provide information about the measure development process and field test reports, and to give stakeholders the opportunity to ask questions.

The new episode-based measures developed by the clinical subcommittees were considered by the NQF-convened MAP, and were all conditionally supported by the MAP, with the recommendation of obtaining NQF endorsement. We intend to submit these episode-based measures to NQF for endorsement in the future. The MAP provides an opportunity for an interdisciplinary group of stakeholders to provide input on whether the measures under consideration are attributable and applicable to clinicians. The MAP also reviews measures for clinician level feasibility, reliability, and validity. Following the successful field testing and review through the MAP process, we proposed to add 8 episode-based measures listed in Table 36 as cost measures for the 2019 MIPS performance period and future performance periods (83 FR 35902).

The attribution methodology for these measures is discussed in section III.I.3.h.(3)(b)(iv)(B) of this final rule. The detailed specifications for these measures can be reviewed at *qpp.cms.gov*. These specifications documents consist of (i) a methods document that outlines the methodology for constructing the measures, and (ii) a measure codes list file that contains the medical codes used in that methodology. First, the methods document provides a high-level overview of the measure development process, including discussion of the detailed clinical input obtained at each step, and details about the components of episode-based cost measures: Defining an episode group; assigning costs to the episode group; attributing the episode group; risk adjusting episode group costs; and aligning cost with quality. The methods document also contains the detailed measure methodology that describes each logic step involved in constructing the episode groups and calculating the cost measure. Second, the measure codes list file contains the codes used in the specifications, including the episode triggers, exclusions, episode sub-groups, assigned items and services, and risk adjustors.

TABLE 36—EPISODE-BASED MEASURES PROPOSED FOR THE 2019 MIPS PERFORMANCE PERIOD AND FUTURE PERFORMANCE PERIODS

Measure topic	Measure type
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural.
Knee Arthroplasty	Procedural.
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural.
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural.
Screening/Surveillance Colonoscopy	Procedural.
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition.
Simple Pneumonia with Hospitalization	Acute inpatient medical condition.
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Several commenters supported our proposed adoption of the 8 episode-based measures under the cost performance category for the 2021 MIPS payment year. These commenters noted their support for the significant clinician input into the measures.

Response: We thank the commenters for their support.

Comment: Several commenters supported the development of episode-based measures but expressed concern about including them in the MIPS cost performance category for the 2019 MIPS performance period. They recommended that there be additional time for clinicians to understand and address their performance on the measures. One commenter indicated that although the measures had been made available as part of field testing in the fall of 2017, the feedback that was made available did not facilitate action to improve on the part of the clinician. Another commenter suggested that CMS use 2019 as a pilot year to better test these new episode-based measures.

Response: We will continue to work to make clinicians more familiar with the measures through education and outreach activities. For example, we have held cost performance category webinars to help clinicians understand the cost measures in use for the MIPS 2018 performance period, and expect to hold similar webinars in the future. We believe that the extensive field testing activities conducted in the fall of 2017 in combination with future education and outreach will help to ensure clinicians will understand these episode-based measures and what actions they could take to improve their performance in the measures. We do not believe that an additional year of pilot testing is necessary at this time given the field testing and extensive involvement of clinicians in the development of these measures.

Comment: Many commenters requested more detailed feedback on cost measures in order to improve their performance, stating that it is difficult to manage costs without receiving data on the patients attributed to them for purposes of the cost measures. Some commenters requested that CMS provide information on attributed patients on a regular basis, such as quarterly. Some commenters expressed concern that in contrast with the Value Modifier program, CMS has not provided detailed feedback on cost measures, such as identifying beneficiaries and the services they received for the 2017 MIPS performance period. One commenter also suggested the use of an alternative metric, such as the average ratio of the observed cost compared to the expected cost, as a final comparison for the episode-based measures, as they believe this to be more informative and actionable for clinicians.

Response: We have conducted user research on the feedback provided for the first year of MIPS. In addition to that feedback, we are also reviewing the QRURs from the legacy VM program and conducting user research about what is valuable within the information provided historically. We are committed to maturing the feedback experience for year 2 and may consider providing beneficiary-level data on cost measures in the future. Additionally, while we are unsure whether or not the average ratio of the observed cost to expected cost would be more informative than our current feedback reports, we will continue to monitor the information provided, and explore ways to provide actionable information to clinicians as we develop the measures for the cost performance category.

Comment: A few commenters supported the development and inclusion of episode-based measures but expressed concern that measures for their particular specialty or focus area, such as urology, chiropractic medicine, and medical oncology, were not yet included. A few commenters suggested that CMS continue to engage with stakeholders and provide a transparent process as CMS continues to develop additional episode-based measures. One commenter recommended that CMS develop or include quality measures in tandem with cost measures to prevent unintended consequences of attempts to reduce cost which could adversely affect quality of care.

Response: We continue to work to develop new episode-based measures that could be considered for inclusion in the cost performance category in future years. We expect that future measures may apply to a greater range of specialties and clinical areas, such as urology and the other focus areas suggested by commenters. Section 1848(r)(2)(D)(i)(I) of the Act requires us to establish care episode groups and patient condition groups, which account for a target of an estimated one half of expenditures under parts A and B with such target increasing over time as appropriate. While we have developed some episode-based measures to target that goal as required, we shall continue our work to develop additional measures focusing on both additional specialty types as well as consider the important issue of measuring both cost and quality. By continuing to gather detailed clinician and expert input on episode-based measures, such as through clinical subcommittees and technical expert panels, we hope to identify and mitigate potential unintended consequences at each stage of measure development and testing.

Comment: A few commenters expressed concern with the overall process for adding episode-based measures to the MIPS program on an annual basis. They indicated that while clinician input is valuable in defining the measures, it is also of particular importance to have an underlying structure for episode-based measures that defines responsibility for patients as they cross between multiple episodes. They opposed inclusion of episode-based measures until these issues are addressed. Additionally, several commenters offered alternative frameworks to consider in the future development of episode-based measures, including moving towards a tool that offers a multi-payer perspective. One commenter urged CMS to develop episode-based measures that are specific to discrete episodes of care. A few commenters encouraged CMS to consider other factors when developing episode-based measures including Activities of Daily Living (ADLs), counter quality measures, patient specific pricing, and medical innovations.

Response: We rely on a comprehensive framework and systematic process for creating episode-based measures that account for the roles and responsibilities of individual clinicians in the care of individual patients experiencing specific health conditions. This framework has been applied in constructing all of the new cost measures for use in MIPS, and in revising episode groups that had been developed under section 1848(n)(9)(A) of the Act. Our current process includes: (1) A transparent conceptual framework for creating episodes of care that assigns costs for patients to those clinicians with the ability to influence those costs; (2) a mechanism for incentivizing high quality treatment that lowers preventable high cost future adverse health events; and (3) a data-driven stakeholder input process for acquiring and implementing clinical input that ensures clinical face validity and actionability of constructed episode-based cost measures. This framework was developed in part based on stakeholder comments on measures in the Value Modifier program and overcomes the fundamental shortcomings of earlier episode grouping approaches previously studied

by CMS. Shortcomings of previously studied episode grouping approaches included lack of actionability arising from the unpredictable and clinically inappropriate assignment of costs, limited relevance as episode constructions did not focus on the role of attributed clinicians in providing patient care, and limited transparency arising from the use of complicated software algorithms.

Our conceptual framework provides a comprehensive foundation for episode-based measures that can be used to incentivize high-value care by attributed clinicians at each stage of the patient care continuum, and allows for progressively adding new episode-based measures in a logically cohesive and consistent manner. The framework involves three distinct types of episode groups: Procedural, acute inpatient medical condition, and chronic. Procedural episode groups are triggered by performance of a major procedure, acute inpatient medical condition episode groups are triggered by evaluation and management claims during hospitalizations with specific DRGs, and chronic condition episode groups are triggered by evaluation and management claims with particular diagnoses. Attribution is determined by the clinician(s) involved in the triggering claims, with consistent rules within each type of episode group. Services, and their associated costs, are assigned to an episode based on a clinical determination of whether a service is under the influence of the attributed clinician (for example, routine follow-up care or adverse health outcomes such as a readmission). Clinical determinations of service assignment are made using common criteria and methods across episode groups, to encourage distinctions in service assignment and reflect differences in clinical influence across episode groups. Risk adjustment employs a common starting point of the CMS–HCC model across episode groups, but risk adjustment models can be enhanced by the use of risk factors specifically adapted for each episode group. This allows, for instance, for adjustments to be made for an acute condition episode group based on whether the condition is a stand-alone presentation of the condition versus the exacerbation of an ongoing chronic condition. The framework also allows for complete stratification in risk adjustment through the use of episode sub-groups, with the definition of sub-groups (such as unilateral vs. bilateral) being based on common principles across episode groups. Episodes from distinct episode groups can overlap with one another to ensure that each clinician treating a patient with multiple health issues has incentives for providing high value care. When a given service is clinically related to only one overlapping episode, it is assigned only to that one. When a service is clinically related to two overlapping episodes, it is assigned to both to ensure joint accountability. Since each episode's cost is compared to a risk-adjusted expected cost only for other episodes from the same episode group, there is no issue of double counting. This approach allows for development of distinct episode groups that cover a patient's care continuum, including an underlying chronic condition as well as a procedure or treatment for an exacerbation. As an example, a patient receiving chronic care for coronary artery disease (CAD) (a chronic episode) could have an acute incidence of STEMI requiring PCI for stabilization (an acute inpatient medical condition episode), and due to having severe CAD could later receive a coronary artery bypass graft (CABG) procedure (a procedural episode). This logically, cohesive framework for episode group development avoids a series of challenges raised by previously studied episode grouping approaches that assign services to only a single episode, including lack of transparency and predictability in what an attributed clinician will be held accountable for at the beginning of an episode. For information on how this framework has been operationalized, refer to the measure specifications available at *https://qpp.cms.gov*.

Using this conceptual framework, we have created a concrete process for developing new measures over time. To prioritize the areas for development of the new cost measures, our measure development contractor convened a clinical committee, comprised of over 70 clinicians affiliated with over 50 specialty societies that provided input necessary to develop a public posting of 117 episode groups for development in December 2016. We then used criteria vetted by a standing technical expert panel—comprised of 19 clinicians, health researchers, and representatives of patient advocacy organizations—to divide these 117 episode groups into 18 clinical areas. The prioritization criteria focused on identifying areas where potential episode-based measures could affect the highest number of beneficiaries and clinicians, address particularly high cost procedures and conditions, provide an opportunity for improvement, and best align with quality measures.

Our measure development contractor has and is continuing to convene clinical subcommittees for each of the priority clinical areas. The composition of a subcommittee for an area principally consists of practicing clinicians who are candidates for attribution of episode-based measures developed for that area. Each clinical subcommittee prioritizes specific episode measures for development within its area based on the criteria above. The structure for developing specific cost measures relies on a systematic data-based conceptual framework for triggering logic, cohort definition, attribution, and cost assignment. For the 8 episode-based measures discussed in this rule, nearly 150 clinicians affiliated with 98 specialty societies participated in the clinical subcommittees in the creation of these measures. After positive reception of the initial development process, 267 clinicians affiliated with more than 120 specialty societies are now participating in the clinical subcommittees and workgroups developing 11 additional episode-based cost measures. The structure of episode-based cost measure development provides a vehicle for continued stakeholder engagement as additional measures are developed in the future.

Comment: A few commenters recommended that episode-based measures not be included in the MIPS cost performance category if the measures have not been endorsed by the NQF or supported by the MAP. They stated that the NQF process gives important insights into the reliability, validity, and usability of measures.

Response: The episode-based measures were reviewed by the MAP and received the recommendation of ''conditional support for rulemaking,'' with the MAP recommending that the measures be submitted for NQF endorsement. This review provided stakeholders with additional public comment opportunities, which the MAP considered along with submission materials regarding the scientific acceptability, reliability, validity, and usability of the measures. We intend to submit the episode-based measures for NQF endorsement in an upcoming review cycle.

Comment: One commenter expressed concern that particular episode-based measures did not properly account for risk because of the nature of their construction and lack of clinical data. Specifically, this commenter stated that a combined measure of intracranial hemorrhage and cerebral infraction

would produce distortions in results. This commenter also stated that risk adjustment for this measure did not include a measure of stroke severity. Another commenter expressed uncertainty about the risk adjustment methodology and also suggested the use of both inpatient and outpatient claims data to obtain a complete understanding of the patient's risk factors. One commenter suggested excluding Implantable Cardioverter Defibrillator (ICD) implantation MS–DRGs (222–227) from the Elective Outpatient PCI and STEMI with PCI measures to ensure there are no adverse incentives to providing a service that is both covered and clinically indicated. One commenter expressed concern that the episode-based measure for Revascularization for Lower Extremity Chronic Critical Limb Ischemia should have a longer measurement period. One commenter requested that post-discharge events unrelated to the initial pneumonia hospitalization and any hospice costs be excluded for the Simple Pneumonia episode-based measure. The same commenter also stated that new episodes for the same measure should not be started for a patient if they already have an ongoing episode.

Response: We understand the interest in risk adjustment and other aspects of measure construction. To summarize, the risk adjustment for the eight episode-based measures includes risk adjustors from the CMS–HCC model and additional measure-specific risk adjustors recommended by the Clinical Subcommittee for the measure. Risk adjustors are defined using the beneficiary's Medicare claims history (including inpatient, outpatient, and Part B Physician/Supplier claims) during the period prior to the start of the episode. Claims from the triggering hospitalization or on the triggering Part B Physician/Supplier claim are typically not included, as we understand it may be difficult to discern which claims are due to complications and which were already present at the initiation of the episode. We believe that utilizing the claims from the look back window adequately identifies patient comorbidities. To address the specific comments, we believe that the Intracranial Hemorrhage and Cerebral Infarction measure accurately assesses clinician cost performance as there are separate sub-groups for Intracerebral Hemorrhage and Cerebral Infarction such that patients within each sub-group are compared only with each other (that is, a patient being treated for Cerebral Infarction would only be compared to other patients being treated for Cerebral Infarction). The risk adjustors for this measure were developed with significant input from a Neuropsychiatric Disease Management Clinical Subcommittee, which recommended specific risk adjustors that include MS–DRG severity for Intracranial Hemorrhage or Cerebral Infarction and Nonspecific Cerebrovascular Disorders. Additional risk adjustors were included to account for comorbidities that could lead to worse outcomes such as aphasia and dysphagia. However, measures of stroke severity such as the NIH stroke scale were not included in the risk adjustment model to avoid possible unintended consequences (for example, coding of higher severity for improvement of individual episode risk adjustment) and to avoid penalizing clinicians who do not code for severity, especially since ICD–10–CM codes for NIH Stroke Scale have only been operational since October 2017. The Revascularization for Lower Extremity Chronic Critical Limb Ischemia measure has a 30-day pre-trigger period and a 90-day post-trigger period. This episode window was determined through extensive input from a Peripheral Vascular Disease Management Clinical Subcommittee, which we believe to be an appropriate length of time for which the attributed clinician can reasonably influence services. The measure specifications, including the post-discharge assigned services, for the Simple Pneumonia with Hospitalization measure were developed with significant clinical input from the Pulmonary Disease Management Clinical Subcommittee, which only assigned services they believed the attributed clinician could reasonably influence. For this reason, the costs associated with the hospice setting are not assigned to Simple Pneumonia with Hospitalization episodes. We will conduct annual evaluations to review the continued accuracy of the measure specifications. Finally, we do not exclude episodes if a patient already qualifies for another episode since we believe that allowing for overlapping episodes incentivizes communication and care coordination as a patient progresses through the care continuum. For example, if a patient is re-hospitalized for pneumonia after an initial pneumonia episode, this triggers two separate episodes of care for pneumonia. The risk adjustment model adjusts for differences in clinical complexity at the time each episode begins. This ensures that the attributed clinicians managing each hospitalization face analogous incentives to provide the patient high value care. The assigned services for the STEMI with PCI and Elective Outpatient PCI measures were developed with input from the Cardiovascular Disease Management Clinical Subcommittee, with the goal of capturing complications of Myocardial Infarction (MI) or Heart Failure (HF) admissions. Given this clinical intent of the measure, we believe that MS–DRGs with MI or HF in the measure (MS–DRGs 222–223: Defib with Cath with MI/HF) are appropriate to include as assigned services. We agree, however, with the comment about removing assignments of the MS–DRGs without MI or HF (MS–DRGs 224–225: Defib with Cath without MI/HF and MS–DRGs 226–227: Defib without Cath without MI/HF), as these are more likely to be elective ICD placements. Given the scope of the measure, we believe it is appropriate to assign services that are part of an admission for MI or HF, while excluding services that are elective. To maintain a consistent framework across all measures, we are implementing this revision where relevant in STEMI with PCI, Elective Outpatient PCI, and Revascularization for Lower Extremity Chronic Critical Limb Ischemia.

Comment: One commenter expressed concern with the possibility of high cost variation for some episode-based measures depending on the codes that trigger the episodes or the place of service in which an episode is triggered. To account for this variation, the commenter suggested incorporating a sub-group based on the triggering DRG code for the Intracranial Hemorrhage or Cerebral Infarction measure and the STEMI with PCI measure, a sub-group based on triggering procedure code for the Elective Outpatient PCI measure, and a place of service sub-group for the Revascularization for Lower Extremity Chronic Critical Limb Ischemia measure and Screening/Surveillance Colonoscopy measure.

Response: The measure specifications, including the episode triggers and the sub-groups for each measure, were determined with significant clinical input from the Clinical Subcommittees that developed each episode-based measure. To adjust for patient differences outside attributed clinicians' influence, the Clinical Subcommittees could choose to risk adjust for a specific patient factor or sub-group by that factor. Risk adjustment ensures that a measure accounts for average cost differences associated with the specific factor, while sub-grouping involves estimating an entirely separate risk adjustment model for patients with that factor. Sub-grouping is only appropriate

in cases where a sufficient number of episodes are present in the sub-population to ensure a statistically meaningful model and where a separate model for the sub-population is necessary. Balancing these considerations, the Clinical Subcommittees addressed concerns raised by the commenter by: Including indicators for MS–DRG in risk adjustment models for the Intracranial Hemorrhage or Cerebral Infarction measure and the STEMI with PCI measure to reflect the presence of Complication or Comorbidity (CC) or Major Complication or Comorbidity (MCC); and including place of service factors in risk adjustment models for the Revascularization for Lower Extremity Chronic Critical Limb Ischemia measure and the Screening/Surveillance Colonoscopy measure. For the Elective Outpatient PCI measure, the current inclusion of other risk adjustment factors is designed to control for factors outside of the clinician's influence that may dictate the particular triggering procedure used.

Comment: Several commenters expressed support for the episode-based measure development process implemented by CMS that incorporates significant stakeholder input as well as support for the measures. One commenter commended CMS for convening the Clinical Subcommittees, specifically noting that they believed members of the subcommittee that developed the Screening/Surveillance Colonoscopy measure were part of a successful and deliberative process. Two commenters also supported the Routine Cataract with IOL Implantation measure, stating the measure accurately reflected the costs of the procedure and will provide actionable data to clinicians. Another commenter expressed appreciation for the pace of the development process and urged CMS to continue this level of engagement with stakeholders in other areas of the Quality Payment Program.

Response: We recognize the importance of clinician input in developing episode-based measures that provide actionable data and aim to continue this level of engagement in the development of future episode-based measures for MIPS.

Comment: One commenter supported the total per capita cost measure and stated it is the best initial metric for assessing the cost-effectiveness of primary care providers while fulfilling MACRA's mandate to evaluate a primary care provider's cost performance.

Response: We agree that this measure is important as a measure of the overall cost of care, even as we develop episode-based measures which are also important measures of the cost of care.

Comment: Several commenters opposed the continued inclusion of the total per capita cost measure and the MSPB measure in the cost performance category. They stated that the measures included all services provided to a patient, even those for which the attributed clinician could not control. One commenter requested that these measures only be applied to primary care clinicians and not to specialists. Finally, one commenter expressed concerns with how total per capita cost measure has not yet been endorsed by NQF, and MSPB measure has only been endorsed at the facility-level.

Response: While we appreciate the interest in the total per capita cost and MSPB measures' NQF endorsement status, we continue to believe that these measures are tested and reliable for Medicare populations and provide an important measurement of clinician cost performance (82 FR 53644) while we continue to develop episode-based measures that precisely identify services that are part of an episode that could be considered directly under the control of a clinician. Versions of the total per capita cost and MSPB measures were included in the QRURs and used in the VM for many years before the implementation in MIPS. These measures have an important place in cost measurement given that the episode-based measures will only apply to a subset of clinicians at this time.

The total per capita cost measure uses a primary care attribution method in which a specialist would not be attributed a patient unless that patient did not see a primary care clinician (based on the Medicare specialty) during the year. For some patients who do not see a primary care clinician in a year, a specialist may serve as a primary care clinician due to an underlying disease or condition which the specialist focuses on. For the MSPB measure, we do not believe it is appropriate to limit attribution to primary care clinicians as specialists may perform procedures or manage patients in the hospital and can have a significant influence on the overall spending during the hospitalization.

Both the total per capita cost and MSPB measures are being refined as part of the measure maintenance and re-evaluation process, incorporating substantial stakeholder input. We are completing an extensive outreach initiative in the fall of 2018 to share performance information with clinicians as part of field testing, a part of measure re-evaluation. After considering the stakeholder feedback on these refinements, we may propose the re-evaluated measures for use in MIPS to replace the current versions of the measures in the program.

Comment: Several commenters expressed concern about the risk and specialty adjustment methods used in the measures that are part of the cost performance category. In particular, several commenters stated that measures do not appropriately account for sociodemographic status, which can drive differences in average episode costs. Additionally, commenters noted that measures did not take into account the risks associated with complex or dual-eligible patients or patients seen by certain specialists. Another noted the lack of risk-adjustment for cancer treatment. One commenter also expressed concern about the differences in case-mix across specialties for a given measure, specifically STEMI with PCI. The commenter stated that under this measure, hospitalists may be attributed episodes that include more medically complex patients who require post-ICU care on a general medicine floor, making these hospitalists appear to be costlier than other clinicians.

Response: We understand stakeholders' concerns regarding risk adjustment for social risk factors and dual eligible status. As we have previously stated, we are concerned about holding clinicians to different standards for the outcomes of their patients with social risk factors, because we do not want to mask potential disparities. We believe that the path forward should incentivize improvements in health outcomes for disadvantaged populations while ensuring that beneficiaries have adequate access to excellent care. We thank commenters for this important feedback and will continue to consider options to account for social risk factors that would allow us to view disparities and potentially incentivize improvement in care for patients and beneficiaries. We recognize the concern regarding risk adjusting for complex patients, including those with cancer treatment, and regarding the variation in case-mix across specialties for a given episode. Our risk adjustment methodology, which employs a common starting point of the CMS–HCC model across episode groups and can include the use of risk factors specifically adapted for each episode group is designed to account for patient comorbidities that predict a complex hospitalization and lead to higher costs that are outside the influence of attributed clinicians, regardless of

which specialty designations those clinicians choose to identify.

Comment: Several commenters requested that certain clinicians be excluded or included in the cost performance category on the basis of their type of practice, particularly non-patient facing clinicians.

Response: We have established a policy to assign a zero percent weight to the cost performance category if there are not sufficient measures applicable and available to a MIPS eligible clinician (see, for example, 81 FR 77322 through 77325). We believe it is possible that a clinician may not have sufficient cost measures applicable or available to them based on their specialty or type of practice, including clinicians who are non-patient facing. We continue to work to expand the reach of the cost performance category to as many clinicians as possible, including non-patient facing clinicians in accordance with section 1848(q)(2)(C)(iv) of the Act.

After consideration of the public comments, we are finalizing our proposal to include the 8 episode-based measures listed in Table 36 in the cost performance category beginning with the 2019 MIPS performance period with a modification to the STEMI with PCI, Elective Outpatient PCI, and Revascularization for Lower Extremity Chronic Critical Limb Ischemia episode-based measures to remove assignments of the MS–DRGs without MI or HF (MS–DRGs 224–225: Defib with Cath without MI/HF and MS–DRGs 226–227: Defib without Cath without MI/HF).

(iii) Reliability

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77170), we finalized a reliability threshold of 0.4 for measures in the cost performance category. We seek to ensure that MIPS eligible clinicians are measured reliably. In the CY 2017 Quality Payment Program final rule, we finalized a case minimum of 20 for the episode-based measures specified for the 2017 MIPS performance period (81 FR 77175). We examined the reliability of the proposed 8 episode-based measures listed in Table 36 at various case minimums and found that all of these measures meet the reliability threshold of 0.4 for the majority of clinicians and groups at a case minimum of 10 episodes for procedural episode-based measures and 20 episodes for acute inpatient medical condition episode-based measures. Furthermore, these case minimums would balance the goal of increased reliability with the goal of adopting cost measures that are applicable to a larger set of clinicians and clinician groups. Our analysis indicated that the case minimum for procedural episode-based measures could be lower than that of acute inpatient medical condition episode-based measures while still ensuring reliable measures.

Table 37 presents the percentage of TINs and TIN/NPIs with 0.4 or higher reliability, as well as the mean reliability for the subset of TINs and TIN/NPIs who met the proposed case minimums of 10 episodes for procedural episode-based measures and 20 episodes for acute inpatient medical condition episode-based measures for each of the proposed episode-based measures. Each row in Table 37 provides the percentage of TINs and TIN/NPIs who had reliability of 0.4 or higher among all the TINs and TIN/NPIs who met the case minimum for that measure during the study period (6/1/2016 to 5/31/2017).

TABLE 37—PERCENTAGE OF TINS AND TIN/NPIS WITH 0.4 OR HIGHER RELIABILITY FROM JUNE 1, 2016 TO MAY 31, 2017 AT PROPOSED CASE MINIMUMS

Measure name	Percentage TINs with 0.4 or higher reliability (%)	Mean reliability for TINs	Percentage TIN/NPIs with 0.4 or higher reliability (%)	Mean reliability for TIN/NPIs
Elective Outpatient Percutaneous Coronary Intervention (PCI)	100.0	0.73	84.1	0.53
Knee Arthroplasty	100.0	0.87	100.0	0.81
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	100.0	0.74	100.0	0.64
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	100.0	0.95	100.0	0.94
Screening/Surveillance Colonoscopy	100.0	0.96	100.0	0.93
Intracranial Hemorrhage or Cerebral Infarction	100.0	0.70	74.9	0.48
Simple Pneumonia with Hospitalization	100.0	0.64	31.8	0.40
ST-Elevation Myocardial Infarction (STEMI) with PCI	100.0	0.59	100.0	0.59

Based on this analysis, we proposed at § 414.1350(c)(4) and (5) a case minimum of 10 episodes for the procedural episode-based measures and 20 episodes for the acute inpatient medical condition episode-based measures beginning with the 2019 MIPS performance period (83 FR 35904). We stated that these case minimums would ensure that the measures meet the reliability threshold for groups and individual clinicians. We stated that we believe that the proposed case minimums for these procedural and acute inpatient medical condition episode-based measures would achieve a balance between several important considerations. In order to help clinicians become familiar with the episode-based measures as a robust and clinician-focused form of cost measurement, we want to provide as many clinicians as possible the opportunity to receive information about their performance on reliable measures. This is consistent with the stakeholder feedback that we have received throughout the measure development process. We stated that we believe that calculating episode-based measures with these case minimums would accurately and reliably measure the performance of a large number of clinicians and clinician group practices.

We stated that we recognize that the percentage of TIN/NPIs with 0.4 or greater reliability for the Simple Pneumonia with Hospitalization measure, while still meeting our reliability threshold, is somewhat lower than that of the other proposed acute inpatient medical condition episode-based measures, as well as all of the proposed procedural episode-based measures. For this reason, we considered an alternative case minimum of 30 for both TIN/NPIs and TINs for this measure. At this case minimum, 100 percent of TIN/NPIs would have 0.4 or greater reliability and the mean reliability would increase to 0.49 for TIN/NPIs and 0.70 for TINs. However, the number of TINs and TIN/NPIs that would meet the case minimum for this important measure would decrease by 29 percent for TINs and by 84 percent for TIN/NPIs. We invited comments on

this alternative case minimum for TIN/NPIs and TINs for the Simple Pneumonia with Hospitalization episode-based measure.

We previously finalized a case minimum of 35 for the MSPB measure (81 FR 77171), 20 for the total per capita cost measure (81 FR 77170), and 20 for the episode-based measures specified for the 2017 MIPS performance period (81 FR 77175). We proposed to codify these final policies under § 414.1350(c) (83 FR 35904).

In general, higher case minimums increase reliability, but also decrease the number of clinicians who are measured. We aim to measure as many clinicians as possible in the cost performance category. Some clinicians or smaller groups may never see enough patients in a single year to meet the case minimum for a specific episode-based measure. For this reason, we solicited comment on whether we should consider expanding the performance period for the cost performance category measures from a single year to 2 or more years in future rulemaking. We believe this would allow us to more reliably measure a larger number of clinicians. However, we are also concerned that expanding the performance period would increase the time between the measurement of performance and the application of the MIPS payment adjustment. In addition, it would take a longer period of time for us to introduce new cost measures as we would expect to adopt them through rulemaking prior to the beginning of the performance period.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Many commenters expressed concern with the reliability thresholds that we use to inform the determination of case minimums in the cost performance category. Several of these commenters suggested that measures should have case minimums that would reflect 0.8 reliability for all TINs and TIN/NPI combinations. One commenter stated that using a low reliability threshold would result in measuring the acuity of patients as opposed to the performance of a clinician. Another commenter suggested that we consider whether a standard case minimum for all episode group should continue to be set or case minimums should be set accordingly for each individual measure. One commenter also suggested increasing to a 20 episode case minimum for procedural episode-based measures.

Response: Because we aim to balance the need for consistent program standards with ensuring that measures are reliable, we proposed to set a different case minimum for the procedural and acute inpatient medical condition episode-based measures. We aim to measure cost for as many clinicians as possible, and limiting measures to reliability of 0.7 or 0.8 would result in few individual clinicians with attributed cost measures. In addition, a 0.4 reliability threshold ensures moderate reliability for most MIPS eligible clinicians and group practices that are being measured on cost. Under the proposed case minimum of 10 episodes for the procedural episode-based measures, the reliability of the measures already exceeds the 0.4 reliability threshold we have previously established, with most having higher than 0.7 reliability. Using a 20 episode case minimum, while having a slight increase in reliability, will reduce clinician coverage. Therefore, retaining the proposed case minimum of 10 episodes for the procedural measures allows us to maximize the number of clinicians covered by these measures, while still exceeding the 0.4 moderate reliability threshold. We will continue to evaluate reliability as we develop new measures and propose them for inclusion in MIPS in future rulemaking.

Comment: Several commenters supported our alternative proposal for a case minimum of 30 for the Simple Pneumonia with Hospitalization measure. The commenters stated that using a more reliable measure would be preferred over measuring more clinicians.

Response: We agree that our proposed alternative case minimum of 30 episodes for the Simple Pneumonia with Hospitalization measure would have slightly higher reliability, but we also believe that maintaining a consistent case minimum across all acute inpatient medical condition episode-based measures would accurately and reliably assess cost measure performance for a large number of clinicians and clinician groups. We believe it is in the interests of MIPS participants, particularly specialists who treat patients for this condition, to have this new episode-based measure available to them. A consistent case minimum for acute inpatient medical condition episode-based measures would also make it easier for clinicians to understand because it establishes cohesiveness across the different measures as stakeholders are still becoming familiar with these new measures. The mean reliability of the Simple Pneumonia with Hospitalization measure at 20 episodes exceeds the 0.4 reliability threshold (indicating moderate reliability) for TINs and meets that threshold for TIN/NPIs.

Comment: One commenter stated that small practices are less reliably measured by cost measures and that it will be difficult for small practices to analyze cost data in order to improve.

Response: While we have not examined the issue of practice size in relation to the reliability of the cost measures, we have examined the issue of case size in relation to the reliability of cost measures. The results of the analysis of episode-based cost measures can be found in our National Summary Data Report on Eight Wave 1 Episode-Based Cost Measures at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Updated-2017-National-Summary-Data-Report.pdf*. To some degree, the size of a practice correlates with the case size for cost measures, as an individual clinician can only see so many patients. We believe that establishing case minimums that are based on moderate reliability allow us to measure all clinicians and groups that meet those case minimums. We note that the scores on the measures in the cost performance category are only a component of the MIPS final score, which also includes a small practice bonus available within the quality performance category to accommodate the issues that may be faced by small practices.

After consideration of the public comments, we are finalizing our proposed case minimum of 10 episodes for the procedural episode-based measures and 20 episodes for the acute inpatient medical condition episode-based measures beginning with the 2019 MIPS performance period at § 414.1350(c)(4) and (5) as proposed. We are also finalizing our proposal to codify our previously finalized case minimum of 35 for the MSPB measure, 20 for the total per capita cost measure, and 20 for the episode-based measures specified for the 2017 MIPS performance period at § 414.1350(c) as proposed. We will take the comments we received on expanding the performance period for measures in the cost performance category into account for future rulemaking.

(iv) Attribution

(A) Attribution Methodology for Cost Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169; 77174 through 77176), we adopted final policies concerning the attribution methodologies for the total

per capita cost measure, the MSPB measure, and the episode-based measures specified for the 2017 MIPS performance period in addition to an attribution methodology for individual clinicians and groups. We proposed to codify these final policies under § 414.1350(b).

The following is a summary of the public comments received on these proposals and our responses:

Comment: Several commenters expressed concern with the attribution methods finalized in the 2017 Quality Payment Program final rule (81 FR 77168 through 77169), which we proposed to codify. These commenters stated that it was unclear to clinicians which patients would be attributed to them. They recommended a number of methods to improve this process, such as offering feedback on the patients that may be attributed to a clinician at some time during the performance period or allowing clinicians to define attribution with the use of patient relationship codes.

Response: We will continue to look at ways to facilitate the engagement of clinicians in the measures in the cost performance category and will look into offering as much information as is feasible to clinicians.

Comment: Several commenters expressed concern with the attribution methodology for the total per capita cost measure that we finalized in the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169), which we proposed to codify. In particular, they expressed concerns with the identification of clinicians such as nurse practitioners and physician assistants as primary care clinicians under this methodology, because many of them work in specialist practices.

Response: We believe that attribution methods that include nurse practitioners (NP) and physician assistants (PA) as primary care clinicians best represents the role they play in clinical care. Under the attribution methodology for the total per capita cost measure, a patient who saw a primary care physician more often than an NP or PA in a specialty practice would be attributed to that primary care physician. As we have observed in rulemaking for the Value Modifier (79 FR 67961), including NPs and PAs in the first step of attribution in the total per capita care cost measure did not significantly affect the attribution of patients.

Comment: Several commenters expressed concern with the attribution methods used for the MSPB measure for which we finalized policy in the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169) and which we proposed to add to regulatory text. Many of the commenters expressed concern that the method of attribution was assigning patients to non-patient facing specialists such as pathologists and radiologists because they may provide expensive services, but do not provide overall care management for the patient. A few commenters requested that non-patient facing clinicians not be attributed this measure.

Response: We believe that the MSPB measure continues to be an important measure of the overall cost of care for a patient and the clinician who provides the plurality of care. We believe that a clinician who provides the plurality of care in a hospital has opportunities to affect the cost of care for that patient. In some cases that may be a non-patient facing clinician, who in order to provide the plurality of care, would have provided a significant amount of service to a hospitalized patient.

After consideration of the public comments, we are finalizing our proposal to codify the previously adopted final policies at § 414.1350(b) as proposed.

(B) Attribution Rules for the Episode-Based Measures

In section III.I.3.h.(3)(b)(ii) of this final rule, we finalized 8 episode-based measures for the cost performance category for the 2019 MIPS performance period and future performance periods, which can be categorized into two types of episode groups: Acute inpatient medical condition episode groups, and procedural episode groups. These measures only include items and services that are related to the episode of care for a clinical condition or procedure (as defined by procedure and diagnosis codes), as opposed to including all services that are provided to a patient over a given period of time. The attribution methodology will be the same for all of the measures within each type of episode groups—acute inpatient medical condition episode groups and procedural episode groups. Our approach to attribution will ensure that the episode-based measures reflect the roles of the individuals and groups in providing care to patients.

For acute inpatient medical condition episode groups specified beginning in the 2019 performance period, we proposed at § 414.1350(b)(6) to attribute episodes to each MIPS eligible clinician who bills inpatient evaluation and management (E&M) claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E&M claim lines in that hospitalization (83 FR 35905). We stated that a trigger inpatient hospitalization is a hospitalization with a particular MS–DRG identifying the episode group. These MS–DRGs, and any supplementary trigger rules, are identified in the measure specifications posted at *qpp.cms.gov*. The measure score for an individual clinician (TIN/NPI) is based on all of the episodes attributed to the individual. The measure score for a group (TIN) is based on all of the episodes attributed to a TIN/NPI in the given TIN. If a single episode is attributed to multiple TIN/NPIs in a single TIN, the episode is only counted once in the TIN's measure score. We stated that we believe that establishing a 30 percent threshold for the TIN would ensure that the clinician group is collectively measured across all of its clinicians who are likely responsible for the oversight of care for the patient during the trigger hospitalization.

This proposed attribution approach differs from the attribution approach previously established for episode-based measures for acute inpatient medical conditions specified for the 2017 performance period in the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77175). The previous approach attributed episodes to TIN/NPIs who individually exceed the 30 percent E&M threshold, while excluding all episodes where no TIN/NPI exceeds the 30 percent threshold. Throughout the measure development process, stakeholders have discussed the team-based nature of acute care, in which multiple clinicians share management of a patient during a hospital stay. The previous approach outlined in the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77175) does not capture patients' episodes when a group collaborates to manage a patient but no individual clinician exceeds the 30 percent threshold. Based upon stakeholder feedback, our proposed approach emphasizes team-based care and expands the measures' coverage of clinicians, patients, and cost.

We provided an example to illustrate the proposed attribution rules for acute inpatient medical condition episode groups in the proposed rule (83 FR 35905).

For procedural episode groups specified beginning in the 2019 MIPS performance period, we proposed at § 414.1350(b)(7) to attribute episodes to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes (83 FR 35905). These trigger services are identified in the measure specifications posted at *qpp.cms.gov*. We stated that the measure score for an individual

clinician (TIN/NPI) is based on all of the episodes attributed to the individual. The measure score for a group (TIN) is based on all of the episodes attributed to a TIN/NPI in the given TIN. If a single episode is attributed to multiple TIN/NPIs in a single TIN, the episode is only counted once in the TIN's measure score. We stated that we believe this approach best identifies the clinician(s) responsible for the patient's care. This attribution method is similar to that used for procedural episode-based measures in the 2017 MIPS performance period but more clearly defines that the services must be provided during the episode and how we would address instances in which two NPIs in the same TIN provided a trigger service.

The following is a summary of the public comments received on these proposals and our responses:

Comment: One commenter supported our proposed attribution methods for the procedural and acute inpatient medical condition episode-based measures.

Response: We appreciate the support of the commenter.

Comment: A few commenters agreed with the importance of shared accountability in attribution, with one commenter noting that they believed the proposed methodology represented a novel approach to this shared accountability. However, a few commenters opposed our proposed attribution methodology for acute inpatient medical condition episode-based measures. A few commenters recommended that the required percentage be increased. A few commenters expressed concern that a single patient could be attributed to many clinicians in a practice if they participated in MIPS as individuals under this proposed attribution method. This commenter stated that a clinician billing for a single service during a hospitalization could not be expected to have a significant effect on costs. A few commenters stated that this change in attribution methodology had been made following the episode-based measure field testing and could undercut the viability of measures established with clinical input.

Response: We appreciate the support for the emphasis on team-based care and shared accountability in the attribution methodology. We also appreciate the interest in increasing the E&M threshold percentage as part of the attribution methodology for the acute inpatient medical condition episode-based measures. While there is interest in increasing the E&M threshold and concern about the impact of the proposed attribution methodology on clinicians participating in MIPS as individuals, we believe that the methodology as proposed appropriately balances the interest in team-based care and enabling as many clinicians as possible to be attributed to these new acute inpatient medical condition episode-based measures. Specifically, we believe that an E&M threshold requirement of 30 percent reflects stakeholder input throughout the measure development process to reasonably reflect the nature of care in an inpatient setting, and it is in the interests of a large number of clinicians and clinician groups to be able to access these episode-based measures. We disagree that the proposed methodology undercuts the viability of the episode-based measures. Each component of the measures reflects feedback that the measure development contractor has gathered from clinical subcommittees, a technical expert panel, and public comments, including during field testing in 2017. We believe that the changes made to the attribution methodology after field testing reflect the purpose of such testing—which we believe goes beyond the typical testing associated with many performance measures—to reveal issues and to gather stakeholder feedback to inform potential measure refinements. This included feedback on the importance of incorporating considerations of care coordination into the attribution methodology. We believe that a clinician participating as an individual who bills one E&M claim within a TIN that has 30 percent of the total E&Ms for that trigger inpatient stay does not necessarily have limited influence on episode costs due to the nature of inpatient care involving teams. In addition, we seek to incentivize clinicians to engage in greater care coordination throughout a patient's trajectory. The case minimum of 20 for acute inpatient medical condition episode-based measures as finalized above ensures that clinicians are reliably measured in providing care to beneficiaries with those specific conditions. We note that the mean reliability for the measures meets or exceeds the established 0.4 reliability threshold under this attribution methodology for TINs and TIN/NPIs.

Comment: Some commenters expressed concern with our procedural episode groups proposal to attribute episodes to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes. One commenter suggested that a clinician should be required to bill at least two service codes in order to be attributed a procedural episode in order to increase the reliability of the measure. One commenter recommended that a single clinician should not be solely attributed the costs for a patient based on the provision of a trigger service, but that the responsibility should be shared among all clinicians who treated the patient during the episode. One commenter stated that the same patient would be attributed twice if a two-stage procedure were performed.

Response: We believe that in the case of a procedural episode, the clinician who performs the service has a significant influence on the costs of care that are part of the episode that follows the provision of that service. These clinicians perform significant therapeutic and diagnostic services, and the episode-based measures are intended to limit costs to those which the clinician can affect, such as by avoiding complications or better managing the patient during the episode. In many cases, it would not be practical to require more than a single service, such as in cases of surgical services which may encompass much of the period of the episode.

After consideration of the public comments, we are finalizing as proposed our proposal at § 414.1350(b)(6) for acute inpatient medical condition episode groups specified beginning in the 2019 performance period, to attribute episodes to each MIPS eligible clinician who bills inpatient evaluation and management (E&M) claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E&M claim lines in that hospitalization. Additionally, we also finalizing as proposed our proposal at § 414.1350(b)(7) for procedural episode groups specified beginning in the 2019 MIPS performance period, to attribute episodes to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes.

(4) Improvement Activities Performance Category

(a) Background

In CY 2017 Quality Payment Program final rule (81 FR 77179 through 77180), we codified at § 414.1355 that the improvement activities performance category would account for 15 percent of the final score. We refer readers to section III.I.3.i.(1)(e) of this final rule where we proposed to modify § 414.1355 to provide further technical clarifications. In addition, in the CY 2018 Quality Payment Program final

rule (82 FR 53649), we codified at § 414.1380(b)(3)(iv) that the term recognized be accepted as equivalent to the term certified when referring to the requirements for a patient-centered medical home to receive full credit for the improvement activities performance category for MIPS. We also finalized at § 414.1380(b)(3)(x) that for the 2020 MIPS payment year and future years, to receive full credit as a certified or recognized patient-centered medical home or comparable specialty practice, at least 50 percent of the practice sites within the TIN must be recognized as a patient-centered medical home or comparable specialty practice (82 FR 53655). We refer readers to section III.I.3.i.(1)(e)(i)(D) of this final rule for details on our proposals regarding patient-centered medical homes.

In the CY 2017 Quality Payment Program final rule (81 FR 77539), we codified the definition of improvement activities at § 414.1305 to mean an activity that relevant MIPS eligible clinicians, organizations, and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes. Further, in that final rule (81 FR 77190), we codified at § 414.1365 that the improvement activities performance category would include the subcategories of activities provided at section 1848(q)(2)(B)(iii) of the Act. We also codified subcategories for improvement activities at § 414.1365 (81 FR 77190).

We also previously codified in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77180 and 82 FR 53651, respectively) data submission criteria for the improvement activities performance category at § 414.1360(a)(1). In addition, we established exceptions for: Small practices; practices located in rural areas; practices located in geographic HPSAs; non-patient facing individual MIPS eligible clinicians or groups; and individual MIPS eligible clinicians and groups that participate in a MIPS APM or a patient-centered medical home submitting in MIPS (81 FR 77185, 77188). Specifically, we codified at § 414.1380(b)(3)(vii) that non-patient facing MIPS eligible clinicians and groups, small practices, and practices located in rural areas and geographic HPSAs receive full credit for the improvement activities performance category by selecting one high-weighted improvement activity or two medium-weighted improvement activities; such practices receive half credit for the improvement activities performance category by selecting one medium-weighted improvement activity (81 FR 77185). We refer readers to section III.I.3.i.(1)(e)(i)(B) of this final rule for our proposals related to that provision. In addition, we specified at § 414.1305 that rural areas refers to ZIP codes designated as rural, using the most recent HRSA Area Health Resource File data set available (81 FR 77188, 82 FR 53582). Lastly, we finalized the meaning of Health Professional Shortage Areas (HPSA) at § 414.1305 to mean areas as designated under section 332(a)(1)(A) of the Public Health Service Act (81 FR 77188). In the CY 2018 Quality Payment Program final rule (82 FR 53581), we modified the definition of small practices at § 414.1305 to mean practices consisting of 15 or fewer eligible clinicians.

In the CY 2019 PFS proposed rule (83 FR 35906 through 35912), we requested comments on our proposals to: (1) Revise § 414.1360(a)(1) to more accurately describe the data submission criteria; (2) delete § 414.1365 and move improvement activities subcategories to § 414.1355(c); (3) update the criteria considered for nominating new improvement activities; (4) modify the Annual Call for Activities timeline for the CY 2019 performance period and future years; (5) add 6 new improvement activities for the CY 2019 performance period and future years; (6) modify 5 existing improvement activities for the CY 2019 performance period and future years; and (7) remove 1 existing improvement activity for the CY 2019 performance period and future years. In addition, we also requested comments on our proposals with respect to the CMS Study on Factors Associated with Reporting Quality Measures for the CY 2019 performance period and future years the following proposals: (1) Change the title of the study to CMS Study on Factors Associated with Reporting Quality Measures; (2) increase the sample size to a minimum of 200 participants; (3) limit the focus group requirement to a subset of the 200 participants; and (4) require that at least one of the minimum of three required measures be a high priority measure. We are also making clarifications to: (1) Considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities.

These topics are discussed in more detail below.

(b) Submission Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77181) for submission mechanism policies we finalized and codified for the transition year of MIPS. In the CY 2018 Quality Payment Program final rule (82 FR 53651), we continued these policies for future years. Specifically, we finalized that for MIPS Year 2 and future years, MIPS eligible clinicians or groups must submit data on MIPS improvement activities in one of the following manners: Qualified registries; EHR submission mechanisms; QCDR; CMS Web Interface; or attestation. Additionally, we finalized that for activities that are performed for at least a continuous 90-days during the performance period, MIPS eligible clinicians must submit a yes response for activities within the improvement activities inventory. In addition, in the case where an individual MIPS eligible clinician or group is using a health IT vendor, QCDR, or qualified registry for their data submission, we finalized that the MIPS eligible clinician or group must certify all improvement activities were performed and the health IT vendor, QCDR, or qualified registry would submit on their behalf (82 FR 53650 through 53651). We also updated § 414.1360 to reflect those changes (82 FR 53651). We refer readers to section III.I.3.h.(1) of this final rule, MIPS Performance Category Measures and Activities, where we discuss our finalized policies to update the data submission process for MIPS eligible clinicians, groups and third party intermediaries, by updating our terminology. We also refer readers to changes to § 414.1325 for data submission requirements. In the CY 2019 PFS proposed rule (83 FR 35906), we proposed those changes to more closely align with the actual submission experience users have.

In alignment with those proposals, we also proposed to revise § 414.1360(a)(1) to more accurately reflect the data submission process for the improvement activities performance category. In particular, in the CY 2019 PFS proposed rule (83 FR 35906), we proposed that instead of ''via qualified registries; EHR submission mechanisms; QCDR, CMS Web Interface; or attestation,'' as currently stated, we revised the first sentence to state that data would be submitted ''via direct, login and upload, and login and attest'' as discussed in section III.I.3.h.(1)(b) of this final rule. In addition, we proposed to add further additions to § 414.1360(a)(1) to specify, submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period.

We did not receive any comments on these proposals. Therefore, we are

finalizing our proposals, as proposed, to revise the first sentence of § 414.1360(a)(1) to state that data must be submitted via direct, login and upload, and login and attest. In addition, we are finalizing our proposal, as proposed, to update § 414.1360(a)(1) to specify: Submit a yes response for each improvement activity that is performed for at least a continuous 90-day period during the applicable performance period.

(c) Subcategories

In the CY 2017 Quality Payment Program final rule (81 FR 77190), we finalized at § 414.1365 that the improvement activities performance category includes the subcategories of activities provided at section 1848(q)(2)(B)(iii) of the Act. It has since come to our attention that it is unnecessary to have a separate regulation text included under § 414.1365 since the subcategories are not a component of the scoring calculations. Therefore, in the CY 2019 PFS proposed rule (83 FR 35906 through 35907), we proposed to delete § 414.1365 and move the same improvement activities subcategories to § 414.1355(c). We reiterate that we did not propose any changes to the subcategories themselves. These subcategories are:

- Expanded practice access, such as same day appointments for urgent needs and after-hours access to clinician advice.
- Population management, such as monitoring health conditions of individuals to provide timely health care interventions or participation in a QCDR.
- Care coordination, such as timely communication of test results, timely exchange of clinical information to patients or other clinicians, and use of remote monitoring or telehealth.
- Beneficiary engagement, such as the establishment of care plans for individuals with complex care needs, beneficiary self-management assessment and training, and using shared decision making mechanisms.
- Patient safety and practice assessment, such as through the use of clinical or surgical checklists and practice assessments related to maintaining certification.
- Participation in an APM.
- Achieving health equity, such as for MIPS eligible clinicians that achieve high quality for underserved populations, including persons with behavioral health conditions, racial and ethnic minorities, sexual and gender minorities, people with disabilities, people living in rural areas, and people in geographic HPSAs.
- Emergency preparedness and response, such as measuring MIPS eligible clinician participation in the Medical Reserve Corps, measuring registration in the Emergency System for Advance Registration of Volunteer Health Professionals, measuring relevant reserve and active duty uniformed services MIPS eligible clinician activities, and measuring MIPS eligible clinician volunteer participation in domestic or international humanitarian medical relief work.
- Integrated behavioral and mental health, such as measuring or evaluating such practices as: Co-location of behavioral health and primary care services; shared/integrated behavioral health and primary care records; cross training of MIPS eligible clinicians, and integrating behavioral health with primary care to address substance use disorders or other behavioral health conditions, as well as integrating mental health with primary care.

The following is a summary of the public comments received on our proposals and our responses:

Comment: One commenter supported the definition of achieving health equity and underserved populations. The commenter recommended that we explicitly include people with limited English in those groups.

Response: We will take this suggestion into consideration for the future.

After consideration of the public comments received, we are finalizing our proposal, as proposed, to delete § 414.1365 and move the same improvement activities subcategories to § 414.1355(c).

(d) Improvement Activities Inventory

In the CY 2019 PFS proposed rule (83 FR 35907 through 35910), we proposed to: (1) Adopt one new criterion and remove one existing criterion for nominating new improvement activities beginning with the CY 2019 performance period and future years; (2) modify the timeframe for the Annual Call for Activities; (3) add 6 new improvement activities for the CY 2019 performance period and future years; (4) modify 5 existing improvement activities for the CY 2019 performance period and future years; and (5) remove 1 existing improvement activity for the CY 2019 performance period and future years. We are also making clarifications to: (1) Considerations for selecting improvement activities for the CY 2019 performance period and future years; and (2) the weighting of improvement activities.

(i) Annual Call for Activities

In the CY 2017 Quality Payment Program final rule (81 FR 77190), for the transition year of MIPS, we implemented the initial Improvement Activities Inventory and took several steps to ensure it was inclusive of activities in line with statutory and program requirements. For Year 2, we provided an informal process for submitting new improvement activities or modifications for potential inclusion in the comprehensive Improvement Activities Inventory for the Quality Payment Program Year 2 and future years through subregulatory guidance (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Annual-Call-for-Measures-and-Activities-for-MIPS_Overview-Factsheet.pdf*). In the CY 2018 Quality Payment Program final rule (82 FR 53656 through 53659), for Year 3 and future years, we finalized a formal Annual Call for Activities process for adding possible new activities or providing modifications to the current activities in the Improvement Activities Inventory, including information required to submit a nomination form similar to the one we utilized for Year 2 (82 FR 53656 through 53659). It is important to note that in order to submit a request for a new activity or a modification to an existing improvement activity the stakeholder must submit a nomination form available at *www.qpp.cms.gov* during the Annual Call for Activities.

(A) Criteria for Nominating New Improvement Activities

In the CY 2019 PFS proposed rule (83 FR 35907 through 35908), we proposed to add one new criterion and remove a previously adopted criterion from the improvement activities nomination criteria. We also clarified our considerations in selecting improvement activities.

(aa) Currently Adopted Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77190 through 77195), we discussed guidelines for the selection of improvement activities. In the CY 2018 Quality Payment Program final rule, we formalized the Annual Call for Activities process for Year 3 and future years and added additional criteria; stakeholders would apply one or more of the below criteria when submitting nominations for improvement activities (82 FR 53660):

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);

- Importance of an activity toward achieving improved beneficiary health outcome;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family's point of view;
- Support the patient's family or personal caregiver;
- Activities that may be considered for an advancing care information bonus;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes; or
- CMS is able to validate the activity.

(bb) New Criteria

We believe it is important to place attention on public health emergencies, such as the opioid epidemic, when considering improvement activities for inclusion in the Inventory, because their inclusion raises awareness for clinicians about the urgency of the situation and to promote clinician adoption of best practices to combat those public health emergencies. A list of the public health emergency declarations is available at *https://www.phe.gov/Preparedness/legal/Pages/phedeclaration.aspx*. Therefore, in the CY 2019 PFS proposed rule (83 FR 35907 through 35908), we proposed to adopt an additional criterion entitled ''Include a public health emergency as determined by the Secretary'' to the criteria for nominating new improvement activities beginning with the CY 2019 performance period and future years. We invited public comment on our proposal.

The following is a summary of the public comments received on our proposals and our responses:

Comment: Many commenters supported the additional criterion for nominating improvement activities to include public health emergencies, noting that such activities are important for patient care and will help raise clinician awareness and promote best practices related to the medically appropriate, evidence-based, and safe use of opioids in treating chronic and acute pain and the use of non-opioid pain management treatment alternatives. One commenter stated this criteria could help ensure patients receive the most appropriate pain and substance use disorder treatments. Another commenter stated this criteria could support efforts to mobilize health care resources to assist those in need and aid providers in relief efforts.

Response: We appreciate the commenters' support.

Comment: One commenter requested clarification regarding whether a public health emergency is required to be listed for an improvement activity to be considered and whether the improvement activities will be removed once the public health emergency has been resolved.

Response: A list of federal public health emergency declarations is available at *https://www.phe.gov/Preparedness/legal/Pages/phedeclaration.aspx*. Modifications to existing improvement activities in the Improvement Activities Inventory, including whether an improvement activity should be removed due to a change in a public health emergency status, will be considered through the formal Annual Call for Activities on a case-by-case basis.

Comment: A few commenters did not support the proposed addition of the public health emergency criteria. One commenter stated there is a need for adequate notice and tracking mechanisms and recommended that improvement activities should progress through the formal review process. Another commenter recommended a process outside the Annual Call for Activities that enables clinicians to propose an activity for immediate implementation during a public health emergency declaration and that such activities remain optional and be granted full credit even if the duration does not span at least 90 continuous days.

Response: We agree that there is a need for adequate notice in order to allow clinicians time to prepare. To be clear, Improvement Activities will continue to be proposed and adopted via rulemaking; we are merely adding a new criteria such that public health emergencies are considered when stakeholders nominate improvement activities and while we select improvement activities for proposal and adoption into the Inventory. We do not agree that we should create a separate process outside of the Annual Call for Activities or that such activities should remain optional and be granted full credit even if the duration does not span at least 90 continuous days. In the CY 2017 Quality Payment Program final rule (81 FR 77186), we specified at § 414.1360 that MIPS eligible clinicians or groups must perform improvement activities for at least 90 consecutive days during the performance period for improvement activities performance category credit.

Comment: One commenter suggested that there should be a bonus associated with the submission of an improvement activity regarding a public health emergency.

Response: We disagree as we do not believe the submission of an improvement activity should get bonus points. We are not able to provide bonus points for improvement activities at this time.

After consideration of the public comments received, we are finalizing our proposal, as proposed to adopt an additional criterion entitled ''Include a public health emergency as determined by the Secretary'' to the criteria for nominating new improvement activities beginning with the CY 2019 performance period and future years.

(cc) Removal of One Criteria

In the CY 2017 Quality Payment Program final rule (81 FR 77202 through 77209), we adopted a policy to award a bonus to the Promoting Interoperability performance category score for MIPS eligible clinicians who use CEHRT to complete certain activities in the improvement activities performance category. We included a designation column in the Improvement Activities Inventory at Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77817) that indicated which activities qualified for the Promoting Interoperability (formerly Advancing Care Information) bonus codified at § 414.1380(b)(4)(i)(D).

In the CY 2019 PFS proposed rule (83 FR 35982), under the Promoting Interoperability performance category, we proposed a new approach for scoring that moves away from the base, performance, and bonus score methodology currently established. This new approach removes the availability of a bonus score for attesting to completing one or more specified improvement activities using CEHRT beginning with the CY 2019 performance period and future years. As a result, we do not believe the criterion for selecting improvement activities for inclusion in the program entitled ''Activities that may be considered for an advancing care information bonus'' remains relevant. Therefore, we proposed to remove the criterion for selecting improvement activities for inclusion in the program entitled ''Activities that may be considered for an advancing care information bonus''

beginning with the CY 2019 performance period and future years (83 FR 35908).

If our proposals to add one criterion and remove one criterion are adopted as proposed, the new list of criteria for nominating new improvement activities for the CY 2019 performance period and future years would be as follows:

- Relevance to an existing improvement activities subcategory (or a proposed new subcategory);
- Importance of an activity toward achieving improved beneficiary health outcome;
- Importance of an activity that could lead to improvement in practice to reduce health care disparities;
- Aligned with patient-centered medical homes;
- Focus on meaningful actions from the person and family's point of view;
- Support the patient's family or personal caregiver;
- Representative of activities that multiple individual MIPS eligible clinicians or groups could perform (for example, primary care, specialty care);
- Feasible to implement, recognizing importance in minimizing burden, especially for small practices, practices in rural areas, or in areas designated as geographic HPSAs by HRSA;
- Evidence supports that an activity has a high probability of contributing to improved beneficiary health outcomes;
- Include a public health emergency as determined by the Secretary; or
- CMS is able to validate the activity.

We did not receive any comments on our proposal. Therefore, we are finalizing our proposal, as proposed, to remove the criterion entitled ''Activities that may be considered for an advancing care information bonus'' beginning with the CY 2019 performance period and future years. We note that this policy is being finalized in alignment with those in section III.I.3.h.(5)(d)(ii) of this final rule.

(B) Considerations in Selecting Improvement Activities

As noted in the CY 2017 Quality Payment Program final rule, we intend to use the criteria for nominating new improvement activities in selecting improvement activities for inclusion in the program (82 FR 53659). However, we clarify here that those criteria are but one factor in determining which improvement activities we ultimately propose. For example, we also generally take into consideration other factors, such as whether the nominated improvement activity uses publically available products or techniques (that is, does not contain proprietary products or information limiting an activity) or whether the nominated improvement activity duplicates any currently adopted activity (83 FR 35908).

(C) Weighting of Improvement Activities

Given stakeholder feedback requesting additional transparency regarding the weighting of improvement activities (82 FR 53657), in the CY 2019 PFS proposed rule (83 FR 35908 through 35909), we summarized considerations we have previously used to assign weights to improvement activities included in the Improvement Activities Inventory (see Appendix 2: Improvement Activities, Tables A and B). We also made a few clarifications and solicited comment for future weighting considerations. These topics are discussed in more detail below.

(aa) Summary of Past Considerations

In the CY 2017 Quality Payment Program final rule (81 FR 77191), we explained that to define the criteria and establish weighting for each activity, we engaged multiple stakeholder groups, including the Centers for Disease Control and Prevention, Health Resources and Services Administration, Office of the National Coordinator for Health Information Technology, SAMHSA, Agency for Healthcare Research and Quality, Food and Drug Administration, the Department of Veterans Affairs, and several clinical specialty groups, small and rural practices and non-patient facing clinicians. Activities were proposed to be weighted as high based on the extent to which they align with activities that support the patient-centered medical home, since that is the standard under section 1848(q)(5)(C)(i) of the Act for achieving the highest potential score for the improvement activities performance category, as well as with our priorities for transforming clinical practice (81 FR 77191). Activities that require performance of multiple actions, such as participation in the Transforming Clinical Practice Initiative (TCPI), participation in a MIPS eligible clinician's state Medicaid program, or an activity identified as a public health priority (such as emphasis on anticoagulation management or utilization of prescription drug monitoring programs) were also proposed to be weighted as high (81 FR 77191). We also stated that we believe that high-weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being (81 FR 77194). In the past, we have given certain improvement activities high-weighting due to the intensity of the activity; for example, one improvement activity was changed to high-weighting because it often involves travel and work under challenging physical and clinical circumstances (81 FR 77194). Also, we note that successful participation in the CMS Study on Factors Associated with Reporting Quality Measures as discussed in section III.I.3.h.(4)(e) of this final rule would result in full credit for the improvement activities performance category of 40 points; if participants do not meet the study guidelines, they will need to follow the current improvement activities guidelines (81 FR 77197).

(bb) Clarifications

In this final rule, we are clarifying: (a) Our consideration of giving high-weighting due to activity intensity; and (b) differences between high- and medium-weighting.

(AA) High-Weighting Due to Activity Intensity

As stated previously, we have given certain improvement activities high-weighting due to the intensity of the activity (81 FR 77194). To elaborate, we believe that an activity that requires significant investment of time and resources should be high-weighted. For example, we finalized the CAHPS for MIPS survey as high-weighted (81 FR 77827), because it requires a significant investment of time and resources. As part of the requirements of this activity, MIPS eligible clinicians: (1) Must register for the CAHPS for MIPS survey; (2) must select and authorize a CMS-approved survey vendor to collect and report survey data using the survey and specifications provided by us; and (3) are responsible for vendor's costs to collect and report the survey (ranges from approximately $4,000 to $7,000 depending on services requested).

In contrast, we believe medium-weighted improvement activities are simpler to complete and require less time and resources as compared to high-weighted improvement activities. For example, we finalized the Cost Display for Laboratory and Radiographic Orders improvement activity as medium-weighted (82 FR 54188), because the information required to be used is readily available (*https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ClinicalLabFeeSched/index.html*) at no cost through the Medicare clinical laboratory fee schedule and can be distributed in a variety of manners with very little investment (for example, it may be displayed in the clinic, provided to patients through hardcopies, or incorporated in the electronic health record).

(BB) High- Versus Medium-Weighting

We recognize that we did not previously explicitly state separate considerations for medium-weighted activities. This is because an improvement activity is only either high or medium-weighted. In this final rule, we are clarifying that an improvement activity is by default medium-weight unless it meets considerations for high-weighting as discussed previously (83 FR 35909).

(cc) Request for Comments

We intend to more thoroughly revisit our improvement activity weighting policies in next year's rulemaking. We invited public comment on the need for additional transparency and guidance on the weighting of improvement activities as we work to refine the Annual Call for Activities process for future years. Furthermore, in light of the finalized policy to remove bonus points for improvement activities that may be applicable to the Promoting Interoperability performance category as discussed in sections III.I.3.h.(4)(d)(i)(A)(cc) and III.I.3.h.(5)(d)(ii), we recognize the need to continue incentives for CEHRT. Therefore, for future consideration, we solicited comment on potentially applying high-weighting for any improvement activity employing CEHRT. We also invited public comment on any other additional considerations for high- or medium-weighting.

Comment: One commenter supported more transparency regarding the differences between high-weight and medium-weight activities and encouraged continued education related to the improvement activities performance category as new activities are added. Another commenter recommended that improvement activities related to Continuing Medical Education (CME) be weighted in a bifurcated manner with more substantial CME's potentially counting as high-weighted.

Response: We will take these comments into consideration as we develop future policy.

(D) Timeframe for the Annual Call for Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would accept submissions for prospective improvement activities and modifications to existing improvement activities at any time during the performance period to be added to the Improvement Activities Under Review (IAUR) list, for the applicable performance period, which would be displayed on a CMS website following the close of the Annual Call for Activities. In addition, we finalized that for the Annual Call for Activities, only nominations and modifications submitted by March 1st would be considered for inclusion in the IAUR list and Improvement Activities Inventory for the performance period occurring in the following calendar year (82 FR 53660). For example, for the CY 2018 Annual Call for Activities, we received nominations for new and modified improvement activities from February 1st through March 1st. Currently, an improvement activity nomination submitted during the CY 2018 Annual Call for Activities would be vetted in CY 2018, and after review, if accepted by CMS, would be proposed during the CY 2018 rulemaking cycle for possible implementation in the CY 2019 performance period and future years.

However, the previously established timeline, which includes prospective new and modified improvement activities submission period, review, and publication of proposed improvement activities for implementation in the next performance period, has become operationally challenging. Based on our experience over the past 2 years, we have found that processing and reviewing the volume of improvement activities nominations requires more time than originally thought. In addition, preparations and drafting for annual rulemaking begin around the time of the close date for the current Annual Call for Activities (that is, March 1st), leaving incorporation into the proposed rule challenging. Therefore, in the CY 2019 PFS proposed rule, beginning with the CY 2019 performance period, we proposed to: (1) Delay the year for which nominations of prospective new and modified improvement activities would apply; and (2) expand the submission timeframe/due date for nominations (83 FR 35909).

Beginning with the CY 2019 performance period, we proposed to change the performance year for which the nominations of prospective new and modified improvement activities would apply, such that improvement activities nominations received in a particular year will be vetted and considered for the next year's rulemaking cycle for possible implementation in a future year. This timeframe parallels the Promoting Interoperability performance category Annual Call for EHR Measures timeframe available at *https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/CallForMeasures.html*. For example, an improvement activity nomination submitted during the CY 2020 Annual Call for Activities would be vetted, and if accepted by CMS, would be proposed during the CY 2021 rulemaking cycle for possible implementation starting in CY 2022. We believe this change would give us adequate time to thoroughly vet improvement activity nominations prior to rulemaking (83 FR 35909).

Second, beginning with the CY 2019 performance period, we proposed to change the submission timeframe for the Annual Call for Activities from February 1st through March 1st to February 1st through June 30th, providing approximately 4 additional months for stakeholders to submit nominations. We believe this change would assist stakeholders by providing additional time to submit improvement activities nominations. Consistent with previous policy, nominations for prospective new and modified improvement activities would be accepted during the Annual Call for Activities time period only and would be included in the IAUR displayed on a CMS website following the close of the Annual Call for Activities (83 FR 35909).

The following is a summary of the public comments received on our proposals and our responses:

Comment: Several commenters supported the proposed change to the Annual Call for Activities timeframe citing that the modified timeline provides a longer window during which to propose new improvement activities, allows for more advance notice to implement new activities that have been finalized, aligns the Annual Call for Activities with the Annual Call for Measures, and reduces overall program complexity. One commenter noted the new timeframe would ensure that the inventory includes an appropriate number of measures that are meaningful to each specialty, including non-physician Medicare clinicians, and that are appropriate for the patient-centered health care team and have a positive impact on patient care.

Response: We appreciate the commenters' support.

Comment: Several commenters did not support the proposed extension of the timeframe for the Annual Call for Activities and recommended that we maintain the current schedule because this would ensure the improvement activities inventory include activities that are timely, important, relevant, and meaningful to the evolving practice of medicine and to public health. One commenter noted extending the timeframe from submission to

implementation is a barrier to previously stated goals in aligning improvement activities with the quality improvement cycle. Another commenter noted the benefit of being able to modify or add measures each year outweighs the need for additional submission time and that improvement activities do not require the same reliability and validity testing necessary for successful quality measures and that improvement activities be considered annually informed by the quality improvement cycle. One commenter stated the proposal would impede the ability of groups to create activities that raise awareness of novel or pressing issues and promote best practices in a timely manner. Another commenter urged us to take a modified approach to its proposal in which the timeframe to modify existing measures would be shorter than that for new measures. One commenter stated that delaying consideration of improvement activities until the following year's rule making does not appropriately reward early adopters of activities and suggested that early adopters of an improvement activity could be given credit.

Response: Although improvement activities do not have the same testing requirements as quality measures, we believe that improvement activities are equally important in facilitating clinical practice improvement. As such, sufficient time is needed to thoroughly review all submissions to ensure we maintain an inventory that is both meaningful and robust. In addition, we cannot increase the submission period without increasing our review period. It would not be operationally feasible to do otherwise. We also do not believe that there is a benefit to providing for a review period that does not allow for an adequate time to thoroughly vet improvement activity nominations prior to rulemaking. However, we will continue to monitor the timeline to assess if there are any future improvements that can be made to more quickly incorporate new improvement activities into the program when feasibly possible. We disagree that the timeframe would impede the promotion of best practices or awareness of improvement-related activities or issues because stakeholders are not precluded from referencing that a particular activity has been submitted for consideration as part of the Annual Call for Activities to raise awareness and promote best practices. We recognize that the proposed extended timeframe does not align with the submission, review, and implementation of quality measures as part of the Annual Call for Measures; however, we note our proposal parallels our timeframe with the Promoting Interoperability performance category Annual Call for EHR Measures timeframe (we refer readers to section III.I.3.h.(5)(f) of this final rule for more information) and achieves alignment between those performance categories.

After consideration of the public comments received on our proposal, we are finalizing our proposal, as proposed, to change the performance year for which the nominations of prospective new and modified improvement activities would apply, such that beginning with the CY 2019 performance period, improvement activities nominations received in a particular year will be vetted and considered for the next year's rulemaking cycle for possible implementation in a future year. In addition, we are finalizing our proposal, as proposed, to change the submission timeframe for the Annual Call for Activities from February 1st through March 1st to February 1st through June 30th, providing approximately 4 additional months for stakeholders to submit nominations beginning with the CY 2019 performance period.

(ii) New Improvement Activities and Modifications to and Removal of Existing Improvement Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would add new improvement activities to the Improvement Activities Inventory through notice-and-comment rulemaking. We referred readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199) and Table F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229) for our previously finalized Improvement Activities Inventory. In the CY 2019 PFS proposed rule (83 FR 36359 through 36368), for CY 2019 performance period and future years, we proposed 6 new improvement activities; we also proposed to: (1) Modify 5 existing activities; and (2) remove 1 existing activity. We also proposed changes to our CMS Study on Factors Associated with Reporting Quality Measures in section III.I.3.h.(4)(e) of this final rule.

Comment: A few commenters supported the overall approach for the improvement activities performance category because of its goal-oriented and technology-neutral approach to compliance, stating that this provides the flexibility needed for clinicians to select the most effective approaches for their patients that could include connected health technology innovations. One commenter supported the stability in the improvement activities performance category and the transparent process for adding improvement activities to the inventory.

Response: We appreciate the commenters' support.

A summary of the public comments received on specific improvement activities proposals and our responses may be found in Tables A and B of Appendix 2: Improvement Activities in this final rule.

(e) CMS Study on Factors Associated With Reporting Quality Measures

(i) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77195), we created the Study on Improvement Activities and Measurement. In CMS' quest to create a culture of improvement using evidence based medicine on a consistent basis, fully understanding the strengths and limitations of the current processes is crucial to better understand and improve these current processes. We proposed to conduct a study on clinical improvement activities and measurement to examine clinical quality workflows and data capture using a simpler approach to quality measures (81 FR 77196). The lessons learned in this study on practice improvement and measurement may influence changes to future MIPS data submission requirements. The goals of the study are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians (81 FR 77196). This study shall inform us on the root causes of clinicians' performance measure data collection and submission burdens, as well as challenges that hinder accurate and timely quality measurement activities. Our goals are to use high quality, low cost measures that are meaningful, easy to understand, operable, reliable, and valid. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77195) the CMS Study on Burden Associated with Quality Reporting goals are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians desiring:

- A more data driven approach to quality measurement.
- Measure selection unconstrained by a CEHRT program or system.
- Improving data quality submitted to CMS.

• Enabling CMS to get data more frequently and provide feedback more often.

This study evolved into ''CMS Study on Burdens Associated with Reporting Quality Measures'' in the CY 2018 Quality Payment Program final rule (82 FR 53662).

This study is ongoing, participants are recruited on a yearly basis for a minimum period of 3 years, and current participants can opt-in or out when the study year ends (81 FR 77195). Successful participation in the study would result in full credit for the improvement activities performance category of 40 points; if participants do not meet the study guidelines, they will need to follow the current improvement activities requirements (81 FR 77197). To meet the study requirements, study participants must partake in two web-based survey questionnaires, submit data for at least three MIPS clinician quality measures to CMS during the CY 2019 performance period, and be available for selection and participation in at least one focus group meeting (82 FR 53662).

Although we did not propose any changes to the study purpose, aim, eligibility, or credit, in the CY 2019 PFS proposed rule (83 FR 35910 through 35911), we proposed, for the CY 2019 performance period and future years, changes to the: (1) Title of the study; (2) sample size to allow enough statistical power for rigorous analysis within some categories, (3) focus group and survey requirements; and (4) measure requirements. These proposals are discussed in more detail below.

(ii) Title

In the CY 2019 PFS proposed rule (83 FR 35910), beginning with the CY 2019 performance period, we proposed to change the title of the study from ''CMS Study on Burdens Associated with Reporting Quality Measures'' to ''CMS Study on Factors Associated with Reporting Quality Measures'' to more accurately reflect the study's intent and purpose. To assess the root causes of clinician burden associated with the collection and submission of clinician quality measures for MIPS, as depicted in CY 2017 Quality Payment Program final rule (81 FR 77195), replacing ''Burden'' with ''Factors'' in the title will eliminate possible response or recall bias that may occur with data collection. Having ''burden'' in the study title may elicit the tendency of survey participants reporting more on their perception of burden and challenges, and/or suppressing other factors that are associated with their quality measure data collection and submission, that may be relevant to examining the root cause of burden.

The following is a summary of the public comments related to our proposal and our response:

Comment: One commenter supported the title change stating that the terminology changes will attract a more diverse group of study participants and encourage clinician participants in the study who will work to simplify measures and ensure that that measures bring maximum value to CMS, clinicians, and beneficiaries.

Response: We appreciate the commenters' support.

After consideration of the comments, we are finalizing our proposal, as proposed, to change the title of the study from ''CMS Study on Burdens Associated with Reporting Quality Measures'' to ''CMS Study on Factors Associated with Reporting Quality Measures'' beginning with the CY 2019 performance period.

(iii) Sample Size

(A) Current Policy

In the CY 2017 Quality Payment Program final rule (81 FR 77196), we initially finalized a sample size of 42 participants (comprising of groups and individual MIPS eligible facilities). In the CY 2018 Quality Payment Program final rule (82 FR 53661), we increased that number and finalized a sample size of a minimum of 102 individual and group participants for performance periods occurring in CY 2018 for the following categories:

• 20 urban individuals or groups of <3 eligible clinicians—(broken down into 10 individuals & 10 groups).

• 20 rural individuals or groups of <3 eligible clinicians—(broken down into 10 individuals & 10 groups).

• 10 groups of 3–8 eligible clinicians.

• 10 groups of 8–20 eligible clinicians.

• 10 groups of 20–100 eligible clinicians.

• 10 groups of 100 or greater eligible clinicians.

• 6 groups of >20 eligible clinicians reporting as individuals—(broken down into 3 urban & 3 rural).

• 6 specialty groups—(broken down into 3 reporting individually & 3 reporting as a group).

• Up to 10 non-MIPS eligible clinicians reporting as a group or individual (any number of individuals and any group size).

(B) New Sample Size

In the CY 2019 PFS proposed rule (83 FR 35910 through 35911), we proposed to again increase the sample size for the CY 2019 performance period and future years from a minimum of 102 to a minimum of 200 MIPS eligible clinicians, which will enable us to more rigorously analyze the statistical difference between the burden and factors associated within the categories listed above. This proposed increase in sample size would provide the minimum sample needed to get a significant result with adequate statistical power to determine whether there are any statistically significant differences in quality measurement data submission associated with: (1) The size of practice or facility; (2) clinician specialty of practice; (3) region of practice; (4) individual or group reporting; and (5) clinician quality measure type. This rigorous statistical analysis is important, because it facilitates tracing the root causes of measurement burdens and data submission errors that may be associated with various sub-groups of clinician practices using quantitative analytical methods. We believe that a larger sample size would also account for any attrition (drop out of study participants before the study ends). Therefore, we proposed that the new sample size distribution would be:

• 40 urban individuals or groups of <3 eligible clinicians—(broken down into 20 individuals & 20 groups).

• 40 rural individuals or groups of <3 eligible clinicians—(broken down into 20 individuals & 20 groups).

• 20 groups of 3–8 eligible clinicians.

• 20 groups of 8–20 eligible clinicians.

• 20 groups of 20–100 eligible clinicians.

• 20 groups of 100 or greater eligible clinicians.

• Up to 6 groups of >20 eligible clinicians reporting as individuals—(broken down into 3 urban & 3 rural).

• Up to 6 specialty groups—(broken down into 3 reporting individually & 3 reporting as a group).

• Up to 10 non-MIPS eligible clinicians reporting as a group or individual (any number of individuals and any group size).

The following is a summary of the public comments related to our proposals and our responses:

Comment: One commenter supported the continuation of the study to gather data on clinical improvement activities and measurement to examine clinical quality workflows and data and the proposal to increase the sample size of the study, stating that this would be a simpler approach and allow more clinicians to participate and increase the ability to conduct rigorous statistical analysis with sufficient power.

Response: We appreciate the commenter's support.

Comment: One commenter recommended that clinicians located in both urban and rural health practitioner shortage areas and clinicians who serve a high proportion of low-income patients and patients of color be included as study participants.

Response: We have been recruiting participants from health practitioner shortage areas, as well as areas with high proportion of patients of color and minority groups.

Comment: One commenter requested that CMS assure the quality reporting burden study includes a sample of clinicians with multiple special status categories, such as Certified Registered Nurse Anesthetists, citing there is likely a sufficient number of clinicians that meet the CMS special status requirements in the six specialty groups. The commenter also requested CMS ascertain the burden placed on special status clinicians in outpatient and ASC facilities.

Response: We appreciate the commenter's recommendation. The study welcomes all MIPS eligible clinicians, including Certified Registered Nurse Anesthetists, and non-MIPS clinicians to apply. We hope to further expand the scope of the study in the future.

After consideration of the comments received, we are finalizing our proposal, as proposed, to increase the sample size for the CY 2019 performance period and future years from a minimum of 102 to a minimum of 200 MIPS eligible clinicians.

(iv) Focus Group

(A) Current Policies

We previously finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195) that for the transition year of MIPS, study participants were required to attend a monthly focus group to share lessons learned in submitting quality data along with providing survey feedback to monitor effectiveness. The focus group includes providing visual displays of data, workflows, and best practices to share amongst the participants to obtain feedback and make further improvements (81 FR 77196). The focus groups are used to learn from the practices about how to be more agile as we test new ways of measure recording and workflow (81 FR 77196). In the CY 2018 Quality Payment Program final rule (82 FR 53662), for Year 2 and future years, we reduced that requirement and finalized that study participants would be required to complete at least two web-based survey questionnaire and attend up to 4 focus group sessions throughout the year, but certain study participants would be able to attend less frequently. Each study participant is required to complete a survey prior to submitting MIPS data and another survey after submitting MIPS data (82 FR 53662). The purpose of reducing focus group attendance and survey participation was to ease requirements for MIPS eligible clinicians or group of clinicians who may have nothing new to contribute, without compromising the minimum sample needed for focus groups. For example, if a MIPS eligible clinician submitted all 6 measures after collecting 90 days of data and attended the first available focus group and/or survey, the clinician may have nothing new or relevant to discuss with the research team on subsequent focus groups and/or surveys.

(B) New Requirements for Focus Group and Survey Participation

Although we proposed in the section previously to increase the sample size of the study to a minimum of 200 MIPS eligible clinicians, we do not believe we need focus groups for the entirety of that population. We believe that requiring focus groups for all proposed minimum of 200 MIPS eligible clinicians would only result in bringing the data to a saturation point, a situation whereby the same themes and information are recurring, and no new insights are given by additional sources of data from focus groups.

Instead, we believe that selecting a subset of clinicians, purposively, to participate in focus groups would be a more appropriate approach because that would allow us to understand the experience of select clinicians without imposing undue burden on all. This study is voluntary as clinicians nominate themselves to participate and we select a cohort from among these volunteers. Therefore, in the CY 2019 PFS proposed rule (83 FR 35911), we proposed to make the focus group participation a requirement only for a selected subset of the study participants, using purposive sampling and random sampling methods, beginning with the CY 2019 performance period and future years. Those selected would be required to participate in at least one focus group meeting and complete survey requirement, in addition to all the other study requirements. As previously established, each study participant is required to complete a survey prior to submitting MIPS data and another survey after submitting MIPS data. This requirement would continue to apply for each selected subset participating in a focus group.

We did not receive any comments on our proposal. Therefore, we are finalizing our proposals, as proposed, to make the focus group participation a requirement only for a selected subset of the study participants, using purposive sampling and random sampling methods, beginning with the CY 2019 performance period and future years. Those selected would be required to participate in at least one focus group meeting and complete the survey requirements, in addition to all the other study requirements (81 FR 77195).

(v) Measure Requirements

(A) Current Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77196), we finalized that for CY 2017, MIPS eligible clinicians or groups participating in the CMS Study would submit their data and workflows for a minimum of three MIPS clinician quality measures that are relevant and prioritized by their practice. One of the measures must be an outcome measure, and one must be a patient experience measure (81 FR 77196). We also finalized that for future years, participating MIPS eligible clinicians or groups would select three of the measures for which they have baseline data from the 2017 performance period to compare against later performance years. We note that participating MIPS eligible clinicians could elect to report on more measures originally as this would provide more options from which to select in subsequent years for purposes of measuring improvement. In the CY 2018 Quality Payment Program final rule, we finalized for the Quality Payment Program Year 2 and future years, that study participants could submit all their quality measures data at once, as it is done in the MIPS program, (*qpp.cms.gov*) (82 FR 53662).

(B) Measure Requirements

In the CY 2019 PFS proposed rule (83 FR 35911), we proposed to continue the previously required minimum number of measures. That is, for the CY 2019 performance period and future years: participants must submit data and workflows for a minimum of three MIPS quality measures for which they have baseline data. However, instead of requiring one outcome measure and one patient experience measure as previously finalized, we proposed that, for the CY 2019 performance period and future years, at least one of the minimum of three measures must be a high priority measure as defined at

§ 414.1305. As defined there and discussed in section III.I.3.h.(2) of this final rule, a high priority measure means an outcome, appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure. Outcome measures includes intermediate-outcome and patient-reported outcome measures. We believe that focusing on high priority measures, rather than patient experience measures, is important at this time, because it better aligns with the MIPS quality measures data submission criteria. We invited public comment on our proposal.

We did not receive any comments on our proposal. Therefore, we are finalizing our proposal, as proposed, that for the CY 2019 performance period and future years, at least one of the minimum of three measures must be a high priority measure as defined at § 414.1305.

We note that although the aforementioned activities (that is, the CMS Study on Factors Associated with Reporting Quality Measures) constitute an information collection request as defined in the implementing regulations of the Paperwork Reduction Act of 1995 (5 CFR part 1320), the associated burden is exempt from application of the Paperwork Reduction Act. Specifically, section 1848(s)(7) of the Act, as added by section 102 of MACRA (Pub. L. 114–10) states that Chapter 35 of title 44, United States Code, shall not apply to the collection of information for the development of quality measures.

(5) Promoting Interoperability (PI) (Previously Known as the Advancing Care Information Performance Category)

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of CEHRT as a performance category under the MIPS. In prior rulemaking, we referred to this performance category as the advancing care information performance category, and it is reported by MIPS eligible clinicians as part of the overall MIPS program. As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the advancing care information performance category.

(b) Renaming the Advancing Care Information Performance Category

In this final rule, we are adopting several scoring and measurement policies that will bring the performance category to a new phase of EHR measurement with an increased focus on interoperability and improving patient access to health information. To better reflect this focus, we renamed the advancing care information performance category to the Promoting Interoperability (PI) performance category. We believe this change will help highlight the enhanced goals of this performance category. We are finalizing revisions to the regulation text under 42 CFR part 414, subpart O, to reflect the new name.

(c) Certification Requirements Beginning in 2019

Under the definition of CEHRT under § 414.1305, for the performance periods in 2017 and 2018, MIPS eligible clinicians had flexibility to use EHR technology certified to either the 2014 or 2015 Edition certification criteria, or a combination of the two Editions, to meet the objectives and measures specified for the Promoting Interoperability performance category (82 FR 53671 through 53672). As we finalized previously (82 FR 53671–53672) beginning with the performance period in 2019, MIPS eligible clinicians must use EHR technology certified to the 2015 Edition certification criteria as specified at § 414.1305. We believe it is appropriate to require the use of 2015 Edition CEHRT beginning in CY 2019. In reviewing the state of health information technology, it is clear the 2014 Edition certification criterion are out of date and insufficient for clinician needs in the evolving health information technology (IT) industry. It will be beneficial to health IT developers and health care providers to move to more up-to-date standards and functions that better support interoperable exchange of health information and improve clinical workflows.

We received many comments regarding the requirement to use the 2015 Edition of CEHRT beginning in 2019. As we stated in the CY 2019 PFS proposed rule (83 FR 35912 through 35913), we did not propose to change the requirement. Because the requirement was not a subject of this rulemaking, we are not responding to the comments we received, although we may consider them to inform our future policy making in this subject area.

(d) Scoring Methodology

(i) Scoring Methodology for 2017 and 2018 Performance Periods

Section 1848(q)(5)(E)(i)(IV) of the Act states that 25 percent of the MIPS final score shall be based on performance for the Promoting Interoperability performance category. Accordingly, under § 414.1375(a), the Promoting Interoperability performance category comprises 25 percent of a MIPS eligible clinician's final score for the 2019 MIPS payment year and each MIPS payment year thereafter, unless we assign a different scoring weight. We proposed to revise § 414.1375(a) (83 FR 35913) to specify the various sections of the statute (sections 1848(o)(2)(D), 1848(q)(5)(E)(ii), and 1848(q)(5)(F) of the Act) under which a different scoring weight may be assigned for the Promoting Interoperability performance category. We established the reporting criteria to earn a performance category score for the Promoting Interoperability performance category under § 414.1375(b). We proposed to revise § 414.1375(b)(2)(i) to replace the reference to ''each required measure'' with ''each base score measure'' to improve the precision of the text. Under § 414.1380(b)(4), the Promoting Interoperability performance category score is comprised of a score for participation and reporting, known as the ''base score,'' and a score for performance at varying levels above the base score requirements, known as the ''performance score,'' as well as any applicable bonus scores. We proposed several editorial changes to § 414.1380(b)(4) in an effort to more clearly and concisely capture the previously established policies. For further explanation of our scoring policies for performance periods in 2017 and 2018 for the Promoting Interoperability performance category, we refer readers to 81 FR 77216 through 77227 and 82 FR 53663 through 53664.

A general summary overview of the scoring methodology for the performance period in 2018 is provided in the Table 38.

BILLING CODE 4120–01–P

TABLE 38: 2018 Performance Period Promoting Interoperability Performance Category Scoring Methodology
Promoting Interoperability Objectives and Measures

2018 Promoting Interoperability Objective	2018 Promoting Interoperability Measure	Required/ Not Required for Base Score (50%)	Performance Score (up to 90%)	Reporting Requirement
Protect Patient Health Information	Security Risk Analysis	Required	0	Yes/No Statement
Electronic Prescribing	e-Prescribing **	Required	0	Numerator/ Denominator
Patient Electronic Access	Provide Patient Access	Required	Up to 10%	Numerator/ Denominator
	Patient-Specific Education	Not Required	Up to 10%	Numerator/ Denominator
Coordination of Care Through Patient Engagement	View, Download, or Transmit (VDT)	Not Required	Up to 10%	Numerator/ Denominator
	Secure Messaging	Not Required	Up to 10%	Numerator/ Denominator
	Patient-Generated Health Data	Not Required	Up to 10%	Numerator/ Denominator
Health Information Exchange	Send a Summary of Care **	Required	Up to 10%	Numerator/ Denominator
	Request/Accept Summary of Care **	Required	Up to 10%	Numerator/ Denominator
	Clinical Information Reconciliation	Not Required	Up to 10%	Numerator/ Denominator
Public Health and Clinical Data Registry Reporting	Immunization Registry Reporting	Not Required	0 or 10%*	Yes/No Statement
	Syndromic Surveillance Reporting	Not Required	0 or 10%*	Yes/No Statement
	Electronic Case Reporting	Not Required	0 or 10%*	Yes/No Statement
	Public Health Registry Reporting	Not Required	0 or 10%*	Yes/No Statement
	Clinical Data Registry Reporting	Not Required	0 or 10%*	Yes/No Statement
Bonus (up to 25%)				
Report to one or more additional public health agencies or clinical data registries beyond the one identified for the performance score		5% bonus		Yes/No Statement
Report improvement activities using CEHRT		10% bonus		Yes/No Statement
Report using only 2015 Edition CEHRT		10% bonus		Based on measures submitted

* A MIPS eligible clinician may earn 10 percent for each public health agency or clinical data registry to which the clinician reports, up to a maximum of 10 percent under the performance score.

** Exclusions are available for these measures.

BILLING CODE 4120–01–C

We did not receive any comments on the proposed revisions to the regulation text at §§ 414.1375(a) and (b)(2)(i), and § 414.1380(b)(4). We are finalizing these revisions as proposed.

We heard from many stakeholders that the current scoring methodology is complicated and difficult to understand. By providing flexibility and offering clinicians multiple measures to choose from within the performance score, it appears some clinicians may have been confused by the options. Other MIPS eligible clinicians have indicated that they dislike the base score because it is a required set of measures and provides no flexibility because the scoring is all or nothing. If a MIPS eligible clinician cannot fulfill the base score, they cannot

earn a performance and/or bonus score. We have also received feedback from clinicians and specialty societies that the current requirements detract from their ability to provide care to their patients. In addition, stakeholders have indicated that the requirements of the Promoting Interoperability performance category for clinicians do not align with the requirements of the Medicare Promoting Interoperability Program for eligible hospitals and critical access hospitals (CAHs) and that this creates a burden for the medical staff who are tasked with overseeing the participation of both clinicians and hospitals in these programs.

Based on the concerns expressed by stakeholders, we proposed a new scoring methodology (83 FR 35913–395918) and moved away from the base, performance and bonus score methodology that we currently use. We stated our belief that this change would provide a simpler, more flexible, less burdensome structure, allowing MIPS eligible clinicians to put their focus back on patients. The introduction of this new scoring methodology would continue to encourage MIPS eligible clinicians to push themselves on measures that are most applicable to how they deliver care to patients, instead of focusing on measures that may not be as applicable to them. Our goal was to provide increased flexibility to MIPS eligible clinicians and enable them to focus more on patient care and health data exchange through interoperability. Additionally, we wanted to align the requirements of the Promoting Interoperability performance category with the requirements of the Medicare Promoting Interoperability Program for eligible hospitals and CAHs as we had proposed in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20515 through 20537). As the distinction between ambulatory and inpatient CEHRT has diminished and more clinicians are sharing hospitals' CEHRT, we stated our belief that aligning the requirements between programs would lessen the burden on health care providers and facilitate their participation in both programs.

(ii) Proposed Scoring Methodology Beginning With the MIPS Performance Period in 2019

In the CY 2019 PFS proposed rule (83 FR 35914 through 35918), we proposed a new scoring methodology, beginning with the performance period in 2019, to include a combination of new measures, as well as the existing Promoting Interoperability performance category measures, broken into a smaller set of four objectives and scored based on performance. We stated our belief that this would be an overhaul of the existing program requirements as it would eliminate the concept of base and performance scores. We proposed a smaller set of objectives that consisted of e-Prescribing, Health Information Exchange, Provider to Patient Exchange, and Public Health and Clinical Data Exchange. We proposed these objectives to promote specific HHS priorities and satisfy the requirements of section 1848(o)(2) of the Act. We included the e-Prescribing and Health Information Exchange objectives in part to capture what we believe are core goals for the 2015 Edition of CEHRT and also to satisfy the statutory requirements. These core goals promote interoperability between health care providers and health IT systems to support safer, more coordinated care. The Provider to Patient Exchange objective promotes patient awareness and involvement in their health care through the use of APIs, and ensures patients have access to their medical data. Finally, the Public Health and Clinical Data Exchange objective supports the ongoing systematic collection, analysis, and interpretation of data that may be used in the prevention and controlling of disease through the estimation of health status and behavior. The integration of health IT systems into the national network of health data tracking and promotion improves the efficiency, timeliness, and effectiveness of public health surveillance. We stated our belief that it is important to keep these core goals, primarily because these objectives promote interoperability between health care providers and health IT systems to support safer, more coordinated care while ensuring patients have access to their medical data.

Under the proposed scoring methodology, MIPS eligible clinicians would be required to report certain measures from each of the four objectives, with performance-based scoring occurring at the individual measure-level. Each measure would be scored based on the MIPS eligible clinician's performance for that measure, based on the submission of a numerator and denominator, except for the measures associated with the Public Health and Clinical Data Exchange objective, which require ''yes or no'' submissions. Each measure would contribute to the MIPS eligible clinician's total Promoting Interoperability performance category score. The scores for each of the individual measures would be added together to calculate the Promoting Interoperability performance category score of up to 100 possible points for each MIPS eligible clinician. In general, the Promoting Interoperability performance category score makes up 25 percent of the MIPS final score. If a MIPS eligible clinician fails to report on a required measure or claim an exclusion for a required measure if applicable, the clinician would receive a total score of zero for the Promoting Interoperability performance category.

We also considered an alternative approach in which scoring would occur at the objective level, instead of the individual measure level, and MIPS eligible clinicians would be required to report on only one measure from each objective to earn a score for that objective. Under this scoring methodology, instead of six required measures, the MIPS eligible clinician total Promoting Interoperability performance category score would be based on only four measures, one measure from each objective. Each objective would be weighted similarly to how the objectives are weighted in our proposed methodology, and bonus points would be awarded for reporting any additional measures beyond the required four. We solicited public comment on this alternative approach, and whether additional flexibilities should be considered, such as allowing MIPS eligible clinicians to select which measures to report on within an objective and how those objectives should be weighted, as well as whether additional scoring approaches or methodologies should be considered.

In our proposed scoring methodology, the e-Prescribing objective would contain three measures each weighted differently to reflect their potential availability and applicability to the clinician community. In addition to the existing e-Prescribing measure, we proposed to add two new measures to the e-Prescribing objective: Query of Prescription Drug Monitoring Program (PDMP); and Verify Opioid Treatment Agreement. For more information about these two proposed measures, we refer readers to section III.H.3.h.(5)(f) of the proposed rule (83 FR 35922 through 35925). The e-Prescribing measure would be required for reporting and weighted at 10 points because we believed it would be applicable to most MIPS eligible clinicians. In the event that a MIPS eligible clinician meets the criteria and claims the exclusion for the e-Prescribing measure in 2019, the 10 points available for that measure would be redistributed equally among the two measures under the Health Information Exchange objective:

- Support Electronic Referral Loops By Sending Health Information Measure (25 points).
- Support Electronic Referral Loops By Receiving and Incorporating Health Information (25 points).

We solicited public comment on whether this redistribution is appropriate for 2019, or whether the points should be distributed differently.

The Query of PDMP and Verify Opioid Treatment Agreement measures would be optional for the MIPS performance period in 2019. These new measures may not be available to all MIPS eligible clinicians for the MIPS performance period in 2019 as they may not have been fully developed by their health IT vendor, or not fully implemented in time for data capture and reporting. Therefore, we did not propose to require these two new measures in 2019, although MIPS eligible clinicians may choose to report them and earn up to 5 bonus points for each measure. We proposed to require these measures beginning with the MIPS performance period in 2020, and we solicited public comment on this proposal.

Due to varying state requirements, not all MIPS eligible clinicians would be able to e-prescribe controlled substances, and thus, these measures would not be available to them. For these reasons, in the CY 2019 PFS proposed rule (83 FR 35915 through 35916) we proposed an exclusion for these two measures beginning with the MIPS performance period in 2020. The exclusion would provide that any MIPS eligible clinician who is unable to report the measure in accordance with applicable law would be excluded from reporting the measure, and the 5 points assigned to that measure would be redistributed to the e-Prescribing measure.

As the two new opioid measures become more broadly available in CEHRT, we proposed each of the three measures within the e-Prescribing objective would be worth 5 points beginning with the MIPS performance period in 2020. Requiring these two measures would add 10 points to the maximum total score for the Promoting Interoperability performance category as these measures would no longer be eligible for optional bonus points. To maintain a maximum total score of 100 points, beginning with the MIPS performance period in 2020, we proposed to reweight the e-Prescribing measure from 10 points down to 5 points, and reweight the Provide Patients Electronic Access to Their Health Information measure from 40 points down to 35 points as illustrated in Table 38. We proposed that if the MIPS eligible clinician qualifies for the e-Prescribing exclusion and is excluded from reporting all three of the measures associated with the e-Prescribing objective as described in section III.H.3.h.(5)(f) of the proposed rule, (83 FR 35921) the 15 points for the e-Prescribing objective would be redistributed evenly among the two measures associated with the Health Information Exchange objective and the Provide Patients Electronic Access to their Health Information measure by adding 5 points to each measure.

We refer readers to section III.I.3.h.(5)(f) of this final rule, where we discuss the Promoting Interoperability performance category measures, for a discussion of the comments we received regarding the above-referenced proposed scoring methodology for the e-Prescribing objective and associated measures. After consideration of the public comments we received, we are finalizing our proposed scoring for the E-Prescribing objective as proposed but with the modifications discussed at the end of this section III.I.3.h.(5)(f) of the preamble of this final rule. The e-Prescribing measure is finalized with modification, the Query of PDMP measure is finalized with modification, and the Verify Opioid Treatment Agreement measure is finalized with modification. In addition, we refer readers to section III.I.3.h.(5)(f)(ii) of the preamble of this final rule where we discuss our reasons for adopting the Query of PDMP measure with modification and the Verify Opioid Treatment Agreement measure with modification.

For the Health Information Exchange objective, we proposed to change the name of the existing Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information measure, and proposed a new measure which combines the functionality of the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures into a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. For more information about the proposed measure and measure changes, we refer readers to section III.I.3.h.(5)(f) of the proposed final rule (83 FR 35925 through 35928). MIPS eligible clinicians would be required to report both of these measures, each worth 20 points toward their total Promoting Interoperability performance category score. These measures are weighted heavily to emphasize the importance of sharing health information through interoperable exchange in an effort to promote care coordination and better patient outcomes. Similar to the two new measures in the e-Prescribing objective, the new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure may not be available to all MIPS eligible clinicians as it may not have been fully developed by their health IT vendor, or not fully implemented in time for a MIPS performance period in 2019. For these reasons, we proposed two exclusions for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure:

1. Any MIPS eligible clinician who is unable to implement the measure for a MIPS performance period in 2019 would be excluded from this measure.

2. Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period would be excluded from this measure.

We note that these two exclusions for the measure were proposed in different sections of the proposed rule (83 FR 35916, 35927).

In the event that a MIPS eligible clinician claims an exclusion for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, the 20 points would be redistributed to the Support Electronic Referral Loops by Sending Health Information measure, and that measure would then be worth 40 points. We solicited public comment on whether this redistribution is appropriate, or whether the points should be redistributed to other measures instead.

We refer readers to section III.I.3.h.(5)(f) of this final rule, where we discuss the Promoting Interoperability performance category measures, for a discussion of the comments we received regarding the above-referenced proposed scoring methodology for the Health Information Exchange objective and associated measures. We did not receive any comments regarding the redistribution of points if an exclusion is claimed for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. After consideration of the comments that we received, we are finalizing our proposals for the Health Information Exchange objective as proposed. In addition, measure specification details can be found in section III.I.3.h.(5)(f) of the preamble of this final rule.

In the CY 2019 PFS proposed rule (83 FR 359186), we proposed to weight the

one measure in the Provider to Patient Exchange objective, Provide Patients Electronic Access to Their Health Information, at 40 points toward the total Promoting Interoperability performance category score in 2019 and 35 points beginning in 2020. We proposed that this measure would be weighted at 35 points beginning in 2020 to account for the two new opioid measures, which would be worth 5 points each beginning in 2020 as proposed. We stated our belief that this objective and its associated measure get to the core of improved access and exchange of patient data in Promoting Interoperability and are the crux of the Promoting Interoperability performance category. This exchange of data between health care provider and patient is imperative in order to continue to improve interoperability, data exchange and improved health outcomes. We stated that it is important for patients to have control over their own health information, and through this highly weighted objective we are aiming to show our dedication to this effort.

We solicited comment on these proposals and our summary and response are below.

Comment: A few commenters supported CMS' proposed weighting of the Provide Patients Electronic Access to Their Health Information measure.

Response: We appreciate the support regarding the proposed weight of this measure. We believe that it is important to give patients access to their data and therefore the measure deserves to be highly weighted.

Comment: A few commenters stated that an allocation of 40 points to a single measure (Provide Patient Electronic Access to Their Health Information) is too high. Commenters stated that if the points are redistributed to other measures because exclusions are claimed, especially if an exclusion is claimed on more than one measure, the emphasis on the remaining measures will increase.

Response: We believe that it is essential for patients to have access to their health information and the assignment of 40 points to this measure reflects the importance we place on patient's access to their health information.

After consideration of the comments, we are finalizing with modification the proposals for the Provider to Patient Exchange objective. The Provide Patients Electronic Access to Their Health Information measure will be worth up to 40 points beginning in CY 2019. We had proposed that the measure would be worth up to 35 points beginning in CY 2020, but we are not finalizing that proposal because we are not requiring the Verify Opioid Treatment Agreement measure beginning in CY 2020 as proposed, which would have been worth up to 5 points. For additional measure information, we refer readers to section III.I.3.h.(5)(f) of the preamble of this final rule.

The measures under the Public Health and Clinical Data Exchange objective are reported using ''yes or no'' responses and thus we proposed to score those measures on a pass/fail basis in which the MIPS eligible clinician would receive the full 10 points for reporting two ''yes'' responses, or for submitting a ''yes'' for one measure and claiming an exclusion for another. If there are no ''yes'' responses and two exclusions are claimed, the 10 points would be redistributed to the Provide Patients Electronic Access to Their Health Information measure. A MIPS eligible clinician would receive zero points for reporting ''no'' responses for the measures in this objective if they do not submit a ''yes'' or claim an exclusion for at least two measures under this objective. We proposed that for this objective, the MIPS eligible clinician would be required to report on two measures of their choice from the following list of measures: Immunization Registry Reporting, Electronic Case Reporting, Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting. To account for the possibility that not all of the measures under the Public Health and Clinical Data Exchange objective may be applicable to all MIPS eligible clinicians, we proposed to establish exclusions for these measures as described in section III.H.3.h.(5)(f) of the proposed rule (83 FR 35929 through 35930). If a MIPS eligible clinician claims two exclusions, the 10 points for this objective would be redistributed to the Provide Patients Electronic Access to their Health Information measure under the Provider to Patient Exchange objective, making that measure worth 50 points in 2019 and 45 points beginning in 2020. Reporting more than two measures for this objective would not earn the MIPS eligible clinician any additional points. We refer readers to section III.H.3.h.(5)(f) of the proposed rule (83 FR 35929 through 35930) in regard to the proposals for the Public Health and Clinical Data Exchange objective and its associated measures.

We solicited comment on these proposals and our summary and response are below.

Comment: A commenter suggested that MIPS eligible clinicians should be eligible to earn more points for reporting on more than two public health and clinical data exchange measures.

Response: We appreciate the suggestion but decline to implement it at this time. We are limiting bonus point opportunities to brand new measures, such as those associated with the e-Prescribing objective, in an effort to maintain simplicity and avoid confusion in our scoring methodology.

Comment: Some commenters questioned whether they could receive credit for reporting to more than one registry for a measure.

Response: We believe that a clinician who is in active engagement with two different public health agencies or clinical data registries for purposes of the same measure would accomplish the same policy goal as our proposal to report on two measures. It is also consistent with the policy we established in the CY 2018 Quality Payment Program final rule for reporting on the measures associated with the Public Health and Clinical Data Registry Reporting Objective for the performance score and bonus score (82 FR 53663–53664). In addition, allowing MIPS eligible clinicians to report to two different public health agencies or clinical data registries of their choice promotes flexibility in reporting and allows them to focus on the public health measures that are most relevant to them and their patient populations. Therefore, we will be adopting our proposal with modification to allow clinicians the flexibility to report to two different public health agencies or clinical data registries for purposes of the same measure.

After consideration of the public comments we received, we are finalizing our proposals for the Public Health and Clinical Data Exchange objective with modifications. MIPS eligible clinicians must report to two different public health agencies or clinical data registries for any of the following measures: Syndromic Surveillance Reporting, Immunization Registry Reporting, Electronic Case Reporting, Public Health Registry Reporting, and Clinical Data Registry Reporting. MIPS eligible clinicians may report to two different public health agencies or clinical data registries for purposes of the same measure if they choose. For additional measure information, we refer readers to section III.I.3.h.(5)(f) of this final rule.

In the CY 2019 PFS proposed rule (83 FR 359186), we proposed that the Protect Patient Health Information objective and its associated measure, Security Risk Analysis, would remain part of the requirements for the

Promoting Interoperability performance category, but would no longer be scored as a measure and would not contribute to the MIPS eligible clinician's Promoting Interoperability performance category score. To earn any score in the Promoting Interoperability performance category, we proposed a MIPS eligible clinician would have to report that they completed the actions included in the Security Risk Analysis measure at some point during the calendar year in which the performance period occurs. We stated our belief that the Security Risk Analysis measure involves critical tasks and noted that the HIPAA Security Rule requires covered entities to conduct a risk assessment of their health care organization. This risk assessment will help MIPS eligible clinicians comply with HIPAA's administrative, physical, and technical safeguards. Therefore, we stated that every MIPS eligible clinician should already be meeting the requirements for this objective and measure as it is a requirement of HIPAA. We indicated that we still believe this objective and its associated measure are imperative in ensuring the safe delivery of patient health data. As a result, we would maintain the Security Risk Analysis measure as part of the Promoting Interoperability performance category, but we would not score the measure.

The following is a summary of the public comments received on the proposals for the Protect Patient Health Information objective and its associated measure, Security Risk Analysis and our responses.

Comment: A commenter stated that the Security Risk Analysis measure has historically been challenging for physicians. The commenter did not support the annual reporting of this measure to be required to achieve any score in the Promoting Interoperability category. To overcome what the commenter described as the burdensome nature of this measure, the commenter indicated that MIPS eligible clinicians need additional support and resources to aid in their understanding of how to conduct a security risk analysis that is compliant with CMS's standards.

Response: The Security Risk Analysis measure has been a required measure since the beginning of the EHR Incentive programs in 2011 through the transition to MIPS starting in 2017. The requirement remains that the actions included in the measure must be performed once during the calendar year in which the performance period occurs. We appreciate the commenter's interest in additional educational materials for clinicians on how they can improve the privacy and security of their health information. We refer them to *https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/Downloads/2016_SecurityRiskAnalysis.pdf*. HHS Office for Civil Rights (OCR) has issued guidance on conducting a security risk analysis in accordance with the HIPAA Security Rule (*http://www.hhs.gov/hipaa/forprofessionals/security/guidance/guidance-risk-analysis/index.html*). Additional free tools and resources available to assist MIPS eligible clinicians include a Security Risk Assessment (SRA) Tool developed by the Office of National Coordinator for Health Information Technology (ONC) and OCR at *http://www.healthit.gov/providersprofessionals/security-risk-assessment-tool*. We believe that performing an annual security risk assessment will help identify security weaknesses and may provide opportunities to improve the security of the MIPS eligible clinician's electronic systems.

Comment: Several commenters stated that if the Security Risk Analysis measure is required, then MIPS eligible clinicians should receive credit for doing it. The commenters recommended that the technological, encryption, and other cybersecurity components of the security risk analysis should be shifted to the health IT vendor and should not be a burden placed on MIPS eligible clinicians.

Response: As we discussed in the proposed rule (83 FR 35916), we do not believe that the Security Risk Analysis measure should be scored because it includes actions already required under HIPAA and will help MIPS eligible clinicians comply with HIPAA's administrative, physical, and technical safeguards. We do not believe points should be awarded because MIPS eligible clinicians should have already been performing these actions. In addition, while a health IT vendor's products must possess the relevant privacy and security capabilities be certified, we believe that MIPS eligible clinicians must also conduct security risk assessments to make sure that vulnerabilities are identified and remediated. In addition, successful completion of a security risk analysis is required to earn a score in the Promoting Interoperability performance category.

Comment: The majority of commenters supported CMS' proposal to require MIPS eligible clinicians to attest to the completion of the actions of the Security Risk Analysis measure with no associated score in order to be eligible to receive an overall score in the Promoting Interoperability performance category. They stated that this measure is essential to safely transmitting their patient data and successfully participating in the Promoting Interoperability performance category.

Response: As discussed in the preceding response, we agree that this measure should not be scored.

After consideration of the public comments, we are finalizing our proposal to require MIPS eligible clinicians to attest that they completed the actions included in the Security Risk Analysis measure at some point during the calendar year in which the MIPS performance period occurs. MIPS eligible clinicians who fail to complete these actions or fail to attest will not earn any score for the Promoting Interoperability performance category, regardless of whether they report on other measures for this category.

As we proposed at 83 FR 35916, similar to how MIPS eligible clinicians currently submit data, the MIPS eligible clinician would submit their numerator and denominator data for each measure, and a ''yes or no'' response for each of the two reported measures under the Public Health and Clinical Data Exchange objective. The numerator and denominator for each measure would then translate to a performance rate for that measure and would be applied to the total possible points for that measure. For example, the e-Prescribing measure was proposed to be worth 10 points. A numerator of 200 and denominator of 250 would yield a performance rate of (200/250) = 80 percent. This 80 percent would be applied to the 10 total points available for the e-Prescribing measure to determine the measure score. A performance rate of 80 percent for the e-Prescribing measure would equate to a measure score of 8 points (performance rate * total possible measure points = points awarded toward the total Promoting Interoperability performance category score; 80 percent * 10 = 8 points). To calculate the Promoting Interoperability performance category score, the measure scores would be added together, and the total sum would be divided by the total possible points (100). The total sum cannot exceed the total possible points. This calculation results in a fraction from zero to 1, which can be formatted as a percent. For further clarification we refer readers to the scoring example that we included in the proposed rule (83 FR 35917).

When calculating the performance rates, measure and objective scores, and the Promoting Interoperability performance category score, we would generally round to the nearest whole

number. For example if a MIPS eligible clinician received a score of 8.53 the nearest whole number would be 9. Similarly, if the MIPS eligible clinician received a score of 8.33 the nearest whole number would be 8. In the event that the MIPS eligible clinician receives a performance rate or measure score of less than 0.5, as long as the MIPS eligible clinician reported on at least one patient for a given measure, a score of 1 would be awarded for that measure. We stated that we believed this is the best method for the issues that might arise with the decimal points and is the easiest for computations.

In order to meet statutory requirements and HHS priorities, the MIPS eligible clinician would need to report on all of the required measures across all objectives in order to earn any score at all for the Promoting Interoperability performance category. Failure to report any required measure, or reporting a ''no'' response on a ''yes or no'' response measure, unless an exclusion applies would result in a score of zero. We solicited public comment on the proposed requirement to report on all required measures, or whether reporting on a smaller subset of optional measures would be appropriate.

BILLING CODE 4120–01–P

TABLE 39: Proposed Scoring Methodology for the MIPS Performance Period in 2019

Objectives	Measures	Maximum Points
e-Prescribing	e-Prescribing	10 points
	Bonus: Query of Prescription Drug Monitoring Program (PDMP)	5 points bonus
	Bonus: Verify Opioid Treatment Agreement	5 points bonus
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Incorporating Health Information	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Choose two of the following: Immunization Registry Reporting Electronic Case Reporting Public Health Registry Reporting Clinical Data Registry Reporting Syndromic Surveillance Reporting	10 points

TABLE 40: Proposed Scoring Methodology Beginning with MIPS Performance Period in 2020

Objectives	Measures	Maximum Points
e-Prescribing	e-Prescribing	5 points
	Query of Prescription Drug Monitoring Program (PDMP)	5 points
	Verify Opioid Treatment Agreement	5 points
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Incorporating Health Information	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	35 points
Public Health and Clinical Data Exchange	Choose two of the following: Immunization Registry Reporting Electronic Case Reporting Public Health Registry Reporting Clinical Data Registry Reporting Syndromic Surveillance Reporting	10 points

BILLING CODE 4120–01–C

In the proposed rule (83 FR 35917), we sought public comment on whether these measures are weighted appropriately, or whether a different weighting distribution, such as equal distribution across all measures would be better suited to this program and this proposed scoring methodology. We also sought public comment on other scoring methodologies such as the alternative we considered and described earlier in this section.

We solicited comment on these proposals and our summary of these comments and responses are below.

Comment: Some commenters expressed concern that CMS has gone back to an ''all or nothing'' approach, which existed in the original meaningful use program. Commenters indicated that under CMS' proposal, clinicians would be required to report on all required measures within each of the four objectives. Failure to report on one measure without claiming an exclusion would result in a score of zero. Other commenters stated that the proposed new structure is still essentially an ''all or nothing'' approach, which they do not support. Instead, they suggested that MIPS eligible clinicians who do not or cannot attest to a measure should not receive points for that particular measure, but they should still earn points for all of the other measures that they are able to submit data for.

Response: We tried to reduce confusion and clinician burden by proposing to reduce the number of measures that MIPS eligible clinicians are required to report and provide an opportunity for MIPS eligible clinicians to earn points by redistributing the points to other measures when an exclusion is claimed. We do not agree that this scoring structure is an all or nothing approach due to the reduction of measures, the requirement of a one in the numerator for numerator/denominator measures or a ''yes'' for yes/no measures, and the redistribution of points when an exclusion is claimed. We do not agree with the suggestion that MIPS eligible clinicians that do not or cannot attest to measures should not receive points since the measures have been reduced to six required measures which will reduce administrative burden and allow MIPS eligible clinicians to focus more on their patients. We believe it would disadvantage clinicians if we did not redistribute the points for measures when an exclusion is claimed. We believe the proposed scoring methodology promotes the goals of the performance category to focus on interoperability, improving patient access to health information and aligning the performance category with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs.

Comment: One commenter agreed with the CMS proposal to give a MIPS eligible clinician a Promoting Interoperability performance category score of ''zero'' for failure to report on any one required measure, but recommended that CMS create an exclusion process with identified circumstances where partial credit for the measure may be applied, but such partial credit should be the exception and not the norm and should be evaluated on a case-by-case basis.

Response: We appreciate the suggestion but believe it would further complicate scoring when we are trying to simplify it to the greatest extent possible. Our intention with our proposals for the scoring methodology was to reduce clinician burden. We do not believe that a process to address individual scenarios is feasible for us to implement at this time, but will take this comment into consideration for future rulemaking.

Comment: One commenter requested clarification of our proposal to require MIPS eligible clinicians to report on all of the required measures across all objectives in order to earn any score at all for the Promoting Interoperability performance category. The commenter questioned if failure to report any required measure would result in a zero for that measure or a zero for the Promoting Interoperability performance category.

Response: The clinician would earn a score of zero for the entire Promoting Interoperability performance category.

Comment: Some commenters expressed concern with the time required to incorporate new measures into CEHRT (an average of 1,000 hours per measure per product) and requested that measures changes be done judiciously to minimize the burden to developers and to MIPS eligible clinicians who must implement the new measures.

Response: The proposed scoring methodology primarily would eliminate or revise existing measures, which should only require consolidation of existing workflows and actions. In addition, the certification criteria and standards for EHR technology would remain the same as finalized in the October 16, 2015 final rule titled ''2015 Edition Health Information Technology (Health IT) Certification Criteria, 2015 Edition Base Electronic Health Record (EHR) Definition, and ONC Health IT Certification Program Modifications'' (80 FR 62602 through 62759).

Comment: One commenter stated that we should not require a minimum numerator of 1 for any of the performance measures, but instead we should require all program participants to report on all of the performance measures, with an exclusion available for each measure in case their CEHRT does not support the measure. If the exclusion is claimed, the participant would receive a 0 on that measure, and the exclusion status would be published on Physician Compare.

Response: We disagree with the commenter's suggested approach. CEHRT presently has the capability to support all of the proposed measures with the exception of the Query of Prescription Drug Monitoring measure and the Verify Opioid Treatment Agreement measure, which would be optional in the 2019 MIPS performance period. For more information on what will be posted on Physician Compare, see section III.I.3.l. of this final rule.

Comment: One commenter suggested an alternative intermediate solution where each measure would be worth up to 10 points for a total of 110 points (90 for the existing performance measures plus e-Prescribing plus a second registry measure).

Response: We appreciate this suggestion, but we believe that removing several of the existing performance score measures will help to reduce burden for MIPS eligible clinicians.

Comment: Many commenters supported CMS' proposal to reduce the number of measures to be reported as part of the Promoting Interoperability performance category.

Response: We believe the reduction in reporting will relieve health care provider burden through a more flexible, performance-based approach.

Comment: Some commenters supported the CMS effort to reduce the complexity of the scoring methodology. Some commenters stated that the proposed scoring methodology reduces clinician burden by eliminating confusing base and performance scores in favor of scoring at the individual measure level, with relevant measure exclusions. Some commenters supported the overall reduction of measures in this category through the elimination of burdensome measures. Another commenter indicated that the proposed scoring methodology and measure set is a huge improvement and does a lot to streamline the requirements of the Promoting Interoperability performance category. Commenters supported the move to a

single set of measures because it will help alleviate confusion by MIPS eligible clinicians. Many commenters supported CMS' proposed scoring methodology in which MIPS eligible clinicians would be required to report certain measures from each of the four objectives, with performance-based scoring occurring at the individual measure-level.

Response: We appreciate the many commenters who supported the proposed scoring methodology and agree it will reduce burden.

Comment: A few commenters stated they favored a system that provides the flexibility for MIPS eligible clinicians to select the measures most relevant to their practice and patient population and are the least burdensome to implement.

Response: We believe the proposed scoring methodology approach, including the reduction of measures to reduce reporting burden and our goal to provide patients with access to their health information promotes the goals of the Promoting Interoperability performance category. Providing flexibility to choose measures that do not promote increased focus on interoperability or improving patient access to health information will deemphasize the goals of the Promoting Interoperability performance category. We received many comments indicating that there were too many measures so to address that we have reduced and combined measures to reduce MIPS eligible clinician burden.

Comment: One commenter supported this specific proposal to streamline and simplify the Promoting Interoperability performance category, but cautioned CMS against further implementation of major category overhauls. Significant changes, even those intended to reduce physician reporting burden, can increase burden when they require yet another round of health care provider and staff education to understand how to maximize performance under a redesigned category scoring methodology. Solo practitioners and small group practices in particular have indicated that substantial category changes are significant burdens for their practices.

Response: We appreciate the commenter's support for our proposal and will take the recommendation against further implementation of major category overhaul into consideration in future rulemaking. We note that in the CY 2018 Quality Payment Program final rule (82 FR 53682–53683), we finalized a significant hardship exception for the Promoting Interoperability performance category for MIPS eligible clinicians who are in small practices.

Comment: A few commenters disagreed with our proposal to combine the Request/Accept Summary of Care measure with the Clinical Information Reconciliation measure and they proposed that each measure remain separate and be worth 10 points, rather than having them combined and worth 20 points.

Response: We thank commenters for their suggestion but we decline to adopt it. For the reasons discussed in section III.I.3.h.(5)(f) of this final rule, we believe it is appropriate to combine these measures and have the point value reflect the combination.

Comment: Many commenters recommended that we establish a threshold of 50 points to align with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs.

Response: Although our proposed scoring methodology did not include a point threshold, we appreciate this comment and will take it into consideration as we develop future proposals.

Comment: A commenter supported the proposed weighting of the measures but recommended that CMS consider adding additional measures that would promote the integration of clinical and administrative data toward the goal of creating substantive longitudinal patient records.

Response: We appreciate the support and appreciate the suggestion. In the proposed rule we did request comments (83 FR 35931 through 35932) on potential new measures as well as ways to link the quality, improvement activities, and the Promoting Interoperability performance categories. We plan to use the comments we received to inform future proposals that focus on integration.

Comment: Some commenters thanked CMS for aligning the measures in the inpatient and outpatient settings because it will reduce burden.

Response: We appreciate commenter's support of our proposal to align the MIPS Promoting Interoperability performance category measures with the Medicare Promoting Interoperability Program measures for eligible hospitals and CAHs.

Comment: Some commenters stated that CMS should not implement the alternative scoring approach that was considered and discussed in the proposed rule because it would allow MIPS eligible clinicians to report on fewer measures and still earn the same credit which is a lowering of the bar for achieving interoperability. Many commenters suggested that the Public Health and Clinical Data Exchange objective would be deemphasized by reducing the reporting requirement to only one measure.

Response: We agree and will not be implementing the alternative that we considered. Our primary proposal focuses on interoperability and improving patient access to health information and we believe that the objectives and measures we have chosen will help to fulfill these goals. We agree that reporting to two different public health agencies or clinical data registries for any of the measures from the Public Health and Clinical Data Exchange objective will help to build bi-directional data exchange between clinicians and public health agencies and clinical data registries. We believe that our proposal will enable MIPS eligible clinicians to push themselves on measures that are the most applicable to how they deliver care to patients.

Comment: Many commenters supported CMS' alternative approach to scoring in which scoring would occur at the objective level, instead of the individual measure level, and MIPS eligible clinicians would be required to report on only one measure from each objective to earn a score for that objective.

Some commenters stated that requiring MIPS eligible clinicians to report on every single measure or claim an exclusion creates an unfair burden. Other commenters supported the alternative approach because they believe it is less rigid and provides MIPS eligible clinicians with more flexibility to report measures that are part of their workflow.

Response: We have taken commenters' feedback into consideration as we have constructed our final policy as outlined in section III.I.3.h.(5)(d) of this final rule. We decline to finalize the alternative approach to scoring. In addition, the other objectives containing more than one measure are the Electronic Prescribing objective and the Health Information Exchange objective. For the Electronic Prescribing objective, we note that both the Query of PDMP and Verify Opioid Treatment Agreement measures are optional for reporting for CY 2019; therefore we believe this objective could require reporting on only one measure as opposed to multiple measures. We continue to believe that the objective and measure set that we selected will enable MIPS eligible clinicians to focus on interoperability and improving patient access to health information.

Comment: A commenter recommended that CMS only require that MIPS eligible clinicians attest to satisfying each measure for a least 1 patient instead of using a performance rate.

Response: We disagree. We believe that a performance-based scoring mechanism will enable MIPS eligible clinicians who perform well on measures to differentiate themselves from other MIPS eligible clinicians who submitted data with lower results for the Promoting Interoperability performance category.

Comment: One commenter suggested that if a MIPS eligible clinician cannot fulfill a measure that an exclusion process be created where partial credit can be earned. They recommended that partial credit be granted on a case-by-case basis.

Response: We do not believe that finalizing a process to address individual scenarios is feasible for us to implement at this time. We may take this comment into consideration in our development of future rulemaking.

Comment: One commenter supported all of the proposed measures as long as there is no minimum threshold requirement and no performance measurement.

Response: The Promoting Interoperability performance category sets a very low minimum threshold requirement for measures. We believe that the minimum reporting requirements we set (a one in the numerator for numerator/denominator measures, a ''yes'' for yes/no measures, unless an exclusion is claimed) are appropriate. We believe that a performance based scoring system as we are implementing for the Promoting Interoperability performance category will enable high performing MIPS eligible clinicians to distinguish themselves from others and potentially earn a higher upward adjustment.

Comment: One commenter urged CMS to allow MIPS eligible clinicians to ''pick and choose'' measures from a ''menu'' of objectives and measures. Other commenters recommended that the Promoting Interoperability performance category not be limited to a small set of measures. The commenters recommended more flexibility by allowing MIPS eligible clinicians to select from a larger list of measures.

Response: We disagree because we allowed considerable choice for years one and two and received significant feedback about how complicated it was for clinicians to understand the requirements for the base and performance scores. We continue to believe that a reduced set of measures will reduce burden for clinicians and will enable them to focus more on patient care. As we have received significant commenters support on our proposal to align the Promoting Interoperability requirements and measures with the Medicare Promoting Interoperability Program measures for eligible hospitals and CAHs, we decline to retain measures so that MIPS eligible clinicians have flexibility in selecting measures.

Comment: A commenter stated that if CMS does not remove the ''all or nothing'' scoring requirement, we recommend that the proposals related to re-weighting measures when a MIPS eligible clinician claims an exclusion be modified because they are confusing.

Response: While we understand that concern, we believe that if a MIPS eligible clinician meets the requirements of an exclusion, then the points for the excluded measure should be redistributed to another measure. We will develop educational tools to assist MIPS eligible clinicians to understand our redistribution policy.

Comment: A commenter stated that MIPS eligible clinicians rely on their EHR systems to help them with program participation. They warned that if these proposed changes are finalized in November 2018 for the 2019 performance period, the systems will not be updated until mid-2019 at the earliest. They requested a full calendar year's notice before any changes would become applicable.

Response: We disagree that a full calendar year's notice is necessary. The proposed new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information, includes two exclusions in CY 2019, as described in section III.I.3.h.(5)(f) of the preamble of this final rule. For the Electronic Prescribing objective, we note that both the Query of PDMP and Verify Opioid Treatment Agreement measures are optional for reporting for CY 2019.The criteria for all of the remaining measures (numerator/denominator or yes/no measures) would remain the same and are supported by 2015 Edition CEHRT.

Summary of Final Scoring Methodology: As discussed above, after consideration of the comments we received, we are finalizing our proposed performance-based scoring methodology for the Promoting Interoperability performance category beginning with the performance period in CY 2019, with modifications, as described below.

For additional measure-specific information, we refer readers to section III.I.3.h.(5)(f) the preamble of this final rule.

Promoting Interoperability Score: We are finalizing that MIPS eligible clinicians are required to report certain measures from each of the four objectives, with performance-based scoring occurring at the individual measure-level. Each measure is scored based on the MIPS eligible clinician's performance for that measure, except for the measures associated with the Public Health and Clinical Data Exchange objective, which require a yes/no attestation. Each measure will contribute to the MIPS eligible clinician's total Promoting Interoperability performance category score. The scores for each of the individual measures are added together to calculate the total Promoting Interoperability performance category score of up to 100 possible points for each MIPS eligible clinician. To calculate the Promoting Interoperability performance category score, the measure scores are added together, and the total sum is divided by the total possible points (100). The total sum cannot exceed the total possible points. This calculation results in a fraction from zero to 1, which can be formatted as a percent. For a MIPS eligible clinician to earn a score greater than zero for the Promoting Interoperability performance category, in addition to completing the actions included in the Security Risk Analysis measure, the MIPS eligible clinician must submit their complete numerator and denominator or yes/no data for all required measures. The numerator and denominator for each performance measure will translate to a performance rate for that measure and will be applied to the total possible points for that measure. The MIPS eligible clinician must report on all of the required measures across all of the objectives in order to earn any score at all. Failure to report any required measure, or reporting a ''no'' response on a yes/no response measure, unless an exclusion is claimed will result in a Promoting Interoperability performance category score of zero.

Security Risk Analysis Measure: We are finalizing our proposal that MIPS eligible clinicians must attest to having completed the actions included in the Security Risk Analysis measure at some point during the calendar year in which the MIPS performance period occurs. The Security Risk Analysis measure is not scored and does not contribute any points to the MIPS eligible clinician's total score for the objectives and measures.

Electronic Prescribing Objective Scoring: We are finalizing the Electronic

Prescribing objective as proposed with the following modifications. The e-Prescribing measure is worth up to 10 points in CYs 2019 and 2020. We are modifying the points for CY 2020 to reflect the modification to our proposal for the Query of Prescription Drug Monitoring Program (PDMP) measure in CY 2020. The Query of PDMP measure is optional in CY 2019 and worth 5 bonus points. We are not establishing a policy for the Query of PDMP measure for CY 2020 in this final rule and intend to address this measure in future rulemaking. The Verify Opioid Treatment Agreement measure is optional in CY 2019 and 2020, and worth five bonus points. We intend to reevaluate the status of the Verify Opioid Treatment Agreement measure for subsequent years in future rulemaking. An exclusion is available for the e-Prescribing measure as described in section III.I.3.h.(5)(f) of the preamble of this final rule. If an exclusion is claimed for the e-Prescribing measure for CY 2019, the 10 points for the e-Prescribing measure will be redistributed equally among the measures associated with the Health Information Exchange objective. Since the Query of PDMP and Verify Opioid Treatment Agreement measures are optional and eligible for bonus points, no exclusions are available.

Health Information Exchange Objective Scoring: We are finalizing the Health Information Exchange objective as proposed. The Support Electronic Referral Loops by Sending Health Information measure is worth up to 20 points. An exclusion is available for this measure, as described in section III.I.3.h.(5)(f) of the preamble of this final rule, although we did not address in the proposed rule how the points would be redistributed in the event the exclusion is claimed. We intend to propose in next year's rulemaking how the points will be redistributed if an exclusion is claimed. The new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information, is worth up to 20 points. Exclusions are available for this measure, as described in section III.I.3.h.(5)(f) of this final rule. If an exclusion is claimed, the 20 points would be redistributed to the other measure within this objective, the Support Electronic Referral Loops by Sending Health Information measure, which would be worth up to 40 points. We will address in future rulemaking how the points will be redistributed if exclusions are claimed for both the Support Electronic Referral Loops by Sending Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure.

Provider to Patient Exchange Objective Scoring: We are finalizing the Provider to Patient Exchange objective with modifications. The Provide Patients Electronic Access to Their Health Information measure is worth up to 40 points beginning with the MIPS performance period in CY 2019. No exclusions are available for this measure.

Public Health and Clinical Data Exchange Objective Scoring: We are finalizing the Public Health and Clinical Data Exchange objective as proposed with the following modifications. MIPS eligible clinicians must submit a yes/no response for two different public health agencies or clinical data registries for any of the measures associated with the Public Health and Clinical Data Exchange objective to earn 10 points for the objective. Failure to report on two different public health agencies or clinical data registries or submitting a ''no'' response for a measure will earn a score of zero. Exclusions available for this objective are discussed in section III.I.3.h.(5)(f) of the preamble of this final rule. If an exclusion is claimed for one measure, but the MIPS eligible clinicians submits a ''yes'' response for another measure, they would earn the 10 points for the Public Health and Clinical Data Exchange objective. If a MIPS eligible clinician claims exclusions for both measures they select to report on, the 10 points would be redistributed to the Provide Patients Electronic Access to Their Health Information measure under the Provider to Patient Exchange objective.

Tables 41 and 42 reflect the final policy for the objectives, measures, and maximum points available for the MIPS performance periods in CY 2019 and CY 2020. Please note, the maximum points available do not include points that would be redistributed in the event an exclusion is claimed:

Tables 41 and 42 illustrate our final performance-based scoring methodology.

BILLING CODE 4120–01–P

TABLE 41: Scoring Methodology for the MIPS Performance Period in 2019

Objectives	Measures	Maximum Points
e-Prescribing	e-Prescribing**	10 points
	Bonus: Query of Prescription Drug Monitoring Program (PDMP)	5 point bonus
	Bonus: Verify Opioid Treatment Agreement	5 point bonus

Health Information Exchange	Support Electronic Referral Loops by Sending Health Information**	20 points
	Support Electronic Referral Loops by Receiving and Incorporating Health Information**	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report to two different public health agencies or clinical data registries for any of the following: Immunization Registry Reporting** Electronic Case Reporting** Public Health Registry Reporting** Clinical Data Registry Reporting** Syndromic Surveillance Reporting**	10 points

** Exclusion available.

BILLING CODE 4120–01–C

We proposed to codify the proposed new scoring methodology in new paragraphs (b)(4)(ii) and (iii) under § 414.1380 and we are finalizing the proposed regulation text with modification.

(e) Promoting Interoperability/ Advancing Care Information Objectives and Measures Specifications for the 2018 Performance Period

The Advancing Care Information (now Promoting Interoperability) performance category Objectives and Measures for the 2018 performance period are as follows. For more information, we refer readers to the CY 2017 Quality Payment Program and CY 2018 Quality Payment Program final rules (81 FR 77227 through 77229, and 82 FR 53674 through 53680, respectively).

Objective: Protect Patient Health Information.

Objective: Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the

implementation of appropriate technical, administrative, and physical safeguards.

Security Risk Analysis Measure: Conduct or review a security risk analysis in accordance with the requirements in 45 CFR 164.308(a)(1), including addressing the security (to include encryption) of ePHI data created or maintained by CEHRT in accordance with requirements in §§ 164.312(a)(2)(iv) and 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the MIPS eligible clinician's risk management process.

Objective: Electronic Prescribing.

Objective: Generate and transmit permissible prescriptions electronically.

e-Prescribing Measure: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.

Denominator: Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.

Numerator: The number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.

Exclusion: Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.

Objective: Patient Electronic Access.

Objective: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information and patient-specific education.

Patient Access Measure: For at least one unique patient seen by the MIPS eligible clinician: (1) The patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programing Interface (API) in the MIPS eligible clinician's CEHRT.

Denominator: The number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator (or patient authorized representative) who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.

Patient-Specific Education Measure: The MIPS eligible clinician must use clinically relevant information from CEHRT to identify patient-specific educational resources and provide electronic access to those materials to at least one unique patient seen by the MIPS eligible clinician.

Denominator: The number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator who were provided electronic access to patient-specific educational resources using clinically relevant information identified from CEHRT during the performance period.

Objective: Coordination of Care Through Patient Engagement.

Objective: Use CEHRT to engage with patients or their authorized representatives about the patient's care.

View, Download, Transmit (VDT) Measure: During the performance period, at least one unique patient (or patient-authorized representatives) seen by the MIPS eligible clinician actively engages with the EHR made accessible by the MIPS eligible clinician by either: (1) Viewing, downloading or transmitting to a third party their health information; or (2) accessing their health information through the use of an API that can be used by applications chosen by the patient and configured to the API in the MIPS eligible clinician's CEHRT; or (3) a combination of (1) and (2).

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of unique patients (or their authorized representatives) in the denominator who have viewed online, downloaded, or transmitted to a third party the patient's health information during the performance period and the number of unique patients (or their authorized representatives) in the denominator who have accessed their health information through the use of an API during the performance period.

Secure Messaging Measure: For at least one unique patient seen by the MIPS eligible clinician during the performance period, a secure message was sent using the electronic messaging function of CEHRT to the patient (or the patient-authorized representative), or in response to a secure message sent by the patient (or the patient-authorized representative).

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator for whom a secure electronic message is sent to the patient (or patient-authorized representative) or in response to a secure message sent by the patient (or patient-authorized representative), during the performance period.

Patient-Generated Health Data Measure: Patient-generated health data or data from a non-clinical setting is incorporated into the CEHRT for at least one unique patient seen by the MIPS eligible clinician during the performance period.

Denominator: Number of unique patients seen by the MIPS eligible clinician during the performance period.

Numerator: The number of patients in the denominator for whom data from non-clinical settings, which may include patient-generated health data, is captured through the CEHRT into the patient record during the performance period.

Objective: Health Information Exchange.

Objective: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and incorporates summary of care information from other health care providers into their EHR using the functions of CEHRT.

Send a Summary of Care Measure: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care record using CEHRT; and (2) electronically exchanges the summary of care record.

Denominator: Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician.

Numerator: The number of transitions of care and referrals in the denominator where a summary of care record was created using CEHRT and exchanged electronically.

Exclusion: Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Request/Accept Summary of Care Measure: For at least one transition of care or referral received or patient encounter in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician receives or retrieves and incorporates into the patient's record an electronic summary of care document.

Denominator: Number of patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition or referral or has never before encountered the patient and for which an electronic summary of care record is available.

Numerator: Number of patient encounters in the denominator where an electronic summary of care record received is incorporated by the clinician into the CEHRT.

Exclusion: Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.

Clinical Information Reconciliation Measure: For at least one transition of care or referral received or patient encounter in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician performs clinical information reconciliation. The MIPS eligible clinician must implement clinical information reconciliation for the following three clinical information sets: (1) Medication. Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy. Review of the patient's known medication allergies; and (3) Current Problem list. Review of the patient's current and active diagnoses.

Denominator: Number of transitions of care or referrals during the performance period for which the MIPS eligible clinician was the recipient of the transition or referral or has never before encountered the patient.

Numerator: The number of transitions of care or referrals in the denominator where the following three clinical information reconciliations were performed: Medication list; medication allergy list; and current problem list.

Objective: Public Health and Clinical Data Registry Reporting.

Objective: The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.

Immunization Registry Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).

Syndromic Surveillance Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from a non-urgent care setting.

Electronic Case Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to electronically submit case reporting of reportable conditions.

Public Health Registry Reporting Measure: The MIPS eligible clinician is in active engagement with a public health agency to submit data to public health registries.

Clinical Data Registry Reporting Measure: The MIPS eligible clinician is in active engagement to submit data to a clinical data registry.

(f) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Measure Summary Overview

In the CY 2019 PFS proposed rule (83 FR 35920 through 35932), we proposed to adopt beginning with the performance period in 2019 the existing Promoting Interoperability objectives and measures as finalized in the CY 2018 Quality Payment Program final rule (82 FR 53674 through 53680) with several proposed changes as discussed herein, including the addition of new measures, removal of some of the existing measures, and modifications to the specifications of some of the existing measures. We did not propose to continue the Promoting Interoperability transition objectives and measures (see 82 FR 53674 through 53676) beyond the 2018 MIPS performance period because the 2015 Edition of CEHRT will be required beginning with the MIPS performance period in 2019. Our intent for these proposed changes is to ensure the measures better focus on the effective use of health IT, particularly for interoperability, and to address concerns stakeholders have raised through public forums and in public comments related to the perceived burden associated with the current measures in the program. As stated in the CY 2017 Quality Payment Program final rule (81 FR 77216) our priority is to finalize reporting requirements for the Promoting Interoperability performance category that incentivizes performance and reporting with minimal complexity and reporting burden. In addition, we acknowledged that while we believe all of the measures of the Promoting Interoperability performance category are important, we must also balance the need for these data with data collection and reporting burden (81 FR 77221).

In CY 2017, we initiated an informal process outside of rulemaking for submission of new Promoting Interoperability performance category measures for potential inclusion in the Year 3 Quality Payment Program proposed rule. We prioritized measures that build on interoperability and health information exchange, the advanced use of CEHRT using 2015 Edition Standards and Certification Criteria, improve program efficiency and flexibility, measure patient outcomes, emphasize patient safety, and support improvement activities and quality performance categories of MIPS. In addition, and as we indicated in the CY 2018 Quality Payment Program proposed rule (82 FR 30079), we sought new measures that may be more broadly applicable to MIPS eligible clinicians who are Nurse Practitioners (NPs), Physician Assistants (PAs), Certified Registered Nurse Anesthetists (CRNAs) and Clinical Nurse Specialists (CNSs).

During this initial submission period, various MIPS eligible clinicians, stakeholders and health IT developers submitted new measures for consideration via an application posted on the CMS website, now hosted at *https://www.cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/CallForMeasures.html*. Through our review process, which included representation from the ONC, as well as various stakeholder listening sessions, we identified measure submissions that met our criteria and aligned with the Promoting Interoperability performance category goals and priorities, as well as broader HHS initiatives related to the opioid crisis.[20] As a result of this process, we proposed two measures, Query of PDMP and Verify Opioid Treatment Agreement.

We proposed to remove six measures from the Promoting Interoperability objectives and measures beginning with the performance period in 2019. Two of

[20] *https://www.hhs.gov/opioids/about-the-epidemic/index.html*; *https://www.healthit.gov/opioids*.

the measures we proposed to remove—Request/Accept Summary of Care and Clinical Information Reconciliation—would be replaced by the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, which combines the functionalities and goals of the two measures it is replacing. Four of the measures—Patient-Specific Education; Secure Messaging; View, Download, or Transmit; and Patient-Generated Health Data—would be removed because they have proven burdensome to MIPS eligible clinicians in ways that were unintended and may detract from clinicians' progress on current program priorities. We stated that although the measures proposed for removal would no longer need to be submitted if we finalize the proposal to remove them, MIPS eligible clinicians may still continue to use the standards and functions of those measures based on the preferences of their patients and their practice needs. We stated our belief that this burden reduction would enable MIPS eligible clinicians to focus on new measures that further interoperability, advances of innovation in the use of CEHRT and the exchange of health care information.

As discussed in the proposed scoring methodology in section III.H.3.h.(5)(f) of the proposed rule, we proposed to add three new measures to the Promoting Interoperability objectives and measures beginning with the performance period in 2019. For the e-Prescribing objective, we proposed the two new measures referenced earlier, Query of PDMP and Verify Opioid Treatment Agreement, both of which support HHS initiatives related to the treatment of opioid and substance use disorders by helping health care providers avoid inappropriate prescriptions, improving coordination of prescribing amongst health care providers and focusing on the advanced use of CEHRT. For the Health Information Exchange objective, we proposed a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information, which builds upon and replaces the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures, while furthering interoperability and the exchange of health information.

We also proposed to modify some of the existing Promoting Interoperability performance category objectives and measures beginning with the performance period in 2019. We proposed to rename the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information. In addition, we proposed to rename the Patient Electronic Access objective to Provider to Patient Exchange, and proposed to rename the remaining measure, Provide Patient Access to Provide Patients Electronic Access to Their Health Information. We proposed to eliminate the Coordination of Care Through Patient Engagement objective and all of its associated measures as described earlier. Finally, we proposed to rename the Public Health and Clinical Data Registry Reporting objective to Public Health and Clinical Data Exchange and require reporting on at least two measures of the MIPS eligible clinician's choice from the following: Immunization Registry Reporting; Syndromic Surveillance Reporting, Electronic Case Reporting; Public Health Registry Reporting; and Clinical Data Registry Reporting. In addition, we proposed exclusion criteria for each of these measures.

Finally, we solicited comment on a potential new measure Health Information Exchange Across the Care Continuum under the Health Information Exchange objective in which a MIPS eligible clinician would send an electronic summary of care record, or receive and incorporate an electronic summary of care record, for transitions of care and referrals with a health care provider other than a MIPS eligible clinician. The measure would include health care providers in care settings including but not limited to long term care facilities and post-acute care providers such as skilled nursing facilities, home health, and behavioral health settings.

As we stated in the proposed rule (83 FR 35921) we understand from previous listening sessions that EHR vendors and developers will need time to develop, test and implement new measures, and MIPS eligible clinicians will need time to implement as well as establish and test their processes and workflows. As indicated above and in the discussion of the proposed scoring methodology in section III.H.3.h.(5)(d) of the proposed rule, we proposed three new measures (Query of PDMP, Verify Opioid Treatment Agreement, and Support Electronic Referral Loops by Receiving and Incorporating Health Information). We proposed that the Query of PDMP and Verify Opioid Treatment Agreement measures would be optional for the performance period in 2019 and bonus points may be earned for reporting on them. We proposed that the Support Electronic Referral Loops by Receiving and Incorporating Health Information would be required beginning with the performance period in 2019 with exclusions available. We proposed to require the Query of PDMP and Verify Opioid Treatment Agreement measures beginning with the performance period in 2020, and we solicited public comment on this proposal.

We noted that the proposals under the Health Information Exchange objective require only consolidation of existing workflows and actions, while certification criteria and standards remain the same as in the CY 2018 Quality Payment Program final rule (82 FR 53677 through 53678). Therefore, we stated our belief that MIPS eligible clinicians could potentially implement this new measure for the performance period in 2019.

The following is a summary of the comments we received on our proposals.

Comment: One commenter stated that for some measures MIPS eligible clinicians and group practices should be able to get credit for actions that are taken outside of the 90-day performance period.

Response: Since the inception of the Quality Payment Program, we have limited the ability to increment the numerator and denominator of measures to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure for which the relevant actions may occur any time during the calendar year. The MIPS eligible clinician may select a MIPS performance period that exceeds the 90-day minimum up to a maximum of the full calendar year if they choose. (82 FR 53670).

(ii) Measure Proposals for the e-Prescribing Objective

In the CY 2019 PFS proposed rule (83 FR 35921 through 35925), we proposed two new measures under the e-Prescribing objective. In the CY 2017 Quality Payment Program final rule, we stated that MIPS eligible clinicians will have the option to include or not include controlled substances in the definition of ''permissible prescriptions'' at their discretion where feasible and allowable by law in the jurisdiction where they provide care (81 FR 77227). We believe it is important to consider other requirements specific to electronic prescribing of controlled substances for health care providers to take into account and how this may interact with the proposals under this rulemaking. We are committed to combatting the opioid epidemic by making it a top priority for the agency and aligning its efforts with the HHS opioid initiative to combat misuse and promote programs that support treatment and recovery support services.

We proposed to add two new measures to the e-Prescribing objective that are based on electronic prescriptions for controlled substances (EPCS): Query of PDMP; and Verify Opioid Treatment Agreement. These measures build upon the meaningful use of CEHRT as well as the security of electronic prescribing of Schedule II controlled substances while preventing diversion. For both measures, we proposed to define opioids as Schedule II controlled substances under 21 CFR 1308.12, as they are recognized as having a high potential for abuse with potential for severe psychological or physical dependence. We also proposed to apply the same policies for the existing e-Prescribing measure to both the Query of PDMP and Verify Opioid Treatment Agreement measures, including the requirement to use CEHRT as the sole means of creating the prescription and for transmission to the pharmacy. We stated that MIPS eligible clinicians have the option to include or exclude controlled substances in the e-Prescribing measure denominator as long as they are treated uniformly across patients and all available schedules and in accordance with applicable law. However, because the intent of these two new measures is to improve prescribing practices for controlled substances, MIPS eligible clinicians would have to include Schedule II opioid prescriptions in the numerator and denominator or claim the applicable exclusion. Additionally, we noted the intent of the proposed measures is not to dissuade the prescribing or use of opioids for patients with medical diagnoses or conditions that benefit from their use, such as patients diagnosed with cancer or those receiving hospice. We solicited comment on the impact that implementing this measure could have on patients who receive opioids due to medical diagnoses such as cancer or receiving hospice care as well as treatment of patients under a program involving substance abuse education, treatment, or prevention under 42 CFR part 2.

Additionally, we solicited comment on the federal and state statutory and regulatory requirements that may impact implementation of the Query of PDMP and Verify Opioid Treatment Agreement measures.

We stated that in the event we finalize the new scoring methodology that we proposed in section III.H.3.h.(5)(d) of the proposed rule, MIPS eligible clinicians who claim the exclusion under the existing e-Prescribing measure would automatically receive an exclusion for all three of the measures under the e-Prescribing objective; they would not have to also claim exclusions for the other two measures, Query of PDMP and Verify Opioid Treatment Agreement. We are not finalizing this proposal because we are finalizing the two new measures (Query of PDMP and Verify Opioid Treatment Agreement) are optional, so exclusions would not be necessary for them.

(A) Query of Prescription Drug Monitoring Program (PDMP) Measure

As we stated in the proposed rule (83 FR 35922 through 35923), a PDMP is an electronic database that tracks prescriptions of controlled substances at the State level. PDMPs play an important role in patient safety by assisting in the identification of patients who have multiple prescriptions for controlled substances or may be misusing or overusing them. Querying the PDMP is important for tracking the prescribed controlled substances and improving prescribing practices. The ONC, Centers for Disease Control and Prevention (CDC), Department of Justice (DOJ) and Substance Abuse and Mental Health Services Administration (SAMHSA) have had integral roles in the integration and expansion of PMDPs with health information technology systems. For example, the ONC and SAMHSA collaboratively led the ''Enhancing Access'' project to improve health care provider access to PDMP data utilizing health IT.[21] Likewise, the CDC conducted a process and outcome evaluation of the PDMP EHR Integration and Interoperability Expansion (PEHRIIE) program funded by SAMHSA for nine states between FY 2012 and 2016. The PEHRIIE program goals were to integrate PDMPs into health IT and improve the comprehensiveness of PDMPs through initiating and/or improving interstate data exchange.[22] In addition, the Bureau of Justice Assistance's Harold Rogers Prescription Monitoring Program supports Prescription Drug Monitoring Program Information Exchange (PMIX) through funding, the goal of PMIX is to help states implement a cost-effective solution to facilitate interstate data sharing among PDMPs.[23] Integration of the PDMP with health information technology systems supports improves access to PDMP data, minimizes changes to current workflow and overall burden and optimizes prescribing practices. The intent of the Query of the PDMP measure is to build upon the current PDMP initiatives from Federal partners focusing on prescriptions generated and dispensing of opioids.

Proposed Measure Description: For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a Prescription Drug Monitoring Program (PDMP) for prescription drug history, except where prohibited and in accordance with applicable law.

We stated that we recognize both the utility and value of addressing PDMP EHR integration and further recognizes the majority of states mandate use of State prescription monitoring programs (PMPs) requiring prescribers/dispensers to access PMP.[24] According to the CDC, State-level policies that enhance PDMPs or regulate pain clinics helped several states drive down opioid prescriptions and overdose deaths.[25] We stated that we are also further aware of the varying integration approaches underway including efforts to integrate a state PDMP into a health information exchange or EHR or other efforts to enhance a user interface of some type, such as risk assessment tools or red flags. We noted federal evaluation resources available to inform integration efforts[26] and believe integration is critical for enhancing health care provider workflow, access to critical PDMP data, and improving clinical care including prescription management.

We proposed that the query of the PDMP for prescription drug history must be conducted prior to the electronic transmission of the Schedule II opioid prescription. MIPS eligible clinicians would have flexibility to query the PDMP using CEHRT in any manner allowed under their State law.

Although the query of the PDMP may currently be burdensome for some MIPS eligible clinicians as part of their current workflow practice, we stated our belief that querying the PDMP is beneficial to optimal prescribing practices and foresee progression toward fully automated queries of the PDMP building upon the current initiatives at the State level.

We proposed to include in this measure all permissible prescriptions and dispensing of Schedule II opioids regardless of the amount prescribed during an encounter in order for MIPS

[21] *https://www.healthit.gov/PDMP* and *https://www.healthit.gov/sites/default/files/work_group_document_integrated_paper_final_0.pdf.*

[26] *https://www.cdc.gov/drugoverdose/pdf/pehriie_report-a.pdf.*

eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, prescribing rates and controlled substances prescribed in high quantities. We requested comment on these policy proposals, including whether additional queries should be performed and under which circumstances. In addition we solicited comment on whether the query should have additional constraints concerning when it should be performed.

Denominator: Number of Schedule II opioids electronically prescribed using CEHRT by the MIPS eligible clinician during the performance period.

Numerator: The number of Schedule II opioid prescriptions in the denominator for which data from CEHRT is used to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law. A numerator of at least one is required to fulfill this measure.

Exclusion (beginning in 2020): Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period. We proposed that the exclusion criteria would be limited to prescriptions of Schedule II opioids as the measure action is limited to prescriptions of Schedule II opioids only and does not include any other types of electronic prescriptions. We also requested comment on the proposed exclusion criteria and whether there are circumstances which may justify other exclusions for the Query of PDMP measure and what those circumstances might be including medical diagnoses such as cancer or patients under care of hospice.

We noted that we also understand that PDMP integration is not currently in widespread use for CEHRT, and many MIPS eligible clinicians may require additional time and workflow changes at the point of care before they can meet this measure without experiencing significant burden. For instance, many MIPS eligible clinicians will likely need to manually enter the data into CEHRT to document the completion of the query of the PDMP action. In addition, some MIPS eligible clinicians may also need to conduct manual calculation of the measure. Even for those MIPS eligible clinicians that have achieved successful integration of a PDMP with their EHR, this measure may not be machine calculable, for instance, in cases where the MIPS eligible clinician follows a link within the EHR to a separate PDMP system. For the purposes of meeting this measure, we noted there is no existing certification criteria for the query of a PDMP. However, we stated our belief that the use of structured data captured in the CEHRT can support querying a PDMP through the broader use of health IT. We solicited public comment on whether ONC should consider adopting standards and certification criteria to support the query of a PDMP, and if such criteria were to be adopted, on what timeline should CMS require their use to meet this measure.

We noted the NCPDP SCRIPT 2017071 standard for e-prescribing is now available and can help to support PDMP and EHR integration. We solicited public comment, especially from health care providers and health IT developers on whether they believe use of this standard can support MIPS eligible clinicians seeking to report on this measure, and whether HHS should encourage use of this standard through separate rulemaking.

We solicited comment on the challenges associated with querying the PDMP with and without CEHRT integration and whether this proposed measure should require certain standards, methods or functionalities to minimize burden.

In including EPCS as a component of the measure as proposed, we acknowledged and sought input on perceived and real technological barriers as part of its effective implementation including but not limited to input on two-factor authentication and on the effective and appropriate uses of technology, including the use of telehealth modalities to support established patient and health care provider relationships subsequent to in-person visit(s) and for prescribing purposes.

We also proposed that in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at 45 CFR 170.315(a)(10)(ii) and (b)(3).

The following is a summary of the comments we received on these proposals.

Comment: One commenter stated that the measure is overly burdensome because view-only data is not sufficient for clinicians and data should be in a format that is acceptable by the receiving EHR system.

Response: We agree that if data exchanged is not supported in a computable format, it may create increased burden to the MIPS eligible clinician. Although we believe the Query of PDMP measure is a necessary step to combat the opioid crisis by taking advantage of health IT capabilities, we agree that the lack of EHR integration with PDMPs is an obstacle to widespread adoption of this measure. We will continue to work with our colleagues across HHS and with stakeholders to develop necessary standards and complementary resources to promote the advancement of PDMP functionality. Over time, we believe the continued advancement of this measure will help further patient safety and reduce provider burden. We are providing bonus points for this measure in CY 2019 and will propose our policy for CY 2020 in future rulemaking.

Comment: Some commenters supported this new measure but stated that there is little or no time for health IT developers to update their products, receive certification and roll these products out to users. Commenters requested that CMS give more lead-time for these type of changes and have the Query of PDMP measure be optional in the 2019 and 2020 MIPS performance periods.

Other commenters stated that while PDMPs play an important role in identifying high-risk patients, and recommended that CMS move more slowly with requiring the measure until PDMPs are more fully integrated into EHRs and clinician workflows.

Response: We acknowledge that there is currently no certified functionality within CEHRT specific to connecting to a PDMP and that support for integration between PDMP systems and EHRs varies widely across States due to variations in laws and technical approaches. We believe that functionality currently in CEHRT may support integration with PDMP systems. While we understand the concern that there is not specific certified functionality to meet this measure, we stated in the proposed rule (83 FR 35923) that MIPS eligible clinicians have the flexibility to query the PDMP in any manner allowed under their State law. We also stated (83 FR 35923) that in order to meet the measure, MIPS eligible clinicians must use the capabilities of their CEHRT defined at § 170.315(a)(10)(ii) and (b)(3).

The certification criteria defined at § 170.315(b)(3) supports this measure because it allows a MIPS eligible clinician to create a new prescription, change a prescription, cancel a prescription, refill a prescription, request fill status notifications and request and receive medication history information to and from pharmacies. PDMPs collect, monitor, and analyze electronically transmitted prescribing and dispensing data submitted by pharmacies and dispensing practitioners. Additionally, the CEHRT criteria defined at § 170.315(a)(10)(ii) defines drug formulary checks, which

are the most useful when utilized with e-Prescribing. These criteria ensure the availability of structured data to support PDMPs through the broader use of health IT and may increase the efficiency and safety of opioid prescribing, while potentially reducing the cost of care.

We are aware of the need for additional time to implement this measure and thus we are making it optional in CY 2019 and will propose our policy for this measure for CY 2020 in future rulemaking.

Comment: One commenter stated that CMS must recognize that the Query of PDMP measure may not provide a complete picture of the patient's medication history.

Response: We agree that the Query of PDMP measure may not provide a complete picture of the patient's medication history; however, it can provide the clinician with information to make a more informed clinical decision, and we believe it is a valuable tool to consider in caring for patients.

Comment: One commenter recommended that CMS and ONC work together to develop a set of national standards for PDMPs, so that the information can be exchanged across a variety of States. Another commenter recommended CMS and ONC develop standards to allow access to a PDMP through a HIE.

Response: We understand States have varying technical approaches for PDMPs and that some states are pursuing strategies that utilize HIEs to help clinicians access PDMPs. We believe these strategies are an important way to increase interoperability and support clinicians' ability to connect with PDMP systems.

We will continue to work with ONC and other stakeholders to encourage the development of standards, which facilitate increased interoperability between PDMPs and other systems, including HIEs and clinician health IT systems.

Comment: A commenter stated that a State lacks a state-wide PDMP and requested an exclusion for MIPS eligible clinicians who do not have a State PDMP to query. Another commenter requested an exclusion for MIPS eligible clinicians who do not prescribe any Schedule II opioids during a 90-day performance period, because the lack of such exclusion could result in MIPS eligible clinicians prescribing an unnecessary Schedule II opioid just to avoid earning a zero for the Promoting Interoperability performance category. One commenter requested that in addition to the proposed exclusion CMS should add an exclusion for MIPS eligible clinicians in states that do not support PDMP integration using the NCPDP SCRIPT or SMART on FHIR standard.

Response: We decline to add any exclusions to the Query of PDMP measure at this time. For CY 2019, exclusions are not available, as the measure is optional.

Comment: Some commenters stated the development of interfaces to connect EHRs to a PDMP vendor solution is underway, but there is a cost to access the PDMP gateway. Other commenters noted that some states charge clinicians fees to use a PDMP and a mandatory measure using PDMPs could add considerable financial burden.

Response: Our goal of burden reduction includes consideration of costs associated with meeting the Promoting Interoperability performance category requirements. We will continue to listen to feedback related to costs and mitigate burden wherever possible and as practicable within the MIPS programs. We will also continue to work with HHS partners and other stakeholder in the creation, harmonization, and promotion of free and open source interoperability standards for EHRs and PDMPs, and we encourage PDMPs across the country to connect to the free and open source RxCheck, a fully operational national hub that enables states to securely and efficiently share PDMP data.

Comment: A few commenters stated that this measure should be Yes/No reporting instead of reporting a numerator and denominator since some states require health care providers to download current PDMP results that are not incorporated into CEHRT. The commenter further stated that having this measure as a numerator/denominator will create significant challenges to capture and calculate the performance of this measure.

Response: We decline to change the format of the measure to a Yes/No metric as we believe that a numerator/denominator reporting format captures the intent of the measure, which is to identify multiple provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, prescribing rates and controlled substances prescribed in high quantities. We believe MIPS eligible clinicians need to demonstrate their performance in meeting these opioid measures.

Comment: A commenter questioned what documentation is required to indicate that they fulfilled the Query of PDMP measure. The commenter stated that in the 2020 MIPS performance period, when the measure is required, MIPS eligible clinicians will need time to figure out how to generate the appropriate documentation.

Response: We understand that many clinicians may be required to manually calculate this measure, and we plan to issue guidance regarding the documentation to retain. This may include MIPS eligible clinicians with EHR-integrated PDMPs, who still have to manually calculate the measure due to the lack of automated functionality. Due to challenges with reporting on this new measure, we will determine through future rulemaking the status of this measure for the 2020 MIPS performance period and beyond.

Comment: A commenter requested that the denominator of the measure be changed from ''electronically prescribed'' to all prescribed Schedule II opioids because entities that are barred from e-prescribing controlled substances would still benefit from incorporating PDMP queries into their workflows.

Response: As we stated in the proposed rule (83 FR 35922), intent of the Query of the PDMP measure is to build upon current PDMP initiatives from federal partners focusing on prescriptions generated and dispensing of opioids. The objectives and measures for the Promoting Interoperability performance category focus on the use of CEHRT. Therefore we decline to expand the denominator of the measure to include Schedule II opioids that are not electronically prescribed.

Comment: One commenter requested clarification as to whether the numerator is intended to capture PMDP queries or user acknowledgement of conducting a PDMP query.

Response: The numerator captures instances were a MIPS eligible clinician conducts a query of a PDMP for prescription medication history, except where prohibited and in accordance with the applicable law. We understand that many clinician systems may not have the ability to capture the number of PDMP queries in an automated fashion, and that these clinicians may need to capture the data and calculate the measure manually. The intent of the measure is to identify multiple provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, prescribing rates and controlled substances prescribed in high quantities.

Comment: A commenter stated that many state PDMPs are not ready to implement direct integration of the PDMP with the EHR. Many commenters stated that this functionality needs to be a part of CEHRT, so that prescribers do not need to leave their EHR and log into a separate system to conduct the query

of the PDMP. Commenters suggested that CMS redesign the measure so that only direct integration is included.

Response: We agree that there are issues associated with the integration of the PDMP with CEHRT and that is why we will establish our policies for the measure for CY 2020 and beyond in future rulemaking.

Comment: One commenter recommended that CMS allow MIPS eligible clinicians to use a health information exchange to access the Schedule II opioid prescription drug history and earn extra points.

Response: We have stated that clinicians may query the PDMP in any fashion allowed under applicable state law, which would include the use of HIEs to access PDMP data.

Comment: A commenter recommended CMS and ONC work together with PDMPs, PDMP health IT vendors, and key standards development organizations (NCPDP and HL7 in particular) to address the interoperability and integration issues when using PDMPs. We note that, while NCPDP provides medication history query specifications that CEHRT support as part of their electronic prescribing capabilities, none of the PDMPs currently support these. The commenter suggested that consideration should be given whether comprehensive interoperability with PDMPs to support both clinicians and patients would benefit from the use of HL7 FHIR© standards.

Response: We recognize that interoperability and integration efforts are in various stages. CMS and ONC continue to work in tandem and with our stakeholders toward our shared goal of interoperability. We encourage work by PDMPs, pharmacies, and health IT developers to use existing and emerging open source standards to ensure greater interoperability between PDMPs and health IT systems and within efficient clinician workflows. The adoption and implementation of these open source standards is important not only for PDMP query functionality but for also other relevant tools, such as automated clinical decision support, that facilitate more informed prescribing practices and improved patient outcomes.

Comment: The commenter stated their state does not let the PDMP be fully integrated with the electronic medical record. The commenter also questioned how CMS envisions clinicians attesting to querying of the PDMP, and it would be helpful to have more guidance from CMS.

Response: If you choose to submit data for CY 2019 for the Query of PDMP measure, you will submit your numerator and denominator. We plan to provide additional information in future rulemaking regarding this measure in CY 2020 and beyond.

Comment: A commenter stated that some states are not planning for EHR systems to interface with a PDMP and even those that are planning for this functionality may face a lengthy process to develop the ability for an EHR to integrate with a PDMP.

Response: We will use this input to help inform our future work and ongoing collaborative efforts with our HHS colleagues, and with other public- and private-sector partners, as appropriate. We will seek comment and suggestions in future rulemaking to ascertain if additional exclusions are needed for MIPS eligible clinicians located in one of the States where PDMPs are not integrated with EHRs.

Comment: Some commenters supported the intent of this measure but did not support the measure as written because it lacks standards. Commenters suggested that CMS work with ONC to develop a national standard for PDMPs.

Response: We will continue to collaborate with our colleagues across HHS, and with other public-and private-sector partners as appropriate.

Comment: A commenter addressed the impact the Query of PDMP measure may have on patients who receive opioids due to medical diagnoses such as cancer or receiving hospice. The commenter stated that patients with cancer, in hospice care and/or end of life patients should be excluded from this measure. The commenter also stated that CMS needed to do more work to define ''cancer patient,'' and whether this included cancer survivors or those with an active cancer diagnosis.

Response: We decline to add an exclusion for this for the 2019 MIPS performance period because the measure is optional and not required. If we propose to require this measure in future years, we may consider this suggestion for an exclusion.

After consideration of the comments we received, we are finalizing the Query of PDMP measure with modification:

Measure Description: For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.

For the purposes of this measure, we are defining opioids as Schedule II controlled substances under 21 CFR 1308.12. We are finalizing the proposal to apply the same policies for the existing e-Prescribing measure to the Query of PDMP measure, including the requirement to use CEHRT as the sole means of creating the prescription and for transmission to the pharmacy. The query of the PDMP for prescription drug history must be conducted prior to the electronic transmission of the Schedule II opioid prescription. MIPS eligible clinicians would have flexibility to query the PDMP using CEHRT in any manner allowed under their State law. This measure includes all permissible prescriptions and dispensing of Schedule II opioids regardless of the amount prescribed during an encounter in order for MIPS eligible clinicians to identify multiple health care provider episodes (physician shopping), prescriptions of dangerous combinations of drugs, prescribing rates and controlled substances prescribed in high quantities. To meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at §§ 170.315(a)(10)(ii) and (b)(3).

Denominator: Number of Schedule II opioids electronically prescribed using CEHRT by the MIPS eligible clinician during the performance period.

Numerator: The number of Schedule II opioid prescriptions in the denominator for which data from CEHRT is used to conduct a query of a PDMP for prescription drug history except where prohibited and in accordance with applicable law. A numerator of at least one is required to fulfill this measure.

As this measure is optional in CY 2019, we are not finalizing exclusions for it. We will propose our policy for the Query of a PDMP measure for CY 2020 in future rulemaking.

(B) Verify Opioid Treatment Agreement Measure

As we stated in the proposed rule at 83 FR 35923, the intent of this measure is for MIPS eligible clinicians to identify whether there is an existing opioid treatment agreement when they electronically prescribe a Schedule II opioid using CEHRT if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days. We stated that we believe seeking to identify an opioid treatment agreement will further efforts to coordinate care between health care providers and foster a more informed review of patient therapy. The intent of the treatment agreement is to clearly outline the responsibilities of both patient and MIPS eligible clinician in the treatment plan. Such a treatment plan can be integrated into care coordination and care plan activities

and documents as discussed and agreed upon by the patient and MIPS eligible clinician. An opioid treatment agreement is intended to support and to enable further coordination and the sharing of substance use disorder (SUD) data with consent, as may be required of the individual.

We stated that we understand from stakeholder feedback during listening sessions that there are varied opinions regarding opioid treatment agreements amongst health care providers. Some are supportive of their use, indicating that treatment agreements are an important part of the prescription of opioids for pain management, and help patients understand their role and responsibilities for maintaining compliance with terms of the treatment. Other health care providers object to their use citing ethical concerns, and creation of division and trust issues in the health care provider–patient relationship. Other concerns stem from possible disconnect between the language and terminology used in the agreement and the level of comprehension on the part of the patient. Because of the debate among practitioners, we requested comment on the challenges this proposed measure may create for MIPS eligible clinicians, how those challenges might be mitigated, and whether this measure should be included as part of the Promoting Interoperability performance category. We also acknowledged challenges related to prescribing practices and multiple State laws which may present barriers to the uniform implementation of this proposed measure. We solicited public comment on the challenges and concerns associated with opioid treatment agreements and how they could impact the feasibility of the proposal.

Proposed Measure Description: For at least one unique patient for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period, if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days within a 6-month look-back period, the MIPS eligible clinician seeks to identify the existence of a signed opioid treatment agreement and incorporates it into the patient's electronic health record using CEHRT.

We proposed this measure would include all Schedule II opioids prescribed for a patient electronically using CEHRT by the MIPS eligible clinician during the performance period, as well as any Schedule II opioid prescriptions identified in the patient's medication history request and response transactions during a 6-month look-back period, where the total number of days for which a Schedule II opioid was prescribed for the patient is at least 30 days.

We stated that there also may be MIPS eligible clinician burdens specific to identifying the existence of a treatment agreement which could require additional time and changes to existing workflows, determining what constitutes a treatment agreement due to a lack of a definition, standard or electronic format and manual calculation of the measure. We note that there is no certified capability specific to verification and incorporation of an opioid treatment agreement, however, clinicians must use the capabilities and standards defined for CEHRT at §§ 170.315(a)(10) and (b)(3) and 170.205(b)(2) to meet the measure. In addition, limitations in the completeness of care team information may limit the ability of a MIPS eligible clinician to identify all potential sources for querying and obtaining information on a treatment agreement for a specific patient. There are currently pilots in development focused on increasing connectivity and data exchange among health care providers to better integrate behavioral health information, for instance, pilots taking place as part of the federal Demonstration Program for Certified Community Behavioral Health Clinics (CCBHC) [27] includes criteria on how CCBHCs should use health IT to coordinate services and track data on quality measures. Participants in such pilots would potentially have the means necessary to leverage health IT connectivity to query behavioral health data resources and health care providers within their region to identify the existence of an opioid treatment agreement and to successfully integrate patient information from the hospital stay into the care plan for the patient. We solicited comment on other similar pathways to facilitate the identification and exchange of treatment agreements and opioid abuse treatment planning.

We proposed the 6-month look-back period would begin on the date on which the MIPS eligible clinician electronically transmits their Schedule II opioid prescription using CEHRT and provided an illustrative example of this policy in the proposed rule.

We proposed a 6-month look-back period to identify more egregious cases of potential overutilization of opioids and to cover timeframes for use outside the performance period. In addition, we proposed that the 6-month look-back period would utilize at a minimum the industry standard NCDCP SCRIPT v10.6 medication history request and response transactions codified at § 170.205(b)(2)). As ONC has stated (80 FR 62642), adoption of the requirements for NCDCP SCRIPT v10.6 does not preclude developers from incorporating and using technology standards or services not required by regulation in their health IT products.

We did not propose to define an opioid treatment agreement as a standardized electronic document; nor did we propose to define the data elements, content structure, or clinical purpose for a specific document to be considered a ''treatment agreement.'' For this measure, we solicited comment on what characteristics should be part of an opioid treatment agreement including data, content and clinical purpose into CEHRT, including which functionalities could be utilized to accomplish this. We noted that a variety of standards available in CEHRT might support the electronic exchange of opioid abuse related treatment data, such as use of the Consolidated Clinical Document Architecture (C–CDA) care plan template that is currently optional in CEHRT.

We also solicited comment on methods or processes for incorporation of the treatment agreement into CEHRT, including which functionalities could be utilized to accomplish this task.

We solicited comment on whether there are specific data elements that are currently standardized that should be incorporated via reconciliation and if the ''patient health data capture'' functionality (§ 170.315(e)(3)) could be used to incorporate a treatment plan that is not a structured document with structured data elements.

Denominator: Number of unique patients for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period and the total duration of Schedule II opioid prescriptions is at least 30 cumulative days as identified in the patient's medication history request and response transactions during a 6-month look-back period.

Numerator: The number of unique patients in the denominator for whom the MIPS eligible clinician seeks to identify a signed opioid treatment agreement and, if identified, incorporates the agreement in CEHRT. A numerator of at least one is required to fulfill this measure.

Exclusion (beginning in 2020): Any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period.

[27] *https://www.samhsa.gov/section-223.*

We proposed that the exclusion criteria would be limited to prescriptions of Schedule II opioids as the measure action is limited to electronic prescriptions of Schedule II opioids only and does not include any other types of electronic prescriptions.

We requested comment on the proposed exclusion criteria and whether there are additional circumstances that should be added to the exclusion criteria and what those circumstances might be including medical diagnoses such as cancer or patients under care of hospice.

We solicited comment on whether these types of agreements could create a burden on clinicians and patients, particularly clinicians who serve patients with cancer or those practicing in hospice, as well as the patients they serve.

We also proposed that, in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at §§ 170.315(a)(10) and (b)(3) and 170.205(b)(2).

As discussed earlier, we recognize that many health care providers are only beginning to adopt electronic prescriptions for controlled substances (EPCS) at this time. Although we have proposed two new measures which combine EPCS with other actions, we requested comment on whether stakeholders would be interested in a measure focused only on the number of Schedule II opioids prescribed and the successful use of EPCS for permissible prescriptions electronically prescribed.

We solicited comment about the feasibility of such a measure, and whether stakeholders believe this would help to encourage broader adoption of EPCS.

The following is a summary of the comments we received on these proposals.

Comment: A few commenters supported the new Verify Opioid Treatment Agreement measure, but stated concern about the amount of time available for EHR vendors to update systems to meet the requirements of the measure and request CMS give more lead-time for these type of changes. Another commenter requested that CMS remove the requirement to use the capabilities and standards of CEHRT to verify if an opioid treatment agreement exists.

Response: We recognize the measure is technically complex and may require updates to a MIPS eligible clinician's EHR systems in order to effectively perform the functionality associated with this measure. However, we believe there are MIPS eligible clinicians who are already using health IT to verify whether there is an opioid treatment agreement in place before electronically prescribing opioids. We also believe it is important to continue to improve prescribing practices for controlled substances using currently available methods as part of existing workflow practices, and that this particular measure can help lead to improvement in prescribing practices.

As discussed in the proposed rule, we believe there are some ways in which certified health IT may be able to support the electronic exchange of opioid related treatment data, such as use of the C–CDA care plan template that is currently optional in CEHRT. This template contains information on health concerns, goals, interventions, health status evaluation & outcomes sections that could support the development of an opioid treatment agreement. In addition, the ''patient health data capture'' functionality which is part of the 2015 Edition certification criteria (§ 170.315(e)(3)) could be used to incorporate a treatment plan that is not a structured document with structured data elements.

We note that there is no capability within certified health IT to support verification of an opioid treatment agreement. We stated (83 FR 35925) that in order to meet the measure, MIPS eligible clinicians must use the capabilities and standards defined for CEHRT at §§ 170.315(a)(10) and (b)(3) and 170.205(b)(2). The certification criteria defined at § 170.315(a)(10) defines drug formulary checks and preferred drug check lists for a given patient and medication, which are the most useful when utilized with e-Prescribing. These criteria may enable health IT to provide structured data to support querying and may increase the efficiency and safety of opioid prescribing, while potentially reducing the cost of care and confronting the opioid crisis.

The certification criteria defined at § 170.315(b)(3) supports this measure because it allows a health care provider to create a new prescription, change a prescription, cancel a prescription, refill a prescription, request fill status notifications and request and receive medication history information. Additionally, certification criteria defined at § 170.205(b)(2) adopts the NCPDP SCRIPT Standard v10.6 standards and associated implementation specifications for electronic prescribing.

While we understand the above regulations do not specifically define certification criteria and standards for the Verify Opioid Treatment Agreement measure, we believe they may help provide a framework for MIPS eligible clinicians who would like to implement the measure.

Comment: Several commenters expressed concern regarding the calculation of the denominator and potential data inaccuracies because the data is from third party systems and the ability of the EHR to calculate the performance rate is reliant on the quality of the data received. The commenters stated there are no standards regarding the type or format of data that is received. Therefore, the EHR system may be incomplete, making the calculation inaccurate. The commenters recommended that the Verify Opioid Treatment Agreement measure be revised to acknowledge that the EHR will be able to calculate prescription duration only with data supplied.

In addition, a commenter stated the measure is highly problematic and prone to error calculation because the denominator is based on patients who are receiving an electronic prescription for a Schedule II opioid medication and have a total of 30 or more cumulative prescription days on the Schedule II opioid being prescribed in a 6-month look back period. The commenter stated that neither the NCPDP 10.6 Medication History Query nor the NCPDP 2017071 Medication History Query has a required, discrete data field to capture the prescription days. The commenter requested CMS not finalize the measure and not proceed with making the measure optional until it can be better defined. The commenter also stated that if the measure is finalized, that CMS should change its denominator proposal to be based on doses prescribed, as opposed to prescription days.

Response: We understand the measure would be technically complex and potentially burdensome for MIPS eligible clinicians to implement and that the results of the measure may be affected by data quality and availability issues. We may consider modifications to the denominator in future rulemaking.

In addition, as opioid treatment agreements become more widely adopted, we believe this measure may help to encourage health IT vendors to develop innovative solutions to capture data and reduce workflow complexities.

Comment: A commenter requested clarification of the meaning of ''incorporates the agreement'' in CEHRT, as there are no standards about what data elements are included in opioid treatment agreements. The commenter also requested the numerator be changed to the number of

unique patients in the denominator for whom the MIPS eligible clinician has a signed opioid treatment agreement in CEHRT.

Response: As we did not define standards, data elements, content structure or clinical purpose for a specific document to be considered an ''opioid treatment agreement,'' we also did not define what needs to be incorporated into the CEHRT to meet the measure. Rather the intent of an opioid treatment agreement is to support and enable further care coordination and shared decision making. Therefore, we leave it to the discretion of the MIPS eligible clinician to determine what is considered an opioid treatment agreement and how to capture this in their CEHRT.

We decline to change the numerator to those patients for whom the MIPS eligible clinician has a signed opioid treatment agreement in CEHRT. The goal of this measure is to encourage MIPS eligible clinicians to seek to identify an existing opioid treatment agreement for those patients for whom they have prescribed Schedule II opioids, rather than those patients for whom they have successfully identified and incorporated an opioid treatment agreement.

Comment: Many commenters suggested CMS align the requirements of this measure with the similar measure for eligible hospitals and CAHs under the Medicare Promoting Interoperability Program, so that the Verify Opioid Treatment Agreement measure would be optional in the 2019 and 2020 MIPS performance periods.

Response: We appreciate the suggestion to align the requirements of the Verify Opioid Treatment Agreement measure in the Promoting Interoperability performance category with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs. CMS received many similar concerns and feedback on the Verify Opioid Treatment Agreement measure proposal for eligible hospitals and CAHs, which we discussed in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 20528 through 20530). The concerns noted by commenters on both the FY 2019 IPPS/LTCH PPS proposed rule and the CY 2019 PFS proposed rule included the varied opinions on the effectiveness of opioid treatment agreements, lack of specified certification standards and criteria, and the complexities of implementing such a measure.

We understand these concerns and believe additional time is necessary to implement this measure before we make it required. Therefore, we are aligning with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs and making the Verify Opioid Treatment Agreement measure optional for the 2019 and 2020 MIPS performance periods. We will include proposals for this measure for future years in future rulemaking.

Comment: Several commenters questioned whether MIPS eligible clinicians who do not prescribe opioids are allowed to claim an exclusion, or is the exclusion limited to those who cannot prescribe opioids because of applicable law.

Response: We are not finalizing the Verify Opioid Treatment Agreement measure as proposed and therefore are not finalizing the exclusion we proposed at 83 FR 35925, which would have allowed any MIPS eligible clinician who is unable to electronically prescribe Schedule II opioids in accordance with applicable law during the performance period to claim an exclusion.

Because we are finalizing the measure as optional for both the 2019 and 2020 performance periods, we decline to offer any additional exclusions for this measure.

Comment: One commenter suggested that this measure overlaps with existing quality and improvement activities and thus CMS should work to allow MIPS eligible clinicians who report on measures and activities under the quality and improvement activities performance categories to automatically receive credit in the Promoting Interoperability performance category.

Response: We appreciate the suggestion and are currently considering possible ways that points could be earned across multiple performance categories. We refer readers to our request for comment (83 FR 35932) where we requested input on ways to link these three performance categories.

Comment: A commenter appreciated that the measure is intended to verify whether an opioid treatment agreement exists, rather than mandating the creation of an opioid treatment agreement.

Response: We believe it is important for MIPS eligible clinicians to be able to use an existing opioid treatment agreement if one exists, rather than creating a potentially duplicative agreement.

After consideration of the comments received, we are adopting our proposal for the addition of the Verify Opioid Treatment Agreement measure with modification:

Measure Description: For at least one unique patient for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period, if the total duration of the patient's Schedule II opioid prescriptions is at least 30 cumulative days within a 6-month look-back period, the MIPS eligible clinician seeks to identify the existence of a signed opioid treatment agreement and incorporates it into the patient's electronic health record using CEHRT.

We define opioids as Schedule II controlled substances under 21 CFR 1308.12. We are finalizing the proposal to apply the same policies for the existing e-Prescribing measure to the Verify Opioid Treatment Agreement measure, including the requirement to use CEHRT as the sole means of creating the prescription and for transmission to the pharmacy. This measure includes all Schedule II opioids prescribed for a patient electronically using CEHRT by the MIPS eligible clinician during the performance period, as well as any Schedule II opioid prescriptions identified in the patient's medication history request and response transactions during a 6-month look-back period, where the total number of days for which a Schedule II opioid was prescribed for the patient is at least 30 days.

The 6-month look-back period begins on the date on which the MIPS eligible clinician electronically transmits their Schedule II opioid prescription using CEHRT. The 6-month look-back period must utilize at a minimum the industry standard NCDCP SCRIPT v10.6 medication history request and response transactions codified at § 170.205(b)(2)).

To meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at §§ 170.315(a)(10) and (b)(3) and 170.205(b)(2).

Denominator: Number of unique patients for whom a Schedule II opioid was electronically prescribed by the MIPS eligible clinician using CEHRT during the performance period and the total duration of Schedule II opioid prescriptions is at least 30 cumulative days as identified in the patient's medication history request and response transactions during a 6-month look-back period.

Numerator: The number of unique patients in the denominator for whom the MIPS eligible clinician seeks to identify a signed opioid treatment agreement and, if identified, incorporates the agreement in CEHRT. A numerator of at least one is required to fulfill this measure.

This measure will be optional in the CY 2019 and 2020 performance periods, so we are not finalizing the proposed exclusion for CY 2020.

(iii) Measures for the Health Information Exchange Objective

As we stated in the proposed rule (83 FR 35925) the Health Information Exchange measures for MIPS eligible clinicians hold particular importance because of the role they play within the care continuum. In addition, these measures encourage and leverage interoperability on a broader scale and promote health IT-based care coordination. However, through our review of the existing measures, we determined that we could potentially improve the measures to further reduce burden and better focus the measures on interoperability in health care provider to health care provider exchange. Such modifications would address a number of concerns raised by stakeholders including:

- Supporting the implementation of effective health IT supported workflows based on a specific organization's needs;
- Reducing complexity and burden associated with the manual tracking of workflows to support health IT measures; and
- Emphasizing within these measures the importance of using health IT to support closing the referral loop to improve care coordination.

We stated that we believe we can potentially improve the existing Health Information Exchange measures to streamline measurement, remove redundancy, reduce complexity and burden, and address stakeholders' concerns about the focus and impact of the measures on the interoperable use of health IT.

In the CY 2019 PFS proposed rule (83 FR 35925 through 35928), we proposed several changes to the current measures under the Health Information Exchange objective. First, we proposed to change the name of the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information. We also proposed to remove the Clinical Information Reconciliation measure and combine it with the Request/Accept Summary of Care measure to create a new measure, Support Electronic Referral Loops by Receiving and Incorporating Health Information. This proposed new measure would include actions from both the Request/Accept Summary of Care measure and Clinical Information Reconciliation measure.

(A) Modifications to the Send a Summary of Care Measure

We proposed to change the name of the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information measure (83 FR 35925 through 35926), to better reflect the emphasis on completing the referral loop and improving care coordination.

Through public comment and stakeholder correspondence, we have become aware that in the health care industry there is some misunderstanding of the scope of transitions and referrals which must be included in the denominator of this measure. In the event that a MIPS eligible clinician is the recipient of a transition of care or referral, and subsequent to providing care the MIPS eligible clinician transitions or refers the patient back to the referring provider of care, this transition of care should be included in the denominator of the measure for the MIPS eligible clinician. We expect this will help build upon the current provider to provider communication via electronic exchange of summary of care records created by CEHRT required under this measure, further promote interoperability and care coordination with additional health care providers, and prevent redundancy in creation of a separate measure.

In the past, stakeholders have raised concerns that the summary care records shared according to the C–CDA standard included excessive information not relevant to immediate care needs, which increased burden on health care providers. Under the ONC Health IT Certification Program 2015 Edition, CEHRT must have the capability to exchange all of the information in the CCDS as part of a summary care record structured according to the C–CDA standard. We previously finalized in the final rule titled ''Medicare and Medicaid Programs Electronic Health Record Incentive Program—Stage 2: Health Information Technology, Standards Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology'' (hereafter referred to as the ''Stage 2 final rule'') (77 FR 53991 through 53993) that health care providers must transmit all of the CCDS information as part of this summary care record, if known, and that health care providers must always transmit information about the problem list, medications, and medication allergies, or validate that this information is not known.

As finalized in the final rule titled ''Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017; Final Rule'' (hereafter referred to as the ''2015 EHR Incentive Programs final rule'') (80 FR 62852 through 62861), our policy allows health care providers to constrain the information in the summary care record to support transitions of care. For instance, we encouraged health care providers to send a list of items that he or she believes to be pertinent and relevant to the patient's care, rather than a list of all problems, whether active or resolved, that have ever populated the problem list. Although a current problem list must always be included, the health care provider can use his or her judgment in deciding which items historically present on the problem list, medical history list (if it exists in CEHRT), or surgical history list are relevant given the clinical circumstances.

We also wish to encourage MIPS eligible clinicians to use the document template available within the C–CDA which contains the most clinically relevant information required by the receiver. Accordingly, we proposed that MIPS eligible clinicians may use any document template within the C–CDA standard for purposes of the measures under the Health Information Exchange objective. Although a MIPS eligible clinician's CEHRT must be capable of sending the full C–CDA upon request, we believe this additional flexibility will help support clinicians' efforts to ensure the information supporting a transition is relevant.

For instance, when the MIPS eligible clinician is referring to another health care provider the recommended document is the ''Referral Note'' which is designed to communicate pertinent information from a MIPS eligible clinician who is requesting services of another health care provider of clinical or non-clinical services. When the receiving health care provider sends back the information, the most relevant C–CDA document template may be the ''Consultation Note,'' which is generated by a request from a clinician for an opinion or advice from another clinician. Although the 2015 Edition transition of care certification criterion only requires testing to the Continuity of Care Document and Referral Note document templates, we proposed to allow MIPS eligible clinicians the flexibility to use additional C–CDA templates most appropriate to their clinical workflows. Clinicians would need to work with their health IT developer to determine appropriate technical workflows and implementation. For more information about the C–CDA and associated templates, see *http://www.hl7.org/documentcenter/public/standards/dstu/*

CDAR2_IG_CCDA_CLINNOTES_R1_DSTUR2.1_2015AUG.zip.

The following is a summary of the comments we received on these proposals.

Comment: A commenter stated that renaming the measure creates too much confusion and inconvenience because there are too many MIPS eligible clinicians and locations per clinician to keep track of, which undermines the quality of care provided to patients. Other commenters stated that MIPS eligible clinicians are accustomed to the current name and changing the name will only contribute to confusion.

Response: We respectfully decline to retain the current name as we believe that the proposed new name, Support Electronic Referral Loops by Sending Health Information measure, better reflects the emphasis on completing the referral loop and improving care coordination. We also believe that it is important to align measure names across the Medicare Promoting Interoperability Program and the Promoting Interoperability performance category to reduce confusion and burden for health care providers.

Comment: A commenter requested that this measure be modified or removed from the Promoting Interoperability performance category because there is a limited number of specialists that are able to receive the summary of care.

Response: While we understand that there may be challenges associated with this measure, we believe that the sharing of health information with other health care providers treating patients is imperative to improving the quality of care. While we understand that some specialists may be lagging behind in their adoption of CEHRT, the numbers of specialists using CEHRT continues to rise over time. We continue to believe that the use of paper records will continue to diminish and that use of CEHRT will continue to increase. Including this measure as a requirement of the Promoting Interoperability performance category will incentivize clinicians to electronically share the summary of care.

Comment: One commenter addressed our proposal to allow MIPS eligible clinicians to use any document template within the C–CDA for the measures associated with this objective and requested that CMS not expect clinicians to manually select C–CDA templates or portions of templates when sending documents because it adds workflow steps and interferes with solutions that automate sending of information. The commenter recommended that CMS investigate the Integrated Healthcare Enterprise (IHE) summary sections profile for potential future adoption. Other commenters supported allowing MIPS eligible clinicians and groups to determine which data is most appropriate to be shared.

Response: We believe that this additional flexibility allowing MIPS eligible clinicians to use any document template within the C–CDA will help support MIPS eligible clinicians efforts to ensure the information supporting a transition of care is relevant and note that the use of any additional template would be optional for MIPS eligible clinicians. Although MIPS eligible clinicians must have the capability to send the full CCDA upon request, they may choose to send just the items that are pertinent and relevant to the patient's care. The ability to select the most appropriate template will enable the most clinically relevant information to be transmitted. We will work with ONC to consider other suggestions regarding the adoption of other health IT standards and may consider the suggestion to include the IHE summary sections profile in future rulemaking.

Comment: A few commenters requested that CMS allow for flexibility to use any C–CDA formats available to meet the HIE measures to create and electronically send summary of care records.

Response: We believe the proposal to allow MIPS eligible clinicians to use any document template within the C–CDA will provide further flexibility for health care providers to focus on clinically relevant information. We note that CEHRT supports the ability to send and receive C–CDA documents according to Releases 1.1 and 2.1 to support interoperability and exchange. The 2015 Edition transitions of care certification criterion at § 170.315(b)(1) requires Health IT Modules to support the Continuity of Care Document, Referral Note, and (inpatient settings only) Discharge Summary document templates.

While MIPS eligible clinicians' CEHRT must be capable of sending the full C–CDA upon request, we believe this additional flexibility to utilize different functionality within the C–CDA will help support clinicians efforts to ensure the information supporting a transition is relevant. We note that in the use of a document template the clinician would need to work with their developer to determine appropriate technical workflows and implementation.

Comment: Some commenters supported allowing MIPS eligible clinicians and groups to determine which data is most appropriate to be shared. A few commenters agreed with use of any C–CDA document templates available within the C–CDA which contains the most clinically relevant information that may be required by the recipient of the transition or referral. The commenters stated this proposal supports increased flexibility, enables increased information sharing between care providers, and will help providers better understand their patient's history.

Response: We appreciate the feedback by the commenter and agree that this proposal will provide further flexibility for health care providers to focus on clinically relevant information and decrease burden associated with reporting requirements.

Comment: Commenters questioned whether there was an exclusion for the Support Electronic Referral Loops by Sending Health Information measure. A few commenters stated that the lack of an exclusion will unfairly disadvantage MIPS eligible clinicians and practices that are unable to send at least one received summary of care.

Response: While we proposed to change the name of the Send a Summary of Care measure, we did not propose changes to the numerator, denominator or exclusion for the measure. The exclusion remains for this measure.

Exclusion: Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

After consideration of the comments received, we are finalizing the proposal to change the name of the Send a Summary of Care measure to Support Electronic Referral Loops by Sending Health Information measure. We are also finalizing the proposal that MIPS eligible clinicians may use any document template within the C–CDA standard for purposes of the measures under the Health Information Exchange objective.

(B) Removal of the Request/Accept Summary of Care Measure

We proposed to remove the Request/Accept Summary of Care measure (83 FR 35926) based on our analysis of the existing measure and in response to stakeholder input.

We stated that, through review of implementation practices based on stakeholder feedback, we believe that the existing Request/Accept Summary of Care measure is not feasible for machine calculation in the majority of cases. The intent of the measure is to identify when MIPS eligible clinicians are engaging with other providers of

care or care team members to obtain up-to-date patient health information and to subsequently incorporate relevant data into the patient record. However, stakeholders have noted the measure specification does not effectively further this purpose. Specifically, the existing measure specification results in unintended consequences where health care providers implement either:

(1) A burdensome workflow to document the manual action to request or obtain an electronic record, for example, clicking a check box to document each phone call or similar manual administrative task, or

(2) A workflow which is limited to only querying internal resources for the existence of an electronic document.

Neither of these two implementation options is desirable when the intent of the measure is to incentivize and encourage health care providers to implement effective workflows to identify, receive, and incorporate patient health information from other health care providers into the patient record.

In addition, our analysis identified that the definition of incorporate within the Request/Accept Summary of Care measure is insufficient to ensure an interoperable result. When this measure was initially finalized in the 2015 EHR Incentive Programs final rule at 80 FR 62860, we did not define ''incorporate'' as we believed it would vary amongst health care provider's workflows, patient population and the referring health care provider. In addition, we noted that the information could be included as an attachment, as a link within the EHR, as imported structured data or reconciled within the record and not exclusively performed through use of CEHRT. Further, stakeholder feedback highlights the fact that the requirement to incorporate data is insufficiently clear regarding what data must be incorporated.

Our intention was that ''incorporate'' would relate to the workflows undertaken in the process of clinical information reconciliation further defined in the Clinical Information Reconciliation measure (80 FR 62852 through 62862). Taken together, the three measures under the Health Information Exchange objective were intended to support the referral loop through sending, receiving, and incorporating patient health data into the patient record. However, stakeholder feedback on the measures suggests that the separation between receiving and reconciling patient health information is not reflective of clinical and care coordination workflows. Further, stakeholders noted, that when approached separately, the incorporate portion of the Request/Accept Summary of Care measure is both inconsistent with and redundant to the Clinical Information Reconciliation measure which causes unnecessary burden and duplicative measure calculation.

The following is a summary of the comments we received on these proposals.

Comment: Commenters supported the removal of this measure, and stated they appreciated CMS' acknowledgement of the challenges of the current Request/Accept Summary of Care measure.

Response: We believe that removing the measure will reduce burden.

Comment: One commenter stated that it is confusing for CMS to state in the proposed rule that measures will be removed, when they are truly just re-named. The commenter stated that the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure would not be removed. Rather, they would be combined into a new measure named Support Electronic Referral Loops by Receiving and Incorporating Health Information.

Response: While we appreciate this comment, the result of our proposals would be to replace two measures with one measure, resulting in a reduction in the number of measures.

Comment: A commenter requested that CMS maintain the current separate Request/Accept Summary of Care and Clinical Information Reconciliation measures instead of replacing them with the combined measure because MIPS eligible clinicians understand the separate measures.

Response: We disagree and believe that reducing the number of measures reduces burden for MIPS eligible clinicians. Also the proposed measures, Support Electronic Referral Loops by Sending Health Information and Support Electronic Referral Loops by Receiving and Incorporating Health Information, align with our focus on the exchange of health care information and aligns with the measures for the Medicare Promoting Interoperability Program.

After consideration of the comments received, we are removing the Request/Accept Summary of Care Measure as proposed.

(C) Removal of the Clinical Information Reconciliation Measure

We proposed to remove the Clinical Information Reconciliation measure (83 FR 35927) to reduce redundancy, complexity, and MIPS eligible clinician burden.

We stated that we believe the Clinical Information Reconciliation measure is redundant in regard to the requirement to ''incorporate'' electronic summaries of care in light of the requirements of the Request/Accept Summary of Care measure. In addition, the measure is not fully health IT based as the exchange of health care information is not required to complete the measure action and the measure specification is not limited to only the reconciliation of electronic information in health IT supported workflows. We stated in the 2015 EHR Incentive Programs final rule at 80 FR 62861 that the clinical information reconciliation process could involve both automated and manual reconciliation to allow the receiving health care provider to work with both electronic data received as well as the patient to reconcile their health information. Further, stakeholder feedback from hospitals, clinicians, and health IT developers indicates that because the measure is not fully based on the use of health IT to meet the measurement requirements, health care providers must engage in burdensome tracking of manual workflows. While the overall activity of clinical information reconciliation supports quality patient care and should be a part of effective clinical workflows, the process to record and track each individual action places unnecessary burden on MIPS eligible clinicians.

The following is a summary of the comments we received on these proposals.

Comment: Commenters supported the removal of the Clinical Information Reconciliation measure and its incorporation with the Request/Accept Summary of Care measure. Some commenters stated that removal of the Clinical Information Reconciliation measure would reduce burden.

Response: We appreciate the support for our proposal and agree that it will reduce burden.

After consideration of the comments received, we are removing the Clinical Information Reconciliation measure as proposed.

(D) Support Electronic Referral Loops by Receiving and Incorporating Health Information Measure

We proposed to add the following new measure for inclusion in the Health Information Exchange objective: Support Electronic Referral Loops by Receiving and Incorporating Health Information (FR 83 35927). This measure would build upon and replace the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures.

Proposed name of measure and description: Support Electronic Referral Loops by Receiving and Incorporating Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.

We proposed to combine two existing measures, the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure, in this new Support Electronic Referral Loops by Receiving and Incorporating Health Information measure to focus on the exchange of health care information as the current Clinical Information Reconciliation measure is not reliant on the exchange of health care information to complete the measure action. We did not propose to change the actions associated with the existing measures; rather, we proposed to combine the two measures to focus on the exchange of the health care information, reduce administrative burden, and streamline and simplify reporting.

CMS and ONC worked together to define the following for this measure:

Denominator: Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.

Numerator: The number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient's known medication allergies; and (3) Current Problem List—Review of the patient's current and active diagnoses.

Exclusions: (1) Any MIPS eligible clinician who is unable to implement the measure for a MIPS performance period in 2019 would be excluded from this measure. (2) Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period would be excluded from this measure.

We note that these two exclusions for the measure were proposed in different sections of the proposed rule (83 FR 35916, 35927).

We requested comment on the proposed exclusion criteria and whether there are additional circumstances that should be added to the exclusion criteria and what those circumstances might be.

For the proposed measure, the denominator would increment on the receipt of an electronic summary of care record after the MIPS eligible clinician engages in workflows to obtain an electronic summary of care record for a transition, referral or patient encounter in which the MIPS eligible clinician has never before encountered the patient. The numerator would increment upon completion of clinical information reconciliation of the electronic summary of care record for medications, medication allergies, and current problems. The MIPS eligible clinician would no longer be required to manually count each individual non-health-IT-related action taken to engage with other providers of care and care team members to identify and obtain the electronic summary of care record. Instead, the proposed measure would focus on the result of these actions when an electronic summary of care record is successfully identified, received, and reconciled with the patient record. We stated that we believe this approach would allow MIPS eligible clinicians to determine and implement appropriate workflows supporting efforts to receive the electronic summary of care record consistent with the implementation of effective health IT information exchange at an organizational level.

Finally, we proposed to apply our existing policy for cases in which the MIPS eligible clinician determines no update or modification is necessary within the patient record based on the electronic clinical information received, and the MIPS eligible clinician may count the reconciliation in the numerator without completing a redundant or duplicate update to the record. We welcomed public comment on methods by which this specific action could potentially be electronically measured by the MIPS eligible clinician's health IT system—such as incrementing on electronic signature or approval by an authorized health care provider—to mitigate the risk of burden associated with manual tracking of the action, such as having to click check boxes.

We welcomed public comment on these proposals. We solicited comment on methods and approaches to quantify the reduction in burden for MIPS eligible clinicians implementing streamlined workflows for this proposed health IT-based measure. We also solicited comment on the impact these proposed modifications may have for health IT developers in updating, testing, and implementing new measure calculations related to these proposed changes. Specifically, we solicited comment on whether ONC should require developers to recertify their EHR technology as a result of the changes proposed, or whether they should be able to make the changes and engage in testing without recertification, and on the appropriate timeline for such requirements factoring in the proposed continuous 90 day performance period within the calendar year for clinicians. Finally, we solicited comment on whether this proposed new measure that combines the Request/Accept Summary of Care and Clinical Information Reconciliation measures should be adopted, or whether either or both of the existing Request/Accept Summary of Care and Clinical Information Reconciliation measures should be retained in lieu of this proposed new measure.

We stated that in the event we finalize the new scoring methodology we proposed in section III.H.3.h.(5)(d) of the proposed rule, an exclusion would be available for MIPS eligible clinicians who cannot implement the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure for a performance period in CY 2019 and an exclusion for MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period.

We also proposed that, in order to meet this measure, a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at § 170.315(b)(1) and (2).

We solicited comment on these proposals and our summary and response are below.

Comment: A commenter stated that the incorporation of clinical information within the C–CDA into the receiving clinician's CEHRT is limited by the CEHRT and not the clinician. The commenter recommended that the measure be eliminated and requested that CMS work with ONC to strengthen interoperability requirements.

Response: We are working with ONC to explore and potentially implement many initiatives to strengthen interoperability. We understand that there may be limitations with 2015 CEHRT but we believe that EHR developers and vendors will update their products so the CEHRT will calculate the combined measure and not further burden the MIPS eligible clinician.

Comment: Many commenters supported the proposal to combine the Clinical Information Reconciliation measure with the Request/Accept Summary of Care measure into the proposed Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. Some commenters agreed that the proposed measure will allow MIPS eligible clinicians to focus on the exchange of health care information and reconcile the data in patients' medical records.

Response: We appreciate the commenter's support for efforts to improve processes and technology solutions around closing referral loops. We believe that the combined measure focuses on the exchange of health care information and reduces administrative burden. We also believe that this measure will help incentivize further innovation around interoperable exchange of information to support these processes.

Comment: Some commenters disagreed with our proposal to combine the Clinical Information Reconciliation measure with the Request/Accept Summary of Care measure stating that clinical information reconciliation is important and it should remain a stand-alone measure. They indicated that combining the Clinical Information Reconciliation measure with another measure diminishes its importance. Other commenters stated that combining these measures into one is onerous for both front line staff responsible for running reports, as well as EHR developers and clinicians hoping to improve scores, since they will not fully know which measure to target. Some commenters stated that the name change is extremely confusing. Other commenters stated that this new measure is more burdensome and it will be harder to specifically target issues within the measure because two workflows will be combined.

Response: We believe that the current separation of the measures is burdensome and redundant in the action of incorporation of the summary of care record. In addition, we listened to stakeholder' concerns regarding the separate Request/Accept Summary of Care and Clinical Information Reconciliation measures, which indicated that the separation between receiving and reconciling patient health information is not reflective of clinical and care coordination workflows and the incorporation aspect is redundant to both measures. We agree the process of clinical information reconciliation includes both automated and manual reconciliation to allow the receiving health care provider to work with both the electronic data provided with any necessary review, and to work directly with the patient to reconcile their health information. In addition, we believe that combining the measures of Request/Accept Summary of Care and Clinical Information Reconciliation retains the focus on interoperability and exchange of health information as opposed to the separation of the measures where health information exchange and interoperability was not a focus for clinical information reconciliation.

Comment: One commenter noted the measure exclusion (Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period) is causing greater hardship for those clinicians that refer out more than 100 times and therefore must report this measure. While most primary care clinicians refer out more than 100 times in a 90-day period, many specialists do not. If a specialist can claim an exclusion, and therefore, not set up direct messaging capabilities, it may affect the performance on the measure of clinicians that are referring to those specialists if they cannot find someone they refer to that has the capability.

Response: The use of direct messaging is not required to fulfill this measure. Our intent has been to promote and facilitate a wide range of options for the transmission of an electronic summary of care document. Examples of acceptable transmission methods include secure email, Health Information Service Provider (HISP), query-based exchange or use of third party HIE.

Comment: Commenters supported the exclusions for Support Electronic Referrals Loops by Receiving and Incorporating Health Information.

Response: We appreciate the support and believe the exclusions will benefit MIPS eligible clinicians who are unable to implement the measure because they do not refer or transition patients or because they cannot implement the measure for the 2019 MIPS performance period.

After consideration of the public comments we received, we are finalizing the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure as proposed. We are finalizing the proposal to apply the existing policy for cases in which the MIPS eligible clinician determines no update or modification is necessary within the patient record based on the electronic clinical information received, and the MIPS eligible clinician may count the reconciliation in the numerator without completing a redundant or duplicate update to the record.

We are finalizing a MIPS eligible clinician must use the capabilities and standards as defined for CEHRT at § 170.315(b)(1) and (b)(2).

We are adopting the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure as follows:

- *Measure Description: Support Electronic Referral Loops by Receiving and Incorporating Health Information:* For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.

Denominator: Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.

Numerator: The number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication—Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy—Review of the patient's known medication allergies; and (3) Current Problem List—Review of the patient's current and active diagnoses.

Exclusions: (1) Any MIPS eligible clinician who is unable to implement the measure for a MIPS performance period in 2019 would be excluded from this measure.

(2) Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period.

(iv) Measures for the Provider to Patient Exchange Objective

The Provider to Patient Exchange objective for MIPS eligible clinicians builds upon the goal of improved access and exchange of patient data, patient centered communication and coordination of care using CEHRT. We proposed a new scoring methodology in section III.H.3.h.(5)(d) of the proposed rule, under which we proposed to rename the Patient Electronic Access objective to Provider to Patient Exchange, remove the Patient-Specific Education measure and rename the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information. In addition, we proposed to remove the Coordination of Care through Patient Engagement objective and all associated measures. The existing Promoting Interoperability performance category Patient Electronic Access objective includes two measures and the existing Coordination of Care through Patient Engagement objective includes three measures.

We reviewed the Promoting Interoperability performance category requirements and determined that these proposals could reduce program complexity and burden and better focus on leveraging the most current health IT functions and standards for patient flexibility of access and exchange of information.

In the CY 2019 PFS proposed rule (83 FR 35928 through 35929), we proposed the Provider to Patient Exchange objective would include one measure, the existing Provide Patient Access measure, which we proposed to rename to Provide Patients Electronic Access to Their Health Information.

(A) Modifications To Provide Patient Access Measure

We proposed to change the name of the Provide Patient Access measure to Provide Patients Electronic Access to Their Health Information measure (83 FR 35928) to better reflect the emphasis on patient engagement in their health care and patient's electronic access of their health information through use of APIs.

We proposed to change the measure name to emphasize electronic access of patient health information as opposed to use of paper-based actions and limit the focus to only health IT solutions to encourage adoption and innovation in use of CEHRT (80 FR 62783 through 62784). In addition, we are committed to promoting patient engagement with their healthcare information and ensuring access in an electronic format.

We solicited comment on these proposals and our summary and response are below.

Comment: A commenter supported the new name for the measure but recommended that CMS not require widespread use of APIs for at least 3 years after the final standard for the measure has been published.

Response: We decline to provide additional time to implement this measure. In the 2015 Edition final rule, ONC finalized certification criteria that will enable clinicians using 2015 Edition CEHRT to share information through an API consistent with the requirements of this measure (80 FR 62675). As discussed, we believe that eligible clinicians have already implemented, or are prepared to implement, this functionality as part of the 2015 Edition of CEHRT for 2019 and will be able to fulfill this measure.

Comment: One commenter recommended that CMS establish an exclusion for this measure if the MIPS eligible clinician cannot successfully identify an application that meets their security needs. Another requested an exclusion if the MIPS eligible clinician's EHR does not have the ability to have a portal. A commenter cautioned that CMS must address the risks that this measure poses for systems security and the confidentiality of health information because of its use of APIs and recommended that CMS provide an exclusion for this measure for MIPS eligible clinicians that cannot successfully identify an application that meets their security needs. The commenter also recommended that CMS work with the OCR and the FTC to develop an extensive education program so that consumers can be aware of how application companies may use their data.

Response: We decline to implement exclusion criteria for the Provide Patients Electronic Access to Their Health Information measure as we believe MIPS eligible clinicians should work with their health IT vendors to identify applications that meet their security needs. While we appreciate stakeholder concerns regarding security issues, we believe there are already applications available to consumers that could satisfy security requirements. The 2015 Edition of CEHRT enables clinicians to provide patients with timely access to their health information and make the patient's health information available for the patient (or patient authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the application programming interfaces (API) in the MIPS eligible clinician's CEHRT.

We appreciate commenters' interest in additional educational materials for patients on how they can improve the privacy and security of their health information. We will take this comment into consideration as we consider what other consumer-facing materials are helpful, and we direct commenters to resources currently available from HHS (for example, content and materials such as those available at *https://www.hhs.gov/hipaa/for-individuals/right-to-access/index.html*) and FTC (for example, content and materials such as those available at *https://www.consumer.ftc.gov/topics/online-security*) websites.

Comment: A few commenters requested that CMS confirm that this measure focuses on MIPS eligible clinicians making the information available to patients and does not account for patient use.

Response: The Provide Patients Electronic Access to Their Health Information measure does not require that patients actually access their information. Patients should be able to access their health information on demand, and we encourage MIPS eligible clinicians to maintain the appropriate functionalities for patient access to their health information at all times unless the system is undergoing scheduled maintenance, which should be limited.

Comment: A commenter stated that changing the names of measures with essentially the same meaning is confusing to MIPS eligible clinicians. The Provide Patients Electronic Access to Their Health Information measure should simply be called the Provide Patients Electronic Access measure.

Response: We did not intend to confuse MIPS eligible clinicians. We believe that the name change effectively focuses the electronic aspect of the measure and our focus on leveraging advanced use of HIT. We also believe it is important to align the names of the measures of the Promoting Interoperability performance category with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs. Many health care providers have noted frustration with the differing requirements between the two programs and we believe that through alignment we can reduce much of that frustration.

After consideration of the comments we received, we finalizing the new name, Provide Patients Electronic Access to Their Health Information, as proposed.

(B) Removal of the Patient-Generated Health Data Measure

We proposed to remove the Patient-Generated Health Data (PGHD) measure (83 FR 35928) to reduce complexity and focus on the goal of using advanced EHR technology and functionalities to advance interoperability and health information exchange.

As finalized in the 2015 EHR Incentive Programs final rule at 80 FR 62851, the measure is not fully health IT based as we did not specify the manner in which health care providers would incorporate the data received. Instead, we finalized that health care providers could work with their EHR developers to establish the methods and processes that work best for their practice and needs. We indicated that this could include incorporation of the information using a structured format (such as an existing field in the EHR or maintaining an isolation between the data and the patient record such as incorporation as an attachment, link or text reference which would not require the advanced use of CEHRT). Although we continue to believe that incorporating this data is valuable, we prioritized only those actions which are completed electronically using certified health IT.

We solicited comment on these proposals and our summary and response are below.

Comment: Several commenters disagreed with our proposal to remove this measure as it is essential for encouraging the collection and use of patient-reported outcomes. The commenters urged CMS to retain this measure to encourage MIPS eligible clinicians to establish workflows to collect and integrate these critical data into their medical records, thereby promoting interoperability and patient-centered care. One commenter stated that the removal of this measure signals that patient and caregiver engagement has taken a backseat to provider to provider care coordination. Another stated that the measure is crucial for healthcare to be truly interoperable and person-centered.

Response: Functions and standards related to measures that are no longer required for the Promoting Interoperability performance category may still hold value for some health care providers and may be utilized as best suits their practice and the preferences of their patient population. The removal of measures is not intended to discourage the use of the standards, the implementation of best practices, or conducting and tracking the information for providers' own quality improvement goals.

Comment: Another commenter stated that that the measure did not accomplish its intended goal since we did not specify the manner in which health care providers would incorporate the data received.

Response: We agree that it is important to encourage providers to obtain data generated by patients, for instance, through the use of consumer-facing devices, and utilize this data to inform decision-making and provide more effective patient-centered care. While we are finalizing removal of the Patient-Generated Health Data measure for the reasons discussed in the proposed rule, we will continue to consider ways to encourage this activity.

Comment: Many commenters supported the removal of this measure. A commenter supported the removal of this measure because it is burdensome and takes valuable time away from patient care. Another commenter supported the removal of this measure but mentioned that allowing the transmission of key health data such as home blood pressure readings, finger-stick glucose levels, and other vitals is still beneficial to the patient. This functionality should thus remain available in CEHRT. Another suggested that CMS promote the use of patient-generated health data collected via remote monitoring by encouraging the development of open APIs across CEHRT developers.

Response: While we are removing the measure from the Promoting Interoperability performance category, the functionality is not being removed from 2015 Edition CEHRT. We will continue to work with ONC to encourage the development of innovative API functionality that supports exchange of patient-generated health data.

After consideration of the public comments we received, we are removing the Patient-Generated Health Data measure as proposed.

(C) Removal of the Patient-Specific Education Measure

We proposed to remove the Patient-Specific Education measure (83 FR 35928) as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from their progress on current program priorities.

The Patient-Specific Education measure was finalized as a performance score measure for MIPS eligible clinicians in the CY 2017 Quality Payment Program final rule with the intent of improving patient health, increasing transparency and engaging patients in their care (81 FR 77228 through 77237).

We stated that we believe that the Patient-Specific Education measure does not align with the current emphasis of the Promoting Interoperability performance category to increase interoperability, or reduce burden for MIPS eligible clinicians. In addition to not including interoperability as a core focus, stakeholders have indicated that this measure does not capture many of the innovative activities around providing patient education, for instance new approaches to integrating patient education within clinical decision support modules. As a result of this lack of alignment, this measure could potentially increase clinician burden.

We solicited comment on this proposal and our summary and response are below.

Comment: Many commenters supported the removal of this measure. A commenter supported the removal of this measure because it is burdensome. Other commenters stated that reporting on this measure takes valuable time away from patient care and leads to clinician frustration and ultimately contributes to burnout. Another commenter agreed with the removal of the measure because it does not align with promoting interoperability.

Response: We appreciate the commenters' support for the removal of this measure.

Comment: Several commenters disagreed with the removal of this measure. One commenter stated that the removal of this measure signals that patient and caregiver engagement has taken a backseat to provider to provider care coordination. Another commenter stated that the measure is vital to improved health literacy that empowers patient self-care which reduces unnecessary utilization and decreases costs. One commenter stated the measure should be used to provide patients with information about relevant clinical trials, medication adherence tools, and opioid management strategies. A few commenters stated that providing patients with relevant education materials raises their health literacy and enables them to be more active in managing their own health. Several commenters recommended that the measure be available for bonus points.

Response: We disagree that the Patient-Specific Education measure should be retained as a required measure. While we believe that there are

merits to the Patient-Specific Education measure as identified by the commenters, we affirm our position that the Patient-Specific Education measure does not align with the current emphasis of the Promoting Interoperability performance category which aims to increase interoperability, leverage the most current health IT functions and standards and reduce burden for MIPS eligible clinicians. We also decline to offer bonus points for this measure. We note that bonus points should be reserved for brand new measures to help to ease the transition to becoming a required measure.

After consideration of the public comments we received, we are removing of the Patient-Specific Education measure as proposed.

(D) Removal of the Secure Messaging Measure

We proposed to remove the Secure Messaging measure (82 FR 35929) as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from MIPS eligible clinicians' progress on current program priorities.

The Secure Messaging measure was finalized in the CY 2017 Quality Payment Program final rule with the intent to build upon the policy goals of Stage 2 under the EHR Incentive Programs of using CEHRT for health care provider-patient communication (81 FR 77227 through 77236). We stated that we believe that the Secure Messaging measure does not align with the current emphasis of the Promoting Interoperability performance category to increase interoperability or reduce burden for MIPS eligible clinicians. In addition, we stated that we believe there is burden associated with tracking secure messages, including the unintended consequences of workflows designed for the measure rather than for clinical and administrative effectiveness.

We solicited comment on this proposal and our summary and response are below.

Comment: Some commenters opposed the removal of this measure because it supports meaningful improvements in interoperability. Other commenter noted that it must remain a required measure because it ensures that patients can communicate confidentially with their health care providers. Some commenters stated that some health care providers rely on secure messaging to communicate with patients in an effective and timely manner.

Response: We believe that there is a significant burden associated with tracking secure messages. Although we are not requiring the measure, the functionality remains in 2015 Edition CEHRT so MIPS eligible clinicians may continue to utilize the functionality if they choose.

Comment: Many commenters supported the removal of this measure. Some commenters stated that they supported the removal of this measure because it is burdensome, and reporting on this measure takes valuable time away from patient care and leads to clinician frustration and ultimately contributes to burnout.

Response: We agree that this measure may detract from MIPS eligible clinicians' progress on current program priorities such as increasing interoperability and reducing burden.

After consideration of the public comments we received, we are removing the Secure Messaging measure as proposed.

(E) Removal of the View, Download or Transmit Measure

We proposed to remove the View, Download or Transmit measure (83 FR 35929) as it has proven burdensome to MIPS eligible clinicians in ways that were unintended and detracts from their progress on current program priorities.

We stated that we have received MIPS eligible clinician and stakeholder feedback through correspondence, public forums, and listening sessions indicating there is ongoing concern with measures which require patient action for successful submission. We have noted that data analysis on the patient action measures supports stakeholder concerns that barriers exist which impact a clinician's ability to meet them. Stakeholders have indicated that successful submission of the measure is reliant upon the patient, who may face barriers to access which are outside a clinician's control.

After additional review, we noted that successful performance predicated solely on a patient's action has inadvertently created burdens to MIPS eligible clinicians and detracts from progress on Promoting Interoperability measure goals of focusing on patient care, interoperability and leveraging advanced used of health IT. Therefore, we proposed to remove the View, Download or Transmit measure.

We solicited comment on this proposal and our summary and response are below.

Comment: Commenters supported the removal of this measure. One commenter stated that the View, Download, and Transmit measure is challenging because many practices that care for a much older population of patients are at a disadvantage for this measure because many of those patients do not own a computer or even have an email address and in some cases, do not own a cell phone. Another commenter appreciated the proposal to remove this measure and noted that CMS should not hold MIPS eligible clinicians accountable for actions beyond their control.

Response: Previous stakeholder feedback through correspondence, public forums, and listening sessions indicated there is ongoing concern with measures which require health care providers to be accountable for patient actions such as viewing, downloading, or transmitting. We further understand that there are barriers which could negatively impact a MIPS eligible clinician's ability to successfully meet a measure requiring patient action, such as location in remote, rural areas and access to technology including computers, internet and/or email. We believe that removing the patient action measures will allow for focus on program goals of increasing interoperability and patient access to their health information.

Comment: One commenter expressed concern about the removal of this measure and noted that it will limit the effectiveness of driving meaningful improvements in interoperability. One commenter stated that the removal of this measure signals that patient and caregiver engagement has taken a backseat to provider to provider care coordination.

Response: We disagree that the removal of this measure devalues patient and caregiver engagement as we are weighting the Provide Patients Electronic Access to their Health Information measure at 40 points, the highest of any measure in the Promoting Interoperability performance category in recognition of the value of patients having electronic access to their health information. We are removing the View, Download, Transmit measure because of the burden it places on MIPS eligible clinicians to be accountable for patient action.

After consideration of the public comments we received, we are removing the View, Download or Transmit measure as proposed.

In summary, we are removing the Coordination of Care Through Patient Engagement objective and its associated measures: View, Download or Transmit; Secure Messaging; and Patient-Generated Health Data. We are renaming the Patient Electronic Access objective to Provider to Patient Exchange objective and removing the Patient-Specific Education measure. We are renaming the Provide Patient Access

measure to Provide Patients Electronic Access to their Health Information.

(v) Modifications to the Public Health and Clinical Data Registry Reporting Objective and Measures

In connection with the scoring methodology proposed in section III.H.3.h.(5)(d) of the proposed rule, in the CY 2019 PFS proposed rule (83 FR 35929 through 35931), we proposed changes to the Public Health and Clinical Data Registry Reporting objective and five associated measures.

We stated that we believe that public health reporting through EHRs will extend the use of electronic reporting solutions to additional events and care processes, increase timeliness and efficiency of reporting and replace manual data entry.

We proposed to change the name of the objective to Public Health and Clinical Data Exchange and proposed exclusions for each of the associated measures.

Under the new scoring methodology proposed in section III.H.3.h.(5)(d) of the proposed rule, we proposed that a MIPS eligible clinician would be required to submit two of the measures of the clinician's choice from the five measures associated with the objective: Immunization Registry Reporting, Syndromic Surveillance Reporting, Electronic Case Reporting, Public Health Registry Reporting, and Clinical Data Registry Reporting.

In prior rulemaking, we recognized the goal of increasing interoperability through public health registry exchange of data (80 FR 62771). We stated that we continue to believe that public health reporting is valuable in terms of health information exchange between MIPS eligible clinicians and public health and clinical data registries. For example, when immunization information is directly exchanged between EHRs and registries, patient information may be accessed by all of a patient's health care providers for improved continuity of care and reduced health care provider burden, as well as supporting population health monitoring.

We also proposed exclusion criteria for each of the Public Health and Clinical Data Exchange measures beginning with the performance period in 2019. Under the scoring methodology for the Promoting Interoperability performance category for the performance period in 2018 (82 FR 53676 through 53677), the measures associated with the Public Health and Clinical Data Registry Reporting objective are not required for the base score, and thus we did not establish exclusion criteria for them. However, we understand that some MIPS eligible clinicians may not be able to report to public health agencies or clinical data registries due to their scope of practice. Therefore, we proposed the following measure exclusions based on the exclusions finalized in previous rulemaking under the EHR Incentive Programs (80 FR 62862 through 62871).

Measure: Immunization Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Immunization Registry Reporting measure if the MIPS eligible clinician:

1. Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period.

2. Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.

Measure: Syndromic Surveillance Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Syndromic Surveillance Reporting measure if the MIPS eligible clinician:

1. Is not in a category of health care providers from which ambulatory syndromic surveillance data is collected by their jurisdiction's syndromic surveillance system.

2. Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no public health agency has declared readiness to receive syndromic surveillance data from MIPS eligible clinicians as of 6 months prior to the start of the performance period.

Measure: Electronic Case Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Electronic Case Reporting measure if the MIPS eligible clinician:

1. Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period.

2. Operates in a jurisdiction for which no public health agency is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no public health agency has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period.

Measure: Public Health Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Public Health Reporting measure if the MIPS eligible clinician;

1. Does not diagnose or directly treat any disease or condition associated with a public health registry in the MIPS eligible clinician's jurisdiction during the performance period.

2. Operates in a jurisdiction for which no public health agency is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no public health registry for which the MIPS eligible clinician is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the performance period.

Measure: Clinical Data Registry Reporting.

Proposed Exclusions: Any MIPS eligible clinician meeting one or more of the following criteria may be excluded from the Clinical Data Registry Reporting measure if the MIPS eligible clinician;

1. Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the performance period.

2. Operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the performance period.

3. Operates in a jurisdiction where no clinical data registry for which the MIPS eligible clinician is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the performance period.

We solicited comment on the proposed exclusions and whether there are circumstances that would require

additional exclusion criteria for the measures.

In addition, we stated that we intend to propose in future rulemaking to remove the Public Health and Clinical Data Exchange objective and measures no later than CY 2022, and solicited public comment on whether MIPS eligible clinicians will continue to share such data with public health entities once the Public Health and Clinical Data Exchange objective is removed, as well as other policy levers outside of the Promoting Interoperability performance category that could be adopted for continued reporting to public health and clinical data registries, if necessary. As noted above, although we believe that these registries provide the necessary monitoring of public health nationally and contribute to the overall health of the nation, we are also focused on reducing burden and identifying other appropriate venues in which reporting to public health and clinical data registries could be reported. We solicited public comment on the role that each of the public health and clinical data registries should have in the future of the Promoting Interoperability performance category and whether the submission of this data should still be required.

Lastly, we solicited public comment on whether the Promoting Interoperability performance category is the best means for promoting sharing of clinical data with public health entities.

We solicited comment on these proposals and our summary and response are below.

Comment: One commenter stated that these measures should be optional as they continue to remain difficult for MIPS eligible clinicians due to the lack of availability of interoperable public health registries. Another commenter noted that the measures should be a bonus and not required as they note that the path for participation is convoluted and will require an onerous amount of effort on the part of the clinician. Commenters also noted issues with AHRQ's Registry of Patient Registries such as difficulty searching for registries that would fulfill the Promoting Interoperability performance category's requirement.

Response: We disagree as we are trying to simplify scoring by limiting bonus opportunities to brand new measures. Hence we are offering bonus points for reporting the two new measures under the e-Prescribing objective but not the ''new'' measure under the Health Information Exchange objective because it is simply the combination of two existing measures. We know that there are some improvements that need to be made to AHRQ's Registry of Patient Registries and we are working with AHRQ and CDC to improve the search capabilities so that available registries can be easily located.

Comment: Many commenters opposed CMS' intent to remove the Public Health and Clinical Data Exchange objective and measures in the future and noted that interoperability of public health data is still evolving and incentivizes MIPS eligible clinicians to share data with public health agencies. One commenter encouraged CMS to reconsider removing the objective and measures for the following reasons: Many states do not have other policy levers outside the Promoting Interoperability programs and performance category to encourage or enforce public health reporting; CMS and States have spent many years now, using HITECH Act funding, supporting improvements to public health systems and HIEs to encourage health care providers to submit public health data, and thus, the reporting should continue; and in some states public health reporting is one of the driving use cases for participants to connect to their statewide HIE and removing these measures would remove an incentive to encourage health care providers to participate in HIEs. Another commenter expressed concerns about CMS' intention to remove the Public Health and Clinical Data Exchange objectives and measures noting that it is a significant policy lever for those who have yet to engage in this aspect of the program.

Response: We understand the importance of reporting to public health and clinical data registries. We are continuing to focus on burden reduction, as well as other platforms and venues for reporting data to public health and clinical data registries outside of the Promoting Interoperability performance category. We will continue to monitor the data we compile specific to the public health reporting requirements and take the commenters' concerns into consideration in future rulemaking.

Comment: One commenter requested clarification of whether a MIPS eligible clinician can submit to two different registries for purposes of the same measure and get credit for submitting to two registries, or must they report to different registries for purposes of two different measures to receive full credit for the objective.

Response: Although we proposed that a MIPS eligible clinician must report on two measures of their choice to fulfill the Public Health and Clinical Data Registry Reporting objective, we agree that a MIPS eligible clinician should be able to report to two different public health agencies or clinical data registries for purposes of the same measure. Therefore, as previously discussed in section III.H.3.(5)(d) of this final rule, we are finalizing the proposal with modification so that a MIPS eligible clinician may earn full credit for this objective by reporting to two different public health agencies or clinical data registries for purposes of the same measure.

Comment: Some commenters agreed with the Public Health and Clinical Data Exchange reporting requirements proposed, stating they would continue to advance interoperability and improve early detection of outbreaks as well as promote population health strategies.

Response: We appreciate the support for our proposal and believe that public health reporting through EHRs will extend the use of electronic reporting solutions to additional events and care processes and increase the timeliness and efficiency of reporting.

Comment: A few commenters supported the proposed exclusions for the Public Health and Clinical Data Exchange measures. One commenter suggested that the first exclusion for the Immunization Registry Reporting measure be modified to 100 or less immunizations in a performance period.

Response: We decline to expand the first exclusion for the Immunization Registry Reporting measure because if the MIPS eligible clinician is performing any immunizations we believe that the information should be reported to an immunization registry.

Comment: One commenter recommended that CMS specify that exclusions may only be claimed if a MIPS eligible clinician meets exclusions for all of the measures associated with the Public Health and Clinical Data Exchange objective and has made all possible efforts to report on the measures for this objective. The commenter suggested that participation in this objective should be encouraged instead of claiming exclusions, which would not improve interoperability or support improvements to population health. Commenters also stated that public health reporting also supports added value for individuals and reporters by enabling bidirectional information exchange between clinical care and public health.

Response: We agree that MIPS eligible clinicians should try to find public health registries with which they can be in active engagement. We understand the concerns of the commenters and are committed to reducing provider burden

while increasing flexibility. As previously discussed in section III.H.3.(5)(d) of this final rule, we believe the ability to report to two different public health agencies or clinical data registries will promote flexibility in reporting and enables MIPS eligible clinicians to focus on the measures that are most relevant to them and their patient population.

After consideration of the comments we received, we are finalizing our proposals with modification. We are changing the name of the objective to Public Health and Clinical Data Exchange and adopting exclusions for each of the associated measures. As previously discussed in section III.H.3.(5)(d) of this final rule, we are adopting a final policy to allow MIPS eligible clinicians to earn full credit for this objective by reporting to two different public health agencies or clinical data registries for any of the measures associated with the objective.

We may use the comments that we received on the removal of the Public Health and Clinical Data Exchange objectives and measures to inform future rulemaking.

To assist readers in identifying the requirements of CEHRT for the Promoting Interoperability performance category objectives and measures under the scoring methodology we are finalizing in section III.I.3.h.(5)(d) of this final rule, we include Table 43, which includes the 2015 Edition certification criteria required to meet the objectives and measures.

BILLING CODE 4120–01–P

TABLE 43: Promoting Interoperability Objectives and Measures and Certification Criteria for the 2015 Edition

Objective	Measure	2015 Edition
Protect Patient Health Information.	Security Risk Analysis	The requirements are a part of CEHRT specific to each certification criterion[28].
e-Prescribing	e-Prescribing	§170.315(b)(3)(Electronic Prescribing). §170.315(a)(10) (Drug-Formulary and Preferred Drug List checks)
	Query of PDMP	§170.315(a)(10) (Drug-Formulary and Preferred Drug List checks) and (b)(3) (Electronic Prescribing)
	Verify Opioid Treatment Agreement	§170.315(a)(10) (Drug-Formulary and Preferred Drug List checks) (b)(3) (Electronic Prescribing), and §170.205(b)(2) (Electronic Prescribing Standard)
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	§170.315(b)(1) (Transitions of Care)
	Support Electronic Referral Loops by Receiving and Incorporating Health Information	§170.315(b)(1) (Transitions of Care) §170.315(b)(2) (Clinical Information Reconciliation and Incorporation)
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	§170.315(e)(1) (View, Download, and Transmit to 3rd Party) §170.315(g)(7) (Application Access—Patient Selection) §170.315(g)(8) (Application Access—Data Category Request) §170.315(g)(9) (Application Access—All Data Request) The three criteria combined are the ''API'' certification criteria.
Public Health and Clinical Data Exchange	Immunization Registry Reporting	§170.315(f)(1) (Transmission to Immunization Registries)
	Syndromic Surveillance Reporting	§170.315(f)(2) (Transmission to Public Health Agencies—Syndromic Surveillance) Urgent Care Setting Only
	Electronic Case Reporting	§170.315(f)(5) (Transmission to Public Health Agencies—Electronic Case Reporting)
	Public Health Registry Reporting	EPs may choose one or more of the following: § 170.315(f)(4) (Transmission to Cancer Registries) §170.315(f)(7) (Transmission to Public Health Agencies—Health Care Surveys)
	Clinical Data Registry Reporting	No 2015 Edition health IT certification criteria at this time.

BILLING CODE 4120–01–C

(vi) Request for Comment—Potential New Measures Health Information Exchange Across the Care Continuum

We are working to introduce additional flexibility to allow MIPS eligible clinicians a wider range of options in selecting measures that are most appropriate to their setting, patient population, and clinical practice improvement goals. For this reason, in the CY 2019 PFS proposed rule (83 FR 35931) we solicited comment on a potential concept for future rulemaking to add two additional measure options related to health information exchange for MIPS eligible clinicians.

We received many comments in response to our request, and we will consider them as we develop future policy regarding the potential new measures that focus on health information exchange across the care continuum.

[28] References from Title 45.

(g) Improvement Activities Bonus Score Under the Promoting Interoperability Performance Category and Future Reporting Considerations

In the CY 2017 Quality Payment Program final rule (81 FR 77202), we discussed our approach to the measurement of the use of CEHRT to allow MIPS eligible clinicians and groups the flexibility to implement CEHRT in a way that supports their clinical needs. Toward that end, we adopted a policy for the 2017 and 2018 performance periods (81 FR 77202–77209 and 82 FR 53664–53670) and codified it at § 414.1380(b)(4)(i)(C)(*2*) to award a bonus score to MIPS eligible clinicians who use CEHRT to complete certain activities in the improvement activities performance category based on our belief that the use of CEHRT in carrying out these activities could further the outcomes of clinical practice improvement.

In the CY 2019 PFS proposed rule (83 FR 35932 through 35935), we proposed significant changes to the scoring methodology and measures beginning with the performance period in 2019. In connection with these changes, we did not propose to continue the bonus for completing certain improvement activities using CEHRT for the performance period in 2019 and subsequent performance periods. As discussed in section III.H.3.h.(5)(b) of the proposed rule, we shifted the focus of this performance category to put a greater emphasis on interoperability and patient access to health information, and we stated that we do not believe awarding a bonus for performing an improvement activity using CEHRT would directly support those goals. While we continued to believe that the use of CEHRT in completing improvement activities is extremely valuable and vital to the role of CEHRT in practice improvement, awarding a bonus in the Promoting Interoperability performance category would not be appropriate in light of the new direction we wanted to take, and we solicited comment on other ways to promote the use of CEHRT.

We invited comments on our decision not to propose to continue the bonus for completing certain improvement activities using CEHRT for the performance period in 2019 and subsequent performance periods, and our responses are below.

Comment: Commenters supported our decision not to continue the bonus points for completing improvement activities using CEHRT.

Response: We appreciate the support and although we are discontinuing the bonus points, we will continue to seek other opportunities to promote the use of CEHRT.

Comment: Some commenters stated that they opposed our decision not to continue the bonus points for completing improvement activities using CEHRT stating that providing bonus points in the Promoting Interoperability performance category represented CMS' understanding that health IT can play an invaluable role in improving outcomes and incentivized MIPS eligible clinicians to incorporate health IT into their practice workflows and clinical activities. The commenters requested that CMS continue to incentivize—but not require—clinicians to use health IT as they accomplish improvement activities.

Response: We are limiting bonus points to brand new measures in the Promoting Interoperability performance category such as the Verify Opioid Treatment Agreement measure. We are exploring opportunities that would allow MIPS eligible clinicians to earn credit across multiple MIPS performance categories. We continue to believe that the use of health IT, telehealth, and connection of patients to community-based services is important. We encourage the use of health IT as we understand it is an important aspect of the care delivery processes described in many of the established improvement activities found at *https://qpp.cms.gov/*. In addition, we encourage stakeholders to submit new improvement activities through the Annual Call for Activities that encourage the use of health IT.

After consideration of the comments received, we are not continuing the bonus points for completing improvement activities using CEHRT.

We acknowledged that the omission of this bonus could be viewed as increasing burden, and sought to counteract that concern by evaluating other methods to reduce burden to offset this potential increase. We have also considered various ways to align and streamline the different performance categories under the MIPS. In lieu of the improvement activities bonus score, we have looked extensively at ways to link three of the performance categories—quality, improvement activities and Promoting Interoperability—to reduce burden and create a more cohesive and closely linked MIPS program. One possibility we have identified is to establish several sets of new multi-category measures that would cut across the different performance categories and allow MIPS eligible clinicians to report once for credit in all three performance categories. Our goal would be to establish several of combined measures so MIPS eligible clinicians could report once for credit across all three performance categories. We only solicited comment on this concept, as we are still evaluating the appropriate measure combinations and feasibility of a multi-category model.

Furthermore, we stated that to promote measurement that provides clinicians with measures that are meaningful to their practices, we intend to consider proposing in future rulemaking MIPS public health priority sets across the four performance categories (quality, improvement activities, Promoting Interoperability, and cost), and solicited comments on this topic.

We thank commenters for their views and we will consider their views as we develop future policy proposals.

(h) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

In prior rulemaking (82 FR 30079), we discussed our belief that certain types of MIPS eligible clinicians (NPs, PAs, CNSs, and CRNAs) may lack experience with the adoption and use of CEHRT. Because many of these non-physician clinicians were or are not eligible to participate in the Medicare or Medicaid EHR Incentive Program (now known as the Promoting Interoperability Program), we stated that we have little evidence as to whether there are sufficient measures applicable and available to these types of MIPS eligible clinicians under the advancing care information (now known as Promoting Interoperability) performance category. We established a policy for the performance periods in 2017 and 2018 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the advancing care information performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the advancing care information performance category, but if they choose to report, they will be scored on the advancing care information performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act. We stated our intention to use data from the first performance period (2017) to further evaluate the participation of

these MIPS eligible clinicians in the advancing care information performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. In the CY 2019 PFS proposed rule (83 FR 35933), we stated that as we have not yet analyzed the data for the first MIPS performance period, it would be premature to propose to alter our treatment of these MIPS eligible clinicians in year 3.

Accordingly, we proposed to continue this policy for the performance period in 2019 and to codify the policy at § 414.1380(c)(2)(i)(A)(5). We requested public comments on this proposal.

The following is a summary of the comments we received on this proposal.

Comment: One commenter suggested that PAs and NPs not have their Promoting Interoperability performance category reweighted with possible exceptions for small PA and NP-owned practices. The commenter indicated that PAs have been using CEHRT for years and should be held to the same standards and expectations as physicians.

Response: We agree that the goal is to have all MIPS eligible clinicians use CEHRT. However, we believe that at this point in time it is premature to determine whether there are sufficient measures applicable and available to NPs, PAs, CNSs, and CRNAs. We plan to analyze performance data as it becomes available to inform future rulemaking. We note that if NPs and PAs choose to report data for the Promoting Interoperability performance category, they will be scored like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score.

After consideration of the comments we received, we will continue the policy for NPs, PAs, CRNAs, and CNSs for the performance period in 2019 as proposed. We are codifying the policy at § 414.1380(c)(2)(i)(A)(5) as proposed.

(ii) Physical Therapists, Occupational Therapists, Clinical Social Workers, and Clinical Psychologists

As discussed in section III.H.3.a. of the proposed rule, in accordance with section 1848(q)(1)(C)(i)(II) of the Act, we proposed to add the following clinician types to the definition of a MIPS eligible clinician, beginning with the performance period in 2019: Physical therapists; occupational therapists; clinical social workers; and clinical psychologists (83 FR 35883 through 35884). For the reasons discussed in prior rulemaking and in the preceding section III.H.3.h.(5)(f) of the proposed rule, we proposed(83 FR 35933) to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs for the performance periods in 2017 and 2018 to these new types of MIPS eligible clinicians for the performance period in 2019. Because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we stated that we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. Thus, we proposed to rely on section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category if there are not sufficient measures applicable and available to these new types of MIPS eligible clinicians (physical therapists, occupational therapists, clinical social workers, and clinical psychologists). We encouraged all of these new types of MIPS eligible clinicians to report on these measures to the extent they are applicable and available; however, we understand that some of them may choose to accept a weight of zero for this performance category if they are unable to fully report the Promoting Interoperability measures. We stated that we believe this approach is appropriate for their first performance period (in 2019) based on the payment consequences associated with reporting, the fact that many of these types of MIPS eligible clinicians may lack experience with EHR use, and our current uncertainty as to whether we have proposed sufficient measures that are applicable and available to these types of MIPS eligible clinicians. We would use their first performance period to further evaluate the participation of these MIPS eligible clinicians in the Promoting Interoperability performance category and would consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians.

We stated that these MIPS eligible clinicians may choose to submit Promoting Interoperability performance category measures if they determine that these measures are applicable and available to them; however, if they choose to report, they would be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category would be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score.

We proposed to codify this policy at § 414.1380(c)(2)(i)(A)(*4*).

The following is a summary of the comments we received on this proposal.

Comment: A few commenters stated that they are very pleased that CMS proposed to assign a weight of zero to the Promoting Interoperability performance category for physical and occupational therapists. The commenters stated that this is appropriate because the four included objectives have minimal relevance to therapy. Additionally, commenters noted that PTs and OTs have not received any financial incentives or support for implementing CEHRT, and therefore, it would be inappropriate to require them to report on measures for the Promoting Interoperability performance category.

Response: We will continue to monitor participation of physical therapists, occupational therapists, and clinical psychologists to evaluate whether there are sufficient measures applicable and available to them. Our intention is not to continue the proposed policy in perpetuity. We believe that for increased interoperability and health information exchange it is important for all types of MIPS eligible clinicians to use CEHRT, and we aim to adopt measures for the Promoting Interoperability performance category that are available and applicable to all types of MIPS eligible clinicians.

Comment: A commenter recommended that these types of clinicians not be automatically reweighted and instead recommended the creation of some sort of methodology to encourage health IT utilization and interoperability goals for these clinician types.

Response: We disagree. We believe these specialties may not have sufficient measures applicable and available to them. We believe that through enabling these specialties to report if they are able or be reweighted if they are not, will give these specialties more time if they need it as they may not be familiar with the use of CEHRT. The reweighting will not be forever, but will be in place until we can determine through data analysis that these specialties are reporting in sufficient numbers to require their participation in the Promoting Interoperability performance category.

After consideration of the comments that we received, we are adopting our proposal with modification. In section

III.I.3.a. of this final rule, we are adopting a final policy to add the following types of clinicians to the definition of MIPS eligible clinician: Physical therapist, occupational therapist. qualified speech-language pathologist, qualified audiologist, clinical psychologist, and registered dietitian or nutritional professional. For the reasons discussed in the proposed rule, we will apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs for the performance periods in 2017 and 2018 to each of these new types of MIPS eligible clinicians for the performance period in 2019. We are not adopting a policy related to clinical social workers because they are not being added as MIPS eligible clinicians at this time. We are finalizing the proposed regulation text at § 414.1380(c)(2)(i)(A)(*4*) to reflect these modifications.

(6) APM Scoring Standard for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

As codified at § 414.1370, MIPS eligible clinicians, including those participating in MIPS APMs, are subject to MIPS reporting requirements and payment adjustments, unless excluded on another basis.

In the CY 2017 Quality Payment Program rule, we finalized the APM scoring standard, which is designed to reduce reporting burden for participants in certain APMs by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and the MIPS.

We established at § 414.1370(c) that the MIPS performance period under § 414.1320 applies for the APM scoring standard. We finalized under § 414.1370(f) that, under the APM scoring standard, MIPS eligible clinicians will be scored at the APM entity group level and each MIPS eligible clinician will receive the APM Entity's final MIPS score. In the CY 2019 PFS proposed rule, we proposed to amend § 414.1370(f)(2) to state that if the APM Entity group is excluded from MIPS, all eligible clinicians within that APM Entity group are also excluded from MIPS.

The MIPS final score under the APM scoring standard is comprised of the four MIPS performance categories as finalized at § 414.1370(g): Quality; cost; improvement activities; and advancing care information. In 2018, these performance categories are scored at 50 percent, 0 percent, 30 percent, and 20 percent, respectively.

(b) Summary of Proposals

In the CY 2019 PFS proposed rule, we discussed the following proposed policies:

- We proposed to revise § 414.1370(b)(3) to clarify the requirement for MIPS APMs to assess performance on quality measures and cost/utilization.
- We proposed to modify the Shared Savings Program quality reporting requirements by expanding the reporting exception for solo practitioners such that, beginning in 2019, in the case of a Shared Savings Program ACO's failure to report quality measures as required by the Shared Saving Program, we will allow a solo practitioner to report on any available MIPS measures, including individual measures.
- We proposed to clarify that, beginning in 2019, the complete reporting requirement for Web Interface reporters be modified to specify that if an APM Entity fails to complete reporting for Web Interface measures but successfully reports the CAHPS for ACOs survey, we will score the CAHPS for ACOs survey and apply it towards the APM Entity's quality performance category score. In this scenario, the Shared Savings Program TIN-level reporting exception will not be triggered and all MIPS eligible clinicians within the ACO will receive the APM Entity score.
- We clarified that we will consider each distinct track of an APM and whether it meets the criteria necessary to be a MIPS APM under § 414.1370(b)(1). We further clarified the term ''track'' to refer to a distinct arrangement through which an APM Entity participates in the APM, and that such participation is mutually exclusive of the APM Entity's participation in another ''track'' within the same APM.
- We clarified our interpretation of the rule at § 414.1370(b)(4)(i) for APMs that begin after the first day of the MIPS performance period for the year (currently January 1), where quality measures tied to payment must be reported for purposes of the APM from the first day of the MIPS performance period, and indicated that we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM.
- We proposed to remove the Promoting Interoperability (formerly advancing care information) full-TIN reporting requirement for participants in the Shared Savings Program to allow individual TIN/NPIs to report for the Promoting Interoperability performance category.
- We explained how performance feedback may be accessed by ACO participant TINs in the Shared Savings Program.
- We proposed to update the MIPS APM measure sets that apply for purposes of the APM scoring standard.

(c) MIPS APM Criteria

In the CY 2017 Quality Payment Program final rule, we established at § 414.1370(b) that for an APM to be considered a MIPS APM, it must satisfy the following criteria: APM Entities must participate in the APM under an agreement with CMS or by law or regulation, the APM must require that APM Entities include at least one MIPS eligible clinician on a participation list, the APM must base payment incentives on performance (either at the APM entity or eligible clinician level) on cost/utilization and quality measures, and the APM must be neither a new APM for which the first performance period begins after the first day of the MIPS performance year, nor an APM in the final year of operation for which the APM scoring standard is impracticable.

As stated in the CY 2019 PFS proposed rule (83 FR 35934), it has come to our attention that there may have been some ambiguity in the third criterion at § 414.1370(b)(3). We have received questions as to whether the criterion requires MIPS APMs to base payment incentives on performance on cost/utilization ''measures'', or whether it requires more generally that MIPS APMs base payment incentives on ''cost/utilization.'' Because we did not address this exact point in prior rulemaking and our intended policy is not strictly clear from the regulation text, we clarified in the CY 2019 PFS proposed rule that we intended the word ''measures'' at § 414.1370(b)(3) to modify only ''quality'' and not ''cost/utilization.'' To make this criterion clear, we proposed to modify the regulation to specify that a MIPS APM must be designed in such a way that participating APM Entities are incentivized to reduce costs of care or utilization of services, or both. This proposed change to § 414.1370(b)(3) would make it clear that a MIPS APM could take into account performance in terms of cost/utilization using model design features other than the direct use of cost/utilization measures.

We solicited comment on this proposal.

The following is a summary of the public comments received on this proposal and our responses:

Comment: We received several comments supporting our proposal to modify the criterion at § 414.1370(b)(3) to clarify that the word ''measures'' only modifies the word ''quality'' and not ''cost/utilization.'' Commenters stated that as proposed, this revision would mean that a MIPS APM could take into account performance in terms of cost/utilization using a cost/utilization measure and/or through other model design features. One commenter noted appreciation of this clarification and stated that this update to § 414.1370(b)(3) will allow participating APM Entities more flexibility when reporting cost/utilization information. Further, this commenter stated that our proposed clarification is consistent with CMS's intent and the implied intent of MACRA. Another commenter expressed appreciation for this clarification and noted that this may increase participation in MIPS.

Response: We agree with commenters that the policy as intended and clarified allows for flexibility in how reporting cost/utilization information is reported. We continue to believe that accounting for cost/utilization performance can be accomplished by taking model design features into account and it is unnecessary to rely solely on cost/utilization measures. Therefore, we are finalizing our proposal to modify § 414.1370(b)(3) to specify that a MIPS APM must be designed in a way that participating APM Entities are incentivized to reduce costs of care or utilization of services, or both. We continue to believe that this change to the regulation text will clarify our intent that a MIPS APM could take into account performance in terms of cost/utilization using model design features other than the direct use of cost/utilization measures. We are revising § 414.1370(b)(3), as proposed, to state that the APM bases payment on performance (either at the APM entity or eligible clinician level) on quality measures and cost/utilization.

We also proposed to clarify that we will consider each distinct track of an APM and whether it meets the criteria, in this final rule, to be a MIPS APM, and that it is possible for an APM to have tracks that are MIPS APMs and tracks that are not MIPS APMs. However, we specified that we will not further consider whether the individual APM Entities or MIPS eligible clinicians participating within a given track each satisfy all of the MIPS APM criteria.

For purposes of this clarification, we understand the term ''track'' to refer to a distinct arrangement through which an APM Entity participates in the APM, and that such participation is mutually exclusive of the APM Entity's participation in another ''track'' within the same APM. For example, we consider the three risk arrangements under OCM to be three separate ''tracks.''

The following is a summary of the public comments received on this clarification and our responses:

Comment: Some commenters supported our clarification. One commenter noted that this clarification allows for maximum flexibility, and allows APM the ability to offer different risk levels, which would, in turn, expand the pool of participants able to join APMs.

Response: We appreciate the support, and agree with the commenter that identifying MIPS APMs by considering each distinct track of an APM against our criteria to be a MIPS APM would be likely to increase the potential number of eligible participants to join MIPS APMs.

We will continue to evaluate whether each distinct track of an APM meets our criteria to be a MIPS APM. We note that this may result in an APM having tracks that are MIPS APMs and tracks that are not MIPS APMs.

We also clarified our interpretation of the regulation at § 414.1370(b)(4)(i) for APMs that begin after the first day of the MIPS performance period for the year (currently January 1), but require participants to report quality data for quality measures tied to payment for the full MIPS performance period, beginning January 1. Under these circumstances where quality measures tied to payment must be reported for purposes of the APM from the first day of the MIPS performance period, we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM.

The following is a summary of the public comments received on this clarification and our responses:

Comment: Commenters noted that this clarification will provide flexibility to those eligible clinicians and APM entities participating in an APM that begins after January 1. Commenters also stated that this clarification would prevent duplicative reporting of quality measures for both the APM and for MIPS, and would be consistent with CMS's efforts to reduce administrative burden.

Response: We appreciate the commenters' support of our clarification. We agree that our interpretation of § 414.1370(b)(4)(i) will prevent duplicative reporting of quality measures and is consistent with our other efforts to reduce administrative burden.

We are clarifying our interpretation of the regulation at § 414.1370(b)(4)(i). Therefore, we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM. We believe that this interpretation will eliminate possibly conflicting incentives between the quality scoring requirements and payment incentive structures under the APM and MIPS and will reduce the likelihood of duplicative reporting of quality information.

Based on the MIPS APM criteria we expect that the following 10 APMs likely will satisfy the requirements to be MIPS APMs for the 2019 performance year:

- Comprehensive ESRD Care Model (all Tracks).
- Comprehensive Primary Care Plus Model (all Tracks).
- Next Generation ACO Model.
- Oncology Care Model (all Tracks).
- Medicare Shared Savings Program (all Tracks).
- Medicare ACO Track 1+ Model.
- Bundled Payments for Care Improvement Advanced.
- Independence at Home Demonstration.
- Maryland Total Cost of Care Model (Maryland Primary Care Program).
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

Final CMS determinations of MIPS APMs for the 2019 MIPS performance year will be announced via the Quality Payment Program website at *https://qpp.cms.gov/*. Further, we make these determinations based on the established MIPS APM criteria as specified in § 414.1370(b) of our regulation, taking into account the clarifications made in this final rule.

(d) Calculating MIPS APM Performance Category Scores

(i) Quality Performance Category

For the quality performance category, MIPS eligible clinicians in APM Entities will continue to be scored only on the quality measures that are required under the terms of their respective APMs, and available for scoring as specified in § 414.1370(g)(1) and explained in the CY 2017 Quality Payment Program final rule (82 FR 53698, 53692).

(A) Web Interface Reporters

In the CY 2018 Quality Payment Program final rule, we discussed the

requirements for MIPS eligible clinicians participating in a MIPS APM that requires use of the CMS Web Interface for quality reporting, subsequently referred to as ''Web Interface Reporters'' (82 FR 53954). In that rule we finalized a policy to use quality measure data that participating APM Entities submit using the CMS Web Interface and CAHPS surveys as required under the terms of the APM (82 FR 53568, 53692). We also codified at § 414.1370(f)(1) a policy under which, in the event a Shared Savings Program ACO does not report quality measures as required by the Shared Savings Program under § 425.508, each ACO participant TIN will be treated as a unique APM entity for purposes of the APM scoring standard, and may report data for the MIPS quality performance category according to the MIPS submission and reporting requirements.

For the 2019 MIPS performance year, we anticipate that there will be four Web Interface Reporter APMs: The Shared Savings Program; the Medicare ACO Track 1+ Model; Next Generation ACO Model; and the Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

(aa) Complete Reporting Requirement

Under § 414.1370(f)(1), if a Shared Savings Program ACO does not report data on quality measures as required by the Shared Savings Program under § 425.508, each ACO participant TIN will be treated as a unique APM Entity for purposes of the APM scoring standard and the ACO participant TINs may report data for the MIPS quality performance category according to the MIPS submission and reporting requirements. In the CY 2019 PFS proposed rule (83 FR 35935), we stated that we would like to clarify that any ''partial'' reporting through the CMS Web Interface that does not satisfy the requirements of the Shared Savings Program will be considered a failure to report. Should a Shared Savings Program ACO fail to report, the exception under § 414.1370(f)(1) is triggered. In this scenario, each ACO participant TIN has the opportunity to report quality data to MIPS according to MIPS group reporting requirements to avoid a score of zero for the quality performance category (81 FR 77256).

We recognized that, under this policy, successfully reporting to MIPS according to group reporting requirements may be difficult for solo practitioners, for whom case thresholds and other requirements may make many group reporting measures unavailable. Therefore, we proposed to modify the exception such that beginning in 2019, in the case of a Shared Savings Program ACO's failure to report quality measures as required by the Shared Saving Program, we will also allow a solo practitioner (a MIPS eligible clinician who has only one NPI billing through their TIN), to report on any available MIPS measures, including individual measures, in the event that their ACO fails to complete reporting for all Web Interface measures.

The following is a summary of the public comments received on this clarification and our responses:

Comment: One commenter noted that this modification will increase Shared Savings Program ACO participants' flexibility in the unlikely event that the ACO does not submit quality measures.

Response: We agree with the commenter that allowing solo practitioners to report any available MIPS measures, including individual measures, will allow additional flexibility when reporting to MIPS in the event their ACO fails to complete the reporting of all Web Interface measures.

After consideration of all public comments, we are clarifying that beginning in 2019, in the case of a Shared Savings Program ACO's failure to completely report all Web Interface measures as required by the Shared Savings Program, we will allow a solo practitioner to report on any available MIPS measures, including individual measures.

We also proposed, beginning with the 2019 performance period, to modify the complete reporting requirement for Web Interface reporters to specify that if an APM Entity (in this case, an ACO) fails to complete reporting for Web Interface measures but successfully reports the CAHPS for ACOs survey, we will score the CAHPS for ACOs survey and apply it towards the APM Entity's quality performance category score. In this scenario the Shared Savings Program TIN-level reporting exception will not be triggered and all MIPS eligible clinicians within the ACO will receive the APM Entity score.

We solicited comment on this proposal.

The following is a summary of the public comments received on this proposal and our responses:

Comment: Some commenters supported our proposal. Other commenters expressed concern about applying the CAHPS score for ACOs to the APM Entity's quality performance score.

Response: Upon further consideration, we believe that the proposed change could unduly limit the ACO participant TINs' opportunity to achieve the highest possible quality performance category score: By scoring the ACO entity's CAHPS score in this scenario, the entity's total possible quality score would be capped at the total possible CAHPS score. Therefore, in the case where an ACO entity fails to successfully report Web Interface measures but does successfully report CAHPS, we will continue to treat ACO participant TINs as unique APM Entities under the APM scoring standard and will score each TIN only on the MIPS measures it has reported, up to a score of 100 percent for the performance category.

After taking all comments into account, we are not finalizing our proposal to modify the complete reporting requirement for Web Interface reporters to apply the CAHPS for ACOs survey score toward an APM Entity's quality performance category score if an ACO fails to complete reporting for Web Interface measures but successfully reports the CAHPS for ACOs survey.

(B) Other MIPS APMs

Under § 414.1370(g)(1)(ii), the MIPS quality performance category score for a MIPS performance period is calculated for the APM Entity using the data submitted by the APM Entity based on measures specified by us through notice and comment rulemaking and available for scoring for each Other MIPS APM from among those used under the terms of the Other MIPS APM.

In the 2019 MIPS performance year, we anticipate that there will be up to six Other MIPS APMs for which we will use this scoring methodology, based on their respective measure sets and reporting requirements:

- The Oncology Care Model.
- Comprehensive ESRD Care Model.
- Comprehensive Primary Care Plus Model.
- Bundled Payments for Care Improvement Advanced.
- Maryland Total Cost of Care Model (Maryland Primary Care Program).
- Independence at Home Demonstration.

(ii) Promoting Interoperability Performance Category

In the CY 2017 Quality Payment Program final rule (81 FR 77262 through 77264; 81 FR 77266 through 77269), we established a policy at § 414.1370(g)(4)(ii) for MIPS APMs other than the Shared Savings Program, under which we attribute one Promoting Interoperability performance category score to each MIPS eligible clinician in an APM Entity group based on the higher of either individual or group-level data submitted for the MIPS

eligible. We will then use these scores to create an APM Entity group score equal to the average of the highest scores available for each MIPS eligible clinician in the APM Entity group.

For the Shared Savings Program, we also finalized at § 414.1370(g)(4)(i) that ACO participant TINs are required to report on the Promoting Interoperability performance category, and we will weight and aggregate the ACO participant TIN scores to determine an APM Entity group score (81 FR 77258 through 77260). This policy was meant to align requirements between the MIPS Promoting Interoperability measures and the Shared Savings Program ACO–11 measure, which is used to assess Shared Savings Program ACOs based on the MIPS Promoting Interoperability measures. However, we have found that limiting reporting to the ACO participant TIN creates unnecessary confusion, and restricts Promoting Interoperability reporting options for MIPS eligible clinicians who participate in the Shared Savings Program. Therefore, beginning in the 2019 MIPS performance period, we proposed (83 FR 35935) to no longer apply the requirement as finalized at § 414.1370(g)(4)(i) and instead to apply the existing policy at § 414.1370(g)(4)(ii) to MIPS eligible clinicians who participate in the Shared Savings Program so that they may report on the Promoting Interoperability performance category at either the individual or group level like all other MIPS eligible clinicians under the APM scoring standard.

We solicited comment on this proposal.

The following is a summary of the public comments received on this proposal and our responses:

Comment: Several commenters supported our proposed policy. One commenter recommended that CMS allow reporting at the individual level only when group-level information is not reported.

Response: We believe that by aligning Shared Savings Program Promoting Interoperability scoring rules with those for the rest of MIPS and MIPS APMs we will reduce confusion while creating opportunities for individual MIPS eligible clinicians to contribute positively to the total ACO Entity score in the event that a participant TIN fails to report on this performance category.

Comment: One commenter requested that CMS maintain the current requirement for ACO participant TIN-level reporting for Promoting Interoperability performance category measures. The commenter noted that although the proposed change increases flexibility, larger ACOs may encounter difficulty managing the Promoting Interoperability reporting for all of the individual MIPS eligible clinicians that bill through TINs of ACO participants, risking a payment consequences for failing to report.

Response: The Promoting Interoperability performance category may be reported at either the individual or group level, not the APM Entity (ACO) level; therefore, this policy change will increase MIPS eligible clinicians' opportunities to report in the event that an ACO participant TIN does not, but should not give rise to a scenario where an ACO's performance category score would be negatively impacted. If the participant TIN reports for the PI performance category, there would be no need for the ACO to manage reporting for individual MIPS eligible clinicians; if the TIN fails to report, the individual MIPS eligible clincians within that TIN would have an opportunity to reduce the negative impact of that failure by reporting individually.

After consideration of the comments received, we are finalizing the proposal to allow MIPS eligible clinicians participating in the Shared Savings Program to report on the Promoting Interoperability performance category at either the individual or group level.

(e) MIPS APM Performance Feedback

As we discussed in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77270, and 82 FR 53704 through 53705, respectively), MIPS eligible clinicians who are scored under the APM scoring standard will receive performance feedback under section 1848(q)(12) of the Act.

Regarding access to performance feedback, we should note that whereas split-TIN APM Entities and their participants can only access their performance feedback at the APM Entity or individual MIPS eligible clinician level, MIPS eligible clinicians participating in the Shared Savings Program, which is a full-TIN APM, will be able to access their performance feedback at the ACO participant TIN level.

(f) Summary of Finalized Policies

In this section, we are finalizing the following policies:

MIPS APM Criteria:

- We are modifying the MIPS APM criterion at § 414.1370(b)(3) to state that the APM bases payment on performance (either at the APM entity or eligible clinician level) on quality measures and cost/utilization.
- We are finalizing our clarification that we separately evaluate to each distinct track of an APM to determine whether it meets our criteria to be a MIPS APM. We note that this may result in an APM having some tracks that are MIPS APMs and other tracks that are not MIPS APMs.
- We are finalizing our clarification of our interpretation of the regulation at § 414.1370(b)(4)(i). Therefore, we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM. We believe that this will eliminate possibly conflicting incentives between the quality scoring requirements and payment incentive structures under the APM and MIPS and will reduce the likelihood of duplicative reporting of quality information.
- Final determinations of MIPS APMs for the 2019 MIPS performance year will be made by CMS and announced on the QPP website at *https://qpp.cms.gov/*. Further, in making these final determinations for 2019, we will use the MIPS APM criteria established in § 414.1370(b), taking into account the clarifications we are finalizing in this final rule.

Complete Reporting Requirements:

- We are finalizing our policy as proposed so that beginning in 2019, if a Shared Savings Program ACO fails to report quality measures as required by the Shared Savings Program we would also allow a solo practitioner (a MIPS eligible clinician who has only one NPI billing through their TIN), to report on any available MIPS measures, including individual measures.
- We are not finalizing our proposal to modify the complete reporting requirement for Web Interface reporters so that, in the case where a Shared Savings Program ACO fails to complete reporting for Web Interface measures but successfully reports the CAHPS for ACOs survey, we would apply the CAHPS for ACOs survey toward and APM Entity's quality performance category score. Therefore, in the case where a Shared Savings Program ACO fails to successfully report Web Interface measures but does successfully report the CAHPS for ACOs survey, we will continue to treat the ACO participant TINs as unique APM Entities under the APM scoring standard and will score each TIN only on the MIPS measures it has reported.

Promoting Interoperability Performance Category:

- We are finalizing the proposal to allow MIPS eligible clinicians participating in the Shared Savings

Program to report on the Promoting Interoperability performance category at either the individual or group level.

(g) Measure Sets

BILLING CODE 4120–01–P

TABLE 44: MIPS APM Measure List-- Comprehensive ESRD Care Model

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Diabetes Care: Eye Exam	0055	Effective Clinical Care	Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period.	NCQA
Diabetes Care: Foot Exam	0056	Effective Clinical Care	Percentage of patients 18–75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the previous measurement year.	NCQA
Advance Care Plan	0326	Communication and Care Coordination	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	NCQA
Medication Reconciliation Post-Discharge	0554	Communication and Care Coordination	The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following the discharge in the office by the physicians, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record. National Committee for Quality Assurance. This measure is reported as three rates stratified by age group: • Reporting Criteria 1: 18–64 years of age. • Reporting Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and Older.	NCQA
Influenza Immunization for the ESRD Population	Not Endorsed	N/A	Percentage of patients aged 6 months and older seen for a visit between July 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	KCQA
Pneumococcal Vaccination Status	0043	Community/Population Health	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA
Screening for Clinical Depression and Follow-Up Plan	0418	Community/Population Health	Percentage of patients aged 12 and older screened for depression on the date of the encounter and using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	CMS
Tobacco Use: Screening and Cessation	0028	Community/Population Health	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received	PCPI Foundation

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Intervention			cessation counseling intervention if identified as a tobacco user.	
Falls: Screening, Risk Assessment, and Plan of Care to Prevent Future Falls	0101	Patient Safety	(A) Screening for Future Fall Risk: Patients who were screened for future fall risk at last once within 12 months. (B) Multifactorial Falls Risk Assessment: Patients at risk of future fall who had a multifactorial risk assessment for falls completed within 12 months. (C) Plan of Care to Prevent Future Falls: Patients at risk of future fall with a plan of care or falls prevention documented within 12 months.	NCQA
ICH CAHPS: Nephrologists' Communication and Caring	0258	N/A	Summary/Survey Measures may include: ● Getting timely care, appointments, and information. ● How well providers communicate. ● Patients' rating of provider. ● Access to specialists. ● Health promotion and education. ● Shared Decision-making. ● Health status and functional status. ● Courteous and helpful office staff. ● Care coordination. ● Between visit communication. ● Helping you to take medications as directed, and ● Stewardship of patient resources.	CMS
ICH CAHPS: Quality of Dialysis Center Care and Operations	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS
ICH CAHPS: Providing Information to Patients	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS
ICH CAHPS: Rating of the Nephrologist	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS
ICH CAHPS: Rating of Dialysis	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of	CMS

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Center Staff			ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	
ICH CAHPS: Rating of the Dialysis Facility	0258	N/A	Comparison of services and quality of care that dialysis facilities provide from the perspective of ESRD patients receiving in-center hemodialysis care. Patients will assess their dialysis providers, including nephrologists and medical and non-medical staff, the quality of dialysis care they receive, and information sharing about their disease.	CMS
Standardized Mortality Ratio	0369	N/A	This measure is calculated as a ratio but expressed as a rate.	CMS
Standardized First Kidney Transplant Waitlist Ratio for Incident Dialysis Patients (SWR)	Not Endorsed	N/A	The standardized ratio of the observed to expected number of incident patients under age 75 listed on the kidney or kidney-pancreas transplant waitlist or who received a living donor transplant within the first year of initiating dialysis based on the national rate.	CMS
Percentage of Prevalent Patients Waitlisted (PPPW)	Not Endorsed	N/A	The percentage of patients who were on the kidney or kidney-pancreas transplant waitlist.	CMS

TABLE 45: MIPS APM Measure List-- Comprehensive Primary Care Plus (CPC+) Model

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measures Steward
Controlling High Blood Pressure	0018	Effective Treatment/ Clinical Care	Percentage of patients 18–85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.	National Committee for Quality Assurance
Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9 percent)	0059	Effective Treatment/ Clinical Care	Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c >9.0 percent during the measurement period.	National Committee for Quality Assurance
Dementia: Cognitive Assessment	2872	Effective Treatment/ Clinical Care	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.	PCPI Foundation
Falls: Screening for Future Fall Risk	0101	Patient Safety	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance
Initiation and Engagement of Alcohol and Other Drug Dependence Treatment	0004	Effective Treatment/ Clinical Care	Percentage of patients 13 years of age and older with a new episode of alcohol and other drug (AOD) dependence who received the following. Two rates are reported: a. Percentage of patients who initiated treatment within 14 days of the diagnosis. b. Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.	National Committee for Quality Assurance
Closing the Referral Loop: Receipt of Specialist Report	Not Endorsed	Communication and Care Coordination	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	CMS
Cervical Cancer Screening	0032	Effective Treatment/ Clinical Care	Percentage of women 21–64 years of age, who were screened for cervical cancer using either of the following criteria: ● Women age 21–64 who had cervical cytology performed every 3 years. ● Women age 30–64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years.	National Committee for Quality Assurance
Colorectal Cancer Screening	0034	Effective Treatment/ Clinical Care	Percentage of patients, 50–75 years of age who had appropriate screening for colorectal cancer.	National Committee for Quality Assurance
Diabetes: Eye Exam	0055	Effective Treatment/ Clinical Care	Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam	National Committee for Quality Assurance

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measures Steward
			(no evidence of retinopathy) in the 12 months prior to the measurement period.	
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	0028	Community/Population Health	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months and who received cessation counseling intervention if identified as a tobacco user.	PCPI Foundation
Breast Cancer Screening	2372	Effective Treatment/ Clinical Care	Percentage of women 50–74 years of age who had a mammogram to screen for breast cancer.	National Committee for Quality Assurance
CG–CAHPS® Survey 3.0 - modified for CPC+	Not Endorsed	Person and Caregiver-Centered Experience and Outcomes	CG–CAHPS® Survey 3.0	AHRQ
Inpatient Hospital Utilization	Not Endorsed	Communication and Care Coordination	For members 18 years of age and older, the risk-adjusted ratio of observed to expected acute inpatient discharges during the measurement year reported by Surgery, Medicine, and Total.	National Committee for Quality Assurance
Emergency Department Utilization	Not Endorsed	Communication and Care Coordination	For members 18 years of age and older, the risk-adjusted ratio of observed to expected emergency department (ED) visits during the measurement year.	National Committee for Quality Assurance
Diabetes: Medical Attention for Nephropathy	0062	Effective Treatment/ Clinical Care	The percentage of patients 18–75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	National Committee for Quality Assurance
Preventive Care and Screening: Depression and Follow-Up Plan	0418	Community/Population Health	Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	PCPI Foundation
Depression Utilization of the PHQ-9 Tool	0712	Effective Treatment/ Clinical Care	The percentage of patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying visit.	MN Community Measurement
Preventive Care and Screening: Influenza Immunization	0041	Community/Population Health	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	American Medical Association-convened Physician Consortium for Performance Improvement(R) (AMA-PCPI)
Pneumococcal Vaccination Status for Older	Not Endorsed	Community/Population Health	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measures Steward
Adults				Assurance
Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet	0068	Effective Treatment/ Clinical Care	Percentage of patients 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period.	National Committee for Quality Assurance
Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	Not Endorsed	Effective Treatment/ Clinical Care	Percentage of the following patients—all considered at high risk of cardiovascular events—who were prescribed or were on statin therapy during the measurement period: ● Adults aged >=21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR ● Adults aged >=21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL–C) level >=190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR ● Adults aged 40–75 years with a diagnosis of diabetes with a fasting or direct LDL–C level of 70–189 mg/dL.	CMS
Use of High-Risk Medications in the Elderly	0022	Patient Safety	Percentage of patients 65 years of age and older who were ordered high-risk medications.	National Committee for Quality Assurance
Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented	Not Endorsed	Community/Population Health	Percentage of patients aged 18 years and older seen during the reporting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.	CMS
Documentation of Current Medications in the Medical Record	0419	Patient Safety	Percentage of visits for patients aged 18 years and older for which the eligible professional attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	CMS
Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan	0421	Community/Population Health	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous 12 months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous	CMS

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measures Steward
			twelve months of the current encounter.	
Diabetes: Foot Exam	0056	Effective Treatment/ Clinical Care	Percentage of patients 18–75 years of age with diabetes (type 1 and type 2) who received a foot exam (visual inspection and sensory exam with mono filament and a pulse exam) during the previous measurement year.	National Committee for Quality Assurance
Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD)	0081	Effective Treatment/ Clinical Care	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40 percent who were prescribed ACE inhibitor or ARB therapy either within a 12 month period when seen in the outpatient setting OR at each hospital discharge.	PCPI Foundation
Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)	0083	Effective Treatment/ Clinical Care	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40 percent who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.	PCPI Foundation
Coronary Artery Disease (CAD): Beta-Blocker Therapy-Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF <40 percent)	0070	Effective Treatment/ Clinical Care	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF <40 percent who were prescribed beta-blocker therapy.	PCPI Foundation
Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture	Not Endorsed	Effective Treatment/ Clinical Care	Percentage of female patients aged 50 to 64 without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	CMS
HIV Screening	Not Endorsed	Community/Population Health	Percentage of patients 15-65 years of age who have ever been tested for human immunodeficiency virus (HIV).	Centers for Disease Control and Prevention (CDC)

Total Resource Use Population-based PMPM Index (RUI)	1598	N/A	This measure is used to assess the total resource use index population-based per member per month (PMPM). The Resource Use Index (RUI) is a risk adjusted measure of the frequency and intensity of services utilized to manage a provider group's patients. Resource use includes all resources associated with treating members including professional, facility inpatient and outpatient, pharmacy, lab, radiology, ancillary and behavioral health services.	Minneapolis (MN): Health Partners

TABLE 46: MIPS APM Measure List-- Oncology Care Model

Measure Name	NQF/ Quality ID	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Adjuvant chemotherapy is recommended or administered within 4 months (120 days) of diagnosis to patients under the age of 80 with AJCC III (lymph node positive) colon cancer	0223	Communication and Care Coordination	Percentage of patients under the age of 80 with AJCC III (lymph node positive) colon cancer for whom adjuvant chemotherapy is recommended and not received or administered within 4 months (120 days) of diagnosis.	Commission on Cancer, American College of Surgeons
Breast Cancer: Hormonal Therapy for Stage I (T1b)-IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer	0387	Communication and Care Coordination	Percentage of female patients aged 18 years and older with Stage I (T1b) through IIIC, ER or PR positive breast cancer who were prescribed tamoxifen or aromatase inhibitor (AI) during the 12-month reporting period.	AMA-convened Physician Consortium for Performance Improvement
Oncology: Medical and Radiation – Plan of Care for Pain	0384	Person and Caregiver-Centered Experience and Outcomes	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	American Society of Clinical Oncology
Combination chemotherapy is recommended or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1cN0M0, or Stage IB - III hormone receptor negative breast cancer	0559	Communication and Care Coordination	Percentage of female patients, age >18 at diagnosis, who have their first diagnosis of breast cancer (epithelial malignancy), at AJCC stage T1cN0M0 (tumor greater than 1 cm), or Stage IB–III, whose primary tumor is progesterone and estrogen receptor negative recommended for multiagent chemotherapy (recommended or administered) within 4 months (120 days) of diagnosis.	Commission on Cancer, American College of Surgeons
Documentation of Current Medications in the Medical Record	0419	Patient Safety	Percentage of visits for patients aged 18 years and older for which the eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over the counters, herbals, and vitamin/mineral/ dietary AND must contain the medications' name, dosage, frequency and route of administration.	CMS
Oncology: Medical and Radiation -Pain Intensity Quantified	0383	Person and Caregiver Centered Experience	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.	Physician Consortium for Performance Improvement Foundation
Patient-Reported Experience of Care	N/A	Person and Caregiver-Centered Experience	Summary/Survey Measures may include:	CMS

TABLE 47: MIPS APM Measure List--Bundled Payments for Care Improvement Advanced Model

Measure Name	NQF/ Quality ID #	National Quality Strategy Domain	Measure Description	Primary Measure Steward
All-Cause Hospital Readmission	1789	Communication and Care Coordination	This measure estimates a hospital-level risk-standardized readmission rate (RSRR) of unplanned, all cause readmission after admission for any eligible condition within 30 days of hospital discharge.	CMS
Advanced Care Plan	0326 (adapted) [1]	Communication and Care Coordination	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	NCQA
Perioperative Care: Selection of Prophylactic Antibiotic: First or Second Generation Cephalosporin	0268	Patient Safety	Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second generation cephalosporin prophylactic antibiotic who had an order for first OR second generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons
Hospital 30-day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Elective Coronary Artery Bypass Graft (CABG) Surgery	2558	Patient Safety	The measure estimates a hospital-level, risk-standardized mortality rate (RSMR) for patients 18 years and older discharged from the hospital following a qualifying isolated CABG procedure. Mortality is defined as death from any cause within 30 days of the procedure date of an index CABG admission. The measure was developed using Medicare Fee-for-Service (FFS) patients 65 years and older and was tested in all-payer patients 18 years and older. An index admission is the hospitalization for a qualifying isolated CABG procedure considered for the mortality outcome.	CMS
Excess Days in Acute Care After Hospitalization for Acute Myocardial Infarction	2881	Patient Safety	This measure assesses days spent in acute care within 30 days of discharge from an inpatient hospitalization for acute myocardial infarction (AMI) to provide a patient-centered assessment of the post-discharge period. This measure is intended to capture the quality of care transitions provided to discharged patients hospitalized with AMI by collectively measuring a set of adverse acute care outcomes that can occur post-discharge: emergency department (ED) visits, observation stays, and unplanned readmissions at any time during the 30 days post-discharge. To aggregate all three events, we measure each in terms of days. In 2016, CMS will begin annual reporting of the measure for patients who are 65 years or older, are enrolled in fee-for-service (FFS) Medicare, and are hospitalized in	CMS

			non-federal hospitals.	
AHRQ Patient Safety Measures	0531	Patient Safety	The modified PSI-90 Composite measure (name changed to Patient Safety and Adverse Events Composite) consists of ten component indicators: PSI-3 Pressure ulcer rate; PSI-6 Iatrogenic pneumothorax rate; PSI-8 Postoperative hip fracture rate; PSI-09 Perioperative hemorrage or hematoma rate; PSI-10 hysiologic and metabolic derangement rate; PSI-11 postoperative respiratory failure rate; PSI-12 Perioperative pulmonary embolism or Deep vein thrombosis rate; PSI-13 Postoperative sepsis rate; PSI-14 Postoperative wound dehiscence rate; and PSI-15 Accidental puncture or laceration rate.	AHRQ
Hospital-Level Risk-Standardized Complication Rate Following Elective Primary Total Hip Arthroplasty and/or Total Knee Arthroplasty	1550	Patient Safety	The measure estimates a hospital-level risk-standardized complication rate (RSCR) associated with elective primary THA and TKA in Medicare Fee-For-Service beneficiaries who are 65 years and older. The outcome (complication) is defined as any one of the specified complications occurring from the date of index admission to 90 days post date of the index admission (the admission included in the measure cohort).	CMS

1 The specifications used for the Advanced Care Plan quality measure in BPCI Advanced are not NQF endorsed, but have been created specifically for BPCI Advanced.

TABLE 48: MIPS APM Measure List—Maryland Total Cost of Care Model (Maryland Primary Care Program)

Measure Name	NQF/ Quality ID	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Controlling High Blood Pressure	0018	Effective / Clinical Care	Percentage of patients 18–85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mmHg) during the measurement period.	National Committee for Quality Assurance
Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9 percent)	0059	Effective Clinical Care	Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c > 9.0 percent during the measurement period.	National Committee for Quality Assurance
Initiation and Engagement of Alcohol and Other Drug Dependence Treatment	0004	Effective / Clinical Care	Percentage of patients 13 years of age and older with a new episode of alcohol and other drug (AOD) dependence who received the following. Two rates are reported: a. Percentage of patients who initiated treatment within 14 days of the diagnosis. b. Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.	National Committee for Quality Assurance
CG -CAHPS Survey 3.0 - modified for CPC+	Not Endorsed	Person and Family Engagement/ Patient and Caregiver Experience	CG–CAHPS Survey 3.0	AHRQ
Inpatient Hospital Utilization	Not Endorsed	Communication and Care Coordination	For members 18 years of age and older, the risk-adjusted ratio of observed to expected acute inpatient discharges during the measurement year reported by Surgery, Medicine, and Total.	National Committee for Quality Assurance
Emergency Department Utilization	Not Endorsed	Communication and Care Coordination	For members 18 years of age and older, the risk-adjusted ratio of observed to expected emergency department (ED) visits during the measurement year.	National Committee for Quality Assurance

Measure Name	NQF/ Quality ID	National Quality Strategy Domain	Measure Description	Primary Measure Steward
Number of inpatient admissions for ambulatory-care sensitive conditions per 100 patient enrollment months	Not Endorsed	N/A	Number of inpatient admissions for ambulatory-care sensitive conditions per 100 patient enrollment months.	CMS
Number of readmissions within 30 days per 100 inpatient discharges	Not Endorsed	N/A	Risk adjusted readmissions to a hospital within 30 days following discharge from the hospital for an index admission.	CMS
Emergency Department Visits for Ambulatory Care Sensitive Conditions	Not Endorsed	N/A	Risk adjusted emergency department visits for three ambulatory care sensitive conditions: diabetes, congestive heart failure (CHF), and chronic obstructive pulmonary disease (COPD).	CMS
Contact with beneficiaries within 48 hours upon admission to the hospital and discharge from the hospital and/or ED	Not Endorsed	N/A	Percent of hospital admissions, hospital discharges, and emergency department (ED) visits for beneficiaries enrolled in IAH with a follow-up contact within 48 hours.	CMS
Medication reconciliation in the home	Not Endorsed	N/A	Percent of hospital discharges and emergency department (ED) visits for beneficiaries enrolled in IAH with medication reconciliation in the home within 48 hours.	CMS
Percentage with Documented Patient Preferences	Not Endorsed	N/A	Percent of beneficiaries enrolled in IAH with patient preferences documented in the medical record for a demonstration year.	CMS

BILLING CODE 4120–01–C

We proposed to update the MIPS APM measure sets that apply for purposes of the APM scoring standard (83 FR 35933 through 35934). The following is a summary of the public comments received on these measure sets and our responses:

Comment: Several commenters supported the measure sets set forth in the proposed rule. Other commenters recommended additional measures to be used in future years or suggested modifications to the measures themselves.

Response: We thank the commenters for their support and note that, consistent with § 414.1370(g)(1)(i)(A) and (ii)(A), we are using only measures that are included or that CMS intends to include in each APM measures set at the time of publication of this final rule. Should those measures be removed or revised from that measure set before the end of the performance year, we will not score APM Entities on their performance on those measures, but will include updated measures in future rulemaking.

Per our policy expressed in last year's final rule (82 FR 53695 and 53696), the measure sets on the MIPS APM measure list for the year will represent all possible measures which may contribute to an APM Entity's MIPS score for the MIPS quality performance category, and may include measures that are the same as or similar to those used by MIPS. However, a given measure ultimately might not be used for scoring, for example if its data becomes inappropriate or unavailable for scoring.

After consideration of the comments received, we are finalizing our proposal to update the MIPS APM measure sets that apply for purposes of the APM scoring standard and will score only measures that already have been included in the measure sets of their given APM, according to the terms of participation in that APM. We note that Table 48 has been updated to reflect the most current APM measure sets.

i. MIPS Final Score Methodology

(1) Converting Measures and Activities Into Performance Category Scores

(a) Background

For the 2021 MIPS payment year, we intend to build on the scoring methodology we finalized for the transition years, which allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. The rationale for our scoring methodology continues to be grounded in the understanding that the MIPS scoring system has many components and various moving parts.

As we continue to move forward in implementing the MIPS program, we strive to balance the statutory requirements and programmatic goals with the ease of use, stability, and meaningfulness for MIPS eligible clinicians. We do so while also emphasizing simplicity and the continued development of a scoring methodology that is understandable for MIPS eligible clinicians.

In the CY 2017 Quality Payment Program final rule, we finalized a unified scoring system to determine a final score across the 4 performance categories (81 FR 77273 through 77276). For the 2019 MIPS performance period, we proposed to build on the scoring methodology we previously finalized, focusing on encouraging MIPS eligible clinicians to meet data completeness requirements (83 FR 35948 through 35949). For quality performance category scoring, we proposed to extend some of the transition year policies to the 2019 MIPS performance period, and we also proposed several modifications to existing policies (83 FR 35947 through 35949). In the CY 2018 Quality Payment Program final rule (82 FR 53712 through 53714), we established a methodology for scoring improvement in the cost performance category. However, as required by section 51003(a)(1)(B) of the Bipartisan Budget Act of 2018, we proposed that the cost performance category score would not take into account improvement until the 2024 MIPS payment year (83 FR 35956). In the CY 2018 Quality Payment Program final rule (82 FR 53753 through 53767), we finalized the availability of a facility-based measurement option for clinicians who met certain requirements, beginning with the 2019 MIPS performance period. As discussed in section III.I.3.i.(1)(d) of this final rule, we are finalizing our proposal to change the determination of facility-based measurement to include consideration of presence in the on-campus outpatient hospital. The policies for scoring the 4 performance categories are described in detail in section III.I.3.i.(1) of this final rule.

These policies will help eligible clinicians as they participate in the 2019 MIPS performance period/2021 MIPS payment year, and as we move beyond the transition years of the program. Section 51003 of the Bipartisan Budget Act of 2018 provides flexibility to continue the gradual ramp up of the Quality Payment Program and enables us to extend some of the transition year policies to the 2019 performance period.

Unless otherwise noted, for purposes of this section III.I.3.i. of this final rule, the term ''MIPS eligible clinician'' will refer to MIPS eligible clinicians who collect and submit data and are scored at either the individual or group level, including virtual groups; it will not refer to MIPS eligible clinicians who are scored by facility-based measurement, as discussed in section III.I.3.i.(1)(d) of this final rule. We also note that the APM scoring standard applies to MIPS eligible clinicians in APM Entities in MIPS APMs, and those policies take precedence where applicable. Where those policies do not apply, scoring for MIPS eligible clinicians as described in section III.I.3.h.(6) of this final rule will apply. We refer readers to section III.I.4. of this final rule for additional information about the APM scoring standard.

(b) Scoring the Quality Performance Category for the Following Collection Types: Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, CMS Web Interface Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

Although we did not propose changing the basic scoring system that we finalized in the CY 2018 Quality Payment Program final rule for the 2021 MIPS payment year (82 FR 53712 through 53748), we proposed several modifications to scoring the quality performance category, including removing high-priority measure bonus points for CMS Web Interface measures and extending the bonus point caps, and adding a small practice bonus to the quality performance category score. The following section describes these previously finalized policies and our proposals (83 FR 35950 through 35952).

We also proposed updates to § 414.1380(b)(1) in an effort to more clearly and concisely capture previously established policies (83 FR 35946 through 35955). These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We will make note of the updated regulatory citations in their relevant sections below.

(i) Scoring Terminology

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77008 through 77831 and 82 FR 53568 through 54229, respectively), we used the term ''submission mechanisms'' in reference to the various ways in which a MIPS eligible clinician or group can submit data to CMS. As discussed in section III.I.3.h.(1)(b) of this final rule, it has come to our attention that the way we have described the various ways in which MIPS eligible clinicians, groups and third-party intermediaries can submit data to our systems does not accurately reflect the experience users have when submitting data to us. We refer readers to section III.I.3.h.(1)(b) of this final rule for further discussion on our finalized changes to the scoring terminology related to measure specification and data collection and submission. For additional discussion on the impact of the proposed terminology change on our benchmarking methodology, validation process, and end-to-end reporting bonus, we refer readers to sections III.I.3.i.(1)(b)(ii), (v), and (x) of this final rule.

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77282 and 82 FR 53718, respectively) for our previously established benchmarking policies. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(a)(i) of this final rule, our previously established benchmarking policies at § 414.1380(b)(1)(i) through (iii) would now be referenced at § 414.1380(b)(1)(i) through (ii).

When we developed the quality measure benchmarks, we sought to develop a system that enables MIPS eligible clinicians, beneficiaries, and other stakeholders to understand what is required for a strong performance in MIPS while being consistent with statutory requirements (81 FR 28249 through 28250). The feedback we have received thus far from stakeholders on our benchmarks is helping to inform our approach to the benchmarking methodology, especially as we look for possible ways of aligning with Physician Compare benchmarks. As described in section III.I.3.i.(1)(b)(xii) of this final rule, we solicited comment on potential future approaches to scoring the quality performance category to continue to promote value and improved outcomes.

We anticipate changes in scoring would be paired with potential modifications to measure selection and criteria discussed in section III.I.3.h.(2)(b) of this final rule. In the CY 2019 PFS proposed rule (83 FR 35947), we sought input on opportunities to further reduce confusion about our benchmarking methodology described in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77278), which includes further clarification of our benchmarking process and potential areas of alignment between the MIPS and Physician Compare benchmarking methodologies.

We thank commenters for their input and may take this input into consideration in future years.

(A) Revised Terminology for MIPS Benchmarks

We previously established at § 414.1380(b)(1)(iii) separate benchmarks for the following submission mechanisms: EHR; QCDR/registry, claims; CMS Web Interface; CMS-approved survey vendor; and administrative claims. In the CY 2019

PFS proposed rule, we did not propose to change our basic approach to our benchmarking methodology; however, we proposed to amend § 414.1380(b)(1)(ii) consistent with the proposed data submission terminology changes discussed in section III.I.3.h.(1)(b) of this final rule (83 FR 35947). Specifically, beginning with the 2021 MIPS payment year, we proposed to establish separate benchmarks for the following collection types: eCQMs; QCDR measures (as described at § 414.1400(e)); MIPS CQMs; Medicare Part B claims measures; CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures. We would apply benchmarks based on collection type rather than submission mechanism. For example, for an eCQM, we would apply the eCQM benchmark regardless of submitter type (MIPS eligible clinician, group, third party intermediary). In addition, we would establish separate benchmarks for QCDR measures and MIPS CQMs since these measures do not have comparable specifications. In addition, we note that our proposed benchmarking policy allows for the addition of future collection types as the universe of measures continues to evolve and as new technology is introduced. Specifically, we proposed to amend § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

The following is a summary of the public comments on these proposals and our responses:

Comment: A few commenters expressed support for our proposal to establish separate benchmarks by collection types, citing the difference in measure performance across collection types. One commenter stated this update would maintain consistency when migrating between current MIPS terminology to proposed MIPS terminology.

Response: We thank commenters for their support as we continue to clarify and improve our benchmarking policies.

Comment: One commenter expressed concern about the proposal to update our regulatory text to state that benchmarks are based on collection types from all available sources, including APMs. Specifically, the commenter noted that incorporating APM data into benchmark calculations will set the benchmarks too high since APM participants tend to be high performers.

Response: We recognize commenter's concern; however, this is not a new policy, and we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77279) for additional discussion on the inclusion of APMs in the MIPS benchmarks. As measures and technology evolve, we are constantly reviewing and evaluating what data sources are appropriate for benchmarks.

Comment: One commenter requested clarification on whether QCDR measures that have an e-specified collection type and a manual collection type will also be considered separate collection types with distinct benchmarks.

Response: We expect that a QCDR measure for which data is abstracted through EHRs or manually (that is, paper records) would have to be approved as two separate measures. As a result, each measure would only be compared to its own benchmark.

After consideration of public comments, we are finalizing our proposal, beginning with the 2021 MIPS payment year, to amend § 414.1380(b)(1)(ii) to establish separate benchmarks based on collection type and to remove the mention of each individual benchmark and state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

(iii) Assigning Points Based on Achievement

In the CY 2017 Quality Payment Program final rule, we established the policies for scoring quality measures performance (81 FR 77286). We refer readers to § 414.1380(b)(1) for more on these policies.

(A) Floor for Scored Quality Measures

For the 2019 and 2020 MIPS payment years, we finalized at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as for the hospital readmission measure (if applicable). In this way, MIPS eligible clinicians would receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements (81 FR 77286 through 77287; 82 FR 53719). For measures with a benchmark based on the performance period (rather than on the baseline period), we stated that we would continue to assign between 3 and 10 measure achievement points for performance periods after the first transition year (81 FR 77282, 77287; 82 FR 53719). For measures with benchmarks based on the baseline period, we stated that the 3-point floor was for the transition year and that we would revisit the 3-point floor in future years (81 FR 77286 through 77287; 82 FR 53719).

For the 2021 MIPS payment year, we proposed to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period, and to amend § 414.1380(b)(1)(i) accordingly (83 FR 35947). We will revisit the 3-point floor for such measures again in future rulemaking.

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: Several commenters expressed support for the three-point floor for measures that can be reliably scored against a benchmark based on the baseline period because it would reduce confusion, help reduce burden, maintain stability, and encourage physicians to continue to participate in MIPS.

Response: We thank commenters for their support.

After consideration of public comments, we are finalizing our proposal, for the 2021 MIPS payment year, to apply a 3-point floor for each measure that can be reliably scored against a benchmark, and to amend § 414.1380(b)(1)(i) accordingly.

(B) Additional Policies for the CAHPS for MIPS Measure Score

Although participating in the CAHPS for MIPS survey is optional for all groups, some groups will be unable to participate in the CAHPS for MIPS survey because they do not meet the minimum beneficiary sampling requirements. CMS has sampling requirements for groups of 100 or more eligible clinicians, 25 to 99 eligible clinicians, and 2 to 24 eligible clinicians to ensure an adequate number of survey responses and the ability to reliably report data. Our sampling timeframes necessitate notifying groups of their inability to meet the sampling requirements late in the performance period (see 82 FR 53630 through 53632). As a result, we are concerned that some groups that expect and plan to meet the quality performance category requirements using the CAHPS for MIPS survey may find out late in the performance period that they are unable to meet the sampling requirements and, therefore, are unable to have their performance assessed on this measure. These groups may need to report on another measure to meet the

requirements of the quality performance category.

We want to encourage the reporting of the CAHPS for MIPS survey and do not want the uncertainty regarding sampling requirements to be a barrier to selecting the CAHPS for MIPS survey. To mitigate this concern, beginning with the 2021 MIPS payment year, we proposed to reduce the denominator (that is, the total available measure achievement points) for the quality performance category by 10 points for groups that register for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirements (83 FR 35948). By reducing the denominator instead of only assigning the group a score of zero measure achievement points (because the group would be unable to submit any CAHPS for MIPS survey data), we are effectively removing the impact of the group's inability to submit the CAHPS for MIPS survey. We believe this reduction in denominator would remove any need for groups to find another measure if they are unable to submit the CAHPS for MIPS survey. Therefore, we proposed to amend § 414.1380 to add paragraph (b)(1)(vii)(B) to state that we will reduce the total available measure achievement points for the quality performance category by 10 points for groups that registered for the CAHPS for MIPS survey but do not meet the minimum beneficiary sampling requirements.

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: Several commenters supported our proposed policy. One commenter believes this will encourage more groups to conduct the survey.

Response: We appreciate the commenters' support.

Comment: One commenter requested clarification on when groups would be notified that they did not meet the beneficiary sampling requirement. The commenter also requested clarification on what protections the agency will institute for groups who must cancel their contracts with survey vendors ''late in the performance period'' when they are notified that they did not meet the beneficiary sampling requirement. The commenter stated that CMS should not hold groups accountable for vendor costs that result from the agency's late notification process.

Response: We do not anticipate the notification process for minimum beneficiary sample requirements will change. CMS provides information on sample design and sample size requirements in the QPP Resource Library to aid groups in deciding whether or not to elect CAHPS for MIPS. CMS sends communication about sample size eligibility to the point of contact provided by each group during the registration process for CAHPS for MIPS. Providing more than one point of contact will help to promote timely delivery of the information on sample size eligibility to the group. Groups should coordinate with their vendors to address any questions regarding costs in the event the group does not meet the beneficiary sampling requirement. For any additional questions please visit the Quality Payment Program website at *qpp.cms.gov.*

Comment: One commenter sought clarification whether CMS would automatically apply the scoring policy or first provide groups with the option to report on an alternate quality measure or improvement activity.

Response: We will not automatically apply the scoring policy. Notifications will be sent twice to groups that have registered for the CAHPS for MIPS survey and who have an insufficient sample size, with the second notification usually occurring in September. These notifications also encourage groups to select other relevant measures that can be completed. We believe that this policy is necessary because the notification late in the performance period might not allow sufficient time for groups to collect and report a different quality measure, however, some practices may have other quality measures (beyond the 6 minimum) that they have been reporting on that could be submitted within the performance period. For groups that submitted 5 or fewer quality measures and do not meet the CAHPS for MIPS sampling requirements, the quality denominator will be reduced by 10 points. For groups that submitted 6 or more quality measures and do not meet the CAHPS for MIPS sampling requirements, we will score the 6 measures with the highest achievement points.

The notification will also encourage groups to select other relevant improvement activities that can be completed within the performance period. We refer readers to section III.I.3.h.(4)(b) of this final rule for further information on submission criteria for the improvement activities performance category.

After consideration of public comments, we are finalizing our proposal to amend § 414.1380 to add paragraph (b)(1)(vii)(B) to state that we will reduce the total available measure achievement points for the quality performance category by 10 points for groups that submit 5 or fewer quality measures and register for the CAHPS for MIPS survey, but do not meet the minimum beneficiary sampling requirements.

We do not want groups to register for the CAHPS for MIPS survey if they know in advance that they are unlikely to be able to meet the sampling requirement, so we solicited comments on whether we should limit this proposed policy to groups for only one MIPS performance period. For example, for the performance period following the application of this proposed policy, a notice could be provided to groups during registration indicating that if the sampling requirement is not met for a second consecutive performance period, the proposed policy will not be applied. This would provide notice to the group that they may not meet the sampling requirement needed for the CAHPS for MIPS survey and may need to look for alternate measures but does not preclude the group from registering for the CAHPS for MIPS survey if they expect to meet the minimum beneficiary sampling requirements in the second MIPS performance period.

We thank commenters for their suggestions and may consider them for future rulemaking.

(iv) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to CY 2017 Quality Payment Program final rule (82 FR 53721 through 53727) for our established policies for scoring topped out measures.

Under § 414.1380(b)(1)(xiii)(A), for the 2020 MIPS payment year, 6 measures will receive a maximum of 7 measure achievement points, provided that the applicable measure benchmarks are identified as topped out again in the benchmarks published for the 2018 MIPS performance period. Under § 414.1380(b)(1)(xiii)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727). As part of our technical updates to § 414.1380(b)(1) outlined in section III.I.3.i.(1)(b) of this final rule, our previously finalized topped out scoring policies are now referenced at § 414.1380(b)(1)(iv).

We refer readers to the 2018 MIPS Quality Benchmarks' file that is located on the Quality Payment Program resource library (*https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html*) to determine which measure

benchmarks are topped out for 2018 and would be subject to the cap if they are also topped out in the 2019 MIPS Quality Benchmarks' file. We note that the final determination of which measure benchmarks are subject to the topped out cap will not be available until the 2019 MIPS Quality Benchmarks' file is released in late 2018.

We did not propose to apply our previously finalized topped out scoring policy to the CAHPS for MIPS survey (82 FR 53726). Because the CAHPS for MIPS survey was revised in 2018 (82 FR 53632), we do not have historical benchmarks for the 2018 performance period, so the topped out policy would not be applied for the 2019 performance period. Last year, we received limited feedback when we sought comment on how the topped out scoring policy should be applied to CAHPS for MIPS survey. In CY 2019 PFS proposed rule, we sought feedback on potential ways we can score CAHPS for MIPS Summary Survey Measures (SSM) (83 FR 35948). For example, we could score all SSMs, which means there would effectively be no topped out scoring for CAHPS for MIPS SSMs, or we could cap the SSMs that are topped out and score all other SSMs. We sought comment on these approaches and additional approaches to the topped out scoring policy for CAHPS for MIPS SSMs. We noted that we encourage groups to report the CAHPS for MIPS survey as it incorporates beneficiary feedback.

We thank commenters for their suggestions and will consider them for future rulemaking.

(v) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmarks Requirements

In the CY 2017 Quality Payment Program final rule (81 FR 77288 through 77289), we established scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement. As part of our technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously finalized scoring policies are now referenced at § 414.1380(b)(1)(i)(A) and (B).

A summary of the current and proposed policies is provided in Table 50. For more of the statutory background and details on current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77288 through 77289 and 82 FR 53727 through 53730, respectively).

TABLE 50: Quality Performance Category: Scoring Measures

Measure type	Description	Scoring rules
Class 1	For the 2018 and 2019 MIPS performance period: Measures that can be scored based on performance. Measures that were submitted or calculated that met the following criteria: (1) Has a benchmark; (2) Has at least 20 cases; and (3) Meets the data completeness standard (generally 60 percent.)	For the 2018 and 2019 MIPS performance period: 3 to 10 points based on performance compared to the benchmark.
Class 2*	For the 2018 and 2019 MIPS performance period: Measures that were submitted and meet data completeness, but do not have both of the following: (1) a benchmark (2) at least 20 cases.	For the 2018 and 2019 MIPS performance period: 3 points * This Class 2 measure policy does not apply to CMS Web Interface measures and administrative claims based measures
Class 3**	For the 2018 and 2019 MIPS performance period: Measures that were submitted, but do not meet data completeness criteria, regardless of whether they have a benchmark or meet the case minimum.	For the 2018 and 2019 MIPS performance period: 1 point except for small practices, which would receive 3 measure achievement points. Beginning with the 2020 MIPS performance period: MIPS eligible clinicians other than small practices will receive zero measure achievement points. Small practices will continue to receive 3 points. **This Class 3 measure policy would not apply to CMS Web Interface measures and administrative claims based measures

As the MIPS program continues to mature, we are looking to find ways to improve our policies, including what to do with measures that do not meet the case minimum. Although many MIPS eligible clinicians can meet the 20-case minimum requirement, we recognize that small practices and individual MIPS eligible clinicians may have difficulty meeting this standard. Although we process data from the CY 2017 MIPS performance period to determine how often submitted measures do not meet case minimums, we invited public comment on ways we can improve our case-minimum policy. In determining future improvements to our case minimum policy, our goal is to

balance the concerns of MIPS eligible clinicians who are unable to meet the case minimum requirement and for whom we cannot capture enough data to reliably measure performance, while not creating incentives for MIPS eligible clinicians to choose measures that do not meet case minimum even though other more relevant measures are available.

We thank commenters for their suggestions and will consider them for future rulemaking.

In the CY 2019 PFS proposed rule (83 FR 35949), we proposed to maintain the policies finalized for the CY 2018 MIPS performance period regarding measures that do not meet the case-minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria for the CY 2019 MIPS performance period, and to amend § 414.1380(b)(1)(i) accordingly.

We also proposed to assign zero points for measures that do not meet data completeness starting with the CY 2020 MIPS performance period and to amend § 414.1380(b)(1)(i)(B)(*1*) accordingly (83 FR 35949). This policy is part of our effort to move toward complete and accurate reporting that reflects meaningful effort to improve the quality of care that patients receive. Measures submitted by small practices would continue to receive 3 points for all future CY MIPS performance periods, although we may revisit this policy through future rulemaking.

We requested comments on the proposals above. These comments and our responses are discussed below.

Comment: Several commenters supported the proposal to maintain the policies finalized for the CY 2018 MIPS performance period regarding measures that do not meet the case minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria for the CY 2019 MIPS performance period.

Response: We thank commenters for their support. However, we want to stress that these policies were not meant to be permanent and as clinicians continue to gain experience with the program we will revisit the appropriateness of these policies in future rulemaking.

Comment: A few commenters did not support our proposal to reduce points for measures that do not meet data completeness to zero starting with the CY 2020 MIPS performance period because of concerns that it would add complexity and burden as clinicians are continuing to learn the program. A few commenters suggested that CMS should return to assigning these measures 3 points or, at a minimum, continue to assign them 1 point or provide special scoring for MIPS eligible clinicians with significant administrative burdens. A few commenters recommended that clinicians should at least get some credit for attempting to report and, through no fault of their own, fail to meet the data completeness threshold, citing the difficulty of getting all the necessary data from hospitals and/or their billing companies to report on 60 percent of all applicable patients.

Response: We understand and recognize commenters' concerns. However, as the program is being fully implemented, we want to ensure that our policies align with our goal of improving quality. This scoring policy was intended to be temporary, and we believe that data completeness is something that is within the direct control of clinicians. Although we understand that many clinicians have administrative burdens and we continuously strive to reduce paperwork, we also believe that it is important to develop policies that align with the program's goal to improve quality of care. By the fourth year of implementation, we believe this policy is no longer needed and that removing this policy helps streamline our scoring policies.

After consideration of public comments, we are finalizing the proposal to maintain the policies finalized for the CY 2018 MIPS performance period regarding measures that do not meet the case-minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria for the CY 2019 MIPS performance period, and the amending of § 414.1380(b)(1)(i) accordingly.

After consideration of public comments, we are finalizing our proposal to assign zero points for measures that do not meet data completeness starting with the CY 2020 MIPS performance period and to amend § 414.1380(b)(1)(i)(B)(1) accordingly. Measures submitted by small practices will continue to receive 3 points for all future MIPS performance periods.

(vi) Scoring Flexibility for Measures With Clinical Guideline Changes During the Performance Period

In the CY 2018 Quality Payment Program final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD–10 updates based only on the first 9 months of the 12-month performance period (for example, January 1, 2018, through September 30, 2018, for the 2018 MIPS performance period). We noted that performance on measures that are not significantly impacted by changes to ICD–10 codes would continue to be assessed on the full 12-month performance period (January 1 through December 31). Lastly, we finalized that we will publish the list of measures requiring a 9-month assessment process on the CMS website by October 1st of the performance period if technically feasible, but by no later than the beginning of the data submission period (for example, January 2, 2019, for the 2018 MIPS performance period). As part of our technical updates to § 414.1380(b)(1) outlined in section III.I.3.i.(1)(b) of this final rule, these previously finalized policies are now referenced at § 414.1380(b)(1)(viii).

We remain concerned about instances where clinical guideline changes or other changes to evidence supporting a measure occur during the performance period that may significantly impact a measure. Clinical guidelines and protocols developed by clinical experts and specialty medical societies often underpin quality measures. At times, measure stewards must amend quality measures to reflect new research and changed clinical guidelines, and sometimes, as a result of the change in these guidelines, adherence to guidelines in the existing measures could result in patient harm or otherwise provide misleading results as to good quality care. We sought comment in the CY 2018 Quality Payment Program final rule regarding whether we should apply scoring flexibility to measures significantly impacted by clinical guideline changes (82 FR 53716). We refer readers to the CY 2019 PFS proposed rule for a summary of the comments we received (83 FR 35949 through 35950).

We remain concerned that findings of evidence-based research, providing the basis for sound clinical practice guidelines and recommendations that are the foundation of a quality measure, may change outside of the rulemaking cycle. As the clinical evidence and guidelines change, approved measures may no longer reflect the most up-to-date clinical evidence and could be contrary to patient well-being. There may be instances in which changes to clinical guidelines are so significant, that an expedited review is needed outside of the rulemaking cycle because measures may result in a practice that is harmful to patients. To further align with policies adopted within other value based programs such as the Hospital VBP Program (83 FR 20409), we proposed to suppress a measure without rulemaking, if during the performance period a measure is

significantly impacted by clinical guideline changes or other changes that CMS believes may pose patient safety concerns (83 FR 35950). We would rely on measure stewards for notification in changes to clinical guidelines. We will publish on the CMS website suppressed measures whenever technically feasible, but by no later than the beginning of the data submission period.

In the CY 2019 PFS proposed rule (83 FR 35950), we proposed policies to provide scoring flexibility in the event that we need to suppress a measure during a performance period. Scoring for a suppressed measure would result in a zero achievement points for the measure and a reduction of the total available measure achievement points by 10 points. We believe that this approach effectively removes the impact of the eligible clinician's inability to receive measure achievement points for the measure, if a submitted measure is later suppressed.

We also proposed to add a new paragraph at § 414.1380(b)(1)(vii) that, beginning with the 2019 MIPS performance period, CMS will reduce the total available measure achievement points for the quality performance category by 10 points for MIPS eligible clinicians that submit a measure significantly impacted by clinical guideline changes or other changes that CMS believes may pose patient safety concerns (83 FR 35950).

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: A few commenters supported the proposal because it holds the clinician harmless from clinical guideline changes that impact quality measures. One commenter noted that it is important that clinicians are protected from any adverse impacts on their scoring when they are following updated clinical guidelines to ensure proper patient care and safety.

Response: We appreciate the support of the proposal.

Comment: Several commenters did not support the proposal. Commenters questioned whether there would be an expectation that the clinician would continue collecting data on the measure, or whether they would be allowed to submit the measure with less than 12 months' data for the suppressed measure. A few commenters stated the policy should only be applied if the clinical guideline change relates to patient harm or patient safety, in which case data collection on the quality measure should cease immediately. A few commenters indicated that clinicians invest significant time and resources to assess and improve their performance over the course of the performance period, and thus suppressing the scoring of a quality measure, unless patient harm is involved, does not appropriately recognize these efforts. One commenter suggested that CMS establish an attestation process through the EIDM system to allow clinicians the option to attest their intent to report the measure, and CMS should adjust their scoring accordingly.

Response: We appreciate the commenters' suggestions. There are rare instances in which changes to clinical knowledge and guidelines can significantly impact measure specifications and the intent of the measure, which we believe requires suppression of scoring so as to encourage the clinicians to follow the guidelines that are best for the patient, rather than tracking the guidelines that were finalized in the measure set, which may negatively impact patient care. Clinical guideline changes that occur between rulemaking cycles would need to be significant enough that the change in the most up-to-date clinical evidence could result in patient harm if the clinician does not follow these new guidelines or otherwise provide misleading results as to what is measured as good quality care. We believe there are rare instances in which we should not delay our support of the use of the most current clinical evidence by continuing to require the collection of data and scoring the measure until the next rulemaking cycle. For example, a guideline may be updated because clinical evidence indicates that a new medication should replace a medication specified in a quality measure. If this occurs between rulemaking cycles, we would not want the scoring policy to disadvantage the clinicians adopting the updated guideline and using the recommended medication. We envision that this policy would be applied in two circumstances. First, there is a newly issued or updated guideline where there is wide consensus that would result in a significant change to a quality measure. In these cases, it would be expected that clinicians would adopt clinical processes to support the new guideline which may not be compatible with the existing measures and could provide misleading results or patient harm. In this case, we anticipate the quality measure would be reviewed and updated during the next rulemaking process. Second, we envision using this policy in rare cases where there is a new or revised guideline, even if there is no broad consensus within the specialty, because some clinicians will begin to adopt the new guideline which would not be consistent with the quality measures and scoring the measure could cause misleading results for those clinicians. We believe it important to suppress the measure until guideline and quality measure are reviewed by the Measures Application Partnership (MAP) and other processes to support the Annual List of Measures, including rulemaking. We do not envision using this policy solely based on indications that guideline revisions are anticipated but not completed. Until the guideline is updated, clinicians would be expected to follow the existing guideline and it would not be prudent to use the scoring policy. Nor would we activate the policy if the guideline change does not significantly impact the measure results.

In the event of the need for the special scoring policy, we would communicate to clinicians through multiple channels regarding the changes. We appreciate that clinicians invest significant time and resources to select measures, we also believe it is critical that the measure results do not cause patient harm or otherwise harm clinician performance by scoring potentially misleading data. We believe suppressing the measure and reducing the total possible achievement points by 10 would recognize this effort by not forcing clinicians in the middle of a performance to select a new measure to report.

We appreciate the time and resources clinicians expend to collect data for a quality measure; however, we believe the policy will only be used in rare occasions, which will limit disruption to clinicians. We also believe that the policy will not disadvantage the clinician and will ''hold harmless'' any clinician submitting data on the measure. Scoring would be suppressed for any clinician that submitted data on the measure prior to the announcement. Similarly, given how rarely we anticipate we will need to use this policy, we do not believe we require a process for attestation regarding which measures will be selected prior to the performance period.

Comment: A few commenters recommended regular communication between CMS and measure stewards and supported the proposal that it would be the responsibility of the measure steward to notify CMS of changes to the clinical guidelines that may impact existing quality measures. One commenter requested that CMS allow multiple sources, rather than just measure stewards, to identify potential significant changes to clinical guidelines that may pose patient safety

risks. Another commenter stated that only measure stewards should notify CMS of significant changes to clinical guidelines.

Response: We regularly monitor changes to quality measures and work closely with clinical organizations that maintain clinical guidelines and measure stewards to identify quality measures impacted by significant changes to clinical guidelines during the performance period. We will mainly rely on measure stewards to identify significant changes, especially those relating to potential patient harm. We clarify that measure stewards are not necessarily the owner and/or developer of the clinical guidelines. In many instances measure stewards defer to the clinical organizations or stakeholders who own, maintain and update the clinical guideline when changes are warranted. We intend to continue to work collaboratively with measure stewards, clinical organizations, measure owners and other key stakeholders responsible for the maintenance of these guidelines prior to deciding to suppress the scoring of a measure. As noted above, if we decide to suppress these measures, we would notify clinicians through multiple means.

After consideration of public comments, we are finalizing a modification of our proposal and adding a new paragraph at § 414.1380(b)(1)(vii) stating that, beginning with the 2021 MIPS payment year, we will reduce the denominator of available measure achievement points for the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise provide misleading results as to good quality care. To clarify, we regularly monitor changes to quality measures and clinical guidelines and we will rely mainly on measure stewards, who often defer to the clinical organizations or other stakeholders who own, maintain and update the clinical guideline when a guideline change is warranted, for notification in changes to clinical guidelines. We will publish on the CMS website suppressed measures whenever technically feasible, but by no later than the beginning of the data submission period.

(vii) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2021 MIPS payment year, we will validate the availability and applicability of quality measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the validation process for the 2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

As discussed in section III.I.3.h.(1)(b) of this final rule, we proposed to revise our terminology regarding data submission. This updated terminology will more accurately reflect our current submissions and validation policies. In the CY 2019 PFS proposed rule (83 FR 35950), we proposed to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy would not apply to eCQMs even if they are submitted by a registry.

We note that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician's score according to the reweighting policies described in sections III.I.3.i.(2)(b)(ii) and III.I.3.i.(2)(b)(iii) of this final rule.

We did not receive any comments on this proposal.

We are finalizing our proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen.

(viii) Small Practice Bonus

In the CY 2018 Quality Payment Program final rule (82 FR 53788), we finalized at § 414.1380(c)(4) to add a small practice bonus of 5 points to the final score for the 2020 MIPS payment year for MIPS eligible clinicians, groups, APM Entities, and virtual groups that meet the definition of a small practice as defined at § 414.1305 and submit data on at least one performance category in the 2018 MIPS performance period.

We continue to believe an adjustment for small practices is generally appropriate due to the unique challenges small practices experience related to financial and other resources, as well as the performance gap we have observed (based on historical PQRS data) for small practices in comparison to larger practices. We believe a small practice bonus specific to the quality performance category is preferable for the 2021 MIPS payment year and future years. We believe it is appropriate to apply a small practice bonus points to the quality performance category based on observations using historical data, which indicates that small practices are less likely to submit quality performance data, less likely to report as a group and use the CMS Web Interface, and more likely to have lower performance rates in the quality performance category than other practices. We want the final score to reflect performance, rather than the ability and infrastructure to support submitting quality performance category data.

We considered whether we should continue to apply the small practice bonus through bonus points in all 4 performance categories, but believe the need for doing so is less compelling. The improvement activities performance category already includes special scoring for small practices (please refer to § 414.1380(b)(3) and see section III.I.3.i.(1)(e) of this final rule for more information). In addition, for the Promoting Interoperability performance category, small practices can apply for a significant hardship exception if they have issues acquiring an EHR (see section III.I.3.h.(5) of this final rule). Finally, the cost performance category does not require submission of any data; therefore, there is less concern about a small practice being burdened by those requirements. For these reasons, we proposed to transition the small practice bonus to the quality performance category.

Starting with the 2021 MIPS payment year, we proposed at § 414.1380(b)(1)(v)(C) to add a small practice bonus of 3 points in the numerator of the quality performance category for MIPS eligible clinicians in small practices if the MIPS eligible clinician submits data to MIPS on at least 1 quality measure (83 FR 35950). Because MIPS eligible clinicians in small practices are not measured on the readmission measure and are not able to participate in the CMS Web Interface, they generally have a quality performance category denominator of 60 total possible measure achievement points. Thus, our proposal of 3 measure bonus points generally represents 5 percent of the quality performance category score. As described in section III.I.3.i.(2)(b)(iii) of this final rule, for clinicians in many small practices, the

quality performance category weight may be up to 85 percent of the final score. (For example, if a small practice applies for the Promoting Interoperability significant hardship application and does not meet the sufficient case minimum for cost measures, then the weights of Promoting Interoperability and cost performance categories are redistributed to quality and the quality performance category weight would be 85 percent.)

With a weight of 85 percent, a small practice bonus of 3 points added to the quality performance category will result in 4.25 bonus points added to the final score for clinicians in small practices.[29] We believe this is appropriate because it is similar to the impact of the small practice bonus we finalized for the 2020 MIPS payment year (5 points added to the final score). Although we recognize that the impact of the small practice bonus for MIPS eligible clinicians in small practices who do not receive reweighting for the cost and/or Promoting Interoperability performance categories will be less than 4.25 points added to the final score, we believe a consistent approach is preferable for simplicity, and we do not believe that a larger bonus is appropriate as that could potentially inflate the quality performance category score and the final score and mask poor performance.

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: Some commenters supported the proposal and recommended that CMS continue to evaluate the least complicated method to apply the small practice bonus in future years. One commenter indicated that a small practice bonus should be retained as long as possible to support small practices. A few commenters recommended stability over several performance periods for the small practice bonus, with incentives maintained over time with no changes from year-to-year. One commenter recommended that CMS codify the small practice bonus for at least 3 years.

Response: We will evaluate MIPS data to determine whether any future adjustment is still needed based on analysis of the performance of small group practices compared to larger practices. While we appreciate commenters' recommendations for stability in the bonus over time, we believe that we must be guided by the annual analysis of small practices' experience with the Quality Payment Program to determine if the adjustment is still warranted. Any extension to the small practice bonus would be proposed through future rulemaking.

Comment: One commenter recommended bonus points be applied evenly across the following performance categories: Quality; improvement activities; and Promoting Interoperability. Another commenter indicated that it did not support a bonus based on the size or location of the practice and recommended aligning the four performance categories and awarding bonuses for activities that apply across the performance categories. One commenter recommended that the clinician be allowed the option to have bonus points added to a performance category of his or her choice. A few commenters stated that small practices are consistently disadvantaged compared to large health systems for not only quality reporting, but also requirements of other performance categories including Promoting Interoperability and improvement activities.

Response: We considered dividing the small practice bonus between the performance categories; however, we believe that spreading the bonus across performance categories may not be appropriate, and the other performance categories already take small practices into account. As stated earlier, the improvement activities performance category already includes special scoring for small practices. The Promoting Interoperability performance category has a hardship exception for small practices. The cost performance category does not require submission of any data. For these reasons, we believe that it is appropriate for the small practice bonus to be in the quality performance category.

Comment: Many commenters did not support reducing the small practice bonus from 5 points in the final score to 3 measure bonus points in the quality performance category because of concerns that small practices will receive less points, which may not support small practices sufficiently. Several commenters stated that the bonus needs to be significant enough so that adjustments provide more equitable scoring to small practices. One commenter recommended that if the bonus is applied in the quality performance category, 5 points should be awarded.

Response: We understand commenters' concerns. We recently estimated quality performance category scores for the 2019 MIPS performance period using data from the 2017 MIPS performance period. This new data was not available before the publication of the proposed rule. In this new analysis, we found that the number of eligible clinicians whose quality performance category was reweighted to 85 percent of the final score was lower than we anticipated. We found that for approximately three-fourths of the clinicians in small practices (and those not subject to the APM scoring standard), quality was weighted between 45 and 60 percent when we applying our proposed CY 2019 performance period policies to MIPS year 1 data. Thus, the 3 bonus points proposed (which generally represents 5 percent of the quality performance category score for small practices) would represent a lower overall bonus when added to the final score than we had originally anticipated. While we still believe that the small practice bonus should be applied to the quality category performance score, it was not our intention to lower the overall impact on the final score.

With our updated impact analysis in this final rule, we discovered that trends identified when we originally established the small practice bonus still exist. For example, in the CY 2018 Quality Payment Program proposed rule (82 FR 30139 through 30140), we noted that clinicians in practices with more than 100 clinicians may perform better in the Quality Payment Program on average compared to clinicians in smaller practices. We believed this trend was due primarily to two factors: Participation rates and Web Interface reporting. While we estimate more clinicians in small practices are participating in MIPS in our updated model in this final rule compared to our estimates in the 2019 PFS proposed rule, we still see a gap in quality participation when comparing clinicians in small practices to clinicians in large practices (89.8 percent compared to 100.0 percent respectively). We also noticed a discrepancy in performance among those who submitted data for the quality performance category. Prior to applying a small practice bonus, the average quality score for submitters in small practices was 62 percent compared to 82 percent for clinicians in large groups. It is unclear whether the cause of the discrepancy is related to Web Interface reporting, to performance, or to factors related to data collection. While we continue to analyze the implications of these results, we believe increasing the small practice bonus from 3 to 6 measure bonus points for 1 year would be appropriate to ensure that we are correctly incentivizing participation

[29] We get 4.25 points using the following calculation: (3 measure bonus point/60 total measure points) * 85 percent * 100 = 4.25.

during the transition years without lowering the impact of the small practice bonus. The other bonuses in the quality performance category (for high-priority measures and end-to-end electronic reporting) are capped at 10 percent of the denominator of the quality performance category, which in almost all cases for small practices is 60 total possible measure achievement points. Setting the bonus at 6 points generally represents 10 percent of the quality performance category score. For those clinicians who have six measures and for whom the quality performance category weight is 45 percent, then the small practice bonus would equate to 4.5 final score points. For those with a quality performance category weight of 60 percent, the small practice bonus would equate to 6 final score points. We recognize that for some practices whose quality score is reweighted to 85 percent of their final score, this may account for a large part of the final score; however, based on the new CY 2017 MIPS performance period data, we do not believe this will be the case for a large proportion of small practices. On average, we estimate this change to the small practice bonus will add 4.4 points to the final score for clinicians in small practices who submit quality information to MIPS.

We want to remind readers that the small practice bonus was only meant to be temporary and as we further analyze CY 2017 MIPS performance period data we expect that the bonus will likely be reduced or removed in future rulemaking. While we currently believe that it is appropriate due to the unique challenges small practices experience related to financial and other resources, as well as the performance gap for small practices in comparison to larger practices, we believe that upon further analysis of CY 2017 MIPS performance period data the small practice bonus may not address the underlying reasons for the disparate performance between small practices and other clinicians. As a result, we intend to revisit this bonus during next year's rulemaking cycle.

Comment: Many commenters stated that the small practice bonus should not be embedded in the quality performance category and should be a standalone bonus at the final score level to reduce complication in scoring, provide greater flexibility, and reduce burden on small practices. Several commenters stated that the quality performance category is contributing less to the final score, since it is being reduced from 50 percent to 45 percent, and may be reduced in the future, which would continually reduce the small practice bonus. A few commenters noted that moving the bonus to the quality performance category provides additional scoring complexity and will not be equitable, since the bonus will be applied to small practices regardless of the number of measures submitted for the quality performance category. For example, the bonus of 3 points for a clinician being scored on one quality measure would translate to a higher contribution to the final score than applying a bonus of 3 points for a clinician being scored on 6 measures. One commenter was concerned that moving the small practices bonus to the quality performance category will remove the opportunity for a bonus from clinicians who do not, or cannot, report quality measures.

Response: We believe it is more appropriate for the small practice bonus to reside in the quality performance category because small practices have different reporting options than larger practices (for example, only small practices are able to submit data via Medicare Part B claims, but they cannot do so via the Web Interface), and burdens associated with submitting data could affect the quality performance category score. We also believe there is at least one quality measure that is relevant to the vast majority of clinicians in the Quality Payment Program. The small practice bonus is available to any small practice submitting at least one quality measure. We reiterate that we have special policies to assist small practices in the improvement activities and Promoting Interoperability performance categories, which limit the need for a small practice bonus in those performance categories. The cost performance category does not require additional burden to submit information and does not have the same reporting restrictions as the quality performance category. Over time, we will monitor the weight of the quality performance category and the small practice contribution to the final score to determine if the amount of the small practice bonus needs to be adjusted. We acknowledge that moving the small practice bonus may add to the complexity of scoring, but, on balance, we believe it is appropriate to encourage the submission of quality measures. Also, we note that previously the small practice bonus was added to the final score regardless of the number of quality measures that were submitted. Although the bonus is now in the quality category, the equity of the bonus does not change with this policy. In addition, we will continue to monitor data to evaluate the performance of small practices in the quality performance category to determine differences between small and large practices and propose any necessary changed in future rulemaking.

Comment: One commenter requested clarification on how CMS will extend the small practice bonus to MIPS APMs.

Response: The small practice bonus will be applied to the final quality performance category score for MIPS APMs at the MIPS APM entity-level. For further discussion on our MIPS APM scoring policies, we refer readers to section III.I.3.h.(6) of this final rule.

Comment: One commenter indicated that the bonus score changes based on the reweighting of certain performance categories for clinicians, which they believe gives an advantage to clinicians who have a higher percentage of the score weighed to the quality performance category. One commenter did not support moving the bonus to the quality performance category, because the potential to reweight performance categories results in a bonus that is not predictable during the performance period for clinicians, who do not know which performance categories will be reweighted.

Response: We appreciate that there might be differences in the reweighting of performance categories for small practices. As stated previously, we believe the quality performance category is an important component of the Quality Payment Program. While it was our intention to apply a bonus to the quality performance category with a cap approximately equal to the final score small practice bonus for the 2018 MIPS performance period/2020 MIPS payment year, we recognize that due to reweighting, the magnitude of the bonus will vary; however, in order to reduce complexity, we believe that a uniform bonus of 6 measure bonus points added to the numerator for quality is appropriate. As discussed in our response above, the policy is consistent with our other quality performance category bonuses because, for most clinicians, 6 measure bonus points is 10 percent of the 60-point denominator within the quality performance category. In addition, clinicians can predict whether their scores will be reweighted based on eligibility and special status information in the lookup tool. We will monitor the extent to which reweighting the quality performance category contribution to the final score affects quality measure bonus points awarded and so that we may keep the bonuses as equitable as possible.

Comment: A few commenters indicated that the small practice bonus should be extended to rural practices and different practice sizes. One

commenter recommended extending the bonus to all rural practices, regardless of practice size, because of the belief that all rural practices struggle with access to resources. One commenter indicated a belief that the program offers few bonus points and opportunities for high scores for small and rural practices, which may result in a skewed scoring system that rewards large groups with resources to support participation. One commenter recommended that the small practice bonus be available to groups with 10 or less participants, to align the definition with virtual group requirements. One commenter indicated that groups with more than 15 clinicians should be considered a small practice for purposes of the bonus.

Response: As discussed in the CY 2018 Quality Program final rule (82 FR 53778), we observed that performance for rural MIPS eligible clinicians is very similar to performance for non-rural MIPS clinicians once we account for practice size, so we do not believe a bonus for MIPS clinicians practicing in a rural setting is appropriate at this time. Additionally, we discussed in the CY 2018 Quality Payment Program final rule (82 FR 53777) that we believe it is important to maintain a consistent definition of small practices within the Quality Payment Program. In addition, we have not seen discrepancies between simulated MIPS final scores for practices of 16 to 24 clinicians and for practices of 15 or fewer clinicians. However, we will continue to monitor this issue and assess whether there are scoring differences between small rural and small urban practices and, if so, address it in future rulemaking.

Comment: One commenter requested that CMS articulate how the policies proposed align with other CMS efforts to support the long-term, sustainable transformation of small practices and those serving rural and underserved communities.

Response: We recognize the unique challenges that eligible clinicians in small practices face and have established a unique set of policies to reduce their participation burden and ease their transition into the program. The special policies include the provisions related to the assignment of 3 points for measures that do not meet data completeness criteria which are finalized in section III.I.3.i.(1)(b)(v) of this final rule; the significant hardship exception for Promoting Interoperability performance category and the associated reweighting policies available for small practices that do not have CEHRT (2018 Quality Payment Program final rule (82 FR 53683)); special scoring provisions available for the improvement activities performance category (82 FR 53656), and the provisions related to the low-volume threshold at section III.I.3.c. of this final rule. We are also continuing the Small, Underserved, and Rural Support initiative, which provides no-cost technical assistance to MIPS eligible clinicians in small practices. The initiative offers customized, one-on-one support to help MIPS eligible clinicians in small practices familiarize themselves with the program requirements, develop a strategy to successfully participate, and continue improving outcomes for beneficiaries. See: *https://qpp.cms.gov/about/small-underserved-rural-practices* for further information.

As discussed in the response above, we have estimated quality performance category scores using data from the 2017 MIPS performance period. As a result of this new data that was not available before the publication of the proposed rule we believe increasing the small practice bonus from 3 to 6 measure bonus points would be appropriate to ensure that we are correctly incentivizing participation without lowering the final score of small practices. The other bonuses in the quality performance category (for high-priority measures and end-to-end electronic reporting) are capped at 10 percent of the denominator of the quality performance category, which in almost all cases for small practices is 60 total possible measure achievement points. Setting the bonus at 6 points generally represents 10 percent of the quality performance category score.

After consideration of public comments, we are not finalizing as proposed the proposal to amend § 414.1380(b)(1)(v)(C) to add, beginning with the 2021 MIPS payment year, a small practice bonus of 3 measure bonus points in the numerator of the quality performance category for MIPS eligible clinicians in small practices if the MIPS eligible clinician submits data to MIPS on at least 1 quality measure. Instead, based on the rationale discussed previously, we are finalizing the amendment of § 414.1380(b)(1)(v)(C) to add, beginning with the 2021 MIPS payment year, a small practice bonus of 6 measure bonus points in the numerator of the quality performance category for MIPS eligible clinicians in small practices if the MIPS eligible clinician submits data to MIPS on at least 1 quality measure.

(ix) Incentives To Report High-Priority Measures

In the CY 2017 Quality Payment Program final rule, we established a cap on high-priority measure bonus points for the first 2 years of MIPS at 10 percent of the denominator (total possible measure achievement points the MIPS eligible clinician could receive in the quality performance category) of the quality performance category (81 FR 77294). As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously established policy on incentives to report high-priority measures is now referenced at § 414.1380(b)(1)(v)(A). In the CY 2019 PFS proposed rule, we proposed to maintain the cap on measure bonus points for reporting high-priority measures for the 2021 MIPS payment year, and to amend § 414.1380(b)(1)(v)(A)(1)(ii), accordingly (83 FR 35951).

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: One commenter supported the proposal to maintain the cap on measure bonus points for reporting high-priority measures for the 2019 performance period/2021 MIPS payment year.

Response: We thank the commenter for its support of our proposal.

After consideration of public comments, we are finalizing our proposal to maintain the cap on measure bonus points for reporting high-priority measures for the 2021 MIPS payment year, and to amend § 414.1380(b)(1)(v)(A)(1)(ii), accordingly.

We established the scoring policies for high-priority measure bonus points in the CY 2017 Quality Payment Program final rule (81 FR 77293). We noted that, in addition to the required measures, CMS Web Interface reporters may also report the CAHPS for MIPS survey and receive measure bonus points for submitting that measure (81 FR 77293). We refer readers to § 414.1380(b)(1)(v)(A) for more details on the high-priority measure bonus points scoring policies.

For the 2021 MIPS payment year, we proposed to modify the policies finalized in the CY 2017 Quality Payment Program final rule (and amend § 414.1380(b)(1)(v)(A) accordingly) to discontinue awarding measure bonus points to CMS Web Interface reporters for reporting high-priority measures (83 FR 35951). As we continue to move forward in implementing the MIPS program, we no longer believe that it is appropriate to award CMS Web Interface reporters measure bonus points to be consistent with other policies regarding selection of measures. Based on additional data analyses since the first-year policy was implemented,

we have found that practices that elect to report via CMS Web Interface generally perform better than other practices that select other collection types. Therefore, the benefit of the bonus points is limited and instead we believe will create higher than normal scores. Bonus points were created as transition policies which were not meant to continue through the life of the program. Measure bonus points are also used to encourage the selection of additional high-priority measures. As the program matures, we have established other policies related to measures selection, such as applying a cap of 7 measure achievement points if a clinician selects and submits a measure that has been topped out for 2 or more years; however, we have excluded CMS Web Interface reporters from the topped out policies because reporters have no choice in measures. By the same logic, since CMS Web Interface reporters have no choice in measures, we do not believe it is appropriate to continue to provide additional high-priority measure bonuses for reporting CMS Web Interface measures. We note the CMS Web Interface users may still elect to report the CAHPS for MIPS survey in addition to the CMS Web Interface, and if they do, they would receive the high priority bonus points for reporting the survey.

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: A few commenters supported the proposal to discontinue awarding high-priority measure bonus points to CMS Web Interface reporters because it strengthens the incentive to report high-priority measures for those who actively elect to report these measures and reduces the advantage for the large practices that are able to report through CMS Web Interface. One commenter expressed support for the proposal because groups who report via Web Interface perform better than groups who use alternative data collection types, have an increased probability of earning higher quality performance category and overall higher MIPS scores, and can still earn bonus points for reporting CAHPS for MIPS survey measures.

Response: We thank the commenters for their support as we look for ways to improve our scoring policy.

Comment: Several commenters did not support the proposal to remove high-priority bonus points for CMS Web Interface reporters. One commenter stated it would disincentivize clinicians and groups from participating in APMs and stated that ACOs do not have an alternative submission method. Another commenter suggested that the bonus points should continue for non-MIPS APM participants because these submitters voluntarily choose a larger and more difficult and complex set of measures than are required. A few commenters stated that there is not an option to submit additional high-priority measures to earn these bonus points and that this proposal disadvantages ACOs which have demonstrated a high commitment to quality as evidenced by recent MIPS performance feedback reports. One commenter recommended that CMS should not remove all bonus points until it proposes to do the same for the other collection types. A few commenters suggested delaying removal of the bonus points to allow clinicians sufficient notice and until further information and insight is gained about performance in these measures. One commenter stated that the policy penalizes Web Interface reporters for their commitment to measures that truly reflects their practices.

Response: The high priority measure bonus points were intended to encourage the selection of certain measures. As we work towards improving our scoring policy to align with our goals of improving quality of care, we no longer believe we should award bonus points to CMS Web Interface reporters because they do not select individual measures to report, rather the Web Interface is a measurement set. This bonus policy was meant to be temporary, and we believe that as the MIPS program goes into its third year it is an appropriate time to begin to limit the assignment of high priority bonus points. While we recognize the commenters' concerns, the removal of the bonus was not intended to penalize Web Interface reporters and we still have several special policies available for Web Interface reporters. We have excluded CMS Web Interface reporters from the topped out measure cap (82 FR 53576), so although they are no longer able to receive this bonus, they are still able to receive maximum achievement points for all measures, even though some of the CMS Web Interface measures may be considered topped out. Additionally, CMS Web Interface reporters are still able to receive measure bonus points for reporting the CAHPS for MIPS survey and for end-to-end reporting.

We will consider commenters' concerns in future rulemaking.

After consideration of public comments, we are finalizing our proposal, beginning with the 2021 MIPS payment year, to discontinue awarding measure bonus points to CMS Web Interface reporters for reporting high-priority measures and to amend § 414.1380(b)(1)(v)(A) accordingly.

As part of our move towards fully implementing the high value measures as discussed in section III.I.3.h.(2)(b)(iv) of this final rule, we believe that bonus points for high priority measures for all collection types may no longer be needed, and as a result, we intend to consider in future rulemaking whether to modify our scoring policy to no longer offer high priority bonus points after the 2021 MIPS payment year (83 FR 35951).

We thank commenters for suggestions and may consider them for future rulemaking.

(x) Incentives To Use CEHRT To Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT. Under § 414.1380(b)(1)(xv), 1 bonus point is available for each quality measure submitted with end-to-end electronic reporting, under certain criteria. In order to receive the bonus for end-to-end reporting, eligible clinicians must use the 2015 Edition CEHRT. We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77297) and section III.I.3.h.(2)(b)(i) of this final rule for further discussion on our certification requirements for the end-to-end reporting bonus. As part of our proposed technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously established electronic end-to-end reporting bonus point scoring policy is now referenced at § 414.1380(b)(1)(v)(B).

In the CY 2019 PFS proposed rule, we proposed to maintain the cap on measure bonus points for end-to-end electronic reporting for the 2021 MIPS payment year (83 FR 35951). We also proposed to continue to assign bonus points for end-to-end electronic reporting for the 2021 MIPS payment year, as we have seen that this policy encourages electronic reporting. We proposed to amend § 414.1380(b)(1)(v)(B) accordingly.

We requested comments on the proposal above. These comments and our responses are discussed below.

Comment: Several commenters supported maintaining the bonus points for end-to-end electronic reporting for the 2021 MIPS payment year and requested that CMS continue to assign them in future years. One commenter

noted that continuing the bonus points beyond the 2021 MIPS payment year will allow clinicians in smaller practices who are not yet capable of end-to-end electronic reporting an opportunity to do so. Another commenter supported the bonus only if those that are not able to submit using end-to-end electronic reporting have access to CEHRT at no cost to the clinician. One commenter suggested that CMS continue the bonus points until the program is more mature and additional data on performance and reporting is gathered. A few commenters who supported maintaining the bonus points beyond the 2021 MIPS payment year, stated that the removal of the bonus points would result in increased administrative burden to CMS and clinicians, and would adversely affect the ability for clinicians with limited quality measures available to earn bonus points.

Response: While we signaled our intent to discontinue bonus points for end-to-end electronic reporting in the future (83 FR 35951), we are taking into consideration the suggestions we received on additional ways we can incentivize and encourage these reporting methods for future rulemaking.

After consideration of public comments, we are finalizing our proposals to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2021 MIPS payment year and to amend § 414.1380(b)(1)(v)(B) accordingly.

We also proposed to modify our end-to-end reporting bonus point scoring policy based on the changes to the submission terminology discussed in section III.I.3.h.(1)(b) of this final rule (83 FR 35951). We proposed that the end-to-end reporting bonus can only apply to the subset of data submitted by direct, log in and upload, and CMS Web Interface that meet the criteria finalized in the CY 2017 Quality Payment Program final rule (81 FR 77297 through 77298). However, the end-to-end reporting bonus would not be applied to the claims submission type because it does not meet the criteria discussed above. This is not a policy change but rather a clarification of our current process in light of the proposed terminology changes.

We did not receive any comments on this proposal.

After consideration of public comments, we are finalizing our proposals to modify our end-to-end reporting bonus point scoring policy based on the changes to the submission terminology and only apply the bonus to the subset of data submitted by direct, log in and upload, and CMS Web Interface that meet the criteria finalized in the CY 2017 Quality Payment Program final rule (81 FR 77297 through 77298).

As discussed in section III.I.3.i.(1)(b)(x) of this final rule, we believe that in the future, bonus points for end-to-end reporting for all submission types will no longer be needed as we move towards fully implementing the program, and as a result we intend to consider in future rulemaking modifying our scoring policy to no longer offer end-to-end reporting bonus points after the 2021 MIPS payment year (83 FR 35951). Consistent with the section 1848(q)(5)(B)(ii) of the Act, which requires the Secretary to encourage the use of CEHRT for quality reporting, we will continue to be committed to ways that we can incentivize and encourage these reporting methods. We invited comment on other ways that we can encourage the use of CEHRT for quality reporting.

We thank commenters for suggestions and will consider them for future rulemaking.

(xi) Calculating Total Measure Achievement and Measure Bonus Points

(A) Calculating Total Measure Achievement and Measure Bonus Points for Non-CMS Web Interface Reporters

In the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77300, and 82 FR 53733 through 53736, respectively), we established the policy for calculating total measure achievement and measure bonus points for Non-CMS Web Interface reporters. We refer readers to § 414.1380(b)(1) for more details on these policies.

We did not propose any changes to the policy for scoring submitted measures collected across multiple collection types; however, we provided a summary of how this policy will be scored using our new terminology (83 FR 35952). We noted that CMS Web Interface and facility-based measurement each have a comprehensive set of measures that meet the proposed MIPS category requirements. As a result, we did not combine CMS Web Interface measures or facility-based measurement with other ways groups can be scored for data submitted for MIPS (other than CAHPS for MIPS, which can be submitted in conjunction with the CMS Web Interface). We refer readers to section III.I.3.i.(1)(d) of this final rule for a description of our policies on facility-based measurement (83 FR 35956 through 35963).

Although we have established a policy to account for scoring in circumstances when the same measure is collected via multiple collection types, we anticipate that this will be a rare circumstance and do not encourage clinicians to submit the same measure collected via multiple collection types. Table 51 is included in this final rule for illustrative purposes and clarity due to the changes in terminology discussed in section III.I.3.h.(1)(b) of this final rule (83 FR 35893 through 35895). For further discussion of this example, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53734).

BILLING CODE 4120–01–P

TABLE 51: Example Assigning Total Measure Achievement and Bonus Points for an Individual MIPS Eligible Clinician Who Submits Measures Collected Across Multiple Collection Types

	Measure Achievement Points	Six Scored Measures	High-Priority Measure Bonus Points	Incentive for CEHRT Measure Bonus Points
MIPS CQMs				
Measure A (Outcome)	7.1	7.1 (Outcome measure with highest achievement points)	(required outcome measure does not receive bonus points)	
Measure B	6.2 (points not considered because it is lower than the 8.2 points for the same claims measure)			
Measure C (high priority patient safety measure that meets requirements for additional bonus points)	5.1 (points not considered because it is lower than the 6.0 points for the same claims measure)		1	
Claims				
Measure A (Outcome)	4.1 (points not considered because it is lower than the 7.1 points for the same MIPS CQM)		No bonus points because the MIPS CQM of the same measure satisfies requirement for outcome measure.	
Measure B	8.2	8.2		
Measure C (High priority patient safety measure that meets requirements for additional bonus points)	6.0	6.0	No bonus (Bonus applied to the MIPS CQMs)	
Measure D (outcome measure <50% of data submitted)	1.0		(no high priority bonus points because below data completeness)	
EHR (direct submission using end-to-end)				***Reporting that meets CEHRT /bonus point criteria***
Measure E	5.1	5.1		1
Measure F	5.0	5.0		1
Measure G	4.1			1
Measure H	4.2	4.2		1
Measure I (high priority patient safety measure that is below case minimum)	3.0		(no high priority bonus points because below	1

	Measure Achievement Points	Six Scored Measures	High-Priority Measure Bonus Points	Incentive for CEHRT Measure Bonus Points
			case minimum)	
		35.6	1 (below 10% cap[1])	5 (below 10% cap)
Quality Performance Category Percent Score Prior to Improvement Scoring		(35.6 + 1 + 5) / 60 = 69.33%		

[1] In this example, the cap would be 6 points, which is 10 percent of the total available measure achievement points of 60.

BILLING CODE 4120–01–C

We did not propose any changes to our policy regarding scoring measure achievement points and bonus points when using multiple collection types for non-Web Interface MIPS eligible clinicians in the quality performance category for the 2019 MIPS performance period.

(B) Calculating Total Measure Achievement and Measure Bonus Points for CMS Web Interface Reporters

In the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77302 through 77306, and 82 FR 53736 through 82 FR 53737, respectively), we finalized the scoring policies for CMS Web Interface reporters. As part of our technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously established policies for CMS Web Interface reporters are now referenced at § 414.1380(b)(1)(i)(A)(*2*)(*i*) and (b)(1)(v)(A).

(xii) Future Approaches To Scoring the Quality Performance Category

As we discuss in section III.I.3.h.(2)(b)(iv) of this final rule, we anticipate making changes to the quality performance category to reduce burden and increase the value of the measures we are collecting. We discussed that existing measures have differing levels of value and our approaches for implementing a system where points are awarded based on the value of the measure. Should we adopt these approaches, we anticipate needing to modify our scoring approaches accordingly. In addition, we have received stakeholder feedback requesting that we simplify scoring for the quality performance category. Therefore, we solicited comment on the following approaches to scoring that we may consider in future rulemaking and whether these approaches move the clinicians towards reporting high value measures and more accurate performance measurement (83 FR 35954 through 35955).

One option for simplification is restructuring the quality requirements with a pre-determined denominator, for example, 50 points, but no specific requirements regarding the number of measures that must be submitted. Further, we would categorize MIPS and QCDR measures by value, because we recognize that not all measures are created equal. We seek to ensure that the collection and submission of data is valuable to clinicians and worth the cost and burden of collection of information. A system to classify measures as a particular value (for example, gold, silver, or bronze) is discussed in section III.I.3.h.(2)(b)(iv) of this final rule. In this approach, the highest tier would include measures that are considered ''gold'' standard, such as outcome measures, composite measure, or measures that address agency priorities (such as opioids). The CAHPS for MIPS survey, which collects patient experience data, may also be considered a high-value measure. Measures considered in the second tier, or at a ''silver'' standard, would be process measures that are directly related to outcomes and have a good gap in performance (there is no high, unwavering performance) and demonstrate room for improvement, or topped out outcome measures. Lower value measures, such as standard of care process measures or topped out process measures, would have scoring caps in place that would reflect the measure's status as a ''bronze measure.'' In this scenario, we could envision awarding points for achievement as follows: Up to 15 to 20 points in the top tier; up to 10 points in the next tier; and up to 5 points in the lowest tier. Similar to the structure of the improvement activities performance category, a clinician that chooses a top-tier measure would not have to submit as many measures to MIPS. We would still want to ensure the submission of high value measures and might include requirements that restrict the number of lower tier measures that could be submitted; alternatively, we could add a requirement that a certain number of higher tier measures would need to be submitted. With this approach, we could still incentivize reporting on high-priority measures by classifying them as ''gold'' standard measures which would be eligible for up to 15 to 20 achievement points.

Alternatively, we could keep our current approach for the quality performance category requiring 6 measures including one outcome measure, with every measure worth up to 10 measure achievement points in the denominator but change the minimum number of measure achievement points available to vary by the measure tier. For example, high-tier measures could qualify for high priority bonus and/or have a higher potential floor (for example, 5 measure achievement points instead of the floor of 3 measure achievement points for ''gold'' standard measures, which would be eligible for up to 10 measure achievement points.); whereas low-tier measures could have a lower floor (for example, 1 measure achievement point instead of the floor of 3 measure achievement points for ''bronze standard' measures).

Taking into consideration the potential future quality performance category change, we also believe that removing the validation process to determine whether the eligible clinician has measures that are available and applicable would simplify the quality performance category significantly. Several stakeholders have expressed their confusion with the validation process. A move to sets of measures in the quality performance category, potentially with some criteria to define the clinicians for whom these measures are applicable, would eliminate the need for a validation process for measures that are available and

applicable. Moving to sets of measures would also enable us to develop more robust benchmarks. We also believe that in the next few years, we could remove the validation process for measures that are available and applicable if we set the denominator at a pre-determined level (as outlined in the example above at 50 points) and let clinicians determine the best method to achieve 50 points. For the 2019 and 2020 MIPS payment years, MIPS eligible clinicians and groups who report on QCDR measures that do not have an available benchmark based on the baseline or performance period but meet data completeness are assigned a score of 3 measure achievement points (small practices receive 3 points regardless of whether they meet data completeness). Through stakeholder engagement, particularly feedback provided by QCDRs who have developed their own measures, we have heard that MIPS eligible clinicians are hesitant to report QCDR measures without established benchmarks. Eligible clinicians have voiced concern on reporting on QCDR measures without benchmarks because they are not certain that a benchmark could be calculated and established for the MIPS performance period, and they would therefore be limited to a 3-point score for that QCDR measure. In addition, QCDRs have inquired about the possibility of creating QCDR benchmarks. To encourage reporting of QCDR measures, we sought comment on an approach to develop QCDR measure benchmarks based off historical measure data. This may require QDCRs to submit historical data in a form and manner that meets benchmarking needs as required by CMS. We anticipate that the historical QCDR measure data would need to be submitted at the time of self-nomination of the QCDR measure, during the self-nomination period. Detailed discussion of the self-nomination period timeline and requirements can be found in section III.I.3.k of this final rule. Our concern with utilizing historical data provided by QCDRs to develop benchmarks is whether QCDRs have the capability to filter through their historical measure data to extract only data from MIPS eligible clinicians and groups prior to submitting the historical data to CMS for QCDR measure benchmarking consideration. Furthermore, once the historical data is submitted by the QCDR, CMS would analyze the data to ensure that it met benchmarking standards prior to it being accepted to form a benchmark. However, to perform this analysis CMS may need additional data elements such as the sources of the data, data completeness, and the collection period. In addition to seeking comment on developing QCDR measure benchmarks from historical data, we also solicited comment as to how our aforementioned concerns may be addressed in future rulemaking.

We also recognize that improving the electronic capture, calculation, and reporting of quality measures is also an important component of reducing provider burden. We invited comment on how we can incorporate incentives for the use of electronic clinical quality measurement into the future approaches described under this section, as well as other ways to encourage more efficient technology-enabled measurement approaches.

We solicited comment on these approaches and other approaches to simplify scoring, provide incentives to submit more impactful measures that assess outcomes rather than processes, and develop data that can show differences in performance and determine clinicians that provide high value care (83 FR 35954 through 35955).

We thank commenters for suggestions and will consider them for future rulemaking.

(xiii) Improvement Scoring for the MIPS Quality Performance Category Percent Score

Section 1848(q)(5)(D)(i) of the Act stipulates that, beginning with the second year to which the MIPS applies, if data sufficient to measure improvement is available, the improvement of the quality performance category score for eligible clinicians should be measured. To measure improvement, we require a direct comparison of data from one Quality Payment Program year to another (82 FR 52740). For more descriptions of our current policies, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53737 to 53747). As part of our technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously established improvement scoring policies are now referenced at § 414.1380(b)(1)(vi).

In the CY 2018 Quality Payment Program final rule, we adopted a policy that MIPS eligible clinicians must fully participate to receive a quality performance category improvement percent score greater than zero (82 FR 53743 through 53745). In § 414.1380(b)(1)(vi)(F), we determined ''participation'' to mean compliance with § 414.1330 and § 414.1340 in the current performance period. We issued a technical correction for the CY 2018 Quality Payment Year final rule, replacing § 414.1330 with § 414.1335 since § 414.1335 is more specific because it discusses the quality performance category requirements.

We finalized at § 414.1380(b)(1)(vi)(C)(4) that we would compare the 2018 performance to an assumed 2017 quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year (82 FR 53744 through 53745). In the CY 2019 PFS proposed rule, we proposed to continue this policy for the 2019 MIPS performance period and amend § 414.1380(b)(1)(vi)(C)(4), accordingly (83 FR 35955). We proposed to compare the 2019 performance to an assumed 2018 quality performance category achievement percent score of 30 percent.

The following is a summary of the public comments on the proposal and our responses:

Comment: One commenter supported the proposal.

Response: We thank the commenter for its support.

After consideration of public comments, we are finalizing the proposal to continue our previously established policy for the 2019 MIPS performance period and amend § 414.1380(b)(1)(vi)(C)(4), accordingly. Specifically, we will compare the 2019 performance to an assumed 2018 quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

(xiv) Calculating the Quality Performance Category Percent Score Including Achievement and Improvement Points

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77300 and 82 FR 53747 through 53748, respectively), we finalized the policies on incorporating the improvement percent score into the quality performance category percent score. As part of our technical updates to § 414.1380(b)(1) discussed in section III.I.3.i.(1)(b) of this final rule, our previously established policies are now referenced at § 414.1380(b)(1)(vii).

(c) Scoring the Cost Performance Category

(i) Scoring Achievement in the Cost Performance Category

For a description of the statutory basis and our existing policies for scoring achievement in the cost performance

category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311) and the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53749). In the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309), we established that we will determine cost measure benchmarks based on cost measure performance during the performance period. We also established that at least 20 MIPS eligible clinicians or groups must meet the minimum case volume that we specify for a cost measure in order for a benchmark to be determined for the measure, and that if a benchmark is not determined for a cost measure, the measure will not be scored. We proposed to codify these final policies at § 414.1380(b)(2)(i) (83 FR 35955 through 35956).

While we did not receive any public comments for this proposal, we are finalizing our proposal to codify these final policies at § 414.1380(b)(2)(i).

(ii) Scoring Improvement in the Cost Performance Category

For a description of the statutory basis and our existing policies for scoring improvement in the cost performance category, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53749 through 53752). Section 51003(a)(1)(B) of the Bipartisan Budget Act of 2018 modified section 1848(q)(5)(D) of the Act such that the cost performance category score shall not take into account the improvement of the MIPS eligible clinician for each of the second, third, fourth, and fifth years for which the MIPS applies to payments. We do not believe this change requires us to remove our existing methodology for scoring improvement in the cost performance category (see 82 FR 53749 through 53752), but it does prohibit us from including an improvement component in the cost performance category percent score for each of the 2020 through 2023 MIPS payment years. Therefore, we proposed to revise § 414.1380(b)(2)(iv)(E) to provide that the maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points (83 FR 35955). Under our existing policy (82 FR 53751 through 53752), the maximum cost improvement score for the 2020 MIPS payment year is 1 percentage point, but due to the statutory changes and under our proposal, the maximum cost improvement score for the 2020 MIPS payment year would be zero percentage points. We also proposed at § 414.1380(a)(1)(ii) to modify the performance standards to reflect that the cost performance category percent score will not take into account improvement until the 2024 MIPS payment year (83 FR 35956). The following is a summary of the public comments received on these proposals and our responses:

Comment: A few commenters supported the proposals to set the maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years at zero percentage points.

Response: We thank the commenter for their support.

Comment: Several commenters requested that the cost performance category score be determined in a different manner because of the proposed inclusion of episode-based measures. A few commenters recommended that the new measures have a lower weight in determining the cost performance category score than the previously-established MSPB and total per capita cost measures. A few commenters recommend that similar to the quality performance category, only the 6 measures with the highest scores among those for which the clinician or group met the case minimum should be included in calculating the cost performance category score. Likewise, a few commenters recommended that similar to the quality performance category, scores for cost measures should not be below 3 out of 10 points. One commenter recommended that a cost performance category score not be calculated if a clinician or group only meets the case minimum for a single cost measure.

Response: We do not believe that the inclusion of new measures in the cost performance category necessitates a change in the determination of the cost performance category score. Measures in the cost performance category differ from quality measures because they do not require reporting on the part of the clinicians outside of the usual claims submission process. Therefore, there is no choice of measures for clinicians nor burden of reporting. We believe that this is an important consideration in maintaining a simpler scoring mechanism in the cost performance category and scoring all measures for which an individual or group meets the case minimum. Some groups due to their size and comprehensiveness will meet the case minimum for all cost measures. Other individuals and groups will meet the case minimum for fewer measures. A scoring policy that would only score the top 6 measures in the cost performance category would provide an advantage for those groups with more than 6 measures because it would disregard those measures on which performance was poorest. For example, a group that met the case minimum for 10 measures and scored in the lowest decile for the total per capita cost score and the highest decile for all other measures, would have the score for the total per capita measure dropped and would receive the highest possible score in the cost performance category. A group that met the case minimum for only 6 measures, and also performed in the lowest decile for the total per capita cost score and the highest decile for the other 5 cost measures for which it met the case minimum, would not have performance on this measure disregarded and receive a lower score.

We believe that not scoring clinicians and groups that meet the case minimum for only a single measure would fail to recognize that a single measure, such as total per capita cost, could reflect care provided to a large number of patients.

After consideration of the public comments, we are finalizing as proposed our proposal to revise § 414.1380(b)(2)(iv)(E) to provide that the maximum cost improvement score for the 2020, 2021, 2022, and 2023 MIPS payment years is zero percentage points. We are also finalizing as proposed our proposal at § 414.1380(a)(1)(ii) to modify the performance standards to reflect that the cost performance category percent score will not take into account improvement until the 2024 MIPS payment year.

(d) Facility-Based Measures Scoring Option for the 2021 MIPS Payment Year for the Quality and Cost Performance Categories

(i) Background

In the CY 2018 Quality Payment Program final rule, we established a facility-based measurement scoring option for clinicians that meet certain criteria beginning with the 2019 MIPS performance period/2021 MIPS payment year (82 FR 53752 through 53767). We originally proposed a facility-based measurement scoring option for the 2018 MIPS performance period. We did not finalize the policy because we were concerned that we would not have the operational ability to inform clinicians early enough in the 2018 MIPS performance period to allow them to consider the consequences and benefits of participation (82 FR 53755).

(ii) Facility-Based Measurement Applicability

(A) General

In the CY 2018 Quality Payment Program final rule, we limited facility-based reporting to the inpatient hospital in the first year for several reasons,

including because a more diverse group of clinicians (and specialty types) provide services in an inpatient setting than in other settings, and because the Hospital Value-Based Purchasing (VBP) Program adjusts payment to hospitals for inpatient services in connection with their performance under that program (82 FR 53753 through 53755). We also limited measures applicable for facility-based measurement to those used in the Hospital VBP Program because the Hospital VBP Program compares hospital performance on a series of different measures intended to capture the breadth of inpatient care in the facility (82 FR 53753). We noted that we were open to the consideration of additional facility types in the future but recognized that adding a facility type would be dependent upon whether CMS has established a value-based purchasing program for that facility type, the applicability of measures, and our ability to appropriately attribute a clinician to a facility (82 FR 53754). Please note that when we use the term value-based purchasing, we are referring in general to value-based purchasing programs or scores, and not specifically the Hospital VBP Program, unless specifically stated.

We did not propose to add additional facility types for facility-based measurement, but we are interested in potentially expanding to other settings in future rulemaking. Therefore, in section III.I.3.i.(1)(d)(vii) of this final rule, we outline several issues on which we requested feedback and would need to be resolved in order to expand this option to a wider group of facility-based clinicians in future years.

(B) Facility-Based Measurement by Individual Clinicians

In the CY 2018 Quality Payment Program final rule, we established individual eligibility criteria for facility-based measurement at § 414.1380(e)(2)(i). We established that a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital or emergency room based on claims for a period prior to the performance period as specified by CMS (82 FR 53756 through 53757) is eligible as an individual for facility-based measurement. We had noted, as a part of our proposal summary, that we would use the definition of professional services in section 1848(k)(3)(A) of the Act in applying this standard (82 FR 53756). For purposes of determining eligibility for facility-based measurement, we discussed CMS using data from the period between September 1 of the calendar year, 2 years preceding the MIPS performance period, through August 31 of the calendar year preceding the MIPS performance period, with a 30-day claims run out but did not finalize that as part of the applicable regulation (82 FR 53756 through 53757). Because we are using the quality measures associated with the inpatient hospital to determine the MIPS quality and cost performance category score, we wanted to ensure that eligible clinicians contributed to care in that setting during that time period.

We indicated that CMS will use POS code 21 (inpatient) and POS code 23 (emergency department) for this purpose (82 FR 53756). Commenters on our proposal (as summarized in the CY 2018 Quality Payment Program final rule (82 FR 53756 through 53757)) expressed concern that adopting the definition that we did for facility-based clinicians would limit the number of clinicians who would be eligible.

In the CY 2019 PFS proposed rule, we proposed to modify our determination of a facility-based individual at § 414.1380(e)(2)(i) in four ways (83 FR 35957). First, we proposed to add on-campus outpatient hospital (as identified in the POS code in the HIPAA standard transaction, that is, POS code 22) to the settings that determine whether a clinician is facility-based. Second, we proposed that a clinician must have at least a single service billed with the POS code used for the inpatient hospital or emergency room. Third, we proposed that, if we are unable to identify a facility with a value-based purchasing score to attribute as a clinician's performance, that clinician is not eligible for facility-based measurement. Fourth, we proposed to align the time period for determining eligibility for facility-based measurement with changes to the dates used to determine MIPS eligibility and special status detailed in section III.I.3.b. of this final rule. We explain these four proposals from the proposed rule in this section. In the CY 2019 PFS proposed rule, we stated our belief that these proposals will further expand the opportunity for facility-based measurement and eliminate issues associated with the provision of observation services while still restricting eligibility to those who work in an inpatient setting.

First, we proposed to add the on-campus outpatient hospital (POS code 22) to the list of sites of service used to determine eligibility for facility-based measurement (83 FR 35957). We agree with commenters that limiting the eligibility to our current definition may prevent some clinicians who are largely hospital-based from being eligible. However, expanding eligibility without taking into account the relationship between the clinician and the facility and facility's performance could result in unfairly attributing to a clinician performance for which the clinician is not responsible or has little to no role in improving. We do believe that a significant provision of services in the on-campus outpatient hospital are reflected in the quality captured by the Hospital VBP Program. For example, patients in observation status are typically treated by the same staff and clinicians as those who meet the requirements for inpatient status. Although there are some clinical differences that may result in a patient having observation status, we believe that the quality of care provided to these patients in this same setting would be comparable, reflecting the overall healthcare system at that particular location. In the CY 2019 PFS proposed rule, we stated our conviction, based on this that a sufficient nexus exists for attributing the hospital's VBP Total Performance Score to clinicians that provide services in on-campus outpatient hospital settings.

Second, we proposed to require that clinicians bill at least a single service with the POS codes for inpatient hospital or the emergency room in order to be eligible for facility-based measurement (83 FR 35957). Although we generally believe that clinicians who provide services in the outpatient hospital can affect the quality of care for inpatients, we noted in the CY 2019 PFS proposed rule our belief that a clinician who is measured according to the performance of a hospital should at least have a minimal presence in the inpatient or emergency room setting. We explained our concern about attributing inpatient facility performance to clinicians who provide at least 75 percent of their services at on-campus outpatient hospitals (with POS code 22) when such clinicians exclusively provide outpatient services that are unrelated to inpatient hospital service by describing an example: A dermatologist who provides office-based services in a hospital-owned clinic but who never admits or treats patients within the inpatient or emergency room setting does not meaningfully contribute to the quality of care for patients measured under the Hospital VBP Program.

We stated in the CY 2019 PFS proposed rule how we had considered different ways to best identify those who contribute to the quality of care in the inpatient setting while keeping the

facility-based scoring option as simple as possible. We provided one explanation of an alternative we had considered: Separately measuring the HCPCS codes for observation services; however, as also noted in the proposed rule, we believe that such a measurement may not fairly consider services provided by clinicians for whom observations services may be embedded in a global code for a procedure rather than billed as a separate observation service. We also considered requiring a clinician to provide a certain percentage of services with the inpatient hospital POS. We described how we had not identified a threshold (other the one claim threshold we proposed) that would more meaningfully differentiate clinicians who provide services with the outpatient hospital POS code versus those who do not contribute to the services that would be measured under the Hospital VBP Program. We identified our goal of ensuring that the program rules are clear and easily applied to clinicians, so as to both avoid confusion on program participation requirements and to meet overall agency goals to increase transparency in the agency's activities. Our proposal of using a single service as the threshold would provide a simple, bright-line to differentiate those who never provide inpatient services from clinicians that do provide inpatient services as well as outpatient services. We explained in the proposed rule that this would limit the chance of clinicians who exclusively practice in the outpatient setting being measured on the Hospital VBP Program's performance of an unrelated hospital. We recognized this requirement of one service with the inpatient or emergency department POS may not demonstrate a significant presence in a particular facility and solicited comment on whether a better threshold could be used to identify those who are contributing to the quality of care for patients in the inpatient setting without creating unnecessary or inappropriate barriers to eligibility for facility-based measurement.

We explained in the proposed rule our rationale and reasoning for these first two proposals as being based in large part on our analysis of the previously finalized policy for eligibility for the facility-based measurement scoring option. Using claims data, we had identified all clinicians that would be MIPS eligible as either an individual or group, and identified the POS codes submitted for PFS services provided by those clinicians. We then modeled the existing final policy based on inpatient and ER services. Although almost all ER physicians would be scored under facility-based measurement, a relatively small percentage of clinicians in other specialties, even those which we expected to have significant presence in the hospital, would be eligible for the facility-based measurement scoring option. For example, only 13.45 percent of anesthesiologists would be eligible for the facility-based measurement scoring option under the policy finalized in the CY 2018 Quality Payment Program final rule. Adding the on-campus outpatient hospital POS code substantially increased eligibility for the facility-based measurement scoring option in our modeling, even after we adjusted for requiring one service with the inpatient or emergency department POS. Under our proposal, our model illustrated that 72.55 percent of anesthesiologists would be eligible. However, the model did not show that the proposal would substantially increase the number of clinicians eligible for the facility-based measurement scoring option who, based on specialty identification, may not have a significant presence in the hospital. For example, the modeling of the proposed policy projected an increase in the percentage of family physicians eligible for the facility-based measurement scoring option from 11.34 percent to 13.86 percent, which is still a very small percentage of those clinicians.

Third, we proposed to add a new criterion (to be codified at § 414.1380(e)(2)(i)(C)) that stated to be eligible for facility-based measurement, we must be able to attribute a clinician to a particular facility that has a value-based purchasing score (83 FR 35957 through 35958). We explained in the proposed rule how, for facility-based measurement to be applicable, we must be able to attribute a clinician to a facility with a value-based purchasing score. Based on our definition of facility-based measurement, we stated that this means a clinician must be associated with a hospital with a Hospital VBP Program Total Performance Score. We explained our concern that the proposed expansion of eligibility for facility-based measurement would increase the number of clinicians eligible for facility-based measurement but to whom we would be unable to attribute the performance of a particular facility that has a value-based purchasing score. As we noted in the CY 2018 Quality Payment Program final rule (82 FR 53766), some hospitals do not have a Hospital VBP Program Total Performance Score that could be used to determine a MIPS quality and cost performance category score, such as hospitals in the state of Maryland. Hence, clinicians associated with those hospitals would not be able to use facility-based measurement but could report quality measures through another method and have cost measures calculated if applicable. We explained that, under our proposal, a similar result, although relatively rare, would happen if we could not attribute a clinician identified as facility-based to a specific facility; those clinicians who are identified as facility-based but whom we cannot attribute to a hospital would have to participate in MIPS quality reporting through another method, or they would receive a score of zero in the quality performance category. Therefore, we proposed to add the requirement to § 414.1380(e)(2)(i)(C) that a clinician must be able to be attributed to a particular facility with a value-based purchasing score under the methodology specified in § 414.1380(e)(5) to be eligible for facility-based measurement. The cross-reference to paragraph (e)(5) is to the methodology we also proposed for determining the applicable facility score to be used. Our proposed new regulatory text at § 414.1380(e)(2)(i)(C) addresses both attribution to a facility and the need for that facility to have a value-based purchasing score by conditioning eligibility for facility-based scoring for an individual clinician on the clinician being attributed under the methodology in paragraph (e)(5) to a facility with a value-based purchasing score.

Fourth, we proposed to change the dates of determining eligibility for facility-based measurement (83 FR 35958). In section III.M.3.b. of the proposed rule, we proposed to modify the dates of the MIPS determination period that would provide eligibility determination for small practice size, non-patient facing, low-volume threshold, ASC, hospital-based, and facility-based determination periods. To align this regulation controlling facility-based scoring with these other determination periods, we proposed that CMS would use data from the initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, with a 30-day claims run out, in determining eligibility for facility-based measurement.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Many commenters supported the four proposed changes to the determination of a facility-based individual.

Response: We appreciate the commenters' support.

Comment: One commenter recommended that CMS include the place of service code used for the off-campus outpatient hospital (POS code 19) in determining individual eligibility for facility-based measurement, noting that many clinicians work in both on-campus and off-campus outpatient hospital settings. The commenter further suggested the inclusion of the measures from the Hospital Outpatient Quality Reporting Program.

Response: While we are finalizing our proposal to add on the on-campus outpatient code (POS code 22), we disagree that the off-campus outpatient hospital setting (POS code 19) indicates that a clinician has a significant impact on the quality and cost within an inpatient hospital setting in the way that POS code 22 might. A clinician may work at an off-campus outpatient hospital setting that is miles from the hospital and not have any involvement with patients that are hospitalized. We do not believe the Hospital VBP Program measures, which reflect the quality of care furnished to patients in hospitals in inpatient settings, are applicable to (or relate to the performance of) those clinicians who primarily bill within the off-campus outpatient hospital setting; therefore, we do not believe such clinicians should be eligible for facility-based measurement.

While the measures used in the Hospital Outpatient Quality Reporting Program do reflect quality for the off-campus outpatient hospital, section 1848(q)(2)(C)(ii) of the Act provides that we may not use measures for hospital outpatient departments, except in the case of items and services furnished by emergency physicians, radiologists, and anesthesiologists. Our determination of facility-based measurement does not consider the specialty of clinicians, so we therefore do not believe it is appropriate or consistent with the statutory authority to add this setting or these measures at this time.

Comment: One commenter recommended that the threshold of services required to be provided in facilities to be eligible for facility-based measurement be reduced from 75 percent to more than 50 percent of services, because clinicians often work in multiple settings.

Response: As we stated in the CY 2018 Quality Payment Program final rule (82 FR 53757), we believe the 75 percent threshold is appropriate to use because it is similar to our determination of hospital-based eligible clinicians in the Promoting Interoperability performance category. In the context of our proposal to change the eligibility criteria for facility-based measurement, we still believe that a 75 percent threshold indicates that a clinician is spending much of their clinical time working in a hospital and the quality of their work is reflected in that setting. Clinicians who work in more varied settings may be better measured through another method of participating in MIPS.

Comment: One commenter recommended that CMS not include the requirement to bill at least a single service with the POS code used for the inpatient hospital or emergency room as this requirement could easily be gamed.

Response: We continue to believe that that using a single service as the threshold provides a simple, bright line to differentiate those who never provide inpatient services from clinicians that do provide inpatient services, as well as outpatient services. We will monitor this requirement and may consider changing it in future rulemaking if we find evidence or examples of gaming, such as that clinicians are providing services in the inpatient setting primarily so they may meet the requirements of facility-based measurement.

Comment: Several commenters supported the facility-based measurement and the proposed policies because this option would reduce burden and recognize the joint accountability for measures in the hospital environment.

Response: We appreciate the commenters' support as we begin to implement facility-based measurement in the 2019 MIPS performance period/2021 MIPS payment year.

Comment: Several commenters requested that CMS provide more data analysis on the implementation of facility-based measurement. A few commenters noted concerns with how the facility-based scoring option could contribute to an uneven playing field. Commenters' concerns highlighted that automatically applying a quality and cost score eliminates incentives to coordinate care which may place these clinicians at an unfair advantage over those who must report on measures and take steps to perform well on those measures. Hence, commenters encouraged CMS to closely monitor the impact of the facility-based scoring option policy. One commenter suggested that CMS provide more data on how MIPS eligible clinicians might score in the facility-based scoring option. Another commenter suggested that CMS provide data on the percentage of certain specialists who would be eligible. A few commenters suggested that CMS should closely monitor how facility-based measurement impacts total MIPS scores between specialties and groups working within the same hospital, as well as the effect of facility-based measurement on those who are not eligible. One commenter suggested that CMS provide more information via educational resources; another commenter requested that CMS explain how the Hospital VBP Program Total Performance Score is converted into MIPS scoring and requirements for group reporting options.

Response: We recognize the value of data analysis when developing additional scoring options for MIPS eligible clinicians. We continue to believe that the facility-based scoring option will reduce administrative burden by streamlining reporting and allowing clinicians to focus on quality improvement. We disagree that clinicians have an advantage under facility-based scoring option given that we have established an eligibility threshold to identify those clinicians that have a significant impact on the care delivered within the facility and the facility's performance under the Hospital VBP Program. The scoring methodology developed for facility-based measurement translates scores in the Hospital VBP Program to scores in the Quality and Cost performance category. Because that translation takes into account the distribution of scores in the Hospital VBP program, which is analogous to the distribution of scores in MIPS, clinicians who are scored using facility-based measurement will have a similar range of scores as those who are not eligible for facility-based measurement. We will continue to monitor the impact of the finalized facility-based scoring policies in efforts to avoid unfair advantages within the MIPS program.

Comment: Several commenters expressed concern about the availability of facility-based measurement beginning in the 2019 MIPS performance period/2021 MIPS payment year. The commenters expressed concern that the measures included in the Hospital VBP Program were not representative of the care provided by clinicians and would distract from efforts to focus on measures on which these clinicians could have an effect. A few commenters

supported facility-based measurement as a short-term solution to reducing administrative burden for clinicians who primarily work within an inpatient setting but encouraged movement towards measures that are more meaningful for certain specialists who also predominantly work within an inpatient setting.

Response: We recognize that the Hospital VBP Program was not designed to measure clinicians' performance but rather hospitals' performance. However, we believe that by using the established 75 percent threshold to identify clinicians as eligible for facility-based scoring, we are distinguishing between those clinicians who ultimately have a significant impact on the hospital's performance score for the care and cost rendered within that facility versus those who do not. We therefore believe that the Hospital VBP Program measures do reflect the performance of the clinicians in a team-based environment. We note that there may be more opportunities for clinicians, particularly specialists who wish to report on more clinically meaningful measures, to participate in MIPS using qualified registries or QCDRs that may be related to care provided to those specific patients in a facility setting, and we encourage clinicians who find the MIPS measures more meaningful in the context of their patient population to report in that manner.

After consideration of the public comments, we are finalizing our proposals to add the on-campus outpatient hospital (POS code 22) to the list of sites of service used to determine eligibility for facility-based measurement and to require that clinicians bill at least a single service with the POS codes for inpatient hospital or the emergency room in order to be eligible for facility-based measurement as reflected in the regulation text at § 414.1380(e)(2)(i)(A) and (B). We are also finalizing our proposal that we must be able to attribute a clinician to a particular facility that has a value-based purchasing score under the methodology specified in § 414.1380(e)(5) to meet eligibility for facility-based measurement as codified at § 414.1380(e)(2)(i)(C). We are also finalizing our proposed policy that CMS would use data from the initial 12-month segment beginning on October 1 of the calendar year 2 years prior to the applicable performance period and ending on September 30 of the calendar year preceding the applicable performance period, with a 30-day claims run out to determine eligibility for facility-based measurement.

(C) Facility-Based Measurement by Group

In the CY 2018 Quality Payment Program final rule (82 FR 53757), we finalized at § 414.1380(e)(2)(ii) that a MIPS eligible clinician is eligible for facility-based measurement under MIPS if they are determined to be facility-based as part of a group. We established at § 414.1380(e)(2)(ii) that a facility-based group is a group in which 75 percent or more of its eligible clinician NPIs billing under the group's TIN meet the requirements at § 414.1380(e)(2)(i) (82 FR 53758). We did not propose any changes to the determination of a facility-based group but acknowledged that our proposal to change how individual clinicians are determined to be eligible for facility-based measurement will necessarily have a practical impact for practice groups. For more of the statutory background and descriptions of our current policies on determining a facility-based group, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53757 through 53758).

(iii) Facility Attribution for Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule (82 FR 53759), we finalized at § 414.1380(e)(5) a method to identify the hospital whose scores would be associated with a MIPS eligible clinician or group for purposes of facility-based measurement scoring. However, because of a discrepancy in the preamble and the proposed regulation text in the CY 2018 Quality Payment Program proposed rule (82 FR 53759), we indicated we would address this issue as part of the next Quality Payment Program rulemaking cycle. Under the current regulation text § 414.1380(e)(5), a facility-based clinician or group receives a score under the facility-based measurement scoring standard derived from the value-based purchasing score for the facility at which the clinician or group provided services to the most Medicare beneficiaries during the year claims are drawn (that is, the 12-month period described in paragraph (e)(2)). Although we did not propose any changes, we are revising this section to replace the word ''segment'' with ''period'' for clarity purposes.

If an equal number of Medicare beneficiaries are treated at more than one facility, then we will use the value-based purchasing score for the highest-scoring facility (82 FR 53759 through 53760). For more of the statutory background and descriptions of our current policies for attributing a facility to a MIPS eligible clinician, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53759 through 53760).

In considering the issue of facility attribution for a facility-based group, we stated in the CY 2019 PFS proposed rule that we believe that a change to facility-based attribution is appropriate to better align the policy with the determination of a facility-based group at § 414.1380(e)(2)(ii). A facility-based group is one in which 75 percent or more of the eligible clinician NPIs billing under the group's TIN are eligible for facility-based measurement as individuals. Additionally, under the current regulation, the value-based purchasing score for the highest scoring facility would be used in the case of a tie among the number of facilities at which the group provided services to Medicare beneficiaries. We proposed to revise § 414.1380(e)(5) to differentiate how a facility-based clinician or group receives a score based on whether they participate as a clinician or a group (83 FR 35958).

We proposed to remove ''or group'' from § 414.1380(e)(5) and redesignate that paragraph as (e)(5)(i) so that it only applies to individual MIPS eligible clinicians (83 FR 35958). Under our proposal, newly redesignated paragraph (e)(5)(i) would retain the rule for facility attribution for an individual MIPS eligible clinician as finalized in the CY 2018 Quality Payment Program final rule; we also proposed a few minor edits to the paragraph for grammar and to improve the sentence flow. We also proposed to add a new paragraph (e)(5)(ii) to provide that a facility-based group receives a score under the facility-based measurement scoring standard derived from the value-based purchasing score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under the methodology described in § 414.1380(e)(5)(i) if the clinicians had been scored under facility-based measurement as individuals (83 FR 35958). We made this proposal because of our wish to emphasize the connection between an individual clinician and a facility. We explained in the CY 2019 PFS proposed rule that using the plurality of clinicians reinforces the connection between an individual clinician and facility and is more easily understandable for larger groups.

The following is a summary of the public comments received on these proposals and our responses:

Comment: A few commenters suggested that CMS consider additional rules or standards for attribution of a

clinician or group to a facility for purposes of using that facility's Total Performance Score. One commenter requested that CMS consider using an eligible clinician's/group's second most utilized facility in cases where the top utilized facility does not have a Hospital VBP Program Total Performance Score. Another commenter encouraged CMS develop a group level attribution methodology to account for groups that practice in multiple sites and the commenter believed that an accountability model will be more meaningful and actionable for these groups.

Response: We are finalizing our proposal that if we are unable to identify a particular facility with a value-based purchasing score under the methodology specified in § 414.1380(e)(5), such as those facilities in the state of Maryland, to attribute for use as an individual clinician's performance, then that clinician is not eligible for facility-based measurement. We are concerned that using a hospital other than the most utilized could result in assigning a score based on a hospital at which the clinician rarely works. For example, in the case of using the second most utilized facility, an individual clinician may have primarily worked in the facility without a Hospital VBP Program Total Performance Score and then only have seen a single patient at the second most utilized hospital with a Hospital VBP Total Performance Score. However, we will consider looking into this issue in future rulemaking, including whether it may be appropriate to allow for the score to be based upon a facility other than the one at which a clinician provides services to the most patients.

We understand that some groups that may be facility-based include clinicians that practice in a number of different facilities. However, we believe this issue is similar to that experienced in other clinician groups that may have a diversity of clinicians and settings. In section III.I.3.e of the proposed rule (83 FR 35891), we requested comments on developing an opportunity for clinicians to participate in MIPS as subgroups. We believe that our consideration of that issue could inform the determination of members of a group that practice in a single TIN but who serve patients in many different facilities.

After consideration of the public comments, we are finalizing our proposals to remove ''or group'' from § 414.1380(e)(5); redesignate that paragraph as (e)(5)(i) so that it only applies to individual MIPS eligible clinicians; and add a new paragraph (e)(5)(ii) to § 414.1380(e)(5) regarding group scoring methodologies in which a facility-based group receives a score under the facility-based measurement scoring standard derived from the value-based purchasing score for the facility at which the plurality of clinicians identified as facility-based would have had their score determined under the methodology described in § 414.1380(e)(5)(i) if the clinicians had been scored under facility-based measurement as individuals.

(iv) No Election of Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule (82 FR 53760), we did not finalize our proposal for how individual MIPS eligible clinicians or groups who wish to have their quality and cost performance category scores determined based on a facility's performance would elect to do so through an attestation. We did finalize, and reflect in the introductory text at § 414.1380(e), that an individual clinician or group would elect to use a facility-based score. In the CY 2019 PFS proposed rule (82 FR 53760), we specified that such clinicians or groups would be required to submit their election during the data submission period through the attestation submission mechanism established for the improvement activities and the Promoting Interoperability performance categories. An alternative approach, which likewise was not finalized, did not require an election process, but instead would have automatically applied a facility-based measurement to MIPS eligible clinicians and groups who met the eligibility criteria for facility-based measurement, if such an application were technically feasible (82 FR 53760). We noted in the CY 2018 Quality Payment Program final rule (82 FR 53760) that we would examine both the attestation process and the opt-out process, and work with stakeholders to identify a new proposal in future rulemaking. We explained in the CY2018 Quality Payment Program final rule (82 FR 53760) our interest in a process that would impose less burden on clinicians than an attestation requirement and requested comment on automatically assigning a clinician or group a facility-based score, but with a notice and opportunity to opt-out of facility-based measurement. We summarized those comments in the CY 2019 PFS proposed rule (83 FR 35958).

After further considering the advantages and disadvantages of an opt-in or an opt-out process, we proposed a modified policy that would not require an election process. We proposed to automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score (83 FR 35959). Under our proposal, if the MIPS eligible clinician or group is eligible for facility-based measurement, we would calculate a combined quality and cost performance category score. We proposed to use the facility-based score to determine the MIPS quality and cost performance category scores, unless we received another submission of quality data for or on behalf of that clinician or group and the combined quality and cost performance category score for the other submission results in a higher combined quality and cost performance score. If the other submission has a higher combined quality and cost performance score, then we would not apply the facility-based performance scores for either the quality or cost performance categories (83 FR 35959). Under our proposal, the combined score for the quality and cost performance categories would determine the scores to be used for both the quality and cost performance categories, for both individual clinicians and for groups that meet the requirements of paragraph (e)(2). We did not propose to adopt a formal opt-out process because, under our proposal, the higher of the combined quality and cost performance scores for the clinician or clinician group would be used, which would only benefit the clinician or group. We explained in the proposed rule our strong commitment to reducing burden as part of the Quality Payment Program and that we believe that requiring a clinician or group to elect a measurement process (or to opt-out of a measurement process) based on facility performance would add unnecessary burden.

In MIPS, we score clinicians as individuals unless they submit data as a group. We stated in the proposed rule that the same policy should apply to facility-based measurement, even though there are no submission requirements for the quality performance category for individuals under facility-based measurement. We proposed to revise § 414.1380(e)(4) to state that there are no submission requirements for individual clinicians in facility-based measurement, but a group must submit data in the improvement activities or Promoting Interoperability performance categories in order to be measured as a group under facility-based measurement. We explained how, if a group does not

submit improvement activities or Promoting Interoperability measures, we would apply facility-based measurement to the individual clinicians and such clinicians would not be scored as a group under our proposal. In the case of virtual groups, MIPS eligible clinicians will have formed virtual groups prior to the MIPS performance period; as a result, virtual groups eligible for facility-based measurement will always be measured as a virtual group (83 FR 35959). Although we can calculate a score for a TIN without the submission of data by the TIN, we would not be certain if the clinicians in that group actually wanted to be measured as a group without an active submission (in other words, if the group did not submit data as a group). As we explained in the proposed rule, we view submission of data on the improvement activities or Promoting Interoperability measures as an indication by the clinicians in that group that they want to be scored as a group; using the choice to submit data as a group to identify a group in the context of facility-based scoring would preserve and respect choices made by clinicians and groups while avoiding the burden of an election process to be scored as a group solely for the purpose of facility-based scoring. We solicited comment specifically on this proposal and other means to achieve the same ends.

In the CY 2018 Quality Payment Program final rule, we established that if a clinician or group elects facility-based measurement but also submits MIPS quality data, then the clinician or group would be measured on the method that results in the higher quality score (82 FR 53767). We proposed to adopt this same scoring principle in conjunction with our proposal not to use (or require) an election process. Therefore, we proposed at § 414.1380(e)(6)(vi) that the MIPS quality and cost score for clinicians and groups eligible for facility-based measurement would be based on the facility-based measurement scoring methodology described in § 414.1380(e)(6) unless the clinician or group receives a higher combined score for the MIPS quality and cost performance categories through data submitted to CMS for MIPS (83 FR 35959). We stated in the proposed rule that this policy is not applicable to any MIPS eligible clinicians scored under the APM scoring standard described at § 414.1370; we further clarify here that this includes Shared Savings Program participant TINs in ACOs that have failed to complete web interface reporting, unless these measures are specifically required under the terms of the applicable APM.

We also proposed conforming changes in two other sections of regulatory text. We proposed to revise the introductory text at § 414.1380(e) to remove ''elect to,'' and therefore, reflect that clinicians and groups who are determined to be facility-based will receive MIPS quality and cost performance categories under the methodology in paragraph (e) (83 FR 35959 through 35960). Because of our proposal to not require clinicians to opt-in into facility-based measurement, we acknowledged that there may be clinicians that will continue to submit data via other methods. We explained that these clinicians and groups are not prohibited from submitting quality measures to CMS for purposes of MIPS. However, under our proposal, if a higher combined quality and cost score is achieved using data submitted to CMS for purposes of MIPS, then we will use the MIPS scores based on the submission. We also proposed to revise § 414.1380(e)(4) and (e)(6)(v)(A) to reflect that facility-based measurement does not require election and to replace the phrase ''clinicians that elect facility-based measurement'' with ''clinicians and groups scored under facility-based measurement'' (83 FR 35960) as part of this policy.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Many commenters supported our proposal to automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score.

Response: We thank the commenters for their support.

Comment: A few commenters opposed our proposal to require a group to submit information in the improvement activities or Promoting Interoperability performance categories to be measured as a facility-based group. A few of these commenters requested that rather than requiring the submission of information in these categories, CMS offer an election process. One commenter questioned how a group that was excluded from both the improvement activities and Promoting Interoperability performance categories could participate as a facility-based group. One commenter suggested that it would be difficult to complete an improvement activity if members of the group practice at more than one facility.

Response: We continue to believe that our proposal of a clinician receiving the higher of the quality and cost performance score available would only benefit the individual MIPS eligible clinician or group. If we do not require groups to submit data in the improvement activity or Promoting Interoperability performance categories, then we will be unable to tell whether the clinician should be measured as part of a group. We will consider whether there would be an opportunity for a facility-based group to elect to participate without submitting data on another performance category in the future as feasible. We do not believe that we would need to establish additional policies for groups that would have their improvement activities performance score re-weighted specifically because we generally expect reweighting to occur for the improvement activities performance category only in rare cases of extreme and uncontrollable events. We do note that the clinicians in a facility-based group who meet the requirements for facility-based measurement as individuals will have scores in the quality and cost performance categories determined for them as individuals if there is no data submission from the group in the improvement activity or Promoting Interoperability performance categories.

Comment: Commenters encouraged CMS to provide as much information as possible to eligible clinicians including information on eligibility for facility-based measurement, clinician type, potential performance score under facility-based scoring, and to which facility the eligible clinician will be attributed. Several commenters noted that more information would give clinicians the opportunity to assess the advantages and disadvantages of various reporting options under MIPS. One commenter stated that more information will avoid confusion as to how the facility-based scoring option will work during the performance period. A few commenters noted concerns with the timing of receiving information about facility-based measurement. Some commenters noted the risk of a clinician assuming that he or she will meet the criteria for facility-based measurement when that may not be the case. Another commenter noted that the timing is important in making decisions as to whether to report as a group or an individual under the facility-based scoring option.

Response: We intend to provide as much information as possible as early as possible to clinicians about their eligibility and the hospital performance upon which a MIPS eligible clinician's score would be based. We acknowledge

that clinicians may want to consider this information to make financial and operational decisions, regardless of not having to be required to opt-in to facility-based scoring. We intend to provide additional information to clinicians regarding their status with facility-based measurement eligibility, facility attribution, and a preview score based on data from the previous performance period. We anticipate that this information will be released during the first quarter of the performance period, if technically feasible, beginning with the 2019 performance period, and we aim to notify clinicians as soon as this information is available.

Comment: Many commenters expressed concern with our proposal to not require an opt-in or offer an opt-out for facility-based measurement. A few commenters noted that performing this calculation automatically would reduce the control that clinicians have over their participation in MIPS. A few commenters suggested that automatically calculating a score for facility-based clinicians would reduce the incentive to participate in clinical data registries. A few commenters suggested that not requiring an opt-in would provide a performance advantage to facility-based clinicians over those who are not eligible for facility-based measurement. One commenter expressed concern that clinicians could have measures displayed on Physician Compare from facility-based measurement.

Response: Receiving the higher of the combined quality and cost performance scores available would only benefit the applicable individual MIPS eligible clinician or group; however, we are uncertain that facility-based clinicians would necessarily perform better than those who submit MIPS data, because the opportunity to submit data via other methods provides individual clinicians or groups the opportunity to select quality measures. We continue to believe that adding a formal opt-in or opt-out process would add unnecessary burden for both individual clinicians and groups. Additionally, we believe that those MIPS eligible clinicians who will not be required to submit MIPS data will benefit from a reduction in administrative burden while being measured in a facility in which their care has a significant impact on the facility's performance. We note that clinicians who wish to better control their performance in MIPS may submit measures through another method. Hence, we are finalizing our proposal to not require an opt-in or opt-out for facility-based measurement. Additionally, we did not propose any policies for how facility-based measures, other than the scores derived from those measures and included as quality and cost performance category scores, will be displayed on Physician Compare, but we thank commenters for their input and will take this input into consideration in future years.

Comment: One commenter requested clarification on how CMS would score a facility-based clinician who submits data on the quality performance category but does not have a cost performance category score, and thus, the cost performance category weight would need to be redistributed to the quality performance category.

Response: The cost performance category can be reweighted to 0 percent if there are not sufficient cost measures applicable and available (for example, if the clinician does not meet the minimum case requirements for the cost measures). In cases in which a clinician or group does not have a score in the cost performance category, in general, the weight of the cost performance category would be redistributed to the quality performance category. In that case, the points assigned under § 414.1380(b) for purposes of calculating/assigning the MIPS final score in the cost and quality categories will be compared to the points that contribute to the final score from the quality and cost scores established under facility-based measurement. For example, a clinician whose data was submitted on their behalf by a third-party intermediary and received a MIPS quality performance category percent score of 50 percent but did not meet the case minimum for cost measures, would have a total of 30 points as the combined score for the quality and cost performance categories. If that same clinician were eligible for facility-based measurement, the score based on that third party intermediary submission would be used unless the combination of the quality and cost scores established under facility-based measurement (as calculated under § 414.1380(e)(6)) resulted in more than 30 points towards the final score.

Comment: One commenter requested guidance and language as to how to account for MIPS eligible clinicians who wish to use their facility's Hospital VBP Program Total Performance Score for the quality and cost performance categories, yet still use a QCDR to report.

Response: Our proposed policy to not require an opt-in or offer an opt-out for facility-based measurement anticipates that there may be some clinicians and groups who will both receive a score based upon facility-based measurement and submit quality measures via various collection types. These clinicians may believe these quality measures better represent their performance or that they will perform better submitting these measures. In all cases, under the policy we are finalizing here, we will compare combined performance in these two categories and assign the clinician or group the higher combined score, whether based on the facility-based measurement or through another submission type. We note that facility-based measurement only applies to the quality and cost performance categories; the Promoting Interoperability and improvement activity performance categories would still require reporting on the part of the clinicians or group.

After consideration of the public comments, we are finalizing our proposal to automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and those who have a higher combined quality and cost performance category score. Additionally, we are finalizing our proposal to revise § 414.1380(e)(4) to state that there are no submission requirements for individual clinicians in facility-based measurement and that a group must submit data in the improvement activities or Promoting Interoperability performance categories to be measured as a group under facility-based measurement. Additionally, we are also revising the proposed regulation text for § 414.1380(e)(4) by adding ''to be'' between ''clinicians'' and ''scored'' to clarify that this paragraph is establishing the data submissions necessary for facility-based scoring to be possible as opposed to a provision governing MIPS reporting as a whole for all categories. We are also finalizing the conforming changes at § 414.1380(e)(4) and (e)(6) to revise text that referred to an election by the clinician or group to use facility-based scoring. Additionally, while we did not propose any changes, we are revising § 414.1380(e) to state, for the payment in 2021 MIPS payment year and subsequent years and subject to paragraph (e)(6)(vi) of this section, a MIPS eligible clinician or group will be scored under the quality and cost performance categories under the methodology described in this paragraph (e). These technical changes are made to conform to our policy in this section to not require or offer an election and to improve readability.

(v) Facility-Based Measures

(A) Background

Section 1848(q)(2)(C)(ii) of the Act provides that the Secretary may use

measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories. However, the Secretary may not use measures for hospital outpatient departments, except in the case of items and services furnished by emergency physicians, radiologists, and anesthesiologists. In the CY 2018 Quality Payment Program proposed rule, we proposed to include for the 2020 MIPS payment year all the measures adopted for the FY 2019 Hospital VBP Program on the MIPS list of quality measures and cost measures for purposes of facility-based measurement (82 FR 30125). We noted how these measures meet the definition of additional system-based measures provided in section 1848(q)(2)(C)(ii) of the Act (82 FR 30125). In the CY 2018 Quality Payment Program final rule, we did not finalize our proposal that the facility-based measures available for the 2018 MIPS performance period would be the measures adopted for the FY 2019 Hospital VBP Program; nor did we finalize our proposal that, for the 2020 MIPS payment year, facility-based individual MIPS eligible clinicians or groups that were attributed to a facility would be scored on all measures on which the facility is scored via the Hospital VBP Program's Total Performance Score methodology (82 FR 53762).

We did finalize a facility-based measurement scoring standard but not the specific instance of using the FY 2019 Hospital VBP Program Total Performance Score methodology (82 FR 53755). We expressed our belief that using all measures from the Hospital VBP Program is appropriate; nevertheless, because we did not finalize the facility-based measurement scoring option for the 2018 MIPS performance period/2020 MIPS payment year, it was not appropriate to adopt these policies at that time (82 FR 53762 through 53763). We noted that we intended to propose measures that would be available for facility-based measurement for the 2019 MIPS performance period/2021 MIPS payment year in future rulemaking (82 FR 53763).

(B) Measures in Facility-Based Scoring

As we noted in the proposed CY 2019 PFS rule, we continue to believe it is appropriate to adopt all the measures for the Hospital VBP Program into MIPS for purposes of facility-based scoring; these Hospital VBP Program measures meet the definition of additional system-based measures provided in section 1848(q)(2)(C)(ii) of the Act. We also stated how it is appropriate to adopt the performance periods for the measures, which generally are consistent with the dates that we use to determine eligibility for facility-based measurement.

Beginning with the 2019 MIPS performance period, we proposed at § 414.1380(e)(1)(i) to adopt for facility-based measurement, the measure set that we finalize for the fiscal year Hospital VBP Program for which payment begins during the applicable MIPS performance period. For the 2019 MIPS performance period (which runs on the 2019 calendar year), we proposed to adopt the FY 2020 Hospital VBP Program measure set, for which payment begins on October 1, 2019. The performance period for these measures varies but performance ends in 2018 for all measures.

We also proposed at § 414.1380(e)(1)(ii) that, starting with the 2021 MIPS payment year, the scoring methodology applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program, for the fiscal year for which payment begins during the applicable MIPS performance period. Additionally, we note a typographical error in the CY 2019 PFS proposed rule (83 FR 35960) in which we state FY 2019 instead of FY 2020, which we believe commenters have likely understood given the comments we have received on FY 2020 measures. However, we provide additional clarification in this final rule.

We noted in the proposed rule that this approach of adopting all the measures in the Hospital VBP Program can be applied to other value-based purchasing programs in the future, should we decide to expand facility-based measurement to settings other than hospitals.

In the CY 2018 Quality Payment Program final rule we also established at § 414.1380(e)(6)(i) that the available quality and cost measures for facility-based measurement are those adopted under the value-based purchasing program of the facility for the year specified. We established at § 414.1380(e)(6)(ii) that we will use the benchmarks adopted under the value-based purchasing program of the facility program for the year specified (82 FR 53763 through 53764). We noted that we would determine the particular value-based purchasing program to be used for facility-based measurement in future rulemaking but would routinely use the benchmarks associated with that program (82 FR 53764). Likewise, at § 414.1380(e)(6)(iii), we established that the performance period for facility-based measurement is the performance period for the measures adopted under the value-based purchasing program of the facility program for the year specified (82 FR 53755). We noted that these provisions referred to the general parameters of our method of facility-based measurement and that we would address specific programs and years in future rulemaking (82 FR 53763). For the CY 2019 performance period, we proposed regulation text for these three provisions to specify that the measures, performance period, and benchmark period for facility-based measurement are the measures, performance period, and benchmark period established for the value-based purchasing program used to determine the score as described in § 414.1380(e)(1) (83 FR 35960). We provided an example in the proposed rule to illustrate this policy: For the 2019 MIPS performance period and 2021 MIPS payment year, the measures used would be those for the FY 2019 Hospital VBP Program along with the associated benchmarks and performance periods. As explained earlier, we intended this to mean that for the 2019 MIPS performance period and 2021 MIPS payment year, the measures used would be those for the FY 2020 Hospital VBP Program along with the associated benchmarks and performance periods.

The following is a summary of the public comments received on these proposals and our responses:

Comment: Several commenters noted their appreciation of the facility-based scoring option but requested that CMS consider additional measures that are more relevant to specific specialties as that would capture clinically meaningful information. One commenter suggested CMS develop episode-based risk adjusted measures even if they are not used in the Hospital VBP Program. Another commenter suggested that CMS consider additional avenues to collect more meaningful information.

Response: Section 1848(q)(2)(C)(ii) of the Act provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories. Based on this statutory requirement and because we want to align incentives between clinicians and hospitals, we proposed to use measures that are developed and implemented in other programs, as opposed to new measures that reflect a facility's performance. Due to this limitation, we note that there may be additional avenues for clinicians to participate in MIPS using qualified

registries or QCDRs that measure quality for services that may be provided in a facility setting, such as inpatient surgeries, without being measured in facility-based measurement.

After consideration of the public comments, we are finalizing the proposed regulation text at § 414.1380(e)(1)(i) that the measures for facility-based measurement will be the measure set finalized for the fiscal year value-based purchasing program for which payment begins during the applicable MIPS performance period. We are also finalizing the proposed regulation text at § 414.1380(e)(1)(ii) that, beginning with the 2021 MIPS payment year, the scoring methodology applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program for the fiscal year for which payment begins during the applicable MIPS performance period. This means that for the 2021 MIPS payment year, the Total Performance Score for FY 2020 will be applied for the MIPS performance year 2019. Additionally, while we did not propose any changes, we are revising the regulation text at § 414.1380(e)(1)(i) to stated that the measures used for facility-based measurement are the measure set finalized for the fiscal year VBP program for which payment begins during the applicable MIPS performance period. This update is not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We have also made a technical revision in which we revise § 414.1380(e)(6)(ii), (iv), and (v) to reference only (e)(1) rather than (e)(1)(i) for improvements in readability and clarity of the regulation.

(C) Measures for MIPS 2019 Performance Period/2021 MIPS Payment Year

For informational purposes, we provided a list of measures included in the FY 2020 Hospital VBP Program that would be used in determining the quality and cost performance category scores for the 2019 MIPS performance period/2021 MIPS payment year. The FY 2020 Hospital VBP Program has adopted 12 measures covering 4 domains (83 FR 20412 through 20413). The performance period for measures in the Hospital VBP Program varies depending on the measure, and some measures include multi-year performance periods. We noted in the proposed rule that these measures are determined through separate rulemaking (83 FR 38244); the applicable rulemaking is usually the Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System rule. We are using these measures, benchmarks, and performance periods for the purposes of facility-based measurement based on § 414.1380(e)(1) as finalized here. We repeat the list of measures finalized for the FY 2020 Hospital VBP measure set and Total Performance Score in Table 52.

BILLING CODE 4120–01–C

(vi) Scoring Facility-Based Measurement

(A) Scoring Achievement in Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we adopted certain scoring policies for clinicians and groups in facility-based measurement. We established at § 414.1380(e)(6)(iv) and (v) that the quality and cost performance category percent scores would be established by determining the percentile performance of the facility in the value-based purchasing program for the specified year, then awarding scores associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not scored using facility-based measurement for the MIPS payment year (82 FR 53764). We also finalized at § 414.1380(e)(6)(v)(A) that clinicians scored under facility-based measurement would not be scored on other cost measures (82 FR 53767).

For detailed descriptions of the current policies related to scoring achievement in facility-based measurement, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53763). Because we proposed to not require or allow an opt-in process for facility-based measurement, we proposed a change to the determination of the quality and cost performance category scores. We proposed that the quality and cost performance category percent scores would be established by determining the percentile performance of the facility in the Hospital VBP Program for the specified year, then awarding a score associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not eligible to be scored under facility-based measurement for the MIPS payment year (83 FR 35961). Under our proposal, the determination of percentile performance would be independent of those clinicians who would not have their quality or cost scores determined until we make the determination of their status under facility-based measurement.

The following is a summary of the public comments received on these proposals and our responses:

Comment: A few commenters supported our proposal that the quality and cost performance category percent scores for clinicians in facility-based measurement would be established by

determining the percentile performance of the facility in the Hospital VBP Program for the specified year, then awarding a score associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not eligible to be scored under facility-based measurement for the MIPS payment year.

Response: We thank the commenters for their support.

After consideration of the public comments, we are finalizing our proposal to change the determination of the quality and cost performance category scores at § 414.1380(e)(6)(iv) and (v) to establish both scores by determining the percentile performance of the facility in value-based purchasing program for the specified year, then awarding a score associated with that same percentile performance in the MIPS quality and cost performance categories for those MIPS eligible clinicians who are not eligible to be scored under facility-based measurement for the MIPS payment year. Also, we have revised the last sentence in paragraphs (e)(6)(iv) and (v) to more clearly state that a clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality or cost categories.

(B) Scoring Improvement in Facility-Based Measurement

In the CY 2018 Quality Payment Program final rule, we finalized that we would not give a clinician or group participating in facility-based measurement the opportunity to earn improvement points based on prior performance in the MIPS quality and cost performance categories; we noted that the Hospital VBP Program already takes improvement into account in determining the Total Performance Score (82 FR 53764 through 53765). We proposed to add this previously finalized policy to regulatory text at § 414.1380(e)(6)(iv) and (v) (83 FR 35961).

We did not address in the CY 2018 Quality Payment Program final rule a policy for a clinician or group who participates in facility-based measurement for one performance period, and then does not participate in facility-based measurement in a subsequent performance period (for example, a clinician who is scored using facility-based measurement in the 2019 MIPS performance period and is not eligible for facility-based measurement in the 2020 MIPS performance period). After further considering the issue, we stated in the CY 2019 PFS proposed rule our position that it is not possible to assess improvement in the quality performance category for those who are measured under facility-based measurement in 1 year and then through another method in the following year. Our method of assessing and rewarding improvement in the MIPS quality performance category separates points awarded for measure performance from those received for bonus points (82 FR 53745). Our method of determining the quality performance category score using facility-based measurement does not allow for the separation of achievement from bonus points. For this reason, we proposed at § 414.1380(b)(1)(vi)(A)(4) [30] to not assess improvement for MIPS-eligible clinicians who are scored in MIPS through facility-based measurement in 1 year but through another method in the following year (83 FR 39561).

We did not receive any public comments on this proposal, so we will finalize our proposal to add regulatory text at § 414.1380(e)(6)(iv) and (v) and our proposal at § 414.1380(b)(1)(vi)(A)(4) to not assess improvement for MIPS-eligible clinicians who are scored in MIPS through facility-based measurement in 1 year but through another method in the following year.

(vii) Expansion of Facility-Based Measurement To Use in Other Settings

We initiated the process of facility-based measurement focusing on the inpatient hospital setting, but have noted in the past our policy goal of expanding the concept into other facilities and programs and future, in particular to use the post-acute care (PAC) and the end-stage renal disease (ESRD) settings as the basis for facility-based measurement and scoring. In the proposed rule, we summarized a number of issues and topics related to the use of PAC and ESRD facilities (83 FR 35962 through 35963). We solicited comment on these topics, including:

- How to attribute the quality and cost of care for patients in PAC settings to clinicians;
- Whether using a value-based purchasing program, that is, a similar approach to § 414.1380(e)(1), could work for PAC given the number and variation of PAC settings and clinicians;
- The level of influence MIPS-eligible clinicians have in determining performance on quality measures for individual settings and programs in the PAC setting;
- Which PAC QRP measures may be best utilized to measure clinician performance;
- Methods to identify the appropriate measures for scoring, and what measures would be most influenced by clinicians;
- Whether all measures that are reported as part of the PAC QRPs should be included or whether we should identify a subset of measures;
- Whether we should limit facility-based measurement to specific PAC settings and programs such as the IRF QRP or LTCH QRP, or whether we should consider all PAC settings in the facility-based measurement discussion;
- The extent to which the quality measures of dialysis centers reflect clinician performance; and
- Practical and policy considerations related to whether we could to attribute the performance of a specific ESRD facility to an individual clinician.

We appreciate the comments received in response to these considerations and may consider these suggestions in policies that will be proposed as part of future rulemaking.

(e) Scoring the Improvement Activities Performance Category

For our previously established policies regarding scoring the improvement activities performance category, we refer readers to § 414.1380(b)(3) and the CY 2018 Quality Payment Program final rule (82 FR 53767 through 53769). We also refer readers to § 414.1355 and the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53662) and CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199) for previously established policies regarding the improvement activities performance category generally.

(i) Regulatory Text Updates

In the CY 2019 PFS proposed rule, we proposed updates to both §§ 414.1380(b)(3) and 414.1355 to more clearly and concisely capture previously established policies (83 FR 35963). We also proposed one substantive change with respect to patient-centered medical homes and comparable specialty practices (83 FR 35963). These are discussed in more detail in this section.

[30] The codification was misidentified in the preamble of the proposed rule as § 414.1380(b)(1)(xi)(A)(4) but the regulation text was proposed, at 83 FR 36081, to be codified at § 414.1380(b)(1)(vi)(A)(4), where we are finalizing it.

(A) Improvement Activities Performance Category Score and Total Required Points

In an effort to more clearly and concisely capture previously established policies, we proposed updates to § 414.1380(b)(3) and refer readers to the CY 2019 PFS proposed rule for more details (83 FR 35963). We also clarified that the improvement activities performance category score cannot exceed 100 percent (83 FR 35963).

We solicited comments on the above proposal. We did not receive any comments on this proposal. We are finalizing our changes to regulation text at § 414.1380(b)(3) as proposed.

(B) Weighting of Improvement Activities

In an effort to more clearly and concisely capture previously established policies, we proposed updates to § 414.1380(b)(3) and refer readers to the CY 2019 PFS proposed rule for more details (83 FR 35963).

We solicited comments on the above proposal. We did not receive any comments on this proposal. We are finalizing our changes to regulation text at § 414.1380(b)(3) as proposed.

(C) APM Improvement Activities Performance Category Score

In an effort to more clearly and concisely capture previously established policies, we proposed updates to § 414.1380(b)(3)(i) and refer readers to the CY 2019 PFS proposed rule for more details (83 FR 35963).

We solicited comments on the above proposal. We did not receive any comments on this proposal. We are finalizing our changes to regulation text at § 414.1380(b)(3)(i) as proposed.

(D) Patient-Centered Medical Homes and Comparable Specialty Practices

In the CY 2019 PFS proposed rule (83 FR 35963), we proposed to modify our regulations at § 414.1380(b)(3)(ii) to more clearly and concisely capture our previously established policies for patient-centered medical homes and comparable specialty practices and refer readers to the CY 2019 PFS proposed rule for more details.

In addition, it had come to our attention that in the preamble of the CY 2017 Quality Payment Program final rule (81 FR 77186 and 77179), the terminology ''automatic'' was used in reference to patient-centered medical home or comparable specialty practice improvement activities scoring credit. In that rule (81 FR 77186), in response to one comment, we stated, ''. . . any MIPS eligible clinician or group that does not qualify by October 1st of the performance year as a certified patient-centered medical home or comparable specialty practice cannot receive automatic credit as such for the improvement activities performance category.'' In response to another comment in that rule (81 FR 77179), we stated, ''Other certifications that are not for patient-centered medical homes or comparable specialty practices would also not qualify automatically for the highest score.''

While we used the term ''automatic'' then, we have since come to realize it is inaccurate because an eligible clinician or group must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive full credit for the improvement activities performance category. In the CY 2018 Quality Payment Program final rule (82 FR 53649), in response to comments we received regarding patient-centered medical homes or comparable specialty practices receiving full credit for the improvement activities performance category for MIPS, we stated that we would like to make clear that credit is not automatically granted; MIPS eligible clinicians and groups must attest in order to receive the credit.

Therefore, in the CY 2019 PFS proposed rule (83 FR 35963), we proposed codifying at § 414.1380(b)(3)(ii) to require that an eligible clinician or group must attest to their status as a patient-centered medical home or comparable specialty practice in order to receive this credit. Specifically, MIPS eligible clinicians who wish to claim this status for purposes of receiving full credit in the improvement activities performance category must attest to their status as a patient-centered medical home or comparable specialty practice for a continuous 90-day minimum during the performance period.

We solicited comments on the above proposal. We received the following comment on this proposal.

Comment: One commenter supported the proposal to modify current regulations to more clearly and concisely capture previously established policies for patient-centered Medical Homes and comparable specialty practices.

Response: We thank the commenter for your support.

After consideration of the comment we received, we are finalizing our changes to regulation text at § 414.1380(b)(3)(ii) as proposed.

(E) Improvement Activities Performance Category Weighting for Final Scoring

In the CY 2019 PFS proposed rule (83 FR 35963), in an effort to more clearly and concisely capture previously established policies, we proposed to make technical changes to § 414.1355(b) to state that unless a different scoring weight is assigned by CMS under section 1848(q)(5)(F) of the Act, performance in the improvement activities performance category comprises 15 percent of a MIPS eligible clinician's final score for the 2019 MIPS payment year and for each MIPS payment year thereafter). We stated that we believe these changes would better align the regulation text with the text of the statute.

We solicited comments on the above proposal. We did not receive any comments on this proposal. We are finalizing our changes to regulation text at § 414.1355(b) as proposed.

(ii) CEHRT Bonus

In the CY 2017 Quality Payment Program final rule (81 FR 77202 through 77209) and the CY 2018 Quality Payment Program final rule (82 FR 53664 through 53670), we established that certain activities in the improvement activities performance category will qualify for a bonus under the Promoting Interoperability performance category if they are completed using CEHRT. This bonus is applied under the Promoting Interoperability performance category and not under the improvement activities performance category. In the CY 2019 PFS proposed rule (83 FR 35932), we proposed a new approach for scoring the Promoting Interoperability performance category that is aligned with our MIPS program goals of flexibility and simplicity. We refer readers to section III.I.3.h.(5)(g) of this final rule for a summary of the comments we received regarding this proposal and our responses.

(f) Scoring the Promoting Interoperability Performance Category

We refer readers to section III.I.3.h.(5) of this final rule, where we discuss our proposals for scoring the Promoting Interoperability performance category.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for MIPS eligible clinicians, we refer readers to § 414.1380(c), the discussion in the CY 2017 Quality Payment Program final rule (81 FR 77319 through 77329), and the discussion in the CY 2018 Quality Payment Program final rule (82 FR 53769 through 53785). In this final rule, we discuss our proposal to continue the complex patient bonus for the 2021 MIPS payment year, as well as a

modification to the final score calculation for the 2021 MIPS payment year. Finally, we discuss refinements to reweighting policies.

(a) Accounting for Risk Factors

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on individuals' health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) and, as appropriate, other information, including information collected before completion of such studies and recommendations.

(i) Considerations for Social Risk

In the CY 2019 PFS proposed rule (83 FR 35964), we summarized our efforts related to social risk and the relevant studies conducted under section 2(d) of the IMPACT Act. We received several comments suggesting various approaches to adjust for social risk factors in the Quality Payment Program going forward. We thank commenters for their input and will take this input into consideration in future years. We also plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify policy solutions that achieve the goals of attaining health equity for all beneficiaries and minimizing unintended consequences.

(ii) Complex Patient Bonus for the 2021 MIPS Payment Year

In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we finalized at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. Our overall goal for the complex patient bonus was two-fold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We noted that we would assess on an annual basis whether to continue the bonus and how the bonus should be structured (82 FR 53771). For a detailed description of the complex patient bonus finalized for the 2020 MIPS payment year, please refer to the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776).

For the 2019 MIPS performance period/2021 MIPS payment year, we proposed in the CY 2019 PFS proposed rule to continue the complex patient bonus as finalized for the 2018 MIPS performance period/2020 MIPS payment year and to revise § 414.1380(c)(3) to reflect this policy (83 FR 35964 through 35965). Although we intended to maintain the complex patient bonus as a short-term solution, we did not believe we had sufficient information available at the time of the proposed rule to develop a long-term solution to account for patient risk factors in MIPS such that we would be able to propose a different approach for the 2019 MIPS performance period/2021 MIPS payment year. At the time of the proposed rule, we did not believe additional data sources were available that would be feasible to use as the basis for a different approach to account for patient risk factors in MIPS. In the CY 2019 PFS proposed rule, we noted our intention to analyze data when feasible from the 2017 MIPS performance period to identify differences in performance that are consistent across performance categories and that we may, in the future, shift the complex patient bonus to specific performance categories (83 FR 35965). In the absence of data analysis from the first year of MIPS, we did not believe that a change was appropriate at that time. Therefore, we stated that while we work with stakeholders to identify a long-term approach to account for patient risk factors in MIPS, we believed it was appropriate to continue the complex patient bonus for another year to support MIPS eligible clinicians who treat patients with risk factors, as well as to maintain consistency with the 2020 MIPS payment year and minimize confusion. We had received significant feedback from MIPS eligible clinicians that consistency in the MIPS program over time is valued when possible in order to minimize confusion and to help MIPS eligible clinicians predict how they will be scored under MIPS. Therefore, we stated our belief that it is appropriate to maintain consistent policies for the complex patient bonus in the 2021 MIPS payment year until we have sufficient evidence and new data sources that support an updated approach to account for patient risk factors.

Although we did not propose changes to the complex patient bonus for the 2021 MIPS payment year, we stated that the dates used in the calculation of the complex patient bonus may change as a result of other proposals we made in the CY 2019 PFS proposed rule (83 FR 35885 through 35886). For the 2020 MIPS payment year, we finalized that we will use the second 12-month segment of the eligibility determination period to calculate average HCC risk scores and the proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians (82 FR 53771 through 53772). We proposed to change the dates of the eligibility determination period (now referred to as the MIPS determination period) beginning with the 2021 MIPS payment year (83 FR 35885 through 35886). Specifically, the second 12-month segment would begin on October 1 of the calendar year preceding the applicable performance period and end on September 30 of the calendar year in which the applicable performance period occurs. We indicated that if this proposed change to the MIPS determination period is finalized, then beginning with the 2021 MIPS payment year, the second 12-month segment of the MIPS determination period (beginning on October 1 of the calendar year preceding the applicable performance period and ending on September 30 of the calendar year in which the applicable performance period occurs) would be used when calculating average HCC risk scores and proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians.

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: Several commenters supported our proposal to continue the complex patient bonus for the 2019 MIPS performance period/2021 MIPS payment year. Commenters stated that the bonus helps to create fairer scoring for MIPS eligible clinicians. Some commenters requested that we continue the bonus beyond the 2019 MIPS performance period/2021 MIPS payment year. A few commenters supported the complex patient bonus but requested that we increase the complex patient bonus above the proposed 5 points, stating that 5 points

will have a minimal impact on the final score.

Response: We thank commenters for their support of our proposal to maintain the complex patient bonus for the 2019 MIPS performance period/2021 MIPS payment year. We plan to review available information, including any updated data, in future years to determine if it is appropriate to modify our approach to adjusting for social risk factors. As we stated in the CY 2018 Quality Payment Program final rule (82 FR 53775), we believe a complex patient bonus of 5 points added to the final score is appropriate and is justified by information currently available at this time.

Comment: Several commenters did not support our approach for the complex patient bonus. Commenters pointed out limitations in the use of HCC and dual-eligibility to calculate the complex patient bonus. For instance, commenters stated that these indicators are not sufficient to adjust for differences in performance and suggested other indicators that might be more appropriate (such as income or education). Commenters urged us to continue to explore alternative methods to adjust for patient complexity in future years.

Response: We understand that both HCC risk scores and dual eligibility have some limitations as proxies for social risk factors. However, we are not aware of data sources for indicators such as income and education that are readily available for all Medicare beneficiaries that would be more complete indices of a patient's complexity. We have decided to pair the HCC risk score with the proportion of dual eligible patients to create a more complete complex patient indicator than can be captured using HCC risk scores alone. We will evaluate additional options in future years based on any updated data or additional information in order to better account for social risk factors while minimizing unintended consequences.

Comment: One commenter recommended that we use the 12-month performance period to determine the complex patient bonus, stating that it is the most accurate representation of the patient population of a MIPS eligible clinician.

Response: We believe that aligning the time period for assigning beneficiaries for purposes of calculating the complex patient bonus with the MIPS determination period is preferable for simplicity. In addition, when we designed our systems, we incorporated user feedback that requested eligibility information be connected to data submission. In order to be able to provide this information on the complex patient bonus at or near the time of data submission, it is necessary to use the second 12-month segment of the MIPS determination period as proposed to identify beneficiaries for purposes of assigning HCC risk scores and full benefit or partial benefit dual eligible beneficiaries to MIPS eligible clinicians, rather than the performance period. We note that this second 12-month segment begins 3 months before the year in which the performance period occurs and ends 9 months into the year in which the performance period occurs, creating a considerable overlap between the MIPS determination period and the year in which the performance period occurs (9 months).

After consideration of public comments, we are finalizing our proposal to continue the complex patient bonus for the 2019 MIPS performance period/2021 MIPS payment year as proposed. We are also finalizing the changes to the regulation text at § 414.1380(c)(3) as proposed. We are also modifying the timing used to calculate the complex patient bonus based on our changes to the MIPS determination period finalized in III.I.3.b. of this final rule. The second 12-month segment of the MIPS determination period will be used when calculating average HCC risk scores and the proportion of full benefit or partial benefit dual eligible beneficiaries for MIPS eligible clinicians.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability (formerly advancing care information) performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77320 and 82 FR 53779, respectively). Under the proposals we are finalizing in sections III.I.3.h.(3)(a) and III.I.3.h.(2)(a)(ii) of this final rule, for the 2021 MIPS payment year, the cost performance category will make up 15 percent and the quality performance category will make up 45 percent of a MIPS eligible clinician's final score. Table 53 summarizes the weights specified for each performance category.

TABLE 53—FINALIZED WEIGHTS BY MIPS PERFORMANCE CATEGORY AND MIPS PAYMENT YEAR

Performance category	2019 MIPS payment year (previously finalized) (percent)	2020 MIPS payment year (previously finalized) (percent)	2021 MIPS payment year (finalized) (percent)
Quality	60	50	45
Cost	0	10	15
Improvement Activities	15	15	15
Promoting Interoperability	25	25	25

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved. Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as

achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Assigning a scoring weight of zero percent and redistributing the weight to the other performance categories differs from the scenario of a MIPS eligible clinician failing to report on an applicable measure or activity that is required to be reported.

(A) Scenarios Where the Quality, Cost, Improvement Activities, and Promoting Interoperability Performance Categories Would Be Reweighted

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77322 through 77325 and 82 FR 53779 through 53780, respectively), we explained our interpretation of what it means for there to be sufficient measures applicable and available for the quality and cost performance categories, and we finalized policies for the 2019 and 2020 MIPS payment years under which we would assign a scoring weight of zero percent to the quality or cost performance category and redistribute its weight to the other performance categories in the event there are not sufficient measures applicable and available, as authorized by section 1848(q)(5)(F) of the Act. For the quality performance category, we stated that having sufficient measures applicable and available means that we can calculate a quality performance category percent score for the MIPS eligible clinician because at least one quality measure is applicable and available to the clinician (82 FR 53780). For the cost performance category, we stated that having sufficient measures applicable and available means that we can reliably calculate a score for the cost measures that adequately captures and reflects the performance of a MIPS eligible clinician (82 FR 53780). We established that if a MIPS eligible clinician is not attributed enough cases for a cost measure (in other words, has not met the required case minimum for the measure), or if a cost measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated that if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score (82 FR 53780).

In the CY 2019 PFS proposed rule, we proposed to codify these policies for the quality and cost performance categories at § 414.1380(c)(2)(i)(A)(1) and (2), respectively, and to continue them for the 2021 MIPS payment year and each subsequent MIPS payment year (83 FR 35966).

For the Promoting Interoperability performance category, in the CY 2017 Quality Payment Program final rule (81 FR 77238 through 77245) and the CY 2018 Quality Payment Program final rule (82 FR 53680 through 53687), we established policies for assigning a scoring weight of zero percent to the Promoting Interoperability performance category and redistributing its weight to the other performance categories in the final score. We proposed to codify those policies under § 414.1380(c)(2)(i) and (iii) (83 FR 35966).

For the improvement activities performance category, we stated in the CY 2019 proposed rule (83 FR 35967 through 35968) that we continue to believe that all MIPS eligible clinicians will have sufficient activities applicable and available, except for limited extreme and uncontrollable circumstances, such as natural disasters, where a clinician is unable to report improvement activities, and circumstances where a MIPS eligible clinician joins a practice in the final 3 months of the performance period as discussed in the CY 2019 PFS proposed rule (83 FR 35967 through 35968). We stated that, barring these circumstances, we believe that all MIPS eligible clinicians will have sufficient improvement activities applicable and available (82 FR 53780).

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: One commenter supported our reweighting policies, stating that they provide flexibility for MIPS eligible clinicians who are unable to participate in specific performance categories.

Response: We thank this commenter for its support.

Comment: One commenter expressed concern with our reweighting policies, because the commenter believes MIPS eligible clinician may expend resources to submit data to us, and then receive reweighting based on our determination that there are not sufficient measures or activities applicable and available.

Response: Our reweighting policies would not lead us to reweight a MIPS eligible clinician after they submit data for a given performance category. Rather, we would consider whether these policies are applicable in the event that we do not receive any data for a MIPS eligible clinician for a particular performance category. If we determine that the clinician is eligible for reweighting under our policies, then we would redistribute the weight of the performance category, rather than awarding a score of zero to the clinician for that performance category.

After consideration of public comments, we are finalizing our proposal to codify the reweighting policies for the quality and cost performance categories at § 414.1380(c)(2)(i)(A)(1) and (2), respectively, and to continue them for the 2021 MIPS payment year and each subsequent MIPS payment year, as proposed. We are also finalizing our proposal to codify the Promoting Interoperability reweighting policies under § 414.1380(c)(2)(i) and (iii) as proposed.

(B) Reweighting the Quality, Cost, and Improvement Activities Performance Categories for Extreme and Uncontrollable Circumstances

For a summary of the final policy we adopted beginning with the 2018 MIPS performance period/2020 MIPS payment year to reweight the quality, cost, and improvement activities performance categories based on a request submitted by a MIPS eligible clinician, group, or virtual group that was subject to extreme and uncontrollable circumstances, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53780 through 53783). In the proposed rule (83 FR 35966), we proposed to codify this policy at § 414.1380(c)(2)(i)(A)(*5*), but we inadvertently referred to the wrong paragraph of the regulation text, and the citation should have read § 414.1380(c)(2)(i)(A)(6).

We proposed a few minor modifications to our extreme and uncontrollable circumstances policy (83 FR 35967). First, beginning with the 2019 MIPS performance period/2021 MIPS payment year, we proposed at § 414.1380(c)(2)(i)(A)(5) (which should have read § 414.1380(c)(2)(i)(A)(6)) that, if a MIPS eligible clinician submits an application for reweighting based on extreme and uncontrollable circumstances, but also submits data on the measures or activities specified for the quality or improvement activities performance categories in accordance with § 414.1325, he or she would be scored on the submitted data like all other MIPS eligible clinicians, and the categories would not be reweighted (83 FR 35967). We proposed this modification to align with a similar policy for the Promoting Interoperability performance category (82 FR 53680 through 53682). We stated that if a MIPS eligible clinician reports on measures or activities specified for the quality or improvement activities performance categories, then we assume the clinician

believes there are sufficient measures or activities applicable and available to the clinician.

For most quality measures and improvement activities, the data submission occurs after the end of the MIPS performance period, so clinicians would know about the extreme and uncontrollable circumstance prior to submission. However, for the quality performance category, measures submitted via the Medicare Part B claims collection type are submitted by adding quality data codes to a claim. As a result, it is possible that a MIPS eligible clinician could have submitted some Medicare Part B claims collection type data prior to the submission of a reweighting application for extreme and uncontrollable events. Under our proposal, we would score the quality performance category because we have received data. However, we previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77320 through 77321 and 82 FR 53778 through 53779). If a clinician experiences an extreme and uncontrollable event that affects all of the performance categories, then under our proposal, the clinician would only be scored on the quality performance category if they submit data for only that category. The clinician would also have to submit data for the improvement activities or the Promoting Interoperability performance categories in order to be scored on two or more performance categories and receive a final score different than the performance threshold.

This proposal did not include administrative claims data that we receive through the claims submission process and use to calculate the cost measures and certain quality measures. As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77094 through 77095), and as we are codifying in this final rule at § 414.1325(a)(2), there are no data submission requirements for the cost performance category and for certain quality measures used to assess performance in the quality performance category. Please see section III.I.3.h.(1)(b) of this final rule for a description of collection types, submission types, and submitter types. We calculate performance on these measures using administrative claims data, and clinicians are not required to submit any additional data for these measures. Therefore, we stated that we did not believe that it would be appropriate to void a reweighting application based on administrative claims data we receive for measures that do not require data submission for purposes of MIPS.

We also proposed to apply the policy we finalized for virtual groups in the CY 2018 Quality Payment Program final rule (82 FR 53782 through 53783) to groups submitting reweighting applications for the quality, cost, or improvement activities performance categories based on extreme and uncontrollable circumstances (83 FR 35967). For groups, we would evaluate whether sufficient measures and activities are applicable and available to MIPS eligible clinicians in the group on a case-by-case basis and determine whether to reweight a performance category based on the information provided for the individual clinicians and practice location(s) affected by extreme and uncontrollable circumstances and the nature of those circumstances. In the CY 2019 PFS proposed rule (83 FR 35967), we stated that although we did not specifically propose to apply this policy to groups in the CY 2018 Quality Payment Program proposed rule, our intention was to apply the same policy for groups and virtual groups, and thus if we adopt this proposal, we would apply the policy to groups beginning with the 2018 performance period/2020 MIPS payment year.

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: One commenter supported our proposal for groups, stating that all MIPS eligible clinicians in the group will likely be facing the same barriers and a group application will reduce administrative burden and redundancy.

Response: We thank the commenter for its support of our proposal to apply the same policy we established for virtual groups to groups. Under the proposed policy, we would evaluate whether sufficient measures and activities are applicable and available to MIPS eligible clinicians in the group on a case-by-case basis and determine whether to reweight a performance category based on the information provided for the individual clinicians and practice location(s) affected by extreme and uncontrollable circumstances and the nature of those circumstances.

Comment: One commenter expressed concern that MIPS eligible clinicians who submit an application for reweighting based on extreme and uncontrollable circumstances, but who also report via Medicare Part B claims collection type may be unfairly penalized if claims data is received prior to the extreme and uncontrollable event. Another commenter suggested that we should score data received from MIPS eligible clinicians who submit a reweighting application only if they would receive a score that would result in a payment adjustment no lower than a neutral adjustment.

Response: If a MIPS eligible clinician reports via Medicare Part B claims collection type for the quality performance category, and we receive an application for reweighting for the clinician based on extreme and uncontrollable circumstances, their Medicare Part B claims data would only contribute to their final score if they also submit data for either the Promoting Interoperability or the improvement activities performance categories. We previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77320 through 77321 and 82 FR 53778 through 53779). The clinician's cost performance category score would not contribute to their final score because as we discuss above, there are no data submission requirements for the cost performance category, and we do not believe that it would be appropriate to void a reweighting application based on administrative claims data we receive for measures that do not require data submission for purposes of MIPS.

We assume that if a MIPS eligible clinician submits data to us following the submission of an application for reweighting based on extreme and uncontrollable circumstances, the clinician believes there are sufficient measures or activities applicable and available to them and would like their data to contribute to their final score. However, once the data is submitted, it will be scored based on performance in accordance with our policies, and the clinician could receive a negative payment adjustment.

After consideration of public comments, we are finalizing our proposal to codify the final policy we adopted beginning with the 2018 MIPS performance period/2020 MIPS payment year to reweight the quality, cost, and improvement activities performance categories based on a request submitted by a MIPS eligible clinician, group, or virtual group that was subject to extreme and uncontrollable circumstances. We are finalizing our proposal that, beginning with the 2019 performance period/2021 MIPS payment year, if a MIPS eligible clinician submits an application for reweighting based on extreme and uncontrollable circumstances, but also

submits data on the measures or activities specified for the quality or improvement activities performance categories in accordance with § 414.1325, he or she will be scored on the submitted data like all other MIPS eligible clinicians, and the categories will not be reweighted. We are also finalizing our proposal, beginning with the 2018 performance period/2020 MIPS payment year, that, for groups, we will evaluate whether sufficient measures and activities are applicable and available to MIPS eligible clinicians in the group on a case-by-case basis and determine whether to reweight a performance category based on the information provided. We are finalizing the regulation text at § 414.1380(c)(2)(i)(A)(6) as proposed.

(C) Reweighting the Quality, Cost, Improvement Activities, and Promoting Interoperability Performance Categories for MIPS Eligible Clinicians Who Join a Practice in the Final 3 Months of the Performance Period Year

Beginning with the 2019 MIPS performance period, we proposed that a MIPS eligible clinician who joins an existing practice (existing TIN) during the final 3 months of the calendar year in which the MIPS performance period occurs (the performance period year) that is not participating in MIPS as a group would not have sufficient measures applicable and available (83 FR 35967 through 35968). We also proposed that a MIPS eligible clinician who joins a practice that is newly formed (new TIN) during the final 3 months of the performance period year would not have sufficient measures applicable and available, regardless of whether the clinicians in the practice report for purposes of MIPS as individuals or as a group (83 FR 35967 through 35968). In each of these scenarios, we proposed to reweight all four of the performance categories to zero percent for the MIPS eligible clinician and, because he or she would be scored on fewer than two performance categories, the MIPS eligible clinician would receive a final score equal to the performance threshold and a neutral MIPS payment adjustment under the policy at § 414.1380(c) (83 FR 35967 through 35968). We proposed to codify these policies at § 414.1380(c)(2)(i)(A)(3).

We proposed this policy because we are not currently able to identify these MIPS eligible clinicians (or groups if the group is formed in the final 3 months of the performance period year) at the start of the MIPS submission period. When we designed our systems, we incorporated user feedback that requested eligibility information be connected to the submission process. In order to submit data, an individual TIN/NPI or the group TIN must be in the files generated from the MIPS eligibility determination periods. As discussed in the CY 2019 PFS proposed rule (83 FR 35885 through 35886), we have two 12-month determination periods for eligibility. We proposed and are finalizing in section III.II.3.b. of this final rule that the second 12-month segment of the MIPS eligibility determination period will end on September 30 of the calendar year in which the applicable MIPS performance period occurs; therefore, we will have no eligibility information about clinicians who join a practice after September 30 of the performance period year. MIPS eligible clinicians who join an existing practice (existing TIN) in the final 3 months of the performance period year that is not participating in MIPS as a group will not be identified by our systems, and we will not have the ability to inform them that they are eligible or to receive MIPS data from them. Similarly, practices that form (new TIN) in the final 3 months of the performance period year will not be in the MIPS determination files. Accordingly, we stated that the measures and activities would not be available because any data from these MIPS eligible clinicians would not be accessible to us.

If a MIPS eligible clinician joins a practice (existing TIN) in the final 3 months of the performance period year, and the practice is not newly formed and is reporting as a group for the performance period, the MIPS eligible clinician will be able to report as part of that group. In this case, we are able to accept data for the group because the TIN would be in our MIPS eligibility determination files. Therefore, we stated that we believe the measures and activities would be available in this scenario, and reweighting would not be necessary for the MIPS eligible clinician. We noted that, if a MIPS eligible clinician's TIN/NPI combination was not part of the group practice during the MIPS determination period, the TIN/NPI combination will not be identified in our system at the start of the MIPS data submission period; however, if the MIPS eligible clinician qualifies to receive the group final score under our proposal, we would apply the group final score to the MIPS eligible clinician's TIN/NPI combination as soon as the information becomes available. Please see section III.I.3.j.(1) of this final rule for more information about assigning group scores to MIPS eligible clinicians.

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: Several commenters supported our proposal to reweight MIPS eligible clinicians who form a new practice in the final 3 months of the performance period year or join an existing practice that does not participate in MIPS as a group.

Response: We thank commenters for their support of our proposal.

Comment: One commenter requested that we extend this policy to the 2018 performance period as well.

Response: We note that we did not propose to apply the policy to the 2018 performance period, and as such, we will not be extending it in this final rule.

Comment: One commenter did not support our proposal to treat MIPS eligible clinicians who join a new or existing practice in the final 3 months of the performance period year differently depending on whether the practice reports as a group. The commenter also requested that we reweight MIPS eligible clinicians who switch practices at any time during the performance period, because a MIPS eligible clinician's previous practice may not report on their behalf and because clinicians are impacted by training and other requirements associated with switching practices that may impact performance.

Response: A MIPS eligible clinician who joins an existing practice that is participating in MIPS as a group would have the opportunity to contribute to the group's performance and final score. We refer readers to section III.I.3.j.(1) of this final rule for a discussion of which MIPS eligible clinicians may receive a group final score. We do not believe it would be appropriate to reweight the performance categories for MIPS eligible clinicians who change practices at any time during the performance period year because, consistent with our discussion in the CY 2019 PFS proposed rule (83 FR 35967 through 35968), we would be able to identify these clinicians at the beginning of the MIPS submission period if they change practices prior to the final 3 months of the performance period year. We also believe MIPS eligible clinicians who change practices prior to the final 3 months of the performance period year generally should have sufficient time to prepare for MIPS reporting, in the event that their prior practice does not submit data for them.

After consideration of public comments, we are finalizing as

proposed our proposal to reweight the quality, cost, improvement activities, and Promoting Interoperability performance categories to zero percent for MIPS eligible clinicians who join an existing practice (existing TIN) during the final 3 months of the performance period year that is not participating in MIPS as a group, or a practice that is newly formed (new TIN) during the final 3 months of the performance period year regardless of whether the clinicians in the practice report for purposes of MIPS as individuals or as a group. We are finalizing the proposed regulation text at § 414.1380(c)(2)(i)(A)(3) as proposed.

(D) Automatic Extreme and Uncontrollable Circumstances Policy Beginning With the 2020 MIPS Payment Year

In conjunction with the CY 2018 Quality Payment Program final rule, and due to the impact of Hurricanes Harvey, Irma, and Maria, we issued an interim final rule with comment period (IFC) in which we adopted on an interim final basis a policy for automatically reweighting the quality, improvement activities, and advancing care information (now referred to as Promoting Interoperability) performance categories for the transition year of MIPS (the 2017 performance period/ 2019 MIPS payment year) for MIPS eligible clinicians who are affected by extreme and uncontrollable circumstances affecting entire regions or locales (82 FR 53895 through 53900).

In the CY 2019 PFS proposed rule (83 FR 35968), we stated that we believe that a similar automatic extreme and uncontrollable circumstances policy would be appropriate for any year of the MIPS program to account for natural disasters and other extreme and uncontrollable circumstances that impact an entire region or locale. As we discussed in the interim final rule (82 FR 53897), we believe such a policy would reduce burden on clinicians who have been affected by widespread catastrophes and would align with existing policies for other Medicare programs. We proposed at § 414.1380(c)(2)(i)(A)(7) and (c)(2)(i)(C)(3) to apply the automatic extreme and uncontrollable circumstances policy we adopted for the transition year to subsequent years of the MIPS program, beginning with the 2018 MIPS performance period and the 2020 MIPS payment year, with a few additions to address the cost performance category (83 FR 35968). We note that we inadvertently referred to the wrong paragraph of the regulation text in the proposed rule, and the citation should have read § 414.1380(c)(2)(i)(A)(8) instead of § 414.1380(c)(2)(i)(A)(7). For a description of the policy we adopted for the MIPS transition year, we refer readers to the discussion in the interim final rule (82 FR 53895 through 53900).

In the interim final rule (82 FR 53897), we stated that we were not including the cost performance category in the automatic extreme and uncontrollable circumstances policy for the transition year because the cost performance category is weighted at zero percent in the final score for the 2017 MIPS performance period/2019 MIPS payment year. We finalized a 10 percent weight for the cost performance category for the 2018 MIPS performance period/2020 MIPS payment year (82 FR 53643) and are finalizing a 15 percent weight for the 2019 performance period/ 2021 MIPS payment year (see section III.I.3.h.(3)(a) of this final rule). In the CY 2019 PFS proposed rule (83 FR 35968), we stated that for the reasons discussed in the CY 2018 Quality Payment Program final rule (82 FR 53781), we believe a MIPS eligible clinician's performance on measures calculated based on administrative claims data, such as the measures specified for the cost performance category, could be adversely affected by a natural disaster or other extreme and uncontrollable circumstance, and that the cost measures may not be applicable to that MIPS eligible clinician. Therefore, we proposed to include the cost performance category in the automatic extreme and uncontrollable circumstances policy beginning with the 2018 MIPS performance period/2020 MIPS payment year (83 FR 35968). Under our policy for the transition year, if a MIPS eligible clinician in an affected area submits data for any of the MIPS performance categories by the applicable submission deadline for the 2017 MIPS performance period, he or she will be scored on each performance category for which he or she submits data, and the performance category will not be reweighted to zero percent in the final score (82 FR 53898). Our policy for the transition year did not include measures that are calculated based on administrative claims data (82 FR 53898). As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77094 through 77095), and as we are codifying in this final rule at § 414.1325(a)(2), there are no data submission requirements for the cost performance category, and we will calculate performance on the measures specified for the cost performance category using administrative claims data. We proposed for the cost performance category, if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that would enable us to calculate the cost measures for that clinician (83 FR 35968).

In the interim final rule (82 FR 53897), we did not include an automatic extreme and uncontrollable circumstances policy for groups or virtual groups, and we stated in the CY 2019 PFS proposed rule (83 FR 35968) that we continue to believe such a policy is not necessary. Unless we receive data from a TIN indicating that the TIN would like to be scored as a group for MIPS, performance by default is assessed at the individual MIPS eligible clinician level. Similarly, performance is not assessed at the virtual group level unless the member TINs submit an application in accordance with § 414.1315. We stated that if we receive data from a group or virtual group, we would score that data, even if individual MIPS eligible clinicians within the group or virtual group are impacted by an event that would be included in our automatic extreme and uncontrollable circumstances policy. Regardless of whether we receive data from a group or virtual group, we would have no mechanism to determine whether the group or virtual group did not submit data, or submitted data and performed poorly, because it had been affected by an extreme and uncontrollable event unless the group notifies us of its circumstances. Instead of establishing a threshold for groups or virtual groups to receive automatic reweighting based on the number of clinicians in the group or virtual group impacted by extreme and uncontrollable events, we stated that we believe it is preferable that these groups and virtual groups submit an application for reweighting based on extreme and uncontrollable circumstances under our existing policy (82 FR 53780 through 53783) where they may be eligible for reweighting if they establish that the group or virtual group was sufficiently impacted by the extreme and uncontrollable event.

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: Several commenters supported our proposed application of the automatic extreme and uncontrollable policy starting with the 2018 MIPS performance period/2020 MIPS payment year to reduce burden on

impacted MIPS eligible clinicians. A few commenters supported our proposal to extend the automatic extreme and uncontrollable policy to include the cost performance category for the 2018 MIPS performance period/2020 MIPS payment year and future years.

Response: We thank commenters for their support of our proposals.

Comment: One commenter suggested that we only score performance categories (including the cost performance category) for MIPS eligible clinicians impacted by the automatic extreme and uncontrollable policy if they would receive a positive or neutral payment adjustment.

Response: If a MIPS eligible clinician reports via Medicare Part B claims collection type for the quality performance category, and we receive data for the clinician prior to a triggering event for the automatic extreme and uncontrollable circumstances policy, their Medicare Part B claims data would only contribute to their final score if they also submit data for either the Promoting Interoperability or the improvement activities performance categories. We previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77320 through 77321 and 82 FR 53778 through 53779). We assume that if a MIPS eligible clinician submits data to us following a triggering event, the clinician believes there are sufficient measures or activities applicable and available to them and would like their data to contribute to their final score. However, once the data is submitted, it will be scored based on performance in accordance with our policies, and the clinician could receive a negative payment adjustment.

Comment: One commenter disagreed with our decision to not propose an automatic extreme and uncontrollable circumstances policy for groups, because clinicians who choose to report as group for purposes of MIPS conduct all aspects of MIPS at a group level.

Response: We continue to believe that a group policy is not necessary and that there are barriers to implementing such a policy. For example, because group reporting is optional, we would have no mechanism to determine who would have been intending to report without receiving a data submission. Additionally, some groups may be split between areas that are impacted by the triggering event and areas that are not. We do not believe that it would be appropriate to make a decision about how the group is impacted without additional information. We believe our application-based extreme and uncontrollable circumstances policy provides the mechanism for such an assessment. Finally, we note that if all the MIPS eligible clinicians in a group are located in an area affected by the extreme and uncontrollable circumstance, and the group is not able to submit for MIPS as a group, then all the MIPS eligible clinicians in the group would be considered as individuals and covered by the automatic extreme and uncontrollable circumstances policy.

After consideration of public comments received, we are finalizing these proposals and the regulation text at § 414.1380(c)(2)(i)(A)(8) and (c)(2)(i)(C)(3) as proposed.

iii. Extreme and Uncontrollable Circumstance Policy for the 2017 Performance Period/2019 MIPS Payment Year

As discussed in the preceding section III.I.3.i.(2)(b)(ii)(D), in conjunction with the CY 2018 Quality Payment Program final rule, and due to the impact of Hurricanes Harvey, Irma, and Maria, we issued an interim final rule with comment period (IFC) in which we adopted on an interim final basis a policy for automatically reweighting the quality, improvement activities, and advancing care information (now referred to as Promoting Interoperability) performance categories for the transition year of MIPS (the 2017 performance period/2019 MIPS payment year) for MIPS eligible clinicians who are affected by extreme and uncontrollable circumstances affecting entire regions or locales (82 FR 53895 through 53900). In the CY 2019 PFS proposed rule (83 FR 35968), we proposed to codify this policy for the quality and improvement activities performance categories at § 414.1380(c)(2)(i)(A)(6) and for the advancing care information (now Promoting Interoperability) performance category at § 414.1380(c)(2)(i)(C)(3). We note that we inadvertently referred to the wrong paragraph of the regulation text in the proposed rule, and the citation should have read § 414.1380(c)(2)(i)(A)(7) instead of § 414.1380(c)(2)(i)(A)(6).

A summary of the comments we received on the IFC and our responses are included below.

Comment: Many commenters supported the automatic extreme and uncontrollable circumstance policy for the 2017 MIPS performance period. Several commenters stated that the policy is appropriate given the burden these events have had on impacted MIPS eligible clinicians. Several commenters supported the flexibility afforded by this policy and noted that the policy will allow impacted MIPS eligible clinicians to focus on providing patient care during natural disasters without having to focus on MIPS reporting. Several commenters supported our policy to allow clinicians impacted by extreme and uncontrollable events to report for MIPS if they choose because commenters believe some MIPS eligible clinicians may be less impacted by natural disasters and may have interest in reporting for MIPS. One commenter supported including events that have been designated by FEMA in the automatic extreme and uncontrollable circumstance policy. Another commenter supported using the practice location listed in PECOS to determine eligibility for the automatic extreme and uncontrollable policy.

Response: We believe that the automatic extreme and uncontrollable circumstance policy is appropriate to provide relief to MIPS eligible clinicians experiencing natural disasters and will help to ensure they are able to focus on providing patient care. In the CY 2018 Quality Payment Program final rule, we noted that we anticipate the types of events that could trigger this policy would be events designated as FEMA major disasters or a public health emergency declared by the Secretary, although we will review each situation on a case-by-case basis (82 FR 53897).

Comment: One commenter urged CMS to develop a clear communications plan for alerting MIPS eligible clinicians that they are eligible for the automatic extreme and uncontrollable circumstance policy.

Response: We agree that it will be important to effectively alert MIPS eligible clinicians who we determine are covered by the automatic extreme and uncontrollable circumstance policy. Similar to other CMS programs, we communicated applicability information through routine communication channels, including, but not limited to, issuing memos, emails, and notices on the QPP website, *qpp.cms.gov*.

Comment: One commenter stated that providing MIPS eligible clinicians who are impacted by extreme and uncontrollable events with a final score that is equal to the performance threshold if they report on only one performance category does not recognize their efforts for that performance category. Instead, commenter stated CMS should score the MIPS eligible clinician on that category.

Response: We continue to believe that the final score for MIPS should be a composite score. Therefore, for MIPS

eligible clinicians who are subject to the automatic extreme and uncontrollable circumstance policy, we will continue to apply our general MIPS policy codified at § 414.1380(c) that MIPS eligible clinicians who are scored on fewer than 2 performance categories receive a score equal to the performance threshold (82 FR 53958). MIPS eligible clinicians who are located in an area affected by extreme and uncontrollable circumstances who submit data for the quality performance category would also have to submit data for the Promoting Interoperability or improvement activities performance categories in order for the data submitted to contribute to their final score.

Comment: One commenter stated that scoring data that are submitted by impacted MIPS eligible clinicians is unfair because they are being assessed against MIPS eligible clinicians who were not impacted by natural disasters.

Response: Because the performance threshold is set very low (at 3 points) for the 2017 MIPS performance period, we believe that MIPS eligible clinicians who are eligible for the automatic extreme and uncontrollable circumstance policy but submit data will easily exceed the performance threshold and thus will not be negatively impacted. Furthermore, we assume that MIPS eligible clinicians who are located in an area affected by extreme and uncontrollable circumstances but then submit data for more than one performance category believe there are sufficient measures or activities applicable and available to them and would like their data to contribute to their final score.

Comment: One commenter suggested that CMS should not score Medicare Part B claims measures that are submitted by MIPS eligible clinicians impacted by extreme and uncontrollable events.

Response: If a MIPS eligible clinician reports via Medicare Part B claims for the quality performance category and we receive data prior to the extreme and uncontrollable event, their Medicare Part B claims data would only contribute to their final score if they also submit data for either the Promoting Interoperability or improvement activities performance categories. We previously finalized at § 414.1380(c) that if a MIPS eligible clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77320 through 77321 and 82 FR 53778 through 53779).

Comment: One commenter suggested that CMS consider providing a positive payment adjustment for MIPS eligible clinicians who are eligible for the automatic extreme and uncontrollable circumstance policy instead of providing a neutral payment adjustment because this will help to incentivize MIPS eligible clinicians to return to affected areas.

Response: It is unclear to us how a positive payment adjustment would incentivize clinicians to return to affected areas, or how we would go about verifying whether and why they have returned, since many factors influence clinician choice in practice location.

After consideration of the public comments, we are adopting the IFC as a final rule without any modifications. We are finalizing the regulation text at § 414.1380(c)(2)(i)(A)(7) and § 414.1380(c)(2)(i)(C)(3) as proposed.

(iv) Redistributing Performance Category Weights

In the CY 2017 and CY 2018 Quality Payment Program final rules, we established policies for redistributing the weights of performance categories for the 2019 and 2020 MIPS payment years in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories (81 FR 77325 through 77329; 82 FR 53783 through 53785, 53895 through 53900). We proposed to codify these policies under § 414.1380(c)(2)(ii) (83 FR 35969).

For the 2021 MIPS payment year, we proposed at § 414.1380(c)(2)(ii)(B) to apply similar reweighting policies as finalized for the 2020 MIPS payment year (83 FR 35969). We note that we inadvertently referred to the wrong paragraph of the regulation text in the proposed rule, and the citation should have read § 414.1380(c)(2)(ii)(C) instead of § 414.1380(c)(2)(ii)(B). In general, we would redistribute the weight of a performance category or categories to the quality performance category. We stated that redistributing weight to the quality performance category is appropriate because of the experience MIPS eligible clinicians have had reporting on quality measures under other CMS programs. We proposed to continue to redistribute the weight of the quality performance category to the improvement activities and Promoting Interoperability performance categories (83 FR 35969). However, for the 2021 MIPS payment year, based on our proposal to weight the cost performance category at 15 percent, we proposed to reweight the Promoting Interoperability performance category to 45 percent and the improvement activities performance category to 40 percent when the quality performance category is weighted at zero percent (83 FR 35969). We chose to weigh Promoting Interoperability higher in order to align with goals of interoperability and for simplicity because we generally have avoided assigning partial percentage points to performance category weights. Reweighting scenarios under the proposal are presented in Table 54.

TABLE 54: Performance Category Redistribution Policies Proposed for the 2021 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	45%	15%	15%	25%
Reweight One Performance Category				
-No Cost	60%	0%	15%	25%
-No Promoting Interoperability	70%	15%	15%	0%
-No Quality	0%	15%	40%	45%
-No Improvement Activities	60%	15%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	50%	50%
-No Cost and no Improvement Activities	75%	0%	0%	25%
-No Promoting Interoperability and no Quality	0%	15%	85%	0%
-No Promoting Interoperability and no Improvement Activities	85%	15%	0%	0%
-No Quality and no Improvement Activities	0%	15%	0%	85%

We stated that we have heard from stakeholders in previous years that our reweighting policies place undue weight on the quality performance category, and, although we continue to believe the policies are appropriate, we solicited comment on alternative redistribution policies in which we would also redistribute weight to the improvement activities performance category (see Table 55). Under the alternative redistribution policy we considered, we would redistribute the weight of the Promoting Interoperability performance category to the quality and improvement activities performance categories (83 FR 35969 through 35970). We would redistribute 15 percent of the Promoting Interoperability performance category weight to the quality performance category, and 10 percent to the improvement activities performance category. We stated that redistributing more of the weight of the Promoting Interoperability performance category to the quality performance category is appropriate because MIPS eligible clinicians have had more experience reporting on quality measures under other CMS programs than reporting on improvement activities. We would redistribute the cost performance category weight equally to the quality and improvement activities performance categories (5 percent to each) under this alternative policy.

TABLE 55: Alternative Performance Category Redistribution Policies Considered for the 2021 MIPS Payment Year

	Alternative Redistribution Policy: Reweight Promoting Interoperability and Cost to Quality and Improvement Activities			
Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	45%	15%	15%	25%
Reweight One Performance Category				
-No Promoting Interoperability	60%	15%	25%	0%
-No Cost	55%	0%	20%	25%
-No Quality	0%	15%	40%	45%
-No Improvement Activities	60%	15%	0%	25%
Reweight Two Performance Categories				
-No Cost and No Promoting Interoperability	70%	0%	30%	0%
-No Cost and no Quality	0%	0%	50%	50%
-No Cost and no Improvement Activities	75%	0%	0%	25%
-No Promoting Interoperability and no Quality	0%	15%	85%	0%
-No Promoting Interoperability and no Improvement Activities	85%	15%	0%	0%
-No Quality and no Improvement Activities	0%	15%	0%	85%

We solicited comments on the above proposals. These comments and our responses are discussed below.

Comment: A few commenters supported our proposed reweighting policies for the 2019 MIPS performance period/2021 MIPS payment year.

Response: We thank commenters for their support of our proposal.

Comment: Several commenters supported the alternative policy we considered to reweight to both quality and improvement activities, and stated our primary proposal which generally reweights to quality, places undue weight on the quality performance category. Some commenters stated that reweighting to the improvement activities performance category is appropriate given the importance of practice improvement. A few commenters stated that the quality performance category is particularly challenging, and therefore, placing additional weight on this performance category would not be fair to MIPS eligible clinicians who receive reweighting for the cost or Promoting Interoperability performance categories. A few commenters also mentioned that our reweighting policies place undue burden on small and rural practices who have particular difficulty performing well on the quality performance category. A few commenters requested that we redistribute all of the weight of the Promoting Interoperability or cost performance categories to the improvement activities performance category, in order to avoid placing undue focus on quality and due to the importance of quality improvement.

Response: We continue to believe reweighting to the quality performance category is appropriate as the quality performance category is a critical component of value-based care, and therefore, we believe performance on quality measures is important. While there is variation in performance for the quality performance category, for the improvement activities we are only assessing whether the MIPS eligible clinician completed activities. We believe that reweighting to the quality performance category will encourage MIPS eligible clinicians to report on the quality performance category due to the higher category weight (that is, a zero score for this performance category would have more significant impact), particularly those clinicians who may have only reported to the improvement activities performance category, and will minimize complexity. We believe it is important to encourage MIPS eligible clinicians to report on quality while the performance threshold is still relatively low. In regards to the concern on small and rural practice performance in the quality performance category, we note that small practices that report quality measures can receive the small practice bonus we are finalizing in section III.I.3.i.(1)(b)(viii) of this final rule and we have not seen differences in performance for rural practices. We plan to review available approaches to reweighting in future years including impact on small and rural practices and may revisit our policies to ensure they are fair and not overly complex.

Comment: One commenter disagreed with our proposal to reweight the quality performance category to the improvement activities and Promoting Interoperability performance categories, because the commenter noted concern with our discussion of available and applicable measures for the quality performance category and reweighting this category would place greater weight on other performance categories. Another commenter noted that reweighting the quality performance category may lead to MIPS eligible clinicians inaccurately receiving a positive, neutral, or negative payment adjustment.

Response: We believe reweighting to the improvement activities and Promoting Interoperability performance categories in the rare cases when the quality performance category is reweighted is appropriate because MIPS eligible clinicians have limited experience being scored on the cost performance category. We also expect the cases when a MIPS eligible clinician does not have any quality measures to be very rare.

After consideration of public comments, we are finalizing these proposals and the regulation text at § 414.1380(c)(2)(ii)(A) through (C) as proposed.

Because the cost performance category was zero percent of a MIPS eligible clinician's final score for the 2017 MIPS performance period, we stated in the CY 2019 PFS proposed rule (83 FR 35970) that it is not appropriate to redistribute weight to the cost performance category for the 2019 MIPS performance period because MIPS eligible clinicians have limited experience being scored on cost measures for purposes of MIPS. In addition, we were concerned that there would be limited measures in the cost performance category under our proposals for the 2019 MIPS performance period and stated that it may be appropriate to delay shifting additional weight to the cost performance category until additional measures are developed. However, we also noted that cost is a critical component of the Quality Payment Program and believe placing additional emphasis on the cost performance category in future years may be appropriate. Therefore, we solicited comment on redistributing weight to the cost performance category in future years.

We thank commenters for their input and will take this input into consideration in future years.

(c) Final Score Calculation

We proposed to revise the formula at § 414.1380(c) for calculating the final score (83 FR 35970). We did not propose to continue to add the small practice bonus to the final score for the 2021 MIPS payment year and proposed to add a small practice bonus to the quality performance category score instead starting with the 2021 MIPS payment year (83 FR 35950 through 35951). Therefore, we proposed to revise the formula to omit the small practice bonus from the final score calculation beginning with the 2021 MIPS payment year (83 FR 35970). We requested public comments on this proposal.

Although we received several comments on the small practice bonus, we did not receive any comments on our proposed revisions to the formula to calculate the final score. We discuss our policy for our revised small practice bonus in the quality performance category in section III.I.3.i.(1)(b)(viii) of this final rule.

After consideration of public comments, we are finalizing our proposed revisions to § 414.1380(c) as proposed.

In the CY 2019 PFS proposed rule, we solicited comments on approaches to simplify calculation of the final score (83 FR 35970). We thank commenters for their input and will take this input into consideration in future years.

j. MIPS Payment Adjustments

(1) Final Score Used in Payment Adjustment Calculation

For our previously established policies regarding the final score used in payment adjustment calculations, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77330 through 77332) and the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787). Under our policies, for groups submitting data using the TIN identifier, we will apply the group final score to all the TIN/NPI combinations that bill under that TIN during the performance period (82 FR 53785). We proposed to modify this policy for the application of the group final score, beginning with the 2019

performance period/2021 MIPS payment year (83 FR 35971). We proposed a 15-month window that starts with the second segment of the MIPS determination period (October 1 prior to the MIPS performance period through September of the MIPS performance period) and also includes the final 3 months of the calendar year of the performance period (October 1 through December 31 of the performance period year) (83 FR 35971). We proposed for groups submitting data using the TIN identifier, we would apply the group final score to all of the TIN/NPI combinations that bill under that TIN during the proposed 15-month window (83 FR 35971). We stated that we believe that partially aligning with the second segment of the MIPS determination period creates consistency with our eligibility policies that informs a group or eligible clinician of who is eligible. We refer readers to the CY 2019 PFS proposed rule (83 FR 35884 through 35886) where we discuss our proposals related to MIPS determination periods.

We noted that, if a MIPS eligible clinician's TIN/NPI combination was not part of the group practice during the MIPS determination period, the TIN/NPI combination would not be identified in our system at the start of the MIPS data submission period; however, if the MIPS eligible clinician qualifies to receive the group final score under our proposal, we would apply the group final score to the MIPS eligible clinician's TIN/NPI combination as soon as the information becomes available.

We solicited comments on the above proposal.

Comment: One commenter supported the concept of assigning a group score to clinicians who are in a group during the final 3 months of the calendar year of the performance period, stating that it is administratively burdensome for large organizations to track clinicians who join their practice during the last 3 months of the calendar year of the performance period and determine whether or not their previous practice intends to submit data on their behalf for the same calendar year of the performance period.

Response: We thank the commenter for their support.

Comment: One commenter expressed concern with the 15-month gap between the end of the first segment of the MIPS determination period and the end of the calendar year of the MIPS performance period for clinicians in groups who qualify for a group final score. The commenter stated that many clinicians move from one TIN to another and recommended we allow groups to report both on behalf of individual clinicians or as a group for all clinicians who have assigned their billing rights to the TIN during the calendar year of the performance period.

Response: We realize that the first segment of the MIPS determination period, as codified in this final rule at § 414.1305, ends 15 months before the end of the calendar year of the performance period; however, we believe the performance of a group should coincide, to the extent possible, with clinicians who are in the group during the performance period. Therefore, we believe it is appropriate to use the 15-month window which includes the second segment of the MIPS determination period and the last 3 months of the calendar year of the performance period. We note that group reporting is an option and practices may elect to submit for individual eligible clinicians, rather than as a group, as long as eligible clinicians are identified prior to end of the second segment of the MIPS determination period. As discussed in section III.I.3.i.(2)(b)(ii)(C) of this final rule, we do not have the ability to accept data for new group practices formed in the last 3 months of the calendar year of the performance period, or for individual MIPS eligible clinicians who switch practices in the last 3 months of the calendar year of the performance period if their new practice is not participating in MIPS as a group.

Comment: One commenter did not support the proposed 15-month window, citing the need for additional clarity and guidance to avoid complexity and confusion, and suggested that CMS provide examples of how this policy would apply in different scenarios. This commenter also recommended that CMS consider the implications of the proposal on clinician employment and how the proposal may negatively impact the ability of clinicians to switch practices.

Response: We do not agree that this proposal would cause confusion or add complexity. We believe the 15-month window aligns with our eligibility policies and better informs clinicians about their eligibility, streamlining the program. For example, for the 2019 MIPS performance period, if an eligible clinician joins a group practice in November of 2019 and that group practice existed prior to the last 3 months of the year (that is, prior to October 1, 2019) and submits MIPS data as a group, we would apply the group final score to that eligible clinician if the clinician bills under the group's TIN during the proposed 15-month window. Another example is a MIPS eligible clinician who joins a group practice in October of 2018 and that group practice submits MIPS data as a group for the 2019 MIPS performance period; for the 2019 performance period, we would apply the group final score to that eligible clinician if the clinician bills under the group's TIN during the proposed 15-month window. We appreciate the suggestion to consider the policy's implications on clinician employment and will take this into consideration in future rulemaking.

After consideration of the comments we received, we are finalizing our proposed 15-month window that starts with the second segment of the MIPS determination period (October 1 prior to the calendar year of the performance period through September 30 of the calendar year of the performance period) and also includes the final 3 months of the calendar year of the performance period (October 1 through December 31 of the calendar year of the performance period). We are also finalizing that for groups submitting data using the TIN identifier, we will apply the group final score to all of the TIN/NPI combinations that bill under that TIN during the 15-month window. We refer readers to section III.I.3.i.(2)(b)(ii)(C) of this final rule for a detailed discussion of the reweighting of the quality, cost, improvement activities and Promoting Interoperability performance categories for MIPS eligible clinicians who join a group practice in the final 3 months of the calendar year of the performance period.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of

which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

To determine a performance threshold to propose for the third year of MIPS (2019 MIPS performance period/2021 MIPS payment year), in the CY 2019 PFS proposed rule (83 FR 35971), we again relied upon the special rule in section 1848(q)(6)(D)(iii) of the Act, as amended by 51003(a)(1)(D) of the Bipartisan Budget Act of 2018. As required by section 1848(q)(6)(D)(iii) of the Act, we considered data available from a prior period with respect to performance on measures and activities that may be used under the MIPS performance categories. In accordance with newly added clause (iv) of section 1848(q)(6)(D) of the Act, we also considered which data could be used to estimate the performance threshold for the 2024 MIPS payment year to ensure a gradual and incremental transition from the performance threshold we would establish for the 2021 MIPS payment year. In the CY 2019 PFS proposed rule (83 FR 35971), we noted that we considered using the final scores for the 2017 MIPS performance period/2019 MIPS payment year; however, the data used to calculate the final scores was submitted through the first quarter of 2018, and final scores for MIPS eligible clinicians were not available in time for us to use in our analyses. We noted that if technically feasible, we would consider using the actual data used to determine the final scores for the 2019 MIPS payment year to estimate a performance threshold for the 2024 MIPS payment year in the final rule.

Because the final scores for MIPS eligible clinicians were not yet available at the time of the CY 2019 PFS proposed rule, we reviewed the data relied upon for the CY 2017 Quality Payment Program final rule regulatory impact analysis (81 FR 77514 through 77536) as we believed it was the best data available to us to estimate the actual data for the 2017 MIPS performance period/2019 MIPS payment year (83 FR 35971). Please refer to the CY 2019 PFS proposed rule (83 FR 35971 through 35973) for more details about the data we used.

In accordance with section 1848(q)(6)(D)(i) of the Act, the performance threshold for the 2024 MIPS payment year would be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary. In the CY 2019 PFS proposed rule (83 FR 35972), we stated that when we analyzed the estimated final scores for the first year of the program (the 2019 MIPS payment year), the mean final score was between 63.50 and 68.98 points and the median was between 77.83 and 82.5 points based on the different participation assumptions. For purposes of estimating the performance threshold for the 2024 MIPS payment year, we used the mean final score based on data used for the CY 2017 Quality Payment Program final rule regulatory impact analysis (81 FR 77514 through 77536), which resulted in an estimated performance threshold between 63.50 and 68.98 points for the 2024 MIPS payment year. We noted that this is only an estimation we are providing in accordance with section 1848(q)(6)(D)(iv) of the Act, and we will propose the actual performance threshold for the 2024 MIPS payment year in future rulemaking.

We proposed a performance threshold of 30 points for the 2021 MIPS payment year to be codified at § 414.1405(b)(6) (83 FR 35972). A performance threshold of 30 points would be a modest increase over the performance threshold for the 2020 MIPS payment year (15 points), and we stated that we believe it would provide a gradual and incremental transition to the performance threshold we will establish for the 2024 MIPS payment year, which we have estimated would be between 63.50 and 68.98 points.

We stated that we want to encourage continued participation and the collection of meaningful data by MIPS eligible clinicians. A higher performance threshold would help MIPS eligible clinicians strive to achieve more complete reporting and better performance and prepare MIPS eligible clinicians for the 2024 MIPS payment year. However, a performance threshold set too high could also create a performance barrier, particularly for MIPS eligible clinicians who did not previously participate in PQRS or the EHR Incentive Programs. Additionally, we stated that we believe a modest increase from the performance threshold for the 2020 MIPS payment year would be particularly important to reduce the burden for MIPS eligible clinicians in small or solo practices. We stated that we believe that active participation of MIPS eligible clinicians in MIPS will improve the overall quality, cost, and care coordination of services provided to Medicare beneficiaries.

In the CY 2019 PFS proposed rule (83 FR 35972), we noted that we heard from stakeholders requesting that we continue a low performance threshold and from stakeholders that requested we ramp up the performance threshold to help MIPS eligible clinicians prepare for a future performance threshold of the mean or median of final scores and to meaningfully incentivize higher performance. We also noted that we heard from stakeholders who stated a higher performance threshold may incentivize higher performance by MIPS eligible clinicians through higher positive MIPS payment adjustments for those who exceed the performance threshold. We noted our belief that a performance threshold of 30 points for the 2021 MIPS payment year would provide a gradual and incremental increase from the performance threshold of 15 points for the 2020 MIPS payment year and could incentivize higher performance by MIPS eligible clinicians.

We also noted our belief that a performance threshold of 30 points represents a meaningful increase compared to 15 points, while maintaining flexibility for MIPS eligible clinicians in the pathways available to achieve this performance threshold, and we provided examples to support our belief in the CY 2019 PFS proposed rule (83 FR 35972). We invited public comment on the proposal to set the performance threshold for the 2021 MIPS payment year at 30 points (83 FR 35972). Alternatively, we considered whether the performance threshold should be set at a higher or lower number, for example, 25 points or 35 points, and also sought comment on

alternative numerical values for the performance threshold for the 2021 MIPS payment year (83 FR 35972).

We solicited comments on the above proposal.

Comment: Many commenters supported the proposed performance threshold of 30 points, indicating that the increase is reasonable; is aligned with what they believe to be Congress's intent to ensure that clinicians continue to be held accountable for quality and cost; is not a significant change from the prior year; encourages clinicians to increase their engagement and performance in MIPS; and is low enough to protect eligible clinicians who may not have experience reporting in MIPS from negative payment adjustments. One commenter stated that raising the performance threshold may help limit the flattening impact of the overall cost performance category score. One commenter stated the modest increase would not disadvantage small practices if the small practice bonus and other special scoring policies remain available to them and is reasonable considering that a fair portion of clinicians are excluded from MIPS under the low-volume threshold.

Response: We thank the commenters for their support.

Comment: Many commenters did not support the proposed performance threshold of 30 points and stated it is too high, is not gradual enough, would be unduly taxing, and many eligible clinicians are still adapting to the complexities of the MIPS program. Several commenters did not support the performance threshold citing the number of policy changes to the MIPS program and stated that group practices and clinicians, including newly eligible clinicians, should gain experience with MIPS policy changes, including changes to episode-based cost measures and the restructuring of the Promoting Interoperability performance category, before the performance threshold is raised. Several commenters recommended a performance threshold of 20 points given the number of changes being proposed. Commenters also indicated 20 points would help newly eligible clinicians adjust to program reporting requirements and that it could be met or exceeded by reporting on 6 quality measures that receive at least 3 points per measure and one high weighted improvement activity or 2 medium weighted improvement activities to avoid a negative MIPS payment adjustment. A few commenters indicated that clinicians need more time to be educated about the MIPS program.

Response: We acknowledge the concerns submitted by many commenters. We recognize that many requirements and scoring policies in the MIPS program have changed since the 2017 MIPS performance period/2019 MIPS payment year, but we believe the proposed performance threshold of 30 points is an appropriate increase that encourages increased participation and engagement in the MIPS program and that incentivizes clinicians to transition to value-based care with a focus on the delivery of high-value care.

We also do not believe that increasing the performance threshold to 30 points is unreasonable or too steep, but is rather a moderate step that encourages clinicians to gain experience with all MIPS performance categories. In the CY 2019 PFS proposed rule, we estimated the performance threshold we would establish for the 2024 MIPS payment year would be between 63.50 and 68.98 points. This information was based on year 1 estimates from the regulatory impact analysis (83 FR 35972; 81 FR 77514 through 77536). When we looked at the actual final scores for MIPS eligible clinicians for the 2017 MIPS performance period/2019 MIPS payment year, we found the mean final score was 74.01 points and the median final score was 88.97 points. As discussed in section VII.F.8.d. of the Regulatory Impact Analysis (RIA) of this final rule, we also estimated the potential final scores for the 2019 MIPS performance period/2021 MIPS payment year. In the RIA, we updated our estimates by using data submitted for the first year of MIPS (2017 MIPS performance period/2019 MIPS payment year) and applying the scoring and eligibility policies for the third year of MIPS (the 2019 MIPS performance period/2021 MIPS payment year). In the RIA, we estimated the mean final score for the 2019 performance period/2021 MIPS payment year at 69.53 points and the median final score at 78.72 points. Based on these numbers, we estimate the performance threshold that we would establish for the 2024 MIPS payment year would likely be over 65 points. We believe that if we set the performance threshold at 20 points (or another number lower than 30 points) for the 2021 MIPS payment year, then the increases in the performance threshold for each of the 2022 and 2023 MIPS payment years would have to be steeper to ensure a gradual and incremental transition to the performance threshold for the 2024 MIPS payment year, in accordance with 1848(q)(6)(D)(iv) of the Act.

Additionally, we recognize that some policy changes, such as those finalized in this final rule for the Promoting Interoperability performance category, the impact of topped out measures on the quality performance category, the increased weighting of the cost performance category, and the introduction of episode-based cost measures may dampen final scores because it will be more difficult to achieve a perfect performance category score of 100 percent. However, we believe there are also many options for a MIPS eligible clinician, including a newly eligible clinician, to earn a final score at or above a performance threshold of 30 points that do not require a perfect score in every performance category and that these policies do not preclude a MIPS eligible clinician from performing well. For example, a MIPS eligible clinician that submits the maximum number of improvement activities (achieving 40 points out of a possible 40 points) that is weighted at 15 percent of the final score (100 percent improvement activities performance category score × 15 percent × 100 equals 15 points toward the final score) and achieves a quality performance category score of 35 percent [31] that could be achieved through a minimum of complete reporting of quality measures at varying levels of performance (35 percent quality performance category score × 45 percent × 100 equals 15.75 points toward the final score) would qualify for 30.75 points and exceed the performance threshold. When we also consider the cost and Promoting Interoperability performance categories scores, clinicians have even more options to exceed a 30-point performance threshold. While the performance threshold could be met or exceeded without clinician participation in the quality performance category, we encourage clinicians to participate in multiple performance categories, including the quality performance category, to help facilitate successful participation in MIPS when the performance threshold will be increased in future years and to align with the MIPS program's focus on value-based care and the delivery of high quality care for Medicare beneficiaries.

We agree with commenters about the need to educate clinicians, including newly eligible clinicians, about MIPS program policies and policy changes from year to year and encourage

[31] The score for the quality performance category would be (6 measure achievement points × 1 measure plus 3 measure achievement points × 5 measures)/60 total possible achievement points or 35 percent. This assumes an outcome measure is submitted. That score could be higher if the clinician qualifies for bonuses in the quality performance category.

clinicians to utilize the resources available to educate clinicians about the MIPS program at the CMS Quality Payment Program Resource library at *https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html*.

Comment: Several commenters recommended a lower performance threshold specifically for eligible clinicians in their first year of MIPS eligibility, citing that this flexibility is more equitable and allows for a greater chance of successful participation, is a reasonable approach, and that 30 points creates an unlevel playing field. A few commenters recommended 25 points and other scoring accommodations for newly eligible clinicians, including occupational therapists and physical therapists. A few commenters suggested alternative performance thresholds for newly eligible clinicians including 3 points and a modified ''pick your pace'' threshold for these clinicians. One commenter recommended a performance threshold of 20 points and stated a 30-point performance threshold is a very high standard for eligible clinicians in their first year of eligibility.

Response: As described in section III.I.3.j.(2) of this final rule, the MIPS program is still ramping up, and we will continue to increase the performance threshold to ensure a gradual and incremental transition to the performance threshold for the 2024 MIPS payment year (year 6). Therefore, a clinician who is a MIPS eligible clinician beginning with the 2021 MIPS payment year would have 4 years in the program to ramp up to year 6. Conversely, a clinician who first becomes a MIPS eligible clinician in a later year would be afforded less time to ramp up the closer the program gets to year 6. We refer readers to section III.I.3.a. of this final rule for our discussion of new eligible clinician types.

Comment: Many commenters stated that CMS should not increase the performance threshold until there is actual MIPS participation data available to analyze and share with clinicians, indicating that there is insufficient historical MIPS data on which to set benchmarks and determine the feasibility of the current performance threshold, the program is still in its early stages, and that use of actual data would provide eligible clinicians a greater sense of how they performed in the program overall.

Response: We appreciate the commenters' concerns with the proposed performance threshold and their request for a delay in increasing the performance threshold until we have more information about how clinicians are actually performing under MIPS. As discussed earlier in this section, we estimate that we would likely set the performance threshold for the 2024 MIPS payment year at over 65 points. We did analyze the actual final scores for the 2019 MIPS payment year and found the mean final score was 74.01 points and the median final score was 88.97 points for MIPS eligible clinicians. We believe that setting the performance threshold at 30 points for the 2019 performance period/2021 MIPS payment year is appropriate because it encourages increased participation and prepares clinicians for the additional participation requirements to meet or exceed the performance thresholds that will be set for later years. Additionally, we do not believe that keeping the performance threshold at 15 points (which was the performance threshold for the 2020 MIPS payment year) would provide the gradual and incremental transition to the performance threshold for the 2024 MIPS payment year required by section 1848(q)(6)(D)(iv) of the Act.

We also note that eligible clinicians have received performance feedback based on their performance in year 1 of MIPS. As previously finalized in the CY 2018 Quality Payment Program final rule (82 FR 53801 through 53802), on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories for the 2017 performance period, and if technically feasible, for the improvement activities and advancing care information (now known as Promoting Interoperability) performance categories. For details on the release of the feedback reports for the first year of MIPS, we refer readers to section III.I.3.g. of this final rule.

Comment: Several commenters did not support the proposed performance threshold of 30 points, stating their belief that it burdens smaller practices, especially individual clinicians who are unable to afford CEHRT. A few commenters recommended that CMS consider a bonus for solo practitioners.

Response: We acknowledge the concerns of commenters regarding the potential burden on small practices, particularly solo practitioners. We also recognize the unique challenges for solo practitioners who participate in MIPS and have established a set of policies for small practices that apply to solo practitioners as well. The special policies available for small practices include the small practice bonus which is finalized in section III.I.3.i.(1)(b)(viii) of this final rule; the provisions related to the assignment of 3 points for measures that do not meet data completeness criteria which are finalized in section III.I.3.i.(1)(b)(v) of this final rule; the significant hardship exception for Promoting Interoperability performance category and the associated reweighting policies available for small practices (CY 2018 Quality Payment Program final rule (82 FR 53683)); and special scoring provisions available for the improvement activities performance category (81 FR 77185, 77188; 82 FR 53656. We also note that clinicians in small practices are more likely than clinicians in larger practices to fall below one of the low-volume criteria and would not be required to submit to MIPS; however, if they exceed at least one, but not all, of the low volume criteria, then they would be able to take advantage of the opt-in policy. We refer readers to section III.I.3.c. of this final rule for more details.

Comment: A few commenters recommended a more modest increase to the performance threshold and asked us to consider specialty-specific performance thresholds, or special scoring policies for clinicians in specialty practices, stating this would allow for more fair comparisons among clinicians. One commenter stated concerns with ambulatory surgical center-based clinicians being able to meet a 30-point threshold and requested that CMS consider scoring relief for ambulatory surgical center-based clinicians and groups. One commenter stated concerns for certified registered nurse anesthetists (CRNAs) meeting the performance threshold, citing the lack of anesthesia-related measures, low achievable points due to quality measure benchmarking, the lack of applicable cost measures, and the inability of CRNAs to participate in the Promoting Interoperability performance category that places a significant amount of time, money and resources into achieving performance scores to meet the minimum performance threshold. One commenter did not support the proposed performance threshold and believed that clinicians who are not capable of submitting data for more than one MIPS performance category could not meet the performance threshold.

Response: We appreciate the unique challenges faced by MIPS eligible clinicians that are in specialty practices, including clinicians based in ambulatory surgical centers and CRNAs. However, we believe that different performance criteria for certain types of clinicians would create more confusion and burden than a cohesive set of criteria. We also do not believe the

proposed increase in the performance threshold is overly aggressive or unfair to specialty practices and note that there are multiple pathways for clinicians, including specialty practices, to meet or exceed the performance threshold. We also believe that except for a few circumstances, such as extreme and uncontrollable circumstances, rare cases where there are no quality measures, or clinicians joining an existing practice (existing TIN) during the final 3 months of the calendar year in which the performance period occurs (the performance period year) that is not participating in MIPS as a group, most MIPS eligible clinicians would have sufficient measures and activities available and applicable to them for the quality and improvement activities performance categories and would be scored on these two categories. We also have policies in place, such as data validation process discussed in section III.I.3.i.(1)(b)(vii) of this final rule, to assess if clinicians have fewer than 6 measures available and applicable for the quality performance category. We refer the readers to the discussion of our reweighting policies for extreme and uncontrollable circumstances at section III.I.3.i.(2)(b)(ii) of this final rule.

Comment: A few commenters supported keeping a performance threshold of 15 points to minimize administrative burdens as part of the ''Patients over Paperwork'' initiative and to give clinicians adequate time to adjust their practice to meet the program's requirements.

Response: We are mindful of the efforts and requirements for eligible clinician participation in MIPS and agree that many clinicians need time to become familiar with the program's policies and requirements and gain experience with increased participation under the MIPS program. However, we do not believe that maintaining the performance threshold at 15 points for the 2019 performance period/2021 MIPS payment year appropriately encourages clinicians to actively participate in MIPS and incentivizes clinicians to transition to value-based care with a focus on the delivery of high-value care. Additionally, we do not believe that keeping the performance threshold at 15 points (which was the performance threshold for the 2020 MIPS payment year) would provide the gradual and incremental transition to the performance threshold for the 2024 MIPS payment year that the statute requires. We believe a meaningful increase to a performance threshold of 30 points maintains appropriate flexibility for clinicians to meet or exceed the performance threshold, while requiring increased participation over the level of engagement required to meet or exceed the 15-point threshold for year 2 of MIPS. We also believe the increased participation better prepares clinicians to succeed under MIPS in future years, will encourage a transition to the MIPS program's focus on value-based care, and will improve the overall quality, cost, and care coordination of services to Medicare beneficiaries.

Comment: Several commenters recommended a higher performance threshold believing that the proposed performance threshold punishes eligible clinicians who have invested time and money to achieve high MIPS performance, compromises the ability of high performers to earn the maximum payment adjustment, and dilutes program effectiveness to drive quality improvement and reduce spending growth. A few commenters recommended a performance threshold between 30 points and 60 points. One commenter recommended a performance threshold of 50 points, stating it would better reward clinicians and groups who are engaged with the program and encourage the examination of alternative payment models.

Response: The MIPS statute requires budget neutrality, and clinicians will receive a positive, negative, or neutral payment adjustment factor that is determined by their performance and the distribution of final scores across all MIPS eligible clinicians; accordingly, high performers would likely receive higher payment adjustments if fewer MIPS eligible clinicians meet or exceed the performance threshold. While a higher performance threshold provides a greater financial reward for high performers, we believe the proposal of 30 points is warranted to encourage clinician participation in MIPS and to encourage a movement toward value-based care with a focus on the delivery of high quality care. We also believe that the additional performance threshold for exceptional performance discussed later in section III.I.3.j.(3) of this final rule provides an additional financial incentive and financial reward for high performers and will continue to incentivize their exceptional performance. Moreover, we believe setting the performance threshold higher than 30 points would not provide a gradual and incremental transition to the performance threshold for the 2024 MIPS payment year, as required by the statute, but rather would result in a sharp increase over the performance threshold of 15 points for the 2020 MIPS payment year.

After consideration of the comments, we are finalizing our proposal to set the performance threshold at 30 points for the 2021 MIPS payment year as proposed. We are codifying the performance threshold for the 2021 MIPS payment year and finalizing the regulation text at § 414.1405(b)(6) as proposed.

We also solicited comment on our approach to estimating the performance threshold for the 2024 MIPS payment year, which in the CY 2019 PFS proposed rule we based on the estimated mean final score for the 2019 MIPS payment year (83 FR 35972). We were particularly interested in whether we should use the median, instead of the mean, and whether in the future we should estimate the mean or median based on the final scores for another MIPS payment year. We also solicited comment on whether establishing a path forward to a performance threshold for the 2024 MIPS payment year that provides certainty to clinicians and ensures a gradual and incremental increase from the performance threshold for the 2021 MIPS payment year to the estimated performance threshold for the 2024 MIPS payment year would be beneficial, and whether it would be beneficial for MIPS eligible clinicians to know in advance the performance threshold for the 2022 and 2023 MIPS payment years to encourage and facilitate increased clinician engagement and prepare clinicians for meeting the performance threshold for the 2024 MIPS payment year.

We thank commenters for their input on these topics and will take this input into consideration in future years.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS, an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold: (1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold for the prior period described in section 1848(q)(6)(D)(i) of the Act.

Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a

final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the $500,000,000 of funding available for the year under section 1848(q)(6)(F)(iv) of the Act.

As we discussed in the CY 2019 PFS proposed rule (83 FR 35971), we relied on the special rule under section 1848(q)(6)(D)(iii) of the Act, as amended by section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018, to propose a performance threshold of 30 points for the 2021 MIPS payment year. The special rule under section 1848(q)(6)(D)(iii) of the Act also applies for purposes of establishing an additional performance threshold for a year. For the 2021 MIPS payment year, we proposed to again decouple the additional performance threshold from the performance threshold (83 FR 35973 through 35974).

During the time period in which we were drafting the CY 2019 PFS proposed rule, we did not have actual MIPS final scores for a prior performance period. We noted in the CY 2019 PFS proposed rule (83 FR 35973) that if we did not decouple the additional performance threshold from the performance threshold, then we would have to set the additional performance threshold at the 25th percentile of possible final scores above the performance threshold. With a performance threshold set at 30 points, the range of total possible points above the performance threshold is 30.01 to 100 points and the 25th percentile of that range is 47.5, which is less than one-half of the possible 100 points in the MIPS final score. We stated that we do not believe it would be appropriate to lower the additional performance threshold to 47.5 points because we do not believe a final score of 47.5 points demonstrates exceptional performance by a MIPS eligible clinician, as these additional incentives should only be available to those clinicians with very high performance on the MIPS measures and activities. Therefore, we relied on the special rule under section 1848(q)(6)(D)(iii) of the Act and proposed at § 414.1405(d)(5) to set the additional performance threshold at 80 points for the 2021 MIPS payment year, which is higher than the 25th percentile of the range of the possible final scores above the performance threshold (83 FR 35973).

As required by section 1848(q)(6)(D)(iii) of the Act, we took into account the data available and the modeling described in the CY 2019 PFS proposed rule to estimate final scores for the 2021 MIPS payment year (83 FR 35973). We stated that we believed 80 points was appropriate to incentivize clinicians who have made greater strides to meaningfully participate in the MIPS program to perform at even higher levels. An additional performance threshold of 80 points would require a MIPS eligible clinician to perform well on at least two performance categories. We stated that, generally, a MIPS eligible clinician could receive a maximum score of 45 points for the quality performance category, which is below the 80-point additional performance threshold. In addition, 80 points is at a high enough level that MIPS eligible clinicians must submit data for the quality performance category to achieve this target. We noted the additional performance threshold at 80 points could increase the incentive for excellent performance while keeping the focus on quality performance.

We also stated an increase would encourage increased engagement and further incentivize clinicians whose performance meets or exceeds the additional performance threshold, recognizing that a fixed amount is available for a year under section 1848(q)(6)(F)(iv) of the Act to fund the additional MIPS payment adjustments and that the more clinicians who receive an additional MIPS payment adjustment, the lower the average clinician's additional MIPS payment adjustment will be.

For future years, we stated that we may consider additional increases to the additional performance threshold.

We solicited comments on these proposals.

Comment: Many commenters recommended the additional performance threshold remain at 70 points. Several commenters stated it would be more difficult to reach 80 points rather than 70 points because of proposed changes to the Promoting Interoperability performance category, changes to quality measures, more topped out measures, the increased weighting of the cost performance category, the introduction of episode-based cost measures, and the removal of bonus points. One commenter recommended that the additional performance threshold remain at 70 points for at least another year because clinicians are still learning to interpret their feedback reports and make adjustments to their practices accordingly. One commenter stated that clinicians in specialty practices without a significant breadth of reportable measures would be adversely affected while those specialties that do have large numbers of measures with full scoring potential would benefit and that this was unfair and would discourage high performance for those clinicians and groups within specialties. One commenter indicated that the increase may cause more clinicians to report on measures that bring more points rather than the most value to their patients and practice. Another commenter stated the increase seemed arbitrary and that clinicians who earn 70 points should be considered exceptional. One commenter stated that keeping the additional performance threshold at 70 points would allow the payment adjustment to be spread more evenly rather than to only a select few and alleviate some of the lack of positive payment adjustment incentive due to the very low 30-point performance threshold.

A few commenters stated the additional performance threshold should not be increased until information is available and data shared with clinicians from the first 2 years of the program about the number of eligible clinicians who were able to earn the additional payment adjustment, including the number of psychiatrists who exceeded the additional performance threshold during the 2017 MIPS performance period.

Response: We note that many commenters recommended that we maintain 70 points for the additional performance threshold for the 2019 performance period/2021 MIPS payment year. However, we believe for year 3 it is appropriate to raise the bar on what is rewarded as exceptional performance and that increasing the additional performance threshold will encourage clinicians to increase their focus on value-based care and enhance the delivery of high quality care for Medicare beneficiaries. Based on our current data, our belief that raising the additional performance threshold will incentivize continued improved performance, and our concern that policy changes may make it challenging for clinicians to reach an additional performance threshold of 80 points while they are becoming familiar and comfortable with the policy changes, we believe it is important to raise the additional performance threshold, but by less than the original amount proposed. Therefore, for year 3 of the MIPS program, we are finalizing the additional performance threshold at 75 points, which is halfway between our proposal of 80 points and the level recommended by many commenters of 70 points.

We appreciate commenters' concerns about the proposed policy changes for MIPS impacting clinicians' ability to exceed the additional performance threshold. While we recognize that some of the policy changes being

finalized in this rule, including new scoring policies for the Promoting Interoperability performance category, changes to quality measures, the identification of more topped out measures, the increased weighting of the cost performance category, and the introduction of episode-based cost measures, may make it more challenging for clinicians to achieve higher scores while they are becoming more familiar and comfortable with these new policies, we also believe these policy changes help simplify and streamline the MIPS program and reduce overall burden after an initial adjustment period. Thus, we believe it is appropriate to slightly increase the additional performance threshold for year 3 and will consider raising it more in future years.

In addition, despite these changes, we believe that 75 points is achievable for many clinicians. Based on our most current data, we estimated for the 2019 performance period/2021 MIPS payment year a mean final score of 69.53 points and a median final score of 78.72 points as discussed elsewhere in this section and in section VII.F.8.d. of the RIA of this final rule. We also believe a modest increase above the additional performance threshold for the 2018 MIPS performance period/2020 MIPS payment year would result in an additional performance threshold that is attainable and that would allow for multiple pathways for clinicians, including clinicians in specialty practices whose choice of applicable and available measures will likely vary according to specialty, to perform exceptionally well and would encourage higher performance by clinicians for year 3 of the MIPS program.

We acknowledge that the number of quality measures available to clinicians can vary by specialty and practice. We believe our quality performance category scoring validation policy accounts for certain instances where clinicians have less than 6 measure available. We believe these adjustments allow us to develop a fair comparison across different MIPS eligible clinicians and would not preclude clinicians from reaching the final additional performance threshold.

We also note that we have shared performance feedback with clinicians and groups based on their performance in year 1 of MIPS and recognize that clinicians may make adjustments to their clinical practice in response to that feedback, and because we are trying to balance that year 3 is a transition year with the goal of encouraging clinicians to improve their performance and to deliver value-based, high quality care, we believe that a moderate increase to 75 points is appropriate.

Comment: Many commenters supported the proposal to increase the additional performance threshold for exceptional performance to 80 points for the 2021 MIPS payment year and stated it encourages strong performance from clinicians and health systems, supports continuous performance improvement, motivates and holds clinicians accountable to deliver quality care, creates a competitive playing field for high performers, rewards clinicians who have invested time and resources and have demonstrated success under MIPS performance standards, seems reasonable, and is an appropriate increase for year 3 of the program. One commenter supported the proposal because it ensures clinicians are considering both cost and quality. One commenter stated that raising the threshold may help with flattening the overall cost performance score. One commenter supported the proposal because it is high enough to identify exceptional scores, but was uncertain if it would translate into improved patient outcomes or would meet CMS objectives. One commenter supported the proposal should CMS continue its policies that provide bonus points in the MIPS program and allow for claims-based reporting.

Response: We received many comments in support of our proposal for an additional performance threshold of 80 points. We agree with the commenters that raising the performance threshold encourages strong clinician performance, participation in multiple performance categories, and continuous performance improvement; provides an appropriate financial reward for high performers; and promotes a focus on the delivery of high quality, value-based care by clinicians.

We also note that there were many commenters recommending that the additional performance threshold remain at 70 points and other commenters recommending 75 points. We have considered the totality of the comments and are swayed by the comments requesting a more modest increase to the additional performance threshold. We have also considered the updated regulatory impact analysis which incorporates Quality Payment Program year 1 data to estimate performance for the 2019 performance period/2021 MIPS payment year in section VII.F.8.d. of this final rule and found a mean score of 69.53 points and a median final score of 78.72 points. Given these findings, we believe that a small decrease from the proposed additional performance threshold of 80 points that would fall between the mean and the median would help the additional performance threshold remain attainable and would allow for a larger number of clinicians to receive the additional payment adjustment.

We also believe an increase in the additional performance threshold would incentivize clinicians to increase their focus on value-based care with an emphasis on the delivery of high quality care for patients, but that an increase of 10 points is too steep, and thus, are finalizing an additional performance threshold of 75 points that is midway between our original proposal of 80 points and the additional performance threshold for the 2018 MIPS performance period/2020 MIPS payment year of 70 points.

Comment: A few commenters stated an increase to 80 points would disproportionately impact small practices and make it difficult for them to participate successfully in the MIPS program. One commenter recommended CMS should not increase the additional performance threshold until data was available to consider the impact on small practices and then set a fair threshold.

Response: We recognize the unique challenges to eligible clinicians in small practices participating in MIPS and believe the special policies for small practices provide some relief for small practices seeking to perform well. We refer readers to special policies for small practices including: The small practice bonus which is finalized in section III.I.3.i.(1)(b)(viii) of this final rule; the significant hardship exception for the Promoting Interoperability performance category available for small practices (CY 2018 Quality Payment Program final rule 82 FR 53683); the special scoring provisions available for the improvement activities performance category (81 FR 77185, 77188; 82 FR 53656); and the provisions related to the assignment of 3 points for measures that do not meet data completeness criteria which are finalized in section III.I.3.i.(1)(b)(v) of this final rule). We also note that small practices are more likely than larger practices to fall below one or more of the provisions related to the low-volume threshold and would be able to take advantage of the opt-in policy and refer readers to a discussion of the low-volume threshold at section III.I.3.c. of this final rule.

We also analyzed the data referenced in section VII.F.8.d. of the RIA of this final rule, and found that more small practices than larger practices may find it harder to meet or exceed the additional performance threshold. We

agree with commenters referenced here and elsewhere in this section that an additional performance threshold of 80 points is too steep of an increase from 70 points, but we believe that an increase is appropriate for year 3 and that the current policies that provide flexibilities for small practice provide a pathway for a successful transition for clinicians who have made a commitment toward value and the delivery of high quality care in the MIPS program. Based on these competing concerns, as noted above, we are finalizing an additional performance threshold of 75 points.

We also note that the additional performance threshold rewards exceptional performance in the MIPS program and a clinician could successfully participate in MIPS by meeting or exceeding the performance threshold and receive a neutral or positive payment adjustment.

Comment: A few commenters recommended 75 points because it is a more modest, 5-point increase from the previous performance threshold of 70 points. One commenter supported 75 points believing the increase seems fair because the threshold is more attainable for many eligible clinicians who are specialists, such as those practicing interventional pain management, who may have difficulty identifying relevant measures that improve patient quality of care. One commenter supported 75 points should CMS finalize its proposal to remove claims-based reporting and finalize its proposal to remove bonus points for improvement activities completed using CEHRT.

Response: We agree with an additional performance threshold of 75 points. We believe for year 3 it is appropriate to raise the bar on what is rewarded as exceptional performance and that increasing the additional performance threshold will encourage clinicians to increase their focus on value-based care and promote the delivery of high quality care for patients. We also believe that a more modest increase of 5 points, rather than an increase of 10 points, over the additional performance threshold for year 2 is appropriate because year 3 is still a transition year and we want to encourage increased clinician engagement and increased performance in the MIPS program that drives toward the delivery of value-based, high quality care for Medicare beneficiaries. We also note that some commenters stated that the proposed 10-point increase may have unintended consequences especially because of the impact that proposed policy changes could have on final scores as clinicians are becoming familiar with these changes. We want to reward exceptional performance that, given the impact of the policy changes in this final rule, could be less than 80 points. As such, we are swayed by comments that an increase to 75 points is more modest and a reasonable half-way point that still would raise the bar on what is rewarded as exceptional performance for the 2019 MIPS performance period.

We note that a lower additional performance threshold could reduce the maximum additional payment adjustment that a MIPS eligible clinician could potentially receive if the funds available (up to $500 million for the year) are distributed over more clinicians that score above the lower additional performance threshold. For the reasons discussed above, we believe 75 points is appropriate for year 3 and note that the additional performance threshold will be raised in future years.

Comment: A few commenters recommended a higher additional performance threshold for exceptional performers. One commenter recommended an additional performance threshold of 85 points to further efforts to engage clinicians and groups through financial incentives tied to metric performance. One commenter recommended a steeper scale for awarding exceptional performance for scores of 90 points or greater.

Response: We believe that a steeper increase in the additional performance threshold is not appropriate given that MIPS is still in a transition period and because of the MIPS policy changes we are making in this final rule that include scoring changes to the Promoting Interoperability performance category and the addition of episode-based cost measures to the cost performance category, that could impact final scores for year 3 of the MIPS program as eligible clinicians become more familiar and comfortable with these policy changes. We want to reward exceptional performance that, given the impact of our policy changes in this final rule, could include performance below 85 or 90 points, particularly for small practices which may not have sufficient case minimum to achieve maximum quality performance category score. We recognize a higher additional performance threshold will allow for a higher financial reward for high performers, but we want to encourage participation with wider availability of this funding.

Comment: One commenter recommended that CMS increase the thresholds in the CY 2020 performance period and going forward because higher thresholds will result in a wider array of payment adjustments, thereby encouraging more participation and rewarding those that invest in improving their quality of care.

Response: We thank the commenter for the input and will take this comment into consideration in future rule-making.

After consideration of the comments, we are not finalizing our proposal of 80 points for the additional performance threshold and instead are finalizing 75 points for the additional performance threshold for the 2021 MIPS payment year. We are codifying the additional performance threshold for the 2021 MIPS payment year and finalizing the proposed regulation text at § 414.1405(d)(5) with modification to reflect 75 points instead of 80 points.

(4) Application of the MIPS Payment Adjustment Factors

(a) Application to the Medicare Paid Amount for Covered Professional Services

In the CY 2018 Quality Payment Program final rule (82 FR 53795), we finalized the application of the MIPS payment adjustment factor, and if applicable, the additional MIPS payment adjustment factor, to the Medicare paid amount for items and services paid under Part B and furnished by the MIPS eligible clinician during the year. Sections 51003(a)(1)(A)(i) and 51003(a)(1)(E) of the Bipartisan Budget Act of 2018 amended sections 1848(q)(1)(B) and 1848(q)(6)(E) of the Act, respectively, by replacing the references to ''items and services'' with ''covered professional services'' (as defined in section 1848(k)(3)(A) of the Act). Covered professional services as defined in section 1848(k)(3)(A) of the Act are those services for which payment is made under, or is based on, the Medicare PFS and which are furnished by an eligible professional. As a result of these changes, the MIPS payment adjustment factor determined under section 1848(q)(6)(A), and as applicable, the additional MIPS payment adjustment factor determined under section 1848(q)(6)(C) of the Act, will be applied to Part B payments for covered professional services furnished by a MIPS eligible clinician during a year beginning with the 2019 MIPS payment year and not to Part B payments for other items and services.

To conform with these amendments to the statute, we proposed to revise § 414.1405(e) to apply the MIPS payment adjustment factor and, if applicable, the additional MIPS payment adjustment factor, to the

Medicare Part B paid amount for covered professional services furnished by a MIPS eligible clinician during a MIPS payment year (beginning with 2019) (83 FR 35973 through 35974). We also *proposed* to revise § 414.1405(e) to specify the formula for applying these adjustment factors in a manner that more closely tracks the statutory formula under section 1848(q)(6)(E) of the Act (83 FR 35973 through 35974). Specifically, we proposed the following formula: In the case of covered professional services (as defined in section 1848(k)(3)(A) of the Act) furnished by a MIPS eligible clinician during a MIPS payment year beginning with 2019, the amount otherwise paid under Part B with respect to such covered professional services and MIPS eligible clinician for such year, is multiplied by 1, plus the sum of: The MIPS payment adjustment factor divided by 100, and as applicable, the additional MIPS payment adjustment factor divided by 100 (83 FR 35974).

We did not receive any comments on this proposal.

We are finalizing our proposed changes to the regulation text at § 414.1405(e) as proposed. We also refer readers to section III.I.3.a. of this final rule where we discuss the covered professional services to which the MIPS payment adjustment could be applied. We also refer readers to section III.I.3.c.(3) of this final rule where we discuss other conforming edits to the regulation text at §§ 414.1310(a), 414.1310(b), and 414.1310(d) that specify the circumstances when the MIPS payment adjustment would not apply to payments for covered professional services furnished by MIPS eligible clinicians on or after January 1, 2019.

(b) Application for Non-Assigned Claims for Non-Participating Clinicians

In the CY 2018 Quality Payment Program final rule, we did not address the application of the MIPS payment adjustment for non-assigned claims for non-participating clinicians. In the CY 2018 Quality Payment Program final rule (82 FR 53795), we responded to a comment requesting guidance on how the MIPS payment adjustment and the calculation of the Medicare limiting charge amount would be applied for non-participating clinicians, and we stated our intention to address these issues in future rulemaking. Beginning with the 2019 MIPS payment year, we proposed that the MIPS payment adjustment does not apply for non-assigned claims for non-participating clinicians (83 FR 35974). This approach is consistent with the policy for application of the value modifier that was finalized in the CY 2015 PFS final rule (79 FR 67950 through 67951). Sections 1848(q)(6)(A) and 1848(q)(6)(C) of the Act require that we specify a MIPS payment adjustment factor, and if applicable, an additional MIPS payment adjustment factor for each MIPS eligible clinician, and section 1848(q)(6)(E) of the Act (as amended by section 51003(a)(1)(E) of the Bipartisan Budget Act of 2018) requires that these payment adjustment factor(s) be applied to adjust the amount otherwise paid under Part B for covered professional services furnished by the MIPS eligible clinician during the MIPS payment year. When non-participating clinicians choose not to accept assignment for a claim, Medicare makes payment directly to the beneficiary, and the clinician collects payment from the beneficiary. This is referred to as a non-assigned claim. Application of the MIPS payment adjustment to these non-assigned claims would not affect payment to the MIPS eligible clinician. Rather, it would only affect Medicare payment to the beneficiary. If the MIPS payment adjustment were to be applied to non-assigned services, then the Medicare payment to a beneficiary would be increased when the MIPS payment adjustment is positive and decreased when the MIPS payment adjustment is negative. Although the statute does not directly address this situation, it does suggest that the MIPS payment adjustment is directed toward payment to the MIPS eligible clinician and the covered professional services they furnish. We continue to believe that it is important that beneficiary liability not be affected by the MIPS payment adjustment and that the MIPS payment adjustment should be applied to the amount that Medicare pays to MIPS eligible clinicians.

On that basis, we proposed to apply the MIPS payment adjustment to claims that are billed and paid on an assignment-related basis, and not to any non-assigned claims, beginning with the 2019 MIPS payment year (83 FR 35974). We do not expect this proposal would be likely to affect a clinician's decision to participate in Medicare or to otherwise accept assignment for a particular claim, but we solicited comment on whether stakeholders and others believe clinician behavior would change as a result of this policy.

We solicited comments on the above proposal.

Comment: A few commenters supported the proposal to apply the adjustment to claims that are billed and paid on an assignment-related basis and not to any non-assigned claims.

Response: We thank the commenters for their support.

Comment: One commenter recommended that this policy be revisited in the next year and evaluated for unintended consequences, including whether there are any adverse effects on Medicare beneficiaries who see a non-participating clinician who does not accept assignment for a claim.

Response: We thank the commenter for the input and will take this comment into consideration in future rulemaking.

After consideration of the comments, we are finalizing our proposal to apply the MIPS payment adjustment to claims that are billed and paid on an assignment-related basis, and not to any non-assigned claims, beginning with the 2019 MIPS payment year.

(c) Waiver of the Requirement To Apply the MIPS Payment Adjustment Factors to Certain Payments in Models Tested Under Section 1115A of the Act

(i) Overview

CMS tests models under section 1115A of the Act that may include model-specific payments made only to model participants under the terms of the model and not to any other providers of services or suppliers. Some of these model-specific payments may be considered payments for covered professional services furnished by a MIPS eligible clinician, meaning that the MIPS payment adjustment factor, and, as applicable, the additional MIPS payment adjustment factor (collectively referred to as the MIPS payment adjustment factors) applied under § 414.1405(e) of our regulations would normally apply to those payments.

(ii) Summary of Proposals and Comments Received

Section 1115A(d)(1) of the Act authorizes the Secretary to waive requirements of Title XVIII of the Act (and certain other requirements) as may be necessary solely for the purposes of testing models under section 1115A. We stated in the proposed rule (83 FR 35974 through 35975) that we believe it is necessary to waive the requirement to apply the MIPS payment adjustment factors to a model-specific payment or payments (to the extent such a payment or payments are subject to the requirement to apply the MIPS payment adjustment factors) for purposes of testing a section 1115A model under which such model-specific payment or payments are made in a specified payment amount (for example, $160 per-beneficiary, per-month); or paid according to a methodology for calculating a model-specific payment

that is applied in a consistent manner to all model participants. In both cases, applying the MIPS payment adjustment factors to these model-specific payments would introduce variation in the amounts of model-specific payments paid across model participants, which could compromise the model test and the evaluation thereof.

We proposed to amend § 414.1405 to add a new paragraph (f) to specify that the MIPS payment adjustment factors applied under § 414.1405(e) would not apply to certain model-specific payments as described above for the duration of a section 1115A model's testing beginning in the 2019 MIPS payment year (83 FR 35974 through 35975). We proposed to use the authority under section 1115A(d)(1) of the Act to waive the requirement to apply the MIPS payment adjustment factors under section 1848(q)(6)(E) of the Act and § 414.1405(e) specifically for these types of payments because the waiver is necessary solely for purposes of testing models that involve such payments (83 FR 35974 through 35975). To illustrate how the proposed waiver would apply, and to provide notice regarding one model-specific payment to which this proposed waiver would apply, we included an example in the proposed rule involving the Monthly Enhanced Oncology Services (MEOS) payment in the Oncology Care Model (OCM) (83 FR 35975).

We solicited comment on this proposal.

The following is a summary of the public comments received in response to our request for comment and our responses:

Comment: A few commenters supported our proposal to waive the application of the MIPS payment adjustment factors to certain model-specific payments. The commenters agreed that these waivers are necessary to test models that would involve these types of model-specific payments, and without such waivers the evaluation of certain models could be compromised.

Response: We appreciate the commenters' support.

Comment: One commenter noted that the proposed amendment at § 414.1405(f) is ambiguous as to whether paragraphs (l), (2), and (3) refer to three different classes of payments, or to one class of payments that meet all three conditions. The commenter suggested that we clarify our intended policy.

Response: We clarify that only payments meeting all three conditions set forth at § 414.1405(f) will qualify for the waiver of the MIPS payment adjustment factors under section 1848(q)(6)(E) of the Act and § 414.1405(e). We have amended § 414.1405(f) to specify that payments must meet all three conditions to reduce any potential ambiguity, and made further amendments to § 414.1405(f) for greater clarity and readability and to more closely align with the policy described in the preamble text of the proposed rule, including to clarify that the regulatory text in § 414.1405(f)(3) refers to payments made in a consistent manner to all model participants, including those participants subject to the MIPS payment adjustment factors and participants not subject to the MIPS payment adjustment factors.

After considering public comments, we are finalizing our proposal to use the authority under section 1115A(d)(1) of the Act to waive the requirement to apply the MIPS payment adjustment factors under section 1848(q)(6)(E) of the Act and § 414.1405(e) specifically for payments specified at § 414.1405(f) with the clarifying amendments described herein. As discussed in the CY 2019 PFS proposed rule (83 FR 35975), one model-specific payment to which this finalized waiver will apply is the Monthly Enhanced Oncology Services (MEOS) payment in the Oncology Care Model (OCM). The duration of this waiver will begin with the 2019 MIPS payment year and continue for the duration of OCM.

We proposed to provide the public with notice that this proposed new regulation applies to model-specific payments that the Innovation Center elects to test in the future in two ways: first, we would update the Quality Payment Program website (*www.qpp.cms.gov*) when new model-specific payments subject to this proposed waiver are announced; and second, we would provide a notice in the **Federal Register** to update the public on any new model-specific payments to which this waiver would apply (83 FR 35974 through 35975).

We solicited comment on this proposal.

The following is a summary of the public comments received in response to our request for comment and our responses:

Comment: One commenter urged CMS to denote which models and model specific payments are subject to this new policy on the Quality Payment Program website and **Federal Register** as soon as possible.

Response: We plan to provide the public with notice as soon as practicable for model-specific payments subject to this waiver via the Quality Payment Program website (*www.qpp.cms.gov*), and separate notice in the **Federal Register**.

After considering public comments, we are finalizing our policy as proposed to provide the public with notice in the following two ways: (1) We will update the Quality Payment Program website (*www.qpp.cms.gov*) when new model-specific payments subject to this waiver are announced; and (2) we will provide a notice in the **Federal Register** to update the public on any new model-specific payments to which this waiver will apply.

(d) CY 2018 Exclusion of MIPS Eligible Clinicians Participating in the Medicare Advantage Qualifying Payment Arrangement Incentive (MAQI) Demonstration

(i) Overview

In conjunction with releasing the CY 2019 PFS proposed rule, CMS announced the Medicare Advantage Qualifying Payment Arrangement Incentive (MAQI) Demonstration, established by CMS using our demonstration authority under section 402 of the Social Security Amendments of 1967 (as amended). The MAQI Demonstration is designed to test whether excluding MIPS eligible clinicians who participate to a sufficient degree in certain payment arrangements with Medicare Advantage Organizations (MAOs) from the MIPS reporting requirements and payment adjustments will increase or maintain participation in payment arrangements similar to Advanced APMs with MAOs and change the manner in which clinicians deliver care.

(ii) Summary of Proposals

We proposed to use the authority in section 402(b) of the Social Security Amendments of 1967 (as amended) to waive requirements of section 1848(q)(6)(E) of the Act and the regulations implementing it in order to waive the payment consequences (positive, negative or neutral adjustments) of the MIPS and to waive the associated MIPS reporting requirements in 42 CFR part 414 adopted to implement the payment consequences, subject to conditions outlined in the Demonstration. We noted, relating to our proposal to waive payment consequences, that the Demonstration would have the effect of removing MIPS eligible clinicians from the population across which positive and negative payment adjustments are calculated under MIPS, and because of the requirement to ensure budget neutrality with regard to the MIPS payment adjustments under section 1848(q)(6)(F)(ii) of the Act, the Demonstration may affect the payment

adjustments for other MIPS eligible clinicians.

We proposed that these waivers would be applicable for a MIPS eligible clinician participating in the Demonstration if they meet combined thresholds for Medicare payments or patients through Qualifying Payment Arrangements with MAOs and Advanced APMs, and that these thresholds would match the thresholds for participation in Advanced APMs under the Medicare Option of the Quality Payment Program. We also proposed to calculate thresholds based on aggregate participation in Advanced APMs and Qualifying Payment Arrangements with MAOs, without applying a specific minimum threshold to participation in either type of payment arrangement. For purposes of the Demonstration, we proposed to make determinations about clinicians' Qualifying Payment Arrangements with MAOs, consistent with the criteria used for Other Payer Advanced APMs under the Quality Payment Program and as set forth in § 414.1420. We proposed to begin the MAQI Demonstration in CY 2018, with the 2018 Performance Period, and operate the project for a total of 5 years.

We also noted in the proposed rule that, for eligible clinicians who are excluded from the MIPS reporting requirements and payment adjustment under the MAQI Demonstration, we would waive the provision in section 1848(q)(1)(A)(iii) of the Act requiring that the Secretary shall permit any eligible clinician to voluntarily report on applicable measures and activities. We clarify that, with this waiver, the Demonstration will prohibit voluntary reporting under the MIPS by eligible clinicians who participate in the Demonstration and are not subject to the MIPS reporting requirements and payment adjustment for a given year. This last waiver is intended to prevent potential gaming in the form of an eligible clinician intentionally submitting data showing poor performance for a year for which they are not subject to the MIPS reporting requirements and payment adjustment pursuant to the terms of the Demonstration in order to show improvement in their performance in future years when that improvement could result in higher MIPS scoring.

(iii) Applicable Waivers

Section 402(b) of the Social Security Amendments of 1967 (as amended) authorizes the Secretary to waive requirements of Title XVIII that relate to payment and reimbursement in order to carry out demonstrations under section 402(a). We proposed to use this authority to waive certain requirements of section 1848(q) of the Act and the regulations implementing it, specifically the payment consequences (positive, negative or neutral adjustments) of the MIPS and the associated MIPS reporting requirements in 42 CFR part 414 (adopted to implement the payment consequences), subject to conditions outlined in the Demonstration.

We solicited comment on these proposals.

The following is a summary of the public comments, relating to proposed waivers, received in response to our request for comment and our responses:

Comment: Many commenters supported the proposal to use demonstration waiver authority (under section 402 of the Social Security Amendments of 1967 (as amended)) to test the MAQI Demonstration.

Response: We appreciate the commenters' support of the MAQI Demonstration.

Comment: Many commenters urged CMS to use its waiver authority in the MAQI Demonstration to allow another path towards QP status and provide eligible clinicians with the 5 percent incentive payment offered to QPs.

Response: Demonstration projects under the authority of section 402(a)(1)(A) of the Social Security Amendments of 1967 are intended to test whether changes in payment or reimbursement will increase the efficiency or economy of health care services. Our actuarial analyses determined that a demonstration design that would grant QP status, including a 5 percent incentive payment, to eligible clinicians who met the thresholds would have introduced a significant level of new costs to CMS, without adequate evidence for realizing an equal amount of savings from the proposed interventions. Without a basis to believe that the economy or efficiency of health care services would be increased, we do not believe that it is appropriate to design a demonstration with such parameters. Considering that the proposed exclusions from MIPS reporting and payment consequences under the MAQI Demonstration are not anticipated to have a net cost to CMS, we plan to test whether these exclusions will increase or maintain clinician participation in payment arrangements with MAOs that are similar to Advanced APMs and change the manner in which clinicians deliver care. This test is consistent with the standards set forth in section 402(a)(1)(A) of the Social Security Amendments of 1967.

Comment: Some commenters urged CMS to monitor the impact of the Demonstration on MIPS payment adjustments, including one commenter that expressed concern that the MIPS-eligible population pool would be reduced and another commenter that expressed concern about whether the potential benefits being tested under the MAQI Demonstration outweigh any potential impacts on the level of MIPS payment adjustments.

Response: We agree that it will be important to monitor the impact of the Demonstration on payments received by MIPS eligible clinicians to whom the waivers do not apply, but we note that it may be challenging to draw significant conclusions from such monitoring as there are many variables that may impact and influence a clinician's final MIPS payment adjustment. We plan to share information on participation levels in the MAQI Demonstration with the public as soon as this information is available.

Comment: A few commenters commended CMS on starting the MAQI Demonstration in 2018, while a few commenters advised CMS to clarify the timeline associated with a CY 2018 implementation of the Demonstration and when determinations would be made under the Demonstration to identify participating eligible clinicians who are excluded from the MIPS reporting requirements and payment adjustments.

Response: We appreciate certain commenters' support for beginning the Demonstration in CY 2018, and note that by doing so, clinicians that meet threshold levels of participation in Qualifying Payment Arrangements with MAOs in 2018 can be considered for exclusion from the MIPS reporting requirements and payment adjustment under the Demonstration a year before participation in such Qualifying Payment Arrangements could be considered under the All-Payer Combination Option. We anticipate collecting Qualifying Payment Arrangement and threshold information for eligible clinicians participating in the Demonstration starting in late fall of 2018, and making final CMS determinations on whether eligible clinicians meet the criteria to be excluded from the MIPS reporting requirements and payment adjustment, based on this submitted information, by December 2018 or (January 2019 at the latest). We note that eligible clinicians participating in the MAQI Demonstration in 2018 will be evaluated to determine whether they meet the criteria to be excluded from MIPS reporting requirements for the 2018 MIPS performance year, and from the

MIPS payment adjustment for the corresponding 2020 MIPS payment year.

Comment: Some commenters recommended that CMS make changes to the Demonstration criteria relating to clinician eligibility for the exclusion from the MIPS reporting requirements and payment adjustment, such as Qualifying Payment Arrangements and thresholds.

Response: As noted in the proposed rule, we intend to use criteria and requirements that are consistent with the Medicare and Other Payer Advanced APM Options under the Quality Payment Program. Changing the clinician eligibility for exclusion from the MIPS reporting requirements and payment adjustment would not be consistent with this intent.

We also received comments on other provisions associated with the Demonstration.

Comment: Some commenters advised CMS to make changes to the Demonstration application and data collection process.

Response: The application and data collection process are outside the scope of the proposals in the CY 2019 PFS proposed rule; however, we will seek to balance reporting burden with the need to solicit information necessary to ensure that the demonstration is being implemented, tested and evaluated appropriately.

Comment: A few commenters requested additional agency focus in helping physicians and practices better understand their options under Medicare, Medicare Advantage, the Quality Payment Program, the MAQI Demonstration and other value-based payment arrangements.

Response: We are committed to reaching our stakeholders, including clinicians, the technology community, private payers, and beneficiaries, to raise awareness that Medicare is evolving quickly to a value-based system. In addition to raising awareness that change is occurring, we will continue current efforts to engage in a learning process with stakeholders where they may voice opinions and suggestions to help collaboratively drive the goals of the Quality Payment Program. We will continue to set expectations that this will be an iterative process, and, while change will not happen overnight, we are committed to continuing our work to improve how Medicare pays for quality and value, instead of the quantity of services. We will continue to reach out to the clinician community and others to partner in the development of ongoing education, support, and technical assistance materials and activities to help clinicians understand program and model requirements, how to use available tools to enhance their practices, improve quality, reduce expenditures, and progress to participation in Advanced APMs if that is the best choice for their practice.

We are offering support in the form of fact sheets, webinars, online courses, and direct technical assistance to help clinicians successfully participate in the Quality Payment Program, the MIPS or the Advanced APM track. This range of support to help clinician practices actively participate in the Quality Payment Program that can be found at the following website at *https://qpp.cms.gov/*.

We also discussed that the Demonstration would waive the provision in section 1848(q)(1)(A)(iii) of the Act that the Secretary shall permit any eligible clinician to voluntarily report on applicable measures and activities, so that the Demonstration would prohibit reporting under the MIPS by eligible clinicians who participate in the Demonstration and meet the thresholds to be excluded from the MIPS reporting requirements and payment adjustment for a given year. We did not receive any comments on this proposal. We explained that this waiver is necessary to prevent the potential gaming opportunity wherein participating clinicians could intentionally report artificially poor performance under the MIPS for years in which they receive waivers from MIPS payment consequences, then receive artificially inflated quality improvement points under MIPS in later years when they do not receive waivers from MIPS payment consequences. We note here that by prohibiting reporting under MIPS we are also, in effect, disallowing MIPS performance feedback for those clinicians who participate in the Demonstration and meet the criteria to be excluded from the MIPS reporting requirements and payment adjustments. Eligible clinicians who participate in the Demonstration but are not excluded from the MIPS reporting requirements and payment adjustment (whether through participation in the Demonstration or otherwise) would continue to be MIPS eligible clinicians who are subject to the MIPS reporting requirements and payment adjustment as usual.

(iv) Summary of Finalized Policies

After considering public comments, we are finalizing our proposals to implement the MAQI Demonstration in CY 2018 and use the authority in section 402(b) of the Social Security Amendments of 1967 (as amended) to waive certain requirements of section 1848(q)(6)(E) of the Act, specifically the payment consequences (positive, negative or neutral adjustments) of the MIPS and the associated MIPS reporting requirements in 42 CFR part 414 adopted to implement the payment consequences, subject to conditions outlined in the Demonstration. We are also finalizing that we will waive the provision in section 1848(q)(1)(A)(iii) of the Act that the Secretary shall permit any eligible clinician to voluntarily report on applicable measures and activities, so that the Demonstration will prohibit reporting under the MIPS by eligible clinicians who participate in the Demonstration and meet the thresholds that will trigger application of the waivers from the MIPS reporting requirements and payment adjustment for a given year. Related to this waiver of the last sentence of section 1848(q)(1)(A)(iii) of the Act, MAQI Participants who are not subject to the MIPS reporting requirements and payment adjustments will therefore not receive MIPS performance feedback under section 1848(q)(12) of the Act.

In addition, we are also announcing our final policies that, under the waivers identified previously: (1) Eligibility for exclusion from the MIPS reporting requirements and payment adjustment under the MAQI Demonstration will be determined using thresholds of combined participation in Qualifying Payment Arrangements and Advanced APMs that are the same as the QP thresholds under the Medicare Option of the Quality Payment Program codified at § 414.1430(a); and (2) Qualifying Payment Arrangements under the MAQI Demonstration will be identified using criteria consistent with those used to identify Other Payer Advanced APMs codified at § 414.1420. To qualify for exclusion from the MIPS reporting requirements and payment adjustment under the MAQI Demonstration, a MAQI participating clinician must meet combined thresholds for Medicare payments or patients through Qualifying Payment Arrangements with MAOs and Advanced APMs, using Demonstration thresholds that match the thresholds for participation in Advanced APMs under the Medicare Option of the Quality Payment Program, and based on aggregate participation in Advanced APMs and Qualifying Payment Arrangements with MAOs, without applying a specific minimum threshold to participation in either type of payment arrangement.

(e) Example of Adjustment Factors

In the CY 2019 PFS proposed rule (83 FR 35978 through 35981), we provided a figure and several tables as illustrative examples of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2021 MIPS payment year. We updated the figure and tables based on the policies we are adopting in this final rule, as follows.

Figure 3 provides an example of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on the policies adopted in this final rule for the 2021 MIPS payment year. In Figure 3, the performance threshold is 30 points. The applicable percentage is 7 percent for the 2021 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 7 percent for the 2021 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 7.5 points based on the performance threshold of 30 points for the 2021 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 7 percent for the 2021 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 7 percent. If the scaling factor is above 1.0, but less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be higher than 7 percent.

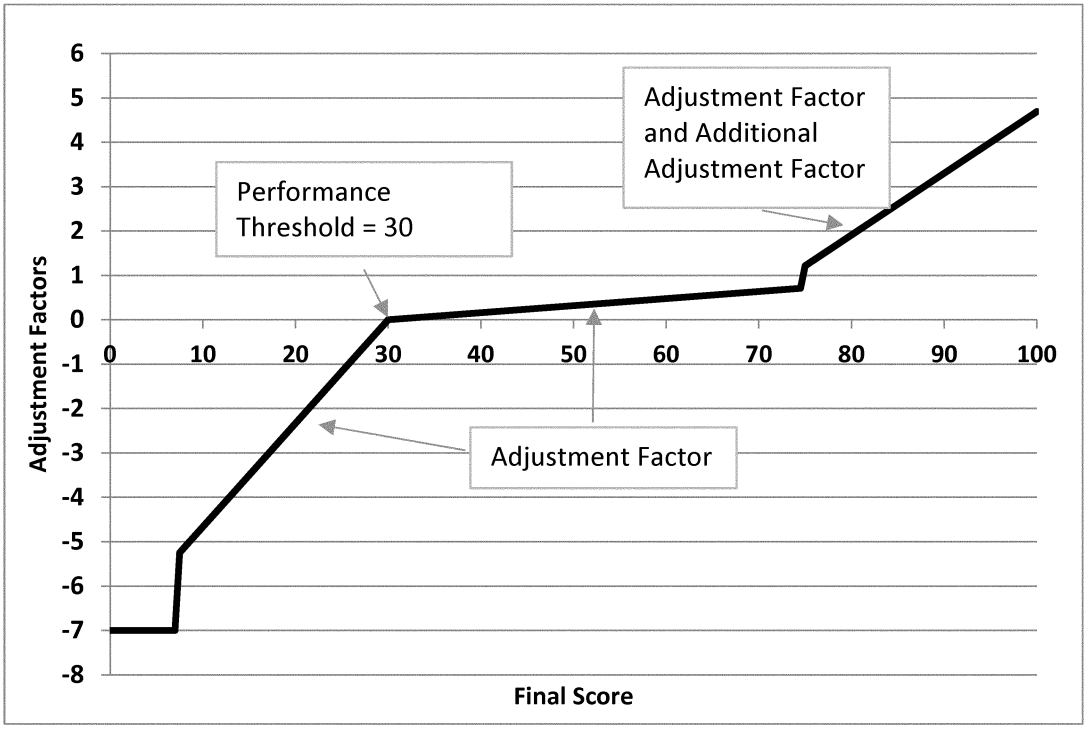
Only those MIPS eligible clinicians with a final score equal to 30 points (which is the performance threshold in this example) would receive a neutral MIPS payment adjustment. Because the performance threshold is 30 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points would be less than 7 percent.

Figure 3 illustrates an example of the slope of the line for the linear adjustments and has been updated from prior rules, but it could change considerably as new information becomes available. In this example, the scaling factor for the MIPS payment adjustment factor is 0.159. In this example, MIPS eligible clinicians with a final score equal to 100 would have a MIPS payment adjustment factor of 1.11 percent (7 percent $\times$ 0.159). (Note that this is prior to adding the additional payment adjustment for exceptional performance, which is explained below.)

The additional performance threshold is 75 points. An additional MIPS payment adjustment factor of 0.5 percent starts at the additional performance threshold and increases on a linear sliding scale up to 10 percent. This linear sliding scale line is also multiplied by a scaling factor that is greater than zero and less than or equal to 1.0. The scaling factor will be determined so that the estimated aggregate increase in payments associated with the application of the additional MIPS payment adjustment factors is equal to $500,000,000. In Figure 3, the example scaling factor for the additional MIPS payment adjustment factor is 0.358. Therefore, MIPS eligible clinicians with a final score of 100 would have an additional MIPS payment adjustment factor of 3.58 percent (10 percent $\times$ 0.358). The total adjustment for a MIPS eligible clinician with a final score equal to 100 would be 1 + 0.0111 + 0.0358 = 1.0469, for a total positive MIPS payment adjustment of 4.69 percent.

BILLING CODE 4120–01–P

FIGURE 3: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2021 MIPS Payment Year



Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 7 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. MIPS clinicians with a final score of at least 75 points would also receive an additional adjustment factor for exceptional performance. The additional adjustment factor is also illustrative. The additional adjustment factor starts at 0.5 percent and cannot exceed 10 percent and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

The final MIPS payment adjustments will be determined by the distribution of final scores across MIPS eligible clinicians and the performance threshold. More MIPS eligible clinicians above the performance threshold means the scaling factors would decrease because more MIPS eligible clinicians receive a positive MIPS payment adjustment factor. More MIPS eligible clinicians below the performance threshold means the scaling factors would increase because more MIPS eligible clinicians would receive a negative MIPS payment adjustment factor and relatively fewer MIPS eligible clinicians would receive a positive MIPS payment adjustment factor.

Table 56 illustrates the changes in payment adjustments based on the final policies from the 2019 MIPS payment year and the 2020 MIPS payment year, and on final policies for the 2021 MIPS payment year adopted in this final rule, as well as the statutorily required increase in the applicable percent as required by section 1848(q)(6)(B) of the Act.

TABLE 56: Illustration of Point System and Associated Adjustments Comparison Between the 2019 MIPS payment year, the 2020 MIPS payment year and 2021 MIPS payment year

2019 MIPS payment year		2020 MIPS payment year		2021 MIPS payment year	
Final score points	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**
0.0-0.75	Negative 4%	0.0-3.75	Negative 5%	0.0-7.5	Negative 7%
0.76-2.99	Negative MIPS payment adjustment greater than negative 4% and less than 0% on a linear sliding scale	3.76-14.99	Negative MIPS payment adjustment greater than negative 5% and less than 0% on a linear sliding scale	7.51-29.99	Negative MIPS payment adjustment greater than negative 7% and less than 0% on a linear sliding scale
3.00	0% adjustment	15.0	0% adjustment	30.0	0% adjustment
3.01-69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 4% for scores from 3.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality.	15.01-69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	30.01-74.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
70.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 4% for scores from 3.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 70.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.	70.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 70.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.	75.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.

BILLING CODE 4120–01–C

We note that in this final rule, with the exception of the increase in our small practice bonus in the quality performance category from 3 measure bonus points to 6 measure bonus points, our scoring algorithms have not changed from the CY 2019 PFS proposed rule and that the only policy change from the CY 2019 PFS proposed rule reflected in Figure 3 and Table 56 is that final scores greater than or equal to 75 points qualify for the additional payment adjustment for exceptional performance discussed at section III.I.3.j.(3) of this final rule. Please refer to the CY 2019 PFS proposed rule (83 FR 35979 through 35981) for examples of scenarios in

which MIPS eligible clinicians can achieve a final score at or above the performance threshold of 30 points for the 2021 MIPS payment year.

k. Third Party Intermediaries

We refer readers to § 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390) and the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819) for our previously established policies regarding third party intermediaries.

In the CY 2019 PFS proposed rule (83 FR 35981 through 35986), we proposed to: (1) Define third party intermediary and require third party intermediaries to be based in the U.S.; (2) update certification requirements for data submission; (3) update the definition of Qualified Clinical Data Registry (QCDR); revise the self-nomination period for QCDRs; update of information required for QCDRs at the time of self-nomination; update consideration criteria for approval of QCDR measures; define the topped out timeline for QCDR measures; (4) revise the self-nomination period for qualified registries; (5) define health IT vendor; (6) update the definition, criteria, and requirements for CMS-approved survey vendor; auditing criteria; and (7) revise probation and disqualification criteria. We finalize these proposals in the manner discussed herein.

(1) Third Party Intermediaries Definition

In the CY 2019 PFS proposed rule (83 FR 35981), at § 414.1305, we proposed a new definition to define a third party intermediary as an entity that has been approved under § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. A QCDR, qualified registry, health IT vendor, or CMS-approved survey vendor are considered third party intermediaries. We also proposed to change the section heading at § 414.1400 from ''Third party data submissions'' to ''Third party intermediaries'' to elucidate the definition and function of a third party intermediary (83 FR 35981).

As discussed in the CY 2019 PFS proposed rule (83 FR 35981), CMS IT systems are required to adhere to multiple agency and federal security standards and policy. CMS policy prohibits non-U.S. citizens from accessing CMS IT systems, and also requires all CMS program data to be retained in accordance with U.S. Federal policy, specifically National Institute of Standards and Technology (NIST) Special Publication (SP) 800–63, which outlines enrollment and identity proofing requirements (levels of assurance) for federal IT system access. Access to the Quality Payment Program would necessitate passing a remote or in-person Federated Identity Proofing process (that is, Equifax or equivalent). A non-U.S. based third party intermediary's potential lack of a SSN, TIN, U.S. based address, and other elements required for identity proofing and identity verification would impact their ability to pass the necessary background checks. An inability to pass identity proofing may limit or fully deny access to the Quality Payment Program if the intent is to interact with the Quality Payment Program outside of the U.S. for the purposes of reporting and storing data.
